One commenter has argued that flow volatility, which staff economists have used as a measure of liquidity risk, does not necessarily translate into liquidity risk.[1068] In this commenter's view, for example, a fund with volatile but predictable flows may have less liquidity risk than a fund with less volatile but less predictable flows. Likewise, a U.S. equity fund could have much greater flow volatility than a foreign bond mutual fund without having greater liquidity risk because the equity fund's assets are more liquid. However, differences in average flow volatility between fund categories persist after accounting for predictability, and the analysis suggests that changes in flow volatility may influence the management of fund liquidity.[1069] Flow volatility is not the sole determinant of liquidity risk for a fund, but it is an important determinant, which makes it useful in helping understand differences in potential liquidity risk within and between fund categories.

The same commenter has also suggested that the same approach of measuring liquidity risk does not consider the usage of derivatives in managing volatile flows, noting that they are often more liquid than their underlying assets.[1070] We acknowledge that derivatives could play a role in managing fund flows. As is the case for corporate bond holding data, data on fund holdings of derivatives is limited so our analysis of holdings level data was necessarily limited to U.S. equity funds.

C. Benefits and Costs, and Effects on Efficiency, Competition, and Capital Formation

Taking into account the goals of the final liquidity regulations and the economic baseline, as discussed above, this section discusses the benefits and costs of the final liquidity regulations, as well as the potential effects of the final liquidity regulations on efficiency, competition, and capital formation. This section also discusses reasonable alternatives to rule 22e–4 and the disclosure and reporting requirements regarding funds' liquidity risk and liquidity risk management.

1. Rule 22e–4

a. Summary of Rule 22e–4's Requirements

Rule 22e–4 will require each fund to establish a written liquidity risk management program. The rule specifies that a fund's liquidity risk management program shall include the following required program elements: (i) Assessment, management, and periodic review of the fund's liquidity risk; (ii) classification of the liquidity of each of the fund's portfolio investments based on asset class, so long as the fund or its adviser does not have information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of an investment that would suggest a different classification for that investment;[1071] (iii) determining and periodically reviewing a highly liquid investment minimum and adopting and implementing policies and procedures for responding to a shortfall of the fund's assets that are highly liquid investments below its highly liquid investment minimum; (iv) prohibiting the fund's acquisition of ''illiquid investments'' (that is, any investment that the fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment) if, following the acquisition, the fund would hold more than 15% of its net assets in assets that are illiquid investments; (v) requiring a fund whose illiquid investments that are assets exceed 15% of its net assets to conduct certain board reporting; and (vi) for funds that engage in, or reserve the right to engage in, redemptions in kind, establishing policies and procedures regarding how and when it will engage in such redemptions in kind.[1072] A fund's board, including a majority of the fund's independent directors, will be required to provide general oversight of the fund's liquidity risk management program, but the board would not have to approve the fund's highly liquid investment minimum.[1073] The fund will be required to designate the fund's adviser or officer(s) responsible for administering the program, and such designation is required to be approved by the fund's board of directors.[1074] The fund's board will also be required to review, at least annually, a written report prepared by the fund's investment adviser or officer(s) administering the liquidity risk management program reviewing the adequacy and effectiveness of the implementation of the fund's liquidity risk management program, including the fund's highly liquid investment minimum, and the effectiveness of its implementation.[1075]

Rule 22e–4 also includes certain recordkeeping requirements. A fund will be required to keep a written copy of its liquidity risk management policies and procedures, as well as copies of any materials provided to the fund's board in connection with the approval of the initial liquidity risk management program and annual board reporting requirement.[1076] A fund will also be required to keep a written record of how its highly liquid investment minimum, and any adjustments thereto, were determined.[1077]

[1064] The Commission and Commission staff have cautioned that high yield securities may be considered to be illiquid, depending on the facts and circumstances. *See* Interval Fund Proposing Release, *supra* footnote 41; *see also* SEC Investor Bulletin, What Are High-Yield Corporate Bonds?, SEC Pub. No. 150 (June 2013), *available at http://www.sec.gov/investor/alerts/ib_high-yield.pdf* (noting that high-yield bonds may be subject to more liquidity risk than, for example, investment-grade bonds). *But see* Who Owns the Assets?, *supra* footnote 378 (discussing the liquidity characteristics of high-yield bond funds in depth, and noting that these funds have weathered multiple market environments, and are generally managed with multiple sources of liquidity).

[1071] Rule 22e–4 (b)(1)(ii).

[1072] Proposed rule 22e–4(b)(2)(iv).

[1073] Proposed rule 22e–4(b)(3)(i).

[1074] Proposed rule 22e–4(b)(3)(iii).

[1075] Rule 22e–4(b)(3)(ii).

[1076] Rule 22e–4(c)(1) and (2).

[1077] Rule 22e–4(c)(3).

In addition, two types of funds are subject to tailored requirements by the final rule. First, funds that primarily hold highly liquid assets do not have to establish a highly liquid investment minimum as part of their liquidity risk management programs.[1078] Second, ETFs are required to assess and manage liquidity risk with respect to certain additional factors tailored to the specific risks of ETFs.[1079] However, an ETF that meets the final rule's definition of an ''In-Kind ETF'' is not required to establish a highly liquid investment minimum or to classify its individual portfolio holdings.[1080]

In addition to the special treatment of In-Kind ETFs and primarily highly liquid funds, the final rules differ from the proposed version in several ways that may have economic consequences: (1) It integrates the definition of illiquid investments subject to the 15% illiquid investment limit as a part of the portfolio classification process, requiring the consideration of market, trading, and investment-specific factors and market depth in determining whether an investment is illiquid, as well as the periodic review of this assessment at least monthly; (2) it reduces the number of categories used to classify portfolio investment liquidity from six to four and requires fewer long-term liquidity projections; (3) it simplifies portfolio position classification by allowing them to be based on asset classes, with customized exceptions for individual positions where necessary;[1081] (4) it does not prohibit the acquisition of less liquid investments if a fund goes below its highly liquid investment minimum, but instead requires that a fund report to its board if it goes below its highly liquid investment minimum, and, if the shortfall lasts more than 7 consecutive calendar days, also requires reporting to the Commission; (5) it requires that a fund's board approve and annually review a report concerning its liquidity risk management program, but generally does not require the board to approve the highly liquid investment minimum (except in some circumstances) or material changes to these programs; (6) it requires that a fund assess its liquidity risk with respect to several factors, where applicable, in both stressed and normal market conditions, whether its strategy is appropriate for an open-ended fund, and whether its strategy involves a concentrated portfolio or large positions in particular issuers;[1082] (7) it requires that principal underwriters or depositors of UITs to determine, on or before the date of the initial deposit of portfolio securities into a UIT, that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities that it issues; and (8) requires that In-Kind ETFs offer daily transparency by posting on the ETF's Web site on each day that the national securities exchange on which the fund's shares are listed is open for business, before commencement of trading of fund shares on the exchange, the identities and quantities of the securities, assets or other positions held by the fund, or its respective master fund, that will form the basis for the fund's calculation of net asset value at the end of the business day.

b. Benefits

Rule 22e–4, as adopted, should produce the same broad benefits for current and potential fund investors as discussed in the proposal. Where appropriate, we discuss below any changes in these benefits due to differences between the proposed and final rules. Specifically, the liquidity risk management program requirements are likely to improve investor protection by decreasing the chance that some funds may be unable to meet their redemption obligations, would meet such obligations by diluting the fund's shares, or would meet such obligations through methods that would have other adverse impacts on non-redeeming investors (*e.g.,* increased risk exposure and decreased liquidity). To the extent that some funds do not currently meet the liquidity risk management standards required by the rule—either by meeting the rule's minimum baseline requirements for fund assessment and management of liquidity risk or via alternative liquidity risk management approaches—investor protection will be enhanced by imposing these minimum requirements on funds.

We believe that the liquidity risk management program requirement should promote improved alignment of the liquidity of the fund's portfolio with the fund's expected (and reasonably foreseeable) levels of redemptions. As discussed above, rule 22e–4 will require each fund to classify the liquidity of its portfolio investments in assessing its liquidity risk, and to determine a highly liquid investment minimum to increase the likelihood that the fund will hold adequate liquid investments to meet redemption requests without significant dilution. Each fund will have flexibility to determine the particular investments that it holds in connection with its highly liquid investment minimum. Assets eligible for inclusion in a fund's highly liquid investment minimum could include a broad variety of securities, as well as cash and cash equivalents. While one fund may conclude that it is appropriate to hold a significant portion of its assets that are highly liquid investments in cash and cash equivalents, another could decide it is appropriate to hold assets that are convertible to cash within longer periods (but not exceeding three business days) as the majority of its highly liquid investments. The highly liquid investment minimum requirement should allow funds to continue to meet a wide variety of investors' investment needs by obliging funds to maintain appropriate liquidity in their portfolios. The proposed rule would have required funds to set a firm three-day liquid asset minimum, prohibiting the acquisition of relatively less liquid assets until a fund was back above its minimum, instead of allowing them to operate below the minimum with board notification, so the final rule should mitigate any unfavorable market effects related to the systematic purchase or sale of investments once a strict minimum was exceeded. In extreme cases—for example, if investments that the fund sought to purchase were trading at fire sale prices due to a market event—a fund could go below its minimum to trade opportunistically. However, that might cause the fund to operate below its highly liquid investment minimum for more than 7 consecutive calendar days, requiring reporting to the fund's board and the Commission within one business day, so funds may be hesitant to take advantage of attractive market prices when they are close to their minimum under the final rule. The ability to deviate from the minimum for up to 7 consecutive calendar days with required reporting at the next regular board meeting, or for longer periods provided the fund reports to the board and the Commission, could also reduce the likelihood that funds set artificially low minimums, which would be less protective of investors than a minimum with some flexibility built in such as the one we are adopting. The limitation on the acquisition of assets that are illiquid investments to no more than 15% of net assets, along with the corresponding enhancements to how investment illiquidity is assessed, complements the

[1078] Rule 22e–4(b)(1)(iii)(A).

[1079] Rule 22e–4(b)(1)(iii)(D)–(E).

[1080] *See infra* footnote 846 and accompanying text for the definition of ''In-Kind ETF.''

[1081] *See supra* footnote 408 and accompanying text.

[1082] Rule 22e–4(b)(1)(iii)(A)–(C).

highly liquid investment minimum requirement by increasing the likelihood that a fund's portfolio is not overly concentrated in investments whose liquidity is limited. Furthermore, the additional board reporting requirements triggered when a fund's illiquid investments that are assets exceed 15% of net assets decreases the likelihood that a fund's portfolio is overly concentrated in investments classified as illiquid for an extended period of time without board oversight.

We believe that the rule also will decrease the probability that a fund will need to meet redemption requests through activities that can materially affect the fund's NAV or risk profile or dilute the interests of fund shareholders. For example, when a fund is insufficiently liquid or does not effectively manage liquidity and is faced with significant redemptions, or both, it may be forced to sell portfolio investments under unfavorable circumstances, which could create significant negative price pressure on those investments.[1083] This, in turn, could disadvantage non-redeeming shareholders by decreasing the value of those shareholders' interests in the fund.[1084] Even if a fund were to sell the most liquid portion of its portfolio to meet redemption requests, which would minimize the loss in fund value due to the price impact of selling, these asset sales could decrease the liquidity of the fund portfolio, potentially creating increased liquidity risk for non-redeeming shareholders. As discussed above, staff analysis is consistent with the hypothesis that U.S. equity funds may disproportionally sell more liquid assets, especially when facing significant outflows, as opposed to selling a *pro rata* ''strip'' of the fund's portfolio assets, which minimizes price impact on a fund in the short term, but ultimately decreases the liquidity of the fund's portfolio.[1085] Short-term borrowings by a fund to meet redemption requests could also disadvantage non-redeeming shareholders by leveraging the fund, which requires the fund to pay interest on the borrowed funds (although, in some instances, the costs of borrowing may be less than the costs of selling assets to meet redemptions) and magnifies any gains or losses to non-redeeming shareholders. Moreover, the costs of borrowing (that is, the costs associated with maintaining a committed line of credit, as well as interest expenses associated with drawing on a credit line) could be passed on to fund shareholders in the form of fund operating expenses, which adversely affect a fund's NAV. To the extent that the program requirement results in liquidity risk assessment and management that enhance funds' ability to meet redemption obligations, it will be less likely that a fund takes actions to pay redemptions that cause dilution or have other adverse impacts on non-redeeming shareholders.

The potential negative consequences of asset sales undertaken to pay fund redemptions could create early redemption incentives in times of liquidity stress, or a ''first-mover advantage.'' [1086] For example, academic studies have suggested that an incentive exists for market participants to front-run trades conducted by a fund in response to significant changes in fund flows.[1087] This suggests that sophisticated fund investors could anticipate that significant fund outflows could lead a fund to conduct trades that would disadvantage non-redeeming shareholders, which could create an incentive to redeem ahead of such trades. If investors' redemptions are motivated by a first-mover advantage, this could lead to increasing levels of redemptions, and as the level of outflows from a fund increases, the incentive to redeem also increases. Any negative effects on non-redeeming shareholders thus could be magnified by a first-mover advantage to the extent that this dynamic produces growing redemptions and decreasing portfolio liquidity. The first-mover advantage is more commonly discussed with respect to money market funds, especially institutional prime money market funds that operated under a fixed NAV prior to the 2014 reform (that will become effective October 14, 2016), but the incentives that have been argued to create the first-mover advantage among those funds could in theory exist (in possibly weaker form) among other open-end funds. We agree with commenters that the empirical support for the existence of a first-mover advantage is not conclusive and that the mutual fund industry has been able to successfully navigate periods of historical market stress.[1088] While we understand that fund investors may not have historically been motivated to redeem on account of a perceived (or actual) first-mover advantage during previous periods of stress, we cannot predict how investors may behave in the future. To the extent that economic incentives exist to redeem fund shares prematurely, such redemptions could lead to investor dilution as discussed above, and the possibility of protecting against this potential dilution could be one benefit of rule 22e–4.

The program requirement aims to promote a minimum baseline for liquidity risk management in the fund industry. This should promote investor protection by elevating the overall quality of liquidity risk management across the fund industry, reducing the likelihood that funds will meet redemption obligations only through activities that could significantly dilute shareholders or adversely affect fund risk profiles. Shareholders in funds that already engage in strong liquidity risk management practices may be less likely to benefit from the program requirement, or may benefit less, than shareholders in funds that do not employ equally rigorous practices. We cannot quantify the total benefits to fund operations and investor protection that we discuss above, but to the extent that staff outreach has noted that some funds currently have no (or very limited) formal liquidity risk management programs in place, rule 22e–4 would enhance current liquidity risk management practices.

Finally, to the extent that the program requirement results in funds less frequently needing to sell portfolio investments in unfavorable market conditions in order to meet redemptions, the requirement also could lower potential spillover risks that funds could pose to the financial markets generally. If, as a result of the program requirement, a fund was prepared to meet redemption requests in other ways, the rule could decrease the

[1083] *See* Coval & Stafford, *supra* footnote 86 (discussing how mutual fund fire sales impact asset prices).

[1084] While the impact of fire sales on asset prices may be short lived in some instances, Coval and Stafford show that the impact of fire sales can often take many months to dissipate. *Id.*

[1085] *See supra* footnote 1038 and accompanying text.

[1086] *See supra* footnote 85 and accompanying text (discussing the possibility of a first-mover advantage with respect to the timing of shareholder redemption from funds, but also arguments that such a first-mover advantage does not exist in funds, as well as arguments that even if incentives to redeem ahead of other shareholders do exist, this does not necessarily imply that investors will in fact redeem *en masse* in times of market stress).

[1087] *See* Coval & Stafford, *supra* footnote 86; Dyakov & Verbeek, *supra* footnote 86.

[1088] *See, e.g.,* Comment Letter of Wellington Management Group LLP on the Notice Seeking Comment on Asset Management Products and Activities, Docket No. FSOC–2014–0001 (Mar. 25, 2015), at 4; ICI FSOC Notice Comment Letter, *supra* footnote 68, at 7; Nuveen FSOC Notice Comment Letter, *supra* footnote 85, at 10; Dechert Comment Letter; Vanguard Comment Letter; Comment Letter of the Independent Trustees of Fidelity Fixed Income and Asset Allocation Funds (Jan. 13, 2016) (all arguing that evidence shows that fund shareholders' redemptions are largely driven by other concerns rather than a theoretical first-mover advantage).

risk that the fund might indirectly transmit stress to other market sectors and participants. The rule should help ensure that all funds, not just those with liquidity risk management practices currently in place, operate in a manner that lessens the chance of spillover risks. We are unable to quantify this potential benefit because we cannot predict the extent to which funds would enhance their current liquidity risk management practices as a result of rule 22e–4, or predict the precise circumstances that could entail negative spillover effects in light of less-comprehensive liquidity risk management by funds.[1089]

Commenters generally did not disagree with the benefits of the proposed rule, with any exceptions noted in the above discussion of rule 22e–4's benefits. As discussed above, the final rule differs from the proposal in several key respects, but it largely preserves the proposed rule's benefits. First, funds that primarily hold assets that are highly liquid investments are not required to establish a highly liquid investment minimum, so any benefits that might have accrued to shareholders of these funds under the proposed rule may be diminished. However, these funds are less likely to be exposed to the liquidity risks discussed above to the same degree as other funds, so any loss in benefits should be negligible and is likely to be less than the costs of establishing a minimum. Similarly, In-Kind ETFs are exempt from certain aspects of the final rule, because the benefits of those aspects of the final rule would have been insignificant for In-Kind ETFs. The final rule instead achieves benefits with respect to ETFs by replacing these less-apposite requirements with new tailored requirements for ETFs that are designed to promote the proper management of ETF liquidity, focused on preventing the arbitrage mechanism that keeps ETFs priced properly from being adversely impacted by a lack of liquidity. In addition, the new requirement for daily transparency will permit the sophisticated authorized participants that directly interact with the ETF to effectively evaluate the liquidity of the ETF's holdings. Since nearly all In-Kind ETFs already provide daily transparency as a matter of course, we believe no additional costs arise for In-Kind ETFs.[1090]

Second, modifications to the proposal allow funds to classify portfolio investments via assignments to asset classes as a default, but require them to classify specific investments separately if they merit special attention,[1091] which preserves the benefits of investment liquidity classification without imposing the additional cost of individually classifying each portfolio position in all cases. Third, the rule's simplification of classification categories from six to four, with shorter-term horizons, still provides a reasonably nuanced view of a fund portfolio's position-level liquidity while responding to commenters' concerns that the proposed rule's more detailed classification would have required too much precision at long-term horizons and would not accurately reflect a fund's actual liquidity profile. Fourth, the final rule should preserve the benefits of board oversight of a fund's liquidity risk management program without requiring that board members approve the highly liquid investment minimum (except in certain circumstances). The modifications to the board's role make the board's involvement in the liquidity risk management more consistent with the board's historical duty to provide oversight (instead of day-to-day management).

Changes to the final rule could also provide additional benefits relative to the proposal. While the final rule clarifies that the factors a fund should consider in devising a liquidity risk management program may be considered as appropriate, it also requires that funds consider two additional factors—whether a given strategy is appropriate in an open-ended fund or involves a concentrated portfolio or concentrated positions in particular issuers—which could improve the risk management program's effectiveness for funds that do not already consider these factors. The final rule also more precisely specifies criteria for both the initial and ongoing assessment of whether investments should be classified as illiquid under the 15% illiquid investment limit by tying it to the same criteria used in assigning investments to other liquidity categories (including considering relevant market, trading, and investment-specific considerations, and market depth), which should reduce a firm's compliance burdens relative to the proposed rule while at the same time providing a more precise picture of how exposed to illiquid investments a given fund is. Finally, while UITs were not subject to rule 22e–4 under the proposal, the final rule requires that the principal underwriter or depositor of a UIT will be required to determine, on or before the date of the initial deposit of portfolio securities into the UIT, that the portion of illiquid investments the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues. This enhancement of the final rule over the proposal could benefit investors by reducing the likelihood that a UIT could be created that holds an excessive amount of illiquid securities, which in turn would reduce the liquidity risk associated with UITs.

c. Costs

One-Time and Ongoing Costs Associated With Program Establishment and Implementation

Funds will incur one-time costs to establish and implement a liquidity risk management program in compliance with rule 22e–4, as well as ongoing program-related costs. As discussed above, funds today employ a range of different practices, with varying levels of quality, for assessing the liquidity of their portfolio investments and managing fund liquidity risk. Accordingly, funds whose practices regarding portfolio investment liquidity classification and liquidity risk assessment and management most closely align with the liquidity risk management program requirements would incur relatively lower costs to comply with rule 22e–4. Funds whose practices for classifying the liquidity of their portfolio investments and for assessing and managing liquidity risk are less thorough or not closely aligned with the rule, on the other hand, may incur relatively higher initial compliance costs.

Some commenters suggested that the estimates of costs in the rule proposal were significantly understated and that the true costs of compliance with the rule requirements would likely exceed the expected benefits.[1092] Another

[1089] The ability of the Commission to perform such analysis is limited by difficulties in both gathering data about funds' liquidity risk management practices and quantifying such data.

[1090] We note that ETMFs are not required to provide such daily transparency under their orders, and thus would need to choose to provide such daily transparency if they wished to take advantage if this provision. Choosing to take advantage of this provision is within the discretion of ETFs that could potentially qualify as In-Kind. As discussed in the PRA section below, we estimate that not all ETFs would qualify as In-kind, either because of their use of cash for redemptions or because of their choice not to provide daily transparency of holdings.

[1091] *See supra* footnote 1064 and accompanying text.

[1092] *See* CFA Comment Letter; Cohen & Steers Comment Letter; Dechert Comment Letter; Dodge & Cox Comment Letter; Federated Comment Letter; FSR Comment Letter; ICI Comment Letter I; Invesco Comment Letter; LSTA Comment Letter; MFDF Comment Letter; SIFMA Comment Letter I; T. Rowe

Continued

commenter suggested that costs were underestimated because other fund systems would also have to be modified to ensure compliance with the entirety of the requirements of the rule.[1093] For example, if funds are required to maintain or target a certain level of fund liquidity, then the trade order management system would have to be modified to ensure accurate monitoring of such limitations. We have revised the discussion of costs to both reflect new information on the potential costs of compliance and changes in the rule that are designed to lessen the potential costs. Specifically, we use estimates provided by commenters to approximate costs for each fund complex under the proposed rule and then qualitatively discuss how changes to the proposed rule affect these estimates. Because most changes to the final rule reduce requirements for some segment of funds relative to the proposal, the estimates below can generally be considered an upper bound on fund costs except where explicitly noted.

Staff estimates of the one-time costs in the proposal, which ranged from $1.3 million to $2.25 million per fund complex, were partly based on estimates from another Commission rulemaking.[1094] Some commenters expressed concern about the calculation of this estimate because it was based on assumptions driven by analysis performed with respect to money market fund reform.[1095] While some of the large scale system modifications required by rule 22e–4 will be similar to those required for money market funds due to regulatory reform, and we attempted to adjust our estimates for differences between the two rules, one commenter suggested that the process of classifying portfolio assets was more akin to a fund's costs in analyzing the value of its assets.[1096] We acknowledge that could be an informative approach to estimating costs, but absent concrete estimates associated with that approach, which the commenter did not provide, we have updated our estimates based on the limited quantitative information available from commenters.[1097] One commenter estimated that there would be $2 million in initial implementation costs and more than $650,000 in annual recurring costs for automating a classification process that would have to manage 63,000 different portfolio positions.[1098] Another commenter estimated the costs of building a system to classify the liquidity of its investments, which is not currently commercially available, in the millions of dollars to manage their 44,000 different portfolio positions.[1099] We use the former as a basis for our analysis because it is comparable in magnitude to the latter.[1100] Because there are likely to be economies of scale in developing the policies, procedures, and systems required to comply with rule 22e–4, we approximate the cost per fund complex by assuming fixed costs constitute 30% of the commenter's estimates, and extrapolate using the number of funds per complex to scale variable costs up or down.[1101] In addition, because the process of classifying assets under the proposal would likely constitute a majority of a fund's costs, we assume the classification process constitutes approximately 75% of a fund's cost of complying with proposed rule 22e–4. This method results in one-time costs for funds under the proposed rule that range from approximately $0.8 million to $10.2 million, that the average cost per fund complex is $1 million, and the aggregate cost is approximately $855 million. The estimated range of costs using this approach is wider than our approach in the proposal, but the estimated aggregate cost is lower than our initial estimate of $1.3 billion. While these estimates would change if we varied our assumption that fixed costs comprise 30% of the commenter's estimate—for example, increasing this percentage would compress the range of costs and the aggregate may increase or decrease—they are of the same order of magnitude as our estimates in the proposal.

These estimated one-time costs are attributable to the following activities, as applicable to each of the funds within the complex: (i) Developing policies and procedures relating to each of the required program elements,[1102] and the related recordkeeping requirements of the rule; (ii) planning, coding, testing, and installing any system modifications relating to each of the required program elements; (iii) integrating and implementing policies and procedures relating to each of the required program elements (including classifying the liquidity of each of the fund's portfolio investments pursuant to rule 22e–4(b)(1)(ii)), as well as the recordkeeping requirements of the rule; (iv) preparing training materials and administering training sessions for staff in affected areas; and (v) costs associated with educating the fund's board and obtaining approval of the program. These activities are likely to cut across many different functional groups within a fund or fund complex, including legal, compliance, risk, portfolio management, accounting, and technology staff. To the extent that some of the systems needed to support the required program elements are developed by third parties, fund complexes may be able to implement their liquidity risk management programs for less than our estimated cost of developing these

Comment Letter; Vanguard Comment Letter; Voya Comment Letter.

[1093] *See* Federated Comment Letter.

[1094] *See* Proposing Release, *supra* footnote 9, at n.702 and accompanying text.

[1095] *See* FSR Comment Letter; SIFMA Comment Letter I.

[1096] *See* Dechert Comment Letter.

[1097] As in the proposal, the estimates assume that each fund would not bear all of the costs (particularly, the costs of systems modification) on an individual basis, but instead that these costs would likely be allocated among the multiple users of the systems, that is, each of the members of a fund complex. Accordingly, we expect that, in general, funds within large fund complexes would incur fewer costs on a per fund basis than funds within smaller fund complexes, due to economies of scale in allocating costs among a group of users.

[1098] *See* Invesco Comment Letter.

[1099] *See* T. Rowe Comment Letter.

[1100] We estimate that there were 146 funds in the second commenter's fund complex as of December 31, 2015, which implies an estimated cost of approximately $4 million using our estimation procedure, in line with the commenter's statement that its cost would be ''in the millions.'' *See supra* footnote 1094 for discussion of the estimation procedure.

[1101] We use CRSP U.S. Mutual Fund Database to obtain the number of funds for each complex. As of December 31, 2015, there were 7551 mutual funds (excluding money market funds and annuities), 1484 ETFs (excluding non-40-act ETFs, ETNs, and Commodity ETFs), and 847 fund complexes (334 of them with only one fund). The commenter, Invesco, consisted of 87 funds as of that date, and we assume the fixed cost component of their estimate is $0.6 million (30% of $2 million). The remaining $1.4 million is assumed to be a variable cost that scales linearly with the number of funds. To arrive at a total cost of 22e–4, each of these estimates is scaled so that the classification process constitutes 75% of the total costs of proposed rule 22e–4.

[1102] Specifically, a fund would be required, where applicable, to establish policies and procedures relating to: (i) Assessment, management, and periodic review of the fund's liquidity risk; (ii) classification of the liquidity of each of the fund's portfolio investments, as well as at-least-monthly reviews of the fund's liquidity classifications; (iii) the requirements to determine and periodically review a highly liquid investment minimum, and to adopt and implement policies and procedures for responding to a shortfall of the fund's highly liquid investments below its highly liquid investment minimum; (iv) the requirement to limit the fund's acquisition of illiquid investments over 15% of the fund's net assets; and (v) for funds that engage in, or reserve the right to engage in, redemptions in kind, the requirement to establish policies and procedures regarding how it will engage in such redemptions in kind. The final rule also provides for a tailored program for ETFs that redeem in kind, excluding them from the classification and highly liquid investment minimum requirements, but requiring them to consider additional factors as part of their liquidity risk assessment and management that reflect potential liquidity-related concerns that could arise from the structure and operation of ETFs. The final rule also provides an exclusion from the highly-liquid investment minimum requirement for funds that primarily hold highly liquid investments. The rule also provides for board oversight of the liquidity risk management program.

programs themselves, but the final rule emphasizes that it is ultimately each fund's responsibility to classify its positions, so these potential cost reductions may be limited. For example, we understand that third parties have already developed programs that include certain market, trading, and investment-specific factors which could be useful in classifying the liquidity of portfolio investments, and are currently available for purchase.[1103]

We have also revised our estimates of the ongoing costs of complying with rule 22e–4 using the same approach and based on the same commenter's estimate as above for one-time costs. While our analysis in the proposal assumed ongoing costs ranged from 10% to 25% of the one-time costs resulting from the rule, we've reduced the low end of the range to 5% to reflect changes from the Proposing Release, discussed below, that should lower some funds' compliance burdens, and increased the high end of the range to 32.5% to reflect the commenter's estimate that ongoing costs for their fund under the proposed rule would be $0.65 million (compared to one-time costs of $2 million). We again extrapolate from the commenter's estimate as above to arrive at a minimum and maximum cost estimate for each fund, which implies a range of ongoing costs across all funds of $40,000 to $3.3 million per fund complex. These costs are attributable to the following activities, as applicable to each of the funds within the complex: (i) Classification of the liquidity of each of the fund's portfolio investments, as well as at-least-monthly reviews of the fund's liquidity classifications (rule 22e–4(b)(1)(ii)); (ii) periodic review of the fund's liquidity risk (rule 22e–4(b)(1)(i)); (iii) periodic review of the adequacy of the fund's highly liquid investment minimum (rule 22e–4(b)(1)(iii)(A)(2)); (iv) systems maintenance; (v) additional staff training; (vi) approval, annual review, and general oversight by the board of the fund's liquidity risk management program (rule 22e–4(b)(2)); and (viii) recordkeeping relating to the fund's liquidity risk management program (rule 22e–4(b)(3)).[1104] Relative to the proposed rule, the final rule reduces the responsibilities of a fund's board, which is not required to approve the fund's highly liquid investment minimum or material changes to the fund's liquidity risk management program, which should reduce the board-related costs embedded in the above estimates of rule 22e–4's one-time and ongoing costs.

The original classification scheme would have mandated significant micro-level analysis of instruments not currently conducted by fund advisers according to many commenters.[1105] Such an analysis would have required entirely new systems for many fund complexes and would have required funds to incur significant expenses (especially for smaller fund complexes).[1106] The new classification system lowers the potential costs of compliance with the liquidity classification requirement by (i) reducing the number of classification categories reduced from six to four, (ii) only requiring ''days-to-cash'' estimates out to 7 days, (iii) allowing funds to generally classify based on asset class (subject to an exception process), (iv) changing the process for considering position size to reduce complexity, and (v) simplifying the classification factors to be considered into a single requirement that funds consider market, trading, and investment-specific data when classifying an investment. As a whole, these changes should lower the potential costs of compliance with the classification requirement relative to the proposal estimates above without significantly reducing the potential benefits of the requirement.

Specifically with respect to position size, commenters argued that evaluating ''days-to-cash'' was inherently biased against large funds and could lead to ''plain vanilla'' funds that generally invest in only highly-liquid securities (*e.g.,* S&P 500 funds) being classified as highly illiquid if they manage a large amount of assets.[1107] The rule now only requires a fund to determine whether trading varying portions of a position in a particular portfolio investment or asset class, in sizes that the fund reasonably anticipates trading, is reasonably expected to significantly affect its liquidity. This change should prevent large ''plain vanilla'' funds from appearing to be very illiquid under the classification scheme while still maintaining the idea that position size is an important consideration in the evaluation of liquidity. Relative to the proposed rule, this should reduce the costs associated with determining how position size affects the number of days required to liquidate an investment and eliminate the cost of classifying separate portions of a position into separate liquidity buckets.

The classification process has also been revised in response to commenter concerns about the need to evaluate whether an investment can be sold for cash without materially affecting the security's price, which investors could interpret as an indication that they can redeem out of funds at a known or protected NAV.[1108] One commenter expressed concern that if investors were given estimates of liquidity that are speculative or stale, or both, which might fail to predict liquidity with accuracy during periods of market stress, then funds could be potentially subject to significant litigation costs.[1109] The value impact component of the rule has been modified so that determinations of market impact can be based on a reasonable expectation that an investment can be converted to cash (or in some cases, sold or disposed of) without the conversion (or in some cases, sale or disposition) significantly changing the market value, rather than a price ''that does not materially affect the value of that asset immediately prior to sale.'' This modification in the definition should relieve funds of the need to develop precise security-by-security expectations of forward looking liquidity while still emphasizing the need to consider the potential market impact of buying or selling an investment, reducing compliance costs relative to the proposed rule.

Commenters also expressed concern about the use of third-party vendors in the process of liquidity classification.[1110] If only a few vendors were able to provide the necessary data, such data would likely cause significant expenses for the funds, and those expenses would likely be passed on, at least in part, to fund investors through

[1103] *See supra* footnote 323 and accompanying text (discussing Commission guidance on a fund's use of third-party service providers to obtain data to inform or supplement its consideration of the liquidity classification factors). We understand, based on staff outreach, that annual costs to subscribe to the liquidity classification services provided by third-party data and analytics providers currently range from $50,000–$500,000.

[1104] As discussed in greater detail below, we anticipate that, depending on the personnel (and/or third-party service providers) involved in the activities associated with administering a liquidity risk management program, certain of the estimated ongoing costs associated with these activities could be borne by the fund, and others could be borne by the adviser.

higher fees. Another commenter suggested that the cost of third-party liquidity data should be included in any estimate of the potential costs of the classification system because of the strong likelihood that all funds would need to subscribe to a third-party vendor to ensure compliance with the rule.[1111] As discussed in the proposal, we believe outsourcing program functions to vendors should, if anything, reduce compliance costs, and we noted that liquidity classification services already exist.[1112] In addition, our updated estimate of costs above is based on a large investment manager's estimate of constructing an internal system from scratch, so we would expect the cost of a vendor-based solution, which would be partially amortized across all of its clients, to be lower. The changes made to the classification system from the proposal could also lessen the costs associated with third-party vendors relative to the proposed rule. In particular, to the extent that requiring less precision via fewer classification categories and shorter time horizons, allowing funds to generally classify according to asset class (subject to an exception process), and requiring a simpler position size evaluation criterion reduce the scope and intensity of the investment classification process, funds may not rely as much on vendors to comply with the rule, and vendors themselves may experience reduced costs in developing programs, leading to lower prices if they pass on some of the savings to funds.

If all funds use a small number of third-party vendors, there could be other indirect, but potentially large, costs. According to one commenter, the vendors could become de facto liquidity ''rating agencies'' and their ''upgrades'' and ''downgrades'' of asset liquidity could have systemic effects on the market.[1113] For example, if a vendor were to remove a widely-held investment from the highly liquid investment category, then many funds could simultaneously attempt to sell that investment, which could harm both fund investors and the wider market. Given the data limitations and difficulties in estimating liquidity for many less liquid investments, that potential effect might be driven by error-prone modeling instead of true changes in liquidity. We emphasize above that while third-party products can serve as a useful input to the classification process, it is the fund's responsibility to determine the liquidity of each investment, which should lessen the potential for systemic issues by reducing fund reliance on third-party vendors and allowing more of the necessary liquidity analysis to be performed within each fund complex.[1114]

Several additional components of the final rule will affect costs relative to the proposal. First, by excluding any fund that primarily holds assets that are highly liquid investments from the requirement to have a highly liquid investment minimum, the final rule avoids imposing any potential costs related to the minimum on some funds that would benefit less from having a minimum. It is possible that some funds that do not qualify as primarily highly liquid funds will incur the costs of establishing a minimum without a significant benefit. Second, whereas funds may currently use back-office operations to limit their acquisition of illiquid assets under exiting Commission guidelines, the final rule's enhanced illiquid investment standard may require funds to incur direct costs associated with a shift of these operations to other business functions (we also discuss indirect costs associated with the enhanced illiquid investment limit below).[1115] Third, the final rule does not require In-Kind ETFs to establish a highly liquid investment minimum or classify the liquidity of their portfolios, which will reduce their costs relative to other funds, but it also requires them—as it does all ETFs—to consider several additional factors as part of their liquidity risk programs, which may increase their implementation costs. Finally, principal underwriters or depositors of UITs, which had no liquidity risk requirements under the proposed rule, will now have to incur a one-time cost on or before the date of the initial deposit of the portfolio securities into the UITs to assess whether the amount of illiquid investments they expect the UITs to hold is compatible with the redeemable nature of the securities they issue. This cost should be comparable in magnitude to incurring a fraction of the ongoing costs of an open-ended fund under rule 22e–4 because it involves an analysis that is similar to complying with the rule's 15% illiquid investment limit without having to establish all of the systems and processes that are required to perform that task on a continuing basis. Assuming that this activity accounts for 20% of an open-ended fund's ongoing costs, we estimate that it would cost a UIT $8,000 to $52,000, and note that it will only be incurred by UITs that are launched after the rule's compliance date.[1116] UITs are already required to consider which of their restricted securities are illiquid, so this estimate should be considered an upper bound on the costs imposed on UITs by the rule. Finally, the rule's provision requiring board oversight when a fund's holding of illiquid assets exceed 15% of its net assets may impose additional costs on the fund to hold a special board meeting, including the cost of preparing materials for the board's deliberation, the cost of board members' time, as well as the cost of consultations with outside counsel.

Depending on the personnel (and/or third-party service providers) involved with respect to the activities associated with establishing and implementing a liquidity risk management program, certain of the estimated one-time costs could be borne by the fund, and others could be borne by the fund's adviser or other service providers. This cost allocation would be dependent on the facts and circumstances of a particular fund's liquidity risk management program, and thus we cannot specify the extent to which the estimated costs would typically be allocated to the fund as opposed to the adviser. Estimated costs that are allocated to the fund would likely be borne by fund shareholders in the form of fund operating expenses.

Certain elements of the program requirement may entail marked variability in related compliance costs, depending on a fund's particular circumstances and sources of potential liquidity risk. The process of classifying the liquidity of each of a fund's portfolio investments could give rise to varying costs depending on the fund's particular investment strategy. For example, a U.S. large cap equity fund would likely incur relatively few costs to obtain the data necessary to classify its portfolio positions, specifically given that, relative to the proposed rule, the final rule allows such a fund to generally classify its positions based on asset classes (subject to an exception process). On the other hand, funds that hold investments for which relevant market,

[1111] *See* Interactive Data Comment Letter.

[1113] *See* ICI Comment Letter II.

[1114] *See supra* section III.C.1.b. (providing guidance on the appropriate use of data vendors).

[1115] *See supra* section III.C.4.a.

[1116] These figures are based on the same comment letter used to estimate one-time and ongoing costs for open-ended funds. We assume the costs associated with launching a UIT under rule 22e–4 are equivalent to 20% of the ongoing costs of a one fund complex. Under the assumptions above that ongoing costs for open-ended funds are 5% to 32.5% of their initial costs, fund complexes with one fund have estimated ongoing costs of approximately $40,000 to $260,000. Multiplying that range by 20% produces the UIT estimate.

trading, and other investment-specific data is less readily available, for which a general asset-class-based classification is more difficult to apply, or funds that require more exceptions to their asset-class-based classification would incur relatively greater costs associated with the classification of their portfolio positions' liquidity. In addition, funds with multiple sub-advisers may incur relatively more costs to coordinate the process of classifying position liquidity as well as monitoring whether the fund is compliant with its highly liquid investment minimum and the 15% illiquid investment limit.

Certain factors that the rule's guidance suggests a fund should consider in assessing its liquidity risk also could entail relatively greater costs, depending on the fund's circumstances. For instance, a fund with a relatively short operating history could incur greater costs in assessing the fund's cash flow projections than a similarly situated fund with a relatively long operating history. This is because the newer fund could find it appropriate to assess redemption activity in similar funds during normal and stressed periods (to predict its future cash flow patterns), which could entail additional costs to gather and analyze relevant data about these comparison funds. Also, a fund whose shares are held largely through omnibus accounts may wish to periodically request shareholder information from financial intermediaries in order to determine how the fund's ownership concentration may affect its cash flow projections. These data requests, and related analyses, could cause a fund to incur costs that another fund, whose shares are largely held directly, would not. A fund that deems it appropriate to establish and implement additional liquidity risk management policies and procedures beyond those specifically required under the rule also would incur additional related costs. While we recognize that, as described above, the costs to establish and implement a liquidity risk management program in compliance with rule 22e–4 will depend to some degree on the level of liquidity risk facing the fund, we are unable to quantify the various ways in which a fund's individual risks and circumstances could affect the costs associated with establishing a liquidity risk management program.

Commenters suggested that the proposed three-day liquid asset minimum requirement could have had a number of unintended consequences. As discussed above, if third-party vendors become de facto ''rating agencies'' for liquidity, then a liquidity minimum could force many funds to sell the same investments simultaneously after a liquidity ''downgrade,'' which could have a systemic impact on funds and the overall market.[1117] Similarly, if a fund were forced into predictable trading behavior during a market downturn because of the highly liquid investment minimum requirement, the liquidity and performance of that fund would be negatively impacted.[1118] It is possible that the proposed three-day liquid asset minimum requirements could have created these types of unintended consequences by prohibiting a fund from acquiring less liquid assets if it was below its three-day liquid asset minimum, but the final rule does not include this prohibition. Instead, as discussed above, a fund is only required to report to its board and, possibly, the Commission when it is below its highly liquid investment minimum. This requirement should provide fund management the flexibility to avoid forced, predictable trading behavior while maintaining the emphasis on effective liquidity risk management the minimum is designed to provide. While fund liquidity may vary more under this approach, the reporting requirements surrounding any shortfall, including a requirement to provide the fund's board with an explanation of how the fund plans to restore its minimum if a shortfall lasts more than 7 consecutive calendar days, should help provide oversight to prevent a fund from continually failing to meet its liquidity minimum. As a whole, this approach should result in lower costs for funds compared to the proposed three-day liquid asset minimum and, because we anticipate that lengthy breaches of the minimum will be relatively rare, it should not significantly decrease the benefits of having a highly liquid investment minimum.

One commenter suggested that investor choice could be negatively impacted because of the implementation and on-going costs of the liquidity risk management program.[1119] The commenter asserted that the costs could overwhelm small fund complexes and force them to either cease operations or consolidate with a larger complex.[1120] Most of the changes made to the rule since its proposal—exclusions for funds that primarily hold assets that are highly liquid investments and In-Kind ETFs, a reduction in the number of investment classification categories, and the ability to generally classify investments based on asset classes (subject to an exception process)—should decrease the estimated implementation and on-going costs compared to the proposal. Yet it remains possible that some fund complexes will still find the costs burdensome. While investor choice may be harmed if a fund is closed because the costs of the rule are burdensome, remaining funds will be better positioned to avoid the negative consequences of inadequate liquidity management if that fund exited because it was unable to provide a minimum acceptable baseline of liquidity. To the extent that there are funds that are currently able to provide effective liquidity risk management, but would be forced to cease operations because of the costs of complying with the rule (even after changes from the proposal that increase flexibility and decrease implementation and on-going costs), investor choice may be negatively affected.

A fund may incur costs if it reallocates its portfolio to correspond with its initial or subsequently modified highly liquid investment minimum, or if the rule's definition of an illiquid investment results in the fund holding more than 15% of its net assets in assets that are illiquid investments. While we are unable to anticipate how many funds may reallocate their portfolios for these two reasons, or the extent of such reallocation by any fund that does so, we anticipate that the transaction-related costs of any such reallocation will not be significant for most funds. This is because some funds may not need to reallocate their portfolios at all to correspond with their highly liquid investment minimum or the 15% illiquid investment limit, and those that do so would be able to gradually adjust their portfolios in order to buy and sell portfolio positions during times that are financially advantageous given the delayed compliance date. Thus, while a fund may reallocate its portfolio to comply with its highly liquid investment minimum and the 15% illiquid investment limit by the time of the compliance date, a fund would not be required to conduct transactions in portfolio investments in any particular timeframe prior to the compliance date. If a fund wishes to reallocate its portfolio by the compliance date, we anticipate that the compliance date would provide sufficient time to do so with relatively few associated transaction costs. Along with the transaction-related costs associated with any portfolio reallocation, we recognize that this reallocation in turn could affect

[1117] ICI Comment Letter II.

[1118] ICI Comment Letter II.

[1119] Charles Schwab Comment Letter.

[1120] *Id.*

the performance and/or risk profiles of funds that modify their composition, which in turn could result in costs associated with decreased investment options available to investors and any changes to the market for relatively less liquid investments; these costs are discussed below. Finally, it is worth noting that, because the rule excludes both In-Kind ETFs and funds that primarily hold assets that are highly liquid investments from the requirement of having a highly liquid investment minimum, these funds will not incur any of the costs associated with transactions, reduced fund performance, or altered risk profiles associated with a minimum, though they will still incur these costs as they apply to the rule's 15% illiquid investment limit.

Potential for Decreased Investment Options and Adverse Effects

We recognize that the rule requires a fund to determine the liquidity profile of its current portfolio and evaluate its potential liquidity needs, which could result in a fund concluding that its current portfolio lacks sufficient liquidity. This could lead a fund to modify its portfolio composition to meet its appropriate highly liquid investment minimum (*e.g.,* one commenter stated that funds may decrease their holdings of long-term municipal bonds) or to comply with the more specific 15% illiquid investment limit.[1121] The rule could therefore result in certain funds increasing their investments in relatively more liquid investments or altering the way in which their portfolios are managed, which in turn could affect the performance, tracking error, and/or risk profiles of these funds.[1122] This is most likely to affect funds that currently hold investments with relatively lower liquidity. Such modifications to funds' portfolio compositions could in turn decrease certain investment options available to investors or reduce investor returns. However, because these portfolio composition shifts are most likely to occur if a fund needs to adjust its existing liquidity level to comply with the rule, we anticipate that the potential for decreased yield is most likely to affect funds currently holding portfolios whose liquidity levels have the potential to create redemption-related liquidity risk for fund investors. Thus, the potential for decreased investment options for certain investors, and any related decrease in investment yield, has the potential offsetting benefit of decreased liquidity risk in the funds in which these investors hold shares. However, there could be other reasons funds may choose to invest in more liquid investments as a result of the rule even if this reallocation is not required, including the possibility that they do not want to appear less liquid than their peer funds in their publicly disclosed liquidity profile, or because increased disclosure requirements regarding the timing of a fund's redemption payments may result in funds holding more liquid investments.[1123]

We cannot quantify the number of funds that would need to significantly modify their portfolios' risk profile as a result of the rule because we lack the information necessary to provide a reasonable estimate. Such an estimate would depend on the number of funds that might need to modify their current portfolio composition as a result of the rule, as well as the availability of relatively liquid investments that can act as adequate substitutes to existing investments for those affected funds. We are unable to quantify the total potential costs discussed in this section because: (1) We cannot anticipate the highly liquid investment minimum that each fund would determine to be appropriate based on its liquidity risk or the extent to which fund holdings exceed the rule's more specific 15% illiquid investment limit relative to the current 15% guideline; (2) we cannot determine what relatively more liquid investments funds would purchase as substitutes; (3) we are unable to estimate the resulting changes to funds' yields and risk profiles, nor how investors would react to these changes. In-Kind ETFs and funds that primarily hold assets that are highly liquid investments will not be subject to the highly liquid investment minimum, so this may reduce the aggregate costs associated with decreased investment options relative to the proposed rule. Commenters did not specifically object to our assessment of the rule's impact on investment options in the proposed rule.

Market for Relatively Less Liquid Investments

As discussed above, the rule could result in certain funds increasing their investments in relatively more liquid investments, which would effectively mean that these funds would decrease their investments in relatively less liquid investments. If funds decrease their investments in relatively less liquid investments, the market for those investments could become even less liquid. This could discourage new issuances of similar investments and decrease the liquidity of relatively less liquid investments that are still outstanding. The impact of decreased investment by funds in relatively less liquid markets will depend on how much current investment in those markets is driven by the funds, which varies between markets. Further, these market effects could be partially offset if other opportunistic investors with greater capacity to hold less liquid investments are attracted to the market by any lower prices for these investments that result if funds decrease their holdings of less liquid investments.[1124] In addition, if the rule leads funds to better assess the liquidity risk associated with certain investments, any decrease in the prices of these investments could reflect more efficient pricing of the investments (that is, risk would be better reflected in asset prices than it is currently). Because funds currently are not required to report or disclose information concerning the liquidity of their investments, and because we cannot anticipate the highly liquid investment minimum that each fund would determine to be appropriate based on its liquidity risk or the extent to which the more specific 15% illiquid investment limit will apply to current fund holdings, it is difficult to predict the extent to which the rule could lead funds to modify their portfolio holdings, or whether such modifications would discourage the issuance of certain investment. As a result, we cannot quantify the potential costs discussed in this section. Commenters did not specifically object to our assessment of the costs related to decreased investment in illiquid assets in the proposed rule.

d. Effects on Efficiency, Competition, and Capital Formation

The liquidity risk management program requirement would require a fund to assess its liquidity risk and to determine its highly liquid investment minimum based on this risk assessment. For funds that do not already engage in liquidity risk management practices that meet the rule's requirements, the requirements should improve the

[1121] GFOA Comment Letter.

[1122] *See, e.g., supra* footnote 767 (discussing how index funds that use full replication strategies might need to move towards other techniques for tracking an index if full replication requires them to exceed the 15% illiquid asset limit).

[1123] *See infra* section IV.c.2.a (discussing the effects of the rule's disclosure requirements).

[1124] Relatively less liquid investments have a higher expected return compared to relatively more liquid investments, thereby compensating longer-term investors for holding relatively less liquid investments. *See* Yakov Amihud & Haim Mendelson, *Asset Pricing and the Bid-Ask Spread,* 17 J. Fin. Econ. 223 (1986), *available at http://pages.stern.nyu.edu/~lpederse/courses/LAP/papers/TransactionCosts/AmihudMendelson86.pdf.*

alignment between fund portfolio liquidity and fund liquidity needs. This improved alignment could enhance funds' ability to meet redemptions in a manner that mitigates potential dilution of shareholders' interests, and thus this improved alignment could be viewed as increasing efficiency to the extent that dilution is perceived as a drag on the ability of a fund's NAV to reflect the performance of its portfolio. Additionally, the requirement for each fund to classify the liquidity of its portfolio investments and publicly report the aggregated percentage of its portfolio assigned to each of the four classifications categories could increase allocative efficiency by assisting investors in making investment choices that better match their risk tolerances. However, this potential efficiency gain will only hold to the extent that these portfolio-level classification aggregates, which are based on non-public subjective assessments of investment liquidity, are comparable across funds. Furthermore, this potential efficiency gain will only be achieved if this classification sufficiently contrasts the tradeoff between portfolio liquidity and performance across funds.

By enhancing funds' liquidity risk assessment and risk management, the program requirement also could promote pricing efficiency in the sense that it could decrease the likelihood that a fund would be forced to sell portfolio investments under unfavorable circumstances in order to meet redemptions, potentially creating significant negative price pressure on those investments. If a fund's asset sales were to cause temporary changes in market prices unrelated to an investment's fundamentals, this could create a temporary pricing inefficiency. By decreasing the likelihood that these types of price movements would occur, the program requirement could decrease pricing inefficiency. However, the program requirement could negatively affect the efficient pricing of investments with lower liquidity if it indirectly discourages funds from investing in them (for example, if a fund were to decrease its holdings in investments that have lower liquidity if it determines, as a result of the fund's liquidity risk assessment, that its appropriate highly liquid investment minimum or the more specific 15% illiquid investment limit do not correspond with the fund's current portfolio composition). But as discussed above, this market effect could be partially offset if other investors are incentivized to buy relatively less liquid investments on account of any lower prices for these investments that result if funds decrease their holdings of these investments.[1125] Alternatively, any price decreases experienced as a result of decreased mutual fund investment could be considered efficient price adjustments given the reduction in liquidity of the investments.

If the liquidity risk management program requirement results in a material decrease in funds' investment in relatively less liquid investments, competition for these investments would initially be negatively affected. Under this scenario, the relatively less liquid investments in which funds formerly would have invested may become less liquid, since the number of current or potential market participants would be reduced. However, because this reduction in demand and liquidity results in larger illiquidity discounts and higher expected returns, some investors might become willing to invest in these assets, which in turn would partially offset the initial reduction in competition. As a corollary, if the liquidity risk management program requirement results in a material increase in funds' investment in highly liquid investments, competition for these investments would be positively affected. However, as funds increase their investments, the liquidity of those investments should increase and their liquidity premium decrease, which in turn could lead some investors to reduce their demand for these investments, partially offsetting the initial increase in competition. Relative to the proposal, the competitive effects of fund demand for highly liquid investments relative to lower liquidity investments should, if anything, be reduced because the rule only requires a fund to consider stressed conditions that are reasonably foreseeable in determining its minimum.

The size of a fund, or the family of funds to which a fund belongs, could have certain competitive effects with respect to the fund's implementation of its liquidity risk management program. If there are economies of scale in creating and administering multiple liquidity risk management programs, funds in large families would have a competitive advantage. For a fund in a smaller complex, however, a greater portion of the fund's (and/or adviser's [1126]) resources may be needed to create and administer a liquidity risk management program, which may increase barriers to entry in the fund industry, and lead to an adverse effect on competition. The size of a fund family also could produce competitive advantages or disadvantages with respect to a fund's use of products developed by third parties to assist in classifying the liquidity of their portfolio investments, or to assess the fund's liquidity risk. Funds in a large complex also could receive relatively more favorable pricing for third-party liquidity risk management tools, if the fund complex were to purchase discounted bulk services from the developer or receive relationship-based pricing discounts. To the extent that they choose to use liquidity risk management tools such as committed lines of credit and interfund lending,[1127] funds in larger complexes likewise could receive more favorable rates on committed lines of credit than funds in smaller complexes, and could have opportunities to establish interfund lending arrangements more easily than funds in smaller complexes.

Any changes in certain investments' or asset classes' liquidity that could indirectly result from the liquidity risk management program requirement (for example, as discussed above, if the number of buyers and sellers for certain investments becomes significantly reduced as a result of the program requirement) could also affect capital formation among issuers of these investments. Because lower asset liquidity implies higher illiquidity premiums and larger asset price discounts some firms and other issuers of securities could be discouraged from issuing new securities in asset classes that are associated with lower liquidity. If changes in liquidity are not equal across all asset classes, firms and other entities may begin to shift their capital structure (*e.g.,* begin to issue equity instead of debt) or to change the terms of certain securities that they issue in order to increase their liquidity (*e.g.,* by standardizing the terms of certain debt securities, or modifying the securities' terms to promote electronic trading).[1128]

Commenters did not specifically object to our assessment of the proposed rule's effects on efficiency, competition, and capital formation. With the exception of the potential efficiency changes due to modifications reflected in the adoption of a highly liquid investment minimum and the more specific 15% illiquid investment limit discussed above, our assessment of the

[1125] *See supra* section IV.C.1.c.

final rule's effects largely corresponds with those of the proposed rule.

e. Reasonable Alternatives

The Commission considered various alternatives to the individual elements of rule 22e–4. Those alternatives are outlined above in the sections discussing the rule elements.[1129] The following discussion addresses economically significant alternatives to rule 22e–4, which involve broader issues than the more granular alternatives to the individual rule elements discussed above.

Liquidity Risk Management Program and Scope

The Commission considered, but ultimately decided against, excluding certain types of funds from rule 22e–4.[1130] For example, the rule could have carved out funds with investment strategies that historically have entailed relatively little liquidity risk, or funds with relatively low asset levels. We are not excluding any subset of open-end funds, other than money market funds, from the scope of the rule, although we have tailored the rule for certain kinds of investment companies that present different liquidity risks (In-Kind ETFs, funds that primarily hold assets that are highly liquid investments, and UITs). Some funds with investment strategies that historically have involved little liquidity risk invest in assets that have lower liquidity, or in more liquid assets that can experience episodes of lower liquidity.[1131] To the extent that these types of investments create potential liquidity risk for a fund, excluding funds with investment strategies that have historically involved little liquidity risk could expose investors to more potential liquidity risk than they would face under the rule. Furthermore, investors in small funds could suffer from insufficient liquidity risk management just as investors in larger funds could. Indeed, staff analysis suggests that funds with relatively low total assets can experience greater flow volatility, including more volatility in unexpected flows, than funds with higher assets, which could indicate increased liquidity risk.[1132] The program requirement permits a fund to customize and calibrate its liquidity risk management program to reflect the liquidity risks that it typically faces (and that it could face in stressed market conditions). This flexibility is meant to result in programs whose scope, and related costs and burdens beyond the fixed cost of establishing a minimum liquidity risk management program, are appropriate to manage the actual liquidity risks facing a particular fund. For example, funds that primarily hold assets that are highly liquid investments are not required to adopt a highly liquid investment minimum because any benefits associated with this requirement as applied to these funds are less likely to justify the associated burdens.

Instead of adopting rule 22e–4, the Commission could issue guidance surrounding the assessment and management of liquidity risk, which would give funds more flexibility in managing liquidity risk and could reduce costs relative to the requirements of the rule. However, on account of the significant diversity in liquidity risk management practices that we have observed in the fund industry, we believe that the need exists for an enhanced comprehensive baseline requirement instead of only guidance for fund liquidity risk management.

Commenters suggested the rule could have also taken a purely principles-based approach instead of a prescriptive approach.[1133] The final rule is not a purely prescriptive rule; while it does specify certain standards, it provides funds with a substantial degree of flexibility in implementing those standards. That said, a purely principles-based approach that specified few or no requirements could give funds more flexibility in tailoring risk management programs to their needs and could reduce compliance costs, but it would be less certain to create a comprehensive baseline for fund liquidity risk management, which in turn would diminish the comparability (and thus the value) of information reported to the Commission and to the public about funds' liquidity. Under a purely principles-based approach, an investor with investments in multiple funds would be aware that those funds are all generally required to manage liquidity risk, but may not have sufficient clarity about how each of the funds may have chosen to interpret and implement general principles so as to permit the investor to understand how this variation across funds affects the liquidity risk to which the investor is exposed. Finally, funds are not prohibited from developing or maintaining their own, tailored risk management programs to the extent that they are supplemental to the baseline that the Commission's program requires.

The Commission considered proposing liquidity requirements similar to those imposed on money market funds—that is, the requirement to hold a specified minimum level of highly liquid investment holdings, and the ability to impose redemption fees and gates.[1134] The requirements imposed on money market funds, and the tools available to these funds to manage heavy redemptions, are specifically tailored to the assets held by money market funds and the behavior of money market fund investors.[1135] Imposing similar regulatory requirements on funds that are not money market funds would ignore significant differences between money market funds and other funds. We discuss the costs and benefits of requiring funds to hold a specified minimum level of highly liquid investments below (similar to the portfolio liquidity requirements applicable to money market funds). With respect to redemption fees, funds are already permitted to use them under existing regulations (up to a maximum fee of two percent), although those fees are largely used by certain funds to recoup costs incurred as a result of excessive short-term trading of mutual fund shares, rather than mitigating dilution arising from shareholder transaction activity generally, and are viewed as unpopular with investors and intermediaries. Redemption gates would allow funds to limit the potential dilution shareholders face in circumstances where they face extreme redemptions, but they would also impose constraints on shareholders' access to their assets in those situations, and commenters were not in favor of extending rule 22e–3 to permit funds to make broader use of suspensions of redemptions.[1136] In addition, funds that are not money market funds have not demonstrated the same risk of significant redemptions during times of

market stress that money market funds may face and which redemption gates are meant to prevent, implying that the benefits of gates are less applicable to funds that are not money market funds.[1137]

Classifying Portfolio Investment Liquidity

The Commission considered multiple alternatives to the rule's requirement that funds classify the liquidity of their portfolio investments, which establishes one component of a uniform baseline for fund liquidity risk management. As discussed above, commenters raised three primary structural alternatives to the proposed classification requirement: (i) A ''principles-based'' liquidity classification approach, where each fund would have to classify the liquidity of its portfolio assets, but the Commission would not require any specific classification scheme; [1138] (ii) a simplified version of the proposed classification system, with fewer classification categories based on shorter time projections than the proposal; [1139] and (iii) an approach with new classification categories based on qualitative distinctions in the market- and trading-related characteristics of different asset classes under different market conditions, which generally would rely on the Commission mapping different asset classes to each of these new classification categories.[1140]

A purely principles-based approach to classifying assets, as suggested by several commenters, would have the benefit of allowing each fund to tailor its classification scheme to the liquidity factors most relevant to the assets it invests in rather than imposing a one-size-fits-all approach that may be less applicable to some funds. However, as discussed above, this approach would not provide a uniform methodology for funds' liquidity assessment procedures and would not promote reasonably comparable reporting to the Commission and disclosure to the public about funds' portfolio liquidity.[1141] Instead, also as discussed above, we are largely adopting commenters' suggested approach of reducing the number of liquidity classifications from six to four.[1142]

The Commission considered but is not adopting commenters' alternative of having the Commission establish a fixed classification schema to which all funds must adhere—for example, an enumeration of asset classes and a mapping of those classes to a liquidity classification.[1143] This approach would have the benefit of producing liquidity classifications that are objectively comparable across funds, but the Commission may not be able to respond as quickly as market participants to dynamic market conditions that might necessitate changes to asset class liquidity classifications, and would be unable to account for determinants of investment liquidity that are fund-specific.

Relatedly, some commenters also suggested classification categories based on alternatives to the ''days-to-cash'' criterion of the proposed and final rule, including, in whole or in part, on the fraction of average daily trading volume (''ADTV'') that each position size corresponds to, the expected behavior of bid-ask spreads in a given asset, or more qualitative liquidity buckets (*e.g.,* ''converted to cash quickly under most circumstances'').[1144] Some of these more specific criteria may be appropriate for particular assets (*e.g.,* ADTV is a reasonable measure for exchange-traded securities), but do not apply to all assets (*e.g.,* bid-ask spreads are not readily available for some asset classes). Also, more qualitative criteria make it more difficult to compare classifications across funds relative to the ''days-to-cash'' approach in the final rule.

Highly Liquid Investment Minimum

The final rules require funds that do not primarily hold assets that are highly liquid investments to establish a highly liquid investment minimum as part of their liquidity risk management program and provides some flexibility by not prohibiting the acquisition of less liquid investments, but instead requiring a fund to report to the board and, in some cases, the Commission if it goes below its minimum. The first type of alternative the Commission considered with respect to this requirement concerns which investments satisfy a minimum, which could have varied along a spectrum from more liquid (*e.g.,* only cash would qualify as a highly liquid investment) to less liquid (*e.g.,* investments reasonably expected to convert to cash in the 7-day timeframe associated with open-ended fund redemption and settlement requirements would qualify). While there are various marginal benefits and costs associated with defining investments that satisfy the minimum at points along that spectrum—for example, cash is more liquid but does not provide any yield—the final rule aligns the definition of what investments are subject to the minimum with the definition of the first (most liquid) category of investments in the liquidity risk management program's liquidity classification requirement.[1145] This consistency in treatment means that fund advisers, investors, and the Commission can focus on a smaller number of clearly-defined concepts when broadly evaluating fund liquidity.

The Commission also considered whether to make the highly liquid investment minimum purely a target instead of a minimum. The proposed rule would have precluded funds from acquiring less liquid investments anytime they were below their highly liquid investment minimum. Commenters suggested this could lead to several potential costs, as discussed above regarding the rule's costs and benefits, including the possibility that it could lead to herding behavior among funds.[1146] Some commenters instead suggested that a target or range be used instead of a minimum, which could provide funds more flexibility in returning to their target without incurring unnecessary trading costs, as well as the ability to trade more opportunistically during periods of market stress.[1147] However, a target

[1137] *See* 2014 Money Market Fund Reform Adopting Release, *supra* footnote 43, at section III.A.1.

[1138] *See, e.g.,* AIMA Comment Letter; LSTA Comment Letter; Street Comment Letter; Wellington Comment Letter.

[1139] *See, e.g.,* Eaton Vance Comment Letter I; Interactive Data Comment Letter; Markit Comment Letter; Wells Fargo Comment Letter. Commenters generally suggested three, four, or five classification categories.

[1140] *See, e.g.,* BlackRock Comment Letter; MFS Comment Letter; Nuveen Comment Letter; CSRC Comment Letter.

[1141] *See supra* section III.C.6.

[1142] The Commission also could have, as described in the Proposing Release, required funds to classify each portfolio position as ''liquid'' or ''illiquid,'' but commenters did not support such an alternative, and we continue to believe that a two-category approach would be insufficiently nuanced to capture the full spectrum of portfolio position liquidity. *See also supra* section III.C.1.a for a more detailed discussion of commenter suggestions with respect to the number of liquidity classification categories.

[1143] For examples suggesting this approach *see, e.g.,* AFR Comment Letter; BlackRock Comment Letter; SRC Comment Letter.

[1144] *See* Nuveen Comment Letter; BlackRock Comment Letter; Dodge & Cox Comment Letter; SIFMA Comment Letter I.

[1145] *See* the Proposing Release, *supra* footnote 9 at n.730 and associated text for a further discussion of cash and ''seven day liquid assets'' as alternatives for a minimum. We did not receive explicit comments on the merits of which types of investments should satisfy a minimum.

[1146] For example, any market event that increases the value of the less liquid portion of many funds' portfolios could place them below the minimum, and could indirectly result in some funds selling less liquid investments at the same time to bring their allocations back in line with their minimums.

[1147] For comments discussing the costs and benefits of a target vs. a minimum, *see, e.g.,*

Continued

might have been interpreted as an ''average'' level of highly liquid investments funds should hold and, without further requirements such as board reporting, may not have provided a sufficient incentive to fund managers to ensure that the percentage of a fund's investments invested in relatively liquid investments is at (or above) the level deemed appropriate by the fund. The final rules strike a balance: Funds are not prohibited from acquiring less liquid investments if they go below their highly liquid investment minimum, but they must report any shortfall to their boards (and the Commission where required). This should reduce concerns regarding herding behavior,[1148] but does make it more burdensome for a fund to buy any assets that are not highly liquid investments opportunistically if the fund is at or below its highly liquid investment minimum, insofar as funds may not want to trigger their reporting obligation to their board, the Commission, or both.

Some commenters were generally opposed to a highly liquid investment minimum,[1149] and the final rule could have excluded this requirement altogether. Doing so would still require that funds manage liquidity risk appropriately but would provide even more flexibility in how that is achieved. However, the highly liquid investment minimum requires funds to directly consider the assets they need to have on hand to meet redemptions in a flexible manner to reduce dilution that may result from forced sales, and funds have flexibility in setting a minimum that is appropriate to the needs of their fund as well as adjusting the minimum dynamically to adapt to changing market conditions.[1150] We note that the final rule does not require funds that primarily hold assets that are highly liquid investments to establish a minimum.

The Commission also considered requiring a uniform highly liquid investment minimum for all funds. This alternative approach would have the advantage of being simple for investors to understand, easy for funds to apply, and simple for our examination staff to verify. However, this alternative would fail to account for notable differences between funds with respect to investment strategy, fund flow patterns, and other characteristics that contribute to funds' liquidity risk, which in turn would make it reasonable for funds' portfolios to have varying liquidity profiles. We believe that the fund-specific highly liquid investment minimum requirement will promote alignment of a fund's liquidity needs with the liquidity of fund investments, while still permitting funds reasonable flexibility in implementation. In light of the significant diversity within the fund industry, we believe that flexibility is appropriate to help minimize the potential costs to investors of the requirement. This approach still includes elements that will help our staff to assess whether funds are holding an appropriate level of assets that are highly liquid investments. Each fund will be required to maintain a written record of how its highly liquid investment minimum was determined, as well as copies of materials submitted to the fund's board in connection with the highly liquid investment minimum.[1151] One benefit of a Commission-determined uniform highly liquid investment minimum would be to ensure that funds do not set their minimum at an artificially low level (*e.g.,* 0) that is divorced from their liquidity risk. We believe that the requirement for a fund to consider certain specified factors in determining its minimum, as well as the recordkeeping and board review requirements discussed above, will help promote funds' establishing realistic minimums, and discourage inappropriately low or zero minimums.

Instead of requiring funds to determine and invest their assets in compliance with a highly liquid investment minimum, we could require funds to conduct stress tests of their own design assessing the extent to which the fund has a level of highly liquid investments necessary to cover possible levels of redemptions. This would have the benefit of granting a fund flexibility in determining whether its portfolio liquidity profile is appropriate given its liquidity needs. However, because the quality and comprehensiveness of funds' liquidity risk management currently varies significantly, we believe that requiring funds to have a highly liquid investment minimum is important in reducing the risk that funds will be unable to meet their redemption obligations, in minimizing dilution, and in elevating the overall quality of liquidity risk management across the fund industry. Also, we believe that it would be difficult to determine, depending on the level of discretion a fund would have in developing stress scenarios, whether these scenarios would accurately depict liquidity risk and lead funds to determine the appropriate level of portfolio liquidity they should hold. For example, if a fund's liquidity needs were generally high during normal periods, but were not correspondingly extreme during stress events, basing this fund's portfolio liquidity on the results of stress testing alone could cause a fund to hold too little liquidity during non-stressed periods. Therefore, we do not believe that a general stress testing requirement would be an adequate substitute for the highly liquid investment minimum requirement.

15% Illiquid Investment Limit

Instead of the adopted illiquid investment definition, the Commission could have codified a definition of illiquid investments that reflects the current 15% guideline. This approach would have had the benefit of already being accepted and understood by the industry, and would have entailed few additional implementation costs for funds. However, it would not have been harmonized with the rule's requirements with respect to other liquidity classifications, particularly the requirement that funds review at least monthly whether their investments are illiquid with respect to relevant market, trading, and investment-specific factors, and also incorporate market depth considerations into this process.[1152] To the extent that the rule's liquidity classification requirement results in funds more accurately assessing the amount of illiquid investments in their portfolios, funds may improve on their liquidity risk management under the rule as adopted than under a codification of the 15% guideline.

f. Comments on the DERA Study

We received substantial comments on the DERA Study from one commenter. The Commission has carefully considered these comments and adjusted our analysis where appropriate. In terms of broader concerns, the commenter suggested that the analysis in the DERA Study does not provide a strong basis for the specifics

Blackrock Comment Letter; Federated Comment Letter; Invesco Comment Letter; PIMCO Comment Letter.

[1148] For example, if an asset ceased to be a highly liquid investment, it could indirectly lead funds to sell that asset in order to meet their minimum. Coordinated selling could produce further downward pressure on the value of the investment. Some funds could be interested in purchasing such an investment if they viewed it to be undervalued and thus good for fund investors—which could also help counteract the downward pricing pressure caused by funds exiting their positions—but if such a purchase would cause them to violate their minimum, it would have been prohibited under the proposed rule.

[1149] *See, e.g.,* Invesco Comment Letter; Blackrock Comment Letter.

[1150] *See supra* footnote 638 and accompanying text.

[1151] *See* proposed rule 22e–4(c)(2)–(3).

[1152] *See supra* sections III.C.1.b and III.C.3.b.

of the rule.[1153] For example, the commenter asserts that the DERA Study's analysis does not provide a justification for funds sorting their assets into six liquidity categories and does not apply this classification in the DERA Study. The DERA Study's analysis was not designed to justify each policy choice made in the rule. Rather, the analysis in the DERA Study makes certain findings and reports certain empirical results designed to inform the Commission more generally about the current state of fund liquidity.

With respect to the proposal's interpretation of the DERA Study's results, the commenter expressed the concern that the results in the DERA Study provide only indirect evidence on the selling behavior of funds in response to redemptions. While a direct test would be preferable, such a test would require data on both daily fund flows and fund daily transactions, neither of which are available in sufficient detail for analysis. The commenter states that the DERA Study itself only shows that fund liquidity tends to decrease following outflows and that other endogenous factors, such as broad changes in market conditions due to macroeconomic events, could be causing changes in both fund liquidity and fund flows.[1154] To demonstrate its concerns about endogeneity, the commenter uses a vector autoregression (VAR) to present evidence that a proxy for market returns causes changes to both the Amihud liquidity of the S&P 500 and net U.S. equity mutual fund flows in a manner consistent with its alternative hypothesis that a fund's average Amihud liquidity may decrease due to an increase in market volatility rather than because of fund managers' trading behavior.[1155] The analysis performed in the DERA Study does control for broad changes in market liquidity at the fund class-level.[1156] To the extent that broad market effects drive variation in fund liquidity within a fund class in a way that is also correlated with fund flows, we acknowledge the commenter's concern about endogeneity and have modified our interpretation in the discussion above, but we also note that there is anecdotal evidence that supports this interpretation.[1157] With respect to the Amihud liquidity measure used in the study, the commenter states that the DERA Study's conclusion that a ''10% outflow increases the impact of selling $10 million of the asset-weighted average equity portfolio holding by 11 basis points'' is a key result supporting the proposal's hypothesis that funds sell their more liquid assets first to meet redemptions. We disagree that the specific economic interpretation of the Amihud measure cited by the commenter is necessary to support the hypothesis that funds tend to sell their more liquid assets: To the extent that the Amihud measure reflects the liquidity of underlying fund assets, a decline in the average Amihud liquidity of a fund's portfolio is consistent with the fund disproportionately selling its more liquid assets.

The commenter concludes that the analysis in the DERA Study does not demonstrate that funds are managing portfolios and redemptions in a manner that harms the interests of non-redeeming shareholders.[1158] We acknowledge that the analysis does not establish a direct link between redemptions and quantifiable harm to non-redeeming shareholders; as discussed above, it was designed to inform the Commission more generally about the current state of fund liquidity. The commenter also states the DERA Study's finding that municipal bond funds hold less cash following redemptions implies that a 40% outflow would be required to deplete the average municipal bond fund's cash holdings. We acknowledge the commenter's interpretation of the analysis, but note that the results do not imply that all municipal bond funds would necessarily require outflows of a similar magnitude to deplete a significant portion of their cash holdings.

The commenter makes several statements regarding results related to the volatility of fund flows. First, the commenter provides evidence that flow volatility declines with fund size, notes that the DERA Study's use of simple averages to calculate average flow volatility in a given fund category overstates the highly volatile flows of small funds, and shows that asset-weighted flow volatility measures are significantly smaller for all fund categories.[1159] We acknowledge that the simple average will overstate smaller funds relative to an asset-weighted average, but the opposite view holds too: Asset-weighted averages will understate flow volatility for small funds, and the rule is concerned with the potential liquidity risk problems at all funds. The commenter also states that the relatively higher flow volatility of alternative funds may simply be attributable to the fact that they are generally smaller in size (because small funds generally tend to have more volatile flows as a percentage of their assets) and that, as they have grown, the volatility of their flows has, if anything, decreased. We acknowledge that the flow volatility of alternative funds may be a function of their smaller size, but also note that small funds are also subject to the rule and that other fund categories, such as foreign bond funds, exhibit higher flow volatility despite being relatively larger in size. The commenter also notes that, as the DERA Study acknowledged, the predictability of fund flows is likely understated. The purpose of analyzing the predictability of flows in the analysis was to determine, using a simple model of fund flows, the extent which flow volatility was predictable and whether, after accounting for predictability, the unexpected component of flow volatility varied across fund types in the same way as total flow volatility. While fund managers may be able to predict a larger fraction of flow volatility, the evidence in the DERA Study supports the notion that unexpected flow volatility varies proportionally with total flow volatility, and the relative ranking of unexpected flow volatility by fund type is not likely to change with a better model of flows. The commenter also states that the DERA Study provides evidence that funds already successfully manage volatile flows.[1160] The proposal acknowledged that this evidence supports the view that funds do manage volatile flows by holding larger amounts of cash and liquid assets, and this evidence provides support for the rule's inclusion of flow volatility as a factor for funds to consider when managing risk.[1161] Finally, the commenter points out that, while the DERA Study finds smaller funds have more volatile flows, small funds may find it easier to trade assets with minimal price effects. We agree that small funds may have less price impact, but note that any fixed trading costs incurred via smaller trades will involve larger proportional trading costs.

The commenter also provides evidence on the relationship between fund flows and holdings of short-term

[1153] ICI Comment Letter II.

[1154] ICI Comment Letter II.

[1155] ICI Comment Letter II.

[1156] DERA Study, *supra* footnote 95, at 43–44. The model includes Lipper class fixed effects, year-quarter fixed effects, and interactions of those fixed effects. The year-quarter and interaction fixed effects should capture any broad changes in liquidity within different fund styles over time, which could be related to macroeconomic events.

[1157] *See, e.g., supra* footnote 71.

[1158] ICI Comment Letter II.

[1159] ICI Comment Letter II.

[1160] ICI Comment Letter II.

[1161] *See* Proposing Release, *supra* footnote 9, at n.631 and accompanying discussion.

assets for alternative strategy and high-yield bond funds. It finds no relationship between the two, asserting that the lack of a relationship shows funds are not systematically selling short-term assets to meet redemptions. However, this result is at the aggregate level, and does not necessarily preclude a relationship between the two quantities at the fund level for some funds. It also provides a fund-level analysis across high-yield bond funds in 5 separate months and also does not find a relationship between the two in four of the months. In one of the months, it does find statistically significant evidence that a decrease in short-term assets is associated with outflows, consistent with the DERA Study's finding. The commenter's inability to find a relationship is not evidence that there is no relationship *per se:* It is possible the commenter's test simply had low statistical power. To the extent that the commenter's evidence does support the claim that funds do not sell short-term assets in response to fund flows, the DERA Study used a different measure of liquidity and did not claim any evidence found using another measure, such as the short-term asset ratio used by the commenter, would produce the same result. More specifically, while funds may not sell their most liquid investments (which would be reflected in the short-term asset ratio used by the commenter), they could still be disproportionately selling their more liquid investments.

With respect to the liquidity measure used in the DERA Study, the commenter points out that it only uses a single measure of market liquidity (Amihud illiquidity) and claims that the measure is not sufficient to support the interpretations the proposal draws from the study.[1162] We acknowledge that the use of alternative measures could alter some of the results and interpretations in the DERA Study, but also emphasize that the DERA Study was intended to generally inform the Commission about the current state of fund liquidity, not to justify each policy choice made in the rule.

The commenter stated that the academic studies used in support of the DERA Study and the proposal are either (1) theoretical and ignore important institutional details or (2) based on empirical fund-level results which by their design cannot provide any commentary on market-wide concerns. With respect to the theoretical study cited in the proposal, it shows one mechanism by which mutual fund shareholders may have a first-mover incentive using a simplified model of the world for tractability; it is possible that in a model which captures more institutional details as proposed by the commenter—taxes, longer investor horizons, and reinvestment risk—this incentive is reduced or eliminated, but we are not aware of any other studies that reach such a conclusion. With respect to any empirical studies, the primary goal of the rule is to improve the fund-level management of liquidity and redemptions, which makes the cited fund-level academic studies relevant for the discussion. The commenter also points out that one of the empirical studies (Coval and Stafford), which provides evidence of negative price pressure due to forced selling by mutual funds, also states that the ex-ante probability of an equity mutual fund being affected by this risk is small because less than one percent of stocks are affected in a given quarter. The proposal did not claim that forced selling by mutual funds was a pervasive phenomenon, but did highlight that it is a possible risk that funds and their shareholders face.

2. Disclosure and Reporting Requirements Regarding Liquidity Risk and Liquidity Risk Management

a. Disclosure and Reporting Requirements

We are adopting amendments to Form N–1A as well as adopting new items to Form N–PORT, Form N–CEN, and adopting Form N–LIQUID, to enhance fund disclosure and reporting regarding liquidity and redemption practices. Specifically, amendments to Form N–1A will require a fund to disclose: (i) The number of days in which the fund typically expects to pay redemption proceeds to redeeming shareholders[1163] and (ii) the methods the fund typically expects to use to meet redemption requests in stressed and non-stressed market conditions.[1164]

New items on Form N–PORT will require a fund to confidentially disclose monthly: (i) The fund's highly liquid investment minimum and the number of days a fund's holdings in assets that are highly liquid investments fell below that minimum during a given reporting period;[1165] (ii) the liquidity classification of each investment as determined pursuant to rule 22e–4(b)(2)(i) including the determination of whether the investment qualifies as an illiquid investment, and (iii) the percentage of the fund's highly liquid investments that the fund has segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions in each of the other liquidity classification categories.[1166] Once per quarter, funds will be required to publicly disclose (with a 60-day delay): (i) The aggregated percentage of their portfolios invested in each of the four liquidity classification categories, but funds will not be required to publicly disclose the liquidity classification of each individual position;[1167] and (ii) the percentage of the fund's highly liquid investments that it has segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions in each of other liquidity classification categories.[1168]

New items on Form N–CEN will require a fund to disclose certain information regarding the use of committed lines of credit and interfund borrowing and lending.[1169] We have also adopted a new item on Form N–CEN that will require an ETF to report whether it qualifies as an In-Kind ETF.[1170]

The final form amendments differ from the proposal in several ways that may have potential economic consequences. In response to commenters' suggestions, the rule does not require funds to file credit agreements as part of Form N–1A. While Form N–PORT requires funds to report position-level liquidity classifications to the Commission, these classifications will not be publicly released. Instead, a fund will only be required to publicly disclose the aggregate percentage of the fund's holdings invested in each of the four liquidity classification categories and the percentage in each of the four liquidity classification categories of the fund's highly liquid investments that are segregated to cover derivatives transactions. The adopted rule also incorporates commenters' suggestions that the Commission be notified more quickly if a fund's assets that are illiquid investments exceed 15% of its net assets by requiring funds to file Form N–LIQUID indicating such a breach immediately after it occurs. With respect to the highly liquid investment minimum, a fund is required to report any decline below the minimum that lasts more than 7 consecutive calendar days to the Commission by filing Form N–LIQUID, whereas the proposal would have required that a fund not purchase

[1162] ICI Comment Letter II.

[1163] Item 11(c)(7) of Form N–1A.

[1164] Item 11(c)(8) of Form N–1A.

[1165] Item B.7 of Form N–PORT.

[1166] Item C.7 of Form N–PORT.

[1167] Item B.8 of Form N–PORT.

[1169] Item C.20 of Form N–CEN.

[1170] Item E.5 of Form N–CEN.

less liquid investments while below its minimum. Any significant economic effects of these changes are discussed below.

b. Benefits

The disclosure and reporting requirements will promote investor protection by improving the availability of information regarding funds' liquidity risks and risk management practices, as well as funds' redemption practices. As discussed above, funds' disclosures to shareholders regarding their redemption practices are currently varied in content and comprehensiveness.[1171] To the extent that the requirement for funds to disclose the number of days in which the fund will pay redemption proceeds to redeeming shareholders fosters competition among funds to minimize the timing of redemptions, and assuming funds are able to meet redemptions in the time advertised, such competition could potentially be to the benefit of investors. Relative to the proposal, final Form N–1A requires that funds disclose estimated payment times for each payment method, which should reduce any potential investor confusion associated with the complexity of estimates based on funds' distribution channels under the proposal.[1172]

While some funds voluntarily include disclosure regarding fund limitations on illiquid asset holdings that track the 15% guideline, a fund is not currently required to disclose information about the liquidity of its portfolio investments. In light of the relatively few disclosure requirements regarding funds' liquidity risks, liquidity risk management practices, and redemption practices, as well as the current inconsistency in funds' liquidity-related disclosures, we believe that the disclosure and reporting requirements would increase shareholders' and the Commission's understanding of particular funds' liquidity-related risks and redemption policies. This in turn should assist investors in making investment choices that better match their risk tolerances.

We note that, while Form N–PORT and Form N–CEN are designed primarily to assist the Commission and its staff, we believe that the information in these forms (including the liquidity-related information to be included in these forms) also will be valuable to investors and other potential users.[1173] In particular, we believe that both sophisticated institutional investors and third-party users that provide services to retail investors may find the publically disclosed liquidity-related information to be useful. And we believe that individual investors could benefit indirectly from the information collected on reports on Form N–PORT through analyses prepared by third-party service providers.

The liquidity-related information that funds will be required to provide on Form N–PORT and Form N–CEN will enhance investor protection by improving the Commission's ability to monitor funds' liquidity using relevant and targeted data. This monitoring will permit us to analyze liquidity trends in individual funds, and, to the extent that liquidity profiles are comparable across funds, among certain types of funds and the fund industry as a whole, as well as to better understand funds' liquidity risk management practices. As discussed in our release adopting rules and forms to modernize investment company reporting, the information we receive on these reports will facilitate the oversight of funds and will assist the Commission, as the primary regulator of such funds, to better effectuate its mission to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.[1174] Some commenters supported the reporting of asset-level liquidity classifications if such information was only provided to the Commission (*i.e.,* made non-public),[1175] although some did object to the disclosure regardless of whether or not it was made public.[1176]

Form N–LIQUID will complement rule 22e–4's enhanced focus on the limits on illiquid investments and the highly liquid investment minimum discussed above by requiring reporting to the SEC every time: (1) A fund's assets that are illiquid investments exceed 15% of its net assets (as well as additional reporting when the fund's assets that are illiquid investments fall back to or below 15% of its net assets); and (2) a fund's investments in highly liquid investments that are assets fall below its highly liquid investment minimum for more than 7 consecutive calendar days. This enhanced reporting could produce significant benefits. For example, the SEC's market monitoring capacity could be enhanced, in that multiple close-in-time filings by similar types of funds may be an indication of market stress in a market segment. Similarly, multiple close-in-time filings by the same fund may be an indication that the fund is failing to adequately manage its liquidity.

Form N–PORT as adopted does not require that the asset-level liquidity classifications be publicly disclosed in order to address commenter concerns about the potential costs of such disclosure (which are discussed in the costs section below). This change reduces some of the proposal's potential public disclosure benefits. Under the proposal, investors—by their own efforts or via third-party products—could have compared how assets were classified according to different funds' subjective approaches and resolved discrepancies across funds to arrive at more directly comparable fund liquidity profiles. Under the form as adopted, a fund will publicly disclose a new aggregate liquidity profile by reporting the percentage of its portfolio assigned to each of the four liquidity classification categories on Form N–PORT. This will provide a useful snapshot of fund liquidity to investors and will increase the amount of information available to investors about fund liquidity, but this snapshot may not be as informative as liquidity profiles under the proposed rule. The final form requires funds to confidentially report their investment liquidity classifications to the Commission via Form N–PORT. This maintains a major benefit of the proposal, allowing the Commission to monitor funds' liquidity levels and take action when significant aberrations are discovered.

Similarly, the final form amendments do not require the public disclosure of a fund's highly liquid investment minimum in order to address commenter concerns, but it is not likely that this change will significantly reduce the benefits of reporting this minimum: The primary investor protection benefit of reporting the minimum via Form N–PORT is to encourage funds' holding of highly liquid investments that correspond to the liquidity risks of their strategies. By confidentially reporting the minimum, a fund will give the Commission the capability to monitor whether the minimum is an outlier relative to other funds with similar investment strategies. The oversight role of the fund's board under rule 22e–4 is yet another safeguard in this respect.

Finally, Form N–PORT's requirement that funds disclose the percentage of the fund's highly liquid investments that it

has segregated to cover or pledged to satisfy margin requirements in connection with derivatives transactions that are classified as moderately liquid investments, less liquid investments, and illiquid investments, should more accurately reflect the amount of highly liquid investments that are available to manage a fund's liquidity risk. For example, without such a disclosure, investors might assume a fund whose highly liquid investments are all segregated to cover derivatives positions that are not highly liquid is better prepared to handle redemption requests than it actually is.

Because we cannot predict the extent to which the requirements will enhance investors' awareness of funds' portfolio liquidity and liquidity risk, influence investors' investments in certain funds, or increase the Commission's ability to protect investors, we are unable to quantify the potential benefits discussed in this section.

c. Costs

Funds will incur one-time and ongoing annual costs to comply with the disclosure and reporting requirements regarding liquidity and shareholder redemption practices. Commenters' responses to the estimates of these costs are discussed in the PRA discussion below, and we have updated all estimates in this section to reflect changes in the PRA.[1177]

We estimate that the one-time costs to comply with the amendments to Form N–1A will be approximately $324 per fund (plus printing costs).[1178] We estimate that each fund will incur an ongoing cost associated with compliance with the amendments to Form N–1A of approximately $81 each year to review and update the disclosure regarding redemptions.

The amendments to Form N–PORT will require funds to report on Form N–PORT the liquidity classification of each portfolio investment, and we estimate that the average one-time compliance costs associated with this reporting will be $15,576 per fund.[1179] Furthermore, we estimate that 9,347 funds will be required to file, on a monthly basis, additional information on Form N–PORT as a result of the amendments.[1180] Assuming that 35% of funds (3,271 funds) will choose to license a software solution to file reports on Form N–PORT in house,[1181] we estimate an upper bound on the initial annual costs to file the additional information associated with the amendments for funds choosing this option of $783 per fund[1182] with annual ongoing costs of $261 per fund.[1183] We further assume that 65% of funds (6,076 funds) will choose to retain a third-party service provider to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–PORT,[1184] and we estimate an upper bound on the initial costs to file the additional information associated with the amendments for funds choosing this option of $1,044 per fund[1185] with annual ongoing costs of $131 per fund.[1186]

Likewise, compliance with the amendments to Form N–CEN will involve ongoing costs as well as one-time costs. We estimate that 10,633 funds will be required to file responses on Form N–CEN as a result of the amendments to the form. We estimate that the one-time and ongoing annual compliance costs associated with providing additional responses to Form N–CEN as a result of the amendments will be approximately $162 per fund.[1187]

Based on these estimates, staff further estimates that the total one-time costs to comply with the disclosure and reporting requirements will be approximately $55 million for all funds that would file reports on Form N–PORT in house[1188] and approximately

[1177] *See infra* section V.

[1178] This estimate is based on the following calculation: 1 (1 hour to update registration statement disclosure about redemption procedures) × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $324. This figure incorporates the costs we estimated for each fund to update its registration statement to include the required disclosure about: (i) The number of days in which the fund will pay redemption proceeds to redeeming shareholders; and (ii) the methods the fund uses to meet redemption requests in stressed and non-stressed market conditions. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section V.F.

[1179] This estimate is based on the following calculation: (i) Project planning and systems design (24 hours × $264 (hourly rate for a senior systems analyst) = $6,336) and (ii) systems modification integration, testing, installation and deployment (30 hours × $308 (hourly rate for a senior programmer) = $9,240). $6,336 + $9,240 = $15,576. Estimates for drafting, integrating, implementing policies and procedures are addressed in the discussion of rule 22e–4. This figure incorporates the costs that we estimated associated with preparing the section of the fund's report on Form N–PORT that will incorporate the information that will be required under Item C.7. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section V.E. As discussed in section V.E *infra,* we believe that any external annual costs associated with filing Form N–PORT will be only incrementally affected by compliance with Item C.7 of Form N–PORT, and thus Item C.7 does not affect our previous estimates of these costs.

[1180] There were 10,633 open-end funds (excluding money market funds, and including ETFs) as of the end of 2015. *See* 2016 ICI Fact Book, *supra* footnote 11, at 22, 176, 183. As discussed in note 1253, infra, we assume that 75% of ETFs, or 1,196 ETFs, will identify as In-Kind ETFs, which are exempt from the classification requirement, thereby reducing the total number of funds filing classification information to 9,347.

[1181] This assumption tracks the assumption made in the Investment Company Reporting Modernization Adopting Release that 35% of funds will choose to license a software solution to file reports on Form N–PORT. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1182] This estimate is based upon the following calculations: $783 in internal costs = ($783 = 3 hours × $261 (blended hourly rate for senior programmer ($308), senior database administrator ($312), financial reporting manager ($266), senior accountant ($192), intermediate accountant ($157), senior portfolio manager ($306), and compliance manager ($283)). We do not anticipate any change to external annual costs as a result of the amendments. *See infra* at section V.E. The hourly wage figures in this and subsequent footnotes are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead.

[1183] This estimate is based upon the following calculations: $261 in internal costs ($261 = 1 hour × $261 (blended hourly rate for senior programmer ($308), senior database administrator ($312), financial reporting manager ($266), senior accountant ($192), intermediate accountant ($157), senior portfolio manager ($306), and compliance manager ($283)). We do not anticipate any change to external annual costs as a result of the amendments. *See infra* at section V.E.

[1184] This assumption tracks the assumptions made in the Investment Company Reporting Modernization Adopting Release that 65% of funds will choose to retain a third-party service provider to provide data aggregation and validation services as part of the preparation and filing of reports on Form N–PORT. *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1185] This estimate is based upon the following calculations: $1,044 in internal costs ($1,044 = 4 hours × $261 (blended hourly rate for senior programmer ($308), senior database administrator ($312), financial reporting manager ($266), senior accountant ($192), intermediate accountant ($157), senior portfolio manager ($306), and compliance manager ($283)). We do not anticipate any change to external annual costs as a result of the amendments.

[1186] This estimate is based upon the following calculations: $130.5 in internal costs ($130.5 = (0.5 hours × $261 (blended hourly rate for senior programmer ($308), senior database administrator ($312), financial reporting manager ($266), senior accountant ($192), intermediate accountant ($157), senior portfolio manager ($306), and compliance manager ($283)). We do not anticipate any change to external annual costs as a result of the amendments.

[1187] This estimate is based on the following calculation: 0.5 hour × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $162. This figure incorporates the costs that we estimated associated with preparing the section of the fund's report on Form N–CEN that will incorporate the information that will be required under Item C.20. We do not estimate any additional costs in connection with proposed Item E.5 of Form N–CEN because the new item only requires a yes or no response. We do not estimate any change to the external costs associated with Form N–CEN. The costs associated with these activities are all paperwork-related costs and are discussed in more detail *infra* at section V.E.

[1188] This estimate assumes that 35% of funds (3,271 funds) would choose to file reports on

$103 million for all funds that will use a third-party service provider to prepare and file reports on Form N–PORT.[1189] In addition, staff estimates that the total ongoing annual costs associated with the disclosure and reporting requirements would be approximately $1.6 million for all funds that file reports on Form N–PORT in house[1190] and approximately $2.3 million for all funds that use a third-party service provider to prepare and file reports on Form N–PORT.[1191]

Commenters expressed concern that it was not appropriate to require public disclosure of liquidity classifications by position via Form N–PORT, arguing that reporting position-level liquidity classifications creates significant costs which outweigh the potential benefits. For example, they suggested this disclosure could create potential litigation exposures, create investor confusion surrounding the perceived precision of the classifications, stifle innovation in liquidity risk management, or facilitate predatory trading and/or first-mover incentives, particularly during times of stress.[1192] We agree that funds could have encountered costs related to the above concerns if they were required to follow the disclosure regime contemplated in the original proposal. While investors already have access to fund portfolio positions, to the extent that position-level liquidity classifications could have been valuable to professional traders, predatory trading opportunities could have increased under the proposal. The final form mitigates these costs by requiring that a fund's most competitively-sensitive information—its individual position liquidity classifications—be filed confidentially with the Commission.

The costs of the adopted form amendments differ from the proposal in several ways. First, as discussed above, the Form N–PORT only requires that funds publicly disclose an aggregate liquidity profile, which should significantly mitigate many of the potential costs associated with the potential front running of mutual funds by sophisticated investors. Second, Form N–PORT requires a fund to disclose the percentage of the fund's highly liquid investments that it has segregated to cover or pledged to satisfy margin requirements in connection with derivatives transactions that are classified as moderately liquid investments, less liquid investments, and illiquid investments. By contrast, the proposed rules required a fund to pair each segregated asset with the derivative it was covering. The final rule's approach should lower costs relative to the proposal. We also are not requiring funds to file credit agreements as exhibits to Form N–1A. Many commenters objected to the proposed requirement to file line of credit agreements[1193] with some arguing that such filings would be unnecessary because lines of credit are often already disclosed under existing requirements of Form N–1A, in a fund's statement of additional information, in footnotes to fund financial statements, and potentially in Form N–CEN.[1194] In addition, commenters stated that public disclosure of line of credit agreements could (1) weaken their ability to negotiate credit terms;[1195] (2) make public proprietary and competitive information;[1196] and (3) discourage lending banks from granting certain lending terms to funds (out of a concern that terms granted would become standard in other lending agreements).[1197] Removing the requirement to file credit agreements as exhibits to Form N–1A should, if anything, lead to a reduction in the costs associated with filing that form, vis-à-vis the proposed rule.

The requirement to file Form N–LIQUID in three circumstances—if more than 15% of a fund's net assets are, or become, illiquid investments that are assets; if the fund's illiquid investments that are assets previously exceeded 15% of net assets and the fund determines that its illiquid investments that are assets have changed to be less than or equal to 15% of net assets; or if a fund's holdings in highly liquid investments that are assets fall below the fund's highly liquid investment minimum for more than 7 consecutive calendar days—may impose small incremental costs on funds. The adopted rule's liquidity risk management framework should help encourage funds to avoid exceeding the 15% illiquid investment limit, but in cases where they must file Form N–LIQUID, there will be incidental costs associated with filing the form itself. There will be similar incidental costs associated with filing Form N–LIQUID should a fund breach its highly liquid investment minimum for more than 7 consecutive calendar days. We estimate these costs as $1,745 per filing, and estimate the total number of filings to be roughly 90 per year, for an aggregate cost of $157,050.[1198] Finally, any potential indirect costs associated with filing the form, such as spillover effects or investor flight due to a breach, should be limited because Form N–LIQUID filings will not be publicly disclosed. Because Form N–LIQUID filings will be triggered by events that are part of a fund's periodic review of its investment classifications under rule 22e–4, the monitoring costs associated with Form N–LIQUID are included in our estimates of the compliance costs for rule 22e–4 above.

d. Effects on Efficiency, Competition, and Capital Formation

We believe the final rules' disclosure requirements could increase informational efficiency by providing additional information about the aggregate liquidity profile of funds' portfolios to investors and third-party service providers. To the extent that aggregate liquidity profiles—the percentages a fund holds in each of the four liquidity classification categories—are comparable across funds, this could assist investors in evaluating the risks associated with certain funds, which could increase allocative efficiency by assisting investors in making more informed investment choices that better match their risk tolerances. However, because each fund has discretion in how it defines both the asset type and liquidity classification of its portfolio positions, the publicly disclosed aggregation of these classifications may not be directly comparable across funds; in this case, allocative efficiency may not be enhanced, and, if fund liquidity profiles are misinterpreted as being comparable, efficiency could be reduced. Enhanced disclosure regarding funds' liquidity and liquidity risk

proposed Form N–PORT in house (*see infra* section V.D) and is based on the following calculation: 3,271 funds × $16,845 ($324 + $15,576 + $783 + $162) = $55,099,995.

1189 This estimate assumes that 65% of funds (6,076) would choose to file reports on proposed Form N–PORT with the assistance of third-party service providers (*see infra* section V.D) and is based on the following calculation: 6,076 funds × $17,106 ($324 + $15,576 + $1,044 + $ 162) = $103,850,526.

1190 This estimate is based on the following calculation: 3,271 funds × $502.63 ($79.63 + $261 + $162) = $1,644,102.73.

1191 This estimate is based on the following calculation: 6,071 funds × $372.63 ($79.63 + $131 + $162) = $2,262,236.73

1198 *See infra* footnotes 1280–1287 and surrounding discussion for more details on these estimates.

management practices could positively affect competition by permitting investors to choose whether to invest in certain funds based on this information. However, if investors were to move their assets among funds as a result of the disclosure requirements (for example, if the disclosure made clear that a certain fund was able to generate higher returns than its peers only because of high exposures to relatively less liquid positions, which then led investors with limited risk tolerance to move assets out of this fund), this could negatively affect the competitive stance of certain funds.

Increased investor awareness of funds' portfolio liquidity and liquidity risk management practices also could promote capital formation if investors find certain funds' liquidity profiles or risk management practices, or both, attractive, and this awareness promotes increased investment in these funds (assuming these investments consist of assets that were not otherwise invested in the capital markets) and in turn in the assets in which the funds invest. On the other hand, disclosure which reveals liquidity risk could negatively impact capital formation if the disclosure causes investors to perceive that some funds pose too great an investment risk. Investors could consequently decide not to invest in these funds or to decrease their investment in these funds. If these foregone investments are not reinvested elsewhere in capital markets, capital formation would be negatively affected. Conversely, to the extent that investors assume that funds investing in relatively less liquid investments could obtain a liquidity risk premium in the form of higher returns over some period of time, the potential for higher returns could draw certain investors to funds investing in relatively less liquid asset classes, which could positively affect capital formation. If investors shift their invested investments between funds based on liquidity, there could be capital formation effects stemming from increased (or decreased) investment in the funds' portfolio investments, even if the total capital invested in funds remains constant. For example, if fund investors move assets from an investment strategy that entails relatively high liquidity risk to one whose investment strategy involves relatively low liquidity risk, less liquid portfolio asset classes could experience an adverse impact on capital formation while the more liquid portfolio asset classes could experience a positive impact on capital formation, although the total capital invested in funds would remain constant.

Relative to the proposal, the final disclosure and reporting requirements do not significantly alter our assessment of the requirements' impact on efficiency, competition, and capital formation. The exclusion of individual portfolio position classification from public disclosure requirements reduces the potential efficiency and capital formation gains that might accrue from better informed investors: position-level data could have been used (directly or via third-party vendor applications) to construct a detailed breakdown of a fund's liquidity profile, but any public analysis is now limited to an aggregate liquidity profile for each fund to address the concerns of commenters regarding the potential costs of disclosing position-level liquidity data publicly. At the same time, to the extent position-level liquidity classifications could be valuable to professional traders, requiring less public disclosure may reduce any potential inefficiencies that could have resulted from predatory trading or front running associated with the disclosure of individual investment classifications.

In addition, while we are also imposing a new filing requirement via Form N–LIQUID, this form will be filed confidentially with the Commission and will only be necessary when a fund breaches the 15% illiquid investment limit, returns to compliance with the 15% illiquid investment limit, or breaches its highly liquid investment minimum for longer than 7 consecutive calendar days. Requiring notice to the Commission of these events may itself provide an incentive for funds to manage their liquidity in such a way as to avoid triggering the reporting obligation; where a reporting obligation is triggered, Form N–LIQUID will provide the Commission with timely information that may prompt the Commission to inquire further into the circumstances that gave rise to the requirement to file Form N–LIQUID. As discussed above, for example, if a number of similarly-situated funds each file a report in close temporal proximity to one another, or if a single fund files a series of reports, such information is likely to be of value to the Commission in taking appropriate action to protect investors, if required. If Form N–LIQUID provides an early warning of potential fund liquidity issues that is sufficiently timely and clear to permit Commission involvement when needed to respond to the potential for disruptive fund closures and associated negative consequences, including fund shareholder dilution and any spillover effects, Form N–LIQUID could enhance efficiency to the extent that negative price pressure on investments due to fire sales is avoided and, to the extent mutual fund investors associate this with lower liquidity risk in the mutual fund industry, Form N–LIQUID may promote capital formation.

e. Reasonable Alternatives

The following discussion addresses significant alternatives to the disclosure and reporting requirements. More detailed alternatives to the individual elements of the requirements are discussed in detail above.[1199]

The Commission considered requiring each fund to disclose information about the liquidity of its portfolio positions in the fund's prospectus or on the fund's Web site, in addition to in reports filed on Form N–PORT. For example, we could have required a fund to disclose its highly liquid investment minimum, or the percentage of the fund's portfolio invested in each of the liquidity categories specified under rule 22e–4(b)(2)(i), in its prospectus or on its Web site. This additional disclosure could further increase transparency with respect to funds' portfolio liquidity and liquidity-related risks. But this additional disclosure could inappropriately emphasize risks relating to a fund's portfolio liquidity over other significant risks associated with an investment in the fund. In addition, funds are not precluded from voluntarily disclosing any of the information contained in the rule's required disclosure forms on their Web sites, so it is likely more efficient to allow investor demand for this information to drive whether or not funds publicly disclose this information of their own volition.

Conversely, the Commission also considered both limiting and expanding the enhancements to funds' liquidity-related disclosures on Form N–PORT. As discussed above, we are sensitive to the possibility that any amendments to the form could facilitate front-running, predatory trading, and other activities that could be detrimental to a fund and its investors. We likewise carefully considered costs and benefits with respect to the new liquidity-related disclosures required under Form N–PORT and concluded that these disclosures appropriately balance related costs with the benefits that could arise from the ability of the Commission, and members of the public, to monitor and analyze the liquidity of individual funds, as well as liquidity trends within the fund industry.

[1199] *See supra* sections III.G.1.a, III.G.1.b, III.G.2.d, and III.G.3.c.

In response to the proposal, which would have required that certain position-level data be reported publicly (albeit with a 60 day delay) commenters suggested that the Commission require (1) no reporting of any kind, or (2) no public disclosure, in light of potential negative competitive effects of public reporting and the limited benefits of stale data in understanding current fund liquidity levels.[1200] The Commission considered these alternatives, but rejected the first alternative because it would have provided no useful information to investors to permit them to better understand their funds' liquidity profiles, and no useful information to the Commission to enable the Commission to better monitor funds' liquidity. With regard to the second alternative, providing no information to investors would have the same defect of not permitting investors the opportunity to assess and make investment decisions based on better information about funds' liquidity. However, recognizing commenters' concern about voluminous, stale data, the final form provides investors with aggregated information—the percentage of the funds' portfolio falling into each of the four liquidity categories—and reserves the more detailed data for confidential submission to the Commission. We believe the approach in the final form strikes an appropriate balance, by mitigating many of the concerns expressed by commenters while preserving significant benefits for investors (both directly, and through the Commission's improved ability to monitor funds).

V. Paperwork Reduction Act Analysis

A. Introduction

New rule 22e–4 contains ''collections of information'' within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[1201] In addition, the amendments to Form N–1A will impact the collections of information burden under those rules and form. The new reporting requirements on Form N–CEN and Form N–PORT will impact the collections of information burdens associated with these forms described in the Investment Company Reporting Modernization Adopting Release.[1202] New rule 30b1–10 and new Form N–LIQUID also contain a collection of information within the meaning of the PRA.[1203]

The titles for the existing collections of information are: ''Form N–1A under the Securities Act of 1933 and under the Investment Company Act of 1940, Registration Statement of Open-End Management Investment Companies'' (OMB Control No. 3235–0307). In the Investment Company Reporting Modernization Adopting Release, we submitted new collections of information for Form N–CEN and Form N–PORT.[1204] The titles for these new collections of information are: ''Form N–CEN Under the Investment Company Act, Annual Report for Registered Investment Companies'' and ''Form N–PORT Under the Investment Company Act, Monthly Portfolio Investments Report.''

We are submitting new collections of information for new rule 22e–4, new rule 30b1–10, and new Form N–LIQUID under the Investment Company Act of 1940. The titles for these new collections of information will be: ''Rule 22e–4 Under the Investment Company Act of 1940, Liquidity risk management programs,'' ''Rule 30b1–10 Under the Investment Company Act of 1940, Current report for open-end management investment companies,'' and ''Form N–LIQUID, Current Report, Open-end Management Investment Company Liquidity.'' The Commission is submitting these collections of information to the OMB for review in accordance with 44 U.S.C. 3507(d) and 5 CFR 1320.11. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number.

The Commission is adopting new rule 22e–4, new rule 30b1–10, new Form N–LIQUID, and amendments to Form N–1A. The Commission also is adopting new items to Form N–CEN and Form N–PORT. The new rules and amendments are designed to promote effective liquidity risk management throughout the open-end fund industry and enhance disclosure and Commission oversight of fund liquidity and shareholder redemption practices. We discuss below the collection of information burdens associated with these reforms. In the Proposing Release, the Commission solicited comment on the collection of information requirements and the accuracy of the Commission's statements in the Proposing Release.

B. Rule 22e–4

Rule 22e–4 requires a ''fund'' and an In-Kind ETF, each within the meaning of rule 22e–4,[1205] to establish a written liquidity risk management program that is reasonably designed to assess and manage the fund's or In-Kind ETF's liquidity risk. This program includes policies and procedures that incorporate certain program elements, including: (i) For funds, the classification of the liquidity of a fund's portfolio positions; (ii) for funds and In-Kind ETFs, the assessment, management, and periodic review of liquidity risk (with such review occurring no less frequently than annually); (iii) for funds that do not primarily hold assets that are highly liquid investments, the determination of and periodic review of the fund's highly liquid investment minimum and establishment of policies and procedures for responding to a shortfall of the fund's highly liquid investment minimum, which includes reporting to the fund's board of directors; and (iv) for funds and In-Kind ETFs, the establishment of policies and procedures regarding redemptions in kind, to the extent that the fund engages in or reserves the right to engage in redemptions in kind. The rule also requires board approval and oversight of a fund's or In-Kind ETF's liquidity risk management program and recordkeeping. Rule 22e–4 also requires a limited liquidity review, under which a UIT's principal underwriter or depositor determines, on or before the date of the initial deposit of portfolio securities into the UIT, that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues and retains a record of such determination for the life of the UIT and for five years thereafter.

The requirements under rule 22e–4 that a fund and In-Kind ETF adopt a written liquidity risk management program, report to the board, maintain a written record of how the highly liquid investment minimum was determined and written policies and procedures for responding to a shortfall of the fund's highly liquid investment

[1202] *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1203] *See* rule 30b1–10 requiring certain funds to file Form N–LIQUID.

[1204] *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1205] The term ''funds'' is defined under rule 22e–4(a)(4) to mean an open-end management investment company that is registered or required to be registered under section 8 of the Act and includes a separate series of such an investment company, *but does not include* a registered open-end management investment company that is regulated as a money market fund under § 270.2a–7 or an In-Kind ETF, as defined under rule 22e–4(a)(9).

minimum, which includes reporting to the fund's board of directors (for funds that do not primarily hold highly liquid investments), establish written policies and procedures regarding how the fund will engage in redemptions in kind, and retain certain other records are all collections of information under the PRA. In addition, the requirement under rule 22e–4 that the principal underwriter or depositor of a UIT assess the liquidity of the UIT on or before the date of the initial deposit of portfolio securities into the UIT and retain a record of such determination for the life of the UIT, and for five years thereafter, is also a collection of information under the PRA. The respondents to rule 22e–4 will be open-end management investment companies (including, under certain circumstances, In-Kind ETFs but excluding money market funds), and the principal underwriters or depositors of UITs under certain circumstances.

1. Preparation of Written Liquidity Risk Management Program

We believe that some open-end funds regularly monitor the liquidity of their portfolios as part of the portfolio management function, but they may not have written policies and procedures regarding liquidity management. Rule 22e–4 requires funds and In-Kind ETFs to have a written liquidity risk management program. We believe such a program will minimize dilution of shareholder interests by promoting stronger and more effective liquidity risk management across open-end funds and will reduce the risk that a fund or In-Kind ETF will be unable to meet redemption obligations.

In the Proposing Release, we estimated that funds within 867 fund complexes would be subject to rule 22e–4.[1206] Compliance with rule 22e–4 would have been mandatory for all such funds. We further estimated that a fund complex would incur a one-time average burden of 40 hours associated with documenting the liquidity risk management programs adopted by each fund within the complex. Under the proposal, rule 22e–4 would have required fund boards to approve the liquidity risk management program and any material changes to the program, and we estimated a one-time burden of nine hours per fund complex associated with fund boards' review and approval of the funds' liquidity risk management programs and preparation of board materials. Amortized over a 3-year period, we estimated this would be an annual burden per fund complex of about 16 hours. Accordingly, we estimated that the total burden for initial documentation and review of funds' written liquidity risk management program would be 42,483 hours.[1207] We also estimated that it would cost a fund complex approximately $38,791 to document, review and initially approve these policies and procedures, for a total cost of approximately $33,631,797.[1208]

We did not receive any comments on the estimated hour and costs burdens associated with the overall preparation of written liquidity risk management programs under rule 22e–4 discussed above. We did, however, receive comments on the costs associated with the classification of the liquidity of a fund's portfolio positions, which we address below in connection with Form N–PORT. The Commission has modified the estimated increase in annual burden hours and total time costs that will result from the new written liquidity risk management requirements of rule 22e–4 based on certain modifications made to rule 22e–4 and updates to the industry data figures that were utilized in the Proposing Release. Based upon our review of industry data, we estimate that funds within 873 fund complexes would be subject to rule 22e–4,[1209] updated from 867 in our proposal. Compliance with rule 22e–4 will be mandatory for all such funds and In-Kind ETFs, with certain program elements applicable to certain funds within a fund complex based upon whether the fund is an In-Kind ETF or does not primarily hold assets that are highly liquid investments, as noted above. We discuss mandatory compliance with rule 22e–4 with respect to principal underwriters and depositors of UITs in section V.B.5. below.

The Commission continues to estimate that a fund complex will incur a one-time average burden of 40 hours associated with documenting the liquidity risk management programs adopted by each fund within a fund complex. In light of the requirement that a fund subject to the highly liquid investment minimum requirement adopt and implement policies and procedures for responding to a shortfall of the fund's highly liquid investment minimum, and responding to any potential excesses of the 15% illiquid asset limit, both of which include reporting to the fund's board of directors, we estimate a one-time burden of 10 hours, rather than 9 hours, per fund complex associated with fund boards' review and approval of the funds' liquidity risk management programs and preparation of board materials. Amortized over a 3-year period, we estimate this will be an annual burden per fund complex of about 16.67 hours. Accordingly, we estimate that the total burden for initial documentation and review of funds' written liquidity risk management program will be 43,650 hours.[1210] We also estimate that it will cost a fund complex approximately $41,467.5 to document, review, and initially approve these policies and procedures, for a total cost of approximately $36,201,127.5.[1211]

2. Reporting Regarding the Highly Liquid Investment Minimum

Rule 22e–4 requires any fund that does not primarily hold assets that are highly liquid investments to determine

[1206] *See* Proposing Release, *supra* footnote 9, at n.819 and accompanying text. This estimate excluded ETFs and UITs. *See also* 2016 ICI Fact Book, *supra* footnote 11, at Fig. 1.8.

[1207] This estimate was based on the following calculation: (40 + 9) hours × 867 fund complexes = 42,483 hours.

[1208] These estimates were based on the following calculations: 20 hours × $301 (hourly rate for a senior portfolio manager) = $6,020; 20 hours × $455.5 (blended hourly rate for assistant general counsel ($426) and chief compliance officer ($485)) = $9,110; 5 hours × $4,465 (hourly rate for a board of 8 directors) = $22,325; 4 hours (for a fund attorney's time to prepare materials for the board's determinations) × $334 (hourly rate for a compliance attorney) = $1,336. $6,020 + $9,110 + $22,325 + $1,336 = $38,791; $38,791 × 867 fund complexes = $33,631,797. The hourly wages used are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. The staff previously estimated in 2009 that the average cost of board of director time was $4,000 per hour for the board as a whole, based on information received from funds and their counsel. Adjusting for inflation, the staff estimates that the current average cost of board of director time is approximately $4,465.

[1209] *See* 2016 ICI Fact Book, *supra* footnote 11, at Fig. 1.8.

[1210] This estimate is based on the following calculation: (40 +10) hours × 873 fund complexes = 43,650 hours.

[1211] These estimates are based on the following calculations: 20 hours × $306 (hourly rate for a senior portfolio manager) = $6,120; 20 hours × $463 (blended hourly rate for assistant general counsel ($433) and chief compliance officer ($493)) = $9,260; 5.5 hours × $4,465 (hourly rate for a board of 8 directors) = $24,557.5; 4.5 hours (for a fund attorney's time to prepare materials for the board's determinations) × $340 (hourly rate for a compliance attorney) = $1,530. $6,120 + $9,260 + $24,557.5 + $1,530 = $41,467.5; $41,467.5 × 873 fund complexes = $36,201,127.5. The hourly wages used are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. The staff previously estimated in 2009 that the average cost of board of director time was $4,000 per hour for the board as a whole, based on information received from funds and their counsel. Adjusting for inflation, the staff estimates that the current average cost of board of director time is approximately $4,465.

a highly liquid investment minimum for the fund, which must be reviewed at least annually, and may not be changed during any period of time that a fund's assets that are highly liquid investments are below the determined minimum without approval from the fund's board of directors.[1212] The fund's investment adviser or officers designated to administer the liquidity risk management program must provide a written report to the fund's board at least annually that describes a review of the adequacy and effectiveness of the fund's liquidity risk management program, including, if applicable, the operation of the highly liquid investment minimum.[1213] In addition, the fund must adopt and implement policies and procedures for responding to a shortfall of the fund's assets that are highly liquid investments below its highly liquid investment minimum, which must include reporting to the fund's board of directors with a brief explanation of the causes of the shortfall, the extent of the shortfall, and any actions taken in response, and, if the shortfall lasts more than 7 consecutive calendar days, an explanation of how the fund plans to come back into compliance with its minimum within a reasonable period of time.[1214]

Similar to the highly liquid investment minimum, in the Proposing Release, we proposed that funds be required to establish a three-day liquid asset minimum as part of a fund's liquidity risk management program, subject to board review, and we estimated that, for each fund complex, compliance with this reporting requirement would entail: (i) Five hours of portfolio management time, (ii) five hours of compliance time, (iii) five hours of professional legal time and (iv) 2.5 hours of support staff time, requiring an additional 17.5 burden hours at a time cost of approximately $5,193 per fund complex to draft the required report to the board.[1215] We estimated that the total burden for preparation of the board report would be 15,173 hours, at an aggregate cost of $4,502,331.[1216]

We received several comments addressing, in general, the potential costs associated with a fund establishing and implementing a liquid asset minimum. To minimize the costs of implementing a liquid asset minimum, one commenter recommended that funds that have demonstrated a history of investing in only three-day liquid assets be excluded from the proposed three-day liquid asset minimum requirements and thus not incur the costs of related board reporting requirements.[1217] Other commenters characterized the program requirements under the proposal as a one-size-fits-all approach to liquidity risk management and expressed the belief that such requirements were expensive and unsuitable for many funds.[1218]

As discussed above, the Commission has modified the proposed three-day liquid asset minimum requirement to a highly liquid investment minimum requirement that is tailored to apply only to funds that do not primarily hold highly liquid investments, thereby potentially reducing the number of funds required to establish, maintain, and report a highly liquid investment minimum. In addition, the final rule retains a role for the board in overseeing the fund's liquidity risk management program, but eliminates certain of the more specific and detailed approval requirements originally proposed.[1219] Unlike the proposal, however, rule 22e–4 requires a fund that is subject to the highly liquid investment minimum requirement to also adopt and implement policies and procedures to respond to a shortfall of assets that are highly liquid investments below the fund's highly liquid investment minimum, which includes reporting to the fund's board of directors.

In light of these modifications, we estimate that the burdens associated with board reporting will decrease overall in comparison to the proposal due to the elimination of certain board oversight requirements originally proposed and the potential reduction in the number of funds that would require board oversight of a highly liquid investment minimum. Therefore, we have modified the estimated annual burden hours and total costs that will result from the highly liquid investment minimum requirement under rule 22e–4.[1220] We estimate that, for each fund complex, compliance with the reporting requirement would entail: (i) 4 Hours, rather than five hours, of portfolio management time; (ii) 4 hours, rather than five hours, of compliance time; (iii) 4 hours, rather than five hours, of professional legal time; and (iv) 2 hours, rather than 2.5 hours, of support staff time, requiring an additional 14 burden hours at a time cost of approximately $4,224 per fund complex to draft the required report to the board.[1221] We estimate that fund complexes will have at least one fund that will be subject to the highly liquid investment minimum requirement. Thus, we estimate that 873 fund complexes will be subject to this requirement under rule 22e–4 and that the total burden for preparation of the board report associated will be 12,222 hours, at an aggregate cost of $3,687,552.[1222]

3. Recordkeeping

Final rule 22e–4 requires a fund or In-Kind ETF to maintain a written copy of the policies and procedures adopted pursuant to its liquidity risk management program for five years in

[1212] *See* rule 22e–4(b)(1)(iii)(A).

[1213] *See* rule 22e–4(b)(3)(iii).

[1214] *See* rule 22e–4(b)(1)(iii)(A)(3).

[1215] This estimate was based on the following calculation: 5 hours × $301 (hourly rate for a senior portfolio manager) = $1,505; 5 hours × $283 (hourly rate for compliance manager) = $1,415; 5 hours × $426 (hourly rate for assistant general counsel) = $2,130; and 2.5 hours × $57 (hourly rate for general clerk) = $143. $1,505 + $1,415 + $2,130 + $143 = $5,193. The hourly wages used were from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. The hourly wage used for the general clerk was from SIFMA's Office Salaries in the Securities Industry 2013, modified to account for an 1800-hour work-year and multiplied by 2.93 to account for bonuses, firm size, employee benefits, and overhead.

Because, under the proposal, each fund within a fund complex would be required to determine its own three-day liquid asset minimum, this estimate assumed that the report at issue would incorporate an assessment of the three-day liquid asset minimum for each fund within the fund complex.

[1216] These estimates were based on the following calculations: 867 fund complexes × 17.5 hours = 15,173 hours; and $5,193 × 867 fund complexes = $4,502,331.

[1217] *See* CFA Comment Letter.

[1218] *See, e.g.,* Dechert Comment Letter; Federated Comment Letter.

[1219] *See supra* section III.H.3.

[1220] Under the proposal, because each fund within a fund complex would have been required to determine its own three-day liquid asset minimum, the estimate under the proposal assumed that the report at issue would incorporate an assessment of the three-day liquid asset minimum for each fund within the fund complex. As adopted, rule 22e–4 only requires the assessment of the highly liquid investment minimum for funds that do not primarily hold assets that are highly liquid investments.

[1221] The estimate is based on the following calculation: 4 hours × $306 (hourly rate for a senior portfolio manager) = $1,224; 4 hours × $288 (hourly rate for compliance manager) = $1,152; 4 hours × $433 (hourly rate for assistant general counsel) = $1,732; and 2 hours × $58 (hourly rate for general clerk) = $116. $1,224 + $1,152 + $1,732 + $116 = $4,224. The hourly wages used are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead. The hourly wage used for the general clerk is from SIFMA's Office Salaries in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead.

[1222] These estimates are based on the following calculations: 873 fund complexes × 14 hours =12,222 hours; and $4,224 × 873 fund complexes = $3,687,552.

an easily accessible place.[1223] The rule also requires a fund to maintain copies of materials provided to the board in connection with its initial approval of the liquidity risk management program and any written reports provided to the board, for at least five years, the first two years in an easily accessible place.[1224] If applicable, a fund must also maintain a written record of how its highly liquid investment minimum and any adjustments to the minimum were determined, as well as any reports to the board regarding a shortfall in the fund's highly liquid investment minimum, for five years, the first two years in an easily accessible place.[1225] The retention of these records would be necessary to allow the staff during examinations of funds to determine whether a fund is in compliance with the liquidity risk management program requirements.

Under the proposal, the recordkeeping requirements were substantially similar to those being adopted. In the Proposing Release, we estimated that the burden to retain these records would be five hours per fund complex, with 2.5 hours spent by a general clerk and 2.5 hours spent by a senior computer operator, with an estimated time cost per fund complex of $361.[1226] We also estimated that the total burden for recordkeeping related to the liquidity risk management program would be 4,335 hours, at an aggregate cost of $312,987.[1227]

We did not receive any comments on the estimated hour and cost burdens associated with the recordkeeping requirements of rule 22e–4. The Commission has modified the estimated increase in annual burden hours and total time costs that will result from these requirements in light of modifications to change those subject to the requirements to funds and In-Kind ETFs and to require them to maintain reports to boards concerning a shortfall of the fund's highly liquid investment minimum and the new requirement to retain records submitted to the board related to shortfalls of the minimum. We believe that, on an annual basis, the burden to retain records in connection with rule 22e–4 will be four hours, rather than five hours per fund complex, with 2 hours, rather than 2.5 hours, spent by a general clerk, and 2 hours, rather than 2.5 hours, spent by a senior computer operator, with an estimated time cost per fund complex of $292, rather than $361, based on updated data concerning funds and fund personnel salaries.[1228] In addition, we estimate that the total burden for recordkeeping related to the liquidity risk management program requirement of rule 22e–4 will be 3,492 hours, rather than 4,335 hours, at an aggregate cost of $254,916, rather than $312,987.[1229]

4. Estimated Total Burden for Open-End Funds

Amortized over a three-year period, we estimate that the hour burdens and time costs associated with rule 22e–4 for open-end funds, including the burden associated with (1) funds' initial documentation and review of the required written liquidity risk management program, (2) reporting to a fund's board regarding the fund's highly liquid investment minimum, and (3) recordkeeping requirements will result in an average aggregate annual burden of 26,190 hours, rather than 28,611 hours as proposed, and average aggregate time costs of $14,780,326.5, rather than $14,431,215 as proposed.[1230] We continue to estimate that there are no external costs associated with this collection of information.

5. UIT Liquidity Determination

As discussed above, we recognize that UITs may in some circumstances be subject to liquidity risk (particularly where the UIT is not a pass-through vehicle and the sponsor does not maintain an active secondary market for UIT shares). We believe that UITs may not have written policies and procedures regarding liquidity management and are adopting a new requirement under rule 22e–4 with respect to UITs. On or before the date of initial deposit of portfolio securities into a registered UIT, the UIT's principal underwriter or depositor is required to determine that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues, and maintain a record of that determination for the life of the UIT and for five years thereafter. The retention of these records would be necessary to allow the staff during examinations to determine whether a UIT is in compliance with the liquidity risk assessment required under rule 22e–4. This assessment would occur on or before the initial deposit of portfolio securities of a new UIT and thus would only need to occur once. Maintenance of the records would be required for the life of the UIT and for five years thereafter.

We estimate that 1615 newly registered UITs will be subject to the UIT liquidity determination requirement under rule 22e–4 each year.[1231] Compliance with rule 22e–4(c) will be mandatory for all principal underwriters or depositors of such UITs. We estimate that the principal underwriter or depositor of a UIT will incur a one-time average burden of 10 hours to document its determination that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues. Amortized over a 3 year period, we estimate this would be an annual burden per UIT of about 3 hours. Accordingly, we estimate that the total burden for the initial documentation and review of funds' written liquidity risk management program would be 16,150 hours.[1232] We also estimate that it will cost the principal underwriter or depositor of a UIT approximately $2,466 to perform and document this review, for a total cost of approximately $3,982,590.[1233]

We estimate that the burden to retain these records will be two hours per UIT, with 1 hour spent by a general clerk and 1 hour spent by a senior computer operator, with an estimated time cost

[1223] *See* rule 22e–4(b)(4)(i).

[1224] *See* rule 22e–4(b)(4)(ii).

[1225] *See* rule 22e–4(b)(4)(iii).

[1226] This estimate was based on the following calculations: 2.5 hours × $57 (hourly rate for a general clerk) = $143; 2.5 hours × $87 (hour rate for a senior computer operator) = $218. $143 + $218 = $361.

[1227] This estimate was based on the following calculations: 867 fund complexes × 5 hours = 4,335 hours. 867 fund complexes × $361 = $312,987.

[1228] This estimate is based on the following calculations: 2 hours × $58 (hourly rate for a general clerk) = $116; 2 hours × $88 (hour rate for a senior computer operator) = $176. $116 + $176 = $292.

[1229] This estimate is based on the following calculations: 873 fund complexes × 4 hours = 3,492 hours. 873 fund complexes × $292 = $254,916.

[1230] These estimates are based on the following calculations: 43,650 hours (year 1) + (2 × 12,222 hours) (years 2 and 3) + (3 × 3,492 hours) (years 1, 2 and 3) ÷ 3 = 26,190 hours; $36,201,127.5 (year 1) + (2 × $3,687,552) (years 2 and 3) + (3 × $254,916) (years 1, 2 and 3) ÷ 3 = $14,780,326.5.

[1231] This estimate is based upon staff review of new UIT registration statements and semi-annual reporting on Form N–SAR filed with the Commission and Monthly Unit Investment Trust Data released by the Investment Company Institute, *available at https://www.ici.org/research/stats*, for the months of January through December of 2015.

[1232] This estimate is based on the following calculation: 10 hours × 1615 new UITs = 16,150 hours.

[1233] These estimates are based on the following calculations: 5 hours × $308 (hourly rate for a senior programmer) = $1540; 2 hours × $463 (blended hourly rate for assistant general counsel ($433) and chief compliance officer ($493)) = $926. $1,540 + $926 = $2,466; $2,466 × 1615 estimated new UITs = $3,982,590. The hourly wages used are from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and inflation, and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead.

per UIT of $146.[1234] We also estimate that the total burden for recordkeeping related to the liquidity risk management program will be 3,230 hours, at an aggregate cost of $235,790.[1235] We estimate that there are no external costs associated with this collection of information.

C. Form N–PORT

Today, the Commission is adopting Form N–PORT, which will require funds to report information within thirty days after the end of each month about their monthly portfolio holdings to the Commission in a structured data format.[1236] Preparing a report on Form N–PORT is mandatory and a collection of information under the PRA, and the information required by Form N–PORT will be data-tagged in XML format. Except for certain reporting items specified in the form, responses to the reporting requirements will be kept confidential for reports filed with respect to the first two months of each quarter; the third month of the quarter will not be kept confidential, but made public sixty days after the quarter end.

In the Investment Company Reporting Modernization Adopting Release, we estimate that, for the 35% of funds that would file reports on Form N–PORT in house, the per fund average aggregate annual hour burden will be 144 hours per fund, and the average cost to license a third-party software solution will be $4,805 per fund per year.[1237] For the remaining 65% of funds that would retain the services of a third party to prepare and file reports on Form N–PORT on the fund's behalf, we estimate that the average aggregate annual hour burden will be 125 hours per fund, and each fund will pay an average fee of $11,440 per fund per year for the services of third-party service provider. In sum, we estimate that filing reports on Form N–PORT will impose an average total annual hour burden of 144 hours on applicable funds, and all applicable funds will incur on average, in the aggregate, external annual costs of $103,787,680, or $9,118 per fund.[1238]

Today, we are also adopting amendments to Form N–PORT concerning liquidity information that require a fund to report information about the fund's highly liquid investment minimum (if applicable),[1239] the liquidity classification for each portfolio investment among four liquidity categories (with the fourth category covering investments that qualify as ''illiquid investments'' under the 15% illiquid investment limit),[1240] certain information on the percentage of the fund's highly liquid investments that is segregated to cover, or pledged to satisfy margin requirements in connection with, fund's derivatives transactions in each of the other liquidity categories,[1241] and the aggregate percentage of the fund representing each of the four liquidity categories.[1242] Unlike the proposal, the amendments adopted today will not require funds to indicate the dollar amount attributable to different classifications for different portions within a given holding.[1243] We believe that requiring funds to report information about the liquidity of portfolio investments will enhance the Commission's ability to assess liquidity risk in the open-end fund industry and assist in our regulatory oversight efforts. Moreover, we believe that this information will help investors and other potential users of information on Form N–PORT better understand the liquidity risks in funds.

1. Liquidity Classification

Under rule 22e–4(b)(1)(ii), an open-end management investment company (other than a money market fund or an In-Kind ETF) is required as part of its liquidity risk management program to classify the liquidity of each of its portfolio investments (including each of the fund's derivatives transactions) as a highly liquid investment, moderately liquid investment, less liquid investment, or illiquid investment.

Under the proposal, all open-end funds would be required to classify portfolio assets under a days-to-cash framework and report such classifications on Form N–PORT.[1244] In the Proposing Release, we estimated that 8,734 funds would be required to file, on a monthly basis, additional information on Form N–PORT as a result of the proposed amendments to N–PORT to require funds provide additional liquidity information.[1245] We stated our expectation that funds would incur a one-time internal burden to initially classify a fund's portfolio securities and program existing systems to conduct the ongoing classifications and reviews required under the proposal for reporting purposes. We estimated that each fund would incur an average one-time burden of 54 hours at a time cost of $15,330.[1246] Amortized over a three-year period, we estimated that this would result in an average annual hour burden of approximately 18 burden hours and a time cost of $5,110.[1247]

Many commenters expressed concerns over the operational costs associated with the assignment of liquidity classifications and the reporting of this information on Form N–PORT. Several commenters expressed the belief that the liquidity classification requirement could impose significant direct costs to a fund and its shareholders (*e.g.,* new operational systems, trade order management systems, and other processes to handle complex classification schemes), which commenters anticipated to be in excess of the Commission's estimates under the proposal.[1248] One commenter estimated that the costs associated with building a liquidity classification system could range in the millions of dollars for fund complexes that have large numbers of portfolio positions.[1249] Another commenter estimated $2 million in initial implementation costs and more than $650,000 in annual recurring costs in connection with automating the classification process for over 63,000 portfolio positions.[1250] This commenter also expressed the belief that substantial resources, including additional investment professionals and

[1234] This estimate is based on the following calculations: 1 hour × $58 (hourly rate for a general clerk) = $58; 1 hours × $88 (hour rate for a senior computer operator) = $88. $58 + 88 = $146.

[1235] This estimate is based on the following calculations: 1615 UITs × 2 hours = 3,230 hours. 1615 UITs × $146 = $235,790.

[1236] *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1237] *See id.* at n. 1426 and accompanying text.

[1238] *See id.* at n. 1499 and accompanying text.

[1239] *See* Item B.7 of Form N–PORT.

[1240] *See* Item C.7.a of Form N–PORT.

[1241] *See* Item C.7.b of Form N–PORT. The fourth classification category incorporates data that, under the proposal, would have been reported as a 15% standard asset in response to proposed Item C.7 of proposed Form N–PORT.

[1242] *See* Item C.7.c of Form N–PORT.

[1243] *See supra* section III.C

[1244] *See id.; see also* Proposing Release, *supra* footnote 9, at section III.B.

[1245] *See* Proposing Release, *supra* footnote 9, at n.850 and accompanying text. This was based on estimates that there were 8,734 open-end funds (excluding money market funds, and including ETFs (for purposes of these calculations, we excluded non-1940 Act ETFs)) as of the end of 2014.

[1246] *See* Proposing Release, *supra* footnote 9, n.851 and accompanying text. We estimated that these systems modifications would include the following costs: (i) Project planning and systems design (24 hours × $260 (hourly rate for a senior systems analyst) = $6,240) and (ii) systems modification integration, testing, installation and deployment (30 hours × $303 (hourly rate for a senior programmer) = $9,090. $6,240 + $9,090 = $15,330.

[1247] $15,330 ÷ 3 = $5,110. *See* Proposing Release, *supra* footnote 9, at n.852 and accompanying text.

[1248] *See, e.g.,* CFA Comment Letter; Federated Comment Letter; ICI Comment Letter; Voya Comment Letter.

[1249] *See* T. Rowe Comment Letter (noting that its fund complex has just under 44,000 portfolio positions combined as of December 31, 2015).

[1250] *See* Invesco Comment Letter.

compliance personnel, and additional expenses associated with third-party service providers would increase costs associated with the classification requirement.[1251] Some commenters also expressed concern that the costs of diverting resources and key personnel were not considered in the Commission's cost estimates.[1252]

As discussed above, we are adopting a liquidity classification requirement under rule 22e–4 with a number of modifications to address commenters' concerns. Unlike the proposal which would have applied to all open-end funds, In-Kind ETFs are not subject to the classification requirements under rule 22e–4(b)(ii). The classification categories have been reduced from six to four and the timeframe for projections substantially reduced, with the fourth category designated for those investments that qualify as ''illiquid investments'' harmonized with the codified 15% illiquid investment limit. Furthermore, a fund may classify portfolio investments based on asset class, rather than position-by-position, so long as the fund or its adviser does not have information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of an investment and would suggest a different classification for that investment.

We believe that these modifications to the liquidity classification requirements will reduce the number of funds subject to the liquidity classification requirements and will address some of the costs commenters anticipate funds and fund shareholders would bear to establish new operational, trade, and other systems to process and report fund liquidity classification information. However, we recognize, as discussed above, that several commenters suggested that implementation of liquidity classification systems would be more costly than we estimated. Accordingly, we believe, on balance, that the per fund estimates that we proposed are reasonable and are not reducing them, despite having adopted some modifications to rule 22e–4 that we believe reduce the burden relative to the proposal.

We estimate that 9,347 funds, rather than 8,734 funds, will be required to file, on a monthly basis, additional information on Form N–PORT as a result of the modifications to Form N–PORT to require additional liquidity information.[1253] We continue to expect that funds will incur a one-time internal burden to initially classify a fund's portfolio securities and program new and/or existing systems to conduct the ongoing classifications and reviews required under rule 22e–4 for reporting purposes. We continue to estimate that each fund will incur an average one-time burden of 54 hours, at a time cost of $15,576, rather than $15,330 based on updated data concerning funds and fund personnel salaries.[1254] Amortized over a three-year period, we estimate that this will result in an average annual hour burden of approximately 18 burden hours, and a time cost of $5,192, rather than $5,110.[1255]

2. Reporting on Form N–PORT

In addition to the classification and review of securities, we estimated in the Proposing Release that 8,734 [1256] funds would be required to file, on a monthly basis, additional information on Form N–PORT. We estimated that each fund that files reports on Form N–PORT in house (35%, or 3,057 funds) would require an average of approximately 3 burden hours to compile (including review of the information), tag, and electronically file the additional information in light of the proposed additions regarding liquidity information for the first time and an average of approximately 1 burden hours for subsequent filings. Therefore, we estimated the per fund average annual hour burden associated with the incremental changes to Form N–PORT as a result of the proposed additions for these funds would be an additional 14 hours for the first year [1257] and an additional 12 hours for each subsequent year.[1258] Amortized over three years, we estimated that the average annual hour burden would be an additional 12.67 hours per fund.[1259]

In the Proposing Release, we also estimated that 65% of funds (5,677) would retain the services of a third party to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on proposed Form N–PORT on the fund's behalf.[1260] For these funds, we estimated that each fund would require an average of approximately 4 hours to compile and review the information with the service provider prior to electronically filing the report for the first time and an average of 0.5 burden hours for subsequent filings.

Therefore, in the Proposing Release, we estimated that the per-fund average annual hour burden associated with the incremental changes to proposed Form N–PORT as a result of the proposed additions related to liquidity information for these funds would be an additional 9.5 hours for the first year [1261] and an additional 6 hours for each subsequent year.[1262] Amortized over three years, we estimated that the average aggregate annual hour burden would be an additional 7.17 hours per fund.[1263] In sum, we estimated that the proposed additions to Form N–PORT would impose an average total annual hour burden of an additional 79,436.28 hours on applicable funds.[1264] We did not anticipate any change to the total external annual costs of $97,674,221 associated with Form N–PORT.[1265]

As discussed in section V.E.2 above, many commenters expressed concerns over the operational costs associated with the assignment of liquidity classifications and the reporting of this information on Form N–PORT. In addition, one commenter recommended that estimated costs to purchase third-party liquidity assessment data be included in the total estimated costs to comply with proposed rule given the

[1251] *Id.*

[1252] *See, e.g.,* Dechert Comment Letter; ICI Comment Letter I; Nuveen Comment Letter; Wells Fargo Comment Letter.

[1253] This is based on estimates that there are 9,039 open-end mutual funds (excluding money market funds) and 1,594 ETFs as of the end of 2015. *See supra* footnote 1045 and accompanying text. Based on staff experience, we estimate that more than 75% of ETFs or 1,196 ETFs will identify as In-Kind ETFs and thus will not be subject to the classification requirement. 9,039 + (1,594 − 1,196) = 9,437.

[1254] We estimate that these systems modifications will include the following costs: (i) Project planning and systems design (24 hours × $264 (hourly rate for a senior systems analyst) = $6,336) and (ii) systems modification integration, testing, installation and deployment (30 hours × $308 (hourly rate for a senior programmer) = $9,240. $6,336 + $9,240 = $15,576.

[1255] $15,576 ÷ 3 = $5,192.

[1256] *See* Proposing Release, *supra* footnote 9, at section V.E. There were 8,734 open-end funds (excluding money market funds, and including ETFs) as of the end of 2014. *See* 2016 ICI Fact Book, *supra* footnote 11, at 177, 184.

[1257] The estimate was based on the following calculation: (1 filing × 3 hours) + (11 filings × 1 hour) = 14 burden hours in the first year.

[1258] This estimate was based on the following calculation: 12 filings × 1 hour = 12 burden hours in each subsequent year.

[1259] The estimate was based on the following calculation: (14 + (12 × 2)) ÷ 3 = 12.67.

[1260] Proposing Release, *supra* footnote 9.

[1261] The estimate was based on the following calculation: (1 filing × 4 hours) + (11 filings × 0.5 hour) = 9.5 burden hours in the first year.

[1262] This estimate was based on the following calculation: 12 filings × 0.5 hour = 6 burden hours in each subsequent year.

[1263] The estimate was based on the following calculation: (9.5 + (6 × 2)) ÷ 3 = 7.17.

[1264] The estimate was based on the following calculation: (3,057 funds × 12.67 hours) + (5,677 funds × 7.17 hours) = 79,436.28 hours.

[1265] *See* Proposing Release, *supra* footnote 9*; see also* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

likelihood that many funds will subscribe to such services to operationally comply with the rule 22e–4.[1266]

The Commission has modified the estimated increase in annual burden hours and total time costs that will result from Form N–PORT and the liquidity related amendments to Form N–PORT in consideration of commenters' concerns that the Commission underestimated the operational requirements for reporting and to reflect updates to the industry data figures that were utilized in the Proposing Release. We estimate that 9,347 funds would be required to file, on a monthly basis, additional information on Form N–PORT as a result of the additional liquidity-related reporting items adopted today.[1267]

We estimate that each fund that files reports on Form N–PORT in house (35%, or 3,271) will require an average of approximately 6 burden hours, rather than 3 burden hours, to compile (including review of the information), tag, and electronically file the additional liquidity information required on Form N–PORT for the first time and an average of approximately 2 burden hours, rather than 1 burden hour, for subsequent filings. Therefore, we estimate the per fund average annual hour burden associated with the incremental changes to Form N–PORT as a result of the added liquidity information for these funds would be an additional 28 hours, rather than 14 hours for the first year [1268] and an additional 24 hours for each subsequent year.[1269] Amortized over three years, the average annual hour burden would be an additional 25.33 hours per fund.[1270]

We further estimate that 65% of funds (9,076) will retain the services of a third party to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on Form N–PORT on the fund's behalf. For these funds, we estimate that each fund will require an average of approximately 8 hours, rather than 4 hours, to compile and review the added liquidity-related information with the service provider prior to electronically filing the report for the first time and an average of 1 burden hour, rather than 0.5 burden hours, for subsequent filings. Therefore, we estimate the per fund average annual hour burden associated with the liquidity-related changes to Form N–PORT for these funds would be an additional 19 hours, rather than 9.5 hours, for the first year [1271] and an additional 12 hours, rather than 6 hours, for each subsequent year.[1272] Amortized over three years, the average aggregate annual hour burden would be an additional 14.33 hours per fund, rather than 7.17 hours per fund.[1273]

In sum, we estimate that the adopted additional liquidity reporting information on Form N–PORT will impose an average total annual hour burden of an additional 169,923.51 hours, rather than 79,436.28 hours, on applicable funds.[1274] As we stated in the Proposing Release, we believe that the changes to Form N–PORT associated with reporting liquidity classifications will not result in third party service providers charging additional fees above those estimated in the Investment Company Modernization Proposing Release. Therefore, we have revised our estimates of number of funds affected as discussed previously, but are continuing to estimate the same external costs for hiring third party service providers as in the Investment Company Modernization Adopting Release. Accordingly, we estimate that the total external annual cost burden of compliance with the information collection requirements of Form N–PORT will be $103,787,680, or $9,118 per fund.[1275]

D. Form N–LIQUID and Rule 30b1–10

As discussed above, we are adopting a new requirement that open-end investment companies, including In-Kind ETFs but not including money market funds, file a current report on Form N–LIQUID on a non-public basis when certain events related to their liquidity occur.[1276] Similar to Form 8–K under the Exchange Act,[1277] or Form N–CR under the Investment Company Act for money market funds,[1278] Form N–LIQUID requires disclosure, by means of a current report filed with the Commission, of certain specific reportable events. The information reported on Form N–LIQUID concerns events under which more than 15% of a fund's or In-Kind ETF's net assets are, or become, illiquid investments that are assets as defined in rule 22e–4 and when holdings in illiquid investments are assets that previously exceeded 15% of a fund's net assets have changed to be less than or equal to 15% of the fund's net assets.[1279] The information reported on Form N–LIQUID also regards events under which a fund's holdings in assets that are highly liquid investments fall below the fund's highly liquid investment minimum for more than 7 consecutive calendar days. A report on Form N–LIQUID is required to be filed, as applicable, within one business day of the occurrence of one or more of these events.[1280]

This reporting requirement on Form N–LIQUID is a collection of information under the PRA. The information provided on Form N–LIQUID will enable the Commission to receive information on fund liquidity events more uniformly and efficiently and will enhance the Commission's oversight of funds when significant liquidity events occur and its ability to respond to market events. The Commission will be able to use the information provided on Form N–LIQUID in its regulatory, disclosure review, inspection, and policymaking roles. This collection of information will be kept confidential.

The staff estimates that the Commission will receive, in the aggregate, an average of 30 reports [1281] per year filed in response to an event specified on Part B (''Above 15% Illiquid Investments''), an average of 30 reports [1282] per year filed in response to an event specified on Part C (''At or Below 15% Illiquid Investments''), and

[1266] *See* Interactive Data Comment Letter.

[1267] *See* footnote 1253 and accompanying text.

[1268] The estimate is based on the following calculation: (1 filing × 6 hours) + (11 filings × 2 hour) = 28 burden hours in the first year.

[1269] This estimate is based on the following calculation: 12 filings × 2 hour = 24 burden hours in each subsequent year.

[1270] The estimate is based on the following calculation: (28 + (24 × 2)) ÷ 3 = 25.33.

[1271] The estimate is based on the following calculation: (1 filing × 8 hours) + (11 filings × 1 hour) = 19 burden hours in the first year.

[1272] This estimate is based on the following calculation: 12 filings × 1 hour = 12 burden hours in each subsequent year.

[1273] The estimate is based on the following calculation: (19 + (12 × 2)) ÷ 3 = 14.33.

[1274] The estimate is based on the following calculation: (3,271 funds × 25.33 hours) + (6,076 funds × 14.33 hours) = 169,923.51 hours.

[1275] *See* Investment Company Reporting Modernization Adopting Release, *supra* footnote 120.

[1276] This requirement will be implemented through our adoption of new rule 30b1–10, which requires funds to file a report on new Form N–LIQUID in certain circumstances. *See* rule 30b1–10; Form N–LIQUID. For purposes of the PRA analysis, therefore, the burden associated with the requirements of rule 30b1–10 is included in the collection of information requirements of Form N–LIQUID.

[1277] 17 CFR 249.308.

[1278] 17 CFR 270.30b1–8.

[1279] *See* Item C.1 and Item C.2 of Part A of Form N–LIQUID.

[1280] *See* General Instruction A.2 of Form N–LIQUID.

[1281] Commission staff estimates this figure based, in part, by reference to the total of 28 Form N–CR filings received by the Commission from mid-July 2015 to mid-July 2016. We recognize that the circumstances under which money market funds report events on Form N–CR are not the same as the liquidity events reported on Form N–LIQUID and that reported occurrences may be less than or more than 30. We believe, however, that Form N–CR provides a helpful guidepost for estimation purposes and believe an estimation of 30 reports is appropriate for purposes of this PRA.

[1282] See id.

an average of 30 reports [1283] per year filed in response to an event specified on Part D (''Highly Liquid Investments Below the Highly Liquid Investment Minimum'') of the form.

When filing a report on Form N–LIQUID,[1284] staff estimates that a fund will spend on average approximately 4 hours [1285] of an in-house attorney's time and one [1286] hour of an in-house accountant's time to prepare, review, and submit Form N–LIQUID, at a total time cost of $1,745.[1287] Accordingly, in the aggregate, staff estimates that compliance with new rule 30b1–10 and Form N–LIQUID will result in a total annual burden of approximately 450 burden hours and total annual time costs of approximately $157,050.[1288] Given an estimated 10,633 funds will be required to comply with new rule 30b1–10 and Form N–LIQUID,[1289] this would result in an annual burden of approximately 0.04 burden hours and annual time costs of approximately $15 on a per-fund basis. Staff estimates that there will be no external costs associated with this collection of information.

E. Form N–CEN

On May 20, 2015, we proposed to amend rule 30a–1 to require all funds to file reports with certain census-type information on proposed Form N–CEN with the Commission on an annual basis. Proposed Form N–CEN would have been a collection of information under the PRA, and was designed to facilitate the Commission's oversight of funds and its ability to monitor trends and risks. The collection of information under Form N–CEN would be mandatory for all funds, and responses would not be kept confidential.

In the Investment Company Reporting Modernization Proposing Release, we estimated that the average annual hour burden per response for proposed Form N–CEN for the first year would be 32.37 hours and 12.37 hours in subsequent years.[1290] Amortizing the burden over three years, we estimated that the average annual hour burden per fund per year would be 19.04 and the total average annual hour burden would be 59,900 hours.[1291] We also estimated that all applicable funds would incur, in the aggregate, external annual costs of $1,748,637, which would include the costs of registering and maintaining LEIs for funds.

We are adopting, substantially as proposed, amendments to Form N–CEN to enhance the reporting of a fund's liquidity risk management practices. Specifically, the amendments to Form N–CEN will require a fund to report information about lines of credit, but in a modification to the proposal, funds will report about both committed *and uncommitted* lines of credit.[1292] As proposed, funds will be required to report information such as the size of the line of credit, the number of days that the line of credit was used, and the identity of the institution with whom the line of credit is held.[1293] The amendments to Form N–CEN also will require a fund to report whether it engaged in interfund lending or interfund borrowing.[1294] In addition, amendments to Form N–CEN will require an ETF to report whether it qualifies as an ''In-Kind ETF'' for purposes of rule 22e–4.[1295]

In the Proposing Release, we estimated that 8,734 funds would be required to file responses on Form N–CEN as a result of the proposed amendments to the form. We estimated that the average annual hour burden per additional response to Form N–CEN as a result of the proposed amendments would be 0.5 hour per fund per year for a total average annual hour burden of 4,367 hours.[1296] We did not estimate any change to the external costs associated with proposed Form N–CEN.

We did not receive any comments on these estimated hour and cost burdens. The Commission has modified the estimated increase in annual burden hours and total time costs that will result from the amendments based on the modifications to the proposal to require funds to report information on uncommitted lines of credit in addition to committed lines of credit as well as in light of updated data concerning funds and fund personnel salaries. We estimate that 10,633 funds, rather than 8,734 funds will be required to file responses on Form N–CEN as a result of the amendments to the form based on updates to the industry data figures that were utilized in the Proposing Release.[1297] We estimate that the average annual hour burden per additional response to Form N–CEN as a result of the adopted additions to Form N–CEN will be one hour per fund per year, instead of 0.5 hour per fund per year, for a total average annual hour burden of 10,633, rather than 4,367 hours.[1298] We do not estimate any change to the external costs associated with proposed Form N–CEN.

F. Form N–1A

Form N–1A is the registration form used by open-end investment companies. The respondents to the amendments to Form N–1A adopted today are open-end management investment companies registered or registering with the Commission. Compliance with the disclosure requirements of Form N–1A is mandatory, and the responses to the disclosure requirements are not confidential. We currently estimate for Form N–1A a total hour burden of 1,579,974 hours, and the total annual external cost burden is $124,820,197.[1299]

We are adopting amendments to Form N–1A that require funds to disclose additional information concerning the procedures for redeeming a fund's shares. Funds will be required to describe the number of days following receipt of shareholder redemption requests in which the fund reasonably

[1283] See id.

[1284] For purposes of this estimate, the staff expects that it would take approximately the same amount of time to prepare and file a report on Form N–LIQUID, regardless under which Part of Form N–LIQUID it is filed.

[1285] This estimate is derived in part from our current PRA estimate for Form N–CR and Form 8–K.

[1286] *Id.*

[1287] This estimate is based on the following calculations: (4 hours × $386/hour for an attorney = $1,544), plus (1 hour × $201/hour for a senior accountant = $201), for a combined total of 5 hours at total time costs of $1,745.

[1288] This estimate is based on the following calculations: (30 reports filed per year with respect to Part B) + (30 reports filed per year with respect to Part C) + (30 reports filed per year with respect to Part D) = 90 reports filed per year. 90 reports filed per year × 5 hours per report = approximately 450 total annual burden hours. 90 reports filed per year × $1,745 in costs per report = $157,050 total annual costs.

[1289] This estimate is based on the number of funds the staff estimates will be required to file reports on Form N–PORT with the Commission. For purposes of this PRA, the staff assumes that the universe of funds affected by rule 30b1–9 for Form N–PORT would be similar to the universe of funds affected by rule 30b1–10 for Form N–LIQUID.

[1290] Investment Company Reporting Modernization Proposing Release, *supra* footnote 120.

[1291] *Id.* at n.765 and accompanying text.

[1292] *See* Item C.20.a. of Form N–CEN.

[1293] See Id.

[1294] *See* Item C.20.b. of Form N–CEN.

[1295] *See* Item E.5 of Form N–CEN. We do not estimate any change in burden as a result of Item E.5 of Form N–CEN because the item only requires a yes or no response. In the Proposing Release, we also proposed to add to Form N–CEN a requirement for funds to report whether the fund required that an authorized participant post collateral to the fund or any of its designated service providers in connection with the purchase or redemption of fund shares during the reporting period. We are adopting this requirement in the Reporting Modernization Release. *See supra* footnote 898.

[1296] This estimate was based on the following calculation: 8,734 funds × 0.5 hours = 4,367 hours.

[1297] *See* 2016 ICI Fact Book, *supra* footnote 11, at 22, 176, 183.

[1298] This estimate is based on the following calculation: 10,633 funds × 1 hour = 10,633 hours.

[1299] These estimates are based on the last time the rule's information collections were submitted for PRA renewal in 2014.

expects to pay redemption proceeds to redeeming shareholders.[1300] Funds also will be required to describe the methods used to meet redemption requests in stressed and non-stressed market conditions.[1301] Funds, however, will not be required to file as exhibits to their registration statements credit agreements as originally proposed. Overall, we believe that requiring funds to provide this additional disclosure regarding redemption procedures will provide Commission staff, investors, and market participants with improved information about the procedures funds use to meet their redemption obligations.

Form N–1A generally imposes two types of reporting burdens on investment companies: (i) The burden of preparing and filing the initial registration statement; and (ii) the burden of preparing and filing post-effective amendments to a previously effective registration statement (including post-effective amendments filed pursuant to rule 485(a) or 485(b) under the Securities Act, as applicable). In the Proposing Release, we estimated that each fund would incur a one-time burden of an additional 2 hours,[1302] at a time cost of an additional $637,[1303] to draft and finalize the required disclosure and amend its registration statement in response to the proposed Form N–1A disclosure requirements. In aggregate, we estimated that funds would incur a one-time burden of an additional 17,468 hours,[1304] at a time cost of an additional $5,563,558,[1305] to comply with the Form N–1A disclosure requirements originally proposed. We estimated that amortizing the one-time burden over a three-year period would result in an average annual burden of an additional 5,823 hours at a time cost of an additional $1,854,519.[1306]

In the Proposing Release, we also estimated that each fund would incur an ongoing burden of an additional 0.25 hours, at a time cost of an additional $80,[1307] each year to review and update the proposed disclosure in response to Item 11 and Item 28 of Form N–1A regarding the pricing and redemption of fund shares and the inclusion of credit agreements as exhibits, respectively. In aggregate, we estimated that funds would incur an annual burden of an additional 2,184 hours,[1308] at a time cost of an additional $695,604,[1309] to comply with the proposed Form N–1A disclosure requirements.

In the Proposing Release, we further estimated that amortizing these one-time and ongoing hour and cost burdens over three years would result in an average annual increased burden of approximately 0.50 hours per fund,[1310] at a time cost of $265.42 per fund.[1311]

In total, we estimated in the Proposing Release that funds would incur an average annual increased burden of approximately 8,007 hours,[1312] at a time cost of approximately $2,550,123,[1313] to comply with the proposed Form N–1A disclosure requirements. We did not estimate any change to the external costs associated with the proposed amendments to Form N–1A.

One commenter stated that the cost estimates under the proposal were overly optimistic, including as an example our estimated $637 cost per fund to implement the proposed Form N–1A disclosure requirements.[1314] As discussed above, our amendments to Form N–1A include several modifications or clarifications from the proposal that address concerns raised by commenters and that are intended, in part, to decrease implementation burdens relative to the proposal. For example, we are not adopting the proposed requirement that funds file credit agreements as exhibits to their registration statements. Furthermore, instead of a requirement for funds to disclose the exact number of days in which a fund would pay redemption proceeds, including the number of days that apply for each distribution channel of the fund, funds are required to disclose the number of days a fund reasonably expects to pay redemption proceeds and are not required to account for all distribution channels, only varied payment methods, if applicable. We believe that these modifications will increase the quality of information provided to fund shareholders about the timing of their redemption proceeds and, at the same time, reduce the likelihood that disclosures regarding such timing will be overly granular and complex for investors and overly burdensome for registrants.

We believe that certain modifications from and clarifications to the proposal that we are adopting today as well as the removal of the swing pricing disclosure requirements from this Release will generally reduce the estimated burden hours and costs associated with the adopted amendments to Form N–1A relative to the proposal. Furthermore, we have considered the concern expressed by one commenter that the burdens and costs estimated in the proposal were overly optimistic and believe that any possible underestimates in burdens and costs expressed in the proposal have been offset by the adopted modifications that reduce such burdens. For these reasons, we believe that the amendments to Form N–1A adopted today, including modifications from the proposal, will reduce the estimated burden hours and costs stated in the Proposing Release.

We estimate that each fund will incur a one-time burden of an additional hour, rather than 2 hours, to draft and finalize the required disclosure and amend its registration statement,[1315] but at a time cost of an additional $324, rather than $637,[1316] based on updated data concerning funds and fund personnel salaries and the removal of the swing pricing disclosure requirement. In

[1300] *See* Item 11(c)(7) of Form N–1A.

[1301] *See* Item 11(c)(8) of Form N–1A.

[1302] This estimate was based on the following calculation: 1 hour to update registration statement to include swing pricing-related disclosure statements + 1 hour to update registration statement disclosure about redemption procedures = 2 hours.

[1303] This estimate was based on the following calculation: 2 hours × $318.5 (blended rate for a compliance attorney ($334) and a senior programmer ($303)) = $637.

[1304] This estimate was based on the following calculations: 2 hours × 8,734 funds = 17,468 hours.

[1305] This estimate was based on the following calculation: 17,468 hours × $318.50 (blended rate for a compliance attorney ($334) and a senior programmer ($303)) = $5,563,558.

[1306] This estimate was based on the following calculation: 17,468 hours ÷ 3 = 5,823 average annual burden hours; $5,563,558 burden costs ÷ 3 = $1,854,519 average annual burden cost.

[1307] This estimate was based on the following calculations: 0.25 hours × $318.50 (blended hourly rate for a compliance attorney ($334) and a senior programmer ($303)) = $79.63.

[1308] This estimate was based on the following calculation: 0.25 hours × 8,734 funds = 2,183.5 hours.

[1309] This estimate was based on the following calculation: 2,184 hours × $318.50 (blended hourly rate for a compliance attorney ($334) and a senior programmer ($303)) = $695,604.

[1310] This estimate was based on the following calculation: 1 burden hour (year 1) + 0.25 burden hour (year 2) + 0.25 burden hour (year 3) ÷ 3 = 0.50 hours.

[1311] This estimate was based on the following calculation: $637 (year 1 monetized burden hours) + $79.63 (year 2 monetized burden hours) + $79.63 (year 3 monetized burden hours) ÷ 3 = $265.42.

[1312] This estimate was based on the following calculation: 5,823 hours + 2,184 hours = 8,007 hours.

[1313] This estimate was based on the following calculation: $1,854,519 + $695,604 = $2,550,123.

[1314] *See* FSR Comment Letter (noting that changes to a fund's disclosure typically involve a number of stakeholders and several rounds of drafting and review, such that costs associated with even modest changes to fund disclosure can have a serious cost component). With the exception of this comment, we did not receive comments on the estimated hour and costs burdens associated with the disclosure amendments to Form N–1A under the proposal.

[1315] This estimate is based on the following calculation: 1 hour to update registration statement disclosure about redemption procedures = 1 hour.

[1316] This estimate is based on the following calculation: 1 hour × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $324.

aggregate, we estimate that funds will incur a one-time burden of an additional 11,114 hours,[1317] rather than 17,468 hours, at a time cost of an additional $3,600,936,[1318] rather than $5,563,558, to comply with the Form N–1A disclosure requirements as adopted. We estimate that amortizing the one-time burden over a three-year period will result in an average annual burden of an additional 3,705 hours, rather than 5,823 hours at a time cost of an additional $1,200,312, rather than $1,854,519.[1319]

In addition, we estimate that each fund will incur an ongoing burden of an additional 0.25 hours, but at a time cost of an additional $81,[1320] each year to review and update disclosures required in response to the amendments to Form N–1A. In aggregate, we estimate that funds will incur an annual burden of an additional 2,778.50 hours,[1321] at a time cost of an additional $900,234,[1322] to comply with the Form N–1A disclosure requirements adopted today.

Furthermore, we estimate that amortizing these one-time and ongoing hour and cost burdens over three years will result in an average annual increased burden of approximately 0.50 hours per fund,[1323] at a time cost of $162 per fund.[1324]

In total, we estimate that funds will incur an average annual increased burden of approximately 6,483.17 hours,[1325] at a time cost of approximately $3,300,858,[1326] to comply with the Form N–1A disclosure requirements adopted today. We do not estimate any change to the external costs associated with these amendments to Form N–1A.

VI. Final Regulatory Flexibility Act Analysis

This Final Regulatory Flexibility Analysis has been prepared in accordance with section 3 of the Regulatory Flexibility Act (''RFA'').[1327] It relates to: new rule 22e–4; new Rule 30b–10, Form N–LIQUID; and amendments to Form N–1A, Form N–PORT, and Form N–CEN. We prepared an Initial Regulatory Flexibility Analysis (''IRFA'') in conjunction with the Proposing Release in September 2015.[1328] The Proposing Release included, and solicited comment, on the IRFA. In the Proposing Release, we also proposed amendments to rule 22c–1, rule 31a–2, and Form N–1A as well as additions to Form N–CEN regarding the use of swing pricing.[1329]

A. Need for the Rule

With the exception of money market funds, open-end funds (including both in-kind and other ETFs) and UITs are not currently subject to requirements under the federal securities laws or Commission rules that specifically require them to manage their liquidity risk,[1330] although there are guidelines stating that such entities should limit their investments in illiquid assets.[1331] In addition, funds are only subject to limited disclosure and reporting requirements concerning a fund's liquidity risk and risk management.[1332] We understand that funds today engage in a variety of different practices, with varying levels of comprehensiveness, for classifying the liquidity of their portfolio investments, assessing and managing liquidity risk, and disclosing information about their liquidity risk, redemption practices, and liquidity risk management practices to investors.[1333]

The Commission is adopting a new rule, amendments to current rules, a new form and amendments to current forms to promote effective liquidity risk management throughout the open-end fund industry and thereby reduce the risk that funds will be unable to meet redemption obligations and mitigate dilution of the interests of fund shareholders. The changes also seek to enhance disclosure regarding fund liquidity and redemption practices. Specifically, a primary objective of these liquidity regulations is to promote shareholder protection by elevating the overall quality of liquidity risk management across the fund industry, as well as by increasing transparency of funds' liquidity risks and risk management. The liquidity regulations are also intended to lessen the possibility of investor dilution created by insufficient liquidity risk management. Finally, the liquidity regulations are meant to address recent industry developments that have underscored the significance of funds' liquidity risk management practices. Each of these objectives is discussed in detail in section III above.

B. Significant Issues Raised by Public Comment

In the Proposing Release, we requested comment on the IRFA, requesting in particular comment on the number of small entities that would be subject to the proposed liquidity regulations and whether the proposed liquidity regulations would have any effects that have not been discussed. We requested that commenters describe the nature of any effects on small entities subject to the proposed liquidity regulations and provide empirical data to support the nature and extent of such effects. We also requested comment on the estimated compliance burdens of the proposed liquidity regulations and how they would affect small entities. We received a number of comments related to the impact of our proposal on small entities, with some commenters expressing concern that liquidity risk management programs, as proposed, would require building entirely new systems and/or maintaining parallel system, which certain of the commenters believed could generate disproportionate burdens on small funds.[1334] We discuss these costs in detail in section V., above, and conclude that such costs are justified by the benefits of liquidity risk management programs.

C. Small Entities Subject to the Rule

An investment company is a small entity if, together with other investment companies in the same group of related investment companies, it has net assets of $50 million or less as of the end of its most recent fiscal year.[1335] Commission staff estimates that, as of

[1317] This estimate was based on the following calculations: 1 hour × 11,114 funds (including money market funds and ETFs) = 11,114 hours.

[1318] This estimate is based on the following calculation: 11,114 hours × $324 (blended rate for a compliance attorney ($340) and a senior programmer ($308)) = $3,600,936.

[1319] This estimate is based on the following calculation: 11,114 hours ÷ 3 = 3,704.67 average annual burden hours; $3,600,936 burden costs ÷ 3 = $1,200,312 average annual burden cost.

[1320] This estimate is based on the following calculations: 0.25 hours × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $81.

[1321] This estimate is based on the following calculation: 0.25 hours × 11,114 funds = 2,778.50 hours.

[1322] This estimate is based on the following calculation: 2,778.50 hours × $324 (blended hourly rate for a compliance attorney ($340) and a senior programmer ($308)) = $900,234.

[1323] This estimate is based on the following calculation: 1 burden hour (year 1) + 0.25 burden hour (year 2) + 0.25 burden hour (year 3) ÷ 3 = 0.50 hours.

[1324] This estimate is based on the following calculation: $324 (year 1 monetized burden hours) + $81 (year 2 monetized burden hours) + $81 (year 3 monetized burden hours) ÷ 3 = $162.

[1325] This estimate is based on the following calculation: 3,704.67 hours + 2,778.50 hours = 6,483.17 hours.

[1326] This estimate is based on the following calculation: $1,200,312 + $900,234 = $2,100,546.

December 31, 2015, there were 78 small open-end investment companies (within 76 fund complexes) that would be considered small entities; this number includes open-end ETFs.

D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

1. New Rule 22e–4

Rule 22e–4 generally requires each registered open-end fund (but not including money market funds), including each small entity, to establish a written liquidity risk management program.[1336] A fund's board will be required to approve the fund's liquidity risk management program, as well as the fund's designation of the fund's investment adviser or officers as responsible for administering the fund's liquidity risk management program, and review a report on the program's effectiveness no less than annually. In addition, for funds that do not primarily hold assets that are highly liquid investments, the new rule requires the determination of and periodic review of the fund's highly liquid investment minimum and establishment of policies and procedures for responding to a shortfall of the fund's highly liquid investment minimum, which includes reporting to the fund's board of directors. The new rule also requires a fund's liquidity risk management program to incorporate certain specified elements.[1337] Rule 22e–4 includes tailored liquidity risk management program requirements for ETFs, intended to target ETFs' unique risks while eliminating requirements that are largely inapplicable to ETFs that redeem in kind.[1338] The rule also includes liquidity-related requirements for UITs, intended to recognize the unmanaged structure of UITs while requiring that principal underwriters or depositors of UITs to determine, on or before the date of the initial deposit of portfolio securities into a UIT, that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities that it issues.[1339] Rule 22e–4 also includes certain recordkeeping requirements.[1340] We estimate that 76 fund complexes are small fund groups that have funds that would be required to comply with the proposed liquidity risk management program requirement.[1341] As discussed above, we estimate that a fund complex would incur one-time costs ranging from $0.8 million to $10.2 million, depending on the fund's particular circumstances and current liquidity risk management practices, to establish and implement a liquidity risk management program.[1342] We further estimate that a fund complex would incur ongoing annual costs associated with proposed rule 22e–4 that would range from $40,000 to $3.3 million.[1343] Finally, we estimate that any UITs launched after the rule's compliance date will incur one-time costs associated with rule 22e–4 of $8,000 to $52,000.[1344]

2. Disclosure and Reporting Requirements Regarding Liquidity Risk and Liquidity Risk Management

New Form N–LIQUID, along with amendments to Form N–1A, Form N–PORT, and Form N–CEN are intended to enhance fund disclosure and reporting regarding a fund's redemption practices, portfolio liquidity, and certain liquidity risk management practices. New Form N–LIQUID will require a fund to confidentially notify the Commission if the fund's illiquid investment holdings exceed 15% of its net assets or if its highly liquid investments decline below its minimum for more than a brief period of time.[1345] The amendments to Form N–1A require funds to disclose additional information concerning the procedures for redeeming a fund's shares.[1346] The amendments to Forms N–PORT and N–CEN require reporting of certain information regarding the liquidity of a fund's holdings and the fund's liquidity risk management practices. We estimate that 78 funds are small entities that would be required to comply with the proposed disclosure and reporting requirements.[1347]

As discussed above, for each fund, including a fund that is a small entity, when filing a report on Form N–LIQUID, staff estimates that a fund will spend on average approximately 4 hours [1348] of an in-house attorney's time and one [1349] hour of an in-house accountant's time to prepare, review, and submit Form N–LIQUID, at a total time cost of $1,745.[1350] Staff estimates that there will be no external costs associated with this collection of information.

As discussed above, we estimate that each fund, including funds that are small entities, would incur a one-time burden of an additional 1 hour,[1351] at a time cost of an additional $324 (plus printing costs), to comply with the amendments to Form N–1A.[1352] We also estimate that each fund, including small entities, would incur an ongoing burden of an additional 0.25 hours, at a time cost of approximately an additional $81 each year associated with compliance with the amendments to Form N–1A.[1353] We do not estimate any change to the external costs associated with the proposed amendments to Form N–1A.

We also estimate that each fund that files reports on Form N–PORT (35% of funds) in house will require an average of approximately 6 burden hours to compile (including review of the information), tag, and electronically file the additional liquidity information required on Form N–PORT for the first time and an average of approximately 2 burden hours, rather than 1 burden hour, for subsequent filings. Therefore, we estimate the per fund average annual hour burden associated with the incremental changes to Form N–PORT as a result of the added liquidity information for these funds would be an additional 28 hours for the first year and an additional 24 hours for each subsequent year.[1354] Amortized over three years, the average annual hour burden would be an additional 25.33 hours per fund.[1355] We further estimate that 65% of funds will retain the services of a third party to provide data aggregation, validation and/or filing services as part of the preparation and filing of reports on Form N–PORT on the fund's behalf. For these funds, we estimate that each fund will require an average of approximately 8 hours to compile and review the added liquidity-related information with the service provider prior to electronically filing the report for the first time and an average of 1 burden hour for subsequent filings. Therefore, we estimate the per fund

[1355] *See supra* footnote 1270 and accompanying text.

average annual hour burden associated with the liquidity-related changes to Form N–PORT for these funds would be an additional 19 hours for the first year [1356] and an additional 12 hours for each subsequent year.[1357] Amortized over three years, the average aggregate annual hour burden would be an additional 14.33 hours per fund.[1358] We further estimate that the total external annual cost burden of compliance with the information collection requirements of Form N–PORT will be $9,118 per fund.[1359]

As discussed above, we also estimate that the average annual hour burden per additional response to Form N–CEN as a result of the adopted additions to Form N–CEN will be one hour per fund per year.[1360] We do not estimate any change to the external costs associated with proposed Form N–CEN.[1361]

E. Agency Action To Minimize Effect on Small Entities

The Regulatory Flexibility Act directs the Commission to consider significant alternatives that would accomplish the stated objective, while minimizing any significant impact on small entities. Alternatives in this category would include: (i) Establishing different compliance or reporting standards that take into account the resources available to small entities; (ii) clarifying, consolidating, or simplifying the compliance requirements under the rules and amendments for small entities; (iii) using performance rather than design standards; and (iv) exempting small entities from coverage of the rules and amendments, or any part of the rules and amendments.

The Commission does not presently believe that these rules and amendments would require the establishment of special compliance requirements or timetables for small entities. These rules and amendments are specifically designed to reduce any unnecessary burdens on all funds (including small funds). To establish special compliance requirements or timetables for small entities may in fact disadvantage small entities by encouraging larger market participants to focus primarily on the needs of larger entities when making the operational changes envisioned by certain of the rules and amendments, and possibly ignoring the needs of smaller funds.

With respect to further clarifying, consolidating, or simplifying the compliance requirements of the rules and amendments, using performance rather than design standards, and exempting small entities from coverage of these rules and amendments or any part of the rules and amendments, we believe additional such changes would be impracticable. Small entities are as vulnerable to the risks of being unable to meet redemption obligations and of dilution of the interests of fund shareholders as larger funds. We believe that the rules and amendments are necessary to help mitigate these risks. Exempting small funds from coverage under these rules and amendments or any part of the rules and amendments could compromise the effectiveness of the rules and amendments or any part of the rules and amendments.

VII. Statutory Authority and Text of Amendments

The Commission is adopting new rule 22e–4 under the authority set forth in sections 22(c), 22(e), 34(b) and 38(a) of the Investment Company Act [15 U.S.C. 80a–22(c), 80a–22(e), 80a–35(b), and 80a–37(a)], the Investment Advisers Act, particularly, section 206(4) thereof [15 U.S.C. 80b–6(4)], the Exchange Act, particularly section 10(b) thereof [15 U.S.C. 78a *et seq.*], the Securities Act, particularly section 17(a) thereof [15 U.S.C. 77a *et seq.*]. The Commission is adopting amendments to Form N–1A, Form N–PORT, and Form N–CEN under the authority set forth in the Securities Act, particularly section 19 thereof [15 U.S.C. 77a *et seq.*], the Trust Indenture Act, particularly, section 19 thereof [15 U.S.C. 77aaa *et seq.*], the Exchange Act, particularly sections 10, 15, and 23, and 35A thereof [15 U.S.C. 78a *et seq.*], and the Investment Company Act, particularly, sections 8, and 38 thereof [15 U.S.C. 80a *et seq.*].

List of Subjects in 17 CFR Parts 270 and 274

Investment companies, Reporting and recordkeeping requirements, Securities.

For the reasons set out in the preamble, title 17, chapter II of the Code of Federal Regulations is amended as follows:

PART 270—RULES AND REGULATIONS, INVESTMENT COMPANY ACT OF 1940

■ 1. The authority citation for part 270 continues to read, in part, as follows:

Authority: 15 U.S.C. 80a–1 *et seq.,* 80a–34(d), 80a–37, 80a–39, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

■ 2. Section 270.22e–4 is added to read as follows:

§ 270.22e–4 Liquidity risk management programs.

(a) *Definitions.* For purposes of this section:

(1) *Acquisition (or acquire)* means any purchase or subsequent rollover.

(2) *Business day* means any day, other than Saturday, Sunday, or any customary business holiday.

(3) *Convertible to cash* means the ability to be sold, with the sale settled.

(4) *Exchange-traded fund* or *ETF* means an open-end management investment company (or series or class thereof), the shares of which are listed and traded on a national securities exchange, and that has formed and operates under an exemptive order under the Act granted by the Commission or in reliance on an exemptive rule adopted by the Commission.

(5) *Fund* means an open-end management investment company that is registered or required to register under section 8 of the Act (15 U.S.C. 80a–8) and includes a separate series of such an investment company, but does not include a registered open-end management investment company that is regulated as a money market fund under § 270.2a–7 or an In-Kind ETF.

(6) *Highly liquid investment* means any cash held by a fund and any investment that the fund reasonably expects to be convertible into cash in current market conditions in three business days or less without the conversion to cash significantly changing the market value of the investment, as determined pursuant to the provisions of paragraph (b)(1)(ii) of this section.

(7) *Highly liquid investment minimum* means the percentage of the fund's net assets that the fund invests in highly liquid investments that are assets pursuant to paragraph (b)(1)(iii) of this section.

(8) *Illiquid investment* means any investment that the fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment, as determined pursuant to the provisions of paragraph (b)(1)(ii) of this section.

(9) *In-Kind Exchange Traded Fund* or *In-Kind ETF* means an ETF that meets redemptions through in-kind transfers

[1356] *See supra* footnote 1271 and accompanying text.

[1357] *See supra* footnote 1272 and accompanying text.

[1358] *See supra* footnote 1273 and accompanying text.

[1359] *See supra* footnote 1275 and accompanying text.

[1360] *See supra* footnote 1298 and accompanying paragraph.

[1361] *Id.*

of securities, positions, and assets other than a *de minimis* amount of cash and that publishes its portfolio holdings daily.

(10) *Less liquid investment* means any investment that the fund reasonably expects to be able to sell or dispose of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment, as determined pursuant to the provisions of paragraph (b)(1)(ii) of this section, but where the sale or disposition is reasonably expected to settle in more than seven calendar days.

(11) *Liquidity risk* means the risk that the fund could not meet requests to redeem shares issued by the fund without significant dilution of remaining investors' interests in the fund.

(12) *Moderately liquid investment* means any investment that the fund reasonably expects to be convertible into cash in current market conditions in more than three calendar days but in seven calendar days or less, without the conversion to cash significantly changing the market value of the investment, as determined pursuant to the provisions of paragraph (b)(1)(ii) of this section.

(13) *Person(s) designated to administer the program* means the fund or In-Kind ETF's investment adviser, officer, or officers (which may not be solely portfolio managers of the fund or In-Kind ETF) responsible for administering the program and its policies and procedures pursuant to paragraph (b)(2)(ii) of this section.

(14) *Unit Investment Trust* or *UIT* means a unit investment trust as defined in section 4(2) of the Act (15 U.S.C. 80a–4).

(b) *Liquidity Risk Management Program.* Each fund and In-Kind ETF must adopt and implement a written liquidity risk management program (''program'') that is reasonably designed to assess and manage its liquidity risk.

(1) *Required program elements.* The program must include policies and procedures reasonably designed to incorporate the following elements:

(i) *Assessment, management, and periodic review of liquidity risk.* Each fund and In-Kind ETF must assess, manage, and periodically review (with such review occurring no less frequently than annually) its liquidity risk, which must include consideration of the following factors, as applicable:

(A) The fund or In-Kind ETF's investment strategy and liquidity of portfolio investments during both normal and reasonably foreseeable stressed conditions, including whether the investment strategy is appropriate for an open-end fund, the extent to which the strategy involves a relatively concentrated portfolio or large positions in particular issuers, and the use of borrowings for investment purposes and derivatives;

(B) Short-term and long-term cash flow projections during both normal and reasonably foreseeable stressed conditions;

(C) Holdings of cash and cash equivalents, as well as borrowing arrangements and other funding sources; and

(D) For an ETF:

(1) The relationship between the ETF's portfolio liquidity and the way in which, and the prices and spreads at which, ETF shares trade, including, the efficiency of the arbitrage function and the level of active participation by market participants (including authorized participants); and

(2) The effect of the composition of baskets on the overall liquidity of the ETF's portfolio.

(ii) *Classification.* Each fund must, using information obtained after reasonable inquiry and taking into account relevant market, trading, and investment-specific considerations, classify each of the fund's portfolio investments (including each of the fund's derivatives transactions) as a highly liquid investment, moderately liquid investment, less liquid investment, or illiquid investment. A fund must review its portfolio investments' classifications, at least monthly in connection with reporting the liquidity classification for each portfolio investment on Form N–PORT in accordance with § 270.30b1–9, and more frequently if changes in relevant market, trading, and investment-specific considerations are reasonably expected to materially affect one or more of its investments' classifications.

Note to paragraph (b)(1)(ii)introductory text: If an investment could be viewed as either a highly liquid investment or a moderately liquid investment, because the period to convert the investment to cash depends on the calendar or business day convention used, a fund should classify the investment as a highly liquid investment. For a discussion of considerations that may be relevant in classifying the liquidity of the fund's portfolio investments, see Investment Company Act Release No. IC–32315 (Oct. 13, 2016).

(A) The fund may generally classify and review its portfolio investments (including the fund's derivatives transactions) according to their asset class, provided, however, that the fund must separately classify and review any investment within an asset class if the fund or its adviser has information about any market, trading, or investment-specific considerations that are reasonably expected to significantly affect the liquidity characteristics of that investment as compared to the fund's other portfolio holdings within that asset class.

(B) In classifying and reviewing its portfolio investments or asset classes (as applicable), the fund must determine whether trading varying portions of a position in a particular portfolio investment or asset class, in sizes that the fund would reasonably anticipate trading, is reasonably expected to significantly affect its liquidity, and if so, the fund must take this determination into account when classifying the liquidity of that investment or asset class.

(C) For derivatives transactions that the fund has classified as moderately liquid investments, less liquid investments, and illiquid investments, identify the percentage of the fund's highly liquid investments that it has segregated to cover, or pledged to satisfy margin requirements in connection with, derivatives transactions in each of these classification categories.

Note to paragraph (b)(1)(ii)(C): For purposes of calculating these percentages, a fund that has segregated or pledged highly liquid investments and non-highly liquid investments to cover derivatives transactions classified as moderately liquid, less liquid, or illiquid investments first should apply segregated or pledged assets that are highly liquid investments to cover these transactions, unless it has specifically identified segregated non-highly liquid investments as covering such derivatives transactions.

(iii) *Highly liquid investment minimum.* (A) Any fund that does not primarily hold assets that are highly liquid investments must:

(1) Determine a highly liquid investment minimum, considering the factors specified in paragraphs (b)(1)(i)(A) through (D) of this section, as applicable (but considering those factors specified in paragraphs (b)(1)(i)(A) and (B) only as they apply during normal conditions, and during stressed conditions only to the extent they are reasonably foreseeable during the period until the next review of the highly liquid investment minimum). The highly liquid investment minimum determined pursuant to this paragraph may not be changed during any period of time that a fund's assets that are highly liquid investments are below the determined minimum without approval from the fund's board of directors, including a majority of directors who are not interested persons of the fund;

(2) Periodically review, no less frequently than annually, the highly liquid investment minimum; and

(3) Adopt and implement policies and procedures for responding to a shortfall of the fund's highly liquid investments below its highly liquid investment minimum, which must include requiring the person(s) designated to administer the program to report to the fund's board of directors no later than its next regularly scheduled meeting with a brief explanation of the causes of the shortfall, the extent of the shortfall, and any actions taken in response, and if the shortfall lasts more than 7 consecutive calendar days, must include requiring the person(s) designated to administer the program to report to the board within one business day thereafter with an explanation of how the fund plans to restore its minimum within a reasonable period of time.

(B) For purposes of determining whether a fund primarily holds assets that are highly liquid investments, a fund must exclude from its calculations the percentage of the fund's assets that are highly liquid investments that it has segregated to cover all derivatives transactions that the fund has classified as moderately liquid investments, less liquid investments, and illiquid investments, or pledged to satisfy margin requirements in connection with those derivatives transactions, as determined pursuant to paragraph (b)(1)(ii)(C) of this section.

(iv) *Illiquid investments.* No fund or In-Kind ETF may acquire any illiquid investment if, immediately after the acquisition, the fund or In-Kind ETF would have invested more than 15% of its net assets in illiquid investments that are assets. If a fund or In-Kind ETF holds more than 15% of its net assets in illiquid investments that are assets:

(A) It must cause the person(s) designated to administer the program to report such an occurrence to the fund's or In-Kind ETF's board of directors within one business day of the occurrence, with an explanation of the extent and causes of the occurrence, and how the fund or In-Kind ETF plans to bring its illiquid investments that are assets to or below 15% of its net assets within a reasonable period of time; and

(B) If the amount of the fund's or In-Kind ETF's illiquid investments that are assets is still above 15% of its net assets 30 days from the occurrence (and at each consecutive 30 day period thereafter), the fund or In-Kind ETF's board of directors, including a majority of directors who are not interested persons of the fund or In-Kind ETF, must assess whether the plan presented to it pursuant to paragraph (b)(1)(iv)(A) continues to be in the best interest of the fund or In-Kind ETF.

(v) *Redemptions in Kind.* A fund that engages in, or reserves the right to engage in, redemptions in kind and any In-Kind ETF must establish policies and procedures regarding how and when it will engage in such redemptions in kind.

(2) *Board oversight.* A fund or In-Kind ETF's board of directors, including a majority of directors who are not interested persons of the fund or In-Kind ETF, must:

(i) Initially approve the liquidity risk management program;

(ii) Approve the designation of the person(s) designated to administer the program; and

(iii) Review, no less frequently than annually, a written report prepared by the person(s) designated to administer the program that addresses the operation of the program and assesses its adequacy and effectiveness of implementation, including, if applicable, the operation of the highly liquid investment minimum, and any material changes to the program.

(3) *Recordkeeping.* The fund or In-Kind ETF must maintain:

(i) A written copy of the program and any associated policies and procedures adopted pursuant to paragraphs (b)(1) through (b)(2) of this section that are in effect, or at any time within the past five years were in effect, in an easily accessible place;

(ii) Copies of any materials provided to the board of directors in connection with its approval under paragraph (b)(2)(i) of this section, and materials provided to the board of directors under paragraph (b)(2)(iii) of this section, for at least five years after the end of the fiscal year in which the documents were provided, the first two years in an easily accessible place; and

(iii) If applicable, a written record of the policies and procedures related to how the highly liquid investment minimum, and any adjustments thereto, were determined, including assessment of the factors incorporated in paragraphs (b)(1)(iii)(A) through (B) of this section and any materials provided to the board pursuant to paragraph (b)(1)(iii)(A)(*3*) of this section, for a period of not less than five years (the first two years in an easily accessible place) following the determination of, and each change to, the highly liquid investment minimum.

(c) *UIT liquidity.* On or before the date of initial deposit of portfolio securities into a registered UIT, the UIT's principal underwriter or depositor must determine that the portion of the illiquid investments that the UIT holds or will hold at the date of deposit that are assets is consistent with the redeemable nature of the securities it issues, and must maintain a record of that determination for the life of the UIT and for five years thereafter.

■ 3. Section 270.30b1–10 is added to read as follows:

§ 270.30b1–10 Current report for open-end management investment companies.

Every registered open-end management investment company, or series thereof but not a fund that is regulated as a money market fund under § 270.2a–7, that experiences any event specified on Form N–LIQUID, must file with the Commission a current report on Form N–LIQUID within the period specified in that form.

PART 274—FORMS PRESCRIBED UNDER THE INVESTMENT COMPANY ACT OF 1940

■ 4. The general authority citation for part 274 continues to read, in part, as follows, and the sectional authorities for §§ 274.101 and 274.130 are removed:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 78c(b), 78*l*, 78m, 78n, 78o(d), 80a–8, 80a–24, 80a–26, 80a–29, and Pub. L. 111–203, sec. 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

§ 274.11A [Amended]

■ 5. Amend Form N–1A (referenced in § 274.11A) by:

■ a. In General Instruction A. Definitions, revising the definition of Exchange-Trade Fund;

■ b. In Item 11 removing paragraph (c)(3) and redesignating paragraphs (c)(4), (c)(5), (c)(6) and (c)(7) as paragraphs (c)(3), (c)(4), (c)(5) and (c)(6), respectively; and

■ c. In Item 11 adding new paragraph (c)(7) and paragraph (c)(8);

The revisions and additions read as follows:

Note: The text of Form N–1A does not, and this amendment will not, appear in the Code of Federal Regulations.

Part C. Additional Questions for Management Investment Companies

* * *

Item C.20. Lines of credit, interfund lending, and interfund borrowing. For open-end management investment companies, respond to the following:

a. Does the Fund have available a line of credit? [Yes/No] If yes, for each line of credit, provide the information requested below:

i. Is the line of credit a committed or uncommitted line of credit? [committed/uncommitted]

ii. What size is the line of credit? [insert dollar amount]

iii. With which institution(s) is the line of credit? [list name(s)]

iv. Is the line of credit just for the Fund, or is it shared among multiple funds? [sole/shared]

1. If shared, list the names of other funds that may use the line of credit. [list names and SEC File numbers]

v. Did the Fund draw on the line of credit this period? [Yes/No]

vi. If the Fund drew on the line of credit during this period, what was the average amount outstanding when the line of credit was in use? [insert dollar amount]

vii. If the Fund drew on the line of credit during this period, what was the number of days that the line of credit was in use? [insert amount]

b. Did the Fund engage in interfund lending? [Yes/No] If yes, for each loan provide the information requested below:

i. What was the average amount of the interfund loan when the loan was outstanding? [insert dollar amount.]

ii. What was the number of days that the interfund loan was outstanding? [insert amount]

c. Did the Fund engage in interfund borrowing? [Yes/No] If yes, for each loan provide the information requested below:

i. What was the average amount of the interfund loan when the loan was outstanding? [insert dollar amount.]

ii. What was the number of days that the interfund loan was outstanding? [insert amount]

§ 274.150 [Amended]

■ 7. Amend Form N–PORT (referenced in § 274.150), as published elsewhere in this issue by:

■ a. In the General Instructions E. Definitions, adding definitions of ''Highly Liquid Investment Minimum'' and ''Illiquid Investment'' in alphabetical order;

■ b. In the General Instructions, revising the second paragraph of F. Public Availability;

■ c. In Part B, adding Item B.7 and Item B.8; and

■ d. In Part C, adding Item C.7.

