FEDERAL REGISTER

Vol. 81 Tuesday,

No. 244 December 20, 2016

Book 1 of 2 Books

Pages 92499–93064

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Proclamation 9555 of December 15, 2016

To Implement the Nepal Preference Program and for Other Purposes

By the President of the United States of America

A Proclamation

1. Section 915(b) of the Trade Facilitation and Trade Enforcement Act of 2015 (the ''TFTEA'') (19 U.S.C. 4454) confers authority upon the President to provide preferential treatment for eligible articles imported directly from Nepal into the customs territory of the United States if the President determines that Nepal meets the eligibility requirements specified in section 915(b)(1)(A) of the TFTEA, taking into account the factors specified in section 915(b)(1)(B) of the TFTEA.

2. Pursuant to section 915(b) of the TFTEA, I have determined that Nepal meets the eligibility requirements of section 915(b)(1)(A), taking into account the factors specified in section 915(b)(1)(B).

3. Section 915(c) of the TFTEA describes the requirements for articles from Nepal to be considered eligible for duty-free treatment. Pursuant to section 915(c)(2)(A)(iv) of the TFTEA, the President may designate certain articles as eligible for duty-free treatment when imported from Nepal if, after receiving the advice of the United States International Trade Commission (Commission) in accordance with section 503(e) of the Trade Act of 1974 (the ''Trade Act'') (19 U.S.C. 2463(e)), the President determines that such articles are not import-sensitive in the context of imports from Nepal.

4. Pursuant to sections 915(c)(2)(A)(iv) of the TFTEA, and after receiving advice from the Commission in accordance with section 503(e) of the Trade Act, I have determined to designate the articles included in Annex I of this proclamation as eligible for duty-free treatment when imported from Nepal.

5. Section 604 of the Trade Act (19 U.S.C. 2483), as amended, authorizes the President to embody in the Harmonized Tariff Schedules of the United States (the ''HTS'') (19 U.S.C. 1202) the substance of the relevant provisions of the Trade Act and of other Acts affecting import treatment, and actions thereunder, including removal, modification, continuance, or imposition of any rate of duty or other import restriction.

6. In order to implement the duty-free treatment provided in accordance with the provisions of the TFTEA, it is necessary to modify the HTS, thus incorporating the substance of relevant provisions of the TFTEA, and of actions taken thereunder, into the HTS, pursuant to section 604 of the Trade Act.

7. In Proclamation 7748 of December 30, 2003, President Bush determined that the Central African Republic was not making continual progress in meeting the requirements described in section 506A(a)(1) of the Trade Act (19 U.S.C. 2466a(a)), as added by section 111(a) of the African Growth and Opportunity Act (the ''AGOA''). Thus, pursuant to section 506A(a)(3) of the Trade Act (19 U.S.C. 2466a(a)(3)), President Bush terminated the designation of the Central African Republic as a beneficiary sub-Saharan African country for purposes of section 506A of the Trade Act.

8. Section 506A(a)(1) of the Trade Act authorizes the President to designate a country listed in section 107 of the AGOA (19 U.S.C. 3706) as a ''beneficiary

sub-Saharan African country'' if the President determines that the country meets the eligibility requirements set forth in section 104 of the AGOA (19 U.S.C. 3703), as well as the eligibility criteria set forth in section 502 of the Trade Act (19 U.S.C. 2462).

9. Pursuant to section 506A(a)(1) of the Trade Act, based on actions that the Central African Republic has taken, I have determined that the Central African Republic meets the eligibility requirements set forth in section 104 of the AGOA and the eligibility criteria set forth in section 502 of the Trade Act, and I have decided to designate the Central African Republic as a beneficiary sub-Saharan African country.

10. On April 22, 1985, the United States and Israel entered into the Agreement on the Establishment of a Free Trade Area between the Government of the United States of America and the Government of Israel (the ''USIFTA''), which the Congress approved in section 3 of the United States-Israel Free Trade Area Implementation Act of 1985 (the ''USIFTA Act'') (19 U.S.C. 2112 note).

11. Section 4(b) of the USIFTA Act provides that, whenever the President determines that it is necessary to maintain the general level of reciprocal and mutually advantageous concessions with respect to Israel provided for by the USIFTA, the President may proclaim such withdrawal, suspension, modification, or continuance of any duty, or such continuance of existing duty-free or excise treatment, or such additional duties, as the President determines to be required or appropriate to carry out the USIFTA.

12. In order to maintain the general level of reciprocal and mutually advantageous concessions with respect to agricultural trade with Israel, on July 27, 2004, the United States entered into an agreement with Israel concerning certain aspects of trade in agricultural products during the period January 1, 2004, through December 31, 2008 (the ''2004 US-Israel Agreement'').

13. In Proclamation 7826 of October 4, 2004, consistent with the 2004 US-Israel Agreement, President Bush determined, pursuant to section 4(b) of the USIFTA Act, that, in order to maintain the general level of reciprocal and mutually advantageous concessions with respect to Israel provided for by the USIFTA, it was necessary to provide duty-free access into the United States through December 31, 2008, for specified quantities of certain agricultural products of Israel.

14. Each year from 2008 through 2015, the United States and Israel entered into agreements to extend the period that the 2004 US-Israel Agreement was in force for 1-year periods to allow additional time for the two governments to conclude an agreement to replace the 2004 US-Israel Agreement.

15. To carry out the extension agreements, the President in Proclamation 8334 of December 31, 2008; Proclamation 8467 of December 23, 2009; Proclamation 8618 of December 21, 2010; Proclamation 8770 of December 29, 2011; Proclamation 8921 of December 20, 2012; Proclamation 9072 of December 23, 2013; Proclamation 9223 of December 23, 2014; and Proclamation 9383 of December 21, 2015, modified the HTS to provide duty-free access into the United States for specified quantities of certain agricultural products of Israel, each time for an additional 1-year period.

16. On December 5, 2016, the United States entered into an agreement with Israel to extend the period that the 2004 US-Israel Agreement is in force through December 31, 2017, and to allow for further negotiations on an agreement to replace the 2004 US-Israel Agreement.

17. Pursuant to section 4(b) of the USIFTA Act, I have determined that it is necessary, in order to maintain the general level of reciprocal and mutually advantageous concessions with respect to Israel provided for by the USIFTA, to provide duty-free access into the United States through the close of December 31, 2017, for specified quantities of certain agricultural products of Israel.

18. Section 1206(a) of the Omnibus Trade and Competitiveness Act of 1988 (the ''1988 Act'') (19 U.S.C. 3006(a)) authorizes the President to proclaim modifications to the HTS based on the recommendations of the Commission under section 1205 of the 1988 Act (19 U.S.C. 3005) if he determines that the modifications are in conformity with United States obligations under the International Convention on the Harmonized Commodity Description and Coding System (Convention) and do not run counter to the national economic interest of the United States. In 2006 and 2011, the Commission recommended modifications to the HTS pursuant to section 1205 of the 1988 Act to conform the HTS to amendments made to the Convention. In Proclamation 8097 of December 29, 2006, and Proclamation 8771 of December 29, 2011, President Bush and I, respectively, modified the HTS pursuant to section 1206 of the 1988 Act to conform the HTS to the amendments to the Convention.

19. Proclamation 8332 of December 29, 2008, implemented the United States-Oman Free Trade Agreement (the ''USOFTA'') with respect to the United States and, pursuant to section 201 of the United States-Oman Free Trade Agreement Implementation Act (the ''USOFTA Act'') (19 U.S.C. 3805 note), the staged reductions in rates of duty that President Bush determined to be necessary or appropriate to carry out or apply articles 2.3, 2.5, 2.6, 3.2.8, and 3.2.9, and the schedule of duty reductions with respect to Oman set forth in Annex 2–B of the USOFTA.

20. In order to ensure the continuation of the staged reductions in rates of duty for originating goods from Oman in categories that were modified to conform to the Convention, President Bush and I proclaimed in Proclamation 8097 and Proclamation 8771, respectively, modifications to the HTS that we determined were necessary or appropriate to carry out the duty reductions proclaimed in Proclamation 8332.

21. The United States and Oman are parties to the Convention. Because the substance of changes to the Convention are reflected in slightly differing form in the national tariff schedules of the United States and Oman, the rules of origin set out in Annex 3–A and Annex 4–A of the USOFTA must be changed to ensure that the tariff and certain other treatment accorded under the USOFTA to originating goods will continue to be provided under the tariff categories that were modified in Proclamation 8097 and Proclamation 8771. The United States and Oman have agreed to make these changes.

22. Section 202 of the USOFTA Act (19 U.S.C. 3805 note) provides certain rules for determining whether a good is an originating good for the purposes of implementing preferential tariff treatment under the USOFTA. Section 202(j) of the USOFTA Act authorizes the President to proclaim the rules of origin set out in the USOFTA and any subordinate tariff categories necessary to carry out the USOFTA, subject to the exceptions stated in section 202(j)(2)(A) of the USOFTA Act.

23. I have determined that the modifications to the HTS proclaimed pursuant to section 202 of the USOFTA Act and section 1206(a) of the 1988 Act are necessary or appropriate to ensure the continuation of tariff and certain other treatment accorded originating goods under tariff categories modified in Proclamation 8097 and Proclamation 8771 and to carry out the duty reductions proclaimed in Proclamation 8332.

24. Section 604 of the Trade Act authorizes the President to embody in the HTS the substance of the relevant provisions of that Act, and of other Acts affecting import treatment, and actions thereunder, including removal, modification, continuance, or imposition of any rate of duty or other import restriction. Section 1206(c) of the 1988 Act (19 U.S.C. 3006(c)), as amended, provides that modifications proclaimed by the President may not take effect before the thirtieth day after the date on which the text of the proclamation is published in the *Federal Register*.

25. Proclamation 8894 of October 29, 2012, implemented the United States-Panama Trade Promotion Agreement (the ''USPTPA'') with respect to the

United States and, pursuant to section 201 of the United States-Panama Trade Promotion Agreement Implementation Act (the ''USPTPA Act'') (19 U.S.C. 3805 note), the staged reductions in duty that the President determined to be necessary or appropriate to carry out or apply articles 3.3, 3.5, 3.6, 3.26, 3.27, 3.28, and 3.29, and the schedule of duty reductions with respect to Panama set forth in Annex 3.3 of the USPTPA.

26. The United States and Panama are parties to the Convention. Because changes to the Convention are reflected in slight differences of form between the national tariff schedules of the United States and Panama, the rules of origin set out in Annex 4.1 of the USPTPA must be changed to ensure that the tariff and certain other treatment accorded under the USPTPA Act to originating goods will continue to be provided under the tariff categories that were proclaimed in Proclamation 8894. The United States and Panama have agreed to make these changes.

27. Section 202 of the USPTPA Act (19 U.S.C. 3805 note) provides certain rules for determining whether a good is an originating good for the purposes of implementing tariff treatment under the USPTPA. Section 202(o) of the USPTPA Act authorizes the President to proclaim the rules of origin set out in the USPTPA and any subordinate tariff categories necessary to carry out the USPTPA, subject to the exceptions stated in section 202(o) of the USPTPA Act.

28. I have determined that the modifications to the HTS proclaimed pursuant to section 202 of the USPTPA Act and section 1206(a) of the 1988 Act are necessary or appropriate to ensure the continuation of tariff and certain other treatment accorded originating goods under tariff categories modified in Proclamation 8097 and Proclamation 8771 and to carry out the duty reductions proclaimed in Proclamation 8894.

29. Section 604 of the Trade Act authorizes the President to embody in the HTS the substance of relevant provisions of that Act, or other Acts affecting import treatment, and of actions taken thereunder, including removal, modification, continuance, or imposition of any rate of duty or other import restriction. Section 1206(c) of the 1988 Act provides that modifications proclaimed by the President may not take effect before the thirtieth day after the date on which the text of the proclamation is published in the *Federal Register.*

30. Proclamation 7987 of February 28, 2006, implemented the Dominican Republic-Central America-United States Free Trade Agreement (the ''CAFTA-DR'') with respect to the United States and, pursuant to section 201 of the Dominican Republic-Central America-United States Free Trade Agreement Implementation Act (the ''CAFTA-DR Act'') (19 U.S.C. 4031), the staged reductions in duty that the President determined to be necessary or appropriate to carry out or apply articles 3.3, 3.5, 3.6, 3.21, 3.26, 3.27, and 3.28, and Annexes 3.3 (including the schedule of United States duty reductions with respect to originating goods), 3.27, and 3.28 of the CAFTA-DR.

31. The United States, Costa Rica, the Dominican Republic, El Salvador, Guatemala, Honduras, and Nicaragua (the ''CAFTA-DR countries'') are parties to the Convention. Because changes to the Convention are reflected in slight differences of form between the national tariff schedules of the United States and the other CAFTA-DR countries, Annexes 4.1, 3.25, and 3.29 of the CAFTA-DR must be changed to ensure that the tariff and certain other treatment accorded under the CAFTA-DR to originating goods will continue to be provided under the tariff categories that were proclaimed in Proclamation 7987. The United States and the other CAFTA-DR countries have agreed to make these changes.

32. Section 201 of the CAFTA-DR Act authorizes the President to proclaim such modifications or continuation of any duty, such continuation of duty-free or excise treatment, or such additional duties, as the President determines to be necessary or appropriate to carry out or apply articles 3.3, 3.5, 3.6,

3.21, 3.26, 3.27, and 3.28, and Annexes 3.3 (including the schedule of United States duty reductions with respect to originating goods), 3.27, and 3.28 of the CAFTA-DR.

33. I have determined that the modifications to the HTS proclaimed pursuant to section 201 of the CAFTA-DR Act and section 1206(a) of the 1988 Act are necessary or appropriate to ensure the continuation of tariff and certain other treatment accorded originating goods under tariff categories modified in Proclamation 8097 and Proclamation 8771 and to carry out the duty reductions proclaimed in Proclamation 7987.

34. Section 604 of the Trade Act authorizes the President to embody in the HTS the substance of relevant provisions of that Act, or other Acts affecting import treatment, and of actions taken thereunder, including removal, modification, continuance, or imposition of any rate of duty or other import restriction. Section 1206(c) of the 1988 Act provides that modifications proclaimed by the President may not take effect before the thirtieth day after the date on which the text of the proclamation is published in the *Federal Register.*

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States of America, including but not limited to section 915 of the TFTEA (19 U.S.C. 4454), section 506A(a)(1) of the Trade Act (19 U.S.C. 2466a(a)); section 4(b) of the USIFTA Act (19 U.S.C. 2112 note); section 301 of title 3, United States Code; section 1206(a) of the 1988 Act (19 U.S.C. 3006(a)); section 202 of the USOFTA Act (19 U.S.C. 3805 note); section 202 of the USPTPA Act (19 U.S.C. 3805 note); section 201 of the CAFTA-DR Act (19 U.S.C. 4031); and section 604 of the Trade Act (19 U.S.C. 2483), do proclaim that:

(1) In order to provide for the preferential treatment provided for in section 915 of the TFTEA, the HTS is modified as provided in Annex I to this proclamation. The modifications to the HTS set forth in Annex I shall continue in effect through December 31, 2025.

(2) The Central African Republic is designated as a beneficiary sub-Saharan African country.

(3) In order to reflect this designation in the HTS, general note 16(a) and U.S. note 1 to subchapter XIX of chapter 98 to the HTS are each modified by inserting in alphabetical sequence in the list of beneficiary sub-Saharan African countries ''Central African Republic.'' Further, note 2(d) to subchapter XIX of chapter 98 is modified by inserting in alphabetical sequence in the list of lesser developed beneficiary sub-Saharan African countries ''Central African Republic.''

(4) In order to implement U.S. tariff commitments under the 2004 US-Israel Agreement through December 31, 2017, the HTS is modified as provided in Annex II to this proclamation.

(5) The modifications to the HTS set forth in Annex II to this proclamation shall be effective with respect to eligible agricultural products of Israel that are entered, or withdrawn from warehouse for consumption, on or after January 1, 2017.

(6) The provisions of subchapter VII of chapter 99 of the HTS, as modified by Annex II to this proclamation, shall continue in effect through December 31, 2017.

(7) In order to reflect in the HTS the modifications to the rules of origin under the USOFTA, general note 31 to the HTS is modified as provided in Annex III to this proclamation.

(8) The modifications and technical rectifications to the HTS set forth in Annex III to this proclamation shall be effective with respect to goods entered, or withdrawn from warehouse for consumption, on or after the later of (i) February 1, 2017, or (ii) the thirtieth day after the date of publication of this proclamation in the *Federal Register.*

(9) In order to provide generally for the modifications in the rules for determining whether goods imported into the customs territory of the United States are eligible for preferential tariff treatment under Annex 4.1 of the USPTPA, to provide preferential tariff treatment for certain other goods under the USPTPA, and to make technical and conforming changes in the general notes to the HTS, the HTS is modified as set forth in Annex IV to this proclamation.

(10) The modifications to the HTS made by paragraph (9) of this proclamation shall enter into effect on the date, as announced by the United States Trade Representative in the *Federal Register,* that the conditions set forth in the Agreement have been fulfilled, and shall be effective with respect to goods entered, or withdrawn from warehouse for consumption, on or after that date.

(11) In order to provide generally for the modifications in the rules for determining whether goods imported into the customs territory of the United States are eligible for preferential tariff treatment under the CAFTA-DR, to provide preferential tariff treatment for certain other goods under the CAFTA-DR, and to make technical and conforming changes in the general notes to the HTS, the HTS is modified as set forth in Annex V to this proclamation.

(12) The modifications to the HTS made by paragraph (11) of this proclamation shall enter into effect on the date, as announced by the United States Trade Representative in the *Federal Register,* that the applicable conditions set forth in the CAFTA-DR have been fulfilled, and shall be effective with respect to goods entered, or withdrawn from warehouse for consumption, on or after that date.

(13) Any provisions of previous proclamations and Executive Orders that are inconsistent with the actions taken in this proclamation are superseded to the extent of such inconsistency.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of December, in the year of our Lord two thousand sixteen, and of the Independence of the United States of America the two hundred and forty-first.

Billing code 3295–F7–P

ANNEX I

MODIFICATIONS TO THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES, AS REQUIRED BY THE TRADE FACILITATION AND TRADE ENFORCEMENT ACT

Effective with respect to goods the product of Nepal that are entered, or withdrawn from warehouse for consumption, on or after December 30, 2016 and through December 31, 2025, the Harmonized Tariff Schedule of the United States (HTS) is hereby modified as follows:

1. General note 4 is modified by inserting at the end thereof the following new subdivision (e):

"(e) Notwithstanding the provisions of subdivision (c) of this note, articles provided for in a provision for which a rate of duty of "Free" appears in the "Special" subcolumn followed by the symbol "NP" in parentheses are those designated by the President to be eligible articles for purposes of section 915 of the Trade Facilitation and Trade Enforcement Act of 2015. An article described in this subdivision is eligible for this treatment if–

(i)(1) the article is the growth, product or manufacture of Nepal; and

(2) in the case of a textile or apparel article, Nepal is the country of origin of the article, as determined under section 102.21 of title 19, Code of Federal Regulations (as in effect on February 24, 2016),

(ii) the article is imported directly from Nepal into the customs territory of the United States; and

(iii) the sum of the cost or value of the materials produced in, and the direct costs of processing operations performed in, Nepal or the customs territory of the United States is not less than 35 percent of the appraised value of the article at the time it is entered.

An article shall not be treated as the growth, product or manufacture of Nepal for the purposes of this subdivision by virtue of having merely undergone (A) simple combining or packaging operations, or (B) mere dilution with water or mere dilution with another substance that does not materially alter the characteristics of the article. For purposes of subdivision (iii) above, the cost or value of materials produced in, and the direct costs of processing operations performed in, the customs territory of the United States and attributed to the 35 percent requirement under such subdivision may not exceed 15 percent of the appraised value of the article at the time it is entered."

2. The Rates of Duty 1-Special subcolumn for each of the subheadings enumerated in the table below is modified by inserting the symbol "NP," in the parenthetical expression following the "Free" rate of duty in such subcolumn for each such subheading:

4202.11.00	4202.32.80	5701.10.90	6216.00.80
4202.12.21	4202.32.91	5702.31.20	6217.10.85
4202.12.29	4202.32.93	5702.49.20	6301.90.00
4202.12.40	4202.32.99	5702.50.40	6308.00.00
4202.12.60	4202.91.10	5702.50.59	6504.00.90
4202.12.81	4202.91.90	5702.91.30	6505.00.08
4202.12.89	4202.92.08	5702.91.40	6505.00.15
4202.21.60	4202.92.15	5702.92.90	6505.00.20
4202.21.90	4202.92.20	5702.99.15	6505.00.25
4202.22.15	4202.92.31	5703.10.20	6505.00.30
4202.22.40	4202.92.33	5703.10.80	6505.00.40
4202.22.45	4202.92.39	5703.90.00	6506.00.50
4202.22.60	4202.92.45	5705.00.20	6506.00.60
4202.22.70	4202.92.60	6117.10.60	6505.00.80
4202.22.81	4202.92.91	6117.80.85	6505.00.90
4202.22.89	4202.92.93	6214.10.10	6506.99.30
4202.29.50	4202.92.94	6214.10.20	6506.99.60
4202.29.90	4202.92.97	6214.20.00	
4202.31.60	4202.99.90	6214.40.00	
4202.32.40	4203.29.50	6214.90.00	

ANNEX II

TEMPORARY EXTENSION OF CERTAIN PROVISIONS OF THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

Effective with respect to eligible agricultural products of Israel which are entered, or withdrawn from warehouse for consumption, on or after January 1, 2017, and before the close of December 31, 2017, subchapter VIII of chapter 99 of the Harmonized Tariff Schedule of the United States is hereby modified as follows:

1. U.S. note 1 to such subchapter is modified by striking "December 31, 2016," and by inserting in lieu thereof "December 31, 2017".

2. U.S. note 3 to such subchapter is modified by adding at the end of the "Applicable time period" column in the table "Calendar year 2017" and by adding at the end of the "Quantity (kg)" column opposite such year the quantity "466,000".

3. U.S. note 4 to such subchapter is modified by adding at the end of the "Applicable time period" column in the table "Calendar year 2017" and by adding at the end of the "Quantity (kg)" column opposite such year the quantity "1,304,000".

4. U.S. note 5 to such subchapter is modified by adding at the end of the "Applicable time period" column in the table "Calendar year 2017" and by adding at the end of the "Quantity (kg)" column opposite such year the quantity "1,534,000".

5. U.S. note 6 to such subchapter is modified by adding at the end of the "Applicable time period" column in the table "Calendar year 2017" and by adding at the end of the "Quantity (kg)" column opposite such year the quantity "131,000".

6. U.S. note 7 to such subchapter is modified by adding at the end of the "Applicable time period" column in the table "Calendar year 2017" and by adding at the end of the "Quantity (kg)" column opposite such year the quantity "707,000".

ANNEX III

MODIFICATIONS TO THE RULES OF ORIGIN FOR THE U.S.-OMAN FREE TRADE AGREEMENT, AS REFLECTED IN THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

Effective with respect to goods of Oman, under the terms of general note 31 of the Harmonized Tariff Schedule of the United States (HTS), that are entered, or withdrawn from warehouse for consumption, on or after February 1, 2017, or the thirtieth day after the date of publication of this proclamation in the Federal Register, general note 31 to the HTS is modified as follows:

1. Tariff Classification Rule (TCR) 2 to chapter 54 is modified by deleting "5402.43.10" and replacing in lieu thereof ""5402.47.10".

2. TCR 1 to chapter 61 is modified by deleting "6101.10" and replacing in lieu thereof "6101.20".

3. TCR 2 to chapter 61 is deleted and the following new TCR is inserted in lieu thereof:

"2. (A) A change to goods of wool or fine animal hair of subheading 6101.90 from any other chapter, except from heading 5106 through 5113, 5204 through 5212, 5307 through 5308 or 5310 through 5311, chapter 54 or headings 5508 through 5516 or 6001 through 6006, provided that:

(i) the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Oman or the United States, or both; and

(ii) any visible lining material used in the apparel article satisfies the requirements of chapter rule 1 to chapter 61.

(B) A change to any other good of subheading 6101.90 from any other chapter, except from heading 5106 through 5113, 5204 through 5212, 5307 through 5308 or 5310 through 5311, chapter 54 or heading 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Oman or the United States, or both."

4. TCRs 5 through 7, inclusive, to chapter 61 are deleted and the following new TCRs are inserted in lieu thereof:

"5. A change to tariff items 6103.10.70 or 6103.10.90 from any other chapter, except from headings 5106 through 5113, 5204 through 5212, 5307 through 5308 or 5310 through 5311, chapter 54 or headings 5508 through

5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn and otherwise assembled in the territory of Oman or the United States, or both.

6. A change to subheading 6103.10 from any other chapter, except from headings 5106 through 5113, 5204 through 5212, 5307 through 5308 or 5310 through 5311, chapter 54 or headings 5508 through 5516 or 6001 through 6006, provided that:

(A) the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Oman or the United States, or both; and

(B) any visible lining material used in the apparel article satisfies the requirements of chapter rule 1 to chapter 61."

5. TCR 8 to chapter 61 is modified by deleting "6103.21" and replacing in lieu thereof "6103.22".

6. TCR 13 to chapter 61 is modified by deleting "subheadings 6104.11 through 6104.13" and replacing in lieu thereof "subheading 6104.13".

7. TCR 16 to chapter 61 is modified by deleting "6104.21" and replacing in lieu thereof "6104.22".

8. TCR 12 to chapter 62 is modified by deleting "6203.21" and replacing in lieu thereof "6203.22".

9. TCR 29 to chapter 62 is deleted.

10. TCR 35 to chapter 62 is modified by deleting "6211.31" and replacing in lieu thereof "6211.32".

11. TCR 2 to chapter 63 is modified by deleting "5402.43.10" and replacing in lieu thereof "5402.47.10".

12. The following new heading rule and TCRs to chapter 96 are inserted in numerical sequence:

"**Heading Rule 1**: For purposes of determining the origin of tariff item 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79, or 9619.00.90, the rule applicable to that good shall only apply to the component that determines the tariff classification of the good and such component must satisfy the tariff change requirements set out in the rule for that good.

1. A change to tariff item 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, or 9619.00.68, from any other chapter, except from headings 5106 through 5113, 5204 through 5212, 5307 through 5308 or 5310 through 5311, chapter 54, or headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Oman or of the United States, or both.

2. A change to tariff items 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79, or 9619.00.90, from any other chapter, except from headings 5106 through 5113, 5204 through 5212, 5307 through 5308, or 5310 through 5311, chapter 54, or headings 5508 through 5516, 5801 through 5802, or 6001 through 6006, provided that the good is both cut and sewn or otherwise assembled in the territory of Oman or of the United States, or both.

3. A change to tariff items 9619.00.21 or 9619.00.25 from any other chapter, except from heading 5106 through 5113, 5204 through 5212, 5307 through 5308, or 5310 through 5311, or chapter 54 through 55."

ANNEX IV

MODIFICATIONS TO THE RULES OF ORIGIN FOR THE U.S.-PANAMA TRADE PROMOTION AGREEMENT, AS REFLECTED IN THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

Effective with respect to goods of Panama, under the terms of general note 35 of the Harmonized Tariff Schedule of the United States (HTS), that are entered, or withdrawn from warehouse for consumption, on or after the date announced by the United States Trade Representative and published in the Federal Register, general note 35 to the HTS is modified as follows:

1. Tariff classification rule (TCR) 1 to chapter 3 is modified by deleting "0307" and inserting in lieu thereof "0308".

2. TCR 2 to chapter 15 is deleted and the following new TCR is inserted in lieu thereof:

"2. A change to heading 1511 from any other chapter, except from palm nuts or kernels of subheading 1207.10."

3. TCR 9 to chapter 20 is modified by deleting "2009.80" at each instance and inserting in lieu thereof "2009.89".

4. TCR 12 to chapter 28 is deleted.

5. TCR 16 to chapter 28 is modified by deleting "2851" and inserting in lieu thereof "2853".

6. TCR 5 to chapter 29 is modified by deleting "2918.90" and inserting in lieu thereof "2918.99".

7. TCR 13 to chapter 29 is deleted and the following new TCRs are inserted in lieu thereof:

"13. A change to subheadings 2936.21 through 2936.29 from any other subheading.

13A. (A) A change to unmixed provitamins of subheading 2936.90 from any other good of subheading 2936.90 or from any other subheading; or

(B) A change to any other good of subheading 2936.90 from unmixed provitamins of subheading 2936.90 or from any other subheading.

13B. A change to subheadings 2937.11 through 2939.99 from any other subheading."

8. TCR 1 to chapter 30 is modified by deleting "3001.10" and inserting in lieu thereof "3001.20".

9. TCR 3 to chapter 30 is modified by deleting "3006.80" and inserting in lieu thereof "3006.92".

10. TCR 1 to chapter 33 is modified by deleting "3301.11" and inserting in lieu thereof "3301.12".

11. TCR 5 to chapter 34 is modified by deleting "3404.10" and inserting in lieu thereof "3404.20".

12. TCR 2 to chapter 38 is deleted and the following new TCR is inserted in lieu thereof:

"2. A change to subheadings 3808.50 through 3808.99 from any other subheading provided that not less than 50 percent by weight of the total active ingredient or ingredients is originating."

13. New TCR 5 to chapter 38 is inserted in numerical sequence:

"5. A change to heading 3826 from any other heading."

14. TCR 4 to chapter 39 is deleted and the following new TCR is inserted in lieu thereof:

"4. (A) A change to subheading 3920.10 through 3920.99 from any other subheading; or

(B) A change to vulcanized fiber of subheading 3920.79 from any other good of subheading 3920.79 or from any other subheading; or

(C) No change in tariff classification is required, provided that there is a regional value content of not less than:

(1) 25 percent under the build-up method, or

(2) 30 percent under the build-down method."

15. TCR 17 to chapter 42 is modified by deleting "4204" and inserting in lieu thereof "4205".

16. TCR 7 to chapter 48 is modified by deleting "4818.40" and inserting in lieu thereof "4818.50".

17. TCR 2 to chapter 54 is modified by deleting "5402.43.10" and inserting in lieu thereof "5402.47.10".

18. TCR 1 to chapter 61 is modified by deleting "6101.10" and inserting in lieu thereof "6101.20".

19. TCR 2 to chapter 61 is deleted and the following new TCR is inserted in lieu thereof:

"2. A change to goods of wool or fine animal hair of subheading 6101.90 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that:

(A) the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Panama or the United States, or both, and

(B) any visible lining material contained in the apparel article satisfies the requirements of chapter rule 1 for chapter 61; or

2A. A change to any other good of subheading 6101.90 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Panama or the United States, or both."

20. TCR 6 to chapter 61 is modified by deleting "6103.19.60 or 6103.19.90" and inserting in lieu thereof "6103.10.70 or 6103.10.90".

21. TCR 7 to chapter 61 is modified by deleting "6103.19" and inserting in lieu thereof "6103.10".

22. TCR 8 to chapter 61 is modified by deleting "6103.21" and inserting in lieu thereof "6103.22".

23. TCR 13 to chapter 61 is modified by deleting "subheadings 6104.11 through 6104.13" and inserting in lieu thereof "subheading 6104.13".

24. TCR 16 to chapter 61 is modified by deleting "6104.21" and inserting in lieu thereof "6104.22".

25. TCR 12 to chapter 62 is modified by deleting "6203.21" and inserting in lieu thereof "6203.22".

26. TCR 33 to chapter 62 is deleted and the following new TCR is inserted in lieu thereof:

"33. A change to pajamas and nightwear of subheadings 6207.21 or 6207.22, tariff items 6207.91.3010 or 6207.99.8510, subheadings 6208.21 or 6208.22 or tariff items 6208.91.30, 6208.92.00 or 6208.99.20 from any other chapter, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Panama or of the United States, or both."

27. TCR 38 to chapter 62 is modified by deleting "6211.31" and inserting in lieu thereof "6211.32".

28. TCR 1 to chapter 64 is deleted and the following new TCR is inserted in lieu thereof:

"1. A change to subheading 6401.10 or tariff items 6401.92.90, 6401.99.10, 6401.99.30, 6401.99.60, 6401.99.90, 6402.30.70, 6402.91.10, 6402.91.20, 6402.91.26, 6402.91.50, 6402.91.80, 6402.91.90, 6402.99.08, 6402.99.16, 6402.99.19, 6402.99.33, 6402.99.80, 6402.99.90, 6404.11.90 or 6404.19.20 from any other heading outside headings 6401 through 6405, except from subheading 6406.10, provided that there is a regional value content of not less than 55 percent under the build-up method."

29. TCR 2 to chapter 65 is deleted and the following new TCR is inserted in lieu thereof:

"2. A change to headings 6504 through 6506 from any other heading, except from headings 6504 through 6507."

30. TCRs 2 through 4, inclusive, to chapter 68 are deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to subheadings 6812.80 through 6812.91from any other subheading.

3. A change to subheadings 6812.92 through 6812.93 from any other subheading outside that group.

4. A change to subheading 6812.99 from any other heading."

31. TCR 11 to chapter 70 is deleted and the following new TCR is inserted in lieu thereof:

"11. A change to headings 7011 through 7018 from any other heading outside that group, except from glass inners for vacuum flasks or other vacuum vessels of heading 7020, or headings 7007 through 7008."

32. TCR 13 to chapter 73 is modified by deleting "7321.83" at each instance and inserting in lieu thereof "7321.89".

33. TCR 2 to chapter 78 is deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to heading 7804 from any other heading.

3. (A) A change to lead bars, rods, profiles or wire of heading 7806 from any other good of heading 7806 or any other heading; or

(B) A change to lead tubes, pipes or tube or pipe fittings of heading 7806 from any other good of heading 7806 or any other heading; or

(C) A change to any other good of heading 7806 from lead bars, rods, profiles, or wire of heading 7806, or from lead tubes, pipes or tube or pipe fittings of heading 7806 or any other heading."

34. TCR 4 to chapter 79 is modified by deleting "7907" and inserting in lieu thereof "7905".

35. The following new TCR for chapter 79 is inserted immediately below TCR 4:

"5. (A) A change to zinc tubes, pipes or tube or pipe fittings of heading 7907 from any other good of heading 7907 or any other heading; or

(B) A change to any other good of heading 7907 from zinc tubes, pipes or tube or pipe fittings of heading 7907 or any other heading."

36. TCRs 2 through 4, inclusive, to chapter 80 are deleted and the following new TCRS are inserted in lieu thereof:

"2. A change to heading 8003 from any other heading.

3. (A) A change to tin plates, sheets or strip, of a thickness exceeding 0.2 mm, of heading 8007 from any other good of heading 8007 or any other heading; or

(B) A change to tin foil, of a thickness not exceeding 0.2 mm, tin powders or flakes of heading 8007 from any other good of heading 8007, except from tin plates, sheets or strip, of a thickness exceeding 0.2 mm of heading 8007, or any other heading; or

(C) A change to tin tubes, pipes and tube or pipe fittings of heading

8007 from any other good of heading 8007 or any other heading; or

(D) A change to any other good of heading 8007 from tin plates, sheets or strip, of thickness exceeding 0.2 mm, tin foil of thickness not exceeding 0.2 mm, tin powders or flakes, tin tubes, pipes or tube or pipe fittings of heading 8007 or any other heading."

37. TCR 2 to chapter 81 is deleted.

38. TCR 3 to chapter 81 is deleted and the following new TCR is inserted in lieu thereof:

"3. A change to subheading 8101.96 from any other subheading, except from bars and rods (other than those obtained simply by sintering), profiles, plates, sheets, strip and foil of subheading 8101.99."

39. TCR 5 to chapter 81 is deleted and the following new TCR is inserted in lieu thereof:

"5. (A) A change to bars, rods (other than those obtained simply by sintering), profiles, plates, sheets, strip or foil of subheading 8101.99 from any other good of subheading 8101.99 or any other subheading; or

(B) A change to any other good of subheading 8101.99 from bars, rods (other than those obtained simply by sintering), profiles, plates, sheets, strip or foil of subheading 8101.99 or any other subheading."

40. TCRs 29 and 30 to chapter 81 are deleted and the following new TCRs are inserted in lieu thereof:

"29. (A) A change to unwrought germanium or vanadium, germanium or vanadium waste, scrap or powders of subheading 8112.92 from any other chapter; or

(B) No change in tariff classification is required for articles of unwrought germanium or vanadium, germanium or vanadium waste, scrap or powders of subheading 8112.92, provided that there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method; or

(C) A change to other goods of subheading 8112.92 from any other chapter.

30. (A) A change to articles of vanadium or germanium of subheading 8112.99 from any other chapter; or

(B) No change in tariff classification is required for articles of germanium or vanadium, provided that there is a regional value content of not less than

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method; or

(C) A change to other goods of subheading 8112.99 from articles of germanium or vanadium of subheading 8112.99 or from any other subheading."

41. TCR 61 to chapter 84 is deleted and the following new TCR is inserted in lieu thereof:

"61. A change to subheading 8442.30 from any other subheading."

42. TCRs 63 through 65, inclusive, to chapter 84 are deleted and the following new TCRs are inserted in lieu thereof:

"63. (A) A change to subheadings 8443.11 through 8443.39 from any other subheading outside that group, except from subheadings 8443.91 through 8443.99; or

(B) A change to subheadings 8443.11 through 8443.39 from subheading 8443.91 through 8443.99, provided that there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method.

64. (A) A change to machines for uses ancillary to printing of subheading 8443.91 from any other good of subheading 8443.91 or from any other subheading except from subheadings 8443.11 through 8443.39; or

(B) A change to any other good of subheading 8443.91 from any other heading.

65. (A) A change to subheading 8443.99 from any other heading; or

(B) No change in tariff classification required, provided that there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method."

43. TCR 76 to chapter 84 is deleted and the following new TCR is inserted in lieu thereof:

"76. A change to subheading 8452.30 from any other subheading."

44. TCRs 91 and 92 to chapter 84 are deleted and the following new TCR is inserted in lieu thereof:

"91. A change to heading 8469 from any other heading."

45. TCR 118 to chapter 84 is deleted and the following new TCR is inserted in lieu thereof:

"118. (A) A change to subheadings 8486.10 through 8486.40 from any other subheading outside that group; or

(B) No change in tariff classification required provided there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method."

46. The following new TCRs to chapter 84 are inserted in numerical sequence:

"119. (A) A change to subheading 8486.90 from any other heading; or

(B) No change of tariff classification required provided there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method.

120. A change to heading 8487 from any other heading."

47. TCR 8 to chapter 85 is modified by deleting "8505.30" and inserting in lieu thereof "8505.20".

48. TCR 9 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"9. (A) A change to electromagnetic lifting heads of subheading 8505.90 from any other subheading, or from any other good of subheading 8505.90; or

(B) A change to any other good of subheading 8505.90 from any other heading."

49. TCR 16 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"16. (A) A change to subheadings 8508.11 through 8508.60 from any other heading; or

(B) A change to subheadings 8508.11 through 8508.60 from any other subheading, whether or not there is also a change from any other heading, provided there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method.

16A. A change to subheading 8508.70 from any other heading.

16B. (A) A change to subheadings 8509.40 through 8509.80 from any other heading; or

(B) A change to subheadings 8509.40 through 8509.80 from any other subheading; whether or not there is also a change from any other heading, provided there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method."

50. TCR 38 to chapter 85 is modified by deleting "8517.80" and inserting in lieu thereof "8517.69".

51. TCR 39 to chapter 85 is modified by deleting "8517.90" and inserting in lieu thereof "8517.70".

52. TCR 44 to chapter 85 is modified by deleting "8519.10 through 8519.40" and inserting in lieu thereof "8519.20 through 8519.89".

53. TCRs 45 through 56, inclusive, to chapter 85 are deleted, and the following new TCRs are inserted in lieu thereof:

"45. (A) A change to subheadings 8521.10 through 8523.80 from any other subheading; or

(B) A change to recorded media of subheadings 8523.21 through 8523.80 from unrecorded media of subheadings 8523.21 through 8523.80."

46. A change to subheading 8525.50 from any other subheading, except from subheading 8525.60.

47. A change to subheading 8525.60 from any other subheading, except from subheading 8525.50.

48. A change to subheading 8525.80 from any other subheading.

49. A change to subheadings 8526.10 through 8527.99 from any other subheading.

50. A change to subheading 8528.41 from any other subheading.

51. (A) A change to color monitors of subheading 8528.49 from any other good of subheading 8528.49 or from any other subheading, except from subheadings 7011.20, 8540.11 or 8540.91; or

(B) A change to any other good of subheading 8528.49 from any other subheading.

52. A change to subheadings 8528.51 through 8528.71 from any other subheading.

53. A change to subheading 8528.72 from any other subheading, except from subheadings 7011.20, 8528.73, 8540.11 or 8540.91.

54. A change to subheading 8528.73 from any other subheading."

54. TCR 79 to chapter 85 is deleted, and the following new TCR is inserted in lieu thereof:

"79. A change to subheading 8543.10 from any other subheading except from ion implanters for doping semiconductor materials of subheading 8486.20."

55. TCR 81 to chapter 85 is deleted, and the following new TCR is inserted in lieu thereof:

"81. A change to subheading 8543.70 from any other subheading."

56. TCR 87 to chapter 85 is modified by deleting "8544.41" and inserting in lieu thereof "8544.42".

57. TCR 88 to chapter 85 is deleted.

58. TCR 1 to chapter 88 is deleted, and the following new TCRs are inserted in lieu thereof:

"1. (A) A change to gliders or hang gliders of heading 8801 from any other good of heading 8801 or any other heading; or

(B) A change to any other good of heading 88.01 from gliders or hang gliders of heading 8801 or any other heading.

1A. A change to subheading 8802.11 through 8803.90 from any other subheading."

59. TCR 13 to chapter 90 is modified by deleting "9007.11" and inserting in lieu thereof "9007.10".

60. TCR 15 to chapter 90 is modified by deleting "subheadings 9008.10 through 9008.40" and inserting in lieu thereof "subheading 9008.50".

61. TCRs 17 through 21, inclusive, to chapter 90 are deleted.

62. TCR 2 to chapter 91 is deleted.

63. TCRs 1 through 3, inclusive, to chapter 95 are deleted and the following new TCRs are inserted in lieu thereof:

1. A change to heading 9503 from any other heading.

2. (A) A change to headings 9504 through 9508 from any other chapter; or

(B) A change to subheading 9506.31 from subheading 9506.39, whether or not there is also a change from any other chapter, provided that there is a regional value content of not less than:

(1) 35 percent under the build-up method, or

(2) 45 percent under the build-down method."

64. TCR 8 to chapter 96 is modified by deleting "9608.31" and inserting in lieu thereof "9608.30".

65. TCRs 18 and 19 to chapter 96 are deleted, and the following new TCR is inserted in lieu thereof:

"18. A change to heading 9614 from any other heading."

66. The following new heading rules are inserted to chapter 96 immediately below TCR 24 to such chapter:

"**Heading rule 1:** For the purposes of determining the origin of a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90, the rule applicable to that good shall only apply to the component that determines the tariff classification of the good and such component must satisfy the change of tariff classification requirements set out in the rule for that good.

Heading rule 2: Notwithstanding heading rule 1 to this chapter, a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90 containing fabrics of subheading 5806.20 or heading 6002 shall be considered originating only if such fabrics are both formed from yarn and finished in the territory of Panama or of the United States, or both.

Heading rule 3: Notwithstanding heading rule 1 to this chapter, a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90 containing sewing thread of headings 5204, 5401 or 5508 shall be considered originating only if such sewing thread is both formed and finished in the territory of Panama or of the United States, or both."

67. The following new TCR to chapter 96 is inserted in numerical sequence:

"25. (A) A change to sanitary towels (pads) and tampons and similar articles of textile wadding of heading 9619 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311 or chapter 54 through 55; or

(B) A change to a tariff item 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, or 9619.00.68 from any other chapter, except from heading 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516

or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Panama or of the United States, or both; or

(C) A change to a tariff item 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79, or 9619.00.90 from any other chapter, except from heading 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516, 5801 through 5802 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of Panama or of the United States, or both; or

(D) A change to any other good of heading 9619 from any other heading."

ANNEX V

MODIFICATIONS TO THE RULES OF ORIGIN FOR THE UNITED STATES – CENTRAL AMERICAN-DOMINICAN REPUBLIC FREE TRADE AGREEMENT, AS REFLECTED IN THE HARMONIZED TARIFF SCHEDULE OF THE UNITED STATES

Effective with respect to goods of a party to the Agreement specified in general note 29(a) to the tariff schedule that are entered, or withdrawn from warehouse for consumption, on or after the date announced by the United States Trade Representative and published in the Federal Register, general note 29(n) to the Harmonized Tariff Schedule of the United States is modified as provided herein:

1. TCR 1 to chapter 3 is deleted and the following new TCRs are inserted in lieu thereof:

"1. A change to headings 0301 through 0305 from any other chapter.

2. (A) A change to smoked goods of headings 0306 through 0308 from goods that are not smoked of headings 0306 through 0308; or

(B) A change to any other good of headings 0306 through 0308 from any other chapter."

2. TCR 4 to chapter 9 is deleted and the following new TCR is inserted in lieu thereof:

"4. (A) A change to crushed, ground, or powdered spices put up for retail sale of subheadings 0904.11 through 0910.99 from spices that are not crushed, ground, or powdered of subheadings 0904.11 through 0910.99, or from any other subheading, except from subheadings 0910.11 through 0910.12; or

(B) A change to mixtures of spices or any good of subheading 0904.11 through 0910.99 other than crushed, ground, or powdered spices put up for retail sale from any other subheading, except from subheadings 0910.11 through 0910.12."

3. TCR 8 to chapter 20 is modified by deleting "2005.90" and inserting in lieu thereof "2005.99".

4. TCR 21 to chapter 20 is deleted and the following new TCR is inserted in lieu thereof:

"21. A change to subheadings 2008.93 through 2008.97 from any other chapter, except that cranberries or a mixture that has been prepared by packing (including canning) in water, brine, or natural juices (including processing incidental to packing) shall be treated as originating only if the

fresh good was wholly obtained or produced entirely in the territory of one or more of the parties to the Agreement."

5. TCR 25 to chapter 20 is modified by deleting "2009.80" at each instance and inserting in lieu thereof "2009.89".

6. TCR 16 to chapter 28 is modified by deleting "2811.23" and inserting in lieu thereof "2811.29".

7. TCR 36 to chapter 28 is modified by deleting "2826.11" and inserting in lieu thereof "2826.12".

8. TCR 46 to chapter 28 is deleted.

9. TCR 51 to chapter 28 is deleted.

10. TCR 54 to chapter 28 is deleted and the following new TCR is inserted in lieu thereof:

"54. (A) A change to commercial ammonium carbonate or other ammonium carbonates of subheading 2836.99 from any other subheading; or

(B) A change to bismuth carbonate of subheading 2836.99 from any other subheading, except from subheading 2617.90; or

(C) A change to lead carbonates of subheading 2836.99 from any other subheading, except from heading 2607; or

(D) A change to other goods of subheading 2836.99 from any other subheading, provided that the good classified in subheading 2836.99 results from a chemical reaction."

11. TCR 56 to chapter 28 is deleted.

12. TCR 58 to chapter 28 is deleted and the following new TCR is inserted in lieu thereof:

"58. A change to subheading 2839.90 from any other subheading."

13. TCRs 61 and 62 to chapter 28 are deleted and the following new TCRs are inserted in lieu thereof:

"61. A change to subheading 2841.30 from any other subheading.

62. (A) A change to chromates of zinc or lead of subheading 2841.50 from any other subheading; or

(B) A change to potassium dichromate of subheading 2841.50 from any other good of subheading 2841.50 or any other subheading; or

(C) A change to other chromates, dichromates or peroxochromates of subheading 2841.50 from potassium dichromate of subheading 2841.50 or any other subheading, except from heading 2610."

14. TCR 66 to chapter 28 is deleted and the following new TCR is inserted in lieu thereof:

"66. (A) A change to aluminates of subheading 2841.90 from any other subheading; or

(B) A change to any other good of subheading 2841.90 from aluminates of subheading 2841.90 or from any other subheading, provided that the good classified in subheading 2841.90 results from a chemical reaction."

15. TCR 68 to chapter 28 is deleted and the following new TCR is inserted in lieu thereof:

"68. (A) A change to fulminates, cyanates or thiocyanates of subheading 2842.90 from any other subheading; or

(B) A change to any other good of subheading 2842.90 from any other subheading, provided that the good classified in subheading 2842.90 results from a chemical reaction."

16. TCR 80 to chapter 28 is deleted and the following new TCR is inserted in lieu thereof:

"80. A change to heading 2850 from any other heading."

17. New TCRs 81 and 82 to chapter 28 are inserted in numerical sequence:

"81. A change to heading 2852 from any other heading.

82. A change to heading 2853 from any other heading."

18. TCR 10 to chapter 29 is modified by deleting "2903.30" and inserting in lieu thereof "2903.39".

19. TCR 11 to chapter 29 is modified by deleting "2903.41 through 2903.49" and inserting in lieu thereof "2903.71 through 2903.79".

20. TCR 12 to chapter 29 is modified by deleting "2903.51" and inserting in lieu thereof "2903.81".

21. TCR 20 to chapter 29 is deleted.

22. TCR 21 to chapter 29 is deleted and the following new TCR is inserted in lieu thereof:

"21. (A) A change to terpineols of subheading 2906.19 from any other good, except from heading 3805; or

(B) A change to any other good of subheading 2906.19 from pine oils of subheading 3805.90 or any other subheading, except from subheading 3301.90 or any other goods of subheading 3805.90."

23. TCR 34 to chapter 29 is modified by deleting "2912.13" and inserting in lieu thereof "2912.12".

24. TCR 39 to chapter 29 is deleted and the following new TCR is inserted in lieu thereof:

"31. A change to subheading 2914.22 from any other subheading."

25. TCR 41 to chapter 29 is deleted and the following new TCR is inserted in lieu thereof:

"41. (A) A change to camphor of subheading 2914.29 from any other subheading; or

(B) A change to any other good of subheading 2914.29 from any other subheading, except from subheading 3301.90 or 3805.90."

26. TCR 44 to chapter 29 is modified by deleting "2915.35" and inserting in lieu thereof "2915.33".

27. TCR 45 to chapter 29 is deleted and the following new TCRs are inserted in lieu thereof:

"45. A change to subheading 2915.36 from any other subheading, except from subheading 3301.90.

45A. (A) A change to isobutyl acetate or 2-ethoxyethyl acetate of subheading 2915.39 from any other subheading; or

(B) A change to any other good of subheading 2915.39 from any other subheading except from subheading 3301.10."

28. TCR 53 to chapter 29 is modified by deleting "subheading 2918.90" and inserting in lieu thereof "subheadings 2918.91 through 2918.99".

29. TCR 55 to chapter 29 is modified by deleting "2920.10" and inserting in lieu thereof "2920.11".

30. TCR 62 to chapter 29 is modified by deleting "2936.10" and inserting in lieu thereof "2936.21".

31. TCR 63 to chapter 29 is deleted and the following new TCR is inserted in lieu thereof:

"63. (A) A change to unmixed provitamins of subheading 2936.90 from any other good of subheading 2936.90 or from any other subheading; or

(B) A change to any other good of subheading 2936.90 from any other subheading, except from subheadings 2936.21 through 2936.29."

32. TCR 1 to chapter 30 is modified by deleting "3001.10" and inserting in lieu thereof "3001.20".

33. TCR 4 to chapter 30 is modified by deleting "subheading 3006.80" and inserting in lieu thereof "subheadings 3006.91 through 3006.92".

34. TCR 2 to subheading 31 is deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to subheadings 3102.10 through 3102.80 from any other subheading.

3. (A) A change to calcium cyanamide of subheading 3102.90 from any other good of subheading 3102.90 or any other subheading; or

(B) A change to any other good of subheading 3102.90 from calcium cyanamide of subheading 3102.90 or any other subheading.

4. A change to subheading 3103.10 from any other subheading.

5. (A) A change to basic slag of subheading 3103.90 from any other good of subheading 3103.90 or any other subheading; or

(B) A change to any other good of subheading 3103.90 from basic slag of subheading 3103.90 or any other subheading.

6. A change to subheadings 3104.20 through 3104.30 from any other subheading.

7. (A) A change to carnallite, sylvite or other crude natural potassium salts of subheading 3104.90 from any other good of subheading 3104.90 or any other subheading; or

(B) A change to any other good of subheading 3104.90 from carnallite, sylvite or other crude natural potassium salts of subheading 3104.90 or any other subheading.

8. A change to subheadings 3105.10 through 3105.90 from any other subheading."

35. TCR 7 to chapter 32 is modified by deleting "3206.43" and inserting in lieu thereof "3206.42".

36. TCR 8 to chapter 32 is deleted and the following new TCR is inserted in lieu thereof:

"8. (A) A change to concentrated dispersions of pigments in plastics materials of subheading 3206.49 from any other chapter; or

(B) A change to pigments or preparations based on cadmium compounds of subheading 3206.49 from any other good, except from pigments or preparations based on hexacyanoferrates of subheading 3206.49 or subheadings 3206.11 through 3206.42; or

(C) A change to pigments or preparations based on hexacyanoferrates of subheading 3206.49 from any other good, except from pigments and preparations based on cadmium compounds of subheading 3206.49 or subheadings 3206.11 through 3206.42; or

(D) A change to any other good of subheading 3206.49 from any other subheading."

37. TCR 1 to chapter 33 is deleted and the following new TCRs are inserted in lieu thereof:

"1. A change to subheadings 3301.12 through 3301.13 from any other subheading.

1A. (A) A change to essential oils of bergamot or lime of subheading 3301.19 from any other good of subheading 3301.19; or

(B) A change to any other good of subheading 3301.19 from essential oils of bergamot or lime of subheading 3301.19 or from any other subheading.

1B. A change to subheadings 3301.24 through 3301.25 from any other subheading.

1C. (A) A change to essential oils of geranium, jasmine, lavender, lavandin or vetiver of subheading 3301.29 from any other good of subheading 3301.29; or

(B) A change to any other good of subheading 3301.29 from essential oils of geranium, of jasmine, of lavender, of lavandin, or of vetiver of subheading 3301.29 or from any other subheading.

1D. A change to subheadings 3301.30 through 3301.90 from any other subheading."

38. TCR 8 to chapter 34 is deleted and the following new TCRs are inserted in lieu thereof:

"8. A change to subheading 3404.20 from any other subheading.

8A. (A) A change to artificial waxes or prepared waxes of chemically modified lignite of subheading 3404.90 from any other good of subheading 3404.90 or from any other subheading; or

(B) A change to any other good of subheading 3404.90 from any other subheading.

8B. A change to subheadings 3405.10 through 3505.90 from any other subheading."

39. TCR 9 to chapter 38 is modified by deleting "3808.10 through 3808.90" and inserting in lieu thereof "3808.50 through 3808.99".

40. TCR 22 to chapter 38 is modified by deleting "subheadings 3824.10 through 3824.20" and inserting in lieu thereof "subheading 3824.10".

41. New TCR 27 to chapter 38 is inserted in numerical sequence:

"27. A change to heading 3826 from any other heading."

42. TCR 13 to chapter 42 is deleted and the following new TCRs are inserted in lieu thereof:

"13. (A) A change to articles of leather or of composition leather, of a kind used in machinery or mechanical appliances or for other technical uses of heading 4205 from any other good of heading 4205 or from any other heading; or

(B) A change to any other good of heading 4205 from articles of leather or of composition leather, of a kind used in machinery or mechanical appliances or for other technical uses of heading 4205 or from any other heading.

14. A change to heading 4206 from any other heading."

43. TCR 7 to chapter 48 is modified by deleting "4818.40" and inserting in lieu thereof "4818.50".

44. TCR 9 to chapter 48 is deleted and the following new TCRs are inserted in lieu thereof:

"9. (A) A change to floor coverings on a base of paper or of paperboard, whether or not cut to size, of subheading 4823.90 from any other good of heading 4823 or any other heading, except from headings 4812 through 4817; or

(B) A change to any other good of heading 4823 from floor coverings on a base of paper or of paperboard, whether or not cut to size, of subheading 4823.90; or

(C) A change to any other good of heading 4823 from any other heading."

45. TCR 2 to chapter 54 is modified by deleting "5402.43.10" and inserting in lieu thereof "5402.47.10".

45. Chapter rule 3 to chapter 61 is deleted and the following new chapter rule 3 is inserted in lieu thereof:

"Chapter rule 3: Notwithstanding chapter rule 2 to this chapter, a good of this chapter, other than a good of subheading 6102.20, tariff item 6102.90.90 (for goods subject to cotton restraints), 6104.13.20, 6104.19.15, 6104.19.60 (for jackets imported as parts of suits), 6104.19.80 (for jackets imported as parts of suits and subject to cotton restraints), 6104.19.80 (for goods subject to man-made fiber restraints), 6104.22.00 (for garments described in heading 6102 or jackets and blazers described in heading 6104), 6104.29.20 (for garments described in heading 6102 or jackets and blazers described in heading 6104, the foregoing subject to cotton restraints), subheading 6104.32, tariff item 6104.39.20 (for goods subject to cotton restraints), 6112.11.00 (for women's or girls' garments

described in headings 6101 or 6102), 6113.00.90 (for coats and jackets of cotton, for women or girls) or 6117.90.90 (for coats and jackets of cotton), containing fabrics of subheading 5806.20 or heading 6002 shall be considered originating only if such fabrics are both formed from yarn and finished in the territory of one or more of the parties to the Agreement."

46. Chapter rule 4 to chapter 61 is deleted and the following new chapter rule 4 is inserted in lieu thereof:

> **"Chapter rule 4**: Notwithstanding chapter rule 2 to this chapter, a good of this chapter, other than a good of subheading 6102.20, tariff item 6102.90.90 (for goods subject to cotton restraints), 6104.13.20, 6104.19.15, 6104.19.60 (for jackets imported as parts of suits), 6104.19.80 (for jackets imported as parts of suits and subject to cotton restraints or for goods subject to man-made fiber restraints), 6104.22.00 (for garments described in heading 6102 or jackets and blazers described in heading 6104), 6104.29.20 (for garments described in heading 6102 or jackets and blazers described in heading 6104, the foregoing subject to cotton restraints), subheading 6104.32, tariff item 6104.39.20 (for goods subject to cotton restraints), 6112.11.00 (for women's or girls' garments described in headings 6101 or 6102), 6113.00.90 (for coats and jackets of cotton, for women or girls) or 6117.90.90 (for coats and jackets of cotton), containing sewing thread of heading 5204, 5401 or 5508 or yarn of heading 5402 used as sewing thread, shall be considered originating only if such sewing thread or yarn is both formed and finished in the territory of one or more of the parties to the Agreement."

47. Chapter rule 5 to chapter 61 is modified by deleting "6104.12.00 (for jackets imported as parts of suits), 6104.13.20, 6104.19.15, 6104.19.80 (for jackets imported as parts of suits and subject to cotton restraints or for goods subject to man-made fiber restraints)" and inserting in lieu thereof "6104.13.20, 6104.19.15, 6104.19.60 (for jackets imported as parts of suits), 6104.19.80 (for jackets imported as parts of suits and subject to cotton restraints or for goods subject to man-made fiber restraints)".

48. TCR 1 to chapter 61 is modified by deleting "6101.10" and inserting in lieu thereof "6101.20".

49. TCR 2 to chapter 61 is deleted and the following new TCR is inserted in lieu thereof:

> "2. (A) A change to goods of wool or fine animal hair of subheading 6101.90 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that:
>
> (i) the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement, and

(ii) any visible lining material contained in the apparel article must satisfy the requirements of chapter rule 1 for chapter 61; or

(B) A change to any other good of subheading 6101.90 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement.

50. TCR 5 to chapter 61 is deleted and the following new TCR is inserted in lieu thereof:

"5. (A) A change to tariff items 6103.10.70 or 6103.10.90 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement.

(B) A change to any other tariff item of subheading 6103.10 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, heading 5508 through 5516 or 6001 through 6006, provided that:

(1) the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement, and

(2) any visible lining material contained in the apparel article must satisfy the requirements of chapter rule 1 for chapter 61."

51. TCRs 6 and 7 to chapter 61 are deleted.

52. TCR 8 to chapter 61 is modified by deleting "6103.21" and inserting in lieu thereof "6103.22".

53. TCRs 13, 13A, and 13B to chapter 61 are deleted.

54. TCR 14A to chapter 61 is modified by deleting "6104.19.15 or 6104.19.80" and inserting in lieu thereof "6104.19.15, 6104.19.60 or 6104.19.80".

55. TCR 16 to chapter 61 is deleted.

56. Chapter rule 1 to chapter 62 is modified by deleting "6211.41" and inserting in lieu thereof "6211.49".

57. Chapter rule 3 to chapter 62 is modified (a) in subdivision (a) of such chapter rule, by deleting "6202.91.20" and inserting in lieu thereof "6202.91.15 or 6202.91.60"; deleting "6202.92.15" and inserting in numerical sequence"6202.92.05," and "6202.92.30,"; deleting "6202.92.20" and inserting in lieu thereof "6202.92.12or 6202.92.90"; deleting 6202.99.90 and inserting in numerical sequence "6202.99.15," and "6202.99.80,"; deleting "6210.50.90" and inserting in numerical sequence "6210.50.22," and "6210.50.80,"; deleting "6211.41.00" and inserting in numerical sequence "6211.49.15," and 6211.49.60," "; deleting "6211.42.00" and inserting in lieu thereof "6211.42.05 or 6211.42.10"; and (b) in subdivision (b) of such chapter rule, by deleting "6211.41" and inserting in lieu thereof "6211.49".

58. Chapter rule 4 to chapter 62 is modified (a) in subdivision (a) of such chapter rule, by deleting "6202.91.20" and inserting in lieu thereof "6202.91.15 or 6202.91.60"; deleting "6202.92.15" and inserting in numerical sequence "6202.92.05," and "6202.92.30,"; deleting "6202.92.20" and inserting in lieu thereof "6202.92.12 or 6202.92.90"; deleting "6202.99.90" and inserting in numerical sequence "6202.99.15," and "6202.99.80,"; deleting "6210.50.90" and inserting in numerical sequence "6210.50.22," and "6210.50.80,"; deleting "6211.41.00" and inserting in lieu thereof "6211.49.15 or 6211.49.60" ; deleting "6211.42.00" and inserting in lieu thereof "6211.42.05 or 6211.42.10"; " and (b) in subdivision (b) of such chapter rule, by deleting "6211.41" and inserting in lieu thereof "6211.49".

59. Chapter rule 5 to chapter 62 is modified (a) in subdivision (a) of such chapter rule, by deleting "6202.91.20" and inserting in lieu thereof "6202.91.15 or 6202.91.60"; deleting "6202.92.15" and inserting in numerical sequence "6202.92.05," and "6202.92.30,"; deleting "6202.92.20" and inserting in lieu thereof "6202.92.12 or 6202.92.90"; deleting 6202.99.90 and inserting in numerical sequence "6202.99.15," and "6202.99.80,"; deleting "6210.50.90" and inserting in numerical sequence "6210.50.22," and "6210.50.80,"; deleting "6211.41.00" and inserting in lieu thereof " 6211.49.15 or 6211.49.60"; deleting "6211.42.00" and inserting in lieu thereof "6211.42.05 or 6211.42.10"; and (b) in subdivision (b) of such chapter rule, by deleting "6211.41" and inserting in lieu thereof "6211.49".

60. TCR 7 to chapter 62 is modified by deleting "6202.91.20" and inserting in lieu thereof "6202.91.15 or 6202.91.60".

61. TCR 7B to chapter 62 is modified by deleting "6202.92.15 or 6202.92.20" and inserting in lieu thereof "6202.92.05, 6202.92.12, 6202.92.30 or 6202.92.90".

62. TCR 8 to chapter 62 is modified by deleting "6202.99.90" and inserting in lieu thereof "6202.99.15 or 6202.99.80".

63. TCR 11 to chapter 62 is modified by deleting "6203.21" and inserting in lieu thereof "6203.22".

64. TCR 30 to chapter 62 is deleted.

65. TCR 33 to chapter 62 is modified by deleting "6207.92.40" and inserting in lieu thereof "6207.99.85".

66. TCR 38 to chapter 62 is modified by deleting "6211.31" and inserting in lieu thereof "6211.32".

67. TCRs 38A and 38B to chapter 62 are deleted.

68. TCR 38E to chapter 62 is deleted and the following new TCRs are inserted in lieu thereof:

"38E. A change to tariff item 6211.49.41 (for jackets and jacket-type garments excluded from heading 6202) from any other chapter, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the Parties.

38F. A change to any other tariff item of subheadings 6211.43 through 6211.49 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement."

69. TCR 2 to chapter 63 is modified by deleting "5402.43.10" and inserting in lieu thereof "5402.47.10".

70. Chapter rule 1 to chapter 64 is modified by deleting the text following "6402.12.00 through" and inserting in lieu thereof the following:

"6402.91.05, inclusive, 6402.91.16, 6402.91.30, 6402.91.40, 6402.91.60, 6402.91.70, 6402.99.04, 6402.99.12, 6402.99.21, 6402.99.23 through 6402.99.31, inclusive, and 6402.99.41 through 6402.99.79, inclusive; heading 6403; tariff items 6404.11.20 through 6404.19.15, inclusive, and 6404.19.25 through 6404.20.60, inclusive; and headings 6405 and 6406."

71. TCR 1 to chapter 64 is deleted and the following new TCR is inserted in lieu thereof:

"1. A change to subheading 6401.10, or tariff items 6401.92.90, 6401.99.10, 6401.99.30, 6401.99.60, 6401.99.90, 6402.91.10, 6402.91.20, 6402.91.26, 6402.91.50, 6402.91.70, 6402.91.80, 6402.91.90, 6402.99.08, 6402.99.16, 6402.99.19, 6402.99.33, 6402.99.80, 6402.99.90, 6404.11.90 or

6404.19.20 from any other heading outside headings 6401 through 6405, except from subheading 6406.10, provided that there is a regional value content of not less than 55 percent under the build-up method."

72. TCR 2 to chapter 65 is modified by deleting "6503" at each instance and inserting in lieu thereof "6504".

73. TCRs 2 through 4, inclusive, to chapter 68 are deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to subheading 6812.80 from any other subheading.

3. A change to subheading 6812.91 from any other subheading.

4. A change to subheading 6812.92 through 6812.93 from any other subheading outside that group.

4A. A change to subheading 6812.99 from any other heading.

74. TCR 8 to chapter 70 is deleted and the following new TCR is inserted in lieu thereof:

"8. A change to headings 7009 through 7018 from any other heading outside that group, except from headings 7007 through 7008 or glass inners for vacuum flasks or other vacuum vessels of heading 7020."

75. TCR 13 to chapter 73 is modified by deleting "7321.83" at each instance and inserting in lieu thereof "7321.89".

76. TCR 2 to chapter 78 is deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to heading 7804 from any other heading.

3. (A) A change to lead bars, rods, profiles and wire of heading 7806 from any other good of heading 7806 or any other heading; or

(B) A change to lead tubes or pipes of heading 7806 and fittings for tubes or pipes (for example, couplings, elbows, sleeves) of heading 7806 from any other good of heading 7806 or from any other heading; or

(C) A change to any other good of heading 7806 from lead bars, rods, profiles, wire and pipes of heading 7806; or from fittings for tubes or pipes (for example, couplings, elbows, sleeves) of heading 7806 or any other heading."

77. TCR 4 to chapter 79 is deleted and the following new TCRs are inserted in lieu thereof:

"4. A change to headings 7904 through 7905 from any other heading.

5. (A) A change to zinc tubes of heading 7907, or pipes and fittings for tubes or pipes (for example, couplings, elbows, sleeves) of heading 7907, from any other good of heading 7907 or from any other heading; or

(B) A change to any other good of heading 7907 from zinc tubes or pipes of heading 7907; or fittings for tubes or pipes (for example, couplings, elbows, sleeves) of heading 7907 or any other heading."

78. TCRs 2 through 4, inclusive, to chapter 80 are deleted and the following new TCRs are inserted in lieu thereof:

"2. A change to heading 8003 from any other heading.

3. (A) A change to heading 8007 from any other heading; or

(B) A change to plates, sheets and strip, of a thickness exceeding 0.2 mm, of heading 8007 from any other good of heading 8007; or

(C) A change to tin foil and strip, thin (printed or even fixed on paper, cardboard, plastic or similar supports), of thickness not exceeding 0.2 mm (without including the support); or to tin powders and flakes of heading 8007 from any other good of heading 8007, except from plates, sheets and strip, of a thickness exceeding 0.2 mm, of heading 8007; or

(D) A change to tin tubes or pipes and fittings for tubes and pipes (for example, couplings, elbows, sleeves) of heading 8007 from any other good of heading 8007."

79. TCRs 2 and 3 to chapter 81 are deleted and the following new TCR is inserted in lieu thereof:

"2. A change to subheading 8101.96 from any other subheading, except from bars, rods, profiles, plates, sheets and strip of subheading 8101.99."

80. TCR 5 to chapter 81 is deleted and the following new TCR is inserted in lieu thereof:

"5. (A) A change to bars or rods (other than those obtained simply by sintering), profiles, plates, sheets, strip or foil of subheading

8101.99 from any other good of subheading 8101.99 or any other subheading; or

(B) A change to any other good of subheading 8109.99 from bars or rods (other than those obtained simply by sintering), profiles, plates, sheets, strip or foil of subheading 8101.99 or any other subheading."

81. TCRs 35 and 36 to chapter 81 are deleted and the following new TCRs are inserted in lieu thereof:

"35. (A) A change to unwrought germanium or vanadium, germanium or vanadium waste, scrap or powders of subheading 8112.92 from any other chapter; or

(B) No change in tariff classification is required for articles of unwrought germanium or vanadium, germanium or vanadium waste, scrap or powders of subheading 8112.92, provided that there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used; or

(C) A change to other goods of subheading 8112.92 from any other chapter.

36. (A) A change to articles of vanadium or germanium of subheading 8112.99 from any other chapter; or

(B) No change in tariff classification is required for articles of germanium or vanadium, provided that there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used; or

(C) A change to other goods of subheading 8112.99 from articles of germanium or vanadium of subheading 8112.99 or from any other subheading."

82. TCR 69 to chapter 84 is deleted and the following new TCR is inserted in lieu thereof:

"69. A change to subheading 8442.30 from any other subheading."

83. TCRs 71 through 73, inclusive, to chapter 84 are deleted and the following new TCRs are inserted in lieu thereof:

"71. (A) A change to subheading 8443.11 through 8443.19 from any other subheading outside that group, except from machines for uses ancillary to printing of subheading 8443.91; or

(B) A change to subheading 8443.11 through 8443.19 from machines for uses ancillary to printing of subheading 8443.91, provided that there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

72. A change to subheading 8443.31 from any other subheading.

73. (A) A change to subheading 8443.32 from any other subheading, except from machines for uses ancillary to printing of subheading 8443.91; or

(B) A change to subheading 8443.32 from machines for uses ancillary to printing of subheading 8443.91, provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

73A. A change to subheading 8443.39 from any other subheading.

73B. (A) A change to machines for uses ancillary to printing of subheading 8443.91 from any other good of subheading 8443.91 or from any other subheading, except from subheadings 8443.11 through 8443.39; or

(B) A change to any other good of subheading 8443.91 from any other heading.

73C. (A) A change to subheading 8443.99 from any other subheading; or

(B) No change in tariff classification required, provided that there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used."

84. TCRs 84 and 85 to chapter 84 are deleted and the following new TCRs are inserted in lieu thereof:

"84. A change to subheading 8452.30 from any other subheading.

85. (A) A change to furniture, bases and covers for sewing machines and parts thereof of subheading 8452.90 from any other good of subheading 8452.90 or from any other subheading; or

(B) A change to any other good of subheading 8452.90 from any other heading."

85. TCRs 99 and 100 to chapter 84 are deleted and the following new TCR is inserted in lieu thereof:

"99. A change to heading 8469 from any other heading."

86. TCR 128 to chapter 84 is deleted and the following new TCRs are inserted in lieu thereof:

"128. (A) A change to subheading 8486.10 from any other subheading; or

(B) No change in tariff classification required provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

129. (A) A change to subheading 8486.20 from any other subheading, except from particle accelerators of subheading 8543.10; or

(B) No change in tariff classification required, provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

130. (A) A change to subheading 8486.30 through 8486.40 from any other subheading; or

(B) No change in tariff classification required, provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

131. (A) A change to subheading 8486.90 from any other heading; or

(B) No change of tariff classification required, provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

132. A change to heading 8487 from any other heading."

87. TCR 8 to chapter 85 is modified by deleting "8505.30" and inserting in lieu thereof "8505.20".

88. TCR 9 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"9. (A) A change to electromagnetic lifting heads of subheading 8505.90 from any other subheading, or from any other good of subheading 8505.90; or

(B) A change to any other good of subheading 8505.90 from any other heading."

89. The following new TCRs to chapter 85 are inserted in numerical sequence:

"15A. (A) A change to subheadings 8508.11 through 8508.60 from any other heading; or

(B) A change to subheadings 8508.11 through 8508.60 from any other subheading, provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used.

15B. A change to subheading 8508.70 from any other heading."

90. TCR 16 to chapter 85 is modified by deleting "8509.10" at each instance and inserting in lieu thereof "8509.40".

91. TCR 38 to chapter 85 is modified by deleting "8517.80" and inserting in lieu thereof "8517.69".

92. TCR 39 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"39. (A) A change to parts of electrical apparatus for telephony or telegraphy or parts of videophones of subheading 8517.70 from any other subheading; or

(B) No change in tariff classification is required to parts of electrical apparatus for telephony or telegraphy or parts of videophones of subheading 8517.70 provided there is a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used; or

(C) A change to any other good of subheading 8517.70 from any other subheading."

93. TCR 44 to chapter 85 is modified by deleting "8519.10 through 8519.40" and inserting in lieu thereof "8519.20 through 8519.89".

94. TCRs 45 and 46 to chapter 85 are deleted.

95. TCR 51 to chapter 85 is deleted and the following new TCRs are inserted in lieu thereof:

"51. A change to subheadings 8522.10 through 8522.90 from any other subheading.

51A. (A) A change to subheadings 8523.21 through 8523.80 from any other subheading; or

(B) A change to recorded media of subheadings 8523.21 through 8523.80 from unrecorded media of subheadings 8523.21 through 8523.80."

96. TCRs 52 and 53 to chapter 85 are deleted and the following new TCRs are inserted in lieu thereof:

"52. A change to subheading 8525.50 from any other subheading, except from subheading 8525.60.

53. A change to subheading 8525.60 from any other subheading, except from subheading 8525.50.

53A. A change to subheading 8525.80 from any other subheading."

97. TCR 55 to chapter 85 is modified by deleting "8527.90" and inserting in lieu thereof "8527.99".

98. TCRs 56 through 59, inclusive, to chapter 85 are deleted and the following new TCRs are inserted in lieu thereof:

"56. A change to subheading 8528.41 from any other subheading.

57. (A) A change to color video monitors of subheading 8528.49 from any other good of subheading 8528.49 or from any other subheading, except from subheadings 7011.20, 8540.11 or 8540.91; or

(B) A change to any other good of subheading 8528.49 from any other subheading.

58. A change to subheading 8528.51 from any other subheading.

59. A change to subheading 8528.59 from any other subheading.

59A. A change to subheading 8528.61 from any other subheading.

59B. A change to subheading 8528.69 from any other subheading.

59C. A change to subheading 8528.71 from any other subheading.

59D. A change to subheading 8528.72 from any other subheading, except from subheading 7011.20, 8540.11 or 8540.91.

59E. A change to subheading 8528.73 from any other subheading."

99. TCR 81 to chapter 85 is modified by deleting "semiconductor devices, integrated circuits, or microassemblies" and inserting in lieu thereof "semiconductor devices or integrated circuits".

100. TCR 82 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"82. A change to subheading 8543.10 from any other subheading, except from ion implanters for doping semiconductor materials of subheading 8486.20."

101. TCR 84 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"84. A change to subheading 8543.70 from any other subheading."

102. TCR 85 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"85. (A) A change to subheading 8543.90 from any other heading; or

(B) A change to electronic microassemblies of subheading 8543.90 from any other subheading; or

(C) No change in tariff classification to electronic microassemblies of subheading 8543.90 is required, provided there is a regional value content of not less than:

(i) 30 percent when the build-up method is used, or

(ii) 35 percent when the build-down method is used."

103. TCR 90 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"90. (A) A change to electric conductors, for a voltage exceeding 80 V but not exceeding 1000 V fitted with connectors, from any other heading; or

(B) A change to any other good of subheading 8544.42 from electric conductors, for a voltage exceeding 80 V but not exceeding 1000 V fitted with connectors, or from any other subheading, provided there is also a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used."

104. TCR 91 to chapter 85 is deleted and the following new TCR is inserted in lieu thereof:

"91. (A) A change to electric conductors, for a voltage exceeding 80 V but not exceeding 1000 V not fitted with connectors, from any other heading; or

(B) A change to any other good of subheading 8544.49 from electric conductors, for a voltage exceeding 80 V but not exceeding 1000 V not fitted with connectors, or from any other subheading, provided there is also a regional value content of not less than:

(i) 35 percent when the build-up method is used, or

(ii) 45 percent when the build-down method is used."

105. TCR 1 to chapter 88 is deleted and the following new TCR is inserted in lieu thereof:

"1. (A) A change to gliders and hang gliders of heading 8801 from any other good of heading 8801 or any other heading; or

(B) A change to any other good of heading 8801 from gliders and hang gliders of heading 8801 or any other heading.

1A. A change to subheading 8802.11 through 8803.90 from any other subheading."

106. TCR 21 to chapter 90 is modified by deleting "9007.11" at each instance and inserting in lieu thereof "9007.10".

107. TCR 23 to chapter 90 is deleted.

108. TCR 24 to chapter 90 is modified by deleting "subheadings 9008.20 through 9008.40" at each instance and inserting in lieu thereof "subheading 9008.50".

109. TCRs 26 through 30, inclusive, to chapter 90 are deleted.

110. TCR 32 to chapter 90 is modified by deleting "subheadings 9010.41 through 9010.50" at each instance and inserting in lieu thereof "subheading 9010.50".

111. TCRs 1 through 3, inclusive, to chapter 95 are deleted and the following new TCRs are inserted in lieu thereof:

"1. (A) A change to heading 9503 from any other chapter; or

(B) A change to dolls representing only human beings of heading 9503 from any other heading.

2. A change to subheadings 9504.20 through 9506.29 from any other chapter.

3. A change to subheading 9506.31 from subheading 9506.39, whether or not there is a change from another chapter, provided there is a regional value content of not less than:

   (A) 35 percent when the build-up method is used, or

   (B) 45 percent when the build-down method is used.

4. A change to subheadings 9506.32 through 9508.90 from any other chapter."

112. TCRs 18 and 19 to chapter 96 are deleted and the following new TCRs are inserted in lieu thereof:

"18. A change to heading 9614 from any other heading."

113. The following new heading rules are inserted to chapter 96 immediately below TCR 24 to such chapter:

"**Heading rule 1:** For the purposes of determining the origin of a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90, the rule applicable to that good shall only apply to the component that determines the tariff classification of the good and such component must satisfy the change of tariff classification requirements set out in the rule for that good.

Heading rule 2: Notwithstanding heading rule 1 to this chapter, a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90, containing fabrics of subheading 5806.20 or heading 6002 shall be considered originating only if such fabrics are both formed from yarn and finished in the territory of one or more of the parties to the Agreement.

Heading rule 3: Notwithstanding heading rule 1 to this chapter, a good of tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64, 9619.00.68, 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90, containing sewing thread of headings 5204, 5401 or 5508 or yarn of heading 5402 used as sewing thread, shall be considered originating only if such sewing thread is both formed and finished in the territory of one or more of the parties to the Agreement."

114. The following new TCR to chapter 96 is inserted in numerical sequence:

"25. (A) A change to sanitary towels (pads) and tampons and similar articles of textile wadding of heading 9619 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311 or chapter 54 through 55; or

(B) A change to a tariff items 9619.00.31, 9619.00.41, 9619.00.43, 9619.00.46, 9619.00.61, 9619.00.64 or 9619.00.68 from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement; or

(C) A change to a tariff items 9619.00.33, 9619.00.48, 9619.00.71, 9619.00.74, 9619.00.78, 9619.00.79 or 9619.00.90, from any other chapter, except from headings 5111 through 5113, 5204 through 5212, 5310 through 5311, chapter 54, headings 5508 through 5516, 5801 through 5802 or 6001 through 6006, provided that the good is cut or knit to shape, or both, and sewn or otherwise assembled in the territory of one or more of the parties to the Agreement; or

(D) A change to any other good of heading 9619 from any other heading."

Rules and Regulations

Federal Register
Vol. 81, No. 244
Tuesday, December 20, 2016

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5

[Docket No. DHS–2016–0091]

Privacy Act of 1974: Implementation of Exemptions; Department of Homeland Security DHS/U.S. Customs and Border Protection (CBP)–023 Border Patrol Enforcement Records (BPER) System of Records

AGENCY: Department of Homeland Security, Privacy Office.

ACTION: Final rule.

SUMMARY: The Department of Homeland Security is issuing a final rule to amend its regulations to exempt portions of a newly established system of records titled, ''Department of Homeland Security U.S. Customs and Border Protection (DHS/CBP)–023 Border Patrol Enforcement Records (BPER) System of Records'' from certain provisions of the Privacy Act. Specifically, the Department exempts portions of the ''DHS/CBP–023 BPER System of Records'' from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: This final rule is effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: For general questions, please contact: Debra Danisek (202–344–1191), CBP Privacy Officer, Privacy and Diversity Office, 1300 Pennsylvania Avenue NW., Washington, DC 20229. For privacy issues please contact: Jonathan R. Cantor (202–343–1717), Acting Chief Privacy Officer, Privacy Office, Department of Homeland Security, Washington, DC 20528.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Homeland Security (DHS) U.S. Customs and Border Protection (CBP) published a notice of proposed rulemaking in the **Federal Register**, (81 FR 72551, October 20, 2016) proposing to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements. DHS issued the ''DHS/CBP–023 Border Patrol Enforcement (BPER) Records System of Records'' in the **Federal Register** at 81 FR 72601 on October 20, 2016, to provide notice to the public that DHS/CBP will collect and maintain enforcement records to secure the U.S. border between Ports of Entry (POE), furthering its enforcement and immigration mission. DHS previously maintained these records under the DHS/ICE–011 Criminal Arrest Records and Immigration Enforcement Records (CARIER) (81 FR 72080, October 19, 2016) and the DHS/USVISIT–004 DHS Automated Biometric Identification System (IDENT) (72 FR 31080, June 5, 2007) System of Records Notices. DHS/CBP issued this new system of records to claim ownership of records created as a result of CBP interactions between POE.

DHS/CBP invited comments on both the Notice of Proposed Rulemaking (NPRM) and System of Records Notice (SORN).

II. Public Comments

DHS/CBP received one positive comment on the NPRM and no comments on the SORN for the DHS/CBP–023 BPER System of Records. After consideration of the public comment, DHS will implement the rulemaking as proposed.

List of Subjects in 6 CFR Part 5

Freedom of information, Privacy.

For the reasons stated in the preamble, DHS amends Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

■ 1. The authority citation for Part 5 continues to read as follows:

Authority: Pub. L. 107–296, 116 Stat. 2135; (6 U.S.C. 101 *et seq.*); 5 U.S.C. 301. Subpart A also issued under 5 U.S.C. 552. Subpart B also issued under 5 U.S.C. 552a.

■ 2. Add paragraph 76 to appendix C to part 5 to read as follows::

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

* * * * *

76. The DHS/CBP–023 Border Patrol Enforcement Records (BPER) System of Records consists of electronic and paper records and will be used by DHS and its components. The DHS/CBP–023 BPER System of Records is a repository of information held by DHS/CBP in connection with its several and varied missions and functions, including, but not limited to the enforcement of civil and criminal laws; investigations, inquiries, and proceedings there under; and national security and intelligence activities. The DHS/CBP–023 BPER System of Records contains information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other federal, state, local, tribal, foreign, or international government agencies. The Secretary of Homeland Security, pursuant to 5 U.S.C. 552a(j)(2), has exempted this system from the following provisions of the Privacy Act: 5 U.S.C. 552a (c)(3), (c)(4); (d); (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8); and (g). Additionally, the Secretary of Homeland Security, pursuant to 5 U.S.C. 552a(k)(2), has exempted this system from the following provisions of the Privacy Act: 5 U.S.C. 552a (c)(3); (d); (e)(1), (e)(4)(G), and (e)(4)(H). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) and (4) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS as well as the recipient agency. Disclosure of the accounting would therefore present a serious impediment to law enforcement efforts and/or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

(b) From subsection (d) (Access to Records) because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or

evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an unreasonable administrative burden by requiring investigations to be continually reinvestigated. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of federal law, the accuracy of information obtained or introduced occasionally may be unclear, or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsection (e)(2) (Collection of Information from Individuals) because requiring that information be collected from the subject of an investigation would alert the subject to the nature or existence of the investigation, thereby interfering with that investigation and related law enforcement activities.

(e) From subsection (e)(3) (Notice to Subjects) because providing such detailed information could impede law enforcement by compromising the existence of a confidential investigation or reveal the identity of witnesses or confidential informants.

(f) From subsections (e)(4)(G) and (e)(4)(H) (Agency Requirements) because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

(g) From subsection (e)(5) (Collection of Information) because with the collection of information for law enforcement purposes, it is impossible to determine in advance what information is accurate, relevant, timely, and complete. Compliance with subsection (e)(5) would preclude DHS agents from using their investigative training and exercise of good judgment to both conduct and report on investigations.

(h) From subsection (e)(8) (Notice on Individuals) because compliance would interfere with DHS's ability to obtain, serve, and issue subpoenas, warrants, and other law enforcement mechanisms that may be filed under seal and could result in disclosure of investigative techniques, procedures, and evidence.

(i) From subsection (g)(1) (Civil Remedies) to the extent that the system is exempt from other specific subsections of the Privacy Act.

Dated: December 13, 2016.

Jonathan R. Cantor,

Acting Chief Privacy Officer, Department of Homeland Security.

BILLING CODE 9111–14–P

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Parts 251, 271, 272 and 277

[FNS–2016–0028]

RIN: 0584–AE44

Supplemental Nutrition Assistance Program Promotion

AGENCY: Food and Nutrition Service (FNS), USDA.

ACTION: Final rule.

SUMMARY: This final rule implements Section 4018 of the Agricultural Act of 2014. Section 4018 created new limitations on the use of Federal funds authorized in the Food and Nutrition Act of 2008, as amended (FNA), for the Supplemental Nutrition Assistance Program (SNAP) promotion and outreach activities. Specifically, Section 4018 of the 2014 Farm Bill prohibits the use of Federal funds appropriated in the FNA from being used for: recruitment activities designed to persuade an individual to apply for SNAP benefits; television, radio, or billboard advertisements that are designed to promote SNAP benefits and enrollment; or agreements with foreign governments designed to promote SNAP benefits and enrollment. The prohibition on using funds appropriated under the FNA for television, radio, or billboard advertisements does not apply to Disaster SNAP.

Section 4018 also prohibits any entity that receives funds under the FNA from compensating any person engaged in outreach or recruitment activities based on the number of individuals who apply to receive SNAP benefits. Lastly, Section 4018 modifies Section 16(a)(4) of the FNA to prohibit the Federal government from paying administrative costs associated with recruitment activities designed to persuade an individual to apply for program benefits or that promote the program through television, radio, or billboard advertisements.

This final rule also impacts the Food Distribution Program on Indian Reservations (FDPIR) and The Emergency Food Assistance Program (TEFAP), both of which receive funding and/or foods authorized under the FNA.

DATES: This final rule is effective January 19, 2017.

FOR FURTHER INFORMATION CONTACT: Mary Rose Conroy, Chief, Program Development Division, Program Design Branch, Food and Nutrition Services, U.S. Department of Agriculture, 3101 Park Center Drive, Room 810, Alexandria, VA 22302, or by phone at (703) 305–2803, or by email at *Maryrose.conroy@fns.usda.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

This rule implements Section 4018 of the Agricultural Act of 2014 (Pub L. 113–79, 2014 Farm Bill). Section 4018 of the 2014 Farm Bill creates new limitations on the use of Federal funds authorized in the Food and Nutrition Act of 2008 (FNA) for Supplemental Nutrition Assistance Program (SNAP) promotion and recruitment activities. Specifically, Section 4018:

- Amends Section 16(a)(4) of the FNA to prohibit Federal reimbursement for activities that are designed to persuade an individual to apply for program benefits or that promote the program through television, radio, or billboard advertisements.
- Amends the end of Section 18 of the FNA to prohibit the use of Federal funds authorized to be appropriated under the FNA from being used for:

(1) Recruitment activities designed to persuade an individual to apply for SNAP benefits;

(2) Television, radio, or billboard advertisements that are designed to promote SNAP benefits and enrollment. This provision does not apply to Disaster SNAP; or

(3) Any agreements with foreign governments designed to promote SNAP benefits and enrollment.

- Amends the end of Section 18 of the FNA to require the Secretary of Agriculture to issue regulations that prohibit entities that receive funds under the FNA from compensating any person engaged in outreach or recruitment activities based on the number of individuals who apply to receive SNAP benefits.

II. Discussion of Comments and the Final Rule

General Comments

On March 14, 2016, the Department published a proposed rule to implement the changes made by Section 4018. *See* Supplemental Nutrition Assistance Program Promotion, 81 FR 13290 (Mar.

14, 2016). The Department received 94 comments on the proposed rule published on March 14, 2016 and open for public comments for 60 days. Commenters included 17 private individuals, one anonymous commenter, 23 food banks or food bank coalitions, two county governments, one university association, one member of a university, and 49 other not-for-profit organizations. Sixty-six of the comments received were variations of two form letters, and 28 comments were unique comments.

Overall, comments were very supportive of the proposed rule. Commenters, however, did point to specific areas in need of clarification. The Department has reviewed these comments and in many cases has made the suggested recommendations, as discussed below. The Department appreciates the efforts of community partners and concerned members of the public to offer insightful comments that have enhanced the final regulations.

Definition of Recruitment Activities Designed To Persuade

The Agricultural Act of 2014 prohibits the use of funds appropriated under the FNA from being used for recruitment activities that are designed to persuade an individual to apply for SNAP benefits.

In the proposed rule, prohibited recruitment activities were defined as those designed to persuade an individual to apply for SNAP benefits through the use of persuasive practices. Persuasive practices constitute coercing or pressuring an individual to apply, or providing incentives to fill out an application. Communicating factual information pertaining to SNAP is not a recruitment activity designed to persuade an individual to apply for SNAP benefits.

Overall, the definition of recruitment activities that would be prohibited in the proposed rule were supported by commenters, with the specific exceptions discussed below. Commenter support focused on the importance of providing factual information through SNAP outreach (n = 78), and the importance of outreach to clear up myths or misconceptions about SNAP (n = 71). Commenters appreciated that the definition in the proposed rule supported these important outreach activities.

However, commenters felt two components of the definition of recruitment activities designed to persuade were in need of clarification. First, a large number of commenters (n = 73) felt the rule should state that individuals are allowed to make an ''informed choice'' about whether or not to apply for SNAP benefits and that this phrase should be added to the regulatory definition of recruitment activities designed to persuade. These commenters explained that long-standing FNS regulations clearly state that prohibited recruitment activities are those that persuade an individual who has made an *informed choice* not to apply for SNAP to change his or her mind and apply for benefits. Some commenters also pointed to floor statements made by Members of Congress during consideration of the conference report on the 2014 Farm Bill. In these floor statements, Members explained that the statute made no change with respect to the role of the applicant to make an ''informed choice'' on whether or not to apply for benefits. These commenters recommended that the Department's final rule explicitly incorporate the long-standing ''informed choice'' standard in the regulatory definition of activities designed to persuade.

Second, a majority of commenters (n = 68) felt that the rule needed to be clarified to explain that outreach workers should be allowed to ask follow-up questions to potential SNAP applicants to clear-up misinformation. Some commenters pointed to a specific example in the preamble of the proposed rule in which a food pantry visitor comes by a SNAP informational table and expresses disinterest in learning more about SNAP. In this example, the Department explained continuing to discuss SNAP with the visitor would constitute a persuasive practice because the visitor had clearly expressed a lack of interest and should not be pressured to apply. These commenters felt that frequently a follow-up question about why an individual is not interested is necessary in order to determine whether or not he or she has accurate information about the program, and should not be considered a persuasive practice. If the individual responds to the follow-up question in such a way as to show he or she is misinformed about SNAP, the outreach worker then has an opportunity to clarify his or her misunderstanding, so that he or she can then make a well-informed choice about applying.

The Department agrees with the commenters that it is important that potential SNAP applicants have the necessary information to make an informed choice about whether or not to apply for benefits, and that outreach is an important tool to ensure that SNAP applicants can make this informed choice. The Department also understands that it was not the intent of Congress to prohibit informational activities that provide basic program information to potentially eligible individuals, as specifically authorized in Section 11(e)(1) of the FNA. Basic program information allows individuals to make a well-informed decision about whether or not to apply based on accurate information, rather than myths or other types of misinformation.

Pursuant to these comments the Department has clarified the regulations at a new 7 CFR 277.4(b)(5). As in the proposed rule, the Federal reimbursement rate shall not include recruitment activities designed to persuade an individual to apply for SNAP benefits through the use of persuasive practices. Persuasive practices constitute coercing or pressuring an individual to apply, or providing incentives to fill out an application for SNAP benefits. However, in the final rule the Department has added the ''informed choice'' standard to the third sentence: communicating factual information so that an individual can make an informed choice pertaining to SNAP is not a recruitment activity designed to persuade an individual to apply for SNAP benefits. As a result, prohibited recruitment activities would not include providing accurate program information to dispel misinformation, answering questions about SNAP, providing assistance in filling out forms or obtaining verification documents, or providing basic information about SNAP availability, application procedures, eligibility requirements, and the benefits of the program, as specifically permitted by Section 11(e)(1) of the FNA.

To conform to this change from the proposed rule, the Department is clarifying one of the examples from the preamble of the proposed rule to make a distinction between persuasive practices and asking appropriate follow-up questions to ensure an individual has made an informed choice. The revised example is as follows:

> A worker funded by SNAP funds is staffing a SNAP informational table at a food pantry. A food pantry visitor comes to the table, but soon replies that he is not interested in learning more. The worker may ask a follow-up question about why the visitor is not interested in learning more. If the visitor's answer demonstrates a lack of accurate information about SNAP, the worker may correct the misunderstanding, thus helping the visitor make an informed choice about applying. However, if the visitor responds to the follow-up questions with a further expression of disinterest, continuing to question the visitor would be pressuring the individual to apply and therefore constitutes a persuasive practice.

Similarly, the Department is hereby clarifying one of the examples from the preamble of the proposed rule about allowable informational activities:

> An outreach worker is talking to a senior citizen who explains that he does not think he is eligible because he owns his own home. The worker would be allowed to correct this misconception, including asking any necessary follow-up questions to ensure the senior citizen makes an informed choice about whether or not to apply.

Application of Recruitment Activities Designed To Persuade to Written Materials

The preamble to the proposed rule explained that written materials would also be expected to comply with the designation of allowable and unallowable activities that are described in the above definition of recruitment activities designed to persuade an individual to apply for SNAP benefits through coercion, pressure, or incentives. One commenter sought clarification on what information may be included in written outreach materials. This commenter suggested that FNS expand the list of permissible written outreach materials to include additional examples in the preamble.

The Department has reviewed the commenter's request and feels that the original language in the preamble was sufficiently clear that it was not intended to be an exhaustive list, and that written outreach materials are permissible, so long as they are not recruitment activities designed to persuade, as defined in 277.4(b)(5)(i).

Specialized Services

The Manager's Statement to the Conference Report, H.R. Rep. 113–333 stated that the changes in Section 4018 of the Agricultural Act of 2014 do not preclude specialized services for eligible SNAP applicants, including application assistance for vulnerable populations. The Manager's Statement explained that specialized services are particularly important for vulnerable populations, including the elderly, homeless, and individuals with disabilities, to ensure they receive the food assistance they need. Consequently, the proposed rule would not have prohibited specialized services that provide vulnerable populations (including the elderly, homeless, and individuals with disabilities) with application assistance or basic program information, including information about rights, program rules, client responsibilities, and benefits.

A majority of commenters (n = 63) supported the language in the proposed rule, agreeing that Congressional intent was never to prohibit specialized or targeted services to vulnerable populations. However, commenters (n = 65) also argued that neither the Act nor the Manager's Statement in the Conference Report, H.R. Rep. 113–333, limit application assistance and specialized services to these vulnerable populations only. These commenters felt that the Department should clarify that application assistance and specialized services can be provided to all individuals, not just so-called vulnerable populations cited in the preamble. For example, these commenters explained, targeted SNAP outreach can be important for limited English proficient populations, pregnant women receiving WIC only benefits, recently unemployed families in a factory town that has lost its primary business, or a community that has suffered severe weather and power outages that do not rise to the level of a Presidentially declared disaster.

The Department considers specialized services to be a subset of all activities provided under informational activities, as defined in 7 CFR 272.5(c). Specialized services are informational activities targeted to specific populations based on their specific needs. For example, a community outreach partner may develop a SNAP Web site targeted to households who have become recently unemployed, informing those households of available SNAP Employment and Training activities. The Web site is a specialized service provided to a targeted group to provide information about SNAP based on their needs and available local resources. Therefore, the Department agrees with the commenters and concludes that specialized services, as a subset of allowable informational activities in 7 CFR 272.5(c), can be targeted to any particular group to meet the specific needs of that population. However, the Department does not believe any changes are needed to the regulatory text to address that clarification.

Incentives

As discussed above, the proposed rule prohibited recruitment activities that are designed to persuade an individual to apply for SNAP benefits through the use of persuasive practices. Providing an incentive to fill out an application was defined as one type of persuasive practice. The preamble to the proposed rule also included an example where a worker funded by SNAP funds at a community-based organization explained to a group of likely eligible SNAP applicants, that every person who applied that day for SNAP would be allowed to stay for a free parenting class. The preamble to the proposed rule explained that this practice would be prohibited if only those who filled out the SNAP application were allowed to attend the parenting class. However, if everyone was allowed to participate in the parenting class, regardless of whether or not they completed an application, the practice would be allowable.

While no comments were received that directly supported the incentive language in the proposed rule, some commenters (n = 19) felt the incentive language in the definition of recruitment activities designed to persuade needed to be clarified. For example, some of the commenters explained that providing information about the ancillary benefits of participating in SNAP and offering outreach reinforcement items that are *not* dependent on the recipient submitting a SNAP application should be clarified as permissible reimbursable outreach activities. Commenters explained that the Department's longstanding State Outreach Plan Guidance allows for reimbursement of appropriate outreach reinforcement items, but not those ''intended as rewards for pre-screening or completing an application.''

To address these comments, the Department is hereby clarifying that providing individuals with information about the ancillary benefits of applying for SNAP is not an incentive or a recruitment activity designed to persuade. Providing factual information to an individual about the benefits of SNAP, such as that SNAP participation may make a household's children eligible for the National School Lunch Program, is a permissible sharing of factual information, per the regulations on allowable informational activities in 7 CFR 272.5(c). The Department is also hereby clarifying that offering outreach reinforcement items at any point in the process of sharing information about SNAP with an interested individual(s) is permissible and not a recruitment activity designed to persuade, so long as the receipt of such reinforcements is not contingent on applying for SNAP. The Department does not think any changes are needed to the regulatory text to address these clarifications.

Radio, Television and Billboard Advertisements

Section 4018 of the Agricultural Act of 2014 prohibits the use of funds authorized to be appropriated under the FNA for television, radio, or billboard advertisements that are designed to promote SNAP benefits and enrollment. The proposed rule would have prohibited States or other entities from

using these Federal funds for television, radio, or billboard advertisements designed to promote program benefits and enrollment.

Several commenters (n = 14) supported language in the preamble that stated only funds authorized by the FNA would be prohibited from purchasing television, radio and billboard advertisements that promote SNAP benefits and enrollment, but that funding from other sources could be spent on these advertisements. In addition, some commenters had concerns about individual elements of the restriction on radio, television, and billboard advertisements, which are discussed more below.

Billboards and Retailer Informational Activities

The proposed rule defined billboards as large format advertising displays intended for viewing from extended distances of more than 50 feet. There were no comments that directly supported the billboard definition in the proposed rule. Several commenters (n = 18) stated that the billboard definition needed to be changed or clarified to consider the context in which a billboard is used so as to allow for large signs at health fairs, farmers markets, or other similar venues where individuals may be seeking information about SNAP or SNAP services. In addition, one commenter explained that not allowing retailers to advertise would prevent these businesses from educating the community about SNAP benefits and remove opportunities to advertise that they support SNAP beneficiaries.

The Department agrees that the restriction on Federal funding for billboard advertisements is not intended to prohibit Federal funding for large signs used for informational purposes at health fairs, farmers markets, and other venues where most attendees are on foot. Consequently, for the purposes of the final rule, a billboard is now defined as an outdoor, large format advertising display, either permanent or portable, which is used to advertise or inform alongside a roadway. This definition does not include large signs and banners intended for viewing predominantly by individuals not travelling along a roadway.

In addition, the Department believes that retailers advertising where SNAP benefits are accepted does not constitute promoting SNAP benefits and enrollment. FNS has long allowed retailers to advertise that SNAP benefits can be used at their establishment. This practice is essential to help both SNAP beneficiaries identify locations to use their benefits, and retailers to connect with potential customers. As a result, the final regulatory text at 7 CFR 277.4(b)(5)(ii) is amended to state that the restriction on the use of Federal funds for radio, television, and billboard advertising does not restrict retailers, such as farmers markets, from using these methods to provide information about where SNAP benefits are accepted. Similarly, the Department also believes that the restriction on the use of Federal funds for radio, television, and billboard advertising does not restrict retailers from using these methods to provide factual information about their FNS-approved programs for currently enrolled SNAP households, such as fruits and vegetables incentive programs.

Exception for Remote Areas and Native American Tribes, and Other Vulnerable Communities

Six commenters felt that radio, television, and billboard advertisements are helpful ways to communicate information about SNAP and suggested these advertising methods should continue to be allowable activities. Two of these commentators noted that the prohibition on radio, television, and billboard advertising would have a negative impact on Native American communities, especially tribes living in remote areas. In addition, a commenter in Alaska noted that radio advertisements are an effective method to communicate within their state, which has many remote areas. One commenter explained that radio, television, and billboard advertisements are important ways to communicate about SNAP in elderly or highly impoverished communities.

The Department understands that the prohibition on using Federal funds for radio, television, and billboard advertisements may negatively impact information sharing in Alaskan, Native American, and other vulnerable communities, as well as other rural areas where radio, television, and billboard advertisements are effective methods of communication. The Department will continue to conduct allowable outreach and communication activities appropriate to various types of vulnerable communities served by SNAP, including technical assistance and regular Tribal consultation. However, the Department has no discretion to allow appropriations authorized under the FNA to fund television, radio, and billboard advertisements to promote program benefits and enrollment in these targeted communities. Consequently, as proposed, the regulation at new 7 CFR 277.4(b)(5)(ii), continues to prohibit States or other entities from using Federal funds for television, radio, or billboard advertisements that promote program benefits and enrollment, with the exception that Federal funds may be used to provide factual information identifying retailers that accept SNAP benefits.

Disaster SNAP

Pursuant to the Agricultural Act of 2014, the prohibition on the use of funding authorized to be appropriated under the FNA for television, radio, or billboard advertisements does not apply to Disaster SNAP. Accordingly, the proposed rule stated that the advertising restriction would not apply to Disaster SNAP. Eleven commenters supported the proposed rule language exempting Disaster SNAP from the ban on Federal funding for radio, television, and billboard advertisements. There were no comments opposing the exemption for Disaster SNAP. Therefore, in the final rule the Department maintains that the prohibition on the use of Federal funding authorized to be appropriated in the FNA for television, radio, and billboard advertisements that promote SNAP benefits and enrollment does not apply to Disaster SNAP.

Social Media

Section 4018 of the Agricultural Act of 2014 does not address the use of social media in promotion activities. As a result, in the proposed rule, the use of social media like Twitter, Facebook, YouTube, or other internet sites was not prohibited, so long as the content was not recruitment activity designed to persuade an individual to apply for SNAP benefits through coercion, pressure, or incentives. The majority of commenters (n = 71) supported the language in the proposed rule exempting social media from the ban on Federal funding for radio, television, and billboard advertisements that promote SNAP benefits and enrollment. No comments were received seeking a change or clarification in the proposed rule language. Therefore, the use of social media, such as Twitter, Facebook and YouTube is not prohibited in the final rule, so long as the content is not designed to persuade an individual to apply for SNAP benefits through persuasive practices.

Ban on Outreach With Foreign Governments

Section 4018 of the Agricultural Act of 2014 prohibits the use of funds appropriated under the FNA from being used for any agreements with foreign governments designed to promote SNAP benefits and enrollment. Accordingly,

under the proposed rule, agreements with foreign governments that are designed to promote SNAP benefits and enrollment were proposed to be prohibited. The ban on outreach with foreign governments contained in the proposed rule was only addressed by two commenters. They both supported the ban on the use of Federal funding for SNAP outreach with foreign countries. No commenters requested a change or clarification to this provision. As a result, the Department maintains the language from the proposed rule, to state that the Federal funds authorized to be appropriated under the Act shall not be used to support agreements with foreign governments that are designed to promote SNAP benefits and enrollment.

Worker Compensation

Section 4018 of the Agricultural Act of 2014 also states that any entity that receives funds under the FNA is banned from compensating any person for conducting outreach activities relating to participation in, or for recruiting individuals to apply to receive benefits under SNAP, if the amount of the compensation would be based on the number of individuals who apply to receive benefits. Pursuant to this provision, the proposed rule banned tying outreach worker compensation to the number of individuals who apply for SNAP as a result of that worker's efforts in any organization that receives funding under the FNA. In other words, the proposed rule would have prohibited organizations who receive any funding from the FNA from requiring a worker to meet a quota of SNAP applicants in order to receive their full compensation or performance bonus; however, the preamble to the proposed rule stated that organizations would be allowed to compensate outreach workers based on the number of hours an outreach worker dedicates to assisting individuals applying for SNAP benefits. For example, an outreach worker may be compensated at an hourly rate of ''X'' dollars for each hour the worker spends providing SNAP application assistance. Lastly, the preamble in the proposed rule also stated this prohibition would apply even if the organization used funds from a source other than those authorized to be appropriated in the FNA to pay outreach workers on a per application basis, so long as that organization received any funds under the FNA.

Several commenters (n = 16) supported the language in the proposed rule prohibiting compensation of workers based on the number of individuals who apply for benefits by entities that receive funds under the FNA. However, these same commenters recommended clarifying that State agencies and their partners are allowed to set outreach and application goals as part of their State outreach plan contracts. These commenters explained that State agencies should be able to hold outreach partners accountable for effective use of State and Federal resources, and be able to track submitted applications that result from educational or informational activities. Another commenter expressed a similar sentiment in explaining that the final rule should confirm that the prohibition on tying outreach worker compensation to the number of SNAP applications completed by a worker applies only to the compensation of individuals and not to the compensation of organizations.

In addition, an advocacy organization stated that the worker compensation regulation raised serious concerns about unwarranted control of independent organizations by the government, including possible constitutional violations by the government. At the very least, this commenter felt that the policy was overbroad and unfairly intruded into the lawful activity of important organizations over which the government cannot, and should not, exert such control.

The Department understands the importance of setting outreach goals for organizations involved in allowable SNAP outreach activities to ensure accountability for taxpayer dollars. The Department encourages States to establish performance metrics in their agreements with community partners as part of their State outreach plans to ensure State and Federal resources are used efficiently and effectively. Accordingly, the Department does not intend to ban the setting of outreach goals, but seeks to prevent the tying of compensation of individual workers, by any organization that receives funding under the FNA, to the number of individuals who apply for SNAP as a result of that particular worker's efforts as required by the Agricultural Act of 2014. The Department is hereby clarifying that the ban does not apply to the setting of outreach goals at the level of the individual or the organization, so long as those goals are not tied to individual worker compensation. The Department believes the regulatory text is sufficiently clear in this regard and maintains the language from the proposed rule.

Regarding the comment on potential government overreach, the Department has little discretion in how this provision of the Agricultural Act of 2014 is implemented. If an organization does not receive funding under the FNA, then this regulation would not apply to them. However, for organizations that do receive funding under the FNA, the final rule maintains the restriction on the spending of funds received from any source.

Other Impacted FNS Programs

The FNA provides authorization of funds for SNAP, and also for food purchases and administrative costs for the Food Distribution Program on Indian Reservations (FDPIR) (7 U.S.C. 2013b) and for food purchases for The Emergency Food Assistance Program (TEFAP) (7 U.S.C. 2036). Under the proposed rule, FDPIR and TEFAP funds, as authorized under the FNA, would not be permitted for use in banned recruitment activities as described above.

No comments were received regarding the impact of the proposed rule on programs other than SNAP. As a result, the Department will proceed, as discussed in the proposed rule, to amend current 7 CFR 251.10(i), to prohibit entities funded by TEFAP from compensating staff engaged in SNAP outreach activities based on the number who apply to receive SNAP benefits. FDPIR regulations, at Section 253.11 of Title 7, currently require that funds must be expended and accounted for in accordance with the SNAP regulations at Part 277. Because the SNAP regulations at Part 277 have been amended to account for the changes mandated by the Agricultural Act of 2014, FDPIR funds, as authorized under FNA, would not be permitted for use in SNAP recruitment and promotion activities.

III. Procedural Matters

Executive Order 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This final rule has been determined to be not significant and was not reviewed by the Office of Management and Budget (OMB) in conformance with Executive Order 12866.

Regulatory Impact Analysis

This rule has been designated as not significant by the Office of Management and Budget, therefore, no Regulatory Impact Analysis is required.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601–612) requires Agencies to analyze the impact of rulemaking on small entities and consider alternatives that would minimize any significant impacts on a substantial number of small entities. Pursuant to that review, it has been certified that this rule would not have a significant impact on a substantial number of small entities.

This final rule would not have an impact on small entities because, while the rule would restrict the types of recruitment and promotion activities eligible for Federal reimbursement and the types of activities for which funds authorized to be appropriated under the FNA may be spent, it does not change the type of entities that may receive administrative reimbursement or the rate at which they may be reimbursed for allowable activities. In addition, the rule would prohibit entities that receive funds under the FNA from compensating any person engaged in outreach or recruitment activities based on the number of individuals who apply to receive SNAP benefits; however, this is not expected to limit the ability of small entities, or any entity, from using other methods of compensating persons engaged in outreach or recruitment activities.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local and tribal governments and the private sector. Under Section 202 of the UMRA, the Department generally must prepare a written statement, including a cost benefit analysis, for proposed and final rules with ''Federal mandates'' that may result in expenditures by State, local or Tribal governments, in the aggregate, or the private sector, of $146 million or more (when adjusted for 2016 inflation; GDP deflator source: Table 1.1.9 at *http://www.bea.gov/iTable*) in any one year. When such a statement is needed for a rule, Section 205 of the UMRA generally requires the Department to identify and consider a reasonable number of regulatory alternatives and adopt the most cost effective or least burdensome alternative that achieves the objectives of the rule.

This final rule does not contain Federal mandates (under the regulatory provisions of Title II of the UMRA) for State, local and Tribal governments or the private sector of $146 million or more in any one year. Thus, the rule is not subject to the requirements of Sections 202 and 205 of the UMRA.

Executive Order 12372

The State Administrative Matching Grants for the Supplemental Nutrition Assistance Program is listed in the Catalog of Federal Domestic Assistance Programs under 10.561. For the reasons set forth in the final rule in 2 CFR chapter IV, and related Notice (48 FR 29114, June 24, 1983), this program is included in the scope of Executive Order 12372, which requires intergovernmental consultation with State and local officials. FNS has consulted with State and local officials regarding the changes set forth in this rule by issuing to SNAP State agencies on March 21, 2014, an Implementation Memorandum for the 2014 Farm Bill which included guidance on implementing the changes in Section 4018 and on May 5, 2014, issuing a Question and Answer Memorandum responding to implementation questions from the State SNAP agencies and their partners. In addition, FNS hosted a stakeholder meeting on September 4, 2014, to consult with State and local representatives on the provisions of Section 4018.

Federalism Summary Impact Statement

Executive Order 13132 requires Federal agencies to consider the impact of their regulatory actions on State and local governments. Where such actions have federalism implications, agencies are directed to provide a statement for inclusion in the preamble to the regulations describing the agency's considerations in terms of the three categories called for under Section (6)(b)(2)(B) of Executive Order 13121. The Department has determined that this final rule does not have federalism implications. This rule does not impose substantial or direct compliance costs on State and local governments. Therefore, under Section 6(b) of the Executive Order, a federalism summary impact statement is not required.

Executive Order 12988, Civil Justice Reform

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This final rule is intended to have preemptive effect with respect to any State or local laws, regulations or policies which conflict with its provisions or which would otherwise impede its full and timely implementation.

This final rule is not intended to have retroactive effect unless so specified in the Effective Dates section of the final rule. Prior to any judicial challenge to the provisions of the final rule, all applicable administrative procedures must be exhausted.

Civil Rights Impact Analysis

FNS has reviewed this final rule in accordance with USDA Regulation 4300–4, ''Civil Rights Impact Analysis,'' to identify any major civil rights impacts the rule might have on program participants on the basis of age, race, color, national origin, sex, or disability. After a careful review of the rule's intent and provisions, FNS has determined that this rule is not expected to affect the participation of protected individuals in the Supplemental Nutrition Assistance Program.

Executive Order 13175

This final rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

FNS has assessed the impact of this rule on Indian tribes and determined that while this rule may have tribal implications as discussed in the summary of comments in the preamble, FNS has no discretion to change the implementation of the final rule, and for that reason no tribal consultation under Executive Order 13175 is required. If a Tribe requests consultation, FNS will work with the USDA Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. Chap. 35; 5 CFR part 1320) requires Office of Management and Budget (OMB) approval of all covered collections of information by a Federal agency before such collections can be implemented. Respondents are not required to respond to any such collection of information unless it

displays a current valid OMB control number. This rule does not contain information collection requirements subject to approval by the Office of Management and Budget under the Paperwork Reduction Act of 1994.

E-Government Act Compliance

The Department is committed to complying with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects

7 CFR Part 251

The Emergency Food Assistance Program, Miscellaneous provisions.

7 CFR Part 271

Supplemental Nutrition Assistance Program, Promotional activities.

7 CFR Part 272

Supplemental Nutrition Assistance Program, Program informational activities.

7 CFR Part 277

Supplemental Nutrition Assistance Program, Funding.

Accordingly, 7 CFR parts 251, 271, 272 and 277 are amended as follows:

PART 251—THE EMERGENCY FOOD ASSISTANCE PROGRAM

■ 1. The authority citation for 7 CFR part 251 is revised to read as follows:

Authority: 7 U.S.C. 2011–2036.

■ 2. Revise § 251.10 (i) to read as follows:

§ 251.10 Miscellaneous provisions.

* * * * *

(i) *Recruitment activities related to the Supplemental Nutrition Assistance Program (SNAP).* Any entity that receives donated foods identified in this section must adhere to regulations set forth under § 277.4(b)(6) of this chapter.

* * * * *

PART 271—GENERAL INFORMATION AND DEFINITIONS

■ 3. The authority citation for 7 CFR part 271 continues to read as follows:

Authority: 7 U.S.C. 2011–2036.

■ 4. Add § 271.9 to read as follows:

§ 271.9 Promotional activities.

No funds authorized to be appropriated under the Food and Nutrition Act of 2008, as amended, shall be used for recruitment or promotion activities as described in § 277.4(b)(5). No entity receiving funds under the Food and Nutrition Act of 2008, as amended, shall be permitted to perform activities described in § 277.4(b)(6) of this chapter.

PART 272—REQUIREMENTS FOR PARTICIPATING STATE AGENCIES

■ 5. The authority citation for 7 CFR part 272 continues to read as follows:

Authority: 7 U.S.C. 2011–2036.

■ 6. Revise § 272.5(c) to read as follows:

§ 272.5 Program informational activities.

* * * * *

(c) *Program informational activities for low-income households.* At their option, State agencies may carry out and claim associated costs for Program informational activities designed to inform low-income households about the availability, eligibility requirements, application procedures, and benefits of SNAP. Allowable informational activities shall not include recruitment activities as described in § 277.4(b)(5) of this chapter. Program informational materials used in such activities shall be subject to § 272.4(b), which pertains to bilingual requirements. Before FNS considers costs for allowable informational activities eligible for reimbursement at the fifty percent rate under part 277 of this chapter, State agencies shall obtain FNS approval for the attachment to their Plans of Operation as specified in § 272.2(d)(1)(ix). In such attachments, State agencies shall describe the subject activities with respect to the socio-economic and demographic characteristics of the target population, types of media used, geographic areas warranting attention, and outside organizations which would be involved. State agencies shall update this attachment to their Plans of Operation when significant changes occur and shall report projected costs for this Program activity in accordance with § 272.2(c), (e), and (f).

PART 277—PAYMENTS OF CERTAIN ADMINISTRATIVE COSTS OF STATE AGENCIES

■ 7. The authority citation for 7 CFR part 277 continues to read as follows:

Authority: 7 U.S.C. 2011–2036.

■ 8. In § 277.4:

■ a. Remove the phrase ''Food Stamp Program'' wherever it appears and add in its place ''SNAP''.

■ b. Amend paragraph (b) introductory text by removing the last two sentences; and

■ c. Add paragraphs (b)(5) and (b)(6).

The additions read as follows:

§ 277.4 Funding.

* * * * *

(b) * * *

(5) The Federal reimbursement rate shall include reimbursement for SNAP informational activities, but shall not include the following:

(i) Recruitment activities designed to persuade an individual to apply for SNAP benefits through the use of persuasive practices. Persuasive practices constitute coercing or pressuring an individual to apply, or providing incentives to fill out an application for SNAP benefits. Communicating factual information pertaining to SNAP so that an individual can make an informed choice is not a recruitment activity designed to persuade an individual to apply for SNAP benefits.

(ii) Television, radio or billboard advertisements that are designed to promote SNAP benefits and enrollment, excepting the use of such advertisements for programmatic activities undertaken with respect to benefits provided under § 280.1 of this chapter. This restriction does not apply to radio, television, or billboard advertisements that are not designed to promote SNAP benefits and enrollment and that provide factual information identifying retail food stores where SNAP benefits are accepted.

(iii) Agreements with foreign governments that are designed to promote SNAP benefits and enrollment.

(6) Any entity that receives funding from the programs identified by this section and § 251.4 of this chapter is prohibited from compensating any person for conducting outreach activities relating to participation in, or for recruiting individuals to apply to receive benefits under, the Supplemental Nutrition Assistance Program, if the amount of the compensation would be based on the number of individuals who apply to receive the benefits.

Dated: December 13, 2016.

Audrey Rowe,

Administrator, Food and Nutrition Service.

BILLING CODE 3410–30–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 923

[Doc. No. AMS–SC–16–0077; SC16–923–1 FR]

Cherries Grown in Designated Counties in Washington; Increased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule implements a recommendation from the Washington Cherry Marketing Committee (Committee) to increase the assessment rate established for the 2016–2017 and subsequent fiscal periods from $0.15 to $0.25 per ton of Washington cherries handled. The Committee locally administers the marketing order and is comprised of growers and handlers of cherries operating within the production area. Assessments upon cherry handlers are used by the Committee to fund reasonable and necessary expenses of the marketing order. The fiscal period begins April 1 and ends March 31. The assessment rate will remain in effect indefinitely unless modified, suspended or terminated.

DATES: Effective December 21, 2016.

FOR FURTHER INFORMATION CONTACT: Teresa Hutchinson or Gary D. Olson, Northwest Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (503) 326–2724, Fax: (503) 326–7440, or Email: *Teresa.Hutchinson@ams.usda.gov* or *GaryD.Olson@ams.usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Order No. 923, as amended (7 CFR part 923), regulating the handling of cherries grown in designated counties in Washington, hereinafter referred to as the ''order.'' The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.''

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the order now in effect, Washington cherry handlers are subject to assessments. Funds to administer the order are derived from such assessments. It is intended that the assessment rate, as issued herein, will be applicable to all assessable Washington cherries beginning April 1, 2016, and continue until amended, suspended, or terminated.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule increases the assessment rate for the 2016–2017 and subsequent fiscal periods from $0.15 to $0.25 per ton of Washington cherries handled.

The order provides authority for the Committee, with the approval of USDA, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The members of the Committee are growers and handlers of Washington cherries. They are familiar with the Committee's needs, and with the costs for goods and services in their local area, and are thus in a position to formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in a public meeting. Thus, all directly affected persons have an opportunity to participate and provide input.

For the 2013–2014 and subsequent fiscal periods, the Committee recommended, and the USDA approved, an assessment rate of $0.15 per ton of Washington cherries that would continue in effect from fiscal period to fiscal period unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Committee or other information available to USDA.

The Committee met on May 18, 2016, and unanimously recommended expenditures of $57,150 for the 2016–2017 fiscal period. In comparison, the previous fiscal period's budgeted expenditures were $59,750. The Committee also unanimously recommended an assessment rate of $0.25 per ton of Washington cherries. The recommended assessment rate of $0.25 is $0.10 higher than the rate currently in effect.

The expenditures recommended by the Committee for the 2016–2017 fiscal period include $25,000 for the management fee; $7,000 for compliance; $5,000 for the data management fee; $5,000 for accounting administration; $5,000 for research; $4,000 for Committee travel; $3,000 for an audit; and $3,150 for other miscellaneous expenses. In comparison, expenditures for the 2015–2016 fiscal period were $25,000 for the management fee; $7,000 for compliance; $5,000 for the data management fee; $7,000 for accounting administration; $5,000 for research; $4,000 for Committee travel; $4,000 for an audit; and $2,750 for other miscellaneous expenses.

Committee members estimated the 2016 fresh cherry production to be approximately 150,000 tons, which would be less than the 2015 production of 165,358 tons by 15,358 tons. However, cherry production tends to fluctuate due to the effects of weather, pollination, and tree health. The Committee's recommended assessment rate was derived by dividing the 2016–2017 anticipated expenses by the expected shipments of Washington cherries, while also taking into account the Committee's monetary reserve. The recommended assessment rate of $0.25 per ton, when multiplied by the 150,000 tons of estimated 2016 Washington cherry shipments, is expected to generate $37,500 in handler assessments. The projected revenue from handler assessments, together with funds from the Committee's monetary reserve, should be adequate to cover the 2016–2017 budgeted expenses of $57,150. The Committee expects its monetary reserve to decrease from $49,661 at the beginning of the 2016–2017 fiscal period to approximately $30,011 at the end of the 2016–2017 fiscal period. That amount will be within the provisions of the order and will provide the Committee with greater ability to absorb fluctuations in assessment income and expenses into the future.

The assessment rate established in this rule will continue in effect indefinitely unless modified, suspended, or terminated by USDA

upon recommendation and information submitted by the Committee or other available information.

Although this assessment rate will be in effect for an indefinite period, the Committee will continue to meet prior to or during each fiscal period to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee and USDA. Committee meetings are open to the public and interested persons may express their views at these meetings. USDA will evaluate Committee recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking will be undertaken as necessary. The Committee's 2016–2017 budget and those for subsequent fiscal periods will be reviewed and, as appropriate, approved by USDA.