The revisions and additions read as follows:

Form N-Port

Monthly Portfolio Investments Report

* * * * *

E. Definitions

* * * * *

''Highly Liquid Investment Minimum'' has the meaning defined in rule 22e–4(a)(7).

''Illiquid Investment'' has the meaning defined in rule 22e–4(a)(8).

* * * * *

F. Public Availability

* * * * *

The SEC does not intend to make public the information reported on Form N–PORT for the first and second months of each Fund's fiscal quarter that is identifiable to any particular Fund or adviser, or any information reported with regards to a Fund's Highly Liquid Investment Minimum (Item B.7 of this Form), country of risk and economic exposure (Item C.5.b), delta (Items C.9.f.5, C.11.c.vii, or C.11.g.iv), liquidity classification for portfolio investments (Item C.7), or miscellaneous securities (Part D of this Form), or explanatory notes related to any of those topics (Part E) that is identifiable to any particular Fund or adviser. However, the SEC may use information reported on this Form in its regulatory programs, including examinations, investigations, and enforcement actions.

* * * * *

Part B. Information About the Fund

* * * * *

Item B.7 Highly Liquid Investment Minimum Information.

a. If applicable, provide the Fund's current Highly Liquid Investment Minimum.

b. If applicable, provide the number of days that the Fund's holdings in Highly Liquid Investments fell below the Fund's Highly Liquid Investment Minimum during the reporting period.

c. Did the Fund's Highly Liquid Investment Minimum change during the reporting period? [Y/N]

1. If yes, provide any Highly Liquid Investment Minimums set by the fund during the reporting period.

Item B.8 Liquidity aggregate classification information. For portfolio investments of open-end management investment companies, provide the following information:

a. The aggregate percentage of investments that are assets (excluding any investments that are reflected as liabilities on the Fund's balance sheet) compared to total investments that are assets of the Fund for each of the following categories as specified in rule 22e–4:

1. Highly Liquid Investments
2. Moderately Liquid Investments
3. Less Liquid Investments
4. Illiquid Investments

b. Derivatives Transactions. The percentage of the Fund's highly

liquid investments that it has segregated to cover or pledged to satisfy margin requirements in connection with derivatives transactions that are classified as:
1. Moderately Liquid Investments
2. Less Liquid Investments
3. Illiquid Investments

* * * * *

Part C. Schedule of Portfolio Investments

* * * * *

Item C.7. Liquidity classification information. For portfolio investments of open-end management investment companies, provide the liquidity classification for each portfolio investment among the following categories as specified in rule 22e–4:
1. Highly Liquid Investments
2. Moderately Liquid Investments
3. Less Liquid Investments
4. Illiquid Investments

■ 8. Section 274.223 is added to subpart C to read as follows:

§ 274.223 Form N–LIQUID, Current report, open-end investment company liquidity.

This form shall be used by registered open-end management investment companies, or series thereof, but not including a company or series thereof that is regulated as a money market fund under § 270.2a–7 of this chapter, to file reports pursuant to § 270.30b1–10 of this chapter.

Note: The text of Form N–LIQUID will not appear in the *Code of Federal Regulations.*

United States Securities and Exchange Commission

Washington, DC 20549

Form N–LIQUID

Current Report

Open-End Management Investment Company Liquidity

Form N–LIQUID is to be used by a registered open-end management investment company, or series thereof (''fund''), under the Investment Company Act of 1940 [15 U.S.C. 80a] (''Act'') but not including a fund that is regulated as a money market fund under rule 2a–7 under the Act (17 CFR 270.2A–7), to file current reports with the Commission pursuant to [rule 30b1–10] under the Act [(17 CFR 270.30b1–10)]. The Commission may use the information provided on Form N–LIQUID in its regulatory, disclosure review, inspection, and policymaking roles.

General Instructions

A. Rules as to Use of Form N–LIQUID

(1) Form N–LIQUID is the reporting form that is to be used for current reports of open-end management investment companies (''registrants'') required by section 30(b) of the Act and rule 30b1–10 under the Act. The Commission does not intend to make public information reported on Form N–LIQUID that is identifiable to any particular registrant, although the Commission may use Form N–LIQUID information in an enforcement action.

(2) Unless otherwise specified, a report on this Form N–LIQUID is required to be filed, as applicable, within one business day of the occurrence of the event specified in Parts B–D of this form. If the event occurs on a Saturday, Sunday, or holiday on which the Commission is not open for business, then the one business day period shall begin to run on, and include, the first business day thereafter.

B. Application of General Rules and Regulations

The General Rules and Regulations under the Act contain certain general requirements that are applicable to reporting on any form under the Act. These general requirements should be carefully read and observed in the preparation and filing of reports on this form, except that any provision in the form or in these instructions shall be controlling.

C. Information To Be Included in Report Filed on Form N–LIQUID

Upon the occurrence of the event specified in Parts B–D of Form N–LIQUID, a registrant must file a report on Form N–LIQUID that includes information in response to each of the items in Part A of the form, as well as each of the items in the applicable Parts B–D of the Form.

D. Filing of Form N–LIQUID

A fund must file Form N–LIQUID in accordance with rule 232.13 of Regulation S–T (17 CFR part 232). Form N–LIQUID must be filed electronically using the Commission's Electronic Data Gathering, Analysis and Retrieval System (''EDGAR'').

E. Paperwork Reduction Act Information

A registrant is not required to respond to the collection of information contained in Form N–LIQUID unless the form displays a currently valid Office of Management and Budget (''OMB'') control number. Please direct comments concerning the accuracy of the information collection burden estimate and any suggestions for reducing the burden to the Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090. The OMB has reviewed this collection of information under the clearance requirements of 44 U.S.C. 3507.

F. Definitions

References to sections and rules in this Form N–LIQUID are to the Investment Company Act (15 U.S.C. 80a), unless otherwise indicated. Terms used in this Form N–LIQUID have the same meaning as in the Investment Company Act or rule 22e–4 under the Investment Company Act, unless otherwise indicated. In addition, as used in this Form N–LIQUID, the term registrant means the registrant or a separate series of the registrant.

United States Securities and Exchange Commission

Washington, DC 20549

Form N–LIQUID

Current Report

Open-End Management Investment Company Liquidity

Part A. General Information

Item A.1. Report for [mm/dd/yyyy].
Item A.2. CIK Number of registrant.
Item A.3. EDGAR Series Identifier.
Item A.4. Securities Act File Number.
Item A.5. Provide the name, email address, and telephone number of the person authorized to receive information and respond to questions about this Form N–LIQUID.

Part B. Above 15% Illiquid Investments

If more than 15 percent of the registrant's net assets are, or become, illiquid investments that are assets as defined in rule 22e–4, then report the following information:

Item B.1. Date(s) on which the registrant's illiquid investments that are assets exceeded 15 percent of its net assets.
Item B.2. The current percentage of the registrant's net assets that are illiquid investments that are assets.
Item B.3. Identification of Illiquid investments. For each investment that is an asset that is held by the registrant that is considered illiquid, disclose (1) the name of the issuer, the title of the issue or description of the investment, the CUSIP (if any), and at least one other identifier, if available (*e.g.,* ISIN, Ticker, or other unique identifier (if ticker and ISIN are not

available)) (indicate the type of identifier used), and (2) the percentage of the fund's net assets attributable to that investment.

Part C. At or Below 15% Illiquid Investments

If a registrant that has filed part B of Form N–LIQUID determines that its holdings in illiquid investments that are assets have changed to be less than or equal to 15 percent of the registrant's net assets, then report the following information:

Item C.1. Date(s) on which the registrant's illiquid investments that are assets fell to or below 15 percent of net assets.

Item C.2. The current percentage of the registrant's net assets that are illiquid investments that are assets.

Part D. Assets That Are Highly Liquid Investments Below the Highly Liquid Investment Minimum

If a registrant's holdings in assets that are highly liquid investments fall below its highly liquid investment minimum for more than 7 consecutive calendar days, then report the following information:

Item D.1. Date(s) on which the registrant's holdings of assets that are highly liquid investments fell below the fund's highly liquid investment minimum.

Signatures

Pursuant to the requirements of the Investment Company Act of 1940, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

Protection of Stratospheric Ozone: Update to the Refrigerant Management Requirements Under the Clean Air Act; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 82

[EPA–HQ–OAR–2015–0453; FRL–9950–28–OAR]

RIN 2060–AS51

Protection of Stratospheric Ozone: Update to the Refrigerant Management Requirements Under the Clean Air Act

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Clean Air Act prohibits the knowing release of ozone-depleting and substitute refrigerants during the course of maintaining, servicing, repairing, or disposing of appliances or industrial process refrigeration. The existing regulations require that persons maintaining, servicing, repairing, or disposing of air-conditioning and refrigeration equipment containing more than 50 pounds of refrigerant observe certain service practices that reduce emissions of ozone-depleting refrigerant. This rule updates those existing requirements as well as extends them, as appropriate, to non-ozone depleting substitute refrigerants, such as hydrofluorocarbons. Updates include strengthened leak repair requirements, recordkeeping requirements for the disposal of appliances containing more than five and less than 50 pounds of refrigerant, revisions to the technician certification program, and revisions for improved readability and compliance. As a result, this action reduces emissions of ozone-depleting substances and gases with high global warming potentials.

DATES: This final rule is effective on January 1, 2017. The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of on January 1, 2017. This rule contains information collection activities that have been submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act (PRA). Under the PRA, comments on the information collection provisions are best assured of consideration if the Office of Management and Budget (OMB) receives a copy of your comments on or before December 19, 2016.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2015–0453. All documents in the docket are listed on the *www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Jeremy Arling, Stratospheric Protection Division, Office of Atmospheric Programs, Mail Code 6205T, 1200 Pennsylvania Avenue NW., Washington, DC 20460; telephone number (202) 343–9055; email address *arling.jeremy@epa.gov.* You may also visit *www.epa.gov/section608* for further information about refrigerant management, other Stratospheric Ozone Protection regulations, the science of ozone layer depletion, and related topics.

I. General Information

A. Does this action apply to me?

Categories and entities potentially regulated by this action include those who own, operate, maintain, service, repair, recycle, or dispose of refrigeration and air-conditioning appliances and refrigerants, as well as entities that manufacture or sell refrigerants, products and services for the refrigeration and air-conditioning industry, including motor vehicle air conditioning. Regulated entities include, but are not limited to, the following:

TABLE 1—POTENTIALLY AFFECTED ENTITIES

Category	North American industry classification system (NAICS) code	Examples of regulated entities
Industrial Process Refrigeration (IPR).	111, 11251, 11511, 21111, 2211, 2212, 2213, 311, 3121, 3221, 3222, 32311, 32411, 3251, 32512, 3252, 3253, 32541, 3256, 3259, 3261, 3262, 3324, 3328, 33324, 33341, 33361, 3341, 3344, 3345, 3346, 3364, 33911, 339999.	Owners or operators of refrigeration equipment used in agriculture and crop production, oil and gas extraction, ice rinks, and the manufacture of frozen food, dairy products, food and beverages, ice, petrochemicals, chemicals, machinery, medical equipment, plastics, paper, and electronics
Commercial Refrigeration	42374, 42393, 42399, 4242, 4244, 42459, 42469, 42481, 42493, 4451, 4452, 45291, 48422, 4885, 4931, 49312, 72231.	Owners or operators of refrigerated warehousing and storage facilities, supermarkets, grocery stores, warehouse clubs, supercenters, convenience stores, and refrigerated transport
Comfort Cooling	45211, 45299, 453998, 512, 522, 524, 531, 5417, 551, 561, 6111, 6112, 6113, 61151, 622, 7121, 71394, 721, 722, 813, 92.	Owners or operators of air-conditioning equipment used in the following: hospitals, office buildings, colleges and universities, metropolitan transit authorities, real estate rental & leased properties, lodging and food services, property management, schools, and public administration or other public institutions
Plumbing, Heating, and Air-Conditioning Contractors.	238220, 811111, 81131, 811412	Plumbing, heating, and air-conditioning contractors, and refrigerant recovery contractors, including automotive repair
Manufacturers and Distributors of Small Cans of Refrigerant.	325120, 441310, 447110	Automotive parts and accessories stores and industrial gas manufacturers
Reclaimers	325120, 423930, 424690, 562920, 562212.	Industrial gas manufacturers, recyclable material merchant wholesalers, materials recovery facilities, solid waste landfills, and other chemical and allied products merchant wholesalers
Disposers and Recyclers of Appliances.	423990, 562212, 562920	Materials recovery facilities, solid waste landfills, and other miscellaneous durable goods merchant wholesalers
Refrigerant Wholesalers	325120, 42, 424690	Industrial gas manufacturers, other chemical and allied products merchant wholesalers, wholesale trade
Certifying Organizations	541380	Environmental test laboratories and services

This table is not intended to be exhaustive, but rather provides a guide for readers regarding the types of entities that could potentially be regulated by this action. Other types of entities not listed in the table could also be affected. To determine whether your facility, company, business organization, or other entity is regulated by this action, you should carefully examine the regulations in subpart F and this rule. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

B. What action is the Agency taking?

The regulations in 40 CFR part 82, subpart F (subpart F) that are in effect before this final action takes effect (often referred to in this notice as the ''prior'' or ''previous'' regulations) require that persons servicing, maintaining, repairing, or disposing of air-conditioning and refrigeration equipment observe certain service practices that reduce emissions of ozone-depleting refrigerant. Specifically, these provisions include: Restricting the servicing of appliances and the sale of refrigerant to certified technicians; specifying the proper evacuation levels before opening an appliance; requiring the use of certified refrigerant recovery and/or recycling equipment; requiring the maintenance and repair of appliances that meet size and leak rate thresholds; requiring that refrigerant be removed from appliances prior to disposal; requiring that appliances have a servicing aperture or process stub to facilitate refrigerant recovery; requiring that refrigerant reclaimers be certified in order to reclaim and sell used refrigerant; and establishing standards for technician certification programs, recovery equipment, and quality of reclaimed refrigerant.

This rule updates the prior refrigerant management requirements in subpart F that apply to ozone-depleting refrigerants. It also extends those requirements, as appropriate, to non-ozone depleting substitute refrigerants that are not exempt from the venting prohibition, including but not limited to hydrofluorocarbons (HFCs), in order to interpret, explain, and enforce the venting prohibition.

C. What is the Agency's authority for taking this action?

Section 608 of the CAA provides EPA authority for these revisions to the regulations found at 40 CFR part 82, subpart F. EPA's authority for this rulemaking is supplemented by section 301(a), which provides authority to ''prescribe such regulations as are necessary to carry out [the EPA Administrator's] functions under this Act,'' and section 114, which provides authority for the EPA Administrator to require recordkeeping and reporting in carrying out any provision of the CAA (with certain exceptions that do not apply here). More detail on EPA's authority for this action is provided in subsequent sections.

D. What are the incremental costs and benefits of this action?

The revisions in this rule require certain businesses to take actions that have associated costs, such as conducting leak inspections, repairing leaks, and keeping records. Total annual incremental compliance costs associated with this rule are estimated to be $24.5 million per year in 2014 dollars using a 7 percent discount rate. Costs were modeled for a single typical year in which all the requirements were in effect, based on the appliance distribution modeled for 2015. Total annual operating savings associated with reduced refrigerant use are estimated to be $44 million; thus incremental compliance costs and refrigerant savings combined are estimated to be approximately $19.5 million per year. A detailed description of the comments received on the proposed analysis can be found in Section VI of this preamble as well as the response to comments document found in the docket. A full description of the technical analysis can be found in the document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* in the docket.

EPA estimates that this rule will prevent damage to the stratospheric ozone layer by reducing emissions of ozone-depleting refrigerants by approximately 114 metric tons per year, weighted by the ozone-depletion potential (ODP) of the gases emitted. Avoided emissions of ozone-depleting refrigerants and non-ozone depleting substitutes will also reduce climate impacts because most of these refrigerants are potent greenhouse gases. Weighted by their global warming potentials (GWP) [1], EPA estimates that the revisions will prevent annual emissions of greenhouse gases equivalent to 7.3 million metric tons of carbon dioxide ($MMTCO_2eq$). The reductions in emissions of GHGs and ODS have benefits for human health and the environment because of the threats these substances pose to human health and the environment. Such threats are discussed further in Section II.D of this notice.

TABLE 2—ANNUAL GHG AND ODS EMISSIONS AVOIDED

Rule component	GHG emissions avoided ($MTCO_2eq$)			ODS emissions avoided (ODP-weighted MT)
	HFC	ODS	Total	ODS
Leak Repair and Inspection				
Comfort Cooling	1,425,000	2,487,000	3,912,000	78
Commercial Refrigeration	1,246,000	1,077,000	2,323,000	30
IPR	275,000	169,000	444,000	5
Reporting & Recordkeeping				
Self-sealing Valves on Small Cans	657,000		657,000	
Total	3,603,000	3,733,000	7,336,000	114

Totals may not sum due to independent rounding.

Details of the methods used to estimate the benefits are discussed in Section VI of this notice and the *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* in the docket.

E. Judicial Review

Under CAA section 307(b)(1), judicial review of this final action is available only by filing a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit by January 17, 2017. This final action is a nationally applicable regulation and has nationwide scope and effect because it makes revisions to the EPA's regulations for the National Recycling and Emission Reduction Program found at 40 CFR part 82, subpart F, which are nationally applicable regulations that have nationwide scope and effect. Under CAA section 307(d)(7)(B), only an objection to this final action that was raised with reasonable specificity during the period for public comment can be raised during judicial review. This section also provides a mechanism for EPA to convene a proceeding for reconsideration, ''[i]f the person raising an objection can demonstrate to [EPA] that it was impracticable to raise such objection within [the period for public comment] or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of this rule.'' Any person seeking to make such a demonstration to us should submit a Petition for Reconsideration to the Office of the Administrator, Environmental Protection Agency, Room 3000, William Jefferson Clinton Building, 1200 Pennsylvania Ave. NW., Washington, DC 20460, with a copy to the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344–A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

II. Background

A. What are ozone-depleting substances?

The stratospheric ozone layer protects life on Earth from the sun's harmful ultraviolet (UV) radiation. ODS are generally man-made chemicals that, when transported by winds into the stratosphere, release chlorine or bromine and damage that protective ozone layer. ODS are used as refrigerants, solvents, foam blowing

[1] Unless otherwise stated, GWPs stated in this document are 100-year integrated GWPs, relative to a GWP of 1 for carbon dioxide, as reported in IPCC, 2007. *Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change* [Solomon, S., D. Qin, M. Manning, Z. Chen, M. Marquis, K.B. Averyt, M. Tignor and H.L. Miller (eds.)]. Cambridge University Press, Cambridge, United Kingdom and New York, NY, USA. This document is accessible at *www.ipcc.ch/publications_and_data/ar4/wg1/en/contents.html*. For blends of multiple compounds, we are weighting the GWP of each component by mass percentage in the blend.

agents, aerosol propellants, fire suppression agents, and in other smaller applications. The Clean Air Act divides ODS into two categories: Class I and class II substances. The production of new class I ODS, which includes chlorofluorocarbons (CFCs), methyl chloroform, carbon tetrachloride, halons, and other compounds has been banned for over a decade. The production of new class II substances, which are all hydrochlorofluorocarbons (HCFCs), will be phased down 99.5 percent by 2020.

The initial concern about the ozone layer in the 1970s led to a ban on the use of CFCs as aerosol propellants in several countries, including the United States. In 1985, the Vienna Convention on the Protection of the Ozone Layer was adopted to formalize international cooperation on this issue. Additional efforts resulted in the adoption of the Montreal Protocol on Substances that Deplete the Ozone Layer in 1987. Today, all Parties to the Montreal Protocol have agreed to phase out the production and consumption of ODS controlled by the Protocol.

B. What is the National Recycling and Emission Reduction Program?

Section 608 of the CAA bears the title ''National Recycling and Emissions Reduction Program.'' Under the structure of section 608, this program has three main components. First, section 608(a) requires EPA to establish standards and requirements regarding use and disposal of class I and II substances, including a comprehensive refrigerant management program to limit emissions of ozone-depleting refrigerants. This program is to include regulations that reduce the use and emissions of class I and II substances to the lowest achievable level and that maximize the recapture and recycling of such substances. The second component, section 608(b), requires that the regulations issued pursuant to subsection (a) contain requirements for the safe disposal of class I and class II substances. The third component, section 608(c), prohibits the knowing venting, release, or disposal of ozone-depleting refrigerants and their substitutes during the maintenance, service, repair, or disposal of air-conditioning and refrigeration appliances or IPR. This prohibition is also referred to as the ''venting prohibition'' in this action. Section 608 is described in greater detail in Section III.

EPA first issued regulations under section 608 of the CAA on May 14, 1993 (58 FR 28660, ''1993 Rule''), to establish the national refrigerant management program for ozone-depleting refrigerants recovered during the maintenance, service, repair, and disposal of air-conditioning and refrigeration appliances. These regulations were intended to substantially reduce the use and emissions of ozone-depleting refrigerants.

The regulations first established in the 1993 Rule require that persons servicing air-conditioning and refrigeration equipment containing an ozone-depleting refrigerant observe certain practices that reduce emissions. They also established requirements for refrigerant recovery equipment, reclaimer certification, and technician certification, and restricted the sale of refrigerant so that only certified technicians could purchase it. In addition, they required the removal of ODS from appliances prior to disposal, and that all air-conditioning and refrigeration equipment using an ODS be provided with a servicing aperture or process stub to facilitate refrigerant recovery.

The 1993 Rule also established a requirement to repair leaking appliances containing 50 or more pounds of ODS refrigerant. The rule set an annual leak rate of 35 percent for commercial refrigeration appliances and IPR and 15 percent for comfort cooling appliances. If the applicable leak rate was exceeded, the appliance must be repaired within 30 days.

EPA revised these regulations through subsequent rulemakings published on August 19, 1994 (59 FR 42950), November 9, 1994 (59 FR 55912), August 8, 1995 (60 FR 40420), July 24, 2003 (68 FR 43786), March 12, 2004 (69 FR 11946), January 11, 2005 (70 FR 1972), May 23, 2014 (79 FR 29682), and April 10, 2015 (80 FR 19453). EPA also issued proposed rules to revise the regulations in subpart F on June 11, 1998 (63 FR 32044), elements of which were not finalized, and on December 15, 2010 (75 FR 78558), which was also not finalized. EPA is withdrawing and therefore not finalizing the 2010 proposed rule. Instead, EPA re-proposed elements of both the 1998 and the 2010 proposed rules in the notice of proposed rulemaking (80 FR 19453) for this rule.

The August 19, 1994, rule amended specific definitions, required practices, and reporting and recordkeeping requirements, as well as adopted industry standards for reclaimed ODS refrigerants.

The November 9, 1994, rule clarified the conditions under which technician certification programs were grandfathered, allowing technicians who had participated in voluntary technician training and certification programs prior to the publication of the 1993 Rule to receive formal certification. The rule also clarified the scope of the technician certification requirement and provided a limited exemption from certification requirements for apprentices.

The August 8, 1995, rule responded to a settlement agreement between EPA and the Chemical Manufacturers Association to give additional flexibility to repair or retrofit IPR appliances containing ODS. EPA allowed owners or operators additional time beyond 30 days to complete repairs and more than one year to retrofit appliances where certain conditions applied (*i.e.,* federally owned equipment located in areas subject to radiological contamination, unavailability of necessary parts for IPR, or instances where adherence to local, state, or federal laws hinder immediate repairs for IPR). EPA also clarified that purged refrigerants that have been captured and destroyed can be excluded from the leak rate calculations.

The July 24, 2003, rule finalized portions of a proposed rulemaking (61 FR 7858; February 29, 1996) that amended the recordkeeping aspects of the section 608 technician certification program, refined aspects of the refrigerant sales restriction, adopted updated versions of ARI Standards 700 [2] and 740 [3], amended several definitions, and set forth procedures for the revocation and/or suspension of approval to certify technicians and refrigerant recovery and/or recycling equipment and revocation and/or suspension procedures for certification as a refrigerant reclaimer.

The March 12, 2004, rule exempted from the venting prohibition under section 608(c)(2) specific non-ozone depleting substances that the Agency found did not pose a threat to the environment (69 FR 11946). Notably, EPA did not exempt HFC or perfluorocarbon (PFC) refrigerants from the venting prohibition. The rule clarified that regulations affecting the handling and sales of ozone-depleting refrigerants apply to blends that contain an ODS.

The January 11, 2005, rule clarified that the leak repair requirements also apply to blends that contain an ODS (70

[2] The Air Conditioning and Refrigeration Institute Standard 700, *Specification for Fluorocarbons and Other Refrigerants,* contains standards for the reclamation of used refrigerants.

[3] The Air Conditioning and Refrigeration Institute Standard 740, *Performance Rating of Refrigerant Recovery Equipment and Recovery/Recycling Equipment,* contains standards for the equipment used to recover refrigerant from air-conditioning and refrigeration appliances.

FR 1927). The rule amended the required practices and associated reporting/recordkeeping requirements and clarified certain leak repair requirements.

On December 15, 2010 (75 FR 78558, ''proposed 2010 Leak Repair Rule''), EPA proposed to create a streamlined set of leak repair requirements that are applicable to all types of appliances containing 50 or more pounds of ozone-depleting refrigerant. The rule also proposed to reduce the leak repair rates. EPA did not finalize that rule and EPA has withdrawn that proposal through this rulemaking, although, as noted above, EPA also re-proposed elements of that proposal in the notice of proposed rulemaking for this rule.

Finally, on May 23, 2014 (79 FR 29682), and April 10, 2015 (80 FR 19453), EPA expanded the list of substitute refrigerants that EPA has exempted from the CAA venting prohibition to include certain hydrocarbons in specific end-uses.

C. What developments have occurred since EPA first established the National Recycling and Emission Reduction Program?

1. Phaseout of CFCs and HCFCs

In 1993, when EPA established the refrigerant management requirements of subpart F, CFCs and HCFCs were the most commonly used refrigerants, depending on the specific application. Just six months prior, in November 1992, the Parties to the Montreal Protocol accelerated the phaseout schedule for CFCs through the Copenhagen Amendment, so that there would be a complete phaseout by 1996. The Copenhagen Amendment also established a phaseout schedule for HCFCs. The schedule for HCFCs was later amended and now calls for a 35 percent reduction in production and consumption from each Article 2 Party's (developed country's) cap by 2004, followed by a 75 percent reduction by 2010, a 90 percent reduction by 2015, a 99.5 percent reduction by 2020, and a total phaseout by 2030. From 2020 to 2030, production and consumption at only 0.5 percent of baseline is allowed solely for servicing existing air-conditioning and refrigeration equipment.

The United States chose to implement the Montreal Protocol phaseout schedule on a chemical-by-chemical basis. In 1993, as authorized by section 606 of the CAA, EPA established a phaseout schedule that eliminated HCFC–141b first and would greatly restrict HCFC–142b and HCFC–22 next, due to their high ozone depletion potentials (ODPs), followed by restrictions on all other HCFCs, and ultimately a complete phaseout (58 FR 15014, March 18, 1993, and 58 FR 65018, December 10, 1993). EPA continues to issue allowances for the production and consumption of HCFCs that have not yet been phased out. The allowance levels reflect not only phaseout schedules but also use restrictions under section 605(a) of the CAA. The phaseout schedule and allowance levels can be found at 40 CFR part 82, subpart A.

EPA established the refrigerant management program shortly before the CFC phaseout. Similarly, today's rule to update those regulations closely precedes the phaseout of HCFCs. In 2020, production and consumption of HCFCs will be limited to 0.5% of baseline, and may not include HCFC–22, the most commonly used HCFC refrigerant. The reasons for encouraging a viable CFC recycling program support the same approach for HCFCs. The 1993 Rule discussed a 1990 advance notice of proposed rulemaking regarding a national CFC recycling program. As the 1993 Rule discussed, that 1990 notice emphasized that recycling is important because it would allow the continued use of equipment requiring CFCs for service past the year in which CFC production is phased out, thereby eliminating or deferring the cost of early retirement or retrofit of such equipment. Because of the continued use of these substances in existing equipment, recycling can serve as a useful bridge to alternative products while minimizing disruption of the current capital stock of equipment. (58 FR 28661).

More than twenty years later, with the experience gained through the phaseout of CFCs, reducing emissions of HCFCs and maximizing their recovery and reclamation remains just as important for ensuring the continued viability of the current stock of equipment. The transition out of CFC and now HCFC refrigerants is one reason that it is important to update the refrigerant management regulations in subpart F.

2. Development of Non-ODS Alternatives

The universe of available refrigerants has expanded dramatically since EPA first established the refrigerant management regulations in subpart F. Under the Significant New Alternatives Policy (SNAP) program (CAA section 612), EPA identifies substitutes that pose lower overall risks to human health and the environment and must prohibit the use of substitutes for which there are other available or potentially available alternatives posing lower overall risk to human health and the environment for the same use. Thus, EPA's SNAP program does not provide a static list of alternatives. Instead, the SNAP list evolves as EPA makes decisions informed by our overall understanding of the environmental and human health impacts as well as our current knowledge about available substitutes. Under SNAP, EPA has reviewed over 400 substitutes in the refrigeration and air-conditioning; fire suppression; foam blowing; solvent cleaning; aerosols; adhesives, coatings, and inks; sterilants; and tobacco expansion sectors. To date, SNAP has issued 31 notices and 20 rulemakings listing alternatives as acceptable, acceptable subject to use conditions, acceptable subject to narrowed use limits, or unacceptable for those various end-uses.

For example, on April 10, 2015, the SNAP Program listed as acceptable, subject to use conditions, three hydrocarbons, one hydrocarbon blend, and HFC–32 as substitute refrigerants in a number of refrigeration and air-conditioning end-uses (80 FR 19454). The SNAP program has also recently listed a number of additional refrigerant options, including blends of hydrofluoroolefins (HFOs) and HFCs that have lower global warming potentials (GWPs) (October 21, 2014, 79 FR 62863; July 20, 2015, 80 FR 42870). EPA anticipates that industry will continue to develop safer alternatives and that EPA will continue to review information concerning additional refrigerant options and determine the appropriate action needed to safeguard human health and the environment.

Due to the change in the suite of acceptable refrigerants available for some end-uses, EPA anticipates that the relative amounts of different refrigerants in stocks in the United States will change, and thus that the universe of refrigerants subject to the refrigerant management program will continue to evolve. The diversity of refrigerants and the potential for cross-contamination are two reasons why it is important to clarify how all refrigerants, including non-exempt substitute refrigerants, should be handled under the refrigerant management regulations in subpart F.

3. Increased Attention to HFCs as Climate Pollutants

Domestic and international efforts to protect the ozone layer have also helped to protect the global climate, because in addition to damaging ozone in the stratosphere, CFCs and HCFCs are also potent GHGs. HFCs, which are the predominant class of compounds being used as replacements for ODS, also can have high GWPs. As their use has increased, concern has grown over the environmental damage caused by heat trapped in the atmosphere by HFCs.

On December 7, 2009, (74 FR 66496) the Administrator issued an Endangerment Finding regarding GHGs under section 202(a) of the CAA. As part of this finding, EPA concluded that the current and projected concentrations of six key well-mixed GHGs in the atmosphere—carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), HFCs, PFCs, and sulfur hexafluoride (SF_6)—endanger both the health and welfare of current and future generations. While this finding was made specifically for the purposes of section 202(a) of the CAA, EPA is cognizant of the global climate risks generally discussed in the finding in its work to reduce emissions of HFCs and other GHGs.

i. Climate Action Plan

In June 2013, the President announced the Climate Action Plan.[4] Among the many actions called for, the Climate Action Plan outlined a set of measures to address HFCs. The Climate Action Plan states: ''to reduce emissions of HFCs, the United States can and will lead both through international diplomacy as well as domestic actions.'' Part of this international diplomacy is the proposed Amendment to the Montreal Protocol discussed below. The Climate Action Plan also directed EPA to use its authority through the SNAP program ''to encourage private sector investment in low-emissions technology by identifying and approving climate-friendly chemicals while prohibiting certain uses of the most harmful chemical alternatives.'' In July 2015, EPA finalized a rule that revised the listing status for certain substitutes previously listed as acceptable under the SNAP program (80 FR 42870). That rule revised the status of certain HFCs and HCFCs for various end-uses in the aerosols, refrigeration and air-conditioning, and foam blowing sectors. EPA made these revisions based on information showing that other substitutes are available for the same uses that pose lower risk overall to human health and the environment. A copy of the Climate Action Plan is available in the docket to this rule.

The President's Climate Action Plan also calls on the federal government to reduce emissions of HFCs by purchasing alternatives whenever feasible and transitioning to equipment that uses safer and more sustainable alternatives to HFCs. To implement the Climate Action Plan, the Department of Defense, General Services Administration, and National Aeronautics and Space Administration recently amended the Federal Acquisition Regulation to encourage the purchase of alternatives to high GWP HFCs (81 FR 30429; May 16, 2016). This rule is designed to promote the use of safer chemical alternatives to HFCs by service and vendor contractors. To help agencies monitor progress, the amendment requires contractors to keep records of and report on the amounts of HFCs added or removed during the routine maintenance, repair, or disposal of appliances with a full charge of 50 or more pounds of HFC or HFC blend refrigerant.

Minimizing the emissions and maximizing the recovery and reuse of ODS and HFC refrigerants are consistent with the Climate Action Plan. EPA estimates that the revisions finalized in this action will prevent annual emissions of refrigerant equivalent to 7.3 $MMTCO_2eq$. Of this amount, 3.6 $MMTCO_2eq$ are due to HFCs and 3.7 $MMTCO_2eq$ are due to ODS. Because of the significant environmental benefit to be gained by addressing HFC refrigerants, it is important to update the refrigerant management regulations in subpart F.

ii. Trends in HFC Use and Future Projections

Although HFCs represent a small fraction of current GHG emissions by weight, their warming impact per kilogram is very strong. The most commonly used HFC, HFC–134a, has a GWP of 1,430, which means it traps 1,430 times as much heat per kilogram as carbon dioxide does over 100 years. The majority of global, and U.S., HFC use is in the refrigeration and air conditioning sector. HFC emissions are projected to increase substantially and at an increasing rate over the next several decades if their production is left uncontrolled. In the United States, emissions of HFCs are increasing more quickly than those of any other group of GHGs, and globally they are increasing 10 to 15 percent annually. At that rate, emissions are projected to double by 2020 and triple by 2030.

HFCs are also rapidly accumulating in the atmosphere. The atmospheric concentration of HFC–134a has increased by about 10 percent per year from 2006 to 2012, and the concentrations of HFC–143a and HFC–125, which are components of commonly used refrigerant blends, have risen over 13 and 16 percent per year from 2007 to 2011, respectively. Without action, annual global emissions of HFCs are projected to rise to about 6,400 to 9,900 $MMTCO_2eq$ in 2050, which is comparable to the drop in annual GHG emissions of ODS of 8,000 $MMTCO_2eq$ between 1988 and 2010 (UNEP, 2011).

As these HFCs accumulate in the atmosphere, they change the balance between energy entering the Earth's climate from the sun and energy escaping the Earth into space. The change in the net rate at which energy enters the atmosphere is called radiative forcing. By 2050, the buildup of HFCs in the atmosphere is projected to increase radiative forcing to 0.22–0.25 W m^2. To appreciate the significance of the projected HFC radiative forcing within the context of all GHGs, the forcing from HFCs would be 6–9% of that from CO_2 in the IPCC's representative concentration pathways (RCP6 and RCP8.5) in 2050 (Velders *et al.*, 2015).

iii. Montreal Protocol Amendment Proposal

For the past six years, the United States, Canada, and Mexico have proposed an amendment to the Montreal Protocol to phase down the production and consumption of HFCs. The United States seeks adoption of an amendment that is acceptable to all Parties. Global benefits of the amendment proposal would yield significant reductions of over 90 gigatons of carbon dioxide equivalent (CO_2eq) through 2050. A number of other Parties to the Montreal Protocol have also proposed amendments to phase down global production and consumption of HFCs. These proposals were introduced by a group of Island States; the European Union; and India. On November 6, 2015, the Parties to the Montreal Protocol adopted the ''Dubai Pathway'' on HFCs, which provides that the Parties would work together, within the Montreal Protocol, to adopt an HFC amendment in 2016.

4. Petition From the Alliance for Responsible Atmospheric Policy

On January 31, 2014, the Alliance for Responsible Atmospheric Policy (the Alliance) petitioned the Agency to initiate a rulemaking to apply the section 608 refrigerant management regulations to HFCs and other substitute refrigerants. In that petition, the Alliance requested that EPA extend the section 608 regulations relating to refrigerant sales and distribution restrictions, and the evacuation, certification, reclamation and recovery, leak repair, reporting and recordkeeping

[4] The President's Climate Action Plan, 2013, *https://www.whitehouse.gov/sites/default/files/image/president27sclimateactionplan.pdf.*

requirements to HFCs. The petition argues that applying the section 608 requirements to HFCs ''would increase the environmental benefits already realized from the section 608 regulations, through reduced HFC emissions, and would complement the United States' goal of a global phase down in HFC production and consumption.'' The petition cites sections 608(c)(2) and 301(a) of the CAA as authority for these revisions. A copy of the petition is included in the docket for this rulemaking. While EPA is not taking today's action solely as a result of the Alliance petition, this rulemaking constitutes the Agency's response to the petition.

D. What are the goals of this rule?

The Agency has two goals for this rulemaking. The first is to promote the proper handling and use of ozone-depleting and substitute refrigerants. Doing so will protect the stratospheric ozone layer by reducing emissions of ODS refrigerants and protect the climate system by reducing emissions of refrigerant gases with high GWPs. High-GWP refrigerants include both ODS refrigerants and most substitute refrigerants, including HFCs, that EPA has not exempted from the venting prohibition under CAA section 608. The second goal of this rulemaking is to harmonize the requirements across all major refrigerant types and update the regulations in plain language to reduce uncertainty and complexity for the regulated community, as well as increase clarity, encourage compliance, and facilitate enforcement.

1. Promoting the Proper Handling of Refrigerants

Today's rule will reduce the use and emission of refrigerants, maximize the recapture and recycling of such substances, and further interpret, explain, and enforce the prohibition on knowingly venting or releasing refrigerants during the maintenance, service, repair, or disposal of appliances.

EPA estimates that this rule will result in annual reductions in emissions of approximately 114 ODP-weighted metric tons. A separate support document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* contains a full discussion of the benefits of this rule and is available in the docket.

Stratospheric ozone depletion decreases the atmosphere's ability to shield life on the Earth's surface from the sun's UV radiation. The links between stratospheric ozone depletion and public health concerns are well established. Emissions of ODS lead to chemical reactions that reduce the amount of ozone in the stratosphere. Less ozone in the stratosphere means that more UVA and UVB radiation reaches the earth's surface and is incident on exposed organisms, including humans. Adverse health effects associated with exposure to UV radiation include skin cancer, cataracts, and immune suppression. The *Scientific Assessment of Ozone Depletion*,[5] prepared by the Scientific Assessment Panel to the Montreal Protocol, and *Environmental Effects of Ozone Depletion and its Interactions with Climate Change*,[6] prepared by the Environmental Effects Assessment Panel to the Montreal Protocol provide comprehensive information regarding the links between emissions of ODS, ozone layer depletion, UV radiation, and human health effects. Both documents are available in the docket for this rule.

The most common forms of skin cancer are strongly associated with UV radiation, and UV exposure is the most preventable cause of skin cancer (U.S. Department of Health and Human Services. The Surgeon General's Call to Action to Prevent Skin Cancer. Washington, DC: U.S. Department of Health and Human Services, Office of the Surgeon General; 2014). Skin cancer is the most common form of cancer in the United States, with more than 3.5 million new cases diagnosed annually (American Cancer Society, Cancer Facts and Figures, 2015). Rates for new cases of melanoma, the most serious form of skin cancer, have been rising on average 1.4 percent each year over the last 10 years (National Cancer Institute, SEER Stat Fact Sheets: Melanoma of the Skin, available at *http://seer.cancer.gov/statfacts/html/melan.html*, accessed May 5, 2015). In 2015, it is estimated that 70,000 Americans will have been diagnosed with melanoma and almost 10,000 will have died as a result of the disease (American Cancer Society, Cancers Facts and Figures, 2015).

Non-melanoma skin cancers are less deadly than melanomas, but if left untreated they can spread, causing disfigurement and more serious health problems. There are two primary types of non-melanoma skin cancers. Basal cell carcinomas are the most common type of skin cancer tumors. Basal cell carcinoma grows slowly, and rarely spreads to other parts of the body. It can, however, penetrate to the bone and cause considerable damage. Squamous cell carcinomas are tumors that may appear as nodules or as red, scaly patches. This cancer can develop into large masses and can spread to other parts of the body.

Other UV-related skin disorders include actinic keratoses and premature aging of the skin. Actinic keratoses are skin growths that occur on body areas exposed to the sun. The face, hands, forearms, and neck are especially susceptible to this type of lesion. Although premalignant, actinic keratoses are a risk factor for squamous cell carcinoma. Chronic exposure to the sun also causes premature aging, which over time can make the skin become thick, wrinkled, and leathery.

Research has shown that UV radiation increases the likelihood of certain cataracts. (Taylor, H.R., *et al.*, 1988. *Effect of ultraviolet radiation on cataract formation*, New England Journal of Medicine, 319, 1429–33; West, S. *et al.*, 2005. *Model of Risk of Cortical Cataract in the US Population with Exposure to Increased Ultraviolet Radiation due to Stratospheric Ozone Depletion*, American Journal of Epidemiology, 162, 1080–1088.) Cataracts are a form of eye damage in which a loss of transparency in the lens of the eye clouds vision. If left untreated, cataracts can lead to blindness. Although curable with modern eye surgery, cataracts diminish the eyesight of millions of Americans. Other kinds of eye damage caused by UV radiation include pterygium (*i.e.*, tissue growth that can block vision), skin cancer around the eyes, and degeneration of the macula which contains the part of the retina where visual perception is most acute.

Another benefit of reducing refrigerant emissions is protection of the climate system. Many refrigerants, including ODS and substitutes for ODS, are potent GHGs, having GWPs thousands of times higher than that of carbon dioxide (CO_2), which has a GWP of one. For example, HCFC–22 has a GWP of 1,810. R–404A, a commonly used HFC refrigerant blend, has a GWP of 3,922. Other common HFC refrigerants, with their GWPs, include R–134a (1,430), R–410A (2,088), R–407A (2,107), and R–507A (3,985). EPA estimates that today's rule will reduce GWP-weighted emissions by approximately 7.3 $MMTCO_2eq$ per year.

[5] World Meteorological Organization (WMO), Scientific Assessment of Ozone Depletion: 2014, World Meteorological Organization, Global Ozone Research and Monitoring Project—Report No. 55, 416 pp., Geneva, Switzerland, 2014.

[6] United Nations Environment Programme, Environmental Effects Assessment Panel, Environmental effects of ozone depletion and its interactions with climate change: progress report, 2011, Photochem. Photobiol. Sci., 2012, 11, DOI: 10.1039/c1pp90033a.

To briefly summarize, GHGs cause climate change by trapping heat on Earth. The Earth is constantly receiving energy from the sun in the form of radiation, while at the same time, energy is radiating away into space, mostly as infrared radiation. By absorbing and scattering radiation that otherwise would escape into space, GHGs throw off the balance between incoming and escaping radiation, resulting in more energy in the Earth's climate system.

As described in the EPA's 2009 Endangerment Finding (74 FR 66496) and subsequent reports by the IPCC, the United States Global Change Research Program, and the National Research Council, climate change impacts threaten the health of Americans in multiple ways and touch on nearly every aspect of public welfare. For more information on GHGs and climate change in the United States, visit *www.epa.gov/climatechange*.

2. Improving Rule Effectiveness

The second goal of today's rule is to improve the clarity and effectiveness of the subpart F regulations. Achieving the health and environmental benefits of these rules depends on widespread compliance, and understanding of the regulations by the regulated community enhances compliance.

EPA has begun an initiative to improve the effectiveness of its rules called Next Generation Compliance. The vision for this initiative is to make it easier for the regulated community to understand and comply with environmental laws and inform the public about their performance. Most importantly, this initiative will help ensure that all Americans are protected from significant risks to human health and the environment and have access to information that allows them to more fully engage in environmental protection efforts.

The Agency has identified several interconnected components in the Office of Enforcement and Compliance Assurance's 2014–2017 strategic plan for its Next Generation Compliance initiative that can improve the effectiveness of rules:

- Effective Regulations: Design regulations that are clear, as easy to implement as possible, and that contain self-reinforcing drivers. For example, where possible, design regulations such that regulated facilities can take steps to monitor their own performance to prevent violations, or be certified by an independent 3rd party.
- *Advanced Monitoring:* Use advanced monitoring technology for the government, industry, and the public to more easily find information on pollutant discharges/emissions, environmental conditions, and noncompliance.
- *Electronic Reporting:* Implement electronic systems to make reporting easier, more efficient, and less costly. For the user, these systems offer speed, convenience, expanded information choices, and filing capabilities. For government, they offer the ability to increase transparency, improve our ability to spot pollution and compliance issues, and respond quickly to emerging problems.
- *Transparency:* Make the information we have today more accessible, and make new information obtained from advanced monitoring and electronic reporting publicly available.
- *Innovative Enforcement:* Use Next Generation Compliance principles and tools in enforcement planning and cases.

Effective Regulations. The Agency and industry have more than 20 years of experience implementing and operating under the refrigerant management regulations in subpart F. Through that experience, it has become clear that there are elements of the program that could be made more effective. This rule revises the structure of these regulations to clearly lay out the process for repairing refrigerant leaks and adds steps to ensure that the repairs were successful. This rule also for the first time addresses chronically leaking systems in a manner that minimizes the burden on compliant systems. EPA has reorganized the subpart so affected entities can more easily find the provisions that apply to them, including recordkeeping and reporting. This rule removes outdated requirements and, where appropriate, removes unnecessary distinctions between refrigerants, appliance types, and recovery equipment types. Clearer regulations will also be supported by comprehensive compliance assistance materials for each industry segment affected by this final regulation. EPA hopes to make it easier for the regulated community to understand their obligations when handling refrigerants, thereby improving compliance and reducing damage to the environment.

Advanced Monitoring. EPA is encouraging owners/operators of appliances containing 50 or more pounds of refrigerant to install automatic leak detection equipment. Such systems provide continuous information about whether a system is leaking, allowing leaks to be caught sooner. This can reduce both refrigerant costs and labor costs of manually inspecting refrigeration systems.

Electronic Reporting. EPA has established the email address *608reports@epa.gov* and this rule requires that all reports that do not contain confidential business information be submitted to EPA at that address. EPA is also revising the regulations to explicitly state that owners and operators of appliances subject to the leak repair provisions may use electronic systems to track when and how much refrigerant is added to equipment and to keep other required records.

Transparency. EPA is requiring members of the regulated community to post additional information online that is of use to this sector. For example, equipment testing organizations must post lists of certified recovery and/or recycling equipment on their Web sites rather than submit paper reports to EPA. Certifying organizations must also publish lists of technicians that they certify online to assist technicians who have lost their certification cards. EPA also posts to its Web site data on the amount of ODS refrigerant reclaimed each year. Under this final rule EPA will begin collecting and making available reclamation data for non-exempt substitute refrigerants which should provide EPA and the general public a greater understanding of the extent of HFC recovery and reclamation.

Innovative Enforcement. EPA has incorporated innovative enforcement principles into subpart F since its inception, and this rule updates and strengthens those principles. For example, the refrigerant sales restriction is an effective way to ensure that anyone maintaining, servicing, or repairing an appliance is a certified technician. EPA has also required certification of refrigerant recovery equipment by independent third parties (*i.e.*, UL and Air Conditioning, Heating, and Refrigeration Institute (AHRI)) to ensure that recovery equipment meets the applicable standards. This ensures that technicians who use these devices to recover refrigerant are also using equipment that, when following the manufacturer's instructions, will meet the minimum refrigerant evacuation requirements. EPA also relies on third parties to administer the technician certification exam.

E. What are the major revisions being finalized in this rule?

EPA is finalizing most of the proposed revisions to the regulations for the National Recycling and Emission Reduction Program. Some of these revisions strengthen the existing program, in particular by requiring owners and operators to repair systems that leak at lower rates than what is currently required and to verify that those repairs were successful. Others extend, as appropriate, the regulations to HFCs and other non-exempt substitute refrigerants. Still other revisions improve the effectiveness of the regulations. After considering comments, EPA has decided not to finalize certain aspects of the proposal. This section briefly discusses the major proposed revisions and the final actions that EPA is taking. Detailed discussions of all of the revisions to the regulations finalized in this action, changes from the proposal, and responses to significant comments are in Section IV of this notice. EPA also summarizes and responds to all significant comments on the proposed action in the comment response document in the docket.

1. Extend the Regulations To Cover Substitute Refrigerants

EPA is finalizing the proposed extension of the requirements of the National Recycling and Emission Reduction Program to substitute refrigerants that have not been exempted from the venting prohibition (also referred to in this action as ''non-exempt substitutes'').

2. Strengthen Leak Repair Requirements

Prior to this rule, the leak rates for ODS equipment were 35 percent for IPR and commercial refrigeration appliances, and 15 percent for comfort cooling and other appliances. EPA proposed leak rates of 20 percent for IPR and commercial refrigeration and 10 percent for comfort cooling and other appliances. Based in part on comments received on the proposal, EPA is finalizing leak rates for ODS equipment as follows: 30 percent for IPR, 20 percent for commercial refrigeration appliances, and 10 percent for comfort cooling and other appliances. EPA is also extending the new leak rates to equipment using HFCs and other substitute refrigerants that are not exempt from the venting prohibition.

After considering public comments, EPA is modifying the proposed leak inspection requirements in this final rule. EPA proposed to require quarterly or annual leak inspections for all appliances with a full charge of 50 pounds or greater, with the more frequent inspections applying to larger systems. In the revisions finalized in this rule, EPA is requiring quarterly or annual leak inspections only for appliances that have exceeded the applicable leak rate. Similar to the proposal, owners or operators can forgo leak inspections if they install, continuously operate, and maintain automatic leak detection systems.

Based on comments, EPA has given particular attention to situations where the proposed regulations would have required the retrofit or retirement of an appliance. EPA has modified the final rule in numerous places to support the proper repair of leaking systems. Most notably, EPA is modifying the proposed chronic leaker provision. EPA proposed that appliances containing 50 or more pounds of ODS or substitute refrigerant that leak more than 75 percent of the appliance's full charge in each of two consecutive 12-month periods would have to be retired or mothballed. EPA is finalizing a requirement that owners or operators of appliances that leak 125 percent of their full charge in a calendar year must submit a report to EPA detailing their repair efforts. The report must be submitted no later than March 1 following the calendar year of the ≥125 percent leak.

3. Extend the Sales Restriction to Substitute Refrigerants, With an Exception for Small Cans of MVAC Refrigerant

EPA is finalizing the proposed restriction that non-exempt substitute refrigerants may only be sold to technicians certified under sections 608 or 609 of the CAA. In the case of MVAC refrigerant, EPA is exempting the sale of small cans of non-ODS substitutes to allow the do-it-yourself (DIY) community to continue servicing their personal vehicles. EPA is requiring that small cans of non-exempt substitute refrigerant be outfitted with self-sealing valves by January 1, 2018. Based on comments, EPA is not finalizing the proposal to prohibit the sale of small cans that do not contain self-sealing valves that were manufactured or imported prior to that requirement taking effect.

4. Establish Recordkeeping for Appliances Containing More Than 5 and Less Than 50 Pounds of ODS and Non-Exempt Substitute Refrigerant

EPA is finalizing revisions to the regulations that require that technicians, or the company employing technicians, keep records when disposing of appliances containing more than five and less than 50 pounds of refrigerant. These records include the company name, location of the appliance, date of recovery, and type of refrigerant recovered for each appliance. EPA is also finalizing, with some modification, the revision to the regulations requiring that technicians keep records of the amounts of ODS and non-exempt substitute refrigerant transferred for reclamation by refrigerant type.

EPA is reducing the burden in this final rule by only requiring maintaining records typically generated in the field during the normal disposal of appliances. Therefore, EPA is not finalizing the proposed requirement to keep records indicating the amount of refrigerant recovered from each appliance. Instead, EPA is finalizing a requirement to record the total amount of refrigerant, by type, recovered from all appliances they disposed of over a calendar month. This tally can be performed less frequently and at a central location.

5. Update the Technician Certification Program

EPA is finalizing the requirement that technicians be certified to handle HFCs and other non-exempt substitutes, as proposed. EPA is also finalizing the proposed requirement for certifying organizations to publish lists or create online databases of technicians that they certify.

6. Improving Readability and Restructuring the Requirements

EPA is finalizing the extensive revisions to the regulations in subpart F to more clearly state the requirements of the National Recycling and Emission Reduction Program and to remove potentially ambiguous language, with minor changes from the proposal. EPA is modifying some of the proposed revisions to address additional suggestions raised by commenters. EPA's intent with these edits is to improve readability, not to change the substantive content or requirements of the regulations. For edits to the regulations that are intended to be substantive, EPA is discussing those revisions in this notice. EPA is adding to the docket a red-line version of the final regulatory text from subpart F that shows the final revisions to the prior regulations to assist the regulated community in identifying the differences.

F. Enforcement of Subpart F Regulations

Subpart F regulations must be enforced to realize their full environmental and human health benefit. This section briefly presents examples of recent actions that EPA has taken to enforce the venting prohibition, leak repair, and safe disposal provisions of subpart F. Several provisions that EPA is finalizing in this rule are based on lessons learned in taking these enforcement actions. These revisions are intended to encourage compliance and facilitate potential future enforcement of the requirements actions of these and other sections of the subpart F regulations. EPA's Web site contains more information on these enforcement actions.[7]

Some commenters stated that EPA should seek better ways to enforce the pre-existing regulations for Class I and II ODS. One commenter encouraged EPA to continue to identify cost-effective means of ensuring that the entire regulated community supports and follows lawful policies and regulations. Another commenter wrote that venting of HFCs above *de minimis* levels must be severely penalized for the rule to be as effective as possible. That commenter encouraged EPA to reiterate that EPA welcomes information and reporting on an anonymous basis regarding parties known to be venting ODS, HFCs, and any non-exempt substitute.

EPA responds that the Agency has enforced and continues to enforce these regulations in actions that range from civil fines to criminal prosecutions. EPA encourages anyone who suspects or witnesses unlawful releases of refrigerants or other violations of CAA regulations to report an environmental violation to EPA (*www.epa.gov/enforcement/report-environmental-violations*). In 2014 and 2015, EPA brought or assisted in three cases against individuals for violating the venting prohibition when cutting into the refrigerant lines to steal metal from HCFC–22 containing air conditioners. Under the plea agreement in a case from 2014, the individual cutting the refrigerant line must serve 31 months in federal prison and then remain under court supervision for an additional 12 months during which time he must perform 200 hours of community service.

EPA entered into consent decrees with the supermarket chains Safeway in 2013, Costco in 2015, and Trader Joe's in 2016 for violations of the leak repair provisions of subpart F for their commercial refrigeration units. In 2015, EPA obtained corrective action with the United States Navy to resolve allegations of failing to perform leak rate calculations when servicing comfort cooling equipment, and with DuPont for improper maintenance and repair of two large IPR units. In 2012, EPA executed consent decrees with Icicle Seafoods, American Seafoods Co. LLC, and Pacific Longline Co. LLC for failure to repair refrigerant leaks at chilling units aboard its fishing vessels and failure to verify the adequacy of repairs before resuming operations, among other violations. In March of 2016, Ocean Gold Seafoods, Inc. and Ocean Cold, LLC entered into a consent decree with EPA that resolved alleged violations for failing to promptly repair refrigerant leaks and failing to keep adequate records of the servicing of their IPR equipment necessary to prevent leaks.

EPA has executed consent decrees to resolve alleged violations of the safe disposal regulations in subpart F. These include decrees in 2016 with Parkway Iron and Metal, and in 2015 with Metal Dynamics and Basic Recycling, as well as at least forty-five non-judicial settlements against scrap recyclers in 2014 and 2015.

EPA also continues to take steps to maintain the integrity of the certification programs under subpart F. EPA recently revoked over a dozen technician certification programs that had failed to submit the required biannual activity report (81 FR 28864). EPA is also ensuring that certified refrigerant reclaimers continue to operate in accordance with § 82.164 and maintain records and submit reports in accordance with § 82.166. EPA recently published a notice announcing the previous revocation of the certification of eight refrigerant reclaimers and giving a ninth reclaimer notice of impending revocation (80 FR 75455).

G. Incorporation by Reference

This action involves technical standards. In some instances, EPA is deciding to use a modified version of an industry standard for purposes of this rule; in others, EPA is deciding to use an industry standard by incorporating it by reference exactly as written. This section summarizes the technical standards that EPA is incorporating by reference and describes how interested parties can access those standards. Sections IV.C (small cans of MVAC refrigerant), Section IV.G (recovery and/or recycling equipment), and IV.K (reclamation requirements) contain further discussion of these technical standards including comments received on EPA's proposal to incorporate certain standards by reference.

EPA is incorporating by reference UL 1963, *Requirements for Refrigerant Recovery/Recycling Equipment*, Fourth Edition, June 1, 2011 in appendix B4. This establishes standards for refrigerant recovery and refrigerant recovery/recycling equipment to ensure the equipment can be used safely with flammable refrigerants. The standard is available at *www.comm-2000.com* or by writing to Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106. The cost is $798 for an electronic copy and $998 for hardcopy. UL also offers a subscription service to the Standards Certification Customer Library (SCCL) that allows unlimited access to their standards and related documents. The cost of obtaining this standard is not a significant financial burden for equipment manufacturers. Therefore, EPA concludes that the UL standard being incorporated by reference is reasonably available.

EPA is not incorporating by reference AHRI Standard 700–2016, *Specifications for Refrigerants.* Rather EPA is basing the content found in appendix A on this standard. This standard establishes purity specifications for refrigerants, and specifies the associated methods of testing for acceptability of refrigerants. The standard is available at *www.ahrinet.org* or by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. EPA is incorporating by reference publically available versions of the standards referenced in AHRI Standard 700–2016. Specifically, these standards are:

—*2008 Appendix C for Analytical Procedures for AHRI Standard 700–2014—Normative.* This document establishes definitive test procedures for determining the quality of new, reclaimed and/or repackaged refrigerants in support of the standards established in AHRI–700. An electronic copy of the appendix is available at *www.ahrinet.org*. It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—*2012 Appendix D for Gas Chromatograms for AHRI Standard 700–2014—Informative* Air-Conditioning, Heating, and Refrigeration Institute. This appendix provides figures for the gas chromatograms used with Appendix C to AHRI Standard 700–2015: Normative. An electronic copy of the appendix is available at *www.ahrinet.org*. It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—Federal Specification for ''Fluorocarbon Refrigerants,'' BB–F–1421 B, dated March 5, 1982. This section of this standard establishes a method to determine the boiling point and boiling point range of a refrigerant. The standard is available in the docket for this rulemaking. Therefore, EPA concludes that the standard being

[7] *https://www.epa.gov/ozone-layer-protection/enforcement-actions-under-title-vi-clean-air-act.*

incorporated by reference is reasonably available.

—GPA STD–2177, *Analysis of Natural Gas Liquid Mixtures Containing Nitrogen and Carbon Dioxide by Gas Chromatography*, 2013, Gas Processors Association. This standard establishes methods for analyzing demethanized liquid hydrocarbon streams containing nitrogen/air and carbon dioxide, and purity products such as ethane/propane mix that fall within compositional ranges indicated in the standard. The standard is available at *www.techstreet.com* or by writing to Techstreet, 6300 Interfirst Drive, Ann Arbor, MI 48108. The cost of this standard is $55 for an electronic copy or $65 for a printed edition. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—ASTM Standard D1296–01–2012, *Standard Test Method for Odor of Volatile Solvents and Diluents*, July 1, 2012, ASTM International. This test method covers a comparative procedure for observing the characteristic and residual odors of volatile organic solvents and diluents to determine their odor acceptability in a solvent system. The standard is available at *www.astm.org* or by writing to ASTM, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959. The cost of this standard is $39. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

EPA is not incorporating by reference AHRI Standard 740–2016, *Performance Rating of Refrigerant Recovery Equipment and Recovery/Recycling Equipment.* Rather EPA is basing the content found in appendices B3 and B4 on this standard. This standard establishes methods of testing for rating and evaluating the performance of refrigerant recovery equipment and recovery/recycling equipment. The standard is available at *www.ahrinet.org* or by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Blvd., Suite 500, Arlington, VA 22201. EPA is incorporating by reference the standards referenced in AHRI Standard 740–2016. Specifically, these standards are:

—ANSI/ASHRAE Standard 63.2–1996 (RA 2010) Method of Testing Liquid-Line Filter Drier Filtration Capability, 2010, American National Standards Institute/American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. The purpose of this standard is to prescribe a laboratory test method for evaluating the filtration capability of filters and filter driers used in liquid lines of refrigeration systems. The standard is available at *www.ashrae.org* or by mail at AHSRAE, 1791 Tullie Circle NE., Atlanta, GA 30329. The cost is $39 for an electronic copy or printed edition. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—UL Standard 1963–2011, *Refrigerant Recovery/Recycling Equipment*, Fourth Edition, 2011, American National Standards Institute/Underwriters Laboratories, Inc. This standard establishes safety requirements for and methods to evaluate refrigerant recovery and refrigerant recovery/recycling equipment. The standard is available at *www.comm-2000.com* or by writing to Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106. The cost is $798 for an electronic copy and $998 for hardcopy. UL also offers a subscription service to the Standards Certification Customer Library (SCCL) that allows unlimited access to their standards and related documents. The cost of obtaining this standard is not a significant financial burden for equipment manufacturers. Therefore, EPA concludes that the UL standard being incorporated by reference is reasonably available.

—AHRI Standard 110–2016, *Air-Conditioning, Heating and Refrigerating Equipment Nameplate Voltages*, 2016, Air-Conditioning, Heating, and Refrigeration Institute. This standard establishes voltage rating requirements, equipment performance requirements, and conformance conditions for air-conditioning, heating, and refrigerating equipment. A free electronic copy of this standard is available at *www.ahrinet.org*. It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—International Standard IEC 60038, *IEC Standard Voltages,* Edition 7.0, 2009–06, International Electrotechnical Commission. This standard specifies standard voltage values which are intended to serve as preferential values for the nominal voltage of electrical supply systems, and as reference values for equipment and system design. The standard is available at *www.techstreet.com* or by writing to Techstreet, 6300 Interfirst Drive, Ann Arbor, MI 48108. The cost of this standard is $50. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

EPA is not incorporating by reference California Air Resources Board, *Test Procedure for Leaks from Small Containers of Automotive Refrigerant*, TP–503, as amended January 5, 2010. Rather EPA is basing the content found in appendix E on this standard. This standard establishes methods for assessing the leak rate from small containers of refrigerant. A copy of this standard is available in the docket and *www.arb.ca.gov/regact/2009/hfc09/hfc09.htm*.

III. EPA's Authority Under the Clean Air Act

A. Summary of EPA's Authority for the Revisions to Subpart F

The authority for this action is provided primarily by section 608 of the CAA. Section 608 is divided into three subsections, which together comprise the ''National Recycling and Emission Reduction Program.'' Among other things, section 608 of the CAA requires EPA to establish a comprehensive program to limit emissions of ozone-depleting refrigerants. It also prohibits the knowing release or disposal of ozone-depleting refrigerants and their substitutes in the course of maintaining, servicing, repairing, or disposing of air-conditioning and refrigeration equipment in a manner which permits such a substance to enter the environment. The three subsections of section 608 are described in more detail in the following paragraphs.

Section 608(a) requires EPA to establish standards and requirements regarding use and disposal of class I and II substances. With regard to refrigerants, EPA is to promulgate regulations establishing standards and requirements for the use and disposal of class I and class II substances during the maintenance, service, repair, or disposal of air-conditioning and refrigeration appliances or IPR. Regulations under section 608(a) are to include requirements to reduce the use and emission of ODS to the lowest achievable level, and to maximize the recapture and recycling of such substances. Section 608(a) further provides that ''such regulations may include requirements to use alternative substances (including substances which are not class I or class II substances) or to minimize use of class I or class II substances, or to promote the use of safe alternatives pursuant to section [612] or any combination of the foregoing.''

Section 608(b) requires that the regulations issued pursuant to section 608(a) contain requirements for the safe disposal of class I and class II substances, including requirements that such substances shall be removed from such appliances, machines, or other goods prior to the disposal of such items or their delivery for recycling.

Section 608(c) establishes a self-effectuating prohibition, commonly called the ''venting prohibition,'' that generally speaking, makes it unlawful to knowingly release ODS and substitute refrigerants in a way that allows the refrigerant to enter the environment while maintaining, servicing, repairing, or disposing of air-conditioning or refrigeration equipment. More specifically, section 608(c)(1), effective July 1, 1992, makes it unlawful for any person in the course of maintaining, servicing, repairing, or disposing of an appliance or IPR to knowingly vent, release, or dispose of any ODS used as a refrigerant in such equipment in a manner that permits that substance to enter the environment. The statute exempts from this prohibition ''[d]e minimis releases associated with good faith attempts to recapture and recycle or safely dispose'' of such a substance. Section 608(c)(2) extends the provisions of (c)(1), including the prohibition on venting, to substitutes for class I or class II refrigerants, effective November 15, 1995, unless the Administrator determines that such venting, release, or disposal ''does not pose a threat to the environment.'' EPA has determined through prior rulemakings that specific substances do not pose a threat to the environment when vented, released, or disposed of and has exempted those specific substitutes from the venting prohibition. The full list of substitutes that EPA has exempted from this prohibition is at 40 CFR 82.154(a). For some substitutes that have been exempted from the venting prohibition under section 608(c)(2) and § 82.154(a) the exemption only applies when the substitute is used in specified applications, but for others, the exemption is for the substitute refrigerant as used in all applications.[8]

The statutory standards under section 608(a) against which the regulations concerning the use and disposal of ozone-depleting substances are to be measured are whether they ''reduce the use and emission of such substances to the lowest achievable level'' and ''maximize the recapture and recycling of such substances.'' These standards are often complementary in the context of maintenance, service, repair, and disposal of air conditioning and refrigerant equipment. For example, in the context of recycling, maximizing recycling will also help reduce the use and emission of these substances to the lowest achievable level. These statutory standards also bear a relationship to the *de minimis* releases addressed in section 608(c). More specifically, emissions that occur while complying with EPA's recovery and recycling regulations are considered *de minimis,* because those regulations set forth practices and requirements which result in the lowest achievable level of emissions. EPA has established this interpretation in its regulations under section 608 for ODS refrigerants.

On May 14, 1993, EPA published the original regulations implementing subsections (a), (b), and (c)(1) for ODS refrigerants (58 FR 28660). These regulations include evacuation requirements for appliances being serviced or disposed of, standards and testing requirements for recovery and/or recycling equipment, certification requirements for technicians, purity standards and testing requirements for used refrigerant sold to a new owner, certification requirements for refrigerant reclaimers, leak repair requirements, and requirements for the safe disposal of appliances that enter the waste stream with the charge intact. This rule also stated that the Agency interprets ''*de minimis*'' to mean releases that occur while the recycling and recovery requirements of regulations under sections 608 and 609 are followed. However, those requirements only applied to ODS refrigerants, and these regulations did not explain how the venting prohibition or the *de minimis* exemption applied for substitute refrigerants. Among other things, this rulemaking addresses that gap in the regulations.

1. Applying Regulations Under Section 608 to Substitute Refrigerants

In this rule, EPA is extending, as appropriate, provisions of the refrigerant recovery and/or recycling regulations, which previously had only applied to ODS refrigerants, to non-exempt substitute refrigerants. To summarize briefly, EPA's authority for this action rests largely on section 608(c), which EPA interprets to provide it authority to promulgate regulations that interpret, explain, and enforce the venting prohibition and the *de minimis* exemption, as they apply to both ODS refrigerants and non-exempt substitute refrigerants. Accordingly, this rule establishes a comprehensive and consistent framework that applies to both ODS and non-exempt substitute refrigerants. This, in turn, provides clarity to the regulated community concerning the measures that should be taken to comply with the venting prohibition for non-exempt substitutes and reduces confusion and enhances compliance for both ODS and non-exempt substitutes.[9] EPA's authority to issue regulations for section 608(c) is supplemented by section 301(a), which provides authority for EPA to ''prescribe such regulations as are necessary to carry out [the EPA Administrator's] functions under this Act.'' In addition, EPA's authority to extend the recordkeeping and reporting requirements to non-exempt substitutes is supplemented by section 114, which provides authority to the EPA Administrator to require recordkeeping and reporting in carrying out provisions of the CAA. Finally, the extension of requirements under section 608 to non-exempt substitutes in this rule is also supported by section 608(a) because having a consistent regulatory framework for non-exempt substitutes and ODS is expected to reduce emissions of ODS refrigerants, as well as non-exempt substitutes.

Section 608 of the CAA is ambiguous with regard to EPA's authority to establish refrigerant management regulations for substitute refrigerants. As Congress has not precisely spoken to this issue, EPA has the discretion to adopt a permissible interpretation of the CAA. *Chevron, U.S.A., Inc.* v. *Natural Res. Def. Council, Inc.*, 467 U.S. 837, 843–44 (1984). Primarily under the authority of section 608(a), EPA has established standards for the proper handling of ODS refrigerants during the maintenance, service, repair, or disposal of an appliance to maximize the recovery and/or recycling of such substances and reduce the use and emission of such substances. Section 608(a) expressly requires EPA to promulgate regulations that apply to class I and class II substances, but is silent on whether its requirements apply to substitute substances. On the other hand, section 608(c)(2) contains provisions for substitute refrigerants which parallel those for ODS refrigerants in section 608(c)(1). For instance, as for ODS refrigerants under section 608(c)(1), section 608(c)(2) prohibits knowingly venting, releasing, or disposing of any substitute refrigerant in the course of maintaining, servicing, repairing, or disposing of an appliance

[8] EPA is using the term ''non-exempt substitute'' in this notice to refer to substitute refrigerants that have not been exempted from the venting prohibition under CAA section 608(c)(2) and 40 CFR 82.154(a) in the relevant end-use. Similarly, the term ''exempt substitute'' refers to a substitute refrigerant that has been exempted from the venting prohibition under section 608(c)(2) and § 82.154(a) in the relevant end-use.

[9] EPA used an analogous analysis in promulgating the regulations for section 608 originally. In that rulemaking, EPA explained that extending regulatory requirements to class II substances (rather than only regulating class I substances) would facilitate compliance with the venting prohibition, in part by providing clear guidance to technicians recovering class II substances on what releases do and do not constitute violations of the prohibition. 58 FR 28667. EPA also explained that it was desirable to provide a ''clear, consistent framework for fully implementing the prohibition on venting for all refrigerants'' to ''minimize confusion and maximize compliance with the prohibition.'' 58 FR 28666.

in a manner which permits the substance to enter the environment.[10] This creates a tension or ambiguity because the regulated community is subject to an explicit and self-effectuating prohibition on venting, releasing, or disposing of non-exempt substitute refrigerants while maintaining, servicing, repairing, or disposing of equipment but at the same time is not explicitly required by section 608(a) to recover substitute refrigerant prior to servicing or disposing of equipment or to engage in any of the practices or behaviors that EPA has established to minimize the emission and release of ODS refrigerants during such maintenance, service, repair, or disposal.

Moreover, some amount of refrigerant, whether ODS or substitute, is inevitably released during the maintenance, servicing, repair, and disposal of air-conditioning or refrigeration appliances or equipment. Without a clear regulatory framework for determining what requirements apply during the maintenance, servicing, repair, and disposal of such equipment containing a non-exempt substitute refrigerant, the regulated community and the public would not have the same measure of certainty as to whether such releases violate the venting prohibition or fall within the *de minimis* exemption to that prohibition, and what steps must be taken to comply with CAA obligations for such substitute refrigerants in undertaking such actions. Accordingly, this rulemaking finalizes regulations to interpret and explain how the venting prohibition and the *de minimis* exemption apply to non-exempt substitute refrigerants. In doing so, EPA is clarifying that the regulated community that uses non-exempt substitute refrigerants may rely on the *de minimis* exemption to the venting prohibition if they follow the amended requirements in subpart F.

Consistent with the language of sections 608(c)(1) and (2), this rule aims to avoid knowing releases of non-exempt substitute refrigerants into the environment in the course of maintaining, servicing, repairing, or disposing of an appliance or IPR, unless those releases meet the criteria for the *de minimis* exemption. Section 608(c)(1) provides an exemption from the venting prohibition for ''[d]e minimis releases associated with good faith attempts to recapture and recycle or safely dispose of any such [class I or class II] substance.'' In this context, EPA interprets this provision to exempt releases that occur while the recycling and recovery requirements of regulations under sections 608 and 609 are followed and has promulgated regulations consistent with that interpretation.

In particular, EPA has incorporated both the venting prohibition and the *de minimis* exemption into the regulations at § 82.154(a). Further, the last sentence in the existing regulations at § 82.154(a)(2) provides that ''refrigerant releases shall be considered de minimis only if they occur when'' enumerated regulatory practices in subpart F or, alternatively, subpart B are followed. These subpart F requirements are the ones established in the 1993 rule mentioned above, and as periodically amended. The term *refrigerant*, however, was defined in § 82.152 for purposes of subpart F to mean ''any substance consisting in part or whole of a class I or class II ozone-depleting substance that is used for heat transfer purposes and provides a cooling effect.'' This definition did not include substitute substances. In addition, EPA had not yet applied the recycling and recovery requirements to non-ODS substitutes, and therefore these provisions which make clear how to qualify for the *de minimis* exemption for ODS refrigerants did not apply to substitute refrigerants.

EPA interprets section 608(c) such that the statutory *de minimis* exemption contained in section 608(c)(1) also applies to substitute refrigerants. Section 608(c)(2) states that, effective November 15, 1995, ''paragraph 1 shall also apply'' to the venting, release, or disposal of any substitute substance for class I or class II substances. As section 608(c)(2) incorporates ''paragraph 1'' it is reasonable to interpret it to also contain this *de minimis* exemption, which is included in paragraph 1 of section 608(c). However, the Act's exemption applies only to those *de minimis* releases ''associated with good faith attempts to recapture and recycle or safely dispose of refrigerants'' and the Act does not explicitly address what would be considered such ''good faith attempts to recapture and recycle or safely dispose'' of either ODS or substitute refrigerants. In fact, Title VI does not contain any further explanation or definition of those terms. Moreover, the statutory provisions that require EPA to promulgate regulations addressing recapturing and recycling requirements and safe disposal requirements in section 608(a) and 608(b) expressly mention that they apply to ODS refrigerants but are silent as to application to substitute refrigerants. This silence and the corresponding tension between these provisions creates an ambiguity in section 608 and EPA may fill that gap with a permissible interpretation. *Chevron, U.S.A., Inc.* v. *Natural Res. Def. Council, Inc.*, 467 U.S. 837, 843–44 (1984).

Consistent with the interpretation of section 608(c)(2) as incorporating the *de minimis* exemption, prior to this rulemaking EPA's regulations at § 82.154(a)(2) stated that ''[d]e minimis releases associated with good faith attempts to recycle or recover . . . non-exempt substitutes are not subject to this prohibition,'' thus applying the statutory *de minimis* exemption from the venting prohibition to good faith efforts to recycle or recover non-exempt substitute refrigerants. However, in contrast to the regulations for ODS refrigerants, the regulations did not provide any specific provisions to explain what constitutes such a ''good faith attempt'' with respect to substitute refrigerants. Thus, the prior regulations were unclear as to what requirements or practices regulated parties must follow to qualify for the *de minimis* exemption, and thereby comply with the venting prohibition, for non-exempt substitute refrigerants.

EPA has discussed this issue in previous notices. On June 11, 1998, EPA proposed to apply the *de minimis* exemption in section 608(c)(1) to substitute refrigerants and to issue regulations under section 608(c)(2) that interpret, clarify, and enforce the venting prohibition for substitutes (63 FR 32044). EPA stated in that proposed rule, ''[w]hile section 608(c) is self-effectuating, EPA regulations are necessary to define '*(d)e minimis* releases associated with good faith attempts to recapture and recycle or safely dispose' of such substances and to effectively implement and enforce the venting prohibition.'' 63 FR 32046.

In the final rule issued March 12, 2004 (69 FR 11946), EPA extended the regulations interpreting and enforcing the 608(c)(1) *de minimis* exemption to blends containing an ODS component but not to refrigerants containing only substitutes. As stated in that rule at 69 FR 11949:

> [V]enting of all substitute refrigerants, including HFC and PFC refrigerants (and

[10] As noted previously, this venting prohibition does not apply to substitutes for which the Administrator has made a determination that such venting, release, or disposal ''does not pose a threat to the environment'' under CAA 608(c)(2). As indicated elsewhere in this notice, EPA is not extending the requirements of the refrigerant management program to substitutes that have been exempted from the venting prohibition in this action. Where a substitute has been exempted only in specific uses, the requirements in this rule apply to uses in which the substitute has not been exempted.

blends thereof) is prohibited under section 608(c), with the exception of *de minimis* releases associated with good faith attempts to recapture and recycle. The *de minimis* releases exception, however, is not self-effectuating, nor is it self-explanatory.

EPA believes that regulatory clarification is necessary to define such '*[d]e minimis* releases' and 'good faith attempts to recapture and recycle or safely dispose of any such substance' and safely dispose of appliances to effectively implement and enforce the venting prohibition. Section 608(c)(1) in conjunction with 608(c)(2) of the Act allow for an exemption for *de minimis* releases associated with good faith attempts to recapture and recycle or safely dispose of substitutes for class I and class II ODSs used as refrigerants. A regulation reflecting the statutory requirement for recovery of substitute refrigerants is an essential part of a regulatory framework within which *de minimis* releases and good faith attempts to recapture and recycle or safely dispose of substitute refrigerants can be defined.

This interpretation that the statutory *de minimis* exemption applies to substitutes but is not self-explanatory is consistent with the interpretation of section 608(c)(1) and (2) that EPA articulates in this section. However, in the March 2004 Rule EPA did not finalize its proposal to extend all of the subpart F regulations to substitute refrigerants. See 69 FR 11953.

Following the March 12, 2004, rulemaking, the Administrator promulgated a direct final rule to amend the regulatory definitions of *refrigerant* and *technician,* as well as the venting prohibition, to correct and clarify the intent of those regulations (70 FR 19273, April 13, 2005). As part of that rule, EPA edited the regulatory venting prohibition to reflect the statutory *de minimis* exemption in section 608(c)(2). As explained at 70 FR 19275:

In accordance with section 608(c)(2) of Title VI of the Clean Air Act (as amended in 1990), *de minimis* releases associated with good faith attempts to recapture and recycle or safely dispose of such substitutes shall not be subject to the prohibition. EPA has not promulgated regulations mandating certification of refrigerant recycling/recovery equipment intended for use with substitutes; therefore, EPA is not including a regulatory provision for the mandatory use of certified recovery/recycling equipment as an option for determining *de minimis* releases of substitutes. However, the lack of a regulatory provision should not be interpreted as an exemption to the venting prohibition for non-exempted substitutes. The regulatory prohibition at § 82.154(a) reflects the statutory reference to *de minimis* releases of substitutes as they pertain to good faith attempts to recapture and recycle or safely dispose of such substitutes.

In order to emphasize that the knowing venting of HFC and PFC substitutes remains illegal during the maintenance, service, repair, and disposal of appliances and to make certain that the *de minimis* exemption for refrigerants remains in the regulatory prohibition, § 82.154(a) is amended to reflect the venting prohibition of section 608(c)(2) of the Act.

In that action, EPA added the phrase ''[d]e minimis releases associated with good faith attempts to recycle or recover refrigerants *or non-exempt substitutes* are not subject to this prohibition'' to § 82.154(a)(2) (emphasis added). However, because EPA has not extended the regulatory recycling and recovery requirements to substitute refrigerants, the regulations have not provided clarity or certainty how this exception applies to non-exempt substitute refrigerants that do not contain an ODS. Moreover, as for ODS, some amount of substitute refrigerant is released during the maintenance, servicing, repair, or disposal of appliances, even if precautions to avoid such releases are taken. For ODS refrigerants, the rules have provided certainty to the regulated community that if specific identified practices are followed, regulated entities would not be held liable for releases of small amounts of refrigerant incidental to these actions. These regulations have supported the recovery or recycling of ODS refrigerants and reduced the emissions of such substances. In other words, for ODS, EPA has reasonably interpreted the *de minimis* exemption to apply only to the small amount of emissions that cannot be prevented by following the regulatory requirements. This interpretation of the *de minimis* exemption is equally reasonable for non-exempt substitute refrigerants. Accordingly, to provide the same clarity and certainty to the regulated community for substitute refrigerants, it is important to clarify how this exemption applies to non-exempt substitute refrigerants that do not contain an ODS. To do so, EPA is finalizing its proposal to extend the amended regulations concerning emissions reduction and recapture and recycling of CFC and HCFC refrigerants, found at 40 CFR part 82, subpart F, to all substitute refrigerants that have not been exempted from the venting prohibition under § 82.154(a)(1).

These regulations establish standards and requirements related to the maintenance, servicing, repair, or disposal of appliances and IPR that use ODS or non-exempt substitutes as refrigerants. They are designed to minimize or avoid knowing releases or disposal, in the course of those activities, of ODS and non-exempt substitute refrigerants in a manner which allows that substance to enter the environment. For example, the regulations establish requirements to minimize emissions during appliance maintenance, servicing, or repair (*e.g.*, by requiring that technicians recover refrigerant from an appliance before servicing and by setting standards for the repair of appliances that have leaked above the applicable threshold), as well as disposal (*e.g.*, by requiring the use of certified recovery equipment to remove refrigerant from the appliance before the final disposal). Accordingly, the regulations finalized in this action fall within the scope of EPA's authority to interpret and explain the venting prohibition, and to give regulated entities greater certainty about what is required to comply.

EPA is also adopting a broader interpretation of the venting prohibition under CAA sections 608(c)(1) and (2) in this action. As discussed in more detail in the proposal for this action (80 FR 69486), in the 1993 Rule EPA stated that the venting prohibition did not ''prohibit 'topping off' systems, which leads to emissions during the use of equipment'' but explained that the ''provision on knowing releases does however, include the situation in which a technician is practically certain that his or her conduct will cause a release of refrigerant during the maintenance, service, repair, or disposal of equipment'' or fails to appropriately investigate facts that demand investigation (58 FR 28672). The proposal also explained that EPA had subsequently moved toward a broader interpretation of the venting prohibition in the proposed 2010 Leak Repair Rule (80 FR 69486, quoting 75 FR 78570). EPA concludes that its statements in the 1993 Rule presented an overly narrow interpretation of the statutory venting prohibition. Consistent with the direction articulated in the proposed 2010 Leak Repair Rule, EPA is adopting a broader interpretation. When refrigerant must be added to an existing appliance, other than when originally charging the system or for a seasonal variance, the owner or operator necessarily knows that the system has leaks. At that point the owner or operator is required to calculate the leak rate. If the leaks exceed the applicable leak rate for that particular type of appliance, the owner or operator will know that absent repairs, subsequent additions of refrigerant will be released in a manner that will permit the refrigerant to enter the environment. Therefore, EPA interprets section 608(c) such that if a person adds refrigerant to an appliance that he or she knows is leaking, he or she also violates the venting prohibition unless he or she has complied with the applicable practices referenced in § 82.154(a)(2), as revised, including the leak repair requirements, as applicable.

This action extending the regulations under subpart F to non-exempt substitutes is additionally supported by the authority in section 608(a) because regulations that minimize the release and maximize the recapture and recovery of non-exempt substitutes will also reduce the release and increase the recovery of ozone-depleting substances. Improper handling of substitute refrigerants is likely to contaminate appliances and recovery cylinders with mixtures of ODS and non-ODS substitutes, which can lead to illegal venting because such mixtures are difficult or expensive to reclaim or appropriately dispose of. Under the prior definition of *refrigerant*, any substance that consists in whole or in part of a class I or class II ODS and is used for heat transfer and provides a cooling effect, is a refrigerant and is subject to the requirements for ODS. However, when a regulated entity believes it is using a substitute refrigerant, and that substitute becomes contaminated with ODS, the contamination may not be apparent to the user, and thus, the user may not be aware that the requirements for refrigerants apply to that substance. This confusion can also lead to illegal venting of ODS. In short, the authority to promulgate regulations regarding the use of class I and II substances encompasses the authority to establish regulations regarding the proper handling of substitutes where this is needed to reduce emissions and maximize recapture and recycling of class I and II substances. Applying consistent requirements to all non-exempt refrigerants will reduce complexity and increase clarity for the regulated community and promote compliance with those requirements for ODS refrigerants, as well as their substitutes.

2. Recordkeeping Provisions

In this action, EPA is also establishing new recordkeeping requirements, as well as extending existing recordkeeping requirements to non-exempt substitutes. EPA's authority to establish and extend these requirements is supported by CAA sections 608(a), 608(c), and 114, consistent with the description of these authorities offered above. These new recordkeeping requirements are an important part of EPA's efforts to address illegal venting of refrigerants, improve accounting of refrigerants in affected appliances, and facilitate enforcement of requirements under section 608. For example, EPA is establishing a new recordkeeping requirement for the disposal of appliances containing more than five and less than 50 pounds of refrigerant. Section 608(a) gives EPA explicit authority to implement requirements that reduce ODS refrigerant emissions to the lowest achievable level. This recordkeeping requirement, along with other recordkeeping requirements in this rule, further the recovery, reclamation, and/or destruction of ODS refrigerants and discourages the illegal venting of such refrigerants from affected appliances. Because it minimizes the emission of ODS refrigerant, EPA has authority for this requirement as it relates to ODS appliances under 608(a). Additionally, providing a consistent standard for ODS and non-exempt substitute refrigerants will facilitate the recovery, reclamation, and/or destruction of both ODS and non-ODS refrigerants and, accordingly, will reduce the emission of such refrigerants. EPA will continue to evaluate how best to use the information to promote the recovery of refrigerants and compliance with these provisions.

EPA also has authority under section 114 of the CAA to require that technicians document that appliances containing an ODS refrigerant or a non-exempt substitute refrigerant have been properly evacuated prior to disposal. Section 114 of the CAA provides the primary authority to establish these recordkeeping and reporting requirements because it provides EPA authority to require recordkeeping and reporting in carrying out provisions of the CAA, including the venting prohibition under CAA sections 608(c) and the requirements under 608(a). Because these records will help EPA determine whether requirements under sections 608(c) and 608(a) are being complied with, this requirement falls within the scope of section 114.

3. Amendments Related to Practices and Requirements for ODS

In addition to extending the existing regulations in subpart F to non-exempt substitute refrigerants, EPA is also revising and augmenting the existing requirements that apply to ozone-depleting substances, including: Lowered leak rates, periodic leak inspections for equipment that has leaked above the leak threshold, leak repair verification tests, and recordkeeping requirements for the disposal of appliances containing more than five and less than 50 pounds of refrigerant. EPA is also finalizing its proposal to update and revise subpart F to improve clarity and enforceability. EPA's authority for these amendments is based primarily on section 608(a), which requires EPA to promulgate regulations regarding the use and disposal of class I and II substances to ''reduce the use and emission of such substances to the lowest achievable level'' and ''maximize the recapture and recycling of such substances.'' In addition, because EPA is further elaborating the requirements and practices that regulated parties must follow to qualify for the *de minimis* exemption from the venting prohibition for ODS, EPA is drawing on its authority under section 608(c)(1). EPA's authority for these actions is also supplemented by section 301(a) and 114, in the same way as described earlier in this notice.

4. Provisions Related to MVAC and MVAC-Like Appliances

While section 608 covers all appliances,[11] section 609 of the CAA directs EPA to establish requirements to prevent the release of refrigerants during the servicing of MVACs specifically. MVACs are defined under EPA's section 608 implementing regulations at 40 CFR part 82, subpart F as ''any appliance that is a motor vehicle air conditioner as defined in 40 CFR part 82, subpart B.'' 40 CFR 82.152. Under section 609, in 40 CFR part 82, subpart B, MVACs are defined as ''mechanical vapor compression refrigeration equipment used to cool the driver's or passenger's compartment of any motor vehicle. . . .'' 40 CFR 82.32(d).

A motor vehicle is defined under subpart B as ''any vehicle which is self-propelled and designed for transporting persons or property on a street or highway, including but not limited to passenger cars, light duty vehicles, and heavy duty vehicles. This definition does not include a vehicle where final assembly of the vehicle has not been completed by the original equipment manufacturer.'' 40 CFR 82.32(c).

Under section 609, no person repairing or servicing motor vehicles for consideration may perform any service on an MVAC that involves the refrigerant without properly using approved refrigerant recovery or recovery and recycling equipment and no such person may perform such service unless such person has been properly trained and certified. Refrigerant handling equipment must be certified by EPA or an independent organization approved by EPA. Section 609 also prohibits the sale or distribution of any class I or class II MVAC refrigerant in a container of less

[11] For EPA's discussion on the definition of *appliance*, see Section IV.A.

than 20 pounds to any person who is not certified under section 609.

Regulations issued under section 609 are in 40 CFR part 82, subpart B, and include information on prohibitions and required practices (§ 82.34), approved refrigerant handling equipment (§ 82.36), approved independent standards testing organizations (§ 82.38), requirements for technician certification and training programs (§ 82.40), and certification, recordkeeping, and public notification requirements (§ 82.42). Appendices A–F of subpart B provide standards for minimum operating requirements for MVAC servicing equipment.

Because MVACs are defined in subpart F as an ''appliance'' (§ 82.152), the section 608 regulations found in subpart F are generally applicable to MVAC systems. However, because servicing and technician training and certification are regulated under section 609, EPA's section 608 regulations in subpart F defer to those requirements in subpart B. Procedures involving MVACs that are not regulated under section 609, such as the disposal of MVACs and the purchase of refrigerant for use in MVACs besides ODS refrigerant in containers less than 20 pounds, are covered by section 608. The prohibition in section 608 against venting ODS and substitute refrigerants is also applicable to refrigerants used in MVAC systems.

EPA also regulates MVAC-like appliances under subpart B. MVAC-like appliances are used to cool the driver's or passenger's compartment of off-road vehicles, including agricultural and construction vehicles.[12] While these types of systems are outside of the scope of the definition of *motor vehicle* established in subpart B, there are similarities between MVAC-like appliances and MVAC systems. In the 1993 Rule, under the authority of section 608, EPA adopted requirements for the certification and use of recycling equipment for MVAC-like appliances in subpart B. MVAC-like appliances may only be serviced by a certified technician and this requirement is not limited to those servicing for consideration, but MVAC-like technicians have the option to be certified under section 608 or 609.

Through this rulemaking EPA is finalizing its proposal to apply the provisions of section 608 to non-exempt ODS substitutes, including those used in MVAC and MVAC-like appliances. EPA is not extending the regulations under section 609 as part of this rulemaking because the 609 regulations have been applicable to all substitute substances since 1995.[13]

5. Consideration of Economic Factors

Section 608 of the CAA does not explicitly address whether costs or benefits should be considered in developing regulations under that section. The statutory standards under section 608(a) against which the regulations concerning the use and disposal of ozone-depleting substances are to be measured are whether they ''reduce the use and emission of such substances to the lowest achievable level'' and ''maximize the recapture and recycling of such substances.'' The phrase ''lowest achievable level'' as used in section 608(a)(3) is not clear on its face as to whether economic factors should be considered in determining what is the ''lowest achievable level.'' Title VI does not further explain or define the term nor does it expressly state whether economic factors may or must be considered. Thus, EPA has discretion to adopt a reasonable interpretation. EPA has previously interpreted this phrase to allow the consideration of economic factors. *See* 58 FR 28659, 28667 (May 14, 1993). EPA did not propose to revise that interpretation and has considered economic as well as technological factors in the development of this rule.

The phrase ''de minimis releases associated with good faith attempts to recapture and recycle or safely dispose of any such substance'' as used in section 608(c)(1) and as applied to substitutes through section 608(c)(2) is similarly not clear on its face as to whether economic factors may be considered in determining what is *de minimis.* Title VI does not further address this issue. Thus, EPA has discretion to adopt a reasonable interpretation. EPA interprets this phrase to allow the consideration of economic factors. The Senate Manager's Statement for the Clean Air Act Amendments of 1990 indicates that ''the exception is included to account for the fact that in the course of properly using recapture and recycling equipment, it may not be possible to prevent some small amount of leakage'' (Cong. Rec. S 16948 (Oct. 27, 1990), *reprinted in* 1 A Legislative History of the Clean Air Act Amendments of 1990, at 929 (1993)). EPA does not read this statement as expressing an intent that the Agency consider only technological factors in setting standards for recapture and recycling equipment and the proper use of such equipment. Rather, EPA understands it as meaning that once those standards are set, only the small amount of emissions that cannot be prevented by following such standards should be exempted.

Because the statutory language does not dictate a particular means of taking economic factors into account, if at all, EPA has discretion to adopt a reasonable method for doing so. In developing this rule, EPA has not applied a strict cost-benefit test, but rather has focused primarily on the state of air conditioning and refrigeration best practices and recovery technology, while also giving consideration to costs and benefits. The fact that industry has identified and uses these best practices indicates they are affordable.

EPA considered cost for many specific aspects of this rule. For instance, as discussed in the leak repair section (Section IV.F of this notice), EPA considered what is achievable from a technical perspective, while also considering the costs of those practices and technologies and the benefits from their use, when determining whether to establish new requirements and extending existing requirements to non-exempt substitute refrigerants. See the technical support document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* in the docket for sensitivity analyses conducted on various options. Generally, the leak repair requirements finalized in this action take into account that the variability of those conditions in the field is significant in each air-conditioning and refrigeration sector. For example, some appliances generally have more leaks than others. An industrial process refrigeration appliance can have thousands of pounds of refrigerant running through miles of piping, resulting in numerous opportunities for leaks to occur, whereas a household refrigerator typically has about one pound of refrigerant in a hermetically sealed refrigerant loop that rarely leaks. The

[12] We are amending the subpart F definition of ''MVAC-like appliance'' to replace the term ''off-road motor vehicle'' with the term ''off-road vehicles or equipment.'' This revision is not intended to effect a substantive change in the equipment covered by this definition but rather simply is intended to clarify the definition.

[13] The Agency has indicated plans to issue a separate proposed rule to consider adopting standards from the Society of Automotive Engineers (SAE) for servicing equipment in 40 CFR subpart B. These standards are: SAE J2843 R–1234yf Recovery/Recycling/Recharging Equipment for Flammable Refrigerants for Mobile Air-Conditioning Systems, SAE J2851 Recovery Equipment for Contaminated Refrigerant from Mobile Automotive Air Conditioning Systems, and SAE J3030 Automotive Refrigerant Recovery/Recycling Equipment Intended for Use with Multiple Refrigerants. In a future rulemaking, EPA intends to propose to incorporate by reference these standards developed by SAE International's Interior Climate Control Committee.

requirements in this rule reflect that difference.

As another example, EPA considered the costs of extending the refrigerant sales restriction to small cans of non-exempt substitutes used for MVAC servicing. EPA decided a more cost effective method of reducing emissions is requiring that manufacturers install self-sealing valves on small cans rather than limiting the sale of small cans to certified technicians only. As a final example of how EPA considered costs in this rulemaking, EPA relied heavily on the existing program and requirements already in place for ODS refrigerants rather than developing a new and separate set of requirements for non-exempt substitutes. This will allow the regulated community to in many instances use or adapt existing compliance procedures for non-exempt substitutes rather than having to develop wholly new approaches to managing compliance. This approach should help regulated entities to better predict and manage compliance costs.

B. Comments and Responses Related to EPA's Authority

This section summarizes many comments related to EPA's authority under the Clean Air Act to issue this rule and EPA's responses. Other comments related to EPA's authority for this action are addressed in the response to comments document found in the docket for this action.

1. Comment: EPA Does Not Have Authority To Regulate Substitutes That Have Limited or No Impact on Stratospheric Ozone Under Section 608

Some comments asserted that EPA does not have the authority to extend the existing refrigerant management provisions in subpart F to non-ozone depleting refrigerants. Some commenters stated that under a plain language reading of section 608(a) it is clear that regulations to reduce use and emissions apply only to class I and class II substances and not substitutes. These comments said the language of section 608 as a whole authorizes a wide range of prescriptive regulations to reduce the use and emissions of class I and class II refrigerants but mentions substitutes only twice: That their use be promoted and the general requirement that their knowing venting is prohibited.

On the contrary, other comments agreed that EPA had authority to extend these regulations to substitutes. One such comment stated: ''We believe that both the language of section 608 and the Agency's discretionary authority allow the extension of section 608's requirements to substitutes for ODS in the regulations.'' [14] These commenters noted that extending these regulations to substitutes allows for a coherent and robust regime to address venting across the full suite of appliances and applications, and that applying the regulatory regime to substitute refrigerants would more fully allow for and incentivize the recovery and reclamation of both ODS and substitutes. These comments concluded that because ODS and substitutes can be used interchangeably, the regulation of substitutes reinforces the regulation of ODS and more reliably reduces ODS emissions. Another commenter who generally believes the Agency does not have authority to apply the leak repair provisions to appliances using substitute refrigerants does concede that there may be provisions of subpart F which are directly related to emissions occurring in the course of maintenance, service, repair or disposal activities and might be reasonably extended to substitute refrigerants.

EPA disagrees that its regulatory authority under CAA section 608 extends only to class I and class II (ODS) substances and not to substitutes. EPA also disagrees with comments contending that, as a factual matter, extension of the refrigerant management regulations to substitutes would not reduce emissions of ODS and maximize the recapturing and recycling of ODS. Section 608 expressly addresses substitute refrigerants in the venting prohibition in section 608(c)(2). As explained previously in this notice, EPA's authority for extending the refrigerant management regulations to substitute refrigerants is based primarily on section 608(c)(2) (via interpretation, explanation, and enforcement of the venting prohibition for substitutes) and secondarily on section 608(a) (via the corresponding reductions in ODS emissions and increases in ODS recapture and recycling that are expected to result from requiring consistent practices for ODS and substitute refrigerants), with additional support from CAA sections 301 and 114.

More specifically with respect to section 608(a), that section states that the regulations under that section shall include requirements that reduce the use and emission of ODS to the lowest achievable level and that maximize their recapture and recycling. EPA's interpretation that section 608(a) supports the extension of the refrigerant management regulations to substitutes is based on reducing emissions of ODS and maximizing recapturing and recycling of ODS. This is because requiring practices that are consistent for both ODS and for substitutes reduces the likelihood that a person maintaining, servicing, repairing, or disposing of an appliance that uses ODS as a refrigerant mistakenly believes that it contains a substitute refrigerant and fails to apply the proper procedures for ODS, leading to increased ODS emissions or failure to recover or reclaim ODS. It is also because in the course of servicing, repairing, or maintaining appliances there is a potential for mixing ODS and substitute refrigerants, which may lead to venting or release of the mixture due to the difficulty of reclamation. EPA has explained that the venting prohibition applies to all refrigerants consisting in whole or in part of an ODS, such as a blend with an HFC component. (See 69 FR 11949). Accordingly, the commenters' statements that section 608(a) only applies to class I and class II substances fail to recognize that regulation of substitutes can help effectuate the statutory purposes mentioned in section 608(a). EPA is relying in part on section 608(a) for the extension of regulatory requirements to substitutes because it interprets this provision to support regulation of substitutes when such regulations can help achieve the purposes listed in section 608(a). The extension of regulatory requirements to substitutes in this action is supported by section 608(a) because that extension of requirements to substitutes is expected to reduce ODS emissions and further maximize the recovery and reclamation of ODS. After consideration of all the comments, EPA concludes that it has authority to extend the refrigerant management regulations to substitutes, and that section 608(a) is a relevant source of authority because applying a consistent and coherent regulatory regime to both ODS and substitute refrigerants improves the application of the requirements to ODS, promoting the recovery and reclamation of ODS and reducing ODS emissions. Such ODS-focused goals are well within EPA's authority under CAA section 608(a).[15]

Commenters also disagreed with EPA's statement that there is ambiguity in the CAA regarding the Agency's authority to create a comprehensive regulatory program akin to that

[14] Comment submitted by Natural Resources Defense Council and Institute for Governance and Sustainable Development, David Doniger, et. al., pg. 3. EPA–HQ–OAR–2015–0453–0121.

[15] Although these comments do not relate to EPA's authority to regulate ODS, we do note for completeness' sake that CAA section 608(a) also provides authority for the portions of this rulemaking that revise the refrigerant management requirements as those apply directly to ODS.

applicable to class I and class II ODS. These commenters expressed that Congress explicitly addressed substitutes in section 608(c)(2) and did not in section 608(a) and that Congress was fully aware and capable of granting EPA authority to regulate substitutes under section 608(a) and it chose not to do so. They further commented that Congress knew which provisions of Title VI it wished to extend to substitutes and which it did not, and pointed to sections 609, 612, and 615 as allowing EPA to regulate substitutes. These comments concluded that Congress demonstrated that it knew how to include substitutes in refrigerant management regulations if it wanted to.

EPA recognizes that Congress expressly mentioned substitutes in certain sections of Title VI of the CAA, such as section 608(c)(2). In EPA's interpretation of section 608, the fact that Congress expressly applied the venting prohibition to substitutes in section 608(c)(2) supports this action because this action clarifies how EPA interprets that venting prohibition and explains what actions must be taken during the maintenance, servicing, repair, or disposal of appliances and IPR to avoid violating the venting prohibition. The inclusion of substitutes in section 608(c)(2) also indicates that Congress contemplated that regulation of substitutes would play a role in implementing section 608. The ambiguity in section 608 is that Congress created an explicit prohibition on venting substitute refrigerants in the course of maintaining, servicing, repairing, or disposing of appliances or IPR, and also provided an exception to that prohibition for ''de minimis releases associated with good faith attempts to recapture and recycle or safely dispose'' of such substances. CAA section 608(c)(1); see also CAA section 608(c)(2) (applying paragraph (c)(1) to the venting, release, or disposal of substitute refrigerants). Congress, however, did not define what releases would be considered ''*de minimis*'' nor which activities would be considered ''good faith attempts to recapture and recycle or safely dispose'' of such substances. Where Congress has not directly spoken to an issue or has left ambiguity in the statute, that silence or ambiguity creates an assumption that ''Congress implicitly delegated to the agency the power to make policy choices that represent a reasonable accommodation of conflicting policies that are committed to the agency's care by the statute.'' *National Ass'n of Mfrs.* v. *United States DOI,* 134 F.3d 1095, 1106 (D.C. Cir. 1998). As the U.S. Supreme Court has explained, the ''power of an administrative agency to administer a congressionally created . . . program necessarily requires the formulation of policy and the making of rules to fill any gap left, implicitly or explicitly, by Congress.'' *Chevron,* 467 U.S. at 843–44. The Court later explained, ''[w]e accord deference to agencies under *Chevron,* . . . because of a presumption that Congress, when it left ambiguity in a statute meant for implementation by an agency, understood that the ambiguity would be resolved, first and foremost, by the agency, and desired the agency (rather than the courts) to possess whatever degree of discretion the ambiguity allows.'' *Smiley* v. *Citibank (s.D.), N.A,* 517 U.S. 735, 740–741 (1996). Accordingly, Congress's silence with regard to the venting prohibition and the exception for certain releases leaves a gap for the Agency to fill, as it is doing in this rulemaking.

In addition to the statutory interpretation and the principle of *Chevron* deference discussed above, the legislative history further supports the notion that Congress anticipated and intended for the Agency to establish regulations that would further interpret, explain, and enforce the exception to the venting prohibition. A Senate Report accompanying a version of the Senate bill for the Clean Air Act Amendments of 1990, which enacted Title VI, addressed the venting prohibition and described that it would include ''[e]xceptions . . . for de minimis releases associated with good faith attempts to recapture, recycle and safely dispose of'' the substances used as refrigerants in household appliances, commercial refrigeration and air conditioning units. *Report of the Committee on Environment and Public Works United States Senate, Report Accompanying S. 1630 (S. Rept. 101–228)* (December 20, 1989) at 396 (*reprinted in* 4 A Legislative History of the Clean Air Act Amendments of 1990, at 8736 (1993)). This report further stated that the standards and requirements that EPA was required to promulgate ''should include provisions to foster implementation of this prohibition, including guidance on what constitutes 'de minimis' and 'good faith'.'' *Id.* Thus, EPA reasonably interprets the ambiguity in section 608(c) to mean that in creating the exception to the venting prohibition, Congress intended for the Agency to provide additional specificity regarding how a regulated entity would qualify for this exception. This rulemaking provides such additional specificity and further articulates the policy of how this exception is interpreted, explained, and enforced.

While EPA acknowledges that section 608(a) does not explicitly mention substitutes, we disagree with the conclusion that the comment draws from that. The fact that Congress required EPA to address ODS in a certain manner under section 608(a) is not the same as prohibiting EPA from addressing other refrigerants in the same manner. EPA has explained in the preceding response to comments how it interprets section 608(a) to support this rulemaking.

Some commenters contend that Congress specifically listed class I and class II substances for coverage under the regulations and under the principle of *expressio unius est exclusio alterius,* regulations cannot be applied to refrigerants that are neither class I or class II substances. This rule of statutory interpretation, which has limited force in an administrative law setting, means that the inclusion of one thing implies the exclusion of another thing. However, the fact that Congress mandated certain measures for ODS but was silent regarding appropriate measures for substitutes does not mean that Congress prohibited EPA from adopting similar measures for substitutes. *See Cheney R.R. Co.* v. *ICC,* 902 F.2d 66, 69 (D.C. Cir. 1990) (''The contrast between Congress's mandate in one context with its silence in another suggests not a prohibition but simply a decision *not to mandate* any solution in the second context, *i.e.,* to leave the question to agency discretion.'')

Commenters stated that section 608(c) is self-implementing and no promulgation of regulations by EPA is required or contemplated to implement such prohibition. In contrast, 608(a) and (b) require EPA to promulgate regulations to establish ''standards and requirements.'' These standards and requirements are different in kind and broader than the 608(c) statutory prohibition. EPA cannot merge the distinct requirements of 608(a) and (b) with the statutory prohibition of 608(c). Another commenter stated that in trying to apply section 608(b) to any substitute substance, EPA is inferring authority that is not there.

EPA agrees that the prohibition under 608(c) as it applies to the knowing venting or releasing of ODS and substitutes is itself self-implementing. However, that fact does not preclude EPA from establishing regulations to include the prohibition in the overall context of the regulatory scheme and to promulgate rules to further interpret, explain, and enforce it, including by providing certainty to enhance compliance. Indeed, EPA's prior regulations at 40 CFR 82.154 included the venting prohibition. More specifically, these regulations provided that ''no person maintaining, servicing, repairing, or disposing of appliances may knowingly vent or otherwise release into the environment any refrigerant or substitute from such appliances'' and then provided for exceptions from this prohibition for specified substitutes in specified end-uses. These exceptions implemented the discretion Congress left EPA under 608(c)(2) to exempt certain releases from the venting prohibition, if the Administrator has determined that ''venting, releasing, or disposing of such substance does not pose a threat to the environment.'' CAA section 608(c)(2). Contrary to the comment, the inclusion of this discretion in section 608(c)(2) indicates that Congress intended for the EPA to have authority to implement aspects of the prohibition and in fact left gaps in this section that it expected EPA would fill as appropriate.

Similarly, as discussed in the preceding response, the legislative history indicates that in establishing the venting prohibition, Congress expected EPA to promulgate regulatory ''provisions to foster implementation of this prohibition, including guidance on what constitutes 'de minimis' and 'good faith'.'' *Report of the Committee on Environment and Public Works United States Senate, Report Accompanying S. 1630 (S. Rept. 101–228)* (December 20, 1989) at 396 (*reprinted in* 4 A Legislative History of the Clean Air Act Amendments of 1990, at 8736 (1993)). Consistent with that Congressional intent, the prior regulations at 40 CFR 82.154 included provisions clarifying that ''[ODS] releases shall be considered de minimis only if they occur when'' certain regulatory requirements are observed. 40 CFR 82.154(a)(2). However, those regulations did not provide the same clarity regarding releases of non-exempt substitute refrigerants or what practices would be considered to fall within the ambit of ''good faith attempts to recycle or recover'' non-exempt substitute refrigerants. 40 CFR 82.154(a)(2). Because Congress provided this exception to the venting prohibition for substitutes under section 608(c)(2) but did not specify what practices or actions should be taken to qualify for this exception, it is reasonable to interpret this provision as indicating that Congress contemplated that EPA would resolve this ambiguity.

While Congress did not establish specific rulemaking authority under section 608(c)(2), Congress did provide a general grant of authority in CAA section 301(a)(1) to ''prescribe such regulations as are necessary to carry out [the Administrator's] functions under'' the CAA. This rulemaking authority supplements EPA's authority under section 608 by authorizing EPA to promulgate regulations necessary to carry out its functions under section 608, including regulations necessary to interpret the venting prohibition and exceptions to it.

EPA disagrees with the commenter that it is impermissibly merging the distinct requirements of CAA sections 608(a) and (b) with section 608(c). While EPA's regulations under section 608(b) are simply one part of the regulations required under section 608(a), EPA is not relying on section 608(b) to justify its extension of the section 608 regulations to substitutes in this rulemaking. The role of EPA's section 608(a) authority in this rulemaking has been discussed above, in a prior response to comment. Moreover, as noted above, the fact that Congress required EPA to address ODS refrigerants in specific way under section 608(a), or section 608(b) for that matter, is not the same as precluding EPA from addressing other refrigerants in a similar fashion. Likewise, where EPA has authority to establish regulations for non-exempt substitute refrigerants, the fact that it has exercised its authority to establish similar regulations for other refrigerants does not prevent it from exercising its authority to regulate non-exempt substitute refrigerants in a similar manner.

One commenter stated that using section 608(c) to establish the same requirements as authorized under section 608(a) renders section 608(a) null and stated that statutory language should not be read in a manner that renders other provisions of the statute inconsistent, meaningless or superfluous.

EPA disagrees with this comment. Unlike section 608(c), section 608(a) is not limited to refrigerants. EPA has applied its authority under section 608(a) to establish or consider regulations for ODS in non-refrigerant applications. As an example, in 1998, EPA issued a rule on halon management under the authority of section 608(a)(2) (63 FR 11084, March 5, 1998). In that action, EPA noted that section 608(a)(2) ''directs EPA to establish standards and requirements regarding the use and disposal of class I and II substances other than refrigerants.'' 63 FR 11085. Similarly, EPA considered whether to establish a requirement to use gas impermeable tarps to reduce emissions of methyl bromide under section 608(a)(2), ultimately determining not to do so for technological and economic reasons. 63 FR 6008 (February 5, 1998). In that action, EPA noted: ''[s]ection 608(a)(1) of the Act provides for a national recycling and emission reduction program with respect to the use and disposal of Class I substances used as refrigerants. Section 608(a)(2) provides for such a program with respect to Class I and Class II substances not covered by section 608(a)(1).'' 63 FR 6008. Accordingly, this interpretation of section 608(c)(2) to allow EPA to establish requirements for non-exempt substitute refrigerants similar to those established under section 608(a) for ODS refrigerants does not render section 608(a) null or superfluous. Although EPA interprets its substantive authority under both sections 608(a) and 608(c) to support application of the refrigerant management requirements to both ODS and non-exempt substitute refrigerants, that is different from asserting that its section 608(c) authority would extend to any requirement that could be imposed under section 608(a). EPA was required to establish certain regulations for ODS refrigerants under section 608(a) and then decided to use those provisions to interpret and explain the venting prohibition for ODS under section 608(c). The fact that EPA is now electing to use the same requirements under section 608(c) for substitutes does not render 608(a) a nullity. EPA could have established different requirements to interpret and explain the venting prohibition, but for the reasons discussed above, decided to make the requirements consistent for both ODS and substitutes.

2. Comment: Congress Did Not Regulate Substitutes Because It Wanted To Create Incentives To Use Substitute Refrigerants

One commenter asserted that applying detailed refrigerant management requirements to substitutes discourages the development of substitutes as it eliminates the incentive to operate with fewer regulatory requirements. Another commenter stated that the current regulations provide an opt-out incentive to owners that voluntarily retrofit to a non-ozone depleting substitute and suggested that EPA should seek to revise the proposed rule so that it continues to provide similar incentives.

EPA disagrees that applying the refrigerant management requirements to non-exempt substitute refrigerants will discourage the development of substitutes. At this point in time, there are other incentives to either retrofit or replace existing equipment that relies on ODS. Most ODS have been completely phased out and the HCFC phaseout is well underway. Allowances for domestic consumption of the most common HCFC refrigerant, HCFC–22, are set at 5.6 percent of baseline for 2016 and will decline to zero in 2020 (40 CFR 82.16, 82.15(e)). In addition, use restrictions issued pursuant to section 605(a) prohibit use of newly produced HCFC–22 in equipment manufactured on or after January 1, 2010 (40 CFR 82.15(g)(2)). The section 605(a) use restrictions further prohibit use of newly produced HCFC–123 in equipment manufactured on or after January 1, 2020 (40 CFR 82.15(g)(4)). While used HCFCs are not subject to these restrictions, the HCFC phaseout and the restrictions on use of newly produced HCFCs provide clear market signals regarding future availability of HCFC refrigerants.

In addition, while some provisions of the statute indicate Congressional intent to encourage companies to use safer alternatives, other provisions indicate that Congress was also concerned about the potential impacts of unregulated releases of these substitute refrigerants. Section 608(c)(2) is in the latter category, as it extends the venting prohibition to substitute refrigerants, unless EPA determines that such releases do not pose a threat to the environment. Accordingly, the application of these regulatory requirements to non-exempt substitute refrigerants provides clarity and certainty to owners, operators, and people servicing, maintaining, repairing, or disposing of air conditioning and refrigeration equipment of how they can avoid violating the venting prohibition. Such clarity and certainty is consistent with EPA's efforts through other regulatory programs to facilitate and encourage the use of substitute refrigerants.

Other commenters stated that Congress did not extend the refrigerant management requirements to substitutes, likely because it wanted to create incentives for companies to switch to safer alternatives.

EPA responds that Congress did extend the venting prohibition to substitute refrigerants and left to EPA's discretion how to interpret and enforce that prohibition. While Congress did not require EPA to interpret and enforce the venting prohibition by regulating substitute refrigerants in the same manner as ODS, neither did it prevent EPA from doing so.

Commenters also stated that 608(a)(3) encourages EPA to use the regulations under that provision to promote the use of safe alternatives. EPA responds that while section 608(a)(3) provides that the regulations that are required under section 608(a) ''may include requirements . . . to promote the use of safe alternatives pursuant to section [612],'' whether to include such provisions is discretionary, not mandatory. While Congress left such regulations to EPA's discretion, Congress directly applied the venting prohibition to substitute refrigerants under section 608. Moreover, the legislative history for section 608 recognizes the distinctions between sections 612 and 608, stating: ''The fact that a particular substance has been identified by the Administrator as a 'safe substitute' for purposes of section 612, does not affect the requirement for a separate determination under [section 608]. The purposes of section 612 and of this section are different and substances approved under section 612 will not automatically qualify for exclusion from the prohibition on venting that is included in this section.'' Statement of Senate Managers, S. 1630, The Clean Air Act Amendments of 1990, *reprinted in* 1 A Legislative History of the Clean Air Act Amendments of 1990, at 928 (1993). Accordingly, EPA does not interpret the discretion provided by section 608(a)(3) to diminish its ability to interpret, explain, and enforce section 608(c) as it is doing in this rule.

3. Comment: Section 608 Does Not Authorize EPA To Regulate the Normal Operation of Refrigerant Equipment

Commenters stated that EPA's authority under section 608 is limited to regulating actions taken during servicing, repair, or disposal of refrigeration equipment, or class I and II refrigerants evacuated during such servicing and repair. These comments further stated that EPA's authority extends only to technicians and that nothing in section 608 would enable EPA to impose liability on the equipment owner or operator.

With regard to the actions that are within the scope of section 608(c), as explained earlier in this notice, EPA interprets section 608(c) to convey authority to interpret, explain, and enforce the venting prohibition for both ODS and substitute refrigerants, and that prohibition applies to the maintenance, service, repair, or disposal of appliances and IPR. As explained elsewhere in this rulemaking, this action applies regulations to non-exempt substitute refrigerants that are related to the maintenance, service, repair, or disposal of such appliances or to providing persons engaged in such activities with additional clarity and certainty on how to ensure that their actions comport with the venting prohibition and the *de minimis* exemption to it. For example, the technician certification provisions relate to who can maintain, service, or repair an appliance and the evacuation and recovery equipment provisions relate to how to maintain, service, repair or dispose of an appliance. Furthermore, the comment omits the concept of maintenance, which is included in section 608(c). EPA notes that the definition of the term ''maintain'' includes ''to keep in an existing state; preserve or retain'' and to ''keep in a condition of good repair or efficiency.'' The American Heritage College Dictionary, 4th ed. (Houghton Mifflin, 2002), at 834; see also *http://www.merriam-webster.com/dictionary/maintain* (including in the definition of maintain ''to keep in an existing state (as of repair, efficiency, or validity): Preserve from failure or decline <maintain machinery>'') (last accessed May 31, 2016). Thus, ''maintenance'' and ''maintaining'' include a broad range of activities involved in preserving equipment in normal working order.

EPA noted in a prior response that section 608(c) is limited to refrigerants while section 608(a) is not. However, the comment is incorrect that section 608(c) is limited to the activities of a technician. Section 608(c)(2) refers to ''any person,'' and ''person'' is defined broadly in CAA section 302, as well as in subpart F to 40 CFR part 82. More specifically, section 302(e) defines ''person'' to ''include[ ] an individual, corporation, partnership, association, State, municipality, political subdivision of a State, and any agency, department, or instrumentality of the United States and any officer, agent or employee thereof.'' Thus, the definition clearly is not limited to technicians. Furthermore, the current statement of purpose and scope in subpart F, § 82.150, lists appliance owners and operators as one of the persons to which the subpart applies.

When EPA initially promulgated the subpart F regulations, it explained that these rules applied to owners. For example, in the preamble to the 1993 Rule, EPA explained that it had made ''additions to the scope section to clarify that the rule covers refrigerant reclaimers, *appliance owners,* and manufacturers of appliances and recycling and recovery equipment in addition to persons servicing, repairing, maintaining, and disposing of appliances.'' 58 FR 28707 (emphasis added); *see also* 58 FR 28681 (explaining that the rule required the owner of the equipment to either authorize the repair of substantial leaks or develop the equipment retirement/retrofit plan within 30 days of discovering leak above the standard and that the owner has the legal obligation to ensure that repairs are made to equipment where the leak rate exceeds the standard).

Some comments on the proposed rule stated that section 608(c) cannot be used to require that an equipment owner undertake repairs. EPA disagrees with this comment. As explained above, owners are within the scope of ''person'' as defined in CAA section 302(e) and subpart F. An owner's failure to undertake repairs of leaky appliances or IPR could lead directly to a violation of the venting prohibition. As one example, if in the course of a normal maintenance check, a technician discovers that the appliance is releasing refrigerant above the threshold leak rate but the owner does not authorize the repairs as required by the rules, and instead decides to add refrigerant and continue operating the equipment, the owner would be participating in a knowing release.

Many commenters also disagreed with EPA's interpretation of the venting prohibition, as articulated in the proposed rule that ''when a person adds refrigerant to an appliance that he or she knows is leaking, without repairing the appliance consistent with the leak repair requirements, he or she also violates the venting prohibition.'' One commenter stated that this could prohibit technicians from filling any leaking appliance. Another commenter noted that that it appears to cover failed repairs and verification tests during the repair period allowed by § 82.156(i)(9) and § 82.157(e). Commenters requested that EPA clarify that leaks that occur within an applicable repair window or retrofit/retirement schedule, even though the facility may be aware of the leak, do not violate the venting prohibition, where the leak repair procedures prescribed in subpart F are followed. To clarify EPA's statement in the proposed rule and to respond to these comments, EPA's position is that while the addition of refrigerant to an appliance known to be leaking above the threshold rate is a knowing release, that release does not violate the venting prohibition so long as the applicable practices referenced in § 82.154(a)(2), as revised, are complied with, including the leak repair requirements, as applicable.

4. Addressing Concerns About Global Warming Is Not Lawful Under Title VI of the CAA

Multiple commenters stated that EPA cannot use Title VI to control substances based on their GWPs. These commenters referred to section 602(e), which states that EPA's required publication of the GWP of a class I or class II substance ''shall not be construed to be the basis of any additional regulation under this chapter.'' EPA responds that section 602(e) relates to the GWPs of ODS, and says nothing regarding the GWPs of substitutes. In any event, EPA is not relying on section 602 as authority for the action being taken in this rulemaking. Rather, EPA is relying on section 608 for the substantive requirements contained in this rule. Section 608(c) prohibits the knowing venting or release of a substitute refrigerant unless the Administrator determines that such venting, release, or disposal does not pose a threat to the environment. While it is true that EPA anticipates a significant GHG emissions reduction as a result of this rule, EPA is extending the subpart F regulations to all substitute refrigerants that are not exempt from the venting prohibition irrespective of their GWPs. The GWPs of the non-exempt substitutes addressed in this rulemaking range from 4 to over 14,000.

One commenter stated that the legislative history demonstrates that Congress considered and rejected regulating GHGs under Title VI of the CAA. Congress does not intend *sub silento* to enact statutory language that it has earlier discarded. The commenter also noted that Congress rejected the Senate version known as ''The Stratospheric Ozone and Climate Protection Act.'' That version of the act sought to reduce methane emissions in the U.S. and other countries. The removal of those provisions signifies, in the commenter's opinion, that Congress did not intend for Title VI to address substances that were not ozone depleting, even if they have high GWPs.

EPA responds that while Congress chose not to include certain potential measures regarding regulation of GHGs unrelated to ODS, Congress nonetheless included multiple provisions regarding ODS substitutes. The legislative history of section 608(c) indicates that Congress specifically recognized that substitutes could pose a threat to the environment because they could include greenhouse gases. In discussing the venting prohibition, as it applies to substitute refrigerants, the statement of the Senate Managers included the following:

Effective 5 years after enactment, the prohibition on venting or release shall also apply to all substances that are used as refrigerants as substitutes for class I or class II refrigerants. By its terms, this provision applies to substances that are not listed as class I or class II substances. This is an important provision because many of the substitutes being developed do not have ozone depleting properties but they are 'greenhouse gases' and have radiative properties that are expected to exacerbate the problem of global climate change. The prohibition shall apply to all such substitute substances except where the Administrator determines that the venting, release or disposal of a particular substitute substance does not pose a threat to the environment.

The Administrator shall consider long term threats, such as global warming, as well as acute threats. The fact that a particular substance has been identified by the Administrator as a 'safe substitute' for purposes of section 612 does not affect the requirement for a separate determination under this section. The purposes of section 612 and of this section are different and substances approved under section 612 will not automatically qualify for exclusion from the prohibition on venting that is included in this section.[16]

It is therefore clear that Congress understood that substitute refrigerants could be greenhouse gases, specifically sought to apply the venting prohibition to such gases, and specifically contemplated that climate risks would be considered in carrying out the venting prohibition. The removal of a provision related to methane within Title VI does not indicate that Congress did not intend to address greenhouse gases in the venting prohibition.

One commenter stated that EPA has not undertaken an endangerment finding to support regulation of HFCs from IPR as a greenhouse gas which can be regulated under the CAA. EPA responds that under section 608(c), the venting prohibition applies to substitutes unless EPA exempts them. EPA is not required to take any affirmative action, let alone an endangerment finding, for the venting prohibition to apply.

One commenter stated that the purpose of Title VI is to implement the Montreal Protocol, whose sole goal is to protect the stratospheric ozone layer from ODS. EPA responds that while certain sections of Title VI do in fact implement the Montreal Protocol, several sections of Title VI call on EPA to take measures that are not required by the Montreal Protocol but are complementary to the ODS phaseout. These sections include, in addition to

[16] Statement of Senate Managers, S. 1630, The Clean Air Act Amendments of 1990, *reprinted in* 1 A Legislative History of the Clean Air Act Amendments of 1990, at 929 (1993).

section 608, sections 609 (servicing of motor vehicle air conditioners), 610 (nonessential products), 611 (labeling), and 612 (safe alternatives policy). Section 608 clearly provides EPA authority to regulate the venting, release, and disposal of substitute refrigerants.

5. EPA's Proposal Would Increase Risks to Human Health and Violate Section 612

One commenter stated that the proposed rule would drive owners and operators of IPR from HFCs to exempt substitutes in order to remove themselves from the regulatory requirements of subpart F. The commenter stated that some of these exempt substitutes are not safer for human health. HFCs are non-ozone depleting, non-flammable, and non-toxic whereas ammonia, chlorine, and hydrocarbons are either toxic or flammable. By encouraging the use of these non-exempt but riskier substitutes, the commenter states that EPA is violating section 612(a) of the CAA.

EPA responds that the commenter is quoting the policy statement that appears in section 612(a). The Agency is not acting under section 612. Rather, EPA is acting under section 608. This action under section 608 is consistent with decisions made under section 612 and does not alter those decisions. Specifically, it does not preclude use of any substitute listed as acceptable or acceptable subject to use restrictions under section 612(c) for the specified end-use. Under section 612(c), EPA compares substitutes not only to ODS but also to other available substitutes. When reviewing substitute refrigerants, EPA considers a variety of risks, including toxicity and flammability. In some instances, EPA lists substitutes as acceptable subject to use conditions that mitigate such risk. EPA does not dictate that a particular user choose a specific substitute from among those listed as acceptable for that end-use. Whether an owner or operator of an IPR facility chooses to transition to an exempt substitute is a decision that must be made weighing the advantages and disadvantages of the specific refrigerant.

6. Section 301 and 114 Do Not Grant EPA Authority To Regulate Substitutes

Two commenters stated that section 301 grants EPA general rulemaking authority but does not authorize the Agency to act where a specific statutory provision already has addressed an issue. They further stated that section 608(a) does address the issue of whether the refrigerant management regulations apply to substitutes and therefore EPA cannot use section 301 to create that authority.

As discussed above, nothing in Title VI says what refrigerant management requirements should apply to substitutes: Therefore, this is not a situation where a specific statutory provision has already addressed the issue. EPA is issuing regulations to interpret, explain, and enforce the venting prohibition in section 608(c)(2) with regard to non-exempt substitutes. EPA is not deriving substantive authority from section 301. Rather, EPA is relying on section 608 for its substantive authority and is looking to section 301 as supplemental authority to issue regulations to carry out its functions under section 608. Similarly, EPA is looking to section 114 not for the substantive refrigerant management requirements being finalized today but rather as authority to require recordkeeping and reporting in carrying out the venting prohibition for non-exempt substitutes.

IV. The Revisions Finalized in This Rule

A. Revisions to the Definitions in § 82.152

EPA proposed to update and clarify many of the definitions in subpart F. EPA also proposed to add new definitions and remove definitions that solely restated the required practice. In general, these revisions are to improve readability, increase consistency with how the term is used in the regulatory text, and specifically incorporate substitute refrigerants as appropriate.

EPA received comment on the proposed revisions to definitions of *refrigerant* and *appliance,* as well as terms specifically applicable to the leak repair portion of the regulations. EPA also received requests to define additional terms. Those comments, and changes from the proposed definitions that are being made in this final rule, are discussed later in this section with those terms. EPA is finalizing as proposed the other revisions to definitions in this section that were addressed in the notice of proposed rulemaking and where we did not receive comments. Other revisions elicited only supporting comments, which are briefly noted in the descriptions of the revisions.

Appliance

EPA proposed to define *appliance* as any device which contains and uses a class I or class II substance or substitute as a refrigerant and which is used for household or commercial purposes, including any air conditioner, motor vehicle air conditioner, refrigerator, chiller, or freezer. EPA is finalizing three revisions to the definition of *appliance.* First, EPA is extending the subpart F regulatory definition to apply to substitute refrigerants. Second, EPA is adding ''motor vehicle air conditioner'' to the list of example appliances. Third, EPA is adding a sentence stating that each independent circuit on a system with multiple circuits is considered a separate appliance.

The prior definitions in subpart F are written to separate ozone-depleting substances from non-ozone depleting substitutes. EPA's prior regulations defined an *appliance* as a device which contains and uses a *refrigerant.* As relevant here, section 601 of the CAA defines an *appliance* as a ''device which contains and uses a class I or class II substance as a refrigerant.'' Class I and class II substances are defined as substances listed under sections 602(a) or (b), respectively. Section 601 of the CAA does not define *refrigerant* but EPA's regulations at § 82.152 as they existed before this rulemaking defined *refrigerant* as solely class I or class II ozone-depleting substances, or mixtures containing a class I or class II ODS.

Defining these terms in this manner was appropriate before section 608(c)(2) took effect on November 15, 1995. Under section 608(c)(2), the venting prohibition applies to substitutes for ODS refrigerants and, accordingly, it states that ''[f]or purposes of this paragraph'' *appliance* includes any ''device which contains and uses as a refrigerant a substitute substance and which is used for household or commercial purposes.'' However, EPA had not updated the definition of *appliance* in subpart F to reflect section 608(c)(2). Because EPA regulations, as they existed before this rulemaking, had defined an *appliance* as a device that contains and uses a refrigerant, and *refrigerant* in a way that does not include substitutes, substitutes were excluded from the regulatory definition of *appliance.*

In this action, EPA is revising the definition of *appliance* so that it encompasses the definition of the term in both sections 601 and 608 of the CAA. EPA is defining *appliance* as any device which contains and uses a class I or class II substance or substitute as a refrigerant and which is used for household or commercial purposes. This revision makes the regulatory definition consistent with both sections 601 and 608 of the CAA, improves internal consistency of the regulations, and increases clarity for the regulated community.

One commenter stated that EPA should not add ''substitutes'' to the definition of *appliance* because CAA section 601(1) already defines appliance and ''substitutes'' is not included. EPA responds that while the definition of *appliance* in section 601(1) does not contain ''substitutes,'' section 608(c)(2) does extend the term *appliance* to systems containing substitutes for purposes of that paragraph. It is reasonable to update the regulatory definition so that there is a consistent definition of *appliance* throughout subpart F. Further, because the regulations in subpart F address the venting prohibition under section 608(c)(2) for substitute refrigerants and requirements to interpret, explain, and enforce the *de minimis* exemption to that prohibition, it is reasonable to include ''substitutes'' in the regulatory definition of appliance. In addition, this rulemaking only changes the definition of appliance as it appears in subpart F, but the definition of the term in other regulations under Title VI, such as in 40 CFR 82.3, remains unchanged.

EPA also proposed and is finalizing the addition of ''motor vehicle air conditioner'' to the list of example appliances. Two commenters objected to this proposal, stating that neither definition of *appliance* in section 601 or 608 of the CAA specifically includes motor vehicle air conditioners. One commenter states that Congress specifically considered but ultimately decided against explicitly including ''motor vehicles'' within the definition of *appliance* in section 601 of the CAA.

A plain reading of the Clean Air Act would include motor vehicle air conditioning under *appliance.* Section 601 of the CAA defines an appliance as ''*any* device . . . which is used for household or commercial purposes including *any* air conditioner . . .'' (emphasis added). In the 1993 Rule establishing regulations under section 608 for the first time, the Agency stated the following:

> The Act defines 'appliance' as 'any device which contains and uses a class I or class II substance as a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer.' EPA interprets this definition to include all air-conditioning and refrigeration equipment except that designed and used exclusively for military applications. Thus, the term includes all the sectors of air-conditioning and refrigeration equipment described under Section III.A above, including household refrigerators and freezers (which may be used outside the home), other refrigerated appliances, residential and light commercial air-conditioning, transport refrigeration, retail food refrigeration, cold storage warehouses, commercial comfort air-conditioning, *motor vehicle air conditioners,* comfort cooling in vehicles not covered under section 609, and industrial process refrigeration.'' (58 FR 28669; May 14, 1993, emphasis added)

In that same final rule, EPA established the definition of MVAC in subpart F as ''*any appliance* that is a motor vehicle air conditioner as defined in 40 CFR part 82, subpart B'' (emphasis added), and that definition has not since been changed. The commenters themselves state that procedures that are not regulated under section 609, such as the disposal of MVACs and the purchase of refrigerant in some sized containers, are covered by section 608. Furthermore, they agree that the prohibition against venting ODS and substitute refrigerants in section 608 is also already applicable to refrigerants used in MVAC and MVAC-like appliances. This necessarily implies that *appliance* as used in section 608 includes ''motor vehicle air conditioners.'' The inclusion of ''motor vehicle air conditioners'' as an example within *appliance* is a clarification, and it reflects the way the term appliance has been used throughout the history of the program. Specific provisions in subpart F that relate to activities that are regulated for MVACs under section 609 refer, as appropriate, to the subpart B regulations issued under section 609 of the CAA.

Comments from the auto industry also expressed concern that adding motor vehicle air conditioners to the list of examples in the definition of *appliance* would affect EPA's exemption from servicing requirements for MVACs in vehicles that have not yet left the manufacturing facility. In the 1992 rule establishing regulations under section 609, EPA stated that:

> a motor vehicle air conditioner is not subject to these regulations prior to the completion of final assembly of the vehicle by the original equipment manufacturer. While repair or service work on air conditioners in unfinished vehicles may well fit the definition of 'service for consideration,' the equipment and technician certification requirements of these rules do not apply as the motor vehicle air conditioner is not subject to these rules prior to the completion of the final assembly process by the vehicle's manufacturer. (57 FR 31246; July 14, 1992)

The addition of motor vehicle air conditioners as an example within the definition of *appliance* does not affect current practices and EPA regulations as they affect vehicle manufacturing. That was not the intent of the proposed change and is not a result of this final action. As previously discussed, the definition of *motor vehicle air conditioner* in subpart F is ''any appliance that is a motor vehicle air conditioner as defined in 40 CFR part 82, subpart B'' and the definitions within subpart B, under section 609, exclude vehicles that have not completed manufacturing by the original equipment manufacturer. EPA provided the following explanation for the exclusion of vehicles that have not yet been fully manufactured from the servicing requirements under section 609 in the 1992 final rule:

> EPA believes the repair of newly manufactured units is not likely to be a common occurrence and when it does occur, the manufacturing facilities clearly use equipment to recover and recycle the refrigerant so that it may be reintroduced once the motor vehicle air conditioner is repaired. The equipment is significantly different from the kind of equipment covered by EPA's definition of approved equipment, yet serves the purpose of such equipment equally well. In addition, the technicians performing this operation are typically manufacturing employees, not service technicians. For all these reasons, the Agency believes it is not necessary at this time to extend the requirements of this servicing regulation into the assembly operation. . . EPA wants to be clear that this exclusion is limited to final assembly activities conducted by the vehicle's original manufacturer, and does not include service or repair activities conducted, for example, by a dealer. (57 FR 31245, July 14, 1992)

One commenter further stated that it is not necessary to impose new technician training and certification requirements, or other regulatory requirements, for the automobile company and component supplier employees and contractors engaged in these activities. EPA agrees and reiterates that because the venting prohibition already applied to ODS and substitutes, this final action will not have any new effect on the automotive manufacturing process or individuals employed in the automotive and/or MVAC manufacturing process prior to the vehicle leaving the manufacturing plant. EPA's regulations under both sections 608 and 609 are intended, and will continue, to apply only to MVACs that are fully manufactured.

A few commenters requested that EPA clarify that for systems containing multiple circuits, each independent circuit is considered a separate appliance for the purposes of subpart F. This is the position that EPA has taken in the *Compliance Guidance for Industrial Process Refrigeration Leak Repair Regulations under Section 608 of the Clean Air Act* from October 1995 and the commenters believe that making such a statement in the regulations will be clearer to the regulated community.

EPA agrees and is adding a sentence clarifying this point to the definition.

Many commenters from the supermarket industry believe that the Agency's interpretation of the term *appliance* is too broad. In these commenters' view, appliances are display cases or unit coolers and not the broader system of piping, compressors, and condensing units to which those are attached. One commenter suggested that EPA create a definition for the term *system* to indicate a combination of various pieces of equipment and appliances that are professionally and specifically designed and erected for a particular application. Another commenter suggested that EPA define the refrigerant circuit as separate from the appliance. These commenters are especially concerned about a definition of *appliance* that includes all coolers, display cases, components, and piping in light of EPA's proposal to require that an appliance be retired if it exceeds the proposed two-year leak limit.

EPA responds that the Agency interprets an *appliance* as a fully assembled device that can function for its intended purpose. Components, on the other hand, are all the parts of the appliance that make up the refrigerant circuit, as described later in this section. As EPA described in the final rule allocating HCFCs for 2010–2014, ''appliances are separate from components, which are the individual parts of an appliance, such as a condensing unit or line set, that by themselves cannot function to provide a cooling effect'' (74 FR 66439; December 15, 2009). EPA recognizes that some would prefer that some components be considered appliances. For example, some members in the industry consider a condensing unit in a residential split system to be an appliance. However, EPA does not believe it is practical or clear for some components to also be considered appliances in the regulatory definitions. The concepts of *full charge* or *leak rate* do not make sense in the context of only a component. Finally, EPA notes that much of these commenters' concerns about the scope of the term *appliance* was in response to EPA's proposal that chronically leaking appliances be retired. As discussed in Section IV.F.12, EPA is not finalizing the proposed requirement for automatic retirement of chronically leaking appliances.

Apprentice

As proposed, EPA is amending the definition of *apprentice* to replace the ''Bureau of Apprenticeship and Training'' with the ''Office of Apprenticeship'' to match the current name of the office and to make minor edits to improve clarity and readability.

Batch

EPA proposed a requirement that each batch of reclaimed refrigerant be tested. EPA did not propose to define ''batch'' but is doing so in this final rule based on requests by commenters to clarify the term. EPA agrees with the comment that adding a definition of *batch* will clarify this requirement, and is defining the term based on language provided by multiple commenters. Therefore, EPA is defining *batch* to mean a single bulk cylinder of refrigerant after all reclamation has been completed prior to packaging or shipping to the market.

Certified Refrigerant Recovery or Recycling Equipment

As proposed, EPA is removing the defined term *certified refrigerant recovery or recycling equipment* which was merely a reference to the sections of the Code of Federal Regulations that discuss the certification program. This term was also used inconsistently throughout subpart F as ''recovery and recycling equipment,'' ''recovery or recycling equipment,'' ''recycling and recovery equipment,'' and ''recycling or recovery equipment.'' The regulations at § 82.36 make a distinction, in the context of MVAC servicing, between equipment that only recovers refrigerant and equipment that both recovers and recycles refrigerant. The regulations in subpart F generally do not make a distinction. The standards in appendices B1 and B2 refer to recovery and/or recycling equipment while the standard in appendix C for small appliances refers to recovery equipment only. For consistency, in the revised provisions, EPA is using ''recovery and/or recycling equipment'' throughout, except for when referring only to small appliances.

Class I and Class II

EPA is finalizing as proposed regulatory definitions for *class I* and *class II* ozone-depleting substances to assist the reader. These terms are currently defined in section 601 of the CAA and in 40 CFR part 82, subpart A. EPA is finalizing the addition of a definition of class I as an ozone-depleting substance that is listed in 40 CFR part 82, subpart A, appendix A. Similarly, EPA is finalizing the addition of a definition of class II as an ozone-depleting substance that is listed in 40 CFR part 82, subpart A, appendix B. EPA also notes that the regulatory text uses class I substance, class I ODS, and class I refrigerant interchangeably (and similarly uses class II substance, class II ODS, and class II refrigerant interchangeably) and all are intended to have the same meaning for the purpose of subpart F.

Comfort Cooling

EPA is finalizing the addition of a definition for *comfort cooling.* The leak repair provisions divide refrigeration and air-conditioning equipment into four categories: Comfort cooling, commercial refrigeration, industrial process refrigeration, and other. EPA's prior regulations defined commercial refrigeration and industrial process refrigeration but not comfort cooling.

For purposes of the leak repair requirements, EPA proposed to define *comfort cooling* as the air-conditioning appliances used to provide cooling in order to control heat and/or humidity in facilities including but not limited to office buildings and light commercial buildings. EPA further proposed to include language explaining that comfort cooling appliances include building chillers and roof-top self-contained units, and may be used for the comfort of occupants or for climate control to protect equipment within a facility, such as but not limited to computer rooms. EPA sought comments on the applicability of the proposed definition of *comfort cooling* to air-conditioning equipment that is typically used to provide cooling and or humidity control in such environments.

Commenters suggested that EPA remove the reference to equipment and computer rooms as this is beyond the scope of comfort cooling. One commenter suggested that comfort cooling only include computer rooms set to above 68 degrees F to align the definition with CARB–32. That commenter also suggested that appliances used to cool computer rooms would fall under the category of ''other appliances.'' Another commenter believes that such appliances are currently considered as IPR. EPA responds that the intent was to apply the term *comfort cooling* only to spaces occupied by humans. EPA has made edits to better reflect this understanding in the final definition and is therefore not including in the final definition the last sentence from the proposed definition (which read ''[t]hey may be used for the comfort of occupants or for climate control to protect equipment within a facility, including but not limited to computer rooms.'').

EPA notes here that *comfort cooling,* with respect to the leak repair provisions in this subpart, does not include MVACs or MVAC-like appliances.

Commercial Refrigeration

As proposed, EPA is finalizing the amendment to the definition of *commercial refrigeration* that removed the sentence stating that this equipment typically contains a charge size over 75 pounds. While accurate, this sentence has caused confusion as to whether or not the leak repair requirements are applicable to such appliances with a full charge between 50 pounds, as stated in the leak repair required practices, and 75 pounds. The leak repair requirements do apply because the threshold is a refrigerant charge of 50 pounds or greater. EPA is removing this sentence to avoid this confusion. EPA received comments in support of this revision.

Critical Component/Component

As proposed, EPA is removing the defined term *critical component* and adding the term *component.* The term *critical component* was only used in the context of an extension for the repair of IPR when critical components could not be delivered within the necessary time. EPA is amending the definition so that it is not limited to IPR, but also includes comfort cooling and commercial refrigeration appliances. As discussed in Section IV.F of this notice, EPA is applying the extensions for leak repairs to all types of appliances. The unavailability of a component is not unique to IPR and EPA is granting all appliances the same flexibility to request additional time. This revision to the regulatory definitions supports that flexibility.

EPA proposed to define *component* as ''a part of the refrigerant loop within an appliance including, but not limited to, compressors, condensers, evaporators, receivers, and all of its connections and subassemblies.'' *Component* is intended to be broader than *critical component.* EPA considers components to include all the parts of the appliance that make up the refrigerant circuit such as the compressor, heat exchangers (condenser and evaporator), and valves (*e.g.,* heat recovery, expansion, charging). Other components may include receivers, manifolds, filter driers, and refrigerant piping. EPA is finalizing this definition substantially as proposed, although it is replacing the word ''loop'' with ''circuit,'' as *refrigerant circuit* is a defined term in the regulations.

Custom-Built

As proposed, EPA is amending the definition of *custom-built* to remove a citation to a section of the regulation that has moved.

Disposal

EPA proposed to amend the definition of *disposal* to clarify that the disposal process includes the destruction of an appliance that releases or would release refrigerant to the environment. This proposed revision is intended to cover activities such as vandalism or the cutting of refrigerant lines, whether to steal metal or to vent the refrigerant or both. EPA also proposed to clarify that the disassembly of an appliance for recycling, as well as reuse, is part of the disposal process.

One commenter stated that the regulatory definition of *disposal* is inconsistent with EPA's Sustainable Materials Management policy and with the RCRA definition of *disposal* at 40 CFR 260.10, which leads to regulatory confusion. The commenter seeks to clarify that the recycling of appliances or components is separate from disposal. The commenter believes there should be four definitions regarding recycling and disposal: (1) Recycle refrigerant; (2) dispose of refrigerant; (3) recycle an appliance; and (4) dispose of an appliance. The commenter finds that the proposed revision to the definition confuses the distinction between recycling and disposal. The commenter also finds that the word ''destruction'' is too broad if EPA is trying to address vandalism, line-cutting, or theft and is concerned that the term equates recycling with such unlawful activities.

EPA responds that the Agency addresses the recycling and disposal (or reclamation) of refrigerant elsewhere in subpart F. The safe disposal provisions at § 82.155 relate to the disposal of appliances. The Clean Air Act in 608(a) refers to the ''service, repair, and *disposal of appliances*'' and 608(c) refers to the ''maintaining, servicing, repairing, or *disposing of an appliance*'' (emphases added). The manner in which the appliance is disposed of, whether by recycling, landfilling, reuse of component parts, or another method is not addressed by the CAA. For the purposes of section 608, what is relevant is that an action is taken on an appliance at the end of its useful life that releases or would release refrigerant if the proper precautions are not taken. EPA agrees it is appropriate to specify what is included in *disposal* for clarity but does not agree that the term must have the same meaning in section 608 of the CAA as under RCRA or the Sustainable Materials Management policy. The commenter does not make clear how the Agency's Sustainable Materials Management policy is in conflict with the requirement in subpart F to recover, or verify the prior recovery, of refrigerant in discarded appliances. EPA is finalizing its proposal to include recycling for scrap as one of the methods by which an appliance may be disposed.

Furthermore, EPA's intent is to address the various actions taken upon an existing and operational system that will effectively end its useful life and potentially release refrigerant. Both recycling and vandalizing a fully charged appliance would have that effect, though EPA recognizes the distinctions between those two actions. This revision is also consistent with a recent court decision-which found that cutting a functioning condenser unit and releasing refrigerant into the environment constituted disposal of an appliance within the meaning of CAA section 608 and its implementing regulations, even if the underlying intent was to steal and sell the metal piping. *United States* v. *Harrold,* No. 2:15–mj–605 (S.D. Ohio, Oct. 28, 2015) (order concluding that the complaint sufficiently charged a violation of the Act and that sufficient evidence was presented to establish probable cause that defendant violated the Act).[17] *See also United States* v. *Morrissette,* 579 F. App'x 916, 919 (11th Cir. 2014) (stating that defendant who stole metal coils from commercial air conditioning units had violated the CAA regardless of the underlying intent to steal copper). EPA is finalizing the definition of *disposal* substantially as proposed. In response to the comment, EPA is replacing the word ''destruction'' with ''vandalism'' to more specifically refer to actions such as line cutting and metal theft. The vandalism would have to be of such a nature that it would release the refrigerant. EPA is also separating ''[t]he recycling of any appliance for scrap'' from ''[t]he disassembly of any appliance for reuse of its component parts.'' Both are considered disposal.

Follow-Up Verification Test

EPA is amending the definition of *follow-up verification test* to remove duplicative text that was also covered in § 82.156(i). The revised definition describes what the test is and how it is conducted, not the regulatory requirements of the test. The revised regulatory requirements are found in § 82.157(e). EPA is not specifying one test that would satisfy what constitutes a follow-up verification test, but is providing an illustrative list of tests that would qualify. EPA does not intend for this list to be all-inclusive, but rather to

[17] A copy of this opinion and other documents related to this case are available in the docket for this rulemaking.

provide examples of known methodologies of performing leak repair verification tests.

One commenter suggested that EPA modify the name of this test to *follow-up leak repair verification test.* The commenter has found that over 40 percent of technicians who do not work on IPR, where these tests were previously required, were confused about the distinction between the initial and follow-up verification tests. The technicians indicated to the commenter that such a name change would make it clearer that the tests are about the effectiveness of the repair. EPA disagrees that changing the name of the test will improve technician's abilities to conduct these tests or reduce refrigerant emissions. It is understandable that technicians that do not work on IPR equipment and are not trained in the procedures of subpart F that had previously only applied to IPR would not be aware of the requirements. EPA is concerned that changing the name of the test would confuse those who already know of the requirement. EPA is therefore finalizing the definition of *follow-up verification test* as proposed.

Full Charge and Seasonal Variance

EPA is amending the definition of *full charge* to account for seasonal variances and to make minor edits for readability. Owners or operators of commercial refrigeration appliances and IPR have previously expressed concerns that the full charge may not be accurately determined due to seasonal variances that may alter the amount of refrigerant in an appliance. Seasonal variances in ambient temperature and pressure have the effect of forcing refrigerant to different appliance components (for example, from an appliance's receiver to the condenser).

EPA is allowing owners or operators to account for seasonal variances by measuring the actual amount of refrigerant added to or evacuated from the appliance. EPA is defining *full charge* as the amount of refrigerant required for normal operating characteristics and conditions of the appliance as determined by using one or a combination of the following four methods:

(1) Use of the equipment manufacturer's determination of the full charge;

(2) Use of appropriate calculations based on component sizes, density of refrigerant, volume of piping, and other relevant considerations;

(3) Use of actual measurements of the amount of refrigerant added to or evacuated from the appliance, including for seasonal variances; and/or

(4) Use of an established range based on the best available data regarding the normal operating characteristics and conditions for the appliance, where the midpoint of the range will serve as the full charge.

To further explain the definition of *full charge,* EPA is creating a defined term for *seasonal variance.* This term means the removal of refrigerant from an appliance due to a change in ambient conditions caused by a change in season, followed by the subsequent addition of an amount that is less than or equal to the amount of refrigerant removed in the prior change in season, where both the removal and addition of refrigerant occurs within one consecutive 12-month period. A complete discussion of allowing for seasonal variances when calculating appliance leak rates is found in Section IV.F of this preamble.

EPA received several comments on the proposed definition of *seasonal variance.* Two commenters recommended that EPA use the removal of refrigerant as the first step and the addition of refrigerant as the second step. While EPA proposed the opposite framing, you can measure the amount removed to be able to determine the amount that can be added in the next season without triggering a leak rate calculation. EPA has adjusted the definition and the narrative in the preamble accordingly.

Four commenters suggested that the amount added and removed does not always have to be equal, as was proposed. EPA agrees that as long as the amount added is less than or equal to the amount removed in the prior season, the addition will be considered a seasonal variance.

One commenter requested that EPA clarify whether the added refrigerant amount is to be included in the full charge amount. The commenter is concerned that not reflecting the seasonal variance could affect what is considered normal operating characteristics and conditions, which would in turn affect when verification tests can be conducted. Another commenter proposed that the maximum charge be used at all times when calculating the leak rate, regardless of what is actually in the appliance at the time of repair.

Given the concerns raised by the commenter about including seasonal variances in the appliance's full charge to prevent problems with compliance with normal operating characteristics and conditions, the full charge must be adjusted to account for the amount of refrigerant removed or added for a seasonal variance if the full charge was calculated using any method other than method four, since that method inherently includes a range. To be clear, verification tests should be conducted regardless of whether the appliance contains extra refrigerant to account for a seasonal variance. This could result in two ''full charges,'' one for each season. EPA does not agree that it would be appropriate to use the maximum charge or the higher of the two full charge calculations because some seasonal variances are large enough that adjusting the full charge would make significant difference in the leaks that would exceed the applicable leak rate. Since this is an added flexibility, requiring slightly more recordkeeping is warranted.

One commenter indicated that refrigerant charge should never be added or removed throughout the year. While this may be true for some types of equipment, there are legitimate situations where such additions or removals are appropriate, typically in larger commercial refrigeration and industrial process refrigeration appliances. For example, one commenter cited the instance of a seafood packer who may need to add refrigerant during crab season when the refrigeration or freezing load spikes.

Finally, the Agency is allowing an owner or operator to choose a combination of methods to determine full charge. There are instances where multiple methods may be necessary to accurately determine the full charge. Further EPA is providing flexibility by not requiring that owners or operators commit to the same method for the life of the appliance. EPA is requiring in this final rule that owners or operators maintain a written record of the full charge, the method(s) used to determine the full charge, and any changes to that amount.

High-Pressure Appliance

EPA is amending the definition of *high-pressure appliance* as proposed to update the list of example refrigerants with the most commonly used refrigerants today. Because revisions to *appliance* and *refrigerant* carry over into this term as well, under the revisions finalized in this rule, high-pressure appliances include those that use ODS and non-ODS substitute refrigerants.

Industrial Process Refrigeration

EPA is amending the definition of *industrial process refrigeration* as proposed to make minor clarifications for readability and to remove a citation to a section of the regulation that has moved.

Industrial Process Shutdown

EPA is amending the definition of *industrial process shutdown* as proposed to remove a citation to a section of the regulation that has moved.

Initial Verification Test

EPA is amending the definition of *initial verification test* to remove duplicative text that is also covered in the required practices section of the regulation. The revised definition describes in general terms what the test is, not what the requirements of the test are. The purpose of this test is to verify that a leak has been repaired prior to adding refrigerant back into the system. The requirements for an initial leak repair verification test are described in Section IV.F.8 of this notice and in § 82.157(e)(1) of the revised regulation.

Leak Inspection

EPA is creating a new defined term *leak inspection.* EPA proposed to define *leak inspection* as the examination of appliances using a calibrated leak detection device, a bubble test, or visual inspection for oil residue in order to determine the presence and location of refrigerant leaks.

Some commenters recommended additional leak detection methods including: Standing pressure/vacuum decay tests, ultrasonic tests, periodic evacuations, gas-imaging cameras, sight glass checks, viewing receiver levels, pressure checks, charging charts, and the sub-cooling method (for expansion systems).

In general, leak detection methods fall into two categories: Ones that indicate that an appliance is leaking; and ones that can identify the location of a leak. EPA stated in the proposal that the proposed definition covers the techniques currently used to detect the location of leaks, not activities that would assist only in determining whether a system is leaking generally without providing information that would allow detection of the location of the leak. One commenter stated that limiting leak inspections in such a manner increases the costs of conducting leak inspections.

EPA responds that the purpose of a leak inspection is to determine the location of a leak, not to determine whether an appliance is leaking. As discussed in Section IV.F.4 of this notice, EPA is modifying the leak inspection requirement so that it is only required on appliances that have exceeded the applicable leak rate. To repair a leak, the technician must be able to locate it. Therefore, inspection methods that only indicate that the appliance is releasing refrigerant do not provide the necessary information for a technician to repair leaks. Further leak inspections on the repaired system may benefit from using a combination of methods to determine whether the system continues to leak refrigerant, and if so, where.

Commenters also recommended that EPA remove some of the proposed inspection methods. Multiple commenters recommended that EPA not include a visual inspection for oil residue, as that is not a reliable indicator of a refrigerant leak. Similarly, some commenters noted that the bubble test should be used in conjunction with another leak detection method due to its low sensitivity or potential unreliability when performed outdoors. EPA agrees that a visual inspection for oil residue is not dispositive and has removed that method from the list of leak inspection methods included in the definition as finalized. EPA is including bubble tests in that list because it may be appropriate in some circumstances. EPA is also strengthening the leak inspection by requiring under § 82.157(g)(2) that it be performed by a certified technician, while providing discretion for the technician to determine which methods are appropriate.

Some commenters also recommended that EPA remove the word ''calibrated'' because some electronic leak detectors are self-calibrating while others do not require calibration. Instead, these commenters suggested that EPA require that the devices be operated and maintained according to manufacturer guidelines. Another commenter recommended that EPA maintain the requirement that leak detection devices be calibrated. Given the variability of equipment, EPA agrees with the comments suggesting that it is preferable to follow the manufacturer guidelines. Thus, in this final definition EPA is replacing ''calibrated leak detection device'' with ''leak detection device operated and maintained according to manufacturer guidelines'' based on public comment.

In this final rule, EPA is providing a non-exhaustive list of methods for leak inspections, and clarifying that techniques that only determine whether the appliance is leaking must be used in combination with another method that can identify the location of the leak. In general, commenters encouraged EPA to allow for or require multiple methods due to the limitations of individual techniques in different circumstances. This approach is consistent with those comments.

Leak Rate

EPA proposed, and is now finalizing, one substantive change to the definition of *leak rate* to change the calculation performed under what is called Method 2 under the prior rules. The first step of that method has been to take the sum of the quantity of refrigerant added to the appliance over the previous 365-day period (or over the period that has passed since leaks in the appliance were last repaired, if that period is less than one year). Instead of the cut-off being since the last repair (if less than 365 days), EPA is amending Step 1 to cover the period of time since the last successful follow-up verification test showing that all identified leaks were successfully repaired (if less than 365 days have passed since the last refrigerant addition). The goal of this change is to improve the clarity of the requirements. Under the prior definition, it was unclear if the repair had to be successful in order to be considered in the leak rate calculation. These revisions clarify that all identified leaks must be verified as having been successfully repaired.

EPA is also renaming the two methods from Method 1 and Method 2 to ''Annualizing Method'' and ''Rolling Average Method'' to improve readability. EPA is also finalizing the proposed change to clarify that while the same leak rate calculation must be used for all appliances at the same facility, this only refers to the appliances subject to the leak repair provisions (*i.e.,* appliances normally containing 50 or more pounds of refrigerant).

EPA received three comments on this proposed definition. One commenter recommended that EPA remove the Rolling Average Method for simplicity and change the Annualizing Method such that the calculation is based on the time since the last successful follow-up verification test instead of the last refrigerant addition. The commenter further recommended changes to the Rolling Average Method, if EPA keeps it in the regulation, to better express the amount of refrigerant that would be lost if that leak continued for a full year.

EPA responds that while reducing the number of leak rate calculation methods could simplify the regulations, numerous appliance owners and operators have used the Rolling Average method for years and they continue to seek flexibility. EPA does not see an environmental benefit in reducing this flexibility. On the suggestions to change the Annualizing and Rolling Average Methods, EPA is not adopting the suggestions. Broadly speaking, EPA interprets the comment to indicate that the Rolling Average Method should be more like the Annualizing Method and vice versa such that they are effectively identical. This seems unnecessary and confusing, and limits flexibility. Both methods have strengths that would be undercut by the suggested changes.

The strength of the Annualizing Method is that it is future-oriented. It allows an owner or operator to ''close out'' each leak event so long as the requirements are followed and does not lump past leak events with the current leak event. It considers the amount of time since the last refrigerant addition and then scales that up to provide a leak rate that projects the amount lost over a whole year if not fixed. As a result, this formula will yield a higher leak rate for smaller leaks if the amount of time since the last repair was shorter. This can have significant environmental benefits by requiring more thorough leak inspections and verified repairs sooner. The commenter's suggested change would make this method too similar to the Rolling Average Method for minimal, if any, benefit and could potentially increase the amount of time included in each leak rate calculation. Stretching out the period of time covered could result in lower leak rates depending on the situation.

The Rolling Average Method also has its strengths. It accounts for all refrigerant additions over the past 365 days or since the last successful follow-up verification test showing that all identified leaks were successfully repaired (if less than 365 days). If an owner or operator verifies all identified leaks are repaired, this method would also allow an owner or operator to ''close out'' a leak event. If there is no follow-up verification test showing that all identified leaks were successfully repaired within the last year, the leak rate would be based completely on actual leaks in the past year. This retrospective approach measures actual performance and if leaks are identified and fixed quickly, an appliance may never reach the applicable leak rate.

Two other commenters questioned the rationale for the change given the need to update tracking software and provide staff training. EPA explained its rationale in the proposed rule and earlier in this notice. Specifically, the change is needed to provide clarity that repairs must be successful and verified in order to be considered in the calculation and to improve effectiveness of the rule.

In this action, EPA is requiring that owners or operators use a prospective approach (the Annualizing Method), that focuses on the current leak event rather than the size of past leaks, or a retrospective approach (the Rolling Average Method), where past performance is key. If an owner or operator repairs all identified leaks and verifies that the repairs have been successful, then the Agency considers that a sufficient clearing event in that the leak rate has been brought as close to zero as possible. We recognize that these changes may require modification to software and technician training with the new requirements. For that reason, EPA intends to develop several compliance assistance tools that will help technicians and owners/operators to better understand the requirements. EPA has also delayed the compliance date for the appliance maintenance and leak repair requirements to January 1, 2019, to allow time for the industry to prepare for these changes.

Low-Pressure Appliance

EPA is amending the definition of *low-pressure appliance* to update the list of example refrigerants with the most commonly used refrigerants today. Because revisions to *appliance* and *refrigerant* carry over into this term as well, under the revisions finalized in this action, low-pressure appliances include those that use ODS and non-ODS substitute refrigerants. EPA is finalizing this definition as proposed.

Medium-Pressure Appliance

EPA is amending the definition of *medium-pressure appliance* to update the list of example refrigerants with the most commonly used refrigerants today. Because revisions to *appliance* and *refrigerant* carry over into this term as well, under the revisions finalized in this action, medium-pressure appliances include those that use ODS and non-ODS substitute refrigerants. EPA is finalizing this definition as proposed.

Mothball

EPA proposed to revise the defined term *system mothballing* to *mothball* to reflect how it is used in the regulations, and EPA is finalizing this definition as proposed. Mothballing an appliance suspends the time needed to complete repairs, retrofit or retirement plans, or the actual retrofit or retirement of appliances that have triggered the leak repair requirements. The previous definition referred to refrigeration appliances, but the suspension is allowed for comfort cooling appliances as well as commercial refrigeration and IPR systems. EPA is therefore removing the reference to ''refrigeration'' appliances in the definition. The previous definition also required that the appliance be shut down for ''an extended period of time.'' EPA is removing this phrase because the Agency is not concerned about length of time that the system is shut down but rather that the system has been removed from service temporarily, as opposed to permanently, and that the refrigerant has been evacuated. The revised definition also notes that refrigerant can be evacuated from an isolated component of the appliance if only an isolated section or component is affected and makes minor edits to improve clarity and readability. EPA is also clarifying in § 82.157(d)(3) and § 82.157(i) that the suspension of time ends when refrigerant is added back into the appliance.

One commenter recommended that EPA allow the system to be filled with nitrogen or another inert gas to protect the system while repair is in process. EPA responds that the regulations in subpart F do not prohibit or address this action, as long as the holding charge is an inert gas and not a refrigerant as defined in this subpart. However, EPA is not making revisions to address this point specifically, as the regulations in subpart F are concerned with refrigerants and the nitrogen or other inert gas in this example is not being used as a refrigerant.

Normal Operating Characteristics and Conditions

As proposed, EPA is changing the defined term *normal operating characteristics or conditions* by replacing ''or'' with ''and'' for consistency through the regulations and to accurately describe the intended state of the appliance to which this term refers. EPA is also removing a reference to a section of the regulation that has moved and adding a reference to the appliance's full charge. Operating at full charge is a necessary element of an appliance's normal characteristics and it should be reflected in the definition. Finally, the revised definition clarifies that this term applies to all appliances, not just refrigeration appliances.

Normally Containing a Quantity of Refrigerant

As proposed, EPA is removing the defined term *normally containing a quantity of refrigerant.* Because EPA is replacing this term with the phrase ''with a full charge of'' in the regulatory text where the term occurred, this definition is no longer needed.

One-Time Expansion Device

EPA is amending the definition of *one-time expansion device* as proposed to clarify that this includes devices that can store multiple charges, which are released individually to the environment to provide a cooling effect.

Opening an Appliance

EPA proposed to amend the definition of *opening an appliance* to improve readability. EPA is finalizing this amended definition as proposed.

Reclaim

As proposed, EPA is changing the defined term *reclaim refrigerant* to *reclaim* so as to match usage in the regulatory text and to update the Air Conditioning, Refrigeration, and Heating Institute (AHRI) standard referenced in the definition. Because revisions to *refrigerant* carry over into the definition for this term, it is appropriate to use the updated AHRI standard which also includes non-ODS substitute refrigerants.

Recover

As proposed, EPA is changing the defined term *recover refrigerant* to *recover* so as to match usage elsewhere in the regulatory text.

Recycle

In the context of recycling refrigerant, EPA is finalizing revisions to the defined term *recycle refrigerant* to *recycle* so as to match usage elsewhere in the regulatory text. The revised term also clarifies that reuse of recycled refrigerant must occur in equipment of the same owner. This revision facilitates consistency with the prohibition in § 82.154(g) of the existing rules on the sale of used refrigerant unless it has either been reclaimed or is being transferred to an appliance owned by the same parent company or by the same federal agency or department. EPA is finalizing this definition substantially as proposed.

Refrigerant

EPA is amending the definition of *refrigerant,* for the purposes of subpart F, to include both ODS and substitutes that are used for heat transfer purposes and provides a cooling effect. This amended definition is closer to how the term is commonly understood, based on its functional properties. From an engineering standpoint, it is irrelevant whether or not a compound is an ODS to function as a refrigerant. Broadening the term also brings another term in subpart F that contains this term, *refrigerant circuit,* more in line with common usage.

One commenter stated that EPA does not have authority to regulate substitutes to the same extent as class I and class II ODS and thus the Agency is prohibited from redefining *refrigerant* to include substitutes. EPA is revising the definition of *refrigerant* under subpart F for purposes of interpreting, explaining, and enforcing the venting prohibition, which applies to substitute refrigerants as well as to ODS refrigerants. EPA is not revising the definition of *refrigerant* for other subparts under part 82. EPA addresses comments about its authority for this action in Section III of this notice.

Retire

EPA is creating a defined term *retire.* EPA proposed retire to mean, in reference to appliances, the disassembly of the entire appliance including its major components, such that the appliance as a whole cannot be used by any person in the future.

One commenter recommended that retire not include the phrase ''such that the retired appliance as a whole cannot be used by any person in the future.'' The commenter is concerned that this could prevent the reuse of certain equipment parts. Furthermore, the owner/operator has no means to determine the ultimate fate of the retired appliance or components. Another commenter stated that the requirement to render the appliance unfit for use by the current or future owner is unnecessary because retired appliances typically use an older refrigerant and are not economical to purchase. Requiring that the owner do something to render the unit unfit for use would impose an unnecessary burden. EPA responds that the term *retire* concerns the continued use of that appliance as a whole. All of the working components of a retired appliance could be disassembled and resold to be used in multiple other appliances because the original appliance, as a whole, is no longer operating.

Another commenter stated that appliances may be retired without being completely disassembled. This comment stated that often, especially for IPR, appliances can be abandoned in place for a considerable length of time; so long as an appliance is made inoperable and permanently shut down it should be considered retired. This commenter provided recommended language which accurately describes the necessary state of the appliance ''rendered unusable'' and notes that any remaining refrigerant would be recovered from the appliance. EPA is finalizing the definition of *retire* that largely matches the definition suggested by this commenter because it more accurately describes the intent of what the Agency proposed.

As discussed in the proposed rule, retirement differs from *mothballing,* as defined at § 82.152, because a mothballed appliance is simply evacuated and shut down until it is ready to be used once again, whereas retirement involves a permanent shutdown of an appliance. Retirement should also not be confused with a repair. *Repair* is not expressly defined in the subpart F regulations. Repair may include the removal of a faulty component, but such removal does not mean that the appliance as a whole has been removed from service and rendered unfit for further use. Throughout this rule, ''replacement'' or ''replace'' may be used when discussing a situation where an existing appliance is retired and replaced with another appliance. In some instances, however, the owner or operator may choose to only retire and not replace an appliance so the two terms are not always used together.

Retrofit

EPA is creating a defined term *retrofit.* Many appliance owners or operators have incorrectly equated *retrofit* with *repair* and EPA received one comment on the proposed rule requesting additional examples of activities and refrigerant conversions that would qualify as a retrofit.

EPA is finalizing this definition as proposed. EPA uses *retrofit* to refer to a change to the appliance in order to convert it to the use of a different refrigerant. In response to the comment requesting the addition of examples of activities or refrigerant conversions, EPA concludes that it is not necessary to include additional examples of activities in the definition. Further, EPA is not specifying the type of refrigerants that are being converted, though typically retrofits have involved the replacement of an ODS with a non-ozone depleting substitute. Retrofits often require changes to the appliance (for example, change in lubricants, filter driers, gaskets, o-rings, and in some cases, components) in order to acquire system compatibility. Sometimes very few or no changes to the appliance are necessary to convert from one refrigerant to another. That would still be a retrofit because the refrigerant has changed.

Retrofit does not apply to upgrades or repairs to existing equipment where the refrigerant is not changed. EPA generally considers a repair to include an action that addresses the leaking appliance or the affected component(s) of the leaking appliance. Repairs may include replacement of components or component subassemblies but changing the refrigerant would make the action a retrofit.

Self-Sealing Valve

EPA is finalizing its proposal to create a defined term *self-sealing valve.* Under this definition, *self-sealing valve* is a valve affixed to a container of refrigerant that automatically seals when not actively dispensing refrigerant and that meets or exceeds established performance criteria as identified in § 82.154(c)(2). The purpose of a self-sealing valve is to prevent or minimize inadvertent release of refrigerant to the environment during the use and storage of the container of refrigerant. The requirement for self-sealing valves for small cans of MVAC refrigerant is discussed in more detail in Section IV.C.

Small Appliance

EPA is finalizing proposed amendments to the definition of *small appliance* to remove the reference to class I and class II refrigerants. Because revisions to *appliance* and *refrigerant* carry over into this term as well, under the revisions finalized in this rulemaking *small appliances* include those that use ODS and non-ODS substitute refrigerants. EPA is also adding portable air conditioners to the list of example small appliances.

One commenter requested that EPA specifically exclude MVACs and MVAC-like appliances from this definition. The commenter believes that without such an exclusion those types of appliances would be included in the revised definition of *small appliance,* which it characterizes as including any appliance charged with five pounds or less of refrigerant, and be subject to regulations that apply to *small appliances.* EPA responds that MVACs and MVAC-like appliances are not *small appliances* even though the charge sizes may be similar. *Small appliances* must be hermetically sealed, which MVACs and MVAC-like appliances are not.

Another commenter noted that EPA has specifically granted an exemption for the manufacture of small appliances in subpart B and urged EPA to preserve that exclusion in subpart F for MVACs. The commenter points to the definition of *motor vehicle* in subpart B. EPA responds that the definition of *motor vehicle air conditioner* in subpart F is simply a reference to subpart B. Thus, the use of MVAC in subpart F has the meaning granted to it in subpart B and this rule does not remove the exclusion granted for the assembly of MVACs in subpart B. EPA disagrees that it is necessary to clarify this point by amending the definition of *appliance,* which is a broader category, nor is it appropriate to amend the definition of *small appliance* in the manner in which the commenter recommends. See discussion under the definition of *appliance* for additional information.

Substitute

EPA is finalizing proposed amendments to the definition of *substitute* to remove the phrases ''EPA-approved'' and ''in a given refrigeration or air-conditioning end-use.'' These phrases are references to the SNAP program, which identifies acceptable alternatives to ODS for specific end-uses. The Agency has changed the status of certain refrigerants from acceptable to unacceptable for new retail food refrigeration equipment, vending machines, and motor vehicle air conditioning (80 FR 42870; July 20, 2015). EPA has also recently proposed to make additional changes (81 FR 22810; April 18, 2016). EPA does not mean to imply that finding a refrigerant to be unacceptable in a given end-use under SNAP means that it is no longer included within *substitute,* and thus by extension *refrigerant.* Were that the case, those substances would be exempted from the safe handling requirements of subpart F, or even the venting prohibition, despite still being used as refrigerants. EPA intends for those substances to continue to be subject to those requirements where they are being used as refrigerants. Accordingly, EPA is finalizing this revision to prevent that confusion, especially since the Agency allows for the servicing of existing appliances designed to use refrigerants that the Agency recently listed as unacceptable in new (and in some cases) retrofitted appliances.

Under the revised definition, any chemical or product, whether existing or new, that is used by any person as a replacement refrigerant for a class I or II ozone-depleting substance would be considered a substitute, even if it has been recently listed as unacceptable under SNAP in some end-uses or has not been submitted to or reviewed by the SNAP program. One commenter stated that by limiting the definition of *substitut*e to replacements for ODS, EPA could be unintentionally permitting new replacements to HFCs, as opposed to ODS, to be beyond the scope of subpart F. Another commenter suggested that the term be limited to the SNAP-approved list of substitutes but provided no reasons for such a limitation.

EPA responds that in 2004, the Agency affirmed an inclusive view of the scope of substitutes under subpart F. In that rule, it stated:

> Under section 608, EPA considers a SNAP-approved refrigerant a 'substitute' for CFC or HCFC refrigerants under section 608 if any of the following is the case: (1) The substitute refrigerant immediately replaced a CFC or HCFC in a specific instance, (2) the substitute refrigerant replaced another substitute that replaced a CFC or HCFC in a specific instance (*i.e.,* it was a second-or later-generation substitute), or (3) the substitute refrigerant has always been used in a particular instance, but other users in that end-use have used it to replace a CFC or HCFC. (March 12, 2004; 69 FR 11958)

EPA continues to hold this interpretation, except that for the reasons discussed above, EPA no longer maintains the position that substitutes must be approved under SNAP in order to be considered a refrigerant under section 608 when the substance is used as a refrigerant. In addition, the phrase ''any chemical or product, whether existing or new'' makes clear that the term is to be applied broadly, even to compounds that do not yet exist or have not yet been developed.

Other commenters recommended that EPA explicitly state the types of refrigerants that are considered substitutes. The proposal stated that EPA intends to apply the requirements in subpart F to all substances that are functionally refrigerants, including but not limited to HFCs, PFCs, HFOs, hydrofluoroethers, and hydrocarbons, as long as those substances have not been exempted from the venting prohibition. To the extent these comments are suggesting that EPA should provide some examples as a non-exhaustive list in the definition, EPA agrees that this increases clarity and EPA has added a non-exhaustive list of examples of substances that would be included in this definition, as well as clarifying that blends of such substances are also included. This approach also matches other definitions in subpart F that have similar lists of examples. To the extent the commenters are suggesting that EPA establish an exhaustive list of substances that would qualify as substitutes, EPA does not agree such a list is needed or would be feasible to include. Including such a list would also be unadvisable given the continued development of new substitutes. Therefore, the definition provides an illustrative list of substances that are included.

To provide clarity, EPA is adding mention of the venting prohibition in the definition of substitute. While EPA is finalizing its interpretation that carbon dioxide, nitrogen, water, ammonia, chlorine, hydrocarbons, and R–441A are substitutes, the regulations as finalized make clear that when these substitutes are used as refrigerants in the end-uses specified in § 82.154(a)(1), they are exempt from the requirements of subpart F and can be referred to as ''exempt'' substitutes. Similarly, the term ''non-exempt substitutes'' as used in this subpart refers to all other substitutes and end-uses not specified in § 82.154(a)(1) as exempt from the venting prohibition. This clarification is only for purposes of the subpart F regulations, and should not be construed to affect any other subpart.

One commenter requested that the regulations include the phrase ''non-exempt refrigerants'' more frequently so that the reader does not have to understand that the regulatory definition of refrigerants excludes substitutes that are exempted from the venting prohibition. EPA responds that while exempt substitutes are included in the regulatory definition of refrigerant, the regulatory text has been revised to clarify that the obligations under subpart F do not apply to exempt substitutes. EPA has included in the definition of substitute a description of the terms ''exempt substitutes'' and ''non-exempt substitutes'' with reference to § 82.154(a)(1), which provides that exempt substitutes are exempt from the requirements of this subpart, so that readers of the regulation can follow EPA's intent from the definition. EPA has also added references in the regulation to class I, class II, and non-exempt substitute refrigerants, where applicable, to be clear which refrigerants are subject to the provisions.

Suitable Replacement Refrigerant

EPA is removing the defined term *suitable replacement refrigerant.* As discussed in Section IV.F.10 of this notice, EPA is removing the extension to retrofit or retire an appliance using an ODS refrigerant if a suitable replacement refrigerant with a lower ozone depletion potential is unavailable. It is therefore appropriate to remove the term from the list of definitions.

System Receiver

EPA is finalizing the creation of a defined term *system receiver* to provide clarity to the reader and improve the organization of these regulations, by providing a definition of this term in a location where the reader might expect to find it. Under the added definition, a system receiver is the isolated portion of the appliance, or a specific vessel within the appliance, that is used to hold the refrigerant charge during the servicing or repair of that appliance. This definition was previously included only in a parenthetical in the regulatory text at § 82.156(a), which describes the required practices to properly evacuate refrigerant from an appliance. The definition added in this rule does not introduce any new practices to the evacuation requirements. EPA is also removing the parenthetical in § 82.156(a), as it is no longer needed.

Technician

EPA is amending the definition of *technician* to improve clarity. As revised, the definition highlights that the determining factor for being a technician is performing actions that could reasonably be expected to violate the integrity of the refrigerant circuit. In general, only people who have completed the technician certification process should be performing actions that could violate the integrity of the refrigerant circuit and could therefore release refrigerant into the environment.

The exception to that general statement is that persons maintaining, servicing, or repairing MVACs and persons disposing of small appliances, MVACs, or MVAC-like appliances do not need to be technicians, as defined within subpart F. This exception is explicitly included in the definition finalized in this action. This revision is not intended to affect the scope of the existing requirements but rather to respond to requests from stakeholders prior to the publication of the proposed rule that the Agency clarify which activities must be conducted by technicians and which need not be. EPA received comments stating that the proposed revision would require persons maintaining, servicing, or repairing MVACs to be technicians. EPA did not intend to impose that requirement and has corrected that in the final rule. EPA also edited the regulations in the sales restriction in § 82.154(c) to ensure that *technician* applies only to technicians authorized under section 608 and not persons authorized under section 609.

The prior definition of *technician* also included a non-exclusive list of example activities that are reasonably expected to violate the integrity of the refrigerant circuit as well as examples of activities that do not. EPA proposed to edit these examples to improve clarity and to add the following two examples of activities reasonably expected to violate the integrity of the refrigerant circuit: Adding or removing components and cutting the refrigerant line. EPA is finalizing the definition substantially as proposed, including the two new example activities that are reasonably expected to violate the integrity of the refrigerant circuit, and with the modifications from the proposal described above related to MVACs and persons authorized under section 609.

Very High-Pressure Appliance

EPA is finalizing amendments to the definition of *very high-pressure appliance* to update the list of example refrigerants with the most commonly used refrigerants today. Because revisions to *appliance* and *refrigerant* carry over into this term as well, under the revised definition v*ery high-pressure appliances* include those that use ODS and non-ODS substitute refrigerants.

Voluntary Certification Program

EPA is finalizing the proposed removal of the defined term *voluntary certification program.* This term references a provision in the regulations that grandfathered in technicians who were certified prior to the establishment of the technician certification program in subpart F. As discussed in Section IV.J.4 below, EPA is removing these grandfathering provisions in this action because they are no longer needed and therefore is removing the definition as well.

B. Revisions to the Venting Prohibition in § 82.154(a)

1. Background

As explained in Section III of this notice, under the revisions finalized in this rule, § 82.154(a) prohibits the venting of ODS refrigerants and non-ODS substitute refrigerants to the environment by persons maintaining, servicing, repairing, or disposing of an appliance. This provision provides an exemption to the venting prohibition for certain substitutes in specific end-uses based on a determination that the listed substitutes in the listed end-uses do not pose a threat to the environment when released. As revised, this section also exempts from the venting prohibition *de minimis* releases of ODS refrigerants and non-exempt substitute refrigerants, and defines *de minimis* releases of ODS refrigerants and non-exempt substitute refrigerants to be those releases that occur when the other provisions of subpart F (or subpart B in the case of MVACs) are followed.

2. Applying the *de minimis* Exemption to Substitute Refrigerants

As explained in more detail earlier in this notice, the knowing venting, release, or disposal of substitutes for class I and class II refrigerants in the course of maintaining, servicing, repairing, or disposing of an appliance or IPR is expressly prohibited by section 608(c)(1) and (2) of the CAA, effective November 15, 1995, unless the Administrator determines that such venting, release, or disposal does not pose a threat to the environment. This prohibition is commonly called the venting prohibition. Section 608(c)(1) establishes the venting prohibition for class I and class II substances, and also establishes an exemption from the prohibition for *de minimis* releases associated with good faith attempts to recapture and recycle or safely dispose of ''any such substance.'' The statutory language of section 608(c)(2) extends paragraph 608(c)(1) to substitutes for class I and class II substances used as refrigerants in appliances and IPR. This extension includes both the prohibition on venting and the exemption for *de minimis* releases associated with good faith attempts to recapture and recycle or safely dispose of such substances.

Prior to this rulemaking, for class I and II substances EPA had interpreted as *de minimis* those releases that occur despite compliance with EPA's required practices under the previous regulations for recycling and recovery, use of certified recovery and/or recycling equipment, and technician certification programs. EPA interpreted compliance with those regulations to represent ''good faith attempts to recapture and recycle or safely dispose'' of refrigerant. Accordingly, the prior regulations at § 82.154(a)(2) provided that releases of ODS refrigerants are considered *de minimis* only if they occur when the other provisions of subpart F (or subpart B in the case of MVACs) are followed. Although the prior regulations at § 82.154(a) exempted *de minimis* releases of non-exempt substitutes from the venting prohibition, those regulations did not provide any express guidance for such substitutes as to what practices are considered ''good faith attempts to recapture and recycle or safely dispose'' of the substitute such that incidental releases would qualify for the *de minimis* exemption.

EPA interprets the phrase ''good faith attempts to recapture and recycle or safely dispose'' similarly when it applies to substitute refrigerants under section 608(c)(2) as when it applies to ODS refrigerants under section 608(c)(1). Thus, compliance with the provisions regarding the evacuation of equipment, use of certified equipment, and technician certification in any instance where a person is opening (or otherwise violating the refrigerant circuit) or disposing of an appliance would represent ''good faith attempts to recapture and recycle or safely dispose'' of non-exempt substitute refrigerants. EPA considers these provisions to appropriately represent good faith attempts to recapture and recycle or safely dispose of such substitute refrigerants. For example, the proper use of certified recovery equipment and the evacuation of refrigerant to prescribed standards would be considered a good faith attempt to recapture and recycle or safely dispose of non-exempt substitute refrigerants when maintaining, servicing, repairing, or disposing of an appliance.

Under this approach, releases are only considered *de minimis* if they occur when these procedures, or those under subpart B, are followed. Conversely, emissions that take place during maintenance, servicing, repair, or disposal when these provisions are not followed are not *de minimis* emissions and are subject to the venting prohibition. While these principles were clearly expressed in the prior regulations for ODS, the prior regulations did not clearly establish what practices the regulated community would need to follow in order to qualify for the *de minimis* exemption and to comply with the venting prohibition while maintaining, servicing, repairing, or disposing of equipment containing non-exempt substitute refrigerants. With the revisions finalized in this rule, EPA is clarifying how the venting prohibition and *de minimis* exemption apply to non-exempt substitute refrigerants, to increase certainty for and facilitate compliance by the regulated community, as well as further explaining its interpretation of these statutory provisions.

It is impossible to open an appliance (or otherwise violate the refrigerant circuit) or dispose of an appliance without emitting some of the refrigerant in the circuit. Even after the appliance has been evacuated, some refrigerant remains, which is released to the environment when the appliance is opened or disposed of. Other activities that fall short of opening or disposing of the appliance but that involve violation of the refrigerant circuit also release refrigerant, albeit in very small quantities, because connectors (*e.g.,* between hoses or gauges and the appliance) never join together without intervening space. Even in the best case in which a good seal is made between a hose and an appliance before the valve between them is opened, some refrigerant will remain in the space between the valve and the outer seal after the valve is closed. This refrigerant will be released when the outer seal is broken. Thus, whenever a person opens an appliance (or otherwise violates the refrigerant circuit) in the course of maintaining, servicing, repairing, or disposing that appliance, he or she could violate the venting prohibition unless the exception for *de minimis* releases applies. Because EPA is finalizing revisions that define the exception for substitute refrigerants such that it only applies when the person complies with the existing refrigerant management provisions, compliance with those provisions will ensure that any releases incidental to these practices will be considered *de minimis* and thus will not violate the venting prohibition under section 608(c)(2).

One commenter stated that it fails to see why it would be unclear to the regulated community that the same *de minimis* exemption applicable to class I and II substances applies equally to substitutes. Section 608(c)(1) provides a specific *de minimis* exemption. Paragraph 1 contains the *de minimis* language, so that language clearly applies to the intentional venting/release of substitutes under paragraph 2. In other words, the *de minimis* language in section 608(c)(1) is expressly applicable to section 608(c)(2), and there is no ambiguity that EPA needs to clarify.

EPA agrees with the comment that the statute applies the *de minimis* exemption to substitute refrigerants. This statutory interpretation supports the revisions finalized in this rule. The statutory ambiguity arises because neither section 608(c)(1) or (2) specifically define what releases would qualify for the *de minimis* exemption or what would be considered ''good faith attempts to recapture and recycle or safely dispose'' of such a substance. The Agency previously established regulations clarifying what releases would be considered exempt from the venting prohibition under the *de minimis* exemption for ODS refrigerants. For class I and II substances EPA has interpreted those releases that occur despite compliance with EPA's required practices for recycling and recovery under the previous § 82.156, use of recovery and/or recycling equipment certified under § 82.158, and technician certification programs under § 82.161 as falling within the *de minimis* exemption. Because the *de minimis* language in section 608(c)(1) is directly applicable to section 608(c)(2), it is reasonable for EPA to choose to use the same regulations to clarify which releases of non-exempt substitute refrigerants qualify for the *de minimis* exception. These regulations accordingly fill a gap in the statute and the prior regulations relating to the definition of the *de minimis* exemption and the phrase ''good faith attempts to recapture and recycle or safely dispose'' for non-exempt substitute refrigerants.

Another commenter stated that EPA must distinguish between provisions interpreting and enforcing the venting prohibition and other provisions implementing the statutory requirements to ''minimize the use and emission'' and ''maximize the recapture and recycling'' of class I and class II substances. In the commenter's view, the leak repair program is clearly related to the latter requirements. In addition, to the extent that a regulatory violation such as recordkeeping does not cause a release, EPA cannot use that as a violation of the venting prohibition. The comment concludes that all *de minimis* releases associated with good faith attempts to recover or recycle refrigerants are exempt regardless of regulatory compliance.

EPA disagrees that there is a subset of the provisions finalized in this action that does not interpret, explain, or enforce the venting prohibition and is only aimed at minimizing the use and emission or maximizing the recapture and recycling of refrigerants. Under the prior regulations with regard to ODS, the regulatory text has long used the required practices under subpart F, including the leak repair provisions under the prior § 82.156(i), to clarify which emissions will qualify for the *de minimis* exemption and thus not run afoul of the venting prohibition. The stakeholder community has appeared to accept this structure, and the interpretation of the venting prohibition it embodies, as it related to ODS. As described above in more detail, EPA is extending this regulatory structure which has long interpreted and enforced the venting prohibition for ODS to do the same for the venting prohibition as it applies to non-exempt substitute refrigerants. The fact that these requirements may also be related to minimizing the use and emission or maximizing the recapture and recycling of ODS refrigerants does not preclude EPA from using those requirements to clarify how the venting prohibition applies to non-exempt substitute refrigerants. Nor does it prevent EPA from choosing to interpret, explain, and enforce the *de minimis* exemption for ODS and non-exempt substitutes through consistent requirements. EPA is extending this regulatory structure to non-exempt substitutes to clarify its interpretation of the ambiguous statutory phrase ''*de minimis* releases associated with good faith attempts to recover or recycle refrigerants'' and to enhance certainty that emissions that occur while complying with the regulations are covered by this exemption. After the revisions finalized in this rule, releases of non-exempt substitutes will be considered *de minimis* only if they occur when the specified requirements are satisfied.

In addition, EPA does not agree with the comment's implication that the leak repair program relates only to minimizing the use and emission or maximizing the recapture and recycling of refrigerants. For example, leak repair is a type of servicing and releases of non-exempt substitutes that occur in the course of repairing leaks as required by the leak repair program could violate the venting prohibition. As such, it is reasonable to clarify in the regulations that releases of non-exempt substitutes that are incidental to repairing leaks as required by the regulations will not be considered to violate the venting prohibition. In establishing the recordkeeping requirements in this rule, EPA is not suggesting that every failure to comply with a recordkeeping requirement would necessarily result in a violation of the venting prohibition. But in any event a failure to comply with a recordkeeping requirement would certainly be a violation of section 114.

Another commenter stated that there is no basis in the text of the CAA to assert that the venting prohibition is self-effectuating but that the *de minimis* exemption is not. It may be reasonable to interpret *de minimis* to mean in compliance with a comprehensive regulatory program when such a program is already authorized, but EPA cannot create a comprehensive regulatory program from that term. The commenter believes that it would be reasonable to interpret *de minimis* as those releases that occur when following best practices that occur while maintaining, servicing, repairing, or disposing of an appliance.

While the prohibition on venting under section 608(c) is self-effectuating, meaning the prohibition itself is legally binding even without implementing regulations, the statutory terms contain ambiguity. For example, the terms ''*de minimis* releases'' and ''good faith attempts to recapture and recycle or safely dispose'' are not specifically defined in section 608(c)(1) or (c)(2). Accordingly, it is appropriate for EPA to clarify in its regulations how it interprets and will apply those terms. As described in greater detail above, EPA is finalizing revisions to the section 608 regulations to further interpret and explain the venting prohibition and increase its enforceability by giving greater clarity and certainty as to which releases it views as being covered by the *de minimis* exemption. Addressing the application of the venting prohibition and the *de minimis* exemption through rulemaking provides advance notice to regulated entities; this is in contrast to case-by-case application, which would be the approach in the absence of rulemaking.

Further, even if we agreed with the comment that the term *de minimis* does not support development of a comprehensive regulatory program, EPA is not creating such a program through this rule. Rather, it is extending a regulatory program that already exists and serves to interpret and enforce the venting prohibition and *de minimis* exemption for ODS and using those same requirements for the same purpose for non-exempt substitute refrigerants. Although EPA could have chosen a different method to interpret and enforce the venting prohibition for non-exempt substitute refrigerants, for reasons described elsewhere in this rule, EPA is electing to regulate ODS refrigerants and non-exempt substitute refrigerants consistently.

3. Exempting Certain Substitutes From the Venting Prohibition

EPA proposed to explicitly state in the regulatory text that the substitutes exempted from the venting prohibition in § 82.154(a)(1) are also exempt from the other provisions of subpart F. EPA also proposed to reorganize the list of exempt substitutes by refrigerant type for readability. EPA did not propose to revise the listed end-uses or propose to add or remove any substitutes from the list.

Multiple commenters supported EPA's proposal to extend the existing regulations to HFCs and other non-exempt substitutes for the clarity it would provide to manufacturers and technicians. Other commenters recommended that EPA treat all refrigerants (including exempt substitutes like hydrocarbons, ammonia, and carbon dioxide) equally in all aspects of the subpart F regulations, including recovery and reclamation, technician certification, leak detection, and recordkeeping. Consistent application of the regulations to all refrigerants, the commenters say, would reinforce essential refrigerant management practices for all systems, reduce leaks, improve safety, and improve the operating efficiency of equipment. The commenters say that all refrigerants, other than water and some HFOs, have either flammability properties, higher GWP properties, or properties hazardous to human health (toxicity, risk of asphyxiation, frostbite, etc). Another commenter was opposed to exempting refrigerants that may be vented from the broader subpart F requirements (with the possible exception of systems using water, nitrogen, or carbon dioxide) as it viewed such an exemption as a dramatic expansion of the exemption to the venting prohibition. The commenter states that establishing a separate class of equipment that does not require proper refrigerant management practices will only increase confusion in the field and exacerbate the problem of illegal venting.

EPA agrees with the comments that the extension of the subpart F regulations increases clarity. EPA disagrees that its clarification that exempt substitutes are not subject to the subpart F requirements is an expansion of the exemption since the service practices and requirements in subpart F had previously only applied to ODS refrigerant. There are a couple of reasons for EPA's present view that it is appropriate not to extend the provisions of subpart F to refrigerants that have been exempted from the venting prohibition. First, EPA has previously determined that the release of these substances do not pose a threat to the environment or are already controlled by other authorities. (See 69 FR 11949, 80 FR 19454, and 81 FR 22810). Given those decisions, it would generally not make sense to require all procedures for recovery or safe disposal, or to apply all other provisions of subpart F to those exempt refrigerants. This is consistent with the intent of section 608(c)(2), which states that substitutes may be exempted from the venting prohibition if the Administrator determines that not just the venting but also the ''releasing, or disposing'' of such substance does not pose a threat to the environment.

Second, the refrigerant management practices in subpart F may be inappropriate for some of the exempted refrigerants. For example, the venting of exempt hydrocarbon refrigerants in certain end-uses may be the safest option for technicians at this time, considering that such refrigerants are flammable but most existing recovery equipment were not designed and constructed, *e.g.* with spark-proof components, for use on flammable refrigerants. As long as the Administrator has determined that such venting of those substances in those end-uses does not pose a threat to the environment, such venting is legal and may be safer than following the subpart F requirements in some circumstances.

4. Releases From Containers

EPA is moving the previous regulatory provision in § 82.154(a)(2) that states that the venting prohibition applies to the release of refrigerant (both ODS and non-exempt substitute refrigerants) after its recovery from an appliance. EPA is moving this provision to a separate paragraph (§ 82.154(a)(3)) rather than its previous location in the description of a *de minimis* release. Standing alone should make the provision clearer that it is a violation of the venting prohibition to vent or otherwise release refrigerant after that refrigerant is recovered from an appliance, whether from cylinders, recovery equipment, or any other storage container or device. The venting prohibition cannot be circumvented by using a recovery device and subsequently releasing the refrigerant. This is especially important because refrigerant recovered from appliances may be contaminated or be a mixture of multiple refrigerants. Such refrigerant may be difficult to reclaim or may require a fee for proper disposal or destruction. In light of those difficulties, it is important to emphasize that venting this refrigerant, even though it is in a cylinder and not an appliance, is illegal. EPA did not receive any comments on this provision and is finalizing it as proposed.

C. Revisions to the Refrigerant and Appliance Sales Restrictions in § 82.154

1. Background

Under the prior regulations at § 82.154(m), the sale or distribution of a refrigerant containing a class I or class II substance, such as R–12 or refrigerant blends that include HCFCs, is restricted to technicians certified under sections 608 or 609 of the CAA. The sale or distribution of any class I or class II substance suitable for use in an MVAC that is in a container of less than 20 pounds may only be sold to technicians certified under section 609.

The prior regulations at § 82.154(g) also restricted the sale of used ODS refrigerant sold for reuse unless certain conditions are met, the most important of which is that the refrigerant has been reclaimed. Sections 82.154(j) and (k) prohibited the sale of appliances containing an ODS refrigerant unless the appliance has a servicing aperture or process stub to facilitate the removal of refrigerant at servicing and disposal. Section 82.154(p) prohibited the manufacture or import of one-time expansion devices that contain any refrigerant (ODS or non-ODS), other than exempted refrigerants.

2. Extension to Substitute Refrigerants

Through today's rule, EPA is extending the sales restriction to HFCs and other non-exempt substitute refrigerants. This sales restriction applies to non-exempt substitute refrigerants sold in all sizes of containers for use in all types of appliances, including MVACs. EPA is creating an exception for small cans (two pounds or less) of refrigerant intended to service MVACs, so long as the cans are equipped with a self-sealing valve. EPA is also restricting the sale of used non-exempt substitute refrigerants.

Since 1993, EPA has restricted the sale of ODS refrigerant to certified technicians as a means of ensuring that only qualified individuals—those who have sufficient knowledge of the safe handling regulations—actually handle refrigerant. EPA considers the restriction on the sale of ODS refrigerant to be important for ensuring compliance with and aiding enforcement of the regulations issued under sections 608 and 609 of the CAA. This requirement also relates to EPA's Next Generation Compliance strategy since compliance with this requirement is largely carried out by distributors who sell refrigerant to technicians. In this rulemaking, EPA is choosing to apply the same requirements for sales of ODS and non-exempt substitutes. Limiting the sale of non-exempt substitute refrigerants to technicians who have demonstrated knowledge of safe handling practices helps minimize the release of refrigerants during the maintenance, servicing, and repair of appliances containing such substitute refrigerants. A sales restriction for non-exempt substitute refrigerants also provides important support to the extension of the technician certification requirements to individuals working with non-exempt substitute refrigerants.

Generally, commenters are supportive of EPA's proposal and agree with EPA's rationale. Commenters who are generally opposed to extending EPA's regulations under section 608 to substitutes did not specifically raise the issue of whether EPA had authority to extend the sales restriction to HFCs and other non-exempt substitute refrigerants. EPA addresses the general comments about its authority for extending the refrigerant management regulations, as appropriate, to non-exempt substitute refrigerants in Section III of this notice. Some commenters stated that the sales restriction should be extended to hydrocarbons. These commenters noted that the flammability of these refrigerants poses far greater risks than that of R–22 when handling it and servicing equipment. Because the sales restriction is an element of the broader technician certification provisions of subpart F, EPA responds to comments concerning the sale and handling of flammable refrigerants in Section IV.I of this notice.

3. Sales of Small Cans

a. What is EPA finalizing concerning small cans of MVAC refrigerant?

Historically, individuals have been able to purchase small cans of non-ODS refrigerant to service their own vehicles. This do-it-yourself (DIY) servicing is unique in the air-conditioning and refrigeration sector to the MVAC end-use. As mentioned previously in this notice, EPA is finalizing the extension of the sales restriction to non-exempt substitutes. EPA is also finalizing an exemption from the sales restriction for small cans of MVAC refrigerant that are manufactured with a self-sealing valve to minimize the release of refrigerant during servicing because the Agency has concluded that restricting the sale of small cans of refrigerant for use in servicing MVAC would be unnecessarily burdensome. If EPA extended the sales restriction to substitute refrigerants without exempting small cans, the sale of both small containers of refrigerant, which are used for DIY servicing of MVAC systems, and typical size (*e.g.,* 25- or 30-pound) cylinders of refrigerant used by technicians to service MVAC and other appliances would be limited to certified technicians.

In the United States, HFC–134a has been used in all newly manufactured vehicles with air-conditioning systems since 1994 and almost all small cans of refrigerant sold for MVAC DIY use are cans of HFC–134a.[18] More recently, the SNAP program listed HFO–1234yf, HFC–152a, and carbon dioxide (CO_2 or R–744), three climate-friendly alternatives for MVAC, as acceptable subject to use conditions for use in new light-duty vehicles. Manufacturers are currently producing or are actively developing light-duty models using these three refrigerants. As finalized in this rule, the exception for small cans would apply to HFC–134a, HFO–1234yf, HFC–152a, as well as any additional MVAC refrigerants listed as acceptable subject to use conditions under SNAP that are not exempt from the venting prohibition. Because CO_2 is exempt from the venting prohibition, it is not subject to the sales restrictions and certification is not required for its purchase in any size container. EPA has not received a submission of a unique fitting for use on a small can of HFO–1234yf; therefore, at this time this refrigerant cannot be sold in small cans to individuals, regardless of the exemption finalized in this rule.

Based on the NPD Automotive Aftermarket Industry Monitor, 2008, approximately 14 million small cans are sold each year. If EPA were to extend the sales restriction to small cans without the exemption for small cans with self-sealing valves, individuals who normally service their own MVAC would be required to either seek certification under section 609 or take their car to a technician to be serviced. EPA estimates that the cost associated with those two actions could be as much as $1.5 billion per year. For more details, see *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* in the docket.

EPA's proposal to exempt small cans of refrigerant for use in MVAC systems that are equipped with a self-sealing valve was informed by input from the Auto Care Association and the Automotive Refrigeration Products Institute, two associations that represent the vast majority of manufacturers of small cans in the United States. EPA also reached out to CARB and other industry representatives as discussed in the NPRM. Based on California's experience, EPA proposed the exemption for small cans equipped with self-sealing valves as an effective way to reduce emissions of HFCs used to service MVACs without limiting sales to certified technicians. These valves reduce the release of refrigerant during servicing and reduce releases from the can after the servicing is complete.

Manufacturers already produce small cans with self-sealing valves to meet California's requirements. According to industry representatives and CARB, self-sealing valves are estimated to cost $0.25 per can. In light of that information, EPA does not find it to be unduly burdensome to add self-sealing valves to all small cans produced for sale in the United States, especially as compared to an extension of the sales restriction that would prohibit the sale of small cans to non-certified persons. Because they are incorporated into the product, consistent with EPA's Next Generation Compliance principles, the individual servicing her or his personal MVAC would reduce emissions without any additional effort or training, as compared to using small cans of refrigerant on the market today that do not employ a self-sealing valve. Thus, EPA has determined that self-sealing valves are an effective mechanism for controlling the release of non-exempt substitute refrigerants to the atmosphere, making it unnecessary to impose burdensome training and/or certification requirements more broadly at this time.

As described in *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program,* EPA estimates that a nationwide requirement to use self-sealing valves on all small cans will reduce emissions by more than 0.657 $MMTCO_2$eq. per year. EPA also anticipates there could be additional emissions reductions to the extent the self-sealing valves allow individuals to store and re-use the same can of refrigerant, reducing the need to buy additional small cans. Currently, a small can is typically used in one vehicle and then discarded with some refrigerant still remaining in the can –from which it will ultimately be released to the environment. EPA estimates that the annual cost for this requirement would be approximately $3 million with the cost decreasing over time as manufacturers increase production and achieve greater economies of scale.

EPA is finalizing a new appendix E establishing a standard for self-sealing valves that is based largely on CARB's *Test Procedure for Leaks from Small Containers of Automotive Refrigerant,* TP–503, as amended January 5, 2010. To be consistent with the CARB standard and existing small cans that are already on the market, the leakage rate may not exceed 3.00 grams per year when the self-sealing valve is closed. This leakage rate applies to full containers as well as containers that have been used and are partially full.

b. How is EPA responding to comments about this topic?

EPA received comments from several manufacturers, distributors, and retailers of automotive refrigerant, and associations representing them, in support of requiring that the small cans be outfitted with self-sealing valves and not restricting the sale of small cans to certified technicians. EPA also received comments from multiple industry associations and CARB supporting these provisions.

Two environmental organizations were opposed to the proposed exemption for small cans equipped with self-sealing valves. The commenters recommend that only certified technicians be allowed to purchase MVAC refrigerant, regardless of the container size. The commenters believe that the DIY community is a large source of emissions of automotive refrigerant. Specifically, they claimed that emissions occur because DIYers are untrained in the use of the product, they

[18] ODS refrigerant for MVAC servicing that is sold in cylinders less than 20 pounds is currently restricted to technicians certified under section 609 of the CAA.

vent remaining refrigerant from the MVAC prior to recharging it because they do not own recovery and recycling equipment, and they are merely filling, rather than repairing, a leaking system. One of the commenters estimated the annual emissions of automotive refrigerant at 18 $MMTCO_2eq$.

EPA responds that DIY servicing is unique to the MVAC end-use, as discussed previously in this notice. EPA did not propose to restrict the sale of small cans of MVAC refrigerant to certified technicians, explaining its concerns that such a requirement could be unnecessarily burdensome (80 FR 69479; Nov. 9, 2015). If EPA were to prohibit DIY servicing, individuals who normally service their own MVAC would be required to either seek certification under section 609 or take their car to a technician to be serviced. EPA estimates that the cost associated with those two actions could be as much as $1.5 billion per year. In the short term, EPA has concluded that requiring small cans of refrigerant to have self-sealing valves is an effective mechanism for controlling the release of refrigerant to the atmosphere by DIYers from the can of refrigerant. In the longer term, the transition to new MVAC refrigerants will reduce emissions of high GWP refrigerants from DIY servicing at little to no cost for DIYers.

EPA has estimated that the requirement for self-sealing valves on small cans of refrigerant will reduce refrigerant emissions by 0.657 $MMTCO_2eq$. per year compared to the current status. Self-sealing valves prevent emissions of the gas remaining in the can after the system is fully filled. Currently, if a system takes 1.5 cans to fill, the DIYer will have no choice but to allow the extra 0.5 can to be released to the environment after detaching it. Furthermore, because self-sealing valves allow individuals to store and re-use the same can of refrigerant, there may be less need to buy additional small cans. CARB has claimed benefits of 0.25–0.47 MMTCO2eq for their small can program in 2020. However, because their program includes more than just self-sealing valves (*e.g.,* refundable deposits), the benefits are not directly comparable. CARB has noted a reduction in sales of small cans of 1.1 million to 1.9 million cans, which they attribute to the effectiveness in the valves and the displacement of new purchases by later use of the remaining heel.

EPA received one comment from a chemical manufacturer stating that they would support the continued sale of small cans without self-sealing valves but limit those sales to certified technicians under section 609. EPA does not see the benefit of restricting the sale of small cans to people certified under section 609 since small cans of refrigerant that do not have self-sealing valves are inherently emissive. Being certified under section 609 would not prevent the emission of the refrigerant from the heel of the can.

Commenters who oppose the sale of small cans generally do support the requirement to use self-sealing valves if there is not a total ban on sales. One commenter also strongly recommended that EPA allow the sale of small cans of HFO–1234yf and HFC–152a so that DIY consumers will not be enticed to recharge their HFO–1234yf system with HFC–134a for the lack of any alternative. EPA responds that the regulations at § 82.154(c)(1)(x) as revised in this action include any non-exempt substitute refrigerant that is intended for use in an MVAC. Therefore, small cans of HFO–1234yf and HFC–152a would be exempt from the sales restriction but also have the same requirements for unique fittings and self-sealing valves under section 608. As discussed previously in this notice, HFO–1234yf cannot currently be sold in small cans because a submission has not yet been made to SNAP for a unique fitting for small cans of HFO–1234yf. This action under section 608 does not prohibit the sale of any MVAC refrigerant alternative in a small can; however, refrigerants must be listed as acceptable or acceptable subject to use conditions for MVAC and unique fittings for small cans must be established under section 612 of the CAA prior to use[19].

Small cans of refrigerant sold for MVAC servicing are different from containers of refrigerant sold for stationary refrigeration and air-conditioning in that the small cans for MVAC are required to have unique fittings. The SNAP program requires as a use condition for MVAC refrigerants that the container and the MVAC system use unique fittings to prevent cross-contamination. If used properly, the unique fittings will not allow for the introduction of HFC–134a refrigerant into a system using any other refrigerant, including CFC–12, HFO–1234yf, or another approved substitute refrigerant. Using an adapter or deliberately modifying a fitting to use a different refrigerant is a violation of the SNAP use conditions. Unique fittings will also reduce the likelihood that a small can will be used to service appliances other than MVACs that use non-exempt substitute refrigerants, which would be in contravention of the sales restriction.

[19] ''Use'' is defined at 40 CFR 82.172 to include ''use in a manufacturing process or product, in consumption by the end-user, or in intermediate uses, such as formulation or packaging for other subsequent uses.''

Refrigerant sold for MVAC servicing is also different than other refrigerant because of the limited types of equipment that could be serviced with a small can. First, many household appliances that use refrigerants are hermetically sealed, like a refrigerator. Someone who wanted to open that appliance would need greater skill and specialized equipment to service the appliance since there would not be a servicing port to access. This makes it less likely that homeowners would attempt to use a small can to service other small household appliances. Larger appliances that use HFC–134a that are not hermetically sealed, like a reach-in cooler, would need more than one small can to fully charge the appliance. Because of the cost and the added effort to use multiple small cans to charge a larger appliance, it is not practical for someone to use a small can. This would likely lead the person to purchase a larger container of refrigerant, which would require that the person be a certified technician.

Commenters, including CARB, supported the use of CARB's standards. One commenter representing the manufacturers of small cans noted that this standard was developed in a cooperative effort between CARB and the refrigerant industry and that the procedures described in the standard have been used since 2010 to certify small cans sold in the California market. The commenter also stated that adopting the California standard would also allow for a quicker transition to cans with self-sealing valves, while development and adoption of a new standard would require a longer transition time and therefore, EPA should provide a later compliance date.

EPA agrees with the commenters and has determined that the establishment of the standard in appendix E, which is based on CARB's *Test Procedure for Leaks from Small Containers of Automotive Refrigerant,* TP–503, is appropriate. This provides for one uniform standard across the nation, thus simplifying compliance and avoiding potential burdens associated with complying with two different standards, one in California and another in the rest of the country. No commenter identified any other standard for self-sealing valves. EPA is finalizing the provisions in the newly created appendix E without any changes from the proposal.

EPA requested comment on whether the final rule should exempt the sale of

HFC–134a only or of all MVAC substitute refrigerants in small cans. One commenter responded that the exemption should apply to all refrigerants for use in MVAC and MVAC-like appliances because the rationale applies equally to other MVAC refrigerants. The minimal leakage and venting from small cans of other refrigerants is relatively the same as from small cans of HFC–l34a, and the commenters know of no technical reason why a self-sealing valve could not be created for those cans also. EPA appreciates the commenters' support for the proposal to apply the exemption to all MVAC substitute refrigerants. EPA is finalizing the exemption as proposed. It will apply to all MVAC substitute refrigerants, except those exempt from the venting prohibition. EPA also notes that refrigerants for use in MVAC-like appliances are not exempt from the sales prohibition, consistent with EPA's approach to MVAC-like appliances historically. Under section 609, technician certification is required only when a person is servicing an MVAC system for consideration whereas MVAC-like appliances must always be serviced by a certified technician.

4. Servicing Apertures and Process Stubs

EPA is finalizing revisions that require that new appliances containing a non-exempt substitute refrigerant (including a used non-exempt substitute refrigerant) have a servicing aperture or process stub to facilitate the recovery of refrigerant at servicing and disposal. Including these design features on appliances containing such substitutes facilitates compliance with the section 608(c) prohibition against the venting, release, or disposal of substitute refrigerants into the environment. These access points allow for the proper evacuation or recovery of substitute refrigerant, preventing releases to the atmosphere in the course of maintaining, servicing, repairing, or disposing of the appliance. Without these access points, it would be harder for persons maintaining, servicing, repairing, or disposing of such appliances to properly evacuate the refrigerant in accordance with § 82.156(b). For example, these access points provide the person disposing of an appliance the opportunity to properly remove the refrigerant prior to crushing or shredding and thus avoid a knowing release. EPA did not receive comments on this provision. The manufacture or import of one-time expansion devices that contain any refrigerant (ODS or non-ODS), other than exempted refrigerants, was prohibited under the prior regulations. One-time expansion devices, by design, release their refrigerant charge to the environment in order to provide a cooling effect. Examples include self-chilled beverage containers that must be disposed of or recycled after each use, as well as reusable containers. EPA is finalizing minor edits to this prohibition that reference the list of exempt refrigerants as proposed. EPA did not receive any comments on this provision.

D. Revisions to the Safe Disposal Provisions in § 82.155

1. Background

In the 1993 Rule, EPA established specific requirements for the safe disposal of small appliances, MVACs, and MVAC-like appliances containing ODS refrigerant since they typically enter the waste stream with the refrigerant charge intact. Under the prior rules at § 82.156(f), persons who took the final step in the disposal process of such appliances had to either recover any remaining refrigerant in the appliance or verify that the refrigerant has previously been recovered from the appliance or shipment of appliances. If they verified that the refrigerant has been recovered previously, they had to retain a signed statement attesting to this or a contract from the supplier of the appliances for three years. While recovery equipment used to remove the refrigerant had to be certified under § 82.158, persons recovering the refrigerant at disposal did not need to be certified technicians.

2. Extension to Substitute Refrigerants

EPA is extending the preexisting safe disposal provisions previously found at § 82.156(f) for small appliances, MVACs, and MVAC-like appliances containing ODS refrigerants to the same types of appliances that contain non-exempt substitute refrigerants. Generally, commenters support EPA's proposal and agree with EPA's rationale. Commenters who stated that EPA does not have authority to extend section 608 regulations to substitutes were silent on the specific issue of the safe disposal provisions. A fuller and more general discussion of the authority for this action is found in Section III of this notice.

Safely disposing of both ODS and substitute refrigerant in small appliances, MVACs, and MVAC-like appliances is important for the environment and public health. According to EPA's Vintaging Model,[20] EPA projects that the GWP-weighted amount of refrigerant contained within MVACs and small appliances in use in 2015 was more than 260 $MMTCO_2eq$ and 175 $MMTCO_2eq$, respectively. This constitutes 12 and 8 percent, respectively, of the total GWP-weighted amount of refrigerant contained within all appliances in the United States in 2015. On an ODP-weighted basis, EPA estimates that more than 1,400 ODP-weighted metric tons of refrigerant were contained within small appliances in 2015, representing 5 percent of the refrigerant contained within all appliances in the United States. While EPA projects that these amounts will decrease over time as zero-ODP and low-GWP substitute refrigerants penetrate the market, the need for robust safe disposal requirements remains because these appliances are used for a long time. One commenter agreed, noting that forty percent of the refrigerators sent to their recovery facility were manufactured prior to 1993 and contain CFCs.

One commenter approves of the clear signal that the rule sends for appliances containing exempt refrigerants. However, this commenter asks how a recipient of a component of such an appliance for disposal would be aware that the subpart F requirements do not apply to that component. EPA responds that the only likely exempt refrigerant in that scenario is a small appliance containing a flammable refrigerant. As required under the SNAP use conditions, the component would have markings such as red tubing or a warning label that would distinguish that component from other components. The labels must be placed on the outside of the appliance, on the inside of the appliance near the compressor, on or near any evaporators that can be contacted by the consumer, near the machine compartment, and near any and all exposed refrigerant tubing.

3. Clarifications to the Existing Program

The safe disposal regulations require actions of three separate groups of people: The final processor, the supplier of appliances for disposal, and the person who recovers the refrigerant. The final processor is the person who takes the final step in the disposal process,

[20] EPA's Vintaging Model estimates the annual chemical emissions from industry sectors that have historically used ODS, including air-conditioning and refrigeration. The model uses information on the market size and growth for each of the end-uses, as well as a history and projections of the market transition from ODS to alternatives. The model tracks emissions of annual ''vintages'' of new equipment that enter into operation by incorporating information on estimates of the quantity of equipment or products sold, serviced, and retired or converted each year, and the quantity of the compound required to manufacture, charge, and/or maintain the equipment.

typically a scrap recycler or landfill operator. Final processors may receive appliances with a charge or without a charge. The supplier is the person dropping off the appliance (or shipment of appliances) for disposal. The person who recovers the refrigerant may be the final processor, the supplier, or a separate third entity. EPA is finalizing as proposed regulatory text to help clarify the different actors.

Refrigerant may be recovered at any stage in the disposal process, even prior to the supplier taking possession. As EPA stated in the 1993 Rule, ''the supplier to the final processor does not have to remove the refrigerant but then must assure, through an accompanying certification, that refrigerant has been removed earlier in the disposal chain. Any copies of the certificate of removal provided to the supplier could be passed on to the final processor.'' (58 FR 28704–28705). EPA's intent has been to provide the flexibility needed to permit the recovery of refrigerant by the entity in the disposal chain that can accomplish that task most efficiently while at the same time establishing a mechanism to help ensure that the refrigerant has not simply been illegally vented. This flexibility is important for the disposal sector, which is highly diverse and decentralized. This signed certification serves both goals.

EPA is revising the regulations to clarify what must be in the contract stating that refrigerant will be removed prior to delivery. EPA is replacing the word ''remove'' which appears repeatedly in these provisions with ''properly recover.'' These revisions clarify the provisions' intent that the refrigerant is recovered to the required evacuation levels using the appropriate equipment. EPA is also stating explicitly that the contract should provide that the supplier of the appliances is responsible for recovering any remaining refrigerant or verifying that the refrigerant has already been evacuated. As discussed in the 1993 Rule, the supplier to the final processor does not have to remove the refrigerant but must assure, through accompanying certifications, that the refrigerant has been removed earlier in the disposal chain.

EPA notes here that a contract is appropriate for businesses to streamline transactions in cases where they maintain long-standing business relationships. A contract would be entered into prior to the transaction, such as during the set-up of a customer account, not simultaneously with the transaction. A signed statement is more appropriate for one-off transactions between the supplier and the final processor.

EPA is also clarifying the format that the records required under this section may take. In general, where the regulations in subpart F require an individual to maintain records, the Agency intends for them to do so either in an electronic or paper format, preferably in an electronic system. EPA is clarifying this point explicitly in the recordkeeping provision at § 82.155(c).

One commenter stated that the new § 82.155 will remain unclear if EPA does not review the relevant applicability determinations for potential inclusion in the regulatory text. EPA responds that applicability determinations are only applicable to the person requesting the determination from EPA. However, in response to the comment, EPA has reviewed and is incorporating information from specific applicability determinations into the regulatory text where the Agency finds it will increase clarity to the industry as a whole.

Two applicability determinations address the situation where refrigerant has leaked out of an appliance prior to arriving at the final disposer. Applicability determination number 608–8 addresses whether a verification statement is needed where all of the refrigerant has already leaked out due to a break in the refrigerant circuit. Applicability determination number 608–9 addresses whether the term *leaked out* includes instances in which the line has been cut prior to the delivery of the appliance. EPA's determination in 1993 was that if all the refrigerant has leaked out, the signed statement need not contain the name and address of the person who performed the recovery as no such person exists. The signed statement must, however, clearly state that all the refrigerant in the appliance had already leaked out. EPA also determined that ''leaked out'' means those situations in which the refrigerant has escaped because of system failures, accidents, or other unavoidable occurrences not caused by a person's deliberate acts or negligence, such as deliberately cutting refrigerant lines. Scrap processors may accept appliances whose lines have been cut as long as they obtain a signed statement from the supplier. This includes appliances that have been vandalized. EPA is incorporating information from these determinations into the regulatory text at § 82.155(b)(2)(iii).

Two applicability determinations address whether the verification statements are needed for appliances that arrive at the final processor in various conditions. Applicability determination number 608–8 pertains to the situation where the entire refrigeration circuit has been removed from the appliance prior to delivery. Applicability determination number C040001 pertains to (1) receipt of an appliance in which some components of the refrigerant circuit have been removed; (2) receipt of portions of the refrigerant circuit (*e.g.,* compressor); (3) receipt of an appliance in which the entire refrigerant circuit has been removed; and (4) receipt of an appliance which has previously been through a process in which refrigerant would have been released or recovered.

EPA's determinations in 1993 and 1996 were that the first two situations would be subject to the safe disposal regulations and the third and fourth situations would not be. Any equipment that contained refrigerant is subject to the safe disposal requirements. This includes a complete appliance with an intact refrigerant circuit, an appliance with a broken refrigerant circuit such as one with a component removed, or a single component that would contain refrigerant in an appliance. In all such instances the intent of the safe disposal program—to verify that the refrigerant was recovered properly—still applies.

Consistent with these determinations, EPA interprets its regulations such that items that have had the entire refrigerant circuit removed, such as the outer housing of an air conditioner or the structural shell of a refrigerator, are not subject to the safe disposal regulations, as these items do not meet the definition of appliance. Similarly, shredded material, baled scrap, or crushed cars are not subject to the safe disposal regulations. The person responsible for compliance with the safe disposal regulations is the entity upstream that conducted the final processing where the appliance was shredded, crushed, flattened, baled, or otherwise demolished and where the refrigerant would have been previously recovered in accordance with the regulations.

4. Hazardous Wastes

One commenter requested that EPA exclude hydrocarbon refrigerants that are vented from the definition of hazardous waste. The commenter reacted to a discussion in the proposed rule that household appliances containing a hydrocarbon refrigerant would be exempt as a household hazardous waste under the federal hazardous waste regulations at 40 CFR 261.4(b)(1) (although States may have more stringent regulations) and therefore, could generally be vented upon disposal under both RCRA and CAA regulations. The commenter notes that a household-type appliance may also originate from institutional and commercial settings and therefore would not qualify for the household waste exclusion under RCRA.

EPA responds that these refrigerants may be subject to regulation as hazardous waste, with the exception of refrigerants that are directly reused. The Agency did not propose to amend the regulations issued under RCRA in the proposal to this final action and has not undertaken the analysis to do so at this time. This comment is also outside the scope of this rulemaking, which relates to regulations under section 608 of the CAA, not to regulations under RCRA.

5. Restructuring and Edits for Readability

EPA is creating a single section, § 82.155, for all safe disposal provisions, including the recordkeeping and reporting requirements. One commenter supported moving the refrigerant recovery requirements for small appliances, MVACs, and MVAC-like appliances into a single section. The commenter suggested the section be titled ''Safe Disposal of Refrigerant'' rather than ''Safe Disposal of Appliances'' as they stated that the CAA does not contain the concept of safe disposal of appliances. While it is true that section 608(c) is concerned with the entry of refrigerants into the environment, it addresses such releases in the context of ''disposing of an appliance.'' EPA disagrees that it is necessary to change the name of the section. However, EPA has reorganized the section to put up front the general requirement that refrigerant be evacuated from appliances before describing the requirements of the final processor.

E. Revisions to the Evacuation Requirements in § 82.156

1. Background

Under EPA's existing regulations at § 82.156(a), ODS refrigerant must be transferred to a system receiver or to a certified recovery and/or recycling machine before appliances are opened for maintenance, service, or repair. The same requirement applies to appliances that are to be disposed of, except for small appliances, MVACs, and MVAC-like appliances which were subject to separate requirements under § 82.156(g) and (h). To ensure that the maximum amount of refrigerant is captured rather than released, EPA requires that air-conditioning and refrigeration appliances be evacuated to specified levels of vacuum.

2. Extension to Substitute Refrigerants

EPA is finalizing revisions in this action that extend the existing requirements at § 82.156 to appliances containing non-exempt substitute refrigerants. Therefore, before appliances containing non-exempt substitute refrigerants are opened for maintenance, service, or repair, the refrigerant in either the entire appliance or the affected part (when it can be isolated) must be transferred to a system receiver or to a certified recovery and/or recycling machine. The same requirements apply to appliances that are to be disposed of, except for small appliances, MVACs, and MVAC-like appliances, which have separate requirements.

Generally, commenters were supportive of EPA's proposal and agreed with EPA's rationale. Commenters who stated that EPA does not have authority to extend section 608 regulations to substitutes were silent on the specific issue of evacuation requirements. EPA addresses general comments about its authority for this action in Section III of this notice.

i. Evacuation Levels for Appliances Other Than Small Appliances, MVACs, and MVAC-Like Appliances

EPA is finalizing revisions to § 82.156(a) such that appliances other than small appliances, MVACs, and MVAC-like appliances containing non-exempt substitute refrigerants must be evacuated to the levels established for CFCs and HCFCs with similar saturation pressures. These levels are based on the saturation pressures of the refrigerant, which is a characteristic independent of whether or not the refrigerant is an ozone-depleting substance. As is the case for CFCs and HCFCs, the appropriate evacuation levels for HFCs and other substitutes depends upon the size of the appliance and the date of manufacture of the recovery and/or recycling equipment. EPA did not receive comment expressing any technical concerns with extending the evacuation requirements to substitute refrigerants. Some commenters stated that they currently treat ODS and HFC appliances in the same manner, including the level of evacuation.

ii. Evacuation Levels for Small Appliances

EPA is finalizing revisions to § 82.156(b) to establish the same evacuation requirements for servicing small appliances charged with non-exempt substitute refrigerants as had previously existed only for small appliances charged with ODS refrigerants. Technicians opening small appliances for service, maintenance, or repair are required to use equipment certified either under appendix B, based on AHRI 740, or under appendix C, Method for Testing Recovery Devices for Use with Small Appliances, to recover the refrigerant.

Technicians using equipment certified under appendix B have to pull a four-inch vacuum. Technicians using equipment certified under appendix C have to capture 90 percent of the refrigerant in the appliance if the compressor is operational, and 80 percent of the refrigerant if the compressor is not operational. Because the percentage of refrigerant recovered is very difficult to measure on any given job, technicians would have to adhere to the servicing procedure certified for that recovery system under appendix C to ensure that they achieve the required recovery efficiencies.

One commenter specifically expressed support for extending the evacuation requirements to small appliances charged with non-exempt substitutes but not to small appliances containing exempt refrigerants. The commenter notes that the technician would be required to use appropriately certified equipment to recover the refrigerant. EPA did not propose to require the recovery of exempt refrigerants and agrees that it would not be appropriate to finalize such a requirement in this rule, as the venting prohibition does not apply to these substances.

EPA is also revising § 82.156(b) to establish the same evacuation requirements for disposing of small appliances that are charged with non-exempt substitute refrigerants as currently exist for small appliances charged with ODS refrigerants. Small appliances must have 80 or 90 percent of the refrigerant in them recovered (depending on whether or not the compressor was operational) or be evacuated to four inches of mercury vacuum.

EPA is also finalizing revisions to the regulations to simplify the evacuation requirements for small appliances so that they are the same for both servicing and disposal. This new provision applies to both ODS and non-exempt substitute refrigerants. Prior to this rulemaking, a technician servicing a small appliance containing an ODS needed to only recover 80 percent of the refrigerant when using recovery equipment manufactured before November 15, 1993. At the same time, there was no established level of evacuation in the disposal requirements when using pre-1993 recovery equipment. EPA is allowing that 80 percent level of evacuation for disposal to simplify and unify the requirements. This revision will have minimal effect as few people continue to use recovery equipment manufactured prior to that date.

One commenter stated that there should not continue to be separate evacuation levels for recovery equipment manufactured before 1993. This commenter saw such equipment being used only rarely and only to avoid the deeper evacuation requirements. This commenter also stated that pulling a 4-inch vacuum on a small appliance is not equal to 80 percent refrigerant recovery. EPA responds that the proposal explicitly stated that EPA was not proposing to amend the required levels of evacuation in Table 1, change the circumstances that would allow for alternate evacuation levels, or to revise those alternate levels. EPA understands the concerns raised by the commenter, but removing the older evacuation levels at this time is beyond the scope of this rulemaking.

iii. Evacuation Levels for MVACs and MVAC-Like Appliances

Technicians repairing or servicing MVACs for consideration and MVAC-like appliances containing an ODS or a non-exempt substitute refrigerant are subject to the requirement to ''properly use'' (as defined at § 82.32(e)) servicing equipment approved pursuant to § 82.36(a). All persons recovering refrigerant from MVACs and MVAC-like appliances for purposes of disposal of these appliances must reduce the system pressure to or below 102 mm of mercury vacuum or use refrigerant recycling equipment dedicated for use with MVAC and MVAC-like appliances approved pursuant to § 82.36(a). The proposed rule incorrectly extended the MVAC servicing requirement to all persons, not just those servicing MVACs for consideration. EPA has revised the final rule to properly distinguish between the two.

EPA received a comment that section 608 of the CAA does not apply to MVACs. As discussed above in Section III of this notice, section 608(c) provides EPA authority to regulate the disposal of MVACs, which are a type of appliance. With respect to disposal of MVACs, this final rule, like the prior regulations, only specifies evacuation levels for such appliances when they are disposed.

3. Records for Disposal of Appliances With a Charge of More Than 5 and Less Than 50 Pounds

EPA is adding new recordkeeping requirements at § 82.156(a)(3) for the disposal of appliances with a full charge of more than five and less than 50 pounds of either ODS or non-exempt substitute refrigerant. Most appliances this size are disassembled in the field and as such must have the refrigerant recovered in the field. EPA is requiring records that document the name of the company that employs the technician, the location of the appliance being disposed of, the date of recovery, and the type of refrigerant removed from each appliance prior to disposal. The technician who evacuated the refrigerant, or the company employing that technician, must also maintain records indicating the quantity and type of refrigerant transferred for reclamation, the company that they transferred the gas to, and the date of the transfer. The technician, or the company employing the technician, would be required to maintain these records for three years. By company employing the technician, EPA means the person paying the technician's salary or wage, not the appliance owner or operator who has hired the technician for that specific service. The finalized regulations have one change compared to the proposal: EPA is not requiring records indicating the amount and type of refrigerant recovered from each separate appliance but rather the total amount and types recovered from all appliances disposed of in each calendar month. As described in more detail below, this modification from the proposed revision was made after consideration of public comments.

Comments in support of this proposed recordkeeping requirement agreed with EPA's goal of improving the enforceability of the venting prohibition. One commenter stated that EPA's rationale to improve compliance with the venting prohibition and facilitate enforcement against those who do vent is insufficient and not adequately supported in the record. Another commenter believes that venting is not as prevalent as EPA thinks it is and that to the extent that it does occur, it is done by individuals who are not certified technicians.

EPA responds that the Agency has heard from people throughout the HVAC/R industry that venting regularly happens in appliances with more than 5 and less than 50 pounds of refrigerant. One commenter to this rule who regularly addresses contractor and service technician groups hears from them that the venting prohibition is widely disregarded. At a recent meeting EPA attended with air-conditioning and refrigeration contractors, an industry speaker asked attendees what percentage of technicians recover refrigerant. The estimates individuals offered were generally between 10 to 30 percent, with the caveat that recovery is much more common in the refrigeration industry than the air-conditioning industry. EPA also receives numerous tips each year of someone cutting refrigerant lines to quickly and illegally dispose of appliances of this size. This feedback indicates a likelihood that venting regularly occurs.

At times, including in public fora such as the public meeting in November 2014, stakeholders have requested that EPA increase enforcement of the venting prohibition. At that meeting, some stakeholders indicated that technicians will knowingly and illegally vent refrigerant if they think EPA will not bring an enforcement action. Multiple commenters urged the Agency to do a better job of enforcing the venting prohibition. This request came from a broad cross section of the air conditioning and refrigeration community including refrigerant reclaimers, recycling and recovery equipment certifiers, and appliance manufacturers and distributors. Some of these comments stated that good actors who comply with the law are placed at a competitive disadvantage by entities who can operate more cheaply by skipping the required recovery practices and choose instead to illegally vent refrigerant.

The Agency has recently brought successful cases against individuals who have illegally vented refrigerant. However, the availability of the records required under this provision would enhance the Agency's ability to enforce the venting prohibition because these records could be used to demonstrate whether or not refrigerant has been recovered and sent for reclamation. If refrigerant cannot be accounted for, a company or technician may not be able to show that they complied with the venting prohibition.

Some commenters who objected to this proposal stated that EPA did not provide sufficient justification and that EPA underestimated the burden to technicians. EPA responds that it is reasonable to require technicians and the companies employing technicians to maintain records of the amount of refrigerant that they recover and send for reclamation to enhance compliance with and enforceability of the venting prohibition. There is a significant environmental benefit to ensuring that ODS and HFC refrigerant are recovered from existing appliances of this size at the time of disposal. Using EPA's Vintaging Model, EPA estimated the number of appliances in this size category that are disposed of annually, the full charge of those appliances, and the type of refrigerant they contain. EPA estimates that 7.3 million appliances of this size, with a total charge of 27,300 MT of refrigerant, are disposed of annually. This is equal to 960 ODP-weighted metric tons and 49.5 $MMTCO_2eq$. This represents 45 percent of the total amount of ODS and HFC refrigerants contained within all appliances from all size categories that are disposed of annually.

EPA's benefits assessment for the proposed rule did not calculate any additional emissions reductions because the existing regulations already require recovery when appliances are disposed. However, in practical terms, requiring a record from each disposal event may drive more technicians to comply with the venting prohibition because the recordkeeping requirement places extra emphasis on the prohibition and on the risks of violating it. Even slight improvements to compliance could produce substantial environmental benefits.

Another commenter stated that some IPR facilities may have hundreds or even a thousand of these smaller 5–50 pound appliances and that requiring additional tracking or recordkeeping would be unnecessary and overly burdensome. Furthermore, the commenter continued, because industry has the burden of proof that it is in compliance with the venting prohibition, industry has established basic recordkeeping that can meet the intent of this rule without requiring additional or duplicative information. A couple of commenters similarly noted that it is good business practice to recover refrigerant from such units prior to disposal.

EPA responds that the incentive to illegally vent may be less if the owner has hundreds of appliances or uses in-house technicians. In that situation, it may be good business practice to recover refrigerant from a system being disposed of because that refrigerant can be reused in that owner's other appliances. The desire to fit more service calls into a day is also perhaps less when using in-house personnel. However, in cases where a technician is getting paid by the job, there is an economic incentive to minimize the time spent at each job-site which could include venting refrigerant. EPA disagrees that such facilities will require burdensome new tracking and recordkeeping. While a facility may have many appliances, the records that EPA is requiring in this rule are only necessary once—upon disposal—and only a small subset of the total number of appliances is likely to be disposed of in a given year.

EPA has considered ways to minimize the burden to technicians in light of commenters' concerns. EPA is modifying the final rule so as to require records that are generated through normal operations in the field. Therefore, EPA is removing the requirement to determine the amount of refrigerant recovered from each appliance. Entities would not be required to weigh cylinders or otherwise calculate how much refrigerant they recovered at each and every site, which was the most time consuming element of the proposed recordkeeping requirements. Instead, EPA's goals can be achieved by requiring records of the amount recovered in each calendar month. This way, recovery cylinders can be weighed less frequently and at a centralized location or recovery cylinders can simply be tallied if the amount of refrigerant in them is known.

One commenter encouraged EPA to consider exempting residential systems from the recordkeeping requirements due to the nature of their servicing. EPA responds that this recordkeeping requirement does not apply to regular servicing, only disposal, which occurs much less frequently.

A couple of commenters requested clarification of who must maintain records. One commenter did not support this requirement because they believed it would require records be kept by homeowners. Another commenter suggested that third-party collection sites not have recordkeeping requirements so as to not discourage wholesalers and storefronts from serving in the collection chain.

EPA responds that the recordkeeping requirements finalized for this provision apply solely to the company employing the technician (or to the technician, if operating independently) who is disposing of the appliance in both commercial and residential settings. This could be the owner or operator of the appliances or it could be a contractor who is hired to dispose of the appliance. When that company transfers the refrigerant for reclamation they may have to receive records from other entities (such as reclaimers or third-party collection sites) but those receiving refrigerant are not obligated to maintain any records themselves. EPA is not requiring any recordkeeping by the owners of the appliance unless the owner of the appliance and the employer of the technician are the same entity.

One commenter suggested that EPA extend the proposed recordkeeping requirements to those who collect at least 100 pounds of refrigerant per year from small appliances. This commenter also suggested less detailed records be kept in such instance, specifically (1) the quantity of refrigerant recovered monthly, (2) the number of units disposed of, and (3) the name of the certified reclaimer to whom they transferred the recovered refrigerant. EPA disagrees that extending this requirement to small appliances is necessary. Certification and recordkeeping requirements currently exist for the disposal of small appliances. These records are held by the final disposer, who is best suited to maintain them. In addition, EPA does not require that small appliances be evacuated by a certified technician when being disposed of.

Two commenters suggested that EPA extend the recordkeeping requirement to appliances containing more than 50 pounds as well. One of the commenters was concerned that contractors who collect from both smaller 5–50 pound and larger 50-plus pound appliances would have to separate or otherwise distinguish between what was recovered from each when transferring their refrigerant to a reclaimer. EPA finds that it would not be necessary to distinguish between these two size categories. A single record of all refrigerant transferred for reclamation is sufficient because EPA is not requiring an accounting of all recovered refrigerant as it moves through the market.

After consideration of these comments, EPA is requiring records that are regularly generated by technicians or companies recovering refrigerant while disposing of appliances as a practical way to improve the Agency's ability to enforce the venting prohibition without imposing an undue burden on regulated entities that are already complying fully with the venting prohibition. To avoid imposing an undue burden on good actors, especially out in the field where there may already be pressure to cut corners, EPA is not finalizing the proposed requirement that records be kept of how much refrigerant is recovered from each appliance. Weighing or otherwise calculating the amount of refrigerant recovered at each job site could increase burden of these requirements by consuming additional time.

4. Clarifications and Edits for Readability

As proposed, EPA is moving the provisions that were found in § 82.156 ''Required Practices'' in the prior rules into three separate sections: § 82.155 to address the safe disposal of small appliances, MVACs, and MVAC-like appliances; § 82.157 to address appliance maintenance and leak repair for appliances containing 50 or more pounds of refrigerant; and § 82.156 to address the proper evacuation of refrigerant from appliances. These provisions tend to affect different stakeholders so separating them into different sections will make the required provisions easier to find.

F. Revisions to the Leak Repair Requirements in § 82.157

1. Background

A central component of EPA's longstanding program to properly manage ODS refrigerants is the requirement to repair leaking appliances within 30 days of determining that a certain leak rate has been exceeded. Owners and operators of appliances normally containing 50 or more pounds of ODS refrigerant must repair their appliances if they leak above a certain rate or take other actions to reduce the emissions such as retrofitting, retiring, or mothballing the appliance. Under the prior regulations, the leak rate at or above which action was required was 35 percent for commercial refrigeration appliances and IPR and 15 percent for comfort cooling and other appliances. If the attempt to repair failed to bring the appliance's leak rate below the applicable leak rate within that time frame, the owner or operator must develop a retrofit or retirement plan and implement it within one year of the plan's date. Owners or operators also had the option of developing a retrofit or retirement plan within thirty days of identifying that the leak rate has been exceeded. Owners or operators of IPR or federally owned appliances may have more than 30 days to complete repairs and more than one year to retrofit appliances where certain conditions applied (*e.g.,* equipment located in areas subject to radiological contamination, unavailability of necessary parts, and adherence to local or state laws that may hinder immediate repairs). The full suite of the prior requirements are found at § 82.156(i).

EPA recognizes that refrigeration and air-conditioning equipment often do leak. This is particularly likely for larger and more complicated appliances like those subject to the subpart F leak repair provisions. However, leaks from such appliances can be significantly reduced. Multiple factors support this conclusion. Concrete evidence that leaks can be significantly reduced include experience with the GreenChill program, an EPA partnership designed to encourage supermarkets to reduce emissions of refrigerants and transition to low-GWP and low-charge refrigeration appliances; reports from facilities regulated under California's Refrigerant Management Program; and feedback from stakeholders prior to publishing the proposed rule. The revised leak repair provisions in this action will reduce refrigerant releases of ODS and non-exempt substitute refrigerants by ensuring effective repairs and ongoing monitoring of leaking systems.

2. Restructuring and Edits for Readability

The regulatory text has been modified several times since EPA first established the program in 1993. The regulation now contains numerous cross-references to other provisions in § 82.156(i), making the requirements difficult to follow and in some places potentially leading to differing interpretations. Many important provisions are not readily apparent, such as the primary requirement that repairs must occur within 30 days, which appears explicitly only at the end of the leak repair requirements at § 82.156(i)(9). Therefore, EPA has rewritten the regulation and moved the provisions to a single new section of the Code of Federal Regulations (CFR) to make it easier for stakeholders to locate and understand the requirements.

EPA recognizes that changing the text so significantly may make stakeholders who are familiar with the existing requirements wonder how these revisions affect their current compliance monitoring systems and protocols. EPA emphasizes that the Agency did not intend to alter the substance of the requirements while restructuring except where specified. EPA discusses the intended amendments to the requirements in this section of the notice. In general, commenters were supportive of EPA's efforts to rewrite and simplify the leak repair provisions.

To avoid both ambiguity and cumbersome language throughout, EPA establishes from the outset in § 82.157(a) that the provisions of § 82.157 apply to owners and operators of all appliances containing 50 or more pounds of refrigerant, unless otherwise specified. One commenter stated that EPA should clarify throughout the rule whether the owner/operator or the technician is responsible. EPA responds that the final rule makes clearer that the owner or operator is responsible for conducting the leak inspection or repairing the appliance even when it is the technician who will be performing those actions. When a provision applies to technicians or people servicing equipment, the provision so specifies.

Multiple commenters requested that EPA define owner/operator and one commenter requested that EPA clarify who is responsible if the owner is different from the operator. EPA responds that the Agency is not defining *owner* or *operator* because these terms are widely understood in the public and regulated community. If the owner and the operator are separate entities, both are responsible for complying with the applicable leak repair provisions. EPA notes that the owner of the system chooses the operator of the system, or passes that responsibility to someone else (*e.g.,* a tenant in a building may be provided authority to operate an air conditioning system even though that tenant does not own the building or the air conditioning system). EPA does not want to hinder the ability of the owner and operator of the system to make the decision as to who would be responsible for complying with these requirements, and, therefore, the Agency has maintained the existing language that places responsibility for such compliance with requirements on both parties.

The existing regulations also inconsistently described the leak repair requirements as applying to appliances with ''50 or more pounds'' or ''more than 50 pounds'' of refrigerant. The proposed revisions consistently use ''50 or more pounds of refrigerant.'' EPA received a comment from CARB that the California regulations are based on EPA's ''more than 50 pounds,'' but CARB stated they can address any potential inconsistencies created by this revision. As such, EPA is finalizing consistent use of the phrase ''50 or more pounds of refrigerant'' in the revised regulations.

3. Extension to Substitute Refrigerants

EPA proposed to extend the leak repair provisions previously found at § 82.156(i) to appliances containing non-exempt substitute refrigerants. EPA is finalizing this extension in the revised leak repair regulations (now found at § 82.157). As such, the other provisions related to leak repair and maintenance finalized in this rule (*e.g.,* verification tests, reporting by chronic leakers, etc.) apply to appliances containing ODS and non-exempt substitute refrigerants as well. Consistent with discussions elsewhere in this notice, EPA is not extending these requirements to appliances using substitute refrigerants in a specific end-use for which the substitute refrigerant used has been exempted from the venting prohibition. These exemptions are listed in the regulations at § 82.154(a)(1). For example, these requirements would not be extended to water in any application, or to ammonia in commercial or industrial process refrigeration or in absorption units.

Extending the leak repair requirements to non-exempt substitute refrigerants will lead to significant environmental benefits because these substances pose a threat to the environment when released. Like ODS, HFCs and PFCs also have the ability to trap heat that would otherwise be radiated from the Earth back to space. This ability gives both HFCs and PFCs relatively high GWPs. The 100-year GWPs of saturated HFCs used as refrigerants range from 124 (for HFC-152a) to 14,800 (for HFC–23), and the GWPs of PFCs used as refrigerants range from 7,390 (for PFC–14) and higher. HFC–134a, the most common individual HFC used in air-conditioning and refrigeration equipment, has a GWP of 1,430. See Section II.C.2 of this notice for further discussion related to the environmental effects of greenhouse gases.

In determining whether to exempt HFC and PFC refrigerants from the venting prohibition in 2004, EPA examined the potential effects of the refrigerant from the moment of release to its breakdown in the environment, considering possible effects on workers, building occupants, and the environment. EPA concluded that the release of HFCs and PFCs poses a threat to the environment due to their high GWPs. For that reason, and because of a lack of regulation governing the release of such refrigerants, EPA did not exempt the release of HFC or PFC refrigerants from the statutory venting prohibition. Therefore, knowingly venting or otherwise releasing into the environment of HFC and PFC refrigerants during the maintenance, service, repair, or disposal of appliances remains illegal. The venting prohibition focuses on knowing venting or release during the maintenance, service, repair, or disposal of appliances and thus does not account for all HFC (and PFC) refrigerant emissions. For instance, in previous rules we have not assumed that emissions of HFCs that occur due to appliance leaks constitute knowing releases. However, as discussed elsewhere in this rulemaking, EPA is broadening its interpretation of what is considered a knowing release under section 608(c) for purposes of appliance leaks. In addition, the requirements to calculate leak rates and monitor leaking systems that EPA is finalizing in this action provide knowledge to appliance owners and operators and thereby broaden the set of refrigerant releases for which they would be liable for a knowing release.

Consideration of Costs

Based on the evidence discussed later, the reported leak rate performance of today's comfort cooling, commercial refrigeration, and IPR appliances with full charges of 50 or more pounds argues for lowering the leak rates. The evidence discussed later demonstrates that the leak rates of 35 percent for IPR and commercial refrigeration and 15 percent for comfort cooling are considerably above the ''lowest achievable level of emissions'' envisioned in CAA section 608(a)(3)(A).

While section 608(a)(3) does not require EPA to perform a cost-benefit analysis to determine what leak rate(s) would constitute the ''lowest achievable level of emissions,'' in general, EPA has balanced the benefits from reducing emissions of refrigerants with the costs of these requirements. EPA has determined that the costs are reasonable given the significant benefits that accrue (both private in the form of cost savings and public in the form of improved health and environmental protection from reduced GHG and ODS emissions). Specifically, EPA reviewed data from the lowest-emitting equipment to gauge technological feasibility and then reviewed other datasets, such as CARB data and consent decree requirements, to determine a reasonable set of requirements. EPA then assessed the costs and benefits associated with extending the existing requirements to appliances using substitute refrigerants. EPA also assessed the tighter requirements applicable to appliances containing ODS or non-exempt substitute refrigerants such as lower leak rates, the requirement to repair leaks once the applicable leak rate is exceeded, the requirement to conduct verification tests on all types of appliances, and periodic leak inspections for appliances that had exceeded the leak rates.

Based on the comments received, EPA considered ways to reduce the cost of these requirements, as compared to the proposal. These changes are discussed in full later in this section and include: Limiting periodic leak inspections to appliances that have exceeded the applicable leak rate, rather than requiring all appliances to be inspected; finalizing a leak rate for IPR of 30 percent rather than 20 percent; allowing greater flexibility for owners and operators to determine which leaks to repair rather than requiring the repair of all leaks; and modifying the proposed chronic leaker provision so that it results in reporting to EPA rather than automatic retirement of the appliance.

This rule also provides flexibility that will reduce the cost of complying with the existing regulations. For comfort cooling and commercial refrigeration appliances, EPA is allowing an extension to the 30-day repair requirement if the arrival of a part is delayed, recognizing that the short additional time needed for delivery of a part can result in a nearer-term and less costly emission reduction than a retrofit. EPA is also allowing an extension to implement a retrofit or retirement for any appliance that transitions to a non-exempt substitute refrigerant.

4. Leak Inspections

The prior regulations at § 82.156(i) focused on actions an appliance owner or operator must take after discovering an appliance has a leak. EPA proposed to require annual or quarterly leak inspections as a proactive maintenance practice depending on the type and size of the appliance. More specifically, EPA proposed to require that owners or operators of commercial refrigeration appliances or IPR normally containing 500 or more pounds of refrigerant conduct quarterly leak inspections of the appliance, including the appliance's refrigerant circuit. Inspections would be annual for commercial refrigeration appliances and IPR containing 50 pounds or more but less than 500 pounds of refrigerant, as well as comfort cooling appliances and other appliances normally containing 50 or more pounds of refrigerant.

The purpose of the proposed leak inspection requirement was to determine the location of refrigerant leaks. This proposal was designed with Next Generation Compliance objectives in mind (see Section II.D.3). The Agency anticipated that many appliance owners and operators would take action earlier if leaks were identified because it is in their financial interest to do so and would reduce emissions and refrigerant costs. Repairing leaks earlier could also prevent that appliance from being pulled into the proposed regulatory requirements at § 82.157 for exceeding the applicable leak rate. EPA also proposed to allow owners or operators to forgo periodic leak inspections if they installed and operated an automatic leak detection system that continuously monitors the appliance for leaks.

Frequency of Leak Inspections. State regulatory agencies and environmental organizations supported the proposed requirement to conduct periodic leak inspections. Two such commenters suggested that EPA require quarterly leak inspections for systems with 200 pounds or more to harmonize the leak inspection requirements with California's Refrigerant Management Program. However, many other commenters expressed strong opposition to mandatory quarterly or annual leak inspections, asserting that requiring inspections of all appliances imposes unnecessary costs, especially for systems that are not leaking. Those commenters estimated the cost of an inspection for a large supermarket could exceed $5,000. Another commenter stated that companies do not need a regulatory requirement to inspect and maintain their refrigeration equipment and that since EPA did not require repair of leaks identified in a leak inspection for appliances that do not exceed the applicable leak rate, there is not a reasonable relationship between the proposed requirement and the goal of emissions reduction. One commenter stated that leak inspections are unnecessary, at least for chemical manufacturing, because temperatures and pressures must be maintained within tight tolerances for reactions to proceed. Furthermore, any changes in temperature and pressure would trigger an alarm or shutdown the process.

Other commenters expressed qualified support for annual leak inspections, especially if it is phased in, starting with larger systems or if a company can provide evidence that they have not added refrigerant to a system in over a year. Another commenter stated that leak inspections should only be annual, unless the equipment exceeds the applicable leak rate for that system. That commenter believes that the inspections should return to being an annual requirement after the leak rate has been reduced below the threshold for two years. One commenter stated that the greatest value of a leak inspection is on a system with a known leak.

Based on these comments relating to the expense and value of conducting leak inspections on all appliances, EPA is finalizing the leak inspection requirement only for appliances that have been found to be above the applicable leak rate. EPA proposed to only require that the leaks identified from a leak inspection be repaired when the applicable leak rate is exceeded. EPA's proposal observed that the costs of repairing all leaks when the leak rate is below the applicable leak rate may be higher than the benefits, especially when the leak is a series of small pinhole leaks and the leak rate is very low, as may often be the case. As stated in the proposed rule, when the applicable leak rate is exceeded, the benefits of repairing those leaks are significant—both for the environment and for the owner/operator (in decreased refrigerant replacement costs)—and do result in significant savings, which supports repair of leaks. EPA appreciates the concern raised by commenters who question the value of conducting leak inspections on appliances that are known to not be leaking, or leaking at a low rate that would not trigger a requirement for repair under the regulations. Periodic leak inspections are a best practice within the industry to reduce emissions of refrigerants and the Agency continues to recommend periodic leak inspections for all appliances as even well-maintained appliances might leak.[21] EPA did not quantify any benefits for systems that had a leak rate below the applicable leak rate because the Agency did not propose that the leaks that were discovered in those systems needed to be repaired. While requiring proactive leak inspections would generally reduce leaks because companies would find leaks and could repair them before the applicable leak rate was exceeded, EPA is not finalizing the periodic leak inspections for all appliances, as proposed. Many of the specific comments about timing of leak inspections no longer apply because of this change. However, EPA has reconsidered the cost of conducting a leak inspection, as discussed further in Section VI of the preamble.

EPA is finalizing a requirement at § 82.157(d)(1) to conduct a leak inspection after discovering the leak rate had exceeded the applicable leak rate. Thereafter, EPA is requiring episodic leak inspections based on the full charge size and type of appliance on the same schedule as in the proposed § 82.157(b)(1)–(3), but in this final rule EPA added a provision clarifying that this requirement ends if the appliance remains below the applicable leak rate for a specific time. More specifically, following a leak rate exceedance, EPA is requiring quarterly leak inspections for IPR and commercial refrigeration appliances containing 500 or more pounds of refrigerant until there are four quarters in a row where the appliance has not exceeded the applicable leak rate. For IPR and commercial refrigeration appliances containing between 50 and 500 pounds of refrigerant, and for all comfort cooling appliances or other remaining appliances normally containing 50 or more pounds of refrigerant, EPA is requiring annual leak inspections following a leak rate exceedance until the owner or operator can demonstrate that the appliance has not exceeded the applicable leak rate for one year. More frequent monitoring is important for larger commercial refrigeration appliances and IPR because those systems tend to have more leaks than comfort cooling appliances and because the amount of refrigerant that would be lost in a leak is generally greater for those systems.

In our view, and based on our review of comments, limiting inspections to those appliances that are known to have leaked and triggered the repair requirements appropriately tailors the leak inspection requirement to those systems that are most likely to leak and provides important information about whether the leak repairs have held over the longer term. EPA is not finalizing the proposed revision allowing for annual leak inspections when refrigerant has not been added to the appliance for more than a year as EPA is not finalizing the periodic leak inspection requirement for systems that are below the applicable leak threshold. As discussed later, EPA is finalizing the proposed revision allowing the use of automatic leak detection systems in lieu of quarterly or annual leak inspections.

EPA proposed to establish a process that would allow less frequent leak inspections for federally owned appliances that are located in remote locations or are otherwise difficult to access for routine maintenance. One commenter disagreed with the proposal to allow a reduced inspection schedule for federally owned appliances. Other commenters requested that EPA provide a similar exemption to privately owned appliances.

Because EPA is not finalizing periodic leak inspections for appliances below the applicable leak threshold, EPA is also not finalizing the reduced leak inspection schedule for federally owned appliances. EPA is requiring that federally owned equipment that has leaked in excess of the applicable leak rate be subject to the same periodic leak inspection schedule as privately owned equipment. The concerns about burden raised by federal agencies during the development of the proposal are addressed by removing the proposed requirement that leak inspections be conducted on all appliances. The number of appliances leaking above the final leak thresholds is less than 20 percent of the total number of installed appliances with charges of 50 pounds or greater.

Description of leak inspections. Many commenters requested clarification

[21] See GreenChill's *Best Practices Guidelines: Commercial Refrigeration Leak Prevention & Repairs,* May 2011, available in the docket for this rulemaking.

about the types of methods that can be used to conduct a leak inspection. EPA responds to those comments in the section of this notice that addresses comments on the proposed definitions. As described there, the revised definition includes examples of methods that may be appropriate for leak inspections.

EPA proposed that periodic leak inspections would not need to be performed by certified technicians and took comment on that idea. Two commenters agreed that leak inspections should not be required to be conducted by certified technicians. Reasons stated for not requiring the inspection to be done by a certified technician are that they are more expensive than in-house personnel, they may be less familiar with the appliance, and that the person doing the inspection will not necessarily be performing activities that can only be performed by a certified technician such as adding or removing refrigerant or making any repairs to the appliance. Another commenter believes that leak inspections should be performed by someone trained to fix leaks, and thus that the persons performing leak inspections must be a certified technician.

In this final rule, EPA is requiring that the required leak inspections be performed by certified technicians. EPA is making this change from the proposal for several reasons. First, required leak inspections are now limited to appliances that are known to have been leaking. It is now very likely that a technician will have to add refrigerant or make additional repairs after the leak inspection. This is certainly the case for the inspection triggered by discovering that the leak rate exceeds the threshold. Second, because EPA is no longer requiring the repair of all identified leaks, the person inspecting the system must also be qualified to determine which leaks must be repaired to bring the leak rate below the applicable level. Third, while certified technicians may be more expensive to hire, the overall burden of the leak inspection requirement is less since many fewer appliances must be inspected than originally proposed. Under the proposal, all appliances of a certain size would require leak inspections, which EPA estimated to be approximately 1.5 million. Under the finalized provisions, that number drops to approximately 282,000 appliances. EPA has considered the comments about the cost of performing a leak inspection and has updated the technical support document accordingly. Finally, EPA is not specifying a single method but rather allowing the person conducting the inspection to determine the method(s) that are appropriate for that appliance. This technical judgment requires someone trained in the methods of leak detection, which is more likely to be the case for a certified technician.

Many commenters requested clarification on what portions of an appliance are subject to a leak inspection. The proposed regulatory text was silent on this issue but the notice of proposed rulemaking discussed inspecting visible components and the proposed definition of leak inspection included an examination of ''all visible components of an appliance.'' The proposal did not define ''visible'' or address the treatment of components that are only visible if intermediary steps are taken (*e.g.,* clearing ice or elevating monitoring personnel). Commenters noted that refrigerant lines may be insulated and thus the piping is not visible and that lines may run along the ceiling of a store and are not observable or are difficult to access. One commenter proposed a definition that would limit inspections to areas that are visible and accessible without the use of equipment. The commenter states that the vast majority of components in commercial refrigeration, and those most prone to refrigerant leakage, are accessible directly from floor or roof level. One commenter requested that EPA define visible components as those that are readily accessible to be viewed and accessed during normal preventative maintenance activities for the appliance. One commenter suggested that the leak inspection be ''consistent with good industry practice.'' Another commenter expressed concern that requiring the inspection of all visible components may necessitate the appliance be shut down.

Another commenter requested specific exceptions for components that are difficult to monitor, insulated, unsafe to monitor, or otherwise not accessible. Consistent with other leak detection and repair programs for New Source Performance Standards, Subparts VV and VVa, which relates to equipment leaks of VOC in synthetic organic chemicals manufacturing, the commenter suggests that the following sources be exempt from inspection: (1) Components that require monitoring personnel to be elevated more than 2 meters above a support surface; (2) components that are insulated; (3) components that are determined to be un-safe to monitor as determined by site personnel; (4) components that are under ''ice'' that forms on the outside of equipment. A couple of commenters also expressed concern about requiring leak inspections on equipment that cannot be accessed due to radiological concerns.

EPA appreciates the difficulties associated with inspecting the entirety of an appliance, which these comments illustrate. EPA proposed a definition of leak inspection that includes ''all visible components.'' EPA is modifying that proposed definition to remove the reference to ''all visible components.'' Also, in light of the points raised in the comments, EPA is clarifying in the final rule that a leak inspection must be conducted on all visible and accessible components of an appliance, with some exceptions. EPA did not propose any exceptions but did state in the notice of proposed rulemaking that the inspection should occur on all visible and accessible components of an appliance. The exceptions finalized in this rulemaking clarify what is not considered visible or accessible: 1) Where components are insulated, under ice that has formed on the outside of equipment, underground, behind walls, or are otherwise inaccessible; (2) where personnel must be elevated more than 2 meters above a support surface; or (3) where components are unsafe to inspect, as determined by site personnel. This clarification takes into consideration risks to the person conducting the inspection. The Agency does not expect that an appliance be shut down in order to fulfill the obligation of inspecting all visible components.

Automatic Leak Detection. EPA proposed to not require periodic leak inspections if owners or operators install and operate an automatic leak detection system that continuously monitors the appliance for leaks. Although EPA is removing the periodic leak inspection requirements for many appliances, EPA will continue to allow the use of automatic leak detection equipment to continuously monitor whole appliances or portions of appliances in lieu of the required periodic inspections for that appliance or that portion of the appliance. Use of such equipment can minimize releases of refrigerant because it discovers leaks sooner than a quarterly or annual leak inspection can. Using their 2014 Refrigerant Management Program (RMP) data, CARB commented that they found that leaking systems using automatic leak detection had a 25 percent lower annual leak rate than those without. This comment provides further support for including this option to use automatic leak detection equipment to continuously monitor an appliance or portion of an appliance in the final rule.

A few commenters encouraged EPA to require automatic leak detection equipment on appliances with more than 2,000 pounds of refrigerant to harmonize EPA's requirements with California's. EPA responds that while this rule does not impose requirements that are inconsistent with CARB's program, EPA has not included all of CARB's requirements in this rule. EPA is requiring that automatic leak detection systems meet the same level of detection (10 parts per million of vapor) and notification thresholds (100 parts per million of vapor, a loss of 50 pounds of refrigerant, or a loss of 10 percent of the full charge) as CARB requires. EPA knows that such equipment is already available on the market and capable of meeting those standards, which allows companies wishing to install automatic leak detection equipment to do so sooner than if EPA established different standards in this rule. It also means that installed equipment that meets California's requirements will meet EPA's requirements. EPA disagrees, as discussed later, with the comment suggesting it require the use of automatic leak detection equipment.

Some commenters were opposed to requiring automatic leak detection. One such commenter stated that it does not work well outdoors and that it may be hazardous to enclose a system to facilitate leak detection. It can also be expensive and EPA did not estimate the costs of requiring it. One nuclear power producer commented that any modifications to nuclear generating stations must undergo extensive engineering and risk review processes. This argues against requiring the installation of monitoring equipment. Another commenter stated that it has not been able to identify any reliable information confirming that such automatic leak detection devices are available, cost-effective, and capable of satisfying EPA's requirements.

EPA responds that the Agency is not requiring the use of automatic leak detection equipment in this final rule. Rather, this is an option that an owner or operator can choose to pursue in lieu of conducting periodic leak inspections. EPA agrees that automatic leak detection equipment may not be appropriate for all systems, and the Agency is not suggesting that components be enclosed in order to allow for automatic leak detection equipment where it would be hazardous to do so. The decision to install such equipment is up to the owner/operator. With regard to availability, EPA responds that California's existing requirements for use of such systems have been in place since 2011 and include the same standards as those EPA is finalizing in this rule, so equipment meeting these requirements is already available and in use. EPA encourages anyone interested in using automatic leak detection to consult entities in California regarding the availability and performance of such equipment. Another commenter notes that electronic leak detection equipment is currently installed in thousands of supermarkets, further supporting the idea that such equipment is available and in use.

Many commenters supported automatic leak detection equipment in lieu of periodic leak inspections but were concerned that the systems they currently have installed do not meet the requirements of the proposed rule because the entire refrigeration system is not within the building envelope. EPA proposed that automatic leak detection equipment systems that directly detect the presence of a refrigerant in air could only be used where the entire appliance or the compressor, evaporator, condenser, or other component with a high potential to leak is located inside an enclosed building or structure. Multiple commenters requested that EPA still allow the option of using automatic leak detection for those components that are not outdoors. The outside components would then be the only portion of the system that would be subject to periodic inspections. EPA agrees that automatic leak detection equipment should be allowed for enclosed components even if only portions of an appliance are enclosed and the proposed rule was intended to cover that situation. EPA has revised the final rule to more clearly allow for this and to clarify that in such situations, the automatic leak detection equipment would only be used to monitor components located in an enclosed building or structure but the other components would continue to be subject to any applicable leak inspection requirements.

One commenter encouraged EPA to require that the leak detection system be certified. There are third party systems on the market that claim to check charges, but the commenter believes some may be inaccurate. The commenter recommends referencing ASHRAE 207P, which will allow for verification of the charge checking systems. EPA responds that the referenced ASHRAE standard is still under development and we are unaware of any certification programs that exist or that are planned to reference that standard once finalized. Requiring certifications for leak detection systems is therefore not appropriate at this time. EPA is finalizing the proposal to require that the owner or operator calibrate the automatic leak detection system annually and keep records documenting the calibration.

5. Lowering Leak Rates

The leak rate is the rate at which an appliance is losing refrigerant, measured between refrigerant charges. If the leak rate for an appliance is above a specified threshold, the regulatory revisions finalized in this rule require certain actions, such as leak repair, from the owner/operator.

EPA is lowering the leak rates for IPR, commercial refrigeration, and comfort cooling and other appliances containing ODS refrigerants and is establishing those same leak rates for appliances using non-exempt substitute refrigerants. EPA is lowering the leak rates to 30 percent (from 35 percent) for IPR, 20 percent (from 35 percent) for commercial refrigeration appliances and 10 percent (from 15 percent) for comfort cooling and all other appliances with a full charge of 50 pounds or more of ODS or non-exempt substitute refrigerant. For the reasons discussed below, EPA is finalizing a higher leak rate for IPR than proposed while finalizing the same rates as proposed for commercial refrigeration and comfort cooling. In making this decision, EPA has assessed the compliance costs, cost savings, and environmental benefits and has found that the aggregated costs are reasonable, and that lowering leak rates will result in fewer emissions of both ODS and non-exempt substitute refrigerants.

EPA reviewed data submitted under California's RMP, the South Coast Air Quality Management District (SCAQMD), GreenChill partners, consent decrees for both commercial refrigeration and IPR for companies found to be in violation of subpart F regulations, EPA's Vintaging Model, conversations with potentially affected stakeholders, and comments on this and past proposed rules. See the technical support document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* for a complete discussion. EPA presents here background on two data sources (CARB and SCAQMD) that EPA relied on for multiple types of appliances and then discusses appliance-specific data separately.

California's RMP requires that owners or operators of any appliance with more than 50 pounds of ODS or HFC refrigerant repair leaks, conduct leak inspections or install automatic leak detection equipment, and report their refrigerant usage and repairs.[22] In addition, any facility with a refrigeration appliance containing more than 50 pounds of refrigerant must report all service records annually to California. CARB has categorized facilities based on the facility's largest appliance. Facilities that have at least one appliance with a full charge of 2,000 pounds or more (classified as ''large'' facilities under the RMP) began reporting in 2012 (for 2011 service records). These large facilities must submit service records for any appliance that has a full charge greater than 50 pounds. ''Medium'' facilities have at least one appliance with a full charge of 200 or more pounds but less than 2,000 pounds and they started reporting in 2014. ''Small'' facilities have at least one appliance between 50 and 200 pounds and will have begun reporting in 2016. California's reporting program provides insight into the use and emissions of ODS and substitute refrigerants from refrigeration appliances in the state, across a broad range of sectors that use refrigeration appliances. For the proposed rule, EPA reviewed the 2013 data, the most recent dataset available at that time, which contained information from 11,166 appliances at large and medium facilities. EPA has subsequently reviewed the 2014 data, containing data on 12,605 appliances, and found it to be substantially similar. A series of charts showing the aggregated California data has been included in the technical support document. EPA has analyzed these data in developing the revised leak rates for IPR, commercial refrigeration, and comfort cooling appliances.

California's South Coast Air Quality Management District is an air pollution control agency that services the areas of Orange County and the urban portions of Los Angeles, Riverside, and San Bernardino counties, which contained approximately half of the population of California at that time. SCAQMD had issued Rule 1415 to reduce emissions of ozone-depleting refrigerants from stationary refrigeration and air-conditioning systems. The rule required any person within SCAQMD's jurisdiction who owns or operates a refrigeration system to minimize refrigerant leakage. A refrigeration system is defined for the purposes of that rule as ''any non-vehicular equipment used for cooling or freezing, which holds more than 50 pounds of any combination of class I and/or class II refrigerant, including, but not limited to, refrigerators, freezers, or air-conditioning equipment or systems.''

Under Rule 1415, SCAQMD collected the following information every two years from owners or operators of such refrigeration systems: Number of refrigeration systems in operation; type of refrigerant in each refrigeration system; amount of refrigerant in each refrigeration system; date of the last annual audit or maintenance performed for each refrigeration system; and the amount of additional refrigerant charged every year. For the purposes of Rule 1415, additional refrigerant charge is defined as the quantity of refrigerant charged to a refrigeration system in order to bring the system to a full capacity charge and replace refrigerant that has leaked. This reporting requirement has now been replaced by the statewide RMP reporting.

EPA analyzed the SCAQMD data on ODS-containing appliances for the proposed 2010 Leak Repair Rule. The analysis prepared for that rule can also be found in the docket for today's rulemaking. The dataset contains information on over 4,750 appliances from 2004 and 2005 with ODS refrigerant charges greater than 50 pounds. The data included refrigeration and air-conditioning appliances that meet EPA's definitions of IPR (*e.g.,* food processing industry, pharmaceutical manufacturing), commercial refrigeration (*e.g.,* refrigerated warehouses, supermarkets, retail box stores), and comfort cooling (*e.g.,* office buildings, universities, hospitals) from businesses of all sizes. EPA has considered the previous analysis of those data in developing the revised leak rates for IPR, commercial refrigeration, and comfort cooling appliances in this final rule.

i. Industrial Process Refrigeration

In the proposed rule, EPA discussed reducing the leak rate for IPR and commercial refrigeration from 35 percent to 20 percent. EPA specifically sought comments on whether a 20 percent leak rate was appropriate, or whether a leak rate higher than 35 percent or as low as 10 or 15 percent would be appropriate. After considering the comments received and upon further analysis of the CARB data, EPA is finalizing a leak rate of 30 percent.

Some commenters supported the lower leak rates noting that real-world experience shows that the lower leak thresholds are technically and practically achievable. Some industry members encouraged EPA to explore the feasibility of further lowering rates for IPR in the future, consistent with improved and available industry best practices. Other commenters stated that data from GreenChill and consent decrees are not representative of IPR facilities. One commenter also stated that CARB data do not support that a 20 percent threshold is achievable because one third of the reporting facilities are not achieving such performance. As a result, the commenter stated that EPA has not shown that lowering the leak rate for IPR from 35 to 20 percent is necessary nor economically or practically feasible.

Some commenters suggested EPA distinguish between old and new equipment. One commenter noted that existing IPR equipment can meet the 35 percent leak rate but not all could achieve the 20 percent leak rate. Thus, the proposed leak rate would strand significant investment in custom-designed refrigeration process equipment. Another commenter stated that older IPR facilities were designed when refrigerant tightness was not a critical design element. Facilities have been upgraded and maintained to achieve 35 percent leak rates but further upgrades and repairs to bring them to a lower rate would be costly if not impossible. The commenter also stated that it would not be cost effective since many are near the end of their useful lives. A few commenters suggested that EPA follow the 1998 proposal and allow for the 35 percent rate if the appliance meets all of the following criteria: (1) The refrigeration system is custom-built; (2) the refrigeration system has an open-drive compressor; (3) the refrigeration system was built in 1992 or before; and (4) the system is direct-expansion (contains a single, primary refrigerant loop). Another commenter recommended keeping the leak rate at 35 percent for systems using substitute refrigerants, stating that companies that retrofitted from ODS to HFC refrigerants should be recognized for that prior environmental advancement.

In response to the comment that some of the data are not representative of IPR facilities, EPA responds that the Technical Support Document for the proposal did distinguish between IPR and commercial refrigeration. EPA did not use GreenChill's commercial refrigeration data or consent decrees for commercial refrigeration as a basis for the proposal on IPR. In the final Technical Support Document, as well as the discussion that immediately follows, EPA has further separated out the analysis for IPR.

[22] Among other requirements, the RMP establishes leak repair requirements for appliances with more than 50 pounds of refrigerant. More detail on the RMP is provided in the technical support document in the docket titled *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* and online at *www.arb.ca.gov/stoprefrigerantleaks*.

After considering these comments and further reviewing the CARB data, EPA is finalizing a leak rate of 30 percent for IPR, rather than 20 percent as proposed. The potential benefits of lowering the leak rate to 20 percent are small in relation to the potential costs incurred by those small number of facilities that could be affected.

EPA's model, informed by the 2013 CARB data, indicates that 92 percent of IPR appliances have leak rates below 30 percent. Almost 10 percent of ODS-containing appliances would trigger the leak repair requirements if the leak rate were lowered from 35 to 20 percent, as proposed. However, if the leak rate is lowered from 35 to 30 percent only 0.6 percent more ODS-containing IPR appliances would trigger the leak repair requirements.

Viewed another way, using the California data as a proxy for the entire United States' IPR systems, the proposed 20 percent leak rate could affect up to 9 percent of all IPR appliances (though only a small subset of IPR systems above 20 percent using ODS refrigerant would be newly affected because they were already subject to the 35 percent leak rate). Appliances that leaked more than 20 percent are responsible for 86 percent of emissions in the CARB data. Changing the leak rate threshold to 30 percent, as EPA is finalizing in this rule, would affect 7 percent of all IPR appliances and an even smaller subset of ODS-containing equipment (only 0.6 percent). In the CARB records, appliances leaking more than 30 percent are responsible for 75 percent of emissions.

EPA's review of the 2004 and 2005 data submitted to the SCAQMD from 349 IPR facilities also indicate that 81 percent of ODS-containing IPR appliances had leak rates below 30 percent. Slightly less than 5 percent of ODS-containing appliances would trigger the leak repair requirements if the leak rate was lowered from 35 to 20 percent, as proposed. In this final rule, only 1.5 percent of ODS-containing appliances would trigger the leak repair requirements if the leak rate was lowered from 35 to 30 percent. However, by extending the leak repair requirements to IPR appliances containing non-exempt substitute refrigerants, a 30 percent leak rate would also trigger all IPR facilities using non-exempt substitute refrigerants above that threshold, not just the incremental difference of facilities operating between 30 and 35 percent.

EPA calculates leak inspection and repair costs of a 20 percent leak rate for IPR to be $7.0 million, with annual emissions reductions equal to 0.63 $MMTCO_2eq$ and 8.0 ODP tons. EPA calculates the leak inspection and repair compliance costs of a 30 percent leak rate for IPR to be $5.5 million, with annual emissions reductions equal to 0.44 $MMTCO_2eq$ and 5.4 ODP tons. Finally, EPA analyzed retaining the current 35 percent leak rate for IPR, as applied to IPR using substitute refrigerants. In that scenario, the leak inspection and repair costs would be $5.1 million, with annual emissions reductions equal to 0.26 $MMTCO_2eq$ and 0 ODP tons. Lowering the leak rate from 35 to 30 percent provides significantly more environmental benefits, including reductions in emissions of ozone-depleting substances, for the costs. Lowering the leak rate further provides diminishing returns.

EPA recognizes that some IPR transitioned to HFCs from ODS refrigerants. This may have been an environmental decision for some, but other commenters stated that this was done to avoid being covered by the subpart F regulations. For whatever reasons, these facilities transitioned to a substitute refrigerant and therefore were no longer required to maintain a leak rate below 35 percent. EPA's analysis described above indicate that that a majority of the new IPR equipment affected by the rule will be those using substitute refrigerants. At a 30 percent leak rate, EPA estimates that there will be 492 newly affected systems containing ODS refrigerant but 5,938 systems containing HFC refrigerants.

While the number of affected IPR facilities may be small (EPA estimates there are 1.5 million appliances with a charge size of at least 50 pounds of an ODS or non-exempt substitute refrigerant), the challenges faced by IPR facilities to upgrade or improve their system are more substantial that those faced by other appliance types. In general, leak rates are highest for IPR systems for a number of factors. First, such appliances are generally custom-built and assembled at the site where they are used rather than in a factory where standard manufacturing practices can be put in place to reduce leaks. Appliances used in IPR are custom-designed for a wide spectrum of processes and facilities, including applications such as flash freezers aboard commercial fishing vessels to cooling processes used in the manufacture of pharmaceuticals. This results in the sector having an extraordinarily broad range of equipment configurations and designs. Custom designed equipment may also present more challenges to original equipment manufacturers who wish to systematically implement leak reduction technologies. Second, these appliances generally use a long, single refrigerant loop for cooling that is not enclosed within a piece of equipment. This tends to raise average leak rates, particularly when the refrigerant loop flows through inaccessible spaces, such as underneath floors, or when used in challenging climates and operating conditions. Third, these appliances are often integrated into production plants or other applications and typically operate continuously. This need for continuous operation can make repairing certain leaks more difficult and costly, possibly requiring manufacturing processes to be shut down and long lead times. Multiple commenters agreed with and provided comments supporting EPA's assessment that IPR facilities can be leakier and more challenging to repair than commercial refrigeration and comfort cooling appliances.

In response to comments requesting different leak rates for old and new appliances, EPA is not distinguishing between old and new appliances in the regulations for the following reasons. First, CARB data indicate that older IPR equipment is not necessarily leakier than newer IPR equipment. While newer systems can generally be designed with leak tightness in mind, EPA has also found that the quality of the construction and the operation and maintenance of the appliance plays a larger role in whether the appliance leaks than the age of the equipment *per se.* Leakage can be reduced even on older equipment by taking appropriate measures. Second, in EPA's experience with the HCFC phaseout, it has been challenging in some circumstances for owners and operators to determine whether an appliance is existing or new.

For clarity and to facilitate compliance, and consistent with the proposal, EPA is not finalizing a distinction between old and new IPR appliances in the leak thresholds finalized in this rulemaking. In response to the commenters encouraging EPA to explore the feasibility of further lowering IPR rates in the future, EPA will take this under advisement for future analyses and such a future analysis may include the age of the facility and refrigeration technology used. Further gradation of the IPR category is not necessary at this time.

ii. Commercial Refrigeration Appliances

EPA proposed to lower the leak rate for commercial refrigeration appliances from 35 percent to 20 percent. Based on the data analysis discussed in this section and comments, EPA is finalizing that rate as proposed.

First, EPA reviewed data from GreenChill, an EPA partnership with food retailers to reduce refrigerant emissions and decrease their impact on the ozone layer and climate change. Established in 2007, this partnership has 27 member companies comprising almost 30 percent of all supermarkets in the United States. GreenChill works to help food retailers voluntarily (1) transition to environmentally friendlier refrigerants; (2) lower refrigerant charge sizes; (3) eliminate leaks; and (4) adopt green refrigeration technologies and best environmental practices. One of the GreenChill partnership's programs that helps food retailers reduce their refrigerant emissions is the Food Retailer Corporate Emissions Reduction Program. Under this program, partners report their corporate-wide average leak rate for all refrigerants. A corporate-wide average leak rate is the sum of all refrigerant additions in a given time period for all of the commercial refrigeration appliances owned by a corporate entity, divided by the full charge for all of the commercial refrigeration appliances owned by that same corporate entity during that time period.

Between 2007 and 2014, the corporate-wide average leak rate for all reporting GreenChill partners remained within a relatively narrow range of between 12.6 percent and 13.8 percent. Remarkably, when new partners joined, the reported corporate-wide average leak rate across all partners remained level. Several supermarket chains in the GreenChill program, including some having hundreds of stores, have consistently reported a corporate-wide leak rate below 10 percent. These data support the conclusion that leak rates in commercial refrigeration appliances can be considerably lower than 35 percent and that a 20 percent leak rate is reasonable.

Some commenters found GreenChill data unpersuasive because they are self-reported and unverified and because they represent the average performance of multiple appliances rather than the performance of individual systems. Another commenter stated that GreenChill data are not representative of the supermarket industry as a whole and do not consider the capabilities of independent operators or small businesses.

EPA disagrees with the comments regarding the use of GreenChill data. It is appropriate to use the GreenChill data to inform EPA's consideration of achievable leak rates for commercial refrigeration. The average performance of multiple appliances is relevant to understanding how well individual appliances, on average, perform. This dataset represents almost a third of the supermarket industry, including a few smaller independent operators, over multiple years and locations across the United States. Even if the data were biased towards larger chains and organizations that have proactively sought to reduce their emissions below the prior regulatory rate of 35 percent, these data give an indication of what is achievable when companies seek to reduce leak rates. Further, these data demonstrate that leak rates well below 20 percent are not just achievable but may be consistently maintained. A leak rate is not inherent to a particular piece of equipment but rather includes factors such as how that appliance is operated and maintained.

One commenter representing the supermarket industry supported lowering the leak rate threshold but stated that 20 percent may be burdensome for small businesses and independent retailers. Other commenters in the supermarket industry supported the proposed 20 percent leak rate and one stated that they currently meet that rate for both ODS and HFC equipment. CARB submitted comments suggesting that EPA lower the leak rate to 10 percent for commercial refrigeration, or totally eliminate the threshold. Based on their 2014 RMP data, lowering the threshold to 10 percent would raise the number of affected systems in California from 5,500 to 6,342 (out of more than approximately 20,000 systems) while reducing greenhouse gas emissions by 0.11 $MMTCO_2e$. Another commenter urged EPA to establish a leak rate of 10 percent for new commercial refrigeration to incentivize improved design, installation, and maintenance. The commenter refers to the GreenChill program at least 125 stores currently certified as Silver or above, and with Platinum certified stores achieving leak rates below 5 percent and to a supermarket chain in the UK that has a corporate-wide leak rate of 7.1 percent in 2013.

EPA responds that the average leak rate across all GreenChill commercial refrigeration appliances does not rise appreciably when new companies joined the partnership, which indicates that companies operating outside of the GreenChill partnership are operating with leak rates well below 35 percent.[23] EPA's standard presumption, based on CARB data, is that the average leak rate for all commercial refrigeration is 25 percent. That some commenters say they operate their commercial refrigeration with leak rates below 20 percent for both ODS and HFC equipment is further support that private incentives drive lower leak rates and that a 20 percent rate is clearly achievable.

Based on data in the record, EPA does not agree that a 10 percent leak rate would be appropriate for commercial refrigeration. GreenChill partners have lower leak rates than the industry average, yet the average rate among all commercial refrigeration appliances in GreenChill is around 13 percent. There are only nine supermarkets that have achieved the Platinum level certification. EPA therefore does not believe that 10 percent is currently regularly achievable industry-wide. EPA also appreciates the concept raised by the commenter that establishing lower leak rates for future appliances could be a way to encourage innovation. EPA did request comment on whether there are other regulatory incentives that could provide a basis to go with a leak rate lower than 20 percent and establishing a target rate to achieve in the future is an intriguing concept. EPA will take this comment under advisement. However, in today's final rule EPA is basing the revised leak rates on what appliances are currently able to regularly achieve.

The data submitted to the SCAQMD from 1,722 commercial refrigeration appliances indicate that 77 percent of ODS-containing comfort cooling appliances had leak rates below 20 percent. Only 8 percent of ODS-containing appliances would trigger the leak repair requirements if the leak rate was lowered from 35 to 20 percent. In 2010, when EPA analyzed the data, EPA found that the SCAQMD leak repair data for commercial refrigeration appliances was consistent with EPA's analysis of the commercial refrigeration sector.

EPA has also reviewed how companies agreed to manage refrigerants through recent consent decrees with the Agency. In consent decrees with Safeway and Costco, the two companies agreed to bring their corporate-wide leak rates from about 25 percent to 18 and 19 percent, respectively. In a recent consent decree with Trader Joe's, the company agreed to achieve and maintain an annual corporate-wide average leak rate of 12.1 percent through 2019. One commenter was unpersuaded by the use of consent decrees because they are aspirational and do not reflect actual operation. EPA agrees that the corporate-wide leak rates to be obtained under these consent decrees are not data

[23] See the document *GreenChill Partnership's 2014 Data: Benchmarks, Results, and Trends* in the docket.

of actual operations, per se, but they are more than merely aspirational. Consent decrees are legally binding and the companies would not have committed to them if they thought they were unachievable. These consent decrees provide additional support for the proposition that a 20 percent leak rate for commercial refrigeration is reasonably achievable. These consent decrees are available in the docket.

iii. Comfort Cooling and Other Appliances

EPA proposed to lower the leak rate for comfort cooling appliances and all other refrigeration appliances normally containing 50 pounds or more of refrigerant that do not fit into the commercial refrigeration or IPR categories from 15 percent to 10 percent. Based on the data analysis discussed in this section and comments, EPA is finalizing that rate as proposed.

Some commenters recommended keeping the leak rate at 15 percent because some older systems may not be able to achieve a lower leak rate. These commenters stated that large chillers from the 1990s have a leak rate of 8 to 10 percent due to the seal lubrication design and that as chillers age, the leak rate increases. They asserted EPA should therefore consider the equipment's date of manufacture, the compressor configuration, and whether the equipment is custom built. Another commenter recommended a 5 percent leak rate for comfort cooling and cited multiple data sources. This commenter pointed to sources of data showing a 0.5 percent leak rate for HCFC–123 chillers, as well as a 2009 CARB analysis showing a leak rate of 1 percent and the 2005 IPCC/TEAP Special Report which shows average annual leak rates for best practice in large commercial air-conditioning to be 0.5 percent. Another commenter indicated support for the 10 percent leak rate and noted that the threshold could be lowered further without creating undue burden, but did not provide any technical data concerning average leak rates.

EPA responds that the Agency does consider factors such as the date of manufacture and the compressor configuration for establishing a leak rate applicable to all comfort cooling appliances. Since as far back as 1998, EPA found that comfort cooling appliances leaked less than five percent per year, with many new comfort cooling appliances leaking around two or even one percent per year. The highest leak rates reported from new equipment back in 1998 was high pressure chillers with open-drive compressors with leak rates ranging from four to seven percent. (63 FR 32066). This assessment continues to be valid based on industry feedback on EPA's Vintaging Model. On the other side of the spectrum, the ultralow leak rates (*e.g.,* 1 percent or lower) cited by the other commenter are generally best-practice leak rates or average leaks rates across new or low-pressure chillers and do not necessarily represent the full range of chillers, by type and age, that are subject to these regulations. The HCFC–123 chillers cited by the commenter operate at a lower pressure than the other systems and thus might not be representative of achievable leak rates for HFC and other HCFC equipment which operate under higher pressures.

A few commenters stated that EPA lacks definitive data on typical and economically achievable leak rates for comfort cooling appliances. These commenters asserted that the CARB and GreenChill data presented in the proposed rule are primarily related to commercial refrigeration and IPR, and that SCAQMD's data is not nationally representative because those appliances have been subject to leak regulations since 1991.

EPA responds that the Agency has analyzed average leak rates specifically of comfort cooling appliances as reported to SCAQMD and CARB, and as estimated in the Vintaging Model. As reflected in this analysis, these three sources indicate that most comfort cooling appliances can regularly achieve an annual leak rate of 10 percent. This memo also cites other industry estimates of leak rates in comfort cooling appliances. The majority of these estimates range between 2 and 5 percent with three of the fourteen estimates estimating leak rates above 10 percent.

The data submitted to the SCAQMD from 2,700 comfort cooling appliances indicate that 87 percent of ODS-containing comfort cooling appliances had leak rates below 10 percent. Only 1.5 percent of ODS-containing appliances would trigger the leak repair requirements if the leak rate was lowered from 15 to 10 percent.

EPA agrees that appliances in California or in the SCAQMD may have lower leak rates than appliances nationally, given the refrigerant management regulations that have existed in the state for many years. EPA therefore compared California data with the national assumptions in the Vintaging Model and found that the two correlate closely. The Vintaging Model is updated frequently with data supplied by refrigerant industry stakeholders. Therefore, any difference is not likely to be significant. This comparison is found in the final technical support document in the docket.

Commenters also stated that previous actions are leading the recovery of the ozone layer. These commenters stated that reducing the leak rate as proposed will not contribute to the recovery of the ozone layer and thus EPA cannot justify the burden on owners and operators of such equipment. EPA anticipates that this action will contribute to the recovery of the ozone layer and has calculated a reduction in ODP-weighted emissions of 114 ODP tons. However, section 608 does not require EPA to quantify the impact of this action on the ozone layer. To the contrary, section 608(a) directs EPA to establish regulations that reduce the use and emissions of ODS to the lowest achievable level, without requiring separate evaluation of how each such reduction would affect the recovery of the stratospheric ozone layer. Individual actions such as reducing emissions from comfort cooling appliances fit into the broader approach to ozone layer protection reflected in Title VI of the Clean Air Act. As such, any action that reduces the use and emissions of ODS can help the recovery of the ozone layer.

EPA also received two comments regarding what is included under the term *other appliances.* One commenter recommended that the Agency create a defined term that includes refrigerated air dryers, non-food cold storage, wind tunnels, electrical equipment room cooling, non-occupied digital control rooms, computer server rooms with set point below 68 °F, environmental chambers, growth chambers, turbine inlet air cooling, test cells and chambers, and aquariums. That commenter stated that thousands of regulated entities have identified systems that potentially fall into that category. Another commenter noted that humidity control in paint booths and air compressors could be *other appliances* but are currently treated as IPR. This commenter encouraged EPA to remove the other category and instead treat appliances that do not fall under comfort cooling or commercial refrigeration as IPR.

At this time, EPA is not finalizing a definition of ''other appliance.'' The owners or operators of some of the appliances included in a definition may currently treat such appliances as IPR or commercial refrigeration. While not all ''other appliances'' fall under IPR, for those that do, moving them into an ''other appliances'' category would reduce their leak rate from 35 to 10 percent without prior notice. More fundamentally, EPA's current view is that it is appropriate for other appliances to be regulated according to their function, such that those that fit within the definition of IPR would be regulated as IPR and those that fit within the definition of commercial refrigeration would be regulated accordingly. That view is reflected in the regulatory text finalized in this rule, which provides that the 10 percent leak rate applies to ''other appliances'' with a full charge of 50 or more pounds of refrigerant that are not covered by subparagraphs addressing IPR or commercial refrigeration equipment.

6. Leak Rate Calculation and Seasonal Variances

The first step in reducing refrigerant leaks is knowing whether the appliance is leaking refrigerant and, if so, to what extent. The prior regulations at § 82.156(i) did not explicitly require technicians or owners and operators to calculate the leak rate each time refrigerant is added to an appliance. Recognizing that knowing the leak rate is necessary for compliance with the leak repair provisions of subpart F, EPA's *Compliance Guidance for Industrial Process Refrigeration Leak Repair Regulations under Section 608 of the Clean Air Act* from October 1995 states that ''*[e]ach* time you add refrigerant to a system normally containing 50 pounds or more of refrigerant, you should promptly calculate the leak rate.'' (emphasis in original). Generally, the only time one can calculate the leak rate is when refrigerant is added to the appliance.

To reinforce this practice, EPA is clarifying in the revisions to the regulatory text finalized in this rule that owners or operators of appliances with 50 or more pounds of refrigerant must calculate the leak rate every time refrigerant is added to those appliances. EPA is also clarifying that the leak rate would not need to be calculated when refrigerant is added immediately following a retrofit or the installation of a new appliance or for a seasonal variance.

Two commenters suggested that the leak rate calculation should not be required on non-leaking appliances where all identified leaks are repaired within 30 days of discovery. While EPA commends appliance owners and operators who regularly repair all identified leaks within 30 days, calculating the leak rate each time refrigerant is added is still necessary. Comments indicate that in some instances, appliance owners and operators are unable to find significant leaks that may be driving the high leak rate. Given this feedback, EPA concludes that calculating the leak rate is needed to alert the appliance owner or operator to the fact that, in the case of a continually high leak rate, the typical repair and inspection attempts are not sufficiently addressing the problem with the appliance. Moreover, because the revisions to the leak repair rules as finalized in this action require owners or operators to repair leaks to lower the leak rate below the applicable threshold, calculating the leak rate on an ongoing basis provides important information to help evaluate whether this requirement has been satisfied. Not calculating the leak rate each time refrigerant is added could also lead to confusion for technicians that service more than one customer if each has different equipment subject to different regulatory compliance requirements.

EPA is also clarifying in this final rule how to handle seasonal variances. In regions of the country that experience large temperature swings during the year, refrigerant in some appliances can migrate from the condenser to the receiver. This migration results in a need to add refrigerant to an appliance to ''flood the condenser'' in the season of lower temperature ambient conditions (fall or winter). In this case, the added refrigerant would have to be removed when the weather returns to design ambient conditions to prevent high head pressures. This technique is often referred to as a winter-summer charge procedure or a seasonal adjustment. Seasonal adjustments are not necessary for appliances with properly sized system receivers because they can hold the appliances' full charge, including the additional charge needed to flood the condenser.

Under this final rule, owners or operators can exclude from the leak rate calculation the amount added that is less than or equal to the amount removed during the prior season. In a properly charged, non-leaking system, adding refrigerant during months with lower ambient conditions (fall or winter) would require an equivalent amount of refrigerant to be removed in the months with higher ambient conditions (spring or summer). If more refrigerant is added in the fall/winter than was removed in the prior spring/summer, the difference between the two would be considered a leak and not a seasonal variance. Without requiring that the amount added be equal to or less than the amount removed to qualify for the exemption, there is no way to distinguish legitimate seasonal variances from refrigerant leaks. For example, an appliance owner removes 150 pounds of refrigerant during the spring. Later that year, he adds 180 pounds to that same system to address a seasonal variance. The owner would be able to consider 150 of the 180 pounds as a seasonal variance and the remaining 30 pounds as a leak.

EPA expects only one removal and one addition of refrigerant to account for seasonal variance. If the amount added is equal to or less than the amount removed in the previous season, but an additional amount is added in close proximity (typically within a few days to a few weeks) to the addition being counted as a seasonal variance, and the two additions together are less than or equal to the amount removed in the previous season, the second addition would be considered part of the same refrigerant addition unless the owner or operator could document a leak.

As discussed previously in this notice, EPA is defining a seasonal variance as the removal of refrigerant from an appliance due to a change in ambient conditions caused by a change in season, followed by the subsequent addition of an amount that is less than or equal to the amount of refrigerant removed in the prior change in season, where both the removal and addition of refrigerant occurs within one consecutive 12-month period.

EPA is finalizing in the revised regulations at § 82.157(b) that the leak rate does not need to be calculated when adding refrigerant that qualifies as a seasonal variance. Both the addition and prior removal of refrigerant due to seasonal variances must be documented. Such additions and removals would already be accounted for in service records provided by the technician to the owner/operator. The recordkeeping requirements for this flexibility in calculating the leak rate are located in § 82.157(l)(2), and those for maintaining records associated with the seasonal variance if it is excluded from the leak rate calculation are at § 82.157(l)(10).

Commenters were generally supportive of this new flexibility, but had some concerns, many of which are discussed in the definitions section of this notice. Several commenters requested clarification on whether the owner or operator would be responsible for this requirement. Owners or operators must keep records of refrigerant added and removed from an appliance. If they wish to claim a seasonal variance, they must note in their records the amount of refrigerant that was removed at the end of the last season for a seasonal variance. This is likely to be one of the only reasons to remove refrigerant without immediately adding additional refrigerant or without mothballing, retiring or retrofitting an appliance.

7. Appliance Repair

The prior regulations at § 82.156(i) generally require owners or operators to repair leaks within 30 days of the leak rate being exceeded (*i.e.,* the date of the refrigerant addition) to bring the leak rate to below the applicable leak rate. In the proposed rule, EPA discussed that owners or operators may not know that they have performed sufficient repairs to bring the system below the leak rate, or they may have completed the repairs but may find themselves out of compliance if a separate leak occurs. To reduce emissions of refrigerants to the lowest achievable level, and remove ambiguity concerning compliance, EPA proposed to require a leak inspection of the appliance and then repair all identified leaks. Recognizing that a small amount of refrigerant can be released from an appliance even if the refrigerant circuit is unbroken, EPA sought comments on not requiring the repair of certain minor leaks. Specifically, EPA asked whether it should exempt situations where sound professional judgment indicates an individual identified leak is not the result of a faulty component or connection and that refrigerant releases would not be reduced from repair or adjustment.

Many commenters requested that EPA differentiate between major fixable leaks and minor unfixable leaks. They stated that it is impossible to repair ''all leaks'' as many systems have minuscule leaks that are not fixable. A couple of commenters suggested that EPA not require the repair of leaks that meet the ASHRAE 147 standard, which are those that are less than 0.1oz/year/joint. Another commenter recommends a threshold of 10,000 ppm if using leak detection equipment, or detection visible to the naked eye if using qualitative tests like a soap bubble test. Other commenters supported EPA's proposed exception that allows a technician to use best professional judgment to decide that a leak is not caused by a faulty component or connection and that the leak would not be reduced from repair or adjustment.

Some commenters were concerned about the diminishing returns of repairing all identified leaks. In some cases, small leaks may actually require extensive repair activities and even component replacement. Repairing all identified leaks will extend repair times, which for IPR systems may increase the costs of the repair or, in the case of nuclear generating facilities, increase the risk of conducting those repairs. For those reasons, these commenters said owners and operators should be provided flexibility to select which leaks to repair or make a good-faith effort to repair leaks.

In this final rule, after consideration of the comments, EPA is not finalizing the proposed change to require repair of all identified leaks. In the proposal, EPA acknowledged that a small amount of refrigerant can migrate from an appliance even if the refrigerant circuit is unbroken, and requested comment on whether there should be a limited exception from the requirement. Instead, the regulations finalized today contain the same requirement as in the original rule by requiring that leaks be repaired such that the leak rate will be below the applicable leak rate. Accordingly, EPA is not at this time setting a final standard for what is, or is not, an actionable leak beyond the applicable leak rate. In not finalizing this proposed change, EPA considers that an owner or operator may have good reason to choose not to repair a small leak. EPA also considers the original intent of the leak repair provisions, as explained in the 1993 Rule. At that time the Agency considered requiring the repair of all leaks ''which has the benefit of simplicity and clarity'' but explained that without ''any type of lower bound, however, this standard could result in huge amounts of money being spent to repair even pinhole leaks in equipment that may soon be obsolete . . . The intent of the leak repair requirement in this rule is to assure that substantial leaks are repaired.'' (58 FR 28680). Not finalizing this proposed requirement reduces the number of leaks that are to be repaired and accordingly will reduce the burden of the final rule compared with the proposed rule for two reasons. First, the repair effort itself may take less time. Second, fewer verification tests on the repairs, and recordkeeping associated with such tests, will be needed.

The final regulations include other provisions to help ensure that leaks are repaired consistent with the Rule's provisions, and to address compliance and enforceability of the leak repair provisions. For example, the final regulations provide for initial and follow-up verification tests, as discussed below. They also specify that the leak rate must be confirmed upon the next refrigerant addition. EPA recognizes that this will result in some uncertainty because the owner or operator will not know whether the repair is successful until the leak rate is measured at a future date. There are two instances in which EPA will consider a repair to be successful beyond calculating the leak rate upon the next refrigerant addition. The first instance is if a subsequent leak inspection does not find any leaks at all.[24] EPA therefore strongly encourages the owner or operator to repair all identified leaks, and this provision provides an incentive to repair all identified leaks, although EPA is not finalizing this proposed requirement. The second instance is if there has not been a refrigerant addition in 12 months after the date of repair. If there is not a need for another refrigerant addition for at least a year after the date of repair (and thus the leak rate cannot be calculated for at least a year) EPA will consider the repairs to have been successful.

If upon the next refrigerant addition the appliance is still exceeding the threshold leak rate, EPA's presumption is that the repair failed. The burden is on the owner or operator of the appliance to show that leaks were repaired to bring the leak rate below the applicable threshold and that those repairs held.

One commenter stated that the greatest value of a leak inspection is on a system with a known leak. A comprehensive leak inspection on an appliance that has exceeded the applicable leak rate will ensure that the technician does not stop an inspection when the first leak is found. Another commenter encouraged EPA to be specific that the leak inspection be conducted on the whole system not just where the original leak was found. Another commenter stated that if a particular circuit in a rack house is found to be leaking and is subsequently repaired and passes the verification test, it would be nonsensical to require the inspection of other circuits on that particular appliance.

EPA agrees with these three commenters. The leak inspection must encompass all visible and accessible components of an appliance, with certain exceptions specified in the revised rule. The leak inspection is not complete simply because a single suspected leak is identified. Only through an inspection of the whole of the appliance can an owner or operator know that the repairs that are to be made will be sufficient to bring the appliance below the applicable leak rate. However, a leak inspection need

[24] As discussed previously in this notice, EPA is finalizing the proposed requirement that the owner or operator conduct a leak inspection of the appliance before considering the repair to be complete. Conducting a comprehensive leak inspection is the only way to ensure that the owner or operator can identify the repairs necessary to bring the leak rate below the applicable level.

not be performed on other appliances at that site. As discussed previously in this notice, EPA is clarifying the definition of appliance such that each separate circuit is a separate appliance. While there could be a benefit to proactively searching for leaks on all other circuits, there is no obligation to inspect the other circuits if only one circuit is leaking and it has been repaired and the repair verified.

8. Verification Tests

The prior regulations at § 82.156(i)(3) required verification tests for repairs to IPR and federally owned commercial and comfort cooling appliances containing an ODS refrigerant. Verification tests are performed on appliances, or portions thereof, shortly after they are repaired to confirm that leaks have been fixed. Without verification tests, it may take additional time for the owner and operator to realize that a repair has been unsuccessful and during that time refrigerant could continue to leak from the appliance. EPA is extending this requirement to all required repairs because ensuring that the repairs are done correctly the first time is vital to reducing refrigerant emissions, regardless of whether the appliance is used for IPR, commercial refrigeration, comfort cooling, or is in the category of ''other appliances.''

EPA is finalizing the requirement at § 82.157(e) that owners or operators of all types of appliances that are subject to the leak repair requirements (including those using an ODS or non-exempt substitute refrigerant) perform both an initial and follow-up verification of repairs every time the applicable leak rate is exceeded (unless a retrofit or retirement plan is being developed). Most commenters on this issue supported the requirement for a follow-up verification test. Commenters agreed that the combination of an initial and a follow-up verification test provides effective confirmation of successful repair. One commenter stated that requiring the verification of all repairs would be excessively burdensome. The commenter discusses this burden in the context of the proposal to repair ''all identified leaks.'' The commenter continues that if amendments to the rule for inspections and repairs are adopted in any form, EPA should adopt verification provisions that are limited to significant leaks or adopt an 80/20 rule to assure that the majority of leak repairs are verified by a certified technician or qualified plant personnel.

EPA disagrees with the comment about limiting verification provisions to significant leaks or adopting an 80/20 rule. Because EPA is not requiring the repair of all identified leaks in the final rule, the number of verification tests should be reduced. However, as explained above, it is important that all repairs be verified both for purposes of compliance and enforceability and for purposes of avoiding emissions from leaking appliances. Since owners or operators have flexibility to determine which leaks to repair as long as they can meet the obligation to bring the leak rate below the applicable threshold, they may generally consider what are significant leaks in their repair effort. The verification tests would only apply to the leaks that were repaired.

One commenter stated that a follow-up verification test is unnecessary if there are periodic leak inspections and thus they should be eliminated. EPA disagrees with this comment because a follow-up verification test and a leak inspection serve two separate purposes. The verification test is conducted shortly after the repairs to confirm the success of those repairs. The leak inspections are to identify over the next year or longer whether new leaks have developed or whether minor leaks have become more significant and to determine the location of such leaks.

EPA requested comments on whether to require a minimum time between initial and follow up verification tests, such as one to three hours, to allow an appliance to return to normal operating characteristics and conditions. Many commenters recommended that EPA not establish a minimum time. Commenters suggested that the follow-up verification test be allowed as soon as the appliance returns to normal operating characteristics and conditions. Requiring a waiting period would increase costs by requiring an additional service call. Furthermore, high pressure systems will reveal whether a leak was properly repaired almost immediately.

EPA has considered the burden of conducting verification tests on all appliances. The Agency understands that most technicians pressure check appliances immediately following repairs. Such pressure checks would satisfy the initial verification requirements. EPA is concerned that follow-up verifications may not be a part of normal operating procedures for all repairs. This final rule would allow both initial and follow-up verification tests to be conducted during the same service appointment. Accordingly, EPA does not expect the requirement for verification tests to result in a longer servicing event and thus we do not expect this requirement to result in incremental labor costs. However, the final rule provides, and EPA reiterates, that the technician must wait until the appliance returns to normal operating characteristics and conditions, which includes operating temperatures, pressures, fluid flows, speeds, and other characteristics, including full charge of the appliance, that would be expected for a given process load and ambient condition during normal operation.

Some commenters requested that EPA add a reporting requirement for technicians to provide owners or operators with the results of the verification tests. These commenters expressed that it is difficult to get all of the documentation that they are required to maintain from the technicians who generate those records. EPA agrees with the need to harmonize the recordkeeping provisions between technicians and owners and operators and understands that in order for owners and operators to maintain the required records of the verification tests, they would need to obtain relevant information from the person conducting those tests. For these reasons, EPA is adding a requirement for technicians to provide documentation at the conclusion of each service visit to § 82.157(l)(5).

Two commenters suggested that EPA provide an exception for situations where a follow-up verification test is impossible, for example, when it would be unsafe to be present when the system is at normal operating characteristics and conditions. One of the commenters recommended that EPA allow a standing deep vacuum test in lieu of a follow-up verification test. EPA responds that the Agency attempted to address similar concerns from commenters in 1995. Examples included leaks inside a heat exchanger, compressor internals, locations that must be insulated prior to start-up, and locations in close proximity to dangerous hot equipment or moving parts where access is not possible after reassembly (See 60 FR 40429). At that time, the Agency amended the regulation at § 82.156(i)(3) to state that ''[i]n all cases, the follow-up verification test shall be conducted at normal operating characteristics and conditions, unless sound professional judgment indicates that tests performed at normal operating characteristics and conditions will produce less reliable results, in which case the follow-up verification test shall be conducted at or near the normal operating pressure where practicable, and at or near the normal operating temperature where practicable.'' EPA had proposed to remove that provision to make the regulation clearer and less ambiguous.

Instead, EPA is modifying that provision in the revised regulations at § 82.157(e)(2) to more clearly address the concern about safety raised by the commenters as well as the original intent of that provision.

EPA is also finalizing the proposed change to clarify that owners or operators may conduct as many repair attempts as needed within the initial 30 days (or longer if an extension is available) to repair the appliance. Consequently, the Agency is explicitly allowing unlimited verification tests within the required repair window. Commenters were supportive of this clarification.

9. Extensions to the 30-Day (or 120-Day) Repair Requirement

The prior regulations contained extensions to the repair or retrofit/retirement deadlines under four conditions:

- The appliance was mothballed (available for all appliances) (§ 82.156(i)(10));
- The appliance was located in an area subject to radiological contamination or where shutting down the appliance would directly lead to radiological contamination (available for federally owned appliances) (§ 82.156(i)(1)(ii) and (i)(5)(ii));
- Applicable federal, state, or local regulations made a repair within 30 or 120 days impossible (available for IPR) (§ 82.156(i)(2)(i)); or
- Parts were unavailable (available for IPR) (§ 82.156(i)(2)(i)).

While not an extension, IPR facilities were also allowed an initial repair period of 120 days rather than 30 days if an industrial process shutdown is required to complete the repair. In addition, an exemption to the repair requirement was allowed for all types of appliances if a dated retrofit or retirement plan is developed within 30 days and is then implemented within one year of the date developed.

EPA proposed to provide these extensions to all appliance categories, not just IPR and federally owned equipment. EPA is finalizing these proposed extensions, with some changes from the proposal. Based on comments received, EPA is finalizing a modified version for the extension for when necessary parts are unavailable. More specifically, EPA is clarifying that the extension is allowed when components that must be replaced as part of the repair are not available within the initial 30 day (or 120 day) repair time frame. Also based on comments, EPA is modifying the proposed changes to allow these extensions upon notification to EPA, unless EPA notifies the source otherwise, rather than requiring owners or operators to request an extension and wait for EPA approval. Taken together, these changes significantly reduce the burden of the leak repair regulations on owners of comfort cooling and commercial refrigeration appliances and to a lesser extent IPR.

Based on comments received, EPA is modifying the extension for when necessary parts are unavailable. Many commenters supported EPA's proposal to allow additional time to acquire and install a replacement for a leaking component. While EPA views installing a component as a type of repair, the comments indicate that some owners or operators consider the replacement of a component as different than the repair of an appliance. Replacing a component is more costly, requires more time to order, and requires more system downtime to install. Owners or operators may attempt to repair a leak but upon a failed follow-up verification test may ultimately decide that the whole component where the leak is located needs to be replaced. By the time a decision is made to replace the whole component, there is little time remaining within the initial 30 day repair window to procure and install that component.

Based on these comments, EPA is modifying the extension for when necessary parts are unavailable by clarifying that the extension is allowed when components that must be replaced as part of the required repair are not available within the initial 30 day time frame (or 120 days if an industrial process shutdown is required). This extension encourages the proper repair of an appliance, which in EPA's view, includes the replacement of major components if necessary, rather than simply patching those components, an approach which may not be successful in the longer term. Furthermore, some owners or operators would prefer to replace a faulty component before they are required to retrofit or retire an entire appliance and believe this could, in many instances, be an equally effective means to address needed repairs. This extension should also reduce the potentially large burden upon owners or operators of requiring a large-scale retrofit or retirement when replacing the leaking component might satisfactorily repair the appliance.

The extensions for repair in the prior regulations are open-ended. While those regulations provided only the additional time needed to receive delivery of the necessary parts, it did not set an outer limit for delivery nor did it clearly provide time to install the components once they are received. EPA is finalizing its proposal to set a limit on the extension for the installation of a necessary component. The owner or operator must complete the repair within 30 days after receiving delivery of the component and the total extension may not exceed 180 days (or 270 days if an IPR shutdown is required).

To qualify for any of the extensions in this section, owners or operators must perform all repairs that can be completed within the initial 30 or 120 day period. Initial verification tests must be performed on all completed repairs. A final verification test may not be appropriate for the completed repairs depending on the nature of the remaining repairs and state of the appliance. The owner or operator must also document all such repair efforts and the reason for the inability to make the repair. This would include a written statement from the appliance or component manufacturer or distributor stating the unavailability of the necessary component and the expected delivery date.

Some commenters stated that any changes to nuclear generating stations must undergo extensive engineering and risk review processes, which recommends against the requirement to retrofit if they cannot repair the system. The commenter noted that extended downtime of safety systems in such facilities will increase risk to workers and may conflict with federal regulations. EPA responds that the Agency is providing extensions for any appliance type subject to radiological contamination. Previously, this extension was available only for federally owned appliances. EPA is also not changing the open-ended nature of the extensions due to radiological contamination or compliance with applicable federal, state, or local regulations. Together, this should allow repairs in accordance with the commenter's schedule.

In some instances, encouraging repair may be a preferable environmental outcome to requiring the retrofit or retirement of a leaking system. Appliances that are to be retired are not required to be repaired. Thus, an appliance may continue to leak for up to a year (in addition to extension opportunities). Under this final rule, leaks must be repaired to bring the leak rate below the applicable threshold within 30 days and any component replacement must occur within 6 months. The extension could accelerate the time by which the appliance will stop releasing refrigerants by making leak repair seem more attractive or feasible for some owners or operators compared with retrofit or retirement of a leaking system.

Based on the comments received, EPA is allowing these extensions to be automatic, so long as EPA is notified. Previously, owners or operators would have to request these extensions from EPA and wait for them to be approved. One commenter requested that EPA automatically grant the extension where there are limiting federal, state, or local laws so long as the owner or operator maintains the proper documentation that demonstrates they satisfy the condition. Another commenter requested that EPA harmonize the timing of the request with the 30 day time frame to repair. Previously, a request had to be made within 30 days of exceeding the leak rate but EPA had an additional 30 days to approve or deny the request. There was no clear tolling of the 30 day repair clock which meant a system could be denied an extension after the repair deadline expired. EPA is resolving these conflicting schedules by considering repair requests approved unless EPA notifies the owner or operator that it is not approved.

Owners or operators must provide the same information to EPA as was contained in a request for an extension under the prior regulations. The request must include: Identification and address of the facility; the name of the owner or operator of the appliance; the leak rate; the method used to determine the leak rate and full charge; the date a leak rate above the applicable leak rate was discovered; the location of leak(s) to the extent determined to date; any repair work performed thus far, including the date that work was completed; the reasons why more than 30 days are needed to complete the repair; and an estimate of when the work will be completed.

If an extension to the earlier submitted completion date is necessary, the owner or operator must still submit a request to EPA with a new estimated date of completion and documentation of the reason for that change. The request must be within 30 days of identifying that further time is needed. The owner or operator must keep a dated copy of this submission and proof that it was submitted.

10. Retrofit or Retirement Plans

The previous regulations at § 82.156(i)(6) required an owner or operator of an appliance that exceeds the applicable leak rate to develop a retrofit or retirement plan generally within 30 days if they were unable to repair the leak or simply choose not to repair the leak and instead retire the appliance. EPA proposed four revisions to the retrofit/retirement provision. First, EPA proposed to remove the requirement to retrofit or retire an appliance after a failed follow-up verification test. Second, EPA proposed to remove the requirement to use a substitute with a lower or equivalent ODP. Third, EPA proposed to establish explicit elements of a retrofit/retirement plan. Fourth, EPA proposed to require that all identified leaks be repaired as part of implementing any retrofit plan. EPA is finalizing these four proposals, with some modifications based on comments.

Failed Verification Tests. The prior regulations required owners or operators of IPR using an ODS refrigerant that have failed a follow-up verification test to develop a retrofit or retirement plan within 30 days of the failed verification test and implement the plan within one year. Owners or operators of comfort cooling and commercial refrigeration appliances were not required to perform verification tests on their repairs and therefore were not subject to this trigger to develop a retrofit or retirement plan. As discussed in Section IV.F.8 of this notice, EPA is extending the requirement to conduct verification tests on repairs made to commercial refrigeration and comfort cooling appliances, increasing the potential universe of appliances affected.

Both prior to initiating this rulemaking and through comments received on the proposed rule, appliance owners/operators have expressed their concern to EPA that the requirement to retrofit or retire an entire appliance because it has failed a verification test is not always practical or necessary. In their view, a failed verification test should indicate to a technician that further repair work needs to be performed to properly fix the leak, not a regulatory requirement to begin retrofitting or retiring the appliance. As EPA discusses in the section on follow-up verification tests, in the revisions finalized in this rule EPA is allowing as many repairs and follow-up verification tests as are necessary to fix the appliance within the required time frame. Accordingly, consistent with these comments, the revised regulations no longer require an owner or operator to retrofit or retire an entire appliance simply because it has failed a verification test.

EPA proposed that failing to comply with ''paragraphs (e) and (f) of this section,'' which included the proposed requirement to repair all identified leaks and verify all repairs, would trigger a requirement to develop a retrofit or retirement plan within 30 days, rather than a failed verification test. As discussed above, EPA is not finalizing the proposal to repair all identified leaks; therefore, EPA is modifying the trigger to develop a retrofit or retirement plan accordingly. In this final rule, a plan must be developed within 30 days of discovering that an appliance continues to leak above the applicable leak rate after having conducted the necessary repairs and verification tests. This provision as finalized is also narrower and clearer than a ''failure to comply with paragraphs (e) and (f) of this section,'' which EPA proposed, because the proposed language could have been interpreted to also include failure to maintain records rather than failure to repair the appliance. EPA has added a provision to clarify that owners or operators are still required to develop a retrofit or retirement plan even if they do not affirmatively choose to retrofit, retire, or repair their leaking appliance.

Retrofit/Retirement ODP. EPA's prior regulations required that appliances containing an ODS refrigerant, when being retrofitted or retired/replaced, use a refrigerant with an equivalent or lower ODP. EPA created this provision to foster the transition from refrigerants with high ODPs to ones with a lower or zero ODP.

EPA proposed to remove this requirement and allow for retrofits or retired/replaced appliances to use any refrigerant (other than the one currently used in that appliance in the case of retrofits), so long as it is acceptable for use under SNAP. This proposed revision would not relax the prior requirements with respect to HCFCs since the regulations implementing sections 605 and 606 of the CAA already prohibit the use of virgin HCFCs in appliance manufacture (as of January 1, 2010, for HCFC–142b and HCFC–22; and as of January 1, 2020, for other HCFCs) and thus installation and retrofit of such appliances would not occur. As explained in the proposal, requiring the use of a refrigerant with a lower or equivalent ODP could be problematic if the requirement were read strictly because some non-exempt substitutes like HFOs that are not classified as an ODS have a negligible, but non-zero, ODP. For example, *trans*-1-chloro-3,3,3-trifluoroprop-1-ene (also known as 1233zd(E)) has an ODP between 0.00024 to 0.00034 and a GWP between 4.7 to 7 (see 77 FR 47768). Under a strict interpretation, an owner/operator would not be able to replace an R–134a chiller with a 1233zd(E) chiller in the future because R–134a has an ODP of zero and the olefinic refrigerant has an ODP greater than zero. This could prevent transition to low-GWP alternatives.

Some commenters suggested that EPA should require a retrofit to an acceptable substitute under SNAP, with one commenter suggesting that it be a lower GWP alternative than the refrigerant currently being used. Another commenter suggested that if the SNAP-approved refrigerant with the lowest available GWP is being used, EPA should allow for documented repairs and quarterly leak inspection in place of forced system retirement.

Other commenters questioned the value of retrofitting a system that already uses substitute refrigerants and suggest that retrofit plans should not be required for non-ODS equipment. One commenter viewed the existing rules as providing an opt-out incentive to owners that voluntarily retrofit to a non-ODS. The commenter requested that EPA retain this feature so that owners that switch from a high-GWP refrigerant to a low-GWP refrigerant similarly benefit. Similarly, a commenter questioned how retrofitting helps the owner/operator if the rules for HFCs are the same as for ODS.

EPA responds that the Agency is finalizing provisions that encourage the repair of leaking systems instead of requiring the retrofitting or retirement of those systems. Most significantly, EPA is finalizing the proposal to allow all comfort cooling, commercial refrigeration, and IPR appliances the opportunity to extend the deadline to repair leaking appliances beyond 30 days (or 120 days if an industrial process shutdown is required). It is not the Agency's intention to use the retrofit or retirement requirements in the subpart F regulations to dictate specific refrigerant choices. The revisions to these regulations are intended to provide as much flexibility to the owner or operator to decide what is appropriate for their system.

Elements of a Retrofit or Retirement Plan. EPA has not previously specified what elements should be included in a retrofit or retirement plan. Due to the complex nature of refrigeration appliances, an exhaustive list may not fit all types of appliances considering the wide array of configurations and refrigerant choices. Based on requests from stakeholders, EPA proposed a minimum set of information that is likely to be needed during any type of retrofit or retirement to be included in a plan, including:

- Identification and location of the appliance;
- Type (*i.e.,* ASHRAE number) and full charge of the refrigerant currently used in the appliance;
- Type (*i.e.,* ASHRAE number) and full charge of the refrigerant to which the appliance will be converted, if retrofitted;
- Itemized procedure for converting the appliance to the new refrigerant, including changes required for compatibility (for example, procedure for flushing old refrigerant and lubricant; and changes in lubricants, filters, gaskets, o-rings, and valves), if retrofitted;
- Plan for the disposition of recovered refrigerant;
- Plan for the disposition of the appliance, if retired; and
- Schedule for completion within one year of the appliance retrofit or retirement.

Some commenters stated that this is excessively detailed and includes information that is unlikely to be known immediately upon deciding to retrofit or retire an appliance. One commenter noted that it will take time to perform the necessary engineering evaluations and investigate the costs and timing associated with the available options. The commenter provided revised regulatory text to remove reference to the type of refrigerant and full charge for the retrofitted system, the procedure for converting the appliance to a new refrigerant, and the schedule for conducting the retrofit or retirement.

EPA responds that the shortest time frame in which a retrofit or retirement plan would have to be developed is when, upon discovering a leak, the owner or operator immediately chooses to retrofit or retire the appliance upon discovering that leak. In that circumstance the plan would be developed within 30 days. In all other circumstances, the owner will have 30 days from when repair attempts have failed, including repairs attempted under various extensions, to develop the plan.

While some information may not be available in that time frame, the owner or operator can develop an initial plan within 30 days and then modify it as additional information is determined. For example, owners or operators may not know within the allotted time frame what the itemized procedure will be until they finalize plans for the retrofit or retirement. The plan could indicate what steps must be taken in order to have enough information to make the necessary determinations. The information required in the plan is not excessively detailed because the owner or operator will need to know this information in order to properly dispose of the old appliance and install the replacement.

One commenter also stated that the plan does not need to be kept onsite with the appliance, so long as it can be made available to EPA and that it is also unnecessary for a plan to be signed because staff, including the person who initially signed the plan, could change. The commenter believes it is sufficient for EPA to be told who is responsible for the plan when it is provided to the Agency. EPA responds that it is appropriate for the plan to be accessible at the site of the appliance. The previous rules required that the original plan or a legible copy be kept at the site of the appliance. This could imply maintaining a printed version of the plan with the appliance. EPA is finalizing the proposal to allow for the plan to be ''accessible'' at the site of the appliance, which includes an option to have the plan be ''accessible'' in electronic format. This provides sufficient flexibility for the plan's storage while still allowing for the plan to be quickly available upon request. It is also important that the plan be signed so that the authorized representative has taken responsibility for the plan and so that EPA can identify who that person is and the date the plan was created.

Requirement to Repair Appliances Undergoing Retrofit. Under the prior regulations at § 82.156(i)(6), owners or operators were not required to repair leaks if they developed a retrofit or retirement plan. EPA proposed to require that all identified leaks be repaired as part of any retrofit under such a plan. EPA is finalizing the requirement that a system being retrofitted must be simultaneously repaired as part of the retrofit. EPA is also finalizing the proposed requirement that the owner or operator repair ''all identified leaks'' as part of the retrofit, rather than allowing selective repairs that would bring the appliance below the applicable leak rate. Although this differs from the requirements for leak repair discussed in Section IV.F.7, a retrofit is a more extensive change to a system, during which time components may be replaced and more comprehensive leak repair can be performed.

11. Extensions To Retrofit or Retire Appliances

Under the prior regulations at § 82.156(i)(6), an owner or operator generally was required to complete the retrofit or retirement of a leaking appliance containing an ODS within one year of creating a retrofit or retirement plan. Extensions were available in the following circumstances:

- If delays were caused by requirements of other applicable federal, state, or local laws or regulations (available for IPR);
- If a suitable replacement refrigerant with a lower ODP was unavailable (available for IPR);
- If the supplier of the appliance or a critical component quoted a delivery time of more than 30 weeks from when the order was placed (available for IPR);
- If complications presented by the appropriations and/or procurement process resulted in a delivery time of more than 30 weeks (available for federally owned appliances); or
- If the appliance was located in an area subject to radiological contamination and creating a safe working environment will require more than 30 weeks (available for federally owned appliances).

EPA proposed at § 82.157(i) four substantive revisions to these extensions. First, as with all other leak repair provisions, EPA proposed to apply these extensions to appliances containing non-exempt substitute refrigerants. EPA is finalizing this revision, as proposed.

Second, EPA proposed to remove the extension for when a suitable replacement refrigerant with a lower ODP is not available. EPA established this extension when certain applications using CFCs did not have a suitable HCFC substitute. Today, there are many more substitutes for ODS refrigerants. In fact, few appliances can be newly installed or retrofitted with virgin ODS because of the HCFC use restrictions implementing section 605 of the CAA. As discussed previously in this notice, EPA is removing the requirement that a retrofit use a refrigerant with a similar or lower ODP. Therefore, the rationale for this extension no longer exists and EPA is removing it as proposed. EPA is accordingly also removing the term *suitable replacement refrigerant* from the definitions in § 82.154, as proposed.

Third, EPA proposed a new extension at § 82.157(i)(1) if the appliance is to be retrofitted to or replaced with a refrigerant that is exempt from the venting prohibition as listed in § 82.154(a). In that situation, EPA proposed to allow an extension up to 18 months. Whereas the prior extensions were only available to IPR and federally owned appliances, EPA proposed to make this extension available to comfort cooling and commercial refrigeration appliances as well.

Some commenters were supportive of this proposal as a way to encourage transition to zero-ODP and low-GWP refrigerants. Other commenters were opposed to the proposal because it encourages the use of refrigerants that are more toxic, hazardous, or flammable than HFCs.

EPA responds that the first comment is correct that the refrigerants that are exempt from the venting prohibition, such as carbon dioxide (R–744), and the hydrocarbon refrigerants ethane (R–170), propane (R–290), isobutane (R–600a), and R–441A in certain uses, have an ODP of zero and low GWPs ranging from one to eight. EPA further notes that subject to 40 CFR subpart G, many of the refrigerants exempt from the venting prohibition are not acceptable when retrofitting certain types of equipment; hence, in most cases these exempt refrigerants would be used in new equipment replacing the leaking system. One reason to provide more time for retrofitting or replacements for exempt substitutes is to allow time to purchase and install new equipment. With respect to the points made by the second comment, the refrigerant must be approved under SNAP for the end-use in order to be used. A company choosing to move to one of these alternatives would reasonably be expected to consider safety characteristics of the refrigerant. Moreover, for refrigerants that are exempt from the venting prohibition, the Agency has already determined that the release of these substances do not pose a threat to the environment as part of the decision to exempt them from the venting prohibition. Accordingly, EPA is finalizing this extension as proposed.

Fourth, the prior regulations at § 82.156(i)(3)(v) relieved owners and operators of IPR appliances of the requirement to retrofit or retire their appliances if they established that the appliance's leak rate is below the applicable rate within 180 days of an initial failed follow-up verification test and they notified EPA within 30 days of that determination. EPA proposed to remove this provision because it was infrequently used and because other extensions, in particular the extension to receive a replacement component, should provide sufficient flexibility for IPR and other appliances.

Multiple commenters recommended that EPA retain this exemption because there may be situations where the root cause of a leak is not identified until after a retrofit/retirement plan is developed. The commenters stated that an appliance need not be retrofitted or retired if it can be demonstrated that it is repaired.

Based on these comments, EPA is not finalizing its proposal to remove that provision. Just because it is not frequently used does not mean that it may not be used in the future, especially since EPA is expanding the universe of appliances subject to the retrofit/retirement plan requirements to include those that use non-exempt substitute refrigerants. EPA agrees that an appliance need not be retrofitted or retired if it can be demonstrated that the repairs bring the leak rate of the appliance below the threshold leak rates. In the instance of a retrofit, because EPA is requiring that all identified leaks be repaired, it is possible that the appliance could be repaired to such an extent as to not need to complete the retrofit.

EPA is concerned, however, about whether this provision could provide a mechanism to delay repairs. To discourage this, EPA is requiring that all identified leaks be repaired consistent with the retrofit requirements, rather than merely fixing leaks sufficient to bring the appliance below the applicable leak rate, which is what EPA is finalizing for repairs required under § 82.157(d). EPA is also revising the reporting elements that were found in the prior regulations related to this provision. Rather than allowing the owner or operator to merely provide notice to EPA, the Agency is requiring that the owner or operator request that EPA relieve them of the obligation to retrofit or retire the appliance. Like other requests in the leak repair provisions, the request will be considered approved unless EPA notifies the owners or operators otherwise within 60 days of receipt. The request must also provide other information about the equipment and the repair, such as an explanation of why the repair was not conducted within the time frames required under § 82.157(d) and (f). This approach provides flexibility for owners and operators while avoiding it becoming simply an extension of the duty to repair because of the increased level of repair and the information requirements associated with its use. EPA anticipates this will be most useful in situations where the root cause of the leak is not identified until after a retrofit/retirement plan is developed.

Finally, EPA proposed to revise the extension for IPR to implement a retrofit plan where a supplier of the appliance or a critical component has quoted a delivery time of more than 30 weeks from when the order is placed. EPA proposed to modify this to mirror the extension allowed for the repair of an appliance in this situation, such that the appliance or appliance components would have to be installed on the retrofitted appliance within 120 days after receiving delivery of the necessary parts. Previously, this extension allowed for one additional year beyond the one-year retrofit period. EPA inadvertently removed a provision, found previously at § 82.156(i)(7)(iii), that further extended this extension for the delivery and installation of critical components without discussion in the notice of proposed rulemaking. EPA is restoring that provision at § 82.157(i)(2)(iii). EPA notes that the Agency correctly proposed a similar extension for federally owned appliances in § 82.157(i)(3)(iii).

12. Chronically Leaking Appliances

EPA proposed to add a total leak limit to the repair requirement to address chronically leaking systems. Under that proposal, an appliance containing 50 or more pounds of refrigerant may not leak more than 75 percent of its full charge in two consecutive twelve-month periods and remain in use. If an appliance exceeded the two year leak limit, the owner or operator would be out of compliance until the appliance was retired or mothballed and later retired.

For the proposed rule, EPA reviewed data reported to CARB to determine whether such a total leak limit would be necessary and, if so, what the limit should be. In 2013, approximately 8 percent of reporting appliances had leaked more than 75 percent of their full charge over the calendar year and were responsible for 38 percent of total reported emissions. Due to the high chronic leaks of such appliances, the environmental benefit of establishing a cumulative leak limit could be large. Nonetheless, the number of appliances affected by this proposed limit should be low.

Environmental NGOs and state pollution control agencies were supportive of the proposed two year leak limit, with one NGO suggesting a leak limit of 55 percent instead of 75 percent. A chemical manufacturer was also supportive if the proposal allowed an exemption for unavoidable catastrophic leaks. Many other commenters expressed strong opposition to the proposed two year leak limit, describing it as redundant, unnecessary, or punitive. Commenters state that there are many reasons why an appliance may leak in excess of 75 percent for two consecutive years even though the appliance is in good condition. For example, commenters expressed that it is possible for two large volume leaks to occur from unrelated components. Multiple commenters stated that owners should not have to mothball an appliance where the cause of the leak can be remedied by the replacement of a component. Commenters that operate supermarkets were especially concerned about the requirement to retire the appliance given that EPA's definition of appliance includes all of the display cases and coolers attached to the refrigerant circuit. This requirement would result in the scrapping and replacement of perfectly good components. Another commenter for similar reasons suggested that IPR be exempt from the retirement responsibility due to their unique nature, although the commenter believed comfort cooling and commercial refrigeration could remain subject to the 2 year leak limit. If EPA chose to finalize this leak limit, many commenters requested an off-ramp provision from the automatic retirement for catastrophic leaks resulting from accidents, vandalism, acts of nature, non-mechanical failures, or on a case-by-case decision upon notifying EPA.

In response to the significant concerns raised by commenters, EPA is not finalizing this proposed two year leak limit. EPA is aware of the many situations in which a system can leak large quantities of refrigerant in consecutive years. For instance, it is possible, though rare, for two catastrophic leaks to occur on the system through no fault of the operator. Although EPA requested comments on a possible exemption for catastrophic leaks, it is clear from the comments that there is a wide range of opinions about what a catastrophic leak is, and what can cause such a leak. Because EPA is not finalizing this provision, it is not defining the term *catastrophic leak* at this time.

EPA also assumed that, absent catastrophic leaks, it was unlikely for a system to be in compliance with other parts of subpart F while still leaking at this rate. EPA generally anticipates that a leaking appliance will be repaired within 30 days to six months. However, the leak repair regulations contemplate situations in which an owner or operator is unable to repair or subsequently retrofit a system in a timely fashion (*e.g.,* federally owned equipment located in areas subject to radiological contamination, unavailability of necessary parts for IPR, or adherence to local, State, or federal laws hinder repairs for IPR). Based on feedback from stakeholders from meetings docketed in this rule, EPA is aware of instances where appliances leak refrigerant in excess of 75 percent but are still in compliance with the other leak repair regulations.

While EPA wishes to reduce chronically leaking systems, EPA believes other practices required under this final rule will help address chronic leakers. For example, strengthening the leak repair regulations by lowering the rate at which the initial repairs must be performed, requiring leak inspections prior to those repairs, verification tests of those repairs, and subsequent leak inspections after the repair, will reduce the number of chronically leaking systems.

Data received from CARB and other sources indicate that there are systems that may not be adhering to the leak repair requirements of subpart F. Some commenters, even those opposed to the specific proposal offered by EPA, agree that the worst chronic leaking systems may warrant special consideration. However, they found the proposed provision both overly broad and overly harsh in its outcome. Some commenters proposed alternate methods of addressing chronically leaking systems. One commenter stated that a requirement to properly document causes for large leaks and to establish corrective actions would likely be more effective at reducing large leaks than simply imposing a two year leak limit that would result in a unit being retired. CARB recommended that if both (a) the annualized leak rate exceeds 100 percent more than 4 times in the previous 365 days and (b) more than 120 percent of the total charge has been added in the previous 365 days, the system or faulty component should be retired. EPA considered CARB's approach and finds it attractive for a couple of reasons. This alternative has the benefit of considering the number of refrigerant additions in addition to the total amount of refrigerant released, thereby removing appliances affected by catastrophic leaks. It also would take effect after one year, which will cut in half the time in which refrigerant is being released into the environment. However, this approach would still require the automatic retirement of these systems, which some commenters found to be too strict a penalty.

The chronically leaking appliance provision, as proposed, would apply to appliances containing 50 pounds or more of refrigerant that leak more than 75 percent of the full charge in each of two consecutive twelve-month periods. Based on the comments, EPA is revising the chronically leaking appliance provision. EPA is requiring that owners or operators of appliances that leak 125 percent of their full charge in a calendar year submit a report to EPA detailing their repair efforts. The reports must be submitted no later than March 1 of the year following the 125 percent or greater leak. Through that report, the owner or operator must demonstrate that they are in compliance with the repair provisions or the retrofit or retirement provisions in this section. In some cases, owners or operators may have already provided information to EPA as part of a repair or retrofit extension request.

By raising the threshold, EPA intends to avoid capturing appliances affected by unavoidable losses of full charge. Systems would have to lose their full charge and then a significant quantity more. Using CARB data and scaling up to the whole U.S., EPA estimates that 1,425 appliances (or 0.1 percent of all appliances with 50 or more pounds of refrigerant) would be affected at 125 percent of full charge.

Like CARB's approach, this would apply after one year rather than waiting for a second year of high leaks. As such, it will catch chronic leakers sooner than the provision EPA proposed. Several commenters contended the opportunity for a case-by-case determination is necessary to account for the variety of situations that might trigger the chronically leaking appliance provisions. They contended that without the opportunity for a case-by-case determination, the provision will force the retirement of working equipment. EPA's revised approach is similar to what many commenters suggested in that it allows for a case-by-case discussion after notifying EPA. Adding this reporting requirement also furthers EPA's goal of revising these regulations to improve enforcement and compliance of the regulations in subpart F. This will incentivize many owners and operators to improve their systems to ensure that they do not trigger this reporting requirement.

Comments were mixed as to whether the chronically leaking appliance provisions should be calculated based on calendar year, 12-month consecutive periods, or whether regulated entities should be given the discretion to choose one or the other. These concerns are partially moot, given that EPA has changed this requirement to allow for reporting to EPA in lieu of a retrofit or retirement. EPA is finalizing provisions stating that the 125 percent is based on calendar year so that entities do not need to calculate refrigerant additions on a rolling basis.

13. Recordkeeping

The prior regulations contained recordkeeping and reporting provisions for all of subpart F at § 82.166. As proposed, EPA is finalizing a recordkeeping paragraph at § 82.157(l) and a reporting paragraph at § 82.157(m) within the leak repair section to make these requirements easier to locate.

The prior regulations also required that certain records be kept in hard copy at the site of the appliance. Under the revisions finalized in this rule, EPA is explicitly allowing, though not requiring, electronic records in this final rule. EPA recognizes that many companies employ electronic databases to store and track records. An electronic recordkeeping system has advantages to paper records, and EPA encourages owners and operators of appliances to use one of these systems to track refrigerant additions and other required records. Electronic systems allow for more comprehensive refrigerant management and can help identify leaky appliances earlier. These records must still be accessible onsite if an EPA inspector visits a facility, but that access can occur through downloading or printing the records from an online system.

Owners and operators. The previous rules required owners and operators to maintain service records documenting the date and type of service, as well as the quantity of ODS refrigerant added. EPA proposed to add specific recordkeeping requirements to ensure that the owner or operator is aware of the leak rate. EPA also proposed to require that the owner or operator maintain records of all calculations, measurements, and assumptions used to determine the full charge and any revisions made to the full charge over time. EPA also proposed records for the leak inspections or automatic leak detection equipment, verification tests, and seasonal variances.

Some commenters stated that the recordkeeping for the newly proposed requirements will be a significant burden. One commenter stated that the recordkeeping from all of the leak inspections would be a large burden and urged EPA to minimize that burden in the final rule. Another stated that requiring detailed information on the location of all repaired leaks with the type of verification test would be a substantial burden and would require enhanced service records tailored to individual equipment. The commenter suggested EPA require instead only the date and results of initial and follow-up verification tests.

EPA responds that the Agency recognizes the concerns about the extent of the proposed recordkeeping burden. EPA is finalizing the recordkeeping requirements as proposed but is modifying the final rule to reduce the number of such records. First, EPA is only requiring leak inspections on systems that have exceeded the applicable leak rate, rather than on all appliances. EPA estimates that the universe of affected appliances will decrease by 81 percent relative to the proposal (from 1.5 million to 282,000 appliances). Though there are fewer leak inspections, EPA estimates a higher total burden because the Agency has increased the estimates for the costs of each inspection based on public comments. Second, EPA is only requiring repairs sufficient to bring the leak rate below the threshold leak rate, rather than requiring the repair of all identified leaks (unless the owner or operator chooses to calculate their leak rate using the Rolling Average method). There should be fewer verification tests and thus less to record.

EPA is finalizing the leak inspection records as proposed. Specifically, owners or operators must keep records of leak inspections that include the date of inspection, the method(s) used to conduct the leak inspection, a list of the location of each leak that was identified, and a certification that all visible and accessible parts of the appliance were inspected. The specificity of the leak inspection documentation is appropriate because this information will help demonstrate that the repair has brought the appliance's leak rate below the threshold leak rate. This information would allow the owner or operator to demonstrate, if needed, that a further exceedance of the leak rate threshold after repairing leaks is due to a new leak rather than a leak that was previously identified but not repaired.

EPA is also finalizing the verification test records as proposed. Specifically, owners or operators must maintain records that include the location of the appliance, the date of the verification tests, the location of all repaired leaks that were tested, the type of verification test used, and the results of those tests. It is important to document that each specific repair was verified so as to determine whether a repair was successful and whether the leak has been addressed. EPA is not requiring such specificity as a schematic of that individual appliance showing the locations of all repairs and verification tests. However, information should allow a technician to generally know which components of the appliance were repaired.

In this final rule, EPA is establishing the recordkeeping requirements described generally in this section for owners and operators of appliances normally containing 50 or more pounds of class I, class II, or non-exempt substitute refrigerant. All records required in § 82.157(l) must be maintained for at least three years.

- Maintain records documenting the full charge of appliances;

• Maintain records, such as invoices or other documentation showing when refrigerant is added or removed from an appliance, when a leak inspection is performed, when a verification test is conducted, and when service or maintenance is performed;

• If using an automatic leak detection system, maintain documentation that the system is installed and audited or calibrated annually and records of when the monitoring system identifies a leak and the location of the leak;

• Maintain retrofit and/or retirement plans;

• Maintain retrofit and/or extension requests submitted to EPA;

• If a system is mothballed to suspend a deadline, maintain records documenting when the system was mothballed and when it was brought back on-line (*i.e.,* when refrigerant was added back into the appliance);

• Maintain records of purged and destroyed refrigerant if excluding such refrigerant from the leak rate;

• Maintain records to demonstrate a seasonal variance; and

• Maintain copies of any reports submitted to EPA under § 82.157(m).

Technicians. The prior rules required technicians to provide an invoice or other documentation that includes the amount of ODS refrigerant added to the owner or operator. This would likely already include information on the system serviced, the date, and the company/person servicing the appliance. It would likely also include some description of the service provided. However, the information that the technician was required to provide did not match the information that the owner or operator was required to maintain. The limited records that the prior regulations required from service technicians also did not provide information needed by the owner or operator to make decisions on the fate of the appliance. EPA proposed to align the records that the technician must provide to the owner or operator with the ones that the owner or operator are required to maintain.

Multiple commenters noted that owners or operators must expend a tremendous amount of effort to obtain good records from outside service providers. Often facility owners are provided incorrect or incomplete paperwork or are unable to obtain paperwork at all. The commenters were generally supportive of EPA's proposal that would make it a requirement for technicians to provide the necessary information to the owner or operator of the appliance. However, one commenter stated that the record for the proposed rule does not justify the extent of records that technicians must provide to owners/operators and suggested that EPA maintain only the current recordkeeping requirements for technicians.

Multiple commenters requested that EPA remove the proposed requirement that technicians provide the owner or operator with the full charge of the appliance or the leak rate calculations because technicians often do not have sufficient information, such as the date of last service, to make those calculations. Other commenters requested that the Agency require the technician provide the owner or operator with information about the initial and follow-up leak repair verification tests that matches what EPA proposed to require the owner or operator to maintain.

After considering the comments, EPA is finalizing its proposal to align the records that the technician must provide to the owner or operator with the records that the owner or operator are required to maintain, with a few exceptions described below. In response to the comment that EPA maintain only the current recordkeeping requirements for technicians, the service technician is generally in the better position to generate those records as they are performing the service activities and usually are the expert that the appliance owner or operator is relying on to make informed decisions about their appliances. Finalizing these requirements for technicians should help ensure that the appropriate records are created so that they can be maintained.

Specifically, EPA is requiring that whenever an appliance with 50 or more pounds of refrigerant is maintained, serviced, repaired, or disposed of, the technician must provide the owner or operator with an invoice or other documentation that indicates (1) the identity and location of the appliance; (2) the date and type of maintenance, service, repair, or disposal performed, including the location of repairs and the results of any verification tests or leak inspections (if applicable); (3) the name and contact information of the person performing the maintenance, service, repair, or disposal; and (4) the amount and type of refrigerant added to and/or removed from the appliance (if applicable).

Based on the comments, EPA is not finalizing a requirement that the technician calculate the leak rate or provide the owner or operator with a record indicating the full charge of the appliance. The rules as finalized require the technician to provide information that they are best positioned to gather and that is relevant to calculating the leak rate and full charge, but the owner or operator is well positioned to determine those numbers because they should have the historical information that informs that calculation. Accordingly, it is not necessary for the technician to calculate the leak rate and EPA has modified the requirement at § 82.157(b) to explicitly state that it is the owner or operator's responsibility to calculate the leak rate. Because the owner and operator is also required to calculate the full charge it is no longer a relevant record for the technician to provide.

The final rule also explicitly requires that persons conducting the initial or follow-up leak repair verification test must, upon conclusion of that service, provide the documentation needed to meet the owner or operator's recordkeeping requirements. This furthers the goal of aligning the technician and owner or operator's recordkeeping requirements.

14. Reporting

The existing regulations require that owners or operators report to EPA in certain circumstances. EPA is not making changes to those reporting requirements in this final rule:

• If the owner or operator is requesting an extension to the 30-day (or 120-day) requirement to complete repairs pursuant to § 82.157(f);

• If the owner or operator is requesting an extension to complete a retrofit or retirement of an appliance pursuant to § 82.157(i); or

• If the owner or operator is excluding purged refrigerants that are destroyed from annual leak rate calculations pursuant to § 82.157(k).

EPA is also finalizing two reporting requirements that were not contained in the proposed rule. First, EPA is requiring at § 82.157(j) that owners or operators submit a report if their appliance leaks 125 percent or more of the full charge in a calendar year and thereby triggers the chronically leaking appliances provision. EPA is adding this report to provide added flexibility, so that appliances that have leaked 125 percent of their full charge or greater do not necessarily need to be retired or retrofitted provided there is an explanation for the leak. This report must explain the reason for the leak rate of 125 percent or greater and could potentially include, among other things, the documentation prepared to extend the repair requirement or a description of catastrophic events. As discussed earlier in this notice, this reporting requirement is based on comments received to remove the two-year leak limit and allow for case-by-case evaluations.

Second, this final rule contains a provision allowing owners or operators who are retrofitting or retiring an appliance to request that EPA relieve them of that obligation if they can establish within 180 days of the plan's date that the appliance no longer exceeds the applicable leak rate. This provision is contained in the prior regulations. EPA had proposed to remove it, but based on comments requesting that it be left in place, EPA is not finalizing the proposal to remove it. EPA is requiring information be included in the report that is similar to the previously existing requirement except EPA is additionally requiring a description of why the repair was not conducted within the time frames required under paragraphs (d) and (f) of this section. In addition, it must include a signed statement that all identified leaks will be repaired and an estimate of when those repairs will be completed (not to exceed one year from date of the plan). These additional elements are necessary to ensure that this provision is not used as a way to circumvent the required time frames for repair.

EPA is not finalizing the proposed requirement for the report that would have accompanied an extension request from federal agencies to conduct less frequent leak inspections in the proposed rule. EPA is not finalizing this proposed extension and thus the reporting element is no longer necessary.

EPA is also finalizing the requirement that all reports be submitted to EPA via email at *608reports@epa.gov*, as proposed. If the submission contains confidential business information, reports can be mailed to the address in § 82.160. This should reduce costs and streamline the reporting process for both EPA and those reporting. It is also consistent with EPA's Next Generation Compliance initiative. Commenters generally supported the move towards electronic reporting and recordkeeping.

Two commenters requested that the Agency require that owners and operators keep a record of the amount of refrigerant leaked annually to the atmosphere by refrigerant type and that this information be reported to EPA. Additionally, the commenters requested that EPA make the data related to the emissions of refrigerants publicly available. In accordance with the transparency element of the Next Generation Compliance initiative, the general public could then point out violations and owners and operators would have an incentive to correct excessively leaking appliances.

EPA responds that in general, EPA is not requiring that owners or operators calculate the sum total of refrigerant leaked annually or submit those data to EPA. The volume of reporting would be substantial and for a majority of appliances would be of limited value to EPA or the general public. However, owners or operators of equipment that leaks 125 percent of the total charge in a calendar year will have to calculate their total refrigerant additions to determine whether they have met that threshold. EPA finds that there is merit for those chronically leaking systems to perform this calculation and report to EPA because that will encourage those owners or operators to take steps to ensure they do not meet or exceed that threshold.

G. Revisions to the Standards for Recovery and/or Recycling Equipment in § 82.158

1. Background

Under the prior regulations, all refrigerant recovery and/or recycling equipment manufactured or imported on or after November 15, 1993, and used during the maintenance, service, repair, or disposal of appliances containing an ODS refrigerant must be certified by an approved equipment testing organization to ensure that it meets certain performance standards. These standards may vary for certain equipment intended for use with the disposal of small appliances. These performance standards were contained in tables 2 and 3 of § 82.158, as well as appendices B1, B2, and C of subpart F. EPA based these standards in large part on ARI (now AHRI) Standard 740–1993 and ARI Standard 740–1995. Recovery and/or recycling equipment intended for use during the maintenance, service, repair, or disposal of MVAC and MVAC-like appliances must meet the standards in subpart B. The regulations pertaining to MVACs refer to subpart B and state that such recovery and/or recycling equipment must meet the standards of § 82.36(a).

2. Extension to Substitute Refrigerants

In the revisions finalized in this rule, EPA is requiring that all recovery and/or recycling equipment manufactured or imported for use during the maintenance, service, repair, or disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) that contain non-exempt substitute refrigerants be certified by an approved equipment testing organization as being capable of meeting certain performance standards. EPA is requiring that after January 1, 2017, all newly manufactured or imported recovery and/or recycling equipment used during the disposal of all appliances, including MVACs and MVAC-like appliances, also be certified. One commenter agreed that recovery and/or recycling equipment for use with non-exempt substitute refrigerants should be certified. This comment supports EPA's approach.

EPA proposed that all existing recovery and/or recycling equipment that met certification requirements for ODS prior to this rulemaking would be considered as certified for non-exempt substitute refrigerants. EPA is further clarifying that if a person who recovers refrigerant has recovery equipment that was certified as meeting the requirements for an ODS refrigerant, it can be used to recover other non-flammable refrigerants in that pressure category. For example, recovery equipment manufactured in 2015 that was certified to recover HCFC–22 can be used to recover other non-ODS refrigerants like R–407A, R–407C, or R–410A. However, proper care should be taken to prevent refrigerant mixing if using the same recovery device with multiple refrigerants.

One commenter noted that additional equipment testing would be required if the equipment manufacturers want older equipment to handle newer non-exempt substitute refrigerants. EPA responds that all equipment manufactured or imported on or after January 1, 2017, must be tested under the new standards. This is true of older equipment designs previously certified for ODS which have not been tested for substitute refrigerants. However, any equipment manufactured or imported prior to the effective date is grandfathered and does not have to be recertified. Technicians can continue to use previously certified recovery equipment that they already own. As has been the case when EPA has previously changed equipment standards, EPA does not require technicians to recertify or replace their existing equipment.

EPA is adding appendices B3 and B4, based on the AHRI Standard 740–2016, *Performance Rating of Refrigerant Recovery Equipment and Recovery/Recycling Equipment.* The recovery standard is the same in both appendices; the difference between the two, as discussed later in this notice, is that appendix B4 contains additional safety standards for flammable refrigerants. EPA proposed to base appendices B3 and B4 on AHRI Standard 740–2015 but is using the most recent version of that standard for the final rule. All new equipment manufactured or imported on or after

January 1, 2017, must meet the standards in appendices B3 or B4 and table 2. The evacuation level would depend upon the saturation pressure of the refrigerant. EPA is also updating appendix C ''Method for Testing Recovery Devices for Use with Small Appliances'' to reference all refrigerants, instead of the previously referenced CFC–12.

Certifying refrigerant recovery and/or recycling equipment for use with non-exempt substitutes serves multiple purposes. First, certification provides reliable information on the ability of equipment to minimize emissions of these substitute refrigerants, by measuring and/or establishing standards for recovery efficiency (vacuum level) and maximum emissions from air purging, oil draining, equipment clearing, and hose permeation. The fact that the equipment minimizes emissions is part of our consideration of whether emissions associated with using recovery equipment are considered *de minimis* releases. Second, certification provides reliable information on the equipment's ability to clear itself when switching between refrigerants. Without sufficient clearing capability, equipment may retain residual refrigerant in its condenser, which would then be mixed with the next batch of refrigerant recovered by the equipment. Because mixed refrigerant can be difficult if not impossible to reclaim (depending on how cross-contaminated the mixed refrigerant is) and expensive to destroy, it is much more likely than unmixed refrigerant to be vented to the atmosphere. Third, certification provides reliable information on the equipment's recovery speed. Without such information, technicians may purchase equipment that recovers too slowly, tempting them to interrupt recovery before it is complete. As discussed in the 1993 Rule, where EPA established the equipment certification requirements, the information on equipment performance provided by an independent third-party testing organization is more reliable than that provided by other sources, such as equipment manufacturers (58 FR 28686–28687).

Finally, certification embraces Next Generation Compliance principles. Users of certified equipment, when following the manufacturer's instructions, will be in compliance with the regulatory standards for the evacuation of refrigerant.

Flammable Refrigerants. Different treatment is warranted for non-exempt flammable refrigerants. As proposed, EPA is adding standards for the recovery of flammable non-exempt refrigerants to appendix B4. Currently, six flammable non-exempt substitute refrigerants are approved for use in stationary refrigeration and air-conditioning equipment: HFC–32, HFC–152a, R–406A, R–411A, R–411B, and HFO–1234ze(E).

EPA is using AHRI Standard 740–2016 as the basis for the recycling and/or recovery equipment requirements in appendix B3. This standard does not address the safety of recovering flammable refrigerants. EPA is therefore creating appendix B4, which requires the recovery/recycling performance of appendix B3 and the safety performance of Underwriters Laboratories (UL) Standard 1963–2011, Supplement SB—*Requirements for Refrigerant Recovery/Recycling Equipment Intended for Use with a Flammable Refrigerant.* All recycling and/or recovery equipment manufactured or imported after January 1, 2017, that are to be used with flammable non-exempt substitute refrigerants must meet this new standard. EPA is incorporating UL 1963 by reference and modifying the testing protocol in appendix B3 to account for flammability concerns during testing.

Two testing organizations supported using UL 1963 to address flammable refrigerants. One commenter preferred that EPA reference UL 1963 directly within appendix B4 rather than establishing separate requirements in appendix B4 that are based on that standard. Separate requirements published outside of that standard would make it more difficult to apply the standard. EPA responds that appendix B4 refers to UL 1963, Supplement SB, and does not reproduce the standard in the appendix due to copyright concerns.

Another commenter strongly recommended that a label be required on all products certified to handle flammable refrigerants. EPA responds that UL 1963, Supplement SB has requirements for markings that must be placed on recovery and/or recycling equipment certified to handle flammable refrigerants. Because EPA is incorporating those standards in appendix B4 by reference, EPA is requiring those markings.

3. Removing the Certification by Owners of Recovery and/or Recycling Equipment

As proposed, EPA is removing the requirement under § 82.162 that anyone who maintains, services, repairs, or disposes of appliances containing an ODS submit a signed statement to the appropriate EPA Regional office stating that they own recovery and/or recycling equipment and are complying with the applicable requirements of subpart F. EPA received one comment in support of taking this action.

EPA created this provision in 1993 when the Agency first required that recovery and/or recycling equipment be certified and that technicians use certified equipment. At the time, the use and availability of recovery and/or recycling equipment was not as commonplace as it is today. Equipment certification by owners demonstrated to EPA that equipment was available for use by certified technicians. In particular, EPA was interested in the capabilities of grandfathered, or pre-1993, equipment. Since certified recovery and/or recycling equipment is now commonly available, EPA no longer needs the information contained in the certification statement such as the number of service trucks and personally identifiable information of equipment owners.

4. Clarifications and Edits for Readability

EPA is reorganizing § 82.158 by appliance type. EPA is also combining tables 2 and 3, which contain the levels of evacuation that must be achieved by recovery and/or recycling equipment, to remove inconsistencies in terminology and formatting.

EPA also revised how the requirements for recovery equipment used on small appliances are written. In general, the requirement is that the equipment is capable of recovering 90 percent of the refrigerant in the test stand when the compressor of the test stand is operational and 80 percent of the refrigerant when the compressor of the test stand is not operational. In addition, there are secondary considerations that could allow for the certification of recovery equipment based on when that equipment was manufactured or imported.

H. Revisions to the Standards for Equipment Testing Organizations in § 82.160

EPA relies on independent third party organizations approved by the EPA Administrator to certify that refrigerant recovery and/or recycling equipment meets the standards in subpart F. Any equipment testing organization may apply for approval so long as they can verify that they have the expertise and technical capability to verify the performance of the recovery and/or recycling equipment, have no conflict of interest (*e.g.,* with equipment manufacturers), and receive no direct or indirect financial benefit from the outcome of certification testing.

Any new certifying organization must have expertise to certify equipment that is used to recover or recycle refrigerants that are subject to this subpart. This means that they must be able to evaluate and certify HFCs and other non-exempt substitute refrigerants, including flammable refrigerants. Because the same expertise is needed to test equipment used for ODS and substitute refrigerants, equipment certifying organizations that have already been approved by EPA may continue to certify equipment designed for substitute refrigerants without needing to re-apply. In comments on the proposed rule, two certifying organizations agreed that currently approved organizations should not have to reapply to certify equipment used to recycle and/or recover substitute refrigerants and that the same expertise is needed to test equipment used for ODS and substitutes.

EPA is removing the requirement that organizations provide a list of all certified equipment to EPA within 30 days of the organization's approval by EPA and annually at the end of each calendar year thereafter. Instead, EPA is requiring that the certified equipment testing organizations publish online a list of equipment that meets EPA requirements. This list must include the manufacturer and the name and/or serial number of a newly certified model line, which is the information that the certifying organizations had to provide to EPA. This list must be updated no less than once per year, but an organization can choose to update the list more frequently. Online lists must contain certified equipment until three years after that equipment is no longer offered for sale. Making the information available online will be no more burdensome for the testing organization than submitting the list to EPA. Online publication is also a better method of communicating these findings to the public and the service/repair industry than sending the information to EPA. Two certifying organizations commented that they support these revisions because they already make the information publicly available through their Web sites.

EPA is also adding to the regulatory text the timing for records retention that had previously only been found in guidance documents. The regulation now specifies that all records must be maintained for three years after the equipment is no longer offered for sale. EPA is adopting a similar timeframe for the online lists of certified equipment.

EPA also encourages the use of electronic reporting and has established the email address *608reports@epa.gov* to receive applications from organizations seeking to be approved under this section and the required notification if a previously certified model line fails to meet the standards upon retesting.

I. Revisions to the Technician Certification Requirements in § 82.161

1. Background

The prior regulations at § 82.161 required the certification of all individuals who maintain, service, or repair air-conditioning and refrigeration equipment containing an ODS, other than MVACs which are addressed in a separate subpart of the regulations. This group includes installers, contractor employees, in-house service personnel, and anyone else who performs installation, service, maintenance, or repair that might reasonably have the opportunity to release ODS refrigerants to the environment. In addition, individuals disposing of air-conditioning and refrigeration equipment other than small appliances, MVACs, and MVAC-like appliances must be certified. Individuals disposing of small appliances, MVACs, and MVAC-like appliances do not need to be certified.

Under those rules, technicians become certified by passing a test containing questions drawn from a bank developed by EPA with input from industry educational organizations with a certification program approved by EPA. The test includes questions on the role of CFCs and HCFCs in stratospheric ozone depletion, the requirements of the subpart F, and proper techniques for recycling and conserving refrigerant. EPA makes the question bank available to certifying organizations that demonstrate that they can properly generate, track, administer, and grade tests; issue certificates; and keep records.

2. Extension to Substitute Refrigerants

In this final rule, EPA is finalizing its proposal to extend the certification requirements to technicians who work with non-exempt substitute refrigerants.

Persons who are not certified technicians are more likely to intentionally or inadvertently release refrigerant in the course of servicing, maintaining, repairing, or disposing of refrigeration and air conditioning equipment. One commenter stated that they believe most of the intentional venting of refrigerant is done by individuals who are not certified technicians. Another commenter noted that they have observed a lack of competence within the equipment servicing sectors leading in many instances to the improper handling of refrigerants or servicing of mechanical equipment.

EPA responds that these comments support the importance of extending the technician certification requirement, as well as other provisions of the refrigerant management rules, to non-exempt substitute refrigerants. Certified technicians are more likely to understand how and why to recover and recycle refrigerants and to have the proper equipment to do so. Technician certification helps ensure that technicians know refrigerant recovery requirements and techniques. The prior regulations did not specifically prohibit an uncertified individual from opening an air conditioner that contains a substitute refrigerant in order to add a substitute refrigerant or replace components. Similarly, the regulations did not specifically prohibit an uncertified individual from opening an air conditioner that contains an ODS refrigerant to add ODS refrigerant (assuming a certified technician purchased the ODS refrigerant). While the venting prohibition generally applies to these actions, without training or certification the individual performing such servicing activities may not even be aware of the prohibition against knowingly venting or otherwise releasing refrigerant.

Tips reported to the Agency indicate that servicing by uncertified individuals occurs. One commenter asserted that a substantial number of technicians, possibly up to 25 percent, are operating without certification. EPA responds that this information, if true, would further support the extension of the technician certification requirement to non-exempt substitute refrigerants. Requiring that anyone opening an appliance (except those containing only exempt substitute refrigerants) be a certified technician will reduce emissions caused by uninformed service personnel and will facilitate enforcement of the venting prohibition, especially when coupled with the recordkeeping requirement for appliances containing more than five and less than 50 pounds of refrigerant.

Many companies require certification of their technicians regardless of the type of refrigerant being used. The principles of proper handling, recovery, and disposal of non-exempt substitute refrigerants are similar if not identical to those for ODS refrigerants, except that additional safeguards are advisable for flammable refrigerants. The fact that some individuals may be working on non-ODS appliances without certification and without following safe handling practices places them at a disadvantage with respect to compliance. Because there is a reasonable expectation that an ODS or non-exempt substitute refrigerant could be released into the environment in the course of that work if appropriate precautions and practices are not followed, requiring technician certification for individuals performing such work ensures that they have the information necessary to comply with the regulatory requirements and with the venting prohibition, as well as to minimize emissions. Accordingly, to promote proper practices or at least remove barriers for compliance and for environmental protection, EPA is requiring certification for anyone working on an appliance that contains a non-exempt refrigerant.

Many commenters supported extending the technician certification requirement for the handling of substitute refrigerants. While some commenters stated that EPA does not have authority to extend section 608 regulations to substitutes, those commenters did not raise the specific issue of technician certification. EPA addresses those general comments about its authority for this action in Section III of this notice. Two commenters recommended extending the technician certification requirement to flammable refrigerants. Three commenters urged EPA to extend the technician certification requirement for the handling of all refrigerants, even if they are exempt from the venting prohibition. These commenters stated that treating all refrigerants equally will provide consistency and clarity in the industry. Other commenters stated that many of the exempt refrigerants have special considerations such as flammability or toxicity that require care during handling and servicing. As noted previously, some commenters stated that the sales restriction should be extended to hydrocarbons. These commenters noted that the flammability of these refrigerants poses far greater risks than that of R–22 when handling it and servicing equipment. One commenter recommended that if the sales restriction was extended to flammable refrigerants then it should be extended to all exempt refrigerants.

As stated in the proposed rule, EPA is not extending the technician certification requirement (and thus the sales restriction) to individuals maintaining, servicing, repairing, or disposing of appliances containing substitute refrigerants that are exempt from the venting prohibition. EPA has exempted substitutes, at least in the specified end-uses, from the venting prohibition because the Agency has determined for purposes of section 608(c) that they do not pose a threat to the environment when released. For water or nitrogen, technician certification would provide no environmental benefit nor would it increase technician safety. For ammonia or chlorine, other regulations address the risks related to those specific compounds (for example, OSHA regulations that address risk to technician safety). The types of refrigeration equipment that use these exempt substitute refrigerants are also significantly different from an engineering standpoint from the equipment that uses ODS or HFC refrigerants. Therefore, there is little potential for ODS and these exempt substitute refrigerants to be mixed and intentionally released to the environment.

Hydrocarbon refrigerants may be different than the other substitute refrigerants. EPA notes that all end-uses for hydrocarbons currently authorized under SNAP are also exempted under the venting prohibition. The Agency did not propose and is not establishing a technician certification requirement or sales restriction for those exempt substitute refrigerants. The Agency may consider in future whether there are any regulatory or other measures that would be appropriate to address the handling of exempt flammable refrigerants.

As a result of today's action, flammable substitutes that have not been exempted from the venting prohibition in a particular end-use are subject to the requirements of subpart F, including the sales restriction and the technician certification requirements. Unlike the other exempt substitutes, hydrocarbons are being sold to service existing ODS and HFC equipment for which this refrigerant is not listed as acceptable under SNAP. Specifically, R–22a, which is propane, in some cases mixed with isobutane and an odorant, has been marketed as a ''drop-in'' (or more appropriately termed a ''retrofit'') replacement for existing equipment designed for use with HCFCs and/or HFCs. Often these are MVACs or residential split systems.

R–22a has not been submitted to SNAP for review for these uses, and EPA has not listed propane as acceptable for these end-uses under the SNAP program. Accordingly, EPA considers its introduction into interstate commerce for this use a violation of the SNAP regulations. In addition, EPA has not exempted R–22a or propane used as a retrofit in existing HCFC–22 appliances from the venting prohibition. As a result, R–22a and propane are subject to the requirements of subpart F in such non-exempt end-uses, including the sales restriction and the technician certification requirements.

The Agency has learned through its recent enforcement actions against Enviro-Safe and Northcutt, two distributors of R–22a, and through other investigations that R–22a is being sold to both consumers and technicians. Often the buyers are not aware there is a difference between R–22 and R–22a, or even that R–22a is flammable. As a result, appliances have exploded and technicians have been injured. Technicians need to be aware of the safety concerns of using such refrigerant for themselves or subsequent technicians who service ODS or HFC equipment that inappropriately contains hydrocarbons. Consumers must also not have easy access to this refrigerant for their own safety. Applying the sales restriction to unapproved uses of hydrocarbon refrigerants and educating technicians through the certification program will reduce safety risks and prevent the mixing (and subsequent venting) of ODS and HFC refrigerants with these unapproved alternatives.

One commenter, while supportive of extending the technician certification requirements to those working with non-exempt substitute refrigerants, disagreed with the premise that failing to require certification will result in the release and mixture of ODS and non-ODS refrigerants.

EPA responds that information about the illegal use of R–22a as a replacement for R–22 indicates to EPA that people are purchasing their own refrigerant and mixing it with HCFCs. The consequences of inappropriately mixing refrigerants include significant losses in performance and energy efficiency, damage to equipment, the lost value of the mixed refrigerant (which is at best difficult, and often impossible, to separate into the component refrigerants), and costs for destroying mixed refrigerants. Refrigerant mixture also leads both directly and indirectly to refrigerant release. Mixture leads directly to release because mixtures of certain refrigerants, such as R–22 and R–134a, have higher pressures than either component alone. Thus, pressure-sensitive components such as air purge devices on recycling machines and relief devices on appliances may be activated by these mixtures, venting the refrigerant to the atmosphere. Purge devices in particular are often set to open when the pressure of the recovery cylinder's contents rises more than 5–10 psi above the expected saturation pressure for the refrigerant; this margin is exceeded by R–22/R–134a mixtures containing more than ten percent of the contaminating refrigerant.

Refrigerant mixture also reduces recycling and leads indirectly to release. First, mixed refrigerants lose their value for reclamation because it is difficult to separate the component refrigerants. Typically, reclaimers will pay refrigerant distributors for recovered refrigerant. Reclaimers may actually charge money to accept highly mixed refrigerant or not take it at all. Mixed refrigerants cost money to reclaim or destroy and this cost could provide a financial incentive for illegal venting. Second, the direct releases and equipment breakdowns caused by contamination lead to increased equipment servicing, which itself leads to unavoidable releases of refrigerant. Thus, failure to require certification for people working with substitute refrigerants would increase the probability of both substitute and ozone-depleting refrigerants being emitted to the atmosphere.

As noted previously in this notice, certified technicians are more likely to understand how and why to recover and recycle refrigerants and to have the proper equipment to do so. The skills and knowledge that certified technicians have reduces the likelihood that they would mix or release ODS and non-ODS refrigerants. For these reasons, EPA is requiring technician certification for persons working with non-exempt substitutes.

3. Updated Test Bank

EPA is currently updating the technician certification test bank through a process separate from this rulemaking. While this is not a regulatory change—the Agency can update the test bank when appropriate without promulgating a new regulation—it aligns with EPA's efforts to extend the refrigerant management regulations to substitute refrigerants. Currently, the questions focus on CFCs and HCFCs, even though CFCs have been phased out for nearly twenty years and the predominant HCFC, HCFC–22, will be phased out by 2020.

As part of the public participation process for this rule, stakeholders provided input regarding updating the test bank questions. Many commenters supported updating the test bank, especially given the new refrigerants and technologies that have become available since the test was initially developed. Commenters provided suggestions for numerous topics that should be covered by the exam. These include placing greater focus on the venting prohibition, recovery best practices, safe handling of flammable refrigerants, use of new refrigerants, financial benefits of refrigerant recycling, and the costs of non-compliance related to equipment efficiency, equipment life, and environmental harm. One commenter observed that the core, Type II, and Type III tests should now include questions on verification testing since this will be a new requirement of technicians servicing comfort cooling and commercial refrigeration appliances under the leak repair provisions.

EPA responds that all of these suggested topics fit into the testing topics listed in appendix D. EPA intends to consider these potential topics when updating the test bank questions. EPA has begun reviewing the test bank and consulting with certification and training organizations to identify questions that should be updated, replaced, or removed. EPA also intends to incorporate new and revised elements of the National Recycling and Emission Reduction Program that are being finalized in this action in the updated test bank. As such, the test bank will not be completed until after publication of the final rule. Testing organizations have requested time to update their training and testing materials before the new questions go into effect. EPA anticipates the new questions will be added to all exams by mid- to late 2017.

J. Revisions to the Technician Certification Program Requirements in § 82.161

1. Background

The regulations at § 82.161 require that organizations operating technician certification programs apply to EPA to have their programs approved. The application process ensures that technician certification programs meet minimum standards for generating, tracking, and grading tests, as well as keeping records. Approved technician certification programs must keep records of the names of technicians they have certified and the unique numbers assigned to each technician certified through their programs. These records allow both the Agency and the certification program to verify certification claims and to monitor the certification process. Approved technician certification programs also must submit reports to EPA every six months containing information on the number of students certified and the pass/fail rate. Such reports allow the Agency to monitor program compliance.

2. Extension to Substitute Refrigerants

As discussed previously, EPA is requiring in this final rule that technicians who work with non-exempt substitute refrigerants be certified. By extension, EPA is also requiring that technician certification programs offer tests to certify those technicians. This should not require significant changes to current practices other than using the updated test bank once available and the revisions discussed in this section. EPA is not requiring that current certification programs recertify based on any of the revisions in this final rule. EPA did not receive comment specifically on these proposed revisions.

3. Posting Lists of Certified Technicians

In regulatory revisions finalized in this rule, EPA is requiring that certifying organizations publish online lists of the technicians certified by that organization. However, EPA is not establishing a single ''database'' nor requiring certified organizations to create their own databases as was contemplated in the proposed rule. The primary intent of these published lists is to assist technicians who have lost their certification cards and reduce the burden currently facing the Agency and technician certification programs in assisting technicians who have lost their certification cards as described in the proposed rule. These goals can be accomplished for all future technicians through the publication of limited information online. Technicians should be able to find out who certified them through a simple web search.

In the proposed rule, EPA described this as a database and discussed one of its possible uses as a tool refrigerant wholesalers could use to verify their customer is a certified technician. Many commenters supported the creation of a single technician database maintained by EPA. A few of those commenters encouraged EPA to include all certified technicians, not just newly certified technicians, because an incomplete list would have only marginal value for anyone referencing the list prior to selling refrigerant. Some refrigerant distributors wanted assurance that their refrigerant sales would not be adversely affected or that they would not be held responsible for errors or omissions in the technician database. One commenter who employs in-house technicians stated that their technicians would prefer not to be included in such a database. The commenter requested that there not be a database, or if there is one that technicians should have to affirmatively opt in, rather than being given the option of opting out.

EPA responds that the Agency did consider the possibility of a database that could be used to enforce the sales restriction. EPA agrees that in order to be used for regulatory purposes the content of the database would need to be complete and continuously updated. The only manner the Agency could ensure a complete list of technicians would be to require technicians to recertify, which EPA did not propose. EPA did not propose to require that certification programs list everyone currently in their records. While this may assist current technicians who have lost their cards, listing the hundreds of thousands of technicians certified over the last twenty-two years could be overly burdensome. This would also not provide technicians with the opportunity to opt out.

As this requirement is primarily for the benefit of the technician, EPA is requiring technician certification programs to notify individuals taking the certification exam that information will be posted online and allow them to opt out. Allowing the opt out is sufficient for those technicians who do not want to be listed; requiring an opt in to be listed, on the other hand, would reduce the utility of the lists. EPA is also exempting federal government-run programs from this requirement as proposed. The public release of government and military personnel names linking them to their federal employment could present significant privacy and security concerns.

EPA did not receive comment on the proposed information that would need to be published. EPA is therefore finalizing as proposed the following information requirements: The first name, middle initial, and last name of the certified technician, the technician's city of residence when taking the test, the type(s) of certification received, and the date each certification was received. EPA is not requiring any specific format for providing this information. EPA is aware that some certifying organizations already provide this information online to their technicians and the Agency does not intend to require that they change how they offer the information so long as the required data elements are included. Rather than continuous updating, as would have been required of a database, EPA is requiring that the lists be updated annually, although individual organizations may choose to update their lists more frequently.

4. Grandfathering Provisions

In this rulemaking, EPA is finalizing its proposal to remove provisions related to voluntary certification programs at § 82.161(g). This program was created to allow technicians who were trained prior to the establishment of approved technician certification programs to be recognized as certified technicians. This program expired in 1994 and is no longer necessary. EPA did not receive any comments on this proposal.

5. Certification Cards

As proposed, EPA is finalizing revisions to the requirements for the required text that is printed on certification cards. Some organizations told EPA prior to publication of the proposed rule that the language used on the certification card implies that a technician as defined in subpart F may be trained in other aspects of equipment installation. The primary purpose of the 608 certification card is for a technician to prove to a vendor that they understand the environmental impacts of mishandling refrigerants and are legally permitted to perform the necessary maintenance, servicing, repair, or disposal work under CAA section 608. While this certification qualifies an individual to maintain, service, repair, or dispose of appliances containing certain refrigerants for purposes of CAA section 608, the 608 exam is less focused on the operational and engineering aspects of refrigeration and air-conditioning equipment. Accordingly, the 608 certification is not intended to serve as a general license for individuals who work on such equipment.

To more accurately reflect the knowledge needed to obtain the certification, EPA is updating the card to read: ''[Name of person] has successfully passed a [Type I, Type II, Type III, and/or Universal, as appropriate] exam on how to responsibly handle refrigerants as required by EPA's National Recycling and Emission Reduction Program.''

EPA stated in the 1993 Rule establishing the technician certification requirements that standardized language will decrease administrative costs and aid in enforcement. In addition, it was intended to ease burden on refrigerant wholesalers who must inspect the cards to verify the certification of technicians. Those principles also apply to this rulemaking, and updating the information required on the certification card should improve clarity and should not result in any new administrative costs. EPA notes that the Agency is not requiring that currently certified technicians obtain new cards with the updated language. The new language applies only to cards issued to newly certified technicians. In the event where a technician is requesting a replacement for a lost card, EPA encourages that the certifying organization use the updated language whenever feasible.

6. Updates to Appendix D

In this rulemaking, EPA is also finalizing minor edits to appendix D ''Standards for Becoming a Certifying Program for Technicians.'' EPA did not receive any comments on this element of the proposal and is finalizing the revisions as proposed. More specifically, EPA is updating the description of test content to include the environmental impact of not just ODS but also substitute refrigerants. EPA is removing paragraphs (i) through (k) on approval process, grandfathering, and sample application as they are outdated, redundant, or self-explanatory. EPA is removing the reference that EPA will periodically publish information on the fees charged by the programs as the Agency no longer collects this information. To protect the private information of technicians and minimize the potential for fraud, EPA is removing social security numbers as an acceptable form of identification for Type I technicians using the mail-in format and stating that social security numbers cannot be used in the unique certification number assigned to newly certified technicians. EPA also is requiring that certifying organizations provide a hand-out or electronic communication to technicians after they have taken the certification test explaining who provided the training, who to contact with questions regarding the certification process, and when they should expect to receive their score, and if they passed, their certification cards.

K. Revisions to the Reclamation Requirements in § 82.164

1. Background

The regulations at § 82.164 required that anyone reclaiming used ODS refrigerant for sale to a new owner, except for people properly certified under subpart F prior to May 11, 2004, is required to reprocess refrigerant to standards laid out in appendix A (based on ARI Standard 700–1995, *Specification for Fluorocarbons and Other Refrigerants*), release no more than 1.5 percent of the refrigerant during the reclamation process, dispose of wastes from the reclamation process in accordance with all applicable laws and regulations, and adhere to specific recordkeeping and reporting requirements.

2. Extension to Additional Substitute Refrigerants

In this final rule, EPA is extending the reclamation standards for refrigerants in appendix A to additional non-ozone depleting substitute refrigerants. Most of the refrigerants in appendix A were single component ODS refrigerants or blends containing an ODS component. However, appendix A had previously contained a few commonly used substitute refrigerants that have been used for a long time, such as R–407C and R–410A. EPA is updating appendix A to include newer HFCs, PFCs, HFOs, and other refrigerants based on the standards contained in the latest AHRI Standard 700, *Specifications for Refrigerants.* EPA proposed to base appendix A on AHRI Standard 740–2015, with the exception that the Agency would maintain the current unsaturates limit of 0.5 percent by weight. Recently AHRI released Standard 740–2016 which includes additional refrigerants and an impurity standard for R–40. EPA is finalizing appendix A based on the recent AHRI Standard 740–2016 by adding the new refrigerants, but not the unsaturates limit or R–40 impurity standard.

The standard in the previously existing rules was adopted in 1995. It is appropriate to update this standard to ensure that refrigerants developed in the last twenty years are reclaimed properly. While industry has established standards for these new refrigerants, EPA's regulations have not kept pace. Therefore, reclaimers have not had a legal obligation to achieve such standards. Instilling confidence in the market that reclaimed refrigerant is as good as virgin refrigerant is crucial to its widespread use. Ensuring a healthy market for reclaimed refrigerant is also crucial to support the value of used refrigerant and provide incentives through market forces to recover used gas from appliances during their maintenance, servicing, repair, or disposal.

Many refrigerant reclaimers and distributors commented that the current 0.5 percent unsaturates limit is appropriate. One commenter specifies that the reclamation industry as a whole has delivered more than 200 million pounds of reclaimed refrigerant at that unsaturates level without any known issues. Another commenter expressed concern that lowering the unsaturates limit will make successful reclamation impossible. Other commenters encouraged EPA to incorporate the AHRI Standard 700–2015, *Specifications for Refrigerants,* by reference and establish a process to automatically adopt the latest version of the AHRI–700 standard. These commenters explained that typically, the standard is updated to establish purity specifications for each new substitute refrigerant as it is developed and approved. The commenters state that this will prevent reclaimers from having to comply with regulations requiring that they reclaim new refrigerants without any EPA required standard for those refrigerants.

EPA responds that it is not incorporating either the AHRI Standard 700–2015, *Specifications for Refrigerants,* or the current AHRI Standard 700–2016, *Specifications for Refrigerants* by reference. This is because ASHRAE and AHRI are still conducting further studies on whether and how to amend the unsaturates limit. It is important to maintain the 0.5 percent unsaturates limit while the standard is still being debated. Accordingly, rather than incorporating the AHRI Standard 700–2016 by reference, EPA is updating appendix A to include HFCs, PFCs, HFOs, and other refrigerants based on the standards contained in AHRI Standard 700–2016. In response to the comment about establishing a process to automatically update the standards, it is important to understand that EPA cannot automatically incorporate future standards by reference. EPA appreciates the commenters' concerns that the Agency has not updated the standard in twenty-one years. However, any updated standard must undergo notice and comment review prior to being adopted into the regulations.

This final rule will extend the prior reporting requirements that are applicable to ODS to HFCs and other non-exempt substitutes. Reclaimers must report annually the aggregate quantity of material sent to them for reclamation (the combined mass of refrigerant and contaminants) by refrigerant type, the mass of each refrigerant reclaimed by type, and the mass of waste products. EPA has been publishing the aggregate total of each ODS refrigerant reclaimed each year on its Web site. After these revised reporting requirements take effect, EPA will begin collecting and making available reclamation data for non-exempt substitute refrigerants as well as ODS, which should provide EPA and the general public a greater understanding of the extent of HFC recovery and reclamation. One commenter encouraged EPA to publish data on the amount of refrigerant being sent to a reclaimer in addition to the amount reclaimed. The commenter does not believe that aggregated data is CBI and believes that sharing the data publicly will provide further justification for the actions taken in this rule. EPA responds that the Agency has aggregated and released the reported quantity of refrigerant received for reclamation, as well as the aggregate quantity of refrigerant reclaimed since 2010. This includes an aggregate of all of the different types of refrigerant reported to EPA as received and/or reclaimed. Because reporting on substitutes was previously not a requirement, the data on HFCs are incomplete and based only on reports from companies that chose to provide such data.

3. Revisions to Recordkeeping and Reporting

Under the prior regulations at § 82.164(b), reclaimers must certify that the refrigerant reclaimed meets the specifications in AHRI Standard 700–1995 using the analytical methodology prescribed in appendix A. In addition to updating the standard to AHRI Standard 700–2016, EPA is finalizing revisions to the regulations to clarify that the analysis must be conducted on each batch of refrigerant being reclaimed and that reclaimers must maintain records of each analysis. Requiring reclaimers to maintain records helps to ensure that refrigerant is being reclaimed to the appropriate specifications. The standard practice for reclaimers currently is to analyze by batch, and to generate records when doing so, so these revisions update the regulations to reflect current practices and do not add additional burden. EPA is also requiring that all recordkeeping and reporting requirements for reclaimers be maintained and reported by refrigerant type (*i.e.,* ASHRAE number). Information kept in this format will provide more clarity on the types and quantities of refrigerants being reclaimed when aggregated information is reported.