Final Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are 53 handlers of Washington sweet cherries subject to regulation under the order and approximately 1,500 growers in the regulated production area. Small agricultural service firms are defined by the Small Business Administration (13 CFR 121.201) as those having annual receipts of less than $7,500,000, and small agricultural growers are defined as those having annual receipts of less than $750,000.

National Agricultural Statistics Service has prepared a preliminary report for the 2015 shipping season showing that prices for the 171,600 tons of sweet cherries that entered the fresh market averaged $2,380 per ton. Based on the number of growers in the production area (1,500), the average grower revenue from the sale of sweet cherries in 2015 can therefore be estimated at approximately $272,272 per year. In addition, the Committee reports that most of the industry's 53 handlers reported gross receipts of less than $7,500,000 from the sale of fresh sweet cherries last fiscal period. Thus, the majority of growers and handlers of Washington sweet cherries may be classified as small entities.

This action increases the assessment rate established for the Committee and collected from handlers for the 2016–2017 and subsequent fiscal periods from $0.15 to $0.25 per ton of Washington cherries handled. The Committee unanimously recommended 2016–2017 expenditures of $57,150 and an assessment rate of $0.25 per ton. The assessment rate of $0.25 is $0.10 higher than the rate established for the 2013–2014 fiscal period.

The 2016–2017 Washington cherry crop is estimated at 150,000 tons. At the $0.25 per ton assessment rate, the Committee anticipates that assessment income of approximately $37,500, along with reserve funds, should be adequate to cover budgeted expenses for the 2016–2017 fiscal period. With the increased assessment rate and budgeted expense level, the Committee anticipates that $19,650 will need to be deducted from the monetary reserve. As such, reserve funds are estimated to be at $30,011 on March 31, 2017. That reserve level is within the maximum permitted by the order of approximately one fiscal period's operational expenses (§ 923.42(a)(2)).

The expenditures recommended by the Committee for the 2016–2017 fiscal period include $25,000 for the management fee; $7,000 for compliance; $5,000 for the data management fee; $5,000 for accounting administration; $5,000 for research; $4,000 for Committee travel; $3,000 for the audit; and $3,150 for other miscellaneous expenses.

In comparison, expenditures for the 2015–2016 fiscal period were $25,000 for the management fee; $7,000 for compliance; $5,000 for the data management fee; $7,000 for accounting administration; $5,000 for research; $4,000 for Committee travel; $4,000 for the audit; and $2,750 for other miscellaneous expenses.

The Committee discussed alternatives to this action, including recommending alternative expenditure levels and assessment rates. Although lower assessment rates were considered, none were selected because they would not have generated sufficient income to administer the order.

A review of historical data and preliminary information pertaining to the upcoming fiscal period indicates that the grower price for the 2016–2017 fiscal period could average $2,380 per ton of sweet cherries. Therefore, the estimated assessment revenue for the 2016–2017 fiscal period, as a percentage of total grower revenue, is approximately 0.01 percent.

This action increases the assessment obligation imposed on handlers. While assessments impose some additional costs on handlers, the costs are minimal and uniform on all handlers. Some of the additional costs may be passed on to growers. However, these costs are offset by the benefits derived by the operation of the order.

In addition, the Committee's meeting was widely publicized throughout the Washington cherry industry and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the May 18, 2016, meeting was a public meeting and all entities, both large and small, were able to express views on this issue.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0189 (Marketing Orders for Fruit Crops). No changes in those requirements are necessary as a result of this action. Should any changes become necessary, they would be submitted to OMB for approval.

This rule imposes no additional reporting or recordkeeping requirements on either small or large Washington cherry handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. As noted in the initial regulatory flexibility analysis, USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this final rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

A proposed rule concerning this action was published in the **Federal Register** on September 21, 2016 (81 FR 64785). Copies of the proposed rule were also emailed to all commodity handlers. Finally, the proposal was made available through the Internet by USDA and the Office of the Federal Register. A 15-day comment period ending October 6, 2016, was provided

for interested persons to respond to the proposal.

One comment was received during the comment period in response to the proposal. The commenter was concerned about the impact that the increased assessment rate would have on growers. The commenter also questioned why the assessment is only applied to certain counties in Washington, and not others. In addition, the commenter stated that the opinions of sweet cherry growers and handlers should be taken into consideration when establishing assessment rates, and that there should be flexibility during the transitional period when a new assessment rate is implemented. Lastly, the commenter offered recommendations with regards to the assessment rate establishment process and took exception to the indefinite period that assessment rates are in effect.

Under the order, it is handlers that are assessed, not growers. As such, growers will not be directly impacted by this action. However, as mentioned previously in this rule, some of the additional costs to handlers as a result of this action may be passed on to growers. Nevertheless, USDA believes that such additional costs will be offset by the benefits derived by the operation of the order.

Furthermore, the commenter's request for clarity with regards to why only certain counties are covered by this regulatory change is addressed in the order's provisions. Section 923.4 defines the order's production area as the counties of Okanogan, Chelan, Kittitas, Yakima, Klickitat in the State of Washington and all of the counties in Washington lying east thereof. Only handlers who handle cherries grown within the specific production area are subject to assessment.

Lastly, the commenter's thoughts regarding the assessment rate establishment process and effective period have been previously addressed in this rule. The Committee meets prior to, or during, each fiscal period to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee or USDA. Committee meetings are open to the public and interested persons may express their views at these meetings.

Meetings are widely publicized throughout the Washington cherry industry and all interested persons are invited to attend the meetings and participate in Committee deliberations on all issues. In addition, interested persons are invited to submit comments on any proposed assessment rules. All comments are considered prior to finalization of a proposed rule. Once established, assessment rates remain in effect until modified by USDA upon the recommendation of the Committee.

Accordingly, no changes will be made to the rule as proposed, based on the comment received.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *http://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Committee and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it also found and determined that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** because: (1) The 2016–2017 fiscal period began on April 1, 2016, and the order requires that the assessment rate for each fiscal period apply to all assessable Washington cherries handled during such fiscal period; (2) the Committee needs to have sufficient funds to pay its expenses, which are incurred on a continuous basis; (3) handlers have already shipped Washington cherries from the 2016 crop; and (4) handlers are aware of this action, which was unanimously recommended by the Committee at a public meeting and is similar to other assessment rate actions issued in past years.

List of Subjects in 7 CFR Part 923

Cherries, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 923 is amended as follows:

PART 923—CHERRIES GROWN IN DESIGNATED COUNTIES IN WASHINGTON

■ 1. The authority citation for 7 CFR part 923 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Section 923.236 is revised to read as follows:

§ 923.236 Assessment rate.

On and after April 1, 2016, an assessment rate of $0.25 per ton is established for the Washington Cherry Marketing Committee.

Dated: December 12, 2016.

Bruce Summers,

Associate Administrator, Agricultural Marketing Service.

7 CFR Part 981

[Doc. No. AMS–SC–16–0045; SC16–981–2 FR]

Almonds Grown in California; Increased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule implements a recommendation from the Almond Board of California (Board) for an increase of the assessment rate established for the 2016–17 through the 2018–19 crop years from $0.03 to $0.04 per pound of almonds handled under the marketing order (order). Of the $0.04 per pound assessment, 60 percent (or $0.024 per pound) is available as credit-back for handlers who conduct their own promotional activities. The assessment rate will return to $0.03 for the 2019–20 and subsequent crop years, and the amount available for handler credit-back will return to $0.018 per pound (60 percent). The Board locally administers the order and is comprised of growers and handlers of almonds grown in California. Assessments upon almond handlers are used by the Board to fund reasonable and necessary expenses of the program. The crop year began on August 1 and ends on July 31. The $0.04 assessment rate will remain in effect until July 31, 2019. Beginning August 1, 2019, the assessment rate will return to $0.03 and will remain in effect indefinitely unless modified, suspended, or terminated. Two comments period were provided to interested individuals. Comments will be addressed later in this document.

DATES: Effective December 21, 2016.

FOR FURTHER INFORMATION CONTACT: Marketing Specialist Andrea Ricci, or Regional Director Jeffrey Smutny, California Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program,

AMS, USDA; Telephone: (559) 487–5901, Fax: (559) 487–5906, or Email: with *Andrea.Ricci@ams.usda.gov* or *Jeffrey.Smutny@ams.usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Order No. 981, as amended (7 CFR part 981), regulating the handling of almonds grown in California, hereinafter referred to as the ''order.'' The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.''

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the marketing order now in effect, California almond handlers are subject to assessments. Funds to administer the order are derived from such assessments. It is intended that the assessment rate as issued herein will be applicable to all assessable almonds beginning on August 1, 2016, through July 31, 2019. Beginning August 1, 2019, the assessment rate will return to $0.03 and will remain in effect indefinitely unless modified, suspended, or terminated.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule increases the assessment rate established for the Board for the 2016–17 through 2018–19 crop years from $0.03 to $0.04 per pound of almonds received. Of the $0.04 per pound assessment, 60 percent (or $0.024 per pound) is available as credit-back for handlers who conduct their own promotional activities. The assessment rate will return to $0.03 for the 2019–20 and subsequent crop years, and the amount available for handler credit-back will return to $0.018 per pound (60 percent).

The California almond marketing order provides authority for the Board, with the approval of USDA, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The members of the Board are growers and handlers of California almonds. They are familiar with the Board's needs and with the costs for goods and services in their local area and thus are in a position to formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in a public meeting. Therefore, all directly affected persons have an opportunity to participate and provide input.

For the 2005–06 and subsequent crop years, the Board recommended, and USDA approved, an assessment rate of $0.03 per pound that would continue in effect from crop year to crop year unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Board or other information available to USDA. Of the $0.03 per pound assessment, 60 percent ($0.018) per pound was made available as credit-back for handlers who conducted their own promotional activities.

The Board met on April 12, 2016, and unanimously recommended 2016–17 expenditures of $69,897,626 and an assessment rate of $0.04 per pound of almonds received. In comparison, last year's budgeted expenditures were $58,998,976. The assessment rate of $0.04 is $0.01 higher than the rate currently in effect, and the credit-back portion of the assessment rate ($0.024 per pound) is $0.006 more than the credit-back portion currently in effect.

The Board estimates a production increase of thirty percent, or 600 million pounds, by the 2019–20 crop year. This increase is nearly as much as is consumed by the industry's largest market. Due to the size of the increase in forecasted production, the Board believes that increased market development projects and new marketing programs are required to successfully market the additional supply. Accordingly, the Board has recommended a new ''Nut of Choice'' marketing program.

The Board also anticipates needing additional funding for the industry's new ''Crop of Choice'' research program, as well as additional research to address concerns such as changing water supply and quality systems; air quality and how it relates to harvesting, pesticide, and energy use; and bee health.

The three-year higher assessment rate is needed to fund the increase in marketing and research activities. The Board anticipates that by the 2019–20 crop year, the increase in production assessed at the reinstated $0.03 per pound rate should generate sufficient revenue to cover the anticipated expenditures at that time. Therefore, beginning August 1, 2019, the assessment rate will return to $0.03 per pound.

The following table compares major budget expenditures recommended by the Board for the 2015–16 and 2016–17 crop years:

Budget expense categories	2015–16	2016–17
Operations Expenses	$ 7,904,000	$ 8,404,000
Board Accelerated Innovation Management (AIM) Initiatives	1,500,000	1,000,000
Crop of Choice Initiatives	0	5,625,000
Reputation Management	1,826,350	2,000,000
Production Research	1,843,331	1,843,331
Environmental Research	1,039,790	1,039,790
Scientific Affairs/Nutrition	1,640,000	1,640,000
Global Market Development	38,583,756	38,583,756
Nut of Choice Initiatives	0	5,100,000
Technical & Regulatory Affairs	1,045,500	1,045,500
Industry Services	2,436,220	2,436,220
Almond Quality & Food Safety	790,800	790,800
Corporate Technology	389,229	389,229

The assessment rate recommended by the Board was derived by considering the anticipated 30-percent production increase in the next three years, anticipated expenditures plus additional program expenses, current production level, and maintaining adequate operating reserve funds. In its recommendation, the Board utilized an estimate of 1,835,290,000 pounds of assessable almonds for the 2016–17 crop year. If realized, this should provide estimated assessment revenue of $62,262,213, which reflects credit-back reimbursements and organic exemptions. In addition, it is anticipated that $20,907,722 will be provided by other sources, including interest income, Market Access Program (MAP) funds, and operating reserve funds. When combined, revenue from these sources should be adequate to cover budgeted expenses.

Section 981.81 of the order authorizes the Board to maintain operating reserve funds consisting of an administrative-research portion and a marketing promotion portion, and states that the amount allocated to each portion shall not exceed six months' budgeted expenses for that activity area. Funds in the reserve at the end of the 2016–17 crop year are estimated to be approximately $16,581,222, well within the amount permitted by the order.

A proposed rule concerning this action was published in the **Federal Register** on July 18, 2016 (81 FR 46616). A 15-day comment period ending August 2, 2016, was provided for interested persons to respond to the proposal. One commenter raised concern that notification of the proposal was not promptly circulated within industry and asked for an extension of the comment period. After reviewing the request, USDA published a notice reopening the comment period for an additional 30 days in the **Federal Register** on September 12, 2016 (81 FR 62668). All comments will be addressed further in this document.

The assessment rate established in this rule will continue in effect until July 31, 2019. Beginning August 1, 2019, the assessment rate will return to $0.03 and will continue in effect indefinitely unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Board or other available information.

Although this assessment rate will be in effect for a specified period, the Board will continue to meet prior to or during each crop year to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Board meetings are available from the Board or USDA. Board meetings are open to the public, and interested persons may express their views at these meetings. USDA would evaluate Board recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking would be undertaken as necessary. The Board's 2016–17 budget and those for subsequent crop years would be reviewed and, as appropriate, approved by USDA.

Final Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 6,800 almond growers in the production area and approximately 100 handlers subject to regulation under the marketing order. Small agricultural producers are defined by the Small Business Administration (SBA) as those having annual receipts of less than $750,000, and small agricultural service firms are defined as those whose annual receipts are less than $7,500,000 (13 CFR 121.201).

The National Agricultural Statistics Service (NASS) reported in its 2012 Agricultural Census that there were 6,841 almond farms in the production area (California), of which 6,204 had bearing acres. The following computation provides an estimate of the proportion of producers (farms) and agricultural service firms (handlers) that would be considered small under the SBA definitions.

The NASS Census data indicates that out of the 6,204 California farms with bearing acres of almonds, 4,471 (72 percent) have fewer than 100-bearing acres.

In its most recently reported crop year (2015), NASS reported an average yield of 2,130 pounds per acre and a season average grower price of $2.84 per pound. A 100-acre farm with an average yield of 2,130 pounds per acre would produce about 213,000 pounds of almonds. At $2.84 per pound, that farm's production would be valued at $604,920.

Because the Census of Agriculture indicates that the majority of California's almond farms are smaller than 100 acres, it could be concluded that the majority of growers had annual receipts from the sale of almonds in 2015 of less than $604,920, well below the SBA threshold of $750,000. Thus, over 70 percent of California's almond growers would be considered small growers according to SBA's definition.

According to information supplied by the Board, approximately 30 percent of California's almond handlers shipped almonds valued under $7,500,000 during the 2014–15 crop year and would therefore be considered small handlers according to the SBA definition.

This rule increases the assessment rate collected from handlers for the 2016–17 through the 2018–19 crop years from $0.03 to $0.04 per pound of almonds received. Of the $0.04 per pound assessment, 60 percent (or $0.024 per pound) is available as credit-back for handlers who conduct their own promotional activities, consistent with § 981.441 of the order's regulations and subject to Board approval. The Board unanimously recommended 2016–17 expenditures of $69,897,626 and an assessment rate of $0.04 per pound of almonds received. The assessment rate of $0.04 is $0.01 higher than the 2015–16 rate, and the credit-back portion of $0.024 per pound is $0.006 higher than the current credit-back portion of $0.018. The quantity of assessable almonds for the 2016–17 crop year is estimated at 1,835,290,000 pounds. This should provide estimated assessment revenue of $62,262,213, which reflects credit-back reimbursements and organic exemptions. In addition, it is anticipated that $20,907,722 will be provided by other sources, including interest income, MAP funds, and operating reserve funds. When combined, revenue from these sources should be adequate to cover budgeted expenses.

The major expenditures recommended by the Board for the 2016–17 crop year include $8,404,000 for Operations Expenses, $1,000,000 for Board AIM Initiatives, $5,625,000 for Crop of Choice Initiatives, $2,000,000 for Reputation Management, $1,843,331 for Production Research, $1,039,790 for Environmental Research, $1,640,000 for Scientific Affairs/Nutrition, $38,583,756 for Global Market Development, $5,100,000 for Nut of Choice Initiatives, $1,045,500 for Technical & Regulatory Affairs, $2,436,220 for Industry

Services, $790,800 for Almond Quality & Food Safety, and $389,229 for Corporate Technology.

Budgeted expenses for these items in 2015–16 were $7,904,000 for Operations Expenses, $1,500,000 for Board AIM Initiatives, $0 for Crop of Choice Initiatives, $1,826,350 for Reputation Management, $1,843,331 for Production Research, $1,039,790 for Environmental Research, $1,640,000 for Scientific Affairs/Nutrition, $38,583,756 for Global Market Development, $0 for Nut of Choice Initiatives, $1,045,500 for Technical & Regulatory Affairs, $2,436,220 for Industry Services, $790,800 for Almond Quality & Food Safety, and $389,229 for Corporate Technology.

The Board estimates a production increase of 30 percent, or 600 million pounds, by the 2019–20 crop year. This increase is nearly as large as the current consumption of the industry's largest market. Increased market development investment as well as new marketing programs will be required to successfully market the additional supply. Additional investment in research is also needed to address concerns such as changing water supply and quality systems; air quality and how it relates to harvesting, pesticide, and energy use; and bee health. Accordingly, the three-year higher assessment rate is needed to fund the Board's new Nut of Choice marketing program and Crop of Choice research activities. The Board anticipates that by the 2019–20 crop year, the increased production assessed at the reinstated $0.03 per pound rate should generate sufficient revenue to cover the anticipated expenditures at that time.

Prior to arriving at this budget and assessment rate, the Board held a strategic planning session in February 2016. The Board also considered recommendations made from its various committees, including the Global Market Development Committee, Production Research Committee, and Environmental Committee. Alternative expenditure levels were discussed, based upon the relative value of various activities to the almond industry. Ultimately, the Board unanimously determined that 2016–17 expenditures of $69,897,626 were appropriate and that the recommended assessment rate, plus income from other sources and operation reverse funds, would generate sufficient revenue to meet its expenses.

A review of historical information and preliminary information pertaining to the upcoming crop year indicates that the grower price for the 2016–17 season could range between $4.00 and $2.84 per pound of almonds. Therefore, the estimated assessment revenue for the 2016–17 crop year (disregarding any amounts credited pursuant to § 981.41 and § 981.441) as a percentage of total grower revenue could range between 1.00 and 1.41 percent, respectively.

This action increases the assessment obligation imposed on handlers. While assessments impose some additional costs on handlers, the costs are minimal and uniform on all handlers. Some of the additional costs may be passed on to growers. However, these costs would be offset by the benefits derived by the operation of the marketing order. In addition, the Board's meeting was widely publicized throughout the California almond industry, and all interested persons were invited to attend the meeting and participate in Board deliberations on all issues. Like all Board meetings, the April 12, 2016, meeting was a public meeting, and all entities, both large and small, were able to express views on this issue.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0178 (Vegetable and Specialty Crops.) No changes in those requirements as a result of this action are necessary. Should any changes become necessary, they would be submitted to OMB for approval.

This rule imposes no additional reporting or recordkeeping requirements on either small or large California almond handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

As previously noted, a proposed rule concerning this action was published providing a 15-day comment period for interested persons to respond to the proposal. In addition, on September 12, 2016, the comment period was reopened for an additional 30 days. Copies of the proposed rule were provided to all almond handlers. Finally, the proposal was made available through the internet by USDA and the Office of the Federal Register. A total of forty-six comments were received. Twenty-eight supported and eighteen opposed the proposal. Of the eighteen in opposition, three were grower/handlers, eleven were growers, two individuals were from outside of the production area, and two individuals did not identify themselves.

Of those who supported the proposal, twenty-three were growers.

The majority of the commenters in support of the proposal stated that increasing the assessment rate now was necessary to fund market development programs and new marketing and promotion activities to create demand prior to the onset of the increased production. Commenters noted that the industry is aware of the increasing almond acreage and the need to invest prior to the larger crop materializing. The commenters also noted that the three-year ''sunset'' feature will ensure that once the additional 30 percent increase in production is realized, the assessment rate will return to the current $0.03 rate. One commenter noted the need to develop demand for the increased supplies to ensure the carry-over inventory is kept near zero each year, which will help stabilize prices at the grower level and negate the effect of the increased assessment. Another commenter noted that the recent volatility in almond prices illustrates how critically important it is to make investments now. Several commenters stated the Board has had proven success in the areas of marketing and promotion; nutrition, environmental, and production research; and grower outreach; and they are pleased overall with the work of the Board. Commenters also expressed the need for continued investment in research, specifically in areas that will provide resources for growers to continue to remain profitable in the face of continued challenges. One commenter stated that programs such as the almond order are a good example of a public/private partnership which has worked for the consumer, farmer, and food safety while expanding markets around the world.

The majority of commenters in opposition of the proposal stated the increase of production over the next several years should generate adequate income to fund Board programs. In the development of the budget, the Board contemplated the production forecast of a 30 percent increase in the next three years. The Board anticipates the 2016–17 crop year production at 1.835 billion pounds, 2017–18 crop year production at 2.184 billion pounds, 2018–19 crop year production at 2.277 billion pounds, and 2019–20 crop year production at 2.354 billion pounds. The Board discussed the need to build demand before this increased production is realized. The Board strongly believes

not doing so in advance will negatively impact prices. The Board is concerned that without market expansion and new market development programs, the anticipated 600 million pounds' increase in production will lead to oversupply. This year, after Committee input and Board strategic planning, the Board decided an increase in the assessment rate was necessary. The increase in revenue will be used to fund new marketing programs and increase the budgets of existing market research and development projects. At the $0.03 assessment rate, the Board determined funding generated would not be adequate to cover anticipated expenses necessary to establish outlets for the increased production. In its recommendation to have the assessment rate revert back to $0.03 after three years, the Board considered current program needs at the current production level against the anticipated production in the next three years, while recognizing that the increased production will generate adequate income once realized.

In its discussion, the Board also considered the time and resources needed to develop new marketing and promotion programs. The Global Market Demand Committee developed a comprehensive marketing plan, which includes the Nut of Choice program. The plan encompasses expanding the Germany and Japan markets by increasing funding in order to increase impressions; accelerating momentum by increasing budgets and impressions for the U.S./Canada, France, United Kingdom, India, and South Korea markets; maintaining budget levels in the China market and Global Initiative; and allocating spending for one to two additional exploratory markets (*i.e.,* Mexico, Indonesia, and Saudi Arabia regions). Prior to the Committee recommending the marketing plan, it reviewed key factors for each market, including market attractiveness, total market demand forecast, market outlook, opportunities and challenges, historical spending data, and low-end and high-end demand potential. The Board also determined that with the current environment of the agriculture industry, investing in new and innovative techniques would be key to the viability of the almond industry moving forward. Key areas of focus are water management, food safety, production, pest management, pollination, biomass, and soil health.

Additionally, several commenters stated that for growers, with the decline in prices and the rising production costs, it is difficult to remain profitable. The Board has had considerable strategic discussions about the continued challenges facing growers, including rising production costs, water availability, and regulatory impacts, and ways to address the issues. As a result, a substantial portion of the revenue generated by the increased assessment rate is designated for research. More specifically, the newly established nine capabilities of the Crop of Choice Program will fund research at a level of $5.625 million. Areas of focus include Irrigation and Nutrients; Orchard, Tree, Rootstock; Harvesting; Value-Added Orchard Utilization; Soil Health Management; Pest Management; Food Safety; Pollination; Energy; and the Sustainability Program update and outreach. This investment is intended to develop new and innovative techniques to help the almond industry continue to remain profitable. In addition, the increased investment in market development and new marketing programs is intended to create demand to absorb the anticipated increase in production. In turn, these activities should stabilize prices.

Three commenters raised concern that only 23 percent of the additional funding generated is allocated to direct marketing. The commenters further stated that if at least 80 percent of the additional funding was not allocated to direct marketing and promotion activities, they were opposed to the increase. The Board utilizes a comprehensive strategy that includes a balanced approach for research and marketing and promotion activities to sustain and develop market outlets. The Board-funded research plays an integral part in supporting the almond industry, which continues to face new challenges as the landscape of agriculture changes. The Board triennially holds strategic planning retreats to develop tactics that directly address the needs of the almond industry as well as ever-changing market demands. The Board recommends a budget each year utilizing recommendations made by each Committee. Committees are comprised of industry members and meet regularly to deliberate and prioritize programs. Marketing and promotion has been set as a priority, and recommendations have been made to increase spending. Along with the marketing activities, the Board has a robust research program. Nutrition, production, environmental, and food safety research has been utilized by the marketing programs to better position almonds in the marketplace. Specifically, in the past several years with the drought in California, the almond industry came under media fire for its water use. Through the research programs funded by the Board, the marketing team was able to provide data regarding almonds and water use. This research was pivotal in transitioning the conversation from negative to neutral or positive. Additionally, almonds have a qualified heart-healthy claim, which can be directly linked to the research funded as part of the nutrition research program. The almond industry's ability to utilize the heart-health claim is a vital part of the marketing program. Further, the Board is celebrating the tenth year of its California Almond Sustainability Program. As consumer demand continues to shift towards products that are sustainable, the Sustainability Program has been a great resource to the marketing program to provide data regarding the sustainability of the almond industry. The research and marketing and promotion activities work interdependently, ensuring the viability of the industry.

Two commenters stated an assessment rate increase should be approved by growers prior to implementation. Two of the commenters questioned the outreach to the growing community, stating growers should have a larger role in the discussion. One of the commenters requested a grower referendum prior to implementation of an assessment rate change. All Board and Committee meetings are open to the public, allowing directly affected persons and other interested parties an opportunity to participate and provide input. On April 14, 2016, the Board sent a memo to almond handlers and growers as part of its mailer, providing notice of the Board's unanimous recommendation to increase the assessment rate. The Board also included an article regarding the recommendation in the April California Almonds Outlook e-newsletter. In addition, two comment periods were provided, which gave interested parties the opportunity to comment on the recommended proposal. The Board included notice of the comment periods in its industry e-newsletters, on its Web site (specifically, on the grower site), on its social media platforms, and announced this information at its Committee and Board meetings. Notices of the comment periods were also made available on the USDA Web site. In response to the request to hold a grower referendum, under the California almond marketing order, referenda are conducted every five years to ascertain whether continuation of the order is favored by growers. The last continuance referendum was held in 2014, and results indicated continued

grower support for the order. Furthermore, annual budget and assessment rate recommendations are among the many duties the Board, which is comprised of grower and handler members, is required to perform as authorized under the order.

One commenter raised concern that the additional funding will be used to increase the size and salaries of the organization, which will lead to the continuation of increasing the assessment rate year after year. Also, the commenter expressed concerns about transparency and availability of financial information. The majority of the funds generated by the increased assessment are allotted to research programs and marketing and promotion activities. For the past several years, operating expenses have fluctuated between 12 percent and 15 percent of the total budget. In the recommended budget for the 2016–17 crop year, operating expenses are approximately 12 percent of the total budget. In addition, in its unanimous recommendation, the Board stipulated that the increased assessment rate continue only through the 2018–19 crop year. The assessment rate will revert to the current $0.03 rate beginning August 1, 2019. All Board and Committee meetings are open to the public. On a quarterly basis, the Board reviews and approves financial statements at its public meetings. Those documents are made available to the public, and interested persons are encouraged to participate in all meetings.

One commenter expressed concern about the order's credit-back program and that it is not advantageous to non-branded handlers. While credit-back is associated with the assessment rate, the Board did not discuss the program as part of this proposal. This rule does not modify the percentage rate available for handler credit-back.

One commenter raised concern that the Nut of Choice and Crop of Choice programs appear to be an effort to improve the image of almonds at the expense of other California commodities. USDA has a strict policy against any marketing order boards, committees, or councils disparaging other commodities. USDA reviews all marketing and communication materials prior to publication to ensure that policy is being followed.

Accordingly, no changes will be made to the rule as proposed, based on the comments received.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *http://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously-mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Board and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

It is further found that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** (5 U.S.C. 553) because the 2016–17 crop year began August 1, 2016, and the marketing order requires that the rate of assessment for each crop year apply to all assessable almonds handled during such crop year. Further, handlers are aware of this rule, which was recommended at a public meeting. Also, a 15-day comment period was provided for in the proposed rule, followed by an additional 30-day comment period.

List of Subjects in 7 CFR Part 981

Almonds, Marketing agreements, Nuts, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 981 is amended as follows:

PART 981—ALMONDS GROWN IN CALIFORNIA

■ 1. The authority citation for 7 CFR part 981 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Section 981.343 is revised to read as follows:

§ 981.343 Assessment rate.

For the period August 1, 2016, through July 31, 2019, the assessment rate shall be $0.04 per pound for California almonds. Of the $0.04 assessment rate, 60 percent per assessable pound is available for handler credit-back. On and after August 1, 2019, an assessment rate of $0.03 per pound is established for California almonds. Of the $0.03 assessment rate, 60 percent per assessable pound is available for handler credit-back.

Dated: November 12, 2016.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 987

[Doc. No. AMS–SC–16–0084; SC16–987–1 FIR]

Domestic Dates Produced or Packed in Riverside County, California; Decreased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Affirmation of interim rule as final rule.

SUMMARY: The Department of Agriculture (USDA) is adopting, as a final rule, without change, an interim rule that implemented a recommendation from the California Date Administrative Committee (committee) to decrease the assessment rate established for the committee for the 2016–17 and subsequent crop years from $0.10 to $0.05 per hundredweight of dates handled under the marketing order (order). The committee locally administers the order and is comprised of producers and handlers of dates operating within the area of production. The interim rule was necessary to allow the committee to reduce its financial reserve while still providing adequate funding to meet program expenses.

DATES: Effective December 21, 2016.

FOR FURTHER INFORMATION CONTACT: Terry Vawter, Senior Marketing Specialist Jeffrey Smutny, Regional Director, California Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (559) 487–5901, Fax: (559) 487–5906, or Email: *Terry.Vawter@ams.usda.gov* or *Jeffrey.Smutny@ams.usda.gov.*

Small businesses may obtain information on complying with this regulation by viewing a guide at the following Web site: *http://www.ams.usda.gov/rules-regulations/moa/small-businesses;* or by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement and Order No. 987, both as amended (7 CFR part 987), regulating the handling of domestic dates produced or packed in Riverside County, California, hereinafter referred to as the ''order.'' The order is

effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.''

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

Under the order, California date handlers are subject to assessments, which provide funds to administer the order. Assessment rates issued under the order are intended to be applicable to all assessable domestic dates produced or packed in Riverside County, California, for the entire crop year and continue indefinitely until amended, suspended, or terminated. The committee's crop year began October 1, 2016, and ends on September 30, 2017.

In an interim rule published in the **Federal Register** on September 21, 2016, and effective on September 22, 2016, (81 FR 64759, Doc. No. AMS–SC–16–0084, SC16–987–1 IR), § 997.339 was amended by decreasing the assessment rate established for California dates for the 2016–17 and subsequent crop years from $0.10 to $0.05 per hundredweight. The decrease in the per hundredweight assessment rate allows the committee to reduce its financial reserve while still providing adequate funding to meet program expenses.

Final Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 70 date producers in the production area, and 11 date handlers subject to regulation under the order. The Small Business Administration (SBA) defines small agricultural producers as those having annual receipts of less than $750,000 and small agricultural service firms as those whose annual receipts are less than $7,500,000 (13 CFR 121.201).

According to the National Agricultural Statistics Service (NASS), data for the most recently completed crop year (2015) shows that about 4.36 tons, or 8,720 pounds, of dates were produced per acre. The 2015 producer price published by NASS was $1,560 per ton. Thus, the value of date production per acre in 2014–15 averaged about $6,802 (4.36 tons times $1,560 per ton, rounded to the nearest dollar). At that average price, a producer would have to farm over 110 acres to receive an annual income from dates of $750,000 ($750,000 divided by $6,802 per acre equals 110.26 acres). According to committee staff, the majority of California date producers farm less than 110 acres. Thus, it can be concluded that the majority of date producers could be considered small entities.

In addition, according to data from the committee staff, the majority of California date handlers have receipts of less than $7,500,000 and may also be considered small entities under SBA's definition.

This rule continues in effect the action that decreased the assessment rate established for the committee and collected from handlers for the 2016–17 and subsequent crop years from $0.10 to $0.05 per hundredweight of dates. The committee unanimously recommended 2016–17 expenditures of $52,500 and an assessment rate of $0.05 per hundredweight of dates. The assessment rate of $0.05 is $0.05 lower than the rate previously in effect. Applying the $0.05 per hundredweight assessment rate to the committee's 29,000,000 pounds (290,000 hundredweight) crop estimate should provide $14,500 in assessment income. Thus, income derived from handler assessments, along with interest income and funds from the committee's monetary reserve, will be adequate to cover the budgeted expenses. This action will allow the committee to reduce its financial reserve while still providing adequate funding to meet program expenses.

This rule continues in effect the action that decreased the assessment obligation imposed on handlers. Assessments are applied uniformly on all handlers, and some of the costs may be passed on to producers. However, decreasing the assessment rate reduces the burden on handlers and may reduce the burden on producers.

In addition, the committee's meeting was widely publicized throughout the California date industry, and all interested persons were invited to attend the meeting and encouraged to participate in committee deliberations on all issues. Like all committee meetings, the June 22, 2016, meeting was a public meeting, and all entities, both large and small, were able to express views on this issue.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0178, ''Vegetable and Specialty Crops Marketing Orders.'' No changes in those requirements as a result of this action are necessary. Should any changes become necessary, they would be submitted to OMB for approval.

This action imposes no additional reporting or recordkeeping requirements on either small or large California date handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

Comments on the interim rule were required to be received on or before November 21, 2016. No comments were received. Therefore, for reasons given in the interim rule, we are adopting the interim rule as a final rule, without change.

To view the interim rule, go to: *https://www.regulations.gov/document?D=AMS-SC-16-0084-0001.*

This action also affirms information contained in the interim rule concerning Executive Orders 12866, 12988, 13175, and 13563; the Paperwork Reduction Act (44 U.S.C. Chapter 35); and the E-Gov Act (44 U.S.C. 101).

After consideration of all relevant material presented, it is found that finalizing the interim rule, without change, as published in the **Federal Register** (81 FR 64759, September 21, 2016) will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 987

Dates, Marketing agreements, Reporting and recordkeeping requirements.

PART 987—DOMESTIC DATES PRODUCED OR PACKED IN RIVERSIDE COUNTY, CALIFORNIA [AMENDED]

■ Accordingly, the interim rule amending 7 CFR part 987, which was published at 81 FR 64759 on September 21, 2016, is adopted as a final rule, without change.

Dated: December 12, 2016.

Bruce Summers,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE 3410–02–P

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

9 CFR Part 201

RIN 0580–AB25

Scope of Sections 202(a) and (b) of the Packers and Stockyards Act

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Interim final rule; request for comments.

SUMMARY: The Department of Agriculture's (USDA) Grain Inspection, Packers and Stockyards Administration (GIPSA), Packers and Stockyards Program (P&SP) is amending the regulations issued under the Packers and Stockyards Act, 1921, as amended and supplemented (P&S Act). GIPSA is adding a paragraph addressing the scope of sections 202(a) and (b) of the P&S Act. This interim final rule clarifies that conduct or action may violate sections 202(a) and (b) of the P&S Act without adversely affecting, or having a likelihood of adversely affecting, competition. This interim final rule reiterates USDA's longstanding interpretation that not all violations of the P&S Act require a showing of harm or likely harm to competition. The regulations would specifically provide that the scope of section 202(a) and (b) encompasses conduct or action that, depending on their nature and the circumstances, can be found to violate the P&S Act without a finding of harm or likely harm to competition. This interim final rule finalizes a proposed amendment that GIPSA published on June 22, 2010. GIPSA is now publishing as an interim final rule what was proposed on June 22, 2010, with slight modifications, in order to allow additional comment on these provisions.

DATES: This interim final rule is February 21, 2017. Interested persons are invited to submit written comments on this interim final rule on or before February 21, 2017.

ADDRESSES: We invite you to submit comments on this interim final rule. You may submit comments by any of the following methods:

- *Mail:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2542A–S, Washington, DC 20250–3613.
- *Hand Delivery or Courier:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2530–S, Washington, DC 20250–3613.
- *Internet: http://www.regulations.gov.* Follow the on-line instructions for submitting comments.

Instructions: All comments should make reference to the date and page number of this issue of the **Federal Register**. All comments received will be included in the public docket without change, including any personal information provided. Regulatory analyses and other documents relating to this rulemaking will be available for public inspection in Room 2542A–S, 1400 Independence Avenue SW., Washington, DC 20250–3613 during regular business hours. All comments will be available for public inspection in the above office during regular business hours (7 CFR 1.27(b)). Please call the Management and Budget Services staff of GIPSA at (202) 720–8479 to arrange a public inspection of comments or other documents related to this rulemaking.

FOR FURTHER INFORMATION CONTACT: S. Brett Offutt, Director, Litigation and Economic Analysis Division, P&SP, GIPSA, 1400 Independence Ave, SW., Washington, DC 20250, (202) 720–7051, *s.brett.offutt@usda.gov.*

SUPPLEMENTARY INFORMATION: The first section that follows provides background and a summary of the regulatory text for § 201.3(a) and (b) in this interim final rule as compared to the regulatory wording for § 201.3(c) and (d) in the 2010 proposed rule. The second section provides background information about this rule. The third section provides a summary of the public comments received on the proposed rule and at the relevant USDA/Department of Justice Joint Competition Workshops that occurred during the comment period. The fourth section discusses the proposal of new §§ 201.210, 201.211, and 201.214, in this issue of the **Federal Register**. The last section provides the required impact analyses including the Regulatory Flexibility Act, the Paperwork Reduction Act, Civil Rights Analysis, and the relevant Executive Orders.

I. Summary of Changes From the 2010 Proposed Rule

Section 201.3 as Proposed in June 2010

In the proposed rule published in the **Federal Register** on June 22, 2010 [75 FR 35338], GIPSA proposed a new § 201.3, ''Applicability of regulations in this part,'' providing four (4) subsections to describe, in certain respects, the application of the regulations in 9 CFR part 201. These subsections were designated § 201.3(a) through § 201.3(d). Subsection 201.3(c) described the appropriate application of sections 202(a) and (b) of the P&S Act (7 U.S.C. 192(a) and (b)).

In this current rule, GIPSA is re-designating the existing undesignated paragraph in § 201.3 as § 201.3(b), and is adding back the subject heading, ''Effective dates'' to this paragraph.

GIPSA is amending § 201.3 with the addition of proposed § 201.3(c), with slight modifications. Because this provision is of primary importance, GIPSA is designating it as the first of two paragraphs in § 201.3 and changing its designation from (c) to (a). GIPSA has made slight modifications including a grammatical edit and also modified a few words to make the language internally consistent and also consistent with the language in new proposed §§ 201.210, 201.211, and 201.214, published concurrently in this issue of the **Federal Register** as separate proposed rules.

II. Background

A. Development of the Rule

Prior to issuing the initial proposed regulations in 2010, GIPSA held three public meetings in October 2008, in Arkansas, Iowa, and Georgia to gather comments, information, and recommendations from interested parties. Attendees at these meetings were asked to give input on the elements of the 2008 Farm Bill and other issues of concern under the P&S Act. In 2010, USDA and the Department of Justice held five joint public workshops to explore competition issues affecting agricultural industries in the 21st century and the appropriate role for antitrust and regulatory enforcement in those industries. These workshops were held in Ankeny, Iowa (Issues of Concern to Farmers, March 12, 2010); Normal, Alabama (Poultry Industry, May 21, 2010); Madison, Wisconsin (Dairy Industry, June 25, 2010); Fort Collins, Colorado (Livestock Industry, August 27, 2010); and Washington, District of Columbia (Margins, December 8, 2010). The Secretary informed attendees of the workshop in Fort Collins, Colorado that their comments provided that day would be considered in the development of this rulemaking. The Fort Collins workshop addressed issues in the cattle, hog, and other animal

sectors. Attendees provided comments on concentration in livestock markets, buyer power, and enforcement of the P&S Act. GIPSA incorporated relevant comments from the Madison, Wisconsin and Fort Collins, Colorado workshops into the text of the wording of the final rule published on December 9, 2011.

The regulations in this current interim final rule also reflect comments, information, and recommendations received in all those meetings.

On June 22, 2010, GIPSA published the proposed rule [75 FR 35338] upon which this interim final rule is based. The background information presented in the proposed rule remains pertinent to this interim final rule. Some of this background information is presented again here.

In that proposed rule, GIPSA proposed a multi-faceted rule and sought public input. During a 5-month comment period, GIPSA received over 61,000 comments from a wide variety of stakeholders. Some commenters addressed issues associated with this interim final rule. GIPSA published a final rule in 2011 that included modifications to address concerns expressed by commenters. The final rule addressed most, but not all, of the requirements of the Food, Conservation, and Energy Act of 2008 (Pub. L. 110–246) (2008 Farm Bill); however, for the reasons described in further detail below, GIPSA never implemented a final § 201.3(c) following the 2010 public notice and comment period. The 2010 proposed rule also proposed three other regulations, §§ 201.210, 201.211, and 201.214, that GIPSA has restructured and rewritten and is publishing as two separate proposed rules concurrent with this rule. Proposed § 201.210, ''Unfair, unjustly discriminatory and deceptive practices or devices by packers, swine contractors, or live poultry dealers,'' and § 201.211, ''Undue or unreasonable preferences or advantages'' further clarify and define the provisions of § 201.3(a). Proposed § 201.214, ''Poultry Grower Ranking Systems'' provides criteria which would be used in considering whether a live poultry dealer has used a poultry grower ranking system in an unfair, unjustly discriminatory, or deceptive manner or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Beginning with the fiscal year (FY) 2012 appropriations act, USDA was precluded from finalizing some of the regulations as proposed in June 2010. Section 201.3(c), ''Scope of Sections 202(a) and (b) of the Act,'' §§ 201.210, 201.211, and 201.214, published as part of the June 22, 2010, proposed rule, were included in the restrictions in the appropriations acts. Until FY 2016, appropriations acts continued to preclude the finalization of §§ 201.3(c), 201.210, 201.211, and 201.214.

Section 201.3(a), ''Applicability to live poultry dealers,'' and § 201.3(d), ''Effective dates,'' proposed in June 2010, were published on December 9, 2011 [76 FR 76874], as a final rule with some changes. At that time, the designation of proposed paragraph (d) was changed to (b).

Section 731, Division A, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235), required the Secretary to rescind what was then § 201.3(a), ''Applicability to live poultry dealers,'' leaving paragraph (b) as the only paragraph in § 201.3. As a result, GIPSA removed the designation for this paragraph as paragraph (b) and also removed its subject heading, ''Effective dates.'' This was accomplished by a final rule published on February 5, 2015 [80 FR 6430].

Neither the FY 2016 appropriations act nor the FY 2017 continuing appropriations act precludes GIPSA from publishing §§ 201.3(c), 201.210, 201.211, or 201.214 as final rules.

B. Purpose of the Regulatory Action

Section 202 of the P&S Act provides that ''[i]t shall be unlawful for any packer or swine contractor with respect to livestock, meats, meat food products, or livestock products in unmanufactured form, or for any live poultry dealer with respect to live poultry'' to engage in certain prohibited conduct. Section 202(a) prohibits ''any unfair, unjustly discriminatory, or deceptive practice or device.'' Section 202(b) prohibits ''any undue or unreasonable preference or advantage'' or ''any undue or unreasonable prejudice or disadvantage.'' USDA has consistently taken the position that, in some cases, a violation of section 202(a) or (b) can be proven without proof of predatory intent, competitive injury, or likelihood of competitive injury.[1] At the same time, USDA has always understood that an act or practice's effect on competition can be relevant[2] and, in certain circumstances, even dispositive[3] with respect to whether that act or practice violates sections 202(a) and/or (b).

As we explained in the proposed rule, the longstanding agency position that, in some cases, a violation of section 202(a) or (b) can be proven without proof of likelihood of competitive injury is consistent with the language and structure of the P&S Act, as well as its legislative history and purposes. Neither section 202(a) nor section 202(b) contains any language limiting the application of those sections to acts or practices that have an adverse effect on competition, such as acts ''restraining commerce.'' Instead, these provisions use terms including ''deceptive,'' ''unfair,'' ''unjust,'' ''undue,'' and ''unreasonable''—which are commonly understood to encompass more than anticompetitive conduct.[4] This is in direct contrast to subsections (c), (d), and (e), which expressly prohibit only those acts that have the effect of ''restraining commerce,'' ''creating a monopoly,'' or producing another type of antitrust injury. The fact that Congress expressly included these limitations in subsections (c), (d), and (e), but not in subsections (a) and (b), is a strong indication that Congress did not intend subsections (a) and (b) to be limited to instances in which there was harm to competition. And Congress confirmed the agency's position by amending the P&S Act to specify specific instances of conduct prohibited as unfair that do not involve any inherent likelihood of competitive injury.[5]

USDA's interpretation of sections 202(a) and (b) is also consistent with the interpretation of other sections of the P&S Act using similar language—sections 307 and 312 (7 U.S.C. 208 and 213). Courts have recognized that the proper analysis under these provisions

[1] *In re Ozark County Cattle Co.,* 49 Agric. Dec. 336, 365 (1990); 1 John H. Davidson et al., *Agricultural Law* section 3.47, at 244 (1981).

[2] *See, In re Sterling Colo. Beef Co.,* 39 Agric. Dec. 184, 235 (1980) (considering and rejecting respondent packer's business justification for challenged conduct).

[3] *See, Armour & Co.* v. *United States,* 402 F.2d 712, 717 (7th Cir. 1968) (a coupon promotion plan (here coupons for fifty cents off specified packages of bacon) is not per se unfair and violates section 202(a) if it is implemented with some predatory intent or carries some likelihood of competitive injury); *In re IBP, Inc.,* 57 Agric. Dec. 1353, 1356 (1998) (contractual right of first refusal at issue violated section 202 ''because it has the effect or potential of reducing competition'').

[4] When the P&S Act was enacted, *Webster's New International Dictionary* defined ''deceptive'' as ''[t]ending to deceive; having power to mislead, or impress with false opinions''; ''unfair'' as ''[n]ot fair in act or character; disingenuous; using or involving trick or artifice; dishonest; unjust; inequitable'' (2d. definition); and ''unjust'' as ''[c]haracterized by injustice; contrary to justice and right; wrongful.'' *Webster's New International Dictionary* 578, 2237, 2238, 2245, 2248 (1st ed. 1917). This is the same understanding of the terms today.

[5] *See* sections 409(c) and 410(b).

depends on ''the facts of each case,'' [6] and that these sections may apply in the absence of harm to competition or competitors.[7]

The legislative history and purposes of the P&S Act also support USDA's position. The P&S Act ''is a most comprehensive measure and extends farther than any previous law in the regulation of private business, in time of peace, except possibly the interstate commerce act.'' [8] In amending the P&S Act, Congress made clear that its goals for the statute extended beyond the protection of competition. In 1935, for instance, when Congress first subjected live poultry dealers to sections 202(a) and (b), Congress explained in the statute itself that ''[t]he handling of the great volume of live poultry . . . is attendant with various unfair, deceptive, and fraudulent practices and devices, resulting in the producers sustaining sundry losses and receiving prices far below the reasonable value of their live poultry. . . .'' [9] Similarly, the House Committee Report regarding the 1958 amendments stated that ''[t]he primary purpose of [the P&S Act] is to assure fair competition *and fair trade practices*'' and ''to safeguard farmers . . . against receiving less than the true market value of their livestock.'' [10] The Report further observed that protection extends to ''unfair, deceptive, unjustly discriminatory'' practices by ''small'' companies in addition to ''monopolistic practices.'' [11] In accordance with this legislative history, courts and commentators have recognized that the purposes of the P&S Act are not limited to protecting competition.[12]

Four courts of appeals have disagreed with USDA's interpretation of the P&S Act and have concluded (in cases to which the United States was not a party) that plaintiffs could not prove their claims under sections 202(a) and/or (b) without proving harm to competition or likely harm to competition.[13] After carefully considering the analyses in these opinions, USDA continues to believe that its longstanding interpretation of the P&S Act is correct. These court of appeals opinions (two of which were issued over vigorous dissents) [14] are inconsistent with the plain language of the statute; they incorrectly assume that harm to competition was the only evil Congress sought to prevent by enacting the P&S Act; and they fail to defer to the Secretary of Agriculture's longstanding and consistent interpretation of a statute administered by the Secretary. To the extent that these courts failed to defer to USDA's interpretation of the statute because that interpretation had not previously been enshrined in a regulation,[15] this new regulation may constitute a material change in circumstances that warrants judicial reexamination of the issue.[16]

Although it is not necessary in every case to demonstrate competitive injury in order to show a violation of sections 202(a) and/or (b), any act that harms competition or is likely to harm competition may violate the statute. How a competitive injury or the likelihood of a competitive injury manifests itself depends critically on whether the target of the act or practice is a competitor (*e.g.,* a packer harms other packers), or whether the target of the act or practice operates at a different level of the livestock or poultry production process (*e.g.,* a packer harms a livestock producer). Competitive injury or the likelihood of competitive injury may occur when an act or practice improperly forecloses competition in a large share of the market through exclusive dealing, restrains competition among packers, live poultry dealers or swine contractors or otherwise represents a use of market power to distort competition.[17] Competitive injury or the likelihood of competitive injury also may occur when a packer, swine contractor, or live poultry dealer wrongfully depresses prices paid to a livestock producer, swine production contract grower, or poultry grower below market value or impairs the livestock producer, swine production contract grower, or poultry grower's ability to compete with other producers or growers.

To establish an actual or likely competitive injury, it is not necessary to show that a challenged act or practice had a likely effect on resale price levels. Even the antitrust laws do not require such a showing. The P&S Act is broader than the antitrust laws and, therefore, such a requirement of showing effect on resale price levels is not necessary to establish competitive injury under section 202 of the P&S Act (though such a showing would suffice).

III. Discussion of Comments

The proposed rule published on June 22, 2010, (75 FR 35338) provided a 60-day comment period to end on August 23, 2010. In response to requests for an extension of time to file comments, on July 28, 2010, GIPSA extended the comment period to end on November 22, 2010 (75 FR 44163). Commenters covered the spectrum of those affected by the rule, including livestock producers and poultry growers, packers and live poultry dealers, trade associations representing both production and processing, plant workers, and consumers. GIPSA considered all comments postmarked or electronically submitted by November 22, 2010. GIPSA received over 61,000 comments, which addressed the rule generally as well as specific provisions. GIPSA considered written comments as well as comments received at two public meetings, on June 25, 2010, and August 27, 2010, conducted jointly by USDA and the Department of Justice. Because these ''Workshops on Competition in Agriculture'' were held during the comment period for the proposed rule, the Secretary announced that any comments made in those forums would be considered comments on the proposed rule.

Comments on proposed § 201.3(c) were sharply divided with respect to

harm to competition. Those supporting the proposal pointed out it would provide legal relief for farmers and ranchers who suffer because of unfair actions, such as false weighing and retaliatory behavior, without having to show competitive harm to the industry. Opposing comments relied heavily on the fact that several of the United States Courts of Appeals have ruled that harm to competition (or the likelihood of harm to competition) is a required element to find a violation of sections 202(a) and (b) of the P&S Act.

Those supporting proposed § 201.3(c) included numerous livestock producers and poultry growers and organizations representing the interests of farmers and ranchers. Commenters supporting proposed § 201.3(c) pointed out that it would reduce the costs of litigation for poultry growers and livestock producers who suffer because of unfair actions, such as false weighing and retaliation. Proposed § 201.3(c), according to some commenters, corrects the analytical framework of the P&S Act and ensures that the courts grant a higher level of deference to USDA's interpretation of the P&S Act. They believed it was wrong to require a demonstration of harm to competition to the whole industry stemming from an unfair practice targeting an individual grower or producer in order to violate section 202(a) of the P&S Act, and that proposed § 201.3(c) would remove an undue barrier to relief.

Commenters in favor of proposed § 201.3(c) further pointed out the imbalance in power between livestock producers and packers and noted that without this provision, the packers are inoculated against recourse by a livestock producer because the livestock producer is small and overmatched relative to the much larger and more well-resourced packer. A common theme among supporters was that proposed § 201.3(c) allowed farmers and ranchers to seek redress by showing that they were individually harmed in cases such as false weighing or retaliatory behavior, rather than requiring a showing of harm to competition in the industry. Commenters felt that the packers and poultry companies were given a free pass to act unfairly toward livestock producers, swine production contract growers, and poultry growers knowing that proving harm to competition to the industry would be difficult, if not impossible, in many situations.

Many of the supporting comments also addressed the plain language and intent of section 202 of the P&S Act and opined that the recent court decisions were based on incorrect interpretations of the law. Commenters wrote that proposed § 201.3(c) correctly interpreted the plain language of section 202 and the legislative history of the P&S Act.

Commenters opposing proposed § 201.3(c) included many meat packers, live poultry dealers, and organizations representing packers and poultry companies. The opposing comments stated that the P&S Act had always been considered an antitrust statute and therefore, GIPSA should be required to show competitive harm to allege a violation of section 202(a). They also expressed concern that a flood of litigation would ensue if the scope of section 202(a) did not remain closely aligned with case law. Commenters opposed to the rulemaking asserted that allowing allegations of section 202(a) violations without a showing of harm or likely harm to competition would enable swine production contract growers, poultry growers, or livestock producers to sue a swine contractor, live poultry dealer, or packer for aa broad range of adverse circumstances affecting them. The comments went on to say that this would guarantee swine production contract growers, poultry growers, and livestock producers a profit on every transaction, a standard afforded in no other industry. In turn, this would reduce the number of swine production contract growers, poultry growers, and livestock producers with whom companies would do business.

Opposing comments relied heavily on the fact that several United States Courts of Appeals have ruled that harm to competition (or the likelihood of harm to competition) is a required element to find a violation of sections 202(a) and (b) of the P&S Act. These commenters stated that because of the decisions in these circuit courts, GIPSA lacked authority to implement proposed § 201.3(c). Several large packers and poultry companies wrote that the proposed § 201.3(c), if implemented, would be in direct conflict with circuit court decisions in the geographic regions in which they do business. One packer commented that livestock producers would bear the cost of determining the legality of an expanded scope of sections 202(a) and 202(b).

Many opposing commenters felt that proposed § 201.3(c) would lead to a large increase in frivolous litigation and greatly increase operational costs for packers and poultry companies. Commenters felt that an increase in frivolous litigation would lead to a decrease in the use of the value-based pricing. Commenters opposed allowing livestock producers to file lawsuits based on their thoughts of what is unfair. Some commenters believed that proposed § 201.3(c) would eliminate the requirement to show any harm at all. A common concern presented by those in opposition to the proposed change to § 201.3 was that while section 202(a) prohibits unfair, unjustly discriminatory, or deceptive practices, the P&S Act does not define what types of conduct would be classified as such. Of particular concern to these commenters was the prospect that GIPSA may bring actions under section 202(a) without a finding of harm to competition which would encourage livestock producers to sue firms subject to the P&S Act for any conduct having an adverse effect on livestock producer interests. While most of the comments focused on unfair conduct that could violate section 202(a), a few comments mentioned section 202(b) as well. These comments set forth concerns calling for regulatory guidance as to what conduct GIPSA would deem as unfair, unjustly discriminatory, or deceptive, and an undue preference or advantage in violation of the P&S Act, especially when there was no showing of harm to competition.

Agency response: GIPSA did not make the specific changes to proposed § 201.3(c) requested by comments. However, GIPSA is proposing new rule language in proposed rules §§ 201.210, 201.211, and 201.214, that provide the guidance commenters were seeking. GIPSA also modified a few words in § 201.3(c) to make the language internally consistent and to make it consistent with the language in new proposed §§ 201.210, 201.211, and 201.214, published concurrently in this issue of the **Federal Register** as two separate proposed rules. Specifically, proposed §§ 201.210 and 201.211 discuss ''conduct or action'' and GIPSA has modified the references to ''conduct'' in proposed § 201.3(c) to ''conduct or action.'' GIPSA also changed the reference to ''challenged act or practice'' to ''challenged conduct or action,'' again for consistency with proposed §§ 201.210 and 201.211 and to make the language in § 201.3(a) internally consistent. In the proposed rule for § 201.214 in this issue of the **Federal Register**, GIPSA proposes listing the failure to use a poultry grower ranking system in a fair manner after applying the criteria in § 201.214 as a tenth type of ''challenged conduct or action'' under § 201.210(b). GIPSA also made a minor grammatical edit and changed all references to ''section'' to ''sections.'' GIPSA believes the paragraph proposed on June 22, 2010, as § 201.3(c) (''Scope of Sections 202(a) and (b) of the Act.'') is of primary

importance. As a result, the paragraph is designated as paragraph (a) and the current text in § 201.3 is designated as paragraph (b).

It is the longstanding position of the Secretary of Agriculture that a violation of section 202(a) or (b) can be proven without evidence of competitive injury or the likelihood of competitive injury. The Secretary's position is consistent with the language and structure of the P&S Act, as well as its legislative history and purposes. Sections 202(c), 202(d), and 202(e) of the P&S Act include ''restraint'' and ''monopoly'' language, some of which resembles language in the Clayton Act, 15 U.S.C. 12–27. Neither section 202(a) nor section 202(b) contains language limiting the application to conduct or action that has an adverse effect, or the likelihood of an adverse effect, on competition, such as acts ''restraining commerce.'' Sections 202(a) and 202(b) are tort-like provisions that are concerned with unfair practices, discrimination, and preferential treatment, but not with restraint of trade or monopolistic activities.

Analysis of the Federal Trade Commission Act, 15 U.S.C. 41–58, as amended, (FTC Act) is helpful in illustrating the Secretary's position on the scope of sections 202(a) and 202(b) of the P&S Act. Congress considered the FTC Act in drafting the P&S Act as it incorporated portions of the FTC Act by reference into the P&S Act. Section 5 of the FTC Act, now codified at 15 U.S.C. 45, states, ''[u]nfair methods of competition in or affecting commerce, and unfair or deceptive acts or practices in or affecting commerce, are hereby declared unlawful.'' Thus, in the FTC Act, Congress makes a distinction between ''unfair methods of competition'' and ''unfair or deceptive acts or practices.'' In drafting the P&S Act, Congress chose to prohibit any ''unfair, unjustly discriminatory, or deceptive practice or device,'' and the making or giving of ''any undue or unreasonable preference or advantage . . .,'' without limiting the unfair practices or devices, discrimination, or preferential treatment to only those involving competition. The Supreme Court of the United States has examined the scope of Section 5 of the FTC Act, noting that unfair practices are not limited to those likely to have anticompetitive consequences after the manner of the antitrust laws, nor are unfair practices in commerce confined to purely competitive behavior.[18] The FTC Act's phrase, '''unfair or deceptive acts or practices' '' makes the consumer, who may be injured by an unfair trade practice, of equal concern, before the law, with the merchant or manufacturer injured by the unfair methods of a dishonest competitor.'' [19] The Court also noted, upon consideration of legislative and judicial authorities, that the Federal Trade Commission considers public values beyond simply those enshrined in the letter or encompassed in the spirit of the antitrust laws.[20]

Recent circuit court decisions have found that a showing of competitive harm, or a likelihood of competitive harm, is required to substantiate a violation of sections 202(a) and 202(b) of the P&S Act. In one of these cases, *Wheeler* v. *Pilgrim's Pride Corp.,*[21] while the majority opinion required a finding of harm to competition, the dissenting opinion agreed with the district court's ruling that sections (a) and (b) of 202 do not contain language limiting their application to actions which have an adverse effect on competition.[22] The court in another case, *Been* v. *O.K. Indus., Inc.,*[23] declined to defer to USDA's interpretation of ''unfair'' practices under section 202(a) of the P&S Act, in part, because ''the Secretary has not promulgated a regulation applicable to the practices the Growers allege violate § 202(a).'' [24] The court, however, stated that ''[r]egulations promulgated by an agency exercising its congressionally granted rule-making authority'' are entitled to deference,[25] implying that such regulation, once enacted by USDA, would be entitled to deference. Therefore, while decisions of the courts of appeals support comments in opposition to amending § 201.3, these same decisions have also pointed to a need for the very rulemaking the addition of paragraph (a) to § 201.3 provides.

An initial increase in litigation costs is a likely result of this rule, as the industry and the courts are setting precedents for the interpretation of § 201.3. However, the litigation costs and the number of lawsuits are expected to decrease after precedent setting decisions are established. In order to place some parameters on conduct or action that constitutes unfair, unjustly discriminatory, and deceptive practices or devices under section 202(a), and on conduct or action that constitutes undue or unreasonable preferences or advantages under section 202(b), and to address concerns raised by commenters about what those terms mean, GIPSA is publishing concurrently with this interim final rule, proposed rules that will include revised §§ 201.210,201.211, and 201.214, which will help clarify the conduct or action GIPSA considers violations of sections 202(a) and 202(b) of the P&S Act.