EPA is also clarifying what aggregate information must be reported annually to the Agency, and removing a redundant recordkeeping provision related to that report. Currently, reclaimers provide data on ODS reclamation to EPA in multiple formats. EPA intends to develop an electronic form to standardize the reporting across all reclaimers. This should reduce burden on the Agency and on reclaimers as EPA must currently engage in a back and forth process to ensure that all required data have been reported properly. This will also allow the Agency to publish reclamation data in a more timely manner.

Previously reclaimers were required to certify that the refrigerant reclaimed meets the specifications in AHRI Standard 700–1995 using the analytical methodology prescribed in appendix A. EPA proposed to specify that reclaimers must, ''[v]erify that each batch of refrigerant reclaimed meets these specifications using the analytical methodology prescribed in appendix A,'' but did not propose a definition of the term *batch*. Multiple reclaimers supported testing each batch of refrigerant but suggested that EPA define the term batch. These commenters proposed identical or similar definitional language requesting that EPA define a batch of refrigerant as a single bulk cylinder containing the reclaimed refrigerant after all processing has been completed but prior to packaging or shipping to the market. EPA agrees that specifying what a batch is will assist reclaimers in complying with this requirement and is therefore adding *batch* to the defined terms in § 82.152. This added definition is materially similar to what commenters suggested.

One commenter suggested that a testing ID or batch number be placed on each cylinder packaged from the bulk cylinder to allow for traceability back to the analysis. EPA recognizes that some companies may want to do this for their own internal quality control. However, EPA is not presently convinced of the environmental benefit of making this change at this time.

Multiple reclaimers requested that the reclaimed refrigerant be independently analyzed by an accredited laboratory. They stated that independently verifying that reclaimed refrigerant meets the required specifications reaffirms the appropriate industry standard already being followed by most reclaimers. One commenter found that it would not be necessary to require independent analysis since all reputable reclaimers already do this. EPA responds that it did not propose to require independent third-party testing of reclaimed refrigerant and does not presently have sufficient information to finalize such a requirement. Before requiring third-party testing, EPA would want to better understand the frequency with which such testing is done, the costs involved, whether such testing would improve the quality of the reclaimed refrigerant on the market, and which and how many companies conduct such testing. Therefore, at this time EPA is not requiring independent third-party testing. However, as discussed previously in this notice, ensuring the quality of reclaimed refrigerant is very important to its use and to further the goals of the section 608 program and EPA may consider establishing such requirements in a future rulemaking.

EPA requested comment on possible future proposed revisions to the reclamation requirements including establishing more stringent certification requirements for reclaimers; establishing a third-party certification or audit program for reclaimers; and requiring labeling of reclaimed refrigerant. Many reclaimers and other commenters provided input on these questions. Because EPA was merely seeking comment for potential future actions and did not propose any specific action for this rulemaking, EPA is not responding to those comments at this time and is not taking final action with respect to any of those comments. EPA will consider the information received for a potential future rulemaking.

4. Hazardous Wastes

EPA received comments related to hazardous waste in the context of the safe disposal requirements, recovery equipment, and reclamation. Multiple commenters requested that EPA create new Resource Conservation and Recovery Act (RCRA) exclusions from the definition of hazardous waste for all recovered refrigerants, perhaps with the exception of ammonia. The commenters stated that classifying used refrigerant as a hazardous waste would prevent technicians from recovering and transporting used refrigerant and prevent reclaimers from accepting, processing, or reclaiming such refrigerant. As a result, commenters foresee less recovery and increased emissions because handling compounds classified as hazardous waste would be cost prohibitive. The commenters point to the exclusion EPA created for used CFCs at 40 CFR 261.4(b)(12) as a model.

EPA responds that to be a hazardous waste, a compound must either be specifically listed as a hazardous waste per 40 CFR 261 Subpart D or exhibit one of the following characteristics: Ignitability, reactivity, toxicity, or corrosivity per 40 CFR 261 Subpart C. In 1990, EPA revised the toxicity characteristic and as a result, became aware that certain CFCs may exhibit the toxicity characteristic. On February 13, 1991, the Agency issued an exclusion from the RCRA hazardous waste regulations for CFCs used as refrigerants, provided the refrigerant is reclaimed for further use. Most non-exempt substitute refrigerants are not listed nor do they exhibit any characteristics of a hazardous waste and therefore, are not considered hazardous wastes when they are recovered and reclaimed. However, some refrigerants are flammable (*e.g.,* HFC–32), which are likely to exhibit the hazardous waste characteristic of ignitability.

5. Clarifications and Edits for Readability

EPA is also finalizing revisions in this rule that consolidate provisions related to refrigerant reclaimers into a single section at § 82.164. This rule also clarifies what is required of the reclaimer. The prior regulations required a reclaimer to certify that he or she will meet a certain set of standards and engage in certain behaviors. The revised regulations require first, that a reclaimer meet those standards and behaviors and second, that they certify to having done so. EPA is making this revision to improve the clarity and enforceability of these provisions. EPA did not receive any comments on this proposal.

L. Revisions to the Recordkeeping and Reporting Requirements in § 82.166

1. Background

The prior regulations included all recordkeeping and reporting provisions in one section of subpart F (§ 82.166). While having all the provisions in one place can be useful, they are separated from the required practices specific to that regulated entity. This can create difficulty for the regulated community in finding what records they must keep and what reports they must make to remain in compliance with the section 608 requirements. To improve the readability of the recordkeeping and reporting provisions, EPA is moving the requirements that were in § 82.166 to the relevant section describing the required practices. The recordkeeping and reporting provisions that remain in § 82.166 relate to the leak repair provisions in § 82.156(i) that are effective until January 1, 2019.

EPA summarizes some of the key amended recordkeeping and reporting provisions for this rulemaking below and intends to prepare a guidance document for this rule that includes all of the recordkeeping and reporting requirements. Additional discussion of these provisions may be found in the section of this notice discussing the corresponding required practice. This summary is not exhaustive, so to determine all of recordkeeping requirements that apply to a particular requirement, you must consult the appropriate text in the revised regulations.

2. Summary of Recordkeeping Provisions

A summary of some key, revised recordkeeping requirements for subpart F is included here. Unless otherwise noted, all records must be maintained for at least three years.

• *Disposal of Small Appliances, MVACs, and MVAC-like Appliances:* Persons who take the final step in the disposal process of such appliances must keep a copy of all the signed statements indicating refrigerant was recovered properly. This statement must include the name and address of the person who recovered the refrigerant and the date the refrigerant was recovered. Alternatively, the statement may be a signed contract stating either that the supplier will recover any remaining refrigerant from the appliance in accordance with § 82.155 prior to delivery or will verify that the refrigerant has been properly recovered before receipt by the supplier.

- *Disposal of Appliances Containing More than 5 and Less than 50 Pounds of Refrigerant:* Persons evacuating refrigerant from appliances with a full charge of more than 5 and less than 50 pounds of refrigerant for purposes of disposal of that appliance must maintain records documenting their company name, location of the appliance, date of recovery, and type of refrigerant recovered for each appliance. They must also keep records of the quantity of refrigerant, by type, recovered from such appliances in each calendar month and the quantity and type of refrigerant transferred for reclamation, the person to whom it was transferred, and the date of transfer.
- *Leak Inspection:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant must maintain documentation from quarterly or annual leak inspections that includes the date of inspection, method used for the inspection, a list of locations where leaks were discovered, and a certification that all visible and accessible parts of the appliance were inspected. Technicians conducting leak inspections must provide such documentation to the owner or operator. Alternatively, owners or operators may install an automatic leak detection system and maintain records for that system, including records showing that the system is audited or calibrated annually and records related to the leaks that the system identifies.
- *Full Charge:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant must maintain records relating to the full charge of the appliance, including records documenting what the full charge amount is for such appliances, how it was determined, the range and its midpoint for the full charge, and any revisions to the full charge. The record for the current full charge must be maintained until three years after the appliance is retired.
- *Service Records Provided by Technicians:* Persons adding or removing refrigerant from an appliance with a full charge of 50 or more pounds of refrigerant must provide the owner or operator with documentation containing the identity and location of the appliance; the date and type of maintenance, service, repair, or disposal performed; the parts of the appliance serviced, maintained, repaired, or disposed of; the name of the person performing the maintenance, service, repair or disposal; and the amount and type of refrigerant added to or removed from the appliance. The appliance owner or operator must maintain service records provided by technicians.
- *Verification Tests:* Owners or operators of any appliance with a full charge of 50 or more pounds of refrigerant must maintain records relating to any verification tests, including records of the dates, types, and results of all initial and follow-up verification tests. Technicians conducting verification tests must provide documentation of such activities to the owner or operator.
- *Retrofit/Retirement Plans:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant that are subject to retrofit/retirement requirements must maintain retrofit or retirement plans. The plan must contain the following information: Identification and location of the appliance; type and full charge of the refrigerant used; type and full charge of the refrigerant to which the appliance will be converted, if retrofitted; itemized procedure for converting the appliance to a different refrigerant, including changes required for compatibility with the new substitute, if retrofitted; plan for the disposition of recovered refrigerant; plan for the disposition of the appliance, if retired; and a schedule, not to exceed one year, for completion of the appliance retrofit or retirement.
- *Requests to Extend the Deadline to Repair or Retrofit/Retire Appliances:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant must maintain copies of extension requests.
- *Chronically Leaking Systems:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant that leak 125 percent or more of the full charge in a calendar year period must maintain copies of reports submitted to EPA.
- *Mothballing:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant that mothball an appliance must keep records documenting when the system was mothballed and when they add refrigerant back into the appliance.
- *Purged Refrigerant:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant who exclude from their leak rate calculation purged refrigerant that is destroyed must maintain records related to the destruction of that purged refrigerant, including records that demonstrate that a 98 percent or greater destruction efficiency is met and that include flow rate, quantity or concentration of the refrigerant in the vent stream, and periods of purge flow.
- *Seasonal Variances:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant who exclude additions of refrigerant due to seasonal variance from their leak rate calculation must maintain records stating that they are using the seasonal variance flexibility and documenting the amount added and removed.
- *Lists of Certified Recovery Equipment and Testing Results:* Organizations that are approved to certify refrigerant recovery and/or recycling equipment must maintain records of equipment testing and performance and a list of equipment that meets EPA requirements. These records must be maintained for three years after the equipment is no longer offered for sale.
- *Proof of Certification for Technicians:* Technicians who have passed the section 608 Type I, II, III or Universal test, must keep a copy of their certification at their place of business. These records must be maintained for three years after a certified individual no longer operates as a technician.
- *Sales Restriction:* Anyone selling ODS or a non-exempt substitute refrigerant must document the name of the purchaser, the date of sale, and the quantity of refrigerant purchased. In instances where the buyer employs a certified technician, the seller must keep the information provided by the buyer to demonstrate that at least one technician is properly certified. Copies of technician certifications must be maintained for three years after each purchase. These records would not apply to the sale of small cans of substitute refrigerant for servicing MVACs.
- *Small Cans of Substitute Refrigerant for MVAC Servicing:* Anyone manufacturing small cans of substitute refrigerant with a self-sealing valve for use in an MVAC must maintain records verifying that the self-sealing valves do not leak more than 3.00 grams per year when the self-sealing valve is closed, consistent with appendix E to subpart F, as revised.
- *Technician Certification Programs:* Organizations that certify technicians must maintain records of who they

certify, the scores of all certification tests administered, and the dates and locations of all tests administered. These records must be maintained as long as they are in operation, not just for three years. If a previously approved technician certifying organization stops certifying technicians for any reason, they must ensure those records are transferred to another certifying program or EPA. The recordkeeping requirements can be found in section (g) of appendix D of this subpart.

- *Reclaimers:* Reclaimers must maintain records, by batch, of the analyses conducted to verify that reclaimed refrigerant meets the necessary specifications. On a transactional basis, reclaimers must maintain records of the names and addresses of persons sending them material for reclamation and the quantity of the material (the combined mass of refrigerant and contaminants) by refrigerant type sent to them for reclamation.

4. Summary of Reporting and Notification Provisions

Reporting and notification are important components of the National Recycling and Emission Reduction Program and allow EPA to track compliance with the requirements. A summary of some key requirements is included here, and additional discussion may be found in other sections of this notice. Please consult the appropriate regulatory provision for a complete list of reporting and notification requirements. All of these reporting requirements are new for equipment containing non-exempt substitutes. Unless the information is claimed as confidential business information or as otherwise noted, all notifications must be submitted electronically to *608reports@epa.gov*. Electronic submission of reports should decrease burden on both EPA and the regulated community.

- *Extensions to the 30-day or 120-day Leak Repair Requirement:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant must request an extension from EPA when seeking additional time to complete repairs.
- *Extensions to Retrofit or Retire Appliances:* Owners or operators of appliances with a full charge of 50 or more pounds of refrigerant must request an extension from EPA when seeking additional time to complete a retrofit or retirement.
- *Relief from the Obligation to Retrofit or Retire an Appliance:* Owners or operators who are retrofitting or retiring an appliance with a full charge of 50 or more pounds of refrigerant may request that EPA relieve them of that obligation if they can establish within 180 days of the plan's date that the appliance no longer exceeds the applicable leak rate. The owner or operator must provide the retrofit or retirement plan; the date that the requirement to develop a retrofit or retirement plan was triggered; the leak rate; the method used to determine the leak rate and full charge; the location of the leak(s) identified in the leak inspection; a description of repair work that has been completed; a description of repair work that has not been completed; and a description of why the repair was not conducted within the required time frames.
- *Chronically Leaking Systems:* Owners or operators must submit a report to EPA for any appliance with a full charge of 50 or more pounds of refrigerant that leaks 125 percent or more of the full charge in a calendar year. This report must describe efforts to identify leaks and repair the appliance.
- *Purged Refrigerant:* The first time that owners or operators of appliances with a full charge of 50 or more pounds of refrigerant exclude purged refrigerant that has been destroyed from their leak rate calculation, they must provide a one-time report to EPA that includes the identification of the facility and a contact person; a description of the appliance; a description of the methods used to determine the quantity of refrigerant sent for destruction and type of records that are being kept; the frequency of monitoring and data-recording; and a description of the control device, and its destruction efficiency.
- *Previously Certified Recovery/Recycling Equipment:* Organizations that are approved to certify refrigerant recovery and/or recycling equipment must inform EPA if subsequent tests indicate a previously certified model line for recovery and/or recycling devices does not meet EPA requirements.
- *Technician Certification Programs:* Organizations that certify technicians must publish online lists/databases of the people that they certify. Organizations must report to EPA twice a year the pass/fail rate and testing schedules. Organizations that receive records from a program that no longer offers the certification test must inform EPA within 30 days of receiving these records. The notification must include the name and address of the program to which the records have been transferred. The reporting requirements can be found in section (g) of appendix D of this subpart.
- *Reclaimer Change of Business Information, Location or Contact Information:* If a reclaimer changes address or management, they must notify EPA within 30 days. Since reclaimer certification is not transferable, if ownership changes, the new owner must certify to EPA that they will meet the reclaimer certification requirements.
- *Amounts Reclaimed:* Reclaimers must report annually the total aggregate quantity of material sent to them for reclamation (the combined mass of refrigerant and contaminants) by refrigerant type, the total mass of each refrigerant reclaimed, and the total mass of waste products.

M. Effective and Compliance Dates

EPA proposed that the final rule become effective on January 1, 2017, with later compliance dates for specific provisions that stakeholders may need additional time to implement. The ''effective date'' is the date that the regulatory text in the Code of Federal Regulations at 40 CFR part 82, subpart F will change. Unless otherwise specified, it is also the date by which the regulated community must comply with the revised regulation. Additional ''compliance dates'' are the dates by which the regulated community must comply with specific provisions of the revised regulation.

One commenter stated that January 1, 2017, is too aggressive a compliance date, given the length of time needed to issue the final rule and the rule's size and complexity. EPA responds that while the Agency is finalizing an effective date of January 1, 2017, as proposed, it is also establishing later compliance dates for some new provisions as well as for the application of some existing provisions to non-exempt substitutes. Where a later compliance date applies, the revised regulations explicitly specify that later compliance date.

The existing provisions related to ODS that were not substantively modified by the rule continue to apply with respect to ODS. For minor changes to existing ODS provisions, the compliance date is the same as the effective date of the rule. Provisions in this final rule for which there is no delayed compliance date with respect to ODS include the sales restriction, technician certification requirements, safe disposal requirements, evacuation requirements, restriction on the sale of used refrigerant, requirement that appliances include a process stub or servicing aperture, and the recordkeeping associated with those provisions. While in most instances this rule establishes a later compliance date for application of these provisions to non-exempt substitutes, the restriction on the sale of used substitute refrigerant and the requirement that appliances containing non-exempt substitutes include a process stub or servicing aperture apply for non-exempt substitutes as of January 1, 2017. In addition, the revised standards for the sale or import of recovery and/or recycling equipment apply for both ODS and non-exempt substitutes as of January 1, 2017.

This rule establishes a compliance date of January 1, 2018, for many provisions that are newly applicable to substitute refrigerants. These include the sales restriction, technician certification requirements, safe disposal requirements, evacuation requirements, and the recordkeeping associated with those provisions. The new requirement that small cans of substitute MVAC refrigerant be equipped with self-sealing valves will also apply as of January 1, 2018. In addition, this rule establishes a compliance date of January 1, 2018, for the new recordkeeping requirement associated with the disposal of appliances containing more than five and less than 50 pounds of either ODS or non-exempt substitute refrigerant.

Lastly, this rule establishes a compliance date of January 1, 2019, for the revised leak repair provisions, regardless of whether the appliance contains an ODS or a non-exempt substitute refrigerant.

The following sections discuss EPA's rationale for these staggered compliance dates.

1. Section 82.154(c)—Refrigerant Sales Restriction

EPA proposed January 1, 2017, as the compliance date for the sales restriction of all refrigerant (non-exempt substitutes or ODS). EPA also proposed to require that small cans of MVAC refrigerant be manufactured with self-sealing valves by one year from the publication of the final rule and that the sale of small cans without self-sealing valves cease by two years from publication of the final rule.

EPA is finalizing a compliance date of January 1, 2018, for the sales restriction as applied to non-exempt substitute refrigerants. Changes related to the sales restriction, as applied to ODS, apply January 1, 2017, as proposed. EPA is also finalizing a compliance date of January 1, 2018, to equip small cans with a self-sealing valve. EPA is not finalizing a sell-through requirement in this rule.

EPA is delaying the compliance date for the sales restriction so that it matches the compliance dates for other aspects of the rule related to sales of non-exempt substitute refrigerants. Specifically, EPA proposed one year from the date of publication of the final rule as the date by which technicians working with appliances containing non-exempt substitutes must be certified and the date by which small cans of MVAC refrigerant must be equipped with a self-sealing valve. As discussed below, EPA is finalizing January 1, 2018, as the compliance date for both of those provisions. To minimize potential conflicts by having different compliance dates, EPA is extending the compliance date for the sales restriction of substitute refrigerants to January 1, 2018.

With regards to small cans of MVAC refrigerant, manufacturers, distributors and retailers of automotive refrigerant supported the proposed ''manufacture-by'' date of one year from publication of the final rule, but commented that they oppose a sell-through date for small cans that do not have self-sealing valves. They commented that such a requirement would be inefficient, burdensome, costly, and environmentally problematic. It would require all retailers to know of the requirement and establish processes for returning unsold cans back to the manufacturer for destruction. More likely, the cans may be improperly disposed of, which would negate the environmental benefit of the new provisions. One commenter stated that a ''manufacture-by'' date would shift EPA's burden in ensuring compliance from a few manufacturers to thousands of retailers. Furthermore, commenters cited EPA's July 2015 SNAP rule (80 FR 42901; July 20, 2015) which listed HFC–134a as unacceptable for use as an aerosol as of a ''manufacture-by'' date, rather than a ''sell-by'' date. CARB commented on EPA's proposal for a two-year sell-through period that a one-year sell-through period has been found to be acceptable in their experience.

EPA responds that to allow all entities in the distribution chain time to plan for and communicate changes to the sales restriction on non-exempt substitute refrigerants, as well as the requirement for self-sealing valves on small cans, EPA is finalizing a sales restriction date and ''manufacture-by'' or ''import-by'' date of January 1, 2018. This will provides slightly more time than one year from publication of the final rule, which EPA proposed for the self-sealing valve requirement. Generally speaking, EPA has attempted to simplify the compliance dates so they do not fall in the middle of a month or during the middle of the cooling season.

In response to the comments received on EPA's proposal to allow small cans manufactured and placed into initial inventory or imported before that date to be sold for one additional year, EPA is not finalizing the sell-through requirement and is finalizing only a date by which small cans must be manufactured or imported with a self-sealing valve. EPA agrees that this is the least-burdensome option and that it avoids the potential for any unintended consequences of a ''sell-by'' date.

2. Section 82.155—Safe Disposal of Small Appliances, MVAC, and MVAC-Like Appliances

EPA proposed that the extension of the requirements for the recovery of non-exempt substitute refrigerant prior to disposal/recycling of small appliances, MVACs, and MVAC-like appliances take effect one year from publication of the final rule. EPA proposed that changes related to ODS equipment be effective January 1, 2017.

One commenter supported the proposed one-year extension to the compliance date for substitute refrigerants. EPA is finalizing a compliance date of January 1, 2018, for the extension to non-exempt substitute refrigerants. This will provide sufficient time for final disposers such as scrap recyclers to learn about the extension to non-exempt substitutes and make any adjustments needed to start maintaining records associated with disposal of appliances containing non-exempt substitutes. Using January 1, 2018, rather than one year from publication will also make communicating the compliance date for the rule easier.

Because EPA is not making substantive changes to the existing requirements for appliances containing ODS, EPA does not expect that final disposers will need extra time to adjust to the updates in this rule for those appliances. Accordingly, EPA is finalizing a compliance date for ODS appliances of January 1, 2017.

3. Section 82.156—Proper Evacuation of Refrigerant From Appliances

EPA proposed that the extension of the requirements related to the evacuation of non-exempt substitute refrigerants before the maintenance, servicing, repair, or disposal of appliances apply one year from publication of the final rule. EPA proposed that changes related to ODS equipment apply January 1, 2017.

Two commenters supported the proposed one year extension to the compliance date for non-exempt substitutes. Another commenter requested two years on the ground that recovery and reclamation equipment may need to be modified to meet the requirements of the final rule. EPA responds that the Agency is not requiring that existing recovery and/or recycling equipment be modified or replaced with new equipment.

EPA is finalizing a compliance date of January 1, 2018, for the extension of the requirements to appliances containing non-exempt refrigerants. This will provide affected entities time to learn about the extension and make any adjustments needed to apply the required practices to the evacuation of appliances containing non-exempt substitutes. Because EPA is not making substantive changes to the existing requirements for appliances containing ODS, EPA does not expect that affected entities will need extra time to adjust to the updates in this rule for those appliances. Accordingly, EPA is finalizing a compliance date for ODS appliances of January 1, 2017.

EPA is establishing a delayed compliance date of January 1, 2018, for the new requirement to keep records upon disposal of appliances containing either a class I, class II, or non-exempt substitute refrigerant. This is slightly more than one year from publication of the final rule, which was what EPA proposed. The delayed compliance date will allow affected entities to establish a recordkeeping program to track the amount of refrigerant recovered from appliances that are disposed of in the field. EPA expects that the same amount of time will be needed for ODS and non-ODS appliances because this is a new requirement, not an update to an existing requirement.

4. Section 82.157—Appliance Maintenance and Leak Repair

This rule makes significant revisions to the leak repair provisions, including lowering the leak rates, requiring leak repair verification tests on new types of equipment, and modifying the recordkeeping and reporting requirements. In addition, owners and operators of appliances using non-exempt substitute refrigerants that were previously not covered by any subpart F required practices will have to familiarize themselves with the requirements. EPA is therefore establishing a later compliance date for the appliance maintenance and leak repair requirements than for most other provisions.

EPA proposed a compliance date 18 months from publication of the final rule. One commenter suggested that EPA shorten the compliance date to 12 months and two commenters agreed that it should be at minimum 18 months. Five commenters recommended more than 18 months, with the longest extensions ranging from 24 to 36 months after the publication of the final rule. These commenters stated that later dates would decrease the costs of compliance and give companies adequate time to train employees and update current systems to meet the requirements of the rule. Extending the compliance dates would also allow more time for owners or operators to bring equipment up to the new standards, and avoid having to potentially conduct numerous repairs or replacements at once. Commenters who supported a 36-month extension noted constraints with the federal budget cycle and acquisition requirements or referred to Maximum Achievable Control Technology rules that typically provide three years to comply.

Because the leak repair provisions already provide the opportunity for extensions for delays caused by the federal agency appropriations and/or procurement process, EPA disagrees with federal agencies requesting a 36 month extension to the compliance date. EPA agrees with commenters that additional time may be needed to understand the regulations and to make repairs on systems that have not previously been subject to the subpart F required practices. Therefore, EPA is establishing a compliance date of January 1, 2019. This date is two years from the effective date, and more than 24 months from publication of the final rule. This is sufficient time for owners and operators of appliances with 50 or more pounds of refrigerant to learn about the updated requirements; update systems, standard operating procedures, and training materials to best administer the requirements; and fix leakier systems.

Until January 1, 2019, the leak repair provisions at § 82.156(i) and the associated recordkeeping requirements at § 82.166 continue to apply as specified to appliances containing ODS refrigerant. Those leak repair provisions use terminology contained in the definitions as they existed prior to this rulemaking. EPA has added those unmodified definitions to § 82.156(j) for the purposes of implementing § 82.156(i) until the new provisions take effect January 1, 2019.

5. Section 82.158—Recovery and Recycling Equipment

EPA proposed that the standards for recovery and recycling equipment apply to the manufacture and import of equipment for non-exempt substitutes as of January 1, 2017. One commenter requested additional time on the ground that recovery and recycling equipment may need to be modified to meet the requirements of the final rule. EPA responds that the Agency is not requiring that existing recovery and/or recycling equipment be modified or replaced with new equipment certified for use with non-exempt substitute refrigerants. Rather, EPA is requiring only that *newly manufactured or imported* recovery and/or recycling equipment meet the new standards upon the compliance date.

6. Section 82.161—Technician Certification Requirements

EPA proposed that technicians be certified to handle non-exempt substitute refrigerants by one year from publication of the final rule. EPA proposed that changes related to ODS apply January 1, 2017.

One commenter supported the one year extension to the compliance date for non-exempt substitute refrigerants. Another commenter requested two years so as to allow time for certifying organizations to write and review the certification test questions as well as train, or re-train, technicians on that new material.

EPA is establishing a compliance date of January 1, 2018, for technicians to be certified to handle non-exempt substitute refrigerants. This is slightly more than the proposal of one year from publication of the final rule. This will provide time for EPA to update the test bank with questions related to non-exempt substitute refrigerants and for certifying organizations to update their testing materials to use the new questions. EPA does not anticipate that a two year extension would be necessary because HVACR contractors are generally working on both ODS refrigerants and non-exempt substitute refrigerants, and there is not likely to be a rush of contractors needing to be certified.

EPA is also finalizing the compliance dates for the publication of lists of certified technicians as proposed. As such, any technician certified on or after January 1, 2017, must be included in a publicly accessible list of certified technicians or provided the ability to opt out. Technician certification programs must make these lists available starting January 1, 2018.

V. Possible Future Revisions to Subpart F

EPA requested input on other aspects of the National Recycling and Emission Reduction Program that might be addressed in a future rulemaking. Specifically EPA requested feedback on (1) establishing a voluntary program for supermarkets based on their corporate-wide average leak rate; (2) establishing more stringent certification requirements for reclaimers; (3) establishing a third-party certification or audit program for reclaimers; (4) requiring labeling of reclaimed refrigerant; (5) moving further upstream the responsibility to recapture refrigerant from appliances being disposed of; (6) requiring recertification of currently certified technicians; and (7) establishing a technician certification requirement or sales restriction for flammable refrigerants. EPA is not taking any final action on these topics in this rule but does greatly value the information provided by commenters. EPA has prepared a summary of these comments that is available in the docket for this rule.

VI. Economic Analysis

For the reasons explained in Section III of this preamble, EPA considered economic factors in the development of this rule. EPA considered the costs of different actions that would achieve the goals of this rule to individual entities and the United States economy as a whole. While selecting regulatory actions that would achieve the goals of this rule, EPA elected to consider the costs of different actions to individual entities and the United States economy as a whole. Many commenters claimed that the benefits of the proposed regulatory provisions do not justify the costs, while four comments supported the cost effectiveness of the proposed rule. EPA has taken these comments into consideration and is finalizing several provisions that will be less burdensome than proposed. This section provides a brief overview of how the Agency calculated costs and then discusses major revisions to the final rule that affect EPA's economic analysis. A full description of the cost analyses is included in the technical support document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program,* which can be found in the docket.

To estimate the incremental costs of the regulatory revisions, the Agency developed a set of model entities with a distribution of different model facilities, each of which could contain a set of model appliances. This set of model entities was used to represent the potentially affected entities in a variety of economic sectors in the United States, and they were developed based on EPA's Vintaging Model and cross-checked with the 2013 dataset of repair records developed under California's RMP. Each model entity reflects information about the typical number of facilities in a given sector and size category and the number of pieces of equipment in each equipment category that are likely to be owned and/or operated by each facility. By combining the model entities with economic data on potentially affected industries from the United States Census, EPA obtained a model for the potentially affected population. By applying the costs of leak inspections, repairs, recordkeeping and reporting, self-sealing cans for MVAC servicing, and other regulatory revisions to this population, EPA estimated the costs to individual entities and the total cost to the economy.

Some regulatory revisions in this action, such as providing extensions to owners or operators of comfort cooling and commercial refrigeration before having to replace leaking appliances reduce the cost of compliance to owners of ODS-containing equipment. These reductions were included in the incremental cost of the action.

As detailed more fully in the technical support document, the rulemaking includes new compliance costs of approximately $75.5 million split into approximately $32.5 million for owners and operators of equipment containing ODS and $43 million in non-ODS systems. Offsetting the new compliance costs are reductions in cost due to the removal of some regulatory requirements and increasing flexibility for repairs. These offsetting costs total $51 million, all related to equipment containing ODS. Taken together (the new compliance costs less the offsetting costs), EPA estimates that the net total cost to comply with the requirements of this final rule is $24.5 million per year (Table 3 shows these net costs at both the rule component level and for the total rule).

TABLE 3—INCREMENTAL ANNUAL COMPLIANCE COSTS BY RULE COMPONENT (2014$) WITH 7% AND 3% DISCOUNT RATES

Rule component	Total incremental compliance costs (7% discount rate)			Total incremental compliance costs (3% discount rate)		
	HFC	ODS	Total	HFC	ODS	Total
Leak Repair:						
Comfort Cooling	$5,046,000	−$38,191,000	−$33,145,000	$2,437,000	−$18,705,000	−$16,268,000
Commercial Refrigeration	1,709,000	−10,137,000	−8,428,000	823,000	−4,963,000	−4,139,000
IPR	385,000	31,000	417,000	186,000	13,000	200,000
Leak Inspection	21,703,000	27,460,000	49,163,000	21,703,000	27,460,000	49,163,000
Reporting & Recordkeeping	11,101,000	2,350,000	13,451,000	11,101,000	2,350,000	13,451,000
Self-sealing Valves on Small Cans	3,070,000		3,070,000	3,070,000		3,070,000
Total	43,014,000	−$18,487,000	24,528,000	39,320,000	6,155,000	45,477,000

Totals may not sum due to independent rounding.

Some regulatory revisions, by reducing the amount of refrigerant lost to leaks, also result in savings for equipment owners or operators of the cost of purchasing replacement refrigerant. EPA estimates that affected entities would avoid spending over $44 million in refrigerant purchases alone due to the regulatory revisions. The compliance costs and refrigerant savings combined are estimated to be savings of $19.6 million per year. Furthermore, costs could additionally be lower because appliances running with the correct amount of refrigerant are generally more energy efficient to operate and last longer.

TABLE 4—TOTAL ANNUAL REFRIGERANT SAVINGS (2014$) AND COMBINED ANNUAL COST AND ANNUAL SAVINGS 2ITH 7% AND 3% DISCOUNT RATE

Rule component	Annual refrigerant savings			7% Discount rate		3% Discount rate	
	HFC	ODS	Total	Incremental compliance costs	Combined annual savings and compliance costs	Incremental compliance costs	Combined annual savings and compliance costs
Leak Repair:							
Comfort Cooling	−$9,853,000	−$20,221,000	−$30,073,000	−$33,145,000	−$63,218,000	−$16,268,000	−$46,341,000
Commercial Refrigeration	−3,439,000	−7,514,000	−10,953,000	−8,428,000	−19,381,000	−4,139,000	−15,092,000
IPR	−1,582,000	−1,533,000	−3,115,000	417,000	−2,698,000	200,000	−2,915,000
Leak Inspection				49,163,000	49,163,000	49,163,000	49,163,000
Reporting & Recordkeeping				13,451,000	13,451,000	13,451,000	13,451,000
Self-sealing Valves on Small Cans				3,070,000	3,070,000	3,070,000	3,070,000
Total	−14,874,000	−29,268,000	−44,141,000	24,528,000	−19,613,000	45,477,000	1,336,000

Totals may not sum due to independent rounding.

Several commenters questioned the validity of EPA's cost estimates and some provided examples of costs from their own business/organizations. One commenter said that, given the amount of paperwork and added compliance requirements in the proposed rule, the cost estimates are implausibly low and call into question the fundamental integrity of the Agency's economic analysis. Another said that they would estimate the cost to implement the new requirements to be well in excess of $100 million just to repair and potentially replace IPR systems, noting that the replacement of a single complex IPR system can be as high as $10 million.

EPA responds that the aggregate costs and savings for the economy as a whole would not be expected to be distributed evenly across affected entities. For example, owners of ODS-containing equipment with low leak rates might only incur costs for recordkeeping. On the other hand, owners of HFC-containing equipment with high leak rates might incur costs of repairing leaks, though they would also realize savings due to reduced refrigerant purchases. Owners of ODS-containing comfort cooling or commercial refrigeration appliance with high leak rates may also incur costs of repairing leaks but also substantial cost savings by not having to retrofit or retire the appliance if unable to repair within 30 days, given the extensions provided in the final rule.

Several commenters claimed that requiring all systems to have annual or quarterly leak inspections would impose significant costs on owners of all systems including those systems that do not leak or leak very little. One commenter, using their estimate for the cost of each leak inspection of a particular facility's appliances, when taken quarterly across some 5,200 retail stores and supporting business units, stated that the impact on their company would exceed $10 million. Another commenter called quarterly leak inspections redundant if it is already required that leaks be fixed in a timely manner. Two commenters supported leak inspections and trade group supported periodic leak inspections as a proactive means to detect leaks, reduce refrigerant emissions, and maintain energy efficiency of equipment.

The Agency responds that a proactive plan of maintenance leads to reduced emissions of refrigerant and is part of the best practices for operation of these systems. Discussions with members of industry and reports from the GreenChill program support the effectiveness of a program of regular inspections to lower average leak rates. However, to allow for flexibility in how system owners and operators implement their refrigeration management programs, especially for the least leaky equipment, EPA is not finalizing a requirement that all systems undergo periodic leak inspections. Only systems that show a history of excessive emissions by exceeding the leak rate threshold will require periodic inspections, and then only for a limited time if the leak rate of the system is addressed effectively. This will reduce the burden on owners of systems that are not responsible for emissions, while focusing attention on systems that require it. EPA estimates that this will affect 282,000 appliances, compared to approximately 1.5 million under the proposed rule.

EPA's analysis of the costs of leak inspection used the median hourly rate for heating, air-conditioning, and refrigeration mechanics and installers provided by the Bureau of Labor Statistics, along with an additional 110% for overhead. EPA assumed that leak inspections could be carried out quickly because the proposal allowed employees and not certified technicians to conduct the inspections. However, as discussed previously, a number of stakeholders claimed that inspections by employees not specialized in refrigeration would be far less effective and pointed out that the standard practice for many entities is to hire technicians for inspections. EPA is requiring in this final rule that leak inspections be conducted by certified technicians. EPA's final analysis continues to use the average rate provided by the Bureau of Labor Statistics but has increased the number of hours for each inspection.

Several commenters said that the costs of completely replacing a system if it leaked more than 75 percent of its full charge in two consecutive years were very high, and that these costs would not necessarily fall on those whose poor maintenance practices allowed for excessive emissions. They also commented that the provision was inefficient because all of the system components would need to be replaced, even those that were known not to be leaking, imposing additional costs with no additional benefit.

In response to the potential significant costs that commenters said the proposed ''chronic leaker'' provision would incur, EPA is finalizing a modification of this provision that would instead require reporting to EPA rather than retirement of an appliance. This will greatly reduce the costs on owners of systems with very high emissions. While EPA had not estimated the costs or benefits of the proposed chronic leaker provision, EPA has calculated the total annual reporting burden associated with the final provision to be $126,000.

Two commenters said that requiring all leaks be fixed after a system exceeds the threshold leak rate would lead to high costs with diminishing returns as smaller and smaller leaks were repaired.

EPA maintains that once a system has been evacuated for repair it is a best practice to repair any significant leaks. Doing so makes financial sense because allowing leaks to continue leads to the purchase of more refrigerant, reduced energy efficiency, possible increased service costs if the system must be shut down and repaired again, and increased risk of loss of cooling. However, EPA agrees that some leaks may allow very small amounts of refrigerant to escape and that some leaks are difficult to access or repair. Therefore, taking into account the comments, EPA is not finalizing the requirement that all identified leaks be repaired.

Two commenters claimed that lowering the maximum leak rate for IPR systems to 20 percent would lead to significant economic burden for some businesses, and one of whom said that EPA has not provided adequate benefits to justify this requirement.

EPA has estimated that lowering the maximum rate at which systems may be allowed to leak perpetually without being repaired protects the environment by reducing emissions of pollutants. EPA recognizes that maintenance of IPR systems presents particular challenges. These systems are often very large and complex, making finding leaks more difficult. They can also be extremely costly to shut down to allow for repairs. Therefore, in consideration of comments and other feedback from stakeholders, the Agency is finalizing a leak rate of 30 percent for IPR systems. While this will reduce benefits, we hope to strike a balance between the costs and benefits of this provision that will allow greater flexibility in the management of these systems. Under the proposed leak rate of 20 percent, the EPA estimates benefits of 0.63 $MMTCO_2eq$ with costs of $7 million for leak inspections and repair. With the final leak rate of 30 percent, estimated benefits are 0.44 $MMTCO_2eq$ with costs of $5.5 million.

One commenter stated that there is substantial uncertainty in the transition pathway away from HFCs due to EPA's SNAP rule that changed the listing status for certain substitute refrigerants (80 FR 42870) (''SNAP Program Status Change Rule''). The commenter encouraged EPA to consider a wider range of possible baseline futures when calculating the 2020 and 2025 benefits of the rule.

EPA responds that the Agency has considered that many end users will change the ODS substitutes being used because of the SNAP rule and EPA considered such change when estimating the benefits of this final action. EPA assumed transitions away from substitutes that are no longer acceptable in some end-uses, most notably in commercial refrigeration based on the most likely scenario detailed in *Climate Benefits of the SNAP Program Status Change Rule* found in docket number EPA–HQ–OAR–2014–0198–0239. However, many of the differences between the scenarios in that analysis have little or no effect on the estimated benefits of the present action. For example, the analysis of the SNAP rule looked only at transitions of MVAC units for exports, as it is assumed that the domestic market will already have transitioned away from HFC–134a by 2020 due to EPA's earlier Light Duty Vehicle rule. Therefore the SNAP rule would not be expected to introduce uncertainty in the benefits in 2020 or 2025 in MVAC servicing. As another example, the different SNAP scenarios assumed that low-temperature commercial refrigeration appliances would begin to transition from HFC–134a to R–450A or R–513A in different years, but all three scenarios assume that transition will reach a maximum of 50 percent by 2020. Given the small differences in the expected equipment stock related to uncertainty in the effects of the SNAP Program Status Change Rule, we believe that assuming the effects of the ''most likely'' scenario from the SNAP analysis provides a model universe of appliances that is realistic and that avoids any possibility of double counting benefits between the two rules.

Under the Small Business Regulatory Enforcement Fairness Act (SBREFA), federal agencies must consider the effects regulations may have on small entities. If a rule may have a significant economic impact on a substantial number of small entities (SISNOSE), the Agency would be required to take certain steps to ensure that the interests of small entities were represented in the rulemaking process. To determine if this was necessary, EPA used the model entity analysis to ascertain the likelihood that the revisions would have a SISNOSE. EPA estimates that approximately 740 of the approximately 854,580 affected small businesses could incur costs in excess of 1 percent of annual sales and that fewer than 80 small businesses could incur costs in excess of 3 percent of annual sales. These levels are below the thresholds used in other Title VI rulemakings under which it can be presumed that an action will have no SISNOSE. Nevertheless, EPA consulted numerous stakeholders, including small businesses, in the development of this rule.

The full description of the cost analyses, including sensitivity analyses of key assumptions and alternate options, is included in the technical support document *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program,* which can be found in the docket for this action.

VII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is a significant regulatory action that was submitted to OMB for review. This action was deemed to raise novel legal or policy issues. Any changes made in response to OMB recommendations have been documented in the docket. EPA prepared an economic analysis of the potential costs and benefits associated with this action. This analysis is summarized in Section VI of the notice and is available in the docket.

B. Paperwork Reduction Act

The information collection activities in this rule have been submitted for approval to the Office of Management and Budget (OMB) under the PRA. The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR number 1626.15. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

All recordkeeping and reporting requirements under this program are specifically described in Section IV.L of this notice. In order to facilitate compliance with and enforce the refrigerant management requirements of section 608 of the CAA, EPA requires reporting and recordkeeping by technicians, technician certification programs, refrigerant recovery/recycling equipment testing organizations, refrigerant wholesalers and purchasers, refrigerant reclaimers, refrigeration and air-conditioning equipment owners, and other establishments that perform refrigerant removal, service, or disposal. EPA has used and will continue to use these records and reports to ensure that refrigerant releases are minimized during the recovery, recycling, and reclamation processes. The handling and confidentiality of the reporting requirements follow EPA's confidentiality regulations at 40 CFR 2.201 *et seq.* for assuring computer data security, preventing disclosure, proper storage, and proper disposal.

Respondents/affected entities: Entities required to comply with reporting and recordkeeping requirements include technicians; technician certification programs; refrigerant wholesalers; refrigerant reclaimers; refrigeration and air-conditioning equipment owners and/or operators; and other establishments that perform refrigerant removal, service, or disposal.

Respondent's obligation to respond: Mandatory (40 CFR part 82, subpart F).

Estimated number of respondents: The total number of respondents is estimated to be approximately 861,374.

Frequency of response: The frequency of responses vary from once a year to daily. Public reporting burden for this collection of information is estimated to vary from one minute to 9.4 hours per response, including time for reviewing instructions and gathering, maintaining, and submitting information.

Total estimated burden: The total estimated burden is 580,473 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: The total estimated cost is $34,627,299 (per year). There are no estimated annualized capital or operation & maintenance costs associated with the reporting or recordkeeping requirements.

Much of this burden is already covered by the existing requirements in 40 CFR part 82, subpart F, and the existing ICR, which was last approved by OMB in December 2014. The OMB control number for this information collection is 2060–0256.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. The small entities subject to the requirements of this action are businesses and small governmental jurisdictions that own or service comfort cooling, commercial refrigeration, or IPR equipment. EPA estimates that approximately 740 of the approximately 854,580 affected small businesses could incur costs in excess of 1 percent of annual sales and that fewer than 80 small businesses could incur costs in excess of 3 percent of annual sales. These levels are below the thresholds under which it can be presumed that an action will have no SISNOSE, as used in other Title VI rulemakings. Details of this analysis are presented in the *Analysis of the Economic Impact and Benefits of Final Revisions to the National Recycling and Emission Reduction Program* available in the docket.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This rule supplements the statutory self-effectuating prohibition against venting refrigerants by ensuring that certain service practices are conducted that reduce the emissions of ozone-depleting refrigerants and their substitutes. For example, this rule strengthens the leak repair requirements, establishes recordkeeping requirements for the disposal of appliances containing more than five and less than 50 pounds of refrigerant, and modifies the technician certification program.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This rule does not significantly or uniquely affect the communities of Indian tribal governments. This rule supplements the statutory self-effectuating prohibition against venting refrigerants by ensuring that certain service practices are conducted that reduce the emissions of ozone-depleting refrigerants and their substitutes. For example, this rule strengthens the leak repair requirements, establishes recordkeeping requirements for the disposal of appliances containing more than five and less than 50 pounds of refrigerant, and modifies the technician certification program. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it is not economically significant as defined in Executive Order 12866. Nonetheless, the environmental health or safety risk addressed by this action may have a disproportionate effect on children. Depletion of stratospheric ozone results in greater transmission of the sun's ultraviolet (UV) radiation to the earth's surface. The following studies describe the effects of excessive exposure to UV radiation on children: (1) Westerdahl J, Olsson H, Ingvar C. ''At what age do sunburn episodes play a crucial role for the development of malignant melanoma,'' Eur J Cancer 1994: 30A: 1647–54; (2) Elwood JM Japson J. ''Melanoma and sun exposure: an overview of published studies,'' Int J Cancer 1997; 73:198–203; (3) Armstrong BK, ''Melanoma: childhood or lifelong sun exposure,'' In: Grobb JJ, Stern RS Mackie RM, Weinstock WA, eds. H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution or use of energy.

I. National Technology Transfer and Advancement Act

This action involves technical standards. In some instances, EPA is deciding to use a modified version of an industry standard for purposes of this rule; in others, EPA is deciding to use an industry standard by reference exactly as written.

EPA is incorporating by reference UL 1963, Supplement SB, *Requirements for Refrigerant Recovery/Recycling Equipment Intended for Use with a Flammable Refrigerant,* Fourth Edition, June 1, 2011. This establishes standards for refrigerant recovery and refrigerant recovery/recycling equipment to ensure the equipment can be used safely with flammable refrigerants. The standard is available at *www.comm-2000.com* or by writing to Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106. The cost is $798 for an electronic copy and $998 for hardcopy. UL also offers a subscription service to the Standards Certification Customer Library (SCCL) that allows unlimited access to their standards and related documents. The cost of obtaining this standard is not a significant financial burden for equipment manufacturers. Therefore, EPA concludes that the UL standard being incorporated by reference is reasonably available.

EPA is incorporating by reference standards referenced in AHRI Standard 700–2016. Specifically, these standards are:

—*2008 Appendix C for Analytical Procedures for AHRI Standard 700–2014-Normative,* 2008. This document establishes definitive test procedures for determining the quality of new, reclaimed and/or repackaged refrigerants in support of the standards established in AHRI–700. An electronic copy of the appendix is available at *www.ahrinet.org.* It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—*2012 Appendix D for Gas Chromatograms for AHRI Standard 700–2014- Informative,* 2012, Air-Conditioning, Heating, and Refrigeration Institute. This appendix provides figures for the gas chromatograms used with Appendix C to AHRI Standard 700–2015: Analytical Procedures for AHRI Standard 700–2015, Normative, Specification for Fluorocarbon Refrigerants. An electronic copy of the appendix is available at *www.ahrinet.org.* It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—Federal Specification for ''Fluorocarbon Refrigerants,'' BB–F–1421 B, dated March 5, 1982. This section of this standard establishes a method to determine the boiling point and boiling point range of a refrigerant. The standard is available in the docket for this rulemaking. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—GPA STD–2177, *Analysis of Natural Gas Liquid Mixtures Containing Nitrogen and Carbon Dioxide by Gas Chromatography,* 2013, Gas Processors Association. This standard establishes methods for analyzing demethanized liquid hydrocarbon streams containing nitrogen/air and carbon dioxide, and purity products such as ethane/propane mix that fall within compositional ranges indicated in the standard. The standard is available at *www.techstreet.com* or by writing to Techstreet, 6300 Interfirst Drive, Ann Arbor, MI 48108. The cost of this standard is $55 for an electronic copy or $65 for a printed edition. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—ASTM Standard D1296–01–2012, *Standard Test Method for Odor of Volatile Solvents and Diluents,* July 1, 2012, ASTM International. This test method covers a comparative procedure for observing the characteristic and residual odors of volatile organic solvents and diluents to determine their odor acceptability in a solvent system. The standard is available at *www.astm.org* or by writing to ASTM, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959. The cost of this standard is $39. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

EPA is incorporating by reference standards referenced in AHRI Standard 740–2016.

Specifically, these standards are:

—ANSI/ASHRAE Standard 63.2–1996 (RA 2010) Method of Testing Liquid-Line Filter Drier Filtration Capability, 2010, American National Standards Institute/American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. The purpose of this standard is to prescribe a laboratory test method for evaluating the filtration capability of filters and filter driers used in liquid lines of refrigeration systems. The standard is available at *www.ashrae.org* or by mail at AHSRAE, 1791 Tullie Circle NE., Atlanta, GA 30329. The cost is $39 for an electronic copy or printed edition. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—UL Standard 1963–2011, *Refrigerant Recovery/Recycling Equipment,* Fourth Edition, 2011, American National Standards Institute/ Underwriters Laboratories, Inc. This standard establishes safety requirements for and methods to evaluate refrigerant recovery and refrigerant recovery/recycling equipment. The standard is available at *http://www.comm-2000.com* or by writing to Comm 2000, 151 Eastern Avenue, Bensenville, IL 60106. The cost is $798 for an electronic copy and $998 for hardcopy. UL also offers a subscription service to the Standards Certification Customer Library (SCCL) that allows unlimited access to their standards and related documents. The cost of obtaining this standard is not a significant financial burden for equipment manufacturers. Therefore, EPA concludes that the UL standard being incorporated by reference is reasonably available.

—AHRI Standard 110–2016, *Air-Conditioning, Heating and Refrigerating Equipment Nameplate Voltages,* 2016, Air-Conditioning, Heating, and Refrigeration Institute. This standard establishes voltage rating requirements, equipment performance requirements, and conformance conditions for air-conditioning, heating, and refrigerating equipment. A free electronic copy of this standard is available at *www.ahrinet.org.* It is also available by mail at Air-Conditioning, Heating, and Refrigeration Institute (AHRI), 2111 Wilson Boulevard, Suite 500, Arlington, VA 22201. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

—International Standard IEC 60038, *IEC Standard Voltages,* Edition 7.0, 2009–06, International Electrotechnical Commission. This standard specifies standard voltage values which are intended to serve as preferential values for the nominal voltage of electrical supply systems, and as reference values for equipment and system design. The standard is available at *http://www.iec.ch* or by writing to Techstreet, 6300 Interfirst Drive, Ann Arbor, MI 48108. The cost of this standard is $50. The cost of obtaining this standard is not a significant financial burden. Therefore, EPA concludes that the standard being incorporated by reference is reasonably available.

EPA is not incorporating by reference California Air Resources Board, *Test Procedure for Leaks from Small Containers of Automotive Refrigerant,* TP–503, as amended January 5, 2010. Rather EPA is basing the content found in appendix E on this standard. This standard establishes methods for assessing the leak rate from small containers of refrigerant. A copy of this standard is available in the docket and *www.arb.ca.gov/regact/2009/hfc09/hfc09.htm.www.arb.ca.gov/regact/2009/hfc09/hfc09.htm.*

At this time EPA is not finalizing an incorporation by reference for the ASHRAE terminology found at *https://www.ashrae.org/resources—publications/free-resources/ashrae-terminology.*

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

EPA believes this action will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations because it affects the level of environmental protection equally for all affected populations. This rule amends the leak repair requirements for appliances using ozone-depleting substances, thereby protecting human health and the environment from increased amounts of UV radiation and increased incidence of skin cancer. The effects of exposure to UV radiation and the estimated reduction in emissions of ozone-depleting substances from this rule is contained in Section II.D.1 of this notice.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 82

Environmental protection, Air pollution control, Chemicals, Incorporation by reference, Reporting and recordkeeping requirements.

Dated: September 26, 2016.

Gina McCarthy,

Administrator.

For the reasons set forth in the preamble, the Environmental Protection Agency amends 40 CFR part 82 as follows:

PART 82—PROTECTION OF STRATOSPHERIC OZONE

■ 1. The authority citation for part 82 continues to read as follows:

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

■ 2. Revise § 82.150 to read as follows:

§ 82.150 Purpose and scope.

(a) The purpose of this subpart is to reduce emissions of class I and class II refrigerants and their non-exempt substitutes to the lowest achievable level by maximizing the recapture and recycling of such refrigerants during the maintenance, service, repair, and disposal of appliances and restricting the sale of refrigerants consisting in whole or in part of a class I or class II ozone-depleting substance or their non-exempt substitutes in accordance with Title VI of the Clean Air Act.

(b) This subpart applies to any person maintaining, servicing, or repairing appliances containing class I, class II or non-exempt substitute refrigerants. This subpart also applies to persons disposing of such appliances (including small appliances and motor vehicle air conditioners), refrigerant reclaimers, technician certifying programs, appliance owners and operators, manufacturers of appliances, manufacturers of recovery and/or recycling equipment, approved recovery and/or recycling equipment testing organizations, and persons buying, selling, or offering to sell class I, class II, or non-exempt substitute refrigerants.

■ 3. Amend § 82.152 by:

■ a. Adding definitions for ''Batch,'' ''Class I,'' ''Class II,'' ''Comfort cooling,'' ''Component,'' ''Leak inspection,'' ''Mothball,'' ''Normal operating characteristics and conditions,'' ''Reclaim,'' ''Recover,'' ''Recycle,'' ''Retire,'' ''Retrofit,'' ''Seasonal variance,'' ''Self-sealing valve,'' and ''System receiver.''

■ b. Revising the definitions for ''Appliance,'' ''Apprentice,'' ''Commercial refrigeration,'' ''Custom-built,'' ''Disposal,'' ''Follow-up verification test,'' ''Full charge,'' ''High-pressure appliance,'' ''Industrial process refrigeration,'' ''Industrial process shutdown,'' ''Initial verification test,'' ''Leak rate,'' ''Low-loss fitting,'' ''Low-pressure appliance,'' ''Medium-pressure appliance,'' ''MVAC-like appliance,'' ''One-time expansion device,'' ''Opening an appliance,'' ''Recovery efficiency,'' ''Refrigerant,'' ''Self-contained recovery equipment,'' ''Small appliance,'' ''Substitute,'' ''Technician,'' and ''Very high-pressure appliance.''

■ c. Removing the definitions for ''Critical Component,'' ''Normal operating characteristics or conditions,'' ''Normally containing a quantity of refrigerant,'' ''Reclaim refrigerant,'' ''Recover refrigerant,'' ''Recycle refrigerant,'' ''Suitable replacement refrigerant,'' ''System mothballing,'' and ''Voluntary certification program.''

The revisions and additions to read as follows:

§ 82.152 Definitions.

As used in this subpart, the term:

Appliance means any device which contains and uses a class I or class II substance or substitute as a refrigerant and which is used for household or commercial purposes, including any air conditioner, motor vehicle air conditioner, refrigerator, chiller, or freezer. For a system with multiple circuits, each independent circuit is considered a separate appliance.

Apprentice means any person who is currently registered as an apprentice in maintenance, service, repair, or disposal of appliances with the U.S. Department of Labor's Office of Apprenticeship (or a State Apprenticeship Council recognized by the Office of Apprenticeship). A person may only be an apprentice for two years from the date of first registering with that office.

* * * * *

Batch means a single bulk cylinder of refrigerant after all reclamation has been completed prior to packaging or shipping to the market.

Class I refers to an ozone-depleting substance that is listed in 40 CFR part 82 subpart A, appendix A.

Class II refers to an ozone-depleting substance that is listed in 40 CFR part 82 subpart A, appendix B.

Comfort cooling means the air-conditioning appliances used to provide cooling in order to control heat and/or humidity in occupied facilities including but not limited to residential, office, and commercial buildings. Comfort cooling appliances include but are not limited to chillers, commercial split systems, and packaged roof-top units.

Commercial refrigeration means the refrigeration appliances used in the retail food and cold storage warehouse sectors. Retail food appliances include the refrigeration equipment found in supermarkets, convenience stores, restaurants and other food service establishments. Cold storage includes the refrigeration equipment used to store meat, produce, dairy products, and other perishable goods.

Component means a part of the refrigerant circuit within an appliance including, but not limited to, compressors, condensers, evaporators, receivers, and all of its connections and subassemblies.

Custom-built means that the industrial process equipment or any of its components cannot be purchased and/or installed without being uniquely designed, fabricated and/or assembled to satisfy a specific set of industrial process conditions.

Disposal means the process leading to and including:

(1) The discharge, deposit, dumping or placing of any discarded appliance into or on any land or water;

(2) The disassembly of any appliance for discharge, deposit, dumping or placing of its discarded component parts into or on any land or water;

(3) The vandalism of any appliance such that the refrigerant is released into the environment or would be released into the environment if it had not been recovered prior to the destructive activity;

(4) The disassembly of any appliance for reuse of its component parts; or

(5) The recycling of any appliance for scrap.

Follow-up verification test means those tests that involve checking the repairs to an appliance after a successful initial verification test and after the appliance has returned to normal operating characteristics and conditions to verify that the repairs were successful. Potential methods for follow-up verification tests include, but are not limited to, the use of soap bubbles as appropriate, electronic or ultrasonic leak detectors, pressure or vacuum tests, fluorescent dye and black light, infrared or near infrared tests, and handheld gas detection devices.

Full charge means the amount of refrigerant required for normal operating characteristics and conditions of the appliance as determined by using one or a combination of the following four methods:

(1) Use of the equipment manufacturer's determination of the full charge;

(2) Use of appropriate calculations based on component sizes, density of refrigerant, volume of piping, and other relevant considerations;

(3) Use of actual measurements of the amount of refrigerant added to or evacuated from the appliance, including for seasonal variances; and/or

(4) Use of an established range based on the best available data regarding the normal operating characteristics and conditions for the appliance, where the midpoint of the range will serve as the full charge.

High-pressure appliance means an appliance that uses a refrigerant with a liquid phase saturation pressure between 170 psia and 355 psia at 104 °F. Examples include but are not limited to appliances using R–22, R–407A, R–407C, R–410A, and R–502.

Industrial process refrigeration means complex customized appliances that are directly linked to the processes used in, for example, the chemical, pharmaceutical, petrochemical, and manufacturing industries. This sector also includes industrial ice machines, appliances used directly in the generation of electricity, and ice rinks. Where one appliance is used for both industrial process refrigeration and other applications, it will be considered industrial process refrigeration equipment if 50 percent or more of its operating capacity is used for industrial process refrigeration.

Industrial process shutdown means when an industrial process or facility temporarily ceases to operate or manufacture whatever is being produced at that facility.

Initial verification test means those leak tests that are conducted after the repair is finished to verify that a leak or leaks have been repaired before refrigerant is added back to the appliance.

Leak inspection means the examination of an appliance to determine the location of refrigerant leaks. Potential methods include, but are not limited to, ultrasonic tests, gas-imaging cameras, bubble tests as appropriate, or the use of a leak detection device operated and maintained according to manufacturer guidelines. Methods that determine whether the appliance is leaking refrigerant but not the location of a leak, such as standing pressure/vacuum decay tests, sight glass checks, viewing receiver levels, pressure checks, and charging charts, must be used in conjunction with methods that can determine the location of a leak.

Leak rate means the rate at which an appliance is losing refrigerant, measured between refrigerant charges. The leak rate is expressed in terms of the percentage of the appliance's full charge that would be lost over a 12-month period if the current rate of loss were to continue over that period. The rate must be calculated using one of the following methods. The same method must be used for all appliances subject to the leak repair requirements located at an operating facility.

(1) Annualizing Method. (i) Step 1. Take the number of pounds of refrigerant added to the appliance to return it to a full charge, whether in one addition or if multiple additions related to same leak, and divide it by the number of pounds of refrigerant the appliance normally contains at full charge;

(ii) Step 2. Take the shorter of the number of days that have passed since the last day refrigerant was added or 365 days and divide that number by 365 days;

(iii) Step 3. Take the number calculated in Step 1 and divide it by the number calculated in Step 2; and

(iv) Step 4. Multiply the number calculated in Step 3 by 100 to calculate a percentage. This method is summarized in the following formula:

$$\begin{array}{c}\text{Leak rate}\\ \text{(\% per year)}\end{array} = \frac{\text{pounds of refrigerant added}}{\text{pounds of refrigerant in full charge}} \times \frac{365\ \textit{days/year}}{\textit{shorter}\text{ of: \# days since refrigerant last added or 365 days}} \times 100\%$$

(2) Rolling Average Method. (i) Step 1. Take the sum of the pounds of refrigerant added to the appliance over the previous 365-day period (or over the period that has passed since the last successful follow-up verification test

showing all identified leaks in the appliance were repaired, if that period is less than one year);

(ii) Step 2. Divide the result of Step 1 by the pounds of refrigerant the appliance normally contains at full charge; and

(iii) Step 3. Multiply the result of Step 2 by 100 to obtain a percentage. This method is summarized in the following formula:

$$\underset{\text{(\% per year)}}{\text{Leak rate}} = \frac{\text{pounds of refrigerant added over past 365 days (or since the last successful follow-up verification test showing all identified leaks in the appliance were repaired, if that period is less than one year)}}{\text{pounds of refrigerant in full charge}} \times 100\%$$

Low-loss fitting means any device that is intended to establish a connection between hoses, appliances, or recovery and/or recycling machines and that is designed to close automatically or to be closed manually when disconnected, minimizing the release of refrigerant from hoses, appliances, and recovery and/or recycling machines.

Low-pressure appliance means an appliance that uses a refrigerant with a liquid phase saturation pressure below 45 psia at 104 °F. Examples include but are not limited to appliances using R–11, R–123, R–113, and R–245fa.

* * * * *

Medium-pressure appliance means an appliance that uses a refrigerant with a liquid phase saturation pressure between 45 psia and 170 psia at 104 °F. Examples include but are not limited to appliances using R–114, R–124, R–12, R–134a, and R–500.

Mothball means to evacuate refrigerant from an appliance, or the affected isolated section or component of an appliance, to at least atmospheric pressure, and to temporarily shut down that appliance.

* * * * *

MVAC-like appliance means a mechanical vapor compression, open-drive compressor appliance with a full charge of 20 pounds or less of refrigerant used to cool the driver's or passenger's compartment of off-road vehicles or equipment. This includes, but is not limited to, the air-conditioning equipment found on agricultural or construction vehicles. This definition is not intended to cover appliances using R–22 refrigerant.

Normal operating characteristics and conditions means appliance operating temperatures, pressures, fluid flows, speeds, and other characteristics, including full charge of the appliance, that would be expected for a given process load and ambient condition during normal operation. Normal operating characteristics and conditions are marked by the absence of atypical conditions affecting the operation of the appliance.

One-time expansion device means an appliance that relies on the release of its refrigerant charge to the environment in order to provide a cooling effect. These are typically single releases but could also include products that are designed to release refrigerant to the environment through multiple individual charges.

Opening an appliance means any maintenance, service, repair, or disposal of an appliance that would release any refrigerant in the appliance to the atmosphere. Connecting and disconnecting hoses and gauges to measure pressures, add refrigerant, or recover refrigerant from the appliance are not considered ''opening an appliance.''

* * * * *

Reclaim means to reprocess recovered refrigerant to all of the specifications in appendix A of this subpart (based on AHRI Standard 700–2016, *Specifications for Refrigerants*) that are applicable to that refrigerant and to verify that the refrigerant meets these specifications using the analytical methodology prescribed in section 5 of appendix A of this subpart.

Recover means to remove refrigerant in any condition from an appliance and to store it in an external container without necessarily testing or processing it in any way.

Recovery efficiency means the percentage of refrigerant in an appliance that is recovered by a piece of recovery and/or recycling equipment.

Recycle, when referring to refrigerant, means to extract refrigerant from an appliance (except MVACs) and clean it for reuse in equipment of the same owner without meeting all of the requirements for reclamation. In general, recycled refrigerant is cleaned using oil separation and single or multiple passes through devices, such as replaceable core filter-driers, which reduce moisture, acidity, and particulate matter.

Refrigerant means, for purposes of this subpart, any substance, including blends and mixtures, consisting in part or whole of a class I or class II ozone-depleting substance or substitute that is used for heat transfer purposes and provides a cooling effect.

Refrigerant circuit means the parts of an appliance that are normally connected to each other (or are separated only by internal valves) and are designed to contain refrigerant.

Retire, when referring to an appliance, means the removal of the refrigerant and the disassembly or impairment of the refrigerant circuit such that the appliance as a whole is rendered unusable by any person in the future.

Retrofit means to convert an appliance from one refrigerant to another refrigerant. Retrofitting includes the conversion of the appliance to achieve system compatibility with the new refrigerant and may include, but is not limited to, changes in lubricants, gaskets, filters, driers, valves, o-rings or appliance components.

Seasonal variance means the removal of refrigerant from an appliance due to a change in ambient conditions caused by a change in season, followed by the subsequent addition of an amount that is less than or equal to the amount of refrigerant removed in the prior change in season, where both the removal and addition of refrigerant occurs within one consecutive 12-month period.

Self-contained recovery equipment means refrigerant recovery and/or recycling equipment that is capable of removing the refrigerant from an appliance without the assistance of components contained in the appliance.

Self-sealing valve means a valve affixed to a container of refrigerant that automatically seals when not dispensing refrigerant and meets or exceeds established performance criteria as identified in § 82.154(c)(2).

Small appliance means any appliance that is fully manufactured, charged, and hermetically sealed in a factory with five (5) pounds or less of refrigerant, including, but not limited to, refrigerators and freezers (designed for home, commercial, or consumer use), medical or industrial research refrigeration equipment, room air conditioners (including window air conditioners, portable air conditioners, and packaged terminal air heat pumps), dehumidifiers, under-the-counter ice makers, vending machines, and drinking water coolers.

Substitute means any chemical or product, whether existing or new, that is used as a refrigerant to replace a class I or II ozone-depleting substance. Examples include, but are not limited to hydrofluorocarbons, perfluorocarbons, hydrofluoroolefins, hydrofluoroethers, hydrocarbons, ammonia, carbon dioxide, and blends thereof. As used in this subpart, the term ''exempt substitutes'' refers to certain substitutes when used in certain end-uses that are specified in § 82.154(a)(1) as exempt from the venting prohibition and the requirements of this subpart, and the term ''non-exempt substitutes'' refers to all other substitutes and end-uses not so specified in § 82.154(a)(1).

* * * * *

System receiver means the isolated portion of the appliance, or a specific vessel within the appliance, that is used to hold the refrigerant charge during the servicing or repair of that appliance.

Technician means any person who in the course of maintenance, service, or repair of an appliance (except MVACs) could be reasonably expected to violate the integrity of the refrigerant circuit and therefore release refrigerants into the environment. Technician also means any person who in the course of disposal of an appliance (except small appliances, MVACs, and MVAC-like appliances) could be reasonably expected to violate the integrity of the refrigerant circuit and therefore release refrigerants from the appliances into the environment. Activities reasonably expected to violate the integrity of the refrigerant circuit include but are not limited to: Attaching or detaching hoses and gauges to and from the appliance; adding or removing refrigerant; adding or removing components; and cutting the refrigerant line. Activities such as painting the appliance, rewiring an external electrical circuit, replacing insulation on a length of pipe, or tightening nuts and bolts are not reasonably expected to violate the integrity of the refrigerant circuit. Activities conducted on appliances that have been properly evacuated pursuant to § 82.156 are not reasonably expected to release refrigerants unless the activity includes adding refrigerant to the appliance. Technicians could include but are not limited to installers, contractor employees, in-house service personnel, and owners and/or operators of appliances.

Very high-pressure appliance means an appliance that uses a refrigerant with a critical temperature below 104 °F or with a liquid phase saturation pressure above 355 psia at 104 °F. Examples include but are not limited to appliances using R–13, R–23, R–503, R–508A, and R–508B.

■ 4. Revise § 82.154 to read as follows:

§ 82.154 Prohibitions.

(a) *Venting Prohibition.* (1) No person maintaining, servicing, repairing, or disposing of an appliance or industrial process refrigeration may knowingly vent or otherwise release into the environment any refrigerant from such appliances. Notwithstanding any other provision of this subpart, the following substitutes in the following end-uses are exempt from this prohibition and from the requirements of this subpart:

(i) Carbon dioxide in any application;

(ii) Nitrogen in any application;

(iii) Water in any application;

(iv) Ammonia in commercial or industrial process refrigeration or in absorption units;

(v) Chlorine in industrial process refrigeration (processing of chlorine and chlorine compounds);

(vi) Hydrocarbons in industrial process refrigeration (processing of hydrocarbons);

(vii) Ethane (R–170) in very low temperature refrigeration equipment and equipment for non-mechanical heat transfer;

(viii) Propane (R–290) in retail food refrigerators and freezers (stand-alone units only); household refrigerators, freezers, and combination refrigerators and freezers; self-contained room air conditioners for residential and light commercial air-conditioning; heat pumps; and vending machines;

(ix) Isobutane (R–600a) in retail food refrigerators and freezers (stand-alone units only); household refrigerators, freezers, and combination refrigerators and freezers; and vending machines;

(x) R–441A in retail food refrigerators and freezers (stand-alone units only); household refrigerators, freezers, and combination refrigerators and freezers; self-contained room air conditioners for residential and light commercial air-conditioning; heat pumps; and vending machines.

(2) *De minimis* releases associated with good faith attempts to recycle or recover refrigerants are not subject to this prohibition. Except for exempt substitutes, refrigerant releases are *de minimis* only if they occur when:

(i) The applicable practices in § 82.155, § 82.156, and § 82.157 are observed, recovery and/or recycling machines that meet the requirements in § 82.158 are used whenever refrigerant is removed from an appliance, the technician certification provisions in § 82.161 are observed, and the reclamation requirements in § 82.164 are observed; or

(ii) The requirements in subpart B of this part are observed.

(3) The knowing release of a class I or class II refrigerant or a non-exempt substitute refrigerant after its recovery from an appliance is a violation of the venting prohibition.

(b) No person may maintain, service, repair, or dispose of an appliance containing a class I or class II refrigerant or a non-exempt substitute refrigerant without:

(1) Observing the applicable practices in § 82.155, § 82.156, and § 82.157; and

(2) Using recovery and/or recycling equipment that is certified for that type of refrigerant and appliance under § 82.158.

(c) *Sales Restriction.* (1) No person may sell or distribute, or offer for sale or distribution, any substance that consists in whole or in part of a class I or class II substance or, starting on January 1, 2018, any non-exempt substitute for use as a refrigerant unless:

(i) The buyer has been certified as a Type I, Type II, Type III, or Universal technician under § 82.161;

(ii) The buyer employs at least one technician who is certified as a Type I, Type II, Type III, or Universal technician under § 82.161 and provides proof of such to the seller;

(iii) The buyer has been certified in accordance with 40 CFR part 82, subpart B and the refrigerant is acceptable for use in MVACs under 40 CFR part 82, subpart G;

(iv) The buyer employs at least one person who is certified under 40 CFR part 82, subpart B, and provides proof of such to the seller and the refrigerant is acceptable for use in MVACs under 40 CFR part 82, subpart G. Nothing in this provision relieves persons of the requirements of § 82.34(b) or § 82.42(b);

(v) The refrigerant is sold only for eventual resale to persons certified under § 82.161 or 40 CFR part 82, subpart B or to appliance manufacturers (*e.g.,* sold by a manufacturer to a wholesaler, sold by a technician to a reclaimer);

(vi) The refrigerant is sold to an appliance manufacturer;

(vii) The refrigerant is contained in an appliance with a fully assembled refrigerant circuit or an appliance component;

(viii) The refrigerant is charged into an appliance by a certified technician or an apprentice during maintenance, service, or repair of the appliance; or

(ix) The non-exempt substitute refrigerant is intended for use in an MVAC and is sold in a container designed to hold two pounds or less of refrigerant, has a unique fitting, and has a self-sealing valve.

(2) *Self-sealing valve specifications.* This provision applies starting January 1, 2018, for all containers holding two pounds or less of non-exempt substitute refrigerant for use in an MVAC that are manufactured or imported on or after that date.

(i) Each container holding two pounds or less of non-exempt substitute refrigerant for use in an MVAC must be equipped with a single self-sealing valve that automatically closes and seals when not dispensing refrigerant.

(ii) The leakage rate from each container must not exceed 3.00 grams per year when the self-sealing valve is closed. This leakage rate applies to new, full containers as well as containers that may be partially full.

(iii) The leakage rate must be determined using the standards described in appendix E (incorporated by reference, see § 82.168).

(iv) All testing to demonstrate compliance with this paragraph must be conducted by an independent test laboratory in the United States. For purposes of this requirement, an independent test laboratory is one that is not owned, operated, or affiliated with the applicant certifying equipment and/or products.

(3) *Recordkeeping.* (i) Persons who sell or distribute, or offer to sell or distribute, any class I or class II refrigerant, or, starting on January 1, 2018, any non-exempt substitute refrigerant must keep invoices that indicate the name of the purchaser, the date of sale, and the quantity of refrigerant purchased unless they are selling exempt substitutes (those substitutes used in the end-uses specified as exempt in paragraph (a)(1) of this section) or small cans of MVAC refrigerant in accordance with paragraph (c)(1)(ix) of this section. In instances where the buyer employs a person certified under § 82.161 or 40 CFR part 82, subpart B, the seller must keep the documentation provided by the buyer to demonstrate such employment. All records must be kept for three years.

(ii) Electronic or paper copies of all records described in appendix E must be maintained by manufacturers of containers holding two pounds or less of non-exempt substitute refrigerant for use in an MVAC to verify self-sealing valves meet the requirements specified in paragraph (c)(2) of this section. All records must be kept for three years after each purchase.

(d) *Sale of Used Refrigerant.* No person may sell or distribute, or offer for sale or distribution, for use as a refrigerant any class I or class II substance or non-exempt substitute consisting wholly or in part of used refrigerant unless the refrigerant:

(1) Has been reclaimed by a person who has been certified as a reclaimer under § 82.164;

(2) was used only in an MVAC or MVAC-like appliance and is to be used only in an MVAC or MVAC-like appliance and recycled in accordance with 40 CFR part 82, subpart B;

(3) is contained in an appliance that is sold or offered for sale together with a fully assembled refrigerant circuit;

(4) is being transferred between or among a parent company and one or more of its subsidiaries, or between or among subsidiaries having the same parent company; or

(5) is being transferred between or among a Federal agency or department and a facility or facilities owned by the same Federal agency or department.

(e) *Manufacture and Sale of Appliances.* (1) No person may sell or distribute, or offer for sale or distribution, any appliance (except small appliances and appliances containing only refrigerants that have been exempted under paragraph (a)(1) of this section) unless it is equipped with a servicing aperture to facilitate the removal of refrigerant at servicing and disposal.

(2) No person may sell or distribute, or offer for sale or distribution, any small appliance (except appliances containing only refrigerants that have been exempted under paragraph (a)(1) of this section) unless it is equipped with a process stub to facilitate the removal of refrigerant at servicing and disposal.

(f) *One-time expansion devices.* No person may manufacture or import a one-time expansion device unless the only refrigerants it contains have been exempted under paragraph (a)(1) of this section.

(g) Rules stayed for consideration. Notwithstanding any other provisions of this subpart, the effectiveness of 40 CFR 82.154(c), only as it applies to refrigerant contained in appliances without fully assembled refrigerant circuits, is stayed from April 27, 1995, until EPA takes final action on its reconsideration of these provisions. EPA will publish any such final action in the **Federal Register**.

■ 5. Add § 82.155 to subpart F to read as follows:

§ 82.155 Safe disposal of appliances.

Until January 1, 2018, this section applies only to disposal of appliances containing class I and class II refrigerants. Starting on January 1, 2018, this section applies to disposal of appliances containing any class I or class II refrigerant or any non-exempt substitute refrigerant.

(a) Persons recovering refrigerant from a small appliance, MVAC, or MVAC-like appliance for purposes of disposal of these appliances must evacuate refrigerant to the levels in § 82.156(b) through (d) using recovery equipment that meets the standards in § 82.158(e) through (g), or 40 CFR part 82 subpart B, as applicable.

(b) The final processor—*i.e.,* persons who take the final step in the disposal process (including but not limited to scrap recyclers and landfill operators) of a small appliance, MVAC, or MVAC-like appliance—must either:

(1) Recover any remaining refrigerant from the appliance in accordance with paragraph (a) of this section; or

(2) Verify using a signed statement or a contract that all refrigerant that had not leaked previously has been recovered from the appliance or shipment of appliances in accordance with paragraph (a) of this section. If using a signed statement, it must include the name and address of the person who recovered the refrigerant and the date the refrigerant was recovered. If using a signed contract between the supplier and the final processor, it must either state that the supplier will recover any remaining refrigerant from the appliance or shipment of appliances in accordance with paragraph (a) of this section prior to delivery or verify that the refrigerant had been properly recovered prior to receipt by the supplier.

(i) It is a violation of this subpart to accept a signed statement or contract if the person receiving the statement or contract knew or had reason to know that the signed statement or contract is false.

(ii) The final processor must notify suppliers of appliances that refrigerant must be properly recovered in accordance with paragraph (a) of this section before delivery of the items to the facility. The form of this notification may be signs, letters to suppliers, or other equivalent means.

(iii) If all the refrigerant has leaked out of the appliance, the final processor must obtain a signed statement that all the refrigerant in the appliance had leaked out prior to delivery to the final processor and recovery is not possible. ''Leaked out'' in this context means those situations in which the refrigerant has escaped because of system failures, accidents, or other unavoidable occurrences not caused by a person's negligence or deliberate acts such as cutting refrigerant lines.

(c) *Recordkeeping.* The final processor of a small appliance, MVAC, or MVAC-like appliance must keep a copy of all the signed statements or contracts obtained under paragraph (b)(2) of this section on site, in hard copy or in electronic format, for three years.

■ 6. Amend § 82.156 by:
■ (a) Revising the section heading;
■ (b) Adding an introductory paragraph;
■ (c) Revising paragraphs (a) through (h); and
■ (d) Adding paragraph (i) introductory text; and
■ (e) Adding paragraph (j).

The revisions and additions to read as follows:

§ 82.156 Proper evacuation of refrigerant from appliances.

Until January 1, 2018, this section applies only to evacuation of refrigerant from appliances containing class I or class II refrigerants. Starting on January 1, 2018, this section applies to evacuation of refrigerant from appliances containing any class I or class II refrigerant or any non-exempt substitute refrigerant, excluding paragraph (i) of this section which applies only to appliances containing class I or class II refrigerants until January 1, 2019. Starting January 1, 2019, the provisions in § 82.157 apply in lieu of paragraph (i) of this section.

(a) *Appliances (except small appliances, MVACs, and MVAC-like appliances).* Before opening appliances (except small appliances, MVACs, and MVAC-like appliances) or disposing of such appliances, technicians must evacuate the refrigerant, including all the liquid refrigerant, to the levels in Table 1 using a recovery and/or recycling machine certified pursuant to § 82.158 unless the situations in paragraphs (a)(1) or (2) of this section apply. Technicians may evacuate either the entire appliance or the part to be serviced, if the refrigerant in the part can be isolated to a system receiver. A technician must verify that the applicable level of evacuation has been reached in the appliance or the part before it is opened.

(1) If evacuation of the appliance to the atmosphere is not to be performed after completion of the maintenance, service, or repair, and if the maintenance, service, or repair is not major as defined at § 82.152, the appliance must:

(i) Be evacuated to a pressure no higher than 0 psig before it is opened if it is a medium-, high- or very high-pressure appliance;

(ii) Be pressurized to a pressure no higher than 0 psig before it is opened if it is a low-pressure appliance. Persons must cover openings when isolation is not possible. Persons pressurizing low-pressure appliances that use refrigerants with boiling points at or below 85 degrees Fahrenheit at 29.9 inches of mercury (standard atmospheric pressure), must not use methods such as nitrogen that require subsequent purging. Persons pressurizing low-pressure appliances that use refrigerants with boiling points above 85 degrees Fahrenheit at 29.9 inches of mercury, must use heat to raise the internal pressure of the appliance as much as possible, but may use nitrogen to raise the internal pressure of the appliance from the level attainable through use of heat to atmospheric pressure; or

(iii) For the purposes of oil changes, be evacuated or pressurized to a pressure no higher than 5 psig, before it is opened; or drain the oil into a system receiver to be evacuated or pressurized to a pressure no higher than 5 psig.

(2) If leaks in the appliance make evacuation to the levels in Table 1 unattainable or would substantially contaminate the refrigerant being recovered, persons opening or disposing of the appliance must:

(i) Isolate leaking from non-leaking components wherever possible;

(ii) Evacuate non-leaking components to be opened or disposed of to the levels specified in Table 1; and

(iii) Evacuate leaking components to be opened or disposed of to the lowest level that can be attained without substantially contaminating the refrigerant. This level may not exceed 0 psig.

(3) *Recordkeeping.* As of January 1, 2018, technicians evacuating refrigerant from appliances with a full charge of more than 5 and less than 50 pounds of refrigerant for purposes of disposal of that appliance must keep records documenting the following for three years:

(i) The company name, location of the appliance, date of recovery, and type of refrigerant recovered for each appliance;

(ii) The total quantity of refrigerant, by type, recovered from all disposed appliances in each calendar month; and

(iii) The quantity of refrigerant, by type, transferred for reclamation and/or destruction, the person to whom it was transferred, and the date of transfer.

TABLE 1—REQUIRED LEVELS OF EVACUATION FOR APPLIANCES

[Except for small appliances, MVACs, and MVAC-like appliances]

Type of appliance	Inches of Hg vacuum (relative to standard atmospheric pressure of 29.9 inches Hg): Using recovery and/or recycling equipment manufactured or imported before November 15, 1993	Inches of Hg vacuum (relative to standard atmospheric pressure of 29.9 inches Hg): Using recovery and/or recycling equipment manufactured or imported on or after November 15, 1993
Very high-pressure appliance	0	0.
High-pressure appliance, or isolated component of such appliance, with a full charge of less than 200 pounds of refrigerant.	0	0.
High-pressure appliance, or isolated component of such appliance, with a full charge of 200 pounds or more of refrigerant.	4	10.
Medium-pressure appliance, or isolated component of such appliance, with a full charge of less than 200 pounds of refrigerant.	4	10.
Medium-pressure appliance, or isolated component of such appliance, with a full charge of 200 pounds or more of refrigerant.	4	15.
Low-pressure appliance	25 mm Hg absolute	25 mm Hg absolute.

(b) *Small appliances.* Before opening a small appliance or when disposing of a small appliance, persons must recover refrigerant, using a recovery and/or recycling machine certified pursuant to § 82.158, according to the following conditions:

(1) When using recovery equipment manufactured before November 15, 1993, recover 80 percent of the refrigerant in the small appliance; or

(2) When using recovery equipment manufactured on or after November 15, 1993, recover 90 percent of the refrigerant in the appliance when the compressor in the appliance is functioning, or 80 percent of the refrigerant in the appliance when the compressor in the appliance is not functioning; or

(3) Evacuate the appliance to four inches of mercury vacuum.

(c) *MVAC-like appliances.* Persons may only open MVAC-like appliances while properly using, as defined at § 82.32(e), recovery and/or recycling equipment certified pursuant to § 82.158(f) or § 82.36, as applicable. All persons recovering refrigerant from MVAC-like appliances for purposes of disposal of these appliances must evacuate the appliance in accordance with 40 CFR part 82, subpart B or reduce the system pressure to or below 102 mm of mercury vacuum.

(d) *MVACs.* All persons recovering refrigerant from MVACs for purposes of disposal of these appliances must evacuate the appliance in accordance with 40 CFR part 82, subpart B or reduce the system pressure to or below 102 mm of mercury vacuum.

(e) System-dependent equipment may not be used with appliances with a full charge of more than 15 pounds of refrigerant, unless the system-dependent equipment is permanently attached to the appliance as a pump-out unit.

(f) Persons who maintain, service, repair, or dispose of only appliances that they own and that contain pump-out units are exempt from the requirement to use certified, self-contained recovery and/or recycling equipment.

(g) All recovery and/or recycling equipment must be used in accordance with the manufacturer's directions unless such directions conflict with the requirements of this subpart.

(h) Refrigerant may be returned to the appliance from which it is recovered or to another appliance owned by the same person without being recycled or reclaimed, unless the appliance is an MVAC or MVAC-like appliance.

(i) The provisions in this paragraph (i) apply to owners and operators of appliances containing 50 or more pounds of class I and class II refrigerants only until January 1, 2019. The definitions in paragraph (j) of this section apply for purposes of this paragraph (i) in lieu of the definitions in § 82.152.

* * * * *

(j) *Definitions for the leak repair provisions in 82.156(i).* These definitions are not applicable to any other portion of subpart F other than 82.156(i). Along with paragraph (i) of this section, the definitions in this section apply only until January 1, 2019.

Appliance means, for the purposes of paragraph (i) of this section, any device which contains and uses a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer.

Commercial refrigeration means, for the purposes of paragraph (i) of this section, the refrigeration appliances utilized in the retail food and cold storage warehouse sectors. Retail food includes the refrigeration equipment found in supermarkets, convenience stores, restaurants and other food service establishments. Cold storage includes the equipment used to store meat, produce, dairy products, and other perishable goods. All of the equipment contains large refrigerant charges, typically over 75 pounds.

Critical component means, for the purposes of paragraph (i) of this section, a component without which industrial process refrigeration equipment will not function, will be unsafe in its intended environment, and/or will be subject to failures that would cause the industrial process served by the refrigeration appliance to be unsafe.

Custom-built means, for the purposes of paragraph (i) of this section, that the equipment or any of its critical components cannot be purchased and/or installed without being uniquely designed, fabricated and/or assembled to satisfy a specific set of industrial process conditions.

Follow-up verification test means, for the purposes of paragraph (i) of this section, those tests that involve checking the repairs within 30 days of the appliance's returning to normal operating characteristics and conditions. Follow-up verification tests for appliances from which the refrigerant charge has been evacuated means a test conducted after the appliance or portion of the appliance has resumed operation at normal operating characteristics and conditions of temperature and pressure, except in cases where sound professional judgment dictates that these tests will be more meaningful if performed prior to the return to normal operating characteristics and conditions. A follow-up verification test with respect to repairs conducted without evacuation of the refrigerant charge means a reverification test conducted after the initial verification test and usually within 30 days of normal operating conditions. Where an appliance is not evacuated, it is only necessary to conclude any required changes in pressure, temperature or other conditions to return the appliance to normal operating characteristics and conditions.

Full charge means, for the purposes of paragraph (i) of this section, the amount of refrigerant required for normal operating characteristics and conditions of the appliance as determined by using one or a combination of the following four methods:

(i) Use the equipment manufacturer's determination of the correct full charge for the equipment;

(ii) Determine the full charge by making appropriate calculations based on component sizes, density of refrigerant, volume of piping, and other relevant considerations;

(iii) Use actual measurements of the amount of refrigerant added or evacuated from the appliance; and/or

(iv) Use an established range based on the best available data regarding the normal operating characteristics and conditions for the appliance, where the midpoint of the range will serve as the full charge, and where records are maintained in accordance with § 82.166(q).

Industrial process refrigeration means, for the purposes of paragraph (i) of this section, complex customized appliances used in the chemical, pharmaceutical, petrochemical and manufacturing industries. These appliances are directly linked to the industrial process. This sector also includes industrial ice machines, appliances used directly in the generation of electricity, and ice rinks. Where one appliance is used for both industrial process refrigeration and other applications, it will be considered industrial process refrigeration equipment if 50 percent or more of its operating capacity is used for industrial process refrigeration.

Industrial process shutdown means, for the purposes of paragraph (i) of this section, that an industrial process or facility temporarily ceases to operate or manufacture whatever is being produced at that facility.

Initial verification test means, for the purposes of paragraph (i) of this section, those leak tests that are conducted as soon as practicable after the repair is completed. An initial verification test, with regard to the leak repairs that require the evacuation of the appliance or portion of the appliance, means a test conducted prior to the replacement of the full refrigerant charge and before the appliance or portion of the appliance has reached operation at normal operating characteristics and conditions of temperature and pressure. An initial verification test with regard to repairs conducted without the evacuation of the refrigerant charge means a test conducted as soon as practicable after the conclusion of the repair work.

Leak rate means, for the purposes of paragraph (i) of this section, the rate at which an appliance is losing refrigerant, measured between refrigerant charges. The leak rate is expressed in terms of the percentage of the appliance's full charge that would be lost over a 12-month period if the current rate of loss were to continue over that period. The rate is calculated using only one of the following methods for all appliances located at an operating facility.

(i) Method 1. (A) Step 1. Take the number of pounds of refrigerant added to the appliance to return it to a full charge and divide it by the number of pounds of refrigerant the appliance normally contains at full charge;

(B) Step 2. Take the shorter of the number of days that have passed since the last day refrigerant was added or 365 days and divide that number by 365 days;

(C) Step 3. Take the number calculated in Step 1. and divide it by the number calculated in Step 2.; and

(D) Step 4. Multiply the number calculated in Step 3. by 100 to calculate a percentage. This method is summarized in the following formula:

$$\text{Leak rate (\% per year)} = \frac{\text{pounds of refrigerant added}}{\text{pounds of refrigerant in full charge}} \times \frac{365\ \textit{days/year}}{\textit{shorter}\text{ of: \# days since refrigerant last added or 365 days}} \times 100\%$$

(ii) Method 2. (A) Step 1. Take the sum of the quantity of refrigerant added to the appliance over the previous 365-day period (or over the period that has passed since leaks in the appliance were last repaired, if that period is less than one year),

(B) Step 2. Divide the result of Step 1. by the quantity (*e.g.,* pounds) of refrigerant the appliance normally contains at full charge, and

(C) Step 3. Multiply the result of Step 2. by 100 to obtain a percentage. This method is summarized in the following formula:

$$\text{Leak rate (\% per year)} = \frac{\text{pounds of refrigerant added over past 365 days (or since leaks were last repaired, if that period is less than one year)}}{\text{pounds of refrigerant in full charge}} \times 100\%$$

Normal operating characteristics or conditions means, for the purposes of paragraph (i) of this section, temperatures, pressures, fluid flows, speeds and other characteristics that would normally be expected for a given process load and ambient condition during operation. Normal operating characteristics and conditions are marked by the absence of atypical conditions affecting the operation of the refrigeration appliance.

Normally containing a quantity of refrigerant means, for the purposes of paragraph (i) of this section, containing the quantity of refrigerant within the appliance or appliance component when the appliance is operating with a full charge of refrigerant.

Refrigerant means, for the purposes of paragraph (i) of this section, any substance consisting in part or whole of a class I or class II ozone-depleting substance that is used for heat transfer purposes and provides a cooling effect.

Substitute means, for the purposes of paragraph (i) of this section, any chemical or product, whether existing or new, that is used by any person as an EPA approved replacement for a class I or II ozone-depleting substance in a given refrigeration or air-conditioning end-use.

Suitable replacement refrigerant means, for the purposes of paragraph (i) of this section, a refrigerant that is acceptable under section 612(c) of the Clean Air Act Amendments of 1990 and all regulations promulgated under that section, compatible with other materials with which it may come into contact, and able to achieve the temperatures required for the affected industrial process in a technically feasible manner.

System mothballing means, for the purposes of paragraph (i) of this section, the intentional shutting down of a refrigeration appliance undertaken for an extended period of time by the owners or operators of that facility, where the refrigerant has been evacuated from the appliance or the affected isolated section of the appliance, at least to atmospheric pressure.

■ 7. Add § 82.157 to Subpart F to read as follows:

§ 82.157 Appliance maintenance and leak repair.

(a) *Applicability.* This section applies as of January 1, 2019. This section applies only to appliances with a full charge of 50 or more pounds of any class I or class II refrigerant or any non-exempt substitute refrigerant. Unless otherwise specified, the requirements of this section apply to the owner or operator of the appliance.

(b) *Leak Rate Calculation.* Persons adding or removing refrigerant from an appliance must, upon conclusion of that service, provide the owner or operator with documentation that meets the applicable requirements of paragraph (l)(2) of this section. The owner or operator must calculate the leak rate every time refrigerant is added to an appliance unless the addition is made immediately following a retrofit, installation of a new appliance, or qualifies as a seasonal variance.

(c) *Requirement to Address Leaks through Appliance Repair, or Retrofitting or Retiring an Appliance.* (1) Owners or operators must repair appliances with a leak rate over the applicable leak rate in this paragraph in accordance with paragraphs (d) through (f) of this section unless the owner or operator elects to retrofit or retire the appliance in compliance with paragraphs (h) and (i) of this section. If the owner or operator elects to repair leaks, but fails to bring the leak rate below the applicable leak rate, the owner or operator must create and implement a retrofit or retirement plan in accordance with paragraphs (h) and (i) of this section.

(2) Leak Rates:

(i) 20 percent leak rate for commercial refrigeration equipment;

(ii) 30 percent leak rate for industrial process refrigeration equipment; and

(iii) 10 percent leak rate for comfort cooling appliances or other appliances with a full charge of 50 or more pounds of refrigerant not covered by (c)(2)(i) or (ii) of this section.

(d) *Appliance Repair.* Owners or operators must identify and repair leaks in accordance with this paragraph within 30 days (or 120 days if an industrial process shutdown is required) of when refrigerant is added to an appliance exceeding the applicable leak rate in paragraph (c) of this section.

(1) A certified technician must conduct a leak inspection, as described in paragraph (g) of this section, to identify the location of leaks.

(2) Leaks must be repaired such that the leak rate is brought below the applicable leak rate. This must be confirmed by the leak rate calculation performed upon the next refrigerant addition. The leaks will be presumed to be repaired if there is no further refrigerant addition for 12 months after the repair or if the leak inspections required under paragraph (g) do not find any leaks in the appliance. Repair of leaks must be documented by both an initial and a follow-up verification test or tests.

(3) The time frames in paragraphs (d) through(f) of this section are temporarily suspended when an appliance is mothballed. The time will resume on the day additional refrigerant is added to the appliance (or component of an appliance if the leaking component was isolated).

(e) *Verification tests.* The owner or operator must conduct both initial and follow-up verification tests on each leak that was repaired under paragraph (d) of this section.

(1) *Initial verification test.* Unless granted additional time, an initial verification test must be performed within 30 days (or 120 days if an industrial process shutdown is required) of an appliance exceeding the applicable leak rate in paragraph (c) of this section. An initial verification test must demonstrate that leaks where a repair attempt was made are repaired.

(i) For repairs that can be completed without the need to open or evacuate the appliance, the test must be performed after the conclusion of the repair work and before any additional refrigerant is added to the appliance.

(ii) For repairs that require the evacuation of the appliance or portion of the appliance, the test must be performed before adding any refrigerant to the appliance.

(iii) If the initial verification test indicates that the repairs have not been successful, the owner or operator may conduct as many additional repairs and initial verification tests as needed within the applicable time period.

(2) *Follow-up verification test.* A follow-up verification test must be performed within 10 days of the successful initial verification test or 10 days of the appliance reaching normal operating characteristics and conditions (if the appliance or isolated component was evacuated for the repair(s)). Where it is unsafe to be present or otherwise impossible to conduct a follow-up verification test when the system is operating at normal operating characteristics and conditions, the verification test must, where practicable, be conducted prior to the system returning to normal operating characteristics and conditions.

(i) A follow-up verification test must demonstrate that leaks where a repair attempt was made are repaired. If the follow-up verification test indicates that the repairs have not been successful, the owner or operator may conduct as many additional repairs and verification tests as needed to bring the appliance below the leak rate within the applicable time period and to verify the repairs.

(f) *Extensions to the appliance repair deadlines.* Owners or operators are permitted more than 30 days (or 120 days if an industrial process shutdown is required) to comply with paragraphs (d) and (e) of this section if they meet the requirements of (f)(1) through (4) of this section or the appliance is mothballed. The request will be considered approved unless EPA notifies the owners or operators otherwise.

(1) One or more of the following conditions must apply:

(i) The appliance is located in an area subject to radiological contamination or shutting down the appliance will directly lead to radiological contamination. Additional time is permitted to the extent needed to conduct and finish repairs in a safe working environment.

(ii) Requirements of other applicable Federal, state, or local regulations make a repair within 30 days (or 120 days if an industrial process shutdown is required) impossible. Additional time is permitted to the extent needed to comply with the pertinent regulations.

(iii) Components that must be replaced as part of the repair are not available within 30 days (or 120 days if an industrial process shutdown is required). Additional time is permitted up to 30 days after receiving delivery of the necessary components, not to exceed 180 days (or 270 days if an industrial process shutdown is required) from the date the appliance exceeded the applicable leak rate.

(2) Repairs to leaks that the technician has identified as significantly contributing to the exceedance of the leak rate and that do not require additional time must be completed and verified within the initial 30 day repair period (or 120 day repair period if an industrial process shutdown is required);

(3) The owner or operator must document all repair efforts and the reason for the inability to make the repair within the initial 30 day repair period (or 120 day repair period if an industrial process shutdown is required); and

(4) The owner or operator must request an extension from EPA at the address specified in paragraph (m) of this section within 30 days (or 120 days if an industrial process shutdown is required) of the appliance exceeding the applicable leak rate in paragraph (c) of this section. Extension requests must include: Identification and address of the facility; the name of the owner or operator of the appliance; the leak rate; the method used to determine the leak rate and full charge; the date the appliance exceeded the applicable leak rate; the location of leak(s) to the extent determined to date; any repair work that has been performed thus far, including the date that work was completed; the reasons why more than 30 days (or 120 days if an industrial process shutdown is required) are needed to complete the repair; and an estimate of when the work will be completed. If the estimated completion date is to be extended, a new estimated date of completion and documentation of the reason for that change must be submitted to EPA within 30 days of identifying that the completion date must be extended. The owner or operator must keep a dated copy of this submission.

(g) *Leak Inspections.* (1) The owner or operator must conduct a leak inspection in accordance with the following schedule on any appliance exceeding the applicable leak rate in paragraph (c)(2) of this section.

(i) For commercial refrigeration and industrial process refrigeration appliances with a full charge of 500 or more pounds, leak inspections must be conducted once every three months until the owner or operator can demonstrate through the leak rate calculations required under paragraph (b) of this section that the appliance has not leaked in excess of the applicable leak rate for four quarters in a row.

(ii) For commercial refrigeration and industrial process refrigeration appliances with a full charge of 50 or more pounds but less than 500 pounds, leak inspections must be conducted once per calendar year until the owner or operator can demonstrate through the leak rate calculations required under paragraph (b) of this section that the appliance has not leaked in excess of the applicable leak rate for one year.

(iii) For comfort cooling appliances and other appliances not covered by paragraphs (g)(1)(i) and (ii) of this section, leak inspections must be conducted once per calendar year until the owner or operator can demonstrate through the leak rate calculations required under paragraph (b) of this section that the appliance has not leaked in excess of the applicable leak rate for one year.

(2) Leak inspections must be conducted by a certified technician using method(s) determined by the technician to be appropriate for that appliance.

(3) All visible and accessible components of an appliance must be inspected, with the following exceptions:

(i) Where components are insulated, under ice that forms on the outside of equipment, underground, behind walls, or are otherwise inaccessible;

(ii) Where personnel must be elevated more than two meters above a support surface; or

(iii) Where components are unsafe to inspect, as determined by site personnel.

(4) Quarterly or annual leak inspections are not required on appliances, or portions of appliances, continuously monitored by an automatic leak detection system that is audited or calibrated annually. An automatic leak detection system may directly detect refrigerant in air, monitor its surrounding in a manner other than detecting refrigerant concentrations in air, or monitor conditions of the appliance.

(i) For systems that directly detect the presence of a refrigerant in air, the system must:

(A) Only be used to monitor components located inside an enclosed building or structure;

(B) Have sensors or intakes placed so that they will continuously monitor the refrigerant concentrations in air in proximity to the compressor, evaporator, condenser, and other areas with a high potential for a refrigerant leak;

(C) Accurately detect a concentration level of 10 parts per million of vapor of the specific refrigerant or refrigerants used in the refrigeration appliance(s); and

(D) Alert the owner or operator when a refrigerant concentration of 100 parts per million of vapor of the specific refrigerant or refrigerants used in the refrigeration appliance(s) is reached.

(ii) For a system that monitors its surrounding in a manner other than detecting refrigerant concentrations in air or monitor conditions of the appliance, the system must automatically alert the owner or operator when measurements indicate a loss of 50 pounds of refrigerant or 10 percent of the full charge, whichever is less.

(iii) When automatic leak detection equipment is only being used to monitor portions of an appliance, the remainder of the appliance continues to be subject to any applicable leak inspection requirements.

(h) *Retrofit or retirement plans.* (1) The owner or operator must create a retrofit or retirement plan within 30 days of:

(i) an appliance leaking above the applicable leak rate in paragraph (c) of this section if the owner or operator intends to retrofit or retire rather than repair the leak;

(ii) an appliance leaking above the applicable leak rate in paragraph (c) of this section if the owner or operator fails to take any action to identify or repair the leak; or

(iii) an appliance continues to leak above the applicable leak rate after having conducted the required repairs and verification tests under paragraphs (d) and (e) of this section.

(2) A retrofit or retirement plan must, at a minimum, contain the following information:

(i) Identification and location of the appliance;

(ii) Type and full charge of the refrigerant used in the appliance;

(iii) Type and full charge of the refrigerant to which the appliance will be converted, if retrofitted;

(iv) Itemized procedure for converting the appliance to a different refrigerant, including changes required for compatibility with the new substitute, if retrofitted;

(v) Plan for the disposition of recovered refrigerant;

(vi) Plan for the disposition of the appliance, if retired; and

(vii) A schedule, not to exceed one-year, for completion of the appliance retrofit or retirement.

(3) The retrofit or retirement plan must be signed by an authorized company official, dated, accessible at the site of the appliance in paper copy or electronic format, and available for EPA inspection upon request.

(4) All identified leaks must be repaired as part of any retrofit under such a plan.

(5)(i) Unless granted additional time, all work performed in accordance with the plan must be finished within one year of the plan's date (not to exceed 13 months from when the plan was required in paragraph (h)(1) of this section).

(ii) The owner or operator may request that EPA relieve it of the obligation to retrofit or retire an appliance if the owner or operator can establish within 180 days of the plan's date that the appliance no longer exceeds the applicable leak rate and if the owner or operator agrees in writing to repair all identified leaks within one year of the plan's date consistent with paragraph (h)(4) and (h)(5)(i) of this section. The owner or operator must submit to EPA the retrofit or retirement plan as well as the following information: The date that the requirement to develop a retrofit or retirement plan was triggered; the leak rate; the method used to determine the leak rate and full charge; the location of the leak(s) identified in the leak inspection; a description of repair work that has been completed; a description of repair work that has not been completed; a description of why the repair was not conducted within the time frames required under paragraphs (d) and (f) of this section; and a statement signed by an authorized official that all identified leaks will be repaired and an estimate of when those repairs will be completed (not to exceed one year from date of the plan). The request will be considered approved unless EPA notifies the owners or operators within 60 days of receipt of the request that it is not approved.

(i) *Extensions to the one-year retrofit or retirement schedule.* Owners or operators may request more than one year to comply with paragraph (h) of this section if they meet the requirements of this paragraph. The request will be considered approved unless EPA notifies the owners or operators within 60 days of receipt of the request that it is not approved. The request must be submitted to EPA at the address specified in § 82.157(m) within seven months of discovering the appliance exceeded the applicable leak rate. The request must include the identification of the appliance; name of the owner or operator; the leak rate; the method used to determine the leak rate and full charge; the date the appliance exceeded the applicable leak rate; the location of leaks(s) to the extent determined to date; any repair work that has been finished thus far, including the date that work was finished; a plan to finish the retrofit or retirement of the appliance; the reasons why more than one year is necessary to retrofit or retire the appliance; the date of notification to EPA; and an estimate of when retrofit or retirement work will be finished. A dated copy of the request must be available on-site in either electronic or paper copy. If the estimated completion date is to be revised, a new estimated date of completion and documentation of the reason for that change must be submitted to EPA at the address specified in § 82.157(m) within 30 days. Additionally, the time frames in paragraphs (h) and (i) of this section are temporarily suspended when an appliance is mothballed. The time will resume running on the day additional refrigerant is added to the appliance (or component of an appliance if the leaking component was isolated).

(1) *Extensions available to any appliance.* Owners or operators of commercial refrigeration, industrial process refrigeration, comfort-cooling, or other equipment are automatically allowed 18 months to retire an appliance if the replacement appliance uses a substitute refrigerant exempted under § 82.154(a).

(2) *Extensions available to industrial process refrigeration.* Owners or operators of industrial process refrigeration equipment may request additional time beyond the one-year period in paragraph (h) of this section to finish the retrofit or retirement under the following circumstances.

(i) Requirements of other applicable Federal, state, or local regulations make a retrofit or retirement within one year impossible. Additional time is permitted to the extent needed to comply with the pertinent regulations;

(ii) The new or the retrofitted equipment is custom-built as defined in this subpart and the supplier of the appliance or one of its components has quoted a delivery time of more than 30 weeks from when the order is placed. The appliance or appliance components must be installed within 120 days after receiving delivery of the necessary parts; or

(iii) After receiving an extension under paragraph (i)(2)(ii) of this section, owners or operators may request additional time if necessary to finish the retrofit or retirement of equipment. The request must be submitted to EPA before the end of the ninth month of the initial extension and must include the same information submitted for that extension, with any necessary revisions. A dated copy of the request must be available on-site in either electronic or paper copy. The request will be considered approved unless EPA notifies the owners or operators within 60 days of receipt of the request that it is not approved.

(3) *Extensions available to Federally owned equipment.* Owners or operators of federally owned commercial or comfort-cooling equipment may request an additional year beyond the one-year period in paragraph (h) of this section to finish the retrofit or retirement under the following circumstances:

(i) A delivery time of more than 30 weeks from the beginning of the official procurement process is quoted due to complications presented by the Federal agency appropriations and/or procurement process;

(ii) The appliance is located in an area subject to radiological contamination and creating a safe working environment will require more than 30 weeks; or

(iii) After receiving a one-year extension under paragraphs (i)(3)(i) or (ii) of this section, additional time may be requested if necessary to finish the retrofit or retirement of equipment. The request must be submitted to EPA before the end of the ninth month of the one-year extension and must include the same information submitted for that one-year extension, with any necessary revisions. A dated copy of the request must be available on-site in either electronic or paper copy. The request will be considered approved unless EPA notifies the owners or operators within 60 days of receipt of the request that it is not approved.

(j) *Chronically leaking appliances.* Owners or operators of appliances containing 50 pounds or more of refrigerant that leak 125 percent or more of the full charge in a calendar year must submit a report to EPA at the address in paragraph (m) of this section. This report must be submitted by March 1 of the subsequent year and describe efforts to identify leaks and repair the appliance.

(k) *Purged refrigerant.* In calculating annual leak rates, purged refrigerant that is destroyed at a verifiable destruction efficiency of 98 percent or greater will not be counted toward the leak rate.

(l) *Recordkeeping.* All records identified in this paragraph must be kept for at least three years in electronic or paper format, unless otherwise specified.

(1) Owners or operators must determine the full charge of all appliances with 50 or more pounds of refrigerant and maintain the following information for each appliance until three years after the appliance is retired:

(i) The identification of the owner or operator of the appliance;

(ii) The address where the appliance is located;

(iii) The full charge of the appliance and the method for how the full charge was determined;

(iv) If using method 4 (using an established range) for determining full charge, records must include the range for the full charge of the appliance, its midpoint, and how the range was determined;

(v) Any revisions of the full charge, how they were determined, and the dates such revisions occurred.

(2) Owners or operators must maintain a record including the following information for each time an appliance with a full charge of 50 or more pounds is maintained, serviced, repaired, or disposed of, when applicable. If the maintenance, service, repair, or disposal is done by someone other than the owner or operator, that person must provide a record containing the following information, with the exception of (l)(2)(vii) and (viii) of this section, to the owner or operator:

(i) The identity and location of the appliance;

(ii) The date of the maintenance, service, repair, or disposal performed;

(iii) The part(s) of the appliance being maintained, serviced, repaired, or disposed;

(iv) The type of maintenance, service, repair, or disposal performed for each part;

(v) The name of the person performing the maintenance, service, repair, or disposal;

(vi) The amount and type of refrigerant added to, or in the case of disposal removed from, the appliance;

(vii) The full charge of the appliance; and

(viii) The leak rate and the method used to determine the leak rate (not applicable when disposing of the appliance, following a retrofit, installing a new appliance, or if the refrigerant addition qualifies as a seasonal variance).

(3) Owners or operators must keep records of leak inspections that include

the date of inspection, the method(s) used to conduct the leak inspection, a list of the location of each leak that was identified, and a certification that all visible and accessible parts of the appliance were inspected. Technicians conducting leak inspections must, upon conclusion of that service, provide the owner or operator of the appliance with documentation that meets these requirements.

(4) If using an automatic leak detection system, the owner or operator must maintain records regarding the installation and the annual audit and calibration of the system, a record of each date the monitoring system identified a leak, and the location of the leak.

(5) Owners or operators must maintain records of the dates and results of all initial and follow-up verification tests. Records must include the location of the appliance, the date(s) of the verification tests, the location(s) of all repaired leaks that were tested, the type(s) of verification test(s) used, and the results of those tests. Technicians conducting initial or follow-up verification tests must, upon conclusion of that service, provide the owner or operator of the appliance with documentation that meets these requirements.

(6) Owners or operators must maintain retrofit or retirement plans developed in accordance with paragraph (h) of this section.

(7) Owners or operators must maintain retrofit and/or extension requests submitted to EPA in accordance with paragraph (i) of this section.

(8) Owners or operators that suspend the deadlines in this section by mothballing an appliance must keep records documenting when the appliance was mothballed and when additional refrigerant was added to the appliance (or isolated component).

(9) Owners or operators who exclude purged refrigerants that are destroyed from annual leak rate calculations must maintain records to support the amount of refrigerant claimed as sent for destruction. Records must be based on a monitoring strategy that provides reliable data to demonstrate that the amount of refrigerant claimed to have been destroyed is not greater than the amount of refrigerant actually purged and destroyed and that the 98 percent or greater destruction efficiency is met. Records must include flow rate, quantity or concentration of the refrigerant in the vent stream, and periods of purge flow. Records must include:

(i) The identification of the facility and a contact person, including the address and telephone number;

(ii) A description of the appliance, focusing on aspects relevant to the purging of refrigerant and subsequent destruction;

(iii) A description of the methods used to determine the quantity of refrigerant sent for destruction and type of records that are being kept by the owners or operators where the appliance is located;

(iv) The frequency of monitoring and data-recording; and

(v) A description of the control device, and its destruction efficiency.

(10) Owners or operators that exclude additions of refrigerant due to seasonal variance from their leak rate calculation must maintain records stating that they are using the seasonal variance flexibility and documenting the amount added and removed under § 82.157(l)(2).

(11) Owners or operators that submit reports to EPA in accordance with paragraph (m) of this section must maintain copies of the submitted reports and any responses from EPA.

(m) *Reporting.* All notifications must be submitted electronically to *608reports@epa.gov* unless the notification contains confidential business information. If the notification contains confidential business information, the information should be submitted to: Section 608 Program Manager; Stratospheric Protection Division; Mail Code: 6205T; U.S. Environmental Protection Agency; 1200 Pennsylvania Avenue NW., Washington, DC 20460.

(1) Owners or operators must notify EPA at this address in accordance with paragraph (f) of this section when seeking an extension of time to complete repairs.

(2) Owners or operators must notify EPA at this address in accordance with paragraph (h)(5)(ii) of this section when seeking relief from the obligation to retrofit or retire an appliance.

(3) Owners or operators must notify EPA at this address in accordance with paragraph (i) of this section when seeking an extension of time to complete the retrofit or retirement of an appliance.

(4) Owners or operators must notify EPA at this address in accordance with paragraph (j) of this section for any appliance that leaks 125 percent or more of the full charge in a calendar year.

(5) When excluding purged refrigerants that are destroyed from annual leak rate calculations, owners or operators must notify EPA at this address within 60 days after the first time the exclusion is used by the facility where the appliance is located. The report must include the information included in paragraph (l)(9) of this section.

■ 8. Revise § 82.158 to read as follows:

§ 82.158 Standards for recovery and/or recycling equipment.

Starting January 1, 2017, this section applies to recovery and/or recycling equipment for use during the maintenance, service, repair, or disposal of appliances containing any class I or class II refrigerant or any non-exempt substitute refrigerant.

(a) No person may manufacture or import recovery and/or recycling equipment for use during the maintenance, service, repair, or disposal of appliances unless the equipment is certified in accordance with this section.

(b) No person may alter the design of certified refrigerant recovery and/or recycling equipment in a way that would affect the equipment's ability to meet the certification standards in this section without resubmitting the altered design for certification testing. Until it is tested and shown to meet the certification standards in this section, equipment so altered will be considered uncertified.

(c) Recovery and/or recycling equipment manufactured or imported before November 15, 1993, intended for use during the maintenance, service, repair, or disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) will be considered certified if it is capable of achieving the level of evacuation specified in Table 2 of this section when tested using a properly calibrated pressure gauge.

(d) Manufacturers and importers of recovery and/or recycling equipment must have such equipment certified by an approved equipment testing organization as follows:

(1) Recovery and/or recycling equipment manufactured or imported on or after November 15, 1993, and before September 22, 2003, intended for use during the maintenance, service, repair, or disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) must be certified by an approved equipment testing organization as being capable of achieving the level of evacuation specified in Table 2 of this section under the conditions of appendix B1 of this subpart (based upon the ARI Standard 740–1993, *Performance of Refrigerant Recovery, Recycling and/or Reclaim Equipment*).

(2) Recovery and/or recycling equipment manufactured or imported on or after September 22, 2003, and

before January 1, 2017, intended for use during the maintenance, service, repair, or disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) must be certified by an approved equipment testing organization as being capable of achieving the level of evacuation specified in Table 2 of this section under the conditions of appendix B2 of this subpart (based upon the ARI Standard 740–1995, *Performance of Refrigerant Recovery, Recycling and/or Reclaim Equipment*).

(3) Recovery and/or recycling equipment manufactured or imported on or after January 1, 2017, intended for use during the maintenance, service, repair, or disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) must be certified by an approved equipment testing organization as being capable of achieving the level of evacuation specified in Table 2 of this section under the conditions of appendix B3 (for non-flammable refrigerants) based upon AHRI Standard 740–2016 or appendix B4 (for flammable refrigerants) of this subpart.

TABLE 2—LEVELS OF EVACUATION WHICH MUST BE ACHIEVED BY RECOVERY AND/OR RECYCLING EQUIPMENT

[Except for small appliances, MVACs, and MVAC-like appliances.]

Type of appliance with which recovery and/or recycling machine is intended to be used	Inches of Hg vacuum (relative to standard atmospheric pressure of 29.9 inches Hg)	
	Manufactured or imported before November 15, 1993	Manufactured or imported on or after November 15, 1993
HCFC–22 appliances, or isolated component of such appliances, with a full charge of less than 200 pounds of refrigerant.	0	0.
HCFC–22 appliances, or isolated component of such appliances, with a full charge of 200 pounds or more of refrigerant.	4	10.
Very high-pressure appliances	0	0.
Other high-pressure appliances, or isolated component of such appliances, with a full charge of less than 200 pounds of refrigerant.	4	10.
Other high-pressure appliances, or isolated component of such appliances, with a full charge of 200 pounds or more of refrigerant.	4	15.
Medium-pressure appliances, or isolated component of such appliances, with a full charge of less than 200 pounds of refrigerant.	4	10.
Medium-pressure appliances, or isolated component of such appliances, with a full charge of 200 pounds or more of refrigerant.	4	15.
Low-pressure appliances	25 mm Hg absolute	25 mm Hg absolute.

(4) Recovery and/or recycling equipment whose recovery efficiency cannot be tested according to the procedures in appendix B1, B2, B3, or B4 of this subpart as applicable may be certified if an approved third-party testing organization adopts and performs a test that demonstrates, to the satisfaction of the Administrator, that the recovery efficiency of that equipment is equal to or better than that of equipment that:

(i) Is intended for use with the same type of appliance; and

(ii) Achieves the level of evacuation in Table 2. The manufacturer's instructions must specify how to achieve the required recovery efficiency, and the equipment must be tested when used according to these instructions.

(5) The equipment must meet the minimum requirements for certification under appendix B1, B2, B3, or B4 of this subpart as applicable.

(6) If the equipment is equipped with a noncondensables purge device, the equipment must not release more than 3 percent of the quantity of refrigerant being recycled through noncondensables purging under the conditions of appendix B1, B2, B3, or B4 of this subpart as applicable.

(7) The equipment must be equipped with low-loss fittings on all hoses.

(8) The equipment must have its liquid recovery rate and its vapor recovery rate measured under the conditions of appendix B1, B2, B3, or B4 as applicable, unless the equipment has no inherent liquid or vapor recovery rate.

(e) *Small Appliances.* Equipment used during the maintenance, service, repair, or disposal of small appliances must be certified by an approved equipment testing organization to be capable of recovering 90 percent of the refrigerant in the test stand when the compressor of the test stand is operational and 80 percent of the refrigerant when the compressor of the test stand is not operational, when used in accordance with the manufacturer's instructions under the conditions of appendix C, Method for Testing Recovery Devices for Use with Small Appliances.

(1) Equipment manufactured or imported before November 15, 1993, will be considered certified if it is capable of either recovering 80 percent of the refrigerant in the system, whether or not the compressor of the test stand is operational, or achieving a four-inch vacuum when tested using a properly calibrated pressure gauge.

(2) Equipment manufactured or imported on or after November 15, 1993, may also be certified if it is capable of achieving a four-inch vacuum under the conditions of appendix B1 of this subpart, based upon ARI Standard 740–1993.

(3) Equipment manufactured or imported on or after September 22, 2003, and before January 1, 2017, may also be certified if it is capable of achieving a four-inch vacuum under the conditions of appendix B2 of this subpart, based upon ARI Standard 740–1995.

(4) Equipment manufactured or imported on or after January 1, 2017, may also be certified if it is capable of achieving a four-inch vacuum under the conditions of appendix B3 of this subpart (for non-flammable refrigerants), based upon AHRI Standard 740–2016 or appendix B4 of this subpart (for flammable refrigerants), based upon both AHRI Standard 740–2016 and UL 1963, Supplement SB, *Requirements for Refrigerant Recovery/Recycling Equipment Intended for Use with a Flammable Refrigerant,* Fourth Edition, June 1, 2011.

(5) Equipment used to evacuate any class I or class II refrigerant or any non-exempt substitute refrigerant from small

appliances before they are disposed of may also be certified if it is capable of achieving a four-inch vacuum when tested using a properly calibrated pressure gauge.

(f) *MVAC-like appliances.* (1) Manufacturers and importers of recovery and/or recycling equipment intended for use during the maintenance, service, repair, or disposal of MVAC-like appliances must certify such equipment in accordance with subpart B of this part.

(2) Equipment manufactured or imported before November 15, 1993, intended for use during the maintenance, service, or repair of MVAC-like appliances must be capable of reducing the system pressure to 102 mm of mercury vacuum under the conditions of appendix A of subpart B of this part.

(g) *MVACs.* Manufacturers and importers of recovery and/or recycling equipment intended for use during the maintenance, service, repair, or disposal of MVACs must certify such equipment in accordance with subpart B of this part.

(h) *Labeling.* (1) Manufacturers and importers of equipment certified under paragraphs (d) and (e) of this section must place a label on each piece of equipment stating the following:

THIS EQUIPMENT HAS BEEN CERTIFIED BY [APPROVED EQUIPMENT TESTING ORGANIZATION] TO MEET EPA's MINIMUM REQUIREMENTS FOR RECYCLING OR RECOVERY EQUIPMENT INTENDED FOR USE WITH [APPROPRIATE CATEGORY OF APPLIANCE].

(2) The label must also show the date of manufacture and the serial number (if applicable) of the equipment. The label must be affixed in a readily visible or accessible location, be made of a material expected to last the lifetime of the equipment, present required information in a way that it is likely to remain legible for the lifetime of the equipment, and be affixed in such a way that it cannot be removed from the equipment without damage to the label.

(i) *Retesting.* At least once every three years, manufacturers or importers of certified recovery and/or recycling equipment intended for use during the maintenance, service, or repair of appliances (except MVACs or MVAC-like appliances) or during the disposal of appliances (except small appliances, MVACs, and MVAC-like appliances) must have approved equipment testing organizations conduct either:

(1) Retests of certified recovery and/or recycling equipment in accordance with paragraphs (d) and (e) of this section; or

(2) Inspections of recovery and/or recycling equipment at manufacturing facilities to ensure that each equipment model line that has been certified under this section continues to meet the certification criteria.

(j) *Revocation.* An equipment model line that has been certified under this section may have its certification revoked if it is subsequently determined to fail to meet the certification criteria. In such cases, the Administrator must give notice to the manufacturer or importer setting forth the basis for the determination.

(k) Equipment that is advertised or marketed as ''recycling equipment'' must be capable of recycling the standard contaminated refrigerant sample of appendix B2, B3, or B4 of this subpart (as applicable) to the levels in the following table when tested under the conditions of appendix B2, B3 or B4 of this subpart:

MAXIMUM LEVELS OF CONTAMINANTS PERMISSIBLE IN REFRIGERANT PROCESSED THROUGH EQUIPMENT ADVERTISED AS ''RECYCLING'' EQUIPMENT

Contaminants	Low-pressure (R–11, R–123, R–113) systems	R–12 systems	All other systems
Acid Content (by wt.)	1.0 PPM	1.0 PPM	1.0 PPM.
Moisture (by wt.)	20 PPM	10 PPM	20 PPM.
Noncondensable Gas (by vol.)	N/A	2.0%	2.0%.
High Boiling Residues (by vol.)	1.0%	0.02%	0.02%.
Chlorides by Silver Nitrate Test	No turbidity	No turbidity	No turbidity.
Particulates	Visually clean	Visually clean	Visually clean.

■ 9. Revise § 82.160 to read as follows:

§ 82.160 Approved equipment testing organizations.

(a) Any equipment testing organization may apply for approval by the Administrator to certify equipment under the standards in § 82.158 and appendices B2, B3, B4, or C of this subpart. Applications must be sent to *608reports@epa.gov*, or if containing confidential business information, mailed to: Section 608 Program Manager, Stratospheric Protection Division, Mail Code: 6205T, U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue NW., Washington, DC 20460.

(b) Applications for approval must include:

(1) A list of equipment present at the organization that will be used for equipment testing.

(2) Verification of the organization's expertise in equipment testing and the technical experience of the organization's personnel.

(3) Verification of the organization's knowledge of the standards and recordkeeping and reporting requirements of this subpart.

(4) A description of the organization's program for verifying the performance of certified recovery and/or recycling equipment manufactured over the long term, specifying whether retests of equipment or inspections of equipment at manufacturing facilities will be used.

(5) Verification that the organization has no conflict of interest and receives no direct or indirect financial benefit from the outcome of certification testing.

(6) Agreement to allow the Administrator access to records and personnel to verify the information contained in the application.

(c) Organizations may not certify equipment before receiving approval from EPA. If approval is denied under this section, the Administrator must give written notice to the organization setting forth the basis for the determination.

(d) If an approved testing organization conducts certification tests in a way not consistent with the representations made in its application or with the provisions of this subpart, the Administrator may revoke approval in accordance with § 82.169. In such cases, the Administrator must give notice to the organization setting forth the basis for the determination.

(e) *Recordkeeping and reporting.* (1) Approved equipment testing organizations must maintain records of equipment testing and performance and a list of equipment that meets EPA requirements. This list must include the name of the manufacturer and the name and/or serial number of the model line. Approved equipment testing organizations must publish online a list of all certified equipment that includes the information specified above and update the list annually.

(2) Approved equipment testing organizations must notify EPA at *608reports@epa.gov* if retests of equipment or inspections of manufacturing facilities conducted under to § 82.158(i) show that a previously certified model line fails to meet EPA requirements. Such notification must be received within thirty days of the retest or inspection.

(3) All records must be maintained for three years after the equipment is no longer offered for sale. Online lists must contain certified equipment until three years after that equipment is no longer offered for sale.

■ 10. Revise § 82.161 to read as follows:

§ 82.161 Technician certification.

Until January 1, 2018, this section applies only to technicians and organizations certifying technicians that maintain, service, or repair appliances containing class I or class II refrigerants. Starting on January 1, 2018, this section applies to technicians and organizations certifying technicians that maintain, service, or repair appliances containing any class I or class II refrigerant or any non-exempt substitute refrigerant.

(a) *Certification Requirements.* (1) Any person who could be reasonably expected to violate the integrity of the refrigerant circuit during the maintenance, service, repair, or disposal of appliances (as follows in this paragraph) containing a class I or class II refrigerant or a non-exempt substitute refrigerant must pass a certification exam offered by an approved technician certification program.

(i) Persons who maintain, service, or repair small appliances must be certified as Type I technicians.

(ii) Persons who maintain, service, repair, or dispose of medium-, high-, or very high-pressure appliances (except small appliances, MVACs, and MVAC-like appliances) must be certified as Type II technicians.

(iii) Persons who maintain, service, repair, or dispose of low-pressure appliances must be certified as Type III technicians.

(iv) Persons who maintain, service, repair, or dispose of all appliances described in paragraph (a)(1)(i) through (iii) of this section must be certified as Universal technicians.

(v) Technicians who maintain, service, or repair MVAC-like appliances must either be certified as Type II technicians or be certified in accordance with 40 CFR part 82, subpart B.

(vi) Persons who maintain, service, or repair MVAC appliances for consideration must be certified in accordance with 40 CFR part 82, subpart B.

(vii) Persons who dispose of small appliances, MVACs, and MVAC-like appliances are not required to be certified.

(2) Apprentices are exempt from the requirement in paragraph (a)(1) of this section provided the apprentice is closely and continually supervised by a certified technician while performing any maintenance, service, repair, or disposal that could reasonably be expected to release refrigerant from an appliance into the environment, except those substitute refrigerants exempted under paragraph (a)(1) of this section. The supervising certified technician and the apprentice have the responsibility to ensure that the apprentice complies with this subpart.

(3) The Administrator may require technicians to demonstrate at their place of business their ability to perform proper procedures for recovering and/or recycling refrigerant, except those substitute refrigerants exempted under paragraph (a)(1) of this section. Failure to demonstrate or failure to properly use the equipment may result in revocation or suspension of the certificate. Failure to abide by any of the provisions of this subpart may also result in revocation or suspension of the certificate. If a technician's certificate is revoked, the technician would need to recertify before maintaining, servicing, repairing, or disposing of any appliances.

(4) (i) Technicians certified under this section must keep a copy of their certificate at their place of business.

(ii) Technicians must maintain a copy of their certificate until three years after no longer operating as a technician.

(5) *Recertification.* The Administrator reserves the right to specify a requirement for technician recertification at some future date, if necessary, by placing a notice in the **Federal Register**.

(b) *Requirements for Technician Certification Programs.* (1) No technician training or testing program may issue certificates under this section unless the program complies with all the standards of this section and appendix D, and has been granted approval by the Administrator.

(2) *Program Approval.* Persons may seek approval of any technician certification program (program), in accordance with this paragraph, by submitting to the Administrator at the address in § 82.160(a) verification that the program meets all the standards listed in appendix D of this subpart. The Administrator reserves the right to consider other relevant factors to ensure the effectiveness of certification programs. If approval is denied under this section, the Administrator must give written notice to the program setting forth the basis for the determination.

(3) *Alternative Examinations.* Programs are encouraged to make provisions for non-English speaking technicians by providing tests in other languages or allowing the use of a translator when taking the test. A test may be administered orally to any person who makes this request, in writing, to the program at least 30 days before the scheduled date for the examination. The written request must explain why the request is being made.

(4) *Proof of Certification.* Programs certifying technicians must provide technicians with identification cards in accordance with section (f) of appendix D of this subpart.

(5) Programs certifying technicians must maintain records in accordance with section (g) of appendix D of this subpart.

(6) Starting January 1, 2018, programs certifying technicians, excluding Federally-run programs, must publish online a list of all technicians they have certified on or after January 1, 2017. Certifying organizations must update these lists at least annually.

(i) The list must include the first name, middle initial, and last name of the certified technician, the technician's city of residence when taking the test, the type(s) of certification received, and the date each certification was received.

(ii) Programs certifying technicians must provide notice to technicians that such information will be published online in compliance with any other Federal, state or local regulations, and allow technicians to opt out of being included in such lists.

(7) If an approved program violates any of the above requirements, the Administrator may revoke approval in accordance with § 82.169. In such cases, the Administrator must give notice to the organization setting forth the basis for the determination.

(c) *Test Subject Material.* A bank of test questions developed by the Administrator consists of groups, including a core group and technical groups. The Administrator will release this bank of questions only to approved technician certification programs. Each test for each type of certification must include at least 25 questions drawn from the core group and at least 25 questions drawn from each relevant technical group. These questions must address the subject areas in appendix D of this subpart.

§ 82.162 [Removed and Reserved]

■ 11. Remove and reserve § 82.162.

■ 12. Revise § 82.164 to read as follows:

§ 82.164 Reclaimer certification.

(a) All persons reclaiming used class I or II refrigerant or non-exempt substitute refrigerant for sale to a new owner must meet the following requirements:

(1) Reclaim such refrigerant to all the specifications in appendix A of this subpart (based on AHRI Standard 700–2016, *Specifications for Refrigerants*) that are applicable to that refrigerant;

(2) Verify that each batch of such refrigerant reclaimed meets these specifications using the analytical methodology prescribed in appendix A of this subpart, which includes the primary methodologies included in appendix A of AHRI Standard 700–2016;

(3) Release no more than 1.5 percent of the refrigerant during the reclamation process;

(4) Dispose of wastes from the reclamation process in accordance with all applicable laws and regulations; and

(5) Maintain records and submit reports in accordance with paragraph (d) of this section.

(b) The owner or a responsible officer reclaiming used refrigerant for sale to a new owner, except for persons who properly certified under this section before May 11, 2004, must certify to the Administrator at the address in § 82.160(a) that they will meet the requirements in paragraph (a) of this section. The certification must include the name and address of the reclaimer and a list of equipment used to reclaim the refrigerant to the required standard, and to analyze the refrigerant to ensure it meets these specifications.

(c) Certificates are not transferable. In the event of a change in ownership of an entity which reclaims refrigerant, the new owner of the entity must certify with the Administrator within 30 days of the change that they will meet the reclaimer certification requirements. In the event of a change in business management, location, or contact information, the owner of the entity must notify EPA within 30 days of the change at the address in § 82.160(a).

(d) *Recordkeeping and reporting.* (1) Reclaimers must maintain records, by batch, of the results of the analysis conducted to verify that reclaimed refrigerant meets the necessary specifications in paragraph (a)(2) of this section.

(2) Reclaimers must maintain records of the names and addresses of persons sending them material for reclamation and the quantity of the material (the combined mass of refrigerant and contaminants) by refrigerant type sent to them for reclamation. Such records must be maintained on a transactional basis for three years.

(3) Reclaimers must report to the Administrator annually by February 1 of the next calendar year the total annual quantity of material (the combined mass of refrigerant and contaminants) by refrigerant type sent to them for reclamation, the total annual mass of each refrigerant reclaimed, and the total annual mass of waste products.

(e) Failure to abide by any of the provisions of this subpart may result in revocation or suspension of the certification of the reclaimer in accordance with § 82.169. In such cases, the Administrator must give notice to the organization setting forth the basis for the determination.

■ 13. Amend § 82.166 by:

■ a. Revising the section heading;

■ b. Adding the introductory paragraph;

■ c. Removing and reserving paragraphs (a) through (i), and (l); and

■ d. Revising paragraph (m) and the introductory text of paragraph (q).

Revisions and addition to read as follows:

§ 82.166 Reporting and recordkeeping requirements for leak repair.

This section contains leak repair reporting and recordkeeping requirements that apply to owners and operators of appliances containing 50 or more pounds of class I or class II refrigerants until January 1, 2019. Starting January 1, 2019, the recordkeeping and reporting requirements in the leak repair provisions in § 82.157(l) and (m) apply to owners and operators of appliances containing 50 or more pounds of class I or class II refrigerants or non-exempt substitutes.

(a)–(i) [Reserved]

* * * * *

(l) [Reserved]

(m) All records required to be maintained pursuant to this section must be kept for a minimum of three years unless otherwise indicated.

* * * * *

(q) Owners or operators choosing to determine the full charge as defined in § 82.156(j) of an affected appliance by using an established range or using that methodology in combination with other methods for determining the full charge as defined in § 82.156(j) must maintain the following information:

* * * * *

■ 14. Add § 82.168 to read as follows:

§ 82.168 Incorporation by Reference.

(a) Certain material is incorporated by reference into this subpart part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. You can obtain the material from the sources listed below. You may inspect a copy of the approved material at U.S. EPA's Air and Radiation Docket; EPA West Building, Room 3334, 1301 Constitution Ave. NW., Washington, DC, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030 or go to *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html*.

■ 15. Amend subpart F by revising appendix A to read as follows:

Appendix A to Subpart F of Part 82—Specifications for Refrigerants

This appendix is based on the Air-Conditioning, Heating, and Refrigeration Institute Standard 700–2016, *Specifications for Refrigerants.*

Section 1. Purpose

1.1 *Purpose.* The purpose of this standard is to evaluate and accept/reject refrigerants regardless of source (*i.e.*, new, reclaimed and/or repackaged) for use in new and existing refrigeration and air-conditioning products as required under 40 CFR part 82.

1.1.1 *Intent.* This standard is intended for the guidance of the industry including manufacturers, refrigerant reclaimers, repackagers, distributors, installers, servicemen, contractors and for consumers.

1.1.2 *Review and Amendment.* This standard is subject to review and amendment as the technology advances.

Section 2. Scope

2.1 *Scope.* This standard specifies acceptable levels of contaminants (purity requirements) for various fluorocarbon and other refrigerants regardless of source and lists acceptable test methods. These refrigerants are as referenced in the ANSI/ASHRAE Standard 34 with Addenda:

2.1.1 Single-Component Fluorocarbon Refrigerants: R–11, R–12, R–13, R–22, R–23, R–32, R–113, R–114, R–115, R–116, R–123, R–124, R–125, R–134a, R–141b, R–142b, R–143a, R–152a, R–218, R–227ea, R–236fa, R–245fa, R–1233zd(E), R–1234yf, R–1234ze(E);

2.1.2 Single Component Hydrocarbon Refrigerants: R–50, R–170, R–E170, R–290, R–600, R–600a, R–601, R–601a, R–610, R–1150, R–1270;

2.1.3 Carbon Dioxide Refrigerant: R–744;

2.1.4 Zeotropic Blend Refrigerants: R–401A, R–401B, R–402A, R–402B, R–403A, R–403B, R–404A, R–405A, R–406A, R–407A, R–407B, R–407C, R–407D, R–407E, R–407F, R–408A, R–409A, R–409B, R–410A, R–410B, R–411A, R–411B, R–412A, R–413A, R–414A, R–414B, R–415A, R–415B, R–416A, R–417A, R–417B, R–417C, R–418A, R–419A, R–419B, R–420A, R–421A, R–421B, R–422A, R–422B, R–422C, R–422D, R–422E, R–423A, R–424A, R–425A, R–426A, R–427A, R–428A, R–429A, R–430A, R–431A, R–434A, R–435A, R–437A, R–438A, R–439A, R–440A, R–442A, R–444A, R–444B, R–445A, R–446A, R–447A, R–448A, R–449A, R–450A;

2.1.5 Zeotropic Hydrocarbon Blend Refrigerants: R–432A, R–433A, R–433B, R–433C, R–436A, R–436B, R–441A, R–443A; and

2.1.6 Azeotropic Blend Refrigerants: R–500, R–502, R–503, R–507A, R–508A, R–508B, R–509A, R–510A, R–511A, and R–512A.

Section 3. Definitions

3.1 *Definitions.* All terms in this appendix will follow the definitions in § 82.152 unless otherwise defined in this appendix.

3.2 *Shall, Should, Recommended,* or *It Is Recommended* shall be interpreted as follows:

3.2.1 *Shall.* Where ''shall'' or ''shall not'' is used for a provision specified, that provision is mandatory if compliance with this appendix is claimed.

3.2.2 *Should, Recommended,* or *It is Recommended* is used to indicate provisions which are not mandatory but which are desirable as good practice.

Section 4. Characterization of Refrigerants and Contaminants

4.1 *Characterization.* Characterization of single component fluorocarbon (Table 1A) and zeotropic/azeotropic blend (Table 2A/3) refrigerants and contaminants are listed in the following general classifications:

4.1.1 Isomer content (see Table 1A)

4.1.2 Air and other non-condensables (see Tables 1A, 2A, 3)

4.1.3 Water (see Tables 1A, 2A, 3)

4.1.4 All other volatile impurities (see Tables 1A, 2A, 3)

4.1.5 High boiling residue (see Tables 1A, 2A, 3)

4.1.6 Halogenated unsaturated volatile impurities (see Table 1A)

4.1.7 Particulates/solids (see Tables 1A, 2A, 3)

4.1.8 Acidity (see Tables 1A, 2A, 3)

4.1.9 Chloride (see Tables 1A, 2A, 3)

4.2 Hydrocarbon Characterization. Characterization of hydrocarbon refrigerants (Tables 1B and 2B) and contaminants are listed in the following general classifications:

4.2.1 Nominal composition

4.2.2 Other allowable impurities

4.2.3 Air and other non-condensables

4.2.4 Sulfur odor

4.2.5 High boiling residue

4.2.6 Particulates/solids

4.2.7 Acidity

4.2.8 Water

4.2.9 All other volatile impurities

4.2.10 Total C3, C4, and C5 polyolefins

4.3 *Carbon Dioxide Characterization.* Characterization of carbon dioxide (Table 1C) and its contaminants are listed in the following general classifications:

4.3.1 Purity

4.3.2 Air and other non-condensables

4.3.3 Water

4.3.4 High boiling residue

4.3.5 Particulates/solids

Section 5. Sampling and Summary of Test Procedures

5.1 *Referee Test.* The referee test methods for the various contaminants are summarized in the following paragraphs. Detailed test procedures are included in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). If alternative test methods are employed, the user must be able to demonstrate that they produce results at least equivalent to the specified referee test method.

5.2 *Refrigerant Sampling*

5.2.1 *Sampling Precautions.* Special precautions should be taken to ensure that representative samples are obtained for analysis. Sampling shall be done by qualified personnel following accepted sampling and safety procedures. Refrigerants with critical temperatures near or below ambient temperature cannot be reliably sampled for both liquid and vapor phase without special handling.

Note: Flammable refrigerants which are ASHRAE 34 class 2L, 2, or 3 present additional safety challenges and require additional measures for sampling safety procedures compared to nonflammable halocarbons documented in this standard.

5.2.2 *Cylinder Preparation.* Place a clean, empty sample cylinder with the valve open in an oven at 110 °C (230 °F) for one hour. Remove it from the oven while hot, immediately connect it to an evacuation system and evacuate to less than 56 kPa. Close the valve and allow it to cool. Weigh the empty cylinder.

5.2.3 *Vapor Phase Sampling.* A vapor phase sample shall be obtained for determining the non-condensables. The source temperature shall be measured and recorded at the time the sample is taken.

5.2.3.1 *Special Handling for Low Critical Temperature Refrigerant.* A vapor phase sample is required to determine non-condensables and volatile impurities, including other refrigerants. The vapor phase sample is obtained by regulating the sample container temperature to 5 K or more above the refrigerant critical temperature.

5.2.3.2 *Handling for Liquid Refrigerants with Boiling Points Near or Above Room Temperature.* Since R–11, R–113, R–123, R–141b, R–245fa, and R–1233zd(E) have normal boiling points near or above room temperature, non-condensable determination is not required for these refrigerants.

Note: Non-condensable gases, if present, will concentrate in the vapor phase of the refrigerant; care must be exercised to eliminate introduction of either air or liquid phase refrigerant during the sample transfer.

5.2.4 *Liquid Phase Sampling.* A liquid phase sample is required for all tests listed in this standard except the test for non-condensables.

5.2.4.1 *Liquid Sampling.* Accurate analysis requires that the sample cylinder, at ambient temperature, be filled to at least 60 percent by volume; however, under no circumstances should the cylinder be filled to more than 80 percent by volume. This can be accomplished by weighing the empty cylinder and then the cylinder with refrigerant. When the desired amount of refrigerant has been collected, close the valve(s) and immediately disconnect the sample cylinder.

Note: Care should be taken to ensure that all connections and transfer lines are dry and evacuated to avoid contaminating the sample.

Note: Low critical temperature refrigerants can have extremely high pressure and the sampling vessel, all connections, and transfer lines must be designed to handle high pressures.

5.2.4.2 *Special Handling for Low Critical Temperature Refrigerant.* A liquid phase sample is required for all testing except volatile impurities, including other refrigerants. The liquid phase sample is obtained by regulating the sample cylinder temperature to 2 °C below the critical temperature of the refrigerant.

Note: If free water is present in the sample, cooling to below 0 °C may result in the formation of ice. Clathrates may form at temperatures above 0 °C with some fluorocarbon refrigerants.

5.2.4.3 *Record Weight.* Check the sample cylinder for leaks and record the gross weight.

5.3 *Refrigerant Identification.* The required method shall be gas chromatography (GC) as described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168) with the corresponding gas chromatogram figures as illustrated in *2012 Appendix D to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). The chromatogram of the sample shall be compared to known standards.

5.3.2 *Alternative Method.* Determination of the boiling point and boiling point range is an acceptable alternative test method which can be used to characterize refrigerants. The test method shall be that described in section 4.4.3 of BB–F–1421B (incorporated by reference, see § 82.168).

5.3.3 *Required Values.* The required values for boiling point and boiling point range are given in Table 1A, *Physical Properties of Single Component Refrigerants*; Table 1B, *Physical Properties of Zeotropic Blends (400 Series Refrigerants)*; and Table 1C, *Physical Properties of Azeotropic Blends (500 Series Refrigerants).*

5.4 *Water Content.*

5.4.1 *Method.* The Coulometric Karl Fischer Titration shall be the primary test method for determining the water content of refrigerants. This method is described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). This method can be used for refrigerants that are either a liquid or a gas at room temperature. For all refrigerants, the sample for water analysis shall be taken from the liquid phase of the container to be tested.

5.4.2 *Limits.* The value for water content shall be expressed in parts per million (ppm) by weight and shall not exceed the maximum specified in Tables 1A, 1B, 1C, 2A, 2B, and 3.

5.5 *Conductivity.* (Alternative to chloride and acidity tests).

5.5.1 *Method.* A refrigerant may be tested for conductivity as an indication of the presence of acids, metal chlorides, and any compound that ionizes in water. This alternative procedure is intended for use with new or reclaimed refrigerants, however, significant amounts of oil can interfere with the test results.

5.5.2 *Limits.* The value for conductivity shall be converted to and expressed in ppm by weight calculated as HCl and shall be compared with the maximum acidity value specified (see in Tables 1A, 1B, 1C, 2A, 2B, and 3). If the conductivity is above this amount, then the chloride and acidity tests shall be conducted. If the conductivity is not greater than this amount, then the chloride and acidity tests may be omitted.

5.6 *Chloride.* The refrigerant shall be tested for chloride as an indication of the presence of hydrochloric acid and/or metal chlorides. The referee procedure is intended for use with new or reclaimed halogenated refrigerants; however, high boiling residue in excess of the amounts in Tables 1A, 1B, 1C, 2A, 2B, and 3 can interfere with the test results.

5.6.1 *Method.* The test method shall be that described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). The test will show noticeable turbidity at chloride levels of about 3 ppm or greater by weight.

5.5.2 *Limits.* The results of the test shall not exhibit any sign of turbidity. Report the results as ‘‘pass’’ or ‘‘fail.’’

5.7 *Acidity.*

5.7.1 *Method.* The acidity test uses the titration principle to detect any compound that is soluble in water and ionizes as an acid. The test method shall be that described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). This test may not be suitable for determination of high molecular weight organic acids; however these acids will be found in the high boiling residue test outlined in Section 5.8. The test requires a 50 to 60 gram sample and has a detection limit of 0.1 ppm by weight calculated as HCl.

5.7.2 *Limits.* The value for acidity shall be expressed in ppm by weight as HCl and shall not exceed the limits in Tables 1A, 1B, 2A, 2B, and 3.

5.8 *High Boiling Residue.*

5.8.1 *Method.* High boiling residue shall be determined by either volume or weight. The volume method measures the residue from a standard volume of refrigerant after evaporation. The gravimetric method is described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168). Oils and/or organic acids will be captured by these methods.

5.8.2 *Limits.* The value for high boiling residue shall be expressed as a percentage by volume or weight and shall not exceed the maximum percent specified in Tables 1A, 1B, 1C, 2A, 2B, and 3.

5.9 *Particulates and Solids.*

5.9.1 *Method.* A measured amount of sample shall be placed in a Goetz bulb under controlled temperature conditions. The particulates/solids shall be determined by visual examination of the Goetz bulb prior to the evaporation of refrigerant. For details of this test method, refer to Part 3 of *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168).

Note: R–744 will partially sublimate when measuring a known amount of liquid sample into the dry Goetz bulb and the solid R–744 will interfere with the visual examination of particulates/solids. Determining the particulates/solids shall be completed by visual examination of the Goetz bulb after the evaporation of the refrigerant.

5.9.2 *Limits.* Visual presence of dirt, rust, or other particulate contamination is reported as ‘‘fail.’’

5.10 *Non-Condensables.*

5.10.1 *Method.* A vapor phase sample shall be used for determination of non-condensables. Non-condensable gases consist primarily of air accumulated in the vapor phase of refrigerants where the solubility of air in the refrigerant liquid phase is extremely low and air is not significant as a liquid phase contaminant. The presence of non-condensable gases may reflect poor quality control in transferring refrigerants to storage tanks and cylinders.

The test method shall be gas chromatography with a thermal conductivity detector as described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168).

5.10.2 *Limits.* The maximum level of non-condensables in the vapor phase of a test sample shall not exceed the maximum at 25 °C as shown in Tables 1A, 1B, 1C, 2A, 2B, and 3.

5.11 *All Other Volatile Impurities and/or Other Refrigerants.*

5.11.1 *Method.* The amount of volatile impurities including other refrigerants in the subject refrigerant shall be determined by gas chromatography as described in *2008 Appendix C to AHRI Standard 700–2014* (incorporated by reference, see § 82.168).

5.11.2 *Limits.* The test sample shall not contain more than 0.5 percent by weight of volatile impurities including other refrigerants as shown in Tables 1A, 1B, 1C, 2A, 2B and 3.

5.12 *Total C_3, C_4 and C_5 Polyolefins in Hydrocarbon Refrigerants.*

5.12.1 *Method.* The amount of polyolefin impurities in the hydrocarbon shall be determined by gas chromatography as described in GPA Standard 2177–13 (incorporated by reference, see § 82.168).

5.12.2 *Limits.* The test sample shall not contain more than 0.05 percent by weight in the hydrocarbon sample as shown in Tables 1B and 2B. Report the results as ‘‘pass’’ or ‘‘fail.’’

5.13 *Sulfur Odor in Hydrocarbon Refrigerants.*

5.13.1 *Method.* The amount of sulfur containing compounds or other compounds with an odor shall be determined by ASTM D1296–01 (Reapproved 2012) (incorporated by reference, see § 82.168).

5.13.2 *Limits.* The test sample paper shall not emit a residual sulfur odor as shown in Tables 1B and 2B.

Section 6. Reporting Procedure

6.1 *Reporting Procedure.* The source (manufacturer, reclaimer, or repackager) of the packaged refrigerant shall be identified. The refrigerant shall be identified by its accepted refrigerant number and/or its chemical name. Maximum allowable levels of contaminants are shown in Tables 1A, 1B, 1C, 2A, 2B, and 3. Test results shall be tabulated in a similar manner.

1. Boiling points, boiling point ranges, and critical temperatures, although not required, are provided for informational purposes. Refrigerant data compiled from Refprop 9.1.
2. Since R-11, R-113, R-123, R-141b, R-245fa, R-1233zd(E), and R-1336mzz(Z) have normal boiling points near or above room temperature, non-condensable determinations are not required for these refrigerants.
3. Recognized chloride level for pass/fail is about 3 ppm.
-- Data Not Available

■ 16. Amend subpart F by adding appendix B3 to read as follows:

Appendix B3 to Subpart F of Part 82—Performance of Refrigerant Recovery, Recycling, and/or Reclaim Equipment

This appendix is based on the Air-Conditioning, Heating, and Refrigeration Institute Standard 740–2016, *Performance Rating of Refrigerant Recovery Equipment and Recovery/Recycling Equipment.*

Section 1. Purpose

1.1 The purpose of this standard is to establish methods of testing for rating and evaluating the performance of refrigerant recovery, and/or recycling equipment and general equipment requirements (herein referred to as ''equipment'') for contaminant or purity levels, capacity, speed and purge loss to minimize emission into the atmosphere of designated refrigerants.

Section 2. Scope

2.1 This standard applies to equipment for recovering and/or recycling single refrigerants, azeotropes, zeotropic blends, and their normal contaminants from refrigerant systems. This standard defines the test apparatus, test gas mixtures, sampling procedures and analytical techniques that will be used to determine the performance of refrigerant recovery and/or recycling equipment (hereinafter, ''equipment''). Appendix B4 of this subpart establishes standards for recovery/recycling equipment used with flammable refrigerants.

Section 3. Definitions

3.1 *Definitions.* All terms in this appendix will follow the definitions in § 82.152 unless otherwise defined in this appendix.

3.2 *Clearing Refrigerant.* Procedures used to remove trapped refrigerant(s) from equipment before switching from one refrigerant to another.

3.3 *High Temperature Vapor Recovery Rate.* For equipment having at least one designated refrigerant (see Section 11.2 of this appendix) with a boiling point in the range of −50 to +10 °C, the rate will be measured for R–22, or the lowest boiling point refrigerant if R–22 is not a designated refrigerant.

3.4 *Published Ratings.* A statement of the assigned values of those performance characteristics, under stated rating conditions, by which a unit may be chosen to fit its application. These values apply to all units of like nominal size and type (identification) produced by the same manufacturer. As used herein, the term ''published rating'' includes the rating of all performance characteristics shown on the unit or published in specifications, advertising, or other literature controlled by the manufacturer, at stated rating conditions.

3.5 *Push/Pull Liquid Recovery.* The push/pull refrigerant recovery method is defined as the process of transferring liquid refrigerant from a refrigeration system to a receiving vessel by lowering the pressure in the vessel and raising the pressure in the system, and by connecting a separate line between the system liquid port and the receiving vessel.

3.6 *Recycle Flow Rate.* The amount of refrigerant processed divided by the time elapsed in the recycling mode. For equipment which uses a separate recycling sequence, the recycle rate does not include the recovery rate (or elapsed time). For equipment which does not use a separate recycling sequence, the recycle rate is a rate based solely on the higher of the liquid or vapor recovery rate, by which the contaminant levels were measured.

3.7 *Residual Trapped Refrigerant.* Refrigerant remaining in equipment after clearing refrigerant.

3.8 *Shall, Should, Recommended* or *It Is Recommended* shall be interpreted as follows:

3.8.1 *Shall.* Where ''shall'' or ''shall not'' is used for a provision specified, that provision is mandatory if compliance with this appendix is claimed.

3.8.2 *Should, Recommended* or *It Is Recommended* is used to indicate provisions which are not mandatory but which are desirable as good practice.

3.9 *Standard Contaminated Refrigerant Sample.* A mixture of new or reclaimed refrigerant and specified quantities of identified contaminants which constitute the mixture to be processed by the equipment under test. These contaminant levels are expected only from severe service conditions.

3.10 *Trapped Refrigerant.* The amount of refrigerant remaining in the equipment after the recovery or recovery/recycling operation but before clearing refrigerant.

3.11 *Vapor Recovery Rate.* The average rate that refrigerant is withdrawn from the mixing chamber between two pressures as vapor recovery rate is changing depending on the pressure. The initial condition is vapor only at saturation pressure and temperature at either 24 °C or at the boiling point at 100 kPa, whichever is higher. The final pressure condition is 10 percent of the initial pressure, but not lower than the equipment final recovery vacuum and not higher than 100 kPa.

Section 4. General Equipment Requirements

4.1 *Equipment Information.* The equipment manufacturer shall provide operating instructions, necessary maintenance procedures, and source information for replacement parts and repair.

4.2 *Filter Replacement.* The equipment shall indicate when any filter/drier(s) needs replacement. This requirement can be met by use of a moisture transducer and indicator light, by use of a sight glass/moisture indicator, or by some measurement of the amount of refrigerant processed such as a flow meter or hour meter. The equipment manufacturer must provide maximum quantity recycled or filter change interval in its written instructions.

4.3 *Purge of Non-Condensable.* If non-condensables are purged, the equipment shall either automatically purge non-condensables or provide an indicating means to guide the purge process. Recycling equipment must provide purge means.

4.4 *Purge Loss.* The total refrigerant loss due to purging non-condensables, draining oil, and clearing refrigerant (see Section 9.5) shall be less than 3 percent (by weight) of total processed refrigerant.

4.5 *Permeation Rate.* High pressure hose assemblies ⅝ in. (16 mm) nominal and smaller shall not exceed a permeation rate of 3.9 g/cm^2/yr (internal surface) at a temperature of 48.8 °C. Hose assemblies that UL recognized as having passed UL 1963, 2011 requirements shall be accepted without testing. See Section 7.1.4 of this appendix.

4.6 *Clearing Trapped Refrigerant.* For equipment rated for more than one refrigerant, the manufacturer shall provide a method and instructions which will accomplish connections and clearing within 15 minutes. Special equipment, other than a vacuum pump or manifold gauge set, shall be furnished. The clearing procedure shall not rely upon the storage cylinder below saturated pressure conditions at ambient temperature.

4.7 *Temperature.* The equipment shall be evaluated at 24 °C with additional limited evaluation at 40 °C. Normal operating conditions range from 10 °C to 40 °C.

4.8 *Exemptions.* Equipment intended for recovery only shall be exempt from Sections 4.2 and 4.3.

Section 5. Contaminated Refrigerants

5.1 *Sample Characteristics.* The standard contaminated refrigerant sample shall have the characteristics specified in Table 1, except as provided in Section 5.2 of this appendix. Testing shall be conducted at an ambient temperature of 24 °C ± 1 °C except high temperature vapor recovery shall be 40 °C ± 1 °C.

5.2 *Recovery-only Testing.* Recovery equipment not rated for removal of contaminants shall be tested with new or reclaimed refrigerant.

[1] Particulate content shall consist of inert materials and shall comply with particulate requirements in Appendix B.

[2] Acid consists of 60% oleic acid and 40% hydrochloric acid on a total number basis.

[3] POE = Polyoester, AB = Alkylbenzene, MO = Mineral Oil.

[4] N/A means not applicable.

BILLING CODE 6560–50–C

Section 6. Test Apparatus

6.1 *General Recommendations.* The recommended test apparatus is described in the following paragraphs. If alternate test apparatus are employed, the user shall be able to demonstrate that they produce results equivalent to the specified reference apparatus.

6.2 *Self-Contained Equipment Test Apparatus.* The apparatus, shown in Figure 1, shall consist of:

6.2.1 *Mixing Chamber.* A mixing chamber consisting of a tank with a conical-shaped bottom, a bottom port and piping for delivering refrigerant to the equipment, various ports and valves for adding refrigerant to the chamber, and stirring means for mixing.

6.2.2 *Filling Storage Cylinder.* The storage cylinder to be filled by the refrigerant transferred shall be cleaned and at the pressure of the recovered refrigerant at the beginning of the test. It will not be filled over 80 percent, by volume.

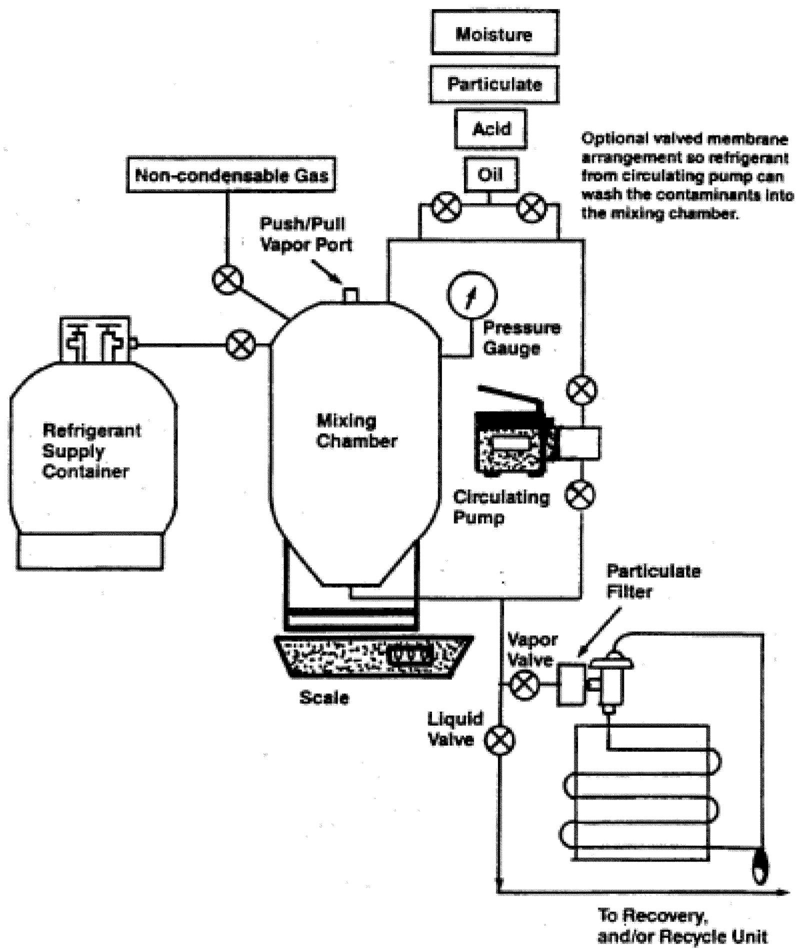
6.2.3 *Vapor Feed.* Vapor refrigerant feed consisting of evaporator, control valves and piping to create a 3.0 °C superheat condition at an evaporating temperature of 21 °C ± 2 °C.

6.2.4 *Alternative Vapor Feed.* An alternative method for vapor feed shall be to pass the refrigerant through a boiler and then through an automatic pressure regulating valve set at different saturation pressures, moving from saturated pressure at 24 °C to final pressure of recovery.

6.2.5 *Liquid Feed.* Liquid refrigerant feed consisting of control valves, sampling port, and piping.

6.2.6 *Instrumentation.* Instrumentation capable of measuring weight, temperature, pressure, and refrigerant loss, as required.

Figure 1. Test Apparatus for Self-Contained Equipment



6.3 *Size.* The size of the mixing chamber and filling storage cylinder used during testing shall correspond to the size of the equipment being tested per Section 6.3.1 or 6.3.2:

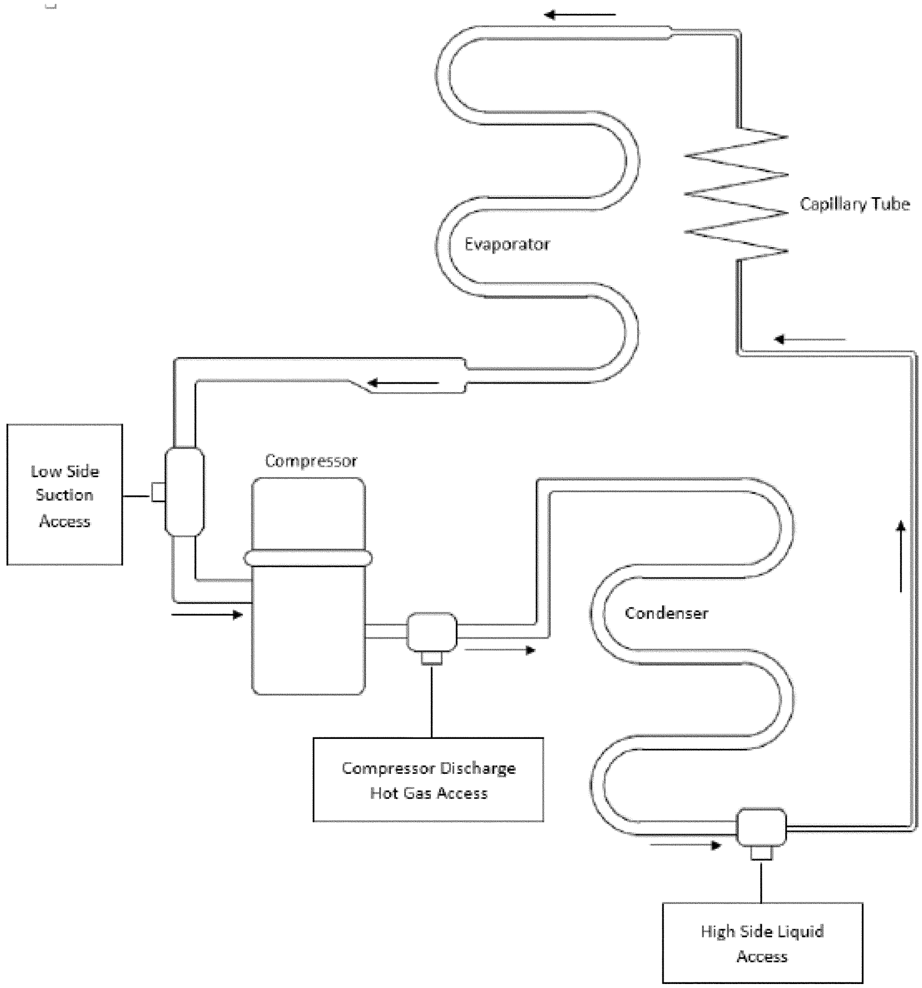
6.3.1 For equipment utilizing nominal ¼″ or ⅜″ flare ports and hoses, the mixing chamber shall be 0.09 m^3 and all ports, valves, mixing valves, and piping shall be ½″ or larger, reduced down to the port size of the equipment by fittings at the connection ports of the mixing chamber. The filling storage cylinder used during testing shall be a nominal 50-pound water capacity DOT 4Bx cylinder with ¼″ flare liquid and vapor ports.

6.3.2 For equipment utilizing ½″ or larger flare ports and hoses, the mixing chamber shall be 0.45 m^3 (or nominal 1000-pound water capacity DOT 4Bx cylinder) and all ports, valves, mixing valves, and piping shall be 1½″ or larger, reduced down to the port size of the equipment by fittings at the connection ports of the mixing chamber. The filling storage cylinder used during testing shall be a nominal 1000-pound water capacity DOT 4Bx cylinder with liquid and vapor ports, valves and piping sized ¾″ NPT and reduced or increased to the port size of the equipment by fittings at the connection ports of the filling storage cylinder.

6.4 *System Dependent Equipment Test Apparatus.* This test apparatus is to be used for final recovery vacuum rating of all system dependent equipment.

6.4.1 *Test Setup.* The test apparatus shown in Figure 2 consists of a complete refrigeration system. The manufacturer shall identify the refrigerants to be tested. The test apparatus can be modified to facilitate operation or testing of the system dependent equipment if the modifications to the apparatus are specifically described within the manufacturer's literature. A 6.3 mm balance line shall be connected across the test apparatus between the high- and low-pressure sides, with an isolation valve located at the connection to the compressor high side. A 6.3 mm access port with a valve core shall be located in the balance line for the purpose of measuring final recovery vacuum at the conclusion of the test.

Figure 2. System Dependent Equipment Test Apparatus



Section 7. Performance Testing Procedures

7.1 *General Testing.*

7.1.1 *Temperatures.* Testing shall be conducted at an ambient temperature of 24 °C ± 1 °C except high temperature vapor recovery shall be at 40 °C ± 1 °C. The evaporator conditions of Section 6.2.3 shall be maintained as long as liquid refrigerant remains in the mixing chamber.

7.1.2 *Refrigerants.* The equipment shall be tested for all designated refrigerants (see Section 11.2). All tests in Section 7 shall be completed for each refrigerant before starting tests with the next refrigerant.

7.1.3 *Selected Tests.* Tests shall be as appropriate for the equipment type and ratings parameters selected (see Sections 9.9, 11.1 and 11.2).

7.1.4 *Hose Assemblies.* For the purpose of limiting refrigerant emissions to the atmosphere, hose assemblies shall be tested for permeation according to UL Standard 1963 (incorporated by reference, see § 82.168).

7.2 *Equipment Preparation and Operation.* The equipment shall be prepared and operated per the operating instructions.

7.3 *Test Batch.* The test batch consisting of refrigerant sample (*see* Section 5) of the test refrigerant shall be prepared and thoroughly mixed. Continued mixing or stirring shall be required during the test while liquid refrigerant remains in the mixing chamber. The mixing chamber shall be filled to 80 percent level by volume.

7.3.1 *Control Test Batch.* Prior to starting the test for the first batch for each refrigerant, a liquid sample will be drawn from the mixing chamber and analyzed per Section 8 to assure that contaminant levels match Table 1 within ±10 ppm for moisture, ±20 ppm for oleic acid and ±0.5 percent for oil.

7.4 *Recovery Tests (Recovery and Recovery/Recycling Equipment)*

7.4.1 *Determining Recovery Rates.* The liquid and vapor refrigerant recovery rates shall be measured during the first test batch for each refrigerant (*see* Sections 9.1, 9.2 and 9.4). Equipment preparation and recovery cylinder changeover shall not be included in elapsed time measurements for determining vapor recovery rate and liquid refrigerant recovery rate. Operations such as subcooling the recovery cylinder shall be included. The recovery cylinder shall be the same size as per Section 6.3 or as furnished by the equipment manufacturer. Oversized tanks shall not be permitted.

7.4.1.1 *Liquid Refrigerant Recovery Rate.* If elected, the recovery rate using the liquid refrigerant feed means (*see* Section 6.2.5) shall be determined. After the equipment reaches stabilized conditions of condensing temperature and/or recovery cylinder pressure, the recovery process shall be stopped and an initial weight shall be taken of the mixing chamber (*see* Section 9.2). The recovery process shall be continued for a period of time sufficient to achieve the accuracy in Section 9.4. The recovery process shall be stopped and a final weight of the mixing chamber shall be taken.

7.4.1.2 *Vapor Refrigerant Recovery Rate.* If elected, the average vapor flow rate shall be measured to accuracy requirements in Section 9.4 under conditions with no liquid refrigerant in the mixing chamber. The liquid recovery feed means shall be used. At initial conditions of saturated vapor at the higher of 24 °C or the boiling temperature (100 kPa), the weight of the mixing chamber and the pressure shall be recorded. At final conditions representing pressure in the mixing chamber of 10 percent of the initial condition, but not less than the final recovery vacuum (*see* Section 9.6) nor more than 100 kPa, measure the weight of the mixing chamber and the elapsed time. At initial conditions, the recovery cylinder shall be at saturation pressure at ambient conditions.

7.4.1.3 *High Temperature Vapor Recovery Rate.* This is applicable for equipment having at least one designated refrigerant (*see* Section 11.2) with a boiling point between −50 °C and +10 °C. Measure the rate for R–22, or the refrigerant with the lowest boiling point if R–22 is not a designated refrigerant. Repeat the test in Section 7.4.1.2 at saturated conditions at 40 °C and continue to operate equipment to assure it will operate at this condition (see Section 7.4.3). At initial conditions, the recovery cylinder shall be at saturated pressure at 40 °C.

7.4.1.4 *Push/Pull Liquid Refrigerant Recovery Rate.* If elected, the average liquid push/pull flow rate shall be measured to accuracy requirements in Section 9.4. The mixing chamber and filling storage cylinder shall be filled with refrigerant vapor at initial conditions of saturated vapor at the higher of 24 °C or the boiling temperature at 100 kPa. An amount of liquid refrigerant shall be added to the mixing chamber equivalent to 80 percent by weight of the capacity of the filling storage cylinder. The pressure between the mixing chamber and filling storage cylinder shall be equalized and stabilized at initial conditions of saturated vapor at the higher of 24 °C or the boiling temperature at 100 kPa. The initial weight of the mixing chamber and the pressure shall be recorded. The equipment is then operated in push/pull liquid recovery mode and the weight change of the mixing chamber is recorded over time until all of the liquid has been transferred.

7.4.2 *Recovery Operation.* This test is for determining the final recovery vacuum and the ability to remove contaminants as appropriate. If equipment is rated for liquid recovery (*see* Section 7.4.1.3), liquid recovery feed means described in Section 6.2.5 shall be used. If not, vapor recovery means described in Sections 6.2.3 or 6.2.4 shall be used. Continue recovery operation until all liquid is removed from the test apparatus and vapor is removed to the point where equipment shuts down by automatic means or is manually shut off per operating instructions.

7.4.2.1 *Oil Draining.* Capture oil from the equipment at intervals as required in the instructions. Record the weight of the container. Completely remove refrigerant from oil by evacuation or other appropriate means. The weight difference shall be used in Section 7.5.2.

7.4.3 *Final Recovery Vacuum.* At the end of the first test batch for each refrigerant, the liquid valve and vapor valve of the apparatus shall be closed. After waiting 1 minute, the mixing chamber pressure shall be recorded (*see* Section 9.6).

7.4.4 *Residual Refrigerant.* This test will measure the mass of remaining refrigerant in the equipment after clearing and therefore the extent of mixing different refrigerants (*see* Section 9.6).

7.4.4.1 *Initial Conditions.* At the end of the last test for each batch for each refrigerant, the equipment shall be disconnected from the test apparatus (Figure 1). Recycle per Section 7.5, if appropriate. Perform refrigerant clearing operations as called for in the instruction manual. Capture and record the weight of any refrigerant which would have been emitted to the atmosphere during the clearing process for use in Section 9.5. If two loops are used for recycling, trapped refrigerant shall be measured for both.

7.4.4.2 *Residual Trapped Refrigerant.* Evacuate an empty test cylinder to 1.0 kPa. Record the empty weight of the test cylinder. Open all valves to the equipment so as to provide access to all trapped refrigerant. Connect the equipment to the test cylinder and operate valves to recover the residual refrigerant. Record the weight of the test cylinder using a recovery cylinder pressure no less than specified in Section 6.2.2. Place the test cylinder in liquid nitrogen for a period of 30 minutes or until a vacuum of 1000 microns is reached, whichever occurs first.

7.5 *Recycling Tests (Recovery/Recycling Equipment).*

7.5.1 *Recycling Operation.* As each recovery cylinder is filled in Section 7.4.2, recycle according to operating instructions. There will not necessarily be a separate recycling sequence. Note non-condensable purge measurement in Section 9.5.

7.5.1.1 *Recycle Flow Rate.* While recycling the first recovery cylinder for each refrigerant, determine the recycling flow rate by appropriate means (*see* Section 9.3) to achieve the accuracy required in Section 9.4.

7.5.2 *Non-Condensable Sample.* After completing Section 7.4.3, prepare a second test batch (*see* Section 7.3). Recover per Section 7.4.2 until the current recovery cylinder is filled to 80 percent level by volume. Recycle per Section 7.5.1. Mark this cylinder and set aside for taking the vapor sample. For equipment having both an internal tank of at least 3 kg refrigerant capacity and an external recovery cylinder, two recovery cylinders shall be marked and set aside. The first is the cylinder described above. The second cylinder is the final recovery cylinder after filling it to 80 percent level by volume and recycling.

7.5.2.1 *Push/Pull Liquid Refrigerant Recovery Rate.* This rate shall be measured by weight change of the mixing chamber divided by elapsed time (*see* Section 7.4.1.4). The units shall be kg/min and the accuracy shall be per Section 9.4.

7.5.3 *Liquid Sample for Analysis.* Repeat steps in Sections 7.3, 7.4.2 and 7.5.1 with further test batches until indication means in Section 4.2 show the filter/drier(s) need replacing.

7.5.3.1 *Multiple Pass.* For equipment with a separate recycling circuit (multiple pass), set aside the current cylinder and draw the liquid sample (*see* Section 7.4) from the previous cylinder.

7.5.3.2 *Single Pass.* For equipment with the single pass recycling circuit, draw the liquid sample (*see* Section 7.4) from the current cylinder.

7.6 *Measuring Refrigerant Loss.* Refrigerant loss due to non-condensables shall be determined by appropriate means (*see* Section 9.5.1). The loss could occur in Sections 7.4.1, 7.4.2 and 7.5.1.

Section 8. Sampling and Chemical Analysis Methods

8.1 *Chemical Analysis.* Chemical analysis methods shall be specified in appropriate standards such as AHRI Standard 700, *2008 Appendix C for Analytical Procedures for AHRI Standard 700–2014- Normative*, and Addendum 700–1 to Appendix C. If alternate test methods are employed, the laboratory must be able to demonstrate that they produce results equivalent to the specified referee method.

8.2 *Refrigerant Sampling.*

8.2.1 *Moisture Content.* The water content in refrigerant shall be measured by the Karl Fischer Coulometric Titration technique. Report the moisture level in parts per million by weight.

8.2.2 *Chloride Ions.* Chloride ions shall be measured by turbidity tests. At this time, quantitative results have not been defined. Report chloride content as ''pass'' or ''fail.'' In the future, when quantitative results are possible, report chloride content as parts per million by weight.

8.2.3 *Acid Content.* The acidity test uses the titration principle. Report the acidity in parts per million by weight (mg KOH/kg) of sample.

8.2.4 *High Boiling Residue.* High boiling residues shall use measurement of the volume of residue after evaporating a standard volume of refrigerant. Using weight measurement and converting to volumetric units is acceptable. Report high boiling residues as percent by volume.

8.2.5 *Particulates/Solids.* The particulates/solids measurement employs visual examination. Report results as ''pass'' or ''fail.''

8.2.6 *Non-condensables.* The level of contamination by non-condensable gases in the base refrigerant being recycled shall be determined by gas chromatography. Report results as percent by volume.

Section 9. Performance Calculations for Ratings

9.1 *Vapor Refrigerant Recovery Rate.* This rate shall be measured by weight change of the mixing chamber divided by elapsed time (*see* 7.4.1.2). The units shall be kg/min and the accuracy shall be per Section 9.4.

9.1.1 *High Temperature Vapor Recovery Rate.* This rate shall be measured by measured weight change of the mixing chamber divided by elapsed time (see Section 7.4.1.3). The units shall be kg/min and the accuracy shall be per Section 9.4.

9.2 *Liquid Refrigerant Recovery Rate.* This rate shall be measured by weight change of the mixing chamber divided by elapsed time (*see* 7.4.1.3). The units shall be kg/min and the accuracy shall be per Section 9.4.

9.3 *Recycle Flow Rate.* The recycle flow rate shall be as defined in Section 3.12, expressed in kg/min, and the accuracy shall be per Section 9.4.

9.3.1 For equipment using multi-pass recycling or a separate sequence, the recycle rate shall be determined by dividing the net weight, W, of the refrigerant to be recycled by the actual time T required to recycle. Any set-up or operator interruptions shall not be included in the time T.

9.3.2 If no separate recycling sequence is used, the recycle rate shall be the higher of the vapor refrigerant recovery rate or the liquid refrigerant recovery rate. The recycle rate shall match a process which leads to contaminant levels in Section 9.9. Specifically, a recovery rate determined from bypassing a contaminant removal device cannot be used as a recycle rate when the contaminant levels in Section 9.9 are determined by passing the refrigerant through the contaminant removal device.

9.4 *Accuracy of Flow Rates.* The accuracy of test measurements in Sections 9.1, 9.2 and 9.3 shall be ±008 kg/min for flow rates up to 0.42 kg/min and ±2.0 percent for flow rates larger than 0.42 kg/min. Ratings shall be expressed to the nearest 0.02 kg/min.

9.5 *Refrigerant Loss.* This calculation will be based upon the net loss of refrigerant which would have been eliminated in the non-condensable purge process (*see* Section 7.5.1), the oil draining process (*see* Section 7.4.2.1) and the refrigerant clearing process (*see* Section 7.4.4.1), all divided by the net refrigerant content of the test batches. The refrigerant loss shall not exceed 3 percent by weight.

9.5.1 *Non-Condensable Purge.* Evacuate an empty container to 2 kPa. Record the empty weight of the container. Place the container in a dry ice bath. Connect the equipment purge connection to the container and operate purge according to operating instructions so as to capture the non-condensables and lost refrigerant. Weigh the cylinder after the recycling is complete. Equivalent means are permissible.

For units which either recycle or publish (list) non-condensable removal, non-condensable gases are purged, operating the recycle device per the manufacturer's instructions through an evaporator pressure regulator (EPR) valve into a liquid nitrogen-chilled cylinder. This combination will simulate the atmosphere while allowing the capture of purge gases. The cylinder is weighed before and after the purge procedure.

9.5.2 *Oil Draining.* Refrigerant removed from the oil after draining shall be collected and measured in accordance with Section 7.4.2.1.

9.5.3 *Clearing Unit.* Refrigerant captured during the clearing process shall be measured in accordance with Section 7.4.4.1.

9.6 *Final Recovery Vacuum.* The final recovery vacuum shall be the mixing chamber pressure in Section 7.4.3 expressed in kPa at 24 °C. The accuracy of the measurement shall be within 0.33 kPa.

9.7 *Residual Trapped Refrigerant.* The amount of residual trapped refrigerant shall be the final weight minus the initial weight of the test cylinder in Section 7.4.4.2, expressed in kg. The accuracy shall be ±0.02 kg and reported to the nearest 0.05 kg.

9.8 *Refrigerant Processed.* The amount of refrigerant processed before changing filters (*see* Section 7.5.3) shall be expressed in kg to an accuracy of ±1 percent.

9.9 *Contaminant Levels.* The contaminant levels remaining after testing shall be published as follows:

Moisture content, ppm by weight
Chloride ions, pass/fail
Acid Content, ppm by weight
High boiling residue, percent (by volume)
Particulates/solids, pass/fail (visual examination)
Non-condensables, percent (by volume)

9.10 *Minimum Data Requirements for Published Ratings.* Published ratings shall include all of the parameters as shown in Tables 2 and 3 for each refrigerant designated by the manufacturer.

Section 10. Tolerances

10.1 *Tolerances.* Performance related parameters shall be equal to or better than the published ratings.

Section 11. Marking and Nameplate Data

11.1 *Marking and Nameplate Data.* The nameplate shall display the manufacturer's name, model designation, type of equipment (Recovery or Recovery/Recycling and Self-Contained or System Dependent), designated refrigerant(s), capacities, and electrical characteristics where applicable. The nameplate shall also conform to the labeling requirements established for certified recycling and recovery equipment established at 40 CFR 82.158(h).

Recommended nameplate voltages for 60 Hertz systems shall include one or more of the equipment nameplate voltages shown in Table 1 of AHRI 110–2016 (incorporated by reference, see § 82.168). Recommended nameplate voltages for 50 Hertz systems shall include one or more of the utilization voltages shown in Table 1 of IEC 60038 (English version) (incorporated by reference, see § 82.168).

11.2 *Data for Designated Refrigerants.* For each refrigerant designated, the manufacturer shall include all the following that are applicable per Table 2:

a. Liquid Recovery Rate, kg/min
b. Vapor Recovery Rate, kg/min
c. High Temperature Vapor Recovery Rate, kg/min
d. Push/Pull Liquid Recovery Rate, kg/min
e. Final Recovery Vacuum Level, kPa
f. Recycle Flow Rate, kg/min
g. Refrigerant Loss, kg
h. Residual Trapped Refrigerant, kg
i. Quantity of Refrigerant Processed at Rated Conditions, kg

TABLE 2—PERFORMANCE RATINGS FOR REFRIGERANT RECOVERY AND RECOVERY/RECYCLING EQUIPMENT [4] [5]

Parameter	Type of equipment			
	Recovery	Recovery/recycling	Recycling	System dependent equipment
Liquid Refrigerant Recovery Rate, kg/min	X [1] [4]	X [1]	N/A [5]	N/A
Vapor Refrigerant Recovery Rate, kg/min	X [1]	X [1]	N/A	N/A
High Temperature Vapor Recovery Rate, kg/min	X [1]	X [1]	N/A	N/A
Push/Pull Liquid Recovery Rate, kg/min	X [1]	X [1]	N/A	N/A
Final Recovery Vacuum Level, kPa	X	X	N/A	X
Recycle Flow Rate, kg/min	N/A	X	X	N/A
Refrigerant Loss, kg	X [2]	X	X	X [3]
Residual Trapped Refrigerant, kg	X [3]	X [2]	X [2]	X [2]
Quantity of Refrigerant Processed at Rated Conditions, kg	N/A	X	X	N/A

[1] For a recovery or recovery/recycle unit, one must rate either liquid refrigerant recovery rate or vapor refrigerant recovery rate or one can rate for both. If rating only one, the other shall be indicated by N/A, "not applicable."
[2] Mandatory rating if multiple refrigerants, oil separation or non-condensable purge are rated.
[3] Mandatory rating for equipment tested for multiple refrigerants.
[4] "X" denotes mandatory rating or equipment requirements.
[5] "N/A" indicates "Not Applicable" for a parameter that does not have a rating.

TABLE 3—CONTAMINANT REMOVAL RATINGS FOR REFRIGERANT RECOVERY AND RECOVERY/RECYCLING EQUIPMENT [1] [2]

Contaminant	Type of equipment			
	Recovery	Recovery/recycling	Recycling	System dependent equipment
Moisture Content, ppm by weight	N/A [2]	X [1]	X	N/A
Chloride Ions, pass/fail	N/A	X	X	N/A
Acid Content, ppm by weight	N/A	X	X	N/A
High Boiling Residue, % by volume	N/A	X	X	N/A
Particulates/solids, pass/fail	N/A	X	X	N/A
Non-condensables, % by volume	N/A	X	X	N/A

[1] "X" denotes mandatory rating.
[2] "N/A" indicates "Not Applicable" for a parameter that does not have a rating.

Section 12. References

Listed here are all standards, handbooks, and other publications essential to the formation and implementation of the standard. All references in this appendix are considered as part of this standard.

- UL 1963, *Standard for Safety Refrigerant Recovery/Recycling Equipment*, Fourth Edition (with revisions through October 13, 2013), dated June 1, 2011, (incorporated by reference, see § 82.168).

- AHRI Standard 700–2015, *Specifications for Refrigerants*, Air-Conditioning, Heating, and Refrigeration Institute
- IEC 60038 *IEC Standard Voltages*, Edition 7.0, 2009–06 (English version) (incorporated by reference, see § 82.168).

Section 13.0. Particulate Used in Standard Contaminated Refrigerant Sample

13.1 *Particulate Specification*

13.1.1 The particulate material (pm) will be a blend of 50 percent coarse air cleaner dust as received, and 50 percent retained on a 200-mesh screen. The coarse air cleaner dust is available from: AC Spark Plug Division; General Motors Corporation; Flint, Michigan.

13.1.2 *Preparation of Particulate Materials.* To prepare the blend of contaminant per ANSI/ASHRAE Standard 63.2–1996 (RA 2010), first wet screen a quantity of coarse air cleaner dust on a 200-mesh screen (particle retention 74 µm). This is done by placing a portion of the dust on a 200-mesh screen and running water through the screen while stirring the dust with the fingers. The fine contaminant particles passing through the screen are discarded. The larger than 200-mesh particles collected on the screen are removed and dried for one hour at 110 °C. The blend of standard contaminant is prepared by mixing 50 percent by weight of coarse air cleaner dust as received (after drying for one hour at 110 °C) with 50 percent by weight of the larger than 200-mesh screened dust.

13.1.3 *Particle Size Analysis.* The coarse air cleaner dust as received and the blend used as the standard contaminant have the following approximate particle size analysis:

TABLE B1—WEIGHT PERCENTAGE IN VARIOUS µm SIZE RANGES FOR PARTICLE SIZE ANALYSIS

Size range (µm)	As received (wt %)	Blend (wt %)
0–5	12	6
5–10	12	6
10–20	14	7
20–40	23	11
40–80	30	32
80–200	9	38

■ 17. Amend subpart F by adding appendix B4 to read as follows:

Appendix B4 to Subpart F of Part 82—Performance and Safety of Flammable Refrigerant Recovery and/or Recycling Equipment

This appendix is based on the Air-Conditioning, Heating, and Refrigeration Institute Standard 740–2016, *Performance Rating of Refrigerant Recovery Equipment and Recovery/Recycling Equipment*, and Underwriters Laboratories Standard 1963–2011 (Fourth Edition), *Standard for Safety: Refrigerant Recovery/Recycling Equipment*, including Supplement SB (added October 11, 2013), *Requirements for Refrigerant Recovery/Recycling Equipment Intended for Use with a Flammable Refrigerant.*

Section 1. Purpose

1.1 The purpose of this standard is to establish methods of testing for rating and evaluating the performance and safety of refrigerant recovery and/or recycling equipment and general equipment requirements (herein referred to as "equipment") for contaminant or purity levels, capacity, speed and purge loss to minimize emission into the atmosphere of designated refrigerants, as well as safety for use with flammable refrigerants.

Section 2. Scope

2.1 This standard applies to equipment for recovering and/or recycling flammable single refrigerants, azeotropes, zeotropic blends, and their normal contaminants from refrigerant systems. This standard defines the test apparatus, test gas mixtures, sampling procedures, analytical techniques, and equipment construction that will be used to determine the performance and safety of refrigerant recovery and/or recycling equipment (hereinafter, "equipment").

Section 3. Definitions

3.1 All terms in this appendix will follow the definitions in § 82.152 and Appendix B3 to Subpart F of Part 82 unless otherwise defined in this appendix.

3.2 All definitions used in UL 1963, including the definitions in Supplement SB, as applicable, are incorporated by reference, see § 82.168.

Section 4. Evaluation of Performance

4.1 *Performance Ratings.* All recovery and/or recycling equipment to be tested under this appendix must follow the procedures and meet all requirements established in Appendix B3 to Subpart F of Part 82 to determine the performance ratings in addition to the safety evaluation conducted under the rest of this appendix.

4.2 *Safety.* All recovery and/or recycling equipment to be tested under this appendix must follow the procedures and meet all requirements in Supplement SB (added October 11, 2013), *Requirements for Refrigerant Recovery/Recycling Equipment Intended for Use with a Flammable Refrigerant* in Underwriters Laboratories Standard 1963–2011 (Fourth Edition), *Standard for Safety: Refrigerant Recovery/Recycling Equipment* (incorporated by reference, see § 82.168).

■ 18. Amend subpart F by revising appendix D to read as follows:

Appendix D to Subpart F of Part 82—Standards for Becoming a Certifying Program for Technicians

a. Test Preparation. Technicians must pass an EPA-approved test, provided by an EPA-approved certifying program to be certified as a Type I technician. Organizations providing Type I certification only may choose either an on-site format or a mail-in format similar to what is permitted under the MVACs program.

Technicians must pass a closed-book, proctored test, administered in a secure environment, by an EPA-approved certifying program to be certified as a Type II or Type III technician.

Technicians must pass a closed-book, proctored test (or series of tests), administered in a secure environment, by an

EPA-approved certifying program to be certified as a Universal technician. Mail-in format Type I tests cannot be used toward a Universal certification.

Each certifying program must assemble tests by choosing a prescribed subset from the EPA test bank. EPA will have a test bank with more questions than are needed for an individual test, which will enable the certifying program to generate multiple tests in order to discourage cheating. Each test must include 25 questions drawn from Group 1 and 25 questions drawn from each relevant technical Group. Tests for Universal technicians will include 100 questions (25 from Group 1 and 25 from each relevant technical Group). Universal tests may be taken all at once, or by combining passing scores on separate Type I, Type II, and Type III tests. Questions should be divided in order to sufficiently cover each topic within the Group.

Certifying programs must provide a paper hand-out or electronic form of communication to technicians after they have completed their certification test that contains the following information:

—Which certifying program is providing the testing;
—Contact information for the certifying program;
—The name and contact information of the proctor; and
—When they should expect to receive their score and, if they passed, their certification card.

Each certifying program must show a method of randomly choosing which questions will be on the tests. Multiple versions of the test must be used during each testing event. Test answer sheets must include the name and address of the applicant, the name and address of the certifying program, and the date and location at which the test was administered.

Training material accompanying mail-in Type I tests must not include sample test questions mimicking the language of the certification test. All mail-in material will be subject to review by EPA.

Certifying programs may charge individuals reasonable fees for the administration of the tests. EPA will publish a list of all approved certifying programs.

b. Proctoring. A certifying program for Type I (if in-person), Type II, Type III, and Universal technicians must designate at least one proctor registered for every 50 people taking tests at the same time at a given site.

The certification test for Type I (if taken as part of a Universal certification), Type II, Type III, and Universal technicians is a closed-book exam. The proctors must ensure that the applicants for certification do not use any notes or training materials during testing. Desks or work space must be placed in a way that discourages cheating. The space and physical facilities are to be conducive to continuous surveillance by the proctors and monitors during testing.

The proctor may not receive any benefit from the outcome of the testing other than a fee for proctoring. Proctors cannot know in advance which questions are on the tests they are proctoring.

Proctors are required to verify the identity of individuals taking the test by examining photo identification. Acceptable forms of identification include but are not limited to drivers' licenses, government identification cards, passports, and military identification.

Certifying programs for Type I technicians using the mail-in format, must take sufficient measures at the test site to ensure that tests are completed honestly by each technician. Each test for Type I certification must provide a means of verifying the identification of the individual taking the test. Acceptable forms of identification include but are not limited to drivers' licenses and passports.

c. Test Security. A certifying program must demonstrate the ability to ensure the confidentiality and security of the test questions and answer keys through strict accountability procedures. An organization interested in developing a technician certification program will be required to describe these test security procedures to EPA.

After the completion of a test, proctors must collect all test forms, answer sheets, scratch paper and notes. These items are to be placed in a sealed envelope.

d. Test Content. All Type I, Type II and Type III, certification tests will include 25 questions from Group I and 25 questions from Group II. Universal certification tests will include 25 questions from Group I and 75 questions from Group II (with 25 from each of the three sector-specific areas).

Group I will ask questions in the following areas:

1. Environmental impact of CFCs, HCFCs, and substitute refrigerants
2. Laws and regulations
3. Changing industry outlook

Group II will ask questions covering sector-specific (*i.e.,* Type I, Type II, Type III) issues in the following areas:

4. Leak detection
5. Recovery Techniques
6. Safety
7. Shipping
8. Disposal

e. Grading. Tests must be graded objectively. Certifying programs must inform the applicant of their test results no later than 30 days from the date of the test. Type I certifying programs using the mail-in format must notify the applicants of their test results no later than 30 days from the date the certifying programs received the completed test and any required documentation.

The passing score for the closed-book Type I, Type II, Type III and Universal certification test is 70 percent. The passing score for Type I certification tests using the mail-in format is 84 percent.

f. Proof of Certification. Certifying programs must issue a standard wallet-sized identification card no later than 30 days from the date of the test. Type I certifying programs using mail-in formats must issue cards to certified technicians no later than 30 days from the date the certifying program receives the completed test and any required documentation.

Each wallet-sized identification card must include, at a minimum, the name of the certifying program including the date the certifying program received EPA approval, the name of the person certified, the type of certification, a unique number for the certified person that does not include a technician's social security number, and the following text:

[name of person] has successfully passed a [Type I, Type II, Type III and/or Universal—as appropriate] exam on how to responsibly handle refrigerants as required by EPA's National Recycling and Emissions Reduction Program.

g. Recordkeeping and Reporting Requirements. Certifying programs must maintain records of the names and addresses of all individuals taking the tests, the scores of all certification tests administered, and the dates and locations of all tests administered. These records must be maintained indefinitely, unless transferred to another certifying program or EPA.

EPA must receive an activity report from all approved certifying programs by every January 30 and July 30, which covers the previous six months of certifications. The first report must be submitted following the first full six-month period for which the program has been approved by EPA. This report includes the pass/fail rate. If the certifying program believes a test bank question needs to be modified, information about that question should also be included.

Approved certifying programs will receive a letter of approval from EPA. Each testing center must display a copy of that letter at their place of business.

Approved technician certification programs that voluntarily plan to stop providing the certification test must forward all records required by this appendix and § 82.161 to another program currently approved by EPA in accordance with this appendix and with § 82.161. Approved technician certification programs that receive records of certified technicians from a program that no longer offers the certification test, and the program that is voluntarily withdrawing from being a technician certification program must inform EPA at the address listed in § 82.160 within 30 days of receiving or transferring these records. The notification must include the name and address of the program to which the records have been transferred. If another currently approved program willing to accept the records cannot be located, these records must be submitted to EPA at the address listed at § 82.160.

Technician certification programs that have had their certification revoked in accordance with § 82.169 must forward all records required by this appendix and § 82.161 to EPA at the address listed in § 82.160. Failure to do so is a violation of 40 CFR part 82, subpart F.

h. Additional Requirements. EPA may periodically inspect testing sites to ensure compliance with EPA regulations. If testing center discrepancies are found, they must be corrected within a specified time period. If discrepancies are not corrected, EPA may suspend or revoke the certifying program's approval. The inspections will include but are not limited to a review of the certifying program's provisions for test security, the availability of space and facilities to conduct the administrative requirements and ensure the security of the tests, the availability of adequate testing facilities and spacing of the applicants during testing, a review of the proper procedures regarding accountability, and that there is no evidence of misconduct on the part of the certifying programs, their representatives and proctors, or the applicants for certification.

If the certifying programs offer training or provide review materials to the applicants, these endeavors are to be considered completely separate from the administration of the certification test.

■ 19. Amend subpart F by adding appendix E to read as follows:

Appendix E to Subpart F of Part 82—Test Procedure for Leaks From Containers Holding Two Pounds or Less of Refrigerant for Use in an MVAC

This appendix is based on the California Air Resources Board (CARB) standard *TP–503: Test Procedure for Leaks from Small Cans of Automotive Refrigerant,* as amended on January 5, 2010; and CARB standard *BP–A1: Balance Protocol for Gravimetric Determination of Sample Weights using a Precision Balance,* as amended January 5, 2010.

Section 1. Applicability

This test procedure is used by manufacturers of containers holding two pounds or less of refrigerant for use in a motor vehicle air conditioner (MVAC) to determine the leakage rate of small containers of automotive refrigerant that are subject to the requirements of 40 CFR part 82, subpart F. Specifically, this test procedure will specify the equipment, procedures, and calculations to determine if a container holding two pounds or less of refrigerant for use in an MVAC complies with the leakage rate specified in § 82.154(c)(2)(ii). All terms in this appendix will follow the definitions in § 82.152 unless otherwise defined in this appendix.

All containers holding two pounds or less of refrigerant for use in an MVAC must comply with other applicable codes and regulations such as local, state, or Federal safety codes and regulations.

This test procedure involves the use of materials under pressure and operations and should only be used by or under the supervision of those familiar and experienced in the use of such materials and operations. Appropriate safety precautions should be observed at all times while performing this test procedure.

Section 2. Principle and Summary of Test Procedure

This procedure is used to determine the leakage rate of containers holding two pounds or less of refrigerant for use in an MVAC (small cans). Testing will involve subjecting both full and partially empty cans in both upright and inverted positions at two temperatures: 73 °F and 130 °F.

Thirty small cans are tested under each condition for a total of 240 small cans tested. Small cans are brought to temperature stability, weighed, then stored for 30 days under specified conditions of temperature, orientation, and state of fill, then re-weighed. Leakage rate (grams/year) is estimated by (weight loss in grams) x 365/(days duration). The leakage rate is then compared to a standard of 3.00 grams/year to determine if a given small can complies with the leakage rate specified in § 82.154(c)(2)(ii).

Section 3. Biases and Interferences

3.1 Contaminants on the operator's hands can affect the weight of the small can and the ability of the small can to absorb moisture. To avoid contamination of the small can, the balance operator should wear gloves while handling the small cans.

3.2 Weight determinations can be interfered with by moisture condensing on the small can and by thermal currents generated by temperature differences between the small can and the room temperature. The small cans cool during discharge and could cause condensation. For these reasons, small cans must be equilibrated to balance room temperature for at least four hours before weighing.

3.3 Variations in the temperature, pressure, and humidity of the ambient air will cause variations in the buoyancy of the small can. These variations should typically be less than 25 mg for a small can. If the small can is not leaking at all, then the uncorrected weight changes will be within the range of 0 ± 25 mg, which is about ten percent of the 247 mg loss expected after thirty days for a can leaking at 3 g/yr. In that case buoyancy corrections can be omitted. If the absolute value of the uncorrected weight change exceeds 25 mg, then all calculations must be made using weights corrected for buoyancy based on the temperature, pressure, and humidity of the weighing room.

3.4 Some electronic balances are sensitive to the effects of small static charges. The small can should be placed directly on the balance pan, ensuring metal to metal contact. If the balance pan is not grounded, the small can and balance pan should be statically discharged before weighing.

Section 4. Sensitivity and Range

The mass of a full small can could range from roughly 50 g to 1000 g depending on the container capacity. A top loading balance, capable of a maximum weight measurement of not less than 1,000 g and having a minimum readability of 0.001 g, reproducibility and linearity of ± 0.002 g, must be used to perform mass measurements.

Section 5. Equipment

5.1 A top loading balance that meets the requirements of Section 4 above.

5.2 A NIST traceable working standard mass for balance calibration. A NIST traceable working standard mass for a balance linearity check. A reference mass to serve as a ''blank'' small can.

5.3 An enclosure capable of controlling the internal air temperature from 73 °F ± 5 °F, and an enclosure capable of controlling the internal air temperature to 130 °F ± 5 °F.

5.4 A temperature instrument capable of measuring the internal temperature of the temperature conditioning enclosures and the balance room with a sensitivity of ± 2 °F.

5.5 A barometric pressure instrument capable of measuring atmospheric pressure at the location of the balance to within ± 0.02 inches of mercury.

5.6 A relative humidity measuring instrument capable of measuring the relative humidity (RH) at the location of the balance with a sensitivity of ± 2 percent RH.

5.7 A hose with appropriate fitting for dispensing refrigerant from the small can to a recovery machine.

5.8 A refrigerant recovery machine to collect the discharged refrigerant from small cans being tested.

Section 6. Calibration Procedures

6.1 Calibrations are applied to the balance and to the support equipment such as temperature, humidity, and pressure monitoring equipment. Procedures for calibration are not spelled out here. General calibration principals for the support equipment and the balance are described in Section 11, Quality Assurance/Quality Control. Detailed calibration procedures for measurements made using the balance are contained in Attachment A: ''Balance Protocol for Gravimetric Determination of Sample Weights using a Precision Balance.''

Section 7. Small Can Preparation

7.1 Receive a batch of 240 small cans of one design to be tested. These may include several SKUs from different manufacturers if the container and valve combination are the same.

7.2 Clean small cans with Alkanox solution or equivalent and dry with a lint free towel.

7.3 Confirm that the sample ID sticker on the small can matches the sample ID on the chain of custody forms.

7.4 Select a reference mass similar to the weight of a full small can. If multiple sets of similar sized small cans are being tested, only one reference mass is needed; it can be used with all sets. Store the reference mass in the balance area.

7.5 Evacuate the contents of one half of the small cans (120 cans) into the refrigerant recovery machine using normal DIY dispensing procedures until each small can is approximately half full.

7.6 Select a reference mass similar to the weight of the half-full small can. If multiple sets of similar size small cans are being tested, only one reference mass is needed; it can be used with all sets. Store the reference mass in the balance area.

Section 8. Small Can Weighing

Weighing cans on the balance is done in accordance with Attachment A to this appendix. Attachment A describes how to conduct weight determinations including appropriate calibration and QC data. This section, ''Small Can Weighing,'' describes the overall process, not the details of how to use the balance.

Initial Weights

8.1 Put on gloves. Check the small cans for contamination.

8.2 Place the 240 small cans into a location where they can equilibrate to balance room temperature. Record the small can test IDs and the equilibration start time on the Small Can Test Data Forms available on EPA's Web site in sets of thirty, one form for each of the eight test conditions.

8.3 Let cans equilibrate for at least four hours.

8.4 Weigh the set of 240 small cans and the reference weights using Attachment A and log the results to the Balance Weighing Log Form available on EPA's Web site.

8.5 Transfer data from the Balance Weighing Log Form to the Small Can Test Data Form in sets of 30, one set for each of the eight conditions to be tested.

Thirty-Day Soak

8.6 Place each set of 30 small cans into the appropriate orientation and temperature for soaking:

30 full small cans—73 °F, upright
30 full small cans—73 °F, inverted
30 full small cans—130 °F, upright
30 full small cans—130 °F, inverted
30 half-full small cans—73 °F, upright
30 half-full small cans—73 °F, inverted
30 half-full small cans—130 °F, upright
30 half-full small cans—130 °F, inverted

8.7 Soak the small cans for 30 days undisturbed.

Final Weighing

8.8 Place the 240 small cans into a location where they can equilibrate to balance room temperature.

8.9 Let the small cans equilibrate for at least four hours.

8.10 Weigh the set of 240 small cans, the reference weights, and any additional sets of small cans using Attachment A.

8.11 Transfer data from the Balance Weighing Log Form to the corresponding Small Can Test Data Forms.

Section 9. Calculations

Corrections for Buoyancy

The calculations in this section are described in terms of ''weight.'' Mass is a property of the small can, whereas weight is a force due to the effects of buoyancy and gravity. Procedures for correcting the effect of buoyancy are given in Attachment B of this appendix. Ignoring buoyancy, *i.e.,* using weight data uncorrected for buoyancy effects, is acceptable for a thirty day test if the absolute magnitude of the weight change is less than 25 mg. If the uncorrected weight change exceeds 25 mg for any small can, then correct all small can weights for buoyancy using the procedures in Attachment B before performing the calculations described below.

Calculation of Leak Rate

The emission rate in grams/day for each small can is calculated by subtracting the final weight from the initial weight and then dividing the weight difference by the time difference measured in days to the nearest hour (nearest 1/24 of a day). The emission rate in g/day is multiplied by 365 to determine emission rate in grams/yr. If the annual emission rate for any small can exceeds the entire small can contents, then the annual emission rate for that small can is adjusted to equal the entire small can contents/year (*e.g.,* about 350 g/yr for a 12 ounce small can). The annual emission rate for the purpose of the test is calculated by averaging the 240 individual adjusted annual emission rates and rounding to two decimal places. The cans fail the test if the adjusted annual emission rate averaged over 240 cans is greater than 3.00 g/yr. The calculations are described below.

Loss rate for each small can

$Ei_{daily} = (Wi_{final} - Wi_{initial})/(Di_{final} - Di_{initial})$ g/day

$Ei_{annual} = 365 \times Ei_{daily}$ g/year

$Ei_{adjusted}$ = Minimum of ($Ei_{adjusted}$, Ci/year) g/yr

Where,

Ei = emission rate
Wi_{final} = weight of can i after soaking (grams)
$Wi_{initial}$ = weight of can I before soaking (grams)
Di_{final} = date/time of final weight measurements (days)
$Di_{initial}$ = date/time of initial weight measurements (days)
Ci = original factory mass of refrigerant in can i

Note: Date/Times are measured in days. Microsoft Excel stores dates and times in days, and the calculations can be made directly in Excel. If calculations are made manually, calculate serial days to the nearest hour for each date and time as follows:

D = Julday + Hour/24

Where,

Julday = serial day of the year: Jan 1 = 1, Jan 31 = 31, Feb 1 = 32, etc.
Hour = hour of day using 24-hour clock, 0 to 23

Calculate the average loss rate for the 240 small cans as follows:

E_{mean} = [Sum ($E_{adjusted}i$), i = 1 to 240]/240

Section 10. Recordkeeping

During small can weighing, record the small can weights and date/times on the Balance Weighing Log Form. After each weighing session, transfer the measured weights and date/times from the Balance Weighing Log Form to the Small Can Test Data Form.

At the end of the test, complete the calculations described in Section 9, Calculations, and record the results on the Small Can Test Data Form.

Section 11. Quality Assurance/Quality Control

11.1 All temperature, pressure, and humidity instruments should be calibrated annually against NIST traceable laboratory standards. The main purpose of the NIST traceable calibration is to establish the absolute accuracy of the device. The instruments should also be checked periodically such as weekly, monthly, or quarterly against intermediate standards or against independent instruments. For example, a thermocouple can be checked weekly against a wall thermometer. A barometer or pressure gauge can be checked weekly by adjusting to sea level and comparing with local airport data. The main purpose of the frequent checks is to verify that the device has not failed in some way. This is especially important for electronic devices such as a digital thermometer, but even a liquid filled thermometer can develop a problem such as a bubble.

11.2 The balance should be serviced and calibrated annually by an independent balance service company or agency using NIST traceable reference masses. Servicing verifies accuracy and linearity, and the maintenance performed helps ensure that a malfunction does not develop.

11.3 The balance must also be calibrated and its linearity checked with working standards before and after each weighing session, or before and after each group of 24 small cans if more than 24 small cans are weighed in a session. Procedures for calibrating and using the balance, as well as recording balance data, are described in the accompanying balance weighing protocol. These procedures include zero checks, calibration checks, and reference mass checks. Procedures for calculating quality control data from those checks are described in Attachment A.

11.4 The small cans are cleaned then handled using gloves to prevent contamination. All equilibration and soaking must be done in a dust free area.

Section 12. Balance Protocol for Gravimetric Determination of Sample Weights Using a Precision Balance

12.1 *Scope and application*

This Protocol summarizes a set of procedures and tolerances for weighing objects in the range of 0 to 1,000 g with a resolution of 0.001 g. This protocol only addresses balance operations, it does not address project requirements for equilibration, sample hold time limits, sample collection etc.

12.2 *Summary of method*

The balance is zeroed and calibrated using procedures defined herein. Object weight determinations are conducted along with control object weight determinations, zero checks, calibration checks, sensitivity checks, and replicate weightings in a defined sequence designed to control and quantitatively characterize precision and accuracy.

12.3 *Definitions*

N/A.

12.4 *Interferences*

Object weights can be affected by temperature and relative humidity of their environment, air currents, static electricity, gain and loss of water vapor, gain or loss of and loss of volatile compounds directly from the sample or from contaminants such as finger prints, marker ink, and adhesive tape.

Contamination, transfer of material to or from the samples, is controlled by conducting operations inside a clean area dedicated to the purpose and having a filtered laminar air flow where possible; by wearing gloves while handling all samples and related balance equipment; by using forceps to handle small objects, and by keeping the balance and all related equipment inside the clean area.

Air currents are controlled by conducting weighing operations inside a closed chamber or glove box and by allowing the substrates to reach temperature and relative humidity equilibrium. The chamber is maintained at 40 percent relative humidity and 25 °C by a continuous humidity and temperature control system. The temperature and RH conditions are recorded at least once per weighing sessions. Equilibration times for samples that are particularly sensitive to humidity or to loss of semi-volatiles species are specified by project requirements.

Static electric charges on the walls of the balance and the weighed objects, including samples, controls, and calibration weights, can significantly affect balance readings. Static is avoided by the operator ground himself and test objects as described in the balance manual.

12.5 *Personnel health and safety*

N/A

12.6 *Equipment and supplies*

- Filtered, temperature and humidity controlled weighing chamber.
- Precision Balance
- Plastic forceps
- Nylon fabric gloves.
- Working calibration weights: ANSI Class 2, 1000g and 500 g
- Working sensitivity weight: 50 mg
- Reference objects: references are one or more objects that are typical of the objects to be weighed during a project, but that are stored permanently inside the balance glove box. Reference objects are labeled Test1, Test2, Test3, etc.

12.7 *Reagents and standard*

N/A

12.8 *Sample collection, preservation, and storage*

N/A. See relevant project requirements and SOPs.

12.9 *Quality control*

Data quality is controlled by specifying frequencies and tolerances for Zero, Calibration, Linearity, and Sensitivity checks. If checks do not meet tolerance criteria, then samples must be re-weighed. In addition, the procedures specify frequencies for Control Object Checks.

Data quality is quantitatively characterized using Zero Check, Calibration Check, and Control Check data. These data are summarized monthly in statistics and QC charts.

12.10 *Calibration and standardization*

The absolute accuracy of the balance is established by calibration against an ANSI Class 2, stainless steel working weight: 1000.000 g ± 0.0025 g. Linearity is established checking the midpoint against an ANSI Class 2 stainless steel working weight: 500.000 ± 0.0012 g. Sensitivity is established using and ANSI Class 2 stainless steel or aluminum working weight: 50 mg. Precision is checked by periodically checking zero, calibration, and reference object weights.

12.11 *Procedure*

12.11.1 *Overview of Weighing Sequence*

Weighing a series of substrates consists of performing the following procedures in sequence, while observing the procedures for handling and the procedures for reading the balance:

1. Initial Adjustment
2. Weigh eight samples
3. Zero Check
4. Weigh eight samples
5. Zero Check
6. Weigh eight samples
7. Calibration Check
8. Return to step 2.
9. If less than 24 cans are weighed, perform a final Calibration Check at the end of weighing.

This sequence is interrupted and samples are reweighed if QC check tolerances are not met. Each of these procedures along with procedures for handling and reading the balance are described below. The QC tolerances referred to in these procedures are listed in Table 1.

12.11.2 *Handling*

1. Never touch samples, weights, balance pans, etc. with bare hands. Wear powder free gloves to handle the weights, controls, and samples.

12.11.3 *Reading the Balance*

1. Close the door. Wait for the balance stabilization light to come on, and note the reading.

2. Watch the balance reading for 30 sec (use a clock). If the reading has not changed by more than 0.001 g from the reading noted in step 1, then record the reading observed at the end of the 30 sec period.

3. If the reading has drifted more than 0.001 g note the new balance reading and go to step 2.

4. If the balance reading is flickering back and forth between two consecutive values choose the value that is displayed more often than the other.

5. If the balance reading is flickering equally back and forth between two consecutive values choose the higher value.

12.11.4 *Initial Adjustment*

1. Empty the sample pan Close the door. Select Range 1000 g
2. Wait for a stable reading
3. Record the reading with QC code IZC (initial zero check)
4. Press the Tare button
5. Record the reading in the logbook with QC code IZA (initial zero adjust)
6. Place the 1,000 g working calibration weight on the balance pan
7. Wait for a stable reading.
8. Record the reading with QC code ICC (initial cal check)
9. Press the Calibrate button
10. Record the reading with QC code ICA (initial cal adjust)
11. Remove the calibration weight.
12. Wait for a stable reading.
13. Record the reading with QC code IZC.
14. If the zero reading exceeds ± 0.002 g, go to step 4.
15. Place the 500 g calibration weight on the balance pan
16. After a stable reading, record the reading with QC code C500. Do not adjust the balance.
17. Add the 0.050 g weight to 500 g weight on the balance pan.
18. After a stable reading, record the reading with QC code C0.05. Do not adjust the balance.
19. Weigh reference object TEST1, record reading with QC code T1.
20. Weigh the reference object TEST2, TEST3, etc. that is similar in weight to the samples that you will be weighing. Record with QC code T2, T3, etc.

12.11.5 *Zero Check*

1. Empty the sample pan. Close the door.
2. Wait for a stable reading
3. Record the reading with QC code ZC
4. If the ZC reading is less than or equal to the zero adjustment tolerance shown in Table 1, return to weighing and *do not adjust the zero.* If the ZC reading exceeded the zero adjustment tolerance, proceed with steps 5 through 7.
5. Press the Tare button
6. Record the reading in the logbook with QC code ZA.
7. If the ZC reading exceeded the zero re-weigh tolerance, change the QC code recorded in step 3 from ZC to FZC. Then enter a QC code of FZ into the QC code column of all samples weights obtained after the last valid zero check. Re- weigh all of those samples, recording new data in new rows of the logbook.

12.11.6 *Calibration Check*

1. First, follow procedures for Zero Check. If the ZC was within tolerance, tare the balance anyway (*i.e.,* follow steps 5 and 6 of the Zero Check method)
2. Place the 1,000 g working calibration weight on the sample pan, wait for a stable reading.
3. Record the reading with QC code C1000
4. If the C1000 reading is less than or equal to the calibration adjustment tolerances, skip steps 5 through 8 and proceed to step 9. *Do not adjust the calibration.*
5. If the C100 reading exceeded the calibration adjust tolerance, press the Calibrate button.
6. Record the reading in the logbook with QC code CA
7. Perform a Zero Check (follow the Zero Check method)
8. If the C1000 reading exceeded the calibration re-weigh tolerance, change the code recorded in step 3 from C1000 to FC1000. Enter FC into the QC column for all sample weights obtained after the last valid calibration check. Re-weigh all of those samples, recording new data in new rows of the logbook.

12.11.7 *Replicate Weighing Check*

1. This protocol does not include reweigh samples to obtain replicates. The projects for which this protocol is intended already include procedures multiple weightings of each sample.

TABLE 1—QC TOLERANCES AND FREQUENCIES FOR BALANCE PROTOCOL

Reading Tolerance:	
0.001 g, stable for 30 sec.	
Adjustment Tolerances:	
Zero:	−0.003 to +0.003 g.
Calibration:	999.997 to 1000.003 g.
Controls:	none.
Replicates:	none.
Re-weigh Tolerances:	
Zero:	−0.005 to +0.005 g.
Calibration:	999.995 to 1000.005 g.
Controls:	none.
Replicates:	none.

TABLE 1—QC TOLERANCES AND FREQUENCIES FOR BALANCE PROTOCOL—Continued

Reference Objects:	
Test 1—A reference object weighing about 400 g.	
Test 2—A reference object weighing about 200 g.	
Test 3—A reference object weighing about 700 g.	
QC Frequencies:	
Zero Checks:	once per 8 samples.
Calibration Checks:	once per 24 samples.
Repeat weighings:	none (test method includes replicate determinations).
Control objects:	once per weighing session.

12.12 *Data analysis and calculations*

For Zero Checks, let Z equal the recorded Zero Check value. For control checks let T1, T2, etc. equal the recorded value for control object Test 1, Test 2, etc. For Calibration Checks, let C1000 equal C1000 reading minus 1000, M = C500—500, S = .C.050—C500—.050. For Replicate Checks, let D equal the loss that occurred between the first and second measurements. In summary:

T1 = T1
T2 = T2
T3 = T3
Z = ZC—0
C = C1000—1000
M = C500—500
G = C050—C500—.050

Tabulate the mean and standard deviation for each of the following: Z, C, M, G. T1, T2, T3. Depending on the number of operators using the balance and the number of protocols in use, analyze the data by subcategories to determine the effects of balance operator and protocol. Each of these standard deviations, S_Z, S_C, etc. is an estimate of the precision of single weight measurement.

For Z, C, M, and G, check the mean value for statistical difference from 0. If the means are statistically different than zero, troubleshooting to eliminate bias may be called for. For Z, C, M, G, T1, T2, T3, check that the standard deviations are all comparable. If there are systematic differences, then troubleshooting to eliminate the problem may be called for.

Note that the precision of a weight gain, involves two weight determinations, and therefore is larger than S by a factor of sqrt(2). On the other hand replicate weighings improves the precision of the determinations by a factor of sqrt(N). If N = 2, *i.e.,* duplicates, then the factors cancel each other.

To estimate the overall uncertainty in a weight determination, a conservative estimate might be to combine the imprecision contributed by the zero with the imprecision contributed by the calibration.

$U = \mathrm{Sqrt}(S_Z^2 + S_C^2)$

The uncertainty in a weight gain from N replicates is then given by:

$U_{gain} = \mathrm{Sqrt}(2) \times \mathrm{Sqrt}(S_Z^2 + S_C^2)/\mathrm{Sqrt}(N)$

But due to the balance adjustment and reweigh tolerances, we expect S_Z to approximately equal S_C, to approximately equal S_M, etc. tolerances, so that the equation above becomes:

$U_{gain} = 2 \times S/\mathrm{Sqrt}(N)$

Where S is any individual standard deviation; or better, a pooled standard deviation.

12.13 *Method performance*

The data necessary to characterize the accuracy and precision of this method are still being collected. The method is used primarily to weigh objects before and after a period of soaking to determine weight loss by subtraction. Given the reweigh tolerances, we expect that the precision of weight gain determinations will be on the order of 0.006 g at the 1-sigma level. Bias in the weight gain determination, due to inaccuracy of the calibration weight and to fixed non-linearity of the balance response is on the order 0.005 percent of the gain.

12.14 *Pollution prevention*

When discharging half the can contents during can preparation, do not vent the contents of the small can to the atmosphere. Use an automotive recovery machine to transfer small can contest to a recovery cylinder.

12.15 *Waste management*

Dispose of the contents of the recycle cylinder through a service that consolidates waste for shipment to EPA certified facilities for reclaiming or destruction.

Section 13. Compensation of Weight Data for Buoyancy and Gravity Effects

13.1 *Gravity*

Variations in gravity are important only when weighing objects under different gravitational fields, *i.e.,* at different locations or at different heights. Since the balance procedures calibrate the balance against a known mass (the calibration ''weight'') at the same location where sample objects are weighed, there is no need to correct for location. Although both the sample and the calibration weight are used at the same location, there will be a difference in the height of the center of gravity of the sample object (small can) and the center of gravity of the reference mass (calibration weight). However, this difference in height is maintained during both the initial weights and final weights, affecting the initial and final weights by the same amount, and affecting the scale of the weight difference by only a few ppm. In any event, the magnitude of this correction is on the order of 0.3 ug per kg per mm of height difference. A difference on the order of 100 mm would thus yield a weight difference of about 0.03 mg, which is insignificant compared to our balance resolution which is 0.001 g or 1 mg.

Based on the discussion above, no corrections for gravity are necessary when determining weight changes in small cans.

13.2 *Buoyancy*

Within a weighing session, the difference in density between the sample object and the calibration weight will cause the sample object weight value to differ from its mass value due to buoyancy. For a 1-liter object in air at 20 °C and at 1 atm, the buoyant force is about 1.2 g. The volume of a 1 kg object with a density of 8 g/cm³ (*e.g.,* a calibration weight), is about 0.125 liters, and the buoyancy force is about 0.15 g. Variations in air density will affect both of these values in proportion. The net value being affected by variations in air density is thus on the order of 1.2 − 0.15 = 1.05 g. Air density can vary up or down by 2 percent or more due to variations in barometric pressure, temperature, and humidity. The buoyancy force will then vary up or down by 0.02 g, or 20 mg. This is significant compared to the weight change expected after one week for a can leaking at 3 grams per year, which is 57 mg.

Based on the discussion above, buoyancy corrections must be made.

Variables measured or calculated:

V_{can} = volume of can (cm³). Estimate to within 10 percent by measuring the can dimensions or by water displacement. Error in the can volume will cause an error in the absolute amount of the buoyancy force, but will have only a small effect on the change in buoyancy force from day to day.

W_{can} = nominal weight of a can (g), used to calculate the nominal density of the can.

ρ_{can} = nominal density of a small can (g/cm³). The nominal values can be applied to corrections for all cans. It is not necessary to calculate a more exact density for each can. Calculate once for a full can and once for a half full can as follows:

ρ_{can} = Wcan /Vcan

T = Temperature in balance chamber (degrees Celsius).

RH = Relative humidity in balance chamber (expressed a number between 0 and 100).

P_{baro} = Barometric pressure in balance chamber (millibar). Use actual pressure, NOT pressure adjusted to sea level.

ρ_{air} = density of air in the balance chamber (g/cm³). Calculate using the following approximation:

$\rho_{air} = 0.001*[0.348444*P_{baro} - (RH/100) \times (0.252 \times T - 2.0582)]/(T + 273.15)$

ρ_{ref} = the reference density of the calibration weight (g/cm³). Should be 8.0 g/cm³.

Equation to correct for buoyancy: $W_{corrected} = W_{reading} \times (1—\rho_{air}/\rho_{ref})/(1—\rho_{air}/\rho_{can})$

Retention of EB–1, EB–2, and EB–3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers; Final Rule

DEPARTMENT OF HOMELAND SECURITY

8 CFR Parts 204, 205, 214, 245 and 274a

[CIS No. 2571–15; DHS Docket No. USCIS–2015–0008]

RIN 1615–AC05

Retention of EB–1, EB–2, and EB–3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Final rule.

SUMMARY: The Department of Homeland Security (DHS) is amending its regulations related to certain employment-based immigrant and nonimmigrant visa programs. Specifically, the final rule provides various benefits to participants in those programs, including the following: improved processes and increased certainty for U.S. employers seeking to sponsor and retain immigrant and nonimmigrant workers; greater stability and job flexibility for those workers; and increased transparency and consistency in the application of DHS policy related to affected classifications. Many of these changes are primarily aimed at improving the ability of U.S. employers to hire and retain high-skilled workers who are beneficiaries of approved employment-based immigrant visa petitions and are waiting to become lawful permanent residents, while increasing the ability of those workers to seek promotions, accept lateral positions with current employers, change employers, or pursue other employment options.

DATES: This final rule is effective January 17, 2017.

ADDRESSES: Comments and related materials received from the public, as well as background documents mentioned in this preamble as being available in the docket, are part of docket USCIS–2015–0008. For access to the online docket, go to *http://www.regulations.gov* and enter this rulemaking's eDocket number: USCIS–2015–0008 in the ''Search'' box.

FOR FURTHER INFORMATION CONTACT: Kathleen Angustia or Nikki Lomax-Larson, Adjudications Officers (Policy), Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529. II. Executive Summary

A. Purpose and Summary of the Regulatory Action

DHS is amending its regulations related to certain employment-based immigrant and nonimmigrant visa programs. The final rule is intended to benefit U.S. employers and foreign workers participating in these programs by streamlining the processes for employer sponsorship of nonimmigrant workers for lawful permanent resident (LPR) status, increasing job portability and otherwise providing stability and flexibility for such workers, and providing additional transparency and consistency in the application of DHS policies and practices related to these programs. These changes are primarily intended to better enable U.S. employers to employ and retain high-skilled workers who are beneficiaries of employment-based immigrant visa (Form I–140) petitions, while increasing the ability of these workers to further their careers by accepting promotions, changing positions with current employers, changing employers, and pursuing other employment opportunities.

1. *Clarifications and Policy Improvements*

First, the final rule largely conforms DHS regulations to longstanding DHS policies and practices established in response to certain sections of the American Competitiveness and Workforce Improvement Act of 1998 (ACWIA), Public Law 105–277, div. C, tit. IV, 112 Stat. 2681, and the American Competitiveness in the Twenty-first Century Act of 2000 (AC21), Public Law 106–313, 114 Stat. 1251, as amended by the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107–273, 116 Stat. 1758

(2002).[1] Those sections were intended, among other things, to provide greater flexibility and job portability to certain nonimmigrant workers, particularly those who have been sponsored for LPR status as employment-based immigrants, while enhancing opportunities for innovation and expansion, maintaining U.S. competitiveness, and protecting U.S. workers. The final rule further clarifies and improves DHS policies and practices in this area—policies and practices that have long been specified through a series of policy memoranda and precedent decisions of the U.S. Citizenship and Immigration Services (USCIS) Administrative Appeals Office. By clarifying such policies in regulation, DHS provides greater transparency and certainty to affected employers and workers, while increasing consistency among DHS adjudications. In addition, this final rule clarifies several interpretive questions raised by AC21 and ACWIA.

Specifically, the final rule clarifies and improves policies and practices related to:

• *H–1B extensions of stay under AC21.* The final rule addresses the ability of H–1B nonimmigrant workers who are being sponsored for LPR status (and their dependents in H–4 nonimmigrant status) to extend their nonimmigrant stay beyond the otherwise applicable 6-year limit pursuant to AC21.

• *INA 204(j) portability.* The final rule addresses the ability of certain workers who have pending applications for adjustment of status to change employers or jobs without endangering the approved Form I–140 petitions filed on their behalf.

• *H–1B portability.* The final rule addresses the ability of H–1B nonimmigrant workers to change jobs or employers, including: (1) Beginning employment with new H–1B employers upon the filing of non-frivolous petitions for new H–1B employment (''H–1B portability petition''); and (2) allowing H–1B employers to file successive H–1B portability petitions (often referred to as ''bridge petitions'') and clarifying how these petitions affect lawful status and work authorization.

• *Counting against the H–1B annual cap.* The final rule clarifies the way in which H–1B nonimmigrant workers are counted against the annual H–1B numerical cap, including: (1) The method for calculating when these workers may access so-called remainder time (*i.e.,* time when they were physically outside the United States), thus allowing them to use their full period of H–1B admission; and (2) the method for determining which H–1B nonimmigrant workers are ''cap-exempt'' as a result of previously being counted against the cap.

• *H–1B cap exemptions.* The final rule clarifies and improves the method for determining which H–1B nonimmigrant workers are exempt from the H–1B numerical cap due to their employment at an institution of higher education, a nonprofit entity related to or affiliated with such an institution, or a governmental or nonprofit research organization, including a revision to the definition of the term ''related or affiliated nonprofit entity.''

• *Protections for H–1B whistleblowers.* The final rule addresses the ability of H–1B nonimmigrant workers who are disclosing information in aid of, or otherwise participating in, investigations regarding alleged violations of Labor Condition Application (LCA) obligations in the H–1B program to provide documentary evidence to USCIS to demonstrate that their resulting failure to maintain H–1B status was due to ''extraordinary circumstances.''

• *Form I–140 petition validity.* The final rule clarifies the circumstances under which an approved Immigrant Petition for Alien Worker (Form I–140 petition) remains valid, even after the petitioner withdraws the petition or the petitioner's business terminates, including for purposes of status extension applications filed on behalf of the beneficiary, job portability of H–1B nonimmigrants, and job portability under section 204(j) of the Immigration and Nationality Act (INA), 8 U.S.C. 1154(j).

Second, this rule builds on the provisions listed above by making changes consistent with the goals of AC21 and ACWIA to further provide stability and flexibility in certain immigrant and nonimmigrant visa categories. The amended provisions improve the ability of certain foreign workers, particularly those who are successfully sponsored for LPR status by their employers, to accept new employment opportunities, pursue normal career progression, better establish their lives in the United States, and contribute more fully to the U.S. economy. These changes also provide certainty for the regulated community and improve consistency across DHS adjudications, thereby enhancing DHS's ability to fulfill its responsibilities related to U.S. employers and certain foreign workers. Specifically, the final rule provides the following:

• *Establishment of priority dates.* To enhance clarity for the regulated community, the final rule provides that a priority date is generally established based upon the filing of certain applications or petitions. The new regulatory language is consistent with existing DHS practice in establishing priority dates for other Form I–140 petitions that do not require permanent labor certifications (labor certifications)—such as petitions filed under the employment-based first preference immigrant visa (EB–1) category.[2] *See* final 8 CFR 204.5(d).[3]

• *Retention of priority dates.* To enhance job portability for workers with approved Form I–140 petitions, the final rule explains the circumstances under which workers may retain priority dates and effectively transfer those dates to new and subsequently approved Form I–140 petitions. Priority date retention will generally be available as long as the approval of the initial Form I–140 petition was not revoked for fraud, willful misrepresentation of a material fact, the invalidation or revocation of a labor certification, or material error. This provision improves the ability of certain workers to accept promotions, change employers, or pursue other employment opportunities without fear of losing their place in line for immigrant visas. *See* final 8 CFR 204.5(e).

• *Retention of employment-based immigrant visa petitions.* To enhance job portability for certain workers with approved Form I–140 petitions in the EB–1, second preference (EB–2), and third preference (EB–3) categories, but who are unable to obtain LPR status due to immigrant visa backlogs, the final rule provides that Form I–140 petitions that have been approved for 180 days or more would no longer be subject to automatic revocation based solely on withdrawal by the petitioner or the termination of the petitioner's business. *See* final 8 CFR 205.1(a)(3)(iii)(C) and (D).

[1] Except where changes to current policies and practices are noted in the preamble of this final rule, these amendments capture the longstanding policies and practices that have developed since AC21 and ACWIA were enacted. DHS also notes that policies implementing AC21 and ACWIA provisions, if not referenced, discussed, or changed through this rulemaking, remain in place.

[2] The EB–1 preference category is for individuals with extraordinary ability, outstanding professors and researchers, and multinational executives and managers.

[3] In this final rule, the word ''final'' before a reference to 8 CFR is used to refer to a provision promulgated through this final rule and the word ''proposed'' before 8 CFR is used to refer to a provision of the proposed rule. *See Retention of EB–1, EB–2, and EB–3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers;* Proposed Rule, 80 FR 81899 (Dec. 31, 2015).

• *Eligibility for employment authorization in compelling circumstances.* To enhance stability and job flexibility for certain high-skilled nonimmigrant workers in the United States with approved Form I–140 petitions who cannot obtain an immigrant visa due to statutory limits on the number of immigrant visas that may be issued, the final rule allows certain beneficiaries in the United States in E–3, H–1B, H–1B1, L–1, or O–1 nonimmigrant status to apply for separate employment authorization for a limited period if there are compelling circumstances that, in the discretion of DHS, justify the issuance of employment authorization. *See* final 8 CFR 204.5(p).

• *10-day nonimmigrant grace periods.* To promote stability and flexibility for certain high-skilled nonimmigrant workers, the final rule provides two grace periods of up to 10 days, consistent with those already available to individuals in some nonimmigrant classifications, to individuals in the E–1, E–2, E–3, L–1, and TN classifications. The rule allows an initial grace period of up to 10 days prior to the start of an authorized validity period, which provides nonimmigrants in the above classifications a reasonable amount of time to enter the United States and prepare to begin employment in the country. The rule also allows a second grace period of up to 10 days after the end of an authorized validity period, which provides a reasonable amount of time for such nonimmigrants to depart the United States or take other actions to extend, change, or otherwise maintain lawful status. *See* final 8 CFR 214.1(l)(1).

• *60-day nonimmigrant grace periods.* To further enhance job portability, the final rule establishes a grace period of up to 60 consecutive days during each authorized validity period for individuals in the E–1, E–2, E–3, H–1B, H–1B1, L–1, O–1 or TN classifications. This grace period allows high-skilled workers in these classifications, including those whose employment ceases prior to the end of the petition validity period, to more readily pursue new employment should they be eligible for other employer-sponsored nonimmigrant classifications or employment in the same classification with a new employer. The grace period also allows U.S. employers to more easily facilitate changes in employment for existing or newly recruited nonimmigrant workers. *See* final 8 CFR 214.1(l)(2).

• *H–1B licensing.* To provide clarity and certainty to the regulated community, the final regulations codify current DHS policy regarding exceptions to the requirement that makes the approval of an H–1B petition contingent upon the beneficiary's licensure where licensure is required to fully perform the duties of the relevant specialty occupation. The final rule generally allows for the temporary approval of an H–1B petition for an otherwise eligible unlicensed worker, if the petitioner can demonstrate that the worker is unable for certain technical reasons to obtain the required license before obtaining H–1B status. The final rule also clarifies the types of evidence that would need to be submitted to support approval of an H–1B petition on behalf of an unlicensed worker who will work in a state that allows the individual to be employed in the relevant occupation under the supervision of licensed senior or supervisory personnel. *See* final 8 CFR 214.2(h)(4)(v)(C).

As noted above, these changes codify and improve USCIS policies concerning various employment-based immigrant and nonimmigrant visa classifications, including by making it easier to hire and retain nonimmigrant workers who have approved Form I–140 petitions and giving such workers additional career options as they wait for immigrant visas to become available. These improvements are increasingly important considering the lengthy waits and consistently growing demand for immigrant visas.

Finally, to provide additional stability and certainty to U.S. employers and individuals eligible for employment authorization in the United States, this final rule changes several DHS regulations governing the processing of applications for employment authorization. First, to minimize the risk of any gaps in employment authorization, this final rule automatically extends the validity of Employment Authorization Documents (EADs or Forms I–766) in certain circumstances based on the timely filing of EAD renewal applications. Specifically, the rule automatically extends the employment authorization and validity of existing EADs issued to certain employment-eligible individuals for up to 180 days from the date of expiration, as long as: (1) A renewal application is filed based on the same employment authorization category as the previously issued EAD (or the renewal application is for an individual approved for Temporary Protected Status (TPS) whose EAD was issued under 8 CFR 274a.12(c)(19)); (2) the renewal application is timely filed prior to the expiration of the EAD (or, in accordance with an applicable **Federal Register** notice regarding procedures for renewing TPS-related employment documentation) and remains pending; and (3) the individual's eligibility for employment authorization continues beyond the expiration of the EAD and an independent adjudication of the underlying eligibility is not a prerequisite to the extension of employment authorization. Concurrently, DHS eliminates the regulatory provisions that require adjudication of the Application for Employment Authorization (Form I–765 or EAD application) within 90 days of filing and that authorize interim EADs in cases where such adjudications are not conducted within the 90-day timeframe. These changes provide enhanced stability and certainty to employment-authorized individuals and their employers while reducing opportunities for fraud and protecting the security related processes undertaken for each EAD application. *See* final 8 CFR 247a.13(d).

2. *Summary of Changes From the Notice of Proposed Rulemaking*

Following careful consideration of public comments received, DHS has made several modifications to the regulatory text proposed in the Notice of Proposed Rulemaking (NPRM) published in the **Federal Register** on December 31, 2015. *See Retention of EB–1, EB–2, and EB–3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers; Proposed Rule,* 80 FR 81899. Those changes include the following:

• *Retaining a Priority Date.* In the final rule, DHS is responding to public comment by revising proposed 8 CFR 204.5(e)(2)(iv), a provision that identifies when error related to the approval of an employment-based immigrant visa petition can lead to loss of a priority date. The term ''error'' is clarified to mean ''material error'' in final 8 CFR 204.5(e)(2)(iv), which now states that a priority date may not be retained if USCIS revokes the approval of the Form I–140 petition because it determined that there was a material error with regard to the petition's approval.

• *Eligibility for employment authorization in compelling circumstances.* In the final rule, DHS is responding to public comment by revising several aspects of proposed 8 CFR 204.5(p) governing requests for EADs in compelling circumstances.

First, DHS is revising proposed 8 CFR 204.5(p)(1)(i), which discusses the eligibility of principal beneficiaries of immigrant visa petitions to obtain EADs in compelling circumstances. In the final rule, DHS provides clarification that principal beneficiaries may be eligible to file applications for such EADs during the authorized periods of admission that immediately precede or follow the validity periods of their nonimmigrant classifications (*i.e.,* ''grace periods'').

Second, DHS also is making several revisions to proposed 8 CFR 204.5(p)(3), which addresses certain eligibility requirements for principal beneficiaries and family members seeking to renew EADs issued in compelling circumstances. DHS clarifies in final § 204.5(p)(3) that applicants seeking to extend such employment authorization must file a renewal Form I–765 before the expiration of their current employment authorization. DHS also streamlines and clarifies the regulatory text covering the two instances in which applicants may be eligible to apply for renewal. DHS clarifies that under final § 204.5(p)(3)(i)(A), applicants may apply for renewal if the principal beneficiary continues to demonstrate compelling circumstances and an immigrant visa is not authorized for issuance to the principal beneficiary based on his or her priority date. DHS also clarifies that under final § 204.5(p)(3)(i)(B), a principal beneficiary may apply for renewal if his or her priority date is one year or less either before or after the relevant date in the Department of State Visa Bulletin. In determining whether the difference between the principal beneficiary's priority date and the date upon which immigrant visas are authorized for issuance is one year or less, DHS will use the applicable Final Action Date in the Visa Bulletin that was in effect on the date the application for employment authorization is filed.

Third, DHS is removing a ground of ineligibility that was proposed in § 204.5(p)(5), as it was duplicative of requirements for renewal under § 204.5(p)(3)(i)(B), which authorizes eligibility for renewals when the difference between the principal beneficiary's priority date and the date upon which immigrant visas are authorized for issuance to the principal beneficiary is 1 year or less according to the Visa Bulletin in effect on the date the application for employment authorization is filed.

Fourth, DHS is revising proposed § 204.5(p)(3)(ii) to clarify that family members may submit applications to renew employment authorization concurrently with renewal applications filed by the principal beneficiaries, or while such applications are pending, but family renewal applications cannot be approved unless the principal beneficiaries' applications are granted under paragraph (p)(3)(i) and remain valid.

Finally, DHS is making several technical revisions for readability and clarity.

- *Automatic revocation.* In the final rule, DHS is responding to public comment by editing proposed 8 CFR 205.1(a)(3)(iii)(C) and (D), which provide the grounds for automatically revoking Form I–140 petitions. DHS is revising these provisions to clarify that a Form I–140 petition will remain approved if a request to withdraw it is received or the petitioner terminates its business 180 days or more after either the date of the petition's approval or the date of filing of an associated application for adjustment of status.[4] In addition, DHS is removing the phrase, ''provided that the revocation of a petition's approval under this clause will not, by itself, impact a beneficiary's ability to retain his or her priority date under 8 CFR 204.5(e)'' in § 205.1(a)(3)(iii)(C) and (D) because that phrase was redundant of text in 8 CFR 204.5(e), which, as proposed and retained in this final rule, already establishes the ability of the beneficiary to retain his or her priority date if his or her immigrant visa petition is revoked on any ground other than those enumerated in final 8 CFR 204.5(e)(2)(i)–(iv). The deletion of the redundant text does not change the substance of the provisions.
- *Period of stay.* In the final rule, DHS is responding to public comment by revising proposed 8 CFR 214.1(l), which concerns authorized grace periods that may immediately precede and follow periods of nonimmigrant petition validity and other authorized periods of stay. DHS is removing from proposed 8 CFR 214.1(l)(1) the phrase ''to prepare for departure from the United States or to seek an extension or change of status based on a subsequent offer of employment'' because it is unnecessarily limiting and did not fully comport with how the existing 10-day grace period may be used by individuals in the H, O and P nonimmigrant visa classifications. DHS is adding the phrase ''or otherwise provided status'' after ''an alien admissible in E–1, E–2, E–3, H–1B, L–1, or TN classification and his or her dependents may be admitted to the United States'' to clarify that the 10-day grace period may be granted to these nonimmigrants at time of admission or upon approval of an extension of stay or change of status.

Moreover, in § 214.1(l)(2), DHS is adding the O–1 classification to the list of visa classifications for which USCIS will not consider an individual to have failed to maintain nonimmigrant status for a period of up to 60 days or until the end of the authorized validity period, whichever is shorter, solely because of the cessation of the employment on which the visa classification was based. In addition, DHS is clarifying that the 60-day grace period must be used in a single period of consecutive days during the relevant authorized validity period. DHS also is changing the phrase ''for a one-time period during any authorized validity period,'' to read ''once during each authorized validity period'' to clarify that the 60-day grace period may be provided to an individual only once per authorized validity period. However, an individual may be provided other such grace periods if he or she receives a new authorized validity period in one of the eligible nonimmigrant classifications. In addition, DHS is making other technical revisions to proposed § 214.1(l)(1), (2) and (3).

- *Duties without licensure.* In the final rule, DHS is responding to public comment by modifying proposed 8 CFR 214.2(h)(4)(v)(C), which sets standards for H–1B adjudication absent the beneficiary's full licensure. First, DHS is revising proposed 8 CFR 214.2(h)(4)(v)(C)(*1*) to expand the evidence USCIS will examine in cases where a state allows an individual without licensure to fully practice the occupation under the supervision of licensed senior or supervisory personnel to include ''evidence that the petitioner is complying with state requirements.''

Second, DHS is expanding the language in § 214.2(h)(4)(v)(C)(*2*) to account for other technical requirements in state or local rules or procedures that may, like the lack of a Social Security number or employment authorization, pose obstacles to obtaining a license. Specifically, in § 214.2(h)(4)(v)(C)(*2*)(*i*), DHS is adding the phrase ''or met a technical requirement'' following the references to the Social Security number and employment authorization. DHS is making similar conforming changes in two places in § 214.2(h)(4)(v)(C)(*2*)(*ii*).

Third, in § 214.2(h)(4)(v)(C)(*2*)(*ii*), which discusses the petitioner's qualifications for a license, DHS is adding ''substantive'' in front of the word ''requirements,'' to allow flexibility to account for various state specific requirements. DHS is adding these clarifications to address other analogous obstacles of which DHS is not specifically aware, which present similar situations where the beneficiary

[4] Such petitions will remain approved unless revoked on other grounds.

is qualified for licensure, but may not obtain the licensure because of a technical requirement.

In addition, DHS is making technical edits by replacing the use of the word ''or'' with ''and'' in the first clause of 8 CFR 214.2(h)(4)(v)(C)(*2*)(*ii*) to reflect that the beneficiary must have filed an application for the license in accordance with State and local rules and procedures. This does not change the intended meaning of the proposed rule. Finally, DHS is making a technical edit in the second clause by replacing the use of ''and/or'' with ''or'' preceding ''procedures.''

• *Definitions of non-profit entities related to or affiliated with an institution of higher education and governmental research organizations.* In the final rule, DHS is responding to public comment by editing proposed 8 CFR 214.2(h)(8)(ii)(F) and (h)(19), which define which entities are (1) nonprofit entities that are related to or affiliated with institutions of higher education, and (2) governmental research organizations for purposes of the H–1B visa program. H–1B nonimmigrant workers who are employed at such entities are exempt from the annual limitations on H–1B visas. Such entities are also exempt from paying certain fees in the H–1B program.

At § 214.2(h)(8)(ii)(F)(*2*), DHS is adding the phrase ''if it satisfies any one of the following conditions,'' to clarify that a petitioner only has to meet one of the listed requirements. DHS is adding the same clarifying language to 8 CFR 214.2(h)(19)(iii)(B). In § 214.2(h)(8)(ii)(F)(*2*)(*iv*) and (h)(19)(iii)(B)(*4*), which address cap exemption and ACWIA fee exemption, respectively, for a nonprofit entity that is related to or affiliated with an institution of higher education based on a formal written affiliation agreement, DHS is replacing the term ''primary purpose'' with ''fundamental activity'' in response to public comments suggesting the term ''primary purpose'' was too restrictive. As a result, when a nonprofit entity claims exemption from the cap and ACWIA fee based on a formal written affiliation agreement with an institution of higher education, the final rule requires that ''a fundamental activity'' of the nonprofit entity is to directly contribute to the research or education mission of the institution of higher education. DHS is also removing the phrase ''absent shared ownership or control'' from § 214.2 (h)(8)(ii)(F)(*2*)(*iv*) and (h)(19)(iii)(B)(4) to clarify that an entity need not prove the absence of shared ownership or control when relying on the existence of a formal affiliation agreement to establish that a nonprofit entity is related to or affiliated with an institution of higher education.

In addition, DHS is defining the phrase ''governmental research organization'' in § 214.2(h)(19)(iii)(C) to include state and local government research entities, and not just federal government research entities, whose primary mission is the performance or promotion of basic research and/or applied research. This definition is adopted for cap exemption purposes at 8 CFR 214.2(h)(8)(ii)(F)(*3*).

• *Calculating the maximum H–1B admission period.* In the final rule, DHS is responding to public comment by revising proposed 8 CFR 214.2(h)(13)(iii)(C), which discusses how to calculate the time spent physically outside the United States during the validity of an H–1B petition that will not count against an individual's maximum authorized period of stay in H–1B status. DHS is amending the regulatory text to clarify that there is no temporal limit on recapturing time. The amendment makes clear that such time may be recaptured in a subsequent H–1B petition on behalf of the foreign worker, ''at any time before the alien uses the full period of authorized H–1B admission described in section 214(g)(4) of the Act.'' DHS also is making a technical edit to § 214.2(h)(13)(iii)(C)(*1*) to clarify which form may be used for this provision.

• *Lengthy adjudication delay exemption from section 214(g)(4) of the Act.* In the final rule, DHS is responding to public comment by revising several subsections of proposed 8 CFR 214.2(h)(13)(iii)(D), which governs when a nonimmigrant may be eligible for H–1B status in 1-year increments beyond the 6-year limitation that otherwise applies. DHS is amending the text of proposed 8 CFR 214.2(h)(13)(iii)(D)(*1*) by striking the phrase, ''prior to the 6-year limitation being reached.'' This change clarifies that a qualifying labor certification or Form I–140 petition is not required to be filed 365 days before the 6-year limitation is reached in order for the individual to be eligible for an exemption under section 106(a) of AC21; instead, the labor certification or Form I–140 petition would need to be filed at least 365 days before the day the exemption would take effect. DHS is also making several revisions to simplify and clarify § 214.2(h)(13)(iii)(D)(*5*), which concerns advance filing; § 214.2(h)(13)(iii)(D)(*6*), which defines petitioners who may seek the exemption; § 214.2(h)(13)(iii)(D)(*7*), which describes subsequent exemption approvals after the 7th year; and § 214.2(h)(13)(iii)(D)(*10*), which describes limits on future exemptions from the lengthy adjudication delay.

• *Per country and worldwide limits.* In the final rule, DHS is responding to public comment by revising proposed 8 CFR 214.2(h)(13)(iii)(E), which governs when a nonimmigrant may be eligible for H–1B status in 3-year increments beyond the 6-year limitation that otherwise applies. This provision addresses eligibility for an extension of H–1B status under section 104(c) of AC21. DHS is striking the phrase, ''the unavailability must exist at time of the petition's adjudication'' to reflect longstanding DHS policy. By striking this phrase, DHS is clarifying that if the Visa Bulletin that was in effect on the date the H–1B petition is filed shows that the individual was subject to a per country or worldwide visa limitation, DHS may grant the extension under section 104(c) of AC21, even if the immigrant visa is available when the petition is adjudicated, so long as the beneficiary is otherwise eligible.

• *Retaliatory action claims.* In the final rule, DHS is responding to public comment by amending proposed 8 CFR 214.2(h)(20), which discusses eligibility for extensions of stay in H–1B status or change of status to other nonimmigrant classifications by beneficiaries who faced retaliatory action from their employers. Additionally, DHS is making a minor technical change to this section, correcting ''labor certification application'' to ''labor condition application.''

• *Validity of petition for continued eligibility for adjustment of status.* In the final rule, DHS is responding to public comment by amending proposed 8 CFR 245.25(a), which governs the circumstances in which an individual with a pending application for adjustment of status can move to a job in the same or a similar occupational classification. In particular, revisions are being made to implement DHS's current section 204(j) portability policy and longstanding practice related to the adjudication of qualifying Form I–140 petitions that are not approved at the time the beneficiary's application for adjustment of status has been pending for 180 days or more.

First, in § 245.25(a), DHS is replacing a general reference in the NPRM to a ''USCIS designated form'' with a specific reference to ''Form I–485 Supplement J'' as the form DHS intends to be used for an individual to demonstrate continuing eligibility for adjustment of status based on an existing or new job offer under INA 204(j).

Second, DHS also is clarifying that the Supplement J may be accompanied by ''material and credible documentary evidence, in accordance with form instructions.'' This revision expands the types of evidence that can be submitted in support of Supplement J beyond ''material and credible information provided by another Federal agency, such as information from the Standard Occupational Classification (SOC) system,'' as had been proposed. As a result, DHS is deleting the evidentiary list included in proposed § 245.25(b).

Third, DHS is revising proposed § 245.25(a)(2)(ii) to reaffirm that a qualifying Form I–140 petition must be approved before DHS examines a portability request under INA 204(j). Moreover, DHS is adding § 245.25(a)(2)(ii)(B) to confirm that, unless approval of the petition would be inconsistent with a statutory requirement, a pending qualifying Form I–140 petition may be approved if (1) the petitioner established the ability to pay at the time of filing the petition and (2) all other eligibility criteria are met at the time of filing and until the beneficiary's application for adjustment of status has been pending for 180 days.

Finally, DHS is reorganizing and renumbering § 245.25(a), and making other technical and conforming edits.

- *Concurrently filed EAD applications.* In the final rule, DHS is responding to public comment by amending proposed 8 CFR 274a.13(a) to facilitate USCIS's ability to notify the public of changes in concurrent filing procedures for EAD applications. DHS is adding text indicating that USCIS may announce on its Web site circumstances in which an EAD application may be filed concurrently with a related benefit request that, if granted, would form the basis for eligibility for employment authorization. Under the proposed rule, such announcement was limited to form instructions.
- *Automatic extensions of employment authorization for renewal applicants.* In the final rule, DHS is responding to public comment by amending proposed 8 CFR 274a.13(d) to clarify timeliness and termination rules for the automatic extension of certain EAD renewal applicants. DHS is clarifying that a renewal EAD application filed on the basis of a grant of TPS is timely if filed during the period described in the applicable **Federal Register** notice regarding procedures for renewing TPS. DHS is also making clarifying edits to the termination provision at § 274a.13(d)(3).

In addition to the above changes that were made in response to public comment, DHS is making several technical changes to the regulatory text in this final rule so that DHS regulations better reflect current ACWIA fee amounts and filing procedures:

- *ACWIA fee amount and filing procedures.* DHS is making technical changes to 8 CFR 214.2(h)(19)(i), (ii), (v), (vi) and (vii) to update the amount of the ACWIA fee applicable to certain H–1B petitions in accordance with statutory amendments, as well as procedures for submitting the fee to USCIS, or claiming an exemption from the fee, to conform with current procedures.[5] The statutory fee amount in INA 214(c)(9), 8 U.S.C. 1184(c)(9), was amended by section 1 of Pub. L. 106–311 (Oct. 17, 2000) (changing the fee amount from $500 to $1,000), and the Consolidated Appropriations Act, 2005, Pub. L. 108–447, Division J, Title IV, sec. 422 (L–1 Visa and H–1B Visa Reform Act) (Dec. 8, 2004) (permanently extending the fee and changing the fee amount from $1,000 to a bifurcated amount of $1,500 for employers with more than 25 employees, and half that amount for those with up to 25 employees). DHS is updating its regulations to conform the fee amount to the figure in current INA 214(c)(9). DHS regulations at 8 CFR 103.7(b)(1)(i)(CCC) and form instructions for the Petition for a Nonimmigrant Worker, Form I–129, already reflect these updated fee amounts. The technical changes also reflect the elimination of references to the now obsolete Form I–129W, which has been replaced by the Form I–129 H–1B and H–1B1 Data Collection and Filing Fee Exemption Supplement and which is already being used to make determinations for ACWIA fee exemptions.
- *Additional entities exempt from the ACWIA fee.* DHS is making a technical change to 8 CFR 214.2(h)(19)(iii) to include other entities that are statutorily exempt from the ACWIA fee, and thus to conform the regulation to INA 214(c)(9)(A), 8 U.S.C. 1184(c)(9)(A), as amended by section 1 of Pub. L. 106–311. DHS added a new paragraph (D) to include primary or secondary educational institutions, and a new paragraph (E) to include nonprofit entities that engage in an established curriculum-related clinical training of students registered at an institution of higher education. The Form I–129 and its form instructions already list these entities as fee exempt.

[5] DHS finds that prior notice and comment for these technical changes is unnecessary, as DHS is merely conforming its regulations to the self-implementing statutory amendments. *See* 5 U.S.C. 553(b)(B).

B. Legal Authority

The authority of the Secretary of Homeland Security (Secretary) for these regulatory amendments is found in various sections of the Immigration and Nationality Act (INA), 8 U.S.C. 1101 *et seq.,* ACWIA, AC21, and the Homeland Security Act of 2002 (HSA), Public Law 107–296, 116 Stat. 2135, 6 U.S.C. 101 *et seq.* General authority for issuing the final rule is found in section 103(a) of the INA, 8 U.S.C. 1103(a), which authorizes the Secretary to administer and enforce the immigration and nationality laws, as well as section 102 of the HSA, 6 U.S.C. 112, which vests all of the functions of DHS in the Secretary and authorizes the Secretary to issue regulations. Further authority for the regulatory amendments in the final rule is found in the following sections:

- Section 205 of the INA, 8 U.S.C. 1155, which grants the Secretary broad discretion in determining whether and how to revoke the approval of any Form I–140 petition approved under section 204 of the INA, 8 U.S.C. 1154;
- Section 214 of the INA, 8 U.S.C. 1184, including section 214(a)(1), 8 U.S.C. 1184(a)(1), which authorizes the Secretary to prescribe by regulation the terms and conditions of the admission of nonimmigrants;
- Section 274A(h)(3)(B) of the INA, 8 U.S.C. 1324a(h)(3)(B), which recognizes the Secretary's authority to extend employment authorization to noncitizens in the United States;
- Section 413(a) of ACWIA, which amended section 212(n)(2)(C) of the INA, 8 U.S.C. 1182(n)(2)(C), to authorize the Secretary to provide certain whistleblower protections to H–1B nonimmigrant workers;
- Section 414 of ACWIA, which added section 214(c)(9) of the INA, 8 U.S.C. 1184(c)(9), to authorize the Secretary to impose a fee on certain H–1B petitioners to fund the training and education of U.S. workers;
- Section 103 of AC21, which amended section 214(g) of the INA, 8 U.S.C. 1184(g), to provide: (1) An exemption from the H–1B numerical cap for certain H–1B nonimmigrant workers employed at institutions of higher education, nonprofit entities related to or affiliated with such institutions, and nonprofit research organizations or governmental research organizations; (2) that an H–1B nonimmigrant who ceases to be employed by a cap-exempt employer, and who was not previously counted against the cap, will be subject to the H–1B numerical limitations; and (3) that a worker who has been counted against

the H–1B numerical cap within the 6 years prior to petition approval will not again be counted against the cap unless the individual would be eligible for a new 6-year period of authorized H–1B admission.

- Section 104(c) of AC21, which authorizes the extension of authorized H–1B admission beyond the general 6-year maximum for H–1B nonimmigrant workers who have approved EB–1, EB–2, or EB–3 Form I–140 petitions but are subject to backlogs due to application of certain per-country limitations on immigrant visas;
- Section 105 of AC21, which added what is now section 214(n) of the INA, 8 U.S.C. 1184(n),[6] to allow an H–1B nonimmigrant worker to begin concurrent or new H–1B employment upon the filing of a timely, non-frivolous H–1B petition;
- Sections 106(a) and (b) of AC21, which, as amended, authorize the extension of authorized H–1B admission beyond the general 6-year maximum for H–1B nonimmigrant workers who have been sponsored for permanent residence by their employers and who are subject to certain lengthy adjudication or processing delays;
- Section 106(c) of AC21, which added section 204(j) of the INA to authorize certain beneficiaries of approved EB–1, EB–2, and EB–3 Form I–140 petitions who have filed applications for adjustment of status to change jobs or employers without invalidating their approved petitions; and
- Section 101(b)(1)(F) of the HSA, 6 U.S.C. 111(b)(1)(F), which establishes as a primary mission of DHS the duty to ''ensure that the overall economic security of the United States is not diminished by efforts, activities, and programs aimed at securing the homeland.''

C. Costs and Benefits

Taken together, the amendments in this final rule are intended to reduce unnecessary disruption to businesses and workers caused by immigrant visa backlogs, as described in Section III.C of this preamble. The benefits from these amendments add value to the U.S. economy by retaining high-skilled workers who make important contributions to the U.S. economy, including technological advances and research and development endeavors, which are highly correlated with overall economic growth and job creation.[7] For more information, the public may consult the Regulatory Impact Analysis (RIA), which addresses the short-term and long-term effects of these regulations. The RIA is available in the docket for this rulemaking.

DHS has analyzed potential costs of these regulations and has determined that the changes have direct impacts to individual beneficiaries of employment-based nonimmigrant and immigrant visa petitions in the form of filing costs, consular processing costs, and potential for longer processing times for EAD applications during filing surges, among other costs. Because some of these petitions are filed by sponsoring employers, this rule also has indirect effects on employers in the form of employee replacement costs.

The amendments clarify and amend policies and practices in various employment-based immigrant and nonimmigrant visa programs, with the primary aim of providing additional stability and flexibility to foreign workers and U.S. employers participating in those programs. In part, the final rule clarifies and improves upon longstanding policies adopted in response to the enactment of ACWIA and AC21 to ensure greater consistency across DHS adjudications and provide greater certainty to regulated employers and workers. These changes provide various benefits to U.S. employers and certain foreign workers, including the enhanced ability of such workers to accept promotions or change positions with their employers, as well as change employers or pursue other employment opportunities. These changes also benefit the regulated community by providing instructive rules governing: (1) Extensions of stay for certain H–1B nonimmigrant workers facing long delays in the immigrant visa process; (2) the ability of workers who have been sponsored by their employers for LPR status to change jobs or employers 180 days after they file applications for adjustment of status; (3) the circumstances under which H–1B nonimmigrant workers may begin employment with a new employer; (4) the method for counting time in status as an H–1B nonimmigrant worker toward maximum periods of stay; (5) the entities that are properly considered related to or affiliated with institutions of higher education for purposes of the H–1B program; and (6) the circumstances under which H–1B nonimmigrant workers can claim whistleblower protections. The increased clarity provided by these rules enhances the ability of certain high-skilled workers to take advantage of the job portability and related provisions in AC21 and ACWIA.

The final rule also amends the current regulatory scheme governing certain immigrant and nonimmigrant visa programs to further enhance job portability for certain workers and improve the ability of U.S. businesses to retain highly valued individuals. These benefits are achieved by: (1) Revising the provisions affecting the continued validity of approved Form I–140 petitions, and retention of priority dates of those petitions, for purposes of processing immigrant visas or applications for adjustment of status; (2) establishing a means for certain nonimmigrant workers with approved Form I–140 petitions to directly request separate employment authorization for a limited time when facing compelling circumstances; (3) providing grace periods to certain nonimmigrants to enhance their ability to seek an authorized change of employment; and (4) identifying exceptions to licensing requirements applicable to certain H–1B nonimmigrant workers.

The final rule also amends current regulations governing the processing of applications for employment authorization to provide additional stability to certain employment-authorized individuals in the United States while addressing fraud, national security, and operational concerns. To prevent gaps in employment for such individuals and their employers, the final rule provides for the automatic extension of EADs (and, where necessary, employment authorization) upon the timely filing of a renewal application. To protect against fraud and other abuses, the final rule also eliminates current regulatory provisions that require adjudication of applications for employment authorization in 90 days and that authorize interim EADs when that timeframe is not met.

DHS has prepared a full costs and benefits analysis of the final rule, which can be found in the docket for this

[6] Section 8(a)(3) of the Trafficking Victims Protection Reauthorization Act of 2003, Public Law 108–193, (Dec. 19, 2003), redesignated section 214(m) of the INA, 8 U.S.C. 1184(m), as section 214(n) of the INA, 8 U.S.C. 1184(n).

rulemaking on *regulations.gov.* The table below provides a summary of the provisions and impacts of this rule.

TABLE 1—SUMMARY OF PROVISIONS AND IMPACTS

Provisions	Purpose	Expected impact of the final rule
Priority Date	Clarifies when a priority date is established for employment-based immigrant visa petitions that do not require a labor certification under INA 203(b).	Quantitative: • Not estimated. Qualitative: • Removes ambiguity and sets consistent priority dates for affected petitioners and beneficiaries.
Priority Date Retention	Explains that workers may retain priority dates and transfer those dates to new and subsequently approved Form I–140 petitions, except when USCIS revokes approval of the petition for: Material error, fraud or willful misrepresentation of a material fact, or revocation or invalidation of the labor certification accompanying the petition.	Quantitative: • Not estimated. Qualitative: • Results in administrative efficiency and predictability by explicitly listing when priority dates are lost as the approval of the petitions that are revoked under these specific grounds cannot be used as a basis for an immigrant visa. • Improves the ability of certain workers to accept promotions, change employers, or pursue other employment opportunities.
Employment-Based Immigrant Visa Petition Portability Under 204(j).	Incorporates statutory portability provisions into regulation.	Quantitative: Petitioners – • Opportunity costs of time to petitioners for 1-year range from $126,598 to $4,636,448. DHS/USCIS— • Neutral because the new supplementary form to the application for adjustment of status to permanent residence will formalize the process for USCIS requests for evidence of compliance with INA 204(j) porting. Qualitative: Applicants/Petitioners— • Replaces, through the Supplement J standardized form, the need for individuals to submit job offer and employment confirmation letters. • Provides stability and job flexibility to certain individuals with approved employment-based immigrant visa petitions. • Implements the clarifications regarding ''same or similar occupational classifications'' through the new Supplement J. • Allows certain foreign workers to advance and progress in their careers. • Potential increased employee replacement costs for employers. DHS/USCIS— • Administrative efficiency. • Standardized and streamlined process.
Employment Authorization for Certain Nonimmigrants Based on Compelling Circumstances.	Provisions allowing certain nonimmigrant principal beneficiaries, and their dependent spouses and children, to apply for employment authorization if the principal is a beneficiary of an approved EB–1, EB–2, or EB–3 immigrant visa petition while waiting for his or her immigrant visa to become available. Applicants must demonstrate compelling circumstances justifying an independent grant of employment authorization.	Quantitative: Total costs over 10-year period to applicants are: • $731.1 million for undiscounted costs. • $649.9 million at a 3% discounted rate. • $565.2 million at a 7% discounted rate. Qualitative: Applicants— • Provides ability for nonimmigrants who have been sponsored for LPR status to change jobs or employers when compelling circumstances arise. • Incentivizes such skilled nonimmigrant workers contributing to the economy to continue seeking LPR status. • Nonimmigrant principal workers who take advantage of the compelling circumstances EAD will lose their current nonimmigrant status and may not be able to adjust to LPR status in the United States. • Consular processing imposes potentially significant costs, risk and uncertainty for individuals and their families as well. Dependents— • Allows dependents to enter labor market earlier and contribute to household income.

TABLE 1—SUMMARY OF PROVISIONS AND IMPACTS—Continued

Provisions	Purpose	Expected impact of the final rule
90-Day Processing Time for Employment Authorization Applications.	Eliminates regulatory requirement for 90-day adjudication timeframe and issuance of interim-EADs. Adds provisions allowing for the automatic extension of EADs for up to 180 days for certain workers filing renewal requests.	Quantitative: • Not estimated. Qualitative: Applicants— • Removing a regulatory timeframe and moving to one governed by processing goals could potentially lead to longer processing times whenever USCIS is faced with higher than expected filing volumes. If such a situation were to occur, this could lead to potential delays in work employment start dates for first-time EAD applicants until approval is obtained. However, USCIS believes such scenarios will be rare and mitigated by the automatic extension provision for renewal applications which will allow the movement of resources in such situations. • Providing the automatic continuing authorization for up to 180 days for certain renewal applicants could lead to less turnover costs for U.S. employers. In addition, the automatic extension provision minimizes the applicants' risk of any gaps in employment authorization. DHS/USCIS— • Streamlines the application and card issuance processes. • Enhances the ability to ensure all national security verification checks are completed. • Reduces duplication efforts. • Reduces opportunities for fraud and better accommodates increased security measures.
Automatic Revocation With Respect to Approved Employment-Based Immigrant Visa Petitions.	Revises regulations so that a petition may remain valid despite withdrawal by the employer or termination of the employer's business after 180 days or more of approval, or 180 days or more after the associated application for adjustment of status has been filed.	Quantitative: • Not estimated. Qualitative: • Beneficiary retains priority date unless the petition is revoked for one of the reasons specified in final 8 CFR 204.5(e)(2). • Affords porting ability under INA 204(j) and extension of H–1B status pursuant to AC21 sections 104(c) and 106(a) and (b), as well as potential eligibility for the new compelling circumstances EAD.
Period of Admission for Certain Nonimmigrant Classifications.	Nonimmigrants in certain high-skilled, nonimmigrant classifications may be granted grace periods of up to 10 days before and after their validity period, and a grace period upon cessation of employment on which the foreign national's classification was based, for up to 60 days or until the end of their authorized validity period, whichever is shorter, during each authorized validity period.	Quantitative: • Not estimated. Qualitative: Nonimmigrant Visa Holders—. • Assists the beneficiary in getting sufficiently settled such that he or she is immediately able to begin working upon the start of the petition validity period. • Provides time necessary to wrap up affairs to depart the country. • Allows the beneficiary to maintain nonimmigrant status when faced with a termination of employment to wrap up affairs, find new employment, or change to a different nonimmigrant classification.
Portability of H–1B Status Calculating the H–1B Admission Period Exemptions Due to Lengthy Adjudication Delays Per Country Limitation Exemptions Employer Debarment and H–1B Whistleblower Provisions.	Updates, improves, and clarifies DHS regulations consistent with policy guidance.	Quantitative: • Not estimated. Qualitative: • Formalizes existing DHS policy in the regulations, which will give the public access to existing policy in one location. • Clarifies current DHS policy that there is no temporal limit on recapturing time.
H–1B Licensing Requirements.	Expands the evidence USCIS will examine in cases where a state allows an individual without licensure to fully practice the relevant occupation under the supervision of licensed senior or supervisory personnel in that occupation to include evidence of compliance with state requirements. Additionally, USCIS is expanding the possible situations in which it may approve an H–1B petition even though the beneficiary cannot obtain a license for certain technical reasons.	Quantitative: • Not estimated. Qualitative: • Provides additional flexibilities in obtaining necessary licensure while still permitting H–1B employment during the pendency of state or local license applications. • Helps to relieve the circular predicament an H–1B beneficiary may encounter.

TABLE 1—SUMMARY OF PROVISIONS AND IMPACTS—Continued

Provisions	Purpose	Expected impact of the final rule
		• May minimally increase time burden for the petitioner to gather information and send it to USCIS. However, DHS anticipates that the benefits to the petitioner and beneficiary exceed the opportunity costs of time. • May increase opportunity costs of time for USCIS adjudicators to evaluate additional evidence in such types of cases. However, DHS does not anticipate that the opportunity costs of time will be so substantial as to warrant additional hiring of staff or cause significant adjudication delays.
Exemptions to the H–1B Numerical Cap, Revised Definition of "Related or Affiliated Nonprofit Entity" in the ACWIA Fee Context, and Expanded Interpretation of "Governmental Research Organizations.".	Codifies definition of "institution of higher education" and adds a broader definition of "related or affiliated nonprofit entity." Also, revises the definition of "related or affiliated nonprofit entity" for purposes of the ACWIA fee to conform it to the new definition of the same term for H–1B numerical cap exemption. Expands the interpretation of "governmental research organizations" for purposes of the ACWIA fee and aligns definitions for H–1B cap and fee exemptions.	Quantitative: • Not estimated. Qualitative: • Clarifies the requirements for a nonprofit entity to establish that it is related to or affiliated with an institution of higher education. • Better reflects current operational realities for institutions of higher education and how they interact with, and sometimes rely on, nonprofit entities. • Clarifies the interpretation of governmental research organizations to include federal, state, and local governmental organizations. • May expand the numbers of petitioners that are cap exempt and thus allow certain employers greater access to H–1B workers.

III. Background

A. ACWIA and AC21

1. The American Competitiveness and Workforce Improvement Act of 1998

ACWIA was enacted on October 21, 1998. Among other things, ACWIA was intended to address shortages of workers in the U.S. high-technology sector. To increase the number of such workers in the United States, section 411 of ACWIA increased the annual numerical cap on H–1B visas from 65,000 to 115,000 in each of fiscal years (FY) 1999 and 2000, and to 107,500 in FY 2001.[8] *See* section 411 of ACWIA (amending INA 214(g)(1), codified at 8 U.S.C. 1184(g)(1)). The congressional statements accompanying ACWIA recognized that the continued competitiveness of the U.S. high-technology sector is ''crucial for [U.S.] economic well-being as a nation, and for increased economic opportunity for American workers.'' *See* 144 Cong. Rec. S12,741, S12,749 (daily ed. Oct. 21, 1998) (statement of Sen. Spencer Abraham); *see also id.* (''This issue is not only about shortages, it is about opportunities for innovation and expansion, since people with valuable skills, whatever their national origin, will always benefit our nation by creating more jobs for everyone.'') [9]

ACWIA also included several measures intended to improve protections for U.S. and H–1B nonimmigrant workers. Section 413 of the ACWIA provided enhanced penalties for employer violations of Labor Condition Application (LCA) obligations as well as willful misrepresentations by employers in LCAs. *See* ACWIA 413 (creating INA 212(n)(2)(C), codified at 8 U.S.C. 1182(n)(2)(C)). Section 413 of ACWIA also made it a violation for an H–1B employer to retaliate against an employee for providing information to the employer or other persons, or for cooperating in an investigation, related to an employer's violation of its LCA attestations and obligations. Employers are prohibited from taking retaliatory action in such situations, including any action ''to intimidate, threaten, restrain, coerce, blacklist, discharge, or in any other manner discriminate'' against an employee for ''disclos[ing] information to the employer, or to any other person, that the employee reasonably believes evidences [an LCA] violation, any rule or regulation pertaining to the statutory LCA attestation requirements, or for cooperating, or attempting to cooperate, in an investigation or proceeding pertaining to the employer's LCA compliance.'' *See* INA 212(n)(2)(C)(iv), 8 U.S.C. 1182(n)(2)(C)(iv). Section 413 further required the development of a process to enable H–1B nonimmigrant workers who file complaints with DOL regarding illegal retaliation, and are otherwise eligible to remain and work in the United States, to seek other appropriate employment in the United States. *See* INA 212(n)(2)(C)(v), 8 U.S.C. 1182(n)(2)(C)(v).

Section 414 of ACWIA imposed a temporary fee on certain H–1B employers to fund, among other things, job training of U.S. workers and scholarships in the science, technology, engineering, and mathematics (STEM) fields. *See* ACWIA 414 (creating INA 214(c)(9), codified at 8 U.S.C. 1184(c)(9)). Although initially scheduled to sunset, the ACWIA fee was eventually made permanent by the H–1B Visa Reform Act of 2004, enacted as part of the Consolidated Appropriations Act, 2005, Public Law 108–447, div. J, tit. IV. That later enactment also established the current fee amounts of $1,500 per qualifying petition, or $750 for employers with no more than 25 full-time equivalent employees employed in the United States (including employees employed by any affiliate or subsidiary of such employer). Congress in the interim had amended section 214(c)(9)(A) of the INA, 8 U.S.C. 1184(c)(9)(A), by specifying additional

[8] Section 102(a) of AC21 further amended INA 214(g)(1) by increasing the annual numerical cap on H–1B visas to 195,000 for each of the fiscal years 2001, 2002, 2003. In fiscal year 2004 the annual H–1B numerical cap reverted to 65,000.

[9] Senator Abraham drafted and sponsored the original Senate bill for ACWIA, then titled the American Competitiveness Act, S. 1723, 105th Cong. (1998), which passed the full Senate by a 78–20 margin on May 18, 1998. 144 Cong. Rec. as S12,748–49 (daily ed. Oct. 21, 1998). He negotiated with the House of Representatives on a compromise ACWIA bill and was deputized to negotiate in talks between Congress and the White House to finalize the bill.

employers that are exempt from the ACWIA fee. *See* Act of Oct. 17, 2010, Public Law 106–311. Exempt employers include primary and secondary education institutions, certain institutions of higher education and related or affiliated nonprofit entities, nonprofit entities engaged in curriculum-related clinical training, and nonprofit research organizations or governmental research organizations. *See* INA 214(c)(9)(A), 8 U.S.C. 1184(c)(9)(A).

2. The American Competitiveness in the Twenty-First Century Act of 2000

AC21 was enacted on October 17, 2000. It made numerous changes to the INA designed to improve the U.S. economy in the short and long term. First, AC21 sought to improve economic growth and job creation by immediately increasing U.S. access to high-skilled workers. *See* S. Rep. No. 260, at 10 (''[A]rtificially limiting companies' ability to hire skilled foreign professionals will stymie our country's economic growth and thereby partially atrophy its creation of new jobs . . . American workers' interests are advanced, rather than impeded, by raising the H–1B cap''). Second, AC21 sought to improve the education and training of U.S. workers in high-skilled sectors, and thereby produce a U.S. workforce better equipped to fill the need in such sectors, through the funding of scholarships and high-skilled training programs. *See* section 111 of AC21. As noted by the accompanying Senate Report, foreign-born high-skilled individuals have played an important role in U.S. economic prosperity and the competitiveness of U.S. companies in numerous fields. *Id.* AC21 sought to provide such benefits by improving both the employment-based immigrant visa process and the H–1B specialty occupation worker program.

i. AC21 Provisions Relating to Employment-Based Immigrant Visas

AC21 contained several provisions designed to improve access to employment-based immigrant visas for certain workers. Section 104 of AC21, for example, sought to ameliorate the impact of the ''per-country limitations,'' which generally limit the number of immigrant visas that may be issued to the nationals of any one country to no more than 7 percent of the total number of immigrant visas. *See* INA 202(a)(2), 8 U.S.C. 1152(a)(2). Sections 104(a) and (b) of AC21 amended the INA to effectively waive application of the per-country limitations when such application would result in immigrant visas going unused in any quarter of the fiscal year. *See* AC21 104(a) and (b) (amending INA 202(a)(5), codified at 8 U.S.C. 1152(a)(5)); *see also* S. Rep. No. 260, 106th Cong., 2nd Sess. at 2. This provision recognized ''the discriminatory effects of [the per-country limitations] on nationals from certain Asian Pacific nations,'' specifically Chinese and Indian nationals, which ''prevent[ed] an employer from hiring or sponsoring someone permanently simply because he or she is Chinese or Indian, even though the individual meets all other legal criteria.'' *See* S. Rep. No. 260, at 22.

Section 104(c) of AC21 was designed to further ameliorate the impact of the per-country limitations on H–1B nonimmigrant workers who are the beneficiaries of approved EB–1, EB–2, or EB–3 Form I–140 petitions. Specifically, section 104(c) of AC21 authorized the extension of H–1B status beyond the statutory 6-year maximum for such individuals if immigrant visas are not immediately available to them because the relevant preference category is already over-subscribed for that foreign national's country of birth. *See* AC21 104(c). In support of this provision, Congress noted that ''these immigrants would otherwise be forced to return home at the conclusion of their allotted time in H–1B status, disrupting projects and American workers.'' *See* S. Rep. No. 260, at 22. Section 104(c) ''enables these foreign nationals to remain in H–1B status until they are able to receive an immigrant visa and adjust their status within the United States, thus limiting the disruption to American businesses.'' *Id.*

AC21 also sought to more generally ameliorate the impact of the lack of employment-based immigrant visas on the high-skilled beneficiaries of approved Form I–140 petitions. Sections 106(a) and (b) of AC21, as amended by section 11030A of the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107–273 (2002), authorized the extension of H–1B status beyond the statutory 6-year maximum for H–1B nonimmigrant workers who are being sponsored for LPR status by U.S. employers and are subject to lengthy adjudication or processing delays. Specifically, these provisions exempted H–1B nonimmigrant workers from the 6-year limitation on H–1B status contained in INA 214(g)(4), if 365 days or more have elapsed since the filing of a labor certification application (if such certification is required under INA 212(a)(5), 8 U.S.C. 1182(a)(5)), or a Form I–140 petition under INA 203(b), 8 U.S.C. 1153(b). These provisions were intended to allow such high-skilled individuals to remain in the United States as H–1B nonimmigrant workers, rather than being forced to leave the country and disrupt their employers due to a long-pending labor certification application or Form I–140 petition. *See* S. Rep. No. 260, at 23.

Finally, to provide stability and flexibility to beneficiaries of approved Form I–140 petitions subject to immigrant visa backlogs and processing delays, AC21 also provided certain workers the improved ability to change jobs or employers without losing their positions in the immigrant visa queue. Specifically, section 106(c) of AC21 provides that certain Form I–140 petitions filed under the EB–1, EB–2, and EB–3 preference categories will remain valid with respect to a new qualifying job offer if the beneficiary changes jobs or employers, provided an application for adjustment of status has been filed and such application has been pending for 180 days or more. *See* AC21 106(c) (creating INA 204(j)). The new job offer must be in the same or a similar occupational classification as the job for which the original Form I–140 petition was filed. *Id.*

ii. AC21 Provisions Seeking To Improve the H–1B Nonimmigrant Worker Classification

As noted above, one of the principal purposes for the enactment of AC21 was to improve the country's access to high-skilled workers. AC21 therefore contains several additional provisions intended to expand and strengthen the H–1B program.

a. Exemptions From the H–1B Numerical Cap

Section 103 of AC21 amended the INA to create an exemption from the H–1B numerical cap for those H–1B nonimmigrant workers who are employed or offered employment at an institution of higher education, a nonprofit entity related or affiliated to such an institution, or a nonprofit research organization or governmental research organization. *See* INA 214(g)(5)(A) and (B); 8 U.S.C. 1184(g)(5)(A) and (B). Congress deemed such employment advantageous to the United States, based on the belief that increasing the number of high-skilled foreign nationals working at U.S. institutions of higher education would increase the number of Americans who will be ready to fill specialty occupation positions upon completion of their education. *See* S. Rep. No. 260, at 21–22. Congress reasoned that ''by virtue of what they are doing, people working in universities are necessarily immediately contributing to educating Americans.'' *Id.* at 21. Congress also recognized that U.S. institutions of higher education are on a different hiring cycle from other U.S. employers, and in years of high H–1B demand, these institutions would be unable to hire cap-subject H–1B nonimmigrant workers. *Id.* at 22.

For purposes of this H–1B numerical cap exemption, the term ''institution of higher education'' is given the same meaning as that set forth in section 101(a) of the Higher Education Act of 1965, Public Law 89–329, 79 Stat. 1224 (1965), as amended (codified at 20 U.S.C. 1001(a) (''Higher Education Act'')).[10] *See* INA 214(g)(5)(A), 8 U.S.C. 1184(g)(5)(A). Due to the lack of statutory definitions, DHS defined the terms ''related or affiliated nonprofit entity,'' and ''nonprofit research organization or governmental research organization'' at 8 CFR 214.2(h)(19)(iii)(B) and (C), respectively, and adopted these definitions as a matter of interpretation in the cap exemption context.[11]

b. Application of the H–1B Numerical Cap to Persons Previously Counted

Section 103 of AC21 also amended the INA to ensure that H–1B nonimmigrant workers can change jobs or employers without again being counted against the H–1B cap. Specifically, section 103 provides that an individual who has been counted against the H–1B numerical cap within the 6 years prior to petition approval shall not be counted against the cap unless that individual would be eligible for a new 6-year period of authorized H–1B admission. *See* INA 214(g)(7), 8 U.S.C. 1184(g)(7). In addition, an individual previously in the United States in H–1B nonimmigrant status is eligible for a full 6 years of authorized admission as an H–1B nonimmigrant after residing and being physically present outside the United States for the immediate prior year. *Id.*

Section 103 of AC21 also amended the INA to address cases in which an H–1B nonimmigrant worker seeks to change employment from a cap-exempt entity to a ''cap-subject'' entity. Section 103 provides that once employment ceases with respect to a cap-exempt entity, the H–1B nonimmigrant worker will be subject to the cap if not previously counted and no other exemptions from the cap apply. *See* INA 214(g)(6), 8 U.S.C. 1184(g)(6).

c. H–1B Portability

Section 105 of AC21 further improved the H–1B program by increasing job portability for H–1B nonimmigrant workers. Specifically, section 105 allows an H–1B nonimmigrant worker to begin concurrent or new H–1B employment upon the filing of a timely, nonfrivolous H–1B petition. *See* INA 214(n), 8 U.S.C. 1184(n). The H–1B nonimmigrant worker must have been lawfully admitted to the United States, must not have worked without authorization after the lawful admission, and must be in a period of stay authorized by the Secretary.[12] Employment authorization based on the pending petition continues until adjudication. *See* INA 214(n)(1), 8 U.S.C. 1184(n)(1). If the H–1B petition is denied, the employment authorization provided under this provision ceases. *Id.* Congress created H–1B portability to ''allow an H–1B visa holder to change employers at the time a new employer files the initial paperwork, rather than having to wait for the new H–1B petition to be approved. This responds to concerns raised about the potential for exploitation of H–1B visa holders as a result of a specific U.S. employer's control over the employee's legal status.'' *See* S. Rep. No. 260, at 22–23.

B. Processing Applications for Employment Authorization Documents

The Secretary of Homeland Security has broad authority to extend employment authorization to noncitizens in the United States. *See, e.g.,* INA sections 103(a) and 274A(h)(3)(B), 8 U.S.C. 1103(a) and 1324a(h)(3)(B). DHS regulations at 8 CFR 274a.12(a), (b), and (c) describe three broad categories of foreign nationals authorized to work in the United States. Individuals in the first class, described at 8 CFR 274a.12(a), are authorized to work in the United States incident to their immigration status, without restriction as to the location of their employment or the type of employment they may accept. In many cases, their immigration status and attendant employment authorization is evidenced by the Arrival-Departure Record (Form I–94). Those individuals seeking to obtain an EAD that contains not only evidence of employment authorization, but also a photograph, typically must file a separate application with USCIS. *See* 8 CFR 274a.13(a).

Individuals in the second class, described at 8 CFR 274a.12(b), are employment authorized incident to their nonimmigrant status, but each individual's employment authorization is valid only with a specific employer. Individuals in this second group do not file separate requests for evidence of employment authorization and are not generally issued EADs. These individuals instead obtain a Form I–94 indicating their nonimmigrant status and attendant employment authorization.

Individuals in the third class, described at 8 CFR 274a.12(c), are required to apply for employment authorization and may begin working only if USCIS approves their application. This employment authorization is subject to the restrictions described in the regulations for the specific employment eligibility category. Generally, the approval of an EAD application by an individual described in 8 CFR 274a.12(c) is within the discretion of USCIS. There is no right to appeal the denial of an EAD application. *See* 8 CFR 274a.13(c).

Individuals requesting an EAD must file Form I–765 with USCIS in accordance with the form instructions. *See* 8 CFR 274a.13. Under current regulations, if USCIS does not adjudicate the Form I–765 within 90 days from the date USCIS receives the application, the applicant will be granted an interim document evidencing employment authorization

[10] Section 101(a) of the Higher Education Act of 1965, as amended, defines ''institution of higher education'' as an educational institution in any state that:

(1) admits as regular students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such a certificate, or persons who meet the requirements of [20 U.S.C. 1091(d)];

(2) is legally authorized within such state to provide a program of education beyond secondary education;

(3) provides an educational program for which the institution awards a bachelor's degree or provides not less than a 2-year program that is acceptable for full credit toward such a degree, or awards a degree that is acceptable for admission to a graduate or professional degree program, subject to review and approval by the Secretary [of Education];

(4) is a public or other nonprofit institution; and

(5) is accredited by a nationally recognized accrediting agency or association, or if not so accredited, is an institution that has been granted preaccreditation status by such an agency or association that has been recognized by the Secretary [of Education] for the granting of preaccreditation status, and the Secretary [of Education] has determined that there is satisfactory assurance that the institution will meet the accreditation standards of such an agency or association within a reasonable time.

[11] *See* USCIS Memorandum from Michael Aytes, ''Guidance Regarding Eligibility for Exemption from the H–1B Cap Based on § 103 of the American Competitiveness in the Twenty-First Century Act of 2000 (AC21) (Public Law 106–313)'' (June 6, 2006) (''Aytes Memo June 2006'') at 2–4.

[12] *See* USCIS Memorandum from Donald Neufeld, ''Consolidation of Guidance Concerning Unlawful Presence for Purposes of Sections 212(a)(9)(B)(i) and 212(a)(9)(C)(i)(I) of the Act'' (May 6, 2009) (''Neufeld May 2009 Memo'') (describing various ''periods of authorized stay''), available at *https://www.uscis.gov/sites/default/files/USCIS/Laws/Memoranda/Static_Files_Memoranda/2009/revision_redesign_AFM.PDF.*

with a validity period not to exceed 240 days. *See* 8 CFR 274a.13(d).

C. The Increasing Challenges Caused by Immigrant Visa Backlogs

The final rule addresses in part some of the challenges that flow from the statutory limits on immigrant visas, consistent with existing DHS authorities. The number of employment-based immigrant visas statutorily allocated per year has remained unchanged since the passage of the Immigration Act of 1990. In the intervening 25 years, the country's economy has expanded dramatically. The size of the U.S. economy, as measured by U.S. gross domestic product (GDP), increased by about 83 percent since 1990, rising from $8.955 trillion in 1990 to $16.397 trillion in 2015.[13] Over the same period, GDP per capita increased by just over 42 percent, rising from $35,794 in 1990 to $50,970 in 2015.[14] The number of entities doing business in the United States increased by at least 24 percent during the same period.[15] Over the same period, employer demand for immigrant visas has increasingly outpaced supply in some categories and for some nationalities, resulting in growing waits for some sponsored employees to obtain their LPR status. Such delays have resulted in substantial inequalities and other hardships flowing from limits on the ability of sponsored workers to change employment to enhance their skills, to accept promotions, or to otherwise change their positions. Since AC21 was enacted in October of 2000, certain workers seeking LPR status in the United States have faced increasing challenges as a consequence of the escalating wait times for immigrant visas. Numerical limitations in the various employment-based preference categories, combined with the per-country limitations that further reduce visa availability to certain workers, has produced significant oversubscription in the EB–2 and EB–3 categories, particularly for individuals born in India and China. This oversubscription results in substantial delays in obtaining LPR status for many workers, especially for workers from oversubscribed countries who can face delays that extend for more than a decade.[16]

AC21 was enacted as a response to the long and growing delays for many beneficiaries of Form I–140 petitions, to ameliorate the detrimental impact of such delays on the U.S. economy, U.S. businesses, and affected workers themselves. Those delays, however, have grown substantially longer than those that existed at the time AC21 was passed. Although DHS has worked diligently to improve processing times during the intervening period, visa backlogs due to statutory numerical limits for many individuals seeking EB–2 and EB–3 classification have grown significantly for certain individuals.[17] DHS recognizes the resulting realities confronting individuals seeking employment-based permanent residence who, due to immigrant visa unavailability, are required to wait many years for visas to become available before they can file applications for adjustment of status or seek immigrant visas abroad and become LPRs. In many instances, these individuals are in the United States in a nonimmigrant, employer-specific temporary worker category (*e.g.,* H–1B or L–1 visa classification) and may be unable to accept promotions or otherwise change jobs or employers without abandoning their existing efforts—including great investments of time and money—to become permanent residents. Their employment opportunities may be limited to their original job duties with the U.S. employer that sponsored their temporary admission to the United States, despite the fact that they may have gained professional experience that would otherwise allow them to progress substantially in their careers.

Many individuals subject to the immigrant visa backlogs confront the choice between remaining employed in a specific job under the same terms and conditions originally offered to them, or abandoning the pursuit of an immigrant visa altogether if they do not have another Form I–140 petition filed on their behalf. When such a worker changes employers or jobs—including a change to an identical job with a different employer or to a new but related job for the same employer—the worker is typically subject to uncertainty as to whether USCIS will approve his or her application for LPR status based on the change. Moreover, these individuals must consider whether such changes would involve expensive additional immigration processes, greatly discouraging them. Indeed, under current regulations, some changes in employment could result in the loss of nonimmigrant status, loss of the ability to change to another nonimmigrant status, loss of an approved immigrant visa, loss of the ability to obtain an immigrant visa or adjust to LPR status, or the need for the affected worker and his or her family to immediately depart the United States. As a result, these employees often suffer through many years of effective career stagnation, as they are largely dependent on current employers for immigration status and are substantially restricted in their ability to change employers or even accept promotions from, or make lateral movements within, their current employers.

Simply put, many workers in the immigrant visa process are not free to consider all available employment and career development opportunities. This effectively prevents U.S. employers from treating them like the high-potential individuals the employer hired them to be, thus restricting productivity and the promise they offer to our nation's economy. The lack of predictability and flexibility for such workers may also prevent them from otherwise investing in and contributing to the local, regional, and national economy or fully integrating into American society.

[16] According to the Visa Bulletin for November 2016, immigrant visas are currently issuable to all persons qualifying under the EB–1 preference category. The EB–2 category Application Final Action date cutoff is current for all countries except for China and India; the cutoff date for China is July 15, 2012 and the cutoff date for India is November 1, 2007, meaning nationals of these countries may have to wait 4 to 9 years for a visa to be authorized for issuance. The Application Final Action cut-off dates for nationals of most countries under the EB–3 preference category are set at July 1, 2016 (a wait of less than five months). But for EB–3 Indian nationals, the Application Final Action cutoff dates are set at March 8, 2005 (a wait of more than 10 years) and EB–3 cutoff dates for Chinese nationals are set at April 15, 2013 (a wait of more than 3 years). *See* Visa Bulletin for November 2016, *https://travel.state.gov/content/visas/en/law-and-policy/bulletin/2017/visa-bulletin-for-november-2016.html.*

[17] According to the Visa Bulletin for October 2000 (the month AC21 was enacted), visa availability was current for all persons qualifying under the EB–1 preference category. The EB–2 category was current for all countries except for China and India. The EB–2 cut-off dates were March 8, 1999 for persons chargeable to China (a wait of 19 months) and November 1, 1999 for persons chargeable to India (a wait of 11 months). The EB–3 category likewise was current for all countries except for China and India, with a cut-off date of March 15, 1998 for individuals charged to China (a wait of 31 months) and February 8, 1997 for individuals charged to India (a wait of 44 months). *See http://dosfan.lib.uic.edu/ERC/visa_bulletin/2000–10bulletin.html.*

IV. Discussion of Comments

A. Overview of the Comments

During the 60-day public comment period, DHS received 27,979 comments offering a wide variety of opinions and recommendations on the NPRM and related forms. A range of entities and individuals submitted comments, including nonimmigrants seeking to become LPRs, U.S. workers, schools and universities, employers, labor organizations, professional organizations, advocacy groups, law firms and attorneys, and nonprofit organizations.

Many commenters expressed support for the rulemaking, in whole or in part. Supporters of the proposed rule agreed that it would help the United States attract and retain high-skilled foreign workers and would provide some relief to nonimmigrants and their families during their transition to LPR status. In particular, these commenters approved of the proposals to retain priority dates for the beneficiaries of immigrant visa petitions; provide grace periods of up to 60 days for certain high-skilled nonimmigrant workers to enhance job portability; extend grace periods of up to 10 days for certain high-skilled nonimmigrant workers so that they may more easily change or extend their nonimmigrant status; and codify guidance on counting previously exempt workers under nonimmigrant visa caps, as well as policies determining admission periods for such workers. Some commenters who generally supported the proposals also suggested changes to certain provisions.

Other commenters opposed the proposed rule for different reasons. Some commenters who opposed the proposed rule questioned DHS's legal authority to promulgate some of the regulatory changes contained therein. A substantial number of other commenters, however, objected to the proposed rule because they believed many proposed changes should and could be more expansive. Such commenters, for example, believed that the rule should have substantially broadened the criteria for obtaining independent employment authorization for beneficiaries of immigrant visa petitions, rather than limiting such a benefit to cases involving compelling circumstances. Many commenters who opposed the rule were intending immigrants who described their personal experiences to illustrate how they would have been helped by the additional changes they requested. Some commenters argued that the proposed rule did nothing more than codify existing policies and that DHS could have gone further under existing statutory authorities.

A number of other comments were opposed to the proposed rule based on generalized concerns about its impact on the U.S. economy. Some commenters were concerned that this rule may facilitate the displacement of American workers in certain sectors of the U.S. economy, such as in the information technology sector. Other commenters were concerned that the rule could facilitate the displacement of U.S. workers and a decrease in wages for U.S. citizen workers. One commenter opposing the proposed rule advocated for developing U.S. citizens' employment skills to enable them to have more employment opportunities.

Others submitted comments related to the potential for fraud or to perceived irregularities in the rulemaking process. Commenters, for example, expressed concern that this rule could increase the potential for fraud and abuse, particularly by employers seeking to take advantage of the immigration system. Commenters also expressed concern that the substance of the rulemaking was unduly affected by a former lobbyist. Other commenters were concerned that provisions in the proposed rule would provide greater financial benefits to immigration attorneys and to USCIS than to the foreign workers who are the subject of the rule.

Finally, DHS received a number of comments that were beyond the scope of this rulemaking. For example, several commenters asked DHS to include provisions creating new immigration benefits for inventors, researchers, and founders of start-up enterprises, a proposal that was not raised in the NPRM and some of which is the subject of a different rulemaking.[18] Other commenters focused on the U.S. political climate without addressing the proposed rule. Similarly, some submitted comments on the merits of other commenters' views without providing their own views on the proposal itself.

DHS has reviewed all of the public comments received in response to the proposed rule and thanks the public for its extensive input during this process. In the discussion below, DHS summarizes and responds to all relevant comments that were timely submitted on the NPRM, which are grouped by subject area.

[18] *See* International Entrepreneur Rule, 81 FR 60129 (Aug. 31, 2016).

B. Authority of DHS To Administer and Enforce Immigration Laws

1. Description of DHS's Legal Authority

As discussed at length in section II.B. above, the authority of the Secretary for these regulatory amendments is found in various sections of the INA, ACWIA, AC21, and the HSA. General authority for issuing the final rule is found in section 103(a) of the INA, 8 U.S.C. 1103(a), which authorizes the Secretary to administer and enforce the immigration and nationality laws, as well as section 102 of the HSA, 6 U.S.C. 112, which vests all of the functions of DHS in the Secretary and authorizes the Secretary to issue regulations. Other sections of the INA, together with ACWIA and AC21, provide specific statutory authority for multiple provisions of the final rule as detailed in section III.A of this preamble. DHS notes that, to the extent some of the commenters' requests for changes require action from Congress or other Departments, the Department lacks the authority to adopt these changes. DHS believes that this final rule improves upon existing policies and provides additional flexibilities consistent with DHS's existing authority to administer the U.S. immigration system under the relevant statutes passed by Congress.

2. Public Comments and Responses

Comment. Many commenters opposed the rule based on what they perceived to be insufficient legal authority supporting the proposed changes. Many of these commenters asserted that the provisions in this rule were tantamount to new immigration legislation and that the rule thus effected an ''unconstitutional'' circumvention of Congress' role to establish the immigration laws. A few commenters claimed that only certain discrete proposals included in this rule are beyond DHS's legal authority.

Response. DHS maintains that each proposed revision in this rule is fully within DHS's statutory authority. Section 103(a) of the INA, 8 U.S.C. 1103(a), expressly vests the Secretary with broad authority to administer and enforce the immigration laws, including by establishing regulations or prescribing such forms as necessary to carry out this authority. Additionally, section 102 of the HSA 6 U.S.C. 112, vests all of the functions of DHS in the Secretary and authorizes the Secretary to issue regulations.

This rulemaking reflects the lawful exercise of statutory authority delegated by Congress. In the preamble to this final rule, DHS has identified the statutory authorities for all of the revisions being made, including various provisions of the INA, the HSA, ACWIA and AC21. Through this rulemaking, DHS is exercising its authority to promulgate regulations as necessary to properly implement and administer existing immigration laws. As such, this final rule will improve processes for U.S. employers seeking to sponsor and retain immigrant and nonimmigrant workers; provide greater stability and job flexibility for such workers; and increase transparency and consistency in the application of DHS policy related to affected classifications.

Comment. Several commenters questioned the general basis for various immigration actions taken by the Executive Branch related to businesses and high-skilled workers. These commenters believed that the Executive Branch has exceeded its role by taking it upon itself to ''achieve something that [C]ongress has failed to do.''

Response. As noted above, DHS has the requisite legal authority to issue this final rule. In enacting the INA, ACWIA, AC21, and the HSA, Congress accorded DHS the responsibility for implementing and administering these laws. Consistent with that authority, DHS is promulgating this final rule to further define and clarify existing statutory requirements. With this final rule, DHS is also responding to a specific directive from the Secretary to strengthen and improve various employment-based visa programs within the Department's existing legal authority,[19] including to ''consider amending its regulations to ensure that approved, longstanding visa petitions remain valid in certain cases where the beneficiaries seek to change jobs or employers.'' [20] These executive actions do not impinge on Congress's legislative role.

Comment. Commenters stated that this rule would effectively increase the number of immigrant visas issued in excess of their respective annual caps. These commenters also expressed concern that the rule would increase the number of H–1B workers who would be cap-exempt. Specifically, commenters stated that this rule circumvents overall caps on authorized visas through a two-step process: (1) Authorizing an unlimited number of individuals to seek permanent residence in excess of the cap on immigrant visas; and (2) giving these individuals (and their spouses and children) employment authorization while they wait for their immigrant visas to become available. For example, one commenter stated that the rule would ''nullify[ ] Americans' statutory protections against job-threatening flows of excess foreign labor.'' Other commenters believed that the perceived increase in the number of visas that would be issued under this rule reflects the Administration's favoring of skilled immigrant workers over natural-born U.S. citizens. One commenter claimed that the proposal to allow an H–1B worker whose employer has applied for LPR status on the worker's behalf to stay and work in the United States beyond the 6-year limit violates the Constitution, including by ''waiv[ing] federal law without action of the Congress of the United States.'' Additionally, one commenter expressed concern that the proposed changes would allow foreign workers in the United States on expired H–1B visas to extend their stay indefinitely by applying for employment-based LPR status. The commenter stated that this was an impermissible change because Congress is responsible for setting the annual limits on H–1B visas.

Response. DHS is not modifying immigrant or nonimmigrant numerical limits set forth in the INA and is not changing the classes of foreign workers who qualify for employment-based immigrant or nonimmigrant visas. Contrary to commenters' statements, the provisions contained in this rule reflect a clear congressional mandate with respect to H–1B beneficiaries who are pursuing LPR status, but face long waits due to backlogs resulting from the statutory limits on immigrant visas or certain other adjudication or processing delays. Through the enactment of AC21, Congress authorized these individuals to remain in the United States beyond their initial 6-year period of authorized admission. *See* AC21 104(c) and 106(a) and (b).

Finally, with regard to the concerns about this rule increasing the number of H–1B visas that are exempt from the annual limit, DHS notes that, for the most part, this regulation codifies longstanding policy and practice implementing the relevant provisions of AC21. This rule generally codifies already existing policy interpretations identifying which employers are cap-exempt under the H–1B program and DHS also includes revised definitions of ''related or affiliated nonprofit entity'' and ''governmental research organizations'' to clarify certain terms and to avoid confusion. *See* IV, part J. In particular, although the revised definitions may expand the number of petitioners that are cap-exempt, DHS believes that the changes improve current policy by better reflecting current operational realities for institutions of higher education and governmental research organizations, and are consistent with the exemption enacted by Congress. In addition, DHS added a provision that will protect against indefinite H–1B extensions under section 106(a) of AC21. *See* 8 CFR 214.2(h)(13)(iii)(D)(*10*).

Additionally, DHS is not providing compelling circumstances employment authorization to an unlimited number of foreign workers and their dependents while they wait for immigrant visas to become available. Rather, DHS is allowing certain high-skilled nonimmigrant workers and their dependents, who are all on the path to LPR status, to apply for independent and temporary employment authorization if they meet certain criteria, including demonstrating that the workers need such employment authorization due to compelling circumstances. While some of the dependents of these individuals may not have been part of the workforce at the time they receive such employment authorization, they would eventually become part of the workforce even without this separate employment authorization as they are already on the path to permanent residence. *See* Section IV, part F of this preamble for a discussion of compelling circumstances employment authorization.

C. Immigration Fraud and National Security Concerns

1. Description of Final Rule and Changes From the NPRM

DHS's core responsibilities include enhancing homeland security and preventing terrorism, enforcing and administering the immigration laws, and ensuring the integrity of the immigration system.[21] When drafting this rule, DHS carefully considered the impact of the proposed regulatory provisions on the safety and security of our nation and the integrity of the immigration system. DHS believes that the regulations as proposed appropriately address these concerns and further believes that this final rule will not compromise its vigilance.

2. Public Comments and Responses

Comment. Several commenters raised concerns about terrorism stemming from foreign nationals in various immigration statuses, and the adequacy of

[19] *See* Memo from Jeh Charles Johnson, Secretary of Homeland Security, ''Policies Supporting U.S. High-Skilled Business and Workers'' (Nov. 20, 2014)(Secretary Johnson Nov. 20, 2014 memo), available at *http://www.dhs.gov/sites/default/files/publications/14_1120_memo_business_actions.pdf.*

[20] *Id.*

[21] *See https://www.dhs.gov/our-mission.*

background checks for those seeking to acquire immigration status.

Response. DHS takes its core mission to safeguard the homeland extremely seriously, and it has a number of mechanisms in place to detect fraud and security threats. Individuals requesting immigration benefits from USCIS are subject to a variety of background and security checks, which vary depending on the benefit. USCIS created the Fraud Detection and National Security Directorate (FDNS) in part to investigate whether individuals or organizations filing for immigration benefits pose a threat to national security, public safety, or the integrity of the immigration system. FDNS officers resolve background check information and other concerns that surface during the processing of immigration benefit applications and petitions. Resolution of specific questions related to an application or petition often requires communication with law enforcement or intelligence agencies to make sure that the information pertains to the applicant or petitioner and to determine whether the information would have an impact on his or her eligibility for the benefit. FDNS officers also check various databases and public information, as well as conduct other administrative inquiries, including pre- and post-adjudication site visits, to verify information provided on, and in support of, applications and petitions. FDNS uses the Fraud Detection and National Security Data System (FDNS–DS) to identify fraud and track potential patterns. In addition, FDNS routinely works with U.S. Immigration and Customs Enforcement (ICE), U.S. Customs and Border Protection (CBP), and other law enforcement and intelligence agencies, consistent with all relevant policies on information sharing and referrals.[22]

Comment. DHS received several comments concerning alleged fraud in the EB–1, H–1B, and L–1 visa programs, including falsification of worker qualifications and other misuses. These commenters requested that additional measures be taken to combat fraud.

Response. DHS continually seeks to strengthen its abilities to detect and combat immigration-related fraud. Possible consequences for fraud already include detention and removal, inadmissibility to the United States, ineligibility for naturalization and other benefits, and criminal prosecution. *See, e.g.,* INA 101(f), 204(c), 212(a)(2) and (a)(6), 236(c), 237(a)(1)(A) and (G), (a)(2) and (a)(3), 316(a), 318, 8 U.S.C. 1101(f), 1154(c), 1182(a)(2) and (a)(6), 1226(c), 1227(a)(1)(A) and (G), (a)(2) and (a)(3), 1427(a), 1429. USCIS adjudicators receive training to recognize potential fraud indicators across all benefit types and the guidelines for referring cases of suspected fraud for further investigation.

Additionally, as provided under section 214(c)(12) of the INA, 8 U.S.C. 1184(c)(12), a Fraud Prevention and Detection Fee must be paid by an employer petitioning for a beneficiary's initial grant of H–1B or L nonimmigrant classification, as well as for a beneficiary who is changing employers within these classifications. The INA requires fees deposited into the Fraud Prevention and Detection Account to be divided into thirds, and allocated to DHS, DOL, and DOS. *See* INA 286(v); 8 U.S.C. 1356(v). DHS uses its portion of the fees to support activities related to preventing and detecting fraud in the delivery of all immigration benefit types.[23]

Additionally, FDNS currently combats fraud and abuse across all benefit types—including the EB–1, EB–2, EB–3, H–1B, and L–1 programs—by developing and maintaining efficient and effective anti-fraud and screening programs, leading information sharing and collaboration activities, and supporting the law enforcement and intelligence communities. As mentioned above, FDNS's primary mission is to determine whether individuals or organizations requesting immigration benefits pose a threat to national security, public safety, or the integrity of the nation's immigration system. USCIS verifies information and combats immigration fraud using various tools, including the Administrative Site Visit and Verification Program (ASVVP), under which FDNS conducts compliance review site visits for petitions in the H–1B, L–1, and religious worker programs. USCIS also conducts checks of various USCIS and other databases, including the FDNS–DS and the Validation Instrument for Business Enterprises (VIBE). USCIS has formed a partnership with ICE, under which FDNS pursues administrative inquiries into most application and petition fraud and ICE conducts criminal investigations into major fraud conspiracies. Individuals with information regarding fraud and abuse in the immigration benefits system are encouraged to contact FDNS at *reportfraudtips@uscis.dhs.gov*, by mail at 111 Massachusetts Ave. NW., Ste. 7002, Mail Stop 2280, Washington, DC 20529–2280, or call (202) 529–2280.

DHS believes that existing rules and measures collectively provide adequate tools to detect and combat fraud and abuse, and that this rulemaking does not require new or additional protections. Accordingly, DHS has not made any changes in response to these comments.

D. Petitions for Employment-Based Immigrants and Priority Date Retention

1. Description of Final Rule and Changes From the NPRM

The final rule clarifies when priority dates are established for employment-based immigrants and expands the ability of beneficiaries of approved Form I–140 petitions in the EB–1, EB–2, and EB–3 categories to retain their priority dates for use with subsequently filed Form I–140 petitions. First, the final rule fills a hole in current regulations. Existing regulations establish that the priority date of an employment-based immigrant visa petition accompanied by a labor certification is established when the labor certification is accepted for processing by DOL. Those regulations, however, do not indicate when the priority date is established for an employment-based petition that is *not* accompanied by a labor certification. To provide further clarity, this final rule provides, generally, that the priority date of a Form I–140 petition that does not require a labor certification is the date such petition is properly filed with USCIS. *See* final 8 CFR 204.5(d).

Second, the final rule disallows retention of the priority date of an approved Form I–140 petition if the approval of the petition is revoked because of fraud, willful misrepresentation of a material fact, the invalidation or revocation of a labor certification, or material error. *See* final 8 CFR 204.5(e). Third, the final rule amends existing automatic revocation regulations to prevent Form I–140 petitions that have been approved for 180 days or more from being automatically revoked based solely on the withdrawal of the petition by the petitioner or the termination of the petitioner's business. *See* final 8 CFR 205.1(a)(3)(iii)(C) and (D). In response to comments, the final rule also prevents automatic revocation of approved petitions that are withdrawn or where

[22] Individuals may report suspicious activity to ICE Homeland Security Investigations at *www.ice.gov/webform/hsi-tip-form* or at (866) 347–2423.

[23] Further information about USCIS use and collection of fees can be found in March 2015 Congressional testimony available at *https://www.uscis.gov/tools/resources-congress/presentations-and-reports/oversight-us-citizenship-and-immigration-services-ensuring-agency-priorities-comply-law-senate-committee-judiciary-subcommittee-immigration-and-national-interest-march-2015.*

the business terminates 180 days after an associated adjustment of status application is filed. *See id.* These approved petitions will continue to be valid for priority date retention purposes, unless approval is revoked on other grounds specified in final 8 CFR 204.5(e)(2).[24] They also generally will remain valid for various other purposes under immigration laws including: (1) Job portability under INA section 204(j); (2) extensions of status for certain H–1B nonimmigrant workers under sections 104(c) and 106(a) and (b) of AC21; and (3) eligibility for employment authorization in compelling circumstances under final 8 CFR 204.5(p).

In addition, the final rule clarifies that an approved Form I–140 petition that is subject to withdrawal or business termination cannot on its own serve as a bona fide employment offer related to the petition. *See* final 8 CFR 205.1(a)(3)(iii)(C) and (D). To obtain an immigrant visa or adjust status, beneficiaries of these petitions must have either new Form I–140 petitions filed on their behalf, or, if eligible for job portability under section 204(j) of the INA, new offers of employment in the same or a similar occupational classification. *See id.*; final 8 CFR 245.25(a)(2).

DHS believes these regulatory changes are critical to fully implementing the job portability provisions of AC21. Therefore, the final rule retains these proposals with minor modifications to reflect public comment summarized below.

2. Public Comments and Responses

i. Establishing a Priority Date

Comment. Several commenters supported the proposed clarification of the methods for establishing priority dates.

Response. DHS agrees with commenters and believes such clarification will provide increased transparency and certainty for stakeholders. As noted above, the final rule generally establishes that the priority date of an employment-based immigrant visa petition that does not require a labor certification is the date on which such petition is appropriately filed with USCIS. *See* final 8 CFR 204.5(d). Given commenters' support of this provision, DHS adopts this provision as proposed, including the proposed technical edits to delete obsolete references and otherwise improve the readability of the rule. *Id.*

ii. Retaining a Priority Date

Comment. Some commenters stated that the policy that provides for the retention of priority dates in cases in which an employer withdraws an approved petition already existed before this rulemaking. Those commenters suggested that the rule thus provides no additional benefits to such beneficiaries as they await adjustment of status.

Response. DHS believes the final rule clarifies and expands the ability of beneficiaries of approved EB–1, EB–2, and EB–3 Form I–140 petitions to retain their priority dates for use with subsequently filed EB–1, EB–2, and EB–3 Form I–140 petitions. *See* final 8 CFR 204.5(e). The prior regulations disallowed priority date retention in all instances in which approval of a Form I–140 petition was revoked. Thus, under the prior regulations, revocation of a Form I–140 petition based on withdrawal by the petitioner would have prevented the beneficiary of the petition from retaining his or her priority date. The NPRM proposed to change the prior regulations so that the beneficiary of a Form I–140 petition can retain the priority date of that petition unless USCIS denies the petition or revokes the petition's approval due to: (1) Fraud or a willful misrepresentation of a material fact; (2) revocation or invalidation of the labor certification associated with the petition or (3) a determination that there was a material error with regards to USCIS's approval of the petition. *See* final 8 CFR 204.5(e)(2).

This change expands the ability of beneficiaries to retain the priority dates of approved Form I–140 petitions, including but not limited to when a petition's approval is revoked based solely on withdrawal of the petition. This provision improves the ability of certain workers to accept promotions, change employers, or pursue other employment opportunities without fear of losing their place in line for certain employment-based immigrant visas.

Comment. Although many commenters supported the retention of priority dates, one commenter objected to the retention of the earliest priority date in cases in which a worker is shifting between employment-based immigrant visa (EB) preference categories. The commenter believed the provision was unfair to individuals who have been waiting in those EB preference queues. The commenter did not believe it was fair to have an individual who is recently entering a specific queue to receive a better position than an individual who has been waiting in that queue for some time, even if the former individual has been waiting in a different queue for a longer period of time.

Response. The ability to retain priority dates in cases in which a worker is changing EB preference categories has long been permitted under existing regulations at 8 CFR 204.5(e); it is not a policy newly afforded by this rulemaking. DHS believes that allowing certain beneficiaries of multiple approved Form I–140 petitions to continue to retain the earliest established priority date for use with subsequently approved Form I–140 petitions, including cases of transfers between EB preference categories, provides needed stability, job flexibility, and certainty for workers while they await adjustment of status. The policy also facilitates the ability of individuals to progress in their careers while they wait for visa availability. DHS believes the policy is consistent with the goals of the AC21 statute and has accordingly chosen to maintain it.

Comment. A number of commenters supported the provisions in proposed 8 CFR 205.1(a)(3)(iii)(C) and (D), which provide that approval of a Form I–140 petition will not be automatically revoked based solely on withdrawal by the petitioner or termination of the petitioner's business if 180 days or more have passed since petition approval. The commenters said these provisions provide needed clarity and assurance to workers about the retention of priority dates in cases involving withdrawal or business termination. Several other commenters requested that DHS allow Form I–140 petitions to remain valid and approved despite petitioner withdrawal or business termination regardless of the amount of time that has passed since petition approval (*i.e.,* even for petitions that have not been approved for 180 days or more).

Response. DHS agrees that retaining the NPRM proposal related to validity of Form I–140 petitions in the event of withdrawal or business termination will bring clarity and assurance to workers that a petition's approval is not automatically revoked based solely on an employer's withdrawal of the petition or termination of the employer's business 180 days or more after the petition is approved or the associated application for adjustment of status is filed. This provision is intended to provide greater stability and flexibility to certain workers who are the beneficiaries of approved Form I–

[24] The four grounds are (i) fraud, or a willful misrepresentation of a material fact; (ii) revocation by the Department of Labor of the approved permanent labor certification that accompanied the petition; (iii) invalidation by USCIS or the Department of State of the permanent labor certification that accompanied the petition; and (iv) a determination by USCIS that petition approval was based on a material error.

140 petitions and are well on the path to obtaining LPR status in the United States.

DHS notes, however, that commenters may have confused provisions that govern the retention of *priority dates* with provisions that govern the retention of *petition approval.* As proposed and in this final rule, 8 CFR 204.5(e)(2) allows for the retention of the *priority date* of an approved EB–1, EB–2, or EB–3 Form I–140 petition regardless of the amount of time that has passed since petition approval. As discussed, once such a petition has been approved, the beneficiary may retain that priority date for use with another EB–1, EB–2, or EB–3 Form I–140 petition, so long as the approval of the former petition was not revoked due to: (1) Fraud or a willful misrepresentation of a material fact; (2) revocation or invalidation of the labor certification associated with the petition; or (3) a determination that there was a material error with regards to USCIS's approval of the petition. *See* final 8 CFR 204.5(e)(2). In contrast, final 8 CFR 205.1(a)(3)(iii)(C) and (D) allow for retention of a petition's approval, despite withdrawal or business termination, but only if such withdrawal or termination occurs 180 days or more after the approval or 180 days or more after the associated application for adjustment of status is filed. Thus, under this rule, the beneficiary of a Form I–140 petition may be able to retain his or her priority date even if approval of the petition is revoked due to withdrawal or business termination.

To further provide clarity in this area, DHS removed the phrase ''provided that the revocation of a petition's approval under this clause will not, by itself, impact a beneficiary's ability to retain his or her priority date under 8 CFR 204.5(e)'' from proposed 8 CFR 205.1(a)(3)(iii)(C) and (D). DHS intended this phrase to simply restate that under § 204.5(e), a priority date may be retained, despite withdrawal or business termination that occurs less than 180 days after the petition's approval. DHS is removing the phrase from the proposed text because it could be construed as creating an unintended exception to the priority date retention provision.

DHS declines to adopt commenters' proposal that a Form I–140 petition remains approved if the withdrawal or business termination occurs at any time before the Form I–140 has been approved for at least 180 days. DHS believes that the 180-day threshold is consistent with and furthers the goals of job portability under INA 204(j). Additionally, DHS believes the 180-day threshold protects against fraud and misuse while providing important stability and flexibility to workers who have been sponsored for permanent residence. In addition to the period that it typically takes for a petitioning employer to obtain a labor certification from DOL and approval of a Form I–140 petition from DHS, the 180-day requirement provides additional assurance that the petition was bona fide when filed. The final rule, therefore, maintains Form I–140 petition approval despite petitioner withdrawal or business termination when such petitions have been approved for 180 days or more, or its associated adjustment of status application has been pending for 180 days or more. *See* final 8 CFR 205.1(a)(3)(iii)(C) and (D).

Comment. One commenter suggested changes to the regulatory text concerning the requirement that the Form I–140 petition be approved for 180 days or more. Specifically, the commenter recommended amending the text to make clear that the 180-day threshold would not apply in cases in which an applicant has a pending Application to Register Permanent Residence or Adjust Status (Form I–485) that may provide job portability under INA 204(j). The commenter stated that, as proposed, the regulation would create a ''double'' waiting period in the portability context, requiring the foreign national to wait 180 days from approval of the Form I–140 petition and an additional 180 days from filing of the application of adjustment of status in order to be able to move to a new position. The commenter believed this outcome would be inconsistent with congressional intent under AC21.

Response. DHS thanks the commenter for identifying the potential for confusion given the text of proposed § 205.1(a)(3)(iii)(C) and (D) and DHS's stated goal to codify and expand upon its existing policy implementing INA 204(j). DHS proposed to allow a Form I–140 petition to remain valid for certain purposes if such a petition was withdrawn or the petitioner's business terminated 180 days or more after the Form I–140 petition had been approved.

This provision was intended to build upon existing DHS policies that have governed the validity of Form I–140 petitions in the event of withdrawal or business termination before and after beneficiaries are eligible to change jobs or employers under INA 204(j). DHS did not intend that its regulatory proposal would modify the existing timeframe before an individual would become eligible to port under INA 204(j); rather, this provision was intended to protect those individuals who are not yet eligible for INA 204(j) portability from the automatic revocation of the approval of a Form I–140 petition that had been approved for 180 days or more. Consistent with the intent of AC21 and DHS policy, DHS is revising the regulatory language at 8 CFR 205.1(a)(3)(iii)(C) and (D) to make clear that an approved Form I–140 petition involving withdrawal or business termination occurring 180 days or more after *either* petition approval *or* the filing of an associated application for adjustment of status remains approved, unless its approval is revoked on other grounds. *See* final 8 CFR 205.1(a)(3)(iii).

Comment. One commenter recommended that the final rule require that the beneficiary of an employment-based Form I–140 petition remain with the petitioning employer for at least 3 years before the employee is able to retain the priority date of that petition. The commenter stated that a 3-year ''mandatory stay'' would provide some stability and security to petitioning employers.

Response. DHS declines to adopt the commenter's suggested ''mandatory stay'' requirement as it is contrary to the principles and policy goals of this final rule. Furthermore, DHS notes that Form I–140 petitions are for prospective employment, and there is no guarantee that the beneficiary of an approved Form I–140 petition has or would be able to obtain work authorization to commence employment with the petitioner prior to obtaining lawful permanent residence. In addition, allowing priority date retention furthers the goals of AC21 to grant stability, flexibility, and mobility to workers who are facing long waits for LPR status.

Comment. Several commenters requested that the rule's provision restricting revocation of a petition's approval based on withdrawal or business termination apply retroactively to petitions whose approvals were revoked prior to the rule's publication.

Response. DHS appreciates the commenters' suggestion; however, DHS has determined that retroactive application of this provision would be problematic. Generally, there is a presumption against retroactive application of new regulations. *Cf. Bowen* v. *Georgetown Univ. Hosp.,* 488 U.S. 204 (1988). Moreover, in this case, retroactive application of the revised automatic revocation provision would impose a disproportionate operational burden on USCIS, as it would require significant manual work. USCIS systems cannot be queried based on the specific reason(s) for revocation, and USCIS would be required to manually identify and review these cases in order to verify the reason(s) for revocation, thus creating a highly labor-intensive process that would significantly strain USCIS resources. Therefore, the final 8 CFR 205.1(a)(3)(iii)(C) and (D) provisions will apply prospectively from the effective date of this final rule.

iii. Priority Date Not Retained if Approval Revoked for Fraud, Willful Misrepresentation, DOL Revocation, Invalidation by USCIS or DOS, Material Error, or Petition Denial

Comment. Some commenters supported the rule's requirement that priority dates will not be retained in cases of fraud, willful misrepresentation, revocation or invalidation of the labor certification, a determination that petition approval was the result of an error, or the denial of the petition. Other commenters opposed the inability to retain priority dates where a Form I–140 petition's approval has been revoked based on a determination that USCIS erroneously approved the petition. One commenter requested that DHS change the standard for revoking petition approval in error to ''material'' error to remain consistent with other USCIS policies in cases where DHS's error in a prior adjudication requires review of that adjudicatory outcome.

Response. DHS agrees that it is important for the integrity of the immigration system not to retain a priority date in cases in which the approval of a Form I–140 petition is revoked for fraud, willful misrepresentation of a material fact, the invalidation or revocation of a labor certification, or USCIS error. Based on feedback from commenters, however, DHS has determined that the text of the proposed rule at § 204.5(e)(2)(iv) that reads, ''[a] determination by USCIS that petition approval was in error,'' needs to be clarified. In the final rule, that text is amended to read, ''[a] determination by USCIS that petition approval was based on a material error'' in order to clarify that a priority date will only be lost in those cases in which the error leading to revocation involves the misapplication of a statutory or regulatory requirement to the facts at hand. *See* final 8 CFR 204.5(e)(2)(iv). The change to the ''material error'' standard is consistent with other USCIS policy that addresses agency deference to prior adjudicatory decisions.[25] Examples of material errors include situations in which an adjudicator relied on an inaccurate employer identification number and associated financial information that did not pertain to the petitioner for purposes of establishing its continuing ability to pay the proffered wage; information later comes to light indicating that the petitioner did not establish the ability to pay under the applicable regulatory criteria; or an adjudicator finds evidence in a subsequent related matter that the beneficiary did not have the education or experience required for the position offered. DHS declines to accept commenters' recommendations that the final regulation remove the error standard in its entirety because of the need to take appropriate action in cases in which the petition was not approvable in the first instance. Furthermore, it should be noted that the scope of the ''material error'' standard pertains only to whether the priority date is retained based on a USCIS revocation of the petition approval.

Comment. One commenter suggested that USCIS allow the retention of Form I–140 priority dates even in cases in which it is later discovered that the petitioner made material misrepresentations on the original petition and the petition's approval is revoked, as well as cases in which the petition's approval is revoked based on USCIS error—so long as it can be reasonably verified that the beneficiary had no involvement in the misrepresentation or the error later discovered by USCIS.

Response. DHS understands that revocation of long approved Form I–140 petitions due to the later discovery of willful misrepresentation(s) committed by the petitioner, but that are unbeknownst to the beneficiary, can negatively impact the beneficiary by causing the loss of his or her priority date and, therefore, the beneficiary's place in line for an immigrant visa. The revocation of the approval of a long approved Form I–140 petition due to material errors that are not the fault of the beneficiary can also negatively impact the beneficiary. DHS, however, believes it would be inappropriate to allow a Form I–140 petition that had its approval revoked for fraud or willful misrepresentation of a material fact, or because the Form I–140 petition was not eligible for approval in the first place, to confer a priority date. Allowing the beneficiary of such petition to remain in line ahead of other individuals who are the beneficiaries of properly approved Form I–140 petitions would be contrary to DHS's goal of upholding the integrity of the immigration system.

Comment. Some commenters requested that beneficiaries of approved Form I–140 petitions who are not yet eligible for 204(j) portability be permitted to change jobs and adjust status to lawful permanent residence without the requirement of obtaining a new application for labor certification and a new approved Form I–140 petition. Some who advocated for this change noted that the ability to reuse or ''port'' an approved Form I–140 petition should be available after the initial petition has been approved for 180 days or more, and others requested that portability be allowed immediately after the petition's approval. Similar to job portability under INA 204(j) in certain regards, these and other commenters suggested that beneficiaries of approved Form I–140 petitions should be allowed to change jobs, file a Form I–485 application and adjust status to lawful permanent residence on the basis of the original Form I–140 petition as long as the new job is in the same or a similar occupation as the job described in the approved Form I–140 petition. Some commenters stated that there is an increase in time and monetary costs associated with multiple labor certification filings. Most of the commenters agreed that very few benefits were provided by requiring a new labor certification. Commenters also expressed that ''recertification'' additionally deters employers from sponsoring current foreign worker employees who are beneficiaries of Form I–140 petitions based on new jobs. One commenter urged DHS to allow a withdrawn or revoked Form I–140 petition to remain valid for the purposes of obtaining an immigrant visa, in order to fully implement Congress's intent in passing AC21.

Response. A foreign worker may obtain an employment-based immigrant visa only if he or she is the beneficiary of an approved employment-based immigrant visa petition. *See* INA 204(b), 8 U.S.C. 1154(b). In this final rule, DHS is allowing certain approved Form I–140 petitions to remain approved for various purposes despite withdrawal or business termination. However, such a petition may not be used to obtain lawful permanent residence, unless it meets the requirements of INA 204(j).

With respect to obtaining lawful permanent residence under the EB–2 and EB–3 classifications, the INA requires that the worker be the beneficiary of a valid Form I–140 petition, which generally must be supported by a valid labor certification at the time of adjustment of status. *See* INA 203(b)(2), (3); 204(a)(1)(F); and 212(a)(5)(A) and (D), 8 U.S.C. 1153(b)(2),

[25] *See* USCIS Memorandum from William Yates, ''The Significance of a Prior CIS Approval of a Nonimmigrant Petition in the Context of a Subsequent Determination Regarding Eligibility for Extension of Petition Validity'' (Apr. 24, 2004).

(3); 1154(a)(1)(F); 1182(a)(5)(A) and (D). Outside of the 204(j) context, an approved Form I–140 petition filed by an employer that no longer intends to employ the worker upon approval of the Form I–485 application, whether presently or at any time in the future, does not represent a bona fide job offer and, therefore, is not sufficient to support an application for adjustment of status.

INA section 212(a)(5)(A) and (D) generally prohibits any foreign worker seeking to perform skilled or unskilled labor from being admitted to the United States under the EB–2 and EB–3 immigrant visa classifications unless the Secretary of Labor has determined and certified that there are not sufficient workers who are able, willing, qualified, and available to perform that work at the location the foreign worker will perform the work and that the employment of that foreign worker will not adversely affect the wages and working conditions of similarly situated U.S. workers. Under current DOL regulations, a permanent labor certification remains valid only for the particular job opportunity, for the individual named on the labor certification, and for the area of intended employment stated on the application for permanent labor certification. *See* 20 CFR 656.30(c)(2). However, section 106(c)(2) of AC21 created an exception to this admissibility requirement, by allowing an approved Form I–140 petition supported by the associated labor certification to remain valid for certain long-delayed adjustment applicants ''with respect to a new job accepted by the individual after the individual changes jobs or employers if the new job is in the same or a similar occupational classification as the job for which the certification was issued.'' INA 212(a)(5)(A)(iv), 8 U.S.C. 1182(a)(5)(A)(iv). DHS does not have authority to regulate the terms and requirements of these labor certifications and therefore cannot prescribe what is necessary for the labor certification to remain valid even for long-delayed applicants for adjustment of status, although DHS does have authority to invalidate labor certifications for fraud or willful misrepresentation. The INA designates DOL as the federal department responsible for making permanent labor certification determinations.

While DHS cannot expand portability beyond the INA 204(j) context, the final rule does provide some additional flexibility and stability for individuals who may not be eligible for INA 204(j) portability, by allowing beneficiaries of approved Form I–140 petitions to retain their priority dates in certain situations and allowing certain Form I–140 petitions to remain valid, including for purposes of section 204(j) portability, notwithstanding withdrawal of the petition or termination of the petitioner's business, as described above.[26]

iv. Beneficiary Standing To Challenge the Revocation of an Employment-Based Immigrant Visa Petition's Approval

Comment. Several commenters expressed concern that individual beneficiaries of Form I–140 petitions are not provided notice when USCIS seeks to revoke the approval of those petitions. The commenters stated that this policy prevented beneficiaries from checking the status of their pending Form I–140 petitions and providing the evidence needed to avail themselves of AC21 portability. The commenters stated that under USCIS's current practice, a beneficiary may be unaware that approval of his or her Form I–140 petition has been revoked until his or her application for adjustment of status is denied. The commenters stated that not providing beneficiaries with notice and an opportunity to respond in such cases raises serious issues of fundamental fairness that could be remedied by permitting beneficiaries of petitions that may afford portability under section 204(j) to participate in visa petition proceedings, consistent with Congress's intent when it enacted AC21. The commenters urged DHS to undertake rulemaking to bring notice regulations in line with the realities of today's AC21 statutory scheme. Finally, a commenter stated that beneficiaries of Form I–140 petitions have interests equal to or greater than those of petitioners, including because revocation impacts beneficiaries' ability to retain priority dates, their admissibility, their eligibility to have immigrant visa petitions approved on their behalf, and their eligibility for adjustment of status under section 245(i) of the INA, 8 U.S.C. 1255(i). The commenter added that the enactment of AC21 had altered the analysis of which individuals should be considered ''interested parties'' before USCIS on various issues, including the ability to extend H–1B status beyond the 6-year maximum period and to port to a ''same or similar'' occupation under INA section 204(j). Commenters also cited to various recent federal cases that have supported the commenters' interpretation of AC21.

Response. DHS appreciates the concerns raised by these comments. While DHS is unable to address these concerns in this final rule because they are outside the scope of this rulemaking, DHS is considering separate administrative action outside of this final rule to address these concerns.

E. Continuing and Bona Fide Job Offer and Supplement J Form

1. Description of Final Rule and Changes From NPRM

The final rule at 8 CFR 245.25 codifies DHS policy and practice requiring that a foreign worker seeking to adjust his or her status to that of an LPR must have a valid offer of employment at the time the Form I–485 application is filed and adjudicated. DHS at final 8 CFR 245.25(a)(2) codifies the existing policy and practice to determine eligibility to adjust status based on a request to port under section 204(j) of the INA. In the final rule at 8 CFR 245.25(a)(2)(ii)(A) and (B), DHS reaffirms that a qualifying immigrant visa petition has to be approved before DHS examines a portability request under INA 204(j) and determines an individual's eligibility or continued eligibility to adjust status based on the underlying visa petition. DHS also codifies current practice regarding the adjudication of portability requests when the Form I–140 petition is still pending at the time the application for adjustment of status has been pending for 180 days or more in final 8 CFR 245.25(a)(2)(ii)(B).

Based on its program experience in adjudicating adjustment of status applications, USCIS determined that certain threshold evidence regarding the job offer is required in all cases to successfully determine eligibility for adjustment of status based on an employment-based immigrant visa petition and facilitate the administrative processing of INA 204(j) porting requests. USCIS has consequently developed a new form—Supplement J to Form I–485, Confirmation of Bona Fide Job Offer or Request for Job Portability Under INA Section 204(j) (''Supplement J'')—to standardize the collection of such information. The offer of employment may either be the original job offer or, pursuant to INA 204(j), a new offer of employment, including qualifying self-employment, that is in the same or similar occupational

[26] The priority date of the earliest petition will be preserved in cases where the Form I–140 petition has been approved, no matter the amount of time that has passed since the approval, subject to the restrictions in 8 CFR 204.5(e)(2). *See* final 8 CFR 204.5(e)(1). The priority date can be retained even if approval is subsequently revoked, unless it is revoked for fraud, willful misrepresentation of a material fact, the invalidation or revocation of a labor certification, or USCIS material error as required by 8 CFR 204.5(e)(2).

classification as the original job offer.[27] *See* final 8 CFR 245.25(a)(1)–(2). In the final rule at 8 CFR 245.25(a) and (b), DHS clarifies that it may require individuals to use Supplement J, or successor form, to confirm existing or new job offers prior to adjudication of an application to adjust status. DHS also eliminates duplicative evidentiary provisions that were proposed in 8 CFR 245.25(b). As amended, the final 8 CFR 245.25(a) makes clear that any supporting material and credible documentary evidence may be submitted along with Supplement J, according to the form instructions. The definition of ''same or similar occupational classification'' that was proposed in 8 CFR 245.25(c) is being retained without change in the redesignated final 8 CFR 245.25(b).

The use of Supplement J will ensure uniformity in the collection of information and submission of initial evidence. Supplement J will be used to assist USCIS, as appropriate, in confirming that the job offer described in a Form I–140 petition is still available at the time an individual files an application for adjustment of status, or a qualifying job offer otherwise continues to be available to the individual before final processing of his or her application for adjustment of status. Supplement J also will be used by applicants for adjustment of status to request job portability, and by USCIS to determine, among other things, whether a new offer of employment is in the same or a similar occupational classification as the job offer listed in the Form I–140 petition.

Supplement J collects necessary information about the job offer and includes attestations from the foreign national and employer regarding essential elements of the portability request. In a number of ways, Supplement J will improve the processing of porting requests submitted under INA 204(j). As further described in the responses to comments below, DHS is making a revision to the Supplement J instructions to clarify that individuals applying for adjustment of status on the basis of a national interest waiver (NIW), as well as aliens of extraordinary ability, are not required to use Supplement J. Currently, USCIS is not adding an extra fee for submission of this new supplement, but may consider implementing a fee in the future.

2. Public Comments and Responses

i. Portability Under INA 204(j)

Comment. One commenter requested that DHS clarify regulatory language to reflect current practice that permits a foreign national whose application for adjustment of status has been pending for 180 days or more to request portability under INA 204(j) in cases in which the Form I–140 petition underlying the application for adjustment of status is not yet approved. The commenter noted that current policy allows for such portability requests to be made provided the Form I–140 petition was approvable based on the facts in existence at the time of filing, with the exception of the petitioner's ability to pay the offered wage. The commenter stated that this has been USCIS's policy since 2005, when DHS confirmed through policy guidance that the 180-day portability clock under INA 204(j) begins to run when the Form I–485 application is filed, not when the Form I–140 petition is approved. This commenter cited to the Aytes Memo, ''Interim guidance for processing I–140 employment-based immigrant petitions and I–485 and H–1B petitions affected by the American Competitiveness in the Twenty-First Century Act (AC21) (Public Law 106–313)'' (May 12, 2005, revised Dec. 27, 2005) (Aytes 2005 memo) at 2, 4–5.

Response. DHS agrees that clarification is needed in the final rule regarding DHS's practice for qualifying Form I–140 petitions that remain pending when the beneficiary's application for adjustment of status has been pending for 180 days or more. As noted by the commenter, there may be instances in which an individual can request job portability pursuant to INA 204(j) because the worker's Form I–485 application has been pending for 180 days or more, but the Form I–140 petition has not yet been adjudicated. In such cases, however, the qualifying Form I–140 petition must be approved before a portability request under INA 204(j) may be approved.

In response to this comment, DHS amended proposed 8 CFR 245.25(a)(2) to reflect DHS's current policy and longstanding practice related to such pending Form I–140 petitions.[28] In final 8 CFR 245.25(a)(2)(ii)(A) and (B), DHS reaffirms that a qualifying immigrant visa petition must be approved before DHS examines a portability request under INA 204(j) and determines an individual's eligibility or continued eligibility to adjust status on the basis of the underlying visa petition. DHS also sets forth in this final rule how USCIS will assess specific Form I–140 petition eligibility requirements, including the petitioner's ability to pay, when a porting request has been made on a pending Form I–140 petition.

First, in accordance with existing practice, USCIS will only adjudicate a qualifying Form I–140 petition in accordance with the standards described in final 8 CFR 245.25(a)(2)(ii) when USCIS has been notified that the beneficiary intends to port to a new job pursuant to INA 204(j). As indicated in the precedent decision, *Matter of Al Wazzan,* 25 I&N Dec. 359, 367 (BIA 2010), the qualifying immigrant visa petition—

> must have been filed for an alien who is ''entitled'' to the requested classification and that petition must have been ''approved'' by a USCIS officer pursuant to his or her authority under the Act . . . [A] petition is not made ''valid'' merely through the act of filing the petition with USCIS or through the passage of 180 days.

The burden is on the applicant to demonstrate eligibility or otherwise maintain eligibility for adjustment of status to lawful permanent residence.[29] *See* INA sections 204(e) and 291, 8 U.S.C. 1154(e) and 1361; *see also Tongatapu Woodcraft of Hawaii, Ltd.* v.

[27] For additional information on USCIS policy regarding the parameters of porting to self-employment, please see USCIS memorandum, ''Determining Whether a New Job is in ''the Same or a Similar Occupational Classification'' for Purposes of Section 204(j) Job Portability'' (Mar. 18, 2016) (''Same or Similar Memo March 2016'').

[28] As indicated in the proposed rule, regulatory provisions would ''largely conform DHS regulations to longstanding agency policies and procedures established in response to certain sections of [ACWIA] and [AC21].'' *See* 80 FR 81899, 81901 (Dec. 31, 2015). The new regulatory provision under 8 CFR 245.25(a)(2)(ii) is one such provision that ''update[s] and conform[s] [DHS's] regulations governing adjustment of status consistent with longstanding agency policy.'' *Id.* at 81915.

[29] USCIS may inquire at any time whether an applicant for adjustment of status has, or continues to have, a qualifying job offer until the applicant ultimately obtains lawful permanent residence. *See* INA sections 204(a)(1)(F), (b), (e), (j) and 212(a)(5), 8 U.S.C. 1154(a)(1)(F), (b), (e), (j), and 1182(a)(5); *cf. Yui Sing Tse* v. *INS,* 596 F.2d 831, 835 (9th Cir. 1979) (finding that an alien need not intend to remain at the certified job forever, but at the time of obtaining lawful permanent resident status, both the employer and the alien must intend that the alien be employed in the certified job); *Matter of Danquah,* 16 I&N Dec. 191 (BIA 1975) (adjustment of status denied based on the ground that the labor certification was no longer valid because the foreign national was unable to assume the position specified in the labor certification prior to obtaining adjustment of status). USCIS may become aware of certain information that raises questions about whether an applicant for adjustment of status continues to have a qualifying job offer (*e.g.*, a letter from the petitioner requesting the withdrawal of the petition). In this and similar instances when the Form I–140 petition has already been approved, USCIS may issue a Notice of Intent to Deny (NOID) or Request for Evidence (RFE) to the applicant to make sure that the applicant has a new job offer that preserves his or her eligibility to become a lawful permanent resident in connection with the same Form I–485 application and based on the same qualifying petition pursuant to INA 204(j).

Feldman, 736 F.2d 1305, 1308 (9th Cir. 1984) (stating that the applicant ''bears the ultimate burden of proving eligibility'' and that this burden ''is not discharged until'' lawful permanent residence is granted); 8 CFR 103.2(b)(1).

Second, in determining whether a Form I–140 petitioner meets the ''ability to pay'' requirements under 8 CFR 204.5(g)(2) for a pending petition that a beneficiary seeks to rely upon for 204(j) portability, DHS reviews the facts in existence at the time of filing. *See* final 8 CFR 245.25(a)(2)(ii)(B)(*1*).[30] Thus, during the adjudication of the petition, DHS reviews any initial evidence and responses to requests for evidence (RFEs), notices of intent to deny (NOIDs), or any other requests for more information that may have been issued, to determine whether the petitioner met the ability to pay requirement as of the date of the filing of the petition. To effectuate the intent of INA 204(j) to enable workers to change employment, DHS looks only at the facts existing at the time of filing to determine whether the original petitioner has the ability to pay, notwithstanding the language in 8 CFR 204.5(g)(2), which otherwise requires that a petitioner has continuing ability to pay after filing the petition and until the beneficiary obtains lawful permanent residence. To require that the original Form I–140 petitioner demonstrate a continuing ability to pay when the beneficiary no longer intends to work for that petitioner is illogical and would create an incongruous obstacle for the beneficiary to change jobs, thus unnecessarily undermining the purpose of INA 204(j). USCIS will not review the original petitioner's continuing ability to pay after the filing date of the qualifying petition before it may approve such petition and then review a portability request. Under this final rule, USCIS will continue to determine whether the subsequent offer of employment by an employer that is different from, or even the same as, the employer in the original Form I–140 petition is bona fide.

Third, DHS is clarifying for INA 204(j) portability purposes that a qualifying Form I–140 petition will be approved if eligibility requirements (separate and apart from the ability to pay requirement) have been met at the time of filing and until the foreign national's application for adjustment of status has been pending for 180 days. *See* final 8 CFR 245.25(a)(2)(ii)(B)(*2*). Consistent with current policy and practice, DHS will review the pending petition to determine whether the preponderance of the evidence establishes that the petition is approvable or would have been approvable had it been adjudicated before the associated application for adjustment of status has been pending for 180 days or more.[31] For example, if DHS receives a written withdrawal request from the petitioner, or the petitioner's business terminates, *after* the associated application for adjustment of status has been pending for 180 days or more, DHS will not deny the petition based solely on those reasons.[32] DHS, however, will deny a Form I–140 petition if DHS receives the written withdrawal request, or a business termination occurs, *before* the associated application for adjustment of status has been pending for 180 days, even when DHS adjudicates the petition after the associated application for adjustment of status has been pending for 180 days or more.

Section 8 CFR 245.25(a)(2), as amended in this final rule, is consistent with AC21, existing regulations, USCIS policies implementing AC21, and current practice. Specifically, DHS reads 8 CFR 245.25(a)(2), as amended in this final rule, in harmony with 8 CFR 103.2(b)(1), which requires an applicant or petitioner to ''establish that he or she is eligible for the requested benefit at the time of filing the benefit request and must continue to be eligible through adjudication.'' In cases involving a request for INA 204(j) portability that is filed before USCIS adjudicates the Form I–140 petition, DHS will assess a petitioner's ability to pay as of the date the Form I–140 petition was filed and all other issues as of the date on which the application for adjustment of status was pending 180 days, regardless of the date on which the petition is actually adjudicated. DHS believes this policy meaningfully implements congressional intent in enacting INA 204(j) to allow workers who cannot immediately adjust status based on backlogs to move to new employment while their applications for adjustment of status remain pending.

Accordingly, for petitioners to satisfy the ability to pay requirement in this limited context, eligibility will be deemed established through adjudication for purposes of 8 CFR 103.2(b)(1) if the ability to pay existed at the time the priority date is established through time of the petition's filing. *See* 8 CFR 204.5(g)(2). Similarly, again in this limited INA 204(j) context, DHS is defining eligibility for all other Form I–140 eligibility requirements for purposes of 8 CFR 103.2(b)(1) (*i.e.,* separate and apart from the ability to pay requirement) as being established if such eligibility can be demonstrated at time of filing through the date the associated application for adjustment of status has been pending for 180 days, instead of the date the final decision is issued.

DHS believes that this specific adjudicatory practice is consistent with the requirements in 8 CFR 103.2(b)(1),[33] accommodates the circumstances contemplated in final 8 CFR 245.25(a)(2)(ii), and is important to ensure that the goals of AC21 are met. As a practical matter, petitioners have diminished incentives to address inquiries regarding qualifying Form I–140 petitions once the beneficiaries have a new job offer that may qualify for INA 204(j) portability and the relevant focus has shifted to whether the new job offer meets the requirements of INA 204(j). Accordingly, denying a qualifying Form I–140 petition for either ability to pay issues that occur after the time of filing, or for other petition eligibility issues that transpire after the associated application for adjustment of

[30] *See* Aytes 2005 Memo, at 2; Donald Neufeld Memorandum ''Supplemental Guidance Relating to Processing Forms I–140 Employment-Based Immigrant Petitions and I–129 H–1B Petitions, and Form I–485 Adjustment Applications Affected by the American Competitiveness in the Twenty-First Century Act of 2000 (AC21) (Pub. L. 106–313), as amended, and the American Competitiveness and Workforce Improvement Act of 1998 (ACWIA), Title IV of Div. C. of Public Law 105–277'' at 9, (May 30, 2008) (''Neufeld May 2008 Memo'').

[31] *See* Aytes 2005 Memo, at 1 (stating in the response to Section I, Question 1 that if it is discovered that a beneficiary has ported under an unapproved Form I–140 petition and Form I–485 application that has been pending for 180 days or more, the adjudicator should, among other things, ''review the pending I–140 petition to determine if the preponderance of the evidence establishes that the case is approvable or would have been approvable had it been adjudicated within 180 days'').

[32] Under current INA 204(j) portability practice, DHS considers the date it receives a withdrawal request from the petitioner as the date of withdrawal regardless of the date on which DHS adjudicates the Form I–140 petition.

[33] The current language in 8 CFR 103.2(b)(1) requires in pertinent part that a petitioner ''establish that he or she is eligible for the requested benefit at the time of filing the benefit request and must continue to be eligible through adjudication.'' This policy was codified through a final rule (with request for comments) in 2011 in which DHS noted the ''longstanding policy and practice, as well as a basic tenet of administrative law, [ ] that the decision in a particular case is based on the administrative record that exists at the time the decision is rendered.'' 76 FR 53764, 53770 (Aug. 29, 2011) (citing *Citizens to Preserve Overton Park* v. *Volpe,* 401 U.S. 402 (1972)). The practice that DHS currently outlines in 8 CFR 245.25(a)(2)(ii), in which DHS interprets eligibility through ''adjudication'' in 8 CFR 103.2(b)(1) as eligibility at the time of filing (for the ability to pay requirement) or eligibility at the time of filing and up to the day before the associated application for adjustment of status has been pending for 180 days (for other requirements separate and apart from the ability to pay requirement), were in place since at least 2005, are consistent with the AC21 statute, and were not superseded by the amendments to 8 CFR 103.2(b)(1) in 2011.

status has been pending for 180 days or more, would be contrary to a primary goal of AC21. Such a policy would in significant part defeat the aim to allow individuals the ability to change jobs and benefit from INA 204(j) so long as their associated application for adjustment of status has been pending for 180 days or more. DHS notes that this does not prevent DHS from requiring a response from the Form I–140 petitioner and taking appropriate action on a request for evidence or notice of intent to deny issued before the associated application for adjustment of status has been pending for 180 days or more or, if appropriate for reasons described below, after that period.

Finally, DHS maintains through this final rule its existing policy and practice to deny a pending Form I–140 petition at any time, and even after the associated application for adjustment of status has been pending for 180 days or more, if the approval of such petition is inconsistent with a statutory requirement in the INA or other law. *See* final 8 CFR 245.25(a)(2)(ii)(B)(*2*). For example, DHS will deny an otherwise qualifying Form I–140 petition at any time if the beneficiary seeks or has sought LPR status through a marriage that has been determined by DHS to have been entered into for the purpose of evading the immigration laws. *See* INA 204(c), 8 U.S.C. 1154(c). DHS also will deny, at any time, a pending Form I–140 petition that involves a petitioner or an employer that has been debarred, under INA 212(n)(2)(C)(i) and (ii), 8 U.S.C. 1182(n)(2)(C)(i) and (ii), even when the debarment occurs after the filing of the petition. Similarly, DHS will deny a Form I–140 petition, at any time, if the beneficiary is required by statute to be licensed to perform his or her job and the beneficiary loses such licensure before the petition is adjudicated. *See e.g.,* INA 212(a)(5)(B) and (C), 8 U.S.C. 1182(a)(5)(B) and (C). DHS notes that these examples do not encompass all scenarios when a statute requires DHS to deny a pending Form I–140 petition. DHS will review such petitions on a case-by-case basis.

Comment. Some commenters requested that DHS eliminate references to the Department of Labor's Standard Occupational Classification (SOC) system in the regulatory text governing the adjudication of porting requests. One commenter noted that occupations that rely on similar skills, experience, and education are often classified in disparate major groups within the SOC structure. This commenter was also concerned that the SOC system is updated only once every 8 years, a schedule that is often outpaced by the speed of innovation, particularly with STEM occupations. Another commenter described concern that adjudicators will rely exclusively on the SOC codes when determining whether two jobs are in the same or similar occupational classification(s) (''same or similar determinations'').

Response. DHS agrees with the commenters and, in this final rule, removes the specific reference to SOC codes in the final rule. *See* final 8 CFR 245.25. This change from the proposed rule is consistent with DHS policy under which SOC codes are just one factor that may be considered, in conjunction with other material evidence, when making the portability determination. To demonstrate that two jobs are in the same or similar occupational classification(s) for purposes of INA 204(j) portability, applicants and/or their employers should submit all relevant evidence. Such evidence includes, but is not limited to, a description of the job duties for the new position; the necessary skills, experience, education, training, licenses or certifications required for the new job; the wages offered for the new job; and any other material and credible evidence submitted by the applicant. Applicants or their employers may also reference DOL's labor market expertise as reflected in its SOC system, which is used to organize occupational data and classify workers into distinct occupational categories, as well as other relevant and credible information, when making portability determinations.

DHS recognizes that variations in job duties are natural and may occur because they involve employers in different economic sectors. This does not necessarily preclude two positions from being in similar occupational classifications for purposes of 204(j) portability. SOC codes provide a measure of objectivity in such assessments and thus can help address uncertainty in the portability determination process.

Comment. Several commenters stated that the definition of ''same or similar'' in proposed 8 CFR 245.25(c) is overly restrictive and will particularly cause difficulty for workers seeking promotions because the definition may not cover moves to certain higher level positions. In contrast, another commenter stated that the proposed definition is arbitrary and capricious, and that the definition effectively lowers the standard set in prior DHS guidance. That commenter believed the new definition would effectively nullify the statutory requirements related to labor certification approval.

Response. DHS disagrees with these comments. Congress did not define the term ''same or similar,'' thus delegating that responsibility and authority to DHS. Through this final rule, DHS adopts a definition that is consistent with the statutory purpose underlying INA 204(j), and that reflects both common dictionary definitions and longstanding DHS practice and experience in this area. As has long been the case, to determine whether two jobs are in the same occupational classification, USCIS looks to whether the jobs are ''identical'' or ''resembling in every relevant respect.'' [34] To determine whether two jobs are in similar occupational classifications, USCIS looks to whether the jobs share essential qualities or have a ''marked resemblance or likeness.'' [35]

DHS recognizes that individuals earn opportunities for career advancement as they gain experience over time. Cases involving career progression must be considered under the totality of the circumstances to determine whether the applicant has established by a preponderance of the evidence that the relevant positions are in similar occupational classifications for INA 204(j) portability purposes. For further guidance on the DHS analysis of cases involving career progression, commenters are encouraged to read the March 16, 2016, USCIS policy memorandum, ''Determining Whether a New Job is in 'the Same or a Similar Occupational Classification' for Purposes of Section 204(j) Job Portability.'' [36]

ii. Concerns Raised Regarding Supplement J

Comment. DHS received a number of comments on the new Supplement J to Form I–485, many of which came from individuals who are currently in the process of pursuing lawful permanent residence as beneficiaries of Form I–140 petitions. Many commenters stated that the Supplement J requirement is an unnecessary burden that will make portability requests under INA 204(j) more complex and cumbersome. Commenters also stated that the requirement would create uncertainty and confusion among employers and applicants. Commenters noted that employers may understand the Supplement J requirement as a

[34] For additional information on USCIS policy regarding the parameters of porting to ''same'' or ''similar'' employment, please see Same or Similar Memo March 2016.

[35] *Id.*

[36] *Id.*

disincentive to retaining or hiring new foreign nationals, as the requirement would increase administrative burdens and legal risks for employers in an already time-consuming and expensive process. Commenters stated that employers unfamiliar with the INA 204(j) process may be unwilling to cooperate in the completion of Supplement J. They also noted that the Supplement J requirement may require employers to draft new company policies concerning the supplement, thus further increasing administrative burdens. Some commenters stated that the Supplement J requirement would disrupt employers' existing procedures covering individuals seeking portability under INA 204(j).

Response. The majority of commenters that opposed the Supplement J requirement argued that it would be burdensome and complex, but they did not provide detailed explanations, analysis, or evidence supporting these assertions. Individuals requesting job portability under INA 204(j) have typically complied with that provision by submitting job offer letters describing the new job offer and how that new job is in the same or a similar occupational classification as the job offer listed in the underlying Form I–140 petition. The Supplement J requirement is intended to replace the need to submit job offer and employment confirmation letters by providing a standardized form, which will benefit both individuals and the Department. Under this rule, individuals will now have a uniform method of requesting job portability and USCIS will have a standardized means for capturing all of the relevant information necessary for processing.[37] DHS believes that a single standardized form, with accompanying instructions, provides greater clarity to the public regarding the types of information and evidence needed to support job portability requests. The form also ensures continued compliance with Paperwork Reduction Act (PRA) requirements.

Given the large overall number and variety of benefit requests and applications that USCIS adjudicates each year, DHS can more efficiently intake and process INA 204(j) portability requests on Supplement J than those submitted through letter correspondence. Among other things, Supplement J provides a consistent format and uniform content, which allows DHS to more easily find and capture necessary information as well as match the form with the corresponding Form I–485 application. Because there is no standardized form currently associated with porting requests, DHS contract and records staff cannot efficiently enter data associated with those requests. With the Supplement J, standardized data can more readily be entered and tracked in agency electronic systems. This, in turn, will greatly enhance USCIS's ability to monitor the status of portability requests, track file movement, and otherwise improve accountability and transparency regarding USCIS's processing of portability requests.

DHS does not agree with several commenters' statements that the Supplement J requirement will increase uncertainty with respect to job portability requests. Rather, DHS believes that Supplement J will reduce past uncertainties by facilitating (1) the tracking of portability requests through the adjudication process, (2) the provision of timely acknowledgements and notices, and (3) the ability of individuals to know if their new job is in a same or a similar occupational classification before the Form I–485 application is adjudicated.

Additionally, an individual who seeks to port in the future may affirmatively file Supplement J to seek a determination as to whether a new job offer is in the same or a similar occupational classification. A DHS decision will inform the individual whether the new job offer can support the pending Form I–485 application and continued eligibility to obtain lawful permanent residence without the need for a new employer to file a new Form I–140 petition. This process will provide transparency into USCIS's ''same or similar'' determinations, providing individuals with increased certainty and better allowing them to make informed career decisions, such as whether to change jobs prior to final adjudication of the pending Form I–485 application.

While an applicant may be required to submit Supplement J when requesting job portability, or in response to an RFE or NOID, DHS does not believe that this new requirement will create significant new burdens or legal risks for employers and employees. As discussed in more detail in the Regulatory Impact Analysis (RIA), the submission of Supplement J will not impose significant additional burdens of time on employers, because employers are already required in such cases to submit job offer or employment confirmation letters supporting INA 204(j) portability. For this same reason, DHS believes the Supplement J requirement will also not impose significant new legal costs, including by increasing the likelihood that individuals or employers will need to consult with lawyers.[38]

While DHS presents a sensitivity analysis for the potential annual costs of Supplement J in the RIA as ranging from $126,598 to $4,636,448, DHS believes that the submission of Supplement J does not impose significant additional burdens on USCIS or employers because applicants are already required to submit letters from employers when requesting INA 204(j) portability. DHS does not have information on how long it currently takes to complete employment confirmation or job offer letters, so DHS cannot conduct side-by-side comparisons. However, anecdotal input suggests that, notwithstanding concern to the contrary, the Supplement J requirement in fact is roughly equivalent to the letter-writing process, as employment confirmation and job offer letters currently provide information similar to that requested in Supplement J.

Additionally, USCIS recognizes in the RIA that the simplified and standardized process provided by the Supplement J requirement may facilitate the ability of employees to change employers. This process, along with the potential for an increased awareness of INA 204(j) portability as a result of this regulation, could potentially increase the number of Supplement J forms submitted. While beneficial to applicants, such an increase has the potential to result in higher turnover for some employers, along with additional costs that may be incurred due to employee replacement. However, DHS does not currently have data on the percentage of employees who port to other employers vis-à-vis those who port to other positions with their same employers. In the RIA, DHS qualitatively discusses the potential costs to employers resulting from employee turnover.

DHS reiterates that the Supplement J requirement will streamline adjudication by providing clear instructions on the types of information

[37] Along with Supplement J, individuals will still be able to provide additional information and documentary evidence supporting any aspect of the porting request. Individuals, if they so choose, may also include a letter further explaining how the new job offer is in the same or a similar occupational classification as the job offer listed in the qualifying Form I–140 petition.

[38] DHS notes that the RIA in this rulemaking provides potential filing costs of Supplement J as prepared by human resources specialists, in-house attorneys, and other attorneys. DHS included such legal costs not because it believes that legal assistance will be required to fill out Supplement J, but because many individuals and employers already use attorneys to submit portability requests under INA 204(j).

required to be submitted to USCIS. Additionally, DHS does not believe that employers will need to create any new administrative processes for filling out Supplement J, as employers are already required to submit job offer or employment confirmation letters. DHS believes that Supplement J places similar burden on employers from what is required through the current process. Similarly, because Supplement J requests substantially the same information that is currently provided by employers through letter correspondence, DHS does not believe the Supplement J creates any new legal risks for those employers. For a more detailed analysis of the economic impact of this rule, please refer to the full RIA published on *regulations.gov*.

Comment. Several commenters expressed concern that Supplement J will allow employers to take advantage of and assert more control over foreign workers. Some commenters specifically focused on the requirement that employers review and sign Supplement J before it is submitted to USCIS. Those commenters believed that this requirement could create a power dynamic in which employers could further control and exploit workers, including by forcing them to accept depressed wages.

Response. DHS does not believe that Supplement J will give employers more power over, or the ability to take advantage of, foreign workers. When the use of Supplement J becomes effective, an applicant for adjustment of status will continue to have the same flexibility to accept other job offers, if eligible for INA 204(j) portability, as they currently have.

Applicants requesting portability under INA 204(j) must provide evidence that the employer is a viable employer extending a bona fide offer of full-time employment to the applicant, and that the employer will employ the applicant in the job proffered upon the applicant's grant of lawful permanent resident status. The current practice is to have applicants submit this evidence in the form of job offer letters from employers. These letters must contain the employer's signature, as well as a certification that everything in the letter is true and correct. Supplement J does not depart from this past practice in any meaningful way. Because Supplement J requests the same information as is currently provided in letters that are currently provided by employers, and that contain the employer's signature, DHS does not see how the Supplement J requirement increases the ability to take advantage of, or otherwise assert control over, employees.

Comment. Many commenters also expressed concern that the Supplement J requirement will cause additional processing delays or fail to alleviate current employment-based immigrant visa wait times. Many commenters who were on the path to obtaining lawful permanent residence expressed their belief that the Supplement J requirement will exacerbate the already backlogged process for adjusting status. Commenters also suggested the requirement will lead to even more procedural requests for evidence, further delaying completion of processing efforts. Another commenter requested elimination of the Supplement J requirement from the rule, stating that the requirement would deter employers from hiring porting workers and thus set back efforts to increase portability among workers.

Response. DHS does not believe the Supplement J requirement will exacerbate or otherwise increase Form I–485 application processing times, nor will it deter employers from hiring porting workers, because it is simply replacing the existing requirement to provide letters from employers. To the contrary, DHS believes Supplement J will streamline the processing of Form I–485 applications, minimizing any processing delays caused by a potential increase in porting resulting from this rule. USCIS currently reviews employment letters, often in response to inquiries issued by USCIS, when adjudicating Form I–485 applications. Now USCIS will review and process Supplement J submissions instead. Supplement J aims to reduce exchanges between applicants and adjudicators, including by eliminating the need for USCIS to issue RFEs and NOIDs to obtain employment confirmation letters, thereby reducing the adjudication time involved in such cases. It allows DHS to standardize data entry and tracking pertaining to permanent job offers that are required in order for the principal beneficiaries of Form I–140 petitions to be eligible for adjustment of status. Moreover, the electronic capture of data pertaining to job offers will help DHS monitor the status of certain Form I–485 applications awaiting visa allocation and will enable DHS to better determine which Form I–485 applications have the required evidence prior to final processing.

DHS agrees with commenters, however, that Supplement J will not alleviate current employment-based immigrant visa wait times. Many Form I–485 applications may remain pending for lengthy periods of time due to the retrogression of visa numbers for particular employment-based immigrant visa preference categories, which may lead to visas becoming unavailable after Form I–485 applications are filed. Congress established the numerical limitations on employment-based immigrant visa numbers. The Department of State allocates employment-based immigrant visas based on the applicant's preference category, priority date, and country of chargeability. Supplement J does not affect the statutory availability of employment-based immigrant visas or the allocation of such numbers by DOS. USCIS cannot approve an individual's application for adjustment of status until a visa has again become available to that individual.

Supplement J improves administration of the portability provisions that Congress created so that individuals experiencing lengthy delays in the adjudication of their Form I–485 applications can change jobs while retaining their eligibility to adjust status on the basis of an approved Form I–140 petition. Supplement J will result in the more efficient adjudication of Form I–485 applications once visas become available, which DHS believes will encourage, not deter employers from hiring workers eligible to port under section 204(j).

Comment. Several commenters indicated that Supplement J will require the use of attorneys, which may diminish employers' desires to extend new job offers pursuant to INA 204(j) and therefore limit job portability. One commenter expressed the belief that corporate human resources representatives will not feel comfortable filling out Supplement J and will therefore seek the involvement of immigration attorneys.

Response. An attorney is not required to complete or file Supplement J, although individuals and employers may choose to be represented by attorneys. As indicated previously, Supplement J will standardize information collection for job portability requests under INA 204(j) and request information and evidence that many individuals and employers already submit to demonstrate eligibility under INA 204(j). While DHS is aware that many individuals and employers have in the past been represented by or received assistance from attorneys in relation to portability requests under INA 204(j), DHS disagrees that requiring the use of Supplement J will substantially increase the likelihood that individuals or employers will need to consult with attorneys on future submissions, given that the information collected by the form largely overlaps with the information that individuals and employers already provide through less formalized channels.[39] As noted above, Supplement J does not impose any new requirements and will assist DHS in determining an individual's eligibility to adjust status to lawful permanent residence in certain employment-based immigrant visa categories, as well as to modernize and improve the process for requesting job portability under INA 204(j).

iii. Miscellaneous Comments on Supplement J

Comment. Several commenters asked for clarification on whether individuals granted EB–2 national interest waivers would be required to file Supplement J.

Response. Grantees of national interest waivers will not be required to file Supplement J. Individuals seeking immigrant visas under certain employment-based immigrant visa categories do not require job offers from employers, including those filing EB–1 petitions as an alien of extraordinary ability and those filing EB–2 petitions based on a national interest waiver, which waives the normal EB–2 job offer requirement when DHS determines that doing so is in the national interest. *See* 8 CFR 204.5(h)(5) and (k)(4)(ii). An individual classified as an alien of extraordinary ability or granted a national interest waiver is not required to demonstrate a job offer at the time of adjudication of the Form I–485 application and therefore would not need to submit Supplement J (although they are not precluded from doing so). However, USCIS may inquire whether such applicants are continuing to work in the area or field that forms the basis of their immigrant visa eligibility. USCIS may also assess inadmissibility by determining whether an individual would likely become a public charge under INA 212(a)(4). USCIS revised the Supplement J instructions to clarify that the form need not be filed by aliens of extraordinary ability or individuals applying for adjustment of status on the basis of a national interest waiver.

Comment. Several commenters stated that Supplement J requires certain information that is not relevant to either a portability determination under INA 204(j) or to confirm that a job offer is available and bona fide. Specifically, commenters referred to sections in Supplement J that require employers to provide information such as type of business, gross annual income, net annual income, and number of employees. Commenters suggested revising the form to only require that kinds of information normally contained in employment confirmation letters.

Response. DHS agrees that certain information requested by Supplement J, such as the size of the employer's workforce, by itself, may not be determinative in the assessment of whether two jobs are in the same or similar occupational classification(s), or whether the job offered in the underlying Form I–140 petition is still available. However, such information can be relevant in the ''same or similar'' determination under the totality of the circumstances, as well as when USCIS is assessing whether a job offer is bona fide. DHS believes the information requested on Supplement J will assist USCIS in validating employers and in assessing whether a prospective employer is viable and making a bona fide job offer to the applicant. And in cases involving the same employer named in the underlying Form I–140 petition, Supplement J will assist USCIS in determining whether the employer is still viable and is still extending a bona fide job offer to the applicant.

Comment. Some commenters expressed concern that Supplement J would prevent economic growth and reduce labor mobility among workers who have various talents, especially in the technology sector. They argued that the ability of high-skilled talent to move between various organizations, or between different industries of the U.S. economy, would spur economic growth.

Response. DHS disagrees that the Supplement J requirement would prevent economic growth and hinder labor mobility. As noted previously, Supplement J simply allows DHS to collect and process information that employers already provide using a standardized information collection instrument, but it does not change the applicable standards of review. Contrary to assertions that Supplement J will limit worker mobility, DHS believes that Supplement J will facilitate the ability for eligible individuals to change between jobs while increasing the awareness of the availability of job portability under INA 204(j).

F. Compelling Circumstances Employment Authorization

1. Description of Final Rule and Changes From NPRM

The final rule provides a stopgap measure, in the form of temporary employment authorization, to certain nonimmigrants who are the beneficiaries of approved employment-based immigrant visa petitions, are caught in the continually expanding backlogs for immigrant visas, and face compelling circumstances. This stopgap measure is intended to address certain particularly difficult situations, including those that previously may have forced individuals on the path to lawful permanent residence to abruptly stop working and leave the United States. When sponsored workers and their employers are in particularly difficult situations due to employment-based immigrant visa backlogs, the compelling circumstances employment authorization provision may provide a measure of relief, where currently there is none.

Specifically, the final rule provides that, to obtain a temporary grant of compelling circumstances employment authorization, an individual must (1) be in the United States in E–3, H–1B, H–1B1, O–1, or L–1 nonimmigrant status, including in any applicable grace period, on the date the application for employment authorization is filed; (2) be the principal beneficiary of an approved Form I–140 petition; (3) establish that an immigrant visa is not authorized for issuance based on his or her priority date, preference category, and country of chargeability according to the Final Action Date in effect on the date the application is filed; and (4) demonstrate compelling circumstances that justify the exercise of USCIS discretion to issue an independent grant of employment authorization. *See* final 8 CFR 204.5(p)(1). The final rule limits the grant of employment authorization in compelling circumstances to a period of 1 year. *See* final 8 CFR 204.5(p)(4). Additionally, the principal beneficiary may seek renewals of this employment authorization in 1-year increments if: (1) He or she continues to face compelling circumstances and establishes that an immigrant visa is not authorized for issuance based on his or her priority date, preference category, and country of chargeability according to the Final Action Date in effect on the date the renewal application is filed; or (2) the difference between his or her priority date and the relevant Final Action Date is 1 year or less (without having to show compelling circumstances). *See* final 8 CFR 204.5(p)(3)(i). The final rule allows

[39] As noted previously, the RIA in this rulemaking provides potential filing costs of Supplement J as prepared by human resources specialists, in-house attorneys, and other attorneys. DHS recognizes that not all entities have human resources specialists or low-cost access to attorneys. DHS reaffirms, however, that aid of an attorney or a human resources specialist is not required to fill out Supplement J. DHS included these costs because many larger entities already rely on such individuals when preparing documents for use in portability requests under INA 204(j).

family members of these individuals to also apply for employment authorization, and provides that the validity period for their EADs may not extend beyond that authorized for the principal beneficiary. *See* final 8 CFR 204.5(p)(2) and (p)(3)(ii). The large majority of these individuals, after availing themselves of this temporary relief, are likely to continue on their path to permanent residence.

DHS is finalizing the compelling circumstances employment authorization provision with several changes to the proposed regulatory text to clarify the eligibility requirements for initial and renewal applications filed by principals and dependents. An individual requesting an EAD must file an application on Form I–765 with USCIS in accordance with the form instructions. Under final 8 CFR 204.5(p)(3), some individuals may be eligible for a renewal of their compelling circumstances EAD on either or both bases of eligibility, depending on their circumstances. DHS also recognizes that an applicant may seek to renew his or her compelling circumstances EAD on a different basis than that on the initial application. In the responses to comments below, DHS further explains the provisions in the final rule, including the manner in which DHS determined the specific population of beneficiaries who would be eligible for this type of employment authorization and its rationale for providing employment authorization only to those individuals who are facing compelling circumstances.

2. Public Comments and Responses

i. Support for Compelling Circumstances Employment Authorization

Comment. Some commenters supported the rule completely as written and therefore supported employment authorization based on compelling circumstances as proposed. Many of these commenters expressed general support and did not provide a detailed explanation for their position. Other commenters highlighted the benefits of compelling circumstances employment authorization, such as facilitating the ability of certain nonimmigrants to work for other employers (*i.e.,* not just the sponsoring employer).

Response. DHS appreciates these comments. The compelling circumstances provision fills a gap in the regulations and provides short-term relief to high-skilled individuals who are already on the path to lawful permanent residence, but who find themselves in particularly difficult situations generally outside of their control while they wait for their immigrant visas to become available.

Comment. One commenter supported the provision making individuals with a felony conviction ineligible for compelling circumstances employment authorization and recommended that such felons be ''deported without asking questions.''

Response. DHS confirms that, consistent with other processes, applicants who have been convicted of any felony or two or more misdemeanors are ineligible for employment authorization under the compelling circumstances provision. *See* final 8 CFR 204.5(p)(5). DHS, however, will not deport individuals without due process or in a manner inconsistent with controlling statutory and regulatory authority.

ii. Status of Individuals Who Are Granted a Compelling Circumstances EAD

Comment. A few commenters asked DHS to clarify the ''status'' of an individual who receives employment authorization based on compelling circumstances. One commenter asked DHS to clarify whether such individuals will be given a period of ''deferred action'' so as to provide them with a temporary reprieve from removal or other enforcement action. Similarly, the commenter asked DHS to confirm that individuals who receive employment authorization under compelling circumstances will not accrue unlawful presence. Another commenter asked DHS to provide an underlying status for beneficiaries of compelling circumstances EADs or to consider such beneficiaries to be in lawful status for purposes of INA 245(k)(2)(A), 8 U.S.C. 1255(k)(2)(A), so that these beneficiaries would be eligible to file applications for adjustment of status from within the United States, rather than having to consular process.

Response. Congress sets the categories or ''statuses'' under which foreign nationals may be admitted to the United States. While individuals eligible for compelling circumstances EADs must have lawful nonimmigrant status at the time they apply, such individuals will generally lose that status once they engage in employment pursuant to such an EAD. Such a foreign national will no longer be maintaining his or her nonimmigrant status, but he or she will generally not accrue unlawful presence during the validity period of the EAD or during the pendency of a timely filed and non-frivolous application. This means that if an individual who was employed under a compelling circumstances EAD leaves the United States to apply for a nonimmigrant or immigrant visa at a consular post abroad, the departure will not trigger the unlawful presence grounds of inadmissibility, as long as he or she is not subject to those grounds by virtue of having otherwise accrued periods of unlawful presence. USCIS intends to adjust its policy guidance to confirm that holders of compelling circumstances EADs will be considered to be in a period of stay authorized by the Secretary for that purpose. Because such individuals will be considered as being in a period of authorized stay for purposes of calculating unlawful presence, DHS does not believe it generally would be necessary to provide them with deferred action, which is an act of prosecutorial discretion that may be granted to individuals who generally have no other legal basis for being in the United States.

Comment. Commenters suggested that individuals who use compelling circumstances EADs should be permitted to adjust their status to lawful permanent residence once a visa becomes available, regardless of whether they are maintaining nonimmigrant status.

Response. With limited exception,[40] the INA does not permit the relief these commenters are requesting. Workers who initially apply for compelling circumstances EADs must be in a lawful nonimmigrant status. When a high-skilled worker engages in employment under a compelling circumstances EAD, he or she will no longer be working under the terms and conditions contained in the underlying nonimmigrant petition. Although the foreign national may remain in the United States and work under a compelling circumstances EAD, and generally will not accrue unlawful presence while the EAD is valid, he or she may be unable to adjust status to lawful permanent residence in the United States when his or her priority date becomes current. An individual who is seeking lawful permanent residence based on classification as an employment-based immigrant is generally barred by statute from applying to adjust status in the United States if he or she is not in lawful nonimmigrant status. *See* INA 245(c)(2) and (7), 8 U.S.C. 1254(c)(2) and (7). If an individual working on a compelling circumstances EAD finds an employer who is willing to sponsor him or her for a nonimmigrant classification (such as

[40] *See, e.g.,* INA 245(i) and (k), 8 U.S.C. 1255(i) and (k).

the H–1B nonimmigrant classification), he or she would have to leave the United States and may need to obtain a nonimmigrant visa from a consulate or embassy overseas before being able to return to the United States to work in that status. *See* INA 248, 8 U.S.C. 1258; 8 CFR 248.1(b). Once the individual has been admitted in nonimmigrant status, he or she may be eligible to adjust status to lawful permanent residence, if otherwise eligible.

iii. Changing the Scope of Proposed Employment Authorization

Comment. A majority of commenters supported the ability of high-skilled workers to obtain independent employment authorization but stated that the proposal in the NPRM was too restrictive, particularly because of the inclusion of the compelling circumstances requirement. Commenters instead supported employment authorization for foreign workers in the United States who are beneficiaries of approved Form I–140 petitions, who are maintaining nonimmigrant status, and who are waiting for their immigrant visa priority dates to become current, regardless of whether they face compelling circumstances.

A common concern expressed by commenters opposing the compelling circumstances requirement was that the number of individuals who would be eligible for such EADs would be too narrow. Some commenters suggested that it would be better to never finalize the rule if the compelling circumstance provision were to remain intact. Certain commenters opposed DHS's introduction of a compelling circumstances requirement because no other employment authorization category is conditioned upon a showing of compelling circumstances. One commenter, for example, reasoned that the ''compelling circumstances'' requirement should be eliminated because applicants for adjustment of status, who similarly are on the path to lawful permanent residence, need not demonstrate compelling circumstances to obtain an EAD. Other commenters noted that recipients of deferred action under the Deferred Action for Childhood Arrivals (DACA) policy are not required to establish compelling circumstances to qualify for employment authorization and stated that it is only fair that nonimmigrants with approved Form I–140 petitions who are contributing to society by working and paying taxes be treated equivalently. Some commenters concluded that the Department is ''targeting'' certain foreign workers by imposing the compelling circumstances condition.

Response. The Department believes the compelling circumstances employment authorization provision strikes a reasonable balance between competing priorities. By providing greater flexibility to certain high-skilled foreign workers who are on the path to permanent residence but are facing particularly difficult situations, the provision incentivizes such workers to continue contributing to our economy; affords greater fairness to such individuals who have already cleared significant legal hurdles to becoming LPRs; and complements the flexibilities otherwise introduced by this rulemaking in a way that harmonizes with the broader immigration system. DHS therefore declines to expand the group of people who may be eligible for employment authorization under 8 CFR 204.5(p).

DHS believes the expansions suggested by commenters have the potential to create uncertainty among employers and foreign nationals with consequences for predictability and reliability in the employment-based immigration system. Among other things, the suggestions could lead to unlimited numbers of beneficiaries of approved immigrant visa petitions choosing to fall out of nonimmigrant status, as described in greater detail below. The resulting unpredictability in the employment-based immigrant visa process must be carefully weighed in light of the Secretary's directive to ''provide stability'' to these beneficiaries, while modernizing and improving the high-skilled visa system.[41] DHS is cognizant of these consequences for foreign nationals who may apply for compelling circumstances EADs, and carefully weighed these consequences when assessing the classes of individuals who should be eligible for such EADs. Moreover, the INA affords numerous mechanisms for high-skilled workers to obtain employment in the United States under a variety of applicable nonimmigrant classifications and, as necessary, change from one nonimmigrant status to another.[42] DHS regulations accordingly provide the processes and criteria for obtaining such statuses on behalf of high-skilled workers.[43] By authorizing grants of employment authorization in 1-year increments to certain high-skilled individuals facing difficult situations, DHS intends to provide something different—a stopgap relief measure for intending immigrants, well on their way to achieving lawful permanent resident status, in the event certain circumstances arise outside their control, and that the existing framework fails to meaningfully address. Where no such circumstances are present, these individuals can avail themselves of other opportunities already permitted them under the INA and DHS regulations, including the improved flexibilities provided by this final rule. Among other things, this final rule provides high-skilled workers with nonimmigrant grace periods and includes provisions that help such workers retain approval of their employment-based immigrant visa petitions and related priority dates. These provisions enhance flexibility for employers and nonimmigrant workers and will decrease instances where the compelling circumstances EAD might otherwise be needed. Relatedly, DHS believes that providing compelling circumstances EADs only to the subset of the employment-sponsored population in need of this relief will limit disincentives for employers to sponsor foreign workers for permanent residence. DHS thus disagrees that the proposed eligibility factors for employment authorization in compelling circumstances are too restrictive and negate the value of the entire regulation. Further, DHS disagrees with the commenters' characterizations that the limitations on the compelling circumstances EAD are unfairly or improperly ''targeting'' certain high-skilled workers. DHS believes that the compelling circumstances EAD provides a useful benefit for all eligible high-skilled workers by allowing them to continue to progress in their careers and remain in the United States while they await immigrant visas, despite compelling circumstances that might otherwise force them to leave the United States. Retaining these high-skilled nonimmigrant workers who are well on their way to becoming LPRs is important when considering the contributions of these individuals to the U.S. economy, including through contributions to entrepreneurial endeavors and advances in research and development.[44]

[42] *See* INA 101(a)(15), 214(e), and 248, 8 U.S.C. 1101(a)(15), 1184(e), and 1258.

[43] *See* 8 CFR parts 214 and 248.

[44] *See* Hart, David, et al., ''High-tech Immigrant Entrepreneurship in the United States,'' Small Business Administration Office of Advocacy, at 60 (July 2009), available at: *https://www.sba.gov/sites/*

Comment. Several commenters stated that the Department clearly has the legal authority to implement the compelling circumstances EAD, as well as the legal authority to significantly broaden eligibility for such EADs. Other commenters questioned DHS's legal authority to extend employment authorization to certain non-U.S. citizens based on compelling circumstances. One such commenter emphasized that employment for other categories is expressly authorized by statute.

Response. DHS agrees with the commenters who recognized that the Department has the statutory authority to grant employment authorization to these individuals. Such authority stems, in part, from the Secretary's broad discretion to administer the Nation's immigration laws and broad authority to ''establish such regulations . . . and perform such other acts as he deems necessary for carrying out his authority under the [INA].'' *See* INA 103(a)(3), 8 U.S.C. 1103(a)(3). Further, section 274A(h)(3)(B) of the INA, 8 U.S.C. 1324a(h)(3)(B) recognizes that employment may be authorized by statute or by the Secretary. *See Arizona Dream Act Coalition* v. *Brewer,* 757 F.3d 1053, 1062 (9th Cir. 2014) (''Congress has given the Executive Branch broad discretion to determine when noncitizens may work in the United States.''); *Perales* v. *Casillas,* 903 F.2d 1043, 1048, 1050 (5th Cir. 1990) (describing the authority recognized by INA 274A(h)(3) as ''permissive'' and largely ''unfettered''). The fact that Congress has directed the Secretary to authorize employment to specific classes of foreign nationals (such as the spouses of E and L nonimmigrants) does not diminish the Secretary's broad authority to administer the INA and to exercise discretion in numerous respects, including through granting employment authorization as a valid exercise of such discretion. *See* INA sections 103 and 274A(h)(3)(B), 8 U.S.C. 1103, and 1324a(h)(3)(B). The Secretary's exercise of discretion to grant employment authorization is narrowly tailored in this final rule to address the needs of a group of individuals who face compelling circumstances. The employment authorization is valid for 1 year, with limited opportunities for renewal, and is only available to discrete categories of nonimmigrant workers.