Contrary to some comments, § 201.3(a) does not stand for the proposition that GIPSA never has to demonstrate that the challenged conduct or action adversely affects competition. Instead, § 201.3(a) solely reiterates GIPSA's longstanding position that a finding that the challenged conduct or action adversely affects or is likely to adversely affect competition is not necessary in all cases. Certain conduct is prohibited because it is unfair, unjustly discriminatory or deceptive even though there may be no harm, or likelihood of harm, to competition. Likewise, certain conduct is prohibited because it creates an unfair preference or advantage even though there may be no harm, or likelihood of harm, to competition. This rule, combined with the specific examples of prohibited conduct in proposed § 201.210 and the criteria the Secretary will consider as set forth in proposed § 201.211, will assist industry participants in understanding which behaviors violate sections 202(a) and 202(b) of the P&S Act.

IV. Interim Final Rule and Request for Comments

As previously discussed, GIPSA published a notice of proposed rulemaking in June, 2010, that, *inter alia,* proposed regulatory text relating to the scope of the P&S Act. GIPSA solicited comments over a 5 month period and received thousands of comments on this aspect of the proposed rule. Accordingly, the agency has fulfilled the notice and comment requirements of the Administrative Procedure Act. However, given the significant level of stakeholder interest in this regulatory provision, the intervening six years, and in the interests of open and transparent government, the agency has decided to promulgate the rule as an interim final rule and provide an additional opportunity for public comment. The agency will consider all comments received by the date indicated in the **DATES** section of this interim final rule with request for comments. After the comment period closes, the agency intends to publish another document in the **Federal Register**. The document will

[25] *Id.* at 1226.

include a discussion of any comments received and whether any amendments will be made to the rule.

V. Concurrent Publication of Proposed §§ 201.210, 201.211, and 201.214

While some appellate courts have determined that a showing of competitive injury, or likelihood of competitive injury, is required to allege a violation of sections 202(a) or 202(b), some dissenting opinions agreed with USDA's interpretation of sections 202(a) and 202(b) [26] and at least one dissenting opinion stated that if GIPSA developed regulation explaining whether a showing of competitive injury was required in a given circumstance, that regulation would entitle USDA to deference.[27] Amending § 201.3 with the addition of § 201.3(a) provides a structural foundation for the development of more specific regulations containing examples or criteria GIPSA may then use to determine if given conduct or action requires a showing of competitive injury or the potential for competitive injury to allege a violation of section 202(a) or section 202(b). As mentioned in the summary of comments, implementation of these specific regulations may lower costs to some livestock producers, swine production contract growers and poultry growers should they bring legal action for an alleged violation of section 202(a) or section 202(b). GIPSA acknowledges that § 201.3(a) may initially encourage litigation, temporarily driving up overall costs for stakeholders. While this interim rule is a standalone rulemaking, it is worth noting that GIPSA's current thinking is also expressed in separate proposed rules published concurrently in this edition of the **Federal Register**. GIPSA is proposing § 201.210, which clarifies the conduct or action by packers, swine contractors, or live poultry dealers that GIPSA considers unfair, unjustly discriminatory, or deceptive and a violation of section 202(a), and clarifies whether a showing of harm to competition or likelihood of harm to competition is required. GIPSA is also proposing § 201.211, which identifies criteria the Secretary will consider in determining whether conduct or action by packers, swine contractors, or live poultry dealers constitutes an undue or unreasonable preference or advantage and a violation of section 202(b). Section 201.214, as proposed in this edition of the **Federal Register**, lists criteria the Secretary will consider in determining whether a live poultry dealer has used a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner in violation of section 202(a), or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage in violation of section 202(b). GIPSA believes §§ 201.210, 201.211, and 201.214, once published as final rules, will mitigate potential costs associated with § 201.3(a) by clarifying what conduct or action would violate section 202(a) and section 202(b). Listing examples and criteria to explain the boundaries for compliance with section 202 of the P&S Act will promote compliance and reduce the number of disputes associated with section 202. Even while proposed §§ 201.210, 201.211, and 201.214 are being considered through the rulemaking process, amending § 201.3 with the addition of § 201.3(a) provides sufficient clarity to obtain deference from the courts.

VI. Required Impact Analyses

A. Executive Order 12866 and Regulatory Flexibility Act

This rulemaking has been determined to be ''economically significant'' for the purposes of Executive Order 12866 and, therefore, has been reviewed by the Office of Management and Budget. GIPSA is issuing this interim final rule under the P&S Act, in part, to formalize USDA's position that, in some cases, a violation of section 202(a) or (b) can be proven without proof of competitive injury or likelihood of competitive injury. As a required part of the regulatory process, GIPSA prepared an economic analysis of § 201.3(a). The first section of the analysis is an introduction and a discussion of the prevalence of contracting in the cattle, hog, and poultry industries as well as a discussion of potential market failures. Next, GIPSA discusses three regulatory alternatives it considered and presents a summary cost-benefit analysis of each alternative. GIPSA then discusses the impact on small businesses.

Introduction

GIPSA issued a proposed rule on June 22, 2010, which included §§ 201.3, 201.210, 201.211, 201.214. GIPSA is issuing amendments to § 201.3 as an interim final rule and is proposing new versions of §§ 201.210 and 201.211 in a separate proposed rule published concurrently in this issue of the **Federal Register**. Likewise, 201.214 is being proposed in a separate rulemaking. Section 201.3(a) formalizes GIPSA's longstanding position that conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition. GIPSA believes the interim final § 201.3(a) will serve to strengthen the protection afforded the nation's livestock producers and poultry growers.

Section 201.3(a) states that a finding that the challenged conduct or action adversely affects or is likely to adversely affect competition is not necessary in all cases . . . Some unfair, unjustly discriminatory, or deceptive practices do not result in competitive harm to the industry but still result in significant harm to individual livestock producers, swine production contract growers, and poultry growers. If, for example, a livestock producer, swine production contract grower, or poultry grower filed a complaint related to a matter that does not result in competitive harm, such as retaliatory conduct, use of inaccurate scales, or providing a poultry grower sick birds, the livestock producer, swine production contract grower, or poultry grower will be able to prevail without proof of harm to competition or the likelihood of harm to competition. GIPSA believes the standard articulated in § 201.3(a) is consistent with its mission, which is to ''protect fair trade practices, financial integrity and competitive markets for livestock, meats and poultry.'' [28] By removing the burden to prove harm or likely harm to competition in all cases, this interim final rule promotes fairness and equity in the livestock and poultry industries.

Section 201.3(a) may lower the costs to some livestock producers, swine production contract growers, and poultry growers should they bring legal action for an alleged violation of sections 202(a) and/or 202(b). However, § 201.3(a) may initially increase litigation costs for the livestock and poultry industries while precedent setting decisions are established. While this interim rule is a standalone rulemaking, it is worth noting that GIPSA's current thinking is also expressed in separate proposed rules, which will clarify to the industry the types of conduct and criteria that GIPSA believes violate section 202(a) and section 202(b) of the P&S Act.

Proposed § 201.210(a) specifies that any conduct or action by a packer, swine contractor, or live poultry dealer that is explicitly deemed to be an

[26] *Wheeler* v. *Pilgrim's Pride Corp.*, 591 F.3d 355(5th Cir. 2009) (9–7 decision *en banc*) (Judge Garza dissenting, joined by Judges Jolly, Barksdale, Dennis, Prado, Elrod and Haynes).

[27] *Been* v. *O.K. Indus., Inc.*, 495 F.3d 1217, 1238 (10th Cir. 2007).

''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device by the P&S Act is a per se violation of section 202(a). Section 201.210(b) provides examples of conduct or action that, absent demonstration of a legitimate business justification, are ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' and a violation of section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Section 201.210(c) specifies that any conduct or action that harms or is likely to harm competition is an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device and a violation of section 202(a). Many of the examples provided in § 201.210(b) relate to conduct or action that limits, by contract, the legal rights and remedies afforded by law to poultry growers, swine production contract growers, and livestock producers. Other examples specify conduct or actions that violate section 202(a).

As required by the 2008 Farm Bill, proposed § 201.211 specifies criteria the Secretary will consider when determining whether an undue or unreasonable preference or advantage has occurred in violation of section 202(b). The first four (4) criteria require the Secretary to consider whether one or more livestock producers, swine production contract growers, or poultry growers is treated more favorably as compared to other similarly situated livestock producers, swine production contract growers, or poultry growers. The fifth criterion in § 201.211 requires the Secretary to consider whether the packer, swine contractor, or live poultry dealer has demonstrated a legitimate business justification for conduct or action that may otherwise be an undue or unreasonable preference or advantage.

Proposed §§ 201.210 and 201.211 will thus limit the application of § 201.3(a) by placing some parameters on conduct or action that constitutes unfair, unjustly discriminatory, and deceptive practices or devices under section 202(a), and on conduct or action that constitutes undue or unreasonable preferences or advantages under section 202(b). Proposed §§ 201.210 and 201.211 focus heavily on contracts between livestock producers and packers, swine production contract growers and swine contractors, and poultry growers and live poultry dealers.

While proposed §§ 201.210 and 201.211 focus heavily on contracts, § 201.3(a) is broad in nature. It applies to the use of all types of livestock and poultry procurement and growing arrangements by packers, swine contractors, and live poultry dealers, including packers' use of negotiated cash purchases of livestock. As discussed below, contracting broadly defined, is the primary method by which livestock are procured (especially for hogs) and the almost exclusive arrangement under which poultry are produced. A discussion of contracting in these industries is, therefore, useful in explaining the need for § 201.3(a) and laying the foundation for the economic analysis of 201.3(a).

Prevalence of Contracting in Cattle, Hog, and Poultry Industries

Contracting is an important and prevalent feature in the production and marketing of livestock and poultry. Although § 201.3(a) applies to the livestock and poultry industries in general, proposed §§ 201.210 and 201.211 primarily affect livestock and poultry grown or marketed under contract. For example, under § 201.210(b)(2), absent demonstration of a legitimate business justification, GIPSA considers conduct or action by packers, swine contractors, or live poultry dealers that limit or attempt to limit, by contract, the legal rights and remedies of livestock producers, swine production contract growers, or poultry growers as unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Section 201.211 defines criteria for section 202(b) violations with respect to providing undue or unreasonable preferences or advantages to one or more livestock producers or contract growers as compared to other livestock producers or contract growers.

The type of contracting varies among cattle, hogs, and poultry. Broilers, the largest segment of poultry, are almost exclusively grown under production contracts, while a small percentage of cattle are custom fed and shipped directly for slaughter this activity is not subject to the jurisdiction of the P&S Act. Hog production falls between these two extremes. As shown in Table 1 below, over 96 percent of all broilers are grown under contractual arrangements and over 40 percent of all hogs are grown under contractual arrangements. Live poultry dealers typically own the broilers and provide the growers with feed and medications. Contract growers provide the housing, labor, water, electricity and fuel to grow the birds. Similarly, swine contractors typically own the slaughter hogs and sell the finished hogs to pork packers. The swine contractors typically provide feed and medication to the contract growers who own the growing facilities and provide growing services. With the exception of turkey production, the use of contract growing arrangements has remained relatively stable over the years that the Census of Agriculture has published data on commodities raised and delivered under production contracts as Table 1 shows.

TABLE 1—PERCENTAGE OF POULTRY AND HOGS RAISED AND DELIVERED UNDER PRODUCTION CONTRACTS [29]

Species	2002	2007	2012
Broilers	98.0	96.5	96.4
Turkeys	41.7	67.7	68.5
Hogs	42.9	43.3	43.5

Another contract category is marketing contracts, where producers market their livestock to a packer for slaughter under a verbal or written agreement. These are commonly referred to as Alternative Marketing Arrangements (AMAs). Pricing mechanisms vary across AMAs. Some AMAs rely on a spot market for at least one aspect of its price, while others involve complicated pricing formulas with premiums and discounts based on carcass merits. The livestock seller and packer agree on a pricing mechanism under AMAs, but usually not on a specific price.

USDA's Agricultural Marketing Service (AMS) reports the number of

[29] Agricultural Census, 2007 and 2012. *https://www.agcensus.usda.gov/Publications/2012/Full_Report/Volume_1,_Chapter_1_US/* and *https://www.agcensus.usda.gov/Publications/2007/Full_Report/Volume_1,_Chapter_1_US/.*

cattle sold to packers under formula, forward contract, and negotiated pricing mechanisms. The following table illustrates the prevalence of contracting in the marketing of fed cattle.

TABLE 2—PERCENTAGE OF FED CATTLE SOLD BY TYPE OF PURCHASE [30]

Year	Formula	Forward contract	Negotiated
2005	30.4	5.0	64.6
2006	31.5	6.8	61.7
2007	33.2	8.3	58.5
2008	37.4	9.9	52.7
2009	43.7	7.0	49.3
2010	44.9	9.5	45.6
2011	48.4	10.9	40.7
2012	54.7	11.4	33.8
2013	60.0	10.2	29.8
2014	58.1	14.2	27.6
2015	58.2	16.5	25.3

GIPSA considers cattle sold under formula pricing methods as sold under AMA contracts. Thus, the first two columns in the above table are cattle marketed under contract and the third column represents the spot market for fed cattle. The data in the table above show that the contracting of cattle has increased significantly since 2005. Approximately 35 percent of fed cattle were marketed under contracts in 2005. By 2015, the percentage of fed cattle marketed to packers under contracts had increased to almost 75 percent, while negotiated spot market transactions have decreased to about 25 percent of all transactions.

As discussed above, over 40 percent of hogs are grown under production contracts. These hogs are then sold by swine contractors to packers under marketing contracts. The prevalence of marketing contracts in the sale of finished hogs, which includes production contract and non-production contract hogs, to packers is even more prevalent as shown in the table below.

TABLE 3—PERCENTAGE OF HOGS SOLD BY TYPE OF PURCHASE [31]

Year	Other marketing arrange-ments [32]	Formula [33]	Negotiated
2005	39.3	49.7	11.0
2006	44.0	46.4	9.6
2007	44.8	46.5	8.7
2008	43.9	47.6	8.5
2009	42.8	50.4	6.8
2010	45.4	49.4	5.2
2011	47.6	48.2	4.2
2012	47.7	48.6	3.6
2013	48.3	48.4	3.2
2014	45.9	51.4	2.7
2015	46.0	51.4	2.6

Similar to cattle, the percentage of hogs sold under marketing contracts has increased since 2005 to over 97 percent in 2015. The spot market for hogs has declined to 2.6 percent in 2015. As these data demonstrate, almost all hogs are marketed under some type of marketing contract.

Benefits of Contracting in Cattle, Hog, and Poultry Industries

Contracts have many benefits. They help farmers and livestock producers manage price and production risks, elicit the production of products with specific quality attributes by tying prices to those attributes, and smooth the flows of commodities to processing plants encouraging more efficient use of farm and processing capacities. Agricultural contracts can also lead to improvements in efficiency throughout the supply chain for products by providing farmers with incentives to deliver products consumers desire and produce products in ways that reduce processing costs and, ultimately, retail prices.

In 2007, RTI International conducted a comprehensive study of marketing practices in the livestock and red meat industries from farmers to retailers (the RTI Study).[34] The RTI Study analyzed the extent of use, price relationships, and costs and benefits of contracting, including AMAs. The RTI Study found that AMAs increased the economic efficiency of the livestock markets and yielded economic benefits to consumers, producers and packers.

The RTI Study found that efficiencies come from less volatility in volume and

[33] Includes Swine Pork Market Formula, Other Market Formula.

[34] RTI International, 2007, GIPSA Livestock and Meat Marketing Study, Prepared for GIPSA.

more intensive use of production and processing facilities, meaning less capital, labor, feed, and materials per pound of meat produced. Efficiencies also come from reduced transaction costs and from sending price signals to better match the meat attributes to consumer demand. Consumers benefit from lower meat prices and meat with desired attributes. In turn, the consumer benefits increase livestock demand, which provides benefits to producers.

Structural Issues in the Cattle, Hog, and Poultry Industries

As the above discussion highlights, there are important benefits associated with the use of agriculture contracts in the cattle, hog, and poultry industries. However, if there are large disparities in the bargaining power among contracting parties resulting from size differences between contracting parties or the use of market power by one of the contracting parties, the contracts may have detrimental effects on one of the contracting parties and may result in inefficiencies in the marketplace.

For example, a contract that ties a grower to a single purchaser of a specialized commodity or service, even if the contract provides for fair compensation to the grower, still leaves the grower subject to default risks should the contractor fail. Another example is a contract that covers a shorter term than the life of the capital (a poultry house, for example). The grower may face the hold-up risk that the contractor may require additional capital investments or may impose lower returns at the time of contract renewal. Hold-up risk is a potential market failure and is discussed in detail in the next section. These risks may be heightened when there are no alternative buyers for the grower to switch to, or when the capital investment is specific to the original buyer.[35] Some growers make substantial long-term capital investments as part of livestock or poultry production contracts, including land, poultry or hog houses, and equipment. Those investments may tie the grower to a single contractor or integrator. Costs associated with default risks and hold-up risks are important to many growers in the industry. The table below shows the number of integrators that broiler growers have in their local areas by percent of total farms and by total production.

TABLE 4—INTEGRATOR CHOICE FOR BROILER GROWERS[36]

Integrators in grower's area[37]	Percent of total			Can change to another integrator (percent of farms)
	Farms	Birds	Production	
Number:				
1	21.7	23.4	24.5	7
2	30.2	31.9	31.7	52
3	20.4	20.4	19.7	62
4	16.1	14.9	14.8	71
>4	7.8	6.7	6.6	77
No Response	3.8	2.7	2.7	Na

The data in the table show that 52 percent of broiler growers, accounting for 56 percent of total production, report having only one or two integrators in their local areas. This limited integrator choice may accentuate the contract risks. A 2006 survey indicated that growers facing a single integrator received 7 to 8 percent less compensation, on average, than farmers located in areas with 4 or more integrators.[38] If live poultry dealers already possess some market power to force prices for poultry growing services below competitive levels, some contracts can extend that power by raising the costs of entry for new competitors, or allowing for price discrimination.[39]

Many beef, pork, and poultry processing markets face barriers to entry, including; (1) Economies of scale; (2) high asset-specific capital costs with few alternative uses of the capital; (3) brand loyalty of consumers, customer loyalty to the incumbent processors, and high customer switching costs; and (4) governmental food safety, bio-hazard, and environmental regulations. Consistent with these barriers, there has been limited new entry.

However, an area where entry has been successful is in developing and niche markets, such as organic meat and free-range chicken. Developing and niche markets have a relatively small consumer market that is willing to pay higher prices, which supports smaller plant sizes. Niche processors are generally small, however, and do not offer opportunities to many producers or growers.

Economies of scale have resulted in large processing plants in the beef, pork, and poultry processing industries. The barriers to entry discussed above may have limited the entry of new processors, which limits the expansion of choice of processors to which livestock producers market their livestock. Barriers to entry also limit the expansion of choice for poultry growers who have only one or two integrators in their local areas with no potential entrants on the horizon. The limited expansion of choice of processors by livestock producers, swine production contract growers, and poultry growers may limit contract choices and the bargaining power of producers and growers in negotiating contracts.

One indication of potential market power is industry concentration.[40] The following table shows the level of concentration in the livestock and

poultry slaughtering industries for 2005–2015.

TABLE 5—FOUR-FIRM CONCENTRATION IN LIVESTOCK AND POULTRY SLAUGHTER [41]

Year	Steers & heifers (%)	Hogs (%)	Broilers (%)	Turkeys (%)
2005	80	64	n.a.	n.a.
2006	81	61	n.a.	n.a.
2007	80	65	57	52
2008	79	65	57	51
2009	86	63	53	58
2010	85	65	51	56
2011	85	64	52	55
2012	85	64	51	53
2013	85	64	54	53
2014	83	62	51	58
2015	85	66	51	57

The table above shows the concentration of the four largest steer and heifer slaughterers has remained relatively stable between 79 and 86 percent since 2005. Hog and broiler slaughter concentration has also remained relatively steady at over 60 percent and 50 percent, respectively.

The data in Table 5 are estimates of national concentration and the size differences discussed below are also at the national level, but the economic markets for livestock and poultry may be regional or local, and concentration in regional or local areas may be higher than national measures. For example, while poultry markets may appear to be the least concentrated in terms of the four-firm concentration ratios presented above, economic markets for poultry growing services are more localized than markets for fed cattle or hogs, and local concentration in poultry markets is greater than in hog and other livestock markets.[42] The data presented earlier in Table 4 highlight this issue by showing the limited ability a poultry grower has to switch to a different integrator. As a result, national concentration may not demonstrate accurately the options poultry growers in a particular region actually face.

Empirical evidence does not show a strong or simple relationship between increases in concentration and increases in market power. Other factors matter, including the ease of entry by new producers into a concentrated industry and the ease with which retail food buyers or agricultural commodity sellers can change their buying or marketing strategies in response to attempts to exploit market power.

For example, in 2009, the Government Accountability Office (GAO) reviewed 33 studies published since 1990 that were relevant for assessing the effect of concentration on commodity or food prices in the beef, pork, or dairy sectors.[43] Most of the studies found no evidence of market power, or found that the efficiency gains from concentration were larger than the market power effects. Efficiency gains would be larger if increased concentration led to reduced processing costs (likely to occur if there are scale economies [44] in processing), and if the reduced costs led to a larger effect on prices than the opposing impact of fewer firms. For example, with respect to beef processing, the GAO report concluded that concentration in the beef processing sector has been, overall, beneficial because the efficiency effects dominated the market power effects, thereby reducing farm-to-wholesale beef margins.

Several studies reviewed by the GAO did find evidence of market power in the retail sector, in that food prices exceeded competitive levels or that commodity prices fell below competitive levels. However, the GAO study also concluded that it was not clear whether market power was caused by concentration or some other factor. In interviews with experts, the GAO report concluded that increases in concentration may raise greater concerns in the future about the potential for market power and the manipulation of commodity or food prices.

Another factor GIPSA considered in proposing §§ 201.210 and 201.211 is the contrast in size and scale between livestock producers, swine production contract growers, and poultry growers and the packers, swine contractors, and live poultry dealers they supply. The disparity in size between large oligopsonistic buyers and atomistic sellers may lead to market power and asymmetric information. The 2012 Census of Agriculture reported 740,978 cattle and calf farms with 69.76 million head of cattle for an average of 94 head per operation. Ninety-one percent of these were family or individually-owned operations.[45] The largest one percent of cattle farms sold about 51 percent of the cattle sold by all cattle farms.

There were 33,880 cattle feeding operations in 2012 that sold 25.47 million head of fed cattle for an average of 752 head per feedlot. The 607 largest feedlots sold about 75 percent of the fed cattle, and averaged 32,111 head sold. About 80 percent of feedlots were family or individually owned.[46] As Table 5 shows, the four largest cattle packers processed about 85 percent, 25.47 million head, for an average of 5.41 million head per cattle packer. This means the average top four cattle packers had 57,574 times the volume of the average cattle farm, and 1,054 times the volume of the largest one percent of cattle farms. It also means the average top four cattle packers had 7,197 times the volume of the average feedlot, and

[41] The data on cattle and hogs were compiled from USDA's NASS data of federally inspected slaughter plants. Data on broilers and turkeys were compiled from Packers and Stockyards industry annual reports. Both data sources are proprietary.

[46] Ibid.

169 times the volume of the very largest feedlots.

The USDA, National Agricultural Statistics Service 2012 livestock slaughter summary reported that in 2012, 113.16 million head of hogs were commercially slaughtered in the United States.[47] Table 5 shows that the top four hog packers processed about 64 percent of those hogs, which comes to an average of about 18.1 million head of hogs per top four packer. The 2012 Census of Agriculture reported 55,882 farms with hog and pig sales.[48] About 83 percent of the farms were family or individually owned. Of the 55,882 farms with hog and pig sales, 47,336 farms were independent growers raising hogs and pigs for themselves (sold an average of 1,931 head), 8,031 were swine production contract growers raising hogs and pigs for someone else (an average of 10,970 head per swine production contract grower), and 515 were swine contractors (sold an average of 38,058 head per swine contractor).[49]

The National Chicken Council states that in 2016, approximately 35 companies were involved in the business of raising, processing, and marketing chicken on a vertically integrated basis, while about 25,000 family farmers had production contracts with those companies.[50] That comes to about 714 family-growers per company. Collectively, the family-growers produced about 95 percent of the nearly 9 billion broilers produced in the United States in 2015. The other 5 percent were grown on company-owned farms. That means the average family-grower produced about 342,000 broilers. As Table 5 shows, the four largest poultry companies in the United States accounted for 51 percent of the broilers processed. That means the average volume processed by the four largest poultry companies was about 1.15 billion head, which was 3,357 times the average family grower's volume.

As the above discussion highlights, there are large size differences between livestock producers and meat packers. There are also large size differences between poultry growers and the live poultry dealers which they supply. These size differences may contribute to unequal bargaining power due to monopsony market power or oligopsony market power, or asymmetric information. The result is that the contracts bargained between the parties may have detrimental effects on livestock producers, swine production contract growers, and poultry growers due to the structural issues discussed above and may result in inefficiencies in the marketplace.

Hold-Up as a Potential Market Failure

Integrators demand investment in fixed assets from the growers. One example is specific types of poultry houses and equipment the integrator may require the grower to utilize in their growing operations. These investments may improve efficiency by more than the cost of installation. Typically, the improved efficiency would accrue to both the integrator and the grower. The integrator has lower feed costs, and the grower performs better relative to other poultry growers in a settlement group. If the grower bears the entire cost of installation, then the grower should be further compensated for the feed conversion gains that accrue to the integrator. The risk is that after the assets are installed, the cost to the grower is ''sunk.'' This means that if the integrator reneges on paying compensation for the additional capital investments, and insists on maintaining the lower price, the grower will accept that lower price rather than receive nothing. This allows the integrator to get the benefit of the efficiency gains, at no expense to them, with the grower bearing all of the cost. This reneging is termed ''hold-up'' in the economic literature.[51]

Hold-up can have two consequences that result in a misallocation of resources. If the growers do not anticipate hold-up, then growers will spend too much on investments because the integrator who demands them is not incurring any cost. That is inefficient. If the grower does anticipate hold-up, they will act as if the integrator were going to renege even when they were not, resulting in too little investment and a loss of potential efficiency gains.

Hold-up can be resolved with increased competition. If an integrator developed a reputation for reneging, and growers could go elsewhere, the initial integrator would be punished and disincentivized from reneging in the future. Unfortunately, in practice, many growers do not have the option of going elsewhere.

Data shown above in Table 4 indicate that there are few integrators in these markets, and that growers have limited choice. Table 5, above, indicates the level of concentration in the livestock and poultry slaughtering industries and shows that integrators and livestock packers operate in concentrated markets.

This rule would allow growers to file complaints against integrators that renege, giving some of the incentive benefit of competition, without compromising the efficiency of having a few large processors.

Contracting, Industry Structure, and Market Failure: Summary of the Need for Regulation

There are benefits of contracting in the livestock and poultry industries, as well as structural issues that may result in unequal bargaining power and market failures. These structural issues and market failures will be mitigated by relieving plaintiffs from the requirement to demonstrate competitive injury. For instance, contracting parties can alleviate hold-up problems if they are able to write complete contracts, and are able to litigate to enforce the terms of those contracts when there is an attempt to engage in ex-post hold-up. Because proving competitive injury is difficult and costly, removing that burden will facilitate the use of litigation by producers and growers to address violations of the Packers and Stockyards Act. If growers are able to seek legal remedies, then their contracts are easier to enforce. This will incentivize packers, swine contractors, and integrators to avoid exploitation of market power and asymmetric information, as well as behaviors that result in the market failure of hold-up. The result will be improved efficiency in the livestock and poultry markets.

GIPSA has a clear role to ensure that market failures are mitigated so that livestock and poultry markets remain fair and competitive. Section 201.3(a) seeks to fulfill that role by promoting fairness and equity for livestock producers, swine production contract growers, and poultry growers.

Costs of the Regulations Proposed on June 22, 2010

GIPSA issued a proposed rule on June 22, 2010, which included §§ 201.3, 201.210, and 201.211. GIPSA received and considered thousands of comments before finalizing § 201.3(a) and before proposing the current versions of §§ 201.210, and 201.211. The following provisions were proposed in 2010 but are not in § 201.3 or currently proposed §§ 201.210 and 201.211.

- Applicability to all stages of a live poultry dealer's poultry production, including pullets, laying hens, breeders, and broilers (§ 201.3(a)).

[47] Ibid.

[48] A pig is a generic term for a young hog.

• Applicability to all swine production contracts, poultry growing arrangements and livestock production and marketing contracts, including formula and forward contracts (§ 201.3(b)).
• Requirement that packers, live poultry dealers, and swine contractors maintain records justifying differences in prices (§ 201.210(a)(5)).
• Provision prohibiting packers from purchasing livestock from other packers (§ 201.212(c)).
• Requirement that packers offer the same terms to groups of small producers as offered to large producers when the group can collectively meet the same quantity commitments (§ 201.211(a)).
• Requirement that packers refrain from entering into exclusive agreements with livestock dealers (§ 201.212(b)).
• Requirements that packers and live poultry dealers submit sample contracts to GIPSA for posting to the public (§ 201.213).

Although many thousands of the comments submitted contained general qualitative assessments of either the costs or benefits of the proposed rule, only two comments systematically described quantitative costs across the rule provisions. Comments from the National Meat Association (NMA) included cost estimates by Informa Economics (the Informa Study). The Informa Study projected costs of $880 million, $401 million, and $362 million for U.S. cattle and beef, hogs and pork, and poultry industries respectively.[52] However, these cost estimates were for all of the 2010 proposed changes, many of which do not apply. The Informa Study estimated $133.3 million to be one-time direct costs resulting from rewriting contracts, additional record keeping, etc.[53] The majority of the costs would be indirect costs. The Informa Study estimated $880.9 million in costs due to efficiency losses and $459.9 million in costs due to reduced demand caused by a reduction in meat quality resulting from fewer AMAs.

Comments from the National Chicken Council (NCC) included cost estimates prepared by Dr. Thomas E. Elam, President, FarmEcon LLC (the Elam Study).[54] The Elam Study estimated that the entire 2010 proposed rule would cost the chicken industry $84 million in the first year increasing to $337 million in the fifth year, with a total cost of $1.03 billion over the first five years.[55] The Elam Study identified $6 million as one-time administrative costs. Most of the costs would be indirect costs resulting from efficiency losses.[56] More than half of the costs would be due to a reduced rate of improvement in feed efficiency. Again, these cost estimates were for all of the 2010 proposed changes, many of which do not apply.

The Informa Study estimated that the proposed provision requiring packers to refrain from entering into exclusive agreements with livestock dealers would cost livestock auctions as much as $85.5 million.[57] Because GIPSA has no current plans to propose the ''exclusive agreements'' rule, those costs no longer apply. The Informa Study did not directly specify how much the estimates in the study attributed to each of the other provisions, but GIPSA expects that their omission will substantially reduce the cost of § 201.3(a).

Estimates of the costs in the Informa Study and the Elam Study were largely due to projections that packers, swine contractors, and live poultry dealers, would alter business practices in reaction to the proposed rule. For example, the Informa Study projected that packers would reduce the number and types of AMAs to avoid potential litigation,[58] and the Elam Study expected live poultry dealers to evaluate each load of feed delivered to growers to avoid litigation.[59]

The estimates from the Informa Study and the Elam Study may overstate costs because the studies relied on interviews of packers, swine contractors, live poultry dealers, and other stakeholders for much of the basis for the estimates of the willingness of packers, swine contractors, and live poultry dealers to alter their business practices. Moreover, neither study considered benefits from the proposed rule.

The Informa Study projected that the regulations proposed in 2010 would cause beef and pork packers to limit their involvement in vertical arrangements, and without those arrangements, they would not be able to produce the branded products they currently offer. The Informa Study projected that, as a result, beef and pork markets would lose $460 million, which is about half of the value added from branded products.[60]

GIPSA does not expect that the current § 201.3(a) would cause beef and pork markets to abandon half of the value added from branded products. Current § 201.3(a) does not prevent packers from offering quality incentives to hog or cattle feeders, and any vertical coordination among feeders and producers would be outside of GIPSA's jurisdiction.

Given the differences from the rule proposed in 2010, the estimates from the Elam Study likely overstated the costs of compliance to the poultry industry with current § 201.3(a) by at least $115 million over five years. The Informa Study estimates would overstate costs of compliance to the cattle, hog, and poultry industries with current § 201.3(a) by at least $500 million. If packers, swine contractors, and live poultry dealers overstated their willingness to alter their business practices, then the estimates could be overstated that much more.

Cost-Benefit Analysis of § 201.3(a)

Regulatory Alternatives Considered

Executive Order 12866 requires an assessment of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation and an explanation of why the planned regulatory action is preferable to the potential alternatives.[61] GIPSA considered three regulatory alternatives. The first alternative that GIPSA considered is the baseline to maintain the status quo and not finalize § 201.3(a). The second alternative that GIPSA considered is to issue § 201.3(a) as an interim final regulation. This is GIPSA's preferred alternative as will be explained below. The third alternative that GIPSA considered is issuing § 201.3(a) as an interim final regulation, but exempting small businesses, as defined by the Small Business Administration, from having to comply with the regulation.

Regulatory Option 1: Status Quo

If § 201.3(a) is never finalized, there are no marginal costs and marginal benefits as industry participants will not alter their conduct. From a cost standpoint, this is the least cost alternative compared to the other two alternatives. This alternative also has no marginal benefits. Since there are no changes from the status quo under this regulatory alternative, it will serve as the baseline against which to measure the other two alternatives.

Regulatory Alternative 2: The Preferred Alternative

Section 201.3(a) states that conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition. Given the applicability of the regulation to the entire livestock and poultry industries, it is difficult to predict how the industries will respond. Therefore, GIPSA believes that assigning a range to the expected costs of the regulation is appropriate.

At the lower boundary of the cost spectrum, GIPSA considers the scenario where the only costs are increased litigation costs and there are no adjustments by the livestock and poultry industries to reduce their use of AMAs or incentive pay systems, such as poultry grower ranking systems, and there are no changes to existing marketing or production contracts. For the upper boundary of the cost spectrum, GIPSA considers the scenario in which the livestock and poultry industries adjust their use of AMAs and incentive pay systems and makes systematic changes in its marketing and production contracts to reduce the threat of litigation.

A. Regulatory Alternative 2: Lower Boundary of Cost Spectrum—Litigation Costs of Preferred Alternative

GIPSA modeled the litigation costs by estimating the total cost of litigating a case filed under the jurisdiction of the P&S Act. The main costs are attorney fees to litigate a case in a court of law. Limited empirical data on actual historical litigation costs required GIPSA to use a cost engineering approach to estimate litigation costs. In considering the costs of the 2010 proposed rule, GIPSA, based on its expertise, assumed a cost of $3.5 million to litigate a case. GIPSA uses the same starting point here. The cost of litigating a case includes the costs to all parties including the respondent and the USDA in a case brought by the USDA and the costs of the plaintiff and the defendant in the case of private litigation.

GIPSA then examined the actual number of cases decided under the P&S Act from 1926 to 2014. The listing of court decisions and the court in which the decision was reached came from the National Agricultural Law Center at the University of Arkansas.[62] GIPSA then reviewed each case and classified it as either competition, financial, or trade practice cases. This is an internal classification system corresponding to the types of violations GIPSA investigates.

All of the cases were assigned a specific attorney fee based on a random sample from a normal distribution ranging between $250 thousand and $3.5 million for trade practice cases, $250 thousand to $3 million for financial cases, and $1.5 million to $5 million for competition cases. These ranges are based on GIPSA's expertise and the complexity of each type of case, with competition being the most complex and therefore the most costly to litigate. This expertise comes from GIPSA's experience litigating each type of case and monitoring private litigation under the P&S Act. GIPSA estimated the cost of litigating each case from 1926 to 2014 using the cost ranges outlined above.

GIPSA scaled the initial cost up or down based on the court making the decision and based on GIPSA's assumption that Supreme Court cases are more expensive than District court cases, which are more expensive than state court cases. For Supreme Court cases, GIPSA scaled up the cost by a factor of three. For District court cases, GIPSA left the costs unchanged except for the sole case litigated in the United States District Court for the District of Columbia, which GIPSA scaled up by a factor of 1.1. GIPSA scaled state courts down by a factor of 0.7.

After estimating the cost of each case, by case type, GIPSA averaged all cases decided each year to obtain an estimated annual average cost of litigation. GIPSA then conducted a Monte Carlo simulation by sampling from a normal distribution of estimated average annual litigation costs for each type of case to arrive at the final estimated annual average cost of litigating cases filed under the P&S Act.[63]

GIPSA recognizes the uncertainty in estimating litigation costs and conducted sensitivity analysis using a Monte Carlo simulation on the estimated average annual litigation costs. GIPSA used a normal distribution of estimated litigation costs and calculated estimated litigation costs at the 2.5th percentile (lower percentile) of the distribution, the mean (average), and the 97.5th percentile (upper percentile).

GIPSA then estimated a linear trend line through the data using the Ordinary Least Squares (OLS) linear regression technique and used the trend line to project the litigation costs for 2015–2017.[64] These are baseline litigation costs that GIPSA expects to occur without the regulation. The table below shows the estimated and projected baseline litigation costs for 2007–2017.[65]

TABLE 6—ESTIMATED AND PROJECTED BASELINE LITIGATION COSTS FOR 2007–2017[66]

Year	Lower percentile ($ millions)	Average ($ millions)	Upper percentile ($ millions)
2007	4.98	8.88	12.77
2008	2.16	5.12	8.08
2009	8.45	13.00	17.46
2010	6.82	11.25	15.60
2011	10.52	15.28	20.02
2012	6.49	10.10	13.81
2013	1.94	4.14	6.42
2014	3.56	6.74	10.03
2015	4.32	8.13	12.10
2016	4.45	8.28	12.31
2017	4.58	8.42	12.52

[62] *http://nationalaglawcenter.org/aglaw-reporter/case-law-index/packers-and-stockyards.* We note that this list is not exhaustive, but it is extensive.

[63] Monte Carlo simulation is a statistical technique that relies on repeated random sampling from a distribution to obtain numerical results.

[64] Ordinary least squares regression technique is a method for estimating the unknown parameters using an established statistical model based on existing data observations.

[65] The baseline litigation costs are those costs GIPSA expects to occur without implementation of § 201.3(a).

GIPSA then reviewed the complete history of all investigations conducted by its Packers and Stockyards Program since 2009 and separated out the investigations involving alleged violations of sections 202(a) and 202(b) of the P&S Act for cattle, hogs, and poultry because § 201.3(a) only applies to alleged violations of sections 202(a) and 202(b). The GIPSA investigation data are more robust, with more observations than the case data. There were never many cases in any given year. In addition, the data since 2009 are better predictors of the next ten years than cases that took place as far back as 1926.

Based on the history of investigations, GIPSA then allocated all of the projected baseline litigation costs for 2017 into section 202(a) and 202(b) violations for each species at the lower percentile, the average, and the upper percentile. These allocations appear in the tables below.

TABLE 7—ALLOCATION OF § 201.3(a) BASELINE LITIGATION COSTS FOR 2017 AT THE LOWER PERCENTILE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	1.00	0.65	2.01	3.66
202(b)	0.10	0.11	0.71	0.92
Total	1.10	0.76	2.72	4.58

TABLE 8—ALLOCATION OF § 201.3(a) BASELINE LITIGATION COSTS FOR 2017 AT THE AVERAGE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	1.84	1.20	3.70	6.73
202(b)	0.19	0.21	1.30	1.69
Total	2.02	1.41	4.99	8.42

TABLE 9—ALLOCATION OF § 201.3(a) BASELINE LITIGATION COSTS FOR 2017 AT THE UPPER PERCENTILE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	2.73	1.78	5.50	10.00
202(b)	0.28	0.31	1.93	2.52
Total	3.00	2.09	7.42	12.52

These allocations assume that all projected baseline litigation costs for 2017 will come only from section 202(a) and 202(b) violations. GIPSA then estimated the additional litigation costs the first full year the regulation is in place.

In order to estimate the additional expected litigation costs in 2017 assuming § 201.3(a) becomes effective in early 2017, GIPSA again utilized the complete history of all investigations conducted by its Packers and Stockyards Program since 2009. GIPSA based the additional litigation costs on the difference between the number of complaints received in 2015 on alleged conduct that may violate sections 202(a) and 202(b), by species, and the highest number of complaints GIPSA received in any year since 2009. By 2015, court decisions had established the requirement to demonstrate harm to competition, which likely resulted in fewer complaints of Section 202(a) and 202(b) violations, particularly in the poultry industry, than in previous years when this requirement was not fully realized by industry participants. GIPSA expects § 201.3(a) will result in additional new complaints filed with GIPSA that will be at the levels experienced between 2009 and 2015 before the requirement of harm to competition was fully realized. GIPSA tracks the number of complaints received through a complaint tracking system initiated in 2009. Thus, this difference, by species, is the increase in complaints GIPSA expects when the regulations are finalized. GIPSA then used these differences as scaling factors to estimate the litigation that GIPSA expects to occur in 2017, the first full year that § 201.3(a) becomes effective. The scaling factors appear in the table below:

TABLE 10—SCALING FACTORS FOR LITIGATION FROM § 201.3(a)

P&S Act section	Cattle	Hog	Poultry
202(a)	2.30	1.40	2.15
202(b)	2.30	1.20	2.15

[66] The litigation costs for 2007–2014 are estimated using Monte Carlo simulation at the lower percentile, the average, and the upper percentile and 2015–2017 are projected using the estimated trend lines using OLS and historical estimates. The cost of each case is measured using 2016 dollars.

The scaling factors run from 1.20 for hogs to 2.30 for cattle.

To finalize the estimated increase in litigation costs, GIPSA multiplied the scaling factors in the above table by the projected 2017 baseline litigation costs at the lower percentile, the average, and the upper percentile to arrive at the expected litigation costs in 2017. GIPSA then subtracted out the projected baseline litigation costs to arrive at the estimated additional litigation costs that GIPSA expects to occur assuming § 201.3(a) become effective in early 2017. These estimated litigation costs appear in the following tables.

TABLE 11—PROJECTED § 201.3(a) LITIGATION COSTS FOR 2017 AT THE LOWER PERCENTILE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	1.30	0.26	2.31	3.87
202(b)	0.13	0.02	0.81	0.97
Total	1.43	0.28	3.12	4.84

TABLE 12—PROJECTED § 201.3(a) LITIGATION COSTS FOR 2017 AT THE AVERAGE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	2.39	0.48	4.25	7.12
202(b)	0.24	0.04	1.49	1.77
Total	2.63	0.52	5.74	8.89

TABLE 13—PROJECTED § 201.3(a) LITIGATION COSTS FOR 2017 AT THE UPPER PERCENTILE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	3.55	0.71	6.32	10.58
202(b)	0.36	0.06	2.22	2.64
Total	3.91	0.77	8.54	13.22

GIPSA expects § 201.3(a) to result in an additional $4.84 million in litigation in 2017 at the lower percentile, $8.89 million in litigation in 2017 at the average, and $13.22 million in litigation in 2017 at the upper percentile. GIPSA also expects the majority of additional litigation to come from the poultry industry based on investigations GIPSA conducted from 2009 to 2015, many of which were based on industry complaints.

As discussed above, GIPSA considers the lower boundary of costs from § 201.3(a) to be increased litigation costs with no adjustments by the livestock and poultry industries to reduce their use of AMAs or incentive pay systems and no changes to existing marketing or production contracts. GIPSA also recognizes the uncertainty in estimating litigation costs and conducted a sensitivity analysis of litigation costs at the lower percentile, the average percentile, and the upper percentile. The sensitivity analysis shows that litigation may vary by as much as $8.38 million (upper percentile minus lower percentile). GIPSA believes the average litigation costs is the best available estimate of litigation costs and uses it as the lower boundary for the estimated litigation costs of § 201.3(a). The lower boundary cost estimates appear in the table below.

TABLE 14—LOWER BOUNDARY PROJECTED § 201.3(a) COSTS—PREFERRED ALTERNATIVE

P&S Act section	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
202(a)	2.39	0.48	4.25	7.12
202(b)	0.24	0.04	1.49	1.77
Total	2.63	0.52	5.74	8.89

GIPSA estimates that § 201.3(a) will result in an additional $8.89 million in additional litigation in the livestock and poultry industries with $2.63 million in litigation in the cattle industry, $0.52 million in the hog industry, and $5.74 million in the poultry industry in the first full year § 201.3(a) would be in place.

B. Regulatory Alternative 2: Lower Boundary—Ten-Year Total Costs of the Preferred Alternative

To arrive at the estimated ten-year costs of § 201.3(a), GIPSA expects the litigation costs to be constant for the first five years while courts are setting precedents for the interpretation of § 201.3(a). GIPSA expects that case law with respect to the regulation will be settled after five years and by then, industry participants will know how GIPSA will enforce the regulation and how courts will interpret the regulation.

The effect of courts establishing precedents is that litigation costs will decline after five years as the livestock and poultry industries understand how the courts interpret the regulation.

To arrive at the estimated ten-year costs of § 201.3(a), GIPSA estimates that litigation costs for the first five years will occur at the same rate and at the same cost as in 2017. In the second five years, GIPSA estimates that litigation costs will decrease each year and return to the baseline in the sixth year after the courts have established precedents. GIPSA estimates this decrease in litigation costs to the baseline to be linear with the same decrease in costs each year. The total ten-year costs of § 201.3(a) at the lower boundary appears in the table below.

TABLE 15—LOWER BOUNDARY OF TEN-YEAR TOTAL COSTS OF § 201.3(a)

Year	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
2017	2.63	0.52	5.74	8.89
2018	2.63	0.52	5.74	8.89
2019	2.63	0.52	5.74	8.89
2020	2.63	0.52	5.74	8.89
2021	2.63	0.52	5.74	8.89
2022	2.19	0.43	4.79	7.41
2023	1.75	0.35	3.83	5.93
2024	1.31	0.26	2.87	4.44
2025	0.88	0.17	1.91	2.96
2026	0.44	0.09	0.96	1.48
Totals	19.70	3.90	43.07	66.67

Based on the analysis, GIPSA expects the lower boundary of the ten-year total costs of § 201.3(a) to be $66.67 million.

C. Regulatory Alternative 2: Lower Boundary—Net Present Value of Ten-Year Total Costs of the Preferred Alternative

The lower boundary ten-year total costs of § 201.3(a) in the table above show that the costs are constant in the first five years and then gradually decrease over the next five years. Costs to be incurred in the future are less expensive than the same costs to be incurred today. This is because the money that will be used to pay the costs in the future can be invested today and earn interest until the time period in which the cost is incurred. After the cost has been incurred, the interest earned will still be available.

To account for the time value of money, the costs of the regulation to be incurred in the future is discounted back to today's dollars using a discount rate. The sum of all costs discounted back to the present is called the net present value (NPV) of total costs. GIPSA relied on both a three percent and seven percent discount rate as discussed in Circular A–4.[67] GIPSA measured all costs using constant 2016 dollars.

GIPSA calculated the NPV of the ten-year total costs of the regulation using both a three percent and seven percent discount rate and the NPVs appear in the following table.

TABLE 16—NPV OF LOWER BOUNDARY OF TEN-YEAR TOTAL COST OF § 201.3(a)—PREFERRED ALTERNATIVE

Discount rate	Preferred alternative ($ millions)
3 Percent	58.62
7 Percent	50.03

GIPSA expects the NPV of the lower boundary of the ten-year total costs of § 201.3(a) to be $58.62 million at a three percent discount rate and $50.03 million at a seven percent discount rate.

D. Regulatory Alternative 2: Lower Boundary—Annualized NPV of Ten-Year Total Costs of the Preferred Alternative

GIPSA then annualized the NPV of the ten-year total costs (referred to as annualized costs) of § 201.3(a) at the lower boundary using both a three percent and seven percent discount rate as required by Circular A–4 and the results appear in the following table.[68]

TABLE 17—ANNUALIZED COSTS OF § 201.3(a)—PREFERRED OPTION

Discount rate	Preferred alternative ($ millions)
3 Percent	6.87
7 Percent	7.12

GIPSA expects the annualized costs of § 201.3(a) at the lower boundary to be $6.87 million at a three percent discount rate and $7.12 million at a seven percent discount rate.

E. Regulatory Alternative 2: Upper Boundary of Cost Spectrum—Preferred Alternative

As discussed above, the upper boundary of the cost spectrum occurs if the cattle, hog, and poultry industries adjust their use of AMAs and incentive pay systems and make systematic changes in their marketing and production contracts to reduce the threat of litigation. For the upper boundary cost estimate, GIPSA relied on the Informa Study and Elam Study. The Informa Study was prepared for the NMA and the Elam Study was prepared for the NCC. Both of these groups were opposed to the rule proposed on June 22, 2010 and GIPSA considers their studies to be upper boundary scenarios for meat and livestock industries and poultry industry costs.

GIPSA reviewed the Informa Study and the Elam Study and compared the provisions in the multiple proposed regulations in the June 22, 2010 rule against § 201.3(a). The Informa Study estimated both direct and indirect costs of the 2010 proposed rule. The Informa Study direct costs are estimates of actual costs of complying with all of the regulations proposed in 2010, such as new computer software and additional staff. The Informa Study estimated both direct one-time costs and on-going direct costs that would be incurred by the livestock industry each year. The Informa Study also estimated indirect costs to capture livestock and poultry industry adjustments to the 2010

[67] *https://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf.* Accessed on September 19, 2016.

[68] Ibid.

regulations. The Informa Study also included litigation costs.

The sources of indirect costs that the Informa Study estimated for the cattle industry are a reduction in production efficiencies due to a reduction in the use of AMAs and the corresponding reduction in premiums paid in branded beef programs and a reduction in beef quality. The RTI Study also found that hypothetical reductions in AMAs would reduce beef and cattle supplies, reduce the quality of beef, and increase retail and wholesale beef prices.[69]

For the hog industry, the Informa Study estimated the indirect costs as the reduction in operational efficiency from operating slaughter plants at less than full optimal utilization as well as revenue losses due to reductions in quality from reductions in premiums paid for higher quality hogs procured under AMAs.

For the poultry industry, the Informa Study estimated indirect costs resulting from a slowdown in the adoption of new technology that increases efficiency as integrators are unwilling to provide monetary incentives for growers to invest in new technology due to the threat of litigation for unfair, unjustly discriminatory, or deceptive payment practices.

The Informa Study recognized that the economic costs of the 2010 rule would take time to materialize. The Informa Study estimated that only the direct, one-time costs would occur shortly after implementation of the regulations in the 2010 rule and the more significant impacts, such as declining efficiency and quality degradation, would happen more slowly and might not reach the full impact until three or four years after the rule became effective.[70] The Informa Study further recognized that companies would find ways to adapt to the provisions of the regulation in the rule and the impact of the rule would be lessened over time.[71] The following table summarizes the full-impact of the Informa Study cost estimates on the impact of the June 22, 2010 proposed rule.

TABLE 18—TOTAL INFORMA STUDY COSTS FOR THE FULL-IMPACT YEAR[72]

	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
One-Time Direct Costs	38.7	68.7	26.0	133.4
Ongoing Direct Costs	61.5	73.8	33.4	168.7
Cost Increase Due to Efficiency Loss	401.9	176.7	302.2	880.8
Revenue Lost Due to Quality/Demand Impact	377.7	82.2	0.0	459.9
Total Informa Costs	879.8	401.4	361.6	1,642.8

At the full impact level, the Informa Study estimated the highest cost to be borne by the cattle industry at almost $880 million, followed by the hog and poultry industries. The Informa Study estimated that the total costs of the regulations proposed in 2010 could be as high as $1.64 billion and that this cost would not be fully borne until three or four years after implementation of the regulations.

The Elam Study estimated a similar impact on the poultry industry as the Informa Study. The Elam Study estimated that the costs of the 2010 proposed rule would increase over time and would cost the chicken industry $200.64 million in the third year after implementation, $266.94 in the fourth year, and $336.67 million in the fifth year, with a total cost of $1.03 billion over the first five years.[73] The Elam Study estimated $6 million as one-time administrative costs from re-drafting poultry grower contracts, additional record keeping, and submission of contracts to GIPSA.[74] The remainder of the costs estimated in the Elam Study were indirect costs resulting from efficiency losses and costs of testing and evaluating feed.

GIPSA expects the livestock and poultry industries to adapt to § 201.3(a) after a period of five years when the courts have presumably settled the case law and the livestock and poultry industries know how courts will interpret the regulation. This will cause the costs of § 201.3(a) to decline after a period of five years. GIPSA expects the livestock and poultry industries to adjust their business practices in a way to maximize profits and lessen the impact of the regulation over time.

GIPSA also compared the estimated impact on the poultry industry in the first five years as estimated in the Informa Study and the Elam Study. In the first four years, the poultry costs estimated in the Informa Study are higher than those estimated in the Elam Study. The Elam study has higher cost estimates in year five. Because the Informa Study cost estimates are higher than the Elam Study cost estimates and the Informa Study cost estimates decline in the later years as GIPSA expects, GIPSA relies on the Informa Study cost estimates to estimate the upper boundary of the costs of § 201.3(a).

1. Regulatory Alternative 2: Upper Boundary-Informa Study Estimates—Adjustment 1

In order to arrive at the upper boundary estimate of the costs of § 201.3(a), GIPSA made several downward adjustments to the Informa Study estimates presented in Table 18 above. The first adjustment is to reduce the Informa Study cost estimates by 25 percent. The Informa Study implicitly asserted that 75 percent of the total costs of the 2010 rule were caused by relieving the plaintiff of the burden of proving competitive injury.[75] Thus, the Informa Study implicitly asserted that provisions in regulations in the 2010 proposed rule other than § 201.3(a) are responsible for 25 percent of the total costs. Because GIPSA is only concerned with costs attributable to § 201.3(a), GIPSA is reducing the Informa Study cost estimates by 25 percent.

2. Regulatory Alternative 2: Upper Boundary-Informa Study Estimates—Adjustment 2

The second downward adjustment that GIPSA made is to scale the Informa Study's estimates according to the timing of the economic impact the Informa Study estimated. The Informa Study expected the costs to increase in the first three years, peak in years three or four, and then decline through year ten. In order to simulate the costs that the Informa Study assigned to each year, GIPSA adjusted the costs in the full impact year in Table 18 above by the percentages listed in Table 19.

TABLE 19—IMPACT LEVEL OF INFORMA STUDY COSTS [76]

Year	Cattle (%)	Hog (%)	Poultry (%)
2017	40	29	49
2018	69	59	79
2019	100	79	100
2020	100	100	100
2021	100	96	81
2022	91	75	60
2023	75	54	30
2024	51	53	9
2025	38	29	9
2026	38	29	9

GIPSA then weighted the Informa Study's full-impact cost estimate for each year and each industry by the impact level from the table above.

3. Regulatory Alternative 2: Upper Boundary-Informa Study Estimates—Adjustment 3

The final downward adjustment GIPSA made is based on two factors. The first factor is that GIPSA expects the language in § 201.3(a) to result in limited industry adjustments and a continued role for the courts to interpret when a showing of harm or likelihood of harm to competition is necessary in order to prove a violation of section 202(a) or (b) of the P&S Act. The second factor is the fact that the courts have historically not required a showing of harm or likelihood of harm to competition in all livestock and poultry cases and GIPSA expects that trend to continue. GIPSA discusses the factors in turn and then estimates the third and final adjustment to the Informa Study estimates.

The first factor is that § 201.3(a) states that a finding that the challenged conduct or action adversely affects or is likely to adversely affect competition is not necessary in all cases. However, § 201.3(a) does not provide any guidance regarding the types of conduct or action where a finding of harm or likelihood of harm would or would not be necessary to prove a violation of section 202(a) or (b) of the P&S Act.[77] It is possible that without the guidance in the proposed regulations, courts will continue to exercise judicial discretion in determining when a finding of harm or likelihood of harm to competition is necessary in order to prove a violation of sections 202(a) and/or (b). However, this rule will provide the longstanding position of the Department of Agriculture for the courts to consider. Because some of the U.S. Courts of Appeals in areas of heavy agricultural production have ruled that GIPSA must demonstrate competitive injury or the likelihood of competitive injury in order to prove that certain conduct or action violates section 202(a) and (b), GIPSA anticipates that the federal district courts in those circuits will continue to apply this binding case law.

GIPSA acknowledges that final § 201.3(a) may motivate some private plaintiffs to file new lawsuits under sections 202(a) and/or 202(b) to test its parameters in an attempt to move courts to find in selected cases that harm or likely harm to competition need not be proven. If a U.S. Court of Appeals upholds a district court ruling that competitive harm or likelihood of competitive harm must be demonstrated in order to prove a violation of section 202(a) or (b), that result would not involve any change from the status quo of section 202(a) and 202(b) litigation. Packers, swine contractors, and live poultry dealers would have no reason to adjust their contracts or business practices with the result of few additional indirect costs being borne by the livestock and poultry industries. Similarly, plaintiffs would then need to consider the high costs (in terms of discovery of large amounts of data and the hiring of economic and statistical experts) to proceed to trial and may opt not to proceed with additional litigation.[78]

GIPSA expects the effects of § 201.3(a) on livestock and poultry industry participants to be mixed. A small number of livestock producers, swine production contract growers, and poultry growers may seek judicial enforcement of their rights under the P&S Act without showing harm or likely harm to competition. However, due to the uncertain outcome of litigation under sections 202(a) and/or 202 (b), GIPSA expects packers, swine contractors, and live poultry dealers will likely take a ''wait and see'' approach prior to making any significant changes in their business models, marketing arrangements, or other practices. Concerned with net profit and reports to stockholders or owners, such firms will rationally forego any large changes in their operations until it is clear that such changes are legally required. If such changes are not required, due to status quo rulings by courts requiring proof of competitive

[76] The Informa Study estimates are for years one through ten beginning with the first year of the implementation of the rule and are not specific to any one year. GIPSA uses 2017 as year one and 2026 as year ten. The Informa Study stated that in particular, the decline in beef and pork quality and subsequent damage to consumer demand will take time to materialize, while the efficiency losses in poultry would likely happen sooner, but will still be delayed. This is presumably because the breeding cycle for hogs and especially for cattle is longer than that for poultry.

[77] Proposed regulations 201.210 and 201.211 provide conduct and criteria for 202(a) and 202(b) violations.

[78] In the *Been* v. *O.K. Indus., Inc.* litigation, the plaintiffs' economic expert billed for more than 3,000 hours spent on economic analysis of data, building a monopsony case in accordance with the Tenth Circuit's 2007 opinion, writing reports, consulting with attorneys, and testifying at depositions and during the jury trial. The defendant's two economic experts presumably billed for a similarly significant amount of time.

injury or the likelihood of competitive injury, as GIPSA anticipates, then GIPSA expects that few changes will be made as a result of § 201.3(a).

GIPSA expects the status quo enforcement outcome of § 201.3(a) discussed above to be most likely in the cattle and hog industries. GIPSA has enforced the P&S Act and regulations against packers without proving harm or likelihood of harm to competition for decades, and the courts have upheld successful enforcement actions. It is primarily in the poultry industry that, the courts have declined to enforce, sections 202(a) and (b) of the P&S Act and regulations without a finding of harm or likelihood of harm to competition.

Therefore, due to the likelihood of status quo rulings, GIPSA estimates that the upper boundary cost estimate of the overall impact of § 201.3(a) on the cattle and hog industries will be considerably less than the Informa Study estimates after applying the first two adjustments.

The second factor is the recent outcome of cases decided under the P&S Act since 2000 and whether courts have required demonstration of harm or likely harm to competition. GIPSA examined the actual number of cases decided under the P&S Act from 2000 to 2014. This is the same listing of cases as in the estimation of litigation costs presented earlier, except that GIPSA only considered cases decided after 2000 to reflect the most current decisions reached by the courts. The listing of court decisions and the court in which the decision was reached came from the National Agricultural Law Center at the University of Arkansas.[79] GIPSA then reviewed each case since 2000 and classified it as either a competition, financial, or trade practice case. GIPSA then examined each case to determine which cases involved alleged violations of sections 202(a) and 202(b) and which of those cases the court required demonstration of harm or likelihood of harm to competition.

GIPSA found 22 cases which involved alleged violations of sections 202(a) and 202(b) and addressed the issue of demonstrating harm or likelihood of harm to competition. Of those 22 cases, GIPSA found that the courts required demonstration of harm or likelihood of harm to competition in eight cases and did not require demonstration of a harm or likelihood of harm to competition in 14 cases. However, these 14 cases where demonstration of harm or likelihood of harm to competition was not required were not evenly distributed among the cattle, hog, and poultry industries. Courts have only required a demonstration of harm or likelihood of harm to competition in 20 percent of the cases alleging violations of sections 202(a) and 202(b) in the cattle and hog industries since 2000. GIPSA found that the courts have required a demonstration of harm or likelihood of harm to competition in 50 percent of the cases alleging violations of sections 202(a) and 202(b) in the poultry industry since 2000. The fact that demonstration of harm or likelihood of harm to competition was not required in every case is consistent with § 201.3(a), which states that demonstration of harm or likelihood of harm to competition is not required in all cases. As these cases have all involved livestock packers, swine contractors, and live poultry dealers and are a matter of public record, GIPSA believes that packers, swine contractors, and live poultry dealers are already aware that courts have not required demonstration of a harm or likelihood of harm to competition in all cases. This is another reason why GIPSA expects packers, swine contractors, and live poultry dealers to likely take a ''wait and see'' approach.

Therefore, due to the likelihood of status quo rulings by courts and the rationality of livestock packers, swine contractors, and live poultry dealers to tend toward a ''wait and see'' approach, GIPSA estimates the upper boundary estimate to be between 20 percent of the Informa Study cattle and hog industry estimates, 50 percent of the Informa Study poultry industry estimate and zero percent of the Informa Study estimates after applying the first two adjustments. Zero percent would mean that there are no industry adjustments from § 201.3(a).

Given the uncertainty in how the industry will respond to § 201.3(a), GIPSA selected one half of 20 percent of the Informa Study estimates for cattle and hogs, one half of 50 percent of the poultry industry estimate from the Informa Study estimates as its point estimate. Thus, GIPSA applied ten percent of the cattle and hog Informa Study estimates and 25 percent of the poultry Informa Study estimates as its point estimate after applying the first two adjustments. The following table shows the estimated upper boundary costs for § 201.3(a) on an annual and ten-year cost basis based on the adjusted Informa Study cost estimates.

TABLE 20—UPPER BOUNDARY ANNUAL COSTS OF § 201.3(a)—PREFERRED ALTERNATIVE

Year	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
2017	28.14	12.49	35.87	76.49
2018	43.67	14.68	49.78	108.13
2019	63.08	19.82	62.93	145.82
2020	63.08	24.95	62.93	150.96
2021	63.08	23.85	50.72	137.65
2022	57.26	18.71	37.57	113.54
2023	47.55	13.58	18.78	79.92
2024	32.03	13.21	5.64	50.87
2025	24.26	7.34	5.64	37.24
2026	24.26	7.34	5.64	37.24
Totals	446.42	155.97	335.47	937.86

At the upper boundary in the first full year after implementation, GIPSA estimates that § 201.3(a) will result in an additional $76.49 million in direct and indirect costs in the livestock and poultry industries, with $28.14 million in the cattle industry, $12.49 million in the hog industry, and $35.87 million in the poultry industry. GIPSA expects the

[79] *http://nationalaglawcenter.org/aglaw-reporter/case-law-index/packers-and-stockyards.*

upper boundary of the ten-year total cost of § 201.3(a) to be $937.86 million.

F. Regulatory Alternative 2: Upper Boundary—NPV of Ten-Year Total Costs of the Preferred Alternative

GIPSA calculated the NPV of the ten-year total costs of the regulation using both a three percent and seven percent discount rate and the NPVs appear in the following table.

TABLE 21—NPV OF UPPER BOUNDARY OF TEN-YEAR TOTAL COST OF § 201.3(a)—PREFERRED ALTERNATIVE

Discount rate	Preferred option ($ millions)
3 Percent	818.97
7 Percent	692.49

GIPSA expects the NPV of the upper boundary of the ten-year total costs of § 201.3(a) to be $818.97 million at a three percent discount rate and $692.49 million at a seven percent discount rate.

G. Regulatory Alternative 2: Upper Boundary—Annualized Costs of the Preferred Alternative

GIPSA then annualized the costs of § 201.3(a) at the upper boundary using both a three percent and seven percent discount rate and the results appear in the following table.

TABLE 22—ANNUALIZED COSTS OF § 201.3(a)—PREFERRED OPTION

Discount rate	Preferred option ($ millions)
3 Percent	96.01
7 Percent	98.60

GIPSA expects the annualized costs of § 201.3(a) at the upper boundary to be $96.01 million at a three percent discount rate and $98.60 million at a seven percent discount rate.

H. Sensitivity Analysis of the Upper Boundary

In the section above, GIPSA explained that it chose 10 percent of the cattle and hog estimates from the Informa Study and 25 percent of the poultry estimate from the Informa Study as its point estimate for the upper boundary costs. Because of the uncertainty over the eventual impacts of this rule on industry behavior, GIPSA evaluates the sensitivity of its upper bound estimate to an alternative set of assumptions. GIPSA presents three alternative sets of assumptions for calculating the upper bound estimate.

For the first scenario, GIPSA applies the full adjustment to the Informa Study cost estimates, specifically, 20 percent for cattle and hogs and 50 percent for poultry. In that case, GIPSA's estimate of the upper bound would be twice as high as presented in the previous section. For the second scenario, § 201.3(a) is assumed to impact industry behavior for the poultry industry only, (that is, zero percent of the Informa Study estimate for cattle and hogs, and 25 percent of the estimate for poultry). In that scenario, the upper bound estimate would be the same as presented in Table 20, above, for poultry, and would be the lower boundary estimate for cattle and hogs as shown in Table 15. For a third scenario, all the Informa Study estimates are adjusted to zero assuming that there are no indirect costs of adjustment to the rule. In that case, the lower boundary estimate, only reflecting litigation costs, as shown in Tables 15 through 17 would be the result.

GIPSA calculated the NPV of the ten-year total costs of the regulation using both a three percent and seven percent discount rate for each of the three scenarios described above and the NPVs appear in the following table.

TABLE 23—SENSITIVITY ANALYSIS OF THE UPPER BOUNDARY ESTIMATE OF THE TEN-YEAR TOTAL COST OF § 201.3(a)—PREFERRED ALTERNATIVE—EXPRESSED IN NPV

Discount rate	Point estimate ($ millions)	Scenario 1 ($ millions)	Scenario 2 ($ millions)	Scenario 3 ($ millions)
3 Percent	818.97	1,637.94	319.43	58.62
7 Percent	692.49	1,384.98	276.18	50.03

Scenario 1: Adjustment to Informa of 20% for cattle and hogs, 50% for poultry.
Scenario 2: Adjustment to Informa of 0% for cattle and hogs, 25% for poultry.
Scenario 3: Adjustment to Informa of 0% for cattle and hogs, and poultry.

GIPSA then annualized the estimated costs of § 201.3(a) at the upper boundary for the three sensitivity scenarios using both a three percent and seven percent discount rate and the results appear in the following table.

TABLE 24—SENSITIVITY ANALYSIS OF THE UPPER BOUNDARY ESTIMATE OF THE TEN-YEAR TOTAL COST OF § 201.3(a)—PREFERRED ALTERNATIVE—ANNUALIZED

Discount rate	Point estimate ($ millions)	Scenario 1 ($ millions)	Scenario 2 ($ millions)	Scenario 3 ($ millions)
3 Percent	96.01	192.02	37.45	6.87
7 Percent	98.60	197.19	39.32	7.12

Scenario 1: Adjustment to Informa of 20% for cattle and hogs, 50% for poultry.
Scenario 2: Adjustment to Informa of 0% for cattle and hogs, 25% for poultry.
Scenario 3: Adjustment to Informa of 0% for cattle and hogs, and poultry.

I. Regulatory Alternative 2: Range of Annualized Costs of the Preferred Alternative

The following table shows the full range of the annualized costs of § 201.3(a) at both a three percent and seven percent discount rate.

TABLE 25—RANGE OF ANNUALIZED COSTS—PREFERRED OPTION

Discount rate	Lower boundary ($ millions)	Upper boundary ($ millions)
3 Percent	6.87	96.01
7 Percent	7.12	98.60

GIPSA estimates the annualized costs of § 201.3(a) will range from $6.87 million to $96.01 million at a three percent discount rate and from $7.12 million to $98.60 million at a seven percent discount rate.

J. Regulatory Alternative 2: Point Estimate of Annualized Costs of the Preferred Alternative

The range of potential costs is broad. The reason there is a broad range of potential costs is because § 201.3(a) has applicability to the livestock and poultry industries and it is difficult to predict how the industries will respond. If the industries do not change any of their current business practices, GIPSA expects additional litigation to be the only costs and the costs of the regulation will be closer to the lower boundary. If, however, the industries respond by reducing the use of AMAs and restricting their use of incentive pay, GIPSA expects the costs of the regulation to be closer to the upper boundary. Based on the uncertainty over how the industries will respond, GIPSA believes that the mid-point in the range of estimated annualized costs is the best available point estimate of the costs of § 201.3(a). The point estimate along with the lower and upper boundary estimates appear in the table below.

TABLE 26—POINT ESTIMATE OF ANNUALIZED COSTS—PREFERRED ALTERNATIVE

Discount rate	Lower boundary ($ millions)	Point estimate ($ millions)	Upper boundary ($ millions)
3 Percent	6.87	51.44	96.01
7 Percent	7.12	52.86	98.60

GIPSA expects the annualized costs of § 201.3(a) at the point estimate to be $51.44 million at a three percent discount rate and $52.86 million at a seven percent discount rate. Based on the discussion of GIPSA's expectation that the cattle, hog, and poultry industries will likely take a ''wait and see'' approach to how the courts will interpret § 201.3(a) and for courts to take a status quo approach, GIPSA believes the point estimates of the preferred alternative to be the best available estimates of the costs of § 201.3(a).

K. Regulatory Alternative 2: Sensitivity Analysis of Point Estimates of Annualized Costs

In its estimate of litigation costs presented above, GIPSA recognized the uncertainty in estimating litigation costs and conducted a sensitivity analysis. GIPSA estimated that the lower boundary of the first-year costs of § 201.3(a) were $4.84 million at the lower percentile, $8.89 million at the average percentile, and $13.22 million at the upper percentile.[80] GIPSA relied on the average estimate of litigation costs as the lower boundary of the litigation costs of § 201.3(a).

To consider the effects of the uncertainty in its estimation of litigation costs, GIPSA annualized its litigation costs estimates at the lower percentile, the average percentile, and the upper percentile and the results appear in the following table.

TABLE 27—ANNUALIZED RANGE OF ESTIMATED LITIGATION COSTS—PREFERRED ALTERNATIVE

Discount rate	Lower percentile ($ millions)	Average ($ millions)	Upper percentile ($ millions)
3 Percent	3.74	6.87	10.22
7 Percent	4.54	7.12	12.41

GIPSA then applied this uncertainty to its point estimates of the annualized costs of § 201.3(a) by subtracting the difference of the lower percentile of estimated litigation costs and the point estimate at both the three and seven percent discount rates and added the difference of the upper percentile of estimated litigation costs and the point estimate at both the three and seven percent discount rates. The results of the sensitivity analysis appear in the following table.

[80] See Tables 11–13 above.

TABLE 28—ANNUALIZED RANGE OF POINT ESTIMATES OF § 201.3(a)—PREFERRED ALTERNATIVE

Discount rate	Lower percentile ($ millions)	Point estimate ($ millions)	Upper percentile ($ millions)
3 Percent	49.87	51.44	53.11
7 Percent	51.57	52.86	55.50

GIPSA estimates that the point estimates of the annualized costs of § 201.3(a) will range from $49.87 million at the lower percentile to $53.11 million at the upper percentile using a three percent discount rate. At the seven percent discount rate, GIPSA estimates that the point estimate of the annualized costs will range from $51.57 million at the lower percentile to $55.50 million at the upper percentile. Given the size of the range between the upper and lower boundary of the estimated annualized costs, GIPSA's point estimate is not overly sensitive to the uncertainty in the estimated litigation costs. Thus, GIPSA believes the point estimates of the preferred alternative to be the best available estimate of the costs of § 201.3(a).

L. Regulatory Alternative 2: Benefits of the Preferred Alternative

GIPSA was unable to quantify the benefits of § 201.3(a). However, there are qualitative benefits of § 201.3(a) that merit discussion. The primary qualitative benefit of § 201.3(a) is ability of livestock producers, swine production contract growers, and poultry growers to have more protections and be treated more fairly, which may lead to more equitable contracts. A simple example is the inaccurate weighing of slaughter-ready poultry grown by a poultry grower for a live poultry dealer. The poultry grower is harmed if the true weight is above the inaccurate weight because the poultry grower's payment is typically tied to the poultry grower's efficiency in growing poultry, which in this case is artificially low due to the inaccurate weight of the live birds. The impact of this harm to the poultry grower is very small when compared to the entire industry and there is no discernable or provable harm to competition from this one instance. However because there is no discernible or provable harm or likely harm to competition, courts have been reluctant to find a violation of section 202(a) of the P&S Act in such a situation, despite the harm suffered by the individual poultry grower.

However, if similar, though unrelated, harm is experienced by a large number of poultry growers, the cumulative effect does result in a discernible and provable harm to competition. The individual harm is inconsequential to the poultry industry, but the sum total of all individual harm has the potential to be quite significant when compared to the poultry industry and therefore, courts have found harm or likely harm to competition in such a situation. Under proposed § 201.210(b)(8), failing to ensure accurate weights of live poultry, absent a legitimate business justification, will constitute an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) of the P&S Act. Whether or not the conduct harms or is likely to harm competition becomes irrelevant.

GIPSA expects § 201.3(a) to increase enforcement actions against live poultry dealers for violations of sections 202(a) and/or 202(b) when the conduct or action does not harm or is not likely to harm competition. Several appellate courts have disagreed with USDA's interpretation of the P&S Act that harm or likely harm to competition is not necessary in all cases to prove a violation of sections 202(a) and/or 202(b). In some cases in which the United States was not a party, these courts have concluded that plaintiffs could not prove their claims under sections 202(a) and/or (b) without proving harm to competition or likely harm to competition. One reason the courts gave for declining to defer to USDA's interpretation of the statute is that USDA had not previously enshrined its interpretation in a regulation. Interim final § 201.3(a) corrects the issue and courts may now give deference to USDA's interpretation.

GIPSA expects the result will be additional enforcement actions that will be successfully litigated and serve as a deterrent to violating sections 202(a) and/or 202(b). Benefits to the industries and the markets from additional enforcement will also arise from establishing parity of negotiating power between livestock producers, swine production contract growers, and poultry growers and packers, swine contractors, and live poultry dealers by reducing the ability to use market power with the resulting dead weight losses.[81]

Section 201.3(a) also provides additional protections for livestock producers, swine production contract growers, and poultry growers against unfair, unjustly discriminatory, and deceptive practices or devices and undue or unreasonable preferences, advantages, prejudices, or disadvantages since demonstration of harm to competition is required in all cases. GIPSA believes the standard articulated in § 201.3(a) is consistent with its mission ''[T]o protect fair trade practices, financial integrity, and competitive markets for livestock, meats, and poultry.'' [82] By making it clear that demonstration of harm or likely harm to competition is not necessary in all cases, this interim final rule promotes fairness and equity for livestock producers, swine production contract growers, and poultry growers.[83]

M. Regulatory Alternative 2: Cost-Benefit Summary of the Preferred Alternative

GIPSA estimates the annualized costs of § 201.3(a) to range from $6.87 million to $96.01 million at the three percent discount rate and from $7.12 million to $98.60 million at the seven percent discount rate. The range of potential costs is broad. GIPSA relied on its expertise to arrive at a point estimate range of expected annualized costs. GIPSA expects that the cattle, hog, and poultry industries will primarily take a ''wait and see'' approach to how courts will interpret § 201.3(a) and courts to take a status quo approach and only slightly adjust their use of AMAs and performance-based payment systems. GIPSA estimates that the annualized costs of § 201.3(a) will be $51.44 million at a three percent discount rate and $52.86 million at a seven percent discount rate based on an anticipated ''wait and see'' approach and industry adjustments.

[81] Nigel Key and Jim M. MacDonald discuss evidence for the effect of concentration on grower compensation in ''Local Monopsony Power in the Market for Broilers? Evidence from a Farm Survey'' selected paper American Agri. Economics Assn. meeting Orlando, FL, July 27–29, 2008.

[82] *https://www.gipsa.usda.gov/laws/law/PS_act.pdf.* Accessed on September 19, 2016.

[83] See additional discussion in Steven Y. Wu and James MacDonald (2015) ''Economics of Agricultural Contract Grower Protection Legislation,'' *Choices* 30(3): 1–6.

The primary benefit of § 201.3(a) is the increased ability for the enforcement of the P&S Act for violations of sections 202(a) and/or 202(b), which do not result in harm or likely harm to competition. This, in turn, will reduce instances of unfair, unjustly discriminatory, or deceptive practices or devices and undue or unreasonable preferences, advantages, prejudices, or disadvantages and increased efficiencies in the marketplace. The benefit of additional enforcement of the P&S Act will accrue to all segments of the value chain in the production of livestock and poultry, and ultimately to consumers.

N. Regulatory Alternative 3: Small Business Exemption

The third regulatory alternative that GIPSA considered is issuing § 201.3(a) as an interim final regulation, but exempting small businesses, as defined by the Small Business Administration, from having to comply with it.[84] To estimate the expected costs of exempting small business, GIPSA relied on the percentage of small businesses in the cattle, hog, and poultry industries that are developed and presented in the Regulatory Flexibility Analysis section below.

To arrive at the estimated costs of § 201.3(a) based on exempting small businesses, GIPSA weighted the point estimates, lower boundary, and upper boundary of cost estimates by the percentage of cattle and hogs processed by packers that are large businesses and the percentage of contracts held by swine contractors and live poultry dealers that are large businesses. GIPSA estimates that small businesses account for 19.3 percent of the cattle slaughtered. For the hog industry, GIPSA estimates that small businesses slaughter 17.8 percent of hogs and that 65 percent of swine contractors are small businesses. GIPSA estimates that 10.27 percent of live poultry dealers are classified as small businesses.

O. Regulatory Alternative 3: Lower Boundary of Cost Spectrum—Litigation Costs of the Small Business Exemption

As discussed above, GIPSA considers the lower boundary of costs from § 201.3(a) to be increased litigation with no adjustments by the cattle, hog, and poultry industries to reduce their use of AMAs or incentive pay systems and there are no changes to existing marketing or production contracts. GIPSA used the average of the litigation cost estimates as the lower boundary for the estimated costs of § 201.3(a). GIPSA then weighted the lower boundary cost estimate under the preferred alternative by the percentage of large businesses in the cattle, hog, and poultry industries. The estimates appear in the table below. The preferred alternative is also shown for convenience.

TABLE 29—LOWER BOUNDARY ANNUAL TOTAL COSTS—SMALL BUSINESS EXEMPTION

Year	Preferred alternative ($ millions)	Small business exemption ($ millions)
2017	8.89	7.49
2018	8.89	7.49
2019	8.89	7.49
2020	8.89	7.49
2021	8.89	7.49
2022	7.41	6.24
2023	5.93	4.99
2024	4.44	3.74
2025	2.96	2.50
2026	1.48	1.25
Totals	66.67	56.16

At the lower boundary with a small business exemption, GIPSA estimates that § 201.3(a) will result in an additional $7.49 million in litigation costs in the cattle, hog, and poultry industries in the first full year following implementation. GIPSA expects the lower boundary of the ten-year total costs of § 201.3(a) with a small business exemption to be $56.16 million.

P. Regulatory Alternative 3: Lower Boundary—NPV of Total Costs of the Small Business Exemption

GIPSA calculated the lower boundary of the NPV of the ten-year total costs of the regulation under the small business exemption using both a three percent and seven percent discount and the NPVs appear in the following table. The preferred alternative is also shown for convenience.

TABLE 30—LOWER BOUNDARY NPV OF TEN-YEAR TOTAL COST—SMALL BUSINESS EXEMPTION

Discount rate	Preferred alternative ($ millions)	Small business exemption ($ millions)
3 Percent	58.62	49.38
7 Percent	50.03	42.14

[84] See: *http://www.sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf.*

GIPSA expects the NPV of the lower boundary of the ten-year total costs of § 201.3(a) under a small business exemption to be $49.38 million at a three percent discount rate and $42.14 million at a seven percent discount rate.

Q. Regulatory Alternative 3: Lower Boundary—Annualized Costs of the Small Business Exemption

GIPSA then annualized the NPV of the ten-year total costs of § 201.3(a) at the lower boundary using both a three percent and seven percent discount rate and the results appear in the following table. The preferred alternative is also shown for convenience.

TABLE 31—LOWER BOUNDARY OF ANNUALIZED COSTS—SMALL BUSINESS EXEMPTION

Discount rate	Preferred alternative ($ millions)	Small business exemption ($ millions)
3 Percent	6.87	5.79
7 Percent	7.12	6.00

GIPSA expects the annualized costs of § 201.3(a) at the lower boundary with a small business exemption to be $5.79 million at a three percent discount rate and $6.00 million at a seven percent discount rate.

R. Regulatory Alternative 3: Upper Boundary of Cost Spectrum—Small Business Exemption

As discussed above, the upper boundary of the cost spectrum occurs if the cattle, hog, and poultry industries adjust their use of AMAs and incentive pay systems and make systematic changes in their marketing and production contracts to reduce the threat of litigation.

For the upper boundary cost estimates under the small business exemption, GIPSA weighted the upper boundary cost estimates under the preferred alternative by the percentage of large businesses in the cattle, hog, and poultry industries and the estimates appear in the table below. For convenience, the estimated costs of the preferred alternative are shown in addition to the costs of the small business exemption.

TABLE 32—UPPER BOUNDARY ANNUAL TOTAL COSTS—SMALL BUSINESS EXEMPTION

Year	Preferred alternative ($ millions)	Small business exemption ($ millions)
2017	76.49	60.08
2018	108.13	86.00
2019	145.82	115.60
2020	150.96	117.73
2021	137.65	106.32
2022	113.54	87.69
2023	79.92	60.87
2024	50.87	36.39
2025	37.24	27.68
2026	37.24	27.68
Totals	937.86	726.05

At the upper boundary with a small business exemption, GIPSA estimates that § 201.3(a) will result in an additional $60.08 million in direct and indirect costs in the cattle, hog, and poultry industries in the first full year following implementation. GIPSA expects the upper boundary of the ten-year total costs of § 201.3(a) with a small business exemption to be $726.05 million.

S. Regulatory Alternative 3: Upper Boundary—NPV of Ten-Year Total Costs of the Small Business Exemption

GIPSA calculated the upper boundary of the NPV of the ten-year total costs of the regulation under the small business exemption using both a three percent and seven percent discount and the NPVs appear in the following table. The preferred alternative is also shown for convenience.

TABLE 33—UPPER BOUNDARY NPV OF TEN-YEAR TOTAL COSTS—SMALL BUSINESS EXEMPTION

Discount rate	Preferred alternative ($ millions)	Small business exemption ($ millions)
3 Percent	818.97	634.97
7 Percent	692.49	537.90

GIPSA expects the NPV of the upper boundary of the NPV of the ten-year total costs of § 201.3(a) under a small business exemption to be $634.97 million at a three percent discount rate and $537.90 million at a seven percent discount rate.

T. Regulatory Alternative 3: Upper Boundary—Annualized Costs of the Preferred Alternative

GIPSA then annualized the costs of § 201.3(a) at the upper boundary using both a three percent and seven percent discount rate and the results appear in the following table. The preferred alternative is also shown for convenience.

TABLE 34—UPPER BOUNDARY OF ANNUALIZED COSTS—SMALL BUSINESS EXEMPTION

Discount rate	Preferred alternative ($ millions)	Small business exemption ($ millions)
3 Percent	96.01	74.44
7 Percent	98.60	76.58

GIPSA expects the annualized costs of § 201.3(a) at the upper boundary with a small business exemption to be $74.44 million at a three percent discount rate and $76.58 million at a seven percent discount rate.

U. Regulatory Alternative 3: Point Estimates—Annualized Costs of the Small Business Exemption

Using the same methodology, GIPSA also estimated the point estimates of the annualized costs of § 201.3(a) with a small business exemption using both a three percent and seven percent discount rate and the results appear in the following table. The preferred alternative is also shown for convenience.

TABLE 35—POINT ESTIMATE OF ANNUALIZED COSTS—SMALL BUSINESS EXEMPTION

Discount rate	Preferred alternative ($ millions)	Small business exemption ($ millions)
3 Percent	51.44	40.11
7 Percent	52.86	41.29

GIPSA expects the annualized costs of § 201.3(a) at the point estimates with a small business exemption to be $40.11 million at a three percent discount rate and $41.29 million at a seven percent discount rate.

V. Regulatory Alternative 3: Range of Annualized Costs of the Small Business Exemption

The following table shows the range of the annualized costs of § 201.3(a) at both a three percent and seven percent discount rate under the small business exemption.

TABLE 36—RANGE OF ANNUALIZED COSTS—SMALL BUSINESS EXEMPTION

Discount rate	Lower boundary ($ millions)	Point estimate ($ millions)	Upper boundary ($ millions)
3 Percent	5.79	40.11	74.44
7 Percent	6.00	41.29	76.58

GIPSA estimates the annualized costs of § 201.3(a) to range from $5.79 million to $74.44 million at the three percent discount rate and from $6.00 million to $76.58 million at the seven percent discount rate. The range of potential costs is broad and GIPSA relied on its expertise and the methodology discussed above to arrive at point estimates of the costs within the range that GIPSA expects to occur. GIPSA expects the most likely point estimates of annualized costs to be $40.11 million at a three percent discount rate and $41.29 million at a seven percent discount rate.

W. Regulatory Alternative 3: Benefits of the Small Business Exemption

The benefits of § 201.3(a) with a small business exemption are the same as in the preferred alternative except that the benefits for livestock producers, swine production contract growers, and poultry growers will only be captured by those livestock producers, swine production contract growers, and poultry growers selling or growing livestock and poultry for packers, swine contractors, and poultry dealers classified as large businesses.

X. Regulatory Alternative 3: Cost-Benefit Summary of the Small Business Exemption

GIPSA estimates the annualized costs of § 201.3(a) under a small business exemption to range from $5.79 million to $74.44 million at the three percent discount rate and from $6.00 million to $76.58 million at the seven percent discount rate. GIPSA expects the point estimates of the annualized costs to be $40.11 million at a three percent discount rate and $41.29 million at a seven percent discount rate.

Cost-Benefit Comparison of Regulatory Alternatives

The status quo option has zero marginal costs and benefits as GIPSA does not expect any changes in the cattle, hog, or poultry industries. GIPSA compared the annualized costs of the preferred alternative to the annualized costs of the small business exemption alternative by subtracting the annualized costs of the small business exemption alternative from the preferred alternative and the results appear in the following table.

TABLE 37—COSTS SAVINGS OF THE SMALL BUSINESS EXEMPTION ALTERNATIVE COMPARED TO THE PREFERRED ALTERNATIVE

Discount rate	Lower boundary ($ millions)	Point estimate ($ millions)	Upper boundary ($ millions)
3 Percent	1.08	11.33	21.57
7 Percent	1.12	11.57	22.01

The annualized cost savings of the small business exemption alternative is between $1.08 million and $21.57 million using a three percent discount rate and between $1.12 million and $22.01 million using a seven percent discount rate. At GIPSA's point estimates, the annualized costs of the small business exemption alternative is $11.33 million less than the preferred alternative using a three percent discount rate and $11.57 million less expensive using a seven percent discount rate.

The data presented in Table 4 above show that over 50 percent of broiler growers have only one or two integrators in their local area. This limited integrator choice may accentuate the risks of contracting. Poultry growers with contract growing arrangements with both small and large live poultry dealers face these risks.

Similarly, the potential market failures or unequal bargaining power among contracting parties due to monopsony or oligopsony market power or asymmetric information likely applies to both production and marketing contracts regardless of whether the packer, swine contractor, or live poultry dealer is large or small due to the regional nature of concentration. The result is that the contracts may have detrimental effects on one of the contracting parties and may result in inefficiencies in the marketplace.

One purpose of § 201.3(a) is to mitigate the risks of potential market failures or unequal bargaining power to all livestock producers, swine production contract growers, and poultry growers, not just the livestock producers, swine production contract growers, and poultry growers selling or growing livestock and poultry for large packers, swine contractors, and poultry dealers. The small business exemption would continue to subject the livestock producers, swine production contract growers, and poultry growers with contractual arrangements with small packers, swine contractors, and live poultry dealers to the contracting risks and potential market failures discussed above. GIPSA believes that the benefits of § 201.3(a) should be captured by all livestock producers, swine production contract growers, and poultry growers.

GIPSA considered three regulatory alternatives and believes the preferred alternative is the best option. All livestock producers, swine production contract growers, and poultry growers, regardless of the size of the firm with which they contract, will capture the benefits of § 201.3(a).

Regulatory Flexibility Analysis of the Preferred Option

The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS).[85] SBA considers broiler and turkey producers and swine contractors, NAICS codes 112320, 112330, and 112210 respectively, to be small businesses if sales are less than $750,000 per year. Live poultry dealers, NAICS 311615, are considered small businesses if they have fewer than 1,250 employees. Beef and pork packers, NAICS 311611, are defined as small businesses if they have fewer than 1,000 employees.

The Census of Agriculture (Census) indicates there were 558 farms that sold their own hogs and pigs in 2012 and that identified themselves as contractors or integrators. The Census provides the number of head sold from their own operations by size classes for swine contractors, but not the value of sales nor number of head sold from the farms of the contracted production. Thus, to estimate the entity size and average per-entity revenue by the SBA classification, the average value per head for sales of all swine operations is multiplied by production values for firms in the Census size classes for swine contractors. The estimates reveal that although about 65 percent of swine contractors had sales of less than $750,000 in 2012 and would have been classified as small businesses, these small businesses accounted for only 2.8 percent of the hogs produced under production contracts. Additionally, there were 8,031 swine producers in 2012 with swine contracts and about half of these producers would have been classified as small businesses.

Currently, there are 133 live poultry dealers that would be subject to § 201.3(a). According to U.S. Census data on County Business Patterns, there were 74 live poultry dealers that had more than 1,250 employees in 2013. The difference yields approximately 59 live poultry dealers that have fewer than 1,250 employees and would be considered as small businesses that would be subject to the interim final regulation.

GIPSA records for 2014 indicated there were 21,925 poultry production contracts in effect, of which 13,370, or 61 percent, were held by the largest six live poultry dealers, and 90 percent (19,673) were held by the largest 25 firms. These 25 firms are all in the large business SBA category, whereas the 21,925 poultry growers holding the other end of the contracts are almost all small businesses by SBA's definitions.

Poultry dealers classified as large businesses are responsible for about 89.7 percent of the poultry contracts. Assuming that small businesses will bear 10.3 percent of the costs in the first full year § 201.3(a) is effective, between $590,000[86] at the lower boundary and $3.7 million[87] at the upper boundary in additional costs would fall on live poultry dealers classified as small businesses. This amounts to average

[85] See: *http://www.sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf.* Accessed on September 19, 2016.

[86] Lower bound cost estimate of $5.74 million (Table 12) × 10.27 percent of firms that are small businesses = $589 thousand.

[87] Upper bound cost estimate of $35.87 million (Table 20) × 10.27 percent of firms that are small businesses = $3.7 million.

estimated costs for each live poultry dealer classified as a small business of between $10,000 and $62,400.

As of June 2016, GIPSA records identified 359 beef and pork packers actively purchasing cattle or hogs for slaughter. Many firms slaughtered more than one species of livestock. Of the 359 beef and pork packers, 161 processed both cattle and hogs, 132 processed cattle but not hogs, and 66 processed hogs but not cattle. GIPSA records had a total of 293 cattle slaughterers and 227 hog slaughterers. Two hundred eighty-seven of the cattle slaughterers and 219 of the hog slaughterers would be classified as small businesses.

GIPSA estimates that small businesses accounted for 19.3 percent of the cattle and 17.8 percent of the hogs slaughtered in 2015. If the costs of implementing § 201.3(a) are proportional to the number of head processed, then in 2017, the first full year the regulation would be effective, GIPSA expects between $507,000 [88] and $5.4 million [89] in additional costs would fall on beef packers classified as small businesses. This amounts to a range of $1,800 to $18,900 for each beef packer classified as a small business. GIPSA expects, between $13,000 [90] and $308,000 [91] would fall on pork packers classified as small businesses, and between $12,500 [92] and $301,000 [93] would fall on swine contractors classified as small businesses. This amounts to average estimated costs for each pork packer classified as a small business of between $60 and $1,400, and for each swine contractor classified as a small business of between $35 and $831 in the first full year the regulation would be effective.

Annualized ten-year costs discounted at a three percent interest rate would fall between $392,000 and $8.7 million for the cattle industry, between $20,000 and $772,000 for the hog industry, and between $456,000 and $3.6 million for the poultry industry. This amounts to average estimated costs ranging from $1,400 to $30,400 for each beef packer, $45 to $1,800 for each pork packer, $27 to $1,053 for each swine contractor, and $7,700 to $61,000 for each live poultry dealer that is a small business. The total annualized ten-year costs for small businesses would be between $870,000 and $13.1 million.

Annualized ten-year costs discounted at a seven percent interest rate would fall between $406,000 and $8.8 million for the cattle industry, $20,000 and $785,000 for the hog industry, and $473,000 and $3.8 million for the poultry industry. This amounts to average estimate costs ranging from $1,400 to $30,700 for each beef packer, $40 to $1,800 for each pork packer, $23 to $1,100 for each swine contractor, and $8,000 to $64,100 for each live poultry dealer that is a small business. The total annualized ten-year costs for small businesses would be between $900,000 and $13.4 million.

The table below lists the expected additional costs associated with the proposed regulation and upper and lower bound estimates of the costs. It also lists the point estimate, upper bound, and lower bound annualized costs at three percent and seven percent interest rates.

TABLE 38—UPPER AND LOWER BOUND COSTS TO SMALL BUSINESSES OF § 201.3(a)

Estimate type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
First Year Costs:				
Lower Bound	0.507	0.025	0.590	1.122
Point Estimate	2.969	0.317	2.137	5.423
Upper Bound	5.430	0.609	3.684	9.723
10 years annualized at 3%:				
Lower Bound	0.392	0.020	0.456	0.867
Point Estimate	4.554	0.396	2.026	6.976
Upper Bound	8.716	0.772	3.596	13.084
10 years annualized at 7%:				
Lower Bound	0.406	0.020	0.473	0.899
Point Estimate	4.613	0.403	2.126	7.142
Upper Bound	8.820	0.785	3.780	13.385

In considering the impact on small businesses, GIPSA considered the average costs and revenues of each small business impacted by § 201.3(a). The number of small businesses impacted by § 201.3(a), by NAICS code, as well as the per entity, first-year and annualized costs at both the three percent and seven percent discount rates appear in the following table.

[88] Lower bound cost estimate of $2.63 million × 19.3 percent of slaughter in small businesses = $507 thousand.

[89] Upper bound cost estimate of $28.14 million × 19.3 percent of slaughter in small businesses = $5.4 million.

[90] Lower bound cost estimate of $520 thousand × 17.8 percent of slaughter in small business × 13.8 percent of costs attributed to packers = $13,000.

[91] Upper bound cost estimate of $12.49 million × 17.8 percent of slaughter in small business × 13.8 percent of costs attributed to packers = $308 thousand.

[92] Lower bound cost estimate of $520 thousand × 2.8 percent of contracted hogs produced by swine contractors that are small businesses × 86.2 percent of costs attributed to swine contractors = $12,500.

[93] Upper bound cost estimate of $12.49 million × 2.8 percent of contracted hogs produced by swine contractors that are small businesses × 86.2 percent of costs attributed to swine contractors = $301 thousand.

TABLE 39—PER ENTITY UPPER AND LOWER BOUND COSTS TO SMALL BUSINESSES OF § 201.3(a)

NAICS	Number of small business	Average cost per entity					
		First-year		Annualized costs 3%		Annualized costs 7%	
		Low ($)	High ($)	Low ($)	High ($)	Low ($)	High ($)
112210—Swine Contractor	363	35	831	27	1,053	23	1,071
311615—Poultry	59	9,996	62,443	7,727	60,957	8,010	64,066
311611—Cattle	287	1,767	18,920	1,366	30,369	1,416	30,732
311611—Hogs	219	59	1,405	45	1,781	47	1,811

The following table compares the average per entity first-year cost of § 201.3(a) to the average revenue per establishment for all firms in the same NAICS code.

TABLE 40—COMPARISON OF PER ENTITY FIRST-YEAR COST TO SMALL BUSINESSES OF § 201.3(a) TO REVENUES

NAICS	Number of small business	Average first-year cost per entity		Average revenue per establishment ($)	Cost as percent of revenue	
		Low ($)	High ($)		Low	High
112210—Swine Contractor	363	35	831	485,860	0.01	0.17
311615—Poultry	59	9,996	62,443	13,842,548	0.07	0.45
311611—Cattle	287	1,767	18,920	6,882,205	0.03	0.27
311611—Hogs	219	59	1,405	6,882,205	0.00	0.02

The following table compares the average per entity annualized cost at a seven percent discount rate of § 201.3(a) to the average revenue per establishment for all firms in the same NAICS code. The annualized costs are slightly higher at the seven percent rate than at the three percent rate, so only the seven percent rate is shown as it is the higher annualized cost.

TABLE 41—COMPARISON OF PER ENTITY ANNUALIZED COST TO SMALL BUSINESSES OF § 201.3(a) TO REVENUES

NAICS	Number of small business	Average annualized cost per entity		Average revenue per establishment ($)	Cost as percent of revenue	
		Low ($)	High ($)		Low (%)	High (%)
112210—Swine Contractor	363	23	1,071	485,860	0.00	0.22
311615—Poultry	59	8,010	64,066	13,842,548	0.06	0.46
311611—Cattle	287	1,416	30,732	6,882,205	0.02	0.45
311611—Hogs	219	39	1,811	6,882,205	0.00	0.03

The revenue figures in the above table come from Census data for live poultry dealers and cattle and hog slaughterers, NAICS codes 311615 and 311611, respectively.[94] As discussed above, the Census provides the number of head sold by size classes for farms that sold their own hogs and pigs in 2012 and that that identified themselves as contractors or integrators, but not the value of sales nor the number of head sold from the farms of the contracted production. Thus, to estimate average revenue per establishment, GIPSA used the estimated average value per head for sales of all swine operations and the production values for firms in the Census size classes for swine contractors

As the results in Tables 40 and 41 demonstrate, the costs of § 201.3(a) as a percent of revenue are small as they are less than one percent, with the exception of the upper boundary for swine contractors.[95]

Annualized costs savings of exempting small businesses would be between $870,000 and $13.1 million using a three percent discount rate and between $900,000 and $13.4 million using a seven percent discount rate. At GIPSA's point estimates, the annualized costs of the small business exemption alternative is $7.0 million less than the preferred alternative using a three percent discount rate and $7.1 million less expensive using a seven percent discount rate.

Exempting small businesses would continue to subject the livestock producers, swine production contract growers, and poultry growers with contractual arrangements with small packers, swine contractors, and live poultry dealers to the contracting risks and potential market failures discussed above. GIPSA believes that the benefits

[94] Source: *http://www.census.gov/data/tables/2012/econ/susb/2012-susb-annual.html.* Accessed on November 29, 2016.

[95] There are significant differences in average revenues between swine contractors and cattle, hog, and poultry processors, resulting from the difference in SBA thresholds.

of § 201.3(a) should be captured by all livestock producers, swine production contract growers, and poultry growers.

Based on the above analyses regarding § 201.3(a), GIPSA certifies that this rule is not expected to have a significant economic impact on a substantial number of small business entities as defined in the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). While confident in this certification, GIPSA acknowledges that individual businesses may have relevant data to supplement our analysis. We would encourage small stakeholders to submit any relevant data during the comment period.

B. Executive Order 12988

This interim final rule has been reviewed under Executive Order 12988, Civil Justice Reform. These actions are not intended to have retroactive effect, although in some instances they merely reiterate GIPSA's previous interpretation of the P&S Act. This interim final rule will not pre-empt state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. There are no administrative procedures that must be exhausted prior to any judicial challenge to the provisions of this rule. Nothing in this interim final rule is intended to interfere with a person's right to enforce liability against any person subject to the P&S Act under authority granted in section 308 of the P&S Act.

C. Executive Order 13175

This rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or the distribution of power and responsibilities between the Federal Government and Indian tribes.

Although GIPSA has assessed the impact of this rule on Indian tribes and determined that this rule does not, to our knowledge, have tribal implications that require tribal consultation under Executive Order 13175, GIPSA offered opportunities to meet with representatives from Tribal Governments during the comment period for the proposed rule (June 22 to November 22, 2010) with specific opportunities in Rapid City, South Dakota, on October 28, 2010, and Oklahoma City, Oklahoma on November 3, 2010. All tribal headquarters were invited to participate in these venues for consultation. GIPSA has received no specific indication that the rule will have tribal implications and has received no further requests for consultation as of the date of this publication. If a Tribe requests consultation, GIPSA will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions, and modifications herein are not expressly mandated by Congress.

D. Paperwork Reduction Act

This interim final rule does not contain new or amended information collection requirements subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). It does not involve collection of new or additional information by the federal government.

E. E-Government Act Compliance

GIPSA is committed to compliance with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects in 9 CFR Part 201

Contracts, Livestock, Poultry, Trade practices.

For the reasons set forth in the preamble, we amend 9 CFR part 201 as follows:

PART 201—REGULATIONS UNDER THE PACKERS AND STOCKYARDS ACT

■ 1. The authority citation for part 201 continues to read as follows:

Authority: 7 U.S.C. 181–229c.

■ 2. Section 201.3 is amended by redesignating the existing text as paragraph (b), adding new paragraph (a), and adding a heading to paragraph (b) to read as follows:

§ 201.3 Applicability of regulations in this part.

(a) *Scope of sections 202(a) and (b) of the Act.* The appropriate application of sections 202(a) and (b) of the Act depends on the nature and circumstances of the challenged conduct or action. A finding that the challenged conduct or action adversely affects or is likely to adversely affect competition is not necessary in all cases. Certain conduct or action can be found to violate sections 202(a) and/or (b) of the Act without a finding of harm or likely harm to competition.

(b) *Effective dates.* * * *

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Part 51

[Docket ID OCC–2016–0017]

RIN 1557–AE07

Receiverships for Uninsured National Banks

AGENCY: Office of the Comptroller of the Currency, Treasury.

ACTION: Final rule.

SUMMARY: The Office of the Comptroller of the Currency (OCC) is adopting a final rule addressing the conduct of receiverships for national banks that are not insured by the Federal Deposit Insurance Corporation (FDIC) (uninsured banks) and for which the FDIC would not be appointed as receiver. The final rule implements the provisions of the National Bank Act (NBA) that provide the legal framework for receiverships of such institutions. The final rule adopts the rule as proposed without change.

DATES: This final rule is effective on January 19, 2017.

FOR FURTHER INFORMATION CONTACT: Mitchell Plave, Special Counsel, Legislative and Regulatory Activities Division, (202) 649–5490, or for persons who are deaf or hard of hearing, TTY, (202) 649–5597, or Richard Cleva, Senior Counsel, Bank Activities and Structure Division, (202) 649–5500, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION:

I. Introduction

On September 13, 2016, the OCC published a proposed rule to implement the provisions of the NBA that provide the legal framework for receiverships for uninsured banks,[1] 12 U.S.C. 191—200,

[1] All Federal savings associations (FSAs), including trust-only FSAs, are required to be insured. For this reason, this final rule does not apply to FSAs, given that receiverships for FSAs would be conducted by the FDIC.

with comments due by November 14, 2016.[2] The OCC received 11 comments concerning the proposal. For the reasons discussed in section III of the **SUPPLEMENTARY INFORMATION**, the OCC is adopting the rule as proposed, without change.

II. Background

As of December 2, 2016, the OCC supervised 52 uninsured banks, all of which are national trust banks.[3] Uninsured national trust banks have fundamentally different business models compared to commercial and consumer banks and savings associations and therefore face very different types of risks. National trust banks typically have few assets on the balance sheet, usually composed of cash on deposit with an insured depository institution, investment securities, premises and equipment, and intangible assets. These banks exercise fiduciary and custody powers, do not make loans, do not rely on deposit funding, and consequently have simple liquidity management programs. In view of these differences, the OCC typically requires these banks to hold capital in a specific minimum amount; as a result they hold capital in amounts that exceed substantially the ''well capitalized'' standard that applies when national banks calculate their capital pursuant to the OCC's rules in 12 CFR part 3.

The business model of national trust banks is to generate income in the form of fees by offering fiduciary and custodial services that generally fall into one or more of a few broad categories. Some national trust banks focus on institutional asset management, providing trust and custodial services for investment portfolios of pension plans, foundations and endowments, and other entities, often with an investment management component. A few other national trust banks serve primarily as a fiduciary and custodian to facilitate the establishment of Individual Retirement Accounts by customers of an affiliated mutual fund complex or broker-dealer firm. Some national trust banks provide custodial services, such as corporate trust accounts, under which the bank performs services for others in connection with their issuance, transfer, and registration of debt or equity securities. Other custody accounts may be a holding facility for customer securities, where the bank assists institutional customers with global settlement and safekeeping of the customer's securities.

Many of the uninsured national trust banks are subsidiaries or affiliates of a full-service insured national bank or are affiliates of an insured state bank. Other uninsured national trust banks are not affiliated with an insured depository institution, but are affiliated with an investment management firm or other financial services firm. Still other uninsured national trust banks have no affiliation with a larger parent company.[4]

The OCC appoints and oversees receivers for uninsured banks under the provisions of the NBA [5] and the substantial body of case law applying the statutory provisions and common law receivership principles to national bank receiverships.[6] The FDIC is the required receiver only for an insured national (or state) bank.[7] Based on the statutory history of the NBA and FIRREA, it is likely that the Federal Deposit Insurance Act (FDIA) would not apply to an OCC receivership of an uninsured bank conducted by the OCC, and that such a receivership would be governed exclusively by the NBA, the common law of receivers, and cases applying the statutes and common law to national bank receiverships. While FIRREA and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) greatly expanded the FDIC's powers in resolving failed insured depository institutions, the OCC believes that those additional powers are not available to the OCC as receiver of uninsured banks under the NBA.

The OCC has not appointed a receiver for an uninsured bank since shortly after the Congress established the FDIC in response to the banking panics of 1930–1933. National trust banks face very different types of risks because of the fundamentally different business model of national trust banks compared to commercial and consumer banks and savings associations. These risks include operational, compliance, strategic, and reputational risks without the credit and liquidity risks that additionally affect the solvency of commercial and consumer banks. While any of these risks can result in the precipitous failure of a bank or savings association, from a historical perspective, trust banks have been more likely to decline into a weakened condition, allowing the OCC and the institution the time needed to find other solutions for rehabilitating the institution or to successfully resolve the institution without the need to appoint a receiver.

The OCC believes it would nevertheless be beneficial to financial market participants and the broader community of regulators for the OCC to clarify the receivership framework for uninsured banks. Although the OCC conducted 2,762 receiverships pursuant to this framework in the years prior to the creation of the FDIC,[8] and the associated legal issues are the subject of a robust body of published judicial precedents, the details have not been widely articulated in recent jurisprudence or legal commentary. This final rule may also facilitate synergies with the ongoing efforts of U.S. and international financial regulators since the financial crisis to enhance our readiness to respond effectively to the different critical financial distresses that could manifest themselves unexpectedly in the diverse types of financial firms presently operating in the market.

III. Public Comments on the Proposed Rule

The OCC received 11 comments from the public in response to the OCC's notice of proposed rulemaking and the alternatives the OCC discussed therein. The commenters included individuals, a state trust company, and a think tank, as well as representatives of consumer groups, financial reform advocacy groups, state banking regulators, banking institutions, and bitcoin firms. These submissions offered issues and viewpoints about selected portions of the proposed rule's regulatory provisions for the OCC's consideration; these are discussed in connection with the discussion of the OCC's rationale for issuing the associated portions of the final rule, in Section III of this **SUPPLEMENTARY INFORMATION**.

[3] The OCC may charter national banks whose operations are limited to those of a trust company and related activities (national trust bank). *See, e.g.*, 12 U.S.C. 27(a); 12 CFR 5.20(*l*).

[4] For additional discussion of the business model of uninsured national trust banks, *see* Proposed Rule, 81 FR at 62836–62837.

[5] 12 U.S.C. 191–200.

[6] For a discussion of the statutory history relating to receiverships of national banks conducted by the OCC, under the NBA, and by the FDIC, pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), *see* Proposed Rule, 81 FR at 62836.

[7] Section 11(c)(2)(A)(ii) of the FDIA provides that the FDIC ''shall'' be appointed receiver, and ''shall'' accept such appointment, whenever a receiver is appointed for the purpose of liquidation or winding up the affairs of an insured Federal depository institution by the appropriate Federal banking agency, notwithstanding any other provision of Federal law. 12 U.S.C. 1821(c)(2)(A)(ii). The term ''Federal depository institution'' includes national banks. 12 U.S.C. 1813(c)(4).

[8] *Annual Report of the Comptroller of the Currency for the Year Ended October 31, 1934* at 33 (discussing the status of active and closed receiverships under the jurisdiction of the Comptroller between 1865 and 1934).

As part of the notice of proposed rulemaking, the OCC also asked for the public's input on a number of specific questions and received comments on two of these questions. One question was whether any unique considerations would be raised by applying the proposed rule's framework for receivership of uninsured national banks, which are all national trust banks at present, to other uninsured banks that would be organized to engage in the delivery of banking services in new and innovative ways, such as special purpose national banks engaged in financial technology (fintech) activities.[9]

On this receivership framework question, two commenters expressed concerns that the earlier-established legal regime for receiverships under the NBA and associated judicial precedent does not include select elements subsequently created for insured depository institutions under FIRREA and FDICIA, and thus might not be as effective outside the trust bank sphere in application to the receivership of special purpose national banks engaged in fintech activities. These commenters said the OCC should refrain from chartering these special purpose national banks until the law changes to address this difference. One commenter expressed concern that the rule's incorporation of the NBA's priority requirements for payment of receivership claims, which include no preference for consumer claims over other general creditors, might have the effect of distorting incentives among debt investors across special purpose national banks, and more broadly contribute to moral hazard.

The OCC understands these comments to be urging, in effect, changes in the statutory receivership provisions underlying the rule. Absent Congressional action to do so, however, the current provisions of the NBA are the ones that would govern should it become necessary to appoint a receiver for an uninsured national bank. The OCC believes it is best to be clear, through a regulation implementing those NBA provisions, about the framework that would apply in order to avoid clouding the ongoing discussion about the chartering of special purpose national banks engaged in fintech activities with uncertainty about how uninsured institutions are resolved.

More broadly, some commenters said the OCC should consider receivership and cost issues in deciding whether to charter special purpose national banks engaged in fintech activities, or the terms on which they could be chartered. Two commenters said the nature of a fintech firm's business diverges widely from banks, and that creditor loss rates in a receivership for an uninsured special purpose national bank engaged in fintech activities may exceed levels that are tolerable in the resolution of a chartered bank. These commenters said this was a contra-indication for chartering such banks, but one of the commenters further elaborated that the OCC can and should exercise particularly close supervision of these firms and thereby reduce the risk of receiverships ever taking place. Another commenter said that fintech firms do not have national trust banks' track record for remaining solvent and avoiding receivership, and the OCC should mitigate potential concerns about receivership costs by imposing capital support agreements and similar obligations in chartering special purpose national banks that engage in fintech activities.

In contrast to these views about the uniqueness of special purpose national banks engaged in fintech activities, one commenter said that a fintech firm, such as a digital currency exchange, performs a function comparable to a national trust bank that obtains payments on behalf of customers and provides security for those funds, and therefore such institutions do not pose unique considerations for the receivership framework. Another commenter said the functions of special purpose national banks that engage in fintech activities could be even simpler than a national trust bank, such as a special purpose national bank that provides fintech payment services where each customer transaction is brief and segregated. For special purpose national banks engaged in fintech activities involving lending, this commenter stated the customer relationships are somewhat longer but still discrete, and that the OCC could adequately eliminate concerns about the impact of a receivership by ensuring the bank's plans for back-up servicing and orderly wind-up were robust.

Some commenters discussed additional topics not touching on the receivership issues covered by the notice of proposed rulemaking, but more germane to the desired framework for creating, regulating, and supervising special purpose national banks that engage in fintech activities or uninsured national trust banks. These broader comments do not pertain to the OCC's adoption of the final rule for uninsured banks and many of them implicate issues that the OCC would need to evaluate on a case-by-case basis in connection with a decision on whether to charter a particular special purpose national bank that engages in fintech activities. The OCC has recently published and invited comment on a paper discussing these issues.[10] We will consider the broader comments on fintech chartering submitted as part of this rulemaking together with those we receive in response to the paper.

In the second question asked in the preamble to the Proposed Rule, the OCC asked for alternatives that would take into account the cost considerations that could arise for the OCC if the administrative expenses of an uninsured national bank receivership exceeded the assets in the receivership.[11] In response to this question, one commenter urged the OCC not to impose assessment costs for special purpose national banks that engage in fintech activities on insured national banks, and another commenter further urged the OCC not to impose assessment costs for such banks on uninsured national trust banks. The OCC continues to consider what approach to assessments would be appropriate should it approve charters for special purpose national banks engaged in fintech activities. Any resulting modification to the OCC's assessment structure would be proposed for public comment in a separate rulemaking.

IV. The Final Rule

Overview

The final rule incorporates the framework set forth in the NBA for the Comptroller to appoint a receiver for an uninsured bank, generally under the same grounds for appointment of the FDIC as receiver for insured national banks. The uninsured bank may challenge the appointment in court, and the NBA affords jurisdiction to the appropriate United States district court for this purpose. The OCC will provide the public with notice of the appointment, as well as instructions for submitting claims against the uninsured bank in receivership. The Comptroller

[9] *See* Proposed Rule, 81 FR at 62837 (discussing the OCC's initiative on responsible innovation in the Federal banking system, and the OCC's authority to charter special purpose banks that engage in selected core non-depository services within the business of banking).

[10] *See Exploring Special Purpose National Bank Charters for Fintech Companies* (Dec. 2016), *available at https://www.occ.gov/topics/bank-operations/innovation/special-purpose-national-bank-charters-for-fintech.pdf.*

[11] *See* Proposed Rule, 81 FR at 62838 (discussing the receiver's priority claim to liquidation proceeds for administrative expenses, the OCC's potential direct expenses for its receivership functions, and funding alternatives, such as building resources to defray these costs through the OCC's regulations governing the OCC's collection of assessments from uninsured national banks).

may appoint any person as receiver, including the OCC or another government agency. The receiver carries out its duties under the direction of the Comptroller.

The final rule also follows the statutory framework under the NBA with respect to claims, under which persons with claims against an uninsured bank in receivership will file their claims with the receiver for the failed uninsured bank, for review by the OCC. In the event the OCC denies the claim, the only remedy available to the claimant is to bring a judicial action against the uninsured bank's receivership estate and assert the claim *de novo.* A person is also free to initiate a claim by bringing an action against the receivership estate in court for adjudication and then submit the judgment to the OCC to participate in ratable dividends of liquidation proceeds along with other approved and adjudicated claims.[12]

Approved or adjudicated claims are paid solely out of the assets of the uninsured national bank in receivership. This reflects the legal distinction between the OCC as regulatory agency and the OCC acting in a receivership capacity. In the former, the OCC oversees national banks, FSAs, and Federal branches and Federal agencies, supervising them under the charge of assuring the safety and soundness of, and compliance with laws and regulations, fair access to financial services, and fair treatment of customers by, the institutions and other persons subject to its jurisdiction. As receiver, the OCC appoints and oversees receivers for uninsured national banks, thereby facilitating the winding down of bank operations, assets, and accounts while minimizing disruptions to customers and creditors of the institution. Under the ''separate capacities'' doctrine, which has long been recognized in litigation involving the FDIC, it is well established that the agency, when acting in one capacity, is not liable for claims against the agency acting in its other capacity.[13]

As provided in the final rule, the receiver liquidates the assets of the uninsured bank, with court approval, and pays the proceeds into an account as directed by the OCC. The categories of claims and the priority thereof for payment are set out in the final rule. The final rule also clarifies certain powers held by the receiver.

[12] *See First Nat'l Bank of Bethel* v. *Nat'l Pahquioque Bank,* 81 U.S. 383, 401 (1871).

[13] For a discussion of the separate capacities doctrine and related case law, *see* Proposed Rule, 81 FR at 62838.

Section-by-Section Analysis

Section 51.1 of the final rule identifies the purpose and scope of the final rule and clarifies that the rule applies to receiverships conducted by the OCC under the NBA for national banks that are not insured by the FDIC.[14] The final rule does not extend to receiverships for uninsured Federal branches, although elements of the framework may be similar for uninsured Federal branch receiverships, which would also be resolved under provisions of the NBA.

Section 51.2 of the final rule is based on 12 U.S.C. 191 and 192 and concerns appointment of a receiver. The final rule sets out the Comptroller's authority to appoint any person, including the OCC or another government agency, as receiver for an uninsured bank and provides that the receiver performs its duties subject to the approval and direction of the Comptroller.[15] If the Comptroller were to appoint the OCC as receiver, the OCC would act in a receivership capacity with respect to the uninsured bank in receivership, rather than in the OCC's supervisory capacity.

As discussed earlier, this dual capacity (OCC as supervisor versus OCC as receivership sponsor for an uninsured bank) recognizes that, while the NBA makes the receivership oversight and claims review functions of the Comptroller part of the OCC's responsibilities, the receivership oversight role is unique and distinct from the OCC's role as a Federal regulatory agency and supervisor of national banks and FSAs. This is comparable to the dual capacity of the FDIC's receivership function for insured depository institutions pursuant to the FDIA.

Section 51.2 of the final rule also provides that the Comptroller may require the receiver to post a bond or other security and the receiver may hire staff and professional advisors, with the approval of the Comptroller, if needed to carry out the receivership. This section also identifies the grounds for appointment of a receiver for an uninsured bank and notes that uninsured banks may seek judicial review of the appointment pursuant to 12 U.S.C. 191.

Section 51.3 of the final rule provides that the OCC will provide notice to the public of the appointment of a receiver for the uninsured bank. The final rule specifies that one component of this notice will include publication in a newspaper of general circulation selected by the OCC for three consecutive months, as required by 12 U.S.C. 193. As a component of the OCC's notice to the public about the receivership, the OCC will also provide instructions for creditors and other claimants seeking to submit claims with the receiver for the uninsured bank.

As noted in the proposed rule, the OCC believes that the purpose of section 193 may be better served by publication through means in addition to the statutorily required publication in a newspaper. For example, the OCC could provide direct notice to customers and creditors of the uninsured bank to the extent the uninsured bank's records included current contact information. The OCC could also arrange to provide notice through electronic channels that customers would typically use to contact the uninsured bank, such as the uninsured bank's Web site. The OCC believes that an effective set of notice protocols would best be established on a case-by-case basis, in light of a specific uninsured bank's fiduciary and custodial activities, the types of customers served by the bank, coordination with other notice protocols under way for any related entity that is also undergoing resolution activity, and similar factors. The OCC requested comment on alternative means of communicating with customers of uninsured banks.

One commenter, a trade association for banks, suggested that the OCC employ notice mechanisms that are consistent with the way in which the failed bank typically communicates with its clients and counterparties. The commenter suggested, for example, that a receiver for an institution with clients in other countries should communicate with those clients in the language typically used by the institution in its communications with those clients. The OCC agrees that this approach would be appropriate in such cases and reiterates that effective forms of notice, beyond the statutorily required notice in a newspaper, will be evaluated on a case-by-case basis.

[14] A nationwide organization of state regulators requested clarity on how the NBA receivership framework for uninsured national banks and the OCC's proposed rule thereunder would interact with the processes established for debtors and creditors pursuant to the U.S. Bankruptcy Code. The OCC is not aware of any opinion of a U.S. Bankruptcy Court, or any other U.S. court, finding that an uninsured national bank is eligible to be a debtor subject to a petition under the Code.

[15] *But see* 12 U.S.C. 1821(c)(6) (Comptroller may appoint the FDIC as conservator or receiver and the FDIC has discretion to accept such appointment); *id.* section 1821(c)(2)(C) (FDIC ''not subject to any other agency'' when acting as conservator or receiver''). Read together, these provisions likely mean that the provision in § 51.2 concerning oversight of the receiver by the Comptroller would not apply to the FDIC acting as conservator or receiver for an uninsured institution, should the Comptroller appoint the FDIC and the FDIC accept such an appointment.

Section 51.4 of the final rule addresses the submission of claims to the receiver for an uninsured bank. Under § 51.4(a), a person with a claim against the receivership may submit a claim to the OCC, which will consider the claim and make a determination concerning its validity and approved amount. This process reflects the provisions in 12 U.S.C. 193 and 194 regarding presentation of claims and payment of dividends on claims that are proved to the satisfaction of the Comptroller. Section 51.4 also provides that the Comptroller will establish a deadline for filing claims with the receiver, which could not be earlier than 30 days after the three-month publication of notice required by § 51.3. This provision reflects NBA case law that permits the Comptroller to establish a date for filing claims against the receiver for a failed bank.[16]

Section 51.4(b) of the final rule clarifies that persons with claims against an uninsured bank in receivership may present their claims to a court of competent jurisdiction for adjudication in addition to, or as an alternative to, filing a claim with the OCC. If successful in court, such persons will be required to submit a copy of the final judgment to the OCC to participate in ratable dividends of liquidation proceeds along with claims against the bank in receivership submitted to, and approved by, the OCC. The final rule requires submission of a copy of the court's final judgment to the OCC. This provision is based on 12 U.S.C. 193 and 194.

In this regard, the receivership regime established by the NBA differs somewhat from the approach set out in other resolution regimes, such as the bankruptcy provisions of the United States Code and the receivership provisions of the FDIA. Under those resolution regimes, creditors and claimants must generally submit their claims to the receivership estate for centralized administration and disposition, and claims that are not submitted by the claims deadline are barred from any participation in liquidation payments. The NBA provisions are different in that claimants are provided the opportunity to submit claims to the OCC for evaluation, but are not foreclosed from pursuing judicial resolution by filing litigation (or continuing a pre-existing lawsuit) in a court of competent jurisdiction against the uninsured bank in receivership.

[16] *See Queenan* v. *Mays,* 90 F.2d 525, 531 (10th Cir. 1937).

The claims filing deadline established by the Comptroller pursuant to § 51.4(a) of the final rule is the date by which claimants seeking review under the OCC's claims process must make their submission. Nevertheless, a claimant that has not made a submission to the OCC by the deadline is not barred from initiating judicial claims against the uninsured bank in receivership solely by virtue of missing the claims deadline.[17]

The NBA's receivership provisions are like the receivership regime established by the FDIC under the FDIA, however, in that the avenue available to a party whose claim has been denied by the FDIC or OCC, when performing the agencies' receivership claims functions, is to file (or continue) a *de novo* judicial action asserting the facts and legal theory of the claim against the receivership of the bank. The NBA does not contemplate or support further action by the claimant in an administrative or judicial forum against the OCC seeking review of the claim determination.