Comment. Several commenters opposed to the compelling circumstances limitation noted that such limitation was not referenced in the Secretary's November 20, 2014 Memorandum, ''Policies Supporting U.S. High-Skilled Businesses and Workers.'' [45] Similarly, many commenters stated that the proposed rule did not deliver portable work authorization for high-skilled workers and their spouses, as described in the White House Fact Sheet on Immigration Accountability Executive Action.[46]

Response. In the November 20, 2014 Memorandum, the Secretary directed USCIS to take several steps to modernize and improve the immigrant visa process for high-skilled workers. In relevant part, the Secretary instructed USCIS to carefully consider regulatory or policy changes to better assist and provide stability to the high-skilled beneficiaries of approved Form I–140 petitions. DHS believes this rule meets the Secretary's objectives. Although the compelling circumstances provision was not specifically referenced in the November 20, 2014 Memorandum, it was proposed by the Department in response to the Secretary's directive to ''carefully consider other regulatory or policy changes to better assist and provide stability to the beneficiaries of approved Form I–140 petitions.'' [47] The compelling circumstances provision specifically enables the beneficiaries of such petitions to remain and work in the United States if they face compelling circumstances while they wait for an immigrant visa to become available, and therefore directly responds to the Secretary's directive.

The White House Fact Sheet on Immigration Accountability Executive Action referenced by the commenters concerning portability of high-skilled workers and their spouses is addressed in several elements of this rulemaking, including through the new H–1B portability provisions, the section 204(j) portability provisions, and provisions revising the circumstances under which Form I–140 petitions are automatically revoked. To the degree these comments specifically relate to provisions authorizing employment of H–4 nonimmigrant spouses of H–1B nonimmigrant workers who have been sponsored for permanent resident status, that provision was subject to separate notice-and-comment rulemaking and is now codified at 8 CFR 214.2(h)(9)(iv).

Comment. Several commenters claimed that the compelling circumstances EAD provision has limited value because it introduces additional hurdles for individuals who wish to ultimately adjust their status domestically. Some commenters asserted that the provision would provide employers with increased avenues to exploit workers.

Response. DHS appreciates that workers who are eligible for the compelling circumstances EAD may nevertheless choose to not to apply for this option after weighing all immigration options relevant to their specific situations. DHS is providing this new option in addition to others already available to foreign workers, such as changing status to another nonimmigrant category or applying for an extension of stay with a new employer in the same nonimmigrant category. DHS anticipates that an individual evaluating whether to apply for a compelling circumstances EAD will consider the benefits and drawbacks of using such an EAD. DHS expects that such individuals will specifically consider the effects of losing nonimmigrant status by working under a compelling circumstances EAD, which may require consular processing to reenter the United States on a nonimmigrant or immigrant visa. DHS believes that the rule provides a meaningful benefit to high-skilled individuals who otherwise may face particularly difficult situations.

Finally, commenters did not suggest how the compelling circumstances EAD would facilitate the ability of employers to exploit their employees. DHS disagrees that the availability of such EADs, which are available to high-skilled nonimmigrant workers on a voluntary basis, would result in

default/files/rs349tot_0.pdf (presenting the economic contributions of high-skilled immigrants and the need to retain them, and concluding that 36 percent of immigrant-founded companies conduct R&D and 29 percent of immigrant-founded companies held patents, both higher percentages than native-founded companies); Fairlie, Robert, ''Open for Business: How Immigrants are Driving Small Business Creation in the United States,'' The Partnership for a New American Economy (August, 2012), available at: *http://www.renewoureconomy.org/sites/all/themes/pnae/openforbusiness.pdf;* ''Immigrant Small Business Owners a Significant and Growing Part of the Economy'' (June 2012), available at: *http://www.fiscalpolicy.org/immigrant-small-business-owners-FPI-20120614.pdf;* Anderson, Stuart, ''American Made 2.0 How Immigrant Entrepreneurs Continue to Contribute to the U.S. Economy, National Venture Capital Association,'' available at: *http://nvca.org/research/stats-studies/.*

increased exploitation of such workers.[48]

iv. Illustrations of Compelling Circumstances

In the NPRM, DHS provided four examples of situations that, depending on the totality of the circumstances, may be considered compelling and justify the need for employment authorization: (1) Serious illness or disability faced by the nonimmigrant worker or his or her dependent; (2) employer retaliation against the nonimmigrant worker; (3) other substantial harm to the applicant; and (4) significant disruption to the employer. These situations are meant to be illustrative, as compelling circumstances will be decided on a case-by-case basis and may involve facts that vary from those provided above. For that reason, DHS invited the public to suggest other types of compelling circumstances that may warrant a discretionary grant of separate employment authorization. DHS also requested comments on the manner in which applicants should be expected to document such compelling circumstances. In response, DHS received numerous comments providing examples and suggestions, which are discussed below.

Comment. Several commenters requested that DHS clearly define the term ''compelling circumstances.'' Some of these commenters stated that the subjectivity of the compelling circumstances provision would lead to unfair and inconsistent results. Other commenters stated that the lack of a definition would lead to confusion.

Another commenter requested that DHS expand on the phrase ''other substantial harm to the applicant,'' believing that this provision may be the most common basis for demonstrating compelling circumstances. Another commenter suggested that DHS broaden the circumstances in which employer retaliation would be considered to be compelling, so as to benefit employees involved in labor disputes. The commenter noted that, as discussed in the preamble of the NPRM, the category titled ''Employer Retaliation'' would require an employee to document that an employer had taken retaliatory action before the employee could become eligible to apply for employment authorization based on compelling circumstances. To alleviate undue risk, the commenter recommended revising the category so that it would cover individuals involved in labor disputes. The commenter believed this change would reduce the harm that retaliation can cause to employees and prevent the chilling effect such retaliation can have on the exercise of labor rights.

A commenter also requested that, as related to DHS's proposal to consider significant disruption to employers, compelling circumstances apply when an employer attests that departure of the employee will: (1) Delay a project; (2) require the company to expend time or resources to train another employee to fill the role; (3) result in additional costs to recruit and hire a new employee; or (4) harm the company's professional reputation in the marketplace.

Response. DHS understands that establishing a bright-line definition may be easier to apply in the view of some stakeholders; however, it may also have the effect of limiting DHS's flexibility to recognize the various circumstances that could be considered compelling. Such flexibility is better afforded through a mechanism that permits DHS to determine which situations involve compelling circumstances on a case-by-case basis. Therefore, in the preamble to the NPRM, DHS identified four illustrative (*i.e.,* non-exhaustive) types of circumstances in which the Department may consider granting employment authorization. The possible types of circumstances that DHS may consider compelling are not restricted to these examples. In finalizing this rule, DHS considered comments requesting additional scenarios for DHS to add to the illustrative list of potential compelling circumstances in the NPRM. The broad range of additional scenarios suggested underscores the importance for retaining flexibility in making these discretionary determinations. Therefore, DHS declines to define the term ''compelling circumstances'' in more concrete and limiting terms in this rulemaking. In response to the public comments, however, the agency provides this updated list of illustrative circumstances that USCIS, in its discretion, might find compelling. USCIS emphasizes that this list is not exhaustive of the types of situations that might involve compelling circumstances.

• *Serious Illnesses and Disabilities.* The nonimmigrant worker can demonstrate that he or she, or his or her dependent, is facing a serious illness or disability that entails the worker moving to a different geographic area for treatment or otherwise substantially changing his or her employment circumstances. A move to another part of the country to ensure proper medical care is just one example of compelling circumstances resulting from a serious illness or disability of the principal beneficiary or his or her family member.

• *Employer Dispute or Retaliation.* The nonimmigrant worker can demonstrate that he or she is involved in a dispute regarding the employer's alleged illegal or dishonest conduct as evidenced by, for example, a complaint filed with a relevant government agency[49] or court, and that the employer has taken retaliatory action that justifies granting separate employment authorization to the worker on a discretionary basis or that the dispute otherwise is shown to have created compelling circumstances. DHS recognizes that employer retaliation in response to a dispute is not limited to termination of employment and could include any number of actions taken by an employer, including harassment. Depending on the unique circumstances of a situation, an employer dispute could rise to the level of compelling circumstances even absent employer retaliation, but DHS declines to adopt the suggestion to grant a compelling circumstances EAD on the sole basis that the applicant is involved in a labor dispute. DHS is allowing sufficient flexibility under this ground, including by not defining ''retaliation'' or ''labor dispute'' in this rule or confining the ground to LCA violations alone. DHS further notes that the employer retaliation example does not identify the universe of fact patterns that might involve improper behavior by employers. DHS believes that the approach outlined in this final rule will make appropriate relief available for certain employees who can demonstrate

[48] DHS takes worker exploitation seriously. The Department has created the Blue Campaign to combat human trafficking and aid victims. More information about the Blue Campaign can be found at *www.dhs.gov/blue-campaign.* Other U.S. Government resources include the Department of Justice's Office of Special Counsel for Immigration-Related Unfair Employment Practices, which enforces the anti-discrimination provision of the INA. *See* INA section 274B; 8 U.S.C. 1324b. More information about reporting an immigration-related unfair employment practice may be found at *http://www.justice.gov/crt/about/osc.* In addition, the U.S. Equal Employment Opportunity Commission (EEOC) enforces Title VII of the Civil Rights Act of 1964 (Title VII), as amended, and other federal laws that prohibit employment discrimination based on race, color, national origin, religion, sex, age, disability and genetic information. More information about Title VII and the EEOC may be found at *www.eeoc.gov.* DHS also notes that DOL's Wage and Hour Division investigates allegations of employee abuse. Information about reporting a potential wage and hour violation can be found at *www.dol.gov* or by calling 1–866–4USWAGE (1–866–487–9243).

[49] Relevant government agencies include, but are not limited to, the Department of Labor, the Equal Employment Opportunity Commission, the National Labor Relations Board, and state or local counterparts to these federal agencies (*e.g.,* the Massachusetts Labor and Workforce Development Office, the New Hampshire Public Employee Labor Relations Board, and the Oregon Employment Relations Board).

that they do not have the option of remaining with their current employer or that they face retaliatory actions if they do remain with their current employer.

• *Other Substantial Harm to the Applicant.* The nonimmigrant worker can demonstrate that due to compelling circumstances, he or she will be unable to timely extend or otherwise maintain status, or obtain another nonimmigrant status, and absent continued employment authorization under this proposal the applicant and his or her family would suffer substantial harm. In some situations, this showing might be tied to financial hardship facing the principal and his or her spouse and children. An example of such substantial harm may involve an H–1B nonimmigrant worker who has been applying an industry-specific skillset in a high-technology sector for years with a U.S. entity that is unexpectedly terminating its business, where the worker is able to establish that the same or a similar industry (*e.g.,* nuclear energy, aeronautics, or artificial intelligence) does not materially exist in the home country. Another example might include a nonimmigrant worker whose return to his or her home country would cause significant hardship to the worker and his or her family by resulting in a series of circumstances regarding the family being uprooted that in their totality, rise to the level of compelling circumstances. In this circumstance, the employment authorization proposal would provide the individual with an opportunity to find another employer to sponsor him or her for immigrant or nonimmigrant status and thereby protect the worker and his or her family members from the substantial harm they would suffer if required to depart the United States.

Although approaching or reaching the statutory temporal limit on an individual's nonimmigrant status will not, standing alone, amount to compelling circumstances, this could be a factor considered by DHS in weighing the totality of the circumstances on a case-by-case basis. Likewise, job loss alone will not be considered substantial harm to the applicant, unless an individual can show additional circumstances that compound the hardship associated with job loss.

• *Significant Disruption to the Employer.* The nonimmigrant worker can show that due to compelling circumstances, he or she is unexpectedly unable to timely extend or change status, there are no other possible avenues for the immediate employment of such worker with that employer, and the worker's departure would cause the petitioning employer substantial disruption. DHS does not believe that, standing alone, a time delay in project completion would likely rise to a compelling circumstance, as a commenter suggested; however, such delays when combined with other factors, such as the cost to train or recruit a replacement or harm to an employer's reputation in the marketplace, might rise to a compelling circumstance. Additional examples of significant disruption may include the following:

◦ An L–1B nonimmigrant worker sponsored for permanent residence by an employer that subsequently undergoes corporate restructuring (*e.g.,* a sale, merger, split, or spin-off) such that the worker's new employer is no longer a multinational company eligible to employ L–1B workers, there are no available avenues to promptly obtain another work-authorized nonimmigrant status for the worker, and the employer would suffer substantial disruption due to the critical nature of the worker's services. In such cases, the employment authorization proposal would provide the employer and worker a temporary bridge allowing for continued employment while they continue in their efforts to obtain a new nonimmigrant or immigrant status.

◦ An H–1B nonimmigrant worker who provides critical work on biomedical research for a non-profit entity, affiliated with an institution of higher education, that subsequently reorganizes and becomes a for-profit entity, causing the worker to no longer be exempt from the H–1B cap. In cases where the worker may be unable to obtain employment authorization based on his or her H–1B status, and the employer is unable to file a new H–1B petition based on numerical limitations or to obtain another work-authorized nonimmigrant status, the employment authorization available under 8 CFR 204.5(p) could provide a temporary bridge for continued employment of the worker as his or her departure would create substantial disruption to the employer's biomedical research.

Comment. The NPRM requested that commenters submit examples of additional scenarios that could be considered for compelling circumstances EADs. Many commenters suggested fact patterns that they believed should rise to the level of a compelling circumstance. DHS received the following specific suggestions:

• *Extraordinary Wait.* Many commenters asked DHS to consider a lengthy wait for an immigrant visa to be a compelling circumstance. A number of commenters noted that having to continuously extend nonimmigrant status was in itself a compelling circumstance and that employment authorization should be granted on that basis alone. Commenters suggested various timeframes for when the wait for an immigrant visa would be lengthy enough to qualify as a compelling circumstance, including situations involving beneficiaries: Who are facing waits of over 5 years before they are eligible to file their applications for adjustment of status; who have completed 6 years in H–1B nonimmigrant status and have an approved Form I–140 petition; who have an approved Form I–140 petition and are facing at least a three month wait before they may be eligible to file their applications for adjustment of status; or who have reached the limit of their nonimmigrant status solely because of the backlog on immigrant visas.

• *Academic Qualifications.* Several commenters suggested that DHS should grant compelling circumstances EADs to individuals seeking to gain advanced academic experience, such as those obtaining a U.S. graduate degree based on specialized research or entering a fellowship program. One commenter requested that U.S. educated advanced-degree holders in the fields of science, technology, engineering, and mathematics (STEM) be granted compelling circumstances employment authorization. Another commenter requested employment authorization under compelling circumstances for workers who are pursuing part-time education and would like to switch to a different type of job.

• *Dissatisfaction with Current Position or Salary.* Some commenters indicated that job dissatisfaction should be a compelling circumstance, because remaining in such employment can cause emotional harm and other problems.

• *Home Ownership.* One commenter recommended that home ownership be considered a compelling circumstance.

• *Unemployment.* One commenter recommended that unemployment be considered a compelling circumstance.

• *Effects on Derivatives.* One commenter suggested that certain family situations should be considered compelling circumstances. Specifically, the commenter stated that employment authorization should be approved where the employee submits evidence that his or her departure will: (1) Negatively affect the employee's, or a derivative family member's, professional career; or (2) disrupt the ongoing education of the employee's child. Many commenters requested that DHS amend the proposed regulation to protect derivatives who may be ''aging out.'' The majority of these commenters believed that ''aging out'' itself constituted a compelling circumstance.

• *Entrepreneurship.* Some commenters advocated for granting employment authorization to individuals who would like to start a business. These commenters suggested that such entrepreneurship should always be a compelling circumstance.

• *National Interest Waivers.* Several commenters urged DHS to include approval of a national interest waiver as a stand-alone compelling circumstance. One commenter requested that DHS grant employment authorization to beneficiaries who have pending petitions for national interest waivers, and that DHS eliminate the requirement that individuals be maintaining lawful nonimmigrant status to adjust status pursuant to an employment-based immigrant visa petition. Another commenter requested that employment authorization be granted to physicians with national interest waivers who have worked for at least 3 years in federally designated underserved areas.

Response. Compelling circumstances are generally situations outside a worker's control that warrant the Secretary's exercise of discretion in granting employment authorization, on a case-by-case basis, given the totality of the circumstances. Adjudicators will look at various factors, including all factors identified by the applicant, and may consider whether the evidence supports providing compelling circumstances employment authorization, such as where the high-skilled nonimmigrant worker is facing retaliation from the employer for engaging in protected conduct, where loss of work authorization would result in significant disruption to the employer or cause significant harm to the worker, or other circumstances of similar magnitude.

DHS acknowledges that many beneficiaries eagerly await the opportunity to become lawful permanent residents. The Department works closely with DOS to improve the immigrant visa processing system, but notes that it is inevitable that beneficiaries may experience long waits and that processing times will vary. As indicated in the NPRM, DHS does not believe that a long wait for an immigrant visa constitutes a compelling circumstance on its own. Many workers who face a lengthy wait for an immigrant visa, including those who have reached their statutory maximum time period in nonimmigrant status, often face difficult choices. DHS does not consider that these common consequences, on their own, would amount to compelling circumstances. Nor does DHS believe that many of the other scenarios suggested by commenters involve compelling circumstances on their own. Home ownership, notable academic qualifications, or dissatisfaction with a position or salary, standing alone, do not rise to the level of a compelling circumstance. However, any one of these situations could rise to the level of compelling circumstances in combination with other circumstances.

Likewise, unemployment, in and of itself, will generally not be considered a compelling circumstance. However, unemployment could rise to the level of a compelling circumstance if, for example, the applicant demonstrates that the unemployment was a result of serious illness, employer retaliation, or would result in substantial harm or significant employer disruption, as described above and in the NPRM. *See* 80 FR 81899, at 81925. The compelling circumstances requirement is a higher standard than mere inconvenience, and the applicant would need to establish the harm resulting from the loss of employment and the benefits to be gained by being able to continue employment in the United States.

DHS closely considered comments advocating for protection of derivatives. DHS has determined it is appropriate to extend the benefits provided by the compelling circumstances provision to spouses and children of principal beneficiaries whose employment authorization has not been terminated or revoked. *See* final 8 CFR 204.5(p)(2). DHS, however, purposefully made the determinative factor the principal's status, because it is the principal's status that forms the basis for the family's presence in the United States. A principal beneficiary, however, would be able to present evidence that, for example, his or her departure will negatively impact the derivative family member's professional career or disrupt the ongoing education of the employee's child, and DHS will consider these factors together with all supporting factors as part of the overall analysis.

DHS also specifically considered comments expressing concern for children who may ''age out'' or have recently ''aged out'' of immigration benefit eligibility. DHS notes that, by statute, once a person turns 21, he or she is no longer a ''child'' for purposes of the INA, subject to certain statutory exceptions by which individuals who surpass that age are or may be considered to remain a ''child'' by operation of law.[50] *See* INA 101(b)(1) and 203(d), 8 U.S.C. 1101(b)(1) and 1153(d). Such an individual would no longer qualify as an eligible dependent beneficiary of the principal's Form I–140 petition and would not be able to immigrate to the United States on that basis. As such, DHS will not extend the benefits of a compelling circumstances employment authorization to children who have aged out and will not consider the potential for aging-out as a *per se* compelling circumstance standing alone.

While circumstances relating to a business start-up could be relevant to a presentation of compelling circumstances, an interest in entrepreneurship standing alone cannot support an employment authorization request based on a compelling circumstance. With regard to Form I–140 petitions approved in the EB–2 category based on a national interest waiver, in this final rule DHS is confirming that beneficiaries of approved Form I–140 petitions under the EB–2 category, which include national interest waiver beneficiaries and physicians working in medically underserved areas, are eligible to apply for employment authorization based on compelling circumstances, as long as they meet all other applicable requirements.[51]

v. Nonimmigrant and Immigrant Classifications of Individuals Eligible To Request Employment Authorization Based on Compelling Circumstances

In the NPRM, DHS proposed to limit the discretionary grant of employment authorization based on compelling circumstances only to certain workers who are in the United States in E–3, H–1B, H–1B1, O–1, or L–1 nonimmigrant status and who are the beneficiaries of approved employment-based immigrant

[50] The Child Status Protection Act (CSPA) was enacted on August 6, 2002, and provides continuing eligibility for certain immigration benefits to the principal or derivative beneficiaries of certain benefit requests after such beneficiaries reach 21 years of age. *See* Public Law 107–208; INA sections 201(f), 203(h), 204(k) 207(c)(2), and 208(b)(3), 8 U.S.C. 1151(f), 1153(h), 1154(k), 1157(c)(2), and 1158(b)(3). Specifically, the CSPA addresses certain situations involving delays in the adjudication of petitions or applications. The CSPA has wide applicability, covering family-sponsored and employment-based beneficiaries, Diversity Visa immigrants, refugees, and asylees.

[51] DHS observes that physicians receiving employment authorization based on compelling circumstances who have sought a national interest waiver based on an immigrant visa petition under section 203(b)(2)(B)(ii) of the Act remain subject to all requirements relating to the national interest waiver. Similarly, a physician who may be eligible for a compelling circumstance EAD may still be subject to, and limited by, any applicable obligations under sections 212(e) and 214(l) of the Act.

visa petitions. *See* proposed 8 CFR 204.5(p)(1)(i). DHS invited public comment on the proposed nonimmigrant classifications, including whether other nonimmigrant classifications should be considered. DHS also invited public comment on the requirement that applicants be the beneficiaries of approved EB–1, EB–2, or EB–3 immigrant visa petitions. These comments are addressed below.

Comment. Commenters specifically asked DHS to expand eligibility for the compelling circumstances provision to other nonimmigrant classifications, including to the E–1, E–2, and J–1 nonimmigrant classifications. Some of these commenters noted that nonimmigrants in these classifications could experience the same types of hardship as nonimmigrants covered by the proposed rule.

Response. In developing the proposed rule, DHS carefully considered the classes of nonimmigrant workers who should be eligible to apply for compelling circumstances EADs. Providing additional benefits to E–1 and E–2 nonimmigrants would impact international treaties and foreign policy considerations and DHS therefore believes it is inappropriate to include them in this rulemaking. Likewise, changes related to J–1 nonimmigrants could not be made solely by DHS, as the program is administered predominantly by DOS. Moreover, many J–1 nonimmigrants are statutorily required to complete a 2-year foreign residence requirement before they can remain in the United States, and providing them with employment authorization in many circumstances could be contrary to these statutory restrictions. *See* INA 101(j), 212(e), 214(l), and 248, 8 U.S.C. 1101(j), 1182(e), 1184(l) and 1258. Therefore, DHS declines to include these classifications as eligible for employment authorization for compelling circumstances.

Comment. One commenter focused on DHS's inclusion of E–3 and H–1B1 nonimmigrants in the compelling circumstances provision, and asked whether DHS intended to include E–3 and H–1B1 nonimmigrants among the categories of nonimmigrants that are afforded ''dual intent.''

Response. DHS notes that the doctrine of ''dual intent'' is beyond the scope of this regulation. DHS notes, however, that individuals in these categories can be the beneficiaries of approved Form I–140 petitions while continuing to maintain nonimmigrant status.

Comment. One commenter requested that DHS grant compelling circumstances EADs to individuals in the employment-based fourth preference (EB–4) category, including certain religious workers; Iraqis who have assisted the United States; Iraqi and Afghan translators; employees of international organizations; and others. The commenter further noted that some Iraqi translators have been neglected by the U.S. immigration system, and that DHS, through the NPRM, was continuing this asserted neglect.

Response. DHS aligned this rulemaking with the principles underlying AC21 and ACWIA, codifying longstanding policies and practices implementing those statutes, and building upon those provisions to provide stability and flexibility to certain foreign workers who are successfully sponsored for LPR status by their employers. DHS has carefully tailored the compelling circumstances EAD provision as a stopgap measure for certain high-skilled individuals facing particularly difficult situations who are on the path to lawful permanent residence under the EB–1, EB–2 and EB–3 immigrant visa classifications.

DHS declines the commenter's request to include EB–4 beneficiaries as eligible to apply for employment authorization based on compelling circumstances because Congress, with very limited exception,[52] did not prioritize the EB–4 visa category in AC21, which this rule was broadly intended to complement. Moreover, DHS did not propose to expand the scope of the rulemaking to address issues related to EB–4 beneficiaries, and therefore cannot adopt the commenter's suggestion.

vi. *Application Timeframes for Compelling Circumstances EADs*

Comment. One commenter suggested that individuals should be permitted to apply for an initial compelling circumstances EADs well in advance (a minimum of 180 days) of the expiration of their current nonimmigrant status. Other commenters sought clarification on the timing requirements for renewal applications.

Response. DHS believes that establishing a timeframe for individuals to request initial employment authorization based on compelling circumstances is not necessary. Under this rule, an applicant can file a Form I–765 application to request an initial EAD based on compelling circumstances at any time before the expiration of his or her nonimmigrant status. For approval, the applicant must be able to demonstrate that he or she meets the criteria in 8 CFR 204.5(p)(1) or (2) on the date of filing, including that compelling circumstances exist. DHS notes that a Form I–765 application filed far in advance of the expiration of the foreign national's nonimmigrant status may be adjudicated before such status expires; however, DHS's approval of the employment authorization based on compelling circumstances would still be limited to an initial grant of 1 year beginning on the date of approval.

With respect to the timing of the renewal application, DHS has reviewed the renewal provision as proposed and agrees with commenters that the proposed regulatory text was ambiguous regarding the timing of renewal applications. Therefore, DHS clarifies in the final rule at § 204.5(p)(3) that applications for renewal of employment authorization based on compelling circumstances must be filed by the applicant prior to the expiration of his or her current employment authorization. Requiring renewal applications to be properly filed prior to the expiration of the current employment authorization is consistent with DHS's goal of promoting ongoing employment and also encourages such applicants to avoid accruing unlawful presence, which could affect their eligibility to obtain LPR status. Like other Form I–765 applicants, individuals applying for employment authorization based on compelling circumstances, at either the initial or renewal stage, must be in the United States when applying for the benefit.

Comment. One commenter asked DHS to clarify whether a beneficiary in a grace period may submit an initial request for employment authorization pursuant to compelling circumstances.

Response. DHS affirms that beneficiaries may file an initial application for a compelling circumstances EAD if, on the date of filing, they are in a period authorized by § 214.1(l)(l) or (2), as well as any other grace period authorized by this chapter. *See* final 8 CFR 204.5(p)(1)(i).

vii. *EAD Validity Period*

Comment. Some commenters opposed granting extensions in 1-year increments and requested that extensions instead be granted in longer increments. Several commenters noted that providing employment authorization in 1-year increments would cause certain beneficiaries to incur filing fees and other expenses on an annual basis. Another commenter requested that certain individuals be granted ''indefinite renewals for 3 years'' if they have been in H–1B status for 10 years and have had their Form I–140 petitions approved for 5 years. Similarly, one

[52] *See* AC21 104(a).

commenter requested employment authorization under compelling circumstances for up to 3 years so that the validity period would be in line with the initial periods of petition approval for individuals in the H–1B and L–1 classifications and consistent with section 104 of AC21. Commenters contended that such proposals would provide increased certainty and the ability to plan, while minimizing the possibility of employment disruptions.

Response. DHS disagrees that a single grant of employment authorization under compelling circumstances should last longer than 1 year. The compelling circumstances provision is meant to be a stopgap measure for nonimmigrant workers facing particularly difficult circumstances outside of their control, such as a serious illness, employer retaliation, significant disruption to the employer, or other substantial harm. The compelling circumstances EAD is not a substitute for completing the employment-based immigrant visa process or for obtaining nonimmigrant classifications authorizing foreign nationals to work or live in the United States. While some nonimmigrants may experience compelling circumstances that last beyond one year, DHS anticipates many of the compelling circumstances presented will be resolved within that timeframe. DHS thus intends to require confirmation that a foreign national's circumstances justify an extension of employment authorization each year to ensure that such employment authorization continues to be merited. DHS confirms that employment authorization for compelling circumstances will be granted only in 1-year increments.

viii. *Visa Bulletin Dates*

Comment. Several commenters generally objected to conditioning compelling circumstances EADs on the unavailability of immigrant visas, and they requested that DHS remove all references to the State Department Visa Bulletin in the compelling circumstances provision. Commenters asserted that this restriction weakens the compelling circumstances provision because a beneficiary with an available immigrant visa may still have a lengthy wait before receiving independent employment authorization. Other commenters objected to the references to priority dates in the regulatory text because of the unpredictability of the Visa Bulletin's priority date movement.

Response. DHS disagrees with commenters who requested eliminating the requirement that an immigrant visa must not be immediately available and authorized for issuance to an individual at the time the application is filed. DHS designed this provision specifically to assist those individuals who otherwise may apply for and be granted an immigrant visa or adjustment of status but for the unavailability of an immigrant visa. The Department determined that linking eligibility for an EAD based on compelling circumstances to the authorization to issue an immigrant visa will provide stability to individuals already on the path to lawful permanent residence. The Visa Bulletin notifies individuals whether visas are authorized for issuance.

At the same time, DHS also wants to ensure that foreign workers whose priority dates have already been reached take appropriate measures to apply for permanent residence, as the compelling circumstances EAD is not a substitute for lawful permanent residence. DHS, therefore, believes it is reasonable to condition compelling circumstances EADs to the unavailability of immigrant visas, thereby ensuring that foreign workers avail themselves of the opportunity to apply for and obtain lawful permanent residence when able to do so.

Comment. A few commenters requested that DHS clarify which chart in the newly reformatted Visa Bulletin would govern the eligibility for individuals seeking employment authorization based on compelling circumstances (*i.e.,* the ''Application Final Action Date'' chart or the ''Dates for Filing Employment-Based Visa Applications'' chart).

Response. All references in 8 CFR 204.5(p) to the Visa Bulletin dates are to the ''Final Action Date'' chart. DHS intends that this date will be used to determine eligibility for both the initial and renewal applications for employment authorization. To provide clarification in this regard, DHS modified 8 CFR 204.5(p)(1)(ii) by replacing the phrase ''immediately available'' with ''authorized for issuance'' to signal that the relevant date for eligibility for an initial grant of employment authorization would be the Final Action Date for the principal beneficiary's preference category and country of chargeability that was effective on the date the application for employment authorization, or successor form, is filed.

ix. *Renewals of Employment Authorization Granted Pursuant to Compelling Circumstances*

Comment. Several commenters expressed confusion about the regulatory provisions governing renewals of compelling circumstances EADs and were concerned that, as proposed, the provisions were internally inconsistent and even in conflict with one another. In particular, commenters stated that interactions between the priority date limitations proposed for initial applicants (proposed 8 CFR 204.5(p)(1)(ii)), eligibility for renewals without demonstrating compelling circumstances (proposed 8 CFR 204.5(p)(3)(i)(B)), and ineligibility grounds (proposed 8 CFR 204.5(p)(5)(ii)) may prevent some eligible individuals from renewing their compelling circumstances EADs.

Response. DHS agrees with commenters that the final rule needs to clarify when an applicant can qualify for a renewal by demonstrating compelling circumstances or based solely on his or her priority date. Moreover, DHS recognizes that the proposed regulatory language at § 204.5(p) could have led commenters to conclude that the provision was internally inconsistent or contradictory. In the NPRM, DHS proposed to require initial applicants to show that an immigrant visa was not immediately available to the principal beneficiary. *See* proposed 8 CFR 204.5(p)(1)(ii). For renewals, DHS proposed that principal beneficiaries would need to demonstrate either that they continue to face compelling circumstances or that their priority dates are ''1 year or less'' (either before or after) from the date visas are authorized for issuance according to the current Visa Bulletin. *See* proposed 8 CFR 204.5(p)(3)(i)(A) and (B). In addition, DHS proposed at § 204.5(p)(5)(ii) that an individual would be ineligible to apply for or renew a compelling circumstances EAD if ''[t]he principal beneficiary's priority date is more than 1 year beyond the date immigrant visas were authorized for issuance'' according to the Visa Bulletin in effect at the time of filing.

As noted by commenters, the proposed ineligibility ground based on a priority date being current for more than one year was superfluous with respect to initial applicants (who were required to show that a visa was not immediately available), as their eligibility would have already ended at the time their immigrant visa was authorized for issuance. The proposed ineligibility ground was also superfluous with respect to the second renewal criterion (*i.e.,* that the difference between the beneficiary's priority date and the date visas are authorized for issuance must be ''1 year or less''), because that ineligibility ground was already embedded within that renewal ground. In addition, there was significant confusion as to the interaction between the proposed ineligibility ground and the first ground for renewal (*i.e.,* that the beneficiary continues to demonstrate compelling circumstances). DHS acknowledges that the proposed ineligibility ground was superfluous to the initial eligibility ground and the second renewal criterion, and that the provisions were confusing as written. Therefore, without changing the eligible population as identified in the NPRM for the compelling circumstances EAD, DHS has streamlined the ineligibility and renewal grounds to eliminate any superfluous overlap and to clarify eligibility for renewal under the Final Rule.

In response to public comment, DHS is simplifying the renewal criteria for compelling circumstances EADs. As modified, the final rule makes clear that a principal beneficiary seeking to renew an EAD based on compelling circumstances remains eligible if his or her priority date is not authorized for immigrant visa issuance with respect to his or her preference category and country of chargeability based on the Final Action Date in the Visa Bulletin in effect on the date the renewal application is filed. This modification tracks the eligibility criteria for the initial application for the EAD, and therefore should be readily understood by all parties, making it easier for both the public and USCIS to determine whether someone is eligible for renewal under that basis. DHS retains the second renewal criterion where a principal beneficiary will be eligible to renew the EAD if his or her priority date is one year or less (either before or after) of the Final Action Date in the Visa Bulletin in effect on the date the renewal application is filed. For purposes of greater clarity, in this final rule DHS has included an illustrative example in the regulatory text applicable to renewal applications by principal beneficiaries based on the Visa Bulletin in effect on the date the renewal application is filed. In addition to these changes, DHS made additional edits in this provision to clarify the Visa Bulletin in effect on the date the application for employment authorization is filed establishes the Final Action date for purposes of a renewal application.

Together, the renewal criteria operate to preclude eligibility to individuals for whom a visa has been authorized for issuance for over one year. Therefore, DHS removed the separate ineligibility criteria from § 204.5(p)(5) as unnecessary. DHS believes that these changes should eliminate the confusion or inconsistency in the regulatory provisions.

Comment. Several commenters suggested that individuals with compelling circumstances EADs be able to renew such EADs without restriction (*i.e.,* without needing to meet the proposed eligibility criteria for renewal). Commenters submitted a variety of reasons for requesting this revision, including that such a change would: Be ‘‘truly useful for the immigrant community;’’ help stop employer exploitation of workers; provide greater certainty to immigrants waiting to become LPRs; and help address the lack of available immigrant visas. In addition, several commenters questioned the usefulness of allowing for renewal where the applicant's priority date is less than 1 year from the current cut-off date for the relevant employment-based category and country of nationality in the most recently published Visa Bulletin. Some commenters sought clarification about the situations in which an applicant may seek renewal of compelling circumstances EADs.

Response. DHS agrees that the renewal of the employment authorization under this provision could be based on the same compelling circumstances that supported the initial grant of a compelling circumstances EAD. Moreover, DHS clarifies that individuals may also base their renewal applications on new compelling circumstances that may exist on the date of filing the renewal application.

DHS disagrees with the suggestion that no additional restrictions tied to authorization for immigrant visa issuance should apply to renewal eligibility. DHS intends this provision to provide short-term relief to certain high-skilled workers who are well on their way to LPR status to help them when they are facing compelling circumstances while they wait for their immigrant visas to become available. Consistent with that intent, applicants seeking to benefit from employment authorization based on compelling circumstances must also continue to pursue lawful permanent residence. Therefore, DHS believes it appropriate to deny a renewal application, even when compelling circumstances continue to be shown, in cases where the applicant should already have had ample time to obtain an immigrant visa and become a lawful permanent resident. Thus, renewal will not be granted under any circumstances if the applicant's priority date is more than one year earlier than the applicable Final Action date on the Visa Bulletin in effect at the time of filing the renewal application. In cases in which the Visa Bulletin at the time of a renewal application is filed indicates that the beneficiary's priority date is not authorized for immigrant visa issuance, applicants can seek renewal of their employment authorization based on a showing of new or continuing compelling circumstances.

In addition, DHS believes that important additional flexibility for principal beneficiaries of Form I–140 petitions results from retaining the second ground for renewal, which allows applicants to renew employment authorization without a showing of compelling circumstances if the applicant's priority date is close to becoming or recently became eligible for immigrant visa issuance (*i.e.,* is one year or less either before or after the date on which immigrant visas are authorized for issuance). This provision recognizes that applicants, most of whom are high-skilled workers who have invested a substantial amount of time in the United States, are at advanced stages in the immigration process and, after waiting many years, may be able to obtain lawful permanent residence in the near future. If the immigrant visa has recently been authorized for issuance or may be authorized for issuance in the near future, it is consistent with the purpose for this provision to continue the employment authorization, even if the compelling circumstances that justified the initial employment authorization no longer exist, to avoid the possibility that there will be a significant break in employment authorization late in an individual's lawful permanent residence process that would jeopardize his or her ultimate eligibility to obtain lawful permanent resident status or unnecessarily disrupt the business of his or her employer.

Because there was confusion reflected in many comments with regard to eligibility to make a renewal request and the relevance of the Visa Bulletin, DHS has revised the regulatory text to foster a better understanding and simplify the use and implementation of the compelling circumstances EAD renewal process by both applicants and USCIS adjudicators. DHS has edited the text at 8 CFR 204.5(p)(3)(i)(A) to mirror the requirements for initial eligibility, as well as to eliminate a separate ineligibility ground (*see* proposed 8 CFR 204.5(p)(5)(ii)) that caused great confusion among commenters. In summary, in the final rule at 8 CFR 204.5(p)(3)(i), the principal beneficiary may apply for a renewal of his or her employment authorization in one of two ways.

First, § 204.5(p)(3)(i)(A) allows the principal beneficiary to apply for renewal of employment authorization if he or she continues to face compelling circumstances and an immigrant visa is not authorized for issuance to the principal beneficiary based on his or her priority date listed in the Visa Bulletin for the applicable preference category and country of chargeability in effect on the date of filing. This first renewal ground mirrors the initial eligibility requirements set forth at final § 204.5(p)(1)(ii) and (iii).

Consequently, under this final rule, a principal beneficiary who continues to experience compelling circumstances, and whose immigrant visa is not authorized for issuance, may be able to renew the compelling circumstances EAD if DHS determines that the issuance of employment authorization is justified.

Second, final 8 CFR 204.5(p)(3)(i)(B) allows the principal beneficiary to apply for a renewal of his or her employment authorization without having to show compelling circumstances if, based on his or her priority date, he or she is near the date that an immigrant visa could be issued under the applicable preference category and country of chargeability. Specifically, the difference between the principal beneficiary's priority date and the Final Action Date must be 1 year or less according to the Visa Bulletin in effect on the date the renewal application is filed. This 1-year limitation extends both before and after the specified Final Action Date, thereby allowing beneficiaries whose priority dates are 1 year or less before the relative current priority date, as well as those beneficiaries whose priority dates are 1 year or less after the relative current priority date, to request renewal of their EADs. Allowing for renewals of employment authorization without a demonstration of continuing compelling circumstances provides a bridge for those individuals who may be issued an immigrant visa in the near future. As enumerated in the proposed rule at 8 CFR 204.5(p)(5), this renewal ground incorporates an important DHS policy goal of encouraging individuals to become lawful permanent residents by limiting eligibility for a compelling circumstances EAD to only those whose priority dates have been current for one year or less according to the Visa Bulletin in effect on the date the renewal is filed. DHS believes this provides a reasonable window during which an individual may either apply for adjustment of status, and thereby be issued employment authorization pursuant to that filing, or complete the immigrant visa process abroad. Additionally, DHS has revised this provision to clarify which Visa Bulletin governs for purposes of calculating the difference between the beneficiary's priority date and the Final Action Date.

To avoid further confusion, DHS provides the following examples to facilitate a better understanding of the eligibility requirement for renewal with respect to the Visa Bulletin, and DHS has incorporated one of these examples in the regulatory text:

- The first example involves a Visa Bulletin Final Action cut-off date of November 1, 2000 for the beneficiary's preference category and country of chargeability. If the beneficiary is basing the renewal application on compelling circumstances, his or her priority date must be on or after November 1, 2000 to apply for a renewal under § 204.5(p)(3)(i)(A), as immigrant visas will not be authorized for issuance to beneficiaries with priority dates on or after November 1, 2000.
- The second example again involves a Visa Bulletin Final Action cut-off date of November 1, 2000, but the beneficiary is seeking a renewal under 8 CFR 204.5(p)(3)(i)(B), which provides that ''[t]he difference between the principal beneficiary's priority date and the date upon which visas are authorized for issuance for the principal beneficiary's preference category and country of chargeability is 1 year or less according to the current Visa Bulletin on the date the application for employment authorization is filed.'' Because this 1-year window extends both ways—before and after the specified Final Action Date—the beneficiary's priority date can be as early as October 31, 1999 or as late as October 31, 2001. Beneficiaries qualifying for renewal under this alternative need not show compelling circumstances to meet the eligibility criteria. *See* final 8 CFR 204.5(p)(3)(i)(B). If, however, the beneficiary's priority date is on or before October 30, 1999, he or she would be ineligible to renew the compelling circumstances EAD under the final rule. If the priority date is on or after November 1, 2001, the beneficiary could not seek a renewal under the priority date range described in final 8 CFR 204.5(p)(3)(i)(B), but may be eligible to renew if he or she is able to demonstrate continuing compelling circumstance described in final 8 CFR 204.5(p)(3)(i)(A).

Finally, to implement this provision, DHS is revising Form I–765 and accompanying form instructions with this final rule and will conduct public outreach and publish guidance explaining the filing requirements and eligibility criteria for this new employment authorization category. Information about renewing applications for employment authorization granted pursuant to compelling circumstances will be included.

x. Automatically Granting Advance Parole to Individuals Who Have Compelling Circumstances EADs

Comment. Some commenters requested that DHS automatically provide advance parole [53] in conjunction with compelling circumstances EADs. Some of these commenters indicated that the President had promised to grant advance parole to certain individuals, and they urged DHS to provide such an immigrant benefit here. The commenters also requested that DHS allow such individuals to adjust their status to lawful permanent residence after being paroled into the United States once an immigrant visa became available to them.

Response. Section 212(d)(5)(A) of the INA, 8 U.S.C. 1182(d)(5)(A), provides the Secretary with discretionary authority to parole an individual into the United States temporarily ''only on a case-by-case basis for urgent humanitarian reasons or significant public benefit.'' *See also* 8 CFR 212.5. Neither the President nor the Secretary, in his November 20, 2014 memorandum, specified that parole may be extended to foreign workers who are the beneficiaries of either a pending or an approved Form I–140 petition.[54] A DHS officer may, however, grant parole to individuals who are beneficiaries of approved Form I–140 petitions if, in the officer's discretion, the parole either would be for ''urgent humanitarian reasons'' or provide a ''significant public benefit.''

Importantly, as already noted, individuals who are seeking lawful permanent residence based on classification as an employment-based immigrant are generally barred by statute from applying to adjust their status in the United States if they are not in lawful nonimmigrant status. *See* INA 245(c)(2) and (7), 8 U.S.C. 1255(c)(2) and (7). Although INA 245(k), 8 U.S.C. 1255(k), enables certain individuals who failed to continuously maintain a lawful status for up to 180

[53] As explained on the Form I–131, Application for Travel Document, and the form instructions, advance parole documents allow individuals to return to a United States port of entry after temporary foreign travel. See USCIS Web site, Form I–131, Application for Travel Document, available at *https://www.uscis.gov/i-131;* see also 212(d)(5) of the INA, 8 U.S.C. 1182(d)(5).

[54] *See* Memo from Jeh Charles Johnson, Secretary of Homeland Security, ''Policies Supporting U.S. High-Skilled Business and Workers'' (Nov. 20, 2014), available at *http://www.dhs.gov/sites/default/files/publications/14_1120_memo_business_actions.pdf.*

days to apply for adjustment of status, these individuals must be present in the United States pursuant to a lawful admission. Individuals who are paroled into the United States, however, are not considered to be ''admitted'' into the United States. *See* INA 101(a)(13)(B) and 212(d)(5)(A), 8 U.S.C. 1101(a)(13)(B) and 1182(d)(5)(A). Therefore, an individual who is granted advance parole, leaves the United States, and reenters on parole is not eligible for adjustment of status pursuant to section 245(k).

As such, granting advance parole to individuals who receive compelling circumstances EADs would not, as a rule, make them eligible for employment-based adjustment of status or otherwise enhance stability or certainty in the efforts of these individuals to become lawful permanent residents. DHS thus will not automatically grant advance parole in conjunction with all compelling circumstances EADs. However, to better assist individuals with compelling circumstances EADs who need to travel, DHS will consider granting advance parole, as appropriate for urgent humanitarian reasons or significant public benefit, to such individuals on a case-by-case basis.

xi. Employment Authorization Parity for Legal and Undocumented Workers, Including Individuals Granted Deferred Action for Childhood Arrivals (DACA)

Comment. Commenters asked why Deferred Action for Childhood Arrivals (DACA) recipients are not required to demonstrate compelling circumstances in order to obtain employment authorization and questioned whether being undocumented in the United States is sufficient to demonstrate compelling circumstances. These commenters noted that applying compelling circumstances only to nonimmigrants seeking an independent basis of employment authorization and not to DACA recipients sets an unfair higher bar for nonimmigrants and rewards individuals who came to the United States unlawfully relative to those who have abided by U.S immigration laws.

Many commenters stated that granting employment authorization to DACA recipients, while declining to do so for nonimmigrants, provides a significant advantage to undocumented individuals and encourages unauthorized immigration. Other commenters stated that it is unfair to provide employment authorization to undocumented individuals through DACA and not to nonimmigrants abiding by complex U.S. immigration laws and currently suffering from a lack of job mobility while awaiting available immigrant visas. These commenters highlighted the benefits of independent employment authorization, including freedom from what they perceive as restrictive and immobile H–1B employment, increased opportunity for upward mobility with their current employer, and greater mobility within the U.S. job market in general. One commenter stated that denying independent employment authorization for nonimmigrants with approved Form I–140 petitions creates the equivalent to modern day slavery for nonimmigrant employees, while DACA recipients are allowed to work for whatever employer they choose. A number of commenters stated that their dependent children, who came to the United States legally, should be granted the same benefits as DACA recipients. Several commenters expressed the opinion that being in the United States in a legal status is more difficult than being in the United States under a grant of DACA.

Response. As an initial matter, although DACA requestors do not have to demonstrate compelling circumstances, DACA recipients, like other deferred action recipients, must show ''economic necessity'' for employment.[55] Further, DACA is strictly limited to individuals who are removable from the United States, meet other certain guidelines (*e.g.,* that they came to the United States under the age of sixteen; continuously resided in the United States since June 15, 2007; were under the age of 31 as of June 15, 2012; and have not been convicted of certain crimes or otherwise pose a threat to national security or public safety), and merit a favorable exercise of discretion.[56] As a result, the DACA process does not provide incentives for individuals to unlawfully migrate to the United States. DACA does not apply to all undocumented individuals who entered the United States as children. Even for those individuals who do satisfy the DACA guidelines, not all individuals receive DACA because of the discretionary nature of the process.

DHS disagrees with commenters who contend that the limitations placed on the compelling circumstances EAD give DACA recipients an advantage over nonimmigrant workers. DACA recipients are individuals who are removable from the United States but whose removal is deferred. They do not have a lawful immigration status either before or after receiving DACA and instead are simply provided with relief from removal for periods of two years at a time, if they remain eligible. DACA is a discretionary policy related to enforcement and removal and is not comparable to individuals with nonimmigrant status. DHS considers DACA requests pursuant to an exercise of discretion on a case-by-case basis. Nonimmigrant workers are in a more advantageous position than DACA recipients with respect to the immigration laws by virtue of being in the United States in a lawful immigration status. Among other things, presence in nonimmigrant status is not a basis for removability, family members of nonimmigrants are typically able to obtain benefits through the nonimmigrant, and nonimmigrants are better situated with respect to eligibility to pursue lawful permanent residence and, thereafter, U.S. citizenship.

G. Nonimmigrant Grace Periods

1. Description of Final Rule and Changes From NPRM

Under the final rule, DHS may provide grace periods of up to 10 days before the petition validity period (or other authorized validity period) begins, and of up to 10 days after the validity period ends to individuals in certain employment-authorized nonimmigrant visa classifications that previously have not been afforded these periods, namely the E–1, E–2, E–3, L–1 and TN classifications. *See* final 8 CFR 214.1(l)(1). Similar grace periods are currently available to nonimmigrants with H–1B, O, and P classification. Extending such grace periods in these other classifications—which, like in the H–1B, O, and P classifications, are generally available to high-skilled individuals with authorized stays of multiple years—promotes stability and flexibility for such workers, thereby furthering goals consistent with those underlying AC21.

In response to public comment, DHS is striking a phrase from the proposed regulation that was unnecessarily limiting and not fully consistent with how existing 10-day grace periods may be used by H, O and P nonimmigrants. Specifically, DHS is deleting from proposed 8 CFR 214.1(l)(1) the phrase that could have been read to limit use of a 10-day grace period only ''to prepare for departure from the United States or to seek an extension or change of status based on a subsequent offer of employment.'' As noted, this deletion will further the purpose of the NPRM proposal to extend to the E–1, E–2, E–

[55] 8 CFR 274a.12(c)(14).

[56] *See* DACA Frequently Asked Questions at *https://www.uscis.gov/humanitarian/consideration-deferred-action-childhood-arrivals-process/frequently-asked-questions.*

3, L–1 and TN nonimmigrant classifications a benefit similar to the one already available to the H, O, and P nonimmigrant classifications. DHS is also making minor technical edits to this provision.

Under the final rule, DHS may also authorize a grace period of up to 60 days in the E–1, E–2, E–3, H–1B, H–1B1, L–1, and TN classifications during the period of petition validity (or other authorized validity period). *See* final 8 CFR 214.1(l)(2). In response to public comments, DHS is retaining this provision while adding the O–1 visa classification to the list of nonimmigrant classifications eligible for the 60-day grace period. To enhance job portability for these high-skilled nonimmigrants, this rule establishes a grace period for up to 60 consecutive days, or until the existing validity period ends, whichever is shorter, whenever employment ends for these individuals. The individual may not work during the grace period. An individual may benefit from the 60-day grace period multiple times during his or her total time in the United States; however, this grace period may only apply one time per authorized nonimmigrant validity period. DHS believes that limiting this grace period to one instance during each authorized validity period balances the interests of nonimmigrant flexibility with the need to prevent abuse of this provision.

This 60-day grace period further supports AC21's goals of providing improved certainty and stability to nonimmigrants who need to change jobs or employers. The 60-day grace period would provide needed flexibility to qualifying nonimmigrants who face termination of employment prior to the end of their petition validity periods. The grace period, for example, allows such nonimmigrants to remain in the United States without violating their status and potentially obtain new job offers from employers that seek to file new nonimmigrant petitions, and requests for an extension of stay, on their behalf. In such cases, even though prior employment may have terminated several weeks prior to the filing of the new petition, DHS may consider such an individual to have not violated his or her nonimmigrant status and allow that individual to extend his or her stay with a new petitioner, if otherwise eligible. If the new petition is granted, the individual may be eligible for an additional grace period of up to 60 days in connection with the new authorized validity period.

Finally, the final rule at 8 CFR 214.1(l)(3) makes clear that the nonimmigrant worker, during either a 10-day or 60-day grace period, may apply for and, if otherwise eligible, be granted an extension of stay or change of status. The beneficiary may also commence employment under H–1B portability per § 214.2(h)(2)(i)(H), discussed in some detail below, if otherwise eligible. To further effectuate the intended purpose of these provisions, DHS is also making clarifying edits to the regulatory text at § 214.1(l)(2), and (l)(3).

2. Public Comments and Responses

i. Length of the 10-Day Grace Periods

Comment. While numerous commenters supported the proposal to make 10-day grace periods available to additional high-skilled nonimmigrant workers, one commenter suggested that the 10-day grace periods be lengthened to 15 or 30 days to provide nonimmigrant workers additional time to wrap up affairs after extended periods of stay in the United States.

Response. DHS is not adopting the commenter's suggestion to provide longer grace periods of up to 15 or 30 days. DHS has long provided 10-day grace periods in the H–1B, O, and P nonimmigrant classifications, and DHS has determined that such grace periods are sufficient to provide individuals in these classifications the time they need to initiate or conclude their affairs in the United States. Because individuals who obtain E–1, E–2, E–3, L–1 or TN classification are similarly situated to those who obtain H–1B, O, or P classification, DHS believes 10-day grace periods would also be sufficient for nonimmigrants in the former classifications.

ii. Eligibility for 10-Day Grace Periods

Comment. Many commenters encouraged USCIS to broaden the classes of individuals eligible for the 10-day grace periods to include other nonimmigrant worker visa classifications. Commenters specifically requested that DHS add the following visa classifications to proposed 8 CFR 214.1(l)(1): A, H–1B1, H–2B, H–3, G, I, O, P, and Q.

Response. DHS declines to adopt these suggestions. First, DHS already provides a grace period of up to 10 days to some of these classifications, including the H–2B, H–3 O and P categories. *See* 8 CFR 214.2(h)(13)(i)(A), 8 CFR 214.2 (o)(10) and 8 CFR 214.2 (p)(12). Second, DHS is unable to extend authorized periods of admission to H–1B1 nonimmigrants through the use of such grace periods. The INA specifies that the admission for H–1B1 nonimmigrants ''shall be 1 year,'' with extensions in 1 year increments. *See* INA 214(g)(8), 8 U.S.C. 1184(g)(8). Third, this rulemaking is intended to benefit high-skilled workers and their employers by streamlining the processes for employer sponsorship of such workers for immigrant visas, increasing job portability and otherwise providing stability and flexibility for such workers, and providing additional transparency and consistency in the application of DHS policies and practices related to high-skilled worker programs. Because several of the additional nonimmigrant classifications proposed by commenters are not focused on facilitating the employment of high-skilled workers by employers in the United States, DHS believes providing grace periods in these classifications would not align with the purpose of this rule. For these reasons, DHS believes that the eligible classifications added to the final rule should be limited to individuals admissible in E–1, E–2, E–3, L–1 or TN classification, as well as their dependents.

iii. Miscellaneous Comments on 10-Day Grace Periods

Comment. A few commenters suggested that DHS clarify whether the 10-day grace periods will be reflected on the approved petition or whether those periods may be automatically assumed by nonimmigrant workers. Another commenter noted that CBP usually annotates the Form I–94 when admitting an individual in H–1B classification to reflect the grace period of up to 10 days at the end of the H–1B authorized period of stay, but that the USCIS-issued Form I–797 Notice of Action for an approval of an extension of stay or change of status, which includes a Form I–94, does not reflect that grace period. This commenter further explained that, accordingly, if an individual is granted H–1B status pursuant to an extension of stay or change of status and remains in the United States in H–1B status for the petition's authorized validity period (*i.e.,* without leaving and seeking readmission into the United States as an H–1B nonimmigrant), he or she will not have any evidence of having been granted the grace period. Finally, one commenter requested that USCIS add the following language to its Form I–797 approval notices: ''Beneficiary may be admitted up to 10-days prior to the validity period of the petition and will have a 10-day grace period at the end of nonimmigrant status to depart the United States or apply for another nonimmigrant or immigrant status.''

Response. The commenters correctly point out that USCIS does not presently provide grace periods of up to 10 days before or after petition validity approval when issuing Form I–797 or Form I–94, whether such issuance relates to an initial request for nonimmigrant status, a change of nonimmigrant status, or an extension of such status. Under existing regulations, DHS does not consider the 10-day grace periods to be automatically provided; rather, they are provided through an exercise of discretion on a case-by-case basis. USCIS is revising Form I–797 to facilitate consistent application of the discretionary 10-day grace periods and will continue to explore ways of notifying petitioners and beneficiaries when grace periods are provided. Specifically, DHS is revising 8 CFR 214.1(l)(1) to clarify that 10-day grace periods may be authorized as a matter of discretion, on a case-by-case basis, to nonimmigrants seeking changes of status or extensions of stay. *See* revised 8 CFR 214.1(l)(1). DHS further notes that if such individuals travel abroad and seek admission at a port of entry upon return, they may show the Form I–797 to a CBP officer who has the discretion to grant 10-day grace periods to eligible H–1B, E–1, E–2, E–3, L–1 and TN nonimmigrant workers. *See* INA 214(a)(1), 8 U.S.C. 1184(a)(1); final 8 CFR 214.2(l)(1).

Comment. A few commenters requested that USCIS revise the proposed rule at 8 CFR 214.1(l)(1), which states that eligible nonimmigrants ''*may* be admitted . . . for the validity period of the petition . . . plus an additional period of up to 10 days.'' Because of the use of the word ''may,'' commenters believed the proposed provision was more limiting than the existing regulatory language at 8 CFR 214.2(h)(13)(i)(A), which states that an H beneficiary ''*shall* be admitted . . . for the validity period of the petition, plus a period of up to 10 days.'' The commenters requested that DHS harmonize these provisions and clarify whether, under the final rule, H–1B nonimmigrants would be eligible for a discretionary (''may'') grace period of up to 10 days, whereas other H nonimmigrant classifications would be eligible for a mandatory (''shall'') grace period of up to 10 days.

Response. DHS declines to revise the language in 8 CFR 214.1(l)(1) in response to commenters' suggestions. DHS chose to use the word ''may,'' as opposed to the word ''shall,'' in accordance with Federal regulatory drafting guidelines, to clarify that USCIS and CBP have the discretionary authority to limit periods of stay for all nonimmigrant classifications, including H nonimmigrants, consistent with current practice. Use of ''may'' rather than ''shall'' is also consistent with the regulatory provision allowing 10-day grace periods for O and P nonimmigrants. *See* 8 CFR 214.2(o)(10) and (p)(12). DHS maintains broad discretion when admitting individuals in nonimmigrant classifications, including when determining whether to grant grace periods to such individuals. By statute, DHS has the authority and responsibility to decide which foreign nationals enter the country and under what terms and conditions.[57] *See* INA 214(a)(1), 8 U.S.C. 1184(a)(1) (providing that ''the admission to the United States of any alien as a nonimmigrant shall be for such time and under such conditions as the [Secretary] may by regulations prescribe''); INA 215(a)(1), 8 U.S.C. 1185(a)(1) (authority to establish reasonable regulations governing aliens' entry or admission to and departure from the United States).[58] DHS has drafted the grace period provision to clarify that it maintains discretion to admit an individual with a full 10-day grace period, some part of that period, or no grace period at all, and to assure consistent administration of the grace period provision.

Additionally, in response to public comment, DHS is removing from the 10-day grace period provision in 8 CFR 214.1(l)(1) the clause that reads, ''to prepare for departure from the United States or to seek an extension or change of status based on a subsequent offer of employment.'' DHS is removing this clause to avoid an unintended limitation on the use of such grace periods and to maintain consistency with grace periods already enjoyed by H, O and P nonimmigrants. While DHS maintains that the 10-day grace period commencing when the relevant validity period expires is typically used by individuals to prepare for departure from the United States or to extend or change status, DHS determined upon further examination that the clause is unnecessarily limiting and does not fully comport with how the existing 10-day grace period may be used by H, O and P nonimmigrants. Such grace periods are also used for other permissible non-employment activities such as changing one's status to that of a dependent of a nonimmigrant spouse or vacationing prior to departure. DHS clarifies that, under this final rule, nonimmigrants in E–1, E–2, E–3, L–1, or TN status may engage in the same types of activities during the 10-day grace period that H, O, and P nonimmigrants currently engage in under the existing 10-day grace period.

Comment. One commenter requested that DHS add a regulatory provision that would deem nonimmigrants in a 10-day grace period as being in a period of stay authorized by the Secretary.

Response. Under 8 CFR 214.1(l)(1), the 10-day grace period is considered to be a period of nonimmigrant stay. Consistent with existing policy guidance, this is a period of stay authorized by the Secretary. Therefore, DHS does not believe additional revision to the regulatory text is necessary.[59]

Comment. One commenter suggested that USCIS allow eligible nonimmigrant workers who have experienced a cessation of employment and were unable to find work during the 60-day grace period, to use the additional 10-day grace period so that they can prepare to depart the United States.

Response. DHS declines to adopt the commenter's suggestion to allow eligible nonimmigrant workers the ability to add a 10-day grace period to the end of any 60-day grace period. DHS intends the 60-day grace period in 8 CFR 214.1(l)(2) to afford eligible high-skilled workers sufficient time following a cessation of employment to pursue other employment opportunities, seek a change or extension of status, or make the preparations necessary to depart the country. As the 10-day grace period at the end of a period of nonimmigrant validity is intended to serve the same purposes, providing both would be unnecessary and duplicative. DHS notes, however, that in limited instances it may be possible for a nonimmigrant worker to qualify for both grace periods. Use of both grace periods may occur, for instance, when a nonimmigrant worker, upon his or her last admission, was provided with a grace period of up to 10 days at the expiration of the validity period, and then experiences a cessation of employment in the last 60 days of the validity period. In these limited cases, DHS may consider the nonimmigrant to have maintained his or her status for up to 60 days immediately preceding the expiration of the validity period, and the nonimmigrant may also use the 10-day grace period after the validity period ends.

iv. Length of the 60-Day Grace Period

Comment. Numerous commenters expressed support for the proposal

[57] *Id.*

[58] The President assigned to the Secretary of Homeland Security (acting with the concurrence of the Secretary of State) the functions under INA 215(a) with respect to noncitizens. Exec. Order No. 13323, 69 FR 241 (Dec. 30, 2003).

[59] For further guidance on periods of authorized stay, please see Neufeld May 2009 Memo (describing various ''periods of authorized stay''), available at *https://www.uscis.gov/sites/default/files/USCIS/Laws/Memoranda/Static_Files_Memoranda/2009/revision_redesign_AFM.PDF.*

establishing a 60-day grace period for certain nonimmigrant classifications, including support for 60 days as sufficient time to find a new job. However, a significant number of other commenters believed that the 60-day grace period did not provide sufficient time for such purposes. These commenters suggested the grace period be lengthened to 90 or 120 days. One commenter suggested that USCIS extend the 60-day grace period to 90 days if a new petitioning employer submits evidence to USCIS indicating that it provided a written job offer to the nonimmigrant employee. Other commenters suggested giving USCIS the authority to extend the grace periods on a case-by-case basis. Commenters cited the difficulties of finding new jobs in the current economy, relocation and state-specific professional licensing requirements, personal responsibilities that complicate decision making when conducting job searches, and the fact that employer recruitment often takes 8–12 weeks.

Response. DHS appreciates the many comments suggesting alternate periods of time for the grace period, and the reasons offered in support of a longer grace period. However, DHS will retain the 60-day grace period, rather than provide additional time, to encourage affected high-skilled workers to pursue other options in the United States in an expedient manner. Adding a grace period of up to 60 consecutive days upon cessation of employment allows the affected high-skilled workers sufficient time to respond to sudden or unexpected changes related to their employment. DHS believes that such time may be used to seek new employment, seek a change of status to a different nonimmigrant classification, including B–1/B–2 classification, or make preparations for departure from the United States.

v. Frequency of the 60-Day Grace Period

Comment. Some commenters stated that 60-day grace periods should be available multiple times during any authorized validity period, rather than ''one time'' as described in the NPRM. The majority of these commenters stated that 60-day grace periods should be made available to foreign workers at least once per year. Other commenters suggested making 60-day grace periods available once every 3 years, once per visa extension or change of status, or each time a foreign worker loses his or her job. Commenters stated that lengthy delays in obtaining lawful permanent residence can leave foreign workers waiting for adjustment of status for 10 years or more, and it is likely that they could lose their jobs more than once during this time.

Many commenters stated that the term ''one-time'' in the proposed regulatory text was unclear, and they did not understand whether the rule allowed for one grace period per lifetime, per employer, per petition validity period, or per total period of stay in any given status. Some commenters proposed alternative approaches to measuring the one-time 60-day grace period, including allowing the 60-day grace period to be divisible so that the unused portion of a 60-day grace period could be used toward a subsequent cessation of employment within the same period of valid nonimmigrant status, or carried forward into a new validity period and aggregated with a subsequent 60-day grace period.

Response. Given the number and diversity of comments received, DHS recognizes that the proposal did not clearly convey the intended operation of the 60-day grace period. Accordingly, in the final rule, DHS clarifies that, while the grace period may only be used by an individual once during any single authorized validity period, it may apply to *each* authorized validity period the individual receives. DHS also clarifies that the grace period can last up to 60 consecutive days or until the existing validity period ends, whichever is shorter. As modified, the final rule provides that while the nonimmigrant worker may only receive one grace period in an authorized validity period, he or she would be eligible for a new grace period of up to 60 days in connection with any subsequently authorized validity period. Any days available in such a grace period must be used consecutively, and unused days may not be used later in the same authorized validity period or carried over into a subsequent validity period. DHS believes that limiting the grace period to up to 60 days once during each authorized nonimmigrant validity period, and not allowing for aggregation or carryover of time, is most consistent with the intent of the grace period: to provide a single limited, but reasonable, period of time during which DHS may, when adjudicating an extension of stay or change of status petition, consider the nonimmigrant to have maintained valid nonimmigrant status following cessation of employment.[60] While DHS appreciates the alternative approaches suggested by commenters, DHS believes that most of the underlying concerns are addressed by these clarifications made to this provision in the final rule.

[60] The 60-day grace period provision does not limit the scope of employer violations under section 212(n)(2)(c)(vii) of the Act, or the remedies available to correct such violations. See 8 U.S.C. 1182(n)(2)(c)(vii)(concerning employer failure to pay wages during ''nonproductive time'', commonly referred to as ''benching'').

vi. Classifications Eligible for the 60-Day Grace Period

Comment. Several commenters suggested that DHS broaden the classes eligible for the 60-day grace period to include other nonimmigrant worker visa classifications, namely those working in A, H–3, G, I, O, P, or Q nonimmigrant status.

Response. In response to these comments, DHS is adding O–1 nonimmigrants to the classes of individuals eligible for the 60-day grace period. DHS has decided not to add the other nonimmigrant classifications requested by commenters because the fundamental purposes of those classifications do not align with the fundamental purpose of this rule. As discussed previously, this rulemaking is intended to benefit high-skilled workers and their employers by streamlining the processes for employer sponsorship of such workers for immigrant visas, increasing job portability and otherwise providing stability and flexibility for such workers, and providing additional transparency and consistency in the application of DHS policies and practices related to high-skilled worker programs. The additional nonimmigrant classifications proposed by commenters, however, are not focused on facilitating the employment of high-skilled workers by employers in the United States. Authorizing grace periods for these nonimmigrant classifications would thus not align with the purpose of this rule.

Comment. One commenter suggested broadening the classes of individuals who might benefit from a 60-day grace period to include those nonimmigrant workers whose petitions to extend stay or change employers within an eligible visa classification are denied. This commenter opined that the inclusion of petition denials is consistent with the grace period's purpose of facilitating stability and job flexibility.

Response. DHS declines to adopt the commenter's suggestion to provide grace periods after an approved validity period in cases in which petitions requesting an extension of stay or a change of employers are denied. The 60-day grace period is intended to apply to individuals whose employment ends prior to the end of their approved validity period. It is not intended to apply after that period based on a denial of a benefit request. DHS notes that individuals may be eligible for the 60-day grace period if they port to new H–

1B employers under INA 214(n) and the petition for new employment (*i.e.,* the H–1B petition used to port) is denied prior to the expiration of the validity period of the previously approved petition on which the individual's status had been based. However, the 60-day grace period would not apply where a petition for new employment under section 214(n), or an extension of stay petition with the same employer, is denied after expiration of the validity period.

vii. Clarifying the Meaning of ''Up To'' in the 60-Day Grace Period

Comment. A few commenters asked DHS to clarify how it would exercise its discretion to eliminate or shorten the 60-day period on a case-by-case basis. These commenters wanted to know the circumstances in which DHS might deem it appropriate to eliminate or shorten the grace period, and the manner in which the beneficiary would be notified.

Response. At the time a petitioner files a nonimmigrant visa petition requesting an extension of stay or change of status, DHS will determine whether facts and circumstances may warrant shortening or refusing the 60-day period on a case-by-case basis. If DHS determines credible evidence supports authorizing the grace period, DHS may consider the individual to have maintained valid nonimmigrant status for up to 60 days following cessation of employment and grant a discretionary extension of stay or a change of status to another nonimmigrant classification. *See* 8 CFR 214.1(c)(4) and 248.1(b). Such adjudications require individualized assessments that consider the totality of the circumstances surrounding the cessation of employment and the beneficiary's activities after such cessation. While many cases might result in grants of 60-day grace periods, some cases may present factors that do not support the favorable exercise of this discretion. Circumstances that may lead DHS to make a discretionary determination to shorten or entirely refuse the 60-day grace period may include violations of status, unauthorized employment during the grace period, fraud or national security concerns, or criminal convictions, among other reasons.

viii. Employment Authorization During the Grace Periods

Comment. Several commenters requested that employment authorization be granted during grace periods so that foreign workers can begin their new jobs while awaiting approval of a petition filed by a new employer.

Response. DHS declines to provide employment authorization during the grace periods. Consistent with the intent of the grace periods as proposed, as well as similar grace periods already provided in DHS regulations, the final rule does not allow eligible nonimmigrants to be employed during either the 10- or 60-day grace periods unless otherwise authorized under 8 CFR 274a.12. DHS authorizes these grace periods simply to facilitate the ability of qualified nonimmigrants to transition to new employment in the United States, seek a change of status, or prepare to depart the United States. Consistent with longstanding policy, DHS declines to authorize individuals to work during these grace periods.

Comment. Several commenters requested that USCIS allow nonimmigrant workers to pursue their own businesses during grace periods.

Response. DHS declines to allow nonimmigrant workers to use the grace periods provided by this rule to work to start their own businesses. The grace periods allow qualified nonimmigrants to transition to new employment while maintaining nonimmigrant status, or seek a change of status, or prepare to depart the United States. These grace periods are not intended to provide a separate basis for employment authorization. Therefore, the final rule at 8 CFR 214.1(l)(3) provides that an individual may not work during the grace period unless otherwise authorized under 8 CFR 274a.12.

H. Job Portability for H–1B Nonimmigrant Workers

1. Description of Final Rule and Changes from NPRM

The final rule at 8 CFR 214.2(h)(2)(i)(H) codifies longstanding DHS policies implementing H–1B job portability under INA 214(n). This section of the final rule enhances the ability of H–1B nonimmigrant workers to change jobs or employers by authorizing them to accept new or concurrent employment upon the filing of a nonfrivolous H–1B petition (''H–1B portability petition''). *See* INA section 214(n), 8 U.S.C. 1184(n); 8 CFR 214.2(h)(2)(i)(H). Under section 214(n), the H–1B nonimmigrant worker must have been lawfully admitted into the United States, must not have worked without authorization after such lawful admission, and must be in a period of stay authorized by the Secretary.[61] *See* 8 CFR 214.2(h)(2)(i)(H)(*1*). Although DHS is not making any changes to the H–1B portability provisions proposed in the NPRM, the Department confirms that to be eligible for H–1B portability the new H–1B petition must have been filed while the foreign worker is in H–1B status or is in a period of authorized stay based on a timely filed H–1B extension petition. Employment authorization under the pending H–1B portability petition continues until adjudication. *See* 8 CFR 214.2(h)(2)(i)(H)(*2*).

The final rule allows H–1B employers to file successive H–1B portability petitions (often referred to as ''bridge petitions'') on behalf of H–1B nonimmigrant workers. An H–1B nonimmigrant worker who has changed employment based on an H–1B portability petition filed on his or her behalf may again change employment based on the filing of a new H–1B portability petition, even if the former H–1B portability petition remains pending. Eligibility for employment pursuant to a second or subsequent H–1B portability petition, however, would effectively depend on (1) whether any prior H–1B portability petitions have been approved or remain pending, and (2) whether the individual's Form I–94, issued upon admission or extended pursuant to an approved H–1B petition, has expired. If the request for an extension of stay was denied in a preceding H–1B portability petition and the individual's Form I–94 authorizing admission in or extension of H–1B status has expired, a request for an extension of stay in any successive H–1B portability petition(s) must also be denied. *See* 8 CFR 214.2(h)(2)(i)(H)(*3*). Successive H–1B portability petitions thus may provide employment authorization as long as each such H–1B portability petition separately meets the requirements for H–1B classification and for an extension of stay.

2. Public Comments and Responses

i. H–1B Status Requirement

Comment. Several commenters objected to limiting H–1B portability to workers who are in H–1B nonimmigrant status or in an authorized period of stay based on a timely filed H–1B extension petition. These commenters requested that the regulation permit any worker who was previously issued an H–1B visa or otherwise provided H–1B nonimmigrant status to port to H–1B employment through a request for a change of status from another nonimmigrant category. Commenters stated that the current limitation was contrary to the plain language of the INA and congressional intent, outside

[61] Neufeld May 2009 Memo (describing various ''periods of authorized stay'').

the Department's authority, and inconsistent with DHS's stated goal of maximizing job flexibility for skilled foreign workers. One commenter stated that such a policy would impose further restrictions and fees on employers in the medical field, deterring them from recruiting physicians to work in medically underserved areas.

Response. DHS disagrees with these commenters. USCIS has long interpreted INA 214(n) as allowing only those nonimmigrants who are currently in H–1B status, or in a period of authorized stay as a result of a timely filed H–1B extension petition, to begin employment upon the filing by prospective employers of new H–1B portability petitions on the nonimmigrants' behalf. H–1B portability does not apply to a nonimmigrant who is in a valid status other than H–1B.[62] This interpretation is consistent with the text of INA 214(n)(1), which refers specifically to foreign workers admitted in or otherwise provided H–1B status. *See* INA 214(n)(1), 8 U.S.C. 1184(n)(1). This interpretation is also in harmony with congressional intent behind the creation of the provision. As noted in the Senate Report accompanying the bill, the H–1B portability provision at INA 214(n), titled ''increased portability of H–1B status,'' was intended to ''respond[ ] to concerns raised about the potential for exploitation of H–1B visa holders as a result of a specific employer's control over the employee's legal status.'' *See* S. Rep. No. 260, at 22–23. The Senate Report also noted that: ''[t]he bill allows an H–1B visa holder to change employers at the time a new employer files the initial paperwork, rather than requiring the visa holder to wait for the new H–1B application to be approved.'' *Id.* at 10, 22. For these reasons, DHS believes this limitation is consistent with Congress's intent.

Additionally, DHS does not agree that these clarifications would impose new restrictions on employers. As noted above, USCIS has long interpreted INA 214(n) as requiring an individual to maintain lawful H–1B status, or be in an authorized period of stay based on a timely filed extension of H–1B status, in order to ''port'' to a new employer. As this is longstanding policy and practice, DHS disagrees that the codification of such provision would present a new deterrent to employers recruiting certain H–1B nonimmigrants, such as physicians.

Comment. One commenter expressed qualified support for the proposed H–1B portability provision at 8 CFR 214.2(h)(2)(i)(H). The commenter expressed appreciation for the provision under the assumption that it rendered the so-called ''240-day rule'' at 8 CFR 274a.12(b)(20), which applies to timely filed H–1B extensions with the same employer, moot. This assumption was based on the fact that the proposed regulation provided H–1B portability to the beneficiary of the H–1B extension petition until such petition was adjudicated by USCIS. The commenter stated, however, that there was apparent discrepancy between the text of the proposed H–1B portability provision and the regulatory text at 8 CFR 274a.12(b)(20), and the commenter requested that DHS address such discrepancy.

Response. DHS appreciates the commenter's observations regarding the perceived implications of the portability provision at 8 CFR 214.2(h)(2)(i)(H) on the 240-day rule under 8 CFR 274a.12(b)(20). DHS notes that there is a difference in how these rules are applied, however, and that the portability provision does not in fact render the 240-day rule moot for H–1B nonimmigrants. Under the H–1B portability provision, if an H–1B employer is filing a petition for a change in employment (or an amended petition) for the same employee, then the H–1B nonimmigrant is authorized to work for that same employer in the new employment until the petition is adjudicated. *See* 8 CFR 214.2(h)(2)(i)(H)(*2*). However, if an H–1B employer files a timely petition for an employee seeking continuation of the same employment with the same employer without change, DHS does not consider that to be new employment, and thus is ineligible for H–1B portability. The statutory provision at INA 214(n)(1) plainly refers to new employment in describing what type of employment is authorized, and therefore limits the applicability of that provision. Thus, while a petition seeking extension of the *same* employment for the same employer is pending, employment authorization is not provided by 8 CFR 214.2(h)(2)(i)(H) and 8 CFR 274a.12(b)(9), but would be provided by 8 CFR 274a.12(b)(20), which authorizes employment for an additional 240 days beginning on the date of the expiration of the previously authorized period of stay.

Thus, an eligible nonimmigrant may be granted employment authorization until the adjudication of the H–1B petition if he or she chooses to engage in concurrent or new employment (including new employment with the same employer) or may be granted employment authorization for a period not to exceed 240 days if he or she chooses to continue the current employment with the same employer. For these reasons, DHS disagrees with the commenter's assessment that this provision renders 8 CFR 274a.12(b)(20) moot.

ii. International Travel and Successive Portability Petitions (''Bridge Petitions'')

Comment. A few commenters requested that DHS further clarify the effect of travel outside of the United States on the status of beneficiaries of pending bridge petitions. *See* 8 CFR 214.2(h)(2)(i)(H)(*3*). Many of these commenters expressed the view that DHS prohibited beneficiaries with pending successive portability petitions from traveling outside the United States. Other commenters objected to the potential consequences that beneficiaries of pending bridge petitions face if they travel internationally, including having DHS consider their petitions abandoned. One commenter asked DHS to extend portability to H–1B nonimmigrants who are employed, but are travelling for business or vacation purposes, asserting that true portability should allow job changes for H–1B nonimmigrants who are employed by their sponsors, whether the nonimmigrants are physically in the United States or not.

Response. DHS is aware that H–1B nonimmigrants (and their employers) have expressed concern about their eligibility for admission to the United States during the pendency of a new employer's petition on their behalf. DHS has long acknowledged that otherwise admissible H–1B nonimmigrants may travel and be admitted in H–1B status while H–1B portability petitions on their behalf are pending. However, individuals requesting admission as H–1B nonimmigrants must prove at the port of entry that they are eligible for admission in that status.[63]

Generally, if an individual's original H–1B petition has expired prior to the time that the beneficiary seeks admission to the United States, or if such petition is otherwise no longer valid, the beneficiary must present evidence that USCIS has approved a new H–1B petition to be admitted to the United States. If the original H–1B petition has not yet expired, however, the beneficiary of an H–1B portability petition who travels abroad may be admissible if, in addition to presenting

[62] See Aytes 2005 Memo, at 7.

[63] *See* USCIS Memorandum from Michael A. Pearson, ''Initial Guidance for Processing H–1B Petitions as Affected by the 'American Competitiveness in the Twenty-First Century Act' (Public Law 106–313) and Related Legislation (Public Law 106–311) and (Public Law 106–396)'' (June 19. 2001).

a valid passport and visa (unless visa-exempt), he or she provides a copy of the previously issued Form I–94 or Form I–797 approval notice for the original H–1B petition (evidencing the petition's validity dates), and a Form I–797 receipt notice demonstrating that the new H–1B petition requesting an amendment or extension of stay was timely filed on the individual's behalf. The inspecting officer at the port of entry will make the ultimate determination as to whether the applicant is admissible to the United States as an H–1B nonimmigrant.

Comment. One commenter opposed conditioning H–1B portability on the approval of the H–1B portability petition. The commenter noted that if an employer delays the filing, and chooses not to pay for premium processing, the employee will not be able to port for (potentially) several months. The commenter asked DHS to instead require that portability be conditioned on the portability petition being non-frivolous. Another commenter requested that where the H–1B nonimmigrant's Form I–94 remains valid and unexpired, the regulation should confirm that the denial or withdrawal of a portability petition in the ''chain'' will not result in the denial of successive portability petitions. The commenter advocated that in such situations, pending petitions should remain viable unless denied.

Response. DHS disagrees that an employee who is the beneficiary of a pending portability petition, whether or not premium processing has been requested, would be unable to change jobs for several months. As noted above, as long as a worker is in H–1B nonimmigrant status, or is in a period of authorized stay as a result of a timely filed H–1B petition, that worker may begin new employment upon the filing by the prospective employer of an H–1B portability petition on the foreign worker's behalf. There is no requirement that the portability petition be approved at the time the worker begins the new employment.

DHS notes that an H–1B beneficiary who has a valid and unexpired Form I–94 remains in a period of authorized stay. As long as the petitioner can demonstrate that the beneficiary remained in valid H–1B nonimmigrant status when a successive portability petition was filed, the timely filed petition and associated extension of stay request should not be denied simply because of a denial or withdrawal of the preceding portability petition. DHS does not consider an H–1B portability petition that is filed before the validity period expires to constitute a ''bridge petition''; rather, a bridge petition is one filed after expiration of the Form I–94, but during the time in which the individual was in a period of authorized stay based on a preceding timely filed extension petition.

DHS believes that this rule achieves the ameliorative purpose of section 214(n) to enhance the job flexibility of H–1B nonimmigrant workers and minimize the potential exploitation of such workers by employers. DHS thus adopts the proposed provision without change.

iii. Portability to New Employment Subject to the Cap

Comment. One commenter asked DHS to clarify H–1B portability in the context of a change from cap-exempt to cap-subject employment. The commenter asked DHS to explicitly allow cap-subject employment to begin prior to the beginning of the fiscal year (October 1), noting that H–1B portability provides ''employment authorization'' but not status.

Response. An H–1B nonimmigrant worker's cap-subject employment may not begin prior to October 1 of the fiscal year for which his or her cap-subject petition is approved. *See* INA section 214(g)(1), 8 U.S.C. 1184(g)(1). Therefore, in the circumstances described by the commenter, the H–1B nonimmigrant worker would not be eligible to begin working upon the timely filing of a nonfrivolous petition under 8 CFR 214.2(h)(2)(i)(H).

I. H–1B Licensing Requirements

1. Description of Final Rule and Changes From NPRM

The final rule amends existing DHS regulations to incorporate the Department's current policy[64] for determining when H–1B status may be granted notwithstanding the H–1B beneficiary's inability to obtain a required professional license. In response to public comment, the final rule also expands upon the bases for granting H–1B status in such cases. *See* final 8 CFR 214.2(h)(4)(v)(C).

First, in this final rule, DHS is making clarifications to the proposal in the NPRM covering unlicensed beneficiaries who will work, under the supervision of licensed senior or supervisory personnel, in an occupation that typically requires licensure. *See* proposed 8 CFR 214.2(h)(4)(v)(C)(*1*). The proposed rule required petitioners to provide evidence concerning the duties to be performed by the prospective beneficiary, as well as the identity, physical location, and credentials of the individual(s) who will supervise the foreign worker. In the final rule, DHS is retaining these requirements with an amendment clarifying that petitioners must also submit evidence of compliance with applicable state requirements. DHS is adding this requirement, consistent with existing policy and practice, to clarify that the performance of such work by an unlicensed beneficiary, in an occupation that typically requires a license, would only be permissible if it is otherwise consistent with applicable state licensure requirements and exceptions to such requirements. In such cases, if the evidence demonstrates that the unlicensed H–1B nonimmigrant may fully perform the duties of the occupation under the supervision of licensed senior or supervisory personnel, H–1B classification may be granted. *See* final 8 CFR 214.2(h)(4)(v)(C)(*1*).

Second, DHS is expanding the bases under which an individual may be granted H–1B nonimmigrant status despite the individual's inability to obtain a required license in the United States. The proposed rule expressly allowed for a temporary exception to the licensure requirement for individuals who were substantively qualified for licensure but who could not obtain such licensure due only to the need to have a Social Security number or employment authorization. In response to public comment, DHS is clarifying that a temporary exception to the licensure requirement may also be available in cases in which the inability to obtain the license is due to a ''similar technical requirement.'' Final 8 CFR 214.2(h)(4)(v)(C)(*2*)(*i*). DHS is expanding this provision in recognition that other technical obstacles may exist that would similarly prevent beneficiaries from obtaining licenses required for employment in certain occupations. Under the final rule, petitioners filing H–1B petitions on behalf of such beneficiaries are required to submit evidence from the relevant licensing authority indicating that the only obstacle to the beneficiary's licensure is the lack of a Social Security number, the lack of employment authorization, or the inability to meet a similar technical

[64] *See* USCIS Memorandum from Donald Neufeld, ''Adjudicator's Field Manual Update: Chapter 31: Accepting and Adjudicating H–1B Petitions When a Required License Is Not Available Due to State Licensing Requirements Mandating Possession of a Valid Immigration Document as Evidence of Employment Authorization'' (Mar. 21, 2008) (''Neufeld Memo March 2008''); INS Memorandum from Thomas Cook, ''Social Security Cards and the Adjudication of H–1B Petitions'' (Nov. 20, 2001) (''Cook Memo Nov. 2001'').

requirement. *See* final 8 CFR 214.2(h)(4)(v)(C)(*2*)(*ii*).

Petitions for such unlicensed H–1B beneficiaries may be approved for up to 1 year. *See* final 8 CFR 214.2(h)(4)(v)(C)(*2*). Thereafter, an H–1B petition filed on such a beneficiary's behalf may not be approved unless the required license has been obtained, the beneficiary is employed in a different position that requires another type of license, or the beneficiary is employed in the same occupation but in a different location that does not require a license. *See* final 8 CFR 214.2(h)(4)(v)(C)(*3*).

2. Public Comments and Responses

i. Duties Without Licensure—Expand Circumstances

Comment. Most of the commenters who addressed the proposed changes supported DHS's proposals and thanked DHS for clarifying exceptions to the general requirement making approval of H–1B petitions contingent on licensure when licensure is required for the relevant occupation. Two commenters asked DHS to include additional bases for excusing the general licensure requirement, such as by adding the phrase ''or other requirement'' to 8 CFR 214.2(h)(4)(v)(C)(*2*)(*ii*).

Response. DHS regulations provide that if an occupation, including a health care occupation, requires a state or local license to fully perform the duties of the occupation, the H–1B beneficiary must have the license prior to the approval of the petition. *See* 8 CFR 214.2(h)(4)(v). However, some states will not issue a foreign national a state license without evidence of an approved H–1B petition or other employment authorization. DHS has long acknowledged these beneficiaries sometimes face situations where the beneficiary is qualified for licensure but may not obtain the licensure because of a technical requirement, and the Department responded over 8 years ago by allowing for the *temporary* approval of H–1B petitions in such cases, provided all other requirements are met.[65] By incorporating this policy into the final regulations, DHS intends to provide clear guidance to help certain beneficiaries who cannot obtain the necessary license because they are unable to satisfy a technical prerequisite, including because they do not yet possess a Social Security number or are not yet legally authorized to work in the United States.

In addition, DHS agrees with commenters and recognizes that there may be other analogous technical requirements not specifically identified in the proposed rule that similarly prevent a beneficiary from obtaining a license. DHS is therefore providing additional flexibility in the final rule by allowing beneficiaries to demonstrate that a ''similar technical requirement'' bars the issuance of a license to an individual who is not yet in H–1B status. In such situations, the petitioner must still demonstrate that the beneficiary is otherwise qualified to receive the state or local license, meaning that all educational, training, experience, and other substantive requirements have been met. The petitioner must also still demonstrate that the beneficiary has applied for such license in accordance with state or local rules and procedures, unless such rules and procedures prohibit the beneficiary from applying for the license without first meeting the technical requirement.

Comment. One commenter requested the same accommodation (*i.e.,* a 1-year approval) for physicians who complete their graduate medical education in H–1B nonimmigrant status using a limited or restricted license but who require an unrestricted license to begin post-training work in H–1B status. This commenter noted that these physicians sometimes face circumstances in which they have not yet completed their post-graduate training (*i.e.,* medical residency), which is a prerequisite to obtaining an unrestricted state license in many states, but must have an H–1B petition filed on their behalf to avoid a lapse in status. This commenter requested that USCIS consider the completion of the requisite post-graduate training as another technical impediment to obtaining a license.

Response. DHS declines to adopt the commenter's suggestion. As with other occupations, DHS will require physicians who complete their graduate medical education in H–1B status using a restricted license to demonstrate that the only obstacle to the issuance of an unrestricted license is the lack of a Social Security number, a lack of employment authorization, or the inability to meet a similar technical requirement that precludes the issuance of the license. DHS does not view the absence of completed post-graduate training as analogous to the purely technical prerequisites discussed above. The Department did not propose to excuse substantive prerequisites for obtaining licensure and disagrees that exceptions should extend to such prerequisites.

ii. Unlicensed Employment Under Supervision

Comment. Several commenters were concerned about petitioners being required to provide evidence ''as to the identity, physical location, and credentials of the individual(s) who will supervise the alien.'' *See* 8 CFR 214.2(h)(4)(v)(C)(*1*). One commenter indicated that the quoted text could be interpreted in different ways. According to the commenter, although the text may have been intended to require petitioners to provide broad details about the supervisor(s) who will oversee the work of the nonimmigrant worker, adjudicators may interpret this provision as requiring petitioners to provide the actual identities and qualifications of those supervisors. The commenter believed such an interpretation would pose a major logistical challenge for many petitioners. As an example, the commenter referred to medical residents who often rotate through numerous assignments and different supervisors, sometimes on a monthly basis, during their training. The commenter believed that in such cases it would be overly burdensome for petitioners to provide the actual identities of the supervisors, and the commenter urged DHS to eliminate this requirement. Some commenters recommended that DHS strike the provision requiring petitioners to provide specific information about supervisors and replace it with a provision requiring petitioners to proffer evidence from the appropriate licensing authority supporting the employment.

Additionally, commenters were concerned that the proposed rule gave USCIS too much authority to ''second-guess'' established practices followed by state licensing authorities. One commenter was of the view that if the relevant state licensing authority deems the proposed supervision to be adequate, USCIS should not evaluate the level at which duties are performed or the degree of supervision received. Another commenter stated that refining the regulatory text would help to avoid denials of H–1B petitions filed for unlicensed workers whose supervision is deemed adequate by the state but determined to be inadequate by USCIS.

Response. In this final rule, DHS is clarifying that, consistent with current policy, the petitioner is required to provide details about the supervisor(s) overseeing the work of the nonimmigrant worker, including physical location, credentials and identity of such supervisor(s). Petitioners are encouraged to fully document each case, as this helps DHS

[65] *See* Neufeld Memo March 2008.

ensure that while the beneficiary may as yet be unlicensed, he or she will be supervised by one or more individuals with the proper license. Finally, as the burden of proof is on the petitioner to establish eligibility for the benefit requested, the petitioner must also submit evidence that it is complying with state requirements. DHS is modifying the regulatory text at 8 CFR 214.2(h)(4)(v)(C)(*1*) to clarify the petitioner's burden of proof with respect to compliance with state requirements. As the final rule simply codifies current policy, DHS does not anticipate that petitioners would have to change the way they currently satisfy these requirements.[66]

iii. Duration of H–1B Petition Approval

Comment. A few commenters suggested a longer duration of approval for H–1B petitions involving unlicensed H–1B beneficiaries, noting that limiting the duration of H–1B nonimmigrant status to 1 year seemed both ''arbitrary'' and ''unnecessary.'' The commenters urged DHS to allow petitions to be approved for the full H–1B period requested—up to 3 years—regardless of whether the occupational license is subject to renewal before the requested petition expiration date. Alternatively, another commenter suggested an option whereby USCIS would approve H–1B status for the period requested on the petition and then send a request for proof of licensure 1 year after approval (rather than require a new petition). According to the commenter, if proof is not provided at that point, the grant of H–1B status could be revoked. One commenter proposed that DHS extend the 1-year exception to any foreign beneficiary who presents a health care worker certificate[67] at the time of the filing of the H–1B petition. The commenter noted that this proposal would relieve the need for DHS to parse through a myriad of state licensing prerequisites, while still guaranteeing that only qualified workers are granted H–1B status. The commenter noted that the proposal would provide additional certainty to petitioners and allow for more consistent DHS decision-making.

Response. USCIS has long used a 1-year period as the duration for approval for beneficiaries that cannot obtain licensure due to technical requirements. Petitioners wishing to extend H–1B status for such beneficiaries beyond one year are required to file new petitions with requests for extensions and evidence that the necessary licensure has in fact been obtained.[68] While DHS recognizes that short approval periods impose a burden on employers, DHS must balance employer burden against the need to affirmatively confirm that the beneficiary ultimately received the requisite licensing. Extending the period of H–1B petition validity beyond 1 year in cases in which the beneficiary does not have a license needlessly weakens DHS's oversight of beneficiaries' eligibility for H–1B status.

DHS also declines to implement the commenter's proposal to approve petitions for beneficiaries lacking necessary licensure for the period requested on the petition and then issue an RFE to request proof of licensure 1 year after approval. Such a proposal would be operationally and administratively burdensome, both because it would require USCIS to track petitions and because it would require USCIS to incur the costs of re-determining eligibility without collecting an appropriate fee. The proposal could add also uncertainty for petitioners and H–1B nonimmigrant workers while their petitions are under re-review. For these reasons, DHS retains in the final rule the current 1-year limitation on the duration of approval of H–1B petitions filed on behalf of unlicensed workers under 8 CFR 214.2(h)(4)(v)(C)(*2*).

DHS also declines to adopt the commenter's request to provide an exception to the 1-year limit for a foreign beneficiary who submits a health care worker certificate with the H–1B petition. State laws govern licensure requirements for individuals to fully practice their profession, and DHS regulations accordingly require the petitioner to submit a copy of the beneficiary's license to establish that the beneficiary is fully qualified to practice in his or her specialty occupation. *See* 8 CFR 214.2(h)(4)(iii)(C)(*3*). The licensure exception only applies where the individual is fully qualified for the state license, but is unable to acquire the license due to a technical, non-substantive reason. While a health care worker certification may help prove such qualification, such certificates, which are issued by private organizations, do not confer authorization to engage in the specialty occupation and are not sufficient evidence of a beneficiary's qualifications for the specialty occupation. Accordingly, such health care certificates are not acceptable substitutes for evidence establishing that the foreign national is licensed to practice his or her occupation. For these reasons, DHS declines to make changes to those requirements in the final rule.

iv. Unrestricted Extendable Licenses

Comment. One commenter stated that the proposed rule did not reference the most recent USCIS guidance regarding unrestricted extendable licenses in health care occupations. The commenter cited a May 20, 2009 USCIS memorandum from Barbara Q. Velarde titled, ''Requirements for H–1B Beneficiaries Seeking to Practice in a Health Care Occupation'' (''2009 Velarde Memorandum''), that states, in part, that H–1B approvals in such instances should be for the full duration of time requested on the petition (*i.e.,* up to 3 years) notwithstanding the renewal date on the license, if the petition is otherwise approvable. The commenter asked that the applicability of the policy be expanded to include additional occupations beyond those in health care, and proposed that 8 CFR 214.2(h)(4)(v)(A) be amended accordingly.

Response. DHS did not propose to codify or change USCIS policy addressing the approval of petitions for individuals in health care occupations who are issued unrestricted extendable licenses, as articulated in the 2009 Velarde Memorandum, and therefore declines to address this comment in this rulemaking. USCIS will continue to adjudicate these petitions consistent with the policy guidance articulated in the 2009 Velarde Memorandum, and the agency declines to make any changes to this policy or the memorandum at this time.

J. Employers Exempt From H–1B Numerical Limitations and Qualifying for Fee Exemptions

1. Description of the Final Rule and Changes From the NPRM

In this final rule, DHS codifies its longstanding policy interpretations identifying which employers are exempt

[66] *See* the Adjudicator's Field Manual at Chapter 31.3(d)(2).

[67] A foreign national seeking admission to perform labor as a health care worker, other than a physician, is only admissible to the United States if he or she presents a certification from a USCIS-approved credentialing organization verifying that the worker has met the minimum requirements for education, training, licensure, and English proficiency in his or her field. *See* INA section 212(a)(5), 8 U.S.C. 1182(a)(5); 8 CFR 212.15.

[68] The 1-year time period dates back to 2001, when the former INS issued guidance to adjudicators to approve H–1B petitions for 1-year periods for teachers who could not obtain state licensure unless they obtained Social Security numbers, which in turn could not be obtained unless they were already authorized to work in the United States. *See* Cook Memo Nov. 2001. *See also* USCIS Memorandum from Barbara Q. Velarde, ''Requirements for H–1B Beneficiaries Seeking to Practice in a Health Care Occupation'' (May 20, 2009), available at *https://www.uscis.gov/sites/default/files/USCIS/Laws/Memoranda/Static_Files_Memoranda/2009/health_care_occupations_20may09.pdf.*

from the H–1B numerical limitations (*i.e.,* which employers are ''cap-exempt'') and makes conforming changes to the provisions that establish which employers are exempt under ACWIA from paying certain H–1B fees. DHS also modifies those policies in response to public comment as they relate to (1) nonprofit entities related to or affiliated with institutions of higher education, and (2) governmental research organizations. DHS is making revisions to the H–1B cap- and fee-exemption provisions where needed to reflect these modifications.

In the final rule, DHS is improving upon and codifying current policy interpreting the statutory cap and fee exemptions for a nonprofit entity that is related to or affiliated with an institution of higher education. *See* INA 214(c)(9) and (g)(5), 8 U.S.C. 1184(c)(9) and (g)(5); *see also* final 8 CFR 214.2(h)(8)(ii)(F)(*2*)(*iv*) and (h)(19)(iii)(B). Under current policy, DHS allows nonprofit entities to qualify for the cap and fee exemptions if such nonprofit entities are (1) connected or associated with an institution of higher education through shared ownership or control by the same board or federation; (2) operated by an institution of higher education; or (3) attached to an institution of higher education as a member, branch, cooperative, or subsidiary. In addition to proposing to retain this policy (*see* proposed 8 CFR 214.2(h)(8)(ii)(F)(*2*); 8 CFR 214.2(h)(19)(iii)(B)(*4*)), the NPRM proposed to also allow nonprofit entities to qualify for the cap and fee exemptions on the basis of having a written affiliation agreement with an institution of higher education. As proposed, the regulatory text would have allowed such an agreement to serve as the basis for the cap and fee exemptions if the agreement established an active working relationship between the nonprofit entity and the institution of higher education for the purposes of research or education and so long as one of the nonprofit entity's primary purposes was to directly contribute to the research or education mission of the institution of higher education.

In the final rule, DHS is replacing the phrase ''primary purpose'' with ''fundamental activity'' to avoid potential confusion. This change makes it clearer that nonprofit entities may qualify for the cap and fee exemptions even if they are engaged in more than one fundamental activity, any one of which may directly contribute to the research or education mission of a qualifying college or university. Further, the term ''related or affiliated nonprofit entity'' is defined consistently for both cap-exemption and ACWIA fee-exemption purposes. This change results in a standard that better reflects current operational realities for institutions of higher education and how they interact with, and sometimes rely on, nonprofit entities.

Second, the final rule revises the definition of ''governmental research organization,'' in response to public comment, so that the phrase includes state and local government research entities in addition to federal government research entities. *See* 8 CFR 214.2(h)(8)(ii)(F)(*3*) and (h)(19)(iii)(C). Both the ACWIA fee and H–1B cap statutes provide exemptions for ''governmental research organizations,'' without specifying whether such organizations must be federal government entities. *See* INA 214(c)(9)(A) and (g)(5)(B), 8 U.S.C. 1184(c)(9)(A) and (g)(5)(B). DHS believes it is reasonable to interpret this language to include state and local government entities and that doing so is consistent with the goals of this rulemaking to improve access to and retention of high-skilled workers in the United States. DHS further believes that this interpretation will promote and encourage the significant and important research and development endeavors happening through state and local governments.

Third, the final rule codifies other existing policies and practices in this area. Specifically, the final rule codifies: (1) The requirements for exempting H–1B nonimmigrant workers from the cap in cases in which they are not directly employed by a cap-exempt employer (final 8 CFR 214.2(h)(8)(ii)(F)(*4*)); (2) the application of cap limitations to H–1B nonimmigrant workers in cases in which cap-exempt employment ceases (final 8 CFR 214.2(h)(8)(ii)(F)(*5*)); and (3) the procedures for concurrent cap-exempt and cap-subject employment (final 8 CFR 214.2(h)(8)(ii)(F)(*6*)). As discussed below, DHS did not make any changes to these provisions in response to public comment.

2. Public Comments and Responses

i. Include Government Entities in the Definition of ''Related or Affiliated''

Comment. One commenter stated that DHS's failure to specifically reference government entities as a type of entity that could have a qualifying relationship or affiliation with an institution of higher education meant that government entities would be unable to request exemptions from the H–1B numerical limitations and ACWIA fees. The commenter argued that by only referring to nonprofit entities, the rule excluded government entities, notably Department of Veterans Affairs (VA) hospitals, from these exemptions. The commenter suggested revising the text of the proposed regulation at 8 CFR 214.2(h)(8)(ii)(F)(*2*) and (h)(19)(iii)(B) to specifically include governmental entities related to or affiliated with institutions of higher education in the provisions providing for exemption from the H–1B numerical limitations and ACWIA fees.

Response. DHS thanks the commenter for the suggestion. In enacting sections 214(c)(9) and 214(g)(5) of the INA, Congress specifically identified the types of entities that are eligible for the cap and fee exemptions. DHS will not introduce additional entity types by regulation, but the agency will continue to consider exemption requests from government entities that are also organized as nonprofit entities. DHS notes that it did not propose a change to the definition of a ''nonprofit organization'' in 8 CFR 214.2(h)(19)(iv) for purposes of the cap or fee exemptions. Consistent with the current practice, DHS will assess on a case-by-case basis whether a governmental organization has established that it is a nonprofit entity related to or affiliated with an institution of higher education for purpose of the ACWIA fee and H–1B numerical limitations.

ii. Clarify That a Nonprofit Entity Only Needs To Meet One of the Criteria in 8 CFR 214.2(h)(8)(ii)(F)(2) and 8 CFR 214.2(h)(19)(iii)(B)

Comment. One commenter requested that DHS clarify in the final rule that a nonprofit entity, in order to qualify for exemption from the H–1B numerical limitation, need only meet one of the criteria set forth in 8 CFR 214.2(h)(8)(ii)(F)(*2*). The commenter recommended specific edits to the regulatory text to clarify this point and to avoid potential confusion over the disjunctive nature of the criteria in the definition. The commenter also requested that DHS make corresponding revisions to the fee-exemption provision at proposed 8 CFR 214.2(h)(19)(iii)(B).

Response. DHS believes that the regulatory text at proposed 8 CFR 214.2(h)(8)(ii)(F)(*2*) clearly provides that a nonprofit entity may qualify as ''related to or affiliated with'' an institution of higher education if it meets any one of the listed criteria. However, in response to the comment, DHS is revising the final rule by adding the phrase ''if it satisfies any one of the following conditions'' to the proposed text. DHS is also making conforming changes to 8 CFR 214.2(h)(19)(iii)(B).

iii. The ''Primary Purpose'' Requirement for Nonprofit Entities Seeking Exemptions Based on Formal Written Affiliation Agreements

Comment. As noted above, the NPRM would have allowed nonprofit entities to qualify for cap and fee exemptions based on formal written affiliation agreements with institutions of higher education so long as such agreements establish an active working relationship with the institution of higher education for the purposes of research or education, and the nonprofit entity establishes that one of its primary purposes is to directly contribute to the educational or research mission of the institution of higher education. *See* proposed 8 CFR 214.2(h)(8)(ii)(F)(*2*)(*iv*) and 8 CFR 214.2(h)(19)(iii)(B)(*4*). This proposed path to eligibility for the cap and fee exemptions, which is not available under current policy, was intended to expand eligibility to nonprofit entities that maintain common, bona fide affiliations with institutions of higher education. Commenters were of the view that the term ''a primary purpose'' would make the provision overly restrictive and inconsistent with both the INA and the purpose of the proposed rule. Some commenters suggested eliminating any reference to the ''purpose'' of the nonprofit, while one commenter suggested simply deleting the word ''primary'' while maintaining reference to the ''purpose'' of the nonprofit entity. Another commenter claimed that the proposed regulatory definition was beyond DHS's statutory authority.

Response. In response to public comment, DHS is revising 8 CFR 214.2(h)(8)(ii)(F)(*2*)(*iv*) and (h)(19)(iii)(B)(*4*) to clarify the definition. Specifically, instead of referring to ''a primary purpose'' of the nonprofit entity, the final rule will require the nonprofit entity to show that ''*a fundamental activity* of the nonprofit entity is to directly contribute to the research or education mission of the institution of higher education'' (emphasis added). DHS emphasizes that a nonprofit entity may meet this definition even if it is engaged in more than one fundamental activity, so long as at least one of those fundamental activities is to directly contribute to the research or education mission of a qualifying college or university. This modified definition should capture those nonprofit entities that have bona fide affiliations with institutions of higher education and is consistent with the intent underlying the statute.

While some commenters suggested deleting the requirement altogether, such that any entity could qualify merely by entering into any kind of affiliation agreement with a qualifying institution of higher education, DHS believes that Congress did not intend such a broad exemption from the cap and fee provisions. With respect to institutions of higher education, Congress intended to exempt those foreign national workers who would directly contribute to the research or education missions of those institutions; there is no evidence that Congress intended to allow exemptions based on agreements unrelated to those missions.[69] Finally, DHS disagrees with the suggestion that the proposed definition is beyond DHS's statutory authority. Congress chose not to define the term ''related or affiliated,'' thus delegating the authority and responsibility to interpret that term to DHS. In this rule, DHS acts within its statutory authority by codifying a definition that is consistent with the statutory intent to provide exemptions for certain nonprofit entities that directly contribute to the higher education of Americans.[70]

iv. Formal Written Affiliation Agreement

Comment. Similarly, several commenters objected to the requirement in proposed 8 CFR 214.2(h)(8)(ii)(F)(*2*)(*iv*) and 8 CFR 214.2(h)(19)(iii)(B)(*4*) that the qualifying affiliation agreement be formal and in writing. These commenters proposed deleting this requirement and simply revising the rule to only require that the nonprofit entity have ''an affiliation'' with an institution of higher education in order to qualify for the cap and fee exemptions.

In addition, these commenters offered suggested edits to the regulatory text to ensure that a nonprofit entity that submits a formal written affiliation agreement is also not required to affirmatively prove that the entity is not owned or controlled by the institution of higher education. These commenters requested that proposed 8 CFR 214.2(h)(8)(ii)(F)(*2*)(*iv*) be revised to remove the phrase ''absent shared ownership and control'' to describe the nonprofit entity's affiliation with an institution of higher education. Some of these commenters also asked DHS to make conforming edits to 8 CFR 214.2(h)(19)(iii)(B)(*4*), so the cap and fee exemption provisions remain identical. These commenters also suggested that DHS include deference to other agency determinations of affiliation as an alternative to requiring a formal written affiliation agreement.

Response. DHS appreciates the concerns expressed by the commenters but believes that it is reasonable to require nonprofit entities to submit formal written affiliation agreements with institutions of higher education as evidence that they are adequately affiliated with such institutions and thus exempt from the cap and fee exemptions. DHS believes that submission of such affiliation agreements is important to ensure that the nonprofit entities will directly further the educational or research missions of the affiliated institutions of higher education.[71] A petitioner may wish to submit, or DHS may require the submission of, additional evidence to corroborate the nature of the affiliation and the nonprofit entity's activities.

Based on the comments received, DHS is removing the phrase ''absent a demonstration of shared ownership or control'' from 8 CFR 214.2(h)(8)(F)(*2*)(*iv*) and 8 CFR 214.2(h)(19)(iii)(B)(*4*) to clarify that a nonprofit entity need not prove the absence of shared ownership or control when relying on the existence of a formal affiliation agreement to establish that the entity is related to or affiliated with an institution of higher education. As proposed, the language was intended merely to signify that an affiliation agreement was one option for establishing that the requisite affiliation or relationship exists between the entities; DHS did not intend the phrase to require evidence of the absence of ownership or control.

DHS is not adopting the commenters' recommendation to allow for deference to another agency's determination that a nonprofit entity is related to or affiliated with an institution of higher education. Such determinations, including those made by state or local agencies, could be based on a different substantive standard than the INA requires and could result in inconsistent treatment of similar relationships and affiliations. Therefore, in the final rule, DHS adopts a standard that it will apply consistently across all H–1B petitions claiming cap and fee exemptions.

[69] *See* S. Rep. No. 106–260 (Apr. 11, 2000) (providing that individuals should be considered cap exempt because ''by virtue of what they are doing, people working in universities are necessarily immediately contributing to educating Americans'' and not simply referencing the identity of the petitioning employer).

[70] *Id.*

[71] *See* Aytes Memo June 2006, at 3 (citing S. Rep. No. 106–260, which stated that individuals should be considered cap exempt ''by virtue of what they are doing'' and not simply by reference to the identity of the petitioning employer).

v. Impose Additional Requirements To Qualify as an Institution of Higher Education

Comment. One commenter suggested DHS limit the cap exemption for educational institutions to those institutions that are accredited by an accrediting agency recognized by the Department of Education and that meet federal and state standards for quality educational institutions.

Response. DHS is not adopting the commenter's suggestion because the term ''institution of higher education'' is specifically defined in the INA by reference to 20 U.S.C. 1001(a). *See* INA 214(g)(5)(A), 8 U.S.C. 1184(g)(5)(A). The definition in 20 U.S.C. 1001(a) includes specific reference to accreditation and other standards. As such, DHS will not impose additional requirements or modify the definition of the term ''institution of higher education'' in this final rule.

vi. Impose Additional Requirements on the Nature of Employment at a Qualifying Nonprofit Entity and Nonprofit Research Organization

Comment. One commenter suggested that DHS limit the availability of cap and fee exemptions, for nonprofit entities and nonprofit research organizations, only to those entities and organizations that can document that the employment of H–1B nonimmigrant workers is for the purpose of educating Americans to work in specialty occupation fields. To accomplish this change, the commenter recommended that DHS revise the definition of the terms ''nonprofit entity'' and ''nonprofit research organization'' at proposed 8 CFR 214.2(h)(8)(ii)(F)(*3*). Specifically, the commenter recommended incorporating into the definition the condition that the entity or organization is primarily employing cap-exempt H–1B nonimmigrant workers to educate Americans so that they may immediately qualify for employment in a specialty occupation upon graduation.

Response. DHS declines to adopt the commenter's suggestion. DHS does not believe it would be consistent with congressional intent to impose such a highly limiting restriction on the otherwise broad array of nonprofit entities and nonprofit research organizations that may be eligible for a cap exemption under INA 214(g)(5). As previously discussed, legislative history indicates that Congress intended to include those entities and organizations that are directly contributing to the education and research missions of institutions of higher education. DHS believes the regulatory text in this final rule appropriately reflects this intent.

vii. Expand Interpretation of Research Organization

Comment. Several commenters stated that the current definition of the terms ''nonprofit research organization'' and ''governmental research organization'' in the ACWIA fee-exemption regulation at 8 CFR 214.2(h)(19)(iii)(C), which the proposed rule adopted for purposes of the AC21 H–1B cap exemption at 8 CFR 214.2(h)(8)(ii)(F)(*3*), is inappropriately limited. These commenters questioned the basis for the requirement that qualifying nonprofit research and governmental research organizations be ''primarily'' engaged in or promoting research. The commenters therefore recommended deleting the words ''primarily'' and ''primary'' in 8 CFR 214.2(h)(19)(iii)(C).

Response. DHS does not agree with the commenters' suggestions to remove the requirement that research organizations be either (1) nonprofit entities ''primarily'' engaged in basic or applied research or (2) governmental entities whose ''primary'' mission is the performance or promotion of basic or applied research. These limitations have been in place since 1998 with regard to fee exemptions [72] and have been in effect for more than a decade for purposes of the cap exemptions.[73] The ''primarily'' and ''primary'' requirements were not the subject of any comments when the ACWIA fee regulation was promulgated,[74] and the commenters who raised concerns with these limitations in this rulemaking provided no legal or policy justification for eliminating those requirements. DHS believes that maintaining these longstanding interpretations, which include the ''primarily'' and ''primary'' requirements, will serve to protect the integrity of the cap and fee exemptions as well as clarify for stakeholders and adjudicators what must be proven to successfully receive such exemptions. The requirements thus will be retained for purposes of the ACWIA fee exemption under final 8 CFR 214.2(h)(19)(iii)(C), and also will continue to apply to the cap exemption. *See* final 8 CFR 214.2(h)(8)(ii)(F)(*3*) (adopting the ACWIA fee exemption definition for purposes of the cap exemption).

Comment. A commenter expressed the view that proposed 8 CFR 214.2(h)(19)(iii)(C), as adopted for purposes of the AC21 H–1B cap exemption at 8 CFR 214.2(h)(8)(ii)(F)(*3*), would incorrectly limit ''governmental research organizations'' to federal government research organizations. The commenter stated that DOL reviewed the same issue when it published its final ACWIA prevailing wage rules and concluded that the words ''Governmental'' (capitalized) and ''governmental'' (lower case) convey different meanings, the former referring only to federal governmental entities and the latter referring to federal, state, and local governmental entities. The commenters therefore recommended deleting references in 8 CFR 214.2(h)(19)(iii)(C) to the ''United States Government.''

Response. DHS agrees with the suggestion that the term ''governmental'' should be interpreted to include state and local governmental research organizations in addition to U.S. (*i.e.,* federal) governmental research organizations. Whether governmental research organizations should include state and local government research entities was a straightforward determination when ACWIA was first enacted in 1998. In its original form, the ACWIA statute provided a fee exemption to employers described in INA section 212(p)(1), 8 U.S.C. 1182(p)(1), which in turn referenced ''Governmental'' (capitalized) research organizations. *See* ACWIA sections 414(a), 415(a). Thereafter, DOL and the legacy Immigration and Naturalization Service (INS) promulgated prevailing wage and ACWIA fee-exemption regulations, respectively.[75] In these rulemakings, DOL and INS specifically discussed suggestions from commenters that the term ''Governmental research organization'' should include state and local governmental organizations. DOL concluded that because the ''G'' in the word ''Governmental'' was capitalized, the provision was limited to U.S. (federal) governmental research organizations.[76] For its part, INS explained that it did not exempt state and local governmental organizations from the fee because Congress did not specifically reference them.[77]

In evaluating the commenter's analysis supporting its request that the phrase ''governmental research

[72] *See* Petitioning Requirements for the H–1B Nonimmigrant Classification Under Public Law 105–277, 63 FR 65657 (Nov. 30, 1998) (interim rule) (promulgating the ACWIA fee regulation at 8 CFR 214.2(h)(19)(iii)(C)). This rule was finalized with unrelated amendments in 2000. *See* Petitioning Requirements for the H–1B Nonimmigrant Classification Under Public Law 105–277, 65 FR 10678 (Feb. 29, 2000).

[73] *See* Aytes Memo June 2006, at 4–5.

[74] *See* 65 FR 10678.

[75] 65 FR 80109 (Dec. 20, 2000) (DOL rule); 65 FR 10678 (Feb. 29, 2000) (INS rule).

[76] *See* 65 FR 80109, 80183.

[77] *See* 65 FR 10678, 10680.

organization'' no longer be limited to federal governmental organizations in this final rule, DHS takes into account Congress's actions following enactment of ACWIA and the current ambiguous statutory language. In 2000, two years after ACWIA was signed into law, Congress enacted the cap exemption provision in AC21, which exempted ''governmental research organizations'' (lowercase) from the H–1B cap. *See* AC21 103. Congress also passed legislation that amended the ACWIA fee statute by removing the cross-reference to section 212(p) (which used the capitalized ''Governmental'') from the section 214(c)(9) text and replacing it with language indicating that certain ''governmental'' (lowercase) research entities are exempt. *See* Public Law 106–311, section 1. Legacy INS and later USCIS have not since revised the regulation limiting the fee exemption to federal governmental research organizations.

DHS believes that these intervening statutory changes support the commenter's requested change. In addition, the commenter's requested change would ensure that the DHS and DOL interpretations remain consistent in this context and reflect a recognition that the federal government does not have a monopoly on consequential government-led research and development efforts.[78] Accordingly, DHS is accepting the commenter's suggestion to define ''governmental research organizations'' to include state and local government research organizations for purposes of the cap exemption and fee exemption. DHS is therefore adopting a definition of ''governmental research organization'' for both cap and fee exemptions that covers federal, state, and local governmental research organizations.[79] See final 8 CFR 214.2(h)(19)(iii)(C).

viii. Requirement That the H–1B Worker Perform a Majority of Duties ''at'' the Cap Exempt Entity

Comment. One commenter objected to extending the cap exemption to individuals who are employed ''at'' a qualifying institution, organization or entity rather than limiting the cap exemption to those employed ''by'' such an institution, organization or entity. Other commenters supported the extension of the cap exemption but objected to the ''majority of work time'' requirement, which was proposed as a condition for the cap exemption when an H–1B beneficiary is not a direct employee of a qualifying institution, organization or entity. These commenters contested the proposed rule's requirements that an H–1B beneficiary who is not directly employed by a qualifying institution, organization or entity can only be eligible for a cap exemption if such beneficiary will spend a majority of his or her work time performing job duties at a qualifying institution, organization or entity and if those job duties directly and predominately further the essential purpose, mission, objectives or functions of the qualifying institution, organization or entity. *See* proposed 8 CFR 214.2(h)(8)(ii)(F)(*4*). These commenters requested that DHS eliminate the proposed requirement that such an H–1B beneficiary show that the majority of his or her work time will be spent performing job duties at a qualifying institution, organization or entity. These commenters also objected to the requirement that the H–1B petitioner establish that there is a nexus between the duties to be performed by the H–1B beneficiary and the essential purpose, mission, objectives or functions of the qualifying institution, organization or entity.

Response. DHS believes that its policy extending the cap exemption to individuals employed ''at'' and not simply employed ''by'' a qualifying institution, organization or entity is consistent with the language of the statute and furthers the goals of AC21 to improve economic growth and job creation by immediately increasing U.S. access to high-skilled workers, and particularly at these institutions, organizations, and entities.[80] DHS, moreover, believes that the ''majority of work time'' requirement is a reasonable means to ensure that Congress' aims in exempting workers from the H–1B cap based on their contributions at qualifying institutions, organizations or entities are not undercut by employment that is peripheral to those contributions. DHS is not adopting the changes suggested by the commenters as these provisions in the final rule simply codify policy and practice designed to protect the integrity of the cap exemption. *See* final 8 CFR 214.2(h)(8)(ii)(F)(*4*).

ix. Codify Existing USCIS Deference Policy

Comment. Some commenters stated that the final rule should codify the current deference policy from the 2011 Interim Policy Memo under which USCIS generally defers to a prior agency determination that a nonprofit entity is exempt from the H–1B numerical limitations based on its relation to or affiliation with an institution of higher education.[81] These commenters stated that the lack of a deference regulation has led to uncertainty and unpredictability for employers and prospective H–1B nonimmigrant workers because adjudicators reviewing the same facts can reach opposite conclusions.

Response. DHS is not adopting this suggestion. The deference policy was expressly instituted as interim guidance to promote consistency in adjudications while USCIS reviewed its overall policy on H–1B cap exemptions for nonprofit entities that are related to or affiliated with an institution of higher education. This final rule represents the culmination of USCIS's review of past policy and public input on this issue. In this final rule, DHS specifies the means by which a nonprofit entity may establish that it is related to or affiliated with an institution of higher education. The final rule better reflects current operational realities for institutions of higher education and how they interact with, and sometimes rely on, nonprofit entities, and account for the nature and scope of common, bona fide affiliations between nonprofit entities and institutions of higher education. Rather than continuing to provide deference to past determinations of cap exemption under the 2011 Interim Policy Memo, the final rule includes the final evidentiary criteria that USCIS will now use to determine whether individuals employed at a nonprofit entity will be exempt from H–1B numerical limitations, and, as such, supersedes past guidance in this area.

[78] *See* National Science Foundation, Survey of State Government Research and Development: FYs 2012 and 2013 (June 2015), available at *https://www.nsf.gov/statistics/2015/nsf15323/pdf/nsf15323.pdf.*

[79] As noted, it has long been USCIS policy to apply the same definition of ''governmental research organization'' for both cap and fee exemptions. *See* Aytes Memo June 2006, at 4–5. In the NPRM for this rulemaking, DHS made clear its intent to continue aligning definitions for both exemptions by explicitly linking the AC21 cap exemption to the ACWIA fee-exemption definitions. *See* 80 FR at 81910 (explaining that DHS is adopting the ACWIA fee definition of ''governmental research organization'' for purposes of the cap exemption); *see also id.* at 81919 (explaining that ''DHS also proposes to conform its regulations to current policy with respect to the definitions of several terms in section 214(g)(5) and the applicability of these terms to both: (1) ACWIA provisions that require the payment of fees by certain H–1B employers; and (2) AC21 provisions that exempt certain employers from the H–1B numerical caps''). Multiple commenters supported this approach.

[80] *See* S. Rep. No. 260, at 10.

[81] *See* USCIS Interim Policy Memorandum, ''Additional Guidance to the Field on Giving Deference to Prior Determinations of H–1B Cap Exemption Based on Affiliation'' (Apr. 28, 2011) (2011 Interim Policy Memo).

x. Create a Mechanism To Obtain a Pre-Determination of Cap Exemption

Comment. One commenter suggested that DHS create a mechanism for an H–1B petitioner to obtain a pre-determination of whether it qualifies for an exemption from the H–1B numerical limitations.

Response. DHS appreciates the commenter's suggestion and is in the process of evaluating how to address the administration of these cap and fee exemption provisions procedurally.

xi. Allot H–1B Visas Subject to the Cap on a Quarterly Basis

Comment. One commenter suggested that DHS allot H–1B visas subject to the H–1B numerical limitations on a quarterly basis.

Response. DHS is unable to address this suggestion as it is outside the scope of this rulemaking.

xii. Request for Continuation of Cap-Subject Employment When Concurrent Cap-Exempt H–1B Employment Ends

Comment. A few commenters suggested that when cap-exempt employment ceases, any concurrent H–1B employment with a cap-subject employer should be authorized to continue until the end of the existing H–1B validity period. One commenter stated that tying the validity period of an unrelated cap-exempt petition to the validity of a concurrent cap-subject petition is overly burdensome, as there is no requirement that employment for the cap-exempt petitioner and the cap-subject petitioner be related, and they may be on different hiring cycles. Another commenter stated that cap-exempt H–1B visa holders may have difficulty changing jobs as their only logical option is to move to another cap-exempt employer or, in the alternative, to attempt to obtain a cap-subject H–1B visa, which has frequently required going through the H–1B lottery in April of each year.

Response. DHS appreciates the challenges that cap-subject employers and H–1B visa holders may face when previously approved cap-exempt concurrent employment ceases, and that transitioning from cap-exempt employment to cap-subject employment may be challenging. However, as soon as an H–1B nonimmigrant worker ceases employment with a cap-exempt employer, that worker becomes subject to the H–1B numerical limitations. Section 103 of AC21 specifically provides that if an H–1B nonimmigrant worker was not previously counted against the cap, and if no other exemption from the cap applies, then the H–1B nonimmigrant worker will be subject to the cap once employment with a cap-exempt entity ceases. *See* INA 214(g)(6), 8 U.S.C. 1184(g)(6).

In the scenario contemplated by the commenter, the basis for the H–1B nonimmigrant worker's employment with an employer that normally would be cap-subject is an exemption from the otherwise controlling H–1B numerical limits based on concurrent employment at a cap-exempt institution, entity or organization as described in section 214(g)(5)(A) and (B) of the INA, 8 U.S.C. 1184(g)(5)(A) and (B). If the concurrent cap-exempt employment ceases before the end of the petition validity period of the cap-subject employment, and the H–1B nonimmigrant worker is not otherwise exempt from the numerical limitations, USCIS may revoke the approval of the cap-subject concurrent employment petition. Because the concurrent employment at a cap-subject employer is considered cap-exempt solely because the H–1B nonimmigrant worker's concurrent cap-exempt employment is continuing, DHS believes it is reasonable to limit the cap-subject concurrent employment approval period to the approved concurrent cap-exempt employment. Although concurrent employers may be on different hiring cycles, this does not change the fact that the concurrent cap-subject employment is contingent upon the continuation of the cap-exempt employment. As such, DHS is not adopting the commenter's suggestion to allow for approval validity periods of cap-subject concurrent employment to exceed the validity period of the concurrent cap-exempt employment.

xiii. Prohibit Cap-Exempt H–1B Worker From Concurrent Employment

Comment. One commenter stated that a cap-exempt H–1B worker should be unable to obtain approval for concurrent employment except under another cap-exempt H–1B petition. This commenter disagreed with the codification in proposed 8 CFR 214.2(h)(8)(ii)(F)(*5*) of the existing policy allowing a cap-exempt H–1B nonimmigrant worker, based on continued employment at an institution, organization or entity under INA 214(g)(5)(A) and (B), to be concurrently employed by a cap-subject employer. The commenter suggested revising the rule to prohibit concurrent employment by a cap-exempt H–1B nonimmigrant worker unless the concurrent employment is independently exempt from the H–1B numerical limitations.

Response. DHS is not adopting this suggestion because it is inconsistent with our longstanding policy and practice to allow a cap-exempt H–1B nonimmigrant worker, who is cap-exempt based on continued employment at an institution, organization or entity under INA 214(g)(5)(A) and (B), to be concurrently employed by a cap-subject employer. Consistent with INA 214(g)(6), if the H–1B nonimmigrant worker ''ceases'' his or her cap-exempt employment, the H–1B nonimmigrant worker would become subject to the numerical cap, unless otherwise exempt.

K. Exemptions to the Maximum Admission Period of H–1B Nonimmigrants

1. *Description of the Final Rule and Changes From the NPRM*

In this final rule, DHS is consolidating and codifying longstanding DHS policy implementing sections of AC21 related to the method for calculating time counted toward the maximum period of H–1B admission, as well as determining exemptions from such limits. Specifically, the final rule addresses: (1) When an H–1B nonimmigrant worker can recapture time spent physically outside of the United States (*see* final 8 CFR 214.2(h)(13)(iii)(C)); (2) whether the beneficiary of an H–1B petition should be counted against the H–1B numerical cap (*see* final 8 CFR 214.2(h)(13)(iii)(C)(*2*)); (3) when an individual qualifies for an H–1B extension beyond the general 6-year limit due to lengthy adjudications delays (*see* final 8 CFR 214.2(h)(13)(iii)(D)); and (4) when an individual qualifies for an H–1B extension beyond the general 6-year limit due to the per-country limitations on immigrant visas (*see* final 8 CFR 214.2(h)(13)(iii)(E)). Together, these provisions in the final rule will enhance consistency among DHS adjudicators and provide a primary repository of governing rules for the regulated community.

In response to public comment, DHS is also providing several clarifications in the final rule. First, DHS has amended the regulatory text at 8 CFR 214.2(h)(13)(iii)(C) to more clearly provide that remaining H–1B time may be recaptured at any time before the foreign worker uses the full period of H–1B admission described in section 214(g)(4) of the INA. Second, DHS has made several edits to simplify and streamline the regulatory text at 8 CFR 214.2(h)(13)(iii)(D), which describes eligibility for the ''lengthy adjudication delay'' exemption afforded by section 106(a) and (b) of AC21 to the general 6-year maximum period of H–1B admission. In particular, the final rule makes clear that to be eligible for this exemption, the individual must have had an application for labor certification or a Form I–140 petition filed on his or her behalf at least 365 days before the date the exemption would take effect. *See* final 8 CFR 214.2(h)(13)(iii)(D)(*1*), (*5*), and (*7*). The final rule further clarifies that an individual becomes ineligible for the lengthy adjudication delay exemption if he or she fails to apply for adjustment of status or an immigrant visa within 1 year of the date an immigrant visa is authorized for issuance. *See* final 8 CFR 214.2(h)(13)(iii)(D)(*10*). The final rule also clarifies that exemptions pursuant to section 106(a) of AC21 may only be made in 1-year increments. *See* final 8 CFR 214.2(h)(13)(iii)(D)(*2*).

Finally, DHS is making a correction to 8 CFR 214.2(h)(13)(iii)(E), which was intended to codify existing policy regarding eligibility for H–1B status beyond the general 6-year maximum, pursuant to section 104(c) of AC21, for certain individuals who are beneficiaries of Form I–140 petitions but are affected by the per-country limitations.[82] In the proposed rule, DHS unintentionally departed from existing policy by requiring an individual seeking an H–1B extension under this provision to show visa unavailability both at the time of filing *and* at the time of adjudication. In the final rule, consistent with longstanding policy, DHS requires petitioners to *only* demonstrate immigrant visa unavailability as of the date the H–1B petition is filed with USCIS. *See* final 8 CFR 214.2(h)(13)(iii)(E).

2. Public Comments and Responses

i. Recapture of H–1B Time

Comment. A few commenters urged DHS to clarify that there is no ''statute of limitations'' on recapture. Some of these commenters noted that nothing in INA 214(g)(7) restricts USCIS from granting unused H–1B time when a recapture request is made more than 6 years after the initial grant of the H–1B petition. One commenter asked DHS to clarify that time spent inside the United States in another nonimmigrant status is ''recapturable.'' This commenter stated that the proposed regulatory text allows recapture only for time in which the foreign national was physically outside the United States.

Response. In the final rule, DHS clarifies that, consistent with its existing policy, there is no time limitation on recapturing the remainder of the initial 6-year period of H–1B admission under INA 214(g)(4).[83] DHS notes, however, that the remainder of any time granted pursuant to an AC21 extension cannot be recaptured. The purpose of this clarification is to promote consistency and efficiency in recapture determinations in accordance with the policy objectives described in USCIS's December 5, 2006 policy memorandum from Michael Aytes outlining the recapture policy.[84]

The relevant USCIS policy memoranda,[85] although not codified, specify that the ''remainder'' period of the initial 6-year admission period is that full admission period minus any time that the H–1B nonimmigrant worker previously spent in the United States in valid H–1B or L–1 status. This policy thus allows time spent inside the United States in any other nonimmigrant status (*i.e.,* any nonimmigrant status other than H–1B or L–1) to be ''recapturable.'' This final rule does not impose any additional limits on this policy. *See* final 8 CFR 214.2(h)(13)(iii)(C).

Comment. One commenter requested that the regulation clarify and expand the types of evidence that may be submitted to support the specific amount of time the H–1B nonimmigrant worker seeks to recapture. The commenter suggested that USCIS consider, in addition to passport stamps and travel tickets, other similar records and evidence of an individual's presence in another country, such as employer, school or medical records.

Response. DHS believes that the final regulation is broad enough to allow for submission of the additional types of records proposed by the commenter, and that the language suggested by the commenter therefore is unnecessary. *See* final 8 CFR 214.2(h)(13)(iii)(C)(*1*).

ii. *AC21 106(a) and (b)—Lengthy Adjudication Delay Exemptions*

Comment. One commenter expressed concern that the proposed provision relating to lengthy adjudication delay exemptions was under-inclusive. The commenter interpreted the language to suggest that 1-year extensions of H–1B status pursuant to section 106(a) of AC21 would be available *only* if the permanent labor certification application or Form I–140 petition was filed 365 days or more prior to the 6-year limitation being reached. The commenter stated that such a policy would be legally impermissible because under section 106(a) of AC21, and as reflected in current DHS policy memoranda, these 1-year H–1B extensions are available to a beneficiary of a permanent labor certification application or Form I–140 petition filed at least 365 days prior to the requested *extension start date,* even if that date is less than 365 days before the 6-year limitation will be reached. The commenter further noted that individuals should be eligible for such 1-year H–1B extensions even if they are in their 6th year of H–1B status or even if they are not in H–1B status at all.

Response. DHS agrees with the commenter that AC21 and current DHS policy allow certain beneficiaries to obtain H–1B status for another year if 365 days have passed since the filing of the permanent labor certification or Form I–140 petition, even if the permanent labor certification application or Form I–140 petition was not filed 365 days or more prior to the end of the 6-year limitation.[86] Section

[82] Under longstanding agency policy, H–1B extensions of stay may be granted pursuant to section 104(c) of AC21 regardless of whether the beneficiary of the Form I–140 petition will seek immigrant status by means of adjustment of status or consular processing. *See* Neufeld May 2008 Memo, at 6. Section 104(c) specifies that individuals become ineligible for extensions of stay after a decision is made on an application for adjustment of status, and this final rule provides that eligibility likewise terminates when the beneficiary's application for an immigrant visa is approved or denied. *See* final 8 CFR 214.2(h)(13)(iii)(E)(*2*)(*ii*). If individuals who seek to consular process are authorized for H–1B extensions of stay under section 104(c) despite adjudication of their immigrant visa applications, they could remain eligible for the extension indefinitely, even if their immigrant visa applications or adjustment of status applications are denied. These individuals could also strategically choose to seek an immigrant visa by means of consular processing rather than by adjusting status in order to benefit from indefinite extensions of H–1B status.

[83] USCIS Memorandum from Michael Aytes, ''Guidance on Determining Periods of Admission for Aliens Previously in H–4 or L–2 Status; Aliens Applying for Additional Periods of Admission beyond the H–1B Six Year Maximum; and Aliens Who Have Not Exhausted the Six-Year Maximum But Who Have Been Absent from the United States for Over One Year.,'' at 4–5 (Dec. 5, 2006) (Aytes Dec. 2006 memo), available at *https://www.uscis.gov/sites/default/files/USCIS/Laws/Memoranda/Static_Files_Memoranda/periodsofadm120506.pdf.*

[86] DHS does not require that an individual who relies on one permanent labor certification application or Form I–140 petition for purposes of

Continued

106(a) of AC21 states that the limitations contained in section 214(g)(4) of the INA do not apply to the H–1B nonimmigrant worker if 365 days or more have elapsed since the filing of an application for permanent labor certification or Form I–140 petition on the individual's behalf. The regulation as proposed did not accurately capture the statute or DHS policy and practice, and DHS has therefore corrected the provision in this final rule to make clear that an application for permanent labor certification or Form I–140 petition only needs to be filed at least 365 days before the exemption would take effect.[87] *See* final 8 CFR 214.2(h)(13)(iii)(D)(*1*), (*5*), and (*7*).

Further, DHS agrees with the commenter that, in certain circumstances, foreign workers need not be in H–1B status to be eligible for the lengthy adjudication delay exemptions under section 106(a) and (b) of AC21, as long as they ''previously held'' H–1B status. This provision, as proposed and finalized in this rule, allows foreign workers to obtain additional periods of H–1B status through petitions to change status or through admission after H–1B visa issuance at a U.S. consulate.

Comment. A few commenters objected to the provision that makes an individual ineligible for the lengthy adjudication delay exemption if he or she fails to file an application for adjustment of status within 1 year of the date an immigrant visa becomes available. Commenters thought that the 1-year requirement is unnecessary, is beyond DHS's legal authority, is contrary to the statute, and would force inappropriate concurrent or premature filings. Additionally, commenters stated that including a provision tying AC21 extension time to immigrant visa availability would hamper H–1B portability and be difficult to apply due to pace of visa availability progression and retrogression. Related to this, a commenter requested that DHS clarify the exact circumstances under which an immigrant visa is deemed to be immediately available. One commenter asked DHS to revise the provision by extending the 1-year limit to a minimum of two years to provide additional time for beneficiaries of Form I–140 petitions who lose their jobs to port to new H–1B employment. Finally, one commenter objected to the proposed requirements on the grounds that they could negatively affect an H–1B beneficiary who is subject to the J–1 program's 2-year foreign residence requirement under section 212(e) of the INA because the foreign national would be unable to file an application for adjustment of status until he or she fulfills the two-year home residency requirement of section 212(e) or obtains a waiver of the residency requirement.

Response. In section 106(a) of AC21, Congress provided exemptions to the general 6-year limitation on H–1B admission for certain individuals who experience lengthy adjudication delays in the processing of their applications for adjustment of status. However, in section 106(b), Congress placed a 1-year temporal limitation on the extension period afforded to these individuals. The intent of this exemption was to help facilitate the adjustment of status of those individuals whose process was stymied due to adjudication delays. Allowing foreign workers to benefit from the exemption when they do not file applications for adjustment of status after an immigrant visa becomes immediately available, may allow such workers to remain in H–1B status indefinitely, which would run counter to the purpose of the statute. *See* S. Rep. No. 260, at 23. To avoid this result, DHS is confirming that beneficiaries of section 106(a) must file an application for adjustment of status within 1 year of immigrant visa availability.[88]

DHS believes that, overall, the 1-year filing requirement is consistent with congressional intent and provides a reasonable amount of time for an individual to take the necessary steps toward obtaining lawful permanent residence, despite visa number retrogression and progression. In addition, DHS believes that tying the extension to immigrant visa availability will encourage individuals to pursue lawful permanent residence without interfering with the ability of petitioners to file H–1B portability petitions on behalf of foreign workers.[89] DHS therefore is finalizing the provision with some technical clarifying revisions.

The final rule also retains current policy that alleviates concerns raised by commenters about the 1-year filing requirement. Specifically, the rule resets the 1-year clock following any period in which an application for adjustment of status or immigrant visa could not be filed due to the unavailability of an immigrant visa. It also authorizes USCIS to excuse the failure to timely file such an application, as a matter of discretion, if an individual establishes that the failure to apply was due to circumstances beyond his or her control. The final rule further clarifies that for purposes of determining when an individual becomes ineligible for the lengthy adjudication delay exemption, DHS will look to see if he or she failed to apply for adjustment of status or an immigrant visa within 1 year of the date an immigrant visa is authorized for issuance based on the applicable Final Action Date in the Visa Bulletin. *See* final 8 CFR 214.2(h)(13)(iii)(D)(*10*).

DHS recognizes that individuals admitted in J–1 status who are subject to a 2-year foreign residence requirement may experience uncertainty when seeking post-sixth year H–1B extensions under section 106(a) of AC21, but the Department believes that this uncertainty is balanced by including the discretion to excuse late filings due to circumstances beyond the individual's control. *See id.*

Comment. One commenter opposed the provision that prohibits extensions of H–1B status based on lengthy adjudication delays in cases in which the approval of the Form I–140 petition has been revoked, particularly in cases in which the revocation is based on employer withdrawal. The commenter stated that such a policy is contrary to the statute, will hinder worker portability, and will increase costs to new employers.

Response. DHS did not propose an across-the-board ban on future H–1B extensions in cases in which employers withdraw their Form I–140 petitions. In

an extension under this provision rely on the same labor certification application or Form I–140 petition for purposes of a subsequent extension request.

[87] As explained in the proposed rule, requests for 1-year extensions of H–1B status under the lengthy adjudication delay can include any periods of time the foreign national spent outside the United States during previous H–1B petition validity for which ''recapture'' is sought, as well as any H–1B ''remainder'' periods available to the foreign national. *See* 8 CFR 214.2(h)(13)(iii)(C); 8 CFR 214.2(h)(9)(iii)(A)(*1*) and 8 CFR 214.2(h)(15)(ii)(B) (explaining that in no case may an H–1B approval period exceed 3 years or the period of LCA validity).

[88] Unless otherwise indicated on the USCIS Web site at *www.uscis.gov/visabulletininfo,* individuals seeking to file applications for adjustment of status with USCIS must use the DOS monthly Visa Bulletin ''Final Action Dates'' chart indicating when individuals may file such applications. The Visa Bulletin is available at *https://travel.state.gov/content/visas/en/law-and-policy/bulletin.html.* When USCIS determines that there are more immigrant visas available for the fiscal year than there are documentarily qualified immigrant visa applicants (as reported by DOS) and pending applicants for adjustment of status, after accounting for the historic drop off rate (*e.g.,* denials, withdrawals, abandonments), USCIS will state on its Web site that applicants may instead reference the ''Dates for Filing Visa Applications'' charts in this Visa Bulletin to determine whether they may apply for adjustment of status. Specific questions related to DOS's determinations are beyond the scope of this rulemaking.

[89] Individuals who apply for adjustment of status generally may apply for employment authorization and, if eligible, may receive employment authorization documents. Upon issuance of employment authorization, such individuals would not require H–1B portability to be able to work in the United States.

fact, under this final rule, DHS will no longer automatically revoke the approval of a Form I–140 petition based on petitioner withdrawal or termination of the petitioner's business if the petition has been approved or the associated application for adjustment of status has been pending for 180 days or more. As long as the approval has not been revoked, the Form I–140 petition will generally continue to be valid with regard to the beneficiary for various job portability and status extension purposes under the immigration laws, including extensions of status for certain H–1B nonimmigrant workers under sections 104(c) and 106(a) and (b) of AC21. *See* final 8 CFR 205.1(a)(3)(iii)(C) and (D).

Comment. One commenter suggested that in situations in which an H–1B nonimmigrant worker applies to change status to another nonimmigrant classification but is faced with a lengthy adjudication, DHS should permit the worker to enter a requested start date for the new classification on the Application to Extend/Change Nonimmigrant Status (Form I–539). The commenter also asked DHS to clarify where on the form the beneficiary should list the date on which his or her H–1B period of admission ends.

Response. This issue will not be addressed in this final rule, as it outside the scope of this rulemaking. This rule does not concern questions relating to how individuals seeking to change status from the H–1B classification to other nonimmigrant classification may complete forms to account for delays in processing. DHS may consider this comment in future policy guidance or rulemaking. DHS also notes that applicants requesting a change of status through the filing of a current version of Form I–539 with USCIS may provide a future change of status effective date. *See* Form I–539 (version 04/06/15), Application to Extend/Change Nonimmigrant Status, Part 2, Question 2.

iii. AC21 Section 104(c)—Per Country Limitations

Comment. One commenter recommended that DHS change its longstanding policy of granting extensions of H–1B status in 3-year increments under section 104(c) of AC21 for H–1B nonimmigrant workers who are the beneficiaries of approved Form I–140 petitions. That commenter requested that DHS instead grant extensions to cover the entire period during which such workers have pending applications for adjustment of status. The commenter believed that such a change would result in additional benefits, including avoiding gaps in employment authorization, encouraging employers to file H–1B extension petitions, facilitating portability, and realizing cost savings for both existing and new employers.

Response. DHS declines the commenter's suggestion to grant extensions of H–1B status for individuals who are eligible for extensions of stay in H–1B status under section 104(c) of AC21 that would cover the entire period their applications for adjustment of status are pending adjudication. Although section 104(c) of AC21 provides authorization for H–1B status beyond the general 6-year maximum under section 214(g)(4) of the Act for certain beneficiaries when the H–1B petitioner can demonstrate that an immigrant visa is not available to the beneficiary at the time of filing, DHS regulations, consistent with section 212(n) of the Act, limit H–1B petition approval validity period to the validity period of the corresponding DOL-approved labor condition application. *See* 8 CFR 214.2(h)(9)(iii)(A)(*1*) and (h)(15)(ii)(B)(*1*). DOL regulations dictating H–1B labor condition application validity, which are not the subject of this rulemaking, establish an upper limit of 3 years. *See* 20 CFR 655.750(a)(1). Furthermore, the language of AC21 section 104(c) does not confer an automatic extension of status. An extension of up to 3 years provides a reasonable mechanism to ensure continued eligibility. USCIS accordingly grants such exemptions in increments of up to 3 years until it adjudicates the beneficiary's application for adjustment of status.[90] *See* 8 CFR 214.2(h)(13)(iii)(E)(*1*).

Although the heading for section 104(c) refers to a ''one-time protection,'' the statutory text makes clear that the exemption remains available until the beneficiary has an EB–1, EB–2, or EB–3 immigrant visa immediately available to him or her.[91] *See* AC21 104(c) (authorizing H–1B extensions under this exemption ''until the alien's application for adjustment of status has been processed and a decision made thereon''). An H–1B petition filed under section 104(c) may include any time remaining within the normal 6-year period of authorized H–1B stay in addition to the time requested in the exemption request, but in no case may the approval period exceed 3 years or the validity period of the LCA. *See* 8 CFR 214.2(h)(13)(iii)(E)(*5*).

Comment. A few commenters requested that, for purposes of determining eligibility for this extension, DHS consider visa unavailability at the time of filing, not at the time of adjudication. Commenters noted that by doing so, the regulation would be more consistent with a plain-language reading of the statute. One commenter stated that such an interpretation would lead to greater efficiencies by increasing certainty within the process, including by allowing the petitioner and the beneficiary to know at the time of filing whether the beneficiary would qualify for the benefit sought.

Response. DHS appreciates the comments and recognizes that the proposed regulatory text was not consistent with its current practice to evaluate visa unavailability only at the time of filing.[92] Therefore, DHS has revised the regulatory text in the final rule by striking the phrase, ''the unavailability must exist at time of the petition's adjudication.'' *See* final 8 CFR 214.2(h)(13)(iii)(E). Thus, consistent with current practice, when determining whether an H–1B nonimmigrant worker is eligible for an extension of H–1B status under section 104(c), USCIS officers will continue to review the Visa Bulletin that was in effect at the time of filing of the Form I–129 petition. If the Visa Bulletin in effect on the date the H–1B petition is filed shows that the foreign worker was subject to a per country or worldwide visa limitation in accordance with the foreign worker's immigrant visa ''priority date,'' the H–1B extension request under section 104(c) may be granted.

Comment. One commenter requested that DHS clarify that the per-country limitation applies to beneficiaries of approved Form I–140 petitions who are ineligible for an immigrant visa either because the ''per country'' limit for their country has been reached or because the ''worldwide'' limit on immigrant visas in the EB–1, EB–2, and EB–3 categories has been reached. *See* 8 CFR 214.2(h)(13)(iii)(E). The commenter

[90] DHS notes that individuals may be eligible for H–1B extensions of stay under section 104(c) of AC21 before filing an application for adjustment of status, so long as a Form I–140 petition has been approved on their behalf and they are otherwise eligible for the extension.

[91] *See* Neufeld May 2008 Memo, at 6, discussing DHS policy allowing for H–1B extensions, in a maximum of three year increments, until such time as the foreign national's application for adjustment of status has been adjudicated, despite the title of section 104(c).

[92] *See* USCIS Memorandum from Donald Neufeld, ''Supplemental Guidance Relating to Processing Forms I–140 Employment-Based Immigrant Petitions and I–129 H–1B Petitions, and Form I–485 Adjustment Applications Affected by the American Competitiveness in the Twenty-First Century Act of 2000 (AC21) (Pub. L. 106–313), as amended, and the American Competitiveness and Workforce Improvement Act of 1998 (ACWIA), Title IV of Div. C. of Public Law 105–277'' (May 30, 2008).

noted that such an action would be consistent with current policy as expressed in USCIS's Neufeld May 2008 Memo, which clarified that both ''per country limitations'' and ''worldwide'' unavailability of immigrant visas can serve as the basis for extension under section 104(c).[93]

Response. DHS agrees with the commenter that the per-country limitation exemption applies to all beneficiaries of approved Form I–140 petitions whose priority dates are on or after the applicable cut-off date in either the country-specific or worldwide columns of the Visa Bulletin chart. These beneficiaries may apply for an extension under 8 CFR 214.2(h)(13)(iii)(E), consistent with longstanding policy. The reference to ''per country limitations'' in section 104(c) invokes chargeability: The determination as to which country's numerical limits the beneficiary's visa will be ''charged to'' or counted against. *See* INA 202(b), 8 U.S.C. 1152(b). For purposes of section 104(c), when reviewing the relevant Visa Bulletin chart, there is no difference between nationals of countries who are identified separately on the Visa Bulletin because their applicable per-country limitation has been exceeded (*i.e.,* nationals of India, China, or Mexico), and nationals of those countries who are grouped under the ''All Chargeability'' column, as long as the priority date has not been reached for the particular beneficiary in question.

iv. Spousal Eligibility for H–1B Extensions Beyond Six Years Under AC21

Comment. Several commenters objected to proposed 8 CFR 214.2(h)(13)(iii)(E)(*6*) and (h)(13)(iii)(D)(6), which would limit H–1B extensions under sections 104(c) and 106(a) of AC21 to principal beneficiaries of permanent labor certification applications or Form I–140 petitions, as applicable. Some commenters requested that 8 CFR 214.2(h)(13)(iii)(E)(*6*) and (h)(13)(iii)(D)(*6*) be stricken from the final rule entirely, asserting that DHS's alleged overly narrow reading of sections 104(c) and 106(a) would: Conflict with Congress's determination that family members are ''entitled to the same status'' as the principal beneficiary of an immigrant visa petition; create an unnecessary burden on some dependent spouses by forcing them to obtain a change of status to H–4 nonimmigrant status before an employment authorization application based on their H–4 status can be adjudicated (see 8 CFR 214.2(h)(9)(iv) and 274a.12(c)(26)); possibly create uncertainty and long gaps in employment eligibility; impede the efforts by some universities to recruit and retain the most high-skilled individuals for positions that are often hard to fill; and prevent U.S. employers from benefiting from the talent of both spouses.

Some commenters asked DHS only to revise the provision concerning extensions under section 104(c), such that a spouse who is in H–1B nonimmigrant status could benefit from his or her spouse's certified labor certification or approved Form I–140 petition as the basis for an H–1B extension under section 104(c). One commenter stated that section 106(a) of AC21 may be used as a basis to allow an H–1B nonimmigrant worker to seek a 1-year extension of H–1B status beyond 6 years when his or her spouse, who is also an H–1B nonimmigrant worker, is the beneficiary of an appropriately filed permanent labor certification application.

Response. DHS disagrees with the commenters' statements and is not adopting any of the suggested changes. In the final rule, DHS is formalizing longstanding DHS policy, without change, that requires a foreign worker seeking an extension of H–1B status to independently meet the requirements for such an extension.[94] *See* 8 CFR 214.2(h)(13)(iii)(D)(*9*) and (h)(13)(iii)(E)(*6*). DHS believes this policy best fulfills Congress's intent in enacting AC21. The legislation expressly allows H–1B nonimmigrant status beyond the 6-year general limitation for ''the beneficiary of a petition filed under § 204(a) of [the INA] for a preference status under paragraph (1), (2), or (3) of § 203(b) [of the INA].'' AC21 104(c). Section 203(b) of the INA, in turn, applies to principal beneficiaries of Form I–140 petitions, but not derivative beneficiaries who are separately addressed in section 203(d) of the INA. DHS concludes that the reference to a single beneficiary in section 104(c) of AC21 reasonably supports an interpretation that the provision applies only to the principal beneficiary of the Form I–140 petition.

Similarly, section 106(a) clearly states that the exemption is available for any H–1B beneficiary on whose behalf an immigrant petition or labor certification has been filed. As amended, that section states in pertinent part: ''The limitation contained in section 214(g)(4) of the Immigration and Nationality Act (8 U.S.C. 1184(g)(4)) with respect to the duration of authorized stay shall not apply to any nonimmigrant alien previously issued a visa or otherwise provided nonimmigrant status under section 101(a)(15)(H)(i)(b) of such Act (8 U.S.C. 1101(a)(15)(H)(i)(b)), if 365 days or more have elapsed since the filing of any of the following: (1) Any application for labor certification under section 212(a)(5)(A) of such Act (8 U.S.C. 1182(a)(5)(A)), in a case in which certification is required or used by the alien to obtain status under section 203(b) of such Act (8 U.S.C. 1153(b)). (2) A petition described in section 204(b) of such Act (8 U.S.C. 1154(b)) to accord the alien a status under section 203(b) of such Act.''

As with section 104(c), DHS also interprets the reference to ''section 203(b)'' in section 106(a) to apply to principal beneficiaries of Form I–140 petitions, but not derivative beneficiaries who are separately addressed in section 203(d) of the INA, which provides that family members may be accorded the same immigrant visa preference allocation as the principal beneficiary.

DHS notes, however, that derivative beneficiaries may be eligible for an independent grant of work authorization in accordance with 8 CFR 214.2(h)(9)(iv) and 274a.12(c)(26). Those regulations extend eligibility for employment authorization to certain H–4 dependent spouses of H–1B nonimmigrant workers who are seeking LPR status, including H–1B nonimmigrant workers who are the principal beneficiaries of an approved Form I–140 petition or who have had their H–1B status extended under section 106(a) and (b) of AC21. Accordingly, DHS is not revising its longstanding policy to address the commenters' suggestion.

L. Whistleblower Protections in the H–1B Nonimmigrant Program

1. Description of Final Rule and Changes From NPRM

In this final rule, DHS enhances worker protection by providing whistleblower protections in cases of retaliation by the worker's employer. The final rule provides that a qualifying employer seeking an extension of stay

[93] Neufeld May 2008 memo, at 6.

[94] *See* USCIS Memorandum from Donald Neufeld, '' Supplemental Guidance Relating to Processing Forms I–140 Employment-Based Immigrant Petitions and I–129 H–1B Petitions, and Form I–485 Adjustment Applications Affected by the American Competitiveness in the Twenty-First Century Act of 2000 (AC21) (Pub. L. 106–313), as amended, and the American Competitiveness and Workforce Improvement Act of 1998 (ACWIA), Title IV of Div. C. of Public Law 105–277'' at 6 (May 30, 2008), available at *https://www.uscis.gov/sites/default/files/USCIS/Laws/Memoranda/Static_Files_Memoranda/Archives%201998-2008/2008/ac21_30may08.pdf.*

for an H–1B nonimmigrant worker, or a change of status from H–1B status to another nonimmigrant classification, would be able to submit documentary evidence indicating that the beneficiary faced retaliatory action from his or her employer based on a report regarding a violation of the employer's LCA obligations. *See* final 8 CFR 214.2(h)(20). If DHS determines such documentary evidence to be credible, DHS may consider any loss or failure to maintain H–1B status by the beneficiary related to such violation as an ''extraordinary circumstance'' under 8 CFR 214.1(c)(4) and 248.1(b). Those regulations, in turn, authorize DHS to grant a discretionary extension of H–1B stay or a change of status to another nonimmigrant classification. *See* 8 CFR 214.1(c)(4) and 248.1(b). Finally, DHS makes a technical change to 8 CFR 214.2(h)(20), fixing the reference to the labor ''condition'' application.

2. Public Comments and Responses

Comment. Several commenters supported the provisions in the proposed rule regarding the protection of whistleblowers in the H–1B nonimmigrant program. The commenters believe that the regulatory text will enhance the likelihood that H–1B nonimmigrant workers will report employer violations and misconduct. One commenter, however, opposed the proposed codification of the ACWIA whistleblower protections in 8 CFR 214.2(h)(20), unless the phrase ''the beneficiary faced retaliatory action'' was amended to read, ''the beneficiary suffered from retaliatory action described in 8 U.S.C. 1182(n)(2)(C)(iv).'' The commenter reasoned that the statutory provision provides a precise definition of retaliatory action and that, without a more precise definition in the regulation, DHS would create arbitrary incentives for H–1B nonimmigrant workers to abuse the whistleblower process as a shortcut to obtaining lawful permanent residence.

Response. DHS appreciates the commenters' support for inclusion of the whistleblower protections in the final rule. DHS also believes the regulatory text is sufficiently clear and is not adopting the suggested change to the text at 8 CFR 214.2(h)(20). DHS notes that INA 212(n)(2)(C)(iv) and (v) require DHS and DOL to devise a process for protecting individuals who file complaints about their employers' retaliatory actions, but the statutory provisions do not require such individuals to demonstrate that they have suffered as a result of such actions. Therefore, DHS believes that adopting the commenter's suggestion would be unduly restrictive. Moreover, DHS notes that the whistleblower provision does not provide a shortcut, or even a path, to lawful permanent residence status as asserted by the commenter.

Comment. One commenter expressed concern about the provision in the proposed rule that requires new employers to present DHS with the DOL complaint and evidence of retaliatory action. The commenter believed that provision may infringe on the worker's privacy and discourage the worker from taking advantage of the whistleblower protection. The commenter recommended that such workers be provided the option of providing documentary evidence in a sealed envelope with the H–1B petition, or in some other way that protects his or her privacy.

Response. While DHS appreciates the commenter's concerns regarding the privacy of whistleblowers, DHS has a fundamental interest in the integrity of the information and documentary evidence submitted as part of a nonimmigrant visa petition. Under 8 CFR 103.2(a)(2), the petitioner must ensure the credibility of such evidence. If the beneficiary of an H–1B petition were allowed to provide sealed evidence of which the petitioner may have no knowledge, then the petitioner would not be able to certify the veracity of such evidence in compliance with 8 CFR 103.2(a)(2). Moreover, because DHS did not propose to revise 8 CFR 103.2(a)(2) in the NPRM to allow for the proposed provision of sealed evidence by a beneficiary, DHS is unable to provide a regulatory accommodation to modify those requirements in this final rule. However, DHS will consider ways to address the concerns raised by the commenter in the future. In addition, DHS notes that the regulations do not preclude petitioners from working with beneficiaries of H–1B petitions to acquire and submit the requisite documentary evidence in a manner that would protect the beneficiaries' privacy.

Comment. One commenter requested that workers who have exceeded the maximum period of stay in H–1B status be allowed to apply for whistleblower protection. The commenter believed that by the time some workers become aware of employer violations, they may no longer be in status.

Response. The final rule allows for credible documentary evidence to be provided, in support of a petition seeking an extension of H–1B stay or change of status to another classification, indicating that the beneficiary faced retaliatory action from his or her employer based on the reporting of a violation of the employer's labor condition application obligations under section 212(n)(2)(C)(iv) of the INA. USCIS may consider a loss or failure to maintain H–1B status by the beneficiary related to such violation as due to, and commensurate with, ''extraordinary circumstances'' as defined by 8 CFR 214.1(c)(4) and 248.1(b). These provisions allow DHS to take into account that the employee may no longer be in valid H–1B status at the time the new H–1B petition is submitted to DHS. However, this provision does not allow the beneficiary to stay beyond the maximum (generally, 6-year) period of stay for an H–1B nonimmigrant workers, unless otherwise eligible.

Comment. One commenter requested that DHS clarify the types of employment considered appropriate for whistleblowers when ''seeking appropriate employment.'' *See* INA 212(n)(2)(C)(iv). The commenter further recommended that the H–1B nonimmigrant worker should be permitted to work in another position that is within the occupational classification of the LCA filed on his or her behalf by the petitioning employer.

Response. DHS notes that the final rule does not restrict the types of jobs or occupational classifications that whistleblowers may seek; however, a beneficiary seeking employment in such circumstances must be granted the appropriate work authorization to work for a new employer.

Comment. One commenter requested that DHS expand upon the types of documentary evidence the Department would accept to establish violations of employer LCA obligations. The commenter stated that acceptable forms of evidence should be broadened to include other relevant documents, such as an employment offer, prevailing wage confirmation letter, and ETA Form 9089, even if the worker has not filed a complaint against the employer.

Response. Section 212(n)(2)(C)(v) of the INA requires the Secretary of Labor and the Secretary of Homeland Security to devise a process under which an H–1B nonimmigrant worker may file a complaint regarding a violation of clause (iv), which prohibits employers from intimidating, threatening, restraining, coercing, blacklisting, discharging, or in any other manner discriminating against an employee as retaliation for whistleblowing. Under that section, an H–1B nonimmigrant worker who is otherwise eligible to remain and work in the United States may be allowed to seek other appropriate employment in the United States for a period not to exceed the maximum period of stay authorized for

H–1B classification. *See* INA section 212(n)(2)(C)(v), 8 U.S.C. 1182(n)(2)(C)(v). In addition, DHS has not limited the scope of credible evidence that may be included to document an employer violation. Rather, DHS generally requests credible documentary evidence indicating that the beneficiary faced retaliatory action from his or her employer due to a report regarding a violation of the employer's LCA obligations.

Comment. One commenter requested that the final rule include a provision granting employment authorization to an H–1B nonimmigrant worker who faces retaliatory action due to employer violations of LCA obligations, and his or her spouse and eligible dependents, in order to help defray the financial costs resulting from such violations.

Response. There is no express independent employment authorization for an H–1B nonimmigrant worker who faces retaliatory action due to employer violations of LCA obligations. However, under provisions in the rule, an H–1B nonimmigrant worker facing employer retaliation, along with his or her dependents, may benefit from the grace period of up to 60 days during which the worker could extend or change status. Alternatively, if the H–1B nonimmigrant worker is the beneficiary of a qualifying and approved employment-based immigrant visa petition, the worker may obtain employment authorization in compelling circumstances pursuant to 8 CFR 204.5(p), if otherwise eligible.

Comment. One commenter requested that DHS institute specific penalties against employers that are proven to have violated statutory requirements related to the H–1B program, particularly when those violations may have caused H–1B nonimmigrant workers to lose their H–1B status.

Response. DHS notes that the INA already provides penalties for employers that violate statutory requirements regarding H–1B compliance. Those penalties are listed in section 212(n)(2)(C) of the INA.

Comment. One commenter requested that DHS provide 30-day grace periods to H–1B nonimmigrant workers who experience involuntary termination. The commenter noted that a 30-day grace period would help such workers due to the considerable time it may take to gather credible evidence of retaliation and seek new employment.

Response. The final rule provides H–1B nonimmigrants, among others, a grace period during each authorized nonimmigrant validity period of up to 60 days or until the existing validity period ends, whichever is shorter, whenever employment ends for these individuals. *See* 8 CFR 214.1(l)(2). Therefore, DHS does not believe it is necessary to add a specific provision to the regulations that gives a shorter grace period to H–1B nonimmigrants who may have been the victims of employer retaliation. DHS believes that the 60-day grace period allows certain high-skilled workers facing a sudden or unexpected end to their employment sufficient time to seek new employment, seek a change of status to a different nonimmigrant classification, or make preparations for departure from the United States.

Comment. One commenter requested that the debarment provisions in the H–1B program should be revised to strengthen whistleblower protections. The commenter stated that current H–1B debarment regulations fail to protect the existing workforce when violations are found, thus inadvertently penalizing the H–1B nonimmigrant workers themselves by making it impossible for them to renew their visas once their employers are debarred. The commenter further stated that the rule should include provisions to exempt the existing workforce from being affected by employer debarment or to make H–1B nonimmigrant workers whose employers are debarred automatically eligible for other forms of relief, such as deferred action or independent EADs.

Response. DHS does not believe it is necessary to revise 8 CFR 214.2(h)(20) to address the commenter's concerns, as various types of relief are available to these workers under this rule. For example, H–1B nonimmigrant workers of employers who are subsequently debarred from the H–1B program may be eligible to use the 60-day grace period afforded by this rule to seek new employment, seek a change of status to a different nonimmigrant classification, or make preparations for departure from the United States. Moreover, these workers may be eligible to apply for a compelling circumstances EAD.

Comment. One commenter noted that INA 212(n)(2)(C) requires DHS to establish a process for H–1B nonimmigrant workers to file complaints with DOL regarding illegal retaliation. The commenter encouraged DHS to coordinate this process with DOJ's Office of Special Counsel for Immigration-Related Unfair Employment Practices (OSC) and argued that creating a streamlined, consistent reporting mechanism for whistleblowers would promote integrity in the enforcement process.

Response. DHS believes that the commenter is referencing INA 212(n)(2)(c)(v), which requires DOL and DHS to devise a process to ensure H–1B nonimmigrants who file whistleblower complaints are able to seek continued employment in the United States in H–1B status or under other nonimmigrant classifications, if otherwise eligible. USCIS has implemented this statute by excusing an individual's failure to maintain H–1B status if there is credible evidence that the failure was due to employer retaliation. In this final rule, DHS is codifying this practice under new 8 CFR 214.2(h)(20), the provision addressing retaliatory action claims. Under that provision, USCIS may permit individuals who face retaliatory action from an employer based on a report regarding violations of the employer's LCA obligations, as described in section 212(n)(2)(C)(iv) of the Act, and whose loss or failure to maintain H–1B status relates to the employer violation, to extend their stay in H–1B status or change status to another classification. DHS currently collaborates with its interagency partners on matters of shared statutory responsibility and will continue to seek ways to enhance such collaboration in the future.

M. Haitian Refugee Immigrant Fairness Act of 1998

1. Changes to DHS HRIFA Regulations

DHS did not receive public comments regarding the proposed changes to the DHS regulations concerning individuals applying for adjustment of status under the Haitian Refugee Immigrant Fairness Act of 1998 (HRIFA), Public Law 105–277, div. A, title IX, sections 901–904, 112 Stat. 2681–538–542 (codified as amended at 8 U.S.C. 1255 note (2006)). Therefore, DHS is retaining these changes as proposed. Under the final rule, DHS will be required to issue an EAD, rather than an interim EAD, within the timeframes currently provided in 8 CFR 245.15(n)(2). Additionally, HRIFA-based applicants for adjustment of status are eligible for the automatic 180-day extension of expiring EADs, provided they file a timely request for renewal. *See* final 8 CFR 245.15(n)(2).

N. Application for Employment Authorization

1. Description of Final Rule and Changes From NPRM

In this final rule, DHS is adopting with minimal changes the NPRM's proposed regulatory text to update 8 CFR 274a.13 governing the processing of Applications for Employment Authorization (Forms I–765) and is also changing its policy concerning how early USCIS will accept renewal applications in the same employment category (by allowing, except when impracticable, filings up to 180 days before expiration). First, DHS is modifying the changes to 8 CFR 274a.13(a) proposed in the NPRM by adding a provision indicating that USCIS may announce through its Web site, in addition to form instructions, which employment categories may file EAD applications concurrently with underlying benefit requests. Second, as proposed, DHS is eliminating the regulatory provision at current 8 CFR 274a.13(d) that directs USCIS to adjudicate Forms I–765 within 90 days of filing and that requires interim employment authorization documents to be issued if the adjudication is not completed within the 90-day timeframe.[95] Third, to help prevent gaps in employment authorization, DHS is providing for the automatic extension of expiring EADs (and underlying employment authorization, if applicable) for up to 180 days with respect to individuals who are seeking renewal of their EADs (and, if applicable, employment authorization) based on the same employment authorization categories under which they were granted. For a renewal applicant who is a Temporary Protected Status (TPS) beneficiary or individual approved for TPS ''temporary treatment benefits,'' [96] the renewal application can indicate an employment authorization category based on either 8 CFR 274a.12(a)(12) or (c)(19). In addition to the employment category requirement, the renewal applicant must continue to be employment authorized incident to status beyond the expiration of the EAD or be applying for renewal under a category that does not first require adjudication of an underlying benefit application, petition, or request. The rule clarifies that this requirement applies to individuals granted TPS described in 8 CFR 274a.12(a)(12) and pending applicants for TPS issued EADs under 8 CFR 274a.12(c)(19). The final rule requires, as proposed, that qualifying applicants file their renewal applications timely (*i.e.,* prior to the expiration of their EADs) for the automatic EAD extension to apply.[97] However, this rule clarifies that for renewal applications based on TPS, the automatic EAD extension provision will apply to individuals who file during the re-registration period described in the **Federal Register** notice applicable to their country's TPS designation, even if they file after their EADs are facially expired. This final rule is making this clarification because, in limited cases, the re-registration period may extend beyond the EAD validity period.

DHS listed 15 employment categories in the Supplementary Information to the NPRM that meet the regulatory criteria.[98] DHS reaffirms the list of 15 employment eligibility categories as qualifying for automatic EAD/ employment authorization extensions under this final rule.[99] USCIS will

[95] Excepted from the 90-day processing requirement in 8 CFR 274a.13(d)), prior to its elimination in this rulemaking, are the following classes of aliens: Applicants for asylum described in 8 CFR 274a.12(c)(8); certain H–4 nonimmigrant spouses of H–1B nonimmigrants; and applicants for adjustment of status applying under the Haitian Refugee Immigrant Fairness Act of 1998 (HRIFA). Application processing for asylum applicants is governed by current 8 CFR 274a.13(a)(2) and does not include provisions for interim employment authorization documentation. The employment authorization of applicants for adjustment of status under HRIFA is governed by 8 CFR 245.15(n). The provision at 8 CFR 274a.13(d) also exempts applicants for adjustment of status described in 8 CFR 245.13(j). In 2011, 8 CFR 245.13 was removed from DHS regulations. *See* 76 FR 53764, 53793 (Aug. 29, 2011). However, the cross-reference to 8 CFR 245.13(j) in current 8 CFR 274a.13(d) was inadvertently retained. Prior to its removal in 2011, 8 CFR 245.13 provided for adjustment of status for certain nationals of Nicaragua and Cuba pursuant to section 202 of the Nicaraguan Adjustment and Central American Relief Act, Public Law 105–100, 111 Stat. 2160, 2193 (Nov. 19, 1997). The application period for benefits under this provision ended April 1, 2000. USCIS removed 8 CFR 245.13 from DHS regulations in 2011 as it no longer has pending applications pursuant to this provision. *See* 76 FR at 53793.

[96] Individuals approved for TPS ''temporary treatment benefits'' includes those who obtain employment authorization based on *prima facie* eligibility for TPS during adjudication of their TPS applications. *See* INA 244(a)(4), 8 U.S.C. 1254a(a)(4); 8 CFR 244.5, 244.10(e).

[97] This final rule also adopts, with clarifying changes, the provisions related to the new automatic EAD extension provision, including that: An EAD that is automatically extended will continue to be subject to any limitations and conditions that applied before the extension (*see* final 8 CFR 274a.13(d)(2)); although the validity of the expiring EAD will be extended for up to 180 days, such validity will be automatically terminated upon the issuance of a notification of denial of the renewal application (*see* final 8 CFR 274a.13(d)(3)); and automatic extensions may also be terminated before the renewal application is adjudicated either through written notice to the applicant, or a notice to a class of aliens published in the **Federal Register**, or any other applicable authority (*see* final 8 CFR 274a.13(d)(3)).)

[98] In the NRPM, DHS listed 15 employment authorization categories under which renewal applicants would be able to receive automatic EAD extensions. Note that this list corrects an error in the NPRM wherein DHS failed to include Palau among the list of nations specified in the eligible employment category based on 8 CFR 274a.12(a)(8). As corrected, the list of 15 employment authorization categories are: Aliens admitted as refugees (*see* 8 CFR 274a.12(a)(3)); aliens granted asylum (*see* 8 CFR 274a.12(a)(5)); aliens admitted as parents or dependent children of aliens granted permanent residence under section 101(a)(27)(I) of the INA, 8 U.S.C. 1101(a)(27)(I) (*see* 8 CFR 274a.12(a)(7)); aliens admitted to the United States as citizens of the Federated States of Micronesia, the Marshall Islands, or Palau under agreements between the United States and those nations (*see* 8 CFR 274a.12(a)(8)); aliens granted withholding of deportation or removal (*see* 8 CFR 274a.12(a)(10)); aliens granted Temporary Protected Status (TPS) (regardless of the employment authorization category on their current EADs) (*see* 8 CFR 274a.12(a)(12) and (c)(19)); aliens who have properly filed applications for TPS and who have been deemed *prima facie* eligible for TPS under 8 CFR 244.10(a) and have received an EAD as a ''temporary treatment benefit'' under 8 CFR 244.10(e) and 274a.12(c)(19); aliens who have properly filed applications for asylum or withholding of deportation or removal (*see* 8 CFR 274a.12(c)(8); aliens who have filed applications for adjustment of status under section 245 of the INA, 8 U.S.C. 1255 (*see* 8 CFR 274a.12(c)(9)); aliens who have filed applications for suspension of deportation under section 244 of the INA (as it existed prior to April 1, 1997), cancellation of removal under section 240A of the INA, or special rule cancellation of removal under section 309(f)(1) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (*see* 8 CFR 274a.12(c)(10)); aliens who have filed applications for creation of record of lawful admission for permanent residence (*see* 8 CFR 274a.12(c)(16)); aliens who have properly filed legalization applications pursuant to section 210 of the INA, 8 U.S.C. 1160 (*see* 8 CFR 274a.12(c)(20)); aliens who have properly filed legalization applications pursuant to section 245A of the INA, 8 U.S.C. 1255a (*see* 8 CFR 274a.12(c)(22)); aliens who have filed applications for adjustment of status pursuant to section 1104 of the LIFE Act (*see* 8 CFR 274a.12(c)(24)); and aliens who are the principal beneficiaries or qualified children of approved VAWA self-petitioners, under the employment authorization category ''(c)(31)'' in the form instructions to the Application for Employment Authorization (Form I–765).

[99] The TPS-related employment authorization categories, 8 CFR 274a.12(a)(12) and (c)(19), are included in the list of categories that are eligible for the automatic 180-day EAD extension. The category based on 8 CFR 274a.12(a)(12) denotes that the EAD is for employment authorization based on a grant of TPS. The category based on 8 CFR 274a.12(c)(19) denotes that the EAD is for employment authorization for a TPS applicant who is *prima facie* eligible for TPS based on a pending TPS application. EADs are considered ''temporary treatment benefits'' when provided to such pending TPS applicants. *See* 8 CFR 244.5, 244.10(e). If TPS is granted before the expiration date on the individual's EAD based on 8 CFR 274a.12(c)(19), USCIS usually allows the individual to continue using that EAD until it expires and does not issue an 8 CFR 274a.12(a)(12)-based EAD for a TPS beneficiary until the individual requests an EAD during the next TPS re-registration period for the individual's country. If the relevant TPS country designation is extended, the re-registration process is published in the **Federal Register** and includes instructions on filing to show continued maintenance of TPS eligibility and to renew work authorization documentation. In the past, there have been some very limited circumstances where the designated filing period extended beyond the existing EAD validity date. Therefore, an applicant who files an application to renew his or her EAD may receive an automatic extension under this rule, as long as the application is filed during the designated TPS re-registration filing period in the TPS **Federal Register** notice, even where that period may extend beyond the current EAD validity date. Additionally, because the 8 CFR 274a.12(a)(12) and (c)(19) eligibility categories both relate to TPS, the applicant may benefit from the automatic 180-day extension as long as the receipt notice for the EAD renewal application and the facially expired card in the applicant's possession bear either of these two eligibility categories, but they do not need to match each other. Therefore, if an individual has an EAD bearing the 8 CFR 274a.12(c)(19) eligibility category, but has since

Continued

maintain, and update as necessary, the list of qualifying employment categories on its Web site.

Current DHS policy allows EAD renewal applications submitted under certain categories to be filed up to 120 days before the applicant's current EAD expires. In response to the comments received requesting additional time for advance filing, DHS will adopt a filing policy that will generally permit the filing of an EAD renewal application up to 180 days before the current EAD expires, except when impracticable. This filing policy will be posted on the USCIS Web site and will take into consideration any other regulatory provisions that might require a longer or shorter filing window depending on the specific renewal EAD employment category.

The measures DHS is taking in this final rule will provide additional stability and certainty to employment-authorized individuals and their U.S. employers, while reducing opportunities for fraud and better accommodating increased security measures, including technological advances that utilize centralized production of tamper-resistant documents.

2. Public Comments and Responses

i. Adjudication Timeframes for Initial and Renewal Applications of Employment Authorization

Comment. Many commenters disagreed with the proposal to eliminate the 90-day processing requirement for adjudicating EAD requests. These commenters expressed concerns that eliminating this requirement would cause gaps in employment authorization for certain foreign workers, lead to longer adjudication times, ultimately lead to job losses, and cause hardship for many beneficiaries. Some commenters further noted that delays in the adjudication of EAD applications for certain vulnerable populations—such as crime victims, victims of domestic and other gender-based violence—could place them in even more desperate situations. Another commenter stated that the fee associated with the 90-day adjudication provides a ''social contract'' that ensures that USCIS will timely adjudicate requests and prevent delays that could harm the employment prospects of applicants.

Response. DHS carefully considered these concerns, but disagrees with the assertion that eliminating the 90-day processing time for Applications for Employment Authorization (Forms I–765) from the regulations will cause gaps in employment, undue hardship, job losses, or longer adjudication times. DHS believes that, regardless of the imposition of a fee, Forms I–765 must be adjudicated within reasonable timeframes. Although DHS is eliminating the 90-day processing timeframe for Forms I–765 from the regulatory text, USCIS continues to be committed to the processing goals it has established for Form I–765. Many renewal applicants who may have benefitted from the 90-day timeframe for Form I–765 will now be able to benefit from this rule's provision regarding automatic EAD extensions for up to 180 days for certain employment categories. DHS anticipates that the automatic EAD extension will ensure continued employment authorization for many renewal applicants and prevent any work disruptions for both the applicants and their employers.

Eliminating the 90-day EAD processing timeframe will also support USCIS's existing practice regarding concurrent filing of EAD applications based on underlying immigration benefits. For example, although victims of domestic violence can receive their initial EADs only after USCIS adjudicates the underlying victim-based benefit request, USCIS allows the concurrent filing of the Form I–765 with the underlying victim-based benefit request so that such victims receive EADs expeditiously following a grant of the benefit request. *See* Form I–765 form instructions, at page 7 (instructions for self-petitioners under the Violence Against Women Act (VAWA)). Before USCIS adopted this practice, applicants who concurrently filed a victim-based benefit request with a Form I–765 would have their Form I–765 denied if the underlying benefit was not adjudicated within 90 days of filing. USCIS issued such denials on the ground that the applicant was not yet eligible to receive an EAD because the underlying benefit request was still pending. Removal of the 90-day regulatory timeframe allows USCIS to not only accept Forms I–765 concurrently filed with the underlying victim-based benefit requests, but also permits the Form I–765 to remain pending until USCIS completes its adjudication of the benefit request. Once USCIS issues a final decision on the underlying benefit request that permits approval of the Form I–765, USCIS will be able to immediately issue a decision on the Form I–765 and produce an EAD. This will result in the victim-based EAD applicant receiving employment authorization faster than if the applicant were required to file Form I–765 only after receiving a grant of the underlying benefit request.

Comment. Many commenters supported keeping the 90-day timeframe for adjudicating EADs in the regulations. These commenters stated that the regulatory timeframe provides certainty for applicants, offers a potential legal remedy if EADs are not delivered on time, and provides interim relief if adjudication deadlines are not met. Several of these commenters asserted that DHS's plan to publish operational policy guidance was an inadequate substitute for keeping the 90-day timeframe in the regulations, especially as it could strip applicants of legal protection when EAD adjudications take longer than 90 days.

Another commenter suggested that DHS keep the 90-day adjudication requirement in the regulations but add limited exceptions. According to the commenter, these exceptions could address situations involving security concerns, situations in which underlying benefit applications or petitions are still being adjudicated, and situations involving operational emergencies that prevent DHS from making timely adjudications.

Response. DHS disagrees that operational policy statements regarding the 90-day application adjudication timeframe will be inadequate. The public will be able to rely on USCIS's announcements regarding Form I–765 processing, which will reflect USCIS's up-to-date assessment of its operational capabilities. Applicants also will continue to have redress in case of adjudication delays by contacting USCIS. *See https://www.uscis.gov/forms/tip-sheet-employment-authorization-applications-pending-more-75-days.*

DHS also declines to adopt the suggestion by commenters to retain the 90-day adjudication timeframe in the regulations and modify it to provide for exceptions, such as in cases involving security concerns. Applying different processing standards to certain applicants adds complexity to the overall management of the agency's workloads, and to the customer service inquiry process.

The additional relief from processing delays that DHS is providing in this final rule is the new provision that automatically extends the validity of EADs and, if needed, employment authorization for up to 180 days for certain applicants who timely file renewal EAD applications under the same eligibility category. The automatic

received TPS and is applying for a renewal under the 8 CFR 274a.12(a)(12) eligibility category, he or she would still get the benefit of the automatic 180-day extension under this rule.

extension will only apply to such renewal applicants if their employment is authorized incident to status beyond the expiration of their current EADs or if their eligibility is not dependent on USCIS first adjudicating an underlying immigration benefit.

ii. Earlier Filing for EAD Renewals

Comment. Several commenters asked DHS to permit the filing of a renewal EAD application up to 180 days in advance of the expiration of the applicant's current EAD. These commenters noted that DHS currently will not accept a renewal EAD application that is filed more than 120 days prior to the expiration date. They suggested that by permitting earlier filing, renewal applicants who are not eligible for the automatic 180-day extension will have a greater chance of having their applications adjudicated before their EADs expire and thus avoid a gap in employment authorization. One commenter also stated that a longer filing window would better align with the current Form I–129 filing window for H–1B and L–1 nonimmigrants, allowing nonimmigrant workers (and dependents eligible to apply for EADs) to concurrently apply for extensions of stay and employment authorization. Moreover, commenters stated that allowing applications to be submitted further in advance would benefit DHS by affording it more time to manage its workload, and alleviate concerns about its ability to process all Forms I–765 within 90 days.

Response. DHS strongly encourages eligible individuals to file renewal EAD applications (Forms I–765) sufficiently in advance of the expiration of their EADs to reduce the possibility of gaps in employment authorization and EAD validity. DHS appreciates commenters' desire to avoid such gaps and agrees with commenters that modifying the filing policy to allow Forms I–765 to be filed earlier is a reasonable solution. Therefore, DHS is adopting a flexible filing policy to permit the filing of a renewal EAD application as early as 180 days in advance of the expiration of the applicant's current EAD.[100] USCIS will permit the 180-day advance filing policy when practicable, taking into account workload, resources, filing surges, processing times, and specific regulatory provisions that mandate specific filing windows. DHS will continue to monitor the current filing conditions of Form I–765 applications and will set the filing time period for renewal EAD applications as appropriate. USCIS will post filing time periods for renewal EAD applications on its Web site.

iii. Concurrent Filings

Comment. One commenter suggested allowing applicants to file for EADs concurrently with related benefit requests (*e.g.,* a nonimmigrant visa petition or an application for adjustment of status). Although this is currently allowed to the extent permitted by the form instructions or as announced on the USCIS Web site, this commenter stated that form instructions rarely specify when an EAD may be filed concurrently with another petition, and also stated that forms should not be a substitute for the law when determining when a benefit can be requested. For example, the commenter noted that instructions have not been updated for the Application to Extend/Change Nonimmigrant Status (Form I–539) to state that some H–4 dependent spouses are now eligible for EADs. The commenter recommended amending the provision to allow concurrent filings to the extent permitted by law, rather than only as provided in form instructions.

Response. This rule provides general authority for allowing Forms I–765 to be concurrently filed with other benefit requests where eligibility for employment is contingent upon a grant of the underlying benefit request. *See* final 8 CFR 274a.13(a). It is not possible to allow concurrent filing across all eligible categories. For example, an asylum applicant cannot apply for work authorization until the completed asylum application has been pending for at least 150 days. *See* 8 CFR 208.7(a). By establishing regulatory authority for USCIS to permit concurrent filing when appropriate, this rule provides USCIS with the flexibility necessary to decide when concurrent filing is feasible based on existing operational considerations that take into account the particular circumstances of different underlying immigration benefits. Such decisions on filing procedures are appropriately placed in instructional materials rather than the regulations. Therefore, while DHS disagrees with the commenter that this more specific information should be included in the regulations, DHS agrees that locating up-to-date information regarding the availability of concurrent filing for particular eligibility categories can be challenging for the public. DHS has determined that, in addition to the form instructions proposed in the NPRM, a convenient and useful location to announce concurrent filing information is on the USCIS Web site. Accordingly, DHS is revising the regulatory text at 8 CFR 274a.13(a) in this final rule to include Web site announcements related to the concurrent filing of Forms I–765. Placing information regarding the availability of concurrent filings on USCIS's Web site will enable DHS to more efficiently make updates, particularly as the transformation to electronic processing occurs in the future.[101] USCIS also will continue posting guidance in other public engagement materials regarding concurrent filings.[102] Applicants should consult the appropriate form instructions or the USCIS Web site to determine whether they may file their Form I–765 concurrently with their underlying benefit request.

Regarding the example raised by the commenter, the Form I–539 instructions do not address issues of employment authorization. Rather, the Form I–539 instructions outline who is eligible to apply for an extension of stay or change of nonimmigrant status. However, the current version of the Form I–765 instructions clearly state that some H–4 nonimmigrant spouses of H–1B nonimmigrant workers are eligible for employment authorization and may also be able to concurrently file their Form I–765 with Form I–539. DHS also currently permits such H–4 nonimmigrant spouses seeking an extension of stay to file Form I–539 concurrently with a Petition for a Nonimmigrant Worker (Form I–129) seeking an extension of stay on behalf of the H–1B nonimmigrant worker. This provides several efficiencies, as continued H–4 status of the dependent spouse is based on the adjudication of the H–1B nonimmigrant worker's Form I–129 petition and both forms may be processed at the same USCIS location. By posting concurrent filing instructions in form instructions or on the USCIS

[100] Current USCIS policy allows early filing up to 120 days in advance.

[101] Over the next several years, USCIS will continue rolling out a secure, customer-friendly online account system that will enable and encourage customers to submit benefit requests and supporting documents electronically. This Web-based system will greatly simplify the process of applying for immigration benefits. It will assign new customers a unique account which will enable them to access case status information, respond to USCIS requests for additional information, update certain personal information, and receive timely decisions and other communications from USCIS. For more information, *see https://www.uscis.gov/about-us/directorates-and-program-offices/office-transformation-coordination.*

[102] *See, e.g.,* FAQs for employment authorization for certain H–4 Spouses *https://www.uscis.gov/working-united-states/temporary-workers/faqs-employment-authorization-certain-h-4-dependent-spouses* and *https://www.uscis.gov/i-539-addresses.* USCIS also posts information on its Web site regarding concurrent filing for individuals seeking lawful permanent residence. The Web page can be found at *https://www.uscis.gov/green-card/green-card-processes-and-procedures/concurrent-filing.*

Web site, DHS can better address such complicated adjudication processes.

With respect to the Form I–765, DHS will post on the USCIS Web site a list of the categories of applicants who may file their Forms I–765 concurrently with their underlying eligibility requests. By posting this type of comprehensive information on the USCIS Web site, applicants will have up-to-date information on filing procedures.

iv. Potential Gaps in Employment Authorization

Comment. Some commenters stated that the elimination of the 90-day processing timeframe may cause beneficiaries uncertainty and stress, and deter some individuals from traveling to their home countries. Commenters also expressed concerns about accruing unlawful presence while waiting for their EADs, which might affect their eligibility for future immigration benefits. Finally, commenters opposed eliminating the 90-day provision by noting that employers may refrain from hiring foreign workers, or even lay off foreign workers, who do not have a current EAD in order to avoid the risk of fines imposed by ICE.

Response. DHS does not believe that eliminating the 90-day EAD processing timeframe from the regulation will lead to the issues raised by commenters, except in rare instances. DHS plans to maintain current processing timeframes and will continue to post that information on its Web site.[103] Consistent with current protocols, applicants not covered by the automatic 180-day extension of employment authorization will continue to be able to call the National Customer Service Center (NCSC) if their application is pending for 75 days or more to request priority processing. Applicants covered by the 180-day automatic extension will be permitted to contact the NCSC if their application is still pending at day 165 of the auto-extension to request priority processing. For those cases that are not fit for adjudication within current processing timeframes, DHS does not believe that employment authorization should be granted, and EADs issued, before eligibility is determined.

To avoid potential gaps in employment authorization resulting from unexpected delays in processing, DHS is providing workable solutions in this final rule. As mentioned earlier in this Supplementary Information, USCIS is changing its recommended filing timelines and will accept renewal EAD applications filed as far in advance as 180 days from the expiration date of the current EAD. The extent of the advance filing window will depend on operational considerations. Affected stakeholders can, and are strongly encouraged to, reduce any potential gaps in employment authorization or employment authorization documentation by filing Forms I–765 well enough in advance of the expiration dates on their current EADs.

Further, DHS is providing automatic 180-day extensions of some EADs to renewal applicants within certain employment eligibility categories upon the timely filing of applications to renew their EADs.[104] This provision significantly mitigates the risk of gaps in employment authorization and required documentation for eligible individuals. In addition, the provision will provide consistency for employers, as the extension period is similar to that which already is used in other contexts. For example, DHS typically provides automatic 180-day extensions of EADs to TPS beneficiaries when the registration period does not provide sufficient time for TPS beneficiaries to receive renewal EADs.[105] DHS regulations also provide certain F–1 nonimmigrant students seeking extensions of STEM Optional Practical Training (OPT) with automatic extensions of their employment authorization for up to 180 days. *See* 8 CFR 274a.12(b)(6)(iv).