Section 51.4(c) of the final rule provides that if a person with a claim against an uninsured bank in receivership also has an obligation owed to the bank, the claim and obligation will be set off against each other and only the net balance remaining after set-off will be considered as a claim. To this end, § 51.4(a) also includes language referring to claims for set-off. The right of set-off where parties have mutual obligations has long been recognized as an equitable principle.[18] Well-settled case law has held that a receivership creditor's or other claimant's equitable right to a set-off is not precluded by the ratable distribution requirement of the NBA, provided such set-off is otherwise legally valid.[19] If, after set-off, an amount is owed to the creditor, the creditor may file a claim for the net amount remaining as any other general creditor. Conversely, if, after set-off, an amount is owed to the bank, the creditor does not have a claim and the net amount remaining is an asset of the uninsured bank, which the receiver may obtain in connection with marshalling the assets (as described further in § 51.7(a) of the final rule).

The OCC requested comment on whether there are additional characteristics of set-offs or other situations in which set-off may arise that should be included in the rule. One commenter, a trade association for banks, said that the administration of set-offs may be complex, given that the trust and fiduciary business is a fee-based industry. The commenter offered the example of instances in which fees have been accrued or are otherwise in the process of payment to one or more service providers at the time of receivership. The commenter suggested that the final rule acknowledge that a given resolution may involve bespoke, fact-specific set-off situations that would need to be carefully considered, while also serving the need for the receiver or a successor fiduciary to be in a position to continue providing fiduciary services during the receivership.

The OCC believes that, on balance, it is not necessary to make this kind of an addition to the language of the final rule. Section 51.4 as a whole is designed to make the basic framework of claim submission transparent to creditors of the uninsured bank, and set-off is included as an element of this framework. As the commenter states, the OCC's determination of particular claims will require consideration of fact-specific situations prior to reaching a disposition, and this extends to considerations of set-offs. The final rule is designed to accommodate with flexibility the consideration of such factors in the context in which each claim is postured.

Section 51.5 of the final rule sets out the order of priorities for payment of administrative expenses of the receiver and claims against the uninsured bank in receivership. Under this section, the OCC will pay these expenses and claims in the following order: (1) administrative expenses of the receiver; (2) unsecured creditors, including secured creditors to the extent their claim exceeds their valid and enforceable security interest; (3) creditors of the uninsured bank, if any, whose claims are subordinated to general creditor claims; and (4) shareholders of the uninsured bank. The order is based on case law and, in the

[17] *See First Nat'l Bank of Bethel* v. *Nat'l Pahquioque Bank,* 81 U.S. 383, 401 (1871); *Queenan* v. *Mays,* 90 F.2d 525, 531 (10th Cir. 1937). As noted earlier, it is incumbent on a claimant that pursues the judicial route and ultimately obtains judicial relief to submit the final judicial determination and award to the OCC, in order to participate in the OCC's periodic ratable dividends of liquidation proceeds of the receivership estate. Except with respect to a valid and enforceable security interest in specific property of the uninsured bank established as part of a final judicial determination, there are no assets or funds available to a successful judicial claimant other than the ratable dividend process set out in 12 U.S.C. 194 and described in § 51.8 of the final rule.

[18] *See, e.g., Scammon* v. *Kimball,* 92 U.S. 362 (1876); *Blount* v. *Windley,* 95 U.S. 173, 177 (1877); *Carr* v. *Hamilton,* 129 U.S. 252 (1889).

[19] *See Scott* v. *Armstrong,* 146 U.S. 499, 510 (1892); *InterFirst Bank of Abilene, N.A.* v. *FDIC,* 777 F.2d 1092, 1095–1096 (5th Cir. 1985); *FDIC* v. *Mademoiselle of California,* 379 F.2d 660, 663 (9th Cir. 1967).

case of the first priority for administrative expenses, on 12 U.S.C. 196.[20]

A creditor or other claimant with a security interest that was valid and enforceable as to its terms prior to the appointment of the receiver is entitled to exercise that security interest, outside the priority of distributions set out in the final rule.[21] If the collateral value exceeds the amount of the claim as it was immediately prior to the receiver's appointment, the surplus remains an asset of the uninsured bank, and the receiver may obtain it in connection with marshalling the assets (as further described in § 51.7(a) of the final rule).[22]

Liens arising from judicial determinations after the initiation of the receivership, as well as contractual liens that are triggered due to the appointment of a receiver or other post-appointment events, are not enforceable. This is because recognition of these liens would afford these claimants a priority that is not recognized under the established legal priorities described in § 51.5 of the final rule. Similarly, a secured creditor is not entitled to a priority distribution of any portion of the claim that is not covered by the value of the collateral because the creditor is in the position of a general unsecured creditor for that portion of the claim and must participate in ratable liquidation distributions on par with other unsecured creditors.[23]

Assets held by the uninsured bank at the time of the receiver's appointment in a fiduciary or custodial capacity, as identified on the bank's books and records, are not general assets of the bank. Section 51.8(b) of the final rule reiterates this point. In the same vein, the claim of the customer for the return of the customer's fiduciary or custodial assets is separate from, and not subject to, the priority set out in § 51.5. Fiduciary and custodial customers of the bank have direct claims on those assets pursuant to their fiduciary or custodial account contracts. However, the priority of a fiduciary or custodial customer's other claims against the bank, if any, would remain subject to the priority described in § 51.5. For example, a fiduciary customer's claim for a refund of prepaid investment management fees that were attributable to periods after the receiver returned the fiduciary assets to the customer generally would be a general unsecured claim covered by § 51.5(b). The claims process described in § 51.4(b) is available to a fiduciary customer, for both a direct claim for the return of fiduciary assets, as well as a receivership claim for amounts the customer believes it is owed by the bank.

The OCC requested comment on whether there are other Federal statutes regarding specific types of claims that may be applicable to a receivership of an uninsured bank under the NBA and that would give certain claims a different priority, such as claims owed to the Federal government. One commenter, a coalition that advocates for reform in the financial services industry, agreed that customer assets held by a bank in a fiduciary capacity should not be considered assets of the bank, but questioned why other claims of the customer, such as a claim for a refund of prepaid investment management fees that were attributable to periods after the receiver returned the fiduciary assets to the customer, would be treated as a unsecured general creditor claim. The commenter suggested that such customer funds would have less protection in a receivership for an uninsured bank than they would under certain modern receivership and bankruptcy statutes that set forth claim priorities which include preference to customer claims over other general creditor claims.

The OCC is required, by statute, to pay claims on a ratable basis. As discussed in connection with the description of § 51.8 of the final rule, this requirement has been interpreted by the courts as requiring the OCC to make distributions on OCC-approved claims and judicial awards on an equal footing, determining the amount of each creditor's claim as it stands at the point of insolvency. As a result, the controlling ratable payment statute does not support a rule that makes distinctions in distribution priority between customer and general creditor claimants.

Section 51.6 of the final rule provides that all administrative expenses of the receiver for an uninsured bank will be paid out of the assets of the receivership before payment of claims against the receivership. This reflects the requirements in 12 U.S.C. 196. The final rule also states that receivership expenses will include pre-receivership and post-receivership obligations that the receiver determines are necessary and appropriate to facilitate the orderly liquidation or other resolution of the uninsured bank in receivership. To further illustrate the kinds of expenses that § 196 affords a first priority claim on the uninsured bank's receivership assets, § 51.6 enumerates examples of such administrative expenses, such as wages and salaries of employees, expenses for professional services, contractual rent pursuant to an existing lease or rental agreement, and payments to third-party or affiliated service providers, when the receiver determines these expenses are of benefit to the receivership.

Section 51.7 of the final rule contains provisions describing the powers and duties of the receiver and the disposition of fiduciary and custodial accounts. As described in § 51.7, the receiver will take over the assets and operation of the uninsured bank, take action to realize on debts owed to the uninsured bank, sell the property of the bank, and liquidate the assets of the uninsured bank for payment of claims against the receivership. Section 51.7(a)(1)–(5) lists some of the major powers and duties for the receiver set out in 12 U.S.C. 192 and clarified by the courts, including taking possession of the books and records of the bank, collecting on debts and claims owed to the bank, selling or compromising bad or doubtful debts (with court approval), and selling the bank's real and personal property (also with court approval).

Section 51.7(b) of the final rule provides for the receiver to close the uninsured bank's fiduciary and custodial appointments, or transfer such accounts to a successor fiduciary or custodian under 12 CFR 9.16 or other applicable Federal law. The uninsured banks currently in existence focus on fiduciary and custodial services, so this function of the receiver will be of primary importance. This provision recognizes that the receiver's power to wind up the affairs of the uninsured bank in receivership, acting with court approval to make disposition of bank assets, should properly encompass the power to transfer fiduciary or custodial appointments and any associated assets in appropriate circumstances.

Transfer of fiduciary appointments may occur under the terms of the instrument creating the relationship, if it provides for transfer, or under a fiduciary transfer statute, if one is applicable. The OCC believes there are strong public policy interests in endeavoring to replace fiduciaries and custodians expeditiously, without an interruption in service to their customers, if transfer can be arranged to a qualified successor, maintaining the

[21] *Ticonic Nat'l Bank* v. *Sprague,* 303 U.S. 406, 410–411 (1938); *Bell* v. *Hanover Nat'l Bank,* 57 F. 821, 822 (C.C.S.D.N.Y. 1893).

[22] *Bell* v. *Hanover Nat'l Bank,* 57 F. 821, 822 (C.C.S.D.N.Y. 1893).

[23] *Merrill* v. *Nat'l Bank of Jacksonville,* 173 U.S. 131, 146 (1899).

same duties and standards of care with respect to the customers that previously pertained to their accounts at the uninsured bank in receivership. The alternative, given that the uninsured bank must be wound down and cannot provide services in the future, is to stop managing and reinvesting the customer's assets, stop responding to directions to transfer or receive assets in custody, close the accounts, and seek instructions from the account holders or the courts regarding return of associated assets. For institutional customers, this is likely to cause significant interruption of the intricate machinery of their financial operations. For individuals, it can potentially result in loss of asset value in adverse markets, or loss of income due to foregone reinvestments.

Across the United States, there are disparate and often conflicting legal rules restricting or conditioning transfers of an appointment of a fiduciary for a beneficiary residing within the state. Depending on the geographic area across which the uninsured bank has established fiduciary relationships with its customers, and the standardization of its fiduciary account agreements or appointing instruments, it may be practicable for the receiver to transition an uninsured bank's fiduciary and custody accounts to a qualified successor through the mechanisms provided by applicable local law. On the other hand, if faced with dispersed customers, diverse account agreements or appointments of different vintage, or even the absence of an applicable law of transfer for customers in certain states, reliance on these methods may be so cumbersome as to effectively prevent accomplishment of the transfers in a timely way.

In order to address these potential problems, the OCC, relying on the support of existing case law, is including language in the final rule to make it clear that the uninsured bank receiver's power under 12 U.S.C. 192 to sell, with court approval, the real and personal property of the bank includes the power to transfer the bank's fiduciary accounts and related assets, subject to the approval of the court exercising jurisdiction over the receiver's efforts to transfer the bank's assets. The final rule is consistent with case law recognizing that a receiver for a national bank may properly arrange asset purchase and liability assumption transactions to move the business of a failed bank to a successor on an integrated basis, as part of the power to transfer assets, as well as analogous case law concerning the transfer of fiduciary and custodial assets by the FDIC, acting as receiver of failed insured depository institutions.[24]

Section 51.7(c) of the final rule incorporates, in general terms, the powers, duties, and responsibilities of receivers for national banks under the NBA and under judicial precedents determining the authorities and responsibilities of receivers for national banks. Examples of these powers include: (1) the authority to repudiate certain contracts, including: (a) purely executory contracts, upon determining that the contracts would be unduly burdensome or unprofitable for the receivership estate,[25] (b) contracts that involve fraud or misrepresentation,[26] and (c) in limited cases, non-executory contracts that are contrary to public policy; [27] (2) the authority to recover fraudulent transfers; [28] and (3) the authority to enforce collection of notes from debtors and collateral, regardless of the existence of side arrangements that would otherwise defeat the collectability of such notes.[29]

Section 51.7(d) of the final rule requires the receiver to make periodic reports to the OCC concerning the status and proceedings of the receivership.

Section 51.8 of the final rule contains provisions regarding the payment of dividends on claims against the uninsured bank and the distribution of any remaining proceeds to shareholders. This section provides that, after administrative expenses of the receivership have been paid, the OCC will make ratable dividends from available receivership funds based on the priority of claims in proposed § 51.5 for claims that have been proved to the OCC's satisfaction or adjudicated in a court of competent jurisdiction, as provided in 12 U.S.C. 194. The OCC will make payment of dividends, if any, periodically, at the discretion of the OCC, as the receiver liquidates the assets of the uninsured bank.

The final rule's inclusion of the ''ratable dividend'' requirement is designed to incorporate the associated standards about the proper application of this statutory directive, which the judiciary has articulated over the years. The ratable dividend requirement directs the OCC to make distributions on OCC-approved claims and judicial awards on an equal footing, determining the amount of each creditor's claim as it stands at the point of insolvency. As one example, a court's award of interest on an unpaid debt to the date of a judgment rendered in the plaintiff's favor after the receiver was appointed does not increase the amount of the plaintiff's claim for purposes of making ratable dividends. As another example, the ratable dividend requirement generally restricts claims against the bank receivership for debts that were not due and owing at the appointment of the receiver and arose for the first time as a consequence of the appointment or a post-appointment event.

The OCC requested comment on alternatives to the proposed rule's approach to paying dividends on claims, under which the OCC would exercise its discretion under section 194 to determine the timing of the distributions on established claims. Under one alternative presented in the proposed rule, the OCC would refrain from paying any dividends until all claims have been submitted and validated, with final allowed claim amounts established. As we noted in the proposal, this approach presents the possibility that proven claims may be delayed for a significant amount of time pending more protracted resolution of other claims. Under a second option presented in the proposed rule, the OCC would make ongoing dividends on proven claims, subject to the receiver's retaining a percentage of the funds on hand at the time of the distribution as a pool of dividends for catch-up distributions to a successful plaintiff later.

The OCC did not receive comments on these alternative approaches for making ratable distributions on claims against a receivership. For this reason, and because the proposed rule's approach to payment of dividends provides the OCC with the discretion to tailor the dividend process to facts and circumstances of a particular receivership, the final rule adopts § 51.8 as proposed.

Section 51.8(a)(2) of the final rule recognizes the basic legal premise under the NBA receivership provisions and judicial interpretations thereof that any dividend payments to creditors and other claimants of an uninsured bank will be made solely from receivership

[29] *D'Oench, Duhme & Co., Inc.* v. *FDIC,* 315 U.S. 447, 458 (1942). A. Corbin, *Corbin on Contracts,* § 228 at 320 (1952) (addressing contracts voidable for fraud, duress or mistake).

funds, if any, paid to the OCC by the receiver after payment of the expenses of the receiver. This provision is also consistent with the established dichotomy of the OCC's supervisory and receivership capacities in the NBA, as discussed earlier.

Section 51.8(b) of the final rule similarly recognizes that assets held by an uninsured national bank at the time of the receiver's appointment in a fiduciary or custodial capacity, as designated on the bank's books and records, are not part of the bank's general assets and liabilities held in connection with its other business and will not be considered a source for payment for unrelated claims of creditors and other claimants. This provision is intended to make clear that the receiver will segregate identified fiduciary and custodial assets and either transfer those assets to other fiduciaries or custodians as described in connection with § 51.7(b), or close the accounts and endeavor to make the associated assets available to the account holders or their representatives through other means.

One commenter, a trade association for banks, agreed with the treatment of fiduciary assets in the proposed rule, but questioned whether § 51.8(b) indicates with sufficient clarity that fiduciary assets will not be treated as assets of the bank in receivership. As stated in the final rule, fiduciary and custodial assets ''will not be considered as part of the bank's general assets. . .''. The OCC reiterates that, under this section, assets held by an uninsured bank in a fiduciary or custodial capacity, as designated on the bank's books and records, are not part of the bank's general assets and liabilities held in connection with its other business and will not be a source for payment for unrelated claims of creditors and other claimants.

Section 51.8(d) of the final rule provides that, after all administrative expenses and claims have been paid in full, any remaining proceeds will be paid to shareholders in proportion to their stock ownership, also as provided in 12 U.S.C. 194.

Section 51.9 of the final rule contains provisions for termination of receiverships in which there are assets remaining after all administrative expenses and all claims had been paid. This is the scenario addressed by 12 U.S.C. 197. In such a case, section 197 requires the Comptroller to call a meeting of the shareholders of the bank at which the shareholders would decide whether to continue oversight by the Comptroller, or whether to end the receivership and appoint a liquidating agent to continue the liquidation of the remaining assets, under the direction of the board of directors and shareholders, as in a liquidation that had commenced under 12 U.S.C. 181.

There may be other circumstances under which termination would take place, such as when there are no receivership assets remaining after completion of receivership activities. Under this scenario, the receiver for an uninsured bank has liquidated all of the bank's assets, closed or transferred all fiduciary accounts to a successor fiduciary, paid all administrative expenses, and either paid creditor claims in full and distributed the remaining proceeds to shareholders, as provided in § 51.8(c) of the final rule, or made ratable dividends of all remaining proceeds to creditors as provided in § 51.8(a), but no additional assets remain in the estate. Under these circumstances, the provisions in 12 U.S.C. 197 for termination would not apply.

V. Regulatory Analysis

A. Paperwork Reduction Act

Under the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501 *et seq.*), the OCC may not conduct or sponsor, and, notwithstanding any other provision of law, a person is not required to respond to, an information collection unless the information collection displays a valid Office of Management and Budget (OMB) control number. The final rule contains no information collection requirements under the PRA.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* generally requires that, in connection with a rulemaking, an agency prepare and make available for public comment a regulatory flexibility analysis that describes the impact of the rule on small entities. However, the regulatory flexibility analysis otherwise required under the RFA is not required if an agency certifies that the rule will not have a significant economic impact on a substantial number of small entities (defined in regulations promulgated by the Small Business Administration (SBA) to include commercial banks and savings institutions, and trust companies, with assets of $550 million or less and $38.5 million or less, respectively) and publishes its certification and a brief explanatory statement in the **Federal Register** together with the rule.

The OCC currently supervises approximately 1,032 small entities. The scope of the final rule extends to uninsured banks. The maximum number of OCC-supervised small uninsured banks that could be subject to the receivership framework described in the final rule is approximately 18.[30] Accordingly, the OCC certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

OCC Unfunded Mandates Reform Act of 1995 Determination

The OCC has analyzed the final rule under the factors in the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532). Under this analysis, the OCC considered whether the final rule includes a Federal mandate that may result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year (adjusted annually for inflation). As detailed in the **SUPPLEMENTARY INFORMATION**, the OCC currently supervises 52 uninsured banks, all of which are uninsured trust banks, and has not appointed a receiver for an uninsured bank since 1933. Unlike commercial and consumer banks and savings associations, which generally face credit and liquidity risks, national trust banks primarily face operational, reputational, and strategic risks. While any of these risks could result in the precipitous failure of a bank or savings association, from a historical perspective, trust banks have been more likely to decline into a weakened condition, allowing the OCC and the institution the time needed to find other solutions for rehabilitating the institution or to successfully resolve the institution without the need to appoint a receiver. As such, we believe the OCC is unlikely to place an uninsured trust bank into receivership. For this reason, and because the final rule does not impose any implementation requirements, the OCC concludes that the final rule will not result in an expenditure of $100 million or more by state, local, and tribal governments, or by the private sector, in any one year.

List of Subjects in 12 CFR Part 51

Administrative practice and procedure, Banks, Banking, National banks, Procedural rules, Receiverships.

[30] Consistent with the General Principles of Affiliation 13 CFR 121.103(a), the OCC counts the assets of affiliated financial institutions when determining if we should classify an institution we supervise as a small entity. We used December 31, 2015, to determine size because a financial institution's assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year. *See* footnote 8 of the U.S. SBA's *Table of Size Standards.*

Authority and Issuance

For the reasons set forth in the preamble and under the authority of 12 U.S.C. 16, 93a, 191–200, 481, 482, 1831c, and 1867 the Office of the Comptroller of the Currency adds part 51 to chapter I of title 12, Code of Federal Regulations to read as follows:

PART 51—RECEIVERSHIPS FOR UNINSURED NATIONAL BANKS

Sec.

Authority: 12 U.S.C. 16, 93a, 191–200, 481, 482, 1831c, and 1867.

§ 51.1 Purpose and scope.

(a) *Purpose.* This part sets out procedures for receiverships of national banks conducted by the Office of the Comptroller of the Currency (OCC) under the receivership provisions of the National Bank Act (NBA). These receivership provisions apply to national banks that are not insured by the Federal Deposit Insurance Corporation (FDIC).

(b) *Scope.* This part applies to the appointment of a receiver for uninsured national banks (uninsured banks) and the operation of a receivership after appointment of a receiver for an uninsured bank under 12 U.S.C. 191.[31]

§ 51.2 Appointment of receiver.

(a) *In general.* The Comptroller of the Currency (Comptroller) may appoint any person, including the OCC or another government agency, as receiver for an uninsured bank. The receiver performs its duties under the direction of the Comptroller and serves at the will of the Comptroller. The Comptroller may require the receiver to post a bond or other security. The receiver, with the approval of the Comptroller, may employ such staff and enter into contracts for professional services as are necessary to carry out the receivership.

(b) *Grounds for appointment.* The Comptroller may appoint a receiver for an uninsured bank based on any of the grounds specified in 12 U.S.C. 191(a).

(c) *Judicial review.* If the Comptroller appoints a receiver for an uninsured bank, the bank may seek judicial review of the appointment as provided in 12 U.S.C. 191(b).

§ 51.3 Notice of appointment of receiver.

Upon appointment of a receiver for an uninsured bank, the OCC will provide notice to the public of the receivership, including by publication in a newspaper of general circulation for three consecutive months. The notice of the receivership will provide instructions for creditors and other claimants seeking to submit claims with the receiver for the uninsured bank.

§ 51.4 Claims.

(a) *Submission of claims for consideration by the OCC.* (1) Persons who have claims against the receivership for an uninsured bank may present such claims, along with supporting documentation, for consideration by the OCC. The OCC will determine the validity and approve the amounts of such claims.

(2) The OCC will establish a date by which any person seeking to present a claim against the uninsured bank for consideration by the OCC must present their claim for determination. The deadline for filing such claims will not be less than 30 days after the end of the three-month notice period in § 51.3.

(3) The OCC will allow any claim against the uninsured bank received on or before the deadline for presenting claims if such claim is established to the OCC's satisfaction by the information on the uninsured bank's books and records or otherwise submitted. The OCC may disallow any portion of any claim by a creditor or claim of a security, preference, set-off, or priority which is not established to the satisfaction of the OCC.

(b) *Submission of claims to a court.* Persons with claims against an uninsured bank in receivership may present their claims to a court of competent jurisdiction for adjudication. Such persons must submit a copy of any final judgment received from the court to the OCC, to participate in ratable dividends along with other proved claims.

(c) *Right of set-off.* If a person with a claim against an uninsured bank in receivership also has an obligation owed to the bank, the claim and obligation will be set off against each other and only the net balance remaining after set-off shall be considered as a claim, provided such set-off is otherwise legally valid.

§ 51.5 Order of priorities.

The OCC will pay receivership expenses and proved claims against the uninsured bank in receivership in the following order of priority:

(a) Administrative expenses of the receiver;

(b) Unsecured creditors of the uninsured bank, including secured creditors to the extent their claim exceeds their valid and enforceable security interest;

(c) Creditors of the uninsured bank, if any, whose claims are subordinated to general creditor claims; and

(d) Shareholders of the uninsured bank.

§ 51.6 Administrative expenses of receiver.

(a) *Priority of administrative expenses.* All administrative expenses of the receiver for an uninsured bank shall be paid out of the assets of the bank in receivership before payment of claims against the receivership.

(b) *Scope of administrative expenses.* Administrative expenses of the receiver for an uninsured bank include those expenses incurred by the receiver in maintaining banking operations during the receivership, to preserve assets of the uninsured bank, while liquidating or otherwise resolving the affairs of the uninsured bank. Such expenses include pre-receivership and post-receivership obligations that the receiver determines are necessary and appropriate to facilitate the orderly liquidation or other resolution of the uninsured bank in receivership.

(c) *Types of administrative expenses.* Administrative expenses for the receiver of an uninsured bank include:

(1) Salaries, costs, and other expenses of the receiver and its staff, and costs of contracts entered into by the receiver for professional services relating to performing receivership duties; and

(2) Expenses necessary for the operation of the uninsured bank, including wages and salaries of employees, expenses for professional services, contractual rent pursuant to an existing lease or rental agreement, and payments to third-party or affiliated service providers, that in the opinion of the receiver are of benefit to the receivership, until the date the receiver repudiates, terminates, cancels, or otherwise discontinues the applicable contract.

§ 51.7 Powers and duties of receiver; disposition of fiduciary and custodial accounts.

(a) *Marshalling of assets.* In resolving the affairs of an uninsured bank in receivership, the receiver:

(1) Takes possession of the books, records and other property and assets of the uninsured bank, including the value

[31] This part does not apply to receiverships for uninsured Federal branches or uninsured Federal agencies.

of collateral pledged by the uninsured bank to the extent it exceeds valid and enforceable security interests of a claimant;

(2) Collects all debts, dues and claims belonging to the uninsured bank, including claims remaining after set-off;

(3) Sells or compromises all bad or doubtful debts, subject to approval by a court of competent jurisdiction;

(4) Sells the real and personal property of the uninsured bank, subject to approval by a court of competent jurisdiction, on such terms as the court shall direct; and

(5) Deposits all receivership funds collected from the liquidation of the uninsured bank in an account designated by the OCC.

(b) *Disposition of fiduciary and custodial accounts.* The receiver for an uninsured bank closes the bank's fiduciary and custodial appointments and accounts or transfers some or all of such accounts to successor fiduciaries and custodians, in accordance with 12 CFR 9.16, and other applicable Federal law.

(c) *Other powers.* The receiver for an uninsured bank may exercise other rights, privileges, and powers authorized for receivers of national banks under the NBA and the common law of receiverships as applied by the courts to receiverships of national banks conducted under the NBA.

(d) *Reports to OCC.* The receiver for an uninsured bank shall make periodic reports to the OCC on the status and proceedings of the receivership.

(e) *Receiver subject to removal; modification of fees.* (1) The Comptroller may remove and replace the receiver for an uninsured bank if, in the Comptroller's discretion, the receiver is not conducting the receivership in accordance with applicable Federal laws or regulations or fails to comply with decisions of the Comptroller with respect to the conduct of the receivership or claims against the receivership.

(2) The Comptroller may reduce the fees of the receiver for an uninsured bank if, in the Comptroller's discretion, the Comptroller finds the performance of the receiver to be deficient, or the fees of the receiver to be excessive, unreasonable, or beyond the scope of the work assigned to the receiver.

§ 51.8 Payment of claims and dividends to shareholders.

(a) *Claims.* (1) After the administrative expenses of the receivership have been paid, the OCC shall make ratable dividends from time to time of available receivership funds according to the priority described in § 51.5, based on the claims that have been proved to the OCC's satisfaction or adjudicated in a court of competent jurisdiction.

(2) Dividend payments to creditors and other claimants of an uninsured bank will be made solely from receivership funds, if any, paid to the OCC by the receiver after payment of the expenses of the receiver.

(b) *Fiduciary and custodial assets.* Assets held by an uninsured bank in a fiduciary or custodial capacity, as designated on the bank's books and records, will not be considered as part of the bank's general assets and liabilities held in connection with its other business, and will not be considered a source for payment of unrelated claims of creditors and other claimants.

(c) *Timing of dividends.* The payment of dividends, if any, under paragraph (a) of this section, on proved or adjudicated claims will be made periodically, at the discretion of the OCC, as the receiver liquidates the assets of the uninsured bank.

(d) *Distribution to shareholders.* After all administrative expenses of the receiver and proved claims of creditors of the uninsured bank have been paid in full, to the extent there are receivership assets to make such payments, any remaining proceeds shall be paid to the shareholders, or their legal representatives, in proportion to their stock ownership.

§ 51.9 Termination of receivership.

If there are assets remaining after full payment of the expenses of the receiver and all claims of creditors for an uninsured bank and all fiduciary accounts of the bank have been closed or transferred to a successor fiduciary and fiduciary powers surrendered, the Comptroller shall call a meeting of the shareholders of the uninsured bank, as provided in 12 U.S.C. 197, for the shareholders to decide the manner in which the liquidation will continue. The liquidation may continue by:

(a) Continuing the receivership of the uninsured bank under the direction of the Comptroller; or

(b) Ending the receivership and oversight by the Comptroller and replacing the receiver with a liquidating agent to proceed to liquidate the remaining assets of the uninsured bank for the benefit of the shareholders, as set out in 12 U.S.C. 197.

Dated: December 15, 2016.

Thomas J. Curry,

Comptroller of the Currency.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 4

[Docket No. FDA–2008–N–0424]

RIN 0910–AF82

Postmarketing Safety Reporting for Combination Products

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA or Agency) is issuing regulations to set forth postmarketing safety reporting requirements for combination products. Specifically, this final rule describes the postmarketing safety reporting requirements that apply when two or more different types of regulated medical products (drugs, devices, and/or biological products, which are referred to as ''constituent parts'' of a combination product) comprise a combination product and the combination product or its constituent parts have received FDA marketing authorization. The rule is intended to promote and protect the public health by setting forth the requirements for postmarketing safety reporting for these combination products, and is part of FDA's ongoing effort to ensure the consistency and appropriateness of the regulatory requirements for combination products.

DATES: *Effective date:* This rule is effective on January 19, 2017.

Compliance dates: Some provisions of the rule have a compliance date that is the same as the effective date of this rule, and other provisions of the rule have a later compliance date as discussed in section III.I, Effective Date and Compliance Dates.

FOR FURTHER INFORMATION CONTACT: John Barlow Weiner, Associate Director for Policy, Office of Combination Products, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5129, Silver Spring, MD 20933, 301–796–8930, *john.weiner@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Executive Summary

Purpose of the Final Rule

The Agency has not previously issued regulations on postmarketing safety reporting specifically for combination products, which are products comprised of: (1) A drug and a device; (2) a device and a biological product; (3) a biological product and a drug; or (4) a drug, a device, and a biological product. Instead, the Agency has applied provisions to combination products from the postmarketing safety reporting regulations applicable to the constituent parts (*i.e.,* reporting requirements specific to drugs, devices, and biological products). These regulations for drugs, devices, and biological products share many similarities; however, each set of regulations has certain unique reporting requirements, standards, and timeframes based in part on the characteristics of the type of product. These variations among the regulations and lack of clarity on how to apply these requirements to combination products can result in inconsistent and incomplete postmarketing safety reporting for combination products and their constituent parts.

The purpose of this final rule is to ensure consistent, complete postmarketing safety reporting requirements for combination products that have received FDA marketing authorization, while avoiding duplicative reporting. The term ''postmarketing safety'' is used in this rule because this rule concerns certain postmarket events, including manufacturing events, device malfunctions, and events causing injury to users, and the reporting requirements that relate to product and patient safety arising from these events. The final rule supports the underlying purpose of postmarketing safety reporting for all medical products, namely to protect the public health by ensuring continued safety and effectiveness of the product once it is placed on the market.

Summary of the Major Provisions of the Final Rule

This final rule requires that a ''combination product applicant'' (an entity holding the application(s), as the term ''application'' is defined in 21 CFR 4.101 of this rule, for a combination product) and a ''constituent part applicant'' (an entity holding the application to market a drug, device, or biological product as a constituent part of a combination product the constituent parts of which are marketed under applications held by different applicants) comply with postmarketing safety reporting requirements applicable to the product based on the application type (*e.g.,* new drug application, premarket approval application, biologics license application) under which the combination product or constituent part received marketing authorization. In addition to these application-type based reporting requirements, the final rule requires combination product applicants to submit additional specified reports based on the constituent parts included in the combination product (*e.g.,* malfunction reports if the combination product includes a device, field alert reports if it includes a drug, and biological product deviation reports if it includes a biological product). The final rule requires constituent part applicants to share certain postmarketing safety information they receive with one another. The rule also specifies how combination product and constituent part applicants must submit postmarketing safety reporting information to the Agency and what records they must maintain.

The Agency received 16 sets of comments on the proposed rule. Commenters largely sought clarification of the scope of the proposed rule, how reporting requirements, timelines, and reporting standards from the underlying regulations for drugs, devices, and biological products apply, and how and what information must be shared between constituent part applicants. Several commenters, while supporting rulemaking to address postmarketing safety reporting for combination products, recommended alternative approaches. After considering the comments received on the proposed rule, the Agency has made clarifications and other revisions in the final rule to, among other things: (1) Clarify that the final rule applies only to combination product and constituent part applicants; (2) clarify when a single report may suffice to comply with more than one reporting requirement; and (3) incorporate biological product deviation reporting and device correction and removal reporting requirements applicable to combination product applicants.

Legal Authority

The legal framework underlying this final rule is twofold. The first aspect is that drugs, devices, and biological products do not lose their discrete regulatory identities when they become constituent parts of a combination product. In general, the postmarketing safety reporting requirements specific to each constituent part of a combination product also apply to the combination product itself. Although the constituent parts of combination products retain their regulatory identities, the Federal Food, Drug, and Cosmetic Act (FD&C Act) also recognizes combination products as a category of products that are distinct from products that are solely drugs, devices, or biological products. FDA has the authority to develop regulations to ensure sufficient and appropriate ongoing assessment of the risks associated with combination products.

The second aspect of the framework is founded on the postmarketing safety reporting regulatory scheme associated with the application under which the combination product received marketing authorization, plus any applicable requirements associated with the additional six specified report types listed in this rule. Although similar in effect to the first aspect of the framework, this aspect is based on the legal authority FDA used to issue each of its existing regulations for postmarketing safety reporting for drugs, devices, and biological products.

Costs and Benefits

The final rule will generate one-time administrative costs from reading and understanding the rule, assessing current compliance, modifying existing standards of practice, changing storage and reporting software, and training personnel on the requirements under this rule. Firms that do not currently comply with the reporting requirements identified in 21 CFR 4.102(c) of this rule will also incur annual reporting costs from the submission of field alert reports, 5-day reports, 15-day reports, malfunction reports, correction or removal reports, and biological product deviation reports. The annualized total costs of the rule are between $1.36 and $2.68 million at a 7 percent discount rate and between $1.35 and $2.65 million at a 3 percent discount rate.

The final rule will benefit firms through reduced uncertainty about the reporting requirements for their specific combination product and through decreased duplicative reporting. The final rule will also benefit public health by helping to ensure that important safety information is submitted and directed to the appropriate Agency components, so that the Agency may receive and review this information in a timely manner.

I. Background

As set forth in 21 CFR part 3, a combination product is a product comprised of a drug and a device; a device and a biological product; a biological product and a drug; or a drug, a device, and a biological product. A combination product includes the following: (1) A product comprised of two or more regulated components, *i.e.,* drug/device, biologic/device, drug/biologic, or drug/device/biologic, that are physically, chemically, or otherwise combined or mixed and produced as a single entity (''single-entity'' combination products); (2) two or more separate products packaged together in a single package or as a unit and comprised of drug and device products, device and biological products, or biological and drug products (''co-packaged'' combination products); (3) a drug, device, or biological product packaged separately that, according to its investigational plan or proposed labeling, is intended for use only with an approved individually specified drug, device, or biological product where both are required to achieve the intended use, indication, or effect and where upon approval of the proposed product the labeling of the approved product would need to be changed; *e.g.,* to reflect a change in intended use, dosage form, strength, route of administration, or significant change in dose (a type of ''cross-labeled'' combination product); or (4) any investigational drug, device, or biological product packaged separately that, according to its proposed labeling, is for use only with another individually specified investigational drug, device, or biological product where both are required to achieve the intended use, indication, or effect (another type of ''cross-labeled'' combination product).[1] For purposes of this rulemaking and consistent with 21 CFR 4.2, the drugs, devices, and/or biological products included in a combination product are referred to as ''constituent parts'' of the combination product.

A. Rationale for Rulemaking

In the proposed rule (74 FR 50744 at 50745 to 50751, October 1, 2009), FDA described its rationale and goals for the proposed rulemaking. To date, the Agency has not issued regulations on postmarketing safety reporting (PMSR) specifically for combination products. Instead, the Agency has applied provisions to combination products from the PMSR regulations applicable to the constituent parts of the combination product (*i.e.,* the reporting requirements specific to drugs, devices, and biological products). These requirements for drugs, devices, and biological products share many similarities and have a common underlying purpose, namely to protect the public health by ensuring a product's continued safety and effectiveness once placed on the market. However, each set of regulations has certain reporting standards and timeframes with unique requirements based in part on the characteristics of the type of product.

FDA held a public hearing on November 25, 2002, entitled ''FDA Regulation of Combination Products'' (Ref. 1) and a public workshop on July 8, 2003, entitled ''Innovative Systems for Delivery of Drugs and Biologics: Scientific, Clinical and Regulatory Challenges'' (Ref. 2) to discuss postmarketing safety reporting, among other issues pertaining to combination products. In developing the proposed rule, we carefully considered the comments offered by stakeholders, including written comments submitted to the docket that we opened to facilitate further input on combination product issues. Two common themes from the comments were the need for consistency in postmarketing safety reporting requirements for combination products and the importance of avoiding unnecessarily duplicative reporting. Some stakeholders suggested that FDA consider developing an entirely new postmarketing safety reporting scheme for combination products, but we concluded that because of the broad similarities in the postmarketing safety reporting regulations for drugs, devices, and biological products and industry's familiarity and experience with current postmarketing safety reporting requirements, the most appropriate approach would be to rely on existing rules and to explain how to comply with them.

FDA is issuing this final rule to ensure appropriate and consistent PMSR requirements for combination products that have received FDA marketing authorization by describing how combination product applicants and constituent part applicants must comply with the PMSR regulations for drugs, devices, and biological products, and also to eliminate unnecessary PMSR requirements for such combination products.

B. The Proposed Rule

Entities subject to the proposed rule included those subject to PMSR duties under 21 CFR parts 314, 600, 606, and 803, except for user facilities and distributors as defined under part 803.

Those four sets of regulations expressly address PMSR for: (1) Drugs (part 314); (2) biological products (parts 600 and 606); and (3) devices (part 803). These sets of regulations have certain similarities. For example, the PMSR regulations for biological products, devices, and drugs each requires reports of death and other serious adverse events; each provides for expedited reporting for certain types of safety events; and each provides for followup and non-expedited reports. However, there are also certain significant differences in these sets of regulations designed, in part, to address the distinct characteristics and potential safety issues related to a particular type of product (*i.e.,* drug, device, and biological product).

Accordingly, we proposed to require that entities comply with the PMSR requirements associated with the combination product's application type (*e.g.,* requirements under part 314 for a combination product approved under a new drug application (NDA), or under part 803 for a combination product approved under a premarket approval application (PMA)) and also comply

[1] As discussed in response to Comment 1, this rule addresses only PMSR requirements for combination products that have received marketing authorization. It does not describe reporting requirements for investigational combination products.

with certain specified additional reporting provisions that are not associated with that application type but are associated with a constituent part(s) of the combination product. The additional reporting requirements specified in the proposed rule were: (1) 5-Day reports under § 803.53; (2) device malfunction reports under § 803.50; (3) 15-day ''alert reports'' for drugs and biological products under §§ 314.80 and 600.80; (4) field alert reports for drugs under § 314.81; and (5) expedited blood fatality reports under § 606.170. The Agency identified these five types of reports as addressing particular safety issues related to the type of article (drug, biological product, and device) and, therefore, appropriate to apply to combination products that include that type of article regardless of the application type for the combination product, to ensure consistent and appropriate PMSR for the combination product.

The proposed rule also addressed circumstances in which the constituent parts of a combination product are marketed under separate applications, or are legally marketed by different reporters without separate applications. For constituent parts marketed under separate applications, we proposed that the reporter must comply with the reporting requirements associated with that application type. In addition, we proposed for constituent parts marketed under separate applications held by different entities or legally marketed by separate entities without an approved or cleared marketing application, that each of these entities would have a duty to share within 5 calendar days information it receives about the event, either with the other entity or entities for the combination product or with FDA. We further proposed that entities that receive postmarketing safety information from another such entity, would have to investigate the event and comply with applicable reporting obligations under the rule.

We proposed that reporters submit their reports and maintain records for them in accordance with the requirements of the underlying regulations from which the reporting duty arises (parts 314, 600, 606, or 803).

Following publication of the proposed rule, FDA participated in a workshop on January 21, 2010, entitled ''Understanding Implications of the Postmarket Safety for Combination Products Proposed Rule,'' sponsored by the Advanced Medical Technology Association, the Combination Products Coalition, and the Regulatory Affairs Professional Society. At this workshop, the Agency provided a summary of the proposed rule, and stakeholders then worked in groups to identify issues on which to comment.

II. Overview of the Final Rule

The final rule follows the approach presented in the proposed rule, with certain simplifications, clarifications, additions, and other changes, generally made in light of comments received, as described in sections II.A through II.F. The goal of the final rule remains the same as for the proposed rule, to ensure consistent and appropriate postmarketing safety reporting for combination products, while enabling this reporting to be as efficient as possible. Accordingly, this rulemaking seeks to apply those postmarketing safety reporting requirements to combination products necessary to ensure their safety and effectiveness, clarify how to comply with reporting requirements applicable to combination products, and enable efficiencies including submission of a single report if multiple reporting duties apply to an event. Following is a section-by-section overview of the final rule, and then a summary chart of the requirements presented in the rule.

A. Section 4.100—What is the scope of this subpart?

The scope of the rule remains largely the same as proposed. As in the proposed rule, § 4.100(a) reflects that the rule describes PMSR requirements for combination products. We have revised § 4.100(a) to clarify that the rule only applies to ''combination product applicants'' and ''constituent part applicants'' (as defined in § 4.101); this rule does not apply to any other entities. We have also revised § 4.100(b) to clarify that the rule does not apply to investigational combination products or to combination products that have not received marketing authorization. We have eliminated proposed § 4.102 as that section was largely duplicative of proposed § 4.100.

B. Section 4.101—How does FDA define key terms and phrases in this subpart?

We eliminated unnecessary definitions, including terms not used in this final rule. We also simplified certain definitions, using cross-references to definitions provided in other provisions of Title 21 of the CFR without restating those definitions. We made these changes for clarity and to minimize the need for amendments to this rule if a change is made in the future to the terminology or definitions in the cross-referenced provisions.[2]

The final rule newly includes definitions for ''biological product deviation report'' (BPDR) (by reference to §§ 600.14 and 606.171), and ''correction or removal report'' (by reference to 21 CFR 806.10), because the final rule incorporates these reporting requirements as discussed in relation to § 4.102(c) in section III.C. Similarly, we added a definition for ''Product Development Protocol'' (PDP) (by reference to section 515(f) of the FD&C Act (21 U.S.C. 360e(f))) and de novo classification request (by reference to section 513(f)(2) of the FD&C Act (21 U.S.C. 360c(f)(2))) because the final rule addresses these types of applications.

In addition, we included definitions for ''applicant'', ''combination product applicant'', ''constituent part applicant'', and ''device application'' to help clarify which entities are subject to which duties under this rule. Specifically, we clarified that an applicant is the person holding an application under which a combination product or constituent part has received marketing authorization, and that there is a combination product applicant if there is one applicant that either holds the application for a combination product or, holds the applications for each constituent part if the constituent parts of the combination product are marketed under separate applications (as could be the case for the constituent parts of a cross-labeled combination product). We also clarified that a constituent part applicant is the applicant for a constituent part of a combination product the constituent parts of which marketed under applications held by different applicants. We defined the term ''device application'' to mean a PMA, PDP, humanitarian device exemption (HDE), *de novo* classification request (request for classification under section 513(f)(2) of the FD&C Act), or premarket notification (510(k)) submission, so that we could simplify and clarify the rule by using this term to refer to all such submission types, rather than listing them each, where appropriate in the rule.

[2] We understand that provisions cross-referenced in this rule may be revised in the future, and we want to ensure that it is clear that those provisions as revised continue apply to combination products under this rule, without having to amend this rule each time to provide such clarity. However, if the Agency determines that a future revision to a cross-referenced provision is not appropriate to apply to combination products under this rule, or its application to combination products is unclear under this rule, we intend to amend this rule or otherwise clarify.

C. Section 4.102—What reports must you submit to FDA for your combination product or constituent part?

The requirements listed in § 4.102 include those that were in § 4.103 of the proposed rule with certain adjustments and additional requirements to address, in part, comments received on the proposed rule.

Specifically, we have eliminated the requirement to comply with blood fatality reporting requirements as described in § 606.170 for combination products that received marketing authorization under an application other than a biologics license application (BLA). We have also revised the requirement for all combination product applicants to submit 15-day reports as described in §§ 314.80 and 600.80, to permit these reports to be submitted within 30 days rather than 15 days for combination products that received marketing authorization under a device application.

In addition, we have incorporated BPDR and correction and removal reporting requirements for combination product applicants to ensure that the issues addressed by these reporting requirements, for biological products and devices, respectively, are also addressed for combination products that include these types of constituent parts. We have also made other adjustments in § 4.102 for clarity.

Following is a description of § 4.102 as finalized, including explanations of changes from § 4.103 of the proposed rule.

1. Section 4.102(a)

A new § 4.102(a) clarifies that all applicants must comply with the applicable PMSR requirements with respect to their product. A constituent part applicant must comply with applicable requirements for the constituent part it is marketing, and a combination product applicant must comply with applicable requirements for the combination product it is marketing.

2. Section 4.102(b)

As in § 4.103(a) of the proposed rule, § 4.102(b) lists the PMSR requirements that apply based on the application type for the product. Section 4.102(b) clarifies that combination product applicants and constituent part applicants must comply with the requirements identified under § 4.102(b)(1) through (3) that are applicable based on their product's application type. In addition, § 4.102 clarifies that this rule does not require a combination product applicant to submit multiple reports relating to the same event when one report could be used to satisfy both § 4.102(b) and (c). Specifically, if the applicant has submitted one type of report and that report: Includes all of the information that would also be required in another type of report; is required to be submitted in the same manner under this rule as that other report; and is submitted within applicable deadlines, the submission of the single report will be considered to satisfy both reporting obligations.

The requirements of § 4.102(b) are as follows:

a. Section 4.102(b)(1). Combination product applicants and constituent part applicants must comply with the PMSR requirements under parts 803 and 806 if their product received marketing authorization under a device application.

b. Section 4.102(b)(2). Combination product applicants and constituent part applicants must comply with the PMSR requirements under part 314 if their product received marketing authorization under an NDA or abbreviated new drug application (ANDA).

c. Section 4.102(b)(3). Combination product applicants and constituent part applicants must comply with the PMSR requirements under parts 600 and 606 if their product received marketing authorization under a BLA.

3. Section 4.102(c)

This provision applies only to combination product applicants, not to constituent part applicants. It states which requirements combination product applicants must meet in addition to those associated with the product's application type, to ensure consistent and appropriate PMSR for combination products. Like § 4.102(b), it also states how applicants can submit a single report to comply with multiple reporting requirements.

As indicated previously, § 4.102(c) does not require blood fatality reporting for combination products that received marketing authorization under a device application, NDA, or ANDA, and permits combination product applicants for combination products that received marketing authorization under a device application to submit 15-day reports within 30 days rather than 15 days.

We removed the requirement under this rule to make blood fatality reports for combination products that received marketing authorization under a device application, NDA, or ANDA, because facilities at which such events occur are currently required to make blood fatality reports irrespective of the type of application under which the product received marketing authorization. Because these facilities must make such reports, we concluded that it would be unnecessary for a combination product applicant (who is not also the operator of the facility) to report the same information as well.

In light of comments received (as discussed more fully in response to Comments 7, 8, 10), we modified the 15-day report requirement to permit these reports to be made within 30 days for combination products that received marketing authorization under a device application. We made this change based on several factors, including the following. We determined that the Agency would continue to be able to respond in a timely manner to these reports if submitted within 30 days rather than 15 days for such combination products. Further, we determined that permitting such reports to be made within 30 days would enable better alignment of reporting for device-led combination products because this timing would be consistent with the timing for submission of medical device reports. This alignment could be expected to improve the efficiency, clarity and completeness of reports for this class of combination products and to eliminate unnecessary complexity and potential for confusion.[3]

Section 4.102(c) includes additional reporting requirements not in the proposed rule to address specific safety concerns related to medical devices and biological products. Combination product applicants must submit correction and removal reports as described in § 806.10 and comply with related recordkeeping requirements as described in § 806.20 for combination products that include a device constituent part; and combination product applicants must submit BPDRs

[3] We considered whether to make a corresponding change for combination products that received marketing authorization under an NDA or ANDA (drug-led combination products) or under a BLA (biologic-led combination products), to require that malfunction reports be submitted within 15 days to align with the deadline for 15-day reports, in the interest of simplifying and clarifying requirements for such combination product applicants as well. However, we determined that the nature of events triggering, and the information required for, malfunction reports might make it difficult to provide a meaningful report within 15 days in some cases. As indicated in the final rule, if an event triggers both a 15-day report and a malfunction report for such a combination product, the combination product applicant can opt to comply with both reporting requirements in a single report submitted within 15 days. If the applicant determines that additional time is needed to investigate the device malfunction, the applicant can submit a followup report to the initial 15-day report with the additional information.

as described in §§ 600.14 and 606.171 for combination products that include a biological product constituent part. Having considered the unique safety issues that these additional requirements address in light of comments received, we concluded that this rule should ensure that these additional requirements are addressed by all combination product applicants for combination products that include constituent parts to which these requirements relate.

In many cases, correction and removal reporting requirements arise in relation to manufacturers' recalls in response to adverse events that may also trigger medical device reporting requirements under part 803. In such cases, submission of a medical device report (MDR) that contains all the information required by part 806 will suffice to comply with both sets of reporting requirements. Under § 806.10(f), no separate correction or removal report is required to be submitted if a report of the correction or removal has been submitted under part 803. However, in some instances, a correction or removal will not be associated with a reportable adverse event, or the action that a manufacturer takes in response will not trigger a 5-day reporting requirement, but the action must still be reported as described in part 806 to ensure, in part, appropriate coordination between the manufacturer and the Agency. In such cases, the correction or removal report currently should be submitted to the appropriate Agency field office.

Further, some corrections and removals may not trigger reporting requirements under part 803 or part 806, but may trigger recordkeeping requirements under part 806, and these recordkeeping requirements must be satisfied for combination products that include a device constituent part. Accordingly, we have incorporated the correction and removal reporting and recordkeeping requirements under § 4.102(c) to ensure that combination product applicants comply with these requirements.

With respect to BPDRs, as discussed more fully in response to Comment 13 in section III, we concluded that these reports are akin to field alert reports for drugs, and that it was important for BPDRs to be submitted for combination products that include biological product constituent parts to enable the applicant and the Agency to address the deviation in a timely, appropriate manner. Further, we note that in most instances, a biological product deviation that is reportable under §§ 600.14 and 606.171 is not associated with an adverse experience. Accordingly, we have included in § 4.102(c) BDPR requirements for all combination product applicants whose combination products contain a biological product constituent part.

The requirements applicable to combination products applicants under § 4.102(c) are now specified as follows:

a. Section 4.102(c)(1). Combination product applicants whose combination products received marketing authorization under a BLA, NDA, or ANDA and include a device constituent part must also submit: (i) 5-Day reports as described in §§ 803.3 and 803.53 and supplemental or followup reports as described in § 803.56; (ii) Malfunction reports as described in § 803.50 and supplemental or followup reports as described in § 803.56; and (iii) Correction or removal reports as described in § 806.10 and comply with recordkeeping requirements as described in § 806.20.

b. Section 4.102(c)(2). Combination product applicants whose combination products received marketing authorization under a BLA or a device application and include a drug constituent part must also submit: (i) Field alert reports as described in § 314.81 and (ii) 15-day reports and followup reports as described in § 314.80, within 30 calendar days instead of 15 calendar days if the combination product received marketing authorization under a device application.

c. Section 4.102(c)(3). Combination product applicants whose combination products received marketing authorization under an NDA, ANDA, or device application, and include a biological product constituent part must also submit: (i) BPDRs as described in §§ 600.14 and 606.171 and (ii) 15-day reports and followup reports as described in § 600.80, within 30 calendar days instead of 15 calendar days if the combination product received marketing authorization under a device application.

4. Section 4.102(d)

This provision replaces and has been revised as compared to proposed § 4.103(c) to: (a) Clarify that it applies only to combination product applicants; (b) identify the content expected in periodic safety reports for combination products that received marketing authorization under an NDA, ANDA, or BLA; and (c) provide that additional reporting is required for combination products that received marketing authorization under a device application only upon notification by the Agency if the Agency determines additional or clarifying safety information is required to protect the public health. Section 4.102(d) has two paragraphs stating the following requirements:

a. Section 4.102(d)(1). Combination product applicants for combination products that received marketing authorization under an NDA, ANDA, or BLA must include in their periodic safety reports, in addition to information required under § 314.80 or 600.80, respectively, a summary and analysis of reports that the applicant submitted in accordance with § 4.102(c)(1)(i) and/or (ii) (5-day and malfunction reporting requirements).

b. Section 4.102(d)(2). Combination product applicants for combination products that received marketing authorization under a device application do not have to make periodic reports under this rule but must submit additional reports regarding postmarketing safety events in accordance with written requests by the Agency that will be made only if the Agency determines that protection of the public health requires additional or clarifying safety information. Any such written request will specify the safety information to include in such reports and the reason or purpose for the request.

D. Section 4.103—What information must you share with other constituent part applicants for the combination product?

As discussed more fully in response to Comment 18 in section III, the final rule makes clear that the duties to share information within 5 calendar days under § 4.103 (replacing § 4.104 in the proposed rule) apply only to constituent part applicants. In addition, we clarified and simplified these requirements. Constituent part applicants must share only information they receive regarding events that involve a death or serious injury within the meaning of § 803.3 or an adverse experience within the meaning of § 314.80(a) or § 600.80(a), and must share this information only with each other; we have eliminated the alternative of sharing the information with FDA as unnecessary and inefficient. Also, we have removed as unnecessary the content of proposed § 4.104(b) regarding how to respond to information received from another constituent part applicant. Section 4.102(b) states which PMSR requirements apply to constituent part applicants, and those PMSR requirements prescribe under what circumstances an entity subject to them must submit a report regarding information that the entity receives.

We have added a new § 4.103(b) addressing recordkeeping for this information sharing duty. This provision has been added to provide constituent part applicants appropriate clarity and certainty regarding what records to keep and what documentation the Agency will consider adequate to demonstrate compliance with the information-sharing requirement.

E. Section 4.104—How and where must you submit postmarketing safety reports for your combination product or constituent part?

This section has been revised as compared to proposed § 4.105, to clarify where and how to submit postmarketing safety reports for constituent part applicants (§ 4.104(a)) and combination product applicants (§ 4.104(b)).

1. Section 4.104(a)

Constituent part applicants must make all reports in accordance with the existing regulations applicable to that type of product (for example, making reports in accordance with the requirements of part 314 if the constituent part is a drug). Like an applicant for a non-combination product, a constituent part applicant holds an application for a single type of article (drug, device, or biological product) and is required to make postmarketing safety reports to FDA only for events concerning its product. Accordingly, these reports are most appropriately submitted to the same Agency components in the same manner as they would be by any applicant holding an application for the same type of product.

2. Section 4.104(b)

Combination product applicants are required to submit postmarketing safety reports concerning the combination product, including each of that combination product's constituent parts. The nature of the events and the appropriate Agency component to contact regarding them can vary however. In light of these considerations, § 4.104(b) draws a distinction between individual case study reports (ICSRs) (Ref. 3) for safety events experienced by individual users of combination products [4] and other safety reports.

Section 4.104(b) requires that combination product applicants must submit all ICSRs (15-day reports, malfunction reports, serious injury or death reports, and 5-day reports) applicable to the combination product in the manner specified in the PMSR regulations associated with the application type for the combination product. See §§ 4.104(b)(1) and (2).

This approach to submission of ICSRs by combination product applicants best assures the clarity, completeness, and efficiency of such reporting. Having all ICSRs submitted in the same manner to the Center with the lead for the application enables multiple reporting requirements for an event to be satisfied by submitting a single report and ensures that all such reports relating to the same event will be captured in a single series (see also response to Comment 24).

In addition, under § 4.104(b), all BPDRs, field alert reports, and correction and removal reports must be submitted as described in the regulations from which these reporting requirements arise. The Agency currently receives these reports through differing mechanisms and Agency components based on such factors as logistical considerations and expertise to take the lead in assessing and addressing the issues raised in the report. For example, field alert reports for drugs currently must be submitted to FDA district offices as described in part 314, and BPDRs currently must be submitted to the Center for Biologics Evaluation and Research (CBER) or the Center for Drug Evaluation and Research (CDER) as appropriate based on which of these two Centers would ordinarily have jurisdiction over the type of biological product included in the combination product, as described in parts 600 and 606. These existing reporting systems are designed to assure timely, effective resolution of the matters raised in these reports.

As discussed in response to Comment 28 and in section III.A., the Agency anticipates issuing a guidance to provide recommendations on how applicants may adopt more streamlined, effective approaches to making reports under this rule.

F. Section 4.105—What are the postmarketing safety reporting recordkeeping requirements for your combination product or constituent part?

As discussed more fully in section III, response to Comment 26, we revised this section (replacing § 4.106 in the proposed rule) to clarify and simplify the recordkeeping requirements associated with PMSR obligations for combination product applicants and constituent part applicants. Section 4.105(a) describes the recordkeeping requirements for constituent part applicants and § 4.105(b) describes the requirements for combination product applicants, as follows:

1. Section 4.105(a)

Constituent part applicants must comply with the recordkeeping requirements prescribed in the underlying PMSR regulations identified in § 4.102(b) as applicable to the product based on its application type. In addition, they must retain the records required in § 4.103 (information sharing) for the longest retention period (if more than one period applies) required for records under the PMSR regulations applicable to their constituent part (as explained in response to Comment 26).

2. Section 4.105(b)

Combination product applicants must maintain records relating to their postmarketing safety reports for whichever is the longest required record-keeping period under the PMSR requirements applicable to the combination product applicant under § 4.102. Because both parts 314 and 600 currently require recordkeeping for 10 years, at this time the recordkeeping period for combination product applicant PMSR records would be at least 10 years.

[4] ''Individual case study report'' or ICSR is the internationally recognized term of art referring to reports of an adverse event, including a malfunction, experienced by an individual user of the product. This term is used to refer to such reports in international standards, and FDA implementing materials, regarding proper methods for submitting ICSRs to regulatory bodies for drugs, biologics, and devices.

TABLE 1—REQUIREMENTS FOR BOTH CONSTITUENT PART APPLICANTS AND COMBINATION PRODUCT APPLICANTS [1]

[See § 4.102(b) of this rule]

Source of PMSR requirements	Application Types		
	ANDA/NDA	BLA	Device application
Part 314	X		
Part 600		X	
Part 606		X	
Part 803			X
Part 806			X

[1] In addition to the requirements in table 1, constituent part applicants must share certain adverse event information with other constituent part applicant(s) for the combination product. (See § 4.103 of this rule).

TABLE 2—ADDITIONAL REQUIREMENTS ONLY FOR COMBINATION PRODUCT APPLICANTS [1]

[See § 4.102(c) of this rule]

Combination product includes	Reporting requirement	Application Type		
		ANDA/NDA	BLA	Device application
Drug	§ 314.81, Field Alert Reports	See table 1	X	X
	§ 314.80, 15-Day Reports (initial and followup)		X	X
Biologic	§§ 600.14 and 606.171, Biological Product Deviation Reports.	X	See table 1	X
	§ 600.80, 15-day Reports (initial and followup)	X		X
Device	§§ 803.53 and 803.56, 5-Day Reports (initial and supplemental or followup).	X	X	See table 1
	§§ 803.50 and 803.56, Malfunction Reports (initial and supplemental or followup).	X	X	
	Part 806, Correction or Removal Reports and Records	X	X	

[1] In addition to the requirements in table 2, the rule addresses other reporting requirements for combination product applicants as follows: (1) Combination products that received marketing authorization under an NDA, ANDA, or BLA: Include a summary and analysis of malfunction (§§ 803.50 and 803.56) and 5-day (§§ 803.53 and 803.56) reports submitted during the report interval in the periodic safety reports (see § 4.102(d)(1)) and (2) combination products that received marketing authorization under a device application: Submit additional reports when notified by the Agency because FDA has determined the information is required to protect the public health (see § 4.102(d)(2)).

III. Comments on the Proposed Rule

We received comments from 15 entities and one individual on the proposed rule. Commenters included trade organizations and manufacturers of drugs, devices, biological products, and combination products. Many commenters sought clarification on particular points or recommended adjustments to specific aspects of the proposed rule. Several commenters, while supporting rulemaking to address PMSR for combination products, recommended alternative approaches as discussed in Comment 27.

To make it easier to identify comments and our responses, the word ''Comment'' appears before the descriptions of the comments, and the word ''Response'' appears before our response. We have also numbered comments to help distinguish among them. The number assigned to each comment is purely for organizational purposes and does not signify relative value or importance of comments or the order in which they were received. Certain comments are grouped together under a single number because the subject matter of the comments was similar.

A. Section 4.100—What is the scope of this subpart?

(Comment 1) Some commenters sought clarification of safety reporting requirements for investigational combination products through guidance or expansion of the scope of the rule, including for investigational combination products that contain a legally marketed article as a constituent part. One commenter asked if the Agency is planning to publish guidance on this issue. One commenter asked that the Agency clearly lay out the responsibilities of the manufacturer of an approved product in the investigational setting.

(Response 1) Safety reporting for investigational products is an important issue for combination products, just as it is for drugs, devices, and biological products. However, this rule only discusses the PMSR requirements for combination products that have received marketing authorization. As stated in § 4.100(b), this rule does not apply to investigational combination products. The safety reporting requirements for investigational new drugs are in 21 CFR 312.32, and the safety reporting requirements for investigational devices are in 21 CFR 812.150. The Agency intends to continue developing guidance relating to this topic for combination products. If you have questions regarding how to comply with the reporting requirements for your investigational combination product, please raise them with the review division in CDER, CBER, or the Center for Devices and Radiological Health (CDRH) that is responsible for reviewing your application, or with the Office of Combination Products (OCP) as needed.

(Comment 2) Some commenters requested that the Agency clarify which entities and products are subject to this rule. Some commenters proposed clarifying that this rule applies only to application holders. Other commenters sought clarification of the rule's applicability to devices marketed under a 510(k) clearance and to non-applicants, including contract manufacturers. One commenter asked for clarification of whether the rule

would apply to component suppliers. One commenter sought clarification of which entities have reporting requirements under this rule for combination products composed of constituent parts marketed under separate applications. One commenter proposed that the Agency prepare a comprehensive list of products by class, product code or other designations that are subject to this rule.

(Response 2) As also discussed in section II (discussions of §§ 4.100 and 4.101), in light of comments received, we have amended this rule to clarify which entities it addresses and what PMSR requirements apply to them. We have clarified that this rule applies only to ''combination product applicants'' and ''constituent part applicants,'' as those terms are defined in § 4.101. We also have clarified the final rule to state which requirements apply to combination product applicants and which apply to constituent part applicants.

Under § 4.101 of this rule, the term ''applicant'' is defined to mean a person holding an application (BLA, NDA, ANDA, PMA, HDE, PDP, *de novo* classification request or premarket notification (510(k)) submission) under which a combination product or constituent part has received marketing authorization (see also definitions for ''application'' and ''device application''); ''combination product'' is defined to mean a product meeting the definition for this term under § 3.2(e); and the term ''constituent part'' is defined as in § 4.2 to mean a drug, device, or biological product that is part of a combination product. The term ''combination product applicant'' is defined to mean an applicant holding the application(s) for a combination product (*i.e.,* either holding the application for the entire combination product or the applications for each constituent part—in some cases the constituent parts of a combination product are marketed under their own marketing authorizations, as might be the case for a cross-labeled combination product for example), and ''constituent part applicant'' is defined to mean an applicant for a constituent part of a combination product the constituent parts of which are marketed under applications held by different applicants. In other words, if a single entity holds the application(s) under which a combination product is marketed, that entity is the combination product applicant; there are no constituent part applicants for that combination product. If instead, one applicant receives marketing authorization to market a constituent part of a combination product and another applicant receives marketing authorization to market another constituent part of that combination product, each of those entities is a constituent part applicant for their constituent part of that combination product. Importers, component manufacturers and suppliers, and any other entities that do not meet the definition of combination product applicant or constituent part applicant, are not subject to this rule.[5]

To illustrate how these definitions are used to determine who is subject to this rule, take the example of a prefilled syringe that received marketing authorization under an NDA or ANDA held by entity A, which purchases the syringe components for this product from entity B, which manufactures the syringe components. Entity A is the only applicant for the combination product, and, therefore, is the combination product applicant and must comply with the provisions of this rule applicable to combination product applicants. There are no constituent part applicants for the combination product. Entity B has no reporting duties under this rule (nor does it have any under part 803 or 806 for the syringe components[6]). (It bears noting that entity A is responsible not only for reporting but also for conducting any necessary quality investigations for the combination product as a whole and may need to coordinate with entity B for such investigations and to address safety issues relating to the device constituent part for the combination product.) If entity B were also to manufacture and separately market under a 510(k) complete, finished, empty syringes, not as part of a combination product, entity B would be subject to reporting requirements under parts 803 and 806, but would not be subject to this rule for this device. Entity A would remain the sole applicant for the combination product, *i.e.,* the combination product applicant. Similarly, if entity B manufactured syringes to supply to entity A for inclusion in kits for which entity A received marketing authorization under an NDA or ANDA, entity A would still be the sole applicant for the combination product, *i.e.,* the combination product applicant, since it holds the NDA or ANDA under which the kits received marketing authorization, and, therefore, only entity A would be subject to this rule.

To take another example, if entity C receives marketing authorization under a PMA or 510(k) to market an imaging device as a constituent part of a cross-labeled combination product, and entity D receives marketing authorization under an NDA or ANDA to market a contrast agent drug as a constituent part of that same cross-labeled combination product, then entities C and D are both constituent part applicants, and both are subject to the provisions of this rule applicable to constituent part applicants. There is no combination product applicant for this product.

Regarding one commenter's request for the Agency to develop a comprehensive list of products subject to this rule, we note that combination products are marketed for diverse medical purposes and include a wide variety of constituent parts, making a comprehensive listing impractical to compile. The definition of combination product is provided at § 3.2(e), and additional information regarding product classification is available on the Web page for OCP. In addition, regulated entities may seek feedback from OCP regarding the classification of their products, including by submitting a request for designation (RFD) in accordance with part 3 to obtain a formal decision from the Agency of whether their product is a drug, device, biological product, or combination product. Guidance for how to prepare an RFD is available on OCP's Web page (*http://www.fda.gov/CombinationProducts/default.htm*).

[5] We note that all entities that are not subject to this rule but that have reporting requirements under other regulations must comply with those requirements, including, as appropriate, with respect to events relating to a combination product. For example, although they are not applicants under this rule, entities marketing unapproved combination products must comply with all applicable PMSR requirements, for instance under 21 CFR part 310, for their products. Similarly, all entities subject to PMSR requirements under parts 314, 600, 606, 803, and 806 must comply with those requirements including for events relating to a combination product.

We note that non-applicants subject to reporting requirements under 314.80 and 600.80 may provide their reports to the applicant rather than the Agency. Similarly, non-applicants subject to reporting requirements under part 803 may request a reporting exemption from CDRH under § 803.19. Accordingly, entities that are not combination product applicants or constituent part applicants, as those terms are defined under this rule (importers, for example), who have reporting duties under part 803 in relation to a combination product may request a reporting exemption, subject to § 803.19. We intend to provide further information on these topics for combination products in guidance.

[6] Parts 803 and 806 apply to, among others, device ''manufacturers,'' and under §§ 803.3 and 806.2, device ''manufacturers'' include entities that manufacture components which are devices that are ready to be used and are intended to be commercially distributed and intended to be used as is, or are processed by a licensed practitioner or other qualified person to meet the needs of a particular patient.

B. Section 4.101—How does FDA define key terms and phrases in this subpart?

(Comment 3) One commenter thought we should clarify what we mean by ''combination product,'' and in particular whether we mean to include products that combine only two or more of the same type of article, such as a drug and a drug.

(Response 3) This rule defines combination products as those products falling within the scope of § 3.2(e). Under § 3.2(e), a combination product must include: A drug and either a device or biological product; a device and either a drug or biological product; a biological product and either a drug or device; or a drug, device, and a biological product. A product that includes only multiple drugs, multiple devices, or multiple biological products is not a combination product as defined in § 3.2(e).

(Comment 4) Some commenters proposed that we clarify what products fall within the scope of ''cross-labeled'' combination products as described in § 3.2(e)(3), with some noting that the preamble to the part 3 regulation (56 FR 58754, November 21, 1991) states that most drugs, devices, and biological products intended for concomitant use are not combination products. One commenter stated that the Agency must issue ''guidance on cross-labeled combination products'' before the effective date of this rule ''for meaningful implementation of this rule.''

(Response 4) While we disagree that we must issue guidance on cross-labeled combination products prior to the effective date for this final rule, we agree that clarifying when separately distributed articles constitute a combination product would be helpful. This issue may be relevant not only for purposes of postmarketing safety reporting, but to all aspects of the regulation of such combination products. Whether a drug, device, and/or biological product together constitute a cross-labeled combination product generally would be determined during the premarket review process, but sponsors may, for example, wish to clarify the matter earlier in product development. If sponsors have questions regarding whether a drug, device, and/or biological product that are intended to be separately distributed, but intended to be used with one another constitute a cross-labeled combination product, we encourage them to contact OCP. If sponsors wish to obtain a formal classification determination from the Agency, they may submit an RFD to OCP (see Comment 2).

FDA intends to publish a guidance that provides recommendations on how to comply with the requirements under this rule for combination products, including cross-labeled combination products.

(Comment 5) Two commenters noted that the definition of ''constituent part'' incorrectly cited § 3.1(e), a non-existent provision, rather than § 3.2(e), which is the citation for the ''combination product'' definition.

(Response 5) We have corrected this error by revising the definition to cite to § 4.2 as ''constituent part'' is defined in that section.

(Comment 6) Some commenters expressed concerns regarding the definition of ''constituent part'' for this rule and asked how constituent parts of combination products compare to components of devices. Some commenters specifically raised concerns that the definition of constituent part would result in certain entities, which are currently not subject to reporting requirements, becoming subject to PMSR requirements under this rule. Some commenters proposed revising the definition for ''constituent part'' and adding a definition for ''component'' in this rule to clarify that components of drugs, devices, and biological products are not constituent parts.

(Response 6) The purpose of the term ''constituent part'' is to identify the drug, device, and/or biological products that are part of a combination product. We believe the questions and concerns raised in these comments are fully addressed by the revisions we have made to the rule. As discussed in sections II.A and B (discussions of §§ 4.100 and 4.101) and in response to Comment 2, we have included definitions of ''combination product applicant'' and ''constituent part applicant,'' and clarified that this rule applies only to these two categories of entities.

The term ''component'' is defined elsewhere in Title 21 for drugs and devices (see 21 CFR parts 210, 212, and 820). Because the term ''component'' is not used in this rule, we determined it is not necessary to define the term as part of this rulemaking.

C. Section 4.102—What reports must you submit to FDA for your combination product or constituent part?

(Comment 7) Several commenters requested that the Agency clarify under what circumstances this rule might require the submission of multiple reports in relation to the same event. In this regard, some commenters sought clarification of what reports ''supersede'' others and under what circumstances the submission of one type of report applicable to a combination product would obviate the need to submit a second type of report for the same event. Another commenter sought clarification of reporting requirements for combination products comprised of constituent parts marketed under separate constituent part applications.

(Response 7) Under this rule, combination product applicants and constituent part applicants must submit reports as required by the PMSR requirements applicable to that applicant under § 4.102. Constituent part applicants are subject to only one set of PMSR requirements under this rule (in addition to the duty to share information with other constituent part applicants for the combination product, in accordance with § 4.103 as discussed in section II.D). Specifically, constituent part applicants must comply only with the PMSR requirements listed under § 4.102(b) based on the application type for their constituent part (*e.g.,* parts 803 and 806 PMSR requirements if the constituent part received marketing authorization under a device application). Combination product applicants also must comply with the PMSR requirements applicable to their combination product under § 4.102(b) based on the application type for their combination product. In addition, combination product applicants must comply with the PMSR requirements identified in § 4.102(c) as applicable based on the types of constituent parts (drug, device, and/or biological product) that the combination product includes.

We have clarified when a single report may suffice to comply with more than one reporting requirement for combination product applicants.[7] If a combination product applicant submits a report that satisfies multiple applicable reporting requirements, including all submission deadlines, for reports required to be submitted in the same manner, then the applicant does not need to submit any additional reports to satisfy those reporting requirements. As an example, a combination product applicant who holds an NDA for a drug-device combination product must submit both

[7] Constituent part applicants are subject only to the PMSR regulations applicable to their type of constituent part (drug, device, or biological product) (in addition to the duty to share information with other constituent part applicants for the combination product, in accordance with § 4.103 of this rule, as discussed elsewhere in this preamble). Accordingly, any circumstances under which they may be able to comply with more than one reporting requirement through a single report are identified in those PMSR regulations (see, *e.g.,* § 806.10(f)).

15-day reports as described in § 314.80 and malfunction reports as described in § 803.50, for an event that triggers both duties. That applicant could satisfy both requirements by submitting a single report within 15 days that includes all of the information that would be required in both types of reports for the event.

(Comment 8) Some commenters sought clarification of the standards for submitting a report under this rule. One commenter requested clarification of whether limitations established under §§ 314.80 and 600.80 for 15-day reporting requirements with respect to postmarketing studies apply to combination products under this rule. Other commenters sought clarification of the standard for when to submit an expedited report under § 314.80 or § 600.80, which state that events must be reported if ''associated with'' the use of the product, ''whether or not considered'' drug or biologic related. Other commenters requested clarification of how to interpret aspects of the device reporting standards in part 803, such as the meaning of ''reasonably suggests'' in relation to whether the event is reportable, the meaning of ''unreasonable risk of substantial harm to the public health'' in relation to 5-day reports, and the meaning of ''caused or contributed,'' a term defined under § 803.3.

(Response 8) The standards in this rule for when to submit a report are those established in the underlying PMSR regulations listed in § 4.102(b) and (c), including any exceptions provided in those underlying regulations. The standards and definitions for the underlying PMSR requirements, such as the definition of ''caused or contributed'' in § 803.3, remain applicable for combination products and their constituent parts.

For instance, if you are a combination product applicant for a drug-device combination product, in deciding whether you must submit a 15-day report for a serious, unlabeled adverse event, you must determine if the event was ''associated with'' the use of the combination product, and if so, you must submit the report regardless of whether you believe the combination product caused or contributed to the event. Similarly, in deciding whether you must submit a malfunction report, you must assess, among other things, whether the information ''reasonably suggests'' that the product malfunctioned. If the information does not ''reasonably suggest'' that a malfunction occurred, then a malfunction report would not be required.

If you are a combination product applicant and your combination product received marketing authorization under a device application, in deciding whether you must submit a serious injury or death report, you must consider whether the information ''reasonably suggests'' that the combination product may have caused or contributed to the death or serious injury in which case you must submit a report even if the event does not trigger submittal of a 15-day report.

In some cases, a report required under § 4.102(c) for a combination product applicant may address a constituent part; in others, it may address the combination product as a whole. For example, correction or removal that triggers a correction or removal report may involve the entire combination product. Bacteriological contamination or a significant change or deterioration to the drug constituent part that triggers a field alert report may relate to an aspect of manufacturing for the drug alone, or may also relate to an aspect of the manufacture of the combination product as a whole that is affecting the drug constituent part. A manufacturing deviation or other event that may affect the safety, purity, or potency of a biological product constituent part and trigger a BPDR may involve the biological product alone, or the combination product as a whole. In all cases, the report should fully present the issues, including with respect to each constituent part and the combination product as a whole, as applicable, to ensure an appropriate response to the event.

(Comment 9) One commenter sought clarification of what adverse events would be considered ''unexpected,'' for purposes of §§ 314.80 and 600.80 with regard to combination products. Another commenter asked whether a serious adverse event that is expected under the drug labeling for a combination product and that does not involve a device malfunction should be reported in an expedited manner. In relation to these issues, other commenters also raised whether this rule will ''require labeling specific to the combination product,'' and whether a distinct understanding of ''expectedness'' would need to be developed with respect to combination products marketed under a device application as opposed to an NDA or BLA due to differences in product review and labeling.

(Response 9) Under this rule, a serious adverse event could trigger a requirement for submission of a 15-day report as described in § 314.80 or § 600.80 by a combination product applicant or a drug or biological product constituent part applicant if the event is not listed in the current FDA-approved labeling for the combination product.

While this rule does not establish any labeling requirements, we recognize that there is a question of what labeling is relevant to a determination of whether an adverse event is unexpected for purposes of 15-day reports described in §§ 314.80 and 600.80, if the constituent parts of the combination product have their own labeling.

Our goal is to ensure timely, complete reporting without creating unnecessary redundancy of reporting. Combination product labeling must meet the labeling requirements for each constituent part, including all required information regarding the risks associated with the use of the combination product. The term ''expectedness'' for purposes of § 314.80 or § 600.80 should be interpreted in the same manner regardless of the type of application(s) under which the combination product received marketing authorization.

Accordingly, in determining whether an adverse experience is unexpected, it is appropriate to consider all of the FDA-approved labeling for the combination product. For example, if the constituent parts of a cross-labeled combination product have their own labeling, and the event is addressed in the labeling for either constituent part, the event is expected for the combination product.

(Comment 10) One commenter proposed that the requirements for submitting postmarketing 15-day reports and MDRs be consolidated for combination products, arguing that this would eliminate duplicative reporting as much as possible and improve efficiency. Other commenters proposed applying only the reporting requirements associated with the application type if it is unclear which constituent part or parts contributed to the event.

(Response 10) We agree with the goal of consolidating requirements and avoiding unnecessary redundancy in reporting for combination products. To this end, we have not required submission of serious injury and death reports under part 803 for combination products that received marketing authorization under a BLA, NDA, or ANDA and that include a device constituent part, based on the premise that the requirements of §§ 600.80 and 314.80, respectively, ensure timely reporting of such events for such combination products. In addition, as discussed in section II.C, discussion of § 4.102(c), we have revised the requirement for combination product

applicants to submit 15-day reports to permit these reports to be submitted within 30 days for combination products that received marketing authorization under a device application, so that the timing for these reports corresponds to the timing for related MDRs for such combination products, specifically serious injury, death, and malfunction reports. Further, we have clarified that applicants need not submit multiple types of reports for the same event if they are able to satisfy the requirements of each in a single report.

As discussed in the preamble to the proposed rule, there are certain significant differences in the PMSR regulations for drugs, devices, and biological products, that address distinct characteristics and potential safety issues associated with the particular type of product, and the public health benefit of these unique provisions would be lost if the combination product were subject solely to the reporting requirements associated with the application type (74 FR 50744 at 50746). For example, malfunction reports can address distinct issues that are not captured by other reporting requirements and need to be submitted for all combination products that include a device constituent part. Specifically, malfunction reports ensure that the Agency receives notice of malfunctions of combination products and device constituent parts if that product or a similar one marketed by that applicant would be likely to cause or contribute to a death or serious injury if the malfunction were to recur.

(Comment 11) One commenter argued that the proposed rule included provisions that could result in inconsistent reporting requirements. This commenter stated that an applicant for a drug-device combination product marketed under a single application would have a duty to address adverse events caused by the device under 15-day reporting requirements while, if a drug-device combination product were marketed under separate applications for the drug and device, the 15-day reporting requirements would extend only to the adverse events caused by the drug.

(Response 11) This final rule clarifies these reporting requirements, which we do not consider to be inconsistent. As the commenter indicates, 15-day reports are required for combination product applicants and for drug and biological product constituent part applicants. The scope of these reporting requirements depends on the type of product (drug, biological product, device, combination product) that is marketed by the applicant. A combination product applicant must report unexpected serious adverse events associated with its product, *i.e.,* the combination product. A drug or biological product constituent part applicant must report unexpected serious adverse events associated with its product, *i.e.,* the drug or biological product, and also must share information it receives with the other constituent part applicant(s) for that combination product in accordance with § 4.103. The other constituent part applicant(s) then must comply with any applicable PMSR requirements for its product with respect to that event, including preparation and submission of reports as appropriate.

(Comment 12) One commenter sought clarification of when the clock starts for a 5-day report (as described in §§ 803.3 and 803.53).

(Response 12) This rule does not affect or change when the clock starts for reporting requirements. The clock starts for a 5-day report for a combination product as it would for a device. As required under § 803.53(a), the clock begins when you become aware that a reportable event necessitates remedial action to prevent an unreasonable risk of substantial harm to the public health. Or, as required under § 803.53(b), the clock begins when you receive a written request from FDA for the submission of a 5-day report. Additional information on the timing requirements associated with 5-day reports is in the CDRH guidance document ''Medical Device Reporting for Manufacturers'' available at *http://www.fda.gov/downloads/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/ucm359566.pdf.*

(Comment 13) One commenter proposed BPDRs as an additional type of required report to include among the specified required reports listed in proposed § 4.103(b), arguing that BPDRs serve a purpose similar to field alert reports and, therefore, would be appropriate to include as well.

(Response 13) We agree with this comment. To ensure the completeness of postmarketing safety reports for combination products that include a biological product constituent part, including combination products that received marketing authorization under an NDA, ANDA, or device application, we are explicitly including BPDRs under § 4.102(c). Similar to field alert reports for drugs, BPDRs address events associated with manufacturing that represent a deviation from current good manufacturing practice, applicable regulations, applicable standards or established specifications, or represent an unexpected or unforeseeable event that may affect the safety, purity, or potency of the product. Therefore, we are adding BPDRs to the list of types of reports under § 4.102(c) that a combination product applicant must submit if the combination product includes a biological product constituent part.

(Comment 14) One commenter sought clarification of the application of part 806 device correction and removal reporting requirements within the proposed PMSR system for combination products. The commenter also sought confirmation that part 806 reporting requirements can be met for combination products through part 803 reporting, as they can for devices that are not constituent parts of combination products.

(Response 14) To address this comment, we have expressly incorporated under § 4.102(c) correction and removal reporting described in § 806.10 and associated recordkeeping requirements described in § 806.20. We have made this change to provide clarity, promote efficiency, and ensure the completeness of postmarketing safety reports for combination products that include a device constituent part.

Part 806 implements, in part, section 519(g) of the FD&C Act (21 U.S.C. 360i), which was enacted due to Congressional concern that device manufacturers were carrying out product corrections or removals without notifying FDA or not doing so in a timely fashion (H.R. Rep. No. 101–808, at 29 (1990); S. Rep. No. 101–513, at 23 (1990)). Congress explained that industry's failure to report corrections and removals, particularly those undertaken to reduce risks associated with the use of a device, ''denies the agency the opportunity to fulfill its public health responsibilities by evaluating device-related problems and the adequacy of corrective actions'' (S. Rep. No. 101–513, at 23), and ''has seriously interfered with the FDA's ability to take prompt action against potentially dangerous devices'' (H. R. Rep. No. 101–808, at 29).

FDA believes that correction and removal reporting and recordkeeping for combination products containing a device constituent part is necessary to protect the public health as envisioned by Congress, by ensuring that the Agency has current and complete information regarding those actions taken by applicants to reduce risks to health caused by their products. Reports of such actions will improve the Agency's ability to evaluate problems and to take prompt action against potentially dangerous combination products, regardless of the type of

application under which the combination product received marketing authorization.

As for all of the PMSR requirements incorporated into this rule by reference, the standards for how to report under § 806.10 and for recordkeeping under § 806.20 are not affected by this rule, including not having to submit an 806 report if the correction or removal is addressed in a report submitted under part 803 (§ 806.10(f)). To enable efficient reporting and avoid unnecessarily redundant reports, this rule provides that part 803 reporting requirements can be satisfied through submission of drug or biological product reports, as explained in response to comment 7. Similarly, part 806 reporting requirements also can be satisfied through submission of an MDR or 15-day report, so long as the report includes all of the information needed to comply with the requirements of part 806 and is filed within 10 working days of initiating the correction or removal, as described in § 806.10.

In circumstances in which a 15-day report or MDR is not triggered but reporting under part 806 is required, reports of corrections or removals should be sent to the FDA in the same manner as for other such reports unless otherwise specified by the Agency. Currently, reports required under part 806 are submitted to the district office for the district in which the reporting facility is located, on the basis that the district office can best monitor the firm's removal or corrections activities in a timely fashion. Combination product applicants for combination products with a device constituent part who initiate a correction or removal that is not required to be reported to FDA under 806.10, must maintain a record of the correction or removal as described in § 806.20.

(Comment 15) Some commenters sought clarification of the applicability of section 227 of the Food and Drug Administration Amendments Act of 2007 (FDAAA) concerning the reporting of malfunctions to FDA, including the use of summary reporting, for Class I devices and for Class II devices that are not permanently implantable, life supporting, or life sustaining. Some commentators sought clarification of how the status of ''life-supporting'' or ''life-sustaining'' would apply to combination products, and whether the intended use of the combination product would determine the status of the device constituent part. One commenter sought clarification of how such a class-based approach would be applied to combination products approved under NDA or BLA, for which no express classification may have been made for the device constituent part.

(Response 15) FDA issued a notice in the **Federal Register** (76 FR 12743, March 8, 2011) clarifying that Class I and II device manufacturers and importers must continue to submit malfunction reports in accordance with part 803, pending future action by FDA to address the malfunction reporting requirements for Class I and Class II devices addressed in FDAAA. Accordingly, combination product applicants for combination products that include a device constituent part, and constituent part applicants for device constituent parts, must comply with part 803 requirements as described in this rule pending such further Agency action. At this time, therefore, malfunction reporting duties are the same for all combination products that include a device constituent part, regardless of whether the combination product or device constituent part would be considered life-supporting or life-sustaining, and regardless of whether the device constituent part would be considered a Class I, II, or III device.

(Comment 16) One commenter sought clarification of whether the periodic reports addressed in proposed § 4.103(c) should be considered ''expedited'' reports for purposes of this rule.

(Response 16) FDA has retitled this provision to ''Other reporting requirements for combination product applicants'' for clarity because it addresses periodic safety reports for drug and biologic-led combination products and also addresses under what circumstances additional reports for device-led combination products are required upon Agency request. This rule does not modify the timing of periodic safety reports. The purpose of § 4.102(d) is to clarify which combination product applicants must submit periodic safety reports and other safety reports, and what information they must include in such reports. The intent of § 4.102(d), in conjunction with § 4.102(a), (b), and (c) is to ensure that the Agency obtains complete, timely postmarketing safety information regarding combination products while avoiding unnecessary burden to applicants.

(Comment 17) One commenter proposed the reorganization of proposed 4.103(b) to parallel the structure of § 4.103(a).

(Response 17) We have not adopted this approach because § 4.102(c) is intended to address a different issue than § 4.102(b). Section 4.102(b) (like proposed § 4.103(a)) addresses requirements that constituent part applicants and combination product applicants must satisfy for their marketed products depending upon the type of application under which it received marketing authorization, and structuring the provision based on the type of application that the applicant holds provides a clear, efficient way to identify such requirements. In contrast, the purpose of § 4.102(c) (like proposed § 4.103(b)) is to state which additional requirements a combination product applicant must satisfy based on the types of constituent parts included in the combination product, which are most clearly and efficiently listed by constituent part type (drug, biological product, or device).

D. Section 4.103—What information must you share with other constituent part applicants for the combination product?

(Comment 18) Some commenters requested clarification of whether proposed § 4.104(a) applied if there were a single application holder for the combination product but the combination product included an article approved under another application held by another entity for independent marketing not related to the combination product. Other commenters asked for clarification of which applicants for constituent parts of combination products could be subject to proposed § 4.104(a) and (b) if the combination product were not approved under a single application. Some commenters proposed an approach under which, if there is a single application for the combination product, the holder of that application would report to FDA in accordance with proposed § 4.103, and FDA would then decide whether any other application holders for articles included in the combination product should be notified and whether to seek additional reports from them.

(Response 18) As reflected in the preamble to the proposed rule (see 74 FR 50744 at 50749 to 50750), proposed § 4.104(a) was intended to apply if the constituent parts of the combination product were being marketed by different entities, including when the constituent parts received marketing authorization under separate applications held by different applicants. As explained in the response to Comment 2, we have revised the rule to apply to combination product applicants and constituent part applicants, in part to clarify which entities are subject to it. Accordingly, we have revised this provision to clarify that it applies solely to constituent part applicants. Section 4.103 of this final rule is not intended to establish any

duties for entities who hold a marketing authorization to market a product not as part of a combination product, even if the same article is part of a combination product for which another entity received marketing authorization (*e.g.,* the second entity might have combined the article with another product to make a co-packaged or single-entity combination product, or market the article for a new use with another product as a cross-labeled combination product).

For example, if entity A holds an approved application to market a cross-labeled combination product that includes a device and a drug, and entity B holds an approved application to market the drug for a different use (*i.e.,* not as part of the combination product), then entity A would be the combination product applicant for that combination product, and neither entity A nor B would be a constituent part applicant for that combination product. Therefore, § 4.103 would not require either entity A or B to share information with the other.

In contrast, if entity A holds an approved PMA to market a device as one constituent part of a cross-labeled combination product (*i.e.,* entity A is the constituent part applicant for the device constituent part of the combination product), and entity B holds an approved NDA to market a drug as the other constituent part of that combination product (*i.e.,* entity B is the constituent part applicant for the drug constituent part of the combination product), then § 4.103 would require both entities A and B to share postmarketing safety information with each other for the specified types of events relating to that combination product.

Regarding the issue of which entities would be subject to proposed § 4.104(b), we have decided to eliminate the provision as unnecessary. Constituent part applicants that receive information from another constituent part applicant must comply with the same duties under § 4.102(b) with respect to this information as they must with respect to any information they receive regarding a postmarketing safety issue for their product, including the duty to submit postmarketing safety reports as required.

(Comment 19) Some commenters argued that the 5-day deadline under proposed § 4.104(a) for information sharing was too short. Some commenters recommended instead tying the timeframe to the nature of the event. Some argued that it is not warranted or useful to share information automatically within a 5-day timeframe because it leaves entities little time to evaluate the information before sharing it and could result in unnecessary redundancy of reporting.

(Response 19) We disagree with these comments. The provision calls for sharing information that the constituent part applicant receives regarding an adverse event relating to the combination product, and does not require the applicant to prepare a report in accordance with any of the regulatory reporting requirements established under parts 314, 600, 606, 803, or 806. The duty under § 4.103 does not require a constituent part applicant to analyze, investigate, or organize the information or take any other actions beyond forwarding the information as received to the other constituent part applicant(s) for the combination product and maintaining certain records. Accordingly, we believe 5 calendar days is a reasonable deadline that does not impose undue burden, while enabling timely reporting by the constituent part applicant(s) with whom the information is shared.

Such an expedited sharing of information is important to ensure timely, complete reporting with regard to adverse events that may have been brought to the attention of only one constituent part applicant for a combination product. Enabling each constituent part applicant to review in a timely manner the information related to the combination product enhances efficiency and thoroughness of reporting because each constituent part applicant evaluates the information with respect to its own constituent part and with regard to the reporting requirements applicable to that type of constituent part.

(Comment 20) Some commenters stated that the information sharing requirements of proposed § 4.104 should be eliminated; some said these requirements are unnecessary depending on the nature of the event, and likely to produce unnecessary, duplicative reporting. Some commenters proposed that the information sharing requirements under proposed § 4.104 should apply only if the event is potentially reportable and that proposed § 4.104(a) should not apply if the applicant determines that the event does not concern the other constituent part(s) of the combination product. Other commenters proposed that if it can be determined that the event is attributable to only one constituent part, then reporting requirements should apply only to the application holder for that constituent part. Some commenters proposed that the rule be revised such that, in the event that constituent parts of a combination product are being marketed under separate applications, and it is unclear which constituent part(s) contributed to the event, the rule would require compliance only with the reporting requirements for the constituent part providing the primary mode of action for the combination product.[8] One commenter argued that requiring separate reporting to the centers responsible for each constituent part would be overly burdensome. Some commenters sought clarification for when an applicant should report to another applicant or to FDA under proposed § 4.104(a). Some commenters requested clarification regarding when FDA would notify application holder(s) for the constituent part(s) of a combination product if FDA receives information from another application holder for that combination product. One commenter proposed eliminating the option of sharing the information with FDA arguing that including FDA in the process would slow communications and not provide any benefit. One commenter proposed that subsequent information received relating to the same event be shared only with FDA or with another applicant in the same time-frame as a report would be required to be submitted to FDA.

(Response 20) The best way for the Agency to receive complete reports for combination products is to ensure that each constituent part applicant has an opportunity to review the information received regarding the specified types of events (serious injuries, deaths, and other adverse events) for the combination product. Accordingly, we disagree with the proposals to narrow or eliminate the information sharing requirement. We do not agree this requirement will produce unnecessarily duplicative reporting. The trigger for a constituent part applicant to submit a report to the Agency is not the mere act of receiving information but a determination that the event is reportable under the PMSR requirements applicable to that applicant. The Agency may receive multiple reports regarding the same event because of § 4.103 (formerly § 4.104 in the proposed rule), but this approach ensures that the Agency has the benefit of each constituent part applicant's expertise and familiarity regarding its own constituent part in

[8] The term ''primary mode of action'' is defined at § 3.2 as the mode of action that provides the most important therapeutic action of the combination product, *i.e.,* that is expected to make the greatest contribution to the overall therapeutic effects of the combination product.

assessing the information with respect to that constituent part.

Regarding the issue of sharing information with FDA as opposed to other constituent part applicants, we have eliminated the option of sharing information with FDA as unnecessary and inefficient. We agree that timely, complete reporting by each constituent part applicant is best assured by having constituent part applicants share information they receive directly with one another.

We also agree that when any constituent part applicant shares information relating to an event with the other constituent part applicant(s), the information sharing duty ends with respect to that event. When information is shared, each constituent part applicant must investigate and report to the Agency, under the applicable PMSR requirements, regarding the event as they would for any event for which they receive information. The constituent part applicants may find it helpful to share with one another additional and followup information they receive or develop relating to the event, but this is not required by this rule.

(Comment 21) Some commenters stated that disclosure of event information to another company might involve disclosure of confidential and proprietary information. One commenter proposed that the information be shared with the other applicant if practicable and if it does not raise concerns regarding confidentiality or proprietary information.

(Response 21) Section 4.103 does not require the sharing of trade secret or confidential commercial information with other constituent part applicants. Further, we have revised this section to specify that the information required to be shared concern events that involve a death or serious injury as described in § 803.3, or an adverse experience as described in § 314.80(a) or § 600.80(a). Such information is likely to be received from health care facilities, consumers, and other sources, and therefore, unlikely to contain trade secret or confidential commercial information.

In regard to the Federal Health Insurance Portability and Accountability Act (HIPAA), we note that HIPAA only applies to covered entities (*i.e.,* health plans, covered health care providers, and health care clearinghouses), and their business associates, and thus is unlikely to apply to constituent part applicants. Moreover, even if a constituent part applicant is a HIPAA covered entity or business associate, we note that HIPAA permits the disclosure of protected health information (PHI), such as information that identifies a particular patient, if such disclosures are required by other law. The HIPAA Privacy Rule permits the use or disclosure of PHI ''to the extent that such use or disclosure is required by law and the use or disclosure complies with and is limited to the relevant requirements of such law.'' 45 CFR 164.512(a)(1). Because § 4.103 of this rule requires constituent part applicants to share with each other information received, including PHI, regarding certain events related to the combination product, a constituent part applicant, which is subject to HIPAA, would be permitted by HIPAA to make such disclosure.

(Comment 22) Some commenters sought clarification of the start time for meeting the reporting deadlines under proposed § 4.104(b). One commenter recommended that it be the day the information is received from the reporter subject to proposed § 4.104(a).

(Response 22) While the content of proposed § 4.104(b) has been removed from the rule as unnecessary, we note that the start time for determining the submission deadline for postmarketing safety reports is the same as for information received from any other source, and depends on the type of report and the regulation from which the requirement for the report arises.

(Comment 23) Some commenters asked for the Agency to provide examples of the application of proposed § 4.104, including guidance on what information to include in reports under this provision. One commenter asked for guidance on the process for submitting information to the Agency under proposed § 4.104.

(Response 23) Section 4.103 requires the transmittal of information received. Constituent part applicants do not need to modify, organize, or evaluate the information; they must only forward the information to the other constituent part applicant(s) for the combination product. As discussed in Comment 18, we have eliminated the alternative of sharing the information with FDA as unnecessary and inefficient. We intend to provide additional information regarding how to comply with § 4.103 in guidance.

E. Section 4.104—How and where must you submit postmarketing safety reports for your combination product or constituent part?

(Comment 24) Some commenters sought clarification of how to comply with the submission requirements for different types of reports for a combination product. One commenter proposed that the rule expressly state reports be submitted to ''the approved application'' if there is only one reporter for the combination product. Another proposed that reports for a combination product marketed under one application be submitted to the lead center, while those for combination products marketed under separate applications for different constituent parts in some, but not all, cases be submitted to the center responsible for the particular constituent part's application. One commenter noted a need to clarify how to make electronic submissions for combination products.

(Response 24) As discussed in section II.E (discussion of § 4.104), we have revised the rule to clarify how and where to submit postmarketing safety reports for constituent part applicants and for combination product applicants. In keeping with comments received, § 4.104(a) requires constituent part applicants to submit their reports in the same manner as any other applicant holding the same kind of application for a product (*e.g.,* a constituent part applicant holding a PMA for a device constituent part must submit reports in the same manner as any other applicant holding a PMA for a device).

We have drawn a distinction between types of postmarketing safety reports submitted by combination product applicants. With regard to ICSRs, we have adopted an approach consistent with comments suggesting that reports be submitted to the lead center and in accordance with the procedures associated with the application type for the combination product. Specifically, § 4.104(b) requires such combination product applicants to submit 5-day, 15-day, and malfunction reports, if required for their product, in the manner described in the PMSR regulations associated with the application type for the combination product. For example, if the combination product received marketing authorization under an NDA, then 5-day, 15-day, and malfunction reports, and all followup reports, would be submitted how and where described in part 314 for 15-day reports and followup reports to them. This approach promotes efficiency and ensures that all such reports relating to the same event are pooled together, and that multiple ICSR reporting requirements for the same event can be satisfied through a single submission (so long as that submission meets the content and deadlines for each reporting requirement).

At the same time, it is appropriate for specific components of the Agency to have the lead for addressing certain distinct types of reports, in light of such factors as the issues raised in the

reports, logistical considerations for Agency response, and efficient engagement of appropriate Agency expertise. Specifically, correction or removal reports, field alert reports, and BPDRs are currently directed to specific Agency offices to ensure efficient, effective assessment and response. Accordingly, under § 4.104(b), all combination product applicants must direct field alert reports and BPDRs to the same Agency components that currently receive them, in accordance with the underlying regulations for these reports. For example, if the combination product includes a biological product, BPDRs must be submitted to the appropriate component within CDER or CBER in accordance with parts 600 and 606, based upon which of these two Centers would ordinarily have jurisdiction over the biological product included in the combination product. Part 806 does not specify where to submit correction or removal reports. Accordingly, neither does this rule, but applicants currently should submit them to the appropriate FDA district office, unless the information is included in an ICSR for the event, as explained in response to Comment 14. See Recalls, Corrections and Removals (Devices) (*http://www.fda.gov/medicaldevices/deviceregulationandguidance/postmarketrequirements/recallscorrectionsandremovals/default.htm*).

The Agency intends to provide guidance concerning procedural and technical details of complying with these requirements, including how to comply with the Centers' electronic reporting requirements. We seek to take best advantage of information technology and other resources to maximize the benefit of PMSR while minimizing the burden.

(Comment 25) Several commenters sought guidance regarding the content, format, and completeness of applicable forms, and appropriate terminology to use with respect to different types of events and constituent parts for combination products.

(Response 25) Applicants should provide relevant information in as complete and clear a manner as possible, consistent with the parameters of the FDA form. Also, we intend to update relevant FDA forms, if appropriate, including the instructions for how to complete them, and to develop guidance that provides recommendations for meeting PMSR requirements under this rule.

F. Section 4.105—What are the postmarketing safety reporting recordkeeping requirements for your combination product or constituent part?

(Comment 26) A commenter proposed that the same recordkeeping requirements apply to all types of reports for a combination product.

(Response 26) We agree with the premise that a uniform set of record retention requirements apply to all reports relating to a combination product marketed by a single applicant, *i.e.,* a combination product applicant. Accordingly, § 4.105(b) requires that combination product applicants maintain all PMSR records for the longest time period established in the recordkeeping requirements associated with the PMSR provisions applicable to the combination product. This approach allows combination product applicants to maintain all these PMSR records for a product under one record retention scheme, and helps ensure that potentially interrelated records all remain available for events and for the combination product. Because both parts 314 and 600 currently require record retention for 10 years, at this time, all combination product applicants must retain PMSR records for at least 10 years.

In contrast to combination product applicants, constituent part applicants market only a drug, device, or biological product rather than a complete combination product. This distinction is acknowledged and reflected in the approach taken throughout the rule in establishing PMSR requirements for constituent part applicants. The requirements for record retention by constituent part applicants align with the overall approach of the rule. Specifically, § 4.105(a)(1) requires that constituent part applicants comply with the underlying recordkeeping requirements, including timeframes, established in the PMSR requirements identified in § 4.102(b) as applicable based on their product's application type. This ensures that constituent part applicants comply with the same requirements as any other applicant marketing a drug, device, or biological product.

The essential difference between constituent part applicants and other applicants for drugs, devices, and biological products is the distinct relationship of constituent part applicants' products to one another as parts of a combination product. The information sharing requirements of § 4.103 reflect this distinct relationship and the overarching need for coordination between constituent part applicants to ensure the safety and effectiveness of the combination product. As explained in section II (discussion of § 4.103), § 4.103(b) includes an explicit recordkeeping requirement in relation to the information constituent part applicants are required to share with one another under § 4.103(a). Section 4.103 is intended to ensure complete, timely reporting for the combination product as a whole. To support this goal, while at the same time aligning the record retention requirement for the records required under § 4.103(b) with the overall approach of this rule for constituent part applicants, § 4.105(a)(2) requires constituent part applicants to maintain the specified records of information shared for the retention period established in the PMSR recordkeeping requirements for that constituent part applicant's constituent part if there is only one period established, and the longest recordkeeping requirement established in those requirements if those requirements establish more than one record retention period. We believe that this retention period will ensure that the information remains available to the applicants and the Agency for a sufficiently long period to inform investigation of events and responses to them for the combination product, and enable the Agency to assess compliance with § 4.103, without imposing undue burden on constituent part applicants. This approach also avoids the complexities of tying the retention period for records relating to the information sharing provision to the record retention requirements applicable to the other constituent part applicant(s).

G. Alternate Approaches

(Comment 27) Several commenters proposed that the Agency adopt a wholly different PMSR approach for combination products, with some supporting the Agency's proposed approach as an interim measure until a unified framework is developed either for combination products in particular or for all FDA-regulated medical products. Some commenters proposed adopting the most stringent set of PMSR requirements applicable to the combination product. Others called for developing a harmonized approach for combination products, with one commenter calling for a public meeting to address the issue and another for such a system to be put in place after a single reporting porthole is established for all regulated products. One commenter called for FDA to develop a

PMSR system for combination products consistent with Global Harmonization Task Force guidelines, International Organization for Standardization standards, and European Commission guidelines. This comment emphasized that such other approaches rely on the ''primary intended action'' of the combination product to determine what PMSR requirements should apply. Some commenters recommended applying only the reporting requirements applicable to the application type. One commenter emphasized challenges of complying with multiple reporting systems.

(Response 27) The Agency has considered alternate approaches to PMSR for combination products, including in relation to the public hearing held on November 25, 2002, and the workshop held on July 8, 2003. We have considered such options and presented in the preamble (74 FR 50744 at 50745 to 50747) the Agency's reasons for pursuing the approach described in the proposed rule. In finalizing this rule, FDA again determined that the approach described in this rule allows FDA to receive complete, timely postmarketing safety information regarding combination products, which is necessary to assure the continued safety and effectiveness of such products, using established standards and systems, while minimizing unnecessary duplication and burdens on combination product and constituent part applicants.

H. Guidance and Agency Internal Coordination and Training

(Comment 28) Various commenters requested that the Agency address implementation of this rule through guidance. Commenters noted the importance of ensuring that this rule is as clear as possible. Most commenters requested that the guidance present how the rule would apply to different types of combination products and different types of events. Several commenters requested that this guidance include a decision tree, flow charts, tables, algorithm, or other organizational and explanatory tools to clarify how to comply with the reporting requirements applicable to a combination product. One commenter asked for guidance on whether to cross-reference reports submitted to different locations, such as field alert reports and 15-day reports. Some commenters proposed that the Agency issue guidance prior to publication of this rule. One commenter called for the guidance to address how Agency personnel will coordinate to ensure compliance and how the Agency will monitor implementation of this rule's requirements. One commenter called for the Agency to ensure that the lead center has appropriate expertise to address adverse event reports for a combination product and that training, guidance, and cross-assignment of staff might be helpful in this regard. Another commenter proposed that the Agency take appropriate measures to ensure timely, effective communication between Agency components with respect to postmarketing safety reports for combination products. Some commenters also noted the importance of appropriate training and other Agency personnel considerations.

(Response 28) We intend to publish guidance that provides recommendations on how to comply with the requirements under this rule for combination product applicants and constituent part applicants, including such matters as cross-referencing of reports. We appreciate the comments received on this issue and look forward to further feedback in response to the publication of this final rule and of the draft guidance we may issue. With regard to the requests that we issue guidance prior to issuance of this final rule, we clarified and revised the rule in certain respects, and we did not believe it would be appropriate to anticipate the content of this final rule by publishing guidance concerning its content prior to its finalization.

We agree that appropriate training of Agency staff and timely, effective coordination among Agency components to address postmarketing safety reports for combination products are important efforts that the Agency continues to address.

I. Effective Date and Compliance Dates

(Comment 29) Some commenters proposed that the Agency delay the effective date for this rule, arguing that 180 days would not provide sufficient time to take steps to come into compliance, including to develop, validate, and implement new systems, alter procedures and commercial arrangements, and train staff as needed to comply with this rule's requirements. Some proposed making the effective date 1 year after issuance. One commenter proposed 2 years.

(Response 29) We do not agree that it would be appropriate to delay the effective date of this rule. However, in light of these comments, and in consideration of the costs of this rule as discussed in section VIII, we have decided to extend the compliance date with respect to certain provisions of the rule for combination product applicants and constituent part applicants, for a period of 18 months following the effective date of this rule.

The duties for both combination product and constituent part applicants under § 4.102(a) and (b), and for constituent part applicants under §§ 4.104(a) and 4.105(a)(1) are generally the same as for any other entity holding such an application for its product, and we expect all applicants subject to this rule already to be in compliance with these provisions for their products as these provisions generally refer to existing regulations that such applicants have generally followed (see 74 FR 50744 at 50745). Accordingly, the effective date for the rule is 30 days after the date of its publication and the compliance date for these provisions is the same as the effective date for this rule. However, with respect to the requirements of § 4.102(c) and (d) for combination product applicants, the requirements of §§ 4.103 and 4.105(a)(2) for constituent part applicants, and the requirements of §§ 4.104(b) and 4.105(b) for combination product applicants, the compliance date will be 18 months following the effective date of this rule.

J. Miscellaneous

(Comment 30) Some comments concerned coordination of various Agency activities related to adverse events including then pending Agency rulemakings concerning electronic reporting, adverse event report database management and searchability, forms referenced in this and other rulemakings, and harmonization efforts with foreign regulatory agencies.

(Response 30) The Agency has taken into account such coordination considerations. Pending FDA rulemakings were one consideration in deciding to streamline this rule by using cross-references to requirements of the underlying regulations listed in § 4.102, without repeating the substance of those requirements. As noted in section II (see discussion of § 4.101), this approach will minimize the need to revise this regulation should the underlying regulations be amended. Similar considerations have informed our determination to reference in § 4.104 the reporting procedures required in the underlying regulations. As discussed in Response 25, we intend to update relevant FDA forms, if appropriate, including the instructions for how to complete them, and to develop guidance that provides recommendations for meeting PMSR requirements under this rule.

With respect to international harmonization, we remain committed to such efforts, including with respect to PMSR requirements for combination

products. A practical challenge for combination products in particular is that international collaboration and harmonization efforts are at an early stage for these products. At the same time, there is a current need to clarify FDA's PMSR requirements for this class of products. We have taken an approach that integrates underlying PMSR approaches for drugs, devices, and biological products, which have benefited in various respects from international harmonization efforts. We are committed to continuing to work with our foreign counterparts on PMSR and other issues for combination products.

IV. Legal Authority

The Agency derives its authority to issue the regulations in proposed part 4 subpart B from 21 U.S.C. 321, 331, 351, 352, 353, 355, 360, 360b–360f, 360h–360j, 360*l,* 360hh–360ss, 360aaa–360bbb, 371(a), 372–374, 379e, 381, 383, and 394, and 42 U.S.C. 216, 262, 263a, 264, and 271. For a drug approved under an NDA or an ANDA, section 505(k) of the FD&C Act (21 U.S.C. 355) requires the applicant to submit reports concerning clinical experience and other data or information with respect to the drug to FDA and to establish and maintain related records. Section 505(k) provides the Agency with authority to specify by regulation which data or information must be submitted in such reports. FDA used this statutory authority, among others, in issuing the Agency's regulation concerning postmarketing reporting of adverse drug experiences and other postmarketing reports including field alert reports. The regulations for postmarketing reporting of adverse drug experiences and for field alert reports are set forth in § 314.80 and § 314.81, respectively.

For a device, section 519 of the FD&C Act requires manufacturers and importers to establish and maintain records, make reports, and provide information, as FDA may reasonably require to assure that such device is not adulterated or misbranded and to otherwise assure its safety and effectiveness. FDA utilized this statutory authority, in addition to other authorities, in issuing the MDR regulation and the correction and removal regulation, found in parts 803 and 806, respectively.

For a biological product, section 351 of the Public Health Service Act (PHS Act) (42 U.S.C. 262) requires FDA to approve a BLA on the basis of a demonstration that the product is safe, pure, and potent (section 351(a)(2)(C) of the PHS Act). Section 351(a)(2)(A) of the PHS Act requires FDA to establish by regulation requirements for the approval, suspension, and revocation of BLAs. Section 351(b) of the PHS Act also prohibits falsely labeling a biological product. FDA used section 351of the PHS Act as statutory authority, along with other sources of statutory authority, in issuing the postmarketing reporting of adverse experiences regulation for biological products. This regulation is found in § 600.80. In proposing § 600.80, FDA indicated that information made available to the Agency through the adverse experience reports contemplated under § 600.80 could establish that a biological product is not safe or properly labeled and that the license should be revoked (55 FR 11611 at 11613, March 29, 1990). FDA used section 351 of the PHS Act as statutory authority, along with other sources of statutory authority, in issuing the BPDR regulations for biological products. These regulations are found in §§ 600.14 and 606.171. In issuing these regulations, FDA stated that these reports would enable FDA to respond when public health may be at risk, provide FDA with uniform data to track trends that may indicate broader threats to the public health, and help ensure facilities are taking appropriate actions to investigate and correct biological product deviations. (65 FR 66621 at 66623, November 7, 2000).

There is considerable overlap in the PMSR requirements for drugs, devices, and biological products. The regulatory schemes for adverse event reporting for drugs and biological products are identical in most respects. The MDR regulation has many similarities to the drug and biological product PMSR regulations. Overall, the regulatory framework governing PMSR for each type of product is intended to achieve the same general goals.

Nevertheless, these three sets of regulations differ somewhat because each is tailored to the characteristics of the types of products for which it was designed. For instance, each set of regulations contains certain specific requirements pertaining to particular products or types of postmarketing safety events that are not found in the other sets of regulations. The additional requirements for combination product applicants that FDA considers necessary are as follows: 5-day reports, 15-day reports, malfunction reports, correction or removal reports, field alert reports, and BPDRs. As set forth in this rule, it is crucial that these additional requirements be met if they apply.

The legal framework underlying this proposed rule is twofold. The first is that drugs, devices, and biological products do not lose their discrete regulatory identities when they become constituent parts of a combination product. In general, the PMSR requirements specific to each constituent part of a combination product also apply to the combination product itself. Therefore, all combination products are subject to at least two sets of PMSR requirements. For example, in the case of a device and biological product combination product, the PMSR requirements applicable to devices and to biological products would apply to the combination product. However, this rule is intended to clarify that a combination product applicant may comply only with the PMSR requirements associated with the application under which the combination product received marketing authorization and certain, specified PMSR requirements associated with the other constituent part(s). Taking the example of a device-biologic combination product, if the combination product has an approved BLA, the combination product applicant (holder of the BLA) would use parts 600 and 606 to make postmarketing safety reports for the combination product. In addition, as explained in this rule, the combination product applicant must also comply with all of the specified requirements that apply to the product. Thus, in this case, the combination product applicant must also comply with the reporting requirements for 5-day reports, correction or removal reports, and malfunction reports if the criteria for such reports are met. Under this legal framework, if you demonstrate compliance with the applicable requirements of the set of regulations (*e.g.,* biological product PMSR) associated with the approved application (*e.g.,* BLA), and comply with any applicable specified additional provisions (*e.g.,* 5-day reports, correction or removal reports, and malfunction reports), you will be considered to have satisfied all applicable PMSR requirements associated with the combination product, including its constituent parts.

The legal authority for this streamlining approach is based on the following. Although combination products retain the regulatory identities of their constituent parts, the FD&C Act also recognizes combination products as a category of products that are distinct from products that are solely drugs, devices, or biological products. For example, section 503(g)(4)(A) of the FD&C Act (21 U.S.C. 353b(g)(4)(A)) requires OCP to ''designate'' a product as a combination product as well as to

ensure ''consistent and appropriate postmarket regulation of like products subject to the same statutory requirements.'' Further, section 563 of the FD&C Act (21 U.S.C. 360bbb–2) governs the ''classification'' of products as ''drug, biological product, device, or a *combination product* subject to section 503(g)'' (emphasis added). In this respect, the FD&C Act identifies a combination product as a distinct type of product that could be subject to specialized regulatory controls. In addition, for the efficient enforcement of the FD&C Act under section 701 (21 U.S.C. 371), FDA has the authority to develop regulations to ensure sufficient and appropriate ongoing assessment of the risks associated with combination products.

The second legal framework for this rule is founded on the postmarket safety reporting regulatory scheme associated with the application under which the combination product is approved, plus any applicable requirements associated with the additional six specified report types listed in this rule. Although similar in effect to the previously discussed framework, this approach is based on the legal authority FDA used to issue each of its three existing regulations for postmarketing safety reporting for drugs, devices, and biological products. In the context of this rule, such authority would include, but not be limited to, sections 505(k) and 519 of the FD&C Act, and section 351 of the PHS Act. Under this authority FDA is now issuing additional requirements based on the six additional specified report types. This means that in the case, for example, of a device-biologic combination product, approved under a BLA, section 351 of the PHS Act (in addition to other applicable authorities) would provide the authority for FDA to require postmarketing safety reporting in accordance with parts 600 and 606. Furthermore, section 351 of the PHS Act also would provide the authority for the Agency to require additional reporting for the device-biologic combination product (5-day reports, malfunction reports, and correction or removal reports) if the criteria for such reports are met.

V. Analysis of Environmental Impact

FDA has determined under 21 CFR 25.30(a), 25.30(h), and 25.31(a) through (c) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. Paperwork Reduction Act of 1995

This final rule contains information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The title, description and respondent description of the information collection provisions are shown in the following paragraphs with an estimate of the annual reporting and recordkeeping burdens. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

Title: Postmarketing Safety Reporting for Combination Products.

Description: This final rule describes the PMSR requirements for combination products. In the development of this final rule, the Agency considered the fact that a combination product is subject to the PMSR provisions applicable to its constituent parts (drug, device, and/or biological product). The Agency reviewed each set of regulations governing PMSR for new drugs (part 314), biological products (parts 600 and 606), and devices (parts 803 and 806). The review determined that each set of regulations contains many substantially similar requirements.

Given the broad similarities in the PMSR regulations, the Agency determined that, to ensure consistent, appropriate PMSR for combination products that received marketing authorization under a single application, we need only require that combination product applicants comply with the regulatory requirements for PMSR associated with the application, and with additional, specified provisions from the other set(s) of PMSR requirements applicable to the other constituent part(s) of the combination product. This approach recognizes and addresses PMSR considerations relevant to each type of constituent part of a combination product while avoiding unnecessary redundancy and burden.

Specifically, the additional reporting requirements specified in this rule, along with any associated followup reports, are: (1) Submission of a ''5-day report'' as described in § 803.53 if the combination product contains a device constituent part; (2) submission of a ''malfunction report'' as described in § 803.50 if the combination product contains a device constituent part; (3) submission of a ''correction or removal report'' as described in § 806.10 if the combination product contains a device constituent part; (4) submission of a ''field alert report'' as described in § 314.81 if the combination product contains a drug constituent part; (5) submission of a 15-day report as described in § 314.80 or § 600.80 if the combination product contains a drug or biological product constituent part, respectively; and (6) submission of a ''BPDR'' as described in §§ 600.14 and 606.171 if the combination product contains a biological product constituent part.

For combination products for which the constituent parts received marketing authorization under separate applications held by different entities, the Agency has determined that compliance with the PMSR requirements associated with the application type for the constituent part is sufficient. In addition, constituent part applicants must share safety information they receive related to certain events with the other constituent part applicant(s).

We note that the PMSR information collections for drugs, biological products, and devices found in §§ 314.80, 314.81, 600.80, 600.81, 606.170, 606.171, 803.50, 803.53, 803.56, 806.10, and 806.20 have already been approved and are in effect. The pertinent PMSR information collection provisions for § 314.80(c) and (e), as well as for § 314.81(b) are approved under OMB control numbers 0910–0001, 0910–0230, and 0910–0291. The information collection provisions for §§ 600.80 and 600.81 are approved under OMB control number 0910–0308. Those for § 606.170 are approved under OMB control number 0910–0116. Those for § 606.171 are approved under OMB control number 0910–0458. The information collection provisions for §§ 803.50, 803.53, and 803.56 are approved under OMB control numbers 0910–0291 and 0910–0437. The information collection provisions for §§ 806.10 and 806.20 are approved under OMB control number 0910–0359.

While this rule serves to permit combination product applicants to comply with a streamlined subset of the PMSR requirements applicable to all of their constituent parts, we recognize that some combination product applicants have been complying with only the reporting requirements associated with their application type. As a result, the information collection described here refers to the reporting and recordkeeping requirements for the six additional report types specified in this rule. It also refers to the new information sharing and related recordkeeping requirement applicable to constituent parts marketed under separate applications.

These requirements are necessary to ensure: (1) Consistent PMSR for combination products and constituent parts, (2) that the Agency receives necessary information to promote and protect the public health, (3) appropriate ongoing assessment of risks, and (4) consistent and appropriate postmarketing regulation of combination products. This rule enables applicants to comply with these requirements while avoiding unnecessary duplicative reporting, for example, by limiting the number of PMSR requirements with which combination product applicants must comply and by authorizing applicants to submit only a single, complete report for an event even if multiple reporting duties apply to the same event.

Description of Respondents: This rule applies to combination product applicants and constituent part applicants. Any person holding the application(s) under which a combination product received marketing authorization is a combination product applicant. Any person holding an application under which a constituent part (drug, device, or biological product) of a combination product received marketing authorization is a constituent part applicant if the other constituent part received marketing authorization under an application held by a different person.

FDA estimates the burden for this information collection as follows:

TABLE 3—ESTIMATED ANNUAL REPORTING BURDEN

21 CFR section	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
4.102(c)(1)(i) Submitting 5-day reports	15	98	1,470	1.21	1,779
4.102(c)(1)(ii) Submitting malfunction reports	15	98	1,470	1.21	1,779
4.102(c)(1)(iii) Submitting correction or removal reports	20	1	20	10	200
4.102(c)(2)(i) Submitting field alerts	92	10.8	994	8	7,949
4.102(c)(2)(ii) and (3)((ii) Submitting 15-day reports	1	1	1	1	1
4.102(c)(3) Submitting BPDRs	24	6	144	2	288
4.102(d)	1	1	1	1	1
Totals *					11,709

TABLE 4—ESTIMATED ANNUAL RECORDKEEPING BURDEN

21 CFR section	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
4.103(b)/4.105(a)(2) Records of information shared by constituent part applicants.	33	18	594	.1 (6 minutes)	59
4.105(b) additional record-keeping by device-led combination products.	279	.45	126	.5 (30 minutes)	63
4.105(b) additional recordkeeping by drug and biologic-led combination products.	186	6	1,116	.5 (30 minutes)	558
Totals					680

TABLE 5—ESTIMATED ANNUAL THIRD PARTY DISCLOSURE BURDEN

21 CFR section	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours
4.103 Sharing information with other constituent part applicants.	33	18	594	.35 (21 minutes)	208

Based on FDA's experience regarding receipt of postmarketing safety reports for combination products, the Agency estimates that there will be 401 reporters (who will keep corresponding records) submitting a total of 11,709 reports annually under § 4.102(c) and (d) and 33 reporters (who will keep corresponding records) sharing information eighteen times annually under § 4.103. Further, FDA estimates, based on its experience with information collection regarding postmarketing safety reporting provisions for drugs, biological products, and devices, that each report (or information sharing event under § 4.103) may take from approximately 20 minutes to 10 hours, depending on report type, to prepare and submit, and from approximately 6 to 30 minutes to fulfill the corresponding recordkeeping requirements. FDA believes that there are no significant new operating and maintenance costs associated with this collection of information because, in order to legally market their products, all applicants are required to develop and maintain systems for reporting and maintaining records of postmarketing safety events. Therefore, appropriate mechanisms for PMSR should already be in place, and combination product applicants and constituent part applicants will accrue no significant additional costs to fulfill the requirements set forth here.

In addition, we estimate that there will no significant new costs for 15-day reporting (§ 4.102(c)(2)(ii) and (3)(ii)) and periodic reporting (§ 4.102(d)(1)) under the rule because there is significant overlap between the types of events that trigger a 15-day report for drugs and biological products and the

events that trigger expedited reporting for devices. We also estimate there will be no significant new costs for other non-expedited reporting (§ 4.102(d)(2)) because of the expected rarity of the agency seeking such additional information.

Before the effective date of this final rule, FDA will publish a notice in the **Federal Register** announcing OMB's decision to approve, modify, or disapprove the information collection provisions in this final rule. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the Agency displays a currently valid OMB control number.

VII. Federalism

FDA has analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency has concluded that the final rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.[9]

VIII. Economic Analysis of Impacts

A. Introduction

We have examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). We have developed a comprehensive Economic Analysis of Impacts that assesses the impacts of the final rule. We believe that this final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because the final rule essentially describes the application of existing postmarketing safety reporting regulations to certain combination products, we certify that the final rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before issuing ''any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year.'' The current threshold after adjustment for inflation is $146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This final rule would not result in an expenditure in any year that meets or exceeds this amount.