In response to concerns regarding accrual of unlawful presence, DHS believes that removal of the 90-day adjudication timeline from the regulations generally has no effect on the application of DHS's longstanding unlawful presence guidance. A foreign national will not accrue unlawful presence in the United States if he or she is deemed to be in an authorized period of stay. Neither the mere pendency of a Form I–765 application nor the receipt of an EAD generally determines whether an individual is in an authorized period of stay for purposes of accrual of unlawful presence. DHS has described circumstances deemed to be ''authorized periods of stay'' in policy guidance.[106]

With respect to the comments regarding freedom to travel outside the United States, DHS is not prohibiting applicants with pending Forms I–765 from traveling. However, DHS's longstanding policy is that if an applicant travels outside of the United States without a valid visa or other travel document while he or she has a pending change of status application, DHS considers the applicant to have abandoned that application.[107] Moreover, although applicants may travel abroad, they must have a valid visa or other travel document that allows them to return to the United States. An EAD, by itself, does not authorize travel.

Finally, with respect to commenters' concerns that this rule will cause employers to refrain from hiring foreign workers or may lay off foreign workers to avoid potential fines imposed by ICE, DHS believes that the steps it has taken to minimize the possibility of gaps in employment authorization will satisfactorily allay these concerns. Employers that refuse to hire workers with 180-day extensions, or that terminate such workers, may be in violation of the INA's anti-discrimination provision at section 274B, 8 U.S.C. 1324b, which prohibits, inter alia, discrimination based on a worker's citizenship status, immigration status, or national origin, including discriminatory documentary practices with respect to the employment eligibility verification (Form I–9 and E-Verify) process. Employers that violate the anti-discrimination provision may be subject to civil penalties, and victims of such discrimination may be entitled to back pay awards and reinstatement. For more information, visit *https://www.justice.gov/crt/about/osc.*

Comment. One commenter requested that DHS add a regulatory provision requiring USCIS to issue a Form I–797C Notice of Action (receipt notice) within a certain timeframe. This commenter stated that such a regulatory provision would assist individuals who use Form I–797C to ''validate'' continued employment with his or her employer or for state or federal agencies that rely on EADs to grant ''safety net'' benefits. Otherwise, according to the commenter, the value of the automatic EAD extension will be eviscerated.

[103] *See* current USCIS processing timeframes at *https://egov.uscis.gov/cris/processTimesDisplayInit.do.*

[104] ''Timely filed'' for purposes of renewal applicants filing TPS-based EAD applications means filed according to the applicable TPS country-specific **Federal Register** notice regarding procedures for obtaining EADs. In very limited cases, the filing period described in the **Federal Register** notice may extend beyond the EAD validity date.

[105] *See, e.g.,* 80 FR 51582 (Aug. 25, 2015) (Notice auto-extending EADs of Haitian TPS beneficiaries for 6 months).

[106] *See* Neufeld May 2009 Memo.

[107] *See* USCIS Memorandum from Thomas Cook, ''Travel after filing a request for a change of nonimmigrant status'' (June 18, 2001), available at *https://www.uscis.gov/sites/default/files/files/pressrelease/Travpub.pdf.*

Response. DHS declines to adopt the suggestion to impose a regulatory issuance deadline on the Form I–797C, Notice of Action (receipt notice). Issuance of the receipt notice depends on highly variable operational realities affecting the intake process, and thus cannot be held to a regulatory ''processing'' timeframe. Furthermore, DHS notes that receipt notices are generally issued in a timely manner, usually two weeks.

v. Interim EADs

Comment. Many commenters disagreed with the proposed elimination of the issuance of interim EADs with validity periods of up to 240 days when an EAD application is not adjudicated within the previously discussed 90-day timeframe. These commenters suggested that the lack of an interim EAD may result in an employer laying off a worker if his or her EAD application is not timely adjudicated.

Response. DHS anticipated and addressed these concerns raised by commenters by providing for the automatic extension of EADs of 180 days for individuals who: (1) File a request for renewal of their EAD prior to its expiration date or during the filing period described in the country-specific **Federal Register** notice concerning procedures for obtaining TPS-related EADs; (2) request a renewal based on the same employment authorization category under which the expiring EAD was granted (as indicated on the face of the EAD), or on an approval for TPS even if the expiring EAD was issued under 8 CFR 274a.12(c)(19); [108] and (3) either continue to be employment authorized incident to status beyond the expiration of the EAD or are applying for renewal under a category that does not first require the adjudication of an underlying benefit request. As discussed earlier, DHS had determined that 15 employment categories currently meet these conditions.

DHS recognizes the possibility of gaps in employment authorization for renewal applicants who are not included on the list of employment categories eligible for automatic renewal of their EADs because they require adjudication of an underlying benefit request. Such individuals are encouraged to contact the National Customer Service Center (NCSC) if their application is pending for 75 days or more to request priority processing of their application. In order to further ensure against gaps in employment authorization for renewal applicants, DHS also is modifying its 120-day advance filing policy and will accept Forms I–765 that are filed up to 180 days in advance of the EAD expiration date, except where impracticable. With this modification, DHS expects that the risk of gaps in employment authorization and the possibility of worker layoffs will be minimal.

Comment. One commenter stated that harm would be caused by limiting automatic EAD extensions, but suggested that this harm could be ameliorated by allowing for unlimited automatic extension of work authorization upon the timely filing of a renewal EAD application until a decision is made on the application. The commenter alternatively suggested lengthening the extension period to 240 days to coincide with the validity period of interim EADs and consistent with the extension of employment authorization for certain nonimmigrants pursuant to 8 CFR 274a.12(b)(20). The commenter also suggested extending the 120-day advance filing policy for EADs. According to the commenter, if the automatic extension is limited to 180 days, USCIS should accept filings 240 days in advance of the expiration of the applicants EADs.

Response. DHS declines to adopt the commenter's suggestions and retains the proposed automatic extension period of 180 days in this final rule. Due to fraud concerns, DHS will not provide for an unlimited automatic extension until USCIS issues a decision on the renewal application. In addition, without a date certain, employers would have difficulties reverifying employment authorization to comply with the Employment Eligibility Verification (Form I–9) requirements and would not have the certainty necessary to maintain a stable and authorized workforce.

Regarding the commenter's suggestion to provide for a 240-day (rather than a 180-day) automatic extension, DHS determined that 180 days would be more appropriate. The 180-day period should provide USCIS sufficient time to adjudicate Form I–765 applications, particularly when individuals file well ahead of the expiration of their EADs, as explained further below. In fact, existing regulations already contain a provision granting an automatic 180-day extension of EADs in certain instances, and that time frame has proven workable. *See, e.g.,* 8 CFR 274a.12(b)(6)(iv) (providing automatic 180-day EAD extensions for F–1 nonimmigrant students who timely file requests for STEM OPT extensions). DHS also typically provides TPS re-registrants with automatic EAD extensions of 180 days.[109] Maintaining consistency among rules regarding automatic EAD extensions will aid employers in complying with Form I–9 verification requirements, as well as other agencies making determinations on eligibility for the benefits they oversee (such as those issued by departments of motor vehicles). DHS acknowledges the regulatory provision granting an automatic extension of employment authorization for up to 240 days, as noted by the commenter, *see* 8 CFR 274a.12(b)(20), but that provision extends to certain classes of nonimmigrants who do not have or require an EAD. These classes of nonimmigrants are employment authorized for a specific employer incident to status. Because the adjudication of a Form I–765 application is materially different from the adjudication of petitions seeking extensions of stay in these nonimmigrant classifications, the 240-day time frame afforded to those nonimmigrants is inapposite. DHS believes it is more sensible that the period for automatically extending certain EADs based on the timely filing of renewal EAD applications should mirror the existing 180-day period in 8 CFR 274a.12(b)(6), as well as DHS's policy regarding automatic extensions of TPS-based EADs.

Moreover, DHS believes that providing an automatic 240-day extension is unwarranted given that the typical Form I–765 processing time is 90 days,[110] and DHS will be providing renewal applicants the opportunity to file up to 180 days in advance of the expiration of their EADs. Those Form I–765 application types that are taking more than 90 days to process are often associated with, and dependent upon, adjudication another underlying request such as Temporary Protected Status, DACA, and H–4 status. The current 120-day advance filing policy coupled with the 240-day interim EAD validity under current regulations at 8 CFR 274a.13(d) provide a total processing period of 360 days before an applicant may

[108] Under 8 CFR 274a.12(c)(19), an individual applying for Temporary Protected Status (TPS) must apply for employment authorization; such authorization is not automatic or granted incident to status unless and until the TPS application is granted. EADs are issued as ''temporary treatment benefits'' to pending TPS applicants who are considered *prima facie* eligible for TPS. Such temporary treatment benefits remain in effect until a final decision has been made on the application for TPS, unless otherwise terminated. *See* 8 CFR 244.5; 8 CFR 244.10(e).

[109] *See, e.g.,* 80 FR 51582 (Aug. 25, 2015) (notice auto-extending EADs of Haitian TPS beneficiaries for 6 months).

[110] USCIS Service Centers report that the majority of Form I–765 applications are adjudicated within 3 months. *See* current USCIS processing timeframes at *https://egov.uscis.gov/cris/processTimesDisplayInit.do* (last accessed October 31, 2016).

experience a gap in employment authorization. Under this rule, the 180-day advance filing policy and automatic 180-day employment authorization extension similarly would provide a potential processing period of 360 days. In addition, DHS expects that a long automatic extension period of 240 days without an accompanying, secure EAD would increase the risk of fraud or other misuse of the automatic extension benefit. DHS believes that this rule imposes reasonable limitations on automatic EAD extensions that protect against both fraud and gaps in employment authorization.

Comment. A commenter requested that DHS include an interim EAD for initial applications, for renewal applications in categories not eligible for automatic extension, and for renewal applications that remain pending even after the automatic 180-day extension has expired in order to prevent hardship that could result when people lack employment authorization.

Response. DHS declines to adopt the commenter's suggestion as it would undermine DHS's fraud, national security, and efficiency goals. DHS has determined that the issuance of interim EADs does not reflect the operational realities of the Department, which are intended to promote efficiency, reduce fraud, and address threats to national security, such as through the adoption of improved processes and technological advances in document production. Authorizing an interim EAD for initial and renewal EAD applications whether or not eligible for automatic EAD extensions under this rule would be problematic because some applicants would receive an immigration benefit—employment authorization—before DHS is assured that the applicant is eligible for that benefit through the adjudication of the underlying benefit request. DHS anticipates a long adjudication period will be an extremely rare occurrence, most likely involving an application with serious security concerns, in which case DHS would not grant employment authorization until such concerns are resolved.

Moreover, the resources necessary to process interim EADs are similar to the resources necessary to issue EADs of full duration. Regardless of whether the EAD is for a full duration or for an interim period, the EAD must contain all of the same security and anti-counterfeiting features. Maintaining this duplicative processing would significantly hamper USCIS's ability to maintain reasonable processing times.

vi. Automatic Extensions of EADs and Advance Parole

Comment. DHS received a number of comments referencing the combination EAD/advance parole cards issued to applicants for adjustment of status. These comments requested that DHS provide automatic extensions for advance parole when requests for advanced parole are filed timely and concurrently with requests for EAD extensions.

Response. DHS declines to permit automatic extensions of advance parole in this final rule. Advance parole is a separate adjudication and is wholly discretionary, determined on a case-by-case basis, and, therefore, DHS does not believe that it is appropriate for automatic extensions.

DHS notes that if a renewal applicant with a combination EAD/advance parole card has an urgent need to travel outside the United States while the employment authorization renewal application is pending, the applicant may request expedited adjudication of the concurrently filed advance parole request under USCIS's longstanding expedite criteria. If USCIS expedites the adjudication of the advance parole request and grants advance parole, the applicant will receive a separate advance parole authorization on Form I–512 (Authorization for Parole of an Alien into the United States) and a separate EAD following adjudication of the renewal EAD application. If the applicant does not receive an expedited approval of the advance parole request, then the applicant may receive a combination card following adjudication of both the EAD renewal application and parole request.

vii. H–4 Nonimmigrant Spouses

Comment. Some commenters noted that certain H–4 nonimmigrant spouses of H–1B nonimmigrant workers can wait up to 9 months for an EAD (including time for the visa and EAD extension) and may thus experience gaps in employment.[111] The commenters felt this time period was too long, and they stated that to avoid potential lapses in employment authorization such spouses should be provided the option to: (1) Obtain an automatic extension of their EADs, (2) file their applications for EAD extension at the same time as their requests for extension of their H–4 status, or (3) receive interim EADs.

Response. DHS disagrees with commenters that H–4 nonimmigrant spouses eligible to apply for EADs should receive automatic EAD extensions or interim EADs, and DHS thus declines to modify this rule as suggested by commenters.[112] Consistent with the commenters' requests, an H–4 nonimmigrant spouse eligible for an EAD already may concurrently file his or her EAD application with an H–4 extension request (on Form I–539), even if the Form I–539 is filed with the Form I–129, Petition Nonimmigrant Worker, that is being filed on his or her spouse's behalf. However, the Form I–765 will not be adjudicated until the underlying benefit requests are adjudicated. *See* Instructions to Form I–765. As discussed previously, because the employment authorization for an H–4 nonimmigrant spouse is contingent on the adjudication of an underlying immigration benefit, automatically extending EADs to such individuals significantly increases the risk that EADs may be extended to ineligible individuals.

In the case of an H–4 nonimmigrant spouse filing for an extension of stay and renewal of employment authorization, DHS cannot be reasonably assured that the spouse will continue to be eligible for employment authorization until a full adjudication of the Form I–765 is conducted. Under DHS regulations, an H–4 nonimmigrant spouse is eligible for employment authorization if either the H–1B nonimmigrant worker has an approved Form I–140 petition or the spouse's current H–4 admission or extension of stay was approved pursuant to the H–1B nonimmigrant worker's admission or extension of stay based on sections 106(a) and (b) of AC21. *See* 8 CFR 214.2(h)(9)(iv). Thus, before adjudicating a Form I–765 filed by the H–4 nonimmigrant spouse, USCIS must first make a determination on the principal's H–1B status, because the spouse derives his or her status from the principal. USCIS must then adjudicate the H–4 nonimmigrant spouse's application for an extension of stay. Only after concluding these adjudications with respect to the H–1B

[111] H–4 dependent spouses who may apply for employment authorization include certain H–4 dependent spouses of H–1B nonimmigrants who: Are the principal beneficiaries of an approved Form I–140, Immigrant Petition for Alien Worker; or have been granted H–1B status under sections 106(a) and (b) of the American Competitiveness in the Twenty-first Century Act of 2000, as amended by the 21st Century Department of Justice Appropriations Authorization Act. *See* 8 CFR 214.2(h)(9)(iv).

[112] DHS notes that in a separate rulemaking, commenters also requested automatic EAD extensions for H–4 nonimmigrant spouses who have requested renewal EADs. DHS declined to provide for automatic extensions of employment authorization for such nonimmigrants, because their employment authorization is contingent on the adjudication of an underlying benefit request. *See* 80 FR 10284, 10299. This rationale equally applies to this rule.

nonimmigrant worker and the H–4 nonimmigrant spouse, can USCIS adjudicate the spouse's application for a renewal EAD.

Allowing eligible H–4 nonimmigrant spouses to file Form I–765 concurrently with their Form I–539 extension applications (and, if needed, also with the Form I–129 filed on behalf of the H–1B principal) enables the receipt of employment authorization soon after the underlying immigration benefit requests are adjudicated, thereby significantly reducing the overall adjudication timeline for these H–4 nonimmigrant spouses. To further ensure against gaps in employment authorization for H–4 nonimmigrant spouses and others, except when impracticable, DHS will be permitting EAD renewal applicants to file Forms I–765 up to 180 days prior to the expiration of their current EADs.

viii. F–1 Nonimmigrant Students

Comment. A few commenters requested a 90-day processing timeframe for F–1 nonimmigrant students, because Forms I–765 based on optional practical training (OPT) do not require the submission of biometrics through an Application Support Center (ASC). Additionally, a commenter stated that eliminating the 90-day EAD processing timeframe makes it difficult for F–1 nonimmigrant students to secure employment because OPT is only authorized for 12 months. A few commenters questioned security checks or suggested that DHS implement new requirements for F–1 nonimmigrant students.

Response. DHS declines to retain the current regulatory 90-day processing requirement for Form I–765 filings by F–1 nonimmigrant students. DHS remains committed to current processing timeframes for all Form I–765 applicants, including F–1 nonimmigrant students. When making plans to secure pre-completion or post-completion OPT, F–1 nonimmigrant students should consider the advance filing periods described in the regulations at 8 CFR 214.2(f)(11)(i)(B) and factor in Form I–765 processing times, which can be found on the USCIS Web site.[113] Additionally, F–1 nonimmigrant students who timely apply for STEM OPT extensions are provided with automatic extensions of their employment authorization for up to 180 days, which provides sufficient flexibility in the event of unexpected delays. *See* 8 CFR 274a.12(b)(6)(iv).

The NPRM did not include a proposal regarding additional security checks for F–1 nonimmigrant students. Therefore, such changes would be outside the scope of this rulemaking. However, DHS notes that foreign nationals who apply for F–1 nonimmigrant visas undergo security checks before visa issuance. Additionally, USCIS conducts security checks on all F–1 nonimmigrant students on OPT before rendering a final decision on their Forms I–765. DHS may consider requiring additional security checks for F–1 nonimmigrant students in future rulemakings.

ix. Expanding Automatic Extensions to Additional Categories

Comment. One commenter requested that DHS provide automatic 180-day extensions on all timely-filed, non-frivolous EAD extension applications, or in the alternative, that DHS provide automatic extensions to individuals in J–2 nonimmigrant status. The commenter reasoned that including J–2 status in the list of employment authorization categories that allow for automatic extension comports with the proposed rationale for such extensions since adjudication of an underlying benefit request is not needed. Another commenter urged DHS to grant automatic EAD extensions to L–2, F–1 OPT, and H–4 nonimmigrants, in order to provide an incentive for employers to retain valued employees. More generally, some commenters recommended that DHS automatically extend employment authorization for all work-authorized applicants, including H–4 and L–2 nonimmigrants and categories of applicants seeking employment-authorization based on humanitarian circumstances, regardless of their current basis for work authorization, in order to prevent gaps in employment.

Response. DHS declines to provide automatic EAD extensions (and employment authorization, if applicable) to eligibility categories beyond those listed in the Supplementary Information to the NPRM at this time. However, DHS may announce in the future additional categories of individuals eligible for such automatic extensions on the USCIS Web site. *See* final 8 CFR 274a.13(d)(1)(iii). While granting automatic EAD extensions to the additional nonimmigrant categories suggested by commenters may encourage employers to retain employees and minimize the risk of gaps in employment, such an expansion would undermine DHS's national security and fraud prevention goals, as described above. DHS is limiting availability of automatic EAD extensions in a manner that reasonably ensures that the renewal applicant is eligible for employment authorization, thereby minimizing the risk that ineligible individuals will receive immigration benefits.

In addition, DHS disagrees with the commenter's assertion that the J–2 nonimmigrant category comports with the conditions stated in the NPRM and adopted in this final rule for automatic EAD extensions. DHS is limiting automatic extensions to those renewal applicants who, among other criteria, either continue to be employment authorized incident to status beyond the expiration of their EADs or are applying for renewal under a category that does not first require the adjudication of an underlying benefit request. J–2 nonimmigrants do not fit within the regulatory criteria because they must first receive approvals of their underlying requests for extension of J–2 nonimmigrant stay before they are eligible for employment authorization. The same is true with respect to the suggestion to expand the automatic extension provision to L–2, F–1 OPT, and H–4 nonimmigrants. Renewal of employment authorization for such nonimmigrants is dependent on the prior adjudication of underlying benefit requests. DHS cannot be reasonably assured these classes of individuals will remain eligible for employment authorization until full adjudication of the Form I–765 application is complete. L–2 nonimmigrants, for example, include both spouses and dependent children of L–1 nonimmigrants. However, only L–2 nonimmigrant spouses are eligible for employment authorization. USCIS must adjudicate the Form I–765 application to determine the applicant's valid L–2 nonimmigrant status, the L–1 principal's current nonimmigrant status, and evidence of the marital relationship. For F–1 OPT nonimmigrants, USCIS must determine whether the F–1 nonimmigrant student has obtained a Form I–20 A–B/I–20ID, Certificate of Eligibility of Nonimmigrant F–1 Student Status, endorsed by his or her Designated School Official within the past 30 days. If the applicant is an F–1 nonimmigrant student seeking STEM OPT, USCIS must examine the student's degree and determine whether the student's employer is an E-Verify employer, among other requirements. If the applicant is an F–1 nonimmigrant student seeking off-campus employment under the sponsorship of a qualifying

[113] *See https://egov.uscis.gov/cris/processTimesDisplayInit.do* for service center processing times. At present, Forms I–765 filed by F–1 nonimmigrants pursuant to 8 CFR 274a.12(c)(3) are processed in 3 months.

international organization, USCIS must review the international organization's letter of certification along with the timely endorsed Form I–20.[114] DHS has similarly addressed this issue with respect to H–4 nonimmigrants elsewhere in this Supplementary Information. DHS does not agree that the list of categories eligible for automatic EAD extensions should be expanded to include these additional categories at this time.

x. State Driver's License Issues

Comment. Several commenters noted that they cannot obtain or renew a driver's license without a valid visa or EAD, and if this rule results in longer waits for EADs, it would delay their ability to obtain a driver's license, thereby interrupting their daily routines. One commenter recommended granting EADs for longer periods in order to closely align with state driver license renewal periods. An individual commenter suggested that DHS notify all state departments of motor vehicles (DMVs) so that the DMVs can update their current license issuance policies to account for automatic extensions of EADs. This commenter also asked DHS to provide a list of documentary evidence that can be presented to DMV officials to establish that a renewal EAD application was timely filed and that employment authorization was automatically extended.

Response. DHS remains committed to current processing timeframes and expects to adjudicate Form I–765 applications within 90 days. Regarding the commenter's request for documentary evidence, DHS generally issues applicants a Notice of Action (Form I–797C) within two weeks of filing a renewal EAD application. An individual may choose to present the Form I–797C to a DMV, depending on state DMV rules, in combination with his or her expired EAD that has been automatically extended pursuant to this rule.[115] The combination of the qualifying Form I–797C and expired EAD is the equivalent of an unexpired EAD for purposes of this rule. *See* final 8 CFR 274a.13(d)(4). USCIS will provide guidance to stakeholders, including DMVs, on its Web site to help clarify the provisions regarding automatically extended EADs as established by this rule. However, comments related to individual state driver's license requirements are outside the scope of this rulemaking.

xi. Form I–9 and Automatic Extensions of EADs

Comment. One commenter suggested updating the instructions for Form I–9 and the M–274 Handbook (Handbook for Employers: Guidance for Completing Form I–9 (Employment Eligibility Verification Form)) to include automatic extensions of EADs. This commenter also asked that DHS place stickers on EAD cards during biometrics appointments to indicate automatic extensions, which would serve as evidence of ongoing employment authorization and maintenance of status, and thus reduce confusion during the I–9 process.

Response. DHS has determined that it is not necessary to amend the Form I–9 instructions to include information regarding automatic extensions of EADs because this rule does not change the list of acceptable documents for Form I–9 purposes. In addition, DHS believes that such detailed information regarding the automatic extension of EADs is better placed in guidance materials. DHS will update all relevant public guidance materials on I–9 Central[116] concurrently with the publication of this final rule. DHS also intends to include information regarding the automatic extension of EADs along with other comprehensive revisions to the M–274 Handbook for Employers that are currently underway.

DHS declines to place stickers on EADs at biometrics appointments for several reasons. Most EAD renewal applicants are not requested to appear for biometrics appointments. In addition, DHS has determined that considering the wide variety of affected categories and the number of potential extensions involved, providing extension stickers poses security concerns and is not economical or operationally feasible.

xii. National Security and Fraud Concerns

Comment. Some commenters criticized DHS's national security concerns and fraud prevention rationales as insufficient to support an elimination of the regulatory 90-day EAD processing timeframe, especially as DHS had not provided any data related to fraud or abuse in the program. These commenters further stated that DHS's security rationale did not explain why issuance of an interim EAD could not be based on a USCIS-issued fee receipt showing that Form I–765 had been pending for 90 days, given that USCIS routinely issues temporary Form I–551 stamps in foreign passports upon presentation of a Form I–90 fee receipt. Commenters faulted DHS for describing operational realities as a compelling reason to eliminate the interim EAD option, especially in light of a number of non-secure forms currently being submitted in some circumstances. Commenters suggested that the Form I–797C receipt could be designated an acceptable employment authorization document under current 8 CFR 274a.13(d), given that USCIS has been willing to issue a number of non-secure forms of employment authorization to some applicants.

Response. To support the Department's vital mission of securing the nation from the many threats it faces, DHS has determined that the elimination of both the 90-day EAD processing timeframe and the issuance of interim EADs from current regulations is necessary. This change at final 8 CFR 274a.13(d) reflects DHS's continued attention to security and commitment to improving adjudication processes, including technological advances in document production, to reduce fraud and address threats to national security.

The main security and fraud risks underpinning DHS's decision to remove the 90-day EAD adjudication timeline and interim EAD requirements flow from granting interim EADs to individuals before DHS is sufficiently assured of their eligibility and before background and security checks have been completed. DHS believes that any reduction in the level of eligibility and security vetting before issuing evidence of employment authorization, whether on an interim basis or otherwise, would both be contrary to its core mission and undermine the security, quality, and integrity of the documents issued.

In addition, the 90-day timeline and interim EAD requirements would hamper DHS's ability to implement effective security improvements in cases in which those improvements could extend adjudications in certain cases beyond 90 days. Given the inherent fraud and national security concerns that flow from granting immigration benefits (including EADs) to individuals prior to determining eligibility, DHS believes that the 90-day timeframe and interim EAD provisions at current 8 CFR 274a.13(d) do not provide sufficient flexibility for DHS to enforce and administer the immigration laws while enhancing homeland security.

Moreover, retaining the interim EAD provision would continue to fundamentally undermine overall

[114] *See* 8 CFR 214.2(f)(9)–(11).

[115] Depending on filing volume, USCIS may take longer than 2 weeks to issue Notices of Action (Forms I–797C).

[116] *See https://www.uscis.gov/i-9-central.*

operational efficiencies to the detriment of all applicants for employment authorization. In keeping with DHS secure document issuance policies, implementation of the interim EAD provision calls for DHS to issue tamper-resistant Form I–766 EADs.[117] Issuance of interim Forms I–766 requires the same resources as the issuance of full-duration Forms I–766, because both cards must be produced using the same operational processes at the same secure, centralized card production facility. Elimination of this costly and duplicative process is necessary to better ensure that sufficient resources are dedicated to adjudicating requests for employment authorization, rather than being diverted to monitoring the 90-day adjudication timelines and producing both interim EADs and full-duration EADs. In so doing, DHS believes that the EAD adjudication process will be more efficient and EAD processing timelines will decrease overall.

DHS rejects commenters' suggestions to designate alternate interim documents that do not evidence employment authorization or contain sufficient security features, such as the Form I–797C receipt notice, in lieu of EADs. For decades, Congress, legacy INS, and DHS have been concerned about the prevalence of fraudulent documents that could be presented to employers to obtain unauthorized employment in the United States. To address these concerns, Congress passed the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), Pub. L. 104–208, which strengthened the requirements for secure documentation used in the employment eligibility verification process.[118] Legacy INS, for its part, also took steps to reduce the number of insecure documents in circulation. For example, as described in the NPRM, legacy INS created the new, counterfeit-resistant Form I–766, which is produced at a centralized secure location, to replace the significantly less secure Form I–688B, which was produced at local offices and was easily counterfeited. In addition, legacy INS and DHS have sought to eliminate the issuance of ad hoc or otherwise insecure documents that could be used by individuals as temporary evidence of employment authorization. To reintroduce the issuance of ad hoc or insecure documents to evidence employment authorization in this rule would be a step backwards from DHS's goals in this area.

The instances in which DHS issues temporary documentation concern lawful permanent residents and, therefore, are distinguishable.[119] First, temporary documentation is only issued to lawful permanent residents after they are admitted in that immigration status. Second, USCIS verifies an individual's identity and status before issuing temporary evidence of lawful permanent resident status. Such verification may include inputting fingerprint and photograph information into the Customer Profile Management System-IDENTity Verification Tool (CPMS–IVT).[120]

While DHS strongly believes that it is necessary to eliminate the 90-day adjudication timeline and the requirement to issue interim EADs, the Department understands the need for temporary employment authorization in cases involving application processing delays. For this reason, this rule authorizes automatic extensions of employment authorization, but only for defined classes of individuals. First, DHS is limiting the automatic extension of EADs (and employment authorization, if applicable) to certain renewal applicants, rather than initial filers. As previously mentioned, this limitation meets DHS's policy to issue EADs to only those individuals who have been determined eligible. Second, to further protect the integrity of the immigration process, DHS is requiring that renewal applications be based on the same employment authorization category as that indicated on the expiring EAD, with the narrow exception of TPS beneficiaries, as described earlier. *See* final 8 CFR 274a.13(d)(1)(ii). Because the resulting Form I–797C indicates the employment authorization category cited in the application, this requirement helps to ensure, both to DHS and to employers that such a notice was issued in response to a timely filed renewal application. Third, automatic extensions are restricted to individuals who continue to be employment authorized incident to status beyond the expiration that is annotated on the face of their EADs or who are seeking to renew employment authorization in a category in which eligibility for such renewal is not dependent on a USCIS adjudication of an underlying benefit request. *See* 8 final CFR 274a.13(d)(1)(iii). This provision helps to ensure that individuals are eligible to receive automatic extensions of their EADs under this rule only if there is reasonable assurance of their continued eligibility for issuance of a full duration EAD.

xiii. Separate Rulemaking for the Elimination of the EAD 90-Day Processing Timeframe

Comment. Some commenters stated that the proposal to eliminate the 90-day rule must be promulgated through a separate rulemaking so that the public has proper notice and opportunity to comment. These commenters suggested that DHS intentionally buried the elimination of this provision at the end of a lengthy NPRM that in most other respects seeks to ease the burdens on the employment of qualified nonimmigrant and immigrant workers. According to commenters, some businesses and individuals may not realize that this rule contains a provision that will adversely affect them.

Response. DHS disagrees that the elimination of the 90-day processing timeframe for EADs merits or requires its own rulemaking. The public was given proper notice of the proposed policy in this rulemaking, and the proposal was fully described in the Summary paragraph at the beginning of the NPRM. The thousands of commenters that submitted feedback on this specific issue is evidence that the public had an opportunity to comment, and in fact did comment, on this issue.

xiv. Requests for Premium Processing

Comment. Several commenters asked USCIS to offer premium processing for Forms I–765, with some individuals asking the fee to be set at a reasonable level. One commenter also requested that premium processing be available for travel document requests.

Response. In order to balance workloads and resources in a way that ensures timely customer service across all product lines, DHS will not offer premium processing of Form I–765 applications or travel document requests at this time. DHS declines to adopt this suggestion, but may reconsider it in the future if resources permit.

[117] *See* USCIS Memorandum from Michael Aytes,''Elimination of Form I–688B, Employment Authorization Card'' (Aug. 18, 2006).

[118] *See* Conference Report on H.R. 2202, Illegal Immigration Reform and Immigrant Responsibility Act of 1996, 142 Cong. Rec. H11071–02 (Sept. 25, 1996).

[119] Generally, a temporary Form I–551 (Permanent Resident Card) consists of either a Form I–551 stamp in the lawful permanent resident's foreign passport or a Form I–551 stamp on Form I–94 that also contains the lawful permanent resident's photograph.

[120] CPMS–IVT is a Web-based application that processes, displays and retrieves biometric and biographic data from DHS's fingerprint identity system, the Automated Biometric Identification System (IDENT). For more information, visit USCIS's Web site at *https://www.uscis.gov/news/alerts/uscis-implement-customer-identity-verification-field-offices.*

O. Employment Authorization and Reverification on Form I–9

1. Description of Final Rule and Changes From NPRM

Employers are required to verify the identity and employment authorization of all individuals they hire for employment on Form I–9. For those individuals whose employment authorization or EADs expire, employers must reverify employment authorization at the time of expiration. DHS is finalizing the changes related to the Form I–9 verification process as proposed, with the exception of minor, technical revisions, in order to conform to the new automatic employment authorization provision established by this rule.[121] *See* final 8 CFR 274a.2(b)(1)(vii). In addition, this rule finalizes the proposal providing that a facially expired EAD is considered unexpired for Form I–9 purposes if it is used in combination with a Notice of Action (Form I–797C, or successor form) indicating the timely filing of the application to renew the EAD (provided the Form I–797C lists the same employment authorization category as that listed on the expiring or expired EAD, except in the case of TPS beneficiaries, and has been automatically extended under this rule). *See* final 8 CFR 274a.13(d)(4). Newly hired employees completing Forms I–9 may choose to present their employers with this document combination to show both identity and employment authorization.[122] When the expiration date on the face of an EAD previously used for the Form I–9 is reached, a renewal applicant whose EAD has been automatically extended under this rule and who is continuing in his or her employment with the same employer should, along with the employer, update the previously completed Form I–9 to reflect the extended expiration date based on the automatic extension while the renewal is pending. The need for reverification of employment authorization is not triggered until the expiration of the additional period of validity granted through the automatic extension provisions discussed above. *See* final 8 CFR 274a.2(b)(1)(vii).

2. Public Comments and Responses

i. Reverification

Comment. Several commenters expressed a concern that the proposed automatic extension of EADs will confuse the Form I–9 reverification process because employers will have no way to know, without the help of immigration attorneys, if a renewal application was filed under the same category as the individual's current EAD, and thus no way to know if the automatic extension applies. A commenter also suggested updating the Form I–9 instructions and M–274 Handbook for Employers to reflect the automatic extensions of EADs.

Response. DHS believes that the reverification process is fairly straightforward and can be completed without the assistance of an attorney. Employers will know whether an EAD has been automatically extended under this rule by checking whether the eligibility category stated on the individual's current EAD is the same as the eligibility category stated on the individual's Form I–797C receipt notice,[123] and whether the EAD renewal category is listed on the USCIS Web site as a qualifying category for automatic EAD extensions. The Notice of Action receipt (Form I–797C) that USCIS issues to an applicant who files a Form I–765 application contains the EAD eligibility category. The EAD currently in the employee's possession, combined with a receipt notice for a timely filed EAD application under the same eligibility category, is evidence of employment authorization for Form I–9 purposes.

DHS is taking additional steps to minimize potential confusion among employers. DHS will engage in public outreach in connection with this rule. USCIS will update the Form I–797C receipt notices to include information about automatic extensions of employment authorization based on renewal applications and to direct applicants to the USCIS Web site for more information about qualifying employment categories. USCIS will also update the I–9 Central Web page on its Web site to provide guidance to employers regarding automatically extended EADs and proper completion of Form I–9. DHS intends to include this information in a future revision to the M–274 Handbook for Employers. Because DHS did not propose changes to the Form I–9 instructions to add information regarding automatic extensions of EADs in the proposed rule, DHS is unable to add this information to the form instructions in the final rule. DHS may consider such an addition in a future revision of the Form I–9 instructions under the PRA process.

ii. Use of Form I–9 To Change Employment Authorization Categories

Comment. Several commenters suggested that DHS allow foreign workers in H nonimmigrant status who are eligible for employment authorization based on compelling circumstances to ''change status'' by filling out Form I–9 and using the EAD issued based on compelling circumstances as evidence of employment authorization.

Response. DHS was unable to discern the commenters' specific concerns. However, DHS believes that the discussion below will alleviate any confusion about the Form I–9 process in these circumstances. Employers are responsible for proper completion and retention of Form I–9. *See* INA 274A(b), 8 U.S.C. 1324a(b). DHS does not use the Form I–9 process as a vehicle for workers to change their immigration status. Requests for EADs must be made on a separate form, currently the Application for Employment Authorization, Form I–765. The Form I–9 of an individual employed as an H–1B nonimmigrant who also receives an EAD while maintaining H–1B nonimmigrant status does not need to be updated merely based upon the individual's receipt of the EAD. If an H–1B nonimmigrant worker who also has been issued an EAD based on compelling circumstances obtains employment with a non-H–1B employer, then the individual may present his or her EAD to the non-H–1B employer to comply with the Form I–9 requirements, rather than presenting evidence based on the H–1B nonimmigrant status.

iii. Comments Suggesting Additional Revisions

Comment. A commenter suggested that DHS amend 8 CFR 274a.12(a) and Form I–9 to confirm that foreign nationals authorized for employment incident to status do not need to obtain an EAD. The commenter argued that the requirement in this regulatory provision to obtain an EAD effectively nullifies the portion of the provision that provides for employment authorization incident to status. The commenter noted that the suggested clarification would be even more important if the 90-day adjudication rule is eliminated.

---

[121] The technical changes include changing the cross reference in the regulatory text from ''§ 274a.13(d)'' to ''8 CFR 274a.13(d)'' in two places, and moving the parenthesis so that the reference to the Notice of Action form number reads, ''(Form I–797).'' In addition, this rule replaces ''alien'' with ''individual'' in keeping with the terminology of the paragraph.

[122] An automatically extended EAD in combination with the Notice of Action, Form I–797C, described in this rule constitute an unexpired EAD (Form I–766) under List A for Form I–9 purposes. *See* revised 8 CFR 274a.13(d)(4); 8 CFR 274a.2(b)(1)(v)(A)(*4*).

[123] This rule provides an exception for a TPS beneficiary whose EAD may not match the eligibility category on the receipt notice.

Response. The suggested amendments to both 8 CFR 274a.12(a) and Form I–9 are beyond the scope of this rulemaking. Contrary to the commenter's statement, the part of 8 CFR 274a.12(a) that requires affected individuals to obtain an EAD does not nullify such individuals' employment authorization incident to status. Rather, the provision lists certain categories of foreign nationals whose employment authorization must be evidenced by an EAD. Workers within the listed categories are employment authorized incident to status independent of their receipt of an EAD or other evidence of employment authorization.

Comment. A commenter recommended updating the M–274 Handbook for Employers to permit Form I–9 verification of H–1B nonimmigrant workers whose Form I–129 petition seeking an extension of status or change of employer was filed during the 10-day or 60-day grace periods.

Response. The current M–274 Handbook for Employers contains information regarding Form I–9 completion for H–1B nonimmigrant workers who extend their stay with the same employer or who seek a change of employers. *See* M–274, *Handbook for Employers,* page 22. This guidance applies to those H–1B nonimmigrant workers whose petitions are filed during the 10-day or 60-day grace periods. While this rule does not change that guidance, DHS will consider whether additional clarifications are necessary to the M–274 Handbook for Employers and other guidance materials, such as USCIS's I–9 Central Web page.

Comment. A commenter suggested, as an alternative to eliminating the regulatory provisions establishing the 90-day processing timeframe and the issuance of interim EADs, that the regulation instead be amended for Form I–9 purposes to require foreign workers to present to their employers List B identification documentation along with a Form I–797C receipt notice issued by USCIS to acknowledge the filing of a Form I–765 application. In the alternative, the commenter suggested that USCIS amend the Form I–9 instructions to require employers to confirm the pendency of the Form I–765 application by checking the USCIS Web site for case status information and annotating the Form I–9 accordingly.

Response. DHS declines to adopt the commenter's suggestions. The Form I–9 process mandates that employees present their employers with evidence of current employment authorization and identity. *See* 8 CFR 274a.2(b)(1)(v). A Form I–797C receipt for the filing of a Form I–765 application, standing on its own, does not establish employment authorization except when the filing was to replace a lost, stolen, or damaged EAD.[124] It is merely evidence that an application was filed with USCIS and, therefore, would not be sufficient to satisfy the Form I–9 requirements. For the reasons stated in the proposed rule, extending employment authorization to categories in which DHS lacks reasonable assurance of continued eligibility for employment authorization raises fraud and national security risks that DHS is striving to avoid. Regarding the suggestion by the commenter to require employers to check the case status of an employee's Form I–765 application, DHS believes that such a requirement raises privacy concerns and would introduce changes to the verification process that are beyond the scope of this rulemaking.

P. Other Comments

DHS received a number of comments related to matters falling outside the topics discussed above. These comments are addressed below.

1. Procedural Aspects of the Rulemaking

Comment. Some commenters submitted feedback about general immigration issues. A few commenters expressed support for, or opposition to, general immigration to the United States. Comments ranged from requesting that DHS discontinue immigration to the United States, to underscoring the need for comprehensive immigration reform, to general support for immigration.

Response. DHS is charged with administering the immigration laws enacted by Congress. Only Congress can change those laws. The comments described immediately above are therefore outside the scope of this rulemaking. DHS, however, is committed to strengthening the security and integrity of the immigration system through efficient and consistent adjudications of benefits, fraud detection, and enhanced customer service. DHS promotes flexible and sound immigration policies and programs as well as immigrant participation in American civic culture.

Comment. Several commenters objected to the ability of non-U.S. citizens to submit comments on the proposed rule.

Response. DHS welcomed comments from all interested parties without regard to citizenship or nationality. This approach is consistent with the statutory requirements established by Congress in the APA's notice-and-comment provision, which do not include a citizenship or nationality requirement and place priority on allowing all interested persons to participate in rulemaking proceedings.

2. Assertions That the Employment-Based Immigration System Enables Slavery and Servitude to Employers

Comment. DHS received numerous comments referencing the alleged slavery, servitude, or bondage of nonimmigrant workers in the United States. A number of commenters stated that the nonimmigrant visa and adjustment processes are tantamount to modern slavery or bonded labor, and that employers exploit and abuse workers subject to these processes. Other commenters stated that employers do not allow nonimmigrant workers to have a say in working conditions, leave, and other benefits.

Response. DHS takes allegations of worker slavery, bondage, and exploitation very seriously. There are statutes and regulations governing the terms and conditions of nonimmigrant employment that are intended for the protection of both U.S. and nonimmigrant workers. Commenters and nonimmigrant workers who believe they are being exploited by employers have a number of options to report misconduct. Those suffering abuse or exploitation are encouraged to immediately contact their local police department. DHS has created the Blue Campaign to combat human trafficking and aid victims. More information about the Blue Campaign can be found at *www.dhs.gov/blue-campaign.* Federal law also prohibits discrimination based on citizenship status, immigration status, national origin, and other protected characteristics. The Department of Justice's Office of Special Counsel for Immigration-Related Unfair Employment Practices enforces the anti-discrimination provision of the INA, which prohibits discrimination in hiring, firing, recruitment and referral for a fee, as well as discriminatory documentary practices in the employment eligibility verification (Form I–9 and E-Verify), based on citizenship, immigration status, or national origin. *See* INA section 274B; 8 U.S.C. 1324b. More information about reporting an immigration-related unfair employment practice may be found at *www.justice.gov/crt/office-special-counsel-immigration-related-unfair-*

[124] 8 CFR 274a.2(b)(1)(vi)(A) provides that when a worker shows a Form I–797C receipt for the filing of a Form I–765 application to replace a lost, stolen, or damaged EAD, this type of Form I–797C is considered a receipt for a Form I–9 List A document evidencing identity and employment authorization valid for 90 days.

employment-practices. The U.S. Equal Employment Opportunity Commission (EEOC) enforces Title VII of the Civil Rights Act of 1964 (Title VII), as amended, and other federal laws that prohibit employment discrimination based on race, color, national origin, religion, sex, age, disability and genetic information. More information about Title VII and the EEOC may be found at *www.eeoc.gov.* DHS also notes that DOL's Wage and Hour Division investigates allegations of employee abuse. Information about reporting a potential wage and hour violation can be found at *www.dol.gov* or by calling 1–866–4USWAGE (1–866–487–9243).

In addition, this rule enhances worker whistleblower protection by conforming regulations governing the H–1B program to certain policies and practices developed to implement the ACWIA amendments to the INA. *See* final 8 CFR 214.2(h)(20). Section 413 of ACWIA amended the INA by adding section 212(n)(2)(C), which makes it a violation for an H–1B employer to retaliate against an employee for providing information to the employer or any other person, or for cooperating in an investigation, with respect to an employer's violation of its LCA attestations. *See* INA 212(n)(2)(C)(iv), 8 U.S.C. 1182(n)(2)(C)(iv). Thus, employers may not intimidate, threaten, restrain, coerce, blacklist, discharge, or in any other manner discriminate against an employee for disclosing information that the employee reasonably believes evidences a violation of any rule or regulation pertaining to the statutory LCA attestation requirements, or for cooperating or attempting to cooperate in an investigation or proceeding pertaining to the employer's LCA compliance. *Id.*

Section 212(n)(2)(C) of the INA also requires DHS to establish a process under which an H–1B nonimmigrant worker who files a complaint with DOL regarding such illegal retaliation, and is otherwise eligible to remain and work in the United States, ''may be allowed to seek other appropriate employment in the United States for a period not to exceed the maximum period of stay authorized for such nonimmigrant classification.'' *See* INA 212(n)(2)(C)(v), 8 U.S.C. 1182(n)(2)(C)(v). This final rule formalizes DHS's current policy regarding these protections, as described above. *See* final 8 CFR 214.2(h)(20).

Through this final rule, DHS also provides flexibility to certain nonimmigrants with approved Form I–140 petitions who face compelling circumstances that warrant an independent grant of employment authorization. *See* final 8 CFR 204.5(p)(1). Such compelling circumstances may, depending on the circumstances, include employer retaliation.

Comment. Commenters also stated that employers are effectively in control of the lives of nonimmigrant workers. These commenters stated that if a nonimmigrant worker is fired or laid off by an employer, that worker is then faced with having to quickly find new employment or to return to his or her home country. According to commenters, this dynamic has created a sense of dependency on the employer, and the resulting uncertainty causes many nonimmigrant workers to be unwilling to purchase homes and make other long-term life investments in the United States.

Response. DHS is sympathetic to these comments. Through this final rule, DHS seeks to enhance worker mobility and ease the burdens nonimmigrant workers face when employment ends, either voluntarily or as a result of being laid off or terminated. DHS makes a grace period available to certain high-skilled nonimmigrant classifications (H–1B, H–1B1, O–1, E–1, E–2, E–3, L–1, and TN classifications) whose work ceases for up to 60 consecutive days during each period of petition validity (or other authorized validity period). *See* final 8 CFR 214.1(l)(2). The final rule also extends grace periods to dependents of eligible principal nonimmigrant workers. *Id.* The purpose of the 60-day grace period is to enable the nonimmigrant workers to seek new nonimmigrant employment and thus be able to extend or change their nonimmigrant status while remaining in the United States, should their employment conclude during the relevant validity period.

Comment. Some commenters explained that it is difficult for workers who have already received an approved Form I–140 petition with one employer to find a new employer who is willing to restart the immigrant visa petition process. Because of visa backlogs and country quotas, many nonimmigrants must wait years before they are eligible to adjust status to lawful permanent residence, and some commenters argued that the difficulty of the process has led workers to remain in the same job for years without promotions or salary increases. Commenters stated that the inability of nonimmigrant workers to accept promotions and to advance their careers has created a sense of hopelessness and a lack of motivation to grow skills.

Response. DHS is sympathetic to these comments and believes that this rule includes many provisions, as discussed more fully throughout the preamble, that will facilitate workers' ability to change jobs while waiting for immigrant visa availability, including the following: Expanded priority date retention, changes to the automatic revocation process, clarification on INA 204(j) portability, and the discretionary provision authorizing independent work authorization to beneficiaries who demonstrate compelling circumstances. *See* final 8 CFR 204.5(e)(1), (2) and (p); and 205.1(a)(3)(iii)(C) and (D). Additionally, individuals with approved Form I–140 petitions who are in H–1B nonimmigrant status may benefit from the H–1B portability provisions at final 8 CFR 214.2(h)(2)(i)(H).

3. Limits on Employment-Based Immigration by Country

Comment. Several commenters suggested that the per-country limits on available immigrant visas disproportionately discriminate against individuals from India, China, the Philippines, and Mexico. Some commenters stated that the system should be changed so that the number of available immigrant visas would be proportionate to the percentage of individuals from India and China working as professionals in the United States on H–1B visas. Commenters noted that the per-country limits fail to account for high population countries with larger numbers of well-educated and high-skilled professionals given that smaller countries have the same percentage of visas available to them. One commenter suggested that the per-country limits are not compatible with the equitable concept of responding to applicants on a first-come, first-served basis. Several commenters suggested that DHS increase the number of available immigrant visas or remove the per-country limits completely, both to speed up processing times and to lessen the adverse impact on Indian and Chinese nationals. Another commenter stated that the per-country limits are illogical, unfair and unpredictable, causing individuals from India and China to suffer unfairly. One commenter stated that merit should be the metric for retaining high-skilled workers, not country of birth.

Response. DHS understands the frustration expressed by commenters who have begun the process to obtain lawful permanent residence, but who are subject to long waits before their priority date becomes current as a result of the per-country visa limits applicable to their country of birth. However, DHS is unable to make immigrant visas available without regard to an individual's country of birth as these are statutory requirements under the INA. *See* generally INA 202, 8 U.S.C. 1152. In particular, INA 202(a)(2), requires that, in any fiscal year, individuals born in any given country generally may be allocated no more than seven percent of the total number of immigrant visas. Thus, only Congress can change the per-country limitations in this statutory provision. DHS notes that this Administration supported lifting the per-country cap as a part of commonsense immigration reform legislation that has considered and passed the U.S. Senate in 2013.

4. Guidance on National Interest Waivers

Comment. Some commenters stated that individuals applying for national interest waivers (NIWs) under the employment-based second preference immigrant visa (EB–2) category should be able to file their applications for adjustment of status immediately upon having their Form I–140 petitions approved, instead of enduring long waiting periods due to EB–2 immigrant visa backlogs. The commenter explained that those who qualify for NIWs would help improve the U.S. economy, wages and working conditions of U.S. workers, and educational and training programs for U.S. children and underqualified workers. Commenters compared the U.S. immigration system with other countries' systems and stated that the other countries facilitate permanent status and access to benefits faster than the United States. Another commenter requested that physicians granted NIWs be considered under the first preference employment-based immigrant visa category (EB–1) instead of the second preference as this change would attract more international physicians to come to the United States at a time when we are facing a shortage of physicians. Another commenter requested that DHS eliminate the per-country limits for NIW beneficiaries.

Response. DHS appreciates the concerns expressed by commenters regarding individuals who are subject to long waits for immigrant visas. However, DHS's ability to provide immigrant visas without regard to preference category is constrained by the statutory requirements set forth by Congress.

DHS agrees that those who qualify for NIWs could help contribute to research and medical advances, the U.S. economy, wages and working conditions of U.S. workers, and educational and training programs. Individuals who qualify for the NIW are already able to take advantage of a faster path to an immigrant visa because they are exempt from the labor certification process administered by DOL and may directly petition DHS for an immigrant visa. *See* INA 203(b)(2)(B), 8 U.S.C. 1153(b)(2)(B). However, DHS notes that by enacting INA 203(b)(1) and (b)(2), 8 U.S.C. 1153(b)(1) and (b)(2), Congress statutorily defined first- and second-preference (EB–1 and EB–2) categories for employment-based immigration, and specified that only those in the EB–2 category are eligible for a national interest waiver and that they too are subject to their respective country's annual visa allocation for that preference category. Additionally, Congress specifically provided that certain physicians working in shortage areas or veterans facilities may be eligible for NIWs. *See* INA 203(b)(2)(B)(ii), 8 U.S.C. 1153(b)(2)(B)(ii). Any changes to these provisions would need to be made by Congress. DHS notes, however, that physicians may also be eligible to seek immigrant visas under the EB–1 classification as individuals with extraordinary ability.

5. The Revised Visa Bulletin System

Comment. Several commenters submitted views on the recently revised Visa Bulletin system announced by DOS and DHS on September 9, 2015, and the subsequent revisions made on September 25, 2015, to certain dates on the October 2015 Visa Bulletin. Commenters expressed their disappointment at the September 25 revisions. One commenter requested that DHS provide relief in this final rule to the people who were affected by these revisions. Other commenters requested a better Visa Bulletin system. Finally, one commenter recommended that USCIS should continue to advance cut-off dates in the Visa Bulletin.

Response. DHS appreciates the concerns raised by individuals who may have been affected by the September 25 revisions to the October 2015 Visa Bulletin. However, further revisions to the Visa Bulletin system or dates indicated in the Visa Bulletin must be accomplished in coordination with DOS and are outside the scope of this rulemaking.

Q. Public Comments and Responses on Statutory and Regulatory Requirements

1. Regulatory Impact Analysis

Comment. Some commenters questioned the validity of the economic cost-benefit analysis in the Regulatory Impact Analysis (RIA) that DHS developed in support of the rule. These commenters expressed concern as to whether the economic analysis adhered to the intent and principles of Executive Orders 12866 and 13563. Another commenter believed that the economic analysis was biased against U.S. workers in favor of foreign workers.

Response. DHS appreciates the comments received concerning the cost-benefit economic analysis in the RIA. However, DHS does not agree that the economic analysis is invalid or fails to comply with Executive Orders 12866 and 13563, or that the analysis is biased against U.S. workers in favor of foreign workers. DHS developed the RIA supporting this rule in compliance with these Executive Orders to assess and quantify, to the extent possible, the costs and benefits of this rule as well as the number of individuals that could be affected by the provisions of the rule. DHS places a high priority on conducting its regulatory impact analysis in an objective, fact-based manner with the highest degree of transparency and integrity in order to support and inform the regulatory process.[125] DHS discusses the impact of this rule on U.S. workers in more detail in other sections of Part Q.

2. General Economy

Comment. Many commenters stated that this rule would be good for the economy in general terms. Some commenters cited the positive effects of high-skilled foreign labor on the overall economy because of the stimulating effects in other sectors of the economy. Other commenters suggested this rule would stimulate the economy as principal beneficiaries and their dependents would contribute by accepting new jobs. Commenters cited the numbers of immigrants who hold patents or Nobel prizes and the growing number of entrepreneurs. Commenters also suggested that providing further flexibilities to these immigrants would foster more innovation and entrepreneurship.

Many commenters agreed that increased stability while waiting to adjust status would encourage these high-skilled workers to more fully contribute to the economy by making increased investments. Some high-skilled workers expressed interest in making purchases or investments—such as buying houses or cars, traveling abroad, or making retirement contributions—but refrained from doing so due to their inability to predict their

[125] The full Regulatory Impact Analysis published with the NPRM is available at *https://www.regulations.gov/#!documentDetail;D=USCIS-2015-0008-0270.*

immigrant status. They also suggested that these kinds of purchases would produce many ripple effects on other industries. For example, investments in real estate would produce positive ripple effects in the construction industry. High-skilled workers also expressed a desire to invest in their local communities, but that they refrain from making such investments because they are uncertain how long they will be able to remain in those communities based on their immigration status. Other high-skilled workers commented that the lack of stability during the adjustment process caused many high-skilled foreign workers to invest in their native countries by sending back money, business, and talent. One high-skilled worker provided the example of students who come to the United States to study in STEM fields, and later return to their home countries due to the difficulties and long wait times for adjusting status in the United States. The commenter stated that the return of these foreign workers to their native countries results in losses to the United States of human capital, development of new technologies, revenue, and jobs. High-skilled workers also argued that foreign workers strengthen the U.S. economy by paying taxes, including making contributions to Social Security and Medicaid. However, these high-skilled workers felt they receive few benefits while waiting to adjust status. For example, they expressed frustration with the inability to obtain federal student loans for additional education for themselves and their children. The commenters also noted that the dependent children of high-skilled workers are not able to work and earn supplemental income while pursuing higher education, which adds to the financial constraints many immigrant families experience.

DHS also received other general comments concerning the economy in which the commenters recommended that DHS allow market supply-and-demand forces to dictate the responses to business needs for foreign workers. Other commenters asserted that only 1 to 2 percent of high-skilled foreign workers would benefit from the changes outlined in this rule.

Finally, commenters also expressed concern over the negative effects that both legal and illegal immigration have on wages, the economy, schools, the deficit, and the environment, among other things.

Response. DHS appreciates the comments received concerning the effect of this rule on the U.S. economy. The rule recognizes the value added to the U.S. economy by retaining high-skilled workers who make important contributions to it, including technological advances and research and development endeavors, which are correlated with overall economic growth and job creation.[126] Furthermore, this rule provides these workers with the stability and job flexibility necessary to continue to contribute to the U.S. economy while waiting to adjust their status. DHS believes that increased flexibility and mobility will encourage nonimmigrant workers to remain in the United States and continue to pursue LPR status, and thereby bolster our economy by making long-term purchases and continued investments in the United States. The commenters' request for USCIS to provide additional benefits, such as financial assistance for furthering education, is beyond the scope of this rule.

While DHS appreciates commenters questioning the overall reach of this rule and the assertion that only limited numbers of high-skilled foreign workers will be impacted by these provisions, DHS has made an effort to provide additional flexibilities to as many high-skilled foreign workers as possible while still adhering to its statutory limitations. DHS estimates the maximum number of foreign workers that will be impacted by this rule based on the best available information.

The aim of the INA 204(j) portability provisions is to standardize the existing porting process with additional clarifications; these provisions thus do not change the population of individuals who are eligible to port under section 204(j) of the INA. The regulatory provision authorizing employment authorization in compelling circumstances is intended to offer a stopgap measure for those nonimmigrants who have been sponsored for lawful permanent residence and need additional flexibility due to particularly difficult circumstances. DHS intentionally limited the availability of such employment authorization in part because individuals who avail themselves of this benefit will, in many cases, lose their nonimmigrant status and thus be required to apply for an immigrant visa abroad via consular processing rather than through adjustment of status in the United States.

DHS appreciates the comments on the negative impacts of legal immigration including the impacts on wages, jobs, the labor force, employer costs, and the estimates derived by the agency. DHS responds to these comments more thoroughly in other sections of Part Q of this rule.

While DHS appreciates the commenters' concerns about the negative impacts of unauthorized immigration, this rule does not address the immigration of individuals who are admitted without inspection or parole, or those who stay beyond their authorized period of admission.

With respect to comments noting a negative impact of immigration on schools and the deficit, comments lacked specific information expanding on these statements and explaining how this rule would impact schools or the deficit. Without additional information, DHS cannot determine the impact this rule would have on schools or the deficit. The impact of this rule on environmental issues is discussed more fully in Review under the National Environmental Policy Act (NEPA), Section Q, subpart 6.

3. Labor Market and Labor Force Impact, Including Jobs, Wages, and Job Portability

i. Effect of the Rule on the Availability of Jobs in the United States

Comment. Many commenters expressed concerns about the effect this rule will have on the availability of jobs in the United States. One of the primary concerns commenters had is that there would be fewer jobs for U.S. workers if more foreign workers are granted work authorization. Such commenters felt that allowing foreign workers access to employment authorization when they can demonstrate compelling circumstances would lead to increased competition for jobs and fewer opportunities for U.S. workers. In addition, commenters argued that DHS should not increase the number of foreign workers, especially in science, technology, engineering, and mathematics (STEM) fields, which commenters allege are fields that hire many high-skilled foreign workers. Some commenters cited studies suggesting evidence that a STEM worker

[126] *See* Hart, David, et al., ''High-tech Immigrant Entrepreneurship in the United States,'' Small Business Administration Office of Advocacy (July 2009), available at: *https://www.sba.gov/sites/default/files/rs349tot_0.pdf. See also* Fairlie, Robert., ''Open for Business: How Immigrants are Driving Small Business Creation in the United States,'' The Partnership for a New American Economy (Aug. 2012), available at: *http://www.renewoureconomy.org/sites/all/themes/pnae/openforbusiness.pdf;* ''Immigrant Small Business Owners a Significant and Growing Part of the Economy,'' Fiscal Policy Institute (June 2012), available at: *http://www.fiscalpolicy.org/immigrant-small-business-owners-FPI-20120614.pdf;* Anderson, Stuart, ''American Made 2.0 How Immigrant Entrepreneurs Continue to Contribute to the U.S. Economy,'' National Venture Capital Association (June 2013), available at: *http://nvca.org/research/stats-studies/.*

shortage does not exist in the United States.[127] Many commenters also cited recent DOL Bureau of Labor Statistics (BLS) data showing that native-born workers have lost 320,000 jobs while 306,000 foreign-born workers have gained jobs, and used these data to assert that immigration to the United States needs to be reduced.[128]

Other commenters expressed concern that large numbers of recent U.S. college graduates are having difficulty securing jobs. These commenters expressed their view that this rule will allow foreign workers to saturate the open job market, thereby increasing competition for jobs at all skill levels and denying them to recent U.S. graduates seeking work. Commenters noted their concern that many recent U.S. graduates carry large student loan debt and need jobs to begin paying off their loans shortly after graduation.

While many commenters expressed concern that the rule will adversely affect the availability of jobs for U.S. workers, other commenters stated that the rule will have a favorable effect. For example, some commenters asserted that immigration has a positive impact on job creation and that increasing the number of foreign workers increases employment opportunities for other workers in the labor market. Another commenter claimed that there is little evidence that immigrants diminish the employment opportunities of U.S. workers and thus they are unlikely to have an effect on the American labor force and labor market.

Response. DHS appreciates the points of view commenters expressed regarding the effect this rule may have on the U.S. labor market. In the RIA, DHS explains that only a limited number of foreign workers will seek to apply for employment authorization based on compelling circumstances under the final rule, and that DHS does not expect this number to have a measurable impact on jobs as many of these workers will already be in the labor force. For example, as of 2015, there were an estimated 157,130,000 people in the U.S. civilian labor force.[129] DHS estimates in the RIA that there will be about 92,600 dependent spouses and children that may be eligible for compelling circumstances employment authorization in the first year (the year with the largest number of eligible applicants) which represents approximately 0.06 percent of the overall U.S. civilian labor force.[130] DHS based its analysis of labor market participants on an overestimate of the number of affected spouses and children who will be initially eligible to apply, despite the fact that this results in overstating the labor market impacts. As explained in the RIA, the principal beneficiaries of approved Form I–140 petitions who will be eligible under the rule are currently in a nonimmigrant status that provides employment authorization with a specific employer. Additionally, these principal beneficiaries must demonstrate circumstances compelling enough to warrant consideration of independent employment authorization. Only some dependent spouses and children eligible to apply for employment authorization could be considered ''new'' labor market participants under this rule.[131] [132] DHS notes that many of these labor market participants are not necessarily new participants but rather participants that are eligible to enter the labor market earlier than they normally would have. Dependent spouses and children may be eligible for employment authorization only if the principal beneficiary has been granted independent employment authorization under this rule and are in a nonimmigrant status (including while in a grace period authorized by final 8 CFR 214.1(l)).[133]

From a labor market perspective, it is important to note that the number of jobs in the United States is not fixed or static. Basic principles of labor market economics recognize that individuals not only fill jobs, but also stimulate the economy and create demand for jobs through increased consumption of goods and services.[134] These regulatory changes apply mainly to nonimmigrants who have actively taken certain steps to obtain LPR status. The rule simply accelerates the timeframe by which these nonimmigrants are able to enter the U.S. labor market. Importantly, the rule does not require eligible nonimmigrants to submit an application for an EAD based on compelling circumstances, nor does granting such an EAD guarantee employment for an individual. Further, the relatively small number of people the rule affects limits any effect the rule may have on the labor market.

DHS also appreciates commenters' concerns that DHS should not increase the number of foreign workers through this rule, especially in STEM fields. While DHS does not specifically identify foreign workers in STEM fields as the main beneficiaries of this rule, the main beneficiaries of this rule may nevertheless be high-skilled workers who happen to be in STEM fields. Further, it is not the goal of this rule to increase the numbers of workers in STEM fields, rather it is to provide various flexibilities to high-skilled foreign workers in certain employment-based immigrant and nonimmigrant visa programs who are already working in

[127] For example, commenters cited to the following studies to support the claim that there are no labor shortages in STEM fields: ''Guest Workers in the U.S. Labor Market: An Analysis of Supply, Employment, and Wage Trends,'' Economic Policy Institute, Briefing Paper #359, Apr. 24, 2013, available at *http://www.epi.org/publication/bp359-guestworkers-high-skill-labor-market-analysis/./;* ''Is There A STEM Worker Shortage? A Look at Employment and Wages in Science, Technology, Engineering, and Math,'' Center for Immigration Studies (May 2014,), available at *http://cis.org/no-stem-shortage./.*/. Additionally, one commenter cited the book *Sold Out* by Michelle Malkin and John Miano to provide evidence that there is no STEM worker shortage in the United States.

[128] None of the commenters cited the source of the analysis using these Bureau of Labor Statistics (BLS) data. However, DHS has concluded through its own research that the source appears to be a news article. *See* ''New Data: U.S.-born Workers Lose Jobs while Foreign-born Find Them,'' The Daily Caller News Foundation, (Jan. 8, 2016), available at *http://dailycaller.com/2016/01/08/new-data-us-born-workers-lose-jobs-while-foreign-born-find-them/.*

[129] *See* United States Department of Labor, Bureau of Labor Statistics, Local Area Unemployment Statistics, Regional and State Unemployment—2015 Annual Averages, Table 1 ''Employment status of the civilian non-institutional population 16 years of age and over by region, division, and state, 2014–15 annual averages'' (Mar. 24, 2016), *available at http://www.bls.gov/news.release/pdf/srgune.pdf.*

[130] *Calculation:* 92,600 / 157,130,000 * 100 = 0.059 percent (or 0.06 percent rounded).

[131] Spouses of E–3 and L–1 nonimmigrants are currently eligible for employment authorization. However, due to data limitations, DHS did not remove those spouses of E–3 and L–1 nonimmigrants from the estimate of dependent spouses and children who could be eligible to apply for EADs under this rule. Moreover, a recently promulgated DHS regulation allows for certain H–4 nonimmigrant spouses of H–1B nonimmigrant workers to apply for employment authorization if the principal H–1B nonimmigrant worker: (1) Is the beneficiary of an approved Form I–140 petition, or (2) is extending status under section 106(a) and (b) of AC21 because a petitioning employer has started the employment-based permanent residence process on his or her behalf. The RIA estimates in this final rule for dependent spouses and children do not include certain H–4 spouses who are eligible to apply for work authorization under the recently promulgated DHS regulation. *See* ''Employment Authorization for Certain H–4 Dependent Spouses; Final rule,'' 80 FR 10284 (Feb. 25, 2015).

[132] DHS is not able to determine the age of dependent children at this time, and is therefore unable to predict the number of dependent children who are eligible to work under the Fair Labor Standards Act (FLSA) (*see* U.S. Department of Labor, Youth and Labor Age Requirements, available at: *http://www.dol.gov/dol/topic/youth labor/agerequirements.htm*). While USCIS does not have a policy restricting eligibility for requesting employment authorization based on age, the FLSA restricts employment eligibility.

[133] DHS did not remove spouses of E–3 and L–1 nonimmigrants from the estimate of dependent spouses and children who could be eligible to apply for employment authorization under this rule. Spouses of E–3 and L–1 nonimmigrants are currently otherwise eligible to apply for EADs.

[134] Ehrenberg, R.G., and Smith, R.S. (2012). Modern labor economics: Theory and public policy. (11th ed.). Boston, Massachusetts: Prentice Hall.

the U.S. Many of the changes outlined in the rule are primarily aimed at high-skilled workers who are beneficiaries of approved employment-based immigrant visa petitions and are waiting to become lawful permanent residents (LPRs). Additionally, the changes are meant to increase the ability of such workers to seek promotions, accept lateral positions with current employers, change employers, or pursue other employment options. DHS acknowledges there is a possibility that this rule could impact foreign-born STEM workers in the United States. However, DHS is not able to quantify the magnitude of the potential effect this rule could have on the number of such workers because we cannot separate individuals who are specifically STEM workers from the broader population of high-skilled foreign workers, who are the focus of this rule. DHS notes that commenters did not provide estimates or sources of data to more accurately determine the additional number of workers this rule may add.

Moreover, DHS appreciates the comments received citing studies suggesting that the United States does not have a STEM worker shortage. DHS notes that the intention of this rule is not to increase the number of STEM workers in the United States or to eliminate a possible STEM worker shortage. While, as just noted, there is a possibility that this rule could impact the number of STEM foreign workers, DHS does not know how many STEM foreign workers would be impacted. Further, DHS explained in a recent rulemaking that there is no straightforward answer as whether the United States has a surplus or shortage of STEM workers.[135] Moreover, according the National Science Foundation (NSF),

> It depends on which segment of the workforce is being discussed (*e.g.,* sub-baccalaureates, Ph.D.s, biomedical scientists, computer programmers, petroleum engineers) and where (*e.g.,* rural, metropolitan, ''high-technology corridors''). It also depends on whether ''enough'' or ''not enough STEM workers'' is being understood in terms of the quantity of workers; the quality of workers in terms of education or job training; racial, ethnic or gender diversity, or some combination of these considerations (p. 9).[136]

The NSF highlights the complexity in definitively stating whether there is or is not a STEM worker shortage or surplus.

DHS reviewed the cited BLS data showing that foreign-born workers are gaining jobs at a much higher rate than native-born workers in support of their argument that immigration to the United States needs to be reduced. DHS notes that the BLS employment data cited show the monthly change in employment levels of the entire U.S. population, separated into groups of native-born and foreign-born workers for comparison.[137] In addition, the BLS data commenters cite specifically show the net change in employment levels over the two-month period of November to December 2015, during which native-born workers lost 320,000 jobs while foreign-born workers gained 306,000 jobs. When one examines the same BLS employment level data for all of calendar year 2015 (January to December), the data show that native-born workers gained 2,278,000 jobs and foreign-born workers gained 873,000 jobs. Considering these longer-term trends in employment levels, the data obtained from the short, seasonal period of time between November and December 2015 presents an incomplete and misleading picture.[138]

In addition, DHS appreciates the comments it received that large numbers of recent college graduates are having difficulty securing jobs and that foreign workers will saturate the job market, thereby increasing competition for jobs and denying them to recent U.S. graduates seeking work. As this rule is primarily focused on retaining and providing flexibilities to high-skilled foreign workers who are already in the United States, DHS disagrees with these commenters. Most of the high-skilled foreign workers targeted in this rule would not be competing for similar jobs or levels of jobs as recent college graduates. However, DHS has considered the impact on the labor market, as discussed in the RIA and in other sections of this final rule. As previously discussed though, the rule simply accelerates the timeframe by which spouses and dependents are able to enter the U.S. labor market. Importantly, the rule does not require eligible spouses and dependents to submit an application for employment authorization, nor does the granting of employment authorization guarantee that spouses and dependents will obtain employment.

Comment. Several commenters requested that DHS take steps to prevent situations in which large companies lay off a number of U.S. workers and replace them with H–1B nonimmigrant workers. Commenters have stated that the laid-off U.S. workers are often forced to train their H–1B replacements or forgo severance pay. One commenter stated that large outsourcing agencies have promoted the practice of replacing U.S. workers, and the rule should prohibit entities from submitting petitions for H–1B and L–1 classification if the entities have more than 50 employees and more than 50 percent of their workforce or subcontracted vendors are on H–1B and L–1 visas.

Response. Existing law and regulation provide some protection against the types of employer abuses cited by commenters. Before filing an H–1B petition, the U.S. employer petitioner generally must first file a labor condition application (LCA) with DOL that covers the proposed dates of H–1B employment.[139] Among other things, the LCA requires the petitioner to attest to the occupational classification in which the worker will be employed, the wage to be paid to the worker, the location(s) where the employment will occur, that the working conditions provided to the H–1B nonimmigrant

[135] ''Improving and Expanding Training Opportunities for F–1 Nonimmigrant Students with STEM Degrees and Cap-Gap Relief for All Eligible F–1 Students; Final rule,'' 81 FR 13040 (11 Mar. 2016).

[136] National Science Foundation (NSF), ''Revisiting the STEM Workforce: A Companion to Science and Engineering Indicators,'' 2014, 9 (Feb. 4, 2015), available at *http://www.nsf.gov/pubs/2015/nsb201510/nsb201510.pdf.*

[137] The BLS defines ''foreign-born'' as ''persons residing in the United States who were not U.S. citizens at birth. That is, they were born outside the United States or one of its outlying areas such as Puerto Rico or Guam, to parents neither of whom was a U.S. citizen. The foreign-born population includes legally-admitted immigrants, refugees, temporary residents such as students and temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the numbers of persons in these categories.'' *See http://www.bls.gov/news.release/forbrn.tn.htm.*

[138] DHS notes that the source of these data, the Current Population Survey at BLS, presents a broad picture of employment, as it is a household survey and includes agricultural workers and the self-employed, although neither of these groups is within the main target population of this rule. The BLS conducts another employment survey, the Current Employment Statistics, based on payroll data that is a more reliable gauge of measuring month-to-month change due to a smaller margin of error than the household survey. Both the payroll and household surveys are needed for a complete picture of the labor market due to the make-up of the surveys and the type of respondents. However, these commenters only rely on the household survey. It is misleading to attribute statistics that encompass all foreign-born workers in the United States to only the high-skilled employment-based workers identified in this rule. The BLS data does not distinguish foreign workers by educational attainment, and while this rule is mainly aimed at high-skilled foreign workers who likely have at least a bachelor's degree, it would be incorrect to compare this specific population to all foreign-born workers. Foreign-born workers could include low-skilled workers, temporary workers, students, or even undocumented immigrants, which are not the main target populations for this rule.

[139] *See* INA sections 101(a)(15)(H)(i)(B) and 212(n), 8 U.S.C. 1101(a)(15)(H)(i)(B) and 1182(n).

worker will not adversely affect other similarly situated workers, and that there is no strike or lockout in the occupational classification at the place of employment.[140] Petitioners who employ a certain percentage of H–1B nonimmigrant workers are considered to be ''H–1B dependent'' and are subject to additional attestations.[141] These U.S. employers are required to attest that they did not and will not displace U.S. workers employed by the employer within the period beginning 90 days before and ending 90 days after the date of the filing of any visa petition supported by the LCA and that they took good faith steps to recruit qualified U.S. workers for the prospective H–1B position.[142] Employers are not subject to these additional requirements, however, if the only H–1B nonimmigrant workers sought in the LCA receive at least $60,000 in annual wages or have attained a master's or higher degree in a specialty related to the relevant employment.[143] DOL may impose penalties and fines if an employer fails to comply with the requirements of the LCA.[144]

DHS appreciates the commenter's suggestion that the rule should prohibit certain petitioners from being allowed to submit H–1B or L–1 petitions based on how many of their employees are already foreign workers; however, DHS notes such action is beyond the scope of this regulation. While DHS does not prevent petitioners from filing based on current numbers of foreign workers, certain petitioning employers are required by law to pay additional fees when filing H or L nonimmigrant petitions, depending on the size of the employer and number of foreign workers it employs in those statuses.[145]

ii. Effect of the Rule on Job Portability for Foreign Workers

Comment. Some commenters expressed concerns about the effect this rule will have on the ability of foreign workers to change jobs or employers (the ability to port). One commenter claimed that the inability of foreign workers to port distorts the labor market by preventing such workers from taking more senior positions. According to the commenter, this inability to advance reduces the number of available jobs that U.S. workers could fill and reduces economic growth.

Other commenters stated that the rule will have a favorable effect on U.S. workers. For example, one commenter stated that job flexibility for foreign workers will improve competition in the job market and allow foreign workers to better compete with American workers, thereby improving wages for all workers. Moreover, according to the commenter, allowing foreign workers to change jobs, as outlined in the rule, would allow such workers to progress in their careers without restrictions and would make the labor market fairer for all American citizens.

Response. DHS appreciates the comments regarding the rule's effect on the labor market due to the ability or inability of high-skilled foreign workers to port. The intent of this final rule is, in part, to alleviate some of the difficulties high-skilled foreign workers experience while trying to change jobs to progress in their careers or to change employers altogether, consistent with existing statutory authorities. Currently, section 204(j) of the INA authorizes DHS to provide job flexibility for applicants with long-delayed applications for adjustment of status. Under this section, foreign nationals are eligible to port to a new position with either the same or a new employer if he or she filed an Application to Register Permanent Residence or Adjust Status (Form I–485) that has remained pending for 180 days or more, as long as the new job is in the same or a similar occupational classification as the job for which the underlying employment-based immigrant visa petition was filed.

Moreover, DHS appreciates the commenter's concern that the lack of job portability diminishes economic growth by restricting upward and lateral job mobility of foreign workers, which in turn prevents jobs from opening up that may be filled by U.S. workers. The focus of this rule is to streamline and standardize the porting process and make it easier for eligible individuals to port and advance upwards in their careers. DHS believes that standardizing job portability will thus benefit high-skilled workers in immigrant and nonimmigrant visa classifications.

iii. Effect of the Rule on Wages

Comment. Many commenters expressed concerns about the effect this rule will have on wages. One of the primary concerns commenters had is that the rule will lead to an overall reduction in wages for U.S. workers because employers will be inclined to hire immigrant workers who may work for lower wages. A few commenters claimed that some companies underpay U.S. workers by implicitly threatening to replace them with lower-paid foreign workers with H–1B or L–1 nonimmigrants. Moreover, DHS received many comments about the impact this rule would have on wages from the perspective of immigrant workers. Many of these commenters stated that the rule will lead to wage suppression because it will still be difficult for immigrant workers to change jobs easily, thereby allowing employers to offer lower wages to immigrant workers as well as U.S. workers. Commenters expressed that this resulting decline in wages would especially be felt in the technology sector. Some commenters asserted that many companies lay off native-born engineers and other technology industry workers during economic downturns, and then rehire immigrant workers at reduced wages.

Other commenters stated that the rule will have a favorable effect on the wages of high-skilled U.S. and foreign workers. Many commenters noted that high-skilled foreign workers raise the wages of U.S. workers. For example, some commenters cited recently published research showing that higher numbers of H–1B nonimmigrant workers in STEM fields appear to positively affect the wages of U.S. high-skilled workers.[146] Finally, commenters mentioned that as wages increase for high-skilled foreign workers, the economy will improve and additional taxes will be paid into the system.

Response. DHS appreciates the points of view commenters expressed regarding the effect of the rule on wages for native-born and immigrant workers, but disagrees with statements that wages will be depressed by this rule. DHS notes that a large body of research exists supporting the findings that high-skilled immigrant workers are beneficial to the U.S. economy and labor market in the long term. While recent research shows evidence that immigration of high-skilled workers leads to net long-term benefits, there is a potential for negative impacts in the short-term for some U.S.

workers.[147] In fact, most federal government reports and academic literature show that immigration generally produces a modest increase in the wages of native-born workers in the long run, and that any negative economic effects (in the form of wages) are largely felt by other immigrant workers with education and skill levels similar to native-born workers.[148] However, there is some debate regarding wages in the economic literature. For example, lower-skilled and less educated workers may experience declining wages as an immediate, short-run response to a sudden, unexpected increase in the labor supply (*i.e.,* a labor supply shock) before wage levels recover or exceed where they were prior to the increase in the labor supply.[149] A recent Congressional Budget Office (CBO) report presents a similar finding, though with a focus on all U.S. workers rather than just native-born workers.[150] The CBO report finds that average wages for low-skilled workers would initially decline in response to a labor supply shock, but would steadily increase towards, and eventually exceed, the pre-labor supply shock wage level. The downward pressure on average wages would be an effect of the additional, new low-skilled workers being paid lower wages, rather than native-born workers being paid less. Additionally, an increased number of high and low-skilled workers in the labor force are expected to increase employment and economic growth (*i.e.,* increase the rate of growth of gross domestic product [GDP]) as well as increase labor productivity as workers gain more flexibility in the labor market and are able to pursue additional training and activities to improve skills.[151]

DHS takes seriously commenters that stated that some companies underpay U.S. workers by implicitly threatening to replace them with lower-paid foreign workers on H–1B and L–1 visas. DHS continues to work with DOL to protect U.S. workers. To protect the wages and working conditions of U.S. workers, the INA requires employers that file a request with DHS for an H–1B nonimmigrant worker to first file an LCA with DOL, attesting to pay the required wage; to provide working conditions that will not adversely affect the working conditions of U.S. workers similarly employed; that there is no strike, lockout, or work stoppage in the course of a labor dispute in the occupational classification at the place of employment at the time of filing; and to notify its U.S. workers that it intends to hire the nonimmigrant worker.[152] Similarly, the majority of employers that file a Form I–140 petition with DHS must first file a labor certification application with DOL, which requires a labor market test of U.S. workers and attestations to numerous labor conditions, such as paying the required wage,[153] providing working conditions that will not adversely affect U.S. workers, and only rejecting U.S. worker applicants for lawful, job-related reasons.[154]

iv. Effect of Employment-Based Immigration on Falling Income

Comment. Some commenters stated that median household income has been driven down by $4,000 per year because immigrants are entering the labor market.

Response. DHS does not agree with these commenters. While the commenters did not identify the source of their statement, DHS assumes the statement came from an opinion editorial that stated a series of assertions related to U.S. economic conditions.[155] Although the topic of the opinion editorial concerned the effect of immigration in the United States on native-born workers, the assertions it makes, including that ''median family income is down $4,000 since November 2007,'' are not attributed as being directly caused by immigration as some commenters state in their opposition to this rule.[156] Of note, the United States, along with many other industrialized countries, experienced a major economic recession between 2007 and 2009, and which continued to impact the global economy well after 2009. It is far more likely that median family income decreased during that period as a result of such a major economic recession and the lasting impacts of that recession, rather than solely due to the effects of immigration.

v. Effect of the Rule on Costs Incurred by Employers

Comment. Many commenters, both employers and employees, suggested that this rule overall would unnecessarily increase administrative and legal costs, as well as time burdens, for employers, which may discourage employers from hiring high-skilled foreign workers. Other commenters expressed concerns that the rule would deter employers from either retaining existing foreign workers or hiring new foreign workers by making regulatory compliance a more difficult process. Commenters suggested that hiring immigration attorneys would be necessary to complete the paperwork and thus employers would invest thousands of dollars into hiring high-skilled foreign workers, but have no guarantee of retaining those employees. Employers cited costs ranging from $10,000 to $20,000 or more per employee for both USCIS and attorney fees. Many employers expressed concern over losing their financial investment in new employees if portability is exercised more

[148] *Id.*

[149] *See* Borjas, George J., ''The Wage Impact of the *Marielitos:* A Reprisal'' (2015), *available* at *http://www.hks.harvard.edu/fs/gborjas/publications/working%20papers/Mariel2015.pdf.* Borjas' findings focus specifically on low-skilled and low-educated Cuban immigrants who arrived in the United States during the 1980 Mariel boatlift. As many as 125,000 Cubans immigrated to the United States by the end of 1980 with as many as half settling in the Miami area, thereby increasing the number of workers by about 8 percent and increasing the number of high school dropouts by almost 20 percent.

[150] *See* ''The Economic Impact of S. 744, the Border Security, Economic Opportunity, and Immigration Modernization Act,'' Congressional Budget Office (CBO), (June 18, 2013), *available* at *http://www.cbo.gov/sites/default/files/cbofiles/attachments/44346-Immigration.pdf.* According to the report, wages for the entire labor force are projected to be 0.1 percent lower through 2023, but then increase through 2033 to where wages are about 0.5 percent higher than the initial wage level in 2013. After disaggregating relative wages according to skill level, CBO estimated that wages of those in the lowest and highest quintile (low-skilled and high-skilled, respectively) would decline by 0.3 percent; the wages of those in the middle three quintiles are expected to increase by 0.5 percent. The CBO report emphasizes the overall level of wages is also affected by other factors such as the capital-to-labor ratio and total factor productivity.

[153] Before filing a labor certification application, an employer must obtain a prevailing wage determination from DOL. The prevailing wage determination establishes the minimum wage the employer may offer and pay to the foreign national, as well as advertise in the course of recruitment to U.S. workers. *See* INA 212(p), 8 U.S.C. 1182(p); *see also* 20 CFR part 656.

[154] *See* 20 CFR part 656.

[155] None of the commenters cited the source for this statement. However, a similar amount for median household income in the immigration context was published in the *National Review. See* Sessions, J., ''Who's Looking Out for the American Worker,'' National Review, (Dec. 12, 2014), *available* at *http://www.nationalreview.com/article/394614/whos-looking-out-american-worker-jeff-sessions.*

[156] *Id.*

extensively. However, some employers supported this rule because it would help them hire the best talent. Employees who commented on this issue stated that employers spend a small percentage of their revenue on immigration-related fees, which are offset from the benefits they receive from high-skilled workers.

Response. DHS appreciates the concern expressed about additional employer costs and the impact on high-skilled workers. It is unclear to DHS of the source and composition of the specific costs that commenters cited, which ranged from $10,000 to $20,000. Commenters did not provide any detailed evidence of how these total employer costs were calculated, nor did they indicate any source for these estimates. DHS assumes these total costs may be comprised of filing fees and opportunity costs of time, including the employment of a lawyer, among other costs not defined. There may be some additional costs to employers due to employee turnover, as recognized and discussed in the RIA. DHS acknowledges that the rule may negatively affect some U.S. employers that sponsor workers for employment-based immigrant visas, primarily through higher rates of employee turnover due to accepting offers of employment with other employers. DHS reiterates that these are not required benefits and employers voluntarily sponsor workers. Employers incur costs by filing an employment-based immigrant visa petition on an employee's behalf when seeking to sponsor that employee for lawful permanent residence. However, employers may view the costs associated with sponsoring an employee as a tangible investment in the company. Firms make rational decisions to hire foreign workers that fill a need such that the cost of the investment is outweighed by the potential benefit of employing that foreign worker. At the same time, if the principal beneficiary of the immigrant visa petition is in a compelling situation that qualifies for temporary employment authorization or ports and changes employers under either INA 204(j) or pursuant to the H–1B portability provisions, the petitioning employer could incur some turnover costs. Consequently, increased rates of employee turnover may occur as certain nonimmigrant workers pursue employment with different employers. Other employers, however, will benefit by being able to hire these foreign workers without having to expend any immigration petition costs.

With regard to commenters' concerns that the rule would deter employers from either retaining existing foreign workers or hiring new foreign workers by making regulatory compliance a more difficult process, DHS notes that, for the most part, it is codifying longstanding policy and practice implementing relevant provisions of AC21. Many of these changes are primarily aimed at improving the ability of U.S. employers to hire and retain high-skilled workers who are beneficiaries of approved employment-based immigrant visa petitions and are waiting to become lawful permanent residents, while increasing the ability of those workers to seek promotions, accept lateral positions with current employers, change employers, or pursue other employment options. DHS's intention is not to add to regulatory compliance, but rather to simplify and ease regulatory compliance.

4. DHS Estimate of 155,000 Compelling Circumstances Employment Authorization Applicants

Comment. Several commenters questioned the DHS estimate of 155,000 EADs that could be issued under the compelling circumstances provisions of this rule. Many commenters stated that this estimate was much higher than the actual number of individuals who would qualify for the compelling circumstances EAD. One commenter stated that there is no justification for how this number was estimated. Another commenter asked if this estimate was changed at the last minute due to pressure from lobbyists. A commenter also asked if USCIS estimated how many people with approved Form I–140 petitions will be eligible for EADs based on ''compelling circumstances.''

Response. DHS appreciates the comments regarding the estimated number of compelling circumstances EADs that could be issued under the provisions of this rule. Commenters questioned DHS's estimate of more than 155,000 EADs and the lack of justification for how USCIS estimated this number. However, commenters did not provide an alternative source of data that would provide a more accurate estimate. DHS estimated the maximum annual average of individuals who may request employment authorization under the provisions of this rule in the first two years. DHS estimated this maximum average was 155,067 for PRA purposes in the NPRM.[157] In the NPRM, DHS estimated that a maximum total of 257,039 individuals may be eligible to apply for employment authorization based on compelling circumstances in the first year of implementation and a maximum annual estimate of 53,095 individuals in the second and subsequent years.[158] As detailed in the RIA to the NPRM and final rule, DHS estimates the maximum number of individuals that may be eligible to apply for employment authorization; however, the analysis is unable to model for the number of individuals who will find themselves in compelling circumstances or predict their eligibility along those discretionary lines. Please consult the RIA for the final rule for a detailed explanation on the DHS estimates of the backlog, annual flow, and associated costs.

In the RIA for this final rule, DHS has updated the estimated maximum number of individuals that may be eligible to apply for the compelling circumstances employment authorization. DHS estimates for the final rule that a maximum total of 361,766 individuals may be eligible to apply for employment authorization based on compelling circumstances in the first year of implementation of this rule and a maximum annual estimate of 64,561 individuals in the second and subsequent years.[159] DHS reiterates that eligibility for independent employment authorization will be limited to those who meet specified criteria that demonstrate compelling circumstances, and who are physically present in the United States. Such individuals must be in specified, eligible nonimmigrant visa classifications with approved employment-based immigrant visa

[157] Calculation: [257,039 (maximum total of eligible individuals in year 1) + 53,095 (maximum annual estimate in year 2)]/2 = 155,067.

[158] For the proposed rule, DHS estimated a maximum total of 257,039 individuals, which includes the backlog estimate of 203,944 individuals (principals and eligible dependent spouses and children) and the annual estimate of 53,095 individuals. DHS assumes that all individuals in the backlog will apply for employment authorization in the first year of implementation of this rule. Moreover, as described in the RIA, the visa ''backlog'' is the estimated number of persons waiting for the availability of an immigrant visa. DHS estimated the number of persons in the specified, eligible nonimmigrant visa classifications with approved Form I–140 petitions who are currently waiting for a visa to become available in certain employment-based preference categories.

[159] For the final rule, DHS estimated a maximum total of 361,766 individuals, which includes the backlog estimate of 297,205 individuals (principals and eligible dependent spouses and children) and the annual estimate of 64,561 individuals. DHS again assumes that all individuals in the backlog will apply for employment authorization in the first year of implementation of this rule. Note that due to data limitations the estimates of the population eligible to be granted employment authorization based on compelling circumstances presented are the maximum number of individuals that may be eligible to apply; however, DHS expects that a smaller number of individuals, in practice, will choose to apply.

petitions and are currently waiting for a visa to become available in certain employment-based preference categories. Employment authorization based on compelling circumstances granted under this rule will be valid for a period of one year.

5. Unfunded Mandates Reform Act Violation

Comment. One commenter stated that these regulations violate the federal mandates in the Unfunded Mandates Reform Act (UMRA). The commenter stated that the NPRM is clearly within the scope of both the private sector and state and local area UMRA mandates. The commenter was of the view that the rule falls within UMRA based on the following factors: (1) Economic expenditures exceed $100 million (adjusted for inflation) in the first year; and (2) if implemented, the proposed amendments codifying the AC21 and ACWIA policies and practices would affect and change the numbers of individuals subject to the H–1B cap and ACWIA fees. The commenter stated that extensions and other modifications to the ACWIA fee payment requirements ''would be an intergovernmental mandate as defined by UMRA'' because the rule changes the number and definition of foreign nationals to whom the ACWIA fees applies. The commenter also stated that these statutory mandates are imposed on all ''institutions of higher education'' and ''affiliated and related non-profit entities.''

The commenter also was of the view that the unfunded mandates associated with the published NPRM significantly change how the statutory caps on immigrant and H–1B nonimmigrant visas operate for all other H–1B employers as well. The commenter asserted that the NPRM states there is a very significant impact on the entire range of STEM- and IT-related economic sectors, which rely on increases in productivity and innovation driven by immigration of H–1B workers who adjust status while employed in the United States. The commenter stated that the proposed regulations are not the result of voluntary action by taxpayer funded state and local government agencies. Additionally, the commenter cited the book *Sold Out* by Michelle Malkin and John Miano to provide evidence that there is no STEM worker shortage in the United States.

Response. For this final rule, DHS has added a statement to address the requirements of Title II of UMRA. As stated in the UMRA section of this final rule, the $100 million expenditure threshold (adjusted for inflation) may be exceeded in the first year of implementation, and the main provisions driving the cost estimate are the employment authorization granted for compelling circumstances and porting ability under section 204(j) of the INA.

While these provisions do not directly impose any additional Federal mandates on state, local, and tribal governments, in the aggregate, or by the private sector, there may be some petitioning employers that could potentially experience some employee turnover costs should the worker beneficiaries of those petitions choose to port to another employer or obtain independent employment authorization based on compelling circumstances. DHS recognizes that these provisions could place additional burdens on the state and private sector in these circumstances. However, DHS reiterates that these are not required immigration benefits. State and private sector employers make the cost-benefit decisions of whether to expend finances to petition for foreign workers.

DHS agrees with the commenter that codifying the AC21 and ACWIA policies and practices would affect and change the numbers of individuals subject to the H–1B cap exemption and ACWIA fees. DHS provides this assessment of the ACWIA fees in the RIA of this final rule (as well as the RIA published in the NPRM). As stated in the RIA, DHS reported a total of 8,589 H–1B exemptions due to an employer being a nonprofit entity related to or affiliated with an institution of higher education.[160] DHS anticipates that there may be an increase as a result of these amendments in the numbers of cap exemptions, due to the employer being a nonprofit entity related to or affiliated with an institution of higher education. However, we cannot project the size of such an increase at this time. In addition, DHS notes that because petitioners that are currently cap-subject could become eligible for cap-exempt status, the transition of such currently cap-subject petitioners could result in other cap-subject petitioners being approved.

DHS does not state in the NPRM that there will be a significant impact on any specific sectors of the economy that may be reliant on H–1B workers, nor does it identify STEM- or IT-related workers as the main beneficiaries of the provisions in the final rule. As previously mentioned, DHS does not have enough data to substantiate the commenter's conclusion from Malkin and Miano's book on STEM worker shortages. Please see section Q(3)(i) for further discussion about the rule's intended beneficiaries and the effect on foreign workers in STEM fields. DHS reiterates that the goals of this rule include enhancing U.S. employers' ability to retain and attract high-skilled and certain other workers to the United States and increasing flexibility in pursuing normal career progression for those workers pursuing LPR status in certain employment-based immigrant visa categories who are waiting for immigrant visas to become available.

6. Review Under the National Environmental Policy Act (NEPA)

Comment. A commenter asserted that this rule, like all immigration rules, must be subject to review under the National Environmental Policy Act (NEPA). Under NEPA, agencies must prepare an Environmental Impact Statement for all ''major Federal actions significantly affecting the quality of the human environment.'' The commenter argued that concerns of the impact of human population growth on the quality of the environment must be taken into consideration under NEPA. The commenter suggested that both legal and illegal immigration is the principal cause of current U.S. population growth. Furthermore, the commenter claimed that DHS should prepare an environmental assessment to address the impacts of the result from this rule.

Response. The population affected by this rule is primarily comprised of immigrants and nonimmigrants who are already in the United States and have been present for a number of years. The rule increases flexibilities in pursuing normal career progression for those workers pursuing LPR status in certain employment-based immigrant visa categories who are waiting for visas to become available. For that reason, DHS does not consider this rulemaking to significantly affect the quality of the human environment. Further, this rule is categorically excluded from NEPA review. DHS Management Directive (MD) 023–01 Rev. 01 establishes procedures that DHS and its components use to comply with NEPA and the Council on Environmental Quality (CEQ) regulations for implementing NEPA, 40 CFR parts 1500–1508. CEQ regulations allow federal agencies to establish categories of actions, which do not individually or cumulatively have a significant effect on the human environment and, therefore,

[160] Department of Homeland Security, Report on H–1B Petitions, Fiscal Year 2015 Annual Report to Congress October 1, 2014—September 30, 2015. Available at: *https://www.uscis.gov/sites/default/files/USCIS/Resources/Reports%20and%20Studies/H-1B/H-1B-FY-2015-Petitions.pdf.*

do not require an Environmental Assessment or Environmental Impact Statement. 40 CFR 1507.3(b)(1)(iii), 1508.4. The MD 023–01 Rev. 01 establishes the Categorical Exclusions that DHS has found to have no such effect. MD 023–01 Rev. 01 Appendix A Table 1.

For an action to be categorically excluded, MD 023–01 Rev. 01 requires the action to satisfy each of the following three conditions: (1) The entire action clearly fits within one or more of the Categorical Exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect. MD 023–01 Rev. 01 section V.B(1)–(3).

DHS has determined that this rule does not individually or cumulatively have a significant effect on the human environment because it fits within the Categorical Exclusion found in MD 023–01 Rev. 01, Appendix A, Table 1, number A3(d): ''Promulgation of rules . . . that interpret or amend an existing regulation without changing its environmental effect.'' Rather, this rule affects current participants in immigration programs by codifying existing policies and procedures and making amendments to DHS regulations designed to improve its immigration programs.

Finally, this rule is not part of a larger action and presents no extraordinary circumstances creating the potential for significant environmental effects because it does not introduce new populations that may have an impact on the environment. Therefore, this rule is categorically excluded from further NEPA review.

V. Statutory and Regulatory Requirements

A. Executive Orders 12866 and 13563 (Regulatory Planning and Review)

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available alternatives, and if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been designated a ''significant regulatory action'' that is economically significant, under section 3(f)(1) of Executive Order 12866. Accordingly, the rule has been reviewed by the Office of Management and Budget.

DHS is amending its regulations relating to certain employment-based immigrant and nonimmigrant visa programs. The amendments interpret existing law and change regulations in order to provide various benefits to participants in those programs, including: Improved processes for U.S. employers seeking to sponsor and retain immigrant and nonimmigrant workers, greater stability and job flexibility for such workers, and increased transparency and consistency in the application of DHS policy related to affected classifications. Many of these changes are primarily aimed at improving the ability of U.S. employers to retain high-skilled workers who are beneficiaries of approved employment-based immigrant visa petitions and are waiting to become LPRs, while increasing the ability of those workers to seek promotions, accept lateral positions with current employers, change employers, or pursue other employment options.

First, DHS amends its regulations consistent with certain worker portability and other provisions in AC21 and ACWIA. These amendments clarify and improve longstanding DHS policies and practices, previously articulated in DHS memoranda and precedent decisions. These amendments also implement sections of AC21 and ACWIA relating to certain foreign workers who have been sponsored for LPR status by their employers. In so doing, the rule provides a primary repository of governing rules for the regulated community and enhances consistency among DHS adjudicators. In addition, the rule clarifies several interpretive questions raised by AC21 and ACWIA.

Second, and consistent with existing DHS authorities and the goals of AC21 and ACWIA, DHS is amending its regulations governing certain employment-based immigrant and nonimmigrant visa programs to provide additional stability and flexibility to employers and workers in those programs. The final rule, among other things: Improves portability for certain beneficiaries of approved employment-based immigrant visa petitions by limiting the grounds for automatic revocation of petition approval; enhances job portability for such beneficiaries by improving their ability to retain their priority dates for use with subsequently approved employment-based immigrant visa petitions; establishes or extends grace periods for certain high-skilled nonimmigrant workers so that they may more easily maintain their nonimmigrant status when changing employment opportunities or preparing for departure; and provides additional stability and flexibility to certain high-skilled workers by allowing those who are working in the United States in certain nonimmigrant statuses, are the beneficiaries of approved employment-based immigrant visa petitions, are subject to immigrant visa backlogs, and demonstrate compelling circumstances to apply for employment authorization for a limited period. These and other changes provide much needed flexibility to the beneficiaries of employment-based immigrant visa petitions, as well as the U.S. employers who employ and sponsor them for permanent residence. In addition, these changes provide greater stability and predictability for U.S. employers and avoid potential disruptions to their operations in the United States.

Finally, consistent with providing additional certainty and stability to certain employment-authorized individuals and their U.S. employers, DHS is also changing its regulations governing the processing of applications for employment authorization to minimize the risk of any gaps in such authorization. These changes provide for the automatic extension of the validity of certain Employment Authorization Documents (EADs or Form I–766) for an interim period upon the timely filing of an application to renew such documents. At the same time, in light of national security and fraud concerns, DHS is removing regulations that provide a 90-day processing timeline for EAD applications and that require the issuance of interim EADs if processing extends beyond the 90-day mark.

Table 1, below, provides a more detailed summary of the provisions and their impacts.

TABLE 2—SUMMARY OF PROVISIONS AND IMPACTS

Provisions	Purpose	Expected impact of the final rule
Priority Date	Clarifies when a priority date is established for employment-based immigrant visa petitions that do not require a labor certification under INA 203(b).	Quantitative: • Not estimated. Qualitative: • Removes ambiguity and sets consistent priority dates for affected petitioners and beneficiaries.
Priority Date Retention	Explains that workers may retain priority dates and transfer those dates to new and subsequently approved Form I–140 petitions, except when USCIS revokes approval of the petition for: Material error, fraud or willful misrepresentation of a material fact, or revocation or invalidation of the labor certification accompanying the petition.	Quantitative: • Not estimated. Qualitative: • Results in administrative efficiency and predictability by explicitly listing when priority dates are lost as the approval of the petitions that are revoked under these specific grounds cannot be used as a basis for an immigrant visa. • Improves the ability of certain workers to accept promotions, change employers, or pursue other employment opportunities.
Employment-Based Immigrant Visa Petition Portability Under 204(j).	Incorporates statutory portability provisions into regulation.	Quantitative: Petitioners— • Opportunity costs of time to petitioners for 1-year range from $126,598 to $4,636,448. DHS/USCIS— • Neutral because the new supplementary form to the application for adjustment of status to permanent residence will formalize the process for USCIS requests for evidence of compliance with INA 204(j) porting. Qualitative: Applicants/Petitioners— • Replaces, through the Supplement J standardized form, the need for individuals to submit job offer and employment confirmation letters. • Provides stability and job flexibility to certain individuals with approved employment-based immigrant visa petitions. • Implements the clarifications regarding "same or similar occupational classifications" through the new Supplement J. • Allows certain foreign workers to advance and progress in their careers. • Potential increased employee replacement costs for employers. DHS/USCIS— • Administrative efficiency. • Standardized and streamlined process.
Employment Authorization for Certain Nonimmigrants Based on Compelling Circumstances.	Provisions allowing certain nonimmigrant principal beneficiaries, and their dependent spouses and children, to apply for employment authorization if the principal is a beneficiary of an approved EB–1, EB–2, or EB–3 immigrant visa petition while waiting for his or her immigrant visa to become available. Applicants must demonstrate compelling circumstances justifying an independent grant of employment authorization.	Quantitative: Total costs over 10-year period to applicants are: • $731.1 million for undiscounted costs. • $649.9 million at a 3% discounted rate. • $565.2 million at a 7% discounted rate. Qualitative: Applicants— • Provides ability for nonimmigrants who have been sponsored for LPR status to change jobs or employers when compelling circumstances arise. • Incentivizes such skilled nonimmigrant workers contributing to the economy to continue seeking LPR status. • Nonimmigrant principal workers who take advantage of the compelling circumstances EAD will lose their current nonimmigrant status and may not be able to adjust to LPR status in the United States. • Consular processing imposes potentially significant costs, risk and uncertainty for individuals and their families as well. Dependents— • Allows dependents to enter labor market earlier and contribute to household income.

TABLE 2—SUMMARY OF PROVISIONS AND IMPACTS—Continued

Provisions	Purpose	Expected impact of the final rule
90-Day Processing Time for Employment Authorization Applications.	Eliminates regulatory requirement for 90-day adjudication timeframe and issuance of interim-EADs. Adds provisions allowing for the automatic extension of EADs for up to 180 days for certain workers filing renewal requests.	Quantitative: • Not estimated. Qualitative: Applicants— • Removing a regulatory timeframe and moving to one governed by processing goals could potentially lead to longer processing times whenever USCIS is faced with higher than expected filing volumes. If such a situation were to occur, this could lead to potential delays in work employment start dates for first-time EAD applicants until approval is obtained. However, USCIS believes such scenarios will be rare and mitigated by the automatic extension provision for renewal applications which will allow the movement of resources in such situations. • Providing the automatic continuing authorization for up to 180 days for certain renewal applicants could lead to less turnover costs for U.S. employers. In addition, the automatic extension provision minimizes the applicants' risk of any gaps in employment authorization. DHS/USCIS— • Streamlines the application and card issuance processes. • Enhances the ability to ensure all national security verification checks are completed. • Reduces duplication efforts. • Reduces opportunities for fraud and better accommodates increased security measures.
Automatic Revocation With Respect to Approved Employment-Based Immigrant Visa Petitions.	Revises regulations so that a petition may remain valid despite withdrawal by the employer or termination of the employer's business after 180 days or more of approval, or 180 days or more after the associated application for adjustment of status has been filed.	Quantitative: • Not estimated. Qualitative: • Allows beneficiary to retain priority date unless the petition is revoked for one of the reasons specified in final 8 CFR 204.5(e)(2). • Affords porting ability under INA 204(j) and extension of H–1B status pursuant to AC21 sections 104(c) and 106(a) and (b), as well as potential eligibility for the new compelling circumstances EAD.
Period of Admission for Certain Nonimmigrant Classifications.	Nonimmigrants in certain high-skilled, nonimmigrant classifications may be granted grace periods of up to 10 days before and after their validity period, and a grace period upon cessation of employment on which the foreign national's classification was based, for up to 60 days or until the end of their authorized validity period, whichever is shorter, during each authorized validity period.	Quantitative: • Not estimated. Qualitative: Nonimmigrant Visa Holders— • Assists the beneficiary in getting sufficiently settled such that he or she is immediately able to begin working upon the start of the petition validity period. • Provides time necessary to wrap up affairs to depart the country. • Allows the beneficiary to maintain nonimmigrant status when faced with a termination of employment to wrap up affairs, find new employment, or change to a different nonimmigrant classification.
Portability of H–1B Status Calculating the H–1B Admission Period Exemptions Due to Lengthy Adjudication Delays per Country Limitation Exemptions, Employer Debarment and H–1B Whistleblower Provisions.	Updates, improves, and clarifies DHS regulations consistent with policy guidance.	Quantitative: • Not estimated. Qualitative: • Formalizes existing DHS policy in the regulations, which will give the public access to existing policy in one location. • Clarifies current DHS policy that there is no temporal limit on recapturing time.

TABLE 2—SUMMARY OF PROVISIONS AND IMPACTS—Continued

Provisions	Purpose	Expected impact of the final rule
H–1B Licensing Requirements.	Expands the evidence USCIS will examine in cases where a state allows an individual without licensure to fully practice the relevant occupation under the supervision of licensed senior or supervisory personnel in that occupation to include evidence of compliance with state requirements. Additionally, USCIS is expanding the possible situations in which it may approve an H–1B petition even though the beneficiary cannot obtain a license for certain technical reasons.	Quantitative: • Not estimated. Qualitative: • Provides additional flexibilities in obtaining necessary licensure while still permitting H–1B employment during the pendency of state or local license applications. • Helps to relieve the circular predicament an H–1B beneficiary may encounter. • May minimally increase time burden for the petitioner to gather information and send it to USCIS. However, DHS anticipates that the benefits to the petitioner and beneficiary exceed the opportunity costs of time. • May increase opportunity costs of time for USCIS adjudicators to evaluate additional evidence in such types of cases. However, DHS does not anticipate that the opportunity costs of time will be so substantial as to warrant additional hiring of staff or cause significant adjudication delays.
Exemptions to the H–1B Numerical Cap, Revised Definition of "Related or Affiliated Nonprofit Entity" in the ACWIA Fee Context, and Expanded Interpretation of "Governmental Research Organizations."	Codifies definition of "institution of higher education" and adds a broader definition of "related or affiliated nonprofit entity." Also, revises the definition of "related or affiliated nonprofit entity" for purposes of the ACWIA fee to conform it to the new definition of the same term for H–1B numerical cap exemption. Expands the interpretation of "governmental research organizations" for purposes of the ACWIA fee and aligns definitions for H–1B cap and fee exemptions.	Quantitative: • Not estimated. Qualitative: • Clarifies the requirements for a nonprofit entity to establish that it is related to or affiliated with an institution of higher education. • Better reflects current operational realities for institutions of higher education and how they interact with, and sometimes rely on, nonprofit entities. • Clarifies the interpretation of governmental research organizations to include federal, state, and local governmental organizations. • May expand the numbers of petitioners that are cap exempt and thus allow certain employers greater access to H–1B workers.

As required by OMB Circular A–4, Table 2 presents the prepared accounting statement showing the expenditures associated with this regulation.[161] These updated expenditures take into account all of the changes made to the regulation in addition to the updated cost estimates since publication of the proposed rule. The main benefits of the regulation remain the same: To improve processes for U.S. employers seeking to sponsor and retain immigrant and nonimmigrant workers, provide greater stability and job flexibility for such workers, and increase transparency and consistency in the application of DHS policy related to affected classifications.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121, 5 U.S.C. 601–612 requires Federal agencies to consider the potential impact of regulations on small entities during the development of their rules. The term ''small entities'' comprises small businesses, not-for-profit organizations that are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. An ''individual'' is not defined by the RFA as a small entity, and costs to an individual from a rule are not considered for RFA purposes. In addition, the courts have held that the RFA requires an agency to perform a regulatory flexibility analysis of small entity impacts only when a rule directly regulates small entities.[162] Consequently, any indirect impacts from a rule to a small entity are not costs for RFA purposes.

The changes made by DHS have direct effects on individual beneficiaries of employment-based nonimmigrant and immigrant visa petitions. As individual beneficiaries of employment-based immigrant visa petitions are not defined as small entities, costs to these individuals are not considered as RFA costs. However, because the petitions are filed by sponsoring employers, this rule has *indirect* effects on employers. The original sponsoring employer that files the petition on behalf of an employee will incur employee turnover related costs in cases in which that employee ports to a same or a similar occupation with another employer. Therefore, DHS has chosen to examine the indirect impact of this rule on small entities as well. The analysis of the indirect effects of these changes on small entities follows.

1. Final Regulatory Flexibility Analysis

Small entities that can incur additional indirect costs by this rule are those that file and pay fees for certain immigration benefit petitions, including Form I–140 petitions. DHS conducted a statistically valid sample analysis of these petition types to determine the number of small entities indirectly impacted by this rule. While DHS acknowledges that the changes engendered by this rule directly affect individuals who are beneficiaries of employment-based immigrant visa petitions, which are not small entities as defined by the RFA, DHS believes that the actions taken by such individuals as a result of this rule will have immediate indirect effects on U.S. employers. Employers will be indirectly affected by employee turnover-related costs as beneficiaries of employment-based immigrant visa petitions take advantage of this rule. Therefore, DHS is choosing to discuss these indirect effects in this final regulatory flexibility analysis.

i. A Statement of the Need for, and Objectives of, the Rule

The purpose of this action, in part, is to amend regulations affecting certain employment-based immigrant and nonimmigrant classifications in order to conform them to provisions of AC21 and ACWIA. The rule also seeks to provide greater job flexibility, mobility and stability to beneficiaries of employment-based nonimmigrant and immigrant visa petitions, especially when faced with long waits for immigrant visas. In many instances, the need for these individuals' employment has been demonstrated through the labor certification process. In most cases, before an employment-based immigrant visa petition can be approved, DOL has certified that there are no U.S. workers who are ready, willing and available to fill those positions in the area of intended employment. By increasing flexibility and mobility, the worker is more likely to remain in the United States and help fill the demonstrated need for his or her services.

[162] A Guide for Government Agencies How to Comply with the Regulatory Flexibility Act, May 2012 page 22. *See* Direct versus indirect impact discussion, *https://www.sba.gov/sites/default/files/advocacy/rfaguide_0512_0.pdf.*

ii. A Statement of the Significant Issues Raised by the Public Comments in Response to the Initial Regulatory Flexibility Analysis, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made in the Proposed Rule as a Result of Such Comments

DHS published the NPRM along with the Initial Regulatory Flexibility Analysis (IRFA) on December 31, 2015 (80 FR 81899) with the comment period ending February 29, 2016. During the 60-day comment period, DHS received 27,979 comments from interested individuals and organizations. DHS received numerous comments that referred to aspects of the economic analysis presented with the NPRM. The comments, however, did not result in revisions to the economic analysis in the final rule that are relevant to the analysis of effects on small businesses, small organizations, and small governmental jurisdictions presented in this FRFA. DHS received few comments that referred specifically to the IRFA. DHS addresses these comments below.

Commenters only indirectly mentioned the IRFA by mentioning the impact of the form, Supplement J, on potential employers who may be small start-ups or small businesses. Commenters suggested that many of these small start-ups hire high-skilled foreign workers to stay competitive in high-technology industries in order to compete globally, and they believed that such hiring increased job opportunities for native-born U.S. citizens as well. Commenters expressed concern that Supplement J is an unnecessary burden, especially for small business owners and startups, and commented that it will not help to increase job portability.

DHS appreciates these viewpoints and carefully considered the impact of Supplement J throughout this rulemaking, especially to small entities. DHS reaffirms its belief expressed in the RIA for the NPRM and again in the RIA for the final rule that Supplement J will clarify the process to port to another job and increase flexibility to high-skilled workers so they can advance in their careers and progress in their occupations. As explained in the PRA, completing the Supplement J requires approximately 60 minutes. In the Initial Regulatory Flexibility Analysis, DHS examined the indirect impact of this rule on small entities as this rule does not directly impose costs on small entities. DHS recognizes that this rule imposes indirect costs on small entities because these provisions would affect beneficiaries of employment-based immigrant visa petitions. If those beneficiaries take certain actions in line with the rule that provide greater flexibility and job mobility, then there would be an immediate indirect impact on the current sponsoring U.S. employers. DHS reaffirms that the addition of Supplement J may negatively impact employers in the form of employee turnover costs and some additional burden.

iii. The Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration in Response to the Proposed Rule, and a Detailed Statement of Any Change Made to the Proposed Rule in the Final Rule as a Result of the Comments

No comments were filed by the Chief Counsel for Advocacy of the Small Business Administration.

iv. A Description of and an Estimate of the Number of Small Entities to Which the Rule Will Apply or an Explanation of Why No Such Estimate Is Available

DHS conducted a statistically valid sample analysis of employment-based immigrant visa petitions to determine the maximum potential number of small entities indirectly affected by this rule when a high-skilled worker who has an approved employment-based immigrant visa petition, and an application for adjustment of status that has been pending for 180 days or more, ports to another employer. DHS utilized a subscription-based online database of U.S. entities, Hoovers Online, as well as three other open-access, free databases of public and private entities—Manta, Cortera, and Guidestar—to determine the North American Industry Classification System (NAICS) code, revenue, and employee count for each entity.[163] In order to determine the size of a business, DHS first classified each entity by its NAICS code, and then used SBA guidelines to note the requisite revenue or employee count threshold for each entity. Some entities were classified as small based on their annual revenue and some by number of employees.

Using a 12-month period, from September 2014 to August 2015, of data on actual filings of employment-based immigrant visa petitions, DHS collected internal data for each filing organization. Each entity may make multiple filings. For instance, there were 101,245 employment-based immigrant visa petitions filed, but only 23,284 unique entities that filed petitions. DHS devised a methodology to conduct the small entity analysis based on a representative, random sample of the potentially impacted population. To achieve a 95 percent confidence level and a 5 percent confidence interval on a population of 23,284 entities, DHS used the standard statistical formula to determine that a minimum sample size of 378 entities was necessary. DHS created a sample size greater than the 378 minimum necessary in order to increase the likelihood that our matches would meet or exceed the minimum required sample. Of the 514 entities sampled, 393 instances resulted in entities defined as small. Of the 393 small entities, 290 entities were classified as small by revenue or number of employees. The remaining 103 entities were classified as small because information was not found (either no petitioner name was found or no information was found in the databases). Table 3 shows the summary statistics and results of the small entity analysis of Form I–140 petitions.

TABLE 3—SUMMARY STATISTICS AND RESULTS OF SMALL ENTITY ANALYSIS OF FORM I–140 PETITIONS

Parameter	Quantity	Proportion of sample (%)
Population—petitions	101,245	
Population—unique entities	23,284	
Minimum Required Sample	378	
Selected Sample	514	100.0
Entities Classified as "Not Small":		
by revenue	99	19.2

[163] The Hoovers Web site can be found at *http://www.hoovers.com/;* The Manta Web site can be found at *http://www.manta.com/;* and the Cortera Web site can be found at *https://www.cortera.com/.*

TABLE 3—SUMMARY STATISTICS AND RESULTS OF SMALL ENTITY ANALYSIS OF FORM I–140 PETITIONS—Continued

Parameter	Quantity	Proportion of sample (%)
by number of employees	22	4.3
Entities Classified as "Small":		
by revenue	287	55.9
by number of employees	3	0.6
because no petitioner name found	84	16.3
because no information found in databases	19	3.7
Total Number of Small Entities	393	76.5

Source: USCIS analysis.

v. A Description of the Projected Reporting, Recordkeeping and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities Which Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

The amendments in this rule do not place direct requirements on small entities that petition for workers. However, if the principal beneficiaries of employment-based immigrant visa petitions take advantage of certain flexibility provisions herein (including porting to new sponsoring employers or pursuing employment authorization in cases involving compelling circumstances), there could be increased turnover costs (employee replacement costs) for U.S. entities sponsoring the employment of those beneficiaries, including costs of petitioning for new employees. While DHS has estimated 28,309 individuals who are eligible to port to new employment under section 204(j) of the INA, the Department was unable to predict how many will actually do so. As mentioned earlier in the Executive Orders 12866 and 13563 analysis, a range of opportunity costs of time to petitioners that prepare Supplement J ($43.93 for a human resources specialist, $93.69 for an in-house lawyer, or $160.43 for an outsourced lawyer) are anticipated depending on the total numbers of individuals who port. However, DHS is currently unable to determine the numbers of small entities who take on immigrant sponsorship of high-skilled workers waiting to adjust status based on petitions filed by original sponsoring employers. The estimates presented also do not represent employee turnover costs to original sponsoring employers, but only represent paperwork costs. Similarly, DHS is unable to predict the volume of principal beneficiaries of employment-based immigrant visa petitions who will pursue the option for employment authorization based on compelling circumstances.

The amendments relating to the H–1B numerical cap exemptions may impact some small entities by allowing them to qualify for exemptions of the ACWIA fee when petitioning for H–1B nonimmigrant workers. As DHS cannot predict the numbers of entities these amendments will affect at this time, the exact effect on small entities is not clear, though some positive effect should be anticipated.

vi. A Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each One of the Other Significant Alternatives to the Rule Considered by the Agency Which Affect the Impact on Small Entities Was Rejected

This rule does not impose direct costs on small entities. Therefore, DHS has not proposed any measures to minimize direct effects on small entities. The final rule may indirectly affect small entities because the provisions would affect beneficiaries of employment-based immigrant visa petitions. If those beneficiaries take actions in line with certain proposals that provide greater flexibility and job mobility, then there is an immediate indirect impact—an externality—to the current sponsoring U.S. employers. DHS considered whether to exclude from the flexibility and job mobility provisions those beneficiaries who were sponsored by U.S. employers that were considered small. However, because DHS limited the eligibility for employment authorization to beneficiaries who are able to demonstrate compelling circumstances, and restricted the 204(j) portability provisions to those seeking employment within the same or a similar occupational classification, DHS did not believe it was necessary to pursue this alternative proposal. There are no other alternatives that DHS considered that would further limit or shield small entities from the potential of negative externalities and that would still accomplish the goals of this regulation. To reiterate, the goals of this regulation include providing increased flexibility and normal job progression for beneficiaries of approved employment-based immigrant visa petitions. To incorporate alternatives that would limit such mobility for beneficiaries that are employed or sponsored by small entities would be counterproductive to the goals of this rule.

C. Unfunded Mandates Reform Act of 1995

The Unfunded Mandate Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on state, local, and tribal governments. Title II of UMRA requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in a $100 million or more expenditure (adjusted annually for inflation) in any one year by state, local, and tribal governments, in the aggregate, or by the private sector. The value equivalent of $100 million in 1995 adjusted for inflation to 2014 levels by the Consumer Price Index for All Urban Consumers is $155 million. This rule exceeds the $100 million expenditure threshold in the first year of implementation (adjusted for inflation) and therefore DHS is providing this UMRA analysis.

1. An Identification of the Provision of Federal Law Under Which the Rule Is Being Promulgated

The authority of the Secretary of Homeland Security (Secretary) for these regulatory amendments is found in various sections of the INA, 8 U.S.C. 1101 *et seq.,* ACWIA, AC21, and the Homeland Security Act of 2002 (HSA), Public Law 107–296, 116 Stat. 2135, 6 U.S.C. 101 *et seq.* General authority for issuing the final rule is found in section 103(a) of the INA, 8 U.S.C. 1103(a), which authorizes the Secretary to administer and enforce the immigration and nationality laws, as well as section 102 of the HSA, 6 U.S.C. 112, which vests all of the functions of DHS in the Secretary and authorizes the Secretary to issue regulations. Further authority for the regulatory amendments in the final rule is found in Section II, Subpart B.

2. A Qualitative and Quantitative Assessment of the Anticipated Costs and Benefits of the Federal Mandate, Including the Costs and Benefits to State, Local, and Tribal Governments or the Private Sector, as Well as the Effect of the Federal Mandate on Health, Safety, and the Natural Environment

The two major provisions of this rule for economic analysis purposes provide job flexibility through INA 204(j) portability and job flexibility through employment authorization to a limited number of employment-authorized nonimmigrants in compelling circumstances. These provisions do not directly impose any additional Federal mandates on state, local, and tribal governments, in the aggregate, or by the private sector. However, employers who petition on behalf of applicants could potentially experience some employee turnover costs should these applicants choose to obtain the compelling circumstances EAD or choose to port to another employer. DHS recognizes that these provisions could place additional burdens on the state and private sector in these circumstances. DHS specifically considered the situation where a public institution of higher education filed a petition on behalf of a high skilled worker and that high skilled worker utilized porting under section 204(j) of the INA to move to another employer. The flexibilities provided as a result of this rule would place additional costs and burdens on the states in this scenario and other similar scenarios. However, DHS reiterates that these are not required immigration benefits. State and private sector employers make the cost-benefit decisions of whether to expend finances to petition for foreign workers. DHS presents the impacts of these provisions more fully in the RIA found with this final rule on *www.regulations.gov.*

DHS does not believe that this rule will have any impact on health or safety. The impact of this rule on environmental issues is discussed more fully in Review under the National Environmental Policy Act (NEPA), Section Q, subpart 6 of this final rule.

3. Estimates by the Agency, if and to the Extent That the Agency Determines That Accurate Estimates Are Reasonably Feasible of Future Compliance Costs of the Federal Mandate and Any Disproportionate Budgetary Effects of the Federal Mandate Upon Any Particular Regions of the Nation or Particular State, Local, or Tribal Governments, Urban or Rural or Other Types of Communities, or Particular Segments of the Private Sector

DHS has provided compliance costs of the main provisions that may indirectly trigger Federal mandates in the full RIA discussion of each provision published with this final rule as well as in the FRFA. DHS reiterates that state and private sector employers make the cost-benefit decisions of whether to expend finances to petition for foreign workers and that these provisions are not mandatory requirements.

4. Estimates by the Agency of the Effect on the National Economy, Such as the Effect on Productivity, Economic Growth, Full Employment, Creation of Productive Jobs, and International Competitiveness of United States Goods and Services, if and to the Extent That the Agency in Its Sole Discretion Determines That Accurate Estimates Are Reasonably Feasible and That Such Effect Is Relevant and Material

DHS has provided discussions of the effect of this rule on the economy in Section Q of this final rule.

5. A Description of the Extent of the Agency's Prior Consultation With Elected Representatives (Under Section 204) of the Affected State, Local, and Tribal Governments

DHS has not consulted with elected representatives of the affected State, local, and tribal governments as the Federal mandates imposed by this rule are voluntary and DHS cannot predict which States or private sector entities will apply for these benefits in the future.

D. Small Business Regulatory Enforcement Fairness Act of 1996

This final rule is a major rule as defined by section 804 of the Small Business Regulatory Enforcement Act of 1996. This rule will result in an annual effect on the economy of more than $100 million in the first year only. For each subsequent year, the annual effect on the economy will remain under $100 million. As small businesses may be impacted under this regulation, DHS has prepared a Final Regulatory Flexibility analysis. The RFA analysis can be found with the analysis prepared under Executive Orders 12866 and 13563 on *regulations.gov*.

E. Executive Order 13132 (Federalism)

This rule does not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988 (Civil Justice Reform)

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. Paperwork Reduction Act

Under the Paperwork Reduction Act (PRA) of 1995, Public Law 104–13, Departments are required to submit to the Office of Management and Budget (OMB), for review and approval, any reporting requirements inherent in a rule. This final rule makes revisions to the following information collections:

1. The Application for Employment Authorization, Form I–765; and Form I–765 Work Sheet, Form I–765WS, OMB Control Number 1615–0040. Specifically, USCIS revises this collection by revising the instructions to Form I–765 to include information for the newly amended group of applicants (beneficiaries of approved Form I–140 petitions who are in the United States in E–3, H–1B, H–1B1, O–1, or L–1 nonimmigrant status, who do not have immigrant visas immediately available to them, and who demonstrate compelling circumstances justifying a grant of employment authorization) eligible to apply for employment authorization under final 8 CFR 274a.12(c)(35). Their dependent spouses and children who are present in the United States in nonimmigrant status are also eligible to obtain employment authorization under 8 CFR 274a.12(c)(36), provided that the principal foreign national has been granted employment authorization. USCIS is also amending Form I–765 to include Yes/No questions requiring these applicants to disclose certain criminal convictions. USCIS estimates an upper-bound average of 213,164 respondents will request employment authorization as a result of the changes in this rule in the first 2 years. This average estimate is derived from a maximum estimate of 361,766 new

respondents who may file applications for employment authorization documents in year 1 and a maximum estimate of 64,561 respondents in year 2. USCIS averaged this estimate for new I–765 respondents over a 2-year period of time based on its request seeking a 2-year approval of the form and its instructions from OMB.

2. USCIS is revising the form and its instructions and the estimate of total burden hours has increased due to the addition of this new population of Form I–765 filers, and the increase of burden hours associated with the collection of biometrics from these applicants.

3. The Immigrant Petition for Alien Worker, Form I–140; OMB Control Number 1615–0015. Specifically, USCIS is revising this information collection to remove ambiguity regarding whether information about the principal beneficiary's dependent family members should be entered on the Form I–140 petition, by revising the word ''requests'' to ''requires'' for clarification in the form instructions. USCIS is also revising the instructions to remove the terms ''in duplicate'' in the second paragraph under the labor certification section of the instructions because USCIS no longer requires uncertified Employment and Training Administration (ETA) Forms 9089 to be submitted in duplicate. There is no change in the data being captured on the information collection instrument, but there is a change to the estimated annual burden hours as a result of USCIS's revised estimate of the number of respondents for this collection of information.

4. The Petition for a Nonimmigrant Worker, Form I–129, OMB Control Number 1615–0009. USCIS is making revisions to Form I–129, specifically the H–1B Data Collection and Filing Fee Exemption Supplement and the accompanying instructions, to correspond with revisions to the regulatory definition of ''related or affiliated nonprofit entities'' for the purposes of determining whether the petitioner is exempt from: (1) Payment of the $750/$1,500 fee associated with the American Competitiveness and Workforce Improvement Act (ACWIA) and (2) the statutory numerical limitation on H–1B visas (also known as the H–1B cap). USCIS cannot predict the number of new respondents that would file petitions for foreign workers as a result of the changes in this rule.

5. The Application to Register Permanent Residence or Adjust Status, Form I–485, including new Supplement J, ''Confirmation of Bona Fide Job Offer or Request for Job Portability under INA Section 204(J),'' OMB Control Number 1615–0023. Specifically, USCIS is creating a new Supplement J to Form I–485 to allow the applicant for adjustment of status requesting portability under section 204(j) of the INA, and the U.S. employer offering the applicant a new permanent job offer, to provide formal attestations regarding important aspects of the job offer. Providing such attestations is an essential step to establish eligibility for adjustment of status in any employment-based immigrant visa classification requiring a job offer, regardless of whether the applicant is making a portability request under section 204(j) or is seeking to adjust status based upon the same job that was offered in the underlying immigrant visa petition. Through this new supplement, USCIS will collect required information from U.S. employers offering a new permanent job offer to a specific worker under section 204(j). Moreover, Supplement J will also be used by applicants who are not porting pursuant to section 204(j) to confirm that the original job offer described in the Form I–140 petition is still bona fide and available to the applicant at the time the applicant files the Form I–485 application. Supplement J replaces the current Form I–485 initial evidence requirement that an applicant must submit a letter on the letterhead of the petitioning U.S. employer that confirms that the job offer on which the Form I–140 petition is based is still available to the applicant.

This supplement also serves as an important anti-fraud measure, and it allows USCIS to validate employers extending new permanent job offers to individuals under section 204(j). USCIS estimates that approximately 28,309 new respondents will file Supplement J as a result of the changes made by the rule.

Additionally, USCIS is revising the instructions to Form I–485 to reflect the implementation of Supplement J. The Form I–485 instructions are also being revised to clarify that eligible applicants need to file Supplement J to request job portability under section 204(j). There is no change to the estimated annual burden hours as a result of this revision as a result of the changes in this rule.

Overview of This Information Collection

(1) Type of Information Collection: Revision of a Currently Approved Collection.

(2) Title of the Forms/Collections

- Application for Employment Authorization Document;
- Form I–765 Work Sheet;
- Immigrant Petition for Alien Worker;
- Petition for Nonimmigrant Worker;
- Application to Register Permanent Residence or Adjust Status.

(3) Agency form number, if any, and the applicable component of the DHS sponsoring the collection: Forms I–765/I–765WS, I–140, I–129 and I–485; USCIS.

(4) Affected public who will be asked or required to respond, as well as a brief abstract:

Form I–765: Primary: Individuals or households: This form was developed for individuals to request employment authorization and evidence of that employment authorization. USCIS is revising this form to add a new class of workers eligible to apply for employment authorization as the beneficiary of a valid immigrant visa petition for classification under sections 203(b)(1), 203(b)(2) or 203(b)(3) of the INA. Eligible applicants must be physically present in the United States in E–3, H–1B, H–1B1, O–1, or L–1 nonimmigrant status, and must demonstrate that they face compelling circumstances while they wait for their immigrant visas to become available. Dependent spouses and children who are present in the United States in nonimmigrant status are also eligible to apply provided that the principal has been granted employment authorization. Supporting documentation demonstrating eligibility must be filed with the application. The form instructions list examples of relevant documentation.

Form I–140: Primary: Business or other for-profit organizations, as well as not-for profit organizations. USCIS will use the information furnished on this information collection to classify individuals under sections 203(b)(1), 203(b)(2) or 203(b)(3) of the INA.

Form I–129: Primary: Business: This form is used by employers to petition for workers to come to the United States temporarily to perform services, labor, and training or to request extensions of stay or changes in nonimmigrant status for nonimmigrant workers. USCIS is revising Form I–129, specifically the H–1B Data Collection and Filing Fee Exemption Supplement, and the accompanying instructions, to correspond with revisions to the regulatory definition of ''related or affiliated nonprofit entities'' for the purposes of determining whether the petitioner is exempt from: (1) Payment of the $750/$1,500 fee associated with the American Competitiveness and Workforce Improvement Act (ACWIA), and (2) the statutory numerical limitation on H–1B visas (also known as the cap).

Form I–485: Primary: Individuals or households: The information collected is used to determine eligibility to adjust status under section 245 of the INA. The instructions to Form I–485, Application to Register Permanent Residence or Adjust Status, are being revised to reflect the implementation of Form I–485 Supplement J, Confirmation of Bona Fide Job Offer or Request for Job Portability under INA Section 204(j) (Supplement J). Supplement J will be used by individuals applying for adjustment of status to lawful permanent resident on the basis of being the principal beneficiary of an approved Form I–140, Immigrant Petition for Alien Worker. Applicants will use Supplement J to confirm that the job offer described in the Form I–140 petition is still bona fide and available to the applicant at the time the applicant files the Form I–485 application. Supplement J is replacing the current Form I–485 initial evidence requirement that an applicant must submit a letter on the letterhead of the petitioning employer which confirms that the job offer on which the Form I–140 petition is based is still available to the applicant. Applicants will also use Supplement J when requesting job portability pursuant to section 204(j) of the INA. Supplement J will provide a standardized procedure to confirm that the job offer described in the Form I–140 petition is still bona fide, or if applicable to request job portability pursuant to section 204(j) of the INA.

(5) An estimate of the total annual number of respondents and the amount of time estimated for an average respondent to respond:

- Form I–765/I–765WS:
  - 2,136,583 responses related to Form I–765 at 3.42 hours per response;
  - 250,000 responses related to Form I–765WS at .50 hours per response;
  - 405,067 responses related to Biometrics services at 1.17 hours; and
  - 2,136,583 responses related to Passport-Style Photographs at .50 hours per response.
- Form I–140:
  - 213,164 respondents at 1.08 hours per response.
- Form I–129:
  - Form I–129—333,891 respondents at 2.34 hours;
  - E–1/E–2 Classification to Form I–129—4,760 respondents at .67 hours;
  - Trade Agreement Supplement to Form I–129—3,057 respondents at .67 hours;
  - H Classification Supplement to Form I–129—255,872 respondents at 2 hours;
  - H–1B and H–1B1 Data Collection and Filing Fee Exemption Supplement—243,965 respondents at 1 hour;
  - L Classification Supplement to Form I–129—37,831 respondents at 1.34 hours;
  - and P Classifications Supplement to Form I–129—22,710 respondents at 1 hour;
  - Q–1 Classification Supplement to Form I–129—155 respondents at .34 hours; and
  - R–1 Classification Supplement to Form I–129—6,635 respondents at 2.34 hours.
- Form I–485:
  - 697,811 respondents at 6.25 hours per response;
  - 697,811 respondents related to Biometrics services at 1.17 hours.

(6) An estimate of the total annual public burden (in hours) associated with these collections:

- *Form I–765/I–765WS:* 8,974,364 hours.
- *Form I–140:* 230,217 hours.
- *Form I–129:* 1,631,400 hours.
- *Form I–485:* 5,238,100 hours.

(7) An estimate of the annual public burden (monetized) associated with these collections:

- *Form I–765/I–765WS:* $649,521,330.
- *Form I–140:* $123,642,620.
- *Form I–129:* $73,751,280.
- *Form I–485:* $239,349,173.

DHS has considered the public comments received in response to the NPRM, published in the **Federal Register** at 80 FR 81899 on December 31, 2015. DHS's responses to these comments appear in this final rule and in appendix to the supporting statements that accompany this rule and can be found in the docket. USCIS has submitted the supporting statements to OMB as part of its request for the approval of the revised information collection instruments.

List of Subjects

8 CFR Part 204

Administrative practice and procedure, Adoption and foster care, Immigration, Reporting and recordkeeping requirements.

8 CFR Part 205

Administrative practice and procedure, Immigration.

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange programs, Employment, Foreign officials, Health professions, Reporting and recordkeeping requirements, Students.

8 CFR Part 245

Aliens, Immigration, Reporting and recordkeeping requirements.

8 CFR Part 274a

Administrative practice and procedure, Aliens, Employment, Penalties, Reporting and recordkeeping requirements.

Accordingly, DHS amends chapter I of title 8 of the Code of Federal Regulations as follows:

PART 204—IMMIGRANT PETITIONS

■ 1. The authority citation for part 204 is revised to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1151, 1153, 1154, 1182, 1184, 1186a, 1255, 1324a, 1641; 8 CFR part 2.

■ 2. Section 204.5 is amended by:
■ a. Revising paragraphs (d), (e), and (n)(3); and
■ b. Adding paragraph (p).

The revisions and addition read as follows:

§ 204.5 Petitions for employment-based immigrants.

* * * * *

(d) *Priority date.* The priority date of any petition filed for classification under section 203(b) of the Act which is accompanied by an individual labor certification from the Department of Labor shall be the date the labor certification application was accepted for processing by any office of the Department of Labor. The priority date of any petition filed for a classification under section 203(b) of the Act which does not require a labor certification from the Department of Labor shall be the date the completed, signed petition (including all initial evidence and the correct fee) is properly filed with USCIS. The priority date of any petition filed for classification under section 203(b) of the Act which is accompanied by an application for Schedule A designation shall be the date the completed, signed petition (including all initial evidence and the correct fee) is properly filed with USCIS. The priority date of an alien who filed for classification as a special immigrant under section 203(b)(4) of the Act prior to October 1, 1991, and who is the beneficiary of an approved petition for special immigrant status after October 1, 1991, shall be the date the alien applied for an immigrant visa or adjustment of status.

(e) *Retention of section 203(b)(1), (2), or (3) priority date.* (1) A petition approved on behalf of an alien under sections 203(b)(1), (2), or (3) of the Act accords the alien the priority date of the approved petition for any subsequently filed petition for any classification under section 203(b)(1), (2), or (3) of the Act for which the alien may qualify. In the event that the alien is the beneficiary of multiple approved petitions under section 203(b)(1), (2), or (3) of the Act, the alien shall be entitled to the earliest priority date.

(2) The priority date of a petition may not be retained under paragraph (e)(1) of this section if at any time USCIS revokes the approval of the petition because of:

(i) Fraud, or a willful misrepresentation of a material fact;

(ii) Revocation by the Department of Labor of the approved permanent labor certification that accompanied the petition;

(iii) Invalidation by USCIS or the Department of State of the permanent labor certification that accompanied the petition; or

(iv) A determination by USCIS that petition approval was based on a material error.

(3) A denied petition will not establish a priority date.

(4) A priority date is not transferable to another alien.

(5) A petition filed under section 204(a)(1)(F) of the Act for an alien shall remain valid with respect to a new employment offer as determined by USCIS under section 204(j) of the Act and 8 CFR 245.25. An alien will continue to be afforded the priority date of such petition, if the requirements of paragraph (e) of this section are met.

* * * * *

(n) * * *

(3) *Validity of approved petitions.* Unless approval is revoked under section 203(g) or 205 of the Act, an employment-based petition is valid indefinitely.

* * * * *

(p) *Eligibility for employment authorization in compelling circumstances*—(1) *Eligibility of principal alien.* An individual who is the principal beneficiary of an approved immigrant petition for classification under sections 203(b)(1), 203(b)(2) or 203(b)(3) of the Act may be eligible to receive employment authorization, upon application, if:

(i) In the case of an initial request for employment authorization, the individual is in E–3, H–1B, H–1B1, O–1, or L–1 nonimmigrant status, including the periods authorized by § 214.1(l)(l) and (2), as well as any other periods of admission authorized by this chapter before a validity period begins or after the expiration of a validity period, on the date the application for employment authorization (Form I–765) is filed;

(ii) An immigrant visa is not authorized for issuance to the principal beneficiary based on his or her priority date on the date the application for employment authorization is filed; and

(iii) USCIS determines, as a matter of discretion, that the principal beneficiary demonstrates compelling circumstances that justify the issuance of employment authorization.

(2) *Eligibility of spouses and children.* The family members, as described in section 203(d) of the Act, of a principal beneficiary, who are in nonimmigrant status at the time the principal beneficiary applies for employment authorization under paragraph (p)(1) of this section, are eligible to apply for employment authorization provided that the principal beneficiary has been granted employment authorization under paragraph (p) of this section and such employment authorization has not been terminated or revoked. Such family members may apply for employment authorization concurrently with the principal beneficiary, but cannot be granted employment authorization until the principal beneficiary is so authorized. The validity period of employment authorization granted to family members may not extend beyond the validity period of employment authorization granted to the principal beneficiary.

(3) *Eligibility for renewal of employment authorization.* An alien may be eligible to renew employment authorization granted under paragraph (p) of this section, upon submission of a new application before the expiration of such employment authorization, if:

(i) He or she is the principal beneficiary of an approved immigrant petition for classification under section 203(b)(1), 203(b)(2) or 203(b)(3) of the Act and either:

(A) An immigrant visa is not authorized for issuance to the principal beneficiary based on his or her priority date on the date the application for employment authorization, (Form I–765) is filed; and USCIS determines, as a matter of discretion that the principal beneficiary demonstrates compelling circumstances that justify the issuance of employment authorization; or

(B) The difference between the principal beneficiary's priority date and the date upon which immigrant visas are authorized for issuance for the principal beneficiary's preference category and country of chargeability is 1 year or less according to the Department of State Visa Bulletin in effect on the date the application for employment authorization (Form I–765), is filed. For example, if the Department of State Visa Bulletin in effect on the date the renewal application is filed indicates immigrant visas are authorized for issuance for the applicable preference category and country of chargeability to individuals with priority dates earlier than November 1, 2000, USCIS may grant a renewal to a principal beneficiary whose priority date is on or between October 31, 1999 and October 31, 2001; or

(ii) He or she is a family member, as described under paragraph (p)(2) of this section, of a principal beneficiary granted a renewal of employment authorization under paragraph (p)(3)(i) that remains valid, except that the family member need not be maintaining nonimmigrant status at the time the principal beneficiary applies for renewal of employment authorization under paragraph (p) of this section. A family member may file an application to renew employment authorization concurrently with an application to renew employment authorization filed by the principal beneficiary or while such application by the principal beneficiary is pending, but the family member's renewal application cannot be approved unless the principal beneficiary's application is granted. The validity period of a renewal of employment authorization granted to family members may not extend beyond the validity period of the renewal of employment authorization granted to the principal beneficiary.

(4) *Application for employment authorization.* To request employment authorization, an eligible applicant described in paragraph (p)(1), (2), or (3) of this section must file an application for employment authorization (Form I–765), with USCIS, in accordance with 8 CFR 274a.13(a) and the form instructions. Such applicant is subject to the collection of his or her biometric information and the payment of any biometric services fee as provided in the form instructions. Employment authorization under this paragraph may be granted solely in 1-year increments.

(5) *Ineligibility for employment authorization.* An alien is not eligible for employment authorization, including renewal of employment authorization, under this paragraph if the alien has been convicted of any felony or two or more misdemeanors.

PART 205—REVOCATION OF APPROVAL OF PETITIONS

■ 3. The authority citation for part 205 is revised to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1151, 1153, 1154, 1155, 1182, 1324a, and 1186a.

■ 4. Section 205.1 is amended by revising paragraphs (a)(3)(iii)(C) and (D) to read as follows:

§ 205.1 Automatic revocation.

(a) * * *

(3) * * *

(iii) * * *

(C) In employment-based preference cases, upon written notice of withdrawal filed by the petitioner to any officer of USCIS who is authorized to grant or deny petitions, where the withdrawal is filed less than 180 days after approval of the employment-based preference petition, unless an associated adjustment of status application has been pending for 180 days or more. A petition that is withdrawn 180 days or more after its approval, or 180 days or more after the associated adjustment of status application has been filed, remains approved unless its approval is revoked on other grounds. If an employment-based petition on behalf of an alien is withdrawn, the job offer of the petitioning employer is rescinded and the alien must obtain a new employment-based preference petition in order to seek adjustment of status or issuance of an immigrant visa as an employment-based immigrant, unless eligible for adjustment of status under section 204(j) of the Act and in accordance with 8 CFR 245.25.

(D) Upon termination of the petitioning employer's business less than 180 days after petition approval under section 203(b)(1)(B), 203(b)(1)(C), 203(b)(2), or 203(b)(3) of the Act, unless an associated adjustment of status application has been pending for 180 days or more. If a petitioning employer's business terminates 180 days or more after petition approval, or 180 days or more after an associated adjustment of status application has been filed, the petition remains approved unless its approval is revoked on other grounds. If a petitioning employer's business terminates the job offer of the petitioning employer is rescinded and the beneficiary must obtain a new employment-based preference petition on his or her behalf in order to seek adjustment of status or issuance of an immigrant visa as an employment-based immigrant, unless eligible for adjustment of status under section 204(j) of the Act and in accordance with 8 CFR 245.25.

* * * * *

PART 214—NONIMMIGRANT CLASSES

■ 5. The authority citation for part 214 continues to read as follows:

Authority: 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305 and 1372; sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 105–277, 112 Stat. 2681–641; Pub. L. 106–313, 114 Stat. 1251–1255; Pub. L. 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note, and 1931 note, respectively; 48 U.S.C. 1806; 8 CFR part 2.

■ 6. Section 214.1 is amended by adding paragraph (l) to read as follows:

§ 214.1 Requirements for admission, extension, and maintenance of status.

* * * * *

(l) *Period of stay.* (1) An alien admissible in E–1, E–2, E–3, H–1B, L–1, or TN classification and his or her dependents may be admitted to the United States or otherwise provided such status for the validity period of the petition, or for a validity period otherwise authorized for the E–1, E–2, E–3, and TN classifications, plus an additional period of up to 10 days before the validity period begins and 10 days after the validity period ends. Unless authorized under 8 CFR 274a.12, the alien may not work except during the validity period.

(2) An alien admitted or otherwise provided status in E–1, E–2, E–3, H–1B, H–1B1, L–1, O–1 or TN classification and his or her dependents shall not be considered to have failed to maintain nonimmigrant status solely on the basis of a cessation of the employment on which the alien's classification was based, for up to 60 consecutive days or until the end of the authorized validity period, whichever is shorter, once during each authorized validity period. DHS may eliminate or shorten this 60-day period as a matter of discretion. Unless otherwise authorized under 8 CFR 274a.12, the alien may not work during such a period.

(3) An alien in any authorized period described in paragraph (l) of this section may apply for and be granted an extension of stay under paragraph (c)(4) of this section or change of status under 8 CFR 248.1, if otherwise eligible.

■ 7. Section 214.2 is amended by:

■ a. Adding paragraph (h)(2)(i)(H);

■ b. Revising paragraph (h)(4)(v)(C);

■ c. Adding paragraph (h)(8)(ii)(F);

■ d. Removing the fifth sentence from paragraph (h)(9)(iv);

■ e. Revising paragraph (h)(13)(i)(A);

■ f. Adding paragraphs (h)(13)(iii)(C) through (E);

■ g. Revising paragraphs (h)(19)(i) introductory text, (h)(19)(ii), and (h)(19)(iii)(B).

■ h. In paragraph (h)(19)(iii)(C):

■ i. Revising the second sentence; and

■ ii. Removing the period at the end of the paragraph and adding a semicolon in its place;

■ i. Adding paragraphs (h)(19)(iii)(D) and (E);

■ j. Revising paragraph (h)(19)(v);

■ k. Removing paragraph (h)(19)(vi);

■ l. Redesignating paragraph (h)(19)(vii) as paragraph (h)(19)(vi) and revising newly redesignated paragraph (h)(19)(vi); and

■ m. Adding paragraph (h)(20).

The revisions and additions read as follows:

§ 214.2 Special requirements for admission, extension, and maintenance of status.

* * * * *

(h) * * *

(2) * * *

(i) * * *

(H) *H–1B portability.* An eligible H–1B nonimmigrant is authorized to start concurrent or new employment under section 214(n) of the Act upon the filing, in accordance with 8 CFR 103.2(a), of a nonfrivolous H–1B petition on behalf of such alien, or as of the requested start date, whichever is later.

(*1*) *Eligible H–1B nonimmigrant.* For H–1B portability purposes, an eligible H–1B nonimmigrant is defined as an alien:

(*i*) Who has been lawfully admitted into the United States in, or otherwise provided, H–1B nonimmigrant status;

(*ii*) On whose behalf a nonfrivolous H–1B petition for new employment has been filed, including a petition for new employment with the same employer, with a request to amend or extend the H–1B nonimmigrant's stay, before the H–1B nonimmigrant's period of stay authorized by the Secretary of Homeland Security expires; and

(*iii*) Who has not been employed without authorization in the United States from the time of last admission through the filing of the petition for new employment.

(*2*) *Length of employment.* Employment authorized under paragraph (h)(2)(i)(H) of this section automatically ceases upon the adjudication of the H–1B petition described in paragraph (h)(2)(i)(H)(*1*)(*ii*) of this section.

(*3*) *Successive H–1B portability petitions.* (*i*) An alien maintaining authorization for employment under paragraph (h)(2)(i)(H) of this section, whose status, as indicated on the Arrival-Departure Record (Form I–94), has expired, shall be considered to be in a period of stay authorized by the Secretary of Homeland Security for purposes of paragraph (h)(2)(i)(H)(*1*)(*ii*) of this section. If otherwise eligible under paragraph (h)(2)(i)(H) of this section, such alien may begin working in a subsequent position upon the filing of another H–1B petition or from the requested start date, whichever is later, notwithstanding that the previous H–1B petition upon which employment is authorized under paragraph (h)(2)(i)(H) of this section remains pending and regardless of whether the validity period of an approved H–1B petition filed on the alien's behalf expired during such pendency.

(*ii*) A request to amend the petition or for an extension of stay in any successive H–1B portability petition cannot be approved if a request to amend the petition or for an extension of stay in any preceding H–1B portability petition in the succession is denied, unless the beneficiary's previously approved period of H–1B status remains valid.

(*iii*) Denial of a successive portability petition does not affect the ability of the H–1B beneficiary to continue or resume working in accordance with the terms of an H–1B petition previously approved on behalf of the beneficiary if that petition approval remains valid and the beneficiary has maintained H–1B status or been in a period of authorized stay and has not been employed in the United States without authorization.

* * * * *

(4) * * *

(v) * * *

(C) *Duties without licensure.* (*1*) In certain occupations which generally require licensure, a state may allow an individual without licensure to fully practice the occupation under the supervision of licensed senior or supervisory personnel in that occupation. In such cases, USCIS shall examine the nature of the duties and the level at which they are performed, as well as evidence provided by the petitioner as to the identity, physical location, and credentials of the individual(s) who will supervise the alien, and evidence that the petitioner is complying with state requirements. If the facts demonstrate that the alien under supervision will fully perform the duties of the occupation, H classification may be granted.

(*2*) An H–1B petition filed on behalf of an alien who does not have a valid state or local license, where a license is otherwise required to fully perform the duties in that occupation, may be approved for a period of up to 1 year if:

(*i*) The license would otherwise be issued provided the alien was in possession of a valid Social Security number, was authorized for employment in the United States, or met a similar technical requirement; and

(*ii*) The petitioner demonstrates, through evidence from the state or local licensing authority, that the only obstacle to the issuance of a license to the beneficiary is the lack of a Social Security number, a lack of employment authorization in the United States, or a failure to meet a similar technical requirement that precludes the issuance of the license to an individual who is not yet in H–1B status. The petitioner must demonstrate that the alien is fully qualified to receive the state or local license in all other respects, meaning that all educational, training, experience, and other substantive requirements have been met. The alien must have filed an application for the license in accordance with applicable state and local rules and procedures, provided that state or local rules or procedures do not prohibit the alien from filing the license application without provision of a Social Security number or proof of employment authorization or without meeting a similar technical requirement.

(*3*) An H–1B petition filed on behalf of an alien who has been previously accorded H–1B classification under paragraph (h)(4)(v)(C)(*2*) of this section may not be approved unless the petitioner demonstrates that the alien has obtained the required license, is seeking to employ the alien in a position requiring a different license, or the alien will be employed in that occupation in a different location which does not require a state or local license to fully perform the duties of the occupation.

* * * * *

(8) * * *

(ii) * * *

(F) *Cap exemptions under sections 214(g)(5)(A) and (B) of the Act.* An alien is not subject to the numerical limitations identified in section 214(g)(1)(A) of the Act if the alien qualifies for an exemption under section 214(g)(5) of the Act. For purposes of section 214(g)(5)(A) and (B) of the Act:

(*1*) ''Institution of higher education'' has the same definition as described at section 101(a) of the Higher Education Act of 1965 (20 U.S.C. 1001(a)).

(*2*) A nonprofit entity shall be considered to be related to or affiliated with an institution of higher education if it satisfies any one of the following conditions:

(*i*) The nonprofit entity is connected to or associated with an institution of higher education through shared ownership or control by the same board or federation;

(*ii*) The nonprofit entity is operated by an institution of higher education;

(*iii*) The nonprofit entity is attached to an institution of higher education as a member, branch, cooperative, or subsidiary; or

(*iv*) The nonprofit entity has entered into a formal written affiliation agreement with an institution of higher education that establishes an active working relationship between the nonprofit entity and the institution of higher education for the purposes of research or education, and a fundamental activity of the nonprofit entity is to directly contribute to the research or education mission of the institution of higher education.

(*3*) An entity is considered a ''nonprofit entity'' if it meets the definition described at paragraph (h)(19)(iv) of this section. ''Nonprofit research organization'' and ''governmental research organization'' have the same definitions as described at paragraph (h)(19)(iii)(C) of this section.

(*4*) An H–1B beneficiary who is not directly employed by a qualifying institution, organization or entity identified in section 214(g)(5)(A) or (B) of the Act shall qualify for an exemption under such section if the H–1B beneficiary will spend the majority of his or her work time performing job duties at a qualifying institution, organization or entity and those job duties directly and predominately further the essential purpose, mission, objectives or functions of the qualifying institution, organization or entity, namely, either higher education, nonprofit research or government research. The burden is on the H–1B petitioner to establish that there is a nexus between the duties to be performed by the H–1B beneficiary and the essential purpose, mission, objectives or functions of the qualifying institution, organization or entity.

(*5*) If cap-exempt employment ceases, and if the alien is not the beneficiary of a new cap-exempt petition, then the alien will be subject to the cap if not previously counted within the 6-year period of authorized admission to which the cap-exempt employment applied. If cap-exempt employment converts to cap-subject employment subject to the numerical limitations in section 214(g)(1)(A) of the Act, USCIS may revoke the petition authorizing such employment consistent with paragraph (h)(11)(iii) of this section.

(*6*) Concurrent H–1B employment in a cap-subject position of an alien that qualifies for an exemption under section 214(g)(5)(A) or (B) of the Act shall not subject the alien to the numerical limitations in section 214(g)(1)(A) of the Act. When petitioning for concurrent cap-subject H–1B employment, the petitioner must demonstrate that the H–

1B beneficiary is employed in valid H–1B status under a cap exemption under section 214(g)(5)(A) or (B) of the Act, the beneficiary's employment with the cap-exempt employer is expected to continue after the new cap-subject petition is approved, and the beneficiary can reasonably and concurrently perform the work described in each employer's respective positions.

(*i*) Validity of a petition for concurrent cap-subject H–1B employment approved under paragraph (h)(8)(ii)(F)(*6*) of this section cannot extend beyond the period of validity specified for the cap-exempt H–1B employment.

(*ii*) If H–1B employment subject to a cap exemption under section 214(g)(5)(A) or (B) of the Act is terminated by a petitioner, or otherwise ends before the end of the validity period listed on the approved petition filed on the alien's behalf, the alien who is concurrently employed in a cap-subject position becomes subject to the numerical limitations in section 214(g)(1)(A) of the Act, unless the alien was previously counted with respect to the 6-year period of authorized H–1B admission to which the petition applies or another exemption applies. If such an alien becomes subject to the numerical limitations in section 214(g)(1)(A) of the Act, USCIS may revoke the cap-subject petition described in paragraph (h)(8)(ii)(F)(*6*) of this section consistent with paragraph (h)(11)(iii) of this section.

* * * * *

(13) * * *

(i) * * *

(A) Except as set forth in 8 CFR 214.1(l) with respect to H–1B beneficiaries and their dependents and paragraph (h)(5)(viii)(B) of this section with respect to H–2A beneficiaries, a beneficiary shall be admitted to the United States for the validity period of the petition, plus a period of up to 10 days before the validity period begins and 10 days after the validity period ends. The beneficiary may not work except during the validity period of the petition.

* * * * *

(iii) * * *

(C) *Calculating the maximum H–1B admission period.* Time spent physically outside the United States exceeding 24 hours by an alien during the validity of an H–1B petition that was approved on the alien's behalf shall not be considered for purposes of calculating the alien's total period of authorized admission under section 214(g)(4) of the Act, regardless of whether such time meaningfully interrupts the alien's stay in H–1B status and the reason for the alien's absence. Accordingly, such remaining time may be recaptured in a subsequent H–1B petition on behalf of the alien, at any time before the alien uses the full period of H–1B admission described in section 214(g)(4) of the Act.

(*1*) It is the H–1B petitioner's burden to request and demonstrate the specific amount of time for recapture on behalf of the beneficiary. The beneficiary may provide appropriate evidence, such as copies of passport stamps, Arrival-Departure Records (Form I–94), or airline tickets, together with a chart, indicating the dates spent outside of the United States, and referencing the relevant independent documentary evidence, when seeking to recapture the alien's time spent outside the United States. Based on the evidence provided, USCIS may grant all, part, or none of the recapture period requested.

(*2*) If the beneficiary was previously counted toward the H–1B numerical cap under section 214(g)(1) of the Act with respect to the 6-year maximum period of H–1B admission from which recapture is sought, the H–1B petition seeking to recapture a period of stay as an H–1B nonimmigrant will not subject the beneficiary to the H–1B numerical cap, whether or not the alien has been physically outside the United States for 1 year or more and would be otherwise eligible for a new period of admission under such section of the Act. An H–1B petitioner may either seek such recapture on behalf of the alien or, consistent with paragraph (h)(13)(iii) of this section, seek a new period of admission on behalf of the alien under section 214(g)(1) of the Act.

(D) *Lengthy adjudication delay exemption from 214(g)(4) of the Act.* (*1*) An alien who is in H–1B status or has previously held H–1B status is eligible for H–1B status beyond the 6-year limitation under section 214(g)(4) of the Act, if at least 365 days have elapsed since:

(*i*) The filing of a labor certification with the Department of Labor on the alien's behalf, if such certification is required for the alien to obtain status under section 203(b) of the Act; or

(*ii*) The filing of an immigrant visa petition with USCIS on the alien's behalf to accord classification under section 203(b) of the Act.

(*2*) H–1B approvals under paragraph (h)(13)(iii)(D) of this section may be granted in up to 1-year increments until either the approved permanent labor certification expires or a final decision has been made to:

(*i*) Deny the application for permanent labor certification, or, if approved, to revoke or invalidate such approval;

(*ii*) Deny the immigrant visa petition, or, if approved, revoke such approval;

(*iii*) Deny or approve the alien's application for an immigrant visa or application to adjust status to lawful permanent residence; or

(*iv*) Administratively or otherwise close the application for permanent labor certification, immigrant visa petition, or application to adjust status.

(*3*) *No final decision while appeal available or pending.* A decision to deny or revoke an application for labor certification, or to deny or revoke the approval of an immigrant visa petition, will not be considered final under paragraph (h)(13)(iii)(D)(*2*)(*i*) or (*ii*) of this section during the period authorized for filing an appeal of the decision, or while an appeal is pending.

(*4*) *Substitution of beneficiaries.* An alien who has been replaced by another alien, on or before July 16, 2007, as the beneficiary of an approved permanent labor certification may not rely on that permanent labor certification to establish eligibility for H–1B status based on this lengthy adjudication delay exemption. Except for a substitution of a beneficiary that occurred on or before July 16, 2007, an alien establishing eligibility for this lengthy adjudication delay exemption based on a pending or approved labor certification must be the named beneficiary listed on the permanent labor certification.

(*5*) *Advance filing.* A petitioner may file an H–1B petition seeking a lengthy adjudication delay exemption under paragraph (h)(13)(iii)(D) of this section within 6 months of the requested H–1B start date. The petition may be filed before 365 days have elapsed since the labor certification application or immigrant visa petition was filed with the Department of Labor or USCIS, respectively, provided that the application for labor certification or immigrant visa petition must have been filed at least 365 days prior to the date the period of admission authorized under this exemption will take effect. The petitioner may request any time remaining to the beneficiary under the maximum period of admission described at section 214(g)(4) of the Act along with the exemption request, but in no case may the approved H–1B period of validity exceed the limits specified by paragraph (h)(9)(iii) of this section. Time remaining to the beneficiary under the maximum period of admission described at section 214(g)(4) of the Act may include any request to recapture unused H–1B, L–1A, or L–1B time spent outside of the United States.

(*6*) *Petitioners seeking exemption.* The H–1B petitioner need not be the employer that filed the application for labor certification or immigrant visa petition that is used to qualify for this exemption.

(*7*) *Subsequent exemption approvals after the 7th year.* The qualifying labor certification or immigrant visa petition need not be the same as that used to qualify for the initial exemption under paragraph (h)(13)(iii)(D) of this section.

(*8*) *Aggregation of time not permitted.* A petitioner may not aggregate the number of days that have elapsed since the filing of one labor certification or immigrant visa petition with the number of days that have elapsed since the filing of another such application or petition to meet the 365-day requirement.

(*9*) *Exemption eligibility.* Only a principal beneficiary of a nonfrivolous labor certification application or immigrant visa petition filed on his or her behalf may be eligible under paragraph (h)(13)(iii)(D) of this section for an exemption to the maximum period of admission under section 214(g)(4) of the Act.

(*10*) *Limits on future exemptions from the lengthy adjudication delay.* An alien is ineligible for the lengthy adjudication delay exemption under paragraph (h)(13)(iii)(D) of this section if the alien is the beneficiary of an approved petition under section 203(b) of the Act and fails to file an adjustment of status application or apply for an immigrant visa within 1 year of an immigrant visa being authorized for issuance based on his or her preference category and country of chargeability. If the accrual of such 1-year period is interrupted by the unavailability of an immigrant visa, a new 1-year period shall be afforded when an immigrant visa again becomes immediately available. USCIS may excuse a failure to file in its discretion if the alien establishes that the failure to apply was due to circumstances beyond his or her control. The limitations described in this paragraph apply to any approved immigrant visa petition under section 203(b) of the Act, including petitions withdrawn by the petitioner or those filed by a petitioner whose business terminates 180 days or more after approval.

(E) *Per-country limitation exemption from section 214(g)(4) of the Act.* An alien who currently maintains or previously held H–1B status, who is the beneficiary of an approved immigrant visa petition for classification under section 203(b)(1), (2), or (3) of the Act, and who is eligible to be granted that immigrant status but for application of the per country limitation, is eligible for H–1B status beyond the 6-year limitation under section 214(g)(4) of the Act. The petitioner must demonstrate such visa unavailability as of the date the H–1B petition is filed with USCIS.

(*1*) *Validity periods.* USCIS may grant validity periods for petitions approved under this paragraph in increments of up to 3 years for as long as the alien remains eligible for this exemption.

(*2*) H–1B approvals under paragraph (h)(13)(iii)(E) of this section may be granted until a final decision has been made to:

(*i*) Revoke the approval of the immigrant visa petition; or

(*ii*) Approve or deny the alien's application for an immigrant visa or application to adjust status to lawful permanent residence.

(*3*) *Current H–1B status not required.* An alien who is not in H–1B status at the time the H–1B petition on his or her behalf is filed, including an alien who is not in the United States, may seek an exemption of the 6-year limitation under 214(g)(4) of the Act under this clause, if otherwise eligible.

(*4*) *Subsequent petitioners may seek exemptions.* The H–1B petitioner need not be the employer that filed the immigrant visa petition that is used to qualify for this exemption. An H–1B petition may be approved under paragraph (h)(13)(iii)(E) of this section with respect to any approved immigrant visa petition, and a subsequent H–1B petition may be approved with respect to a different approved immigrant visa petition on behalf of the same alien.

(*5*) *Advance filing.* A petitioner may file an H–1B petition seeking a per-country limitation exemption under paragraph (h)(13)(iii)(E) of this section within 6 months of the requested H–1B start date. The petitioner may request any time remaining to the beneficiary under the maximum period of admission described in section 214(g)(4) of the Act along with the exemption request, but in no case may the H–1B approval period exceed the limits specified by paragraph (h)(9)(iii) of this section.

(*6*) *Exemption eligibility.* Only the principal beneficiary of an approved immigrant visa petition for classification under section 203(b)(1), (2), or (3) of the Act may be eligible under paragraph (h)(13)(iii)(E) of this section for an exemption to the maximum period of admission under section 214(g)(4) of the Act.

* * * * *

(19) * * *

(i) A United States employer (other than an exempt employer defined in paragraph (h)(19)(iii) of this section, or an employer filing a petition described in paragraph (h)(19)(v) of this section) who files a Petition for Nonimmigrant Worker (Form I–129) must include the additional American Competitiveness and Workforce Improvement Act (ACWIA) fee referenced in § 103.7(b)(1) of this chapter, if the petition is filed for any of the following purposes:

* * * * *

(ii) A petitioner must submit with the petition the ACWIA fee, and any other applicable fees, in accordance with § 103.7 of this chapter, and form instructions. Payment of all applicable fees must be made at the same time, but the petitioner may submit separate checks. USCIS will accept payment of the ACWIA fee only from the United States employer or its representative of record, as defined in 8 CFR 103.2(a) and 8 CFR part 292.

(iii) * * *

(B) *An affiliated or related nonprofit entity.* A nonprofit entity shall be considered to be related to or affiliated with an institution of higher education if it satisfies any one of the following conditions:

(*1*) The nonprofit entity is connected to or associated with an institution of higher education through shared ownership or control by the same board or federation;

(*2*) The nonprofit entity is operated by an institution of higher education;

(*3*) The nonprofit entity is attached to an institution of higher education as a member, branch, cooperative, or subsidiary; or

(*4*) The nonprofit entity has entered into a formal written affiliation agreement with an institution of higher education that establishes an active working relationship between the nonprofit entity and the institution of higher education for the purposes of research or education, and a fundamental activity of the nonprofit entity is to directly contribute to the research or education mission of the institution of higher education;

(C) * * * A governmental research organization is a federal, state, or local entity whose primary mission is the performance or promotion of basic research and/or applied research. * * *

(D) A primary or secondary education institution; or

(E) A nonprofit entity which engages in an established curriculum-related clinical training of students registered at an institution of higher education.

* * * * *

(v) *Filing situations where the* American Competitiveness and Workforce Improvement Act of 1998 (*ACWIA) fee is not required.* The ACWIA fee is not required if:

(A) The petition is an amended H–1B petition that does not contain any requests for an extension of stay;

(B) The petition is an H–1B petition filed for the sole purpose of correcting a Service error; or

(C) The petition is the second or subsequent request for an extension of stay filed by the employer regardless of when the first extension of stay was filed or whether the ACWIA fee was paid on the initial petition or the first extension of stay.

(vi) *ACWIA fee exemption evidence.* (A) Employer claiming to be exempt. An employer claiming to be exempt from the ACWIA fee must file a Petition for Nonimmigrant Worker (Form I–129), in accordance with the form instructions, including supporting evidence establishing that it meets one of the exemptions described at paragraph (h)(19)(iii) of this section. A United States employer claiming an exemption from the ACWIA fee on the basis that it is a non-profit research organization must submit evidence that it has tax exempt status under the Internal Revenue Code of 1986, section 501(c)(3), (c)(4) or (c)(6), 26 U.S.C. 501(c)(3), (c)(4) or (c)(6). All other employers claiming an exemption must submit a statement describing why the organization or entity is exempt.

(B) Exempt filing situations. Any non-exempt employer who claims that the ACWIA fee does not apply with respect to a particular filing for one of the reasons described in paragraph (h)(19)(v) of this section must indicate why the ACWIA fee is not required.

(20) *Retaliatory action claims.* If credible documentary evidence is provided in support of a petition seeking an extension of H–1B stay in or change of status to another classification indicating that the beneficiary faced retaliatory action from his or her employer based on a report regarding a violation of that employer's labor condition application obligations under section 212(n)(2)(C)(iv) of the Act, USCIS may consider a loss or failure to maintain H–1B status by the beneficiary related to such violation as due to, and commensurate with, ''extraordinary circumstances'' as defined by § 214.1(c)(4) and 8 CFR 248.1(b).

* * * * *

PART 245—ADJUSTMENT OF STATUS TO THAT OF PERSON ADMITTED FOR PERMANENT RESIDENCE

■ 8. The authority citation for part 245 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1182, 1255; Pub. L. 105–100, section 202, 111 Stat. 2160, 2193; Pub. L. 105–277, section 902, 112 Stat. 2681; Pub. L. 110–229, tit. VII, 122 Stat. 754; 8 CFR part 2.

■ 9. Revise § 245.15(n)(2) to read as follows:

§ 245.15 Adjustment of status of certain Haitian nationals under the Haitian Refugee Immigrant Fairness Act of 1998 (HRIFA).

* * * * *

(n) * * *

(2) *Adjudication and issuance.* Employment authorization may not be issued to an applicant for adjustment of status under section 902 of HRIFA until the adjustment application has been pending for 180 days, unless USCIS verifies that DHS records contain evidence that the applicant meets the criteria set forth in section 902(b) or 902(d) of HRIFA, and determines that there is no indication that the applicant is clearly ineligible for adjustment of status under section 902 of HRIFA, in which case USCIS may approve the application for employment authorization, and issue the resulting document, immediately upon such verification. If USCIS fails to adjudicate the application for employment authorization upon the expiration of the 180-day waiting period, or within 90 days of the filing of application for employment authorization, whichever comes later, the applicant shall be eligible for an employment authorization document. Nothing in this section shall preclude an applicant for adjustment of status under HRIFA from being granted an initial employment authorization or an extension of employment authorization under any other provision of law or regulation for which the applicant may be eligible.

* * * * *

■ 10. Add § 245.25 to read as follows:

§ 245.25 Adjustment of status of aliens with approved employment-based immigrant visa petitions; validity of petition and offer of employment.

(a) *Validity of petition for continued eligibility for adjustment of status.* An alien who has a pending application to adjust status to that of a lawful permanent resident based on an approved employment-based immigrant visa petition filed under section 204(a)(1)(F) of the Act on the applicant's behalf must have a valid offer of employment based on a valid petition at the time the application to adjust status is filed and at the time the alien's application to adjust status is adjudicated, and the applicant must intend to accept such offer of employment. Prior to a final administrative decision on an application to adjust status, USCIS may require that the applicant demonstrate, or the applicant may affirmatively demonstrate to USCIS, on Form I–485 Supplement J, with any supporting material and credible documentary evidence, in accordance with the form instructions that:

(1) The employment offer by the petitioning employer is continuing; or

(2) Under section 204(j) of the Act, the applicant has a new offer of employment from the petitioning employer or a different U.S. employer, or a new offer based on self-employment, in the same or a similar occupational classification as the employment offered under the qualifying petition, provided that:

(i) The alien's application to adjust status based on a qualifying petition has been pending for 180 days or more; and

(ii) The qualifying immigrant visa petition:

(A) Has already been approved; or

(B) Is pending when the beneficiary notifies USCIS of a new job offer 180 days or more after the date the alien's adjustment of status application was filed, and the petition is subsequently approved:

(*1*) Adjudication of the pending petition shall be without regard to the requirement in 8 CFR 204.5(g)(2) to continuously establish the ability to pay the proffered wage after filing and until the beneficiary obtains lawful permanent residence; and

(*2*) The pending petition will be approved if it was eligible for approval at the time of filing and until the alien's adjustment of status application has been pending for 180 days, unless approval of the qualifying immigrant visa petition at the time of adjudication is inconsistent with a requirement of the Act or another applicable statute; and

(iii) The approval of the qualifying petition has not been revoked.

(3) In all cases, the applicant and his or her intended employer must demonstrate the intention for the applicant to be employed under the continuing or new employment offer (including self-employment) described in paragraphs (a)(1) and (2) of this section, as applicable, within a reasonable period upon the applicant's grant of lawful permanent resident status.

(b) *Definition of same or similar occupational classification.* The term ''same occupational classification'' means an occupation that resembles in every relevant respect the occupation for which the underlying employment-based immigrant visa petition was approved. The term ''similar occupational classification'' means an occupation that shares essential qualities or has a marked resemblance or likeness with the occupation for which the underlying employment-based immigrant visa petition was approved.

PART 274a—CONTROL OF EMPLOYMENT OF ALIENS

■ 11. The authority citation for part 274a continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1324a; 48 U.S.C. 1806; 8 CFR part 2.

■ 12. Amend § 274a.2 by revising paragraph (b)(1)(vii) to read as follows:

§ 274a.2 Verification of identity and employment authorization.

* * * * *

(b) * * *

(1) * * *

(vii) If an individual's employment authorization expires, the employer, recruiter or referrer for a fee must reverify on the Form I–9 to reflect that the individual is still authorized to work in the United States; otherwise, the individual may no longer be employed, recruited, or referred. Reverification on the Form I–9 must occur not later than the date work authorization expires. If an Employment Authorization Document (Form I–766) as described in § 274a.13(d) was presented for completion of the Form I–9 in combination with a Notice of Action (Form I–797C), stating that the original Employment Authorization Document has been automatically extended for up to 180 days, reverification applies upon the expiration of the automatically extended validity period under § 274a.13(d) and not upon the expiration date indicated on the face of the individual's Employment Authorization Document. In order to reverify on the Form I–9, the employee or referred individual must present a document that either shows continuing employment eligibility or is a new grant of work authorization. The employer or the recruiter or referrer for a fee must review this document, and if it appears to be genuine and relate to the individual, reverify by noting the document's identification number and expiration date, if any, on the Form I–9 and signing the attestation by a handwritten signature or electronic signature in accordance with paragraph (i) of this section.

* * * * *

■ 13. Amend § 274a.12 by:

■ a. Adding a sentence to the end of paragraph (b)(9);

■ b. Adding and reserving paragraphs (c)(27) through (34); and

■ c. Adding paragraphs (c)(35) and (36).

The additions read as follows:

§ 274a.12 Classes of aliens authorized to accept employment.

* * * * *

(b) * * *

(9) * * * In the case of a nonimmigrant with H–1B status, employment authorization will automatically continue upon the filing of a qualifying petition under 8 CFR 214.2(h)(2)(i)(H) until such petition is adjudicated, in accordance with section 214(n) of the Act and 8 CFR 214.2(h)(2)(i)(H);

* * * * *

(c) * * *

(35) An alien who is the principal beneficiary of a valid immigrant petition under section 203(b)(1), 203(b)(2) or 203(b)(3) of the Act described as eligible for employment authorization in 8 CFR 204.5(p).

(36) A spouse or child of a principal beneficiary of a valid immigrant petition under section 203(b)(1), 203(b)(2) or 203(b)(3) of the Act described as eligible for employment authorization in 8 CFR 204.5(p).

■ 14. Amend § 274a.13 by:

■ a. Revising paragraph (a) introductory text;

■ b. Removing the first sentence of paragraph (a)(1); and

■ c. Revising paragraph (d).

The revisions read as follows:

§ 274a.13 Application for employment authorization.

(a) *Application.* An alien requesting employment authorization or an Employment Authorization Document (Form I–766), or both, may be required to apply on a form designated by USCIS with any prescribed fee(s) in accordance with the form instructions. An alien may file such request concurrently with a related benefit request that, if granted, would form the basis for eligibility for employment authorization, only to the extent permitted by the form instructions or as announced by USCIS on its Web site.

* * * * *

(d) *Renewal application*—(1) *Automatic extension of Employment Authorization Documents.* Except as otherwise provided in this chapter or by law, notwithstanding 8 CFR 274a.14(a)(1)(i), the validity period of an expiring Employment Authorization Document (Form I–766) and, for aliens who are not employment authorized incident to status, also the attendant employment authorization, will be automatically extended for an additional period not to exceed 180 days from the date of such document's and such employment authorization's expiration if a request for renewal on a form designated by USCIS is:

(i) Properly filed as provided by form instructions before the expiration date shown on the face of the Employment Authorization Document, or during the filing period described in the applicable **Federal Register** notice regarding procedures for obtaining Temporary Protected Status-related EADs;

(ii) Based on the same employment authorization category as shown on the face of the expiring Employment Authorization Document or is for an individual approved for Temporary Protected Status whose EAD was issued pursuant to 8 CFR 274a.12(c)(19); and

(iii) Based on a class of aliens whose eligibility to apply for employment authorization continues notwithstanding expiration of the Employment Authorization Document and is based on an employment authorization category that does not require adjudication of an underlying application or petition before adjudication of the renewal application, including aliens described in 8 CFR 274a.12(a)(12) granted Temporary Protected Status and pending applicants for Temporary Protected Status who are issued an EAD under 8 CFR 274a.12(c)(19), as may be announced on the USCIS Web site.

(2) *Terms and conditions.* Any extension authorized under this paragraph (d) shall be subject to any conditions and limitations noted in the immediately preceding employment authorization.

(3) *Termination.* The period authorized by paragraph (d)(1) of this section will automatically terminate the earlier of up to 180 days after the expiration date of the Employment Authorization Document (Form I–766), or upon issuance of notification of a decision denying the renewal request. Nothing in paragraph (d) of this section will affect DHS's ability to otherwise terminate any employment authorization or Employment Authorization Document, or extension period for such employment or document, by written notice to the applicant, by notice to a class of aliens published in the **Federal Register**, or as provided by statute or regulation including 8 CFR 274a.14.

(4) *Unexpired Employment Authorization Documents.* An Employment Authorization Document (Form I–766) that has expired on its face is considered unexpired when combined with a Notice of Action (Form I–797C), which demonstrates that the requirements of paragraph (d)(1) of this section have been met.

Jeh Charles Johnson,

Secretary.

29 CFR Part 1910

Walking-Working Surfaces and Personal Protective Equipment (Fall Protection Systems); Final Rule

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. OSHA–2007–0072]

RIN 1218-AB80

Walking-Working Surfaces and Personal Protective Equipment (Fall Protection Systems)

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Final rule.

SUMMARY: OSHA is revising and updating its general industry standards on walking-working surfaces to prevent and reduce workplace slips, trips, and falls, as well as other injuries and fatalities associated with walking-working surface hazards. The final rule includes revised and new provisions addressing, for example, fixed ladders; rope descent systems; fall protection systems and criteria, including personal fall protection systems; and training on fall hazards and fall protection systems. In addition, the final rule adds requirements on the design, performance, and use of personal fall protection systems.

The final rule increases consistency between the general industry and construction standards, which will make compliance easier for employers who conduct operations in both industry sectors. Similarly, the final rule updates requirements to reflect advances in technology and to make them consistent with more recent OSHA standards and national consensus standards. OSHA has also reorganized the requirements and incorporated plain language in order to make the final rule easier to understand and follow. The final rule also uses performance-based language whenever possible to give employers greater compliance flexibility.

DATES: *Effective date:* This final rule becomes effective on January 17, 2017. Some requirements in the final rule have compliance dates after the effective date. For further information on those compliance dates, see Section XI of the **SUPPLEMENTARY INFORMATION** section. In addition, this final rule contains information collections subject to the Office of Management and Budget (OMB) approval under the Paperwork Reduction Act, and the Department is submitting requests to OMB to obtain that approval. The information collections will not take effect until the date OMB approves the information collection request or the date the requirement would take effect as explained elsewhere in this document. The Department will publish a document in the **Federal Register** to announce OMB's disposition of the information collection requests.

ADDRESSES: In accordance with 28 U.S.C. 2112(a)(2), OSHA designates Ms. Ann Rosenthal, Associate Solicitor of Labor for Occupational Safety and Health, Office of the Solicitor, U.S. Department of Labor, Room S–4004, 200 Constitution Avenue NW., Washington, DC 20210, to receive petitions for review of the final rule.

FOR FURTHER INFORMATION CONTACT:

Press inquiries: Mr. Frank Meilinger, Director, Office of Communications, OSHA, U.S. Department of Labor, Room N–3647, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–1999; email *meilinger.francis2@dol.gov*.

General information and technical inquiries: Mr. Mark Hagemann, Director, Office of Safety Systems, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor, Room N–3609, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–2255, email *hagemann.mark@dol.gov*.

Copies of this ***Federal Register*** *document:* Copies of this **Federal Register** document are available at *http://www.regulations.gov*, the Federal eRulemaking Portal. Copies also are available at OSHA Office of Publications, U.S. Department of Labor, Room N–3101, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–1888 (OSHA's TTY (887) 889–5627). This document, as well as news releases and other relevant documents, are available on OSHA's website at *http://www.osha.gov*.

SUPPLEMENTARY INFORMATION:

Table of Contents

The following table of contents identifies the major sections of the preamble to the final rule:

I. Background

A. References and Exhibits

This **Federal Register** document references materials in Docket No. OSHA–2007–0072, which is the docket for this rulemaking. OSHA also references documents in the following dockets, which the Agency incorporates by reference into this rulemaking:

• 1990 proposed rule on Walking and Working Surfaces (29 CFR 1910, subpart D)—Docket No. OSHA–S041–2006–0666 (formerly Docket No. S–041);
• 1990 proposed rule on Personal Protective Equipment—Fall Protection—Docket No. OSHA–S057–2006–0680 (formerly Docket No. S–057);
• 2003 reopening of the rulemaking record—Docket No. OSHA–S029–2006–0662 (formerly Docket No. S–029);
• 1994 final rule on Fall Protection in the Construction Industry—Docket No. OSHA–S206–2006–0699 (formerly Docket No. S–206);
• 1983 and 1985 proposed rules on Powered Platforms for Building Maintenance—Docket Nos. OSHA–S700–2006–0722 and OSHA–S700A–2006–0723 (formerly Dockets Nos. S–700 and S–700A, respectively); and
• 2014 final rule on Electric Power Generation, Transmission, and Distribution; Electrical Protective Equipment—Docket No. OSHA–S215–2006–0063 (Formerly Docket No. S–215).

All of these dockets are available for viewing at *http://www.regulations.gov*, the Federal eRulemaking Portal.

Citations to documents in Docket No. OSHA–2007–0072: This document references exhibits in this rulemaking record, Docket No. OSHA–2007–0072, as ''Ex.,'' followed by the last sequence of numbers in the document identification (ID) number. For example, ''Ex. 44'' is a reference to document ID number OSHA–2007–0072–0044 in this rulemaking docket.

Citations to the transcripts of the rulemaking hearing: This document includes citations to the informal public hearing on the proposed rule. All of the hearing transcripts are included in exhibit 329. Thus, ''Ex. 329 (1/19/2011, p. 75)'' refers to page 75 of the January 19, 2011, hearing transcript.

Citations to other dockets: This document also references other OSHA dockets. Documents in those dockets are cited as the docket number followed by the last sequence of numbers in the document ID number. For example, ''Ex. OSHA–S029–2006–0662–0014'' refers to ''Docket No. OSHA–S029–2006–0662, Ex. 14'' in the 2003 reopening of the rulemaking record on subparts D and I (formerly Docket No. S–029).

Docket: The exhibits in this rulemaking docket (Docket No. OSHA–2007–0072), as well as the dockets OSHA incorporated by reference in this rulemaking, are available to read and download by searching the docket number or document ID number at *http://www.regulations.gov*. Each docket index lists all documents and exhibits in that docket, including public comments, supporting materials, hearing transcripts, and other documents. However, some documents (*e.g.,* copyrighted material) in those dockets are not available to read or download from that website. All documents are available for inspection and copying at the OSHA Docket Office, Room N–2625, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone number (202) 693–2350 (OSHA TTY (887) 889–5627).

B. Introduction and Basis for Agency Action

Workers in many diverse general industry workplaces are exposed to walking-working surface hazards that can result in slips, trips, falls and other injuries or fatalities. According to the Bureau of Labor Statistics (BLS) data, slips, trips, and falls are a leading cause of workplace fatalities and injuries in general industry, which indicates that workers regularly encounter these hazards (see Section II below).

The final rule covers all general industry walking-working surfaces, including but not limited to, floors, ladders, stairways, runways, dockboards, roofs, scaffolds, and elevated work surfaces and walkways. To protect workers from hazards associated with those surfaces, particularly hazards related to falls from elevations, the final rule updates and revises the general industry Walking-Working Surfaces standards (29 CFR part 1910, subpart D). The final rule includes revised and new provisions that address, for example, fixed ladders; rope descent systems; fall protection systems and criteria, including personal fall protection systems; and training on fall hazards and fall protection systems. In addition, the final rule adds new requirements on the design, performance, and use of personal fall protection systems to the general industry Personal Protective Equipment (PPE) standards (29 CFR part 1910, subpart I). These and other measures the final rule incorporates reflect advances in technology and industry best practices that have been developed since OSHA adopted subpart D in 1971.

The final rule also gives employers greater flexibility to prevent and eliminate walking-working surface hazards. For example, the final rule, like the construction Fall Protection Standards (29 CFR part 1926, subpart M), gives employers flexibility to protect workers from falling to a lower level by using personal fall protection systems, including personal fall arrest, travel restraint, and work positioning systems; instead of requiring the use of guardrail systems, which the existing rule mandates. In addition, consistent with section 6(b)(5) of the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651, 655(b)(5)) the final rule uses performance-based language in place of specification language, where possible, to increase compliance flexibility for employers. OSHA believes the flexibility the final rule provides will allow employers to select and provide the controls they determine will be most effective in the particular workplace operation or situation to protect their workers and prevent injuries and fatalities from occurring.

The final rule also increases harmonization between OSHA standards, which many stakeholders requested. Of particular importance, OSHA increased consistency between the final rule and OSHA's construction Scaffolds, Fall Protection, and Stairway and Ladder standards (29 CFR part 1926, subparts L, M, and X), which makes compliance easier for employers who conduct operations in both industry sectors. The revisions in and additions to the final rule will allow employers to use the same fall protection systems and equipment and follow the same practices when they perform either general industry or construction activities.

The final rule also increases consistency by incorporating provisions from other standards OSHA adopted more recently, including Powered Platforms for Building Maintenance (29 CFR 1910.66) and Scaffolds, Ladders and Other Working Surfaces in Shipyard Employment (29 CFR part 1915, subpart E).[1] In particular, § 1910.140 drew personal fall arrest system requirements from Appendix C (Mandatory) of the Powered Platform standard (§ 1910.66). The experience OSHA gained on that standard shows that those requirements are effective in protecting workers from fall hazards.

OSHA also drew many provisions in the final rule from national consensus standards, including ANSI/ASSE A1264.1–2007, Safety Requirements for Workplace Walking/Working Surfaces and Their Access; Workplace, Floor, Wall and Roof Openings; Stairs and Guardrail Systems; ANSI/ASSE Z359.1–2007, Safety Requirements for Personal Fall Arrest Systems, Subsystems and Components; and ANSI/IWCA I–14.1–2001, Window Cleaning Safety Standard. Many stakeholders recommended that OSHA incorporate the requirements in those standards into the final rule. OSHA agrees with stakeholders that national consensus standards represent industry best practices and reflect advancements in technology, methods, and practices developed in the years since the Agency adopted the existing rule.

OSHA also has made the final rule easier to understand and follow by reorganizing and consolidating provisions, using plain language, and adding informational tables, illustrations, and appendices. For example, the final rule adds two non-mandatory appendices to final § 1910.140 that address planning for, selecting, using, and inspecting personal fall protection systems (appendix C) and test methods and procedures for personal fall arrest work positioning systems (appendix D).

OSHA's efforts to revise and update the existing walking-working surfaces standards have been ongoing since 1973. Over that time, OSHA has gathered and analyzed a large body of data and information on walking-working surface hazards and methods to prevent and eliminate them. After careful examination and analysis of the rulemaking record as a whole, OSHA has determined that the requirements in this final rule will significantly reduce

[1] Where necessary, the final rule also revises provisions in some current general industry standards (*e.g.,* 29 CFR part 1910, subparts F, N, and R) to ensure that they are consistent with the final rule (See Section IV(C) below).

the number of worker deaths and injuries that occur each year due to these hazards, particularly workplace slip, trip, and fall fatalities and injuries. OSHA estimates that final standard rule will prevent 29 fatalities and 5,842 injuries annually (See Sections II and V).

OSHA believes that many employers already are in compliance with many provisions in the final rule; therefore, they should not have significant problems implementing it. OSHA also has included measures to make implementation of the final rule easier for employers. The final rule provides extended compliance dates for implementing some requirements and applies other requirements only prospectively. For example, the final rule gives employers as much as 20 years to equip fixed ladders with personal fall arrest or ladder safety systems. Moreover, since the final rule incorporates requirements from national consensus standards, most equipment manufacturers already provide equipment and systems that meet the requirements of the final rule.

C. Summary of the Final Economic Analysis

The OSH Act requires OSHA to make certain findings with respect to standards. One of these findings, specified by Section 3(8) of the OSH Act, requires an OSHA standard to address a significant risk and to reduce this risk significantly. (See *Industrial Union Dep't* v. *American Petroleum Institute,* 448 U.S. 607 (1980).) As discussed in Section II of this preamble, OSHA finds that slips, trips, and falls constitute a significant risk, and estimates that the final standard will prevent 29 fatalities and 5,842 injuries annually. Section 6(b) of the OSH Act requires OSHA to determine if its standards are technologically and economically feasible. As discussed in Section V of this preamble, OSHA finds that this final standard is economically and technologically feasible. The table below summarizes OSHA's findings with respect to the estimated costs, benefits, and net benefits of this standard. The annual benefits are significantly in excess of the annual costs. However, it should be noted that under the OSH Act, OSHA does not use the magnitude of net benefits as the decision-making criterion in determining what standards to promulgate.

The Regulatory Flexibility Act (5 U.S.C. 601, as amended) requires that OSHA determine whether a standard will have a significant economic impact on a substantial number of small firms. As discussed in Section V, the Assistant Secretary examined the small firms affected by this final rule and certifies that these provisions will not have a significant impact on a substantial number of small firms.