The full analysis of economic impacts is available in the docket for this final rule at *http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/default.htm.*

B. Summary of Costs and Benefits

The final rule will generate one-time administrative costs from reading and understanding the rule, assessing current compliance, modifying existing standards of practice, changing storage and reporting software, and training personnel on the requirements under this rule. Firms that do not currently comply with the reporting requirements specified by the final rule will also incur annual reporting costs from the submission of field alert reports, 5-day reports, malfunction reports, correction or removal reports, and biological product deviation reports, as applicable. The annualized total costs of the rule are between $1.36 and $2.68 million at a 7 percent discount rate and between $1.35 and $2.65 million at a 3 percent discount rate.

The final rule will benefit firms through reduced uncertainty about the reporting requirements for their specific combination product and through decreased potentially duplicative reporting. The final rule will also benefit public health by helping to ensure that important safety information is submitted and directed to the appropriate components within the Agency, so that we may receive and review this important information in a timely manner for the protection of public health.

TABLE 6—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF FINAL RULE

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)	
Benefits:							
Annualized				2016	7	10	
Monetized ($millions/year)				2016	3	10	
Annualized				2016	7	10	
Quantified				2016	3	10	

[9] The rule clarifies which PMSR requirements apply when drugs, devices, and biological products are used to create combination products. The Agency notes that there are no express preemption provisions of the FD&C act applicable to prescription drugs or biological products. Section 521 of the FD&C Act (21 U.S.C. 360k) contains an express preemption provision that applies to devices; nonetheless, the Supreme Court concluded in *Medtronic, Inc.* v. *Lohr,* 581 U.S. 470, 500–01 (1996), that requirements not applicable to a particular device do not preempt State law under section 521. Device adverse event reporting requirements, like the good manufacturing practice requirements at issue in the *Medtronic* case, are general requirements that do not preempt under section 521 of the FD&C Act.

TABLE 6—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF FINAL RULE—Continued

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)

List of Subjects in 21 CFR Part 4

Biological products, Combination products, Drugs, Medical devices, Regulation of combination products, Reporting and recordkeeping requirements, Safety.

Therefore, under the Federal Food, Drug, and Cosmetic Act, the Public Health Service Act, and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 4 is amended as follows:

PART 4—REGULATION OF COMBINATION PRODUCTS

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 360, 360b–360f, 360h–360j, 360l, 360hh–360ss, 360aaa–360bbb, 371(a), 372–374, 379e, 381, 383, 394; 42 U.S.C. 216, 262, 263a, 264, 271.

■ 2. Add subpart B, consisting of §§ 4.100 through 4.105, to read as follows:

Subpart B—Postmarketing Safety Reporting for Combination Products

Sec.

Subpart B—Postmarketing Safety Reporting for Combination Products

§ 4.100 What is the scope of this subpart?

(a) This subpart identifies postmarketing safety reporting requirements for combination product applicants and constituent part applicants.

(b) This subpart does not apply to investigational combination products, combination products that have not received marketing authorization, or to persons other than combination product

applicants and constituent part applicants.

(c) This subpart supplements and does not supersede other provisions of this chapter, including the provisions in parts 314, 600, 606, 803, and 806 of this chapter, unless a regulation explicitly provides otherwise.

§ 4.101 How does the FDA define key terms and phrases in this subpart?

Abbreviated new drug application (ANDA) has the same meaning given the term ''abbreviated application'' in § 314.3(b) of this chapter.

Agency or we means Food and Drug Administration.

Applicant means, for the purposes of this subpart, a person holding an application under which a combination product or constituent part of a combination product has received marketing authorization (such as approval, licensure, or clearance). For the purposes of this subpart, applicant is used interchangeably with the term ''you.''

Application means, for purposes of this subpart, a BLA, an NDA, an ANDA, or a device application, including all amendments and supplements to them.

Biological product has the meaning given the term in section 351 of the Public Health Service Act (42 U.S.C. 262).

Biological product deviation report (BPDR) is a report as described in §§ 600.14 and 606.171 of this chapter.

Biologics license application (BLA) has the meaning given the term in section 351 of the Public Health Service Act (42 U.S.C. 262) and § 601.2 of this chapter.

Combination product has the meaning given the term in § 3.2(e) of this chapter.

Combination product applicant means an applicant that holds the application(s) for a combination product.

Constituent part has the meaning given the term in § 4.2.

Constituent part applicant means the applicant for a constituent part of a combination product the constituent parts of which are marketed under applications held by different applicants.

Correction or removal report is a report as described in § 806.10 of this chapter.

De novo classification request is a submission requesting *de novo* classification under section 513(f)(2) of the Federal Food, Drug, and Cosmetic Act.

Device has the meaning given the term in section 201(h) of the Federal Food, Drug, and Cosmetic Act.

Device application means a PMA, PDP, premarket notification submission, *de novo* classification request, or HDE.

Drug has the meaning given the term in section 201(g)(1) of the Federal Food, Drug, and Cosmetic Act.

Field alert report is a report as described in § 314.81 of this chapter.

Fifteen-day report is a report required to be submitted within 15 days as described in § 314.80 of this chapter or § 600.80 of this chapter, as well as followup reports to such a report.

Five-day report is a report as described in §§ 803.3 and 803.53 of this chapter, as well as supplemental or followup reports to such a report as described in § 803.56 of this chapter.

Humanitarian device exemption (HDE) has the meaning given the term in § 814.3 of this chapter.

Malfunction report is a report as described in § 803.50 of this chapter as well as supplemental or followup reports to such a report as described in § 803.56 of this chapter.

New drug application (NDA) has the meaning given the term ''application'' in § 314.3(b) of this chapter.

Premarket approval application (PMA) has the meaning given the term in § 814.3 of this chapter.

Premarket notification submission is a submission as described in § 807.87 of this chapter.

Product Development Protocol (PDP) is a submission as set forth in section 515(f) of the Federal Food, Drug, and Cosmetic Act.

§ 4.102 What reports must you submit to FDA for your combination product or constituent part?

(a) *In general.* If you are a constituent part applicant, the reporting requirements applicable to you that are identified in this section apply to your constituent part, and if you are a combination product applicant, the reporting requirements applicable to you that are identified in this section apply to your combination product as a whole.

(b) *Reporting requirements applicable to both combination product applicants and constituent part applicants.* If you are a combination product applicant or constituent part applicant, you must comply with the reporting requirements identified in paragraphs (b)(1), (b)(2), or (b)(3) of this section for your product based on its application type. If you are a combination product applicant, you are required to submit a report as specified in this paragraph unless you have already submitted a report in accordance with paragraph (c) of this section for the same event that: Includes the information required under the applicable regulations identified in this paragraph, is required to be submitted in the same manner under § 4.104, and meets the deadlines under the applicable regulations identified in this paragraph.

(1) If your combination product or device constituent part received marketing authorization under a device application, you must comply with the requirements for postmarketing safety reporting described in parts 803 and 806 of this chapter with respect to your product.

(2) If your combination product or drug constituent part received marketing authorization under an NDA or ANDA, you must comply with the requirements for postmarketing safety reporting described in part 314 of this chapter with respect to your product.

(3) If your combination product or biological product constituent part received marketing authorization under a BLA, you must comply with the requirements for postmarketing safety reporting described in parts 600 and 606 of this chapter with respect to your product.

(c) *Reporting requirements applicable only to combination product applicants.* If you are a combination product applicant, in addition to compliance with paragraph (a) of this section, you must also comply with the reporting requirements identified under this paragraph as applicable to your product based on its constituent parts. If you are a combination product applicant, you are required to submit a report as specified in this paragraph unless you have already submitted a report in accordance with paragraph (b) of this section for the same event that: Includes the information required under the applicable regulations for the report identified in this paragraph; is required to be submitted in the same manner under § 4.104 of this chapter; and, unless otherwise specified in this paragraph, meets the deadlines under the applicable regulations for the report identified in this paragraph.

(1) If your combination product contains a device constituent part, you must submit:

(i) Five-day reports;

(ii) Malfunction reports; and

(iii) Correction or removal reports, and maintain records as described in § 806.20 of this chapter for corrections and removals not required to be reported.

(2) If your combination product contains a drug constituent part, you must submit:

(i) Field alert reports; and

(ii) Fifteen-day reports as described in § 314.80 of this chapter, which must be

submitted within 30 calendar days instead of 15 calendar days if your combination product received marketing authorization under a device application.

(3) If your combination product contains a biological product constituent part, you must submit:

(i) Biological product deviation reports; and

(ii) Fifteen-day reports as described in § 600.80 of this chapter, which must be submitted within 30 calendar days instead of 15 calendar days if your combination product received marketing authorization under a device application.

(d) *Other reporting requirements for combination product applicants.* (1) If you are the combination product applicant for a combination product that contains a device constituent part and that received marketing authorization under an NDA, ANDA, or BLA, in addition to the information otherwise required in the periodic safety reports you submit under § 314.80 or § 600.80 of this chapter, your periodic safety reports must also include a summary and analysis of the reports identified in paragraphs (c)(1)(i) and (ii) of this section that were submitted during the report interval.

(2) If you are the combination product applicant for a combination product that received marketing authorization under a device application, in addition to the reports required under paragraphs (b) and (c) of this section, you must submit reports regarding postmarketing safety events if notified by the Agency in writing that the Agency requires additional information. We will specify what safety information is needed and will require such information if we determine that protection of the public health requires additional or clarifying safety information for the combination product. In any request under this section, we will state the reason or purpose for the safety information request, specify the due date for submitting the information, and clearly identify the reported event(s) related to our request.

§ 4.103 What information must you share with other constituent part applicants for the combination product?

(a) When you receive information regarding an event that involves a death or serious injury as described in § 803.3 of this chapter, or an adverse experience as described in § 314.80(a) of this chapter or § 600.80(a) of this chapter, associated with the use of the combination product, you must provide the information to the other constituent part applicant(s) for the combination product no later than 5 calendar days of your receipt of the information.

(b) With regard to information you must provide to the other constituent part applicant(s) for the combination product, you must maintain records that include:

(1) A copy of the information you provided,

(2) The date the information was received by you,

(3) The date the information was provided to the other constituent part applicant(s), and

(4) The name and address of the other constituent part applicant(s) to whom you provided the information.

§ 4.104 How and where must you submit postmarketing safety reports for your combination product or constituent part?

(a) If you are a constituent part applicant, you must submit postmarketing safety reports in accordance with the regulations identified in § 4.102(b) that are applicable to your product based on its application type.

(b) If you are a combination product applicant, you must submit postmarketing safety reports required under § 4.102 in the manner specified in the regulation applicable to the type of report, with the following exceptions:

(1) You must submit the postmarketing safety reports identified in § 4.102(c)(1)(i) and (ii) in accordance with § 314.80(g) of this chapter if your combination product received marketing authorization under an NDA or ANDA or in accordance with § 600.80(h) of this chapter if your combination product received marketing authorization under a BLA.

(2) You must submit the postmarketing safety reports identified in § 4.102(c)(2)(ii) and (c)(3)(ii) in accordance with § 803.12(a) of this chapter if your combination product received marketing authorization under a device application.

§ 4.105 What are the postmarketing safety reporting recordkeeping requirements for your combination product or constituent part?

(a) If you are a constituent part applicant:

(1) You must maintain records in accordance with the recordkeeping requirements in the applicable regulation(s) described in § 4.102(b).

(2) You must maintain records required under § 4.103(b) for the longest time period required for records under the postmarketing safety reporting regulations applicable to your product under § 4.102(b).

(b) If you are a combination product applicant, you must maintain records in accordance with the longest time period required for records under the regulations applicable to your product under § 4.102.

Dated: December 14, 2016.

Leslie Kux,

Associate Commissioner for Policy.

Narrowing the Digital Divide Through Installation of Broadband Infrastructure in HUD-Funded New Construction and Substantial Rehabilitation of Multifamily Rental Housing

AGENCY: Office of the Secretary, HUD.

ACTION: Final rule.

SUMMARY: Through this rule, HUD continues its efforts to narrow the digital divide in low-income communities served by HUD by providing, where feasible and with HUD funding, broadband infrastructure to communities in need of such infrastructure. In this final rule, HUD requires installation of broadband infrastructure at the time of new construction or substantial rehabilitation of multifamily rental housing that is funded or supported by HUD, the point at which such installation is generally easier and less costly than when undertaken as a stand-alone effort. The rule, however, recognizes that installation of broadband infrastructure may not be feasible for all new construction or substantial rehabilitation, and, therefore, it allows limited exceptions to the installation requirements. Installing unit-based broadband infrastructure in multifamily rental housing that is newly constructed or substantially rehabilitated with or supported by HUD funding will provide a platform for individuals and families residing in such housing to participate in the digital economy and increase their access to economic opportunities.

DATES: *Effective date:* January 19, 2017.

FOR FURTHER INFORMATION CONTACT: If you have any questions, please contact the following people (the telephone numbers are not toll-free):

Office of Community Planning and Development programs: Clifford Taffet,

General Deputy Assistant Secretary for Community Planning and Development, Room 7100, 202–708–2690.

Office of Multifamily Housing programs: Katie Buckner, Office of Recapitalization, Office of Housing, Room 6226, 202–402–7140.

Office of Public and Indian Housing programs: Dominique Blom, Deputy Assistant Secretary for Public Housing Investments, Office of Public and Indian Housing, Room 4130, 202–402–4181.

The address for all individuals is Department of Housing and Urban Development; 451 7th Street SW.; Washington, DC 20410–0500. Persons with hearing or speech impairments may access these numbers through TTY by calling the Federal Relay Service at 800–877–8339 (this is a toll-free telephone number).

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose of this Rule

The purpose of this rule is to require installation of broadband infrastructure at the time of new construction or substantial rehabilitation of multifamily rental housing that is funded or supported by HUD. This rule does not require a funding recipient to undertake new construction or substantial rehabilitation, but when a funding recipient does choose to pursue such activity for multifamily rental housing with HUD funding, this rule requires installation of broadband infrastructure. While the rule only requires affected funding recipients to install one form of broadband infrastructure, HUD suggests that funding recipients consider whether installing more than one form of broadband infrastructure would be beneficial to encourage competition among service providers on quality and price. Installing unit-based broadband infrastructure in multifamily rental housing that is newly constructed or substantially rehabilitated with or supported by HUD funding will provide a platform for individuals and families residing in such housing to participate in the digital economy, and increase their access to economic opportunities.

B. Summary of Major Provisions of this Rule

This rule requires installation of broadband infrastructure at the time of new construction or substantial rehabilitation of multifamily rental units funded by the following programs:

1. Choice Neighborhoods Implementation Grant program;
2. Community Development Block Grant (CDBG) program, including the CDBG Disaster Recovery program;
3. Continuum of Care program;
4. HOME Investment Partnerships program;
5. Housing Opportunities for Persons With AIDS program;
6. Housing Trust Fund program;
7. Project-Based Voucher program;
8. Public Housing Capital Fund program;
9. Section 8 project-based housing assistance payments programs, including, but not limited to, the Section 8 New Construction, Substantial Rehabilitation, Loan Management Set-Aside, and Property Disposition programs; [1] and
10. Section 202 and Section 811 Supportive Housing for the Elderly and Persons with Disabilities programs.

The requirements of the rule do not apply to multifamily rental housing that only has a mortgage insured by HUD's Federal Housing Administration or with a loan guaranteed under a HUD loan guarantee program.

HUD defines broadband infrastructure as cables, fiber optics, wiring, or other permanent (integral to the structure) infrastructure—including wireless infrastructure—as long as the installation results in broadband infrastructure in each dwelling unit meeting the Federal Communications Commission's (FCC's) definition in effect at the time the pre-construction estimates are generated. Currently, the FCC defines broadband speeds as 25 Megabits per second (Mbps) download, 3 Mbps upload.[2] In addition, for programs that do not already have a definition of substantial rehabilitation, HUD defines substantial rehabilitation as work on the electrical system with estimated costs equal to or greater than 75 percent of the cost of replacing the entire electrical system, or when the estimated cost of the rehabilitation is equal to or greater than 75 percent of the total estimated cost of replacing the multifamily rental housing after the rehabilitation is complete. The definition of substantial rehabilitation for purpose of the installation of broadband infrastructure does not affect definitions of rehabilitation already in place for other purposes.

C. Costs and Benefits of This Rule

The costs and benefits of this rule are difficult to quantify, but they can be described qualitatively. This rule only requires that the broadband infrastructure provided be able to receive high-speed Internet that is ''accessible'' in each unit. It does not require those recipients of funding undertaking new construction or substantial rehabilitation to provide broadband service to current or future residents even if residents pay for such service. Furthermore, the definition of broadband infrastructure in the rule includes coaxial cable television (TV) wiring that supports cable modem access or even permanent infrastructure that would provide broadband speeds to dwelling units wirelessly. The rule also provides for exceptions to the installation requirements where the installation is too costly to provide due to location or building characteristics.

A recent survey by the National Association of Homebuilders found that 4 percent of the surveyed multifamily housing developers never installed landline wires and jacks in multifamily units completed in the past 12 months.[3] In recent years, HUD's competitive grants for new construction under the Choice Neighborhoods program have sought the provision of broadband access. Therefore, this rule would simply codify what is considered common practice in the private market today when new construction or substantial rehabilitation is undertaken.

Given the wide range of technologies that may be employed to meet the requirements of this rule, it is not possible to specify the cost of the technology and how much additional burden this may be for owners or developers building or providing substantial rehabilitation to HUD-assisted rental housing. If the broadband infrastructure consists of wiring connected to proximate telephone or cable company networks, the cost is not expected to be significant, as all electrical work in a multifamily project is estimated to be only about 10 percent of the construction cost; [4] thus, running an additional cable through existing electrical conduits would be a minimal

[1] This rule applies to all projects with project-based Section 8 housing assistance payment (HAP) contracts (other than Mod Rehab or Mod Rehab Single Room Occupancy (SRO) projects), regardless of whether the properties receive specific funding to pay directly for substantial rehabilitation or new construction, as defined in this rule.

[2] Federal Communications Commission, 2015 Broadband Progress Report and Notice of Inquiry on Immediate Action to Accelerate Deployment, GN Docket No. 14–126, Rel. Feb. 4, 2015, at para. 45 (available at *https://apps.fcc.gov/edocs_public/attachmatch/FCC-15-10A1.pdf*).

[3] NAHB, Multifamily Market Survey 3rd Quarter 2015. November 2015. There were 90 responses, and of the responses, 18 percent indicated it was not applicable, presumably because they had not completed any projects in the past 12 months. The survey covers all multifamily construction including lower quality Class B and Class C. It does not provide details on the developers or projects that did not install landlines.

incremental cost. If the broadband infrastructure is wireless, the cost will be for the equipment, which varies greatly by the design and size of the project, as does the cost per unit. Given that the costs of installation of broadband infrastructure are only a portion of the 10 percent of construction costs, the requirement imposed by this rule is not expected to measurably reduce the size of the housing or the number of units to be constructed. At most, installation of broadband infrastructure may reduce the provision of other amenities or nonessential finishes, but HUD considers even these reductions unlikely. Additionally, the rule only applies to new construction or substantial rehabilitation that is supported with HUD-provided resources, not to existing buildings where substantial rehabilitation is not contemplated.

Materials on the benefits of narrowing the digital divide are voluminous. Having broadband Internet in the home increases household income [5] and yields higher education achievement for students.[6] On July 2015, the Council of Economic Advisers issued the report ''Mapping the Digital Divide,'' which examines progress in the United States in narrowing the digital divide and the work that still needs to be done, especially in the Nation's poorest neighborhoods and most rural communities.[7] However, this rule's limited scope in only requiring the installation of infrastructure instead of providing Internet access also limits the benefits of the rule. The benefit of the rule is that where broadband Internet service can be made available, the tenant, residing in housing with broadband infrastructure, will be assured of the ability to access broadband Internet service, whether they choose and are able to afford Internet service or not. This puts broadband Internet service within reach, especially where other charitable and public social programs, including HUD's ConnectHome program, provide free or reduced-cost service.

II. Background

On March 23, 2015, President Obama issued a Presidential memorandum on ''Expanding Broadband Deployment and Adoption by Addressing Regulatory Barriers and Encouraging Investment and Training.'' [8] In this memorandum, the President noted that access to high-speed broadband is no longer a luxury, but it is a necessity for American families, businesses, and consumers. The President further noted that the Federal Government has an important role to play in developing coordinated policies to promote broadband deployment and adoption, including promoting best practices, breaking down regulatory barriers, and encouraging further investment.

On May 18, 2016, at 81 FR 31181, HUD published a proposed rule seeking to require the installation of broadband infrastructure on all new construction or substantial rehabilitation in multifamily projects supported by HUD. This proposed rule was an outgrowth of the President's memorandum and HUD's own Digital Opportunity Demonstration, known as ''ConnectHome.'' The comment period on the proposed rule closed on July 18, 2016. HUD received 25 comments on the proposed rule from a variety of commenters, including State or local government economic development offices, the National Association of Home Builders, Internet service providers, housing authorities, and nonprofit organizations.

III. Changes From the Proposed Rule

HUD is not changing any of the substantive requirements that were in the proposed rule. Rather, in response to questions raised by public comments, HUD is offering two clarifications in the regulatory text.

First, in the definition in 24 CFR 5.100, HUD is basing the threshold for substantial rehabilitation on the pre-rehabilitation estimates for the work. HUD recognizes that, in the course of rehabilitation, certain cost or work changes may result in the project exceeding the threshold to be defined (for the purposes of installing broadband infrastructure) as substantial rehabilitation. However, in these instances, the funding recipients are already facing higher costs than expected, and to add additional, unplanned-for requirements would be an undue burden.

[8] See Barack Obama. ''Presidential Memorandum—Expanding Broadband Deployment and Adoption by Addressing Regulatory Barriers and Encouraging Investment and Training.'' March 23, 2015. *https://www.whitehouse.gov/the-press-office/2015/03/23/presidential-memorandum-expanding-broadband-deployment-and-adoption-addr.*

Second, HUD has clarified the point in the planning process for new construction or substantial rehabilitation at which a project must be, as of the effective date of this rule, to not be subject to the rule's requirements. Due to the different nature of each program covered by this rule, a tailored approach was necessary, instead of a single declaration for all of the programs.

In addition to these two regulatory changes, HUD will offer some future clarifying guidance on how funding recipients are to determine whether installing broadband infrastructure would be infeasible for a given project. This is to be a case-by-case determination, and is very fact-specific. The ultimate decision, however, will be up to the funding recipient, who will also have to maintain adequate documentation of the determination.

IV. Public Comments and HUD Responses

Adoption of the Internet Franchise Policy Framework

A commenter urged HUD to adopt the policy framework of the Internet Franchise (found at *https://webpass.net/franchise*), which the commenter stated directly addresses the issues in HUD's rule and would eliminate the need for rulemaking in this area. The commenter stated that creating a new set of rules for a small subset of properties—those supported by HUD—is not helpful. HUD should adopt broadly applicable Internet access rules that can be a model for the whole country.

HUD Response: HUD appreciates the suggestion but believes the approach provided in HUD's rule is the appropriate approach for HUD programs. In addition, HUD is not able to regulate Internet access for housing not assisted by HUD.

Capacity or Speed

Commenters asked that HUD encourage the installation of infrastructure that is ''future-proofed'' against higher Internet speeds than what meets the current broadband definition, perhaps by encouraging fiber optic connections to accomplish that goal or by requiring that the infrastructure have capacity of 150 percent of the current standards. Commenters also suggested that, rather than just considering bandwidth capacity, HUD should require that the technology allow for the use of common Internet applications (including voice-over-Internet protocols, or VOIP, and other streaming services).

Commenters suggested that HUD find ways to provide incentives to provide the highest level of broadband capacity.

Commenters also asked how HUD intended to communicate and implement new speed standards from the FCC.

HUD Response: HUD is not mandating that funding recipients install a specific type of infrastructure. Rather, HUD has specifically written the definition of broadband infrastructure to allow funding recipients to choose the form of infrastructure that is most appropriate for their circumstances, including future technologies that we cannot imagine today.

HUD believes that, rather than requiring installation of infrastructure meeting a standard higher than the FCC's then-current definition of ''advanced telecommunications capability,'' it is enough to install infrastructure that meets that definition, especially as in some areas that speed is more than what may be currently available. Further, HUD believes that by requiring that each unit has access to infrastructure that allows broadband speeds, every family will be able to use Internet applications, such as VOIP, as desired. However, this is established as the minimum. Nothing prevents funding recipients from aiming higher, and nothing prevents other local authorities from establishing higher standards as a local requirement for funding or from using HUD funding to pay for the cost differential of getting to that higher level.

In addition, by tying the infrastructure requirements to the FCC's definition, future changes by the FCC will automatically be incorporated into HUD's requirements. When the definition is revised in the future, HUD will evaluate the most appropriate way to notify its funding recipients covered by this rule of the change.

Costs

Commenters responded to HUD's estimates on the cost of installing broadband infrastructure. Many commented that the estimates of the costs of labor and material were too low, particularly when a project is undergoing rehabilitation. Commenters stated that the costs would vary widely across the country, depending on the construction type, the number of units involved, and the regional labor costs. Commenters also stated that HUD should account for operation and maintenance costs for the infrastructure, which may be significant. Commenters stated that the study by the National Association of Home Builders did not specifically address broadband access, and, therefore, it should not be used as evidence that installing broadband is already current practice.

Commenters also suggested that HUD has not justified the costs of compliance with the rule with enough benefits. Some commenters stated that in rural areas, limited access to broadband equipment installers can inflate installation and service costs.

HUD Response: The benefits of narrowing the digital divide through expansion of Internet service are well documented. The Council of Economic Advisers Brief, issued in March 2016, and entitled ''The Digital Divide and Economic Benefits of Broadband Access,'' demonstrates such benefits. (See *https://www.whitehouse.gov/sites/default/files/page/files/20160308_broadband_cea_issue_brief.pdf.*) HUD understands that the costs of installing broadband infrastructure will vary given the geographic area in which the construction or substantial rehabilitation is to take place and that, given such variations, the costs of labor and materials will not be uniform across the Nation. Some costs may be lower because the jurisdiction in which the installation is occurring may already have a strong broadband infrastructure in place that would reduce the cost of a HUD funding recipient to provide such infrastructure. However, given the comments received, HUD has revised its costs analyses found in Section V of this preamble.

Whatever the cost of the installation of a broadband infrastructure, that cost is borne by HUD in the funds awarded to the funding recipient, or the HUD funds are taken into account when leveraging them for rehabilitation funding. There is no mandate in any of the HUD programs covered by this rule to undertake new construction or substantial rehabilitation.

While HUD funds will cover the cost of installation of the broadband infrastructure, HUD understands that, in tight budgetary times, installing broadband infrastructure may be too expensive for the construction budget to incorporate, given other construction or rehabilitation requirements such as energy efficiency features or improvements or accessible housing features needed by the elderly or persons with disabilities. In such cases, the final rule provides that a funding recipient may be exempted from compliance if the cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden.

HUD will continue to explore the possibilities of reducing the cost of broadband infrastructure, including allowing HUD funds to be used for operation or maintenance costs or facilitating group purchases to reduce the costs of the infrastructure itself.

Exceptions

Many commenters weighed in on the exceptions to the broadband infrastructure requirements. Several requested examples of projects that would fall under the listed exceptions or more detailed definitions of the provided exceptions. Commenters suggested that, in addition to the exemptions currently included, HUD provide an exception for scattered-site properties with 1 to 4 units.

Some commenters stated that having a building in a rural location should not exempt the housing provider from providing broadband infrastructure as, while the connection to the building may be more expensive, a rural location does not increase the price of installing infrastructure in the building itself. Other commenters stated that requiring the installation of infrastructure where broadband is not currently available could result in the buildings having obsolete infrastructure when broadband access is provided.

Regarding the feasibility determination, some commenters believed that the owner should be the proper entity to determine whether installing broadband infrastructure is feasible, while others stated that HUD should make that determination, moving as quickly as possible to avoid delays in projects. Commenters also requested additional information on the infeasibility exception, particularly what documentation developers should maintain about any determination of feasibility, and any specific formula or source of pre-rehabilitation estimates that HUD will require. Commenters asked at what point a project would be considered infeasible; some stated that the threshold of feasibility should be set such that costs of broadband installation that are over 5 percent of the construction budget should be considered infeasible.

Commenters suggested that HUD should consider the costs of maintaining and operating the infrastructure in determining feasibility. Commenters reminded HUD that, in the future, increased speed requirements could impact the feasibility of installing broadband infrastructure. Commenters also suggested that HUD encourage installation of broadband infrastructure in common areas if it is too expensive to install in every unit.

HUD Response: This rule only applies to buildings with more than 4 rental

units, so HUD does not believe an exemption for scattered-site properties is needed.

For the existing exemptions from the rule's requirements, this rule places the burden of determining whether or not an exemption applies and documenting the basis for the determination on the funding recipient. HUD will provide additional guidance with examples and possible ways to make such determinations. HUD also appreciates and supports the suggestion that if a funding recipient determines that providing broadband infrastructure to every unit is too expensive, the funding recipient should consider providing broadband infrastructure to common areas at the property.

HUD notes that a building's location in a rural area not currently served by broadband does not necessarily mean that broadband will not be available in the foreseeable future. In addition, the current unavailability of broadband service to a property does not automatically mean that installing the broadband infrastructure is cost prohibitive. However, HUD acknowledges that, in some situations, the fact that broadband will not be available to a property for an extended time period could be a legitimate justification for meeting the ''location'' exemption, particularly if the window before broadband service is available is long enough to potentially render any infrastructure installed now obsolete by the time such service is available.

In some programs, maintenance and operating costs are considered eligible expenses of the funding program, and, therefore, there is no need to consider those costs when determining the cost feasibility of installing the broadband infrastructure in the first place. At this time, it is beyond the scope of this rulemaking to amend other program regulations (which are sometimes based on statutory limitations) to allow such costs when it is not currently allowable. However, HUD will continue to look for situations in which program regulations can be revised to allow Internet operation and maintenance costs to be eligible uses of program funds.

Effectiveness Timeline

Commenters also asked for additional detail on the timing of when the requirements of the new rule would apply. Some stated that for substantial rehabilitation, HUD should state that any project beyond the earliest stage of project budget development should be exempted from the rule. Commenters also suggested that the rule should not apply if a request for proposals (RFP) has been issued for a given project.

HUD Response: HUD fully recognizes that imposing additional requirements on projects that have already established budgets would have negative impacts on those new construction or substantial rehabilitation plans. HUD has, therefore, put specific applicability language into each program's regulations specifying the date or point in the development process after which projects will be subject to these new requirements. HUD intends in particular to issue additional guidance for the Project-Based Voucher (PBV) program and any substantial rehabilitation that may occur after a Housing Assistance Payments (HAP) contract has been signed.

However, HUD encourages funding recipients who are currently developing projects for new construction or substantial rehabilitation that would not be covered by this rule to seriously consider whether they can include broadband infrastructure in those construction or rehabilitation plans.

Infrastructure Design

Commenters suggested other changes to HUD's requirements for the broadband infrastructure. Several stated that the broadband wiring should enter the building at a central point and then flow to each unit and common space in the building. Commenters stated that HUD should encourage building owners to consider ways to future proof the infrastructure, including how to replace broken wires and how to make access points easily accessible. Others wrote that HUD should specify that buildings using wireless should have sufficient access points to ensure that each unit has fast, reliable service.

Commenters also stated that HUD should require broadband infrastructure be provided for common areas and meeting spaces.

Some commenters objected to HUD allowing broadband over power lines (BPL) or very-high-bit-rate digital subscriber lines (VDSL), as the commenters felt those technologies needed significant improvements and more widespread adoption to become viable ways of receiving broadband.

HUD Response: This final rule does not require a specific form of broadband infrastructure, as long as the infrastructure meets the speed requirements and complies with State and local building codes. This rule does not supersede any State or local building codes that may apply to the installation of broadband infrastructure. HUD expects funding recipients to consider the costs of installation, as well as operation and maintenance, when deciding which form of broadband infrastructure to install. HUD also encourages all funding recipients to include broadband infrastructure in a way that conforms to standards for resilient construction.

In addition, HUD is not requiring the installation of broadband infrastructure in common areas and meeting spaces, but HUD highly encourages funding recipients to do so when possible. In projects where installing such infrastructure in individual units is cost prohibitive, HUD encourages funding recipients to install broadband infrastructure in common areas, unless the recipient determines that is also cost prohibitive.

Internet Service Providers (ISPs)

Several commenters stated that HUD should encourage housing providers to install broadband infrastructure that enables multiple competitive providers in the same project, or a managed solution to allow for subsidized services. Commenters stated that HUD should prohibit owners from entering into arrangements with providers that limit other providers' access to inside wiring, interfering with the right of residents to request or receive broadband service from a specific provider, or entering into exclusive marketing arrangements in HUD-supported housing.

Commenters stated that infrastructure running from the street to the building should have sufficient conduit capacity to allow for use by multiple providers.

HUD Response: As noted in response to the prior comments, HUD leaves the precise nature or manner of installation of broadband infrastructure to standards and requirements set by State and local codes. HUD does recognize that it is important to provide as much choice as possible regarding service providers. However, sometimes, exclusive contracts allow for the provision of broadband service at a much lower rate than would otherwise be available. HUD therefore declines at this time to restrict housing providers' ability to enter into limited service contracts, but would like to recommend caution for public housing agencies (PHAs) considering exclusivity contracts.

Programs

Commenters were divided on whether HUD should include additional programs beyond those in the proposed rule. Some wrote that HUD should not include more programs. Others asked that HUD include all programs providing housing assistance for low-income populations, which may make the regulation easier to enforce in general. Commenters also stated that HUD should include all multifamily

programs, while reconsidering including Continuum of Care (CoC) programs, as they help with shelter needs, not long-term housing solutions.

HUD Response: The number of HUD programs that provide for new construction and substantial rehabilitation has not expanded greatly over the years. HUD's Choice Neighborhoods program was the successor to HUD's HOPE VI program. HUD's Housing Trust Fund program is a new program that provides, among other things, for the production of affordable housing. If future HUD programs, whether existing or new, provide for the new construction or substantial rehabilitation of multifamily rental housing, HUD will incorporate these requirements into those programs. In addition, CoC funds long-term housing solutions as well as temporary housing solutions. Therefore, HUD finds it appropriate to include broadband infrastructure in these projects.

Sanctions

Commenters suggested some sanctions HUD could consider. Some stated that HUD should fine owners for inappropriate use of exemptions from the requirements, perhaps using the funds for digital literacy programs. Commenters stated that HUD could, in egregious cases, disqualify recipients from future HUD funding. Other commenters suggested that instead of sanctions, HUD could require funding recipients to develop ways to bring the Internet to a project's residents.

HUD Response: For every HUD program, there are corrective and remedial actions available to HUD for funding recipients who do not follow their regulatory requirements. These corrective and remedial actions vary among programs, depending on existing statutory and regulatory authority. At this time, developing additional program-specific remedies is outside the scope of this rulemaking. However, in the event that a funding recipient does not follow the requirements of this rule, HUD will use the options currently available to pursue such violations.

Substantial Rehabilitation

Commenters suggested that HUD reconsider applying the requirements to substantial rehabilitation projects. Others suggested that HUD expand the definition to include other trigger activities, such as updating or replacing coaxial cables, installing fiber optics, or installing Ethernet. Commenters stated that the definition of substantial rehabilitation should not include the electrical system standard, because work on electrical systems does not always translate easily into providing broadband infrastructure.

Commenters addressed HUD's question about how to determine whether a rehabilitation project rises to the level of substantial rehabilitation. Some stated that HUD should rely on pre-rehabilitation cost estimates because, if there are unexpected expenses that take the project over the substantial rehabilitation threshold, adding broadband requirements on top of those expenses may be too much for the project. However, other comments stated that HUD should use actual costs to judge the substantial threshold.

Commenters also asked how the standard applies to scattered sites, where only a single unit or a few units are being renovated.

HUD Response: HUD believes that it is important to include substantial rehabilitation in this rule to maximize the number of families who can benefit from the rule, while minimizing costs as much as possible. In addition, HUD believes that maintaining the electrical system standard as one way to determine substantial rehabilitation is appropriate, as such work would likely result in exposing a building's basic infrastructure in such a way as to allow for the installation of broadband infrastructure.

HUD appreciates the responses to the question about which construction costs to use when determining whether or not work rises to the level of substantial rehabilitation. HUD has decided that the percentage-of-cost threshold for substantial rehabilitation should be based on the pre-rehabilitation cost estimates, and this has been incorporated into the substantial rehabilitation definition.

Because this rule only affects structures with more than 4 rental units, scattered-site housing with fewer than 4 rental units is not covered by the rule.

Additional HUD Support for Broadband

Commenters stated that HUD should couple the rule with additional support for subsidies and digital literacy programs, including treating the provision of broadband service as an eligible expenditure in affordable rental housing. Others asked for additional funding for the infrastructure costs themselves. Commenters further stated that HUD could leverage its size and buying power to secure broadband service at lower prices. Some suggested that HUD should explore additional subsidies to use ''white space'' in the over-air spectrum in rural areas for wireless Internet or to subsidize seniors or families with children.

Commenters also suggested that HUD should coordinate with the United States Department of Agriculture (USDA) to work with ''last mile'' connection issues.

HUD Response: This rule, and HUD's broadband rule providing for assessing Internet service needs in the consolidated planning process, are not HUD's final responses to narrowing the digital divide. Through HUD's ConnectHome initiative, HUD is striving to narrow the digital divide in the housing arena. In addition, HUD has and will continue to work with other Federal agencies, such as the USDA and the National Telecommunications and Information Administration.

HUD encourages funding recipients to make their own connections with other programs, or to establish local requirements to accomplish these goals. HUD will continue to seek out opportunities to foster such partnerships at the national and local level. Several HUD programs can be used to pay for such complementary services, and HUD encourages funding recipients to leverage those resources. HUD will also continue to explore ways to expand the eligibility of such complementary services and for infrastructure work in HUD programs. However, Congress, not HUD, establishes program funding levels, so we are unable to provide additional programmatic funds at this time.

Other Comments

Commenters asked HUD to expand the scope of the rule beyond new construction and substantial rehabilitation to also include existing facilities. Commenters also disagreed with HUD's encouragement to deploy competing infrastructure or delivery mechanisms.

HUD Response: As noted in responses above, this rule and its companion broadband rule regarding the consolidated planning process are not HUD's final responses to narrowing the digital divide. HUD is continuing to examine other areas for which HUD has authority and oversight to determine whether there are other avenues HUD can take to narrow the digital divide. At this time, however, it is outside the scope of this rulemaking to require funding recipients to retrofit existing buildings with broadband infrastructure unless rehabilitation work is being undertaken with HUD program funding.

V. Findings and Certifications

Regulatory Review—Executive Orders 12866 and 13563

Under Executive Order 12866 (Regulatory Planning and Review), a determination must be made whether a regulatory action is significant and, therefore, subject to review by the Office of Management and Budget (OMB) in accordance with the requirements of the order. Executive Order 13563 (Improving Regulations and Regulatory Review) directs executive agencies to analyze regulations that are ''outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline, expand, or repeal them in accordance with what has been learned.'' Executive Order 13563 also directs that, where relevant, feasible, and consistent with regulatory objectives, and to the extent permitted by law, agencies are to identify and consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public. This rule was determined to be a ''significant regulatory action'' as defined in section 3(f) of Executive Order 12866 (although not an economically significant regulatory action, as provided under section 3(f)(1) of the Executive Order).

As discussed, this rule furthers HUD's efforts to narrow the digital divide in low-income communities served by HUD. Specifically, HUD is requiring installation of broadband infrastructure at the time of new construction or substantial rehabilitation of multifamily rental housing that is funded by HUD. As noted in the Executive Summary, the costs and benefits of this rule are difficult to quantify, but they can be described qualitatively.

A. Benefits

The benefits of narrowing the digital divide are well documented. In just one example, a study conducted by a former chair of the President's Council of Economic Advisers used data on the amount of time Internet users spend online to estimate that Internet access produces thousands of dollars of consumer surplus per user each year.[9] As noted above, however, the benefits of Internet technology have not been evenly distributed and research shows that there remain substantial disparities in both Internet use and the quality of access. This digital deficit is generally concentrated among older, less educated, and less affluent populations,[10] as well as in persons with disabilities.[11]

Additionally, individuals with vision, learning, and physical disabilities affecting manual dexterity rely on assistive technologies to interact with computers and the Internet, and such technologies function best on broadband Internet. Without access to broadband infrastructure, these individuals may have limited access to basic services that are now offered online.

HUD recognizes that the rule's limited scope in only requiring the installation of infrastructure, instead of providing Internet access, also limits the benefits of the rule. Specifically, the benefit of the rule is that where broadband Internet can be made available at a limited price, the tenants, residing in housing with broadband infrastructure, will be assured of the ability to access broadband Internet service, whether they choose and are able to afford Internet service or not. This rule, therefore, would put broadband Internet service within reach where other charitable and public social programs, including HUD's ConnectHome program, provide free or reduced-cost service.

B. Costs

It is not possible to specify the exact costs that recipients and owners may incur as a result of the rule, given the variety of available technologies that may be used to satisfy the new broadband requirements. However, available data indicate that any costs associated with this rule will be minimal.

As is displayed on Table I, broadband Internet access can be provided using two general technologies: Wired and wireless, each with several specific technologies. Broadband can be delivered over wired lines using very-high-bit-rate digital subscriber lines (VDSL), cable lines, power lines (BPL), or fiber optic platforms. Using wireless technologies, broadband can be provided using satellite, fixed wireless, mobile wireless, and Wi-Fi platforms.

TABLE I—TYPES OF BROADBAND TECHNOLOGIES

Platform	Connection type	Access requirement	
		Part of infrastructure	Not part of infrastructure
Wired:			
Digital Subscriber Line (VDSL)	Copper wire	Yes	Router & Modem.
Cable Modem	Copper wire	Yes	Router & Modem.
Fiber	Fiber Optic wire	Yes	Router & Modem.
Broadband over Power Lines (BPL).	Copper wire	Yes	Router & Modem.
Wireless:			
Satellite	Over the Air—satellite	None	Router & Modem.
Fixed Wireless	Over the Air—Longer Range Directional Equipment.	None	Router & Modem.
Mobile Wireless	Over the Air—Cellular	None	Router & Modem.
Wireless Fidelity (Wi-Fi)	Over the Air—Short-Range Wireless Technology.	None	Router & Modem.

Whereas wired lines technologies may require some sort of physical infrastructure consisting of internal wiring within the dwelling unit, wireless technologies do not require any additional physical infrastructure

[9] Council of Economic Advisers July 2015 report, *supra,* citing Austan Goolsbee and Peter J. Klenow, *Valuing Consumer Products by the Time Spent Using Them: An Application to the Internet* National Bureau of Economic Research Working Paper No. 11995 (February 2006) available online at: *http://www.nber.org/papers/w11995.*

[10] Ibid.

[11] Eve Hill, Department of Justice, Testimony before the Senate Committee on Health, Education, Labor, and Pensions (February 7, 2012), available online at *http://www.justice.gov/sites/default/files/testimonies//attachments/02/07/12/02-07-12-crt-hill-testimony.pdf.*

within the building. With wireless technology, the signal travels through the air to the customer, who uses a connection technology, such as a modem, to access the services. For wireless technologies, the infrastructure cost to the property boundary (connection to the service provider) is nil ($0.00). However, the availability of wireless broadband service is limited and evolving, so HUD expects many builders will install wired broadband infrastructure to ensure that the requirements of this rule are met.

Building costs of installing wired infrastructure are limited to in-dwelling wiring, as this is all that is required by the rule. Within the unit or the building, the electrical work consists of running cable (meeting the requirements of category (Cat) 5e or Cat 6 wire), installing jacks and plates, and minor construction work (such as drilling and patching walls). Fiber optic cables are rarely run in the dwelling unit but are installed by the service provider outside the unit; the non-fiber optic wiring then makes broadband accessible within the unit. Depending on the market, some of the cost is also borne by the service provider.

The average per-unit cost for wiring for broadband Internet is approximately $200 (see Table II). These costs are simply estimates of one method of complying with the requirements of the rule. Labor costs will also vary based on the region and whether the installation is being done as part of substantial rehabilitation or new construction. At most, installation of broadband infrastructure may reduce the provision of other amenities or nonessential finishes, but even these reductions are considered unlikely.

TABLE II—SAMPLE COST TO INSTALL ELECTRICAL WIRING (1 WIRING) [12]

Item	Quantity	Low	High
Electrical Wiring Labor (Hours)—Labor estimate to install electrical wiring, route, secure, and connect new NMB–B wiring run for single receptacle, up to a 40′ run. Includes planning, equipment, and material acquisition, area preparation and protection, setup, and cleanup.	2.1 hours	$160.07	$205.10
Electrical Wiring Materials and Supplies—Cost of related materials and supplies typically required to install electrical wiring including connectors, fittings, and mounting hardware.	1 Wiring (unit)	20.00	25.00
Total Costs (1 Wiring)		180.07	230.10

HUD also notes that the rule is drafted so as to minimize the costs of the new installation requirements. For example, the rule does not mandate any rehabilitation or construction, and the decision to undertake such activities appropriately remains with recipients and owners. Rather, the scope of the regulatory changes is limited to requiring the installation of broadband infrastructure if the recipient or owner elects to undertake new construction or substantial rehabilitation. The rule minimizes the economic impacts on recipients and owners by recognizing that the installation of broadband infrastructure is generally less burdensome and costly at the time of new construction or substantial rehabilitation than when such installation is undertaken as a stand-alone effort.

Moreover, this rule only requires the installation of broadband infrastructure that is ''accessible'' in each unit. The rule does not require recipients or owners to provide a regular subscription to broadband Internet service (even at a cost) to residents. Also minimizing the economic costs of the regulatory changes is the fact that the definition of broadband infrastructure includes cable television, fiber optic cabling, and wireless infrastructure providing appropriate broadband connectivity to the individual units. As discussed above in this Executive Summary, multifamily HUD or standard-market new construction typically provides telephone landline and cable TV connectivity. Further, HUD's competitive grants for new construction under the Choice Neighborhoods program have, in recent years, sought the provision of broadband.

A review of HUD internal databases, summarized on Table III, shows that, in 2013, 58,677 units within the targeted programs were newly constructed or rehabilitated. However, HUD's data did not contain specific information to be able to determine how many of the units that underwent rehabilitation met the definition of ''substantial rehabilitation'' contained in the rule, so the number of affected units would be smaller than is contained in the table. In addition, data on affected units newly constructed using CDBG funding are unavailable, as grantee reports do not separate multifamily from single-unit new construction.

TABLE III—HUD-ASSISTED NEW CONSTRUCTION AND SUBSTANTIAL REHABILITATION

TABLE III—HUD-ASSISTED NEW CONSTRUCTION AND SUBSTANTIAL REHABILITATION—Continued

	Sec. 8 RAD	811 PRAC	202 PRAC	Sec. 8 202	HOPE VI	PIH	CDBG	HOME Rental	Totals
2013	199	15	.....	109	.....	16	20,918	14,928	36,185
2014	.....	28	15	.....	.....	.....	15,716	6,965	.....
FY 2013 Totals	.....	.....	.....	.....	.....	.....	.....	.....	58,677

Further, a review found that multifamily (5-plus units) HUD or standard-market new construction typically provides telephone landlines and many provide cable TV connectivity.[13] A recent survey by the National Association of Homebuilders found that just 4 percent of the surveyed multifamily housing developers did not install landline wires and jacks in multifamily units completed in the past 12 months.[14] [15] In recent years, HUD's competitive grants for new construction under the Choice Neighborhoods program have required the provision of broadband.[16] Therefore, this rule simply codifies what is considered common practice in at least one program.

Accordingly, most recipients and owners already meet the standards established in the rule, and the new regulatory requirements will impose minimal, if any, new economic costs. HUD has addressed those rare situations where the new requirements may prove too costly by allowing exceptions to the installation requirements where the installation is documented to be economically infeasible due to location or building characteristics.

[13] For example, under ''Class 4 Low Average Quality'' the Craftsman 2015 National Building Cost Manual lists cable TV as a standard feature. Only ''Class 5'' minimum quality does not list cable or a computer network as a standard feature. All electrical work is estimated to be 10 percent of project cost. *2015 National Building Cost Manual, supra,* p. 19.

[14] NAHB, Multifamily Market Survey, *supra.*

[15] Note that HUD's definition of accessibility is more restrictive than the FCC's because HUD considers only the building itself.

[16] United States Department of Housing and Urban Development. ''Choice Neighborhoods Planning Grants Notice of Funding Availability,'' *supra,* p. 32. ''Broadband Access. All FY2014 and FY2015 Implementation Grantees will be required, as part of their Transformation Plan, to include infrastructure that permits unit-based access to broadband Internet connectivity in all new units. Grantees may use Choice Neighborhoods funds to provide unit-based broadband Internet connectivity, which includes the costs of installing broadband infrastructure and hardware in units, but not the costs of Internet service for residents. Regular and informed Internet adoption can increase access to the job market, as well as health, education, financial and other services. Further, in-home broadband Internet access is an attractive, and in most cases, standard amenity that can be used to market the mixed-income community created through the Transformation Plan.''

The docket file is available for public inspection online at *www.regulations.gov* under the docket number and title of this rule.

Impact on Small Entities

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities.

This rule provides that for new construction or substantial rehabilitation of multifamily rental housing funded by HUD, as part of the new construction or substantial rehabilitation to be undertaken, such activity must include installation of broadband infrastructure. None of the programs covered by this rule require a funding recipient to undertake new construction or substantial rehabilitation. Instead, new construction and substantial rehabilitation are eligible activities that funding recipients may take using HUD funds. Therefore, small entities will not incur any costs they would not otherwise incur by voluntarily undertaking new construction or substantial rehabilitation, since the costs of these activities, including the installation of broadband infrastructure, are funded by HUD. For these reasons, this rule will not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. This rule will not impose any Federal mandates on any State, local, or tribal governments or the private sector within the meaning of the UMRA.

Paperwork Reduction Act

The information collection requirements contained in this rule were submitted to OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) for review and approval and are pending or are covered by OMB control numbers 2577–0269, 2577–0191, 2506–0165, 2506–0077, 2506–0085, 2506–0170, 2506–0199, 2506–0171, 2506–0133, 2577–0169, 2577–0157, 2502–0587, 2502–0612, 2502–0462, and 2502–0608. In accordance with the Paperwork Reduction Act, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection displays a currently valid OMB control number.

Environmental Review

A Finding of No Significant Impact (FONSI) with respect to the environment was made at the proposed rule stage in accordance with HUD regulations in 24 CFR part 50 that implement section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)). That FONSI remains applicable to this final rule and is available for public inspection online at *www.regulations.gov* under the docket number and title of this rule.

Executive Order 13132, Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial direct compliance costs on State and local governments and is not required by statute, or the rule preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This rule does not have federalism implications and does not impose substantial direct compliance costs on State and local governments nor preempts State law within the meaning of the Executive order.

Catalog of Federal Domestic Assistance

The Catalog of Federal Domestic Assistance numbers applicable to the programs that would be affected by this rule are: 14.218, 14.225, 14.228, 14.239, 14.241, 14.267, 14.850, 14.871, and 14.872.

List of Subjects

24 CFR Part 5

Administrative practice and procedure, Aged, Claims, Crime, Government contracts, Grant programs-housing and community development, Individuals with disabilities, Intergovernmental relations, Loan programs-housing and community development, Low and moderate income housing, Mortgage insurance, Penalties, Pets, Public housing, Rent subsidies, Reporting and recordkeeping requirements, Social security, Unemployment compensation, Wages.

24 CFR Part 92

Administrative practice and procedure, Low and moderate income housing, Manufactured homes, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 93

Administrative practice and procedure, Grant programs-housing and community development, Low and moderate income housing, Manufactured homes, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 570

Administrative practice and procedure, American Samoa, Community development block grants, Grant programs-education, Grant programs-housing and community development, Guam, Indians, Loan programs-housing and community development, Low and moderate income housing, Northern Mariana Islands, Pacific Islands Trust Territory, Puerto Rico, Reporting and recordkeeping requirements, Student aid, Virgin Islands.

24 CFR Part 574

Community facilities, Grant programs-housing and community development, Grant programs-social programs, HIV/AIDS, Low and moderate income housing, Reporting and recordkeeping requirements.

24 CFR Part 578

Community development, Community facilities, Grant programs-housing and community development, Grant programs-social programs, Homeless, Reporting and recordkeeping requirements.

24 CFR Part 880

Grant programs-housing and community development, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 881

Grant programs-housing and community development, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 883

Grant programs-housing and community development, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 884

Grant programs-housing and community development, Rent subsidies, Reporting and recordkeeping requirements, Rural areas.

24 CFR Part 886

Grant programs-housing and community development, Lead poisoning, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 891

Aged, Grant programs-housing and community development, Individuals with disabilities, Loan programs-housing and community development, Rent subsidies, Reporting and recordkeeping requirements.

24 CFR Part 905

Grant programs-housing and community development, Public housing, Reporting and recordkeeping requirements.

24 CFR Part 983

Grant programs-housing and community development, Low and moderate income housing, Rent subsidies, Reporting and recordkeeping requirements.

Accordingly, for the reasons stated in the preamble, HUD amends 24 CFR parts 5, 92, 93, 570, 574, 578, 880, 881, 883, 884, 886, 891, 905, and 983 as follows:

PART 5—GENERAL HUD PROGRAM REQUIREMENTS; WAIVERS

■ 1. The authority citation for part 5 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 1437n, 3535(d), Sec. 327, Pub. L. 109–115, 119 Stat. 2936, Sec. 607, Pub. L. 109–162, 119 Stat. 3051, E.O. 13279, and E.O. 13559.

■ 2. In § 5.100, add the definitions of ''Broadband infrastructure'' and ''Substantial rehabilitation'' in alphabetical order, to read as follows:

§ 5.100 Definitions.

* * * * *

Broadband infrastructure means cables, fiber optics, wiring, or other permanent (integral to the structure) infrastructure, including wireless infrastructure, that is capable of providing access to Internet connections in individual housing units, and that meets the definition of ''advanced telecommunications capability'' determined by the Federal Communications Commission under section 706 of the Telecommunications Act of 1996 (47 U.S.C. 1302).

* * * * *

Substantial rehabilitation, for the purposes of determining when installation of broadband infrastructure is required as part of substantial rehabilitation of multifamily rental housing, unless otherwise defined by a program, means work that involves:

(1) Significant work on the electrical system of the multifamily rental housing. ''Significant work'' means complete replacement of the electrical system or other work for which the pre-construction cost estimate is equal to or greater than 75 percent of the cost of replacing the entire electrical system. In the case of multifamily rental housing with multiple buildings with more than 4 units, ''entire system'' refers to the electrical system of the building undergoing rehabilitation; or

(2) Rehabilitation of the multifamily rental housing in which the pre-construction estimated cost of the rehabilitation is equal to or greater than 75 percent of the total estimated cost of replacing the multifamily rental housing after the rehabilitation is complete. In the case of multifamily rental housing with multiple buildings with more than 4 units, the replacement cost must be the replacement cost of the building undergoing rehabilitation.

* * * * *

PART 92—HOME INVESTMENT PARTNERSHIPS PROGRAM

■ 3. The authority citation for part 92 continues to read as follows:

Authority: 42 U.S.C. 3535(d) and 12701–12839.

■ 4. Amend § 92.251 by revising the introductory text of paragraph (a)(2) and adding paragraphs (a)(2)(vi) and (b)(1)(x) to read as follows:

§ 92.251 Property standards.

(a) * * *

(2) *HUD requirements.* All new construction projects must also meet the requirements described in this paragraph:

* * * * *

(vi) *Broadband infrastructure.* For new commitments made after January 19, 2017 for a new construction housing project of a building with more than 4

rental units, the construction must include installation of broadband infrastructure, as this term is defined in 24 CFR 5.100, except where the participating jurisdiction determines and, in accordance with § 92.508(a)(3)(iv), documents the determination that:

(A) The location of the new construction makes installation of broadband infrastructure infeasible; or

(B) The cost of installing the infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden.

(b) * * *

(1) * * *

(x) *Broadband infrastructure.* For new commitments made after January 19, 2017 for a substantial rehabilitation project of a building with more than 4 rental units, any substantial rehabilitation, as defined in 24 CFR 5.100, must provide for installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the participating jurisdiction determines and, in accordance with § 92.508(a)(3)(iv), documents the determination that:

(A) The location of the substantial rehabilitation makes installation of broadband infrastructure infeasible;

(B) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(C) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

* * * * *

PART 93—HOUSING TRUST FUND

■ 5. The authority citation for part 93 continues to read as follows:

Authority: 42 U.S.C. 3535(d), 12 U.S.C. 4568.

■ 6. Amend § 93.301 by revising the introductory text of paragraph (a)(2) and adding paragraphs (a)(2)(vi) and (b)(1)(x) to read as follows:

§ 93.301 Property standards.

(a) * * *

(2) *HUD requirements.* All new construction projects must also meet the requirements described in this paragraph:

* * * * *

(vi) *Broadband infrastructure.* For new commitments made after January 19, 2017 for a new construction housing project of a building with more than 4 rental units, the construction must include installation of broadband infrastructure, as this term is defined in 24 CFR 5.100, except where the grantee determines and, in accordance with § 93.407(a)(2)(iv), documents the determination that:

(A) The location of the new construction makes installation of broadband infrastructure infeasible; or

(B) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden.

(b) * * *

(1) * * *

(x) *Broadband infrastructure.* For new commitments made after January 19, 2017 for a substantial rehabilitation project of a building with more than 4 rental units, any substantial rehabilitation, as defined in 24 CFR 5.100, must provide for installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the grantee determines and, in accordance with § 93.407(a)(2)(iv), documents the determination that:

(A) The location of the substantial rehabilitation makes installation of broadband infrastructure infeasible;

(B) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(C) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

* * * * *

PART 570—COMMUNITY DEVELOPMENT BLOCK GRANTS

■ 7. The authority citation for part 570 continues to read as follows:

Authority: 42 U.S.C. 3535(d) and 5301–5320.

■ 8. In § 570.202, add paragraph (g) to read as follows:

§ 570.202 Eligible rehabilitation and preservation activities.

* * * * *

(g) *Broadband infrastructure.* Any substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units, for which CDBG funds are first obligated by the recipient on or after April 19, 2017, must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the recipient determines and, in accordance with § 570.506, documents the determination that:

(1) The location of the substantial rehabilitation makes installation of broadband infrastructure infeasible;

(2) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(3) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

■ 9. In § 570.204 add paragraph (a)(5) to read as follows:

§ 570.204 Special activities by Community-Based Development Organizations (CBDOs).

(a) * * *

(5) Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units, for which CDBG funds are first obligated by the recipient on or after April 19, 2017, must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the recipient determines and, in accordance with § 570.506, documents the determination that:

(i) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(ii) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(iii) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

* * * * *

■ 10. Add paragraph (c)(5) to § 570.482 to read as follows:

§ 570.482 Eligible activities.

* * * * *

(c) * * *

(5) *Broadband infrastructure in housing.* Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units, for which CDBG funds are first obligated by the State's grant recipient on or after July 18, 2017, must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the State or the State's grant recipient determines and documents the determination that:

(i) The location of the new construction or substantial

rehabilitation makes installation of broadband infrastructure infeasible;

(ii) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(iii) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

* * * * *

■ 11. In § 570.506, redesignate paragraph (c) as paragraph (c)(1) and add a new paragraph (c)(2) to read as follows:

§ 570.506 Records to be maintained.

* * * * *

(c) * * *

(2) Where applicable, records which either demonstrate compliance with the requirements of § 570.202(g) or § 570.204(a)(5) or document the State's or State's grant recipient's basis for an exception to the requirements of those paragraphs.

PART 574—HOUSING OPPORTUNITIES FOR PERSONS WITH AIDS

■ 12. The authority citation for part 574 continues to read as follows:

Authority: 42 U.S.C. 3535(d) and 12901–12912.

■ 13. Add § 574.350 to subpart D to read as follows:

§ 574.350 Additional standards for broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 574.3, of a building with more than 4 rental units, for which HOPWA funds are first obligated by the grantee or project sponsor on or after January 19, 2017 must include installation of broadband infrastructure, as this term is defined in 24 CFR 5.100, except where the grantee or project sponsor determines and, in accordance with § 574.530, documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 578—CONTINUUM OF CARE PROGRAM

■ 14. The authority citation for part 578 continues to read as follows:

Authority: 42 U.S.C. 11371 *et seq.,* 42 U.S.C. 3535(d).

■ 15. In § 578.45, add paragraph (d) to read as follows:

§ 578.45 Rehabilitation.

* * * * *

(d) *Broadband infrastructure.* Any substantial rehabilitation, as defined by 24 CFR 5.100, of a building with more than 4 rental units and funded by a grant awarded after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the grantee determines and, in accordance with § 578.103, documents the determination that:

(1) The location of the substantial rehabilitation makes installation of broadband infrastructure infeasible;

(2) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(3) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

■ 16. In § 578.47, add paragraph (c) to read as follows:

§ 578.47 New construction.

* * * * *

(c) *Broadband infrastructure.* Any new construction of a building with more than 4 rental units and funded by a grant awarded after January 19, 2017 must include installation of broadband infrastructure, as this term is defined in 24 CFR 5.100, except where the grantee determines and, in accordance with § 578.103, documents the determination that:

(1) The location of the new construction makes installation of broadband infrastructure infeasible; or

(2) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden.

PART 880—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM FOR NEW CONSTRUCTION

■ 17. The authority citation for part 880 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 3535(d), 12701, and 13611–13619.

■ 18. Add § 880.212 to subpart B to read as follows:

§ 880.212 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 881—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM FOR SUBSTANTIAL REHABILITATION

■ 19. The authority citation for part 881 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 3535(d), 12701, and 13611–13619.

■ 20. Add § 881.212 to subpart B to read as follows:

§