Net Benefits of the Final Revision to OSHA's Walking-Working Standards

Annualized Costs	
§1910.22 General Requirements	$33.2
§1910.23 Ladders	$11.3
§1910.24 Step Bolts and Manhole Steps	$18.0
§1910.27 Scaffolds and Rope Descent Systems	$71.6
§1910.28 Duty to Have Fall Protection and Falling Object Protection	$55.9
§1910.29 Fall Protection Systems and Falling Object Protection – Criteria and Practices	$13.1
§1910.30 Training Requirements	$74.2
§1910.132 General Requirements	$12.7
§1910.140 Personal Fall Protection Systems	$11.0
Rule Familiarization	$4.1
Total Annual Costs	**$305.0 million**
Annual Benefits	
Number of Injuries Prevented	5,842
Number of Fatalities Prevented	29
Monetized Benefits (assuming $62,000 per injury and $8.7 million per fatality prevented)	**$614.5 million**
OSHA standards that are updated and consistent with voluntary standards.	Unquantified
Net Benefits (benefits minus costs)	**$309.5 million**

D. Events Leading to the Final Rule

Existing standards. In 1971, OSHA adopted the existing general industry standards on Walking-Working Surfaces (29 CFR part 1910, subpart D) and Personal Protective Equipment (PPE) (29 CFR part 1910, subpart I) pursuant to Section 6(a) of the OSH Act (29 U.S.C. 655(a)). Section 6(a) permitted OSHA, during the first two years following the effective date of the OSH Act, to adopt as occupational safety and health standards any established Federal and national consensus standards. OSHA adopted the subpart D and I standards from national consensus standards in existence at the time. Since then, those national consensus standards have been updated and revised, some several times, to incorporate advancements in technology and industry best practices. OSHA's existing walking-working surfaces standards have not kept pace with those advancements.

Early rulemaking efforts. In 1973, OSHA published a proposed rule to revise the subpart D standards (38 FR 24300 (9/6/1973)), but withdrew the proposal in 1976, saying it was outdated (41 FR 17227 (4/23/1976)). That year OSHA conducted stakeholder meetings around the country to obtain public comment on revising subpart D. After reviewing information gathered from those meetings, OSHA determined that it needed to gather additional scientific and technical data, research, and information to support effective revisions to subpart D.

From 1976 through the 1980s, OSHA gathered a large body of scientific and technical research and information, including:

• Recommendations for fall prevention, ladders, scaffolds, slip resistance, and handrails from the University of Michigan;

• Studies on guardrails, slip resistance, scaffolds, and fall prevention from the National Bureau of Standards (now the National Institute of Standards and Technology);

• Analysis of various walking-working surfaces by Texas Tech University;

• Accident, injury, and fatality data from the Bureau of Labor Statistics (BLS); and

• National consensus standards from the American National Standards Institute (ANSI), American Society of Testing and Materials (ASTM), and the American Society of Mechanical Engineers (ASME).

1990 proposed rules. The data, research, and information OSHA gathered provided the basis for OSHA's 1990 companion proposals to revise and update the walking-working surfaces standards in subpart D (55 FR 13360 (4/10/1990)) and add personal fall protection system requirements to subpart I (55 FR 13423 (4/10/1990)). The two proposals were interdependent with respect to personal fall protection systems. That is, the subpart D proposal would have established a ''duty to provide'' fall protection, including personal fall protection systems while the subpart I proposal would have established design, performance, and use criteria for personal fall protection systems.

OSHA received comments and held an informal public hearing on the two proposals (55 FR 29224), but did not finalize either.

1994 final rule revising subpart I. In 1994, OSHA published a final rule updating the general industry PPE standards (59 FR 16334 (4/6/1994)). The final rule added new general provisions requiring that employers conduct hazard assessments; select proper PPE; remove defective or damaged PPE from service; and provide worker training in the proper use, care, and disposal of PPE (§ 1910.132). It also revised design, selection, and use requirements for specific types of PPE. However, the final rule did not apply the new general provisions to personal fall protection systems or include specific requirements addressing such systems.

2003 record reopening. On May 2, 2003, OSHA published a notice reopening the record on the subpart D and I rulemakings to refresh the record, which had grown stale in the years since OSHA published the 1990 proposed rules (68 FR 23528). Based on comments and information OSHA received, including information on significant technological advances in fall protection, particularly personal fall protection systems, OSHA determined that a new proposed rule was needed.

2010 proposed rule. On May 24, 2010, OSHA published a consolidated proposed rule on subparts D and I (75 FR 28862). The Agency provided 90 days, until August 23, 2010, for stakeholders to submit comments on the proposed rule, the preliminary economic analysis, and the issues the Agency raised in the proposal. The Agency received 272 comments, including comments from workers, employers, trade associations, occupational safety and health consultants, manufacturers, labor representatives, and government agencies (Exs. 52 through 326).

Several stakeholders requested an informal public hearing on the proposed rule (Exs. 172; 178; 180; 201; 256). OSHA granted the requests for a public hearing (75 FR 69369 (11/10/2010)), and convened the hearing on January 18, 2011, in Washington, DC (Ex. 329). Administrative Law Judge John M. Vittone presided over the four-day hearing during which 39 stakeholders presented testimony (Ex. 329). At the close of the hearing on January 21, 2011, Judge Vittone ordered that the hearing record remain open for an additional 45 days, until March 7, 2011, for the submission of new factual information and data relevant to the hearing (Exs. 327; 330; 328). He also ordered that the record remain open until April 6, 2011, for the submission of final written comments, arguments, summations, and briefs (Exs. 327; 331–370). On June 13, 2011, Judge Vittone issued an order closing the hearing record and certifying it to the Assistant Secretary of Labor for Occupational Safety and Health (Ex. 373).

II. Analysis of Risk

A. Introduction

To promulgate a standard that regulates exposure to workplace hazards, OSHA must demonstrate that exposure to those hazards poses a ''significant risk'' of death or serious physical harm to workers, and that the standard will substantially reduce that risk. The Agency's burden to establish significant risk derives from the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*).

Section 3(8) of the OSH Act requires that workplace safety and health standards be ''reasonably necessary or appropriate to provide safe or healthful employment and places of employment'' (29 U.S.C. 652(8)). A standard is reasonably necessary and appropriate within the meaning of section 3(8) if it materially reduces a significant risk of harm to workers. The Supreme Court, in the ''Benzene'' decision, stated that section 3(8) ''implies that, before promulgating any standard, the Secretary must make a finding that the workplaces in question are not safe'' (*Indus. Union Dep't, AFL–CIO* v. *Am. Petroleum Inst. (Benzene),* 448 U.S. 607, 642 (1980)). Examining section 3(8) more closely, the Court described OSHA's obligation to demonstrate significant risk:

> ''[S]afe'' is not the equivalent of ''risk-free.'' . . . [A] workplace can hardly be considered ''unsafe'' unless it threatens the workers with a significant risk of harm.
>
> Therefore, before [the Secretary] can promulgate *any* permanent health or safety standard, the Secretary is required to make a threshold finding that the place of employment is unsafe—in the sense that significant risks are present and can be eliminated or lessened by a change in practices. (*Id.* (Emphasis in original)).

Relying on the U.S. Census' Statistics of U.S. Businesses for 2007, OSHA estimates that 6.9 million general industry establishments employing 112.3 million employees will be affected by the final standard. For the industries affected by the final standard, OSHA examined fatalities and lost-workday injuries for falls to a lower level.

In the proposed rule, the Agency preliminarily concluded that falls constitute a significant risk and that the proposed standards would substantially reduce the risk of falls to employees (75 FR 28861, 28865–28866 (5/24/2010)). The analysis of U.S. Bureau of Labor Statistics (BLS) data from 1992 to 2004 identified an annual average of 300 fatal falls, 213 (71 percent) of which resulted from falls to a lower level and an annual average of 299,404 non-fatal falls resulting in lost-workday injuries, 79,593 (26 percent) of which were as a result of falls to a lower level. The Agency's analysis also estimated that compliance with the proposed requirements in subparts D and I annually would prevent 20 fatal to a lower level and 3,706 lost-workday injuries due to falls to a lower level.

Based on the analysis presented in this section, which OSHA updated with more recent data, and in the Final Economic and Final Regulatory Flexibility Screening Analysis (FEA) (Section V), OSHA determines that workplace exposure to hazards associated with walking-working surfaces, particularly the hazards of falling to a lower level, poses a significant risk of serious physical harm or death to workers in general industry. BLS data from 2006–2012 show that an average of 261 fatal falls to a lower level occurred annually in general industry. In addition, BLS data for 2006–2012 indicate that an average of 48,379 lost-workday (LWD) injuries from falls to a lower level occurred annually in general industry.

OSHA also concludes, based on this section and the FEA, that the ''practices, means, methods, operations, or processes'' the final rule requires will substantially reduce that risk. Specifically, the Agency estimates that full compliance with the final rule will prevent 29 fatalities from falls to a lower level and 5,842 lost-workday injuries from falls to a lower level annually in general industry.

B. Nature of the Risk

Every year many workers in general industry experience slips, trips, falls and other injuries associated with walking-working surface hazards. These walking-working surface hazards result in worker fatalities and serious injuries, including lost-workday injuries. Slips, trips, and falls, including falls on the same level, can result in injuries such as fractures, contusions, lacerations, and sprains, and may even be fatal. Falls to lower levels can increase the severity of injuries as well as the likelihood of death. Falls on the same level can also result in strains and sprains when employees try to ''catch'' themselves to prevent falling.

There are many walking-working surface hazards that can cause slips, trips, and falls. These hazards include damaged or worn components on personal fall protection systems and rope descent systems; portable ladders used for purposes for which they were not designed; fixed ladders that are not equipped with fall protection; damaged stair treads; snow, ice, water, or grease on walking-working surfaces such as floors; and dockboards that are not properly secured or anchored.

Identifying walking-working surface hazards and deciding how best to protect employees is the first step in reducing or eliminating the hazards. To that end, the final rule requires that employers regularly inspect walking-working surfaces. It also requires that employers assess walking-working surfaces to determine if hazards are present, or likely to be, that necessitate the use of personal fall protection systems (§§ 1910.132(d); 1910.28(b)(1)(v)). In addition, employers must train employees on fall hazards and equipment plus the proper use of personal fall protection systems (§§ 1910.30, 1910.132(f)). After employers have assessed the workplace and identified fall hazards, final § 1910.28 requires employers to provide fall protection to protect their employees from falls. Final §§ 1910.29 and 1910.140 specify the criteria fall protection systems must meet, such as strength and performance requirements. Section A of the FEA provides detailed information on the incidents the final rule will prevent.

C. Fatality and Injury Data

Fatalities. The BLS Census of Fatal Occupational Injuries (CFOI) has listed falls as one of the leading causes of workplace fatalities for many years. From 1999 to 2010, falls were second only to highway incidents in terms of fatal injuries. In 2011, slips, trips, and falls were the third leading cause of fatal occupational injuries and in 2012, the fourth leading cause of these types of injuries. Many fatal falls occur in general industry. From 2006–2012, approximately one-third of all fatal falls in private industry were falls to a lower level in general industry.

OSHA examined fall fatalities for 2006 to 2012 in industries covered by the final standard using data from the BLS Census of Fatal Occupational Injuries (CFOI). Table II–1, summarizing the data in Table V–6 of the FEA, shows the total number of fatal falls to a lower level from 2006 to 2012.

Table II-1. Fatal Falls to a Lower Level – General Industry

Year	Fatal Falls to a Lower Level
2006	283
2007	279
2008	234
2009	237
2010	243
2011	278
2012	270

As described in Table V–6 of the FEA, over the seven-year period, the Professional, Scientific, and Technical Services industry and the Administrative and Support Services industry (NAICS codes 541 and 561, respectively) accounted for 27 percent of the fatal falls, while the Manufacturing (NAICS 31–33) and Transportation (NAICS 48) sectors accounted for 9.6 and 7.1 percent of the fatal falls, respectively. Among all three-digit NAICS codes affected by the standard, BLS reported the highest number of fatal falls in NAICS code 561, Administrative and Support Services. Although not shown in the table, a large majority of the fatalities for Administrative and Support Services—86 percent for the seven-year period 2006–2012—occurred in the industry concerned with services to buildings and dwellings (NAICS 5617). Based on these data, OSHA estimates that, on average, 261 deaths per year resulted from falls to a lower level and would be directly affected by the final standard.

Table V–7 of the FEA also includes data on fatal falls. That table displays the number of fatal falls by type of fall and industry sector for 2006–2010. These data indicate that during this period, there were, on average, 255 fatal falls to a lower level in general industry establishments when fatal falls are summed across all affected two-digit NAICS industries. While the annual number of fatal falls decreased and then rose since 2006, the average annual number of fatal falls to a lower level from 2006–2010 (255 fatal falls to a lower level) and 2011–2012 (274 fatal falls to a lower level) [2] remains at approximately the same level. In addition, falls remained one of the leading causes of workplace fatalities throughout this time, as discussed above.

Injuries. OSHA examined lost-workday injuries using data from BLS's *Survey of Occupational Injuries and Illnesses.* Falls have been one of the leading causes of lost-workday injuries for the last several years. From 2006–2010, falls were consistently the third leading cause of injuries and illnesses, behind overexertion and contact with objects and equipment. From 2011–2012, slips, trips, and falls were the second leading cause of injuries and illnesses, behind only overexertion.

In addition to being a major source of lost-workday injuries, falls to a lower level were also some of the most severe. Falls to a lower level had the second highest median days away from work, a key measure of the severity of an injury or illness, every year from 2006–2012, except 2010 (where it was the third highest). BLS data also demonstrate that the majority of lost-workday falls to a lower level that occurred in private industry occurred in general industry. More specifically, for 2006–2012, approximately three-quarters of the lost-workday falls to a lower level in private industry occurred in general industry.

Table V–8 of the FEA shows the average number of lost-workday injuries due to falls in general industry, by type of fall, for 2006–2012. Based on these data, OSHA estimates that, on average, approximately 48,379 serious (lost-workday) injuries per year resulted from falls to a lower level and would be directly affected by the final standard.

Table II–2, based on BLS's *Survey of Occupational Injuries and Illnesses,* provides additional information about the median number of days away from work for lost-workday falls to a lower level from 2006–2012. Table II–2 displays the median number of days away from work attributed to falls to a lower level for each industry sector and private industry as a whole. In 2012, for example, the number of median days away from work for falls to a lower level in private industry as a whole was 18, while the median days away from work for all lost-workday injuries and illnesses in private industry as a whole was 8. Similarly, in 2012, the median days away from work for falls to a lower level in nearly every general industry sector was higher, and in many cases, much higher, than the median days away from work for all lost-workday injuries and illnesses in those sectors. This suggests that falls to a lower level are among the most severe lost-workday injuries.

Table II-2. Lost-Workday Falls to a Lower Level – General Industry, 2006-2012
Median Days Away from Work, by Industry Sector

Industry Sector	2006	2007	2008	2009	2010	2011	2012
Manufacturing	14	14	16	12	16	20	20
Trade, Transportation, Utilities	14	16	17	22	25	20	21
Information	15	8	10	34	27	30	13
Financial Activities	10	10	5	5	14	25	16
Professional and Business Services	14	12	13	12	14	11	21
Educational and Health Services	8	8	7	6	6	7	13
Leisure and Hospitality	7	7	14	11	6	11	7
Other Services, except Public Administration	11	4	33	3	8	35	10
All Private Industry	14	15	15	14	16	21	18

[2] Reference year 2011 is the first year in which the Injuries, Illnesses, and Fatalities (IIF) program used the Occupational Injury and Illness Classification System (OIICS), version 2.01, when classifying Event or Exposure, Primary Source, Secondary Source, Nature, and Part of Body. Due to substantial differences between OIICS 2.01 and the original OIICS structure, which was used from 1992 to 2010, data for these case characteristics from 2011 forward should not be compared to prior years.

Based on the number of fatalities and lost-workday injuries reported by BLS for falls to a lower level, and evidence that non-fatal injuries are among the most severe work-related injuries, OSHA finds that workers exposed to fall hazards are at a significant risk of death or serious injury.

Several stakeholders agreed that fall hazards present a significant risk of injury and death (Exs. 63; 121; 158; 189; 363; OSHA–S029–2006–0662–0177; OSHA–S029–2006–0662–0350). For example, Bill Kojola of the American Federation of Labor and Congress of Industrial Organizations (AFL–CIO) asserted:

> Fall hazards remain one of the most serious problems faced by millions of workers. We are convinced that the proposed changes, when implemented as a result of promulgating a final rule, will prevent fatalities and reduce injuries from fall hazards (Ex. 363).

Similarly, in his written comments, Robert Miller of Ameren Corporation stated that the proposed rule is a positive approach towards eliminating at-risk conditions and events (Ex. 189).

Charles Lankford, of Rios and Lankford Consulting International, challenged OSHA's preliminary finding that falls present a significant risk and that revising the general industry fall protection standards is necessary to address the problem. Mr. Lankford used NIOSH and BLS data to argue, respectively, that the final rule is not necessary because the rate of fall fatalities decreased from 1980–1994 and ''held steady'' from 1992 to 1997 (Ex. 368). OSHA is not persuaded by Mr. Lankford's argument because, as discussed above, current BLS data from 2006–2012 show that an average of 261 fatal falls to a lower level occurred annually and these falls continue to be a leading cause of fatal occupational injuries in general industry. OSHA believes this shows that a significant risk of death from falls to a lower level still exists in general industry workplaces. With regard to Mr. Lankford's claim that fall fatalities held ''steady'' from 1992–1997, according to the BLS data, the number of fatal falls increased each year during that period (with the exception of 1995), and reached a 6-year high in 1997.

In addition, Mr. Lankford argued that:

> [H]istorical incident rates for non-fatal falls also do not display an increasing fall problem. The all-industries non-fatal fall incidence rate has declined every year since 2003 (the oldest year in the BLS Table I consulted), so the decline in rates is not attributable to the current recession. If we exclude 2008 and 2009 data, manufacturing did not show a change. Yet 2006 and 2007 showed lower injury incidence rates than 2003 and 2004 (Ex. 368).

A review of 2003–2009 BLS data on the incidence rates of nonfatal occupational injuries and illnesses resulting from falls could not reproduce Mr. Lankford's claims. As previously discussed, falls continue to be one of the leading causes of lost-workday injuries. Falls to a lower level are also some of the most severe lost-workday injuries. In 2012, for example, the number of median days away from work for falls to a lower level in private industry as a whole was 18, while the median days away from work for all lost-workday injuries and illnesses in private industry as a whole was 8.

Mr. Lankford also suggested that fatal falls are a greater problem in the ''goods producing sector'' than the ''service sector.'' However, this assertion is not supported by the BLS data. As described in Table V–6 of the FEA, from 2006–2012, among all three-digit NAICS codes affected by the standard, BLS reported the highest number of fatal falls in a ''service sector'' (NAICS code 561, Administrative and Support Services). Further, over the seven-year period, the Professional, Scientific, and Technical Services industry and the Administrative, and Support Services industry (NAICS codes 541 and 561, respectively) accounted for 28 percent of the fatal falls.

Based on the evidence and analysis, OSHA disagrees with Mr. Lankford's comment. As mentioned above, after examining recent BLS data (2006–2012), OSHA finds that the available evidence points to a significant risk. OSHA believes that the risk of injury, combined with the risk of fatalities constitutes a significant safety threat that needs to be addressed by rulemaking—specifically a revision to subparts D and I. OSHA believes that the revisions to subparts D and I are reasonable and necessary to protect affected employees from those risks. Based on the BLS data, the Agency estimates that full compliance with the revised walking-working surfaces standards will prevent 28 fatalities and 4,056 lost-workday injuries due to falls to a lower level annually. OSHA finds that these benefits constitute a substantial reduction of significant risk of harm from these falls.

Several commenters urged OSHA to expand its analysis to include fatalities and injuries resulting from falls on the same level (Exs. 77; 329 (1/20/2011 pp. 42, 60–61); 329 (1/21/2011, pp. 200–203); 330). However, the Agency finds that, with regard to its significant risk analysis, the data for falls to a lower level constitute the vast majority of the risk that the standard addresses, *i.e.,* falls from elevations. Analysis in the FEA (Section V) demonstrates that fatal falls on the same level made up a small portion of all fatal falls. Table V–7 of the FEA shows that, for the five-year period 2006 to 2010, falls on the same level accounted for about 24 percent of total fall fatalities. For non-fatal injuries, the Agency recognizes that falls on the same level represent a significant portion of lost-workday fall-injuries. Table V–8 of the FEA shows that, in general industry, falls on the same level accounted for 68 percent of all falls resulting in lost-workday injuries, while falls to a lower level accounted for only 24 percent.

However, as discussed in the FEA, the final rule has relatively few new provisions addressing falls on the same level, such as slips and trips from floor obstructions or wet or slippery working surfaces. The requirements expected to yield the largest benefits from preventing falls on the same level are found in final § 1910.22 General requirements. These final provisions will result in safety benefits to workers by controlling worker exposure to fall hazards on walking-working surfaces, especially on outdoor surfaces. Tables V–11 and V–13 of the FEA show that OSHA estimates only 1 percent of fatal falls on the same level and 1 percent of lost-workday falls on the same level will be prevented by these provisions.

Since falls to a lower level constitute the vast majority of the risk the final rule addresses, OSHA's significant risk analysis includes only falls to a lower level. Because of this, OSHA notes the final risk analysis may understate the risk of falls in general industry, since falls on the same level account for 68 percent of falls resulting in a lost-workday injury.

The U.S. Chamber of Commerce questioned whether OSHA's estimate of the benefits of the proposed standard justified the efforts undertaken to issue the standard:

> We note with some surprise that OSHA's analysis suggests this new regulation will have a relatively minor impact on the total number of fatalities attributed to falls from height. OSHA claims that for the years 1992–2007 there were an average of 300 fatal falls per year from height. OSHA calculates that this standard will result in 20 fewer fatal falls per year. We do not mean to diminish the significance of saving 20 lives, but OSHA seems to be projecting less impact than a standard of this scope would suggest. Indeed, OSHA even admits in the preamble that:
>
> For the purposes of this analysis, OSHA did not attempt a quantitative analysis of how many fatal falls could be prevented by full and complete compliance with the existing standard. However *a qualitative examination*

of the fatal falls to a lower level shows that a majority, and perhaps a large majority, could be prevented by full compliance with the existing regulations. (Emphasis added)

This raises questions about whether such a sweeping new standard as this one, which will create confusion and new enforcement exposures, is indeed warranted, or if OSHA would achieve the same or better results by generating more complete compliance with current requirements (Ex. 202).

First, far from creating confusion, this rulemaking assures that OSHA rules will be in much closer accord with existing consensus standards and practices and that OSHA's general industry fall protection requirements will be better aligned with its construction fall protection standard. There are many situations in which improved enforcement of existing rules would be highly cost beneficial but is not possible. On the other hand, OSHA can enforce new provisions to this rule at minimal marginal costs per inspection since the bulk of the costs of an inspection involves the time to reach the site, walk through the site looking for violations of all OSHA rules, and conduct the necessary closing and enforcement conferences.

III. Pertinent Legal Authority

The purpose of the OSH Act is to ''assure so far as possible every working man and woman in the nation safe and healthful working conditions and to preserve our human resources'' (29 U.S.C. 651(b)). To achieve this goal, Congress authorized the Secretary of Labor to issue and to enforce occupational safety and health standards (see 29 U.S.C. 655(a) (authorizing summary adoption of existing consensus and Federal standards within two years of the OSH Act's effective date); 655(b) (authorizing promulgation of standards pursuant to notice and comment); and 654(a)(2) (requiring employers to comply with OSHA standards)).

A safety or health standard is a standard ''which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment or places of employment'' (29 U.S.C. 652(8)).

A standard is reasonably necessary or appropriate within the meaning of section 3(8) of the OSH Act if it materially reduces a significant risk to workers; is economically feasible; is technologically feasible; is cost effective; is consistent with prior Agency action or is a justified departure; adequately responds to any contrary evidence and argument in the rulemaking record; and effectuates the Act's purposes at least as well as any national consensus standard it supersedes (see 29 U.S.C. 652; 58 FR 16612, 16616 (3/30/1993)).

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that can reasonably be expected to be developed (*Pub. Citizen Health Research Group* v. *U.S. Dep't of Labor,* 557 F.3d 165, 170–71 (3d Cir. 2009); *Am. Iron and Steel Inst.* v. *OSHA (Lead II),* 939 F.2d 975, 980 (D.C. Cir. 1991); *United Steelworkers of Am., AFL–CIO–CLC* v. *Marshall,* 647 F.2d 1189, 1272 (D.C. Cir. 1980)).

A standard is economically feasible if industry can absorb or pass on the cost of compliance without threatening its long-term profitability or competitive structure (*Am. Textile Mfrs. Inst.* v. *Donovan (Cotton Dust),* 452 U.S. 490, 530 n.55 (1981); *Lead II,* 939 F.2d at 980). A standard is cost effective if the protective measures it requires are the least costly of the available alternatives that achieve the same level of protection (*Int'l Union, United Auto., Aerospace & Agric. Implement Workers of Am., UAW* v. *OSHA (Lockout/Tagout II),* 37 F.3d 665, 668 (D.C. Cir 1994). *See also Cotton Dust,* 452 U.S. at 514 n.32 (suggesting that the ''reasonably necessary or appropriate'' language of Section 3(8) of the Act (29 U.S.C. 652(8)) might require OSHA to select the less expensive of two equally effective measures)).

Section 6(b)(7) of the OSH Act authorizes OSHA to include among a standard's requirements labeling, monitoring, medical testing, and other information-gathering and transmittal provisions (29 U.S.C. 655(b)(7)).

All safety standards must be highly protective (see 58 FR at 16614–16615; *Lockout/Tagout II,* 37 F.3d at 668). Finally, whenever practicable, standards shall ''be expressed in terms of objective criteria and of the performance desired'' (29 U.S.C. 655(b)(5)).

IV. Summary and Explanation of the Final Rule

The final rule revises and updates the requirements in the general industry Walking-Working Surfaces standards (29 CFR part 1910, subpart D), including requirements for ladders, stairs, dockboards, and fall and falling object protection; and it adds new requirements on the design, performance, and use of personal fall protection systems (29 CFR part 1910, subpart I). The final rule also makes conforming changes to other standards in part 1910 that reference requirements in subparts D and I.

A. Final Subpart D

This part of the preamble discusses the individual requirements in the specific sections of final subpart D; explains the need for and purposes of the requirements; and identifies the data, evidence, and reasons supporting them. This preamble section also discusses issues raised in the proposed rule and by stakeholders, significant comments and testimony submitted to the rulemaking record, and substantive changes from the proposed rule.

In accordance with section 6(b)(8) of the OSH Act, OSHA drew many of the revisions, new provisions, and technological advancements in the proposed and final rules from various national consensus standards. In the discussion of the specific sections of final subpart D, OSHA identifies the national consensus standards that section references. In the summary and explanation of the proposed rule, OSHA's references to national consensus standards are to the editions that were current at that time. In the time since OSHA published the proposed rule, many of the referenced consensus standards have been revised and updated. In the final preamble, OSHA references the most recent editions of those national consensus standards, where appropriate, after examining and verifying that they are as protective as earlier editions.

OSHA has taken a number of steps in the final rule, like the proposal, to provide greater compliance flexibility for employers and make the final rule easier to understand and follow, which stakeholders supported (*e.g.,* Exs. 155; 164; 165; 172; 191; 196; 202). For example, consistent with section 6(b)(5) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655(b)(5)), the final rule uses performance-based language in place of specification requirements, which gives employers flexibility to select the controls that they determine to be most effective for the particular workplace situation and operation. Like the proposed rule, OSHA increases ''harmonization'' between the final rule and OSHA construction standards (29 CFR part 1926, subparts L, M, and X), which makes compliance easier for employers who perform both general industry and construction operations (*e.g.,* Exs. 164; 165; 172; 191; 202; 226).

Finally, clarifying provisions and terms, using plain language, and consolidating and reorganizing the requirements also make the final rule easier to understand, thereby, enhancing compliance. The following table lists the sections in final subpart D and the corresponding sections in the existing subpart:

Final Subpart D	Existing Subpart D
§1910.21 Scope and definitions.	§1910.21 Definitions.
§1910.22 General requirements.	§1910.22 General requirements.
§1910.23 Ladders.	§1910.23 Guarding floor and wall openings and holes.
§1910.24 Step bolts and manhole steps.	§1910.24 Fixed industrial stairs.
§1910.25 Stairways.	§1910.25 Portable wood ladders.
§1910.26 Dockboards.	§1910.26 Portable metal ladders.
§1910.27 Scaffolds and rope descent systems.	§1910.27 Fixed ladders.
§1910.28 Duty to have fall protection and falling object protection.	§1910.28 Safety requirements for scaffolding.
§1910.29 Fall protection systems and falling object protection—criteria and practices.	§1910.29 Manually propelled mobile ladder stands and scaffolds (towers).
§1910.30 Training requirements.	§1910.30 Other working surfaces.

Section 1910.21—Scope and Definitions

Final § 1910.21 establishes the scope of and defines the terms used in 29 CFR part 1910, subpart D—Walking-Working Surfaces.

Final Paragraph (a)—Scope

Final paragraph (a), like the proposed rule, specifies that the subpart applies to all general industry workplaces. It covers all walking-working surfaces unless specifically excluded by an individual section of this subpart. The final rule consolidates the scope requirements for subpart D into one provision and specifies that the final rule applies to all walking-working surfaces in general industry workplaces. The final rule defines ''walking-working surfaces'' as any surface on or through which an employee walks, works, or gains access to a work area or workplace location (§ 1910.21(b)). Walking-working surfaces include, but are not limited to, floors, ladders, stairways, steps, roofs, ramps, runways, aisles, scaffolds, dockboards, and step bolts. Walking-working surfaces include horizontal, vertical, and inclined or angled surfaces.

Final paragraph (a) also specifies that subpart D does not apply to general industry walking-working surfaces, including operations and activities occurring on those surfaces, that an individual section or provision specifically excludes. Final subpart D addresses each of these specific exclusions in the relevant individual section or provision. OSHA notes that each exclusion only applies to the specific section or provision in which it appears and not to any other final subpart D section or provision. Existing subpart D does not have a single scope provision that applies to the entire subpart. Rather, it includes separate scope requirements in various sections in the subpart (*e.g.,* § 1910.22—General requirements; § 1910.24(a)—Fixed industrial stairs; § 1910.25(a)—Portable wood ladders; § 1910.27(e)(3)—Fixed ladders; § 1910.29(a)(1)—Manually propelled mobile ladder stands and scaffolds (towers)).

OSHA believes the consolidated scope provision in final paragraph (a) is clearer and easier to understand than the existing rule. Final paragraph (a) allows employers to determine more easily whether the final rule applies to their particular operations and activities. In addition, the final rule is consistent with OSHA's interpretation and enforcement of subpart D since the Agency adopted the walking-working surfaces standards in 1971. It also is consistent with other OSHA standards, including Agency construction standards (*e.g.,* 29 CFR 1926.450(a); 1926.500(a); 1926.1050(a)).

A number of stakeholders commented on the proposed scope provision (*e.g.,* Exs. 73; 96; 109; 187; 189; 190; 198; 201; 202; 251; 254; 323; 340; 370). Some stakeholders urged OSHA to expand the scope to include agricultural operations (Exs. 201; 323; 325; 329 (1/18/2011, pgs. 206–08); 329 (1/19/2011, p. 101); 340; 370). Most commenters, however, recommended that OSHA limit the scope or exclude certain workers, work operations, or walking-working surfaces or hazards, such as inspection, investigation, and assessment activities; public safety employees; rolling stock and motor vehicles; and combustible dust (*e.g.,* Exs. 73; 96; 98; 150; 156; 158; 157; 161; 167; 173; 187; 189; 190; 202). (See separate discussions of agricultural operations and rolling stock and motor vehicles below. See final § 1910.22(a) for discussion of combustible dust.)

Verallia commented that the proposed scope, combined with the proposed definition of ''walking-working surfaces'' (§ 1910.21(b)), ''greatly expands the obligation of employers'' and makes some requirements, such as regular inspections, ''unduly burdensome'' (Ex. 171). Verallia recommended that OSHA limit the scope of the final rule by revising the walking-working surfaces definition (see discussion of the definition of walking-working surfaces in final § 1910.21(b)). OSHA disagrees with Verallia's contention. The existing rule covers all of the examples of walking-working surfaces listed in the proposed definition of walking-working surfaces (proposed § 1910.21(b)).

Several stakeholders urged that OSHA exclude inspection, investigation, and assessment operations performed before the start of work and after work is completed (*e.g.,* Exs. 109; 156; 157; 177; 254). While some of these commenters recommended excluding those operations from fall protection requirements, others said OSHA should add to final § 1910.21(a) the following language from OSHA's construction standard (29 CFR 1926.500(a)(1)):

> Exception: The provisions of this subpart do not apply when employees are making an inspection, investigation, or assessment of workplace conditions prior to the actual start of construction work or after all construction work has been completed.

Such language would have the effect of excluding these operations from the entirety of subpart D, which OSHA opposes. Although OSHA excludes these operations from the fall protection requirements in final § 1910.28 (see discussion in final § 1910.28(a)(2)), employers performing them must comply with the other requirements in this subpart. For example, those employers must ensure that ladders and stairways their workers use to get to the workplace location are safe; that is, are in compliance with the requirements in final § 1910.23 and final § 1910.25, respectively. Employers also must ensure that the workers performing those operations can safely perform those operations by ensuring they receive the training that final § 1910.30 requires.

Some stakeholders recommended that OSHA exclude public safety employees from the final rule (Exs. 167; 337; 368). The Public Risk Management Association (PRIMA) offered three reasons for excluding public safety employees from the final rule. First, they said employers do not control the walking-working surfaces where employees perform public safety and emergency response operations (Ex. 167). Second, they said it is ''unreasonable'' to require public safety employees (*e.g.,* SWAT teams) to install and use fall protection systems, since there is only a short time in which emergency response and rescue operations they perform will be effective. Finally, PRIMA said requiring that State Plan States adopt the final rule or an equivalent could result in different rules that could adversely impact interstate multidisciplinary teams and agreements.

OSHA does not believe excluding public safety employees from the entire final rule is appropriate or necessary. Many general industry employers that the final rule covers perform operations on walking-working surfaces that they do not own, thus, in this respect, public safety employers and operations are not unique. Regardless of whether general industry employers own the walking-working surfaces where their workers walk and work, they still must ensure the surfaces are safe for them to use. For example, general industry employers, including public safety employers, must ensure that the walking-working surfaces are able to support their employees as well as the equipment they use. If walking-working surfaces cannot support the maximum intended load, employees and, in the case of public safety employers, the people they are trying to assist or rescue, may be injured or killed.

OSHA does not believe stakeholders provided convincing evidence showing this and other requirements (*e.g.,* training) provisions in final subpart D are not feasible for public safety employers. However, if an employer, including public safety employers, can demonstrate that it is infeasible or creates a greater hazard to comply with the final rule in a particular situation, they may use other reasonable alternative means to protect their employees. (OSHA notes that final § 1910.23 does not apply to ladders that employers use in emergency operations such as firefighting, rescue, and tactical law enforcement operations (see discussion in final § 1910.23(a)(1))).

Agricultural operations. The final rule, like the proposal, covers walking-working surfaces in general industry workplaces. In the preamble to the proposed rule OSHA clearly specifies that the proposal does not apply to agricultural operations; 29 CFR part 1928 covers those operations (75 FR 28920 (5/24/2010)).

Although neither the proposed rule nor OSHA standards define ''agricultural operations,'' the Agency has said they generally include ''any activities involved in the growing and harvesting of crops, plants, vines, fruit trees, nut trees, ornamental plants, egg production, the raising of livestock (including poultry and fish) and livestock products'' (*e.g.,* feed for livestock on the farm) (Field Operations Manual (FOM), Chapter 10, Section B(1)). Agricultural operations include preparation of the ground, sowing, watering and feeding of plants, weeding, spraying, harvesting, raising of livestock, and ''all activity necessary for these operations'' (Memorandum from Patricia Clark, Directorate of Compliance Programs (7/22/1992)).

OSHA's Appropriations Act uses the term ''farming operations,'' which is similarly defined as ''any operation involved in the growing or harvesting of crops, the raising of livestock or poultry, or related activities conducted by a farmer on sites such as farms, ranches, orchards, dairy farms or similar farming operations'' (CPL 02–00–51; 42 FR 5356 (1/28/1977); Memorandum for Regional

Administrators (7/29/2014)).[3] Farming operations on small farms also include ''preparing the ground, sowing seeds, watering, weeding, spraying, harvesting, and all related activities necessary for these operations, such as storing, fumigating, and drying crops grown on the farm'' (Memorandum for Regional Administrators (7/29/2014)).

The Occupational Safety and Health Review Commission (OSHRC) has ruled that activities integrally related to these core agricultural operations also are agricultural operations (*Darragh Company,* 9 BNA OSHC 1205, 1208 (1980) (delivery of chicken feed to farmers that raise chickens is integrally related to agricultural operations)). Determining whether an activity is a core agricultural operation must be made on a case-by-case basis and be based on the nature and character of the specific activity rather the employer's agricultural operation as a whole (*J.C. Watson Company,* 22 BNA OSHC 1235, 1238, *aff'd.* 321 Fed. Appx. 9 (April 17, 2009)).

Under the *Darragh* test, post-harvesting activities are not integral to core agricultural operations, therefore, they are not covered by part 1928 (*J.C. Watson Company,* 22 BNA OSHC 1235 (2008)). Post-harvest activities such as receiving, cleaning, sorting, sizing, weighing, inspecting, stacking, packaging and shipping produce are not ''agricultural operations'' (*J.C. Watson Company,* 22 BNA OSHC at 1238 (employer's packaging of onions (1) grown on land employer owned, leased, or worked; (2) purchased on the ''spot market''; or (3) brought to the shed by other growers; in a shed on the employer's farm was ''not integral to the growing of onions, the true agricultural operation here'')). Post-harvesting activities not on a farm include the processing of agriculture products, which ''can be thought of as changing the character of the product (canning, making cider or sauces, etc.) or a higher degree of packaging versus field sorting in a shed for size'' (FOM, Chapter 10, Section B(4)).

In addition, activities performed on a farm that ''are not related to farming operations and are not necessary to gain economic value from products produced on the farm'' are general industry activities (Memorandum for Regional Administrators (July 29, 2014) (these activities on a small farm ''are not exempt from OSHA enforcement'' under the appropriations rider)). To illustrate, the memorandum specifies the following activities performed on a farm are general industry activities (''food manufacturing operations'') not farming operations exempt under the appropriations rider:

- Grain handling operation that stores and sells grain grown on other farms;
- Food processing facility that makes cider from apples grown on the farm or processes large carrots into ''baby carrots;'' and
- Grain milling facility and use of milled flour to make baked goods.

As mentioned, a number of stakeholders urged that OSHA include agricultural operations in the final rule for several reasons (Exs. 201; 323; 325; 340; 370). First, the stakeholders said fall hazards are present throughout agricultural operations. For instance, Farmworker Justice stated:

> Fall hazards exist in all types of farm operations in both crop and animal production, including work in vegetable fields, packing sheds, fruit orchards, tree nurseries, greenhouses, mushroom houses, dairies, poultry farms, cattle feedlots, and other livestock operations (Ex. 325).

They also said that workers are exposed to fall hazards while working on various types of walking-working surfaces, including ladders, farm machinery, and elevated farm structures (Ex. 325).

Second, stakeholders said fall hazards are a leading cause of worker fatalities and injuries in agricultural operations. Farmworker Justice said the annual number of fatal falls in agricultural operations accounted for almost 10 percent of all annual occupational fatal falls (Ex. 370). They said a NIOSH analysis of 2005 Bureau of Labor Statistics (BLS) data indicated that fall-related farmworker deaths occurred at a rate of 1.4 per 100,000, ''a rate exceeded in only two other industries: Construction . . . and mining'' (Ex. 325, referring to 2005 Census of Fatal Occupational Injury data). According to Farmworkers Justice, BLS data from 2004–2009 indicated that 157 agricultural workers died due to falls, which they said was an average of over 28 fall deaths per year (Exs. 329 (1/18/2011, pp. 228); 370). California Rural Legal Assistance Foundation (CRLAF) said BLS fatality data from 1992–1997 indicated 166 agricultural workers died as a result of falls from elevations (Ex. 201).

Farmworker Justice and CRLAF also submitted evidence on the prevalence of fall injuries in agricultural operations. CRLAF said an analysis of 1991 Florida worker compensation records in agricultural operations revealed that falls accounted for nearly 25 percent of all serious, disabling work injuries (Ex. 201). Farmworker Justice reported:

> BLS data indicates that workers in both crop and animal production had among the highest rates of non-fatal fall-related injuries requiring days away from work of all U.S. workers in 2009 (Ex. 370).

Farmworker Justice stated that fall injuries were particularly frequent among workers harvesting tree fruit and nut crops:

> According to 2009 BLS fall injury data . . . orchard workers suffered ladder-related fall injuries at the rate of 33.6 per 10,000 workers, which would be among the top 20 industry fall rates examined by OSHA (Ex. 370; *see also* Ex. 325).

CRLAF reported similar data showing ''nearly one-third (31%) of the 13,068 Workers' Compensation Claims in Washington State orchards between 1996 and 2001 involving compensation for lost work time were for ladder related injuries.''

Third, stakeholders said the fall protection standards that California, Oregon, and Washington have adopted to protect agricultural workers show that it is feasible to apply the final rule to agriculture operations (Exs. 325; 329 (1/18/2011, pgs. 207–210); 340; 370). Farmworker Justice said that government officials, agricultural orchard employers, and agricultural safety training experts in these states indicated that compliance with those standards have ''significantly reduced injuries among agricultural workers'' (Ex. 370). It also reported that a Washington study of fall injuries among orchard workers over a five-year period (1996–2001) following implementation of the state's fall protection standard found ''statistically significant annual reductions in injuries'' (Ex. 370, discussing Hofmann J, Snyder K, Keifer M. ''A descriptive study of workers claims in Washington State orchards,'' 56 Occupational Medicine 251–257 (2006)).

OSHA agrees with the stakeholders that walking-working surface hazards, particularly fall hazards, exist in agricultural operations. That said, OSHA has not included agricultural operation in the final rule. The Agency has not gathered and analyzed the type of information on agricultural operations necessary to support a rule. OSHA has not gathered and analyzed information on the number of agricultural workers and establishments the final rule would affect. In addition, OSHA has not determined what percentage of agricultural

[3] Since 1976, a Congressional appropriations rider has precluded OSHA from expending funds to conduct enforcement activities with respect to any person engaged in farming operations with 10 or fewer non-family employees that has not maintained a temporary labor camp within the preceding 12 months (Consolidated Appropriations Act, 2014, Pub. L. No. 113–76 (2014)).

establishments are farming operations with 10 or fewer non-family employees that have not maintained a temporary labor camp within the preceding 12 months and therefore exempt from enforcement of the final rule.

OSHA has not gathered and analyzed data and information on the jobs in agricultural operations where walking-working surface hazards are present and worker injuries and fatalities are occurring; the current employer practices to address these hazards; and the availability and cost of controls, such as fall protection systems, to protect workers from those hazards. In addition, OSHA has not conducted the economic and regulatory flexibility analyses necessary to make a feasibility determination. And, because the proposal clearly did not extend to agricultural operations, the public has not had a chance to comment on those issues. These and other steps are necessary before OSHA can issue a final rule that applies to agricultural operations. As such, the final rule applies to general industry and not agricultural operations. However, if an operation performed on a farm is not an ''agricultural operation'' or integrally related to an agricultural operation, such as a food manufacturing or other post-harvesting operations, then the final general industry rule applies.

Rolling stock and motor vehicles. In this rulemaking OSHA has raised issues and requested comment about whether the final rule should include specific requirements to protect workers from falling off rolling stock and motor vehicles.[4] The 2010 proposal does not include specific requirements for rolling stock and motor vehicles (75 FR 28862). Instead, in the preamble, OSHA said it would continue gathering information and evidence to determine whether there is a need to propose specific requirements for rolling stock and motor vehicles (75 FR 28867). OSHA also said it needs ''more information about what employers are presently doing and any feasibility and cost concerns associated with a requirement to provide protection'' for rolling stock and motor vehicles. OSHA said it will wait until the record is more fully developed to make a determination about requiring fall protection on rolling stock and motor vehicles. OSHA also stated that if it receives sufficient comments and evidence to warrant additional rulemaking on rolling stock and motor vehicles, the Agency will issue ''a *separate* proposed rule'' (75 FR 28867) (emphasis in original). The comments the Agency received on the need for specific requirements for rolling stock and motor vehicles are summarized below.

Many stakeholders support adding specific fall protection requirements for rolling stock and motor vehicles to the final rule (*e.g.,* Exs. 127; 130; 155; 185; 198; 257; 307; OSHA–S029–2006–0662–0195; OSHA–S029–2006–0662–0196; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0227; OSHA–S029–2006–0662–0234; OSHA–S029–2006–0662–0247; OSHA–S029–2006–0662–0310; OSHA–S029–2006–0662–0329), while many urge OSHA to exclude rolling stock and motor vehicles from coverage or to limit fall protection requirements to specific situations, such as when vehicles are inside or contiguous to a building (*e.g.,* Exs. 63, 121; 158; 161; 162; 181; 182; 183; 220; 238; 335; OSHA–S029–2006–0662–0202; OSHA–S029–2006–0662–0219; OSHA–S029–2006–0662–0226; OSHA–S029–2006–0662–0229; OSHA–S029–2006–0662–0244; OSHA–S029–2006–0662–0252; OSHA–S029–2006–0662–0302; OSHA–S029–2006–0662–0306; OSHA–S029–2006–0662–0314; OSHA–S029–2006–0662–0320; OSHA–S029–2006–0662–0324).

Stakeholders who support adding specific fall protection requirements said workers are exposed to fall hazards working on rolling stock and motor vehicles; falls from rolling stock and motor vehicles have resulted in death and serious injury; and feasible, effective fall protection systems exist and are in use to protect employees working on rolling stock and motor vehicles. These stakeholders include safety professional organizations (*e.g.,* American Society of Safety Engineers (ASSE)); fall protection system manufacturers, suppliers, and installers; safety engineers and consultants; and labor organizations.

Stakeholders who oppose adding specific requirements said requiring fall protection for rolling stock and motor vehicles is not necessary, creates a greater hazard, and is infeasible. Some said OSHA did not have authority to regulate rolling stock and motor vehicles, and, in any event, should leave such regulation to the Federal Railroad Administration (FRA) and Federal Motor Carrier Safety Administration (FMCSA), respectively. Some stakeholders urged OSHA that the final rule limit fall protection requirements to vehicles located inside or contiguous to a building or structure. These stakeholders include employers, small businesses, and industry associations (Exs. 182; 220; OSHA–S029–2006–0662–0226; OSHA–S029–2006–0662–0229; OSHA–S029–2006–0662–0231; OSHA–S029–2006–0662–0237; OSHA–S029–2006–0662–0252; OSHA–S029–2006–0662–0306; OSHA–S029–2006–0662–0340).

Need for fall protection. Several stakeholders asserted that fall protection on rolling stock and motor vehicles is not necessary for a variety of reasons. First, stakeholders said no or very few workers climb on rolling stock and motor vehicles (Exs. 124; 183; 187; 220; 238). For example, Minnesota Grain and Feed Association (MGFA) said members load/unload rolling stock and motor vehicles using electronic controls operated from ground-level instead (Ex. 220). Likewise, the Small Business Administration Office of Advocacy (SBA Advocacy) and American Trucking Associations (ATA) said employees load/unload truck trailers through the rear door directly to docks, ramps, and other devices (Exs. 124; 187; 190; 220). Stakeholders who said workers climb on rolling stock and motor vehicles stressed the number of workers doing so is very low. Conoco Phillips Company said, ''[T]he number of employees required to work atop rolling stock is minimal (<1%)'' (Ex. OSHA–S029–2006–0662–0320; *see also* Exs. 148 (NGFA—''At best, a small percentage of the employees . . . are exposed); 181 (American Truck Dealers/National Automobile Dealers Association (ATD/NADA)—less than 10 percent of employees)).

Other stakeholders, however, including some who oppose requiring fall protection, said a significant number/percentage of employees must climb on or access the tops of rolling stock and motor vehicles to perform a wide range of tasks, including loading/unloading, tarping, maintenance and repair, inspections, sampling, snow and ice removal, and other tasks (*e.g.,* Exs. 63; 121; 158; OSHA–S029–2006–0662–0350). For instance, Clear Channel Outdoors (CCO) said that nearly 80 percent of their field employees climb on motor vehicles (Ex. 121). Ferro Corporation estimated that almost one-half of employees at a typical plant climb onto the top of rolling stock and bulk trucks to perform tasks (Ex. OSHA–S029–2006–0662–0177).

Second, a number of stakeholders stated that fall protection is not necessary on rolling stock and motor vehicles because worker exposure to fall hazards is limited. Several stakeholders said exposure is ''infrequent,'' ''brief and sporadic'' (Exs. 124; 181; 183; 187;

[4] OSHA defines ''rolling stock'' as any locomotive, railcar, or vehicle operated exclusively on a rail or rails, or a trolley bus operated by electric power supplied from an overhead wire. ''Motor vehicle'' means any commercial bus, van, or truck, including tractor trailer, flatbed, tanker, and hopper trucks.

OSHA–S029–2006–0662–0124; OSHA–S029–2006–0662–0183; OSHA–S029–2006–0662–0237). Other stakeholders maintain exposure to fall hazards on rolling stock and motor vehicles is more frequent and widespread. For example, Dynamic Scientific Controls (DSC) said fall hazards are present ''daily in almost every plant that receives and ships'' products (Ex. OSHA–S029–2006–0662–0227; *see also* Exs. 307; 329 (1/20/2011, p. 142)).

Third, some stakeholders assert fall protection is not necessary on rolling stock and motor vehicles because the heights employees climb do not pose fall hazards. For instance, ATA said the height of most commercial vehicle trailers is no more than 49 to 50 inches (*e.g.,* ''step-downs'' and ''low boys''), which only nominally exceeds the 4-foot trigger (Ex. 187). Other stakeholders, however, reported that workers must climb significantly higher than 50 inches on motor vehicles, particularly tanker and hopper trucks, to perform tasks, some of which are the tasks they perform most frequently (*e.g.,* Exs. 130; 198; 307; OSHA–S029–2006–0662–0208). Even where workers only climb 49 to 50 inches onto a trailer or flatbed truck, some stakeholders said there is a risk of serious injury from falls (Exs. 63; 302; 329 (1/20/2011, pgs. 156–60)).

Fourth, a number of stakeholders said fall protection is not necessary because no or few injuries from falls off rolling stock and motor vehicles have occurred in their establishments or industry (Exs. 63; 121; 148; 162; 181; 237; OSHA–S029–2006–0662–0219; OSHA–S029–2006–0662–0237; OSHA–S029–2006–0662–0252; OSHA–S029–2006–0662–0320). Douglas Greenhaus, with ATD/NADA, said:

> I've spent over twenty-five years working with truck dealerships on matters involving employee health and safety. In that time, I have only rarely heard of injuries arising from falls from commercial trucks, tractors, or trailers (Ex. 181. *See also,* OSHA–S029–2006–0662–0237).

The Cargo Tank Risk Management Committee (CTRMC) stated:

> While falls from the top of tank trailers can result in serious injury, the actual frequency of such injuries is very rare. A typical large cargo tank motor vehicle fleet makes over 300 delivers per day and has averaged less than 2 falls from its tank trailers per year (Ex. 63).

Stakeholders pointed out that industry surveys also show falls from rolling stock and motor vehicles were low. McNeilus Trucking reported that a 2002 Illinois Ready Mix Concrete Association survey found only two falls from ready-mix concrete trucks occurred in over 66 million climbs (Ex. OSHA–S029–2006–0662–0219). According to an International Liquid Terminals Association's (ILTA) 2010 annual survey, six of the 221 (2.7%) injuries were falls from rolling stock and motor vehicles, which ''represent a very small proportion of the total number of recordable incidents'' (Ex. 335). A NGFA survey of 901 facilities showed that during a two-year period (2007–09), during which the facilities handled 1.5 million railcars and 1.4 million motor vehicles, no fatalities and only 12 injuries occurred (Ex. 148).

By contrast, a number of stakeholders said falls from rolling stock and motor vehicles are a serious problem that have resulted in worker deaths and serious injuries (*e.g.,* Exs. 130; 155; 257; 302; 307; 329 (1/20/2011, pgs. 142, 150,151–152, 156–57); 335; 355–11; OSHA–S029–2006–0662–0207). In the rail transportation industry, Fall Protection Systems Corp. (FPS) reported that they documented, based on site visits and speaking to customers, more than 50 falls in a 10-year period, 14 of which resulted in death and 30 in serious injuries.

Stakeholders reported a similar experience in the truck transportation industry. For example, Rick Hunter, of the Alabama Trucking Association Workers Compensation Fund, said:

> Each year drivers and shop [technicians] are injured from falls from tankers and flatbed trailers. I know of 4 deaths from this type fall in Alabama'' (Ex. 257).

Cameron Baker, with Standfast USA, testified that one truck company with more than 900 drivers, reported an average of 31 falls per year during a nine-year period (1998–2006) (Exs. 329 (1/20/2011, pgs. 151–52); 355–11). He estimated that the total cost to the company for those fall injures was $3.33 million (Ex. 355–11). Standfast also submitted information indicating that rolling stock and motor vehicle fall injuries are increasing (Ex. 355–11).

Fifth and finally, a number of stakeholders said employers already are using effective measures to protect workers on rolling stock and motor vehicles and requiring additional measures in the final rule will not increase worker safety (*e.g.,* Exs. 63; 121; 124; 142; 147; 148; 158; 162; 169; 181; 190; 335). The measures these stakeholders are using include:

- Conventional fall protection system such as cable line and retractable lifeline systems; work platforms with railings/guardrails; walkways with railings; and portable access systems with railings or safety cages; ladders with railings (Exs. 63; 124; 148; 158; 162; 169; 181; 335);
- Anti-slip surfaces on motor vehicle walkways (Ex. 158);
- Initial, periodic, and remedial training, which is the only measure some stakeholders use (*e.g.,* Exs. 63; 121; 124; 142; 148; 158; 162; 169; 181; 190);
- Work practices such as site-specific loading/unloading protocols and safe climbing techniques (*e.g.,* 3-point climbing); and loading/unloading trailers from the ground (*e.g.,* bottom-loading tankers, ground-level controls) (Ex. 148; 158; 181; 192; 326; 335; OSHA–S029–2006–0662–0314); and
- Administrative controls, including ''blue-flagging'' rail cars on isolated tracks to prevent moving while employees are on them, prohibiting workers from being on moving rolling stock, and keeping employees off railcars in unsafe weather conditions (*e.g.,* ice, sleet, high winds) (*e.g.,* Ex. 148).

However, as mentioned, other stakeholders believe requiring fall protection on rolling stock and motor vehicles is necessary because many employers have not implemented readily available controls even though their workers are exposed to fall hazards on rolling stock and motor vehicles and fall injuries and fatalities are occurring in the railroad and truck transportation industries (*e.g.,* Exs. 127; 130; 155; 185; 198; 257; 307; OSHA–S029–2006–0662–0195; OSHA–S029–2006–0662–0196; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0227; OSHA–S029–2006–0662–0234; OSHA–S029–2006–0662–0247; OSHA–S029–2006–0662–0310; OSHA–S029–2006–0662–0329). FPS, for instance, pointed out that the lost-workday injury rates due to falls from elevations in the rail transportation and truck transportation industries are 25.9 and 29.1 lost workdays per 10,000 employees, respectively (Ex. 130).

Greater hazard. Several stakeholders oppose requiring fall protection on rolling stock and motor vehicles because they say it would expose workers to a ''greater hazard'' than working without any protection (Exs. 121; 124; 181; OSHA–S029–2006–0662–0219; OSHA–S029–2006–0662–0232; OSHA–S029–2006–0662–0244). To establish that an OSHA standard creates a greater hazard, an employer must prove, among other things, that the hazards of complying with the standard are greater than those of not complying, and alternative means of employee protection are not available (*Bancker Construction Corp.,* v. *Reich,* 31 F.2d 32, 34 (2d Cir. 1994); *Dole* v. *Williams Enterprises, Inc.,* 876 F.2d 186, 188 (D.C. Cir. 1989)). The Occupational

Safety and Health Review Commission has held that the employer must establish that complying with a standard would be more dangerous than allowing employees to work without compliance (*Secretary of Labor* v. *Spancrete Northeast, Inc.,* 16 BNA OSHC 1616, *aff.* 40 F.3d 1237 (2d Cir. 1994)).

Stakeholders said that requiring personal fall protection systems on rolling stock and motor vehicles could create a greater risk by causing ''entanglement with moving parts'' (Ex. 124) and creating trip hazards (Exs. 181; OSHA–S029–2006–0662–0244). They also said requiring workers ''to continually tie and untie from a variety of anchorage points when the employee accesses and moves around'' rolling stock or motor vehicles also could create a greater hazard (Ex. 121; OSHA–S029–2006–0662–0244). Keller and Heckman explained:

> [T]he worker would first have to climb or otherwise travel to the anchorage location to attach and then detach from the anchorage, which might very well pose a greater hazard than simply working carefully without fall protection (Ex. OSHA–S029–2006–0662–0244).

However, these stakeholders did not identify instances in which workers were injured while using personal fall protection systems on rolling stock and motor vehicles.

Also, these stakeholders did not show that there are no alternative fall protection measures or systems available to protect workers. In fact, these and other stakeholders identified various types of fall protection systems that they and other employers are using successfully to protect employees working on rolling stock and motor vehicles (*e.g.,* Exs. 63; 124; 130; 148; 158; 162; 181; 185; 198; 307; 335; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208). In point, although ATD/NADA asserted that requiring fall protection on rolling stock and motor vehicles would create a greater hazard, they also said:

> Dealerships often use railing-equipped metal stairs with lockable casters or other ladder systems to reach the sides and tops of trucks, tractors, or trailers, thereby reducing the need to climb on the vehicles themselves. When and where used, mobile work platforms and scaffolds have adjustable 'maximum' heights and are equipped with side rails and toe boards to prevent falling or tripping from the top section. . . . Paint booths often have mobile or stationary stair platforms equipped with railings and safety chains (Ex. 181).

Technological feasibility. As discussed in Pertinent Legal Authority (Section III), OSHA must prove, by substantial evidence in the rulemaking record that its standards are technologically and economically feasible, which the Supreme Court has defined as ''capable of being done, executed, or effected'' (*American Textile Mfrs. Inst.* v. *Donovan (Cotton Dust),* 452 U.S. 490, 506 n. 25 (1981)). A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that can reasonably be expected to be developed (*Cotton Dust,* 452 U.S. at 513; *United Steelworkers* v. *Marshall (Lead I),* 647 F.2d 1189, 1272 (D.C. Cir, 1980), *cert. denied,* 453 U.S. 913 (1981)). OSHA is not bound by the ''technological status quo.'' The Agency can be ''technology-forcing,'' that is, giving industry a reasonable amount of time to develop new technologies (*Lead I,* 647 F.2d at 1264).[5]

Stakeholders asserted various reasons why they believe it is not technologically feasible to require fall protection on rolling stock and motor vehicles that are not located in or contiguous to a building or other structure. First, several stakeholders contend that guardrail systems, safety net systems, and personal fall protection system are not feasible in those locations (*e.g.,* Exs. 158; 326; 329 (1/20/2011, pgs. 156–58); OSHA–S029–2006–0662–0314).

Standfast USA said safety net systems are difficult to deploy and guardrail systems either obstruct loading racks or cannot be raised when the racks are present (Ex. 329 (1/20/2011, pgs. 156–58)).

Regarding personal fall protection systems, stakeholders stated there is no place to install anchorage points when rolling stock and motor vehicles are not located in or contiguous to a building or structure (*e.g.,* Exs. 121; 124; 126; 187; 192; 326; OSHA–S029–2006–0662–0237; OSHA–S029–2006–0662–0244), and attaching them to the rolling stock and motor vehicles is not feasible because the personal fall protection system would compromise the strength or structural integrity of the vehicles, which are made of aluminum, which ''fatigues over time'' (Ex. 158; OSHA–S029–2006–0662–0219).

However, other stakeholders submitted evidence showing that controls are available and in use on rolling stock and motor vehicles regardless of location (*e.g.,* Exs. 63; 130; 158; 161; 169; 185; 307; 335; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0329; OSHA–S029–2006–0662–0350; OSHA–S029–2006–0662–0373). For example, the American Feed Industry Association (AFIA) said members have found guardrail systems (*i.e.,* railed walkways and catwalks; ''pop-up''/collapsible handrails) to be ''very effective'' regardless of where rolling stock and motor vehicles are located (Ex. 158; *see also* Exs. 161; 169; 335; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0350; OSHA–S029–2006–0662–0373). In addition, stakeholders submitted evidence showing that personal fall protection systems are available and in use in a broad range of industries, regardless of the location of the rolling stock and motor vehicles (*e.g.,* Exs. 130; 148; 158; 198; 307; 355; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0373). Some of these systems are attached to rolling stock and motor vehicles (*e.g.,* Exs. 307; 355; OSHA–S029–2006–0662–0208), while others are stand-alone or portable, wheel-mounted overhead systems that employers can use in open yards and other locations (*e.g.,* Exs. 148; 158; 198; 355–2; OSHA–S029–2006–0662–0373).

Second, several stakeholders stated that retrofitting rolling stock and motor vehicles with fall protection is not feasible (Exs. 63; 158; 190; 192; 329 (1/20/2011, pgs. 112–13); 335; OSHA–S029–2006–0662–0219). McNeilus Trucking, for instance, said retrofitting could affect the structural integrity or performance of rolling stock and motor vehicles (Ex. OSHA–S029–2006–0662–0219. *See also* Ex. 158). ILTA testified that although fall protection systems ''are very routinely part of the initial design'' in new equipment, existing rolling stock and motor vehicles ''do not have assets that would readily accept a fall protection system'':

> It's not easy to take these piping manifolds and just simply overlay a superstructure in many cases. . . . [W]hen we're looking at older installations that might require retrofitting where . . . retrofit really does require complete bulldoze and start over'' (Ex. 329 (1/20/2011, pgs. 112–13). *See also* Ex. 335).

Other stakeholders, including industry associations, commented that rolling stock and motor vehicles have been retrofitted with fall protection systems (*e.g.,* Exs. 307; 335; 355), and pointed out that there are many other types of portable and stand-alone fall protection systems (*e.g.,* overhead

[5] A determination of feasibility at the time a standard is promulgated establishes a rebuttable presumption of feasibility. Employers subject to an enforcement action can overcome this presumption by demonstrating that the controls or action the standard requires are not feasible for its operation (*Lead I,* 647 F.2d at 1272).

trolley rail systems) available and in use instead of retrofitting rolling stock and motor vehicles (*e.g.,* Exs. 130; 198; 307; 329 (1/18/2011, pgs. 90–92); 355; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0373).

Third, some stakeholders asserted fall protection on rolling stock and motor vehicles is not feasible because of circumstances beyond their control (Exs. 148; 181; 326). These stakeholders said, for example, they cannot install fall protection systems because they do not own the motor vehicles (*i.e.,* leased fleet, belong to customers, are inventory for sale) or rail carriers prohibit them from modifying rolling stock without prior approval. Some stakeholders said FRA and FMCSA requirements prevent them from using fall protection (Exs. 148; 326). For instance, NGFA stated that members cannot install fall protection on rolling stock because of FRA ''clearance envelope'' requirements (Ex. 148). Similarly, Southeast Transportation Systems (STS) said FMCSA rules on motor vehicle weight, height, width, length, and accessory design (*e.g.,* ladders) ''are just some of the factors preventing the use of conventional fall protection systems'' (Ex. 326. *See also* Exs. 158; OSHA–S029–2006–0662–0226). AFIA agreed:

> Bulk feed transportation equipment must meet maximum height constraints in order to comply with Department of Transportation regulations. The maximum allowable height of trucks and trailers is 13′6″. Since the top of our equipment is approximately 13′ high, the industry is limited in positioning additional structures above this height (Ex. 158).

Other evidence in the record, however, indicates that there are many portable and stand-alone fall protection systems available and in use today in both the rail and truck transportation industries, including overhead cable line systems, moveable stairs with railings, mobile access platforms with railings and/or safety cages and overhead tarping systems (*e.g.,* Exs. 198; 302; 355; OSHA–S029–2006–0662–0350; OSHA–S029–2006–0662–0373). For example, an NGFA survey revealed that nearly 40 percent of their member facilities have installed overhead fall protection systems in railcar loading areas (Ex. 148. *See also* 63; 182; 335). The truck transportation industry has implemented a number of fall protection systems, including portable and adjustable access platforms/racks with railings or safety cages; pedestal platforms; collapsible outer rails; and walkways with collapsible railings (*e.g.,* Exs. 63; 357). Some stakeholders, including truck transportation industry companies and associations, also pointed to the increasing use of bottom-loading tanks and hoppers, which work even where there are external constraints (*e.g.,* Exs. 63; 158; 329 (1/20/2011, p. 143)).

Fall protection system manufacturers indicated that, based on their experience, ''it is feasible and practical to provide workers with active or passive means of fall protection [for working on rolling stock and motor vehicles] in nearly every work situation'' (Ex. 329 (1/18/2011, pgs. 82–83); *see also* Exs. 130; 185; 198; 307; 329 (1/18/2011, pgs. 90–92, 164–66); 329 (1/20/2011) pgs. 144, 149–75); 355–2; 355–12; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0329; OSHA–S029–2006–0662–0350; OSHA–S029–2006–0662–0373). For example, FPS, which by 2003 already had provided more than 13,000 fall protection systems to the rail and trucking industries, said they have found ''no technological or economic obstacles'' to prevent employers from providing fall protection equipment for rolling stock and motor vehicles regardless of their location (Ex. 130). For many years, manufacturers have been producing rolling stock and motor vehicle fall protection systems especially designed for use in locations that are not in or contiguous to buildings or other structures (*e.g.,* Exs. 130, 307; 329 (1/18/2011, pgs. 82–83, 90–92); 329 (1/20/2011, pgs. 149–75, 188); 355; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0373). They also have designed, and employers are using, technological advancements that have eliminated the need for workers to climb on rolling stock and motor vehicles (Exs. 302; 329 (1/20/2011, pgs. 144–45, 149–75, 188); 355; OSHA–S029–2006–0662–0207; OSHA–S029–2006–0662–0208; OSHA–S029–2006–0662–0373). These advancements include tanker and hopper trucks that load/unload from the bottom; automated loading/unloading and tarping systems operated by ground-level controls (Exs. 63; 302; 329 (1/20/2011, pg. 143); *see also* Ex. 158). Several industry associations said member companies are increasingly purchasing these new technologies (Exs. 63; 158; 302). Safety and engineering consultants confirmed the ready availability, effectiveness, and feasibility of the new fall protection technologies for rolling stock and motor vehicles (Exs. 227; 251; OSHA–S029–2006–0662–0227; OSHA–S029–2006–0662–0350).

Employers and industry associations submitted information about effective fall protection controls that have been implemented (*e.g.,* Exs. 63; 148; 158; 162; 169; 181; 182; 220; 326; 335; 337; OSHA–S029–2006–0662–0177). For example, Ferro Corporation, which installed cable line systems over rail cars and work platforms with railings on the top of bulk trailers for loading/unloading coatings and other materials reported that they have not experienced any falls since installing the systems in 2000 (Ex. OSHA–S029–2006–0662–0177; *see also* Ex. 329 (1/20/2011, pgs. 149–75)).

As mentioned, AFIA said member companies have installed several types of fall protection systems (*e.g.,* retractable overhead lanyards and harnesses, elevated walkways, ''pop-up handrails,'' ground-level controls for loading/unloading) that ''have proven to be effective'':

> [T]he additional couple of minutes to don a full body harness and attach it to a retractable lanyard are insignificant compared to a lost-time accident (Ex. 158).

Industry associations also submitted information showing that a significant portion of their member companies already have installed fall protection systems for rolling stock and motor vehicles (Exs. 63; 148; 158; 162; 169; 181; 182; 220; 335; 357). For example, NGFA reported that nearly 40 percent of all member facilities already have installed overhead fall protection systems in railcar loading areas (Ex. 148). Even ''country elevators,'' which generally load only one- to three-railcar units, already have installed retractable safety lines and electronic systems operated from ground level (Ex. 148; *see also,* Ex. 220). CTRMC submitted photographs showing fall protection systems already in use on cargo tank trucks in their industry, including tank trucks located ''in the field'' (Ex. 63).

OSHA believes the evidence employers and industry associations submitted shows it is technologically feasible in many cases for employers to provide fall protection for rolling stock and motor vehicles regardless of their location.

Jurisdiction. Several stakeholders oppose covering rolling stock and motor vehicles in the final rule because they contend that OSHA either lacks authority to require employers to provide fall protection for employees who work on rolling stock and motor vehicles, or should allow the FRA or FMCSA to exercise complete authority for regulating rolling stock and motor vehicles, respectively (Exs. 124; 187; 326; OSHA–S029–2006–0662–0202; OSHA–S029–2006–0662–0232).

Regarding rolling stock, FRA said the Federal Railroad Safety Act (FRSA) grants them broad authority to regulate railroad safety and they have promulgated regulations to protect railroad employees from falling off of rolling stock (OSHA–S029–2006–0662–0232. *See also* OSHA–S029–2006–0662–0206). Therefore, they contend that Section 4(b)(1) of the OSH Act (29 U.S.C. 653(b)(1)) [6] ''displaces OSHA'' from regulating rolling stock. FRA also pointed out that its ''Railroad Occupational Safety and Health Standards'' Policy Statement states that FRA exercises complete authority for ''railroad operations,'' which is the movement of equipment over the rails. FRA said this authority includes design of ''rolling equipment used on a railroad, since working conditions related to such surfaces are regulated by FRA as major aspects of railroad operations'' (43 FR 10583, 10587 (3/14/1978)).

In the preamble to the proposed rule, OSHA acknowledged that FRA has authority to regulate ''railroad operations'' (75 FR 28867). At the same time, OSHA noted that the FRA Policy Statement also recognizes that OSHA has authority for certain ''occupational safety and health'' issues in the railroad industry:

> FRA recognizes that OSHA currently is not precluded from exercising jurisdiction with respect to conditions not rooted in railroad operations nor so closely related to railroad operations as to require regulation by FRA in the interest of controlling predominant operational hazards (43 FR 10587).

Consistent with the Policy Statement, OSHA has authority over working conditions that do not constitute ''railroad operations,'' such as loading/unloading rolling stock by non-railroad employees off railroad property.

The American Railroad Association (ARA) said OSHA should allow the FRA to exercise authority over rolling stock for two reasons. First, they said rolling stock presents ''special concerns, such as clearance issues in rail tunnels and the unique configuration of rolling stock.'' Second, they said FRA, not OSHA, has ''expertise to determine when regulations [on rolling stock] are necessary and the content of those regulations'' (Ex. OSHA–S029–2006–0662–0202). OSHA believes it also has the expertise to address fall hazards on rolling stock. That said, ''[i]n the past, FRA and OSHA have closely coordinated their mutual efforts to improve workplace safety in the rail industry'' and OSHA ''is committed to continuing working cooperatively'' with FRA to maintain and further develop its expertise in rail industry safety (Ex. OSHA–S029–2006–0662–0232).

With regard to commercial motor vehicles, stakeholders asserted that, under Section 4(b)(1), the Motor Carrier Safety Act (MCSA) preempts OSHA from regulating commercial motor vehicles (Exs. 124; 187; 326). The MCSA defines ''commercial motor vehicle'' as a self-propelled or towed vehicle used on the highways in interstate commerce to transport passengers or property, if the vehicle:

- Has a gross vehicle weight rating or gross vehicle weight of at least 10,001 pounds, whichever is greater;
- Is designed or used to transport more than 8 passengers (including the driver) for compensation;
- Is designed or used to transport more than 15 passengers, including the driver, and is not used to transport passengers for compensation; or
- Is used in transporting material found by the Secretary of Transportation to be hazardous under section 5103 of this title and transported in a quantity requiring placarding under regulations prescribed by the Secretary under section 5103 (49 U.S.C. 31132).

However, as interpreted by the courts and the Occupational Safety and Health Review Commission, section 4(b)(1) does not create an industry-wide exemption. Rather, it preempts OSHA regulation of a particular workplace hazard addressed by the regulation of another agency. Thus, an OSHA standard is preempted by the MCSA only to the extent that the FMCSA has adopted a regulation for commercial motor vehicles addressing the hazard. For example, FMCSA addresses fall hazards for certain commercial motor vehicles in 49 CFR part 399. Since the Agency did not propose any specific fall protection requirements for rolling stock or motor vehicles, OSHA has not included any in this final rule. However, it will continue to consider the comments it has received, and in the future the Agency may determine whether it is appropriate to pursue any action on this issue.

Construction vs. Maintenance. Some stakeholders expressed concerns that OSHA does not clearly delineate what activities are maintenance that the proposed general industry rule covers and what are construction that fall under OSHA's construction standards (Exs. 124; 150; 196; 202). For example, SBA Advocacy said participants in their small business roundtable were ''confused about which standard applies under what circumstances'':

> Participants noted that two employees could be working side by side on similar tasks, but one could be covered by the general industry standard and the other by the construction standard. Representatives expressing these concerns included residential construction and remodeling, painting, heating and air conditioning, chimney sweeping, and others (Ex. 124).

In 1994, OSHA clarified the definitions of maintenance v. construction activities:

> OSHA's regulations define construction work as ''construction, alteration, and/or repair, including painting and decorating.'' They further provide that OSHA's construction industry standards apply ''to every employment and place of employment of every employee engaged in construction work.'' . . . In order for work to be construction work, the employer need not itself be a construction company. . . . Further, construction work is not limited to new construction. It includes the repair of existing facilities. The replacement of structures and their components is also considered construction. . . .
>
> There is no specified definition for ''maintenance,'' nor is there a clear distinction between terms such as ''maintenance,'' ''repair,'' or ''refurbishment.'' ''Maintenance activities'' can be defined by OSHA as making or keeping a structure, fixture or foundation (substrates) in proper condition in a routine, scheduled, or anticipated fashion. This definition implies ''keeping equipment working in its existing state, *i.e.,* preventing its failure or decline.'' . . . [D]eterminations of whether [an employer] is engaged in maintenance operations rather than construction activities must be made on a case-by-case basis (Memorandum for Regional Administrators (8/11/1994)).[7]

In subsequent letters of interpretation, OSHA identified factors the Agency considers in determining whether the activity is maintenance or construction and applied them to specific examples (Letter to Randall Tindell (2/1/1999); [8] Letter to J. Nigel Ellis (5/11/1999)); [9] Letter to Raymond Knobbs (11/18/2003) [10]). Those factors include:

- Nature of the work. Equipment reinstalled or replaced with identical equipment is generally maintenance.

[6] Section 4(b)(1) specifies: Nothing in this chapter shall apply to working conditions of employers with respect to which other Federal agencies . . . exercise statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health (29 U.S.C. 653(b)(1)).

Replacement with improved equipment is construction;

• Whether the work is scheduled. Activity that is an anticipated, routine, and periodic event to keep equipment from degrading and maintain it in its existing state is suggestive of maintenance. As long as the activity continues to be a scheduled activity, the passage of time between the activity, even 10 to 20 years, normally does not alter the characterization of the activity as maintenance;

• The scale and complexity of the activity; which also takes into consideration the amount of time and material required to complete it. Although a project may not necessarily be large in terms of scale, a complex activity in terms of steps involved and tools and equipment needed to complete is likely to be construction; and

• The physical size of the object being worked on. Physical size can be a factor if, because of its size, the process of removal and replacement involves significantly altering the structure or equipment that the object is in. Significant alterations of the structure or equipment will likely be construction.

OSHA believes these factors and examples outlined in the letters of interpretation provide useful guidance to help employers determine whether a particular activity is maintenance or construction. If there is an instance where an employer may not be able to easily classify an activity as maintenance or construction, when measured against the above factors, following the more protective standard will ensure compliance.

In any event, since one of the primary goals of this rulemaking is to harmonize the general industry and construction walking-working surface standards, OSHA believes the distinction between maintenance and construction is of much less significance. As discussed in the introduction to the Summary and Explanation (Section IV), in updating and revising the walking-working surface standards in subpart D and adding new personal fall protection requirements to subpart I, OSHA made requirements consistent with construction standards, where possible. For example, in final §§ 1910.28 and 1910.140, OSHA adopts the flexible approach to providing fall protection systems that the construction standard codified in 1994. Thus, whether performing general industry or construction operations, employers may provide personal fall protection systems to protect their workers. OSHA notes that in the discussion of provisions in subparts D and I the Agency identifies the corresponding construction standards the final rule incorporates. As a result, OSHA believes that in most cases employers will be able to use the same controls, particularly fall protection systems, and follow the same work practices regardless of whether they are performing general industry or construction activities.

Paragraph (b)—Definitions

Final paragraph (b) defines terms that are applicable to all sections of final subpart D. For the most part, OSHA drew the final definitions from the existing rule (existing § 1910.21(a) through (g)), other OSHA standards (*e.g.,* 29 CFR 1926.450, 1926.500, 1926.1050), and national consensus standards. For example, the Agency adopted several definitions from the construction fall protection standard (§ 1926.500(b)) and revised the language of other definitions to make them consistent with definitions in OSHA construction standards. The Agency also drew a number of definitions from the following national consensus standards, all of which have been revised and updated or issued since OSHA adopted existing § 1910.21(b) in 1971:

• American National Standard Institute (ANSI) A14.1–2007, American National Standard for Safety Requirements for Portable Wood Ladders (ANSI A14.1–2007) (Ex. 376);

• American National Standard Institute (ANSI) A14.2–2007, American National Standard for Safety Requirements for Portable Metal Ladders (ANSI A14.2–2007) (Ex. 377);

• American National Standard Institute (ANSI) A14.3–2008, American National Standard for Ladders—Fixed—Safety Requirements (ANSI A14.3–2008) (Ex. 378);

• American National Standard Institute (ANSI) A14.5–2007, American National Standard for Safety Requirements for Portable Reinforced Plastic Ladders (ANSI A14.5–2007) (Ex. 391);

• American National Standard Institute (ANSI) A14.7–2011, Safety Requirements for Mobile Ladder Stands and Mobile Ladder Stand Platforms (ANSI A14.7–2011) (Ex. 379);

• American National Standard Institute/American Society of Safety Engineers (ANSI/ASSE) A10.18–2012, Safety Requirements for Temporary Roof and Floor Holes, Wall Openings, Stairways, and Other Unprotected Edges in Construction and Demolition Operations (ANSI/ASSE A10.18–2012) (Ex. 388);

• American National Standard Institute/American Society of Safety Engineers (ANSI/ASSE) A10.32–2012, Fall Protection Systems—American National Standard for Construction and Demolition Operations (Ex. 390);

• American National Standard Institute/American Society of Safety Engineers (ANSI/ASSE) A1264.1–2007, Safety Requirements for Workplace Walking/Working Surfaces and Their Access; Workplace, Floor, Wall and Roof Openings; Stairs and Guardrail Systems (ANSI/ASSE A1264.1–2007) (Ex. 13);

• American National Standard Institute/American Society of Safety Engineers (ANSI/ASSE) Z359.0–2012, Definitions and Nomenclature Used for Fall Protection and Fall Arrest (ANSI/ASSE Z359.0–2012) (Ex. 389);

• American National Standard Institute/International Window Cleaning Association (ANSI/IWCA) I–14.1–2001, Window Cleaning Safety (ANSI/IWCA I–14.1–2001) (Ex. 14);

• American National Standard Institute (ANSI) MH30.2–2005, Portable Dock Leveling Devices: Safety, Performance and Testing (ANSI MH30.2–2005) (Ex. 20);

• National Fire Protection Association (NFPA) 101–2012, Life Safety Code (NFPA 101–2012) (Ex. 385); and

• International Code Council (ICC) International Building Code–2012 (IBC–2012) (Ex. 386).

Final paragraph (b) differs from the existing and proposed rules in several respects. First, the final rule eliminates a number of terms the regulatory text no longer uses. The final rule does not retain the proposed definitions for the following terms because OSHA did not use these terms in final subpart D: ''qualified climber,'' ''safety factor,'' and ''single-point adjustable suspension scaffold.''

Second, in addition to the definitions in the proposed rule, final paragraph (b) adds a number of new definitions, including ''anchorage,'' ''dangerous equipment,'' ''low-slope roof,'' ''personal fall arrest system,'' ''personal fall protection system,'' ''positioning system (work-positioning system),'' ''stairway (stairs),'' ''travel restraint system,'' and ''warning line.'' Most of the definitions are commonly used terms that pertain to new control methods that the final rule allows employers to use to protect workers from falling. For example, several definitions relate to personal fall protection systems, which the final rule allows employers to use instead of guardrails, cages, and wells specified by the existing rule.

Third, final paragraph (b) revises existing definitions to make them consistent with OSHA's construction standards (*e.g.,* §§ 1926.450, 1926.500, 1926.1050). OSHA is aware that many employers and workers perform both general industry and construction activities, and the Agency believes that making the standards, including terminology, consistent will help those employers better understand and fully comply with the final rule.

Fourth, final paragraph (b), like the proposed rule, reorganizes the terms and definitions and clarifies that they are applicable to every section of subpart D. By contrast, the existing rule in § 1910.21 lists the terms and definitions for each section of subpart D separately. Consequently, because the existing rule uses some terms in more than one section of subpart D, it defines those terms multiple times. Final paragraph (b) eliminates this unnecessary repetition, thereby making the final rule easier to understand.

Fifth, and finally, in revising final paragraph (b), OSHA used plain and performance-based language. The Agency believes these types of revisions make the terms and definitions easy for employers and workers to understand, and clarifies several issues raised by stakeholders (discussed below).

The following paragraphs discuss the terms and definitions included in final paragraph (b).

Alternating tread-type stair. The final rule, similar to the proposal, defines this term as a type of stairway that consists of a series of treads usually attached to a center support in an alternating manner, such that a worker typically does not have both feet on the same level while using the stairway. The limited width of the treads makes it difficult or impossible for workers to place both feet on a single tread. OSHA does not consider alternating tread-type stairs to be ''standard stairs'' as defined in final § 1910.21(b).

The existing rule did not specifically address or define alternating tread-type stairs. The definition in the final rule is consistent with ANSI/ASSE A1264.1–2007. OSHA received no comments on the proposed definition and adopts it as discussed.

Anchorage. This is a new term added to the final rule. An anchorage is defined as a secure point of attachment for equipment such as lifelines, lanyards, deceleration devices and rope descent systems. Anchorages can also be a component of a fall protection system. An anchorage may be installed to serve such purpose or may be a fixed structural member such as a post, beam, girder, column, floor, or wall that is an integral part of a structure. An anchorage must be capable of safely supporting the impact forces applied by a fall protection system.

OSHA drew the term and definition for ''anchorage'' from the § 1910.140, Personal fall protection systems. The definition is consistent with the construction fall protection (§ 1926.500(b)), the general industry powered platforms (§§ 1910.66, appendix C, Section I(b)), and the shipyard-employment fall protection standards (§ 1915.151(b)). It also is consistent with the ''anchorage'' definition in ANSI/ASSE A10.32–2012 (Section 2.4) and ANSI/ASSE Z359.0–2012 (Section 2.5). See § 1910.140 for additional information and discussion of stakeholder comments on the definition of ''anchorage.''

Authorized. This final term, like the proposal, refers to a worker who the employer assigns to perform a specific type of duty, or be in a specific location or area in the workplace. The work that authorized employees perform and the work locations where they work often involve situations or conditions where fall hazards are present, such as the working side of teeming or slaughtering platforms, and open/unguarded repair pits.

OSHA notes that once the employer assigns an authorized employee to perform certain work tasks or to be in a certain location, the worker may continue to perform those tasks or be in such work locations without further approval. OSHA did not receive any comments on the proposed definition and adopts it as discussed.

Cage. This term in the final rule, like the proposal, means an enclosure mounted on the side rails of a fixed ladder or fastened to a structure behind the fixed ladder. The final definition also specifies that a cage surrounds the climbing space of the ladder. This will contain the worker and direct a falling worker to a lower landing. A cage may also be called a ''cage guard'' or ''basket guard.''

This definition is essentially the same as the definition for ''cage'' found in existing § 1910.21(e)(11); it also is consistent with ANSI A14.3–2008, American National Standard for Ladders—Fixed—Safety Requirements. OSHA did not receive any comments on the proposed definition and adopts it with only minor revisions for clarity.

Carrier. Final paragraph (b), similar to the proposed rule, defines a carrier as the track of a ladder safety system that consists of a flexible cable or rigid rail attached to the fixed ladder or immediately adjacent to it. The final definition is consistent with ANSI A14.3–2008 (Section 3). The final rule clarifies that fixed ladders may have carriers mounted to them, usually onto the ladder face or immediately adjacent to the ladder. OSHA received no comments on the proposed definition and adopts it with the clarifications discussed.

Combination ladder. Final paragraph (b), like the proposed rule, defines a combination ladder as a portable ladder that an employer can use as a stepladder, extension ladder, trestle ladder, or a stairway ladder. The final definition also specifies that employers may use the components of a combination ladder separately as a single ladder.

The final definition is consistent with ANSI A14.1–2007, ANSI A14.2–2007, and ANSI A14.5–2007. OSHA did not receive any comments on the proposed definition and adopts it with only minor revisions for clarity.

Dangerous equipment. The final rule adds this term and defines it as equipment, such as vats, tanks, electrical equipment, machinery, equipment or machinery with protruding parts, or other similar units that, because of their function or form, may harm an employee who falls into or onto it.

This new definition was added in response to a recommendation from Northrop Grumman Shipbuilding that OSHA define ''dangerous equipment'' in the final rule (Ex. 180). OSHA drew the new definition from the construction fall protection standard (§ 1926.500(b)).

Designated area. This term means a distinct portion of a walking-working surface delineated by a warning line in which work may be performed without additional fall protection. Examples of additional fall protection include guardrails, safety nets, and personal fall protection systems. As mentioned in the proposed rule and in the discussion of final § 1910.28(b)(13), a designated area is a non-conventional fall protection method.

The final rule allows employers to use designated areas for work on low-slope roofs (final § 1910.28(b)(13)). The concept of a designated area in the final rule is similar to controlled access zones and warning line systems in OSHA's construction fall protection standards (§§ 1926.500(b) and 1916.502(g) and (h)), which also do not require the use of conventional fall protection in specified situations.

The final definition differs from the proposal in that the proposed definition included the term ''temporary'' work, while the final does not. OSHA continues to believe that employers need to limit use of designated areas to short and brief tasks, such as equipment repair or annual maintenance, that workers perform on infrequent occasions; *i.e.,* employers are not to use designated areas for lengthy or routine jobs that involve frequent exposure to fall hazards. However, including ''temporary'' in the definition is unnecessary because final § 1910.28(b)(13)(ii) already limits the use of designated areas to work that is both temporary and infrequent. OSHA did not receive any comments on the proposed definition and adopts it as discussed.

Dockboard. In the final rule, dockboard means a portable or fixed device that spans a gap or compensates for the difference in elevation between a loading platform and a transport vehicle. The definition also specifies that dockboards include, but are not limited to, bridge plates, dock plates, and dock levelers. Examples of transport vehicles include motor vehicles, trucks, trailers, rail cars, and other vehicles.

The final rule uses the term ''transport vehicle'' in place of the proposed term ''carrier.'' OSHA believes ''transport vehicle'' is clear and familiar to employers as it is a commonly used term for a cargo-carrying vehicle. The Agency drew the term from ANSI MH30.2–2005.

The final rule adds examples of devices that OSHA includes within the definition of dockboards, including bridge plates, dock plates, and dock levelers. The Agency believes that providing these examples will help employers and workers better understand whether devices manufactured under other names are ''dockboards.'' OSHA notes that the list of dockboard examples is not exhaustive. That is, any device that employers use to span a gap or compensate for the difference in levels between a loading platform and transport vehicle is a dockboard for the purposes of final subpart D.

OSHA did not receive any comments on the proposed definition and adopts the definition with the changes discussed above.

Equivalent. In the final rule, this term means alternative designs, equipment, materials, or methods that the employer can demonstrate will provide an equal or greater degree of safety for workers compared to the designs, equipment, materials, or methods specified in this subpart.

OSHA proposed revising the definition of ''equivalent'' in existing § 1910.23(g)(6) to incorporate language from the construction standards for fall protection, stairways, and ladders standards (§§ 1926.450(b); 1926.500(b); and 1926.1050(b)). These standards specify that the employer has the burden to demonstrate that the alternate designs, materials, methods, or items will provide an equal or greater degree of safety for workers than the designs, materials, methods, or items the final rule specifies or requires. OSHA did not receive any comments on the proposed definition and finalizes the term so it is consistent with OSHA construction standards.

Extension ladder. Final paragraph (b), like the proposed rule, defines this term as a portable ladder that is non-self-supporting and is adjustable in length. The final rule consolidates into one term, and simplifies the language in, the definitions in existing § 1910.23(c)(4) and (d)(4); this existing provision states that an extension ladder ''consists of one or more sections traveling in guides or brackets so arranged as to permit length adjustment.'' OSHA believes that the concise, plain language in the final definition will enhance understanding of requirements involving extension ladders; moving the specifications currently in the existing standards to final § 1910.23 also should improve understanding of these requirements.

The final definition generally is consistent with ANSI A14.1–2007, ANSI A14.2–2007, and ANSI A14.5–2007. OSHA did not receive any comments on the proposed definition and adopts it as proposed.

Failure. Final paragraph (b), similar to the proposed rule and construction standards (§§ 1926.450(b); 1926.500(b); and 1926.1050(b)), defines ''failure'' as a load refusal, breakage, or separation of component parts. The final definition explains that a ''load refusal'' is the point at which the ultimate strength of a component or object is exceeded. To illustrate, if the load exceeds the ultimate strength of a walking-working surface, such as an elevated work platform, the platform likely will collapse.

For the purpose of this definition, load refusal includes permanent deformation of a component part, which is consistent with ANSI/ASSE A1264.1–2007 (Section 2.3). For example, elongation of a connector that causes the connector to lose its strength is the type of permanent deformation OSHA intends the final definition to cover. Similarly, damage to a guardrail system that weakens the bolts or other fasteners so the system cannot support a worker's weight is the type of permanent deformation the final definition intends to covers.

OSHA did not receive any comments on the proposed term and definition and adopts the definition with minor editorial changes for clarity.

Fall hazard. This term, in the final rule, means any condition on a walking-working surface that exposes a worker to a risk of harm from a fall on the same level or to a lower level. The final definition is almost identical to the proposal; however, the final rule uses ''risk of harm'' in place of ''injury.'' It is clear from the Analysis of Risk (Section II) section and the Final Economic Analysis (FEA) (Section V) that worker exposure to fall hazards can result in death as well as injury. OSHA believes the language in the final definition more accurately and fully captures the range of adverse outcomes that can result from falls.

In response to the proposal, OSHA received one comment from Mr. David Hoberg of DBM Corporations, recommending that OSHA add a specific height to the definition of fall hazard (Ex. 206). He said that a specific height is needed for enforcement purposes. OSHA disagrees. The risk of a fall or other harm exists at any height, including on the same level. That said, OSHA has established specific heights that trigger fall protection requirements in final § 1910.28. The final definition is adopted as proposed.

Fall protection. The final rule, like the proposed rule, defines ''fall protection'' as any equipment, device, or system that prevents a worker from falling from an elevation or that mitigates the effect of such a fall. For the purposes of the final rule, ''mitigates the effect'' means that the fall protection prevents the worker from coming into contact with a lower level if a fall occurs. As noted in the preamble to the proposed standard, examples of fall protection include guardrail systems, safety net systems, ladder safety systems, personal fall arrest systems, and similar fall protection systems. OSHA did not receive any comments on the proposed definition and adopts it with minor revisions for clarity.

Fixed ladder. The final definition of fixed ladder, which is generally consistent with existing § 1910.21(e)(2) and the proposed rule, means a ladder with rails or individual rungs that is permanently attached to a structure, building, or equipment. The definition also states that fixed ladders include individual-rung ladders, but do not include ship stairs, step bolts, or manhole steps.

The final definition differs from the existing and proposed rules by clarifying what OSHA does not consider to be fixed ladders. Accordingly, the final definition specifies that fixed ladders do not include ship stairs (ship ladders), step bolts, and manhole steps. Although these devices share some of the same characteristics of fixed ladders, such as a vertical or steep slope, the final rule clarifies that they are not fixed ladders, and therefore, are covered under separate provisions of the final rule.

While fixed ladders include ladders attached to equipment, OSHA notes ladders that are designed into or are an integral part of machines or equipment are excluded from coverage by final § 1910.23(a)(2).

The final definition, as revised, is consistent with OSHA's stairways and ladders standard for construction (§ 1926.1050(b)) and ANSI A14.3–2008 (Section 3). OSHA received no comments on the proposed definition and finalizes it with the revisions discussed.

Grab bar. This term means an individual horizontal or vertical handhold installed to provide workers with access above the height of a ladder. The final definition revises the existing and proposed rules in two respects. First, the final definition adds language indicating that employers can use grab bars installed either horizontally or vertically. OSHA received one comment about the orientation of grab bars. Nigel Ellis, of Ellis Fall Safety Solutions, recommended OSHA require employers to use only horizontal grab bars when the length of the bars exceeds six inches because it would be impossible to stop workers' hands from sliding down the vertical grab bar during a fall (Ex. 155). He also cited a University of Michigan study that recommended using only horizontally oriented grab bars (Ex. 155, discussing Young J, *et al.* ''Hand-Handhold Coupling: Effective Handle Shape, Orientation, and Friction on Breakaway Strength,'' 51 Human Factors 705–717 (2009)). OSHA is not adopting Mr. Ellis' recommendations because the customary industry practice, as specified by the ANSI fixed ladder standard (ANSI A–14.3–2008 (Section 5.3.3.1)), is to allow the use of either horizontal or vertical grab bars and not to limit the length of vertical grab bars.

Second, the final definition deletes language in existing § 1910.21(e)(14) and the proposed rule specifying that employers use only grab bars placed adjacent to a ladder or used as an extension of a ladder. The final definition revises this language to ensure that employers use only grab bars installed above the height of the ladder, not adjacent to it. When grab bars are also in a vertical orientation relative to a ladder, they are not an extension of the ladder; therefore, the final definition removed the language from the proposal referring to grab bars as an extension of a ladder.

Guardrail system. In the final rule, similar to the proposal, this term means a barrier erected along an unprotected or exposed side, edge, or other area of a walking-working surface to prevent workers from falling to a lower level. A guardrail system generally consists of vertical, horizontal, or inclined supports; top rails; midrails; screens; mesh or solid panels; intermediate vertical members; or other equivalent structural members. Guardrail systems can be either permanent or removable. The final definition generally is consistent with the scaffold and fall protection standards for construction (§§ 1926.450(b) and 1926.500(b)).

The proposed and final definition simplify the existing definitions in § 1910.21(a)(6) and (g)(7) by consolidating the terms ''guardrail'' and ''standard railing'' into the single term ''guardrail system.'' The existing definitions are similar to, and included within, the final definition. As a result, there is no need to include both terms and definitions in the final rule since the single term ''guardrail system'' adequately covers both terms.

The final rule clarifies the proposed definition by specifying that guardrails are barriers that employers may erect on a side, edge, or other area of a walking-working surface (*e.g.,* hole). The barrier may be a framework or system of individual units used together to provide protection. For example, a guardrail system may consist of several barriers surrounding a hole.

OSHA did not receive any comments on the proposed definition and, therefore, adopts it as explained.

Handrail. The final rule, like the proposed rule and the construction stairways standard (§ 1926.1050(b)), defines a handrail as a rail used to provide workers with a handhold for support. Handrails may be horizontal, vertical, or sloping. According to ANSI/ASSE A1264.1–2007 (Sections 2.6 and 2.7), handrails also may be part of a stair rail or stair rail system (*i.e.,* the top rail).

The proposed and final definition simplify and consolidate into one term the three definitions for ''handrail'' in the existing rule in §§ 1910.21(a)(3), (b)(1), and (g)(8). Specifically, the final definition deletes existing specifications for the materials (*e.g.,* pipe, bar) that employers must use for handrails, which makes the final definition consistent with final § 1910.29, Fall protection systems criteria and practices. The final definition also is consistent with ANSI/ASSE A1264.1–2007 (Section 2.7). OSHA did not receive any comments on the proposed definition and adopts the final definition as proposed.

Hoist area. In the final rule, like the proposal, a hoist area is defined as any elevated access opening to a walking-working surface through which equipment or materials are loaded or received. The final definition deletes the term ''hoisted'' before the phrase ''equipment or material'' in the proposed definition because the definition covers any means of loading, passing, or receiving equipment or materials through the hoist area. OSHA did not receive any comments on the proposed definition and finalizes it with the revisions discussed.

Hole. The final rule, similar to the proposed rule, defines a hole as a gap or open space in a floor, roof, horizontal walking-working surface, or similar surfaces that is at least two inches in its least dimension. Similar surfaces include runways, dockboards, stair treads, and other low-slope or inclined surfaces where employees walk or work. The existing rule contains four different terms for holes and openings in walking-working surfaces: Floor hole (existing § 1910.21(a)(1)), floor opening (existing § 1910.21(a)(2)), wall hole (existing § 1910.21(a)(10)), and wall opening (existing § 1910.21(a)(11)). Each of the terms has a separate definition. ANSI/ASSE A1264.1–2007 contains the same four terms and definitions.

The final definition consolidates and simplifies the existing rule in two respects. First, the final rule designates a ''hole'' as a gap or open space in ''horizontal walking-working surfaces,'' (*e.g.,* floor, roof, similar surfaces) and an ''opening'' as a gap or space in ''vertical walking-working surfaces'' (*e.g.,* wall or partition). The final definition of ''hole'' revises the proposed definition by adding ''horizontal'' and ''similar surfaces'' so employers know holes are not limited to floors or roofs.

Designating the term ''hole'' to refer to gaps in horizontal or similar walking-working surfaces allows OSHA to simplify and consolidate the existing definitions for ''floor hole'' and ''floor opening'' into a single term: ''hole.'' The existing rule in § 1910.21(a)(1) defines a ''floor hole'' as a gap that is more than one inch but less than 12 inches at its least dimension, while existing § 1910.21(a)(2) defines a ''floor opening'' as a gap that is 12 inches or more at its least dimension. Combining the two terms also makes the final definition consistent with the definition in the construction fall protection standard in § 1926.500(b). The final rule, like the proposal, also expands the term ''hole'' to cover gaps in roofs and similar horizontal walking-working surfaces, as well as floors.

Second, consistent with the Plain Writing Act of 2010, the final definition substitutes ''open space'' for ''void'' to make the term easier to understand.

OSHA received one comment on the proposed rule. Mark Damon, of Damon, Inc., questioned the need for a definition of hole in a fall protection standard, asserting that workers could not fall through a two-inch or larger gap (Ex. 251). OSHA disagrees with Mr. Damon's assertion. Although a worker cannot fall through a narrow (2-inch) hole in a walking-working surface, such holes can cause workers to trip and fall on the same level or to a lower level. Such falls can result in worker injury or death. As such, OSHA is retaining the definition with the changes discussed above.

Individual-rung ladder. This is a type of fixed ladder that has rungs individually attached to a building or structure. It does not include manhole steps. The proposed rule also excluded manhole steps.

Although manhole steps have individual rungs, they involve unique conditions, and OSHA addresses these conditions in a separate section of final subpart D (§ 1910.24). Therefore, the final definition excludes manhole steps from the individual-rung ladder definition to prevent any confusion and emphasize that final § 1910.24, not final § 1910.23 applies to manhole steps.

The proposed rule also included ladders consisting of rungs individually attached to a piece of equipment. Because final rule § 1910.23(a)(2) excludes ladders designed into or integral to a piece of equipment, there was no need to include such ladders within the definition of individual rung ladders.

OSHA did not receive any comments on the proposed definition and adopts it with the revisions discussed above.

Ladder. This term means a device with rungs, steps, or cleats used to gain access to a different elevation. The final rule simplifies and consolidates into one definition the three definitions of ''ladder'' in the existing rule in § 1910.21(c)(1), (d)(1), and (e)(1). The final definition also eliminates references to ladder specifications (*e.g.,* ''joined at regular intervals'') since they simply repeat requirements addressed by final § 1910.23.

OSHA received one comment on the proposed ''ladder'' definition. Steve Smith, of Verallia, recommended that OSHA clarify the term because he said that the phrase ''a device with steps'' is ambiguous and could include stairs as well as a ladder (Ex. 171). OSHA does not agree that stakeholders might mistakenly think the term ''ladder'' includes stairs. The proposed and final definitions of ''ladder'' are essentially the same as the one that all of the ANSI A14 ladder standards use: ''Ladder. A device incorporating or employing steps, rungs, or cleats on which a person may step to ascend or descend'' (see, *e.g.,* ANSI A14.1–2007 (Section 4); ANSI A14.2–2007 (Section 4); ANSI A14.3–2008 (Section 3); ANSI A14.5–2007 (Section 4)). The ANSI A14 ladder standards have been in place for years, and OSHA believes employers, workers, and manufacturers clearly understand the term ''ladder,'' as defined in the ANSI standards, and will not confuse the term with stairs. However, to ensure the final rule is understandable, the final rule clarifies the definitions of ''rung, step, or cleat'' and ''tread'' to specify that a ''step'' is a cross-piece of a ladder and ''tread'' refers to the horizontal part of ''stairways (stair).''

Ladder safety system. In the final rule, a ladder safety system is a system designed to eliminate or reduce the possibility of falling from a ladder. The final definition explains that a ladder safety system usually consists of a carrier; a safety sleeve, which is a moving component that travels on the carrier; a lanyard; connectors; and a body harness. The final definition also specifies that cages and wells are not ladder safety systems.

The existing rule in § 1910.21(e)(13) uses a similar term, ''ladder safety device,'' which also excludes ladder cages and wells. OSHA's construction ladder standard in § 1926.1053 uses the same term, but does not include a definition of the term. The final definition is consistent with the ANSI fixed-ladder standard (ANSI A14.3–2008; Section 3).

OSHA received one comment on the definition of ladder safety system. Darryl Hill, of the American Society of Safety Engineers (ASSE), urged OSHA to prohibit the use of body belts in ladder safety systems as the Agency did with personal fall arrest systems:

> ASSE opposes the use of body belts. There are good ''safety reasons'' . . . for supporting OSHA's decision in 1998 to ban the use of body belts as part of a personal fall arrest system. OSHA needs to take this opportunity to ban their use entirely for the same reasons it banned them in 1998. A full body harness distributes arresting forces over larger areas of the workers body and provides better suspension support, as research has repeatedly confirmed (Ex. 127).

OSHA agrees with ASSE that full-body harnesses provide better suspension support precisely because they distribute arresting/impact forces over a larger area of a worker's body than body belts. To that end, the final rule in § 1910.140(d)(3) retains OSHA's 1998 prohibition on the use of body belts as part of a personal fall arrest system. OSHA believes this requirement in final § 1910.140 addresses ASSE's concern and the Agency encourages employers to provide, and require that their workers use body harnesses when using any type of personal fall protection equipment.

Low-slope roof. This is a new term that OSHA added to the final rule. Low-slope roof is defined as a roof with a slope less than or equal to a ratio of 4 in 12. A ratio of 4 in 12 means a vertical rise of 4 units (*e.g.,* inches, feet, meters) to every 12 units of horizontal run. The final definition is almost identical to the definition of ''low-slope roof'' found in the construction fall protection standard in § 1926.500(b).

OSHA added this term to final paragraph (b) because the final rule includes a new provision on controlling fall hazards on low-slope roofs (final § 1910.28(b)(13)), which is consistent with the construction fall protection standard in § 1926.501(b)(10). OSHA is aware that low-slope roofs also are referred to as ''flat roofs.'' However, even a so-called ''flat roof'' has some slope to allow for drainage. As such, OSHA believes that the term ''low-slope roof'' more accurately represents these roofing configurations.

Lower level. The final rule, similar to the proposal, defines this term as a surface or area to which workers could fall. The final definition lists examples of lower levels including, but not limited to, ground levels, floors, roofs, ramps, runways, excavations, pits, tanks, materials, water, equipment, and similar surfaces and structures, or portions thereof. The final rule adds to the proposed definition of lower level ''surface'' and ''structures, or portions thereof,'' which make the final definition consistent with the definition of ''lower level'' in the construction fall protection standard in § 1926.500(b). The construction standards for scaffolds, and stairways and ladders, also have similar definitions (§§ 1926.450(b); 1926.1050(b)). OSHA did not receive any comments on the proposed definition and adopts it with the changes discussed above.

Manhole steps. The final rule, similar to the proposal, defines these as steps that are individually attached to, or set into the walls of a manhole structure. Although the steps are individually set into or attached to the walls, manhole steps are not considered ''individual-rung ladders'' as stated in the final definition of ''fixed ladders.'' Manhole steps also do not include manhole entry ladders which are portable and are covered in final § 1910.23, Ladders.

OSHA did not receive any comments on the proposed definition and adopts it with minor editorial changes.

Maximum intended load. The final rule, similar to the proposal, defines this term as the total load (weight and force) of all employees, equipment, vehicles, tools, materials, and other loads the employer reasonably anticipates to be applied to a walking-working surface at any one time. The existing rule in § 1910.21(f)(19) and the construction standards for scaffolds, and stairways and ladders in §§ 1926.450(b) and 1926.1050(b) have similar definitions.

OSHA clarified the final definition in several ways. First, the proposed rule indicated that ''maximum intended load'' was also known as ''designed working load.'' OSHA is aware that ''designed working load'' is an outdated term; thus, the final definition deletes it. Second, the final definition adds language clarifying that the maximum intended load includes the combined total weight of the load, as well as the force of the load.

Third, the final definition adds ''vehicles'' to the list of potential components of a total load. Vehicles are found on many types of walking-working surfaces, and determinations of the maximum intended load must include the weight of vehicles, and the load being carried by the vehicles, applied to the walking-working surface.

Fourth, the final definition adds language clarifying that employers are responsible for determining the maximum load in terms of all equipment, vehicles, materials, workers, and other items they reasonably anticipate applying to a walking-working surface. Requiring that an employer know the maximum weight and force a walking-working surface can support and the total weight and force of the loads they reasonably anticipate applying to that surface is essential in safeguarding workers from harm, *e.g.,* falls from elevated surfaces and being struck by falling objects. OSHA believes the language added to the final definition clarifies the employers' responsibility.

Fifth and finally, the final definition adds the language ''at any time'' to make the definition consistent with other OSHA standards (*e.g.,* existing §§ 1910.21(f)(19); 1926.450(b); 1926.1050(b)).

OSHA did not receive any comments on the proposed definition and adopts it with the revisions discussed above.

Mobile. The final rule, like the proposed rule, defines ''mobile'' as being manually propelled or movable. The existing rule defines ''mobile'' as manually propelled (existing § 1910.21(g)(12)). The proposed and final definitions update the existing rule to make it consistent with ANSI A14.7–2011 (Section 3), which specifies that ''mobile'' also means ''moveable.'' OSHA believes that the final definition also clarifies the definitions of ''mobile ladder stand'' and ''mobile ladder stand platform.''

In the proposal, OSHA asked for comment on whether it is necessary to define a common term like ''mobile,'' but the Agency did not receive any comments. Therefore, OSHA adopts the proposed definition with one editorial clarification (replacing ''and/or'' with ''or'').

Mobile ladder stand. This term (also known as ''ladder stand'') means a mobile, fixed-height, self-supporting ladder usually consisting of wheels or casters on a rigid base and steps that leads to a top step. The final definition explains that a mobile ladder stand also may have handrails and is designed for use by one worker at a time. A parenthetical in the definition refers to ''ladder stand'' as another name for mobile ladder stands; ''ladder stand'' is the term used for mobile ladder stands in existing §§ 1910.21(g)(9), 1926.450(b), and 1926.1050(b), and ANSI A14.7–2011 (Section 3).

The final definition clarifies the proposed rule and OSHA's existing definition for ladder stand in several ways. First, the final definition adds language clarifying that mobile ladder stands usually consist of wheels or casters on a rigid base, in addition to steps. This addition clearly distinguishes ladder stands from other types of ladders. Second, the final rule simplifies and clarifies the definition by using the term ''steps'' in place of ''treads in the form of steps,'' which is in the existing and proposed definitions. The term ''step,'' which final paragraph (b) also defines, is clear and well understood, and does not require further elaboration.

Third, the final definition deletes the proposed term ''flat'' used to describe ladder stand steps because it is not necessary. Final § 1910.23 establishes requirements for ladder stand steps (final §§ 1910.23(b)(1) and (b)(4)). OSHA did not receive any comments on the proposed definition and adopts it with the clarifications discussed above.

Mobile ladder stand platform. The final rule defines this term as a mobile, fixed-height, self-supporting unit having one or more standing platforms that are provided with means of access or egress. Existing OSHA standards do not include or define the term ''mobile ladder stand platforms.'' [11] Frequently employers use mobile ladder stand platforms to provide elevated standing or working surfaces for one or more employees.

The final definition is consistent with ANSI A14.7–2011, although the ANSI standard, like the proposed rule, includes the definition of mobile ladder stand. OSHA did not receive any comments on the proposed definition and finalizes the definition with minor clarifications.

Open riser. The final rule, which is similar to existing § 1910.21(b)(3) and the proposed rule, defines ''open riser'' as a gap or space between treads of stairways that do not have upright (vertical) or inclined members (risers).

OSHA clarified the proposed definition slightly by adding terminology to the final definition that it used in the final definition of ''riser.'' This terminology specifies that, in addition to not having upright (vertical) members, stairways with open risers do not have inclined members. This revision makes the final definition consistent with ANSI/ASSE A1264.1–2007 (Section 2.11).

OSHA did not receive any comments on the proposed definition and adopts it with the clarifications discussed above.

Opening. The final rule, similar to the proposed rule, defines this term as a gap or open space in a wall, partition, vertical walking-working surface, or similar surface that is at least 30 inches high and at least 18 inches wide, through which a worker can fall to a lower level.

As discussed in the definition of ''hole,'' the final rule simplifies and consolidates four terms in the existing rule that distinguish between openings and holes in walking-working surfaces. As mentioned, the term ''opening'' in the final rule refers to gaps or open spaces in areas that are generally vertical, such as walls and partitions. The final definition consolidates into one term the definitions of ''wall hole'' and ''wall opening'' in existing § 1910.21(a)(10) and (a)(11). This consolidation makes the final definition of ''opening'' consistent with the construction fall protection standard

[11] OSHA notes that the existing general industry rule includes the terms ''platform ladder'' and ''mobile work platform.'' Existing § 1910.21(d)(5) defines ''platform ladder'' as a ''self-supporting ladder of fixed steps with a platform provided at the working level.'' Existing § 1910.21(g)(13) defines ''mobile work platform'' as ''a fixed work level one frame high on casters or wheels, with bracing diagonally from platform to vertical frame.'' Both terms include elements of the final definition of ''mobile ladder stand platform.'' In the proposed rule, OSHA consolidated and simplified existing terms into one term: Mobile ladder stand platform.

(§ 1926.500(b)), one of OSHA's stated goals of the final rule. OSHA believes that having consistent general industry and construction definitions will facilitate compliance with the final rule. The final definition also is nearly identical to the definition of ''opening'' in ANSI/ASSE A10.18–2012 (Section 2.9).

Consistent with the Plain Writing Act of 2010, the final definition substitutes ''open space'' for ''void'' to make the term easier to understand.

OSHA did not receive any comments on the proposed definition and adopts the term as discussed above.

Personal fall arrest system. This is a new term OSHA added to subpart D in the final rule and means a system used to arrest a worker's fall from a walking-working surface if one occurs. The final definition explains that a personal fall arrest system consists of a body harness,[12] anchorage, connector, and a means of connecting the body harness and anchorage, such as a lanyard, deceleration device, lifeline, or a suitable combination of these. A definition for personal fall arrest systems was provided in proposed subpart I in § 1910.140 (75 FR 29147). Because the term is used in final subpart D, and OSHA believes the term is integral to understanding the final rule, the Agency decided to include the same definition in subpart D.

The final definition is consistent with OSHA's construction standards for scaffolds and fall protection in §§ 1926.450(b) and 1926.500(b), respectively, and ANSI/ASSE Z359.0–2012 (Section 2.98). See the preamble to final § 1910.140 for further discussion and comments on personal fall arrest systems.

Personal fall protection system. This is a new term OSHA added to subpart D in the final rule and means a system (including all components) an employer uses to provide protection from falling or to safely arrest a worker's fall if one occurs. The final definition identifies examples of personal fall protection systems, including personal fall arrest systems, travel restraint systems, and positioning systems.

Personal fall protection systems have the following components in common: An anchorage, body support (*i.e.,* body harness or body belt), and connectors (*i.e.,* means of connecting the anchorage and body support).

A definition for personal fall protection systems was provided in the proposed rule, in proposed § 1910.140 (75 FR 29147). Because the term is used in final subpart D, and OSHA believes the term is integral to understanding the final rule, the Agency decided to include the same definition in subpart D. The requirements for, and comments on, personal fall protection systems are in final § 1910.140, Personal fall protection systems.

Platform. In the final rule, like the proposal, a platform is defined as a walking-working surface that is elevated above the surrounding area. OSHA drew the proposed and final definitions from existing § 1910.21(a)(4) and the construction scaffold standard in § 1926.450(b). The final rule is consistent with the definition in ANSI/ASSE A1264.1–2007.1–2007 (Section 2.14).

OSHA did not receive any comments on the proposed definition and adopts it as proposed with a minor editorial revision.

Portable ladder. The final rule, like the proposal, defines this term as a ladder that can readily be moved or carried, and usually consists of side rails joined at intervals by steps, rungs, or cleats. The definition in the final rule is consistent with the definition of portable ladder in ANSI A14.1–2007 (Section 4), ANSI A14.2–2007 (Section 4), and ANSI A14.5–2007 (Section 4).

The final rule clarifies the definition by deleting the language ''rear braces'' from the proposed definition to eliminate any confusion about what constitutes a portable ladder for the purposes of the final rule. Rear braces are a structural component of self-supporting portable ladders; however, as mentioned above, the final definition of portable ladder is not limited to those types of ladders.

OSHA notes that portable ladders include, but are not limited to, self-supporting, non-self-supporting, articulated, sectional, extension, special purpose, and orchard ladders. OSHA believes that the term portable ladders should be widely understood by employers.

OSHA received one comment on the proposed definition. Virginia Ruiz, representing California Rural Legal Assistance Foundation and Farmworker Justice, urged OSHA to cover agriculture operations in the final rule (Ex. 201). In her comment, Ms. Ruiz pointed out that proposed revisions to the California general industry portable-ladder standards (Title 8 CCR, Sections 3276, 3277, 3278, 3287, and 3413) cover special-purpose orchard and fruitpickers' ladders (Ex. 201). For further discussion on the inclusion of agriculture operations in subpart D, see the discussion above in final paragraph (a), Scope.

Positioning system (work-positioning system). This is a new definition OSHA added to subpart D in the final rule. It means a system of equipment and connectors that, when used with a body harness or body belt, allows an employee to be supported on an elevated vertical surface, such as a wall or window sill, and work with both hands free. Positioning systems also are called ''positioning system devices'' and ''work-positioning equipment.''

The definition is the same as the definition in § 1910.140(b). The newly revised electric power generation, transmission, and distribution standard in § 1910.269, and the construction standard for fall protection in § 1926.500(b), also contain similar terms and definitions. The final definition also is consistent with ANSI/ASSE Z359.0–2012 (Section 2.120).

Although the proposed rule for subpart D used the term work-positioning system, the proposal did not define it. The Agency believes it is important to define positioning systems in final subpart D to ensure that employers and workers understand the meaning of this term as used in this subpart, most importantly that such systems do not arrest falls from elevated walking-working surfaces.

Qualified. In the final rule, like in the proposal, ''qualified'' describes a person who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience has successfully demonstrated the ability to solve or resolve problems relating to the subject matter, the work, or the project. This definition is the same as the definition in the proposed rule and final § 1910.140(b), as well as several construction standards (§§ 1926.32(m); 1926.450(b)) and ANSI A10.32–2012 (Section 2.41).

The final definition, however, differs from the definition of ''qualified person'' in the general industry powered platforms standard (§ 1910.66, Appendix C, Section I(b)) and ANSI/ASSE Z359.0–2012. The § 1910.66 definition, for instance, requires that qualified persons have a degree or professional certificate, not only professional standing, plus extensive knowledge, training, and experience. OSHA explained in the proposed rule that to require qualified persons to meet the definition in the powered platforms standard would mean that the qualified person ''would most likely need to be an engineer'' (75 FR 28905).

Two stakeholders recommended that the Agency adopt the definition in

---

[12] OSHA notes the final rule prohibits the use a body belt as part of a personal fall arrest system (final § 1910.140(d)(3)).

§ 1910.66 (Exs. 155; 206). Mr. Ellis urged OSHA to adopt the § 1910.66 definition at least as it pertains to certification of anchorages. He also said:

> After investing 40 years in industrial fall protection it is important to feed back my experiences from hundreds of site visits and contacts over that time. I am strongly recommending that the word ''or'' be replaced with ''and''. Both are critically important and the anchorage must be documented with at least a sketch or engineering drawing which presently it rarely is except for 1910.66 App. C. In America, anchorages are mostly guesswork and this does not do justice to ''the personal fall arrest system'' term that OSHA is seeking to establish unless the engineering background is added. Furthermore the design of anchorages can easily be incorporated into architects and engineers drawings but is presently not because there is no requirement for an engineer. This simple change may result in saving over one half the lives lost from falls in the USA in my opinion (Ex. 155).

Mr. Hoberg, of DBM, Inc., said that defining qualified ''has been a struggle for decades'' and that the § 1910.66 definition ''is a good one'':

> Two things have become commonly accepted—a competent person is one who has enough experience and knowledge to know when to call a qualified person. A qualified person is one who knows the technical and working practice aspects of the problem.
>
> The problem we have had was how to limit the 'I know, therefore I am a qualified person' (Ex. 206).

The final rule does not adopt the definition of ''qualified person'' in § 1910.66 appendix C. The definition of ''qualified'' in the final rule has been in use for years in the referenced construction standards. OSHA believes the definition is clear and employers understand it. In addition, OSHA believes that employers understand and can distinguish between qualified and competent persons.

With regard to the certification of anchorages, OSHA believes that the anchorage requirements in final §§ 1910.27 and 1910.140, combined with the final definition of ''qualified'' person, are adequate to ensure worker safety. OSHA notes that building owners are free to have their building anchorages certified by professional engineers. Therefore, OSHA finalizes the definition of ''qualified'' as proposed.

Ramp. The final rule defines ramp as an inclined walking-working surface that is used to gain access to another level. Employers use ramps to move workers, equipment, materials, supplies, and vehicles from one level to another. Ramps also allow workers to access another level when stairs are not available or workers cannot use them (such as for workers who use wheelchairs). Ramps generally are permanent devices or structures, although some ramps may be portable, such as ramps that employers use temporarily for accessing a different level where moving equipment or materials up or down stair risers or curbs is impractical.

The proposed rule, similar to the 1990 proposal, defines ramp as an inclined surface between different elevations that is used for the passage of employees, vehicles, or both. The final rule revises the proposed definition for two reasons. First, the proposed definition only refers to the passage of employees and vehicles, but not other things that may be moved across ramps, such as materials, supplies, and equipment. The final definition does not limit the use of ramps as passageways. Second, the final rule simplifies the proposed definition to make it consistent with the definition in ANSI/ASSE A1264.1–2007 (Section 2.16).

OSHA did not receive any comments on the proposed definition and adopts it as discussed above.

Riser. In the final rule, this term means an upright (vertical) or inclined member of a stair located at the back of a stair tread or platform that connects close to the front edge of the next higher tread, platform, or landing. The final definition is consistent with ANSI/ASSE A1264.1–2007 (Section 2.17).

The final rule differs from the proposed definition in that the final definition clarifies that risers may also be inclined (nearly vertical), as well as vertical, members of a stair, and connect treads to the next higher tread, platform or landing. The height of a riser is measured as the vertical distance from the tread (horizontal surface) of one step to the top of the leading edge of the tread above it (see Figure D–8.). OSHA did not receive any comments on the proposed definition and adopts it with the clarification discussed above.

Rope descent system. In the final rule, a rope descent system (RDS) is defined as a suspension system that allows a worker to descend in a controlled manner and, as needed, to stop at any time during the descent. The final definition adds language to the proposed definition explaining that the RDS usually consists of a roof anchorage, support rope, a descent device, carabiner(s) or shackle(s), and a chair (seatboard). The final definition also states that an RDS may also be called controlled descent equipment or apparatus; and does not include industrial rope access systems. OSHA based the final definition of ''rope descent system'' on the definition of the term in ANSI/IWCA I–14.1–2001, since the existing rule does not include the term.

OSHA revised the final definition in several ways. First, the ANSI/ASSE Z359.0–2012 (Sections 2.13 and 2.100) defines both ''automatic descent control device'' and ''manual descent control device.'' However, neither definition encompasses the entire system. The Agency's final definition, like ANSI/IWCA I–14.1–2001, covers the entire system, not just the descent control device. In light of the ANSI/ASSE Z359.0–2012 definitions, OSHA believes that stating, as in the proposal, that another name for an RDS is ''controlled descent device'' may be confusing. Therefore, OSHA removed that statement in the final definition. To further clarify the final definition and distinguish it from the terms in ANSI/ASSE Z359.0–2012, OSHA added language identifying components of a typical RDS.

Second, OSHA added language to the final rule specifically excluding industrial rope-access systems from the final definition of ''rope descent system.'' OSHA received several comments recommending that the term ''rope descent system'' include industrial rope access systems, either as part of rope descent systems or as a new section (*e.g.,* Exs. 129; 205; 355–7; 347). One commenter said that rope descent systems are a type of industrial rope access system (Ex. 362). However, some commenters believe the definition of ''rope descent system'' already includes industrial rope access systems (Exs. 69; 72; 122; 168; 178). For example, the American Wind Energy Association (AWEA) said they use industrial rope access systems as rope descent systems for repair and maintenance of wind turbines (Ex. 178). AWEA recommended that the definition of, and requirements for, rope descent systems should incorporate and reference the Society of Professional Rope Access Technicians (SPRAT) and the International Rope Access Technicians Association standards, which AWEA said ''are much more developed'' than the ANSI/IWCA I–14.1–2001 standard.

In light of the comments, not only does the final definition clarify that rope descent systems do not include industrial rope access systems, but also final § 1910.27, Scaffolds and rope descent systems, explains that the final rule does not cover industrial rope access systems. OSHA agrees, as SPRAT pointed out, that while industrial rope access systems may use equipment similar to rope descent systems (*e.g.,* anchorages, body harnesses, lifelines), they are ''different in key ways'' from rope descent systems (Ex. 355–7). For example, industrial rope access systems are suspension systems that allow the worker to go up or down, while rope descent systems only go down. Also, industrial rope access systems have sit harnesses instead of seatboards or chairs.

Third, OSHA received several comments that opposed OSHA's characterization of a rope descent system in the proposal as a ''variation of the single-point adjustable suspension scaffold'' (Exs. 62; 168; 205). For example, Brian Gartner, of Weatherguard Service, Inc., said, ''A rope descent system is not a variation of the single point adjustable scaffold. The scaffold has the capability of being raised as well as being lowered, rope descent systems only travel downward, and a scaffold has an area, a platform, to store tools and supplies, stand, etc.'' (Ex. 168). OSHA agrees with the commenters and deleted that comparison from the final definition.

Rung, step, or cleat. Similar to the proposal, the final rule defines ''rung, step, or cleat'' as the cross-piece of a ladder on which a worker steps to climb up and down the ladder. OSHA notes that in the final definition, ''steps'' only refer to the cross-pieces of ladders. The final definition is consistent with ANSI A14.1–2007 (Section 4), ANSI A14.2–2007 (Section 4), and ANSI A14.5–2007 (Section 4).

The final definition consolidates and simplifies the existing definitions into one term that identifies their common characteristics and purpose (see existing § 1910.21(e)(8), (9), and (10)). The final definition also incorporates plain language (''climb up and down'') to explain that workers use rungs, steps, or cleats to ascend or descend ladders.

OSHA received one comment on the proposed definition. Nigel Ellis said OSHA should retain the separate definitions in the existing rule ''to explain a rung is designed for holding and stepping but that a step cannot be held since it is only for the feet (shoes)'' (Ex. 155). OSHA does not agree that including such language is necessary.

First, the final definition is consistent with ANSI portable ladder standards (ANSI A14.1–2007, ANSI A14.2–2007, and ANSI A14.5–2007). Rungs, steps, and cleats are all horizontal surfaces for climbing ladders, even if their specifications vary. (Rungs are circular or oval, cleats are rectangular, and steps are flat). Instead of focusing on the differences in the specification, the final rule and the ANSI standards identify, and focus on, the primary purpose of rungs, steps, and cleats; to provide a place to step to climb up and down the ladder.

Second, OSHA believes it is not accurate to say that ''a step cannot be held'' (Ex. 155). Although side rails provide handholds for climbing ladders, especially those with steps, neither the final rule nor the ANSI standards prohibit workers for holding onto steps, either while climbing or standing on a ladder. As such, OSHA believes the language Mr. Ellis suggests may cause confusion; therefore, OSHA is not adopting it.

Runway. In the final rule, similar to the proposal, this term means an elevated walking-working surface, such as a catwalk, a foot walk along shafting, or an elevated walkway between buildings. The final definition is consistent with ANSI/ASSE A1264.1–2007 (Section 2.19).

OSHA added three clarifications to the final ''runway'' definition. First, the final definition substitutes ''walking-working surface'' for ''passageway.'' This change makes the definition consistent with the definitions of other terms in final subpart D. Second, the final definition also more clearly indicates that employees use runways to perform work as well as to gain access to other areas in the workplace. Third, the final rule simplifies the definition by substituting plain language (*i.e.,* ''elevated'') in place of ''elevated above the surrounding floor or ground level'' used in the proposed definition.

OSHA did not receive any comments on the proposed definition and adopts it with the clarifications discussed above.

Scaffold. In the final rule, like the proposal and consistent with the construction scaffold standard (§ 1926.450(b)), this term means any temporary elevated or suspended platform and its supporting structure, including anchorage points, used to support workers, equipment, materials, and other items. The final rule also states that, for purposes of final subpart D, ''scaffold'' does not include crane-suspended or derrick-suspended personnel platforms or rope descent systems.

The final rule consolidates into a single term the two definitions in the existing rule in § 1910.21(f)(27) and (g)(15). The final definition also adds two clarifications to the proposed definition. First, it adds ''equipment'' to the list of items a scaffold must be capable of supporting. Second, it also clarifies that the final definition of scaffold, including suspension scaffolds, does not include rope descent systems. As discussed above, a number of commenters opposed characterizing rope descent systems as a type of single-point adjustable scaffold (Ex. 62; 168; 205). One commenter, David Hoberg, with DBM Consultants, said rope descent systems differ in many ways from scaffolds. For instance, he said the stabilization required for rope descent systems over a height of 130 feet differs from the stabilization required for scaffolds (Ex. 206). Consequently, OSHA added to the definition of scaffold that the term does not apply to rope descent systems.

Ship stair (ship ladder). In the final rule, like the proposal, a ship stair, also known as a ship ladder, is a stairway that is equipped with treads, stair rails, and open risers, and has a slope that is between 50 and 70 degrees from the horizontal. The final definition is consistent with ANSI/ASSE A1264.1–2007 (Section 2.22).

Ship stairs are not standard stairs within the meaning of this section. Generally, ship stairs are a type of stairway found in buildings and structures that have limited space, and are used for accessing special use areas, such as but not limited to, attics, roofs, mechanical equipment spaces, etc.

OSHA notes that ship stair is a term of art and use of the term in this subpart is not intended to infer applicability to the shipyard employment, marine terminal, or longshoring industries.

OSHA did not receive any comments on this definition and adopts it with minor editorial revisions for clarity.

Side-step ladder. This term means a type of fixed ladder that requires a worker to step sideways from it to reach a walking-working surface, such as a landing. The final definition is consistent with ANSI A14.3–2008 (Section 3). In the final rule, OSHA revised the proposed definition to emphasize that side-step ladders are a type of fixed ladder (see final § 1910.23(d)(4), (d)(6), and (d)(12)(ii)). The final rule also clarifies that when a worker steps off a side-step ladder onto a walking-working surface, it may be a landing or another type of surface (*e.g.,* roof). The proposed definition, on the other hand, only mentions stepping onto a landing.

OSHA did not receive any comments on the proposed definition and finalizes with the clarifications discussed above.

Spiral stairs. The final rule, similar to the proposal, defines this term as a series of treads attached to a vertical pole in a winding fashion that is usually within a cylindrical space. For clarity, the Agency substituted the language ''stairway having a helical (spiral) structure attached to a supporting pole'' in the proposal with ''treads attached to a vertical pole in a winding fashion within a cylindrical space.'' OSHA drew the definition from the construction standards for stairways and ladders (see § 1926.1050(b)); it also is consistent with the definition of the term in ANSI/ASSE A1264.1–2007 (Section 2.23).

Additionally, in the final rule, OSHA replaced the proposed term ''steps'' with ''treads.'' As noted above in the definition for rungs, steps or cleats, in the final rule, OSHA clarifies that steps are a component of ladders whereas treads are components of stairs.

Spiral stairs are not standard stairs within the meaning of this section, and the final rule limits their use in general industry workplaces (see final § 1910.25(b)(8)). Employers generally use spiral stairs generally in workplaces that have limited space.

OSHA did not receive any comments on the proposed definition and adopts it as discussed above.

Stair rail or stair rail system. This term means a barrier erected along the exposed or open side of stairways to prevent workers from falling to a lower level. Stair rail and stair rail systems include, but are not limited to, vertical, horizontal, or inclined rails; grillwork or panels, and mesh. In addition, the top rail of a stair rail system may serve as a handrail. The final definition is consistent with the construction standards for stairways and ladders (see § 1926.1050(b)). The ANSI/ASSE A1264.1–2007 (Section 2.6) standard includes a definition covering ''guardrail/railing system/stair railing system'' that is applicable to stairways, ramps, landings, portable ladders, hatchway, manholes, and floor openings; the final definition is generally consistent with this ANSI/ASSE standard.

The final definition eliminates ''vertical'' from the term barriers in order to make the definition consistent with final § 1910.29(f). That provision does not require barriers to be vertical; for example, barriers may be horizontal rails.

OSHA did not receive any comments on the proposed definitions and adopts it with the revision discussed.

Stairway (stairs). The final rule defines stairway (stairs) as risers and treads that connect one level with another. Stairways also include any landings and platforms between those levels. In addition, the final rule specifies that stairway includes standard, spiral, ship, and alternating tread-type stairs.

The existing rule defines stairways as a series of steps leading from one level or floor to another, or leading to platforms, pits, boiler rooms, crossovers, or around machinery tanks and other equipment that are used more or less continuously or routinely by employees, or only occasionally by specific individuals. A series of steps and landings having three or more risers constitutes stairs or stairway (existing § 1910.21(b)(8)). OSHA did not propose a definition of stairway; however, the Agency decided to retain and revise the existing definition.

The final definition revises the existing definition in several ways. First, the final rule simplifies the definition considerably. OSHA believes the term ''stairway'' (''stairs'') is commonly understood and does not require a long explanation. Therefore, OSHA limits the final definition to identifying the specific aspects of the stairways the final rule covers.

Second, the final rule removes language in the existing definition that limits stairways to stairs that have ''three or more risers'' (existing § 1910.28(b)(8)). The proposed rule did not retain the existing definition of stairway, which limited covered stairs to those that have three or more risers. Including a definition in the final rule clarifies the Agency's intent to cover stairways that have fewer risers.

OSHA adopted the existing definition from national consensus standards in effect in 1971 and those standards have been revised and updated. In particular, the current versions of ANSI/ASSE A1264.1–2007 (Section E6.1) and IBC–2012 (Section 202) specify that a stair has one or more risers. The revision makes the final rule consist with those national consensus standards, which OSHA believes that most employers already follow.

Finally, OSHA adds language to the final definition explaining that stairways include standard, spiral, alternating tread-type, and ship stairs (ship ladders). The existing rule did not include that language.

OSHA did not receive any comments about a definition for ''stairway (stairs)'' and adopts the definition as discussed.

Standard stairs. The final rule, like the proposal, defines standard stairs as stairways that are fixed or permanently installed. In the preamble to the proposed rule OSHA explained that ''permanently installed'' standard stairs are interchangeable with the term ''fixed'' standard stairs. To further clarify the definition, OSHA added this concept.

Existing OSHA standards do not define ''standard stairs.'' The ANSI/ASSE A1264.1–2007 (Section 6) standard uses the terms ''fixed stairs'' and ''conventional stair designs,'' but does not define either term.

Although ship stairs, spiral stairs, and alternating tread-type stairs are fixed or permanently installed stairs, the final definition specifies that they are not considered standard stairs under this subpart.

OSHA did not receive any comments on the proposed definition and finalizes it as discussed above.

Step bolt (pole step). This term means a bolt or rung attached at intervals along a structural member and used for foot placement and as a handhold when climbing or standing. The final definition, like the proposal, also refers to step bolts as ''pole steps.'' Existing subpart D does not specifically define or address step bolts.

OSHA did not receive any comments on the proposed definition and adopts it as discussed.

Stepladder. This term means a self-supporting, portable ladder that has a fixed height, flat steps, and a hinged back. The final definition consolidates into one term the two existing definitions in existing § 1910.21(c)(2) and (d)(2). The final definition also simplifies the proposed definition by incorporating plain language (fixed height) in place of ''non-adjustable in length.''

OSHA did not receive any comments on the proposed definition and adopts it with the clarification discussed above.

Stepstool. This term means a self-supporting, portable ladder that has flat steps and side rails. Similar to the proposed definition, the final rule defines the term ''stepstool'' to include only those ladders that have a fixed height, do not have a pail shelf, and do not exceed 32 inches in overall height to the top cap, although the side rails may extend above the top cap. The definition goes on to clarify that a stepstool is designed so an employee can climb and stand on all of the steps as well as the top cap. OSHA drew the definition from the construction stairways and ladders standard (§ 1926.1050(b)), ANSI A14.2–2007 (Section 4), and ANSI A14.5–2007 (Section 4), which are similar. The final definition simplifies the proposed term by incorporating plain language ''fixed height'' in place of ''non-adjustable in length,'' and reorganizing the definition to make it easier to understand.

OSHA did not receive any comments on the proposed definition and finalizes it with the revisions discussed above.

Through ladder. The final rule, similar to the proposed rule, defines a through ladder as a type of fixed ladder that allows workers to step through the side rails at the top of the ladder to reach a walking-working surface, such as a landing. The final definition is consistent with the construction standards for stairways and ladders (see § 1926.1050(b)) and ANSI A14.3–2008 (Section 3).

The final definition clarifies the existing rule in § 1910.21(e)(15) and the proposed rule by stating that, at the top of a through ladder, a worker steps off the ladder onto a ''walking-working surface,'' which may be a landing or another type of surface (*e.g.,* roof); the existing and proposed rules specify stepping onto a landing only.

OSHA did not receive any comments on the proposed definition and adopts it with the clarification discussed above.

Tieback. Similar to the proposed definition, this term means an attachment between an anchorage (*e.g.,* structural member) and a supporting device. The final definition adds language to the proposed definition clarifying that supporting devices include, but are not limited to, parapet clamps or cornice hooks.

According to the International Safety Equipment Association (ISEA), manufacturers provide a number of choices for tieback applications, such as tieback lines or lanyards, and tieback anchors (Ex. 185). ISEA said manufacturers design tieback lanyards for wrapping around a suitable anchor structure (*e.g.,* a beam or structural member), and have the advantage of eliminating a separate component for anchorage connection. ISEA explained that employers typically use tieback lanyards in personal fall arrest systems (Ex. 185).

ANSI/IWCA I–14.1–2001 (Sections 5.7.17, 17.4, and 17.6) notes that the exclusive use of tieback anchors is with tieback lines, not lifelines. The final rule requires that tieback lines and lifelines have separate anchors.

Existing OSHA standards do not define ''tieback.'' OSHA drew the definition from ANSI A10.8–2011, American National Standard for Construction and Demolition Operations—Safety Requirements for Scaffolding. OSHA believes that adding a definition for ''tieback'' clarifies the use of the term elsewhere in this subpart. Mr. Hoberg, of DBM Consultants, stated clarification is necessary because various parts of the country use the term differently, and that ''each area swears adamantly that theirs is the right one and keeps trying to change the other'' (Ex. 206).

The definition is finalized with the clarifying revisions noted above.

Toeboard. The final rule, similar to the proposal, defines this term as a low protective barrier that is designed to prevent materials, tools, and equipment from falling to a lower level, and protect workers from falling. Typically, employers erect toeboards on platforms, dockboards, catwalks, gridirons, and other elevated or exposed floor level edges. Toeboards, also are referred to as toeplates or kickplates, and may be part of a guardrail system.

The final rule consolidates into one term the three definitions in the existing rule in § 1910.21(a)(9), (f)(31), and (g)(16), all of which are consistent with the final definition. The final rule clarifies that toeboards prevent tools, as well as materials and other equipment, from falling on workers who may be below the elevated walking-working surface.

Finally, and most importantly, OSHA clarifies expressly that toeboards serve two purposes: Preventing materials, tools, and equipment from falling on and injuring workers on a lower level; and protecting workers from falling off elevated walking-working surfaces. The final definition is consistent with OSHA's construction standard for fall protection in § 1926.500(b) and ANSI/ASSE A10.18–2012 (Section 2.18).

OSHA did not receive any comments on the proposed definition and adopts it with the clarifications discussed above.

Travel restraint system. This definition is new in the final rule. This system is a combination of an anchorage, an anchorage connector, lanyard (or other means of connection), and body support that an employer uses to eliminate the possibility of a worker going over the edge of a walking-working surface.

OSHA drew the definition from final § 1910.140(b). The definition also is consistent with the definition in ANSI/ASSE Z359.0–2012 (Section 2.204), and the definition of the term ''restraint (tether) system'' in ANSI/ASSE A10.32–2012 (Sections 2.53).

OSHA did not receive any comments on the proposed definition in § 1910.140 and, therefore, adopts a definition as described above for final subpart D. For further discussion about the definition of ''travel restraint system,'' see the preamble discussion for final § 1910.140.

Tread. The final rule, similar to the proposal rule, defines this term as a horizontal member of a stair or stairway, but does not include landings or platforms. OSHA added clarifying language in the final rule, that landings and platforms, which are horizontal members of stairways, are not considered treads.

The final definition revises the existing and proposed rules by using ''stairways or stair'' in place of ''step.'' This revision clarifies that treads describe horizontal members of stairways. In the existing and proposed rules, treads and steps refer to horizontal members of both ladders and stairways, which OSHA believes may cause confusion. By limiting the term ''tread'' to stairways or stairs, and the term ''step'' to ladders, the final rule should resolve any potential confusion.

Treads are measured by their width (side to side) and depth (front to back). OSHA notes that tread depth is measured horizontally between the vertical planes of the foremost projection of adjacent treads, and at a right angle to the tread's leading edge. This method of measurement is consistent with the NFPA 101–2012 (Section 7.2.2.3.5) and the IBC–2012 (Section 1009.7.2).

The final definition is consistent with ANSI/ASSE A1264.1–2007.1 (Section 2.26). OSHA did not receive any comments on the proposed definition and adopts it as discussed.

Unprotected sides and edges. This term means any side or edge of a walking-working surface, (except at entrances and other points of access) where there is no wall, guardrail system, or stair rail system to protect workers from falling to a lower level. The final definition, which replaces the language ''open-sided floors, platforms, and runways'' in the existing rule in § 1910.23(c)(1), is consistent with the definition of the term in OSHA construction standards (see §§ 1926.500(b) and 1926.1050(b)).

The final rule revises the proposed definition in two respects. First, it states that a walking-working surface is unprotected if it does not have a stair rail system, in addition to not having a wall or guardrail system as specified in the proposed definition, to protect workers from falling.

Second, OSHA deleted the height-specification language in the proposed rule. This language is not necessary because final § 1910.29, Fall protection systems and falling object protection—criteria and practices, already addresses these height requirements.

OSHA did not receive any comments on the proposed definition and finalizes it with the revisions discussed above.

Walking-working surface. The final rule, similar to the proposal, defines this term as a horizontal or vertical surface on or through which workers walk, work, or gain access to work areas or workplace locations. Walking-working surfaces include floors, stairways, roofs, ladders, runways, ramps, walkways, dockboards, aisles, platforms, manhole steps, step bolts, equipment, trailers, and other surfaces. The existing rule does not define ''walking-working surfaces,'' but the final definition is similar to the definition for ''walking-working surface'' in the construction standard for fall protection in § 1926.500(b), ANSI/ASSE A10.18–2012 (Section 2.20), and ANSI/ASSE A1264.1–2007 (Section 2.28). OSHA notes that, unlike the construction standard for fall protection, the final definition does not exclude ''ladders, vehicles, or trailers, on which employees must be located in order to perform their job duties.''

The final rule makes two revisions to the proposed walking-working surface definition. First, the final definition adds ''work area'' as a location to which a worker may gain access. This revision means that walking-working surfaces include those areas where employees perform their job duties, as well as other locations in the workplace, such as hallways and supply and change rooms. OSHA notes that, for some work and occupations, including equipment service and repair, delivery of materials and supplies, and landscaping, the ''work area'' may be at various locations. OSHA believes that adding ''work area'' to the final definition makes it clear what the term covers. The revision also makes the final definition consistent with ANSI/ASSE A1264.1–2007 (Section 2.28).

Second, also consistent with ANSI/ASSE A1264.1–2007, the final rule deletes the list of examples of walking-working surfaces from the proposal. Accordingly, the regulated community is to broadly construe the final definition of ''walking-working surface'' to cover any surface on or through which employees walk, work, or gain access to a work area or workplace location. Since the final definition does not exclude any walking-working surface, OSHA does not believe that identifying a partial list of surfaces the final rule covers is helpful, necessary, or definitive.

OSHA received several comments addressing the scope of the definition of ''walking-working surface,'' which it discusses above in the preamble to § 1910.21(a), Scope.

Warning line. This is a new definition OSHA added to the final rule. The term describes a barrier that is erected on a roof to warn workers they are approaching an unprotected side or edge, and which designates an area in which work may take place without using other means of fall protection. The warning line is a component of a designated area, which is an alternative method for preventing falls that the final rule allows employers to use to protect workers on low-slope roofs (see final §§ 1910.28(b)(13) and 1910.29(d)). A warning line alerts workers that the space marked off by the line is an area where they may work without conventional or additional fall protection (*e.g.,* guardrail, safety net, or personal fall protection system).

Workers may enter the demarcated area only if the employer provides them with the required fall hazard training (see final § 1910.30) and assigns them to work in the demarcated area. In large part, OSHA drew the definition in the final rule from the definition of ''warning line system'' in the construction standard for fall protection (see § 1926.500(b)).

Although the proposed rule used the term ''warning line,'' the proposal did not define it. The final rule corrects this oversight. The Agency believes it is important to define the term so that employers and workers understand the new fall prevention method, and so employers may comply with the new warning line requirements.

OSHA did not receive any comments and adopts the definition as discussed above.

Well. Similar to existing § 1910.21(e)(12) and the proposed rule, this term means a permanent, complete enclosure around a fixed ladder. A well surrounding a fixed ladder must provide sufficient clearance to enable the employee to climb the ladder. The terms ''well'' and ''cage'' typically are used together because the structures serve the same purpose, *i.e.,* to enclose the climbing area of a fixed ladder. In the event of a fall, wells and cages contain workers within the enclosure and direct them to a lower landing (Ex. 198). ANSI A14.3–2008 (Section 3) also contains a similar definition.

The final rule deletes proposed language stating that ''proper clearances for a well provide the person climbing the ladder the same protection as a cage'' to prevent employers and workers from mistakenly believing that wells and cages provide fall protection. Information in the record indicates that wells and cages do not protect workers from falling (see, *e.g.,* Ex. 198); as a result, the final rule in § 1910.28(b)(9) phases out their use as fall protection systems.

OSHA did not receive any comments on the proposed definition and adopts the term with the revision discussed above.

Other issues. Two commenters suggested that OSHA include additional definitions in the final rule. First, Nigel Ellis recommended that OSHA add a definition for the term ''cover'' to the final rule, stating:

> The word Cover is not presently defined as to adequacy and walkability in the May 2010 standard proposal. A cover may be a plywood board or perhaps OSB or temporarily and more dangerously a section of drywall to keep out dust and weakens when wet. The new to America Platform Nets should be accommodated for maintenance work to allow walkable fabric covers to be used for walking across holes and open spaces.
>
> * * * * *
>
> The term cover should be defined on a structural level applicable to any unit skylight, including plastic, light transmitting pane and smoke vent and where it is either a board, fabric, fall protection net, walkable net, skylight with structural members impervious to the effects of UV sunlight, screen, grill and should be tested for impacts with humans (Ex. 155).

OSHA believes employers understand the meaning of cover; therefore, it is not necessary to add a definition to the final rule.

Second, Mercer ORC requested that OSHA define the term ''chain gate'' and identify how it differs from the term ''swinging gate'' (Ex. 254). The reference to chain gate in proposed § 1910.29(b)(10) was a typographical error that inadvertently omitted the comma between chain and gate. Given that, there is no need to add a definition for either chain gate or swinging gate.

Section 1910.22—General Requirements

Final § 1910.22 revises and updates the existing requirements that apply to surfaces in general industry. These provisions address:

- Surface conditions and housekeeping (paragraph (a));
- Application of loads on walking-working surfaces (paragraph (b));
- Access to and egress from walking-working surfaces (paragraph (c)); and
- Inspection, maintenance, and repair of walking-working surfaces (paragraph (d)).

In general, the final rule revises the existing requirements in several ways. First, final § 1910.22, as well as all other sections of final subpart D, uses the term ''walking-working surface.'' Final § 1910.21(b) defines walking-working surface as any horizontal or vertical surface on or through which an employee walks, works, or gains access to a workplace location. Walking-working surfaces include, but are not limited to, floors, stairways, roofs, ladders, runways, walkways, dockboards, aisles, and step bolts.

In final § 1910.22, as in other sections of final subpart D, OSHA revised the existing language so it is performance-based and easier to understand, consistent with the OSH Act (29 U.S.C. 655(b)(5)), and the Plain Language Act of 2010 (Pub. L. 111–274; *see also* E.O. 13568 (1/18/2011)), respectively. OSHA believes the revised language provides greater flexibility for employers, and makes it easier for them to comply with the final rule.

OSHA also moved or deleted provisions in existing § 1910.22 that address specific issues or hazards rather than general conditions. For example, OSHA moved the existing guardrail and covers requirements (existing § 1910.22(c)) to final §§ 1910.28 (Duty to have fall protection), and 1910.29 (Fall protection systems criteria and practices). OSHA believes that the existing provision, which addresses two specific types of fall protection measures, is more appropriately grouped with the other fall protection measures. In addition, OSHA deleted the requirements on mechanical-handling equipment in existing paragraph (b) because § 1910.176(a) addresses that issue.

Paragraph (a)—Walking-Working Surfaces

Final paragraph (a), like the existing and proposed rules, contains general requirements on housekeeping and walking-working surface conditions. Pursuant to section 6(a) of the OSH Act (29 U.S.C. 655(a)), OSHA adopted most of the requirements in existing paragraph (a) from the ANSI standard in effect in the early 1970s (ANSI Z4.1–1968, Requirement for Sanitation in Places of Employment (Z4.1–1968)). Although ANSI updated the Z4.1 standard several times since 1968 (see ANSI Z4.1–1986 (R2005) (Z4.1–R2005)), OSHA did not update the requirements until this rulemaking.

Final paragraph (a)(1), consistent with the existing and proposed rules, requires that employers ensure surfaces are kept in a clean, orderly, and sanitary condition in ''[a]ll places of employment, passageways, storerooms, service rooms, and walking-working surfaces.'' Final paragraph (a)(1) also is consistent with Z4.1–R2005 (Section 3.1.1). OSHA adds the term ''walking-working surfaces'' to the provision to eliminate any confusion about the surfaces the final rule is intended to cover.

In the preamble to the proposed rule, OSHA explained its longstanding position that § 1910.22(a), especially § 1910.22(a)(1), covers hazards other than slips, trips, and falls, and includes fire and explosion resulting from combustible dust accumulations (see 75 FR 28874). Prior court decisions uphold OSHA's interpretation, saying ''the housekeeping [§ 1910.22(a)] standard is not limited to tripping and falling hazards, but may be applied to significant accumulation of combustible dust'' (*Con Agra, Inc.* v. *Occupational Safety and Health Review Commission,* 672 F.2d 699, 702 (8th Cir. 1982), citing *Bunge Corp.* v. *Secretary of Labor,* 638 F.2d 831, 834 (5th Cir. 1981)). In *Pratt & Whitney Aircraft* (9 O.S.H. Cas. (BNA) 1653, 1981 O.S.H.D. (CCH) P 25359, 1981 WL 18894 (O.S.H.R.C.), the Occupational Safety and Health Review Commission (Review Commission) reached the same conclusion on a converse set of facts. Pratt & Whitney argued that § 1910.22(a)(1) only covered ''sanitation and the prevention of disease,'' not trip hazards. The Review Commission rejected that argument, saying the standard's requirement that employers keep places of employment ''in a sanitary condition'' is ''in addition to the requirement that workplaces be 'clean and orderly,' thus demonstrating that the standard is directed not merely to sanitation but to all hazards arising from poor housekeeping, including tripping hazards.'' (*See also, Farmer's Co-op,* 1982 WL 2222661 (O.S.H.R.C.); CTA *Acoustics* (KY 2003), CSB Report No. 2003–09–I–KY (February 2005); *Hayes Lemmerz International* (Indiana 2003), CSB Report No. 2004–01–I–IN (September 2005).)

As these cases show, § 1910.22(a)(1) serves as an important enforcement tool for preventing hazardous combustible dust accumulations on walking-working surfaces. Moreover, in essentially every document addressing combustible dust that OSHA released since *Bunge,* the Agency affirmed that its combustible dust enforcement strategy includes citing housekeeping violations (*i.e.,* failure to control combustible dust accumulations) under § 1910.22(a)(1). (See *e.g.,* ''Combustible Dust in Industry: Preventing and Mitigating the Effects of Fire and Explosion,'' OSHA Safety and Health Information Bulletin (SHIB) 07–31–2005, (2005, July 31) [13]; ''Hazard Alert: Combustible Dust Explosions,'' OSHA Fact Sheet (March 2008) [14]; OSHA Compliance Directive CPL–03–00–008, ''Combustible Dust National Emphasis Program,'' (March 11, 2008) (replacing CPL 03–00–006, ''Combustible Dust National Emphasis Program,'' October 18, 2007) [15]; and ''Status Report on Combustible Dust National Emphasis Program,'' (October 2009)).[16]

In the proposed rule, OSHA requested comment on whether the Agency should include a specific reference to combustible dust or other types of dust or materials in final § 1910.22(a) to clarify explicitly that the provision does, and will continue to, cover combustible dust hazards. OSHA received many comments. Two commenters, United Food and Commercial Workers (UFCW) (Ex. 159) and the American Federation of Labor and Congress of Industrial Organizations (AFL–CIO) (Exs. 172; 329 (1/20/2011, p. 219); 363) supported including a specific reference in both final § 1910.22(a)(1) and (a)(2). Bill Kojola of the AFL–CIO said: ''While agency interpretations to include combustible dust have proven useful to address this hazard, we believe an explicit referencing of combustible dust within each of these paragraphs is necessary to * * * let employers know with explicit certainty that combustible dust is covered by these provisions'' (Ex. 172). UFCW, which said it represents food plants, including sugar, corn, flour-milling, and cocoa plants, explained: ''The food dusts in these plants can be combustible. Housekeeping—keeping combustible dust from accumulating on floors and other surfaces and keeping surfaces as free from dust as possible—is a critical aspect to mitigating and preventing combustible dust explosions'' (Ex. 159).

However, most commenters, for various reasons, opposed including a specific reference to combustible dust in final § 1910.22(a) (Exs. 73; 96; 124; 148; 158; 166; 173; 186; 189; 190; 202; 207; 254). First, many commenters seemed to think that existing § 1910.22(a)(1) does not cover combustible dust, and that OSHA is aiming to add it to the final rule as part of this rulemaking (Exs. 73; 96; 124; 148; 158; 166; 202). For example, several commenters said that § 1910.22(a) and this rulemaking focus, and should focus, on preventing slips, trips, and falls, which is not the primary hazard of combustible dust (Exs. 73; 96; 124; 158; 166; 190; 207; 254). The United States Beet Sugar Association (USBSA) and National Grain and Feed Association (NGFA), citing a 1978 OSHA Memorandum, also argued that OSHA is uncertain whether § 1910.22(a) applies to combustible dust because the Agency instructed its compliance officers to cite § 1910.22(a)(1) and

[13] Combustible Dust in Industry: Preventing and Mitigating the Effects of Fire and Explosion available from OSHA's Web site at: *http://www.osha.gov/dts/shib/shib073105.html.*

Section 5(a)(1) of the OSH Act, in the alternative, for grain-dust accumulations (Exs. 148; 166).

These commenters are mistaken. As described in detail above, OSHA has for more than 30 years interpreted § 1910.22(a)(1) as applying to combustible dust hazards, and the courts have upheld this interpretation. In the 2009 ''Status Report on Combustible Dust National Emphasis Program,'' OSHA noted that housekeeping violations (§ 1910.22(a)(1)) accounted for 20 percent of the violations involving combustible dust, second only to hazard communication violations. In the Advance Notice of Proposed Rulemaking on combustible dust, OSHA also stated that existing § 1910.22(a) covers ''accumulation of dust, including dust that may be combustible'' (74 FR 54334, 54335 (October 21, 2009)). Therefore, regardless of whether OSHA includes a specific reference to combustible dust in final § 1910.22(a)(1), OSHA's enforcement policy remains the same.

With regard to USBSA's and NGFA's ''uncertainty'' argument, the 1978 memorandum they cite has not been OSHA's policy since 1981, when the courts and the Review Commission upheld OSHA's interpretation that § 1910.22(a)(1) covers combustible dust.

Second, a number of commenters cited OSHA's ongoing combustible dust rulemaking as a reason why the Agency should not reference combustible dust in final § 1910.22(a)(1) (Exs. 73; 96; 124; 158; 189; 190; 202; 207; 254). The National Federation of Independent Business (NFIB) said that including a reference to combustible dust in final § 1910.22(a) would ''create confusion for small businesses when the combustible dust rule is finalized'' (Ex. 173). The Small Business Administration Office of Advocacy (SBA Advocacy) said that § 1910.22(a) is so vague that ''it would undo any specificity in any forthcoming combustible dust standard'' (Ex. 124). USBSA agreed, stating that including a reference to combustible dust in § 1910.22(a)(1) ''would significantly undermine the usefulness of a combustible dust rule'' and ''would swallow up and nullify whatever specificity is provided by a comprehensive combustible dust standard'' (Ex. 166).

The National Cotton Ginners' Association (NCGA), the Texas Cotton Ginners Association (TCGA), and American Feed Industry Association (AFIA) said including combustible dust in § 1910.22(a)(1) would be ''redundant and possibly conflicting'' when OSHA ''re-regulate[s] these same dusts in the future under the combustible dust rule'' (Exs. 73; 96; 158).

OSHA believes these arguments are premature since OSHA's Spring 2016 Unified Agenda of Regulatory and Deregulatory Actions (Reg Agenda) states that combustible dust is in the Prerule Stage.[17] However, as OSHA proceeds with a rulemaking on combustible dust, the Agency will evaluate carefully the relationship between § 1910.22(a)(1) and a combustible dust rule to avoid any conflicts.

Third, on a related issue, some commenters contend that OSHA must regulate combustible dust in a separate rulemaking. The United States Chamber of Commerce (USCC) said a separate rulemaking is necessary because combustible dust is a complex, multi-variable hazard that is ''not amenable to a simple characterization'' and does not have a consensus definition: ''Merely telling employers that the walking/working surfaces are not to have a level of dust that would be combustible gives them no guidance, serves no workplace safety purpose, and will only lead to OSHA having another source for citations'' (Ex. 202).

USBSA said a separate standard was necessary because § 1910.22(a)(1) and (2) do not address issues such as ''[h]ow much [combustible dust] is too much?''; ''[w]hat must an employer do at what dust level?''; and ''[s]hould all combustible dusts be treated the same?'' (Ex. 166).

NFIB also said a separate rulemaking on combustible dust is necessary because OSHA ''does not understand the implications of [final § 1910.22(a)(1)] on small businesses'' (Ex. 173). NFIB said that OSHA incorrectly certified in the proposed rule that the rulemaking would not have a significant economic impact on small businesses, thereby avoiding the requirement to convene a Small Business Advisory Review (SBAR) panel. As a result, NFIB said OSHA underestimated the proposed compliance costs, and that regulating combustible dust in a separate rulemaking would allow OSHA to hear from a SBAR panel and ''fully grasp the burden'' that a combustible dust rule will impose on small business (Ex. 173).

OSHA disagrees with the commenters. As noted above, for more than 30 years, OSHA has used § 1910.22(a)(1) as an effective enforcement tool in general industry establishments of all sizes to address fire and explosion hazards related to combustible dust accumulations. This earlier discussion also mentioned that the 2009 Status Report on the Combustible Dust NEP determined that 20 percent of all combustible dust-related violations pertained to housekeeping (§ 1910.22(a)(1)). This history indicates that combustible dust is not too complex to enforce under existing rules.

With regard to NFIB's contention that the proposed rule underestimated compliance costs, OSHA points out that § 1910.22(a)(1) already covers combustible dust. Accordingly, in the proposed economic analysis, OSHA did not have to include any costs for the combustible dust requirement or any other existing applicable requirement.

Fourth, some commenters said including a reference to combustible dust in final § 1910.22(a)(1) is invalid because the national consensus standard (ANSI Z4.1–1968) from which OSHA adopted § 1910.22(a)(1), pursuant to section 6(a) of the OSH Act, applied only to ''sanitation'' and sanitary conditions (*i.e.,* ''the physical condition of working quarters which will tend to prevent the incidence and spread of disease'' (ANSI Z4.1–1968 (Section 2)) and, therefore, did not apply to combustible dust (Exs. 124; 166; 190). USBSA pointed out that a statement in ANSI Z4.1–1968 described the purpose of the standard as follows: ''The purpose of this standard is to prescribe minimum sanitary requirements for the protection of the health of employees in establishments covered by this standard'' (ANSI Z4.1–1968 (Section 1.2)). USBSA contends that OSHA's omission of this ANSI purpose statement was ''unlawful'' (Ex. 166). As such, USBSA maintains that OSHA is bound by the scope and purpose of the 1968 ANSI standard, and the only permissible way OSHA could add combustible dust to § 1910.22(a)(1) was by notice-and-comment rulemaking. To bolster its argument, USBSA also includes in its comments a declaration from William Carroll, Executive Director of the Portable Sanitation Association International, which was the sponsoring organization for ANSI Z4.1–1968; Mr. Carrol stated that ANSI did not develop Z4.1–1968 to cover fire and explosion from combustible dust.

OSHA does not agree with USBSA's arguments. Under section 6(a), OSHA ''is not bound to adopt all provisions of national consensus standards,'' and that not adopting the scope and purpose provisions ''[does] not constitute impermissible modification'' of the requirements of a national consensus

standard (*Secretary of Labor* v. *C.R. Burnett and Sons,* 9 O.S.H. Cas. (BNA) (O.S.H.R.C. (October 31, 1980) (the Review Commission rejected the employer's argument that OSHA was bound by the scope of another ANSI sanitation standard (ANSI Z4.4–1968, Sanitation—In Fields and Temporary Labor Camps—Minimum Requirements) adopted pursuant to section 6(a)).

Accepting USBSA's position that § 1910.22(a)(1) only addresses sanitation hazards would mean that OSHA could not use § 1910.22(a)(1) to cite slip, trip, and fall hazards because they are not sanitation hazards. USBSA does not mention that incongruous outcome in its comments, but instead selectively addresses a specific hazard it does not want OSHA to cite under the final rule.

However, previous decisions by the Review Commission and courts of appeal broadly construe § 1910.22(a)(1) (*Whirlpool Corp.* v. *Marshall,* 445 U.S. 1, 13, 100 S.Ct. 883, 891, 63 L.Ed.2d 154 (1980) (''To promote this remedial purpose of the statute, the Act and regulations must be liberally construed so as to afford workers the broadest possible protection''); *National Eng'g & Contracting Co.* v. *OSHA,* 928 F.2d 762, 767 (6th Cir. 1991)). In *Bunge* (638 F.2d at 834), the court opined: ''The type of hazard . . . is irrelevant to whether some condition or practice constitutes a violation of [§ 1910.22(a)(1)]. Unless the general standard incorporates a hazard as a violative element, the prescribed condition or practice is all that the Secretary must show.''

In *Whitney & Pratt Aircraft* (1981 W–L 18894), the Review Commission said:

> We reject Pratt & Whitney's contention that the scope of [§ 1910.22(a)(1)] is limited to disease prevention and does not encompass tripping hazards. The standard's requirement that places of employment be kept 'in a sanitary condition' is in addition to the requirement that workplaces be 'clean and orderly', thus demonstrating that the standard is directed not merely to sanitation but to all hazards arising from poor housekeeping, including tripping hazards.

OSHA notes that, contrary to Mr. Carroll's declaration, ANSI Z4.1–1968, on its face, covers hazards other than sanitation hazards. The standard contains several provisions that do not relate to sanitation, including lighting; keeping workplaces in an orderly condition; and maintaining workplaces free from protruding nails, holes, and loose boards.

Fifth, NGFA (Ex. 148) and AFIA (Ex. 158) recommended that OSHA not include a reference to combustible dust in § 1910.22(a)(1) because it would subject their industry to ''duplicative and unnecessary requirements'' that OSHA's Grain Handling Facilities standard (§ 1910.272) already addresses and, therefore, would cause confusion. They said § 1910.272, along with section 5(a)(1) (29 U.S.C. 654(a)(1)), is working effectively in controlling grain dust hazards, which obviates the need for additional regulation.

AFIA pointed out that the number of fatalities from explosions involving combustible dust declined dramatically in the industry since 1980 (Ex. 158). AFIA maintains that a number of factors contributed to reducing the frequency and severity of these occurrences, including widespread voluntary efforts by industry and trade organizations to increase awareness, research into and implementation of new engineering controls, employee training, and automation that reduces workforce exposure to explosion hazards from combustible dust. Although the Grain Handling Facilities standard issued by OSHA in 1987 (§ 1910.272) may account for some of the reduction in explosions, notably grain-mediated combustible-dust explosions, it was not in effect in the early 1980s, the initial explosion reduction timeframe AFIA cites. Only the court and the Review Commission decisions affirming OSHA's interpretation that § 1910.22(a)(1) applies to combustible dust hazards were in effect in 1981 and 1982. Given that, OSHA believes that it is reasonable to infer that § 1910.22(a)(1) contributed to reducing the number of explosions and fires involving combustible dust during the early 1980s. For all these reasons, OSHA continues to apply § 1910.22(a)(1) to grain-handling facilities.

Finally, USBSA explained that referencing combustible dust in § 1910.22(a)(1) could conflict with §§ 1910.307 (Electrical-Hazardous (classified) locations) and 1910.178 (Powered industrial trucks), stating:

> [A]pplying those provisions with a reference to combustible dust would undermine what little specificity already exists in the current standards addressing combustible dust. For example, applying them would significantly undermine the existing distinctions between unclassified, Class II, Division 1, and Class II, Division 2, areas in 29 C.F.R. 1910.307 and 1910.178, which specify where and under what circumstances approved electrical equipment and forklift trucks are required in dusty conditions. There is no point in specifying what electrical equipment and forklift trucks are required under dusty conditions if those conditions are illegal in the first place under § 1910.22(a) (Ex. 166).

In response, OSHA reiterates that § 1910.22(a)(1) already applies to combustible dust. Existing § 1910.22(a) generally addresses combustible dust hazards on walking-working surfaces, while §§ 1910.307 and 1910.178 address more specific combustible dust hazards related to electric equipment and powered industrial trucks, respectively, and OSHA finds no indication that they conflict with each other. Moreover, the Agency has not experienced any conflicts enforcing those requirements.

Final paragraph (a)(2), like the existing and proposed rules, requires that employers ensure the floor of each workroom is maintained in a clean and, to the extent feasible, in a dry condition. The final rule is similar to OSHA's housekeeping requirements in its Shipyard Employment standards (§ 1915.81(c)(3)) and Z4.1–R2005 (section 3.1.2). OSHA believes it is important for employers to maintain walking-working surfaces in a clean and dry condition to protect workers from possible injury from slips, trips, and falls and other hazards.

Final paragraph (a)(2) also requires that employers take additional action if they cannot keep workroom floors in a dry condition. OSHA notes this provision only requires employers to take additional actions when they are using ''wet processes.'' When wet processes are used, the final rule requires that drainage is maintained and, to the extent feasible, dry standing places are provided, such as false floors, platforms, and mats. Final paragraph (a)(2) provides examples of measures employers can use to provide workers with dry standing places, such as false floors, platforms, and mats, but gives employers flexibility to select other measures that are effective in providing dry standing places. OSHA believes this provision is necessary to protect workers from slips, trips, falls, and other hazards on wet surfaces.

The American Meat Institute (AMI) commented on the proposed rule:

> In the meat industry, as in several others, there is simply no possible way to maintain floors in a ''dry condition'' in areas such as slaughter departments, vat/bin washing rooms, during sanitation operations, etc. And, providing false floors, mats, platforms, etc., though done where possible, is not practical in all areas. Stated simply, there are many cases where floors in operating areas will be ''wet'' throughout the working shift. However, it should be recognized that ''wet'' is a relative term; there is significant difference between standing water of some depth as opposed to simply damp surfaces (Ex. 110).

AMI recommended that the final rule make a distinction between wet floors where there is standing water and floors that are ''continuously damp'' because of periodic cleaning or rinsing, stating:

''We . . . submit that while wet floors may pose potentially unique and specific hazards, damp floors typically pose minimal hazard and do not require additional, specific regulation'' (Ex. 110). OSHA disagrees with AMI's recommendation that the final rule should make a distinction between working in ''standing water,'' which AMI defines as greater than one inch deep, and working on wet surfaces. Accordingly, OSHA believes that both working on wet surfaces and working in standing water are hazardous and pose a risk of slips, trips, falls, or other harm (*e.g.,* electrocution, prolonged standing in water). Final paragraph (a)(2) gives employers a great deal of flexibility to tailor their control measures to the type of wet conditions present in the particular workplace, thereby making it easier for employers to comply with the requirement.

In the proposed rule, OSHA requested comment on whether final paragraph (a)(2) should include a provision, similar to that in Shipyard Employment (29 CFR 1915.81(c)(3)), requiring that, in wet processes, employers provide appropriate waterproof footwear, such as overboots, when it is not practicable to maintain drainage and dry standing areas (75 FR 28874). OSHA received three comments in response to this request, all of which opposed adding that provision to the final rule. Edison Electric Institute (EEI) (Ex. 207) and the American Wind Energy Association (AWEA) (Ex. 178) both said that employers should determine whether a hazard exists that necessitates use of personal protective equipment (PPE) and select the best method to prevent slips, trips, and falls on wet surfaces. UFCW raised concerns that allowing the use of PPE would cause employers to use PPE instead of following the hierarchy of controls:

> By specifically offering the employer the option of providing PPE, OSHA will have the unintended effect of negating the original requirement to eliminate the hazard or control it through engineering controls. We have seen a similar unfortunate dynamic in the implementation and enforcement of 1910.95(b)(1) which supposedly allows the use of PPE *only after* the implementation of feasible administrative and engineering controls. Our experience with the noise standard has been that once excessive sound levels have been determined, most employers embrace the use of hearing protection, and the implementation of engineering controls is perfunctory or ignored altogether (Ex. 159).

UFCW also noted, correctly, that it was not necessary for OSHA to reference PPE in the final rule because, under § 1910.132(a), employers already must provide PPE for hazards that they cannot eliminate or control by other methods (Ex. 159).

OSHA finds the commenters' arguments convincing and, therefore, did not add the language in § 1915.81(c)(3) to the final rule. In particular, OSHA agrees with the concerns UFCW raised about the hierarchy of controls, and reaffirms that employers must provide dry standing places, and maintain drainage using engineering controls, to the extent such controls are feasible.

Final paragraph (a)(3), which OSHA revised significantly from the proposed rule, requires employers to ensure walking-working surfaces are maintained free of hazards such as loose boards, corrosion, leaks, spills, snow, ice, and sharp or protruding objects.

In general, OSHA revised the language in final paragraph (a)(3) to more clearly and specifically reflect the type and nature of the hazards the Agency intended to address in this provision. The revisions serve two purposes. First, the revisions clarify that a major focus of final subpart D is to protect workers from walking-working surface hazards that could cause or exacerbate the severity of a slip, trip, or fall. For example, if employers do not maintain walking-working surfaces free of leaks, spills, and ice workers could slip and fall and be seriously injured. Similarly, if unused tools (*e.g.,* saws, shears), materials (*e.g.,* unused pallets, bailing wire), or solid waste or debris (*e.g.,* scrap metal) are left on surfaces where employees work or walk, workers could be seriously hurt if they fell on any of those objects. In addition, in some situations, corrosion may be so severe or significant that it may weaken the walking-working surface to the point that the surface can no longer support a worker, equipped with tools, materials, and equipment, who walks or works on it.

Second, it emphasizes OSHA's longstanding position, supported by the court decisions noted previously, that the scope of § 1910.22, and paragraph (a)(3) specifically, also covers walking-working surface hazards other than slips, trips, and falls. For example, a nail protruding from a wall may not cause a slip, trip, or fall, but could cause a serious laceration or puncture wound if a worker walks into or bumps into it. Similarly, if employers do not ensure the immediate removal of caustic chemicals or substances spilled onto a walking-working surface, workers may be at risk of adverse effects, such as chemical burns, if they accidentally touch the substance.

The existing rule, which OSHA adopted from the Z4.1–1968 standard, requires that employers, to facilitate cleaning, keep every floor, working place, and passageway free from ''protruding nails, splinters, holes, or loose boards.'' In the proposed rule, OSHA decided to revise existing paragraph (a)(3) to emphasize that the examples of the hazards listed can result in more than slips, trips, and falls, and are present in more than cleaning operations. Therefore, OSHA replaced the existing examples of specific hazards with performance-based language, stating, ''Employers must ensure that all surfaces are designed, constructed, and maintained free of recognized hazards that can result in injury or death to employees,'' and deleted the existing ''[t]o facilitate cleaning'' language.

Many commenters opposed proposed paragraph (a)(3). Most argued that the performance-based language ''free of recognized hazards'' was vague, overly broad, and appeared to duplicate the General Duty Clause of the OSH Act (Exs. 124; 150; 165; 173; 190; 196; 236). For example, the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) said: ''[P]roposed section 1910.22(a)(3) . . . appears to be a 'General Duty Clause' specific to this standard . . . and does not offer any logical means of compliance. . . . [T]he proposed requirement is open-ended and provides very little guidance to address any particular hazard'' (Ex. 165). The Mechanical Contractors Association of America (MCAA) expressed similar concerns about the language and how OSHA would enforce it:

> [T]he general duty clause-like language proposed . . . as 29 CFR 1910.22(a)(3) would allow compliance officers to issue general duty clause-like citations without having to meet the extensive and elaborate criteria established by the agency for issuing general duty clause citations. MCAA believes that this language would cause confusion, dissention and controversy without enhancing worker protection (Ex. 236).

The American Foundry Society (AFS) said the provision was ''so vague and open-ended that it could leave employers vulnerable to OSHA citations based on the subjective assessment of OSHA inspectors as to what is acceptable,'' and would place ''an impossible obligation on employers by short-circuiting the requirements'' of the General Duty Clause (Ex. 190).

NFIB raised three concerns about proposed paragraph (a)(3). First, NFIB pointed out that the proposed rule does not define ''recognized hazards,'' saying ''[t]he term may have a different meaning to a small business owner than it does to an OSHA inspector'' (Ex. 173).

Second, they said the proposed rule is ''impossible to meet'' and ''virtually meaningless for compliance purposes,'' noting:

> This standard, as written, is so broad that it could be inferred by an inspector or judge that if any injury occurs—for any reason—the employer can be cited for failure to comply. The presumption is that a small business owner should foresee all possibilities of injuries, even in the most remote of circumstances (Ex. 173).

Finally, NFIB said the proposed requirement could result in a small business being ''cited twice for the same violation—opening the business up to excessive fines and penalties'' (Ex. 173).

According to SBA Office of Advocacy, small businesses attending their forum on the proposed rule expressed concerns that OSHA would use the proposed rule to impose a '' 'de facto' Safety and Health Program (S&HP) or Injury and Illness Prevention Program (I2P2) requirement on employers'' (Ex. 124). Therefore, SBA Office of Advocacy and Associated Builders and Contractors (ABC), who raised similar concerns, recommended that OSHA clarify the regulatory language, as well as the purpose of the requirement in the final rule (Exs. 124; 196).

The commenters raise valid concerns. The purpose of the proposed requirement was not to codify the General Duty Clause as a standard or reduce OSHA's burdens in proving a General Duty Clause violation. Rather, as explained above, the purpose was to use performance-based language to point out that failure to adequately clean and maintain walking-working surfaces: (1) Can make slips, trips, and falls more severe, and (2) can result in adverse effects other than slips, trips, and falls (*e.g.,* burns from exposure to corrosive materials). The revised language in final paragraph (a)(3) ensures that stakeholders understand that the final rule covers both types of hazards. Also, adding specific examples, such as those in the existing rule, ensures stakeholders that the final rule focuses on the types of hazards associated with walking-working surfaces instead of all ''recognized hazards that can result in injury or death'' as the proposed rule specified. Therefore, the final rule stresses that employers' housekeeping efforts must take into account walking-working surface hazards other than simply those associated with slips, trips, and falls.

Mr. Lankford recommended removing the design and construction requirements in proposed paragraph (a)(3) because they would impose ''significant responsibility on employers'' in the many instances when ''[t]here is no connection between the designer/builder and the current employer'' (Ex. 368). In the hearing, Mr. Lankford said OSHA should allow employers to comply with the requirement by confirming that the walking-working surfaces ''were built according to the standard or local building code'' (Ex. 329 (1/20/2011, p. 297)). OSHA agrees, and removed the design and construction requirements in final paragraph (a)(3).

On a separate issue, Ellis Fall Safety Solutions suggested that OSHA add a requirement to § 1910.22(a) that walking-working surfaces be ''walkable from a body space point of view,'' meaning an employee in the 95th height percentile should be able to walk upright without encountering head or other obstructions (Ex. 155). OSHA believes the performance-based requirements in final paragraph (a)(3) takes this issue into account in an effective way. Paragraph (a)(3) requires that employers maintain walking-working surfaces free of protruding objects that could harm workers, regardless whether the worker is tall or large.

Michael Bell of Joneric Products, a footwear manufacturer, objected to the scope of OSHA's benefits policy:

> This Proposed Rule virtually ignores fatalities and injuries that occur not from heights. There are some easy solutions to remedy these fatalities and injuries.
>
> 1. Recognize that workers whose primary job is to wash, wax or maintain floors are at high risk of slips and falls. There are companies that manufacture specialized footwear for these activities.
>
> 2. Recognize that many workers primarily work outdoors. Most of them must work on Public Property. Even though OSHA has no authority to tell a private citizen how to maintain their properties at least admit that many injuries do occur outdoors and they are reportable to OSHA.
>
> 3. Recognize that inclement weather is the cause of a good many of these injuries.
>
> 4. Know that this is serious enough that many companies are proactive in attempting to reduce these weather related injuries. But, they do not make up for the companies that ignore the situation because there is [sic] no OSHA regulations.
>
> 5. Companies have a wide range of products to choose from many manufacturers (Ex. 77).

OSHA agrees with Mr. Bell's statement and notes that the provisions in § 1910.22(a)(1)–(3) address slips and falls to the same level. In particular, OSHA notes that these final provisions will require employers to control worker exposure to fall hazards on outdoor surfaces.

Final Paragraph (b)—Loads

Final paragraph (b) requires that employers ensure each walking-working surface can support the ''maximum intended load'' for that surface. The final rule, like the proposal defines maximum intended load as the total weight of all employees, equipment, machines, vehicles, tools, materials, and loads that employers reasonably anticipate they may be apply to that walking-working surface. The existing rule includes a similar provision requiring that employers not place on a floor or roof any load weighing more than the building official has approved for the surface (existing § 1910.22(d)(2)). The construction fall protection standard also requires that employers ''determine if walking/working surfaces on which its employees are to work have the strength and integrity to support employees safely'' and only allow employees to work on surfaces that meet the requirement (29 CFR 1926.501(a)(2)).

Final paragraph (b), like the proposal, specifies that it covers all walking-working surfaces; that is, ''any horizontal or vertical surface on or through which an employee walks, works, or gains access to a workplace location'' (see final § 1910.21(b)). Accordingly, employers must ensure that all walking-working surfaces, which include, but are not limited to, floors, roofs, stairs, ladders, and ramps; can support the maximum intended load. The existing rule specifies it applies to ''any floor or roof'' of a building or other structure (existing § 1910.22(d)(2)). Final paragraph (b) also replaces the specification requirements in existing § 1910.22(d)(1) with performance-based language. The existing rule specifies that the loads the building official approves for a specific walking-working surface ''shall be marked on plates of approved design . . . and securely affixed . . . in a conspicuous place in the space to which they relate.''

In the proposed rule, OSHA said the existing specification requirement was not necessary for two reasons: (1) Load-limit information is available in building plans, and (2) engineers take maximum loads into consideration when they design industrial surfaces. OSHA proposed to replace the existing rule with provisions requiring that employers ensure that walking-working surfaces are ''[d]esigned, constructed, and maintained to support their maximum intended load'' (proposed paragraph (b)(1)), and ''[n]ot loaded beyond their maximum intended load'' (proposed paragraph (b)(2)).

OSHA received three comments on the proposal. The first commenter, AFSCME, recommended requiring that employers ensure all walking and working surfaces have the ''structural integrity'' to support the workers, their tools and equipment. OSHA believes that requiring employers to ensure each surface is capable of supporting the maximum intended load, as defined in final § 1910.22(b), achieves the result AFSCME advocates. The definition of ''maximum intended load'' in final § 1910.21(b) includes the total weight of all employees, equipment, machines, vehicles, tools, materials, and loads that the employer reasonably anticipates may be applied to the walking-working surface.

The second commenter, Charles Lankford, objected to the proposed requirement that employers ensure walking-working surfaces are ''designed and constructed'' to support their maximum intended load (proposed paragraph (b)(1)):

> [E]mployers will be unable in most cases to ensure positively that existing or newly purchased walking and working surfaces were ''designed and constructed'' (perhaps decades earlier) to comply with this standard.
>
> Employers will for practical purposes be limited to relying on third party certification, testing, listing, and/or labeling of platforms and surfaces such as scaffold planks, floors of crane cabs, runways, etc. However, OSHA did not state in the proposed rule that reliance on third party certifications would be a method of compliance or could be a valid defense from citations (Ex. 368; *see also* Ex. 329 (1/20/2011, p. 295)).

OSHA disagrees with Mr. Lankford's contention. The existing rule makes it easy for employers to know for certain whether a walking-working surface on an existing building or structure can support the maximum intended loads employers anticipate placing on that surface. The existing rule requires that load limits for buildings and structures used for mercantile, business, industrial, or storage purposes: (1) Be approved by the building official; and (2) be posted in the area of the walking-working surface (existing § 1910.22(d)(1)). The existing rule also prohibits employers from putting any load on a walking-working surface that exceeds the weight the building official has approved. Under the final rule, employers can readily obtain information about walking-working surfaces in those buildings and structures from the plates required to be posted in accordance with the existing rule. For new buildings and structures, employers can obtain information on load limits from building plans, local codes, and third party certification or conduct their own evaluation.

Mr. Lankford is correct that the proposed rule, as well as the final rule, does not state specifically how employers must obtain information about load limits for a walking-working surface. However, OSHA believes there are many ways employers can obtain such information. Mr. Lankford provided examples of several methods employers may use, including obtaining load limits from the plates posted in the area; relying on third party certification; and testing or evaluating walking-working surfaces. Instead of codifying the methods Mr. Lankford mentioned, OSHA has used performance-based language in the final rule to give employers greater flexibility in selecting the method they want to use to identify whether the walking-working surface can support the maximum intended load employers will place on it.

Finally, the National Chimney Sweep Guild (NCSG) contended the requirement that employers ensure each walking-working surface can support the maximum intended load they will apply to it is not feasible and, as proposed, go beyond what is reasonably necessary or appropriate (Exs. 150; 240; 365; 329 (1/18/2011, p. 254–348)). First, NCSG said that chimney sweeps are not able to determine the ''maximum intended load'' [18] for a roof:

> The sweep would have no practical means of determining the maximum intended load for a roof, and no way of determining whether the roof was designed, constructed, and maintained to support the unknown maximum intended load. Only when a job would require a significant load on a roof or under other highly unusual circumstances would a sweep attempt to access the attic below a roof to check the structural integrity of the roof. We doubt most trades would be able to determine whether a roof could safely support its maximum intended load (as established by the builder and/or local code) (Ex. 150).

The final rule, like the construction fall protection standard, requires that employers are responsible for taking the steps necessary to ensure that each walking-working surface employee's access has the strength and structural integrity to safely support the maximum intended load employers will place on the surface. NCSG agreed that assessing hazards and inspecting roof surfaces is necessary before workers step on roofs to perform chimney sweep work:

> We recognize that the employer of a sweep must implement reasonable measures designed to determine whether a roof or other walking-working surface can be safely utilized by the employee to perform the pre-assigned task and any additional tasks that may be identified after the sweep arrives at the site (Ex. 150).

Where workers perform single-person jobs, which NCSG said are the majority of jobs their members perform, employers are responsible for ensuring that workers know how to assess and determine whether the walking-working surface they will access will support the loads reasonably anticipated to be placed on it. For example, employers must ensure that their employees (*e.g.,* chimney sweeps) know how to visually inspect or examine the roof for possible damage, decay, and other problems and look in attics to assess the strength and structural integrity of the roof. Employers also must ensure that workers actually do such visual assessments before they access a surface or perform a job. Finally, if there is a potential problem with the roof or if workers cannot determine whether the roof is safe for use, employers must ensure that workers know they must not step onto the roof. Although NCSG contends that it is infeasible for workers to determine if roof will support the loads they will place on it, their comments indicate that member companies and their workers already are doing this:

> Once we actually get to the job, we are making a hazard assessment . . . of . . . electrical lines, the slope of the roof, the condition of the roof, is there adequate places for our ladders, can we safely access the roof with ladders, is the roof wet, ice covered, snow covered, and ultimately we use all of that information to formulate a go or no go roof decision, whether [we] are actually going to access the roof (Ex. 329 (1/18/2011, p. 276–303)).

In addition, NCSG said member employers also periodically go to jobs sites to discuss and observe workers performing tasks, further indicating that assessments and determinations of the strength and structural of roofs are being done (Ex. 150).

Finally, not only did NCSG say it is not feasible for its members to comply with final paragraph (b), they also said:

> We doubt most trades would be able to determine whether a roof could safely support its maximum intended load (as established by the builder and/or local code) (Ex. 150).

[18] NCSG is mistaken about the meaning and use of the term ''maximum intended load.'' The term refers to the maximum weight of ''all employees, equipment, tools, materials, transmitted loads, and other loads'' the employer reasonably anticipates putting on a walking-working surface, such as a roof. It does not mean the maximum weight building codes require or the builder designed and constructed a roof to tolerate, although the maximum intended load employers place on the surface must not exceed that maximum load limit for the surface.

Since 1994, the current construction fall protection standard has required employers performing construction activities to ''determine if the walking-working surfaces on which its employees are to work have the strength and structural integrity to support employees safely'' (§ 1926.501(a)(2)). According to NCSG, 20 percent of the work chimney sweep companies perform are significant and major installations and repairs and covered by the construction fall protection standard (Ex. 150). These operations involve a substantial quantity of equipment, tools and materials being used and placed on the roof. OSHA has not received any reports that chimney sweep companies have experienced difficulty assessing whether the roof has the ''strength and structural integrity'' to support workers and the equipment, materials, and tools they are using to make those installations and repairs. Because the final rule is consistent with the construction standard, OSHA believes NCSG members will not have difficulty visually assessing whether the roof can support chimney cleaning, inspections, and minor repair work, which do not require the quantities of equipment, tools, and materials of substantial and major installations/repair jobs. For these reasons, OSHA does not find NCSG's infeasibility contention to be convincing.

Second, NCSG expressed concern that the final rule will require member companies to hire ''a structural engineer or someone with significant advanced training'' to make a ''technical determination'' that the walking-working surface has the necessary structural integrity, and that it would be infeasible for small companies to have a structural engineer or similar expert person on staff to assess the walking-working surfaces at each worksite (Ex. 150).

The final rule, like the construction fall protection standard, does not require that employers hire engineers or other experts to make a technical determination about whether a walking-working surface has the strength and structural integrity to support the maximum intended load employers reasonably anticipate placing on that surface. OSHA agrees with NCSG that employers may comply with final paragraph (b) by making ''a visual examination of the condition of the roof and the rest of the structure'' (Ex. 150). As OSHA discussed in the preamble to the proposed rule, if conditions warrant or if employers cannot confirm from the visual examination that the walking-working surface can support the load they will place on it, OSHA believes employers need to conduct a more involved or detailed inspection to ensure the surface is safe for employees (75 FR 28888). OSHA does not believe NCSG members will have difficulty complying with this requirement. NCSG said member companies already conduct visual examinations and hazard assessments to determine whether roofs can support the total load their workers will place on them (Ex. 150). Moreover, NCSG said employers periodically come to job sites to observe how workers are performing tasks, which presumably include observing tasks such as hazard assessments and visual examinations of roofs.

Final paragraph (c)—Access and Egress

Final paragraph (c), like the proposal, requires that employers provide, and ensure that each worker uses, a safe means of access and egress to and from walking-working surfaces. For purposes of the final rule, the term ''safe'' means that no condition (for example, an obstruction, lock, damage) could prevent or endanger a worker trying to access or egress a walking-working surface. Thus, employers must ensure that means of access and egress remain clear and in good repair so workers can safely move about walking-working surfaces.

Final paragraph (c), like the proposal, replaces the specifications in the existing rule (§ 1910.22(b)) with performance-based language. The existing rule requires that aisles and passageways be kept in good repair, with no obstructions across or in aisles that could create a hazard. Where mechanical handling equipment is used, the existing rule requires that sufficient safe clearances be allowed for aisles, at loading docks, through doorways, and wherever turns or passage must be made. The revision ensures that final paragraph (c) applies to all walking-working surfaces the final rule covers, which means that employers must provide safe access to and egress from ''any horizontal or vertical surface on or through which an employee walks, works, or gains access to a workplace location'' (final § 1910.21(b)). Examples of walking-working surfaces that require safe access and egress include floors, stairways, ladders, roofs, ramps, and aisles. The final rule, by using the term ''walking-working surface,'' requires that employers ensure means of access and egress are safe regardless of whether the walking-working surfaces are on the same or different levels. The final rule also applies to both temporary and permanent walking-working surfaces.

OSHA notes that the final rule does not retain the specification language in existing § 1910.22(b)(2) that requires appropriate marking of ''permanent aisles and passageways.'' The performance-based language in final paragraph (c) requires that an employer provide and ensure workers use a safe means of access and egress to and from walking-working surfaces. One way employers can meet the performance language is by appropriately marking passageways and permanent aisles as a means of identifying safe access and egress.

OSHA did not receive any comments on proposed paragraph (c) and finalizes the proposed provision, as discussed, with minor editorial changes for clarity.

Final paragraph (d)—Inspection, maintenance, and repair

Final paragraph (d), like the proposed rule, specifies general inspection, maintenance, and repair requirements for walking-working surfaces. Final paragraph (d)(1) requires that employers inspect and maintain walking-working surfaces in a safe condition. OSHA believes that inspecting walking-working surfaces is necessary to ensure they are maintained in a safe condition. To ensure they are in a safe condition, the final rule specifies that employers must inspect walking-working surfaces both (1) regularly and (2) as necessary.
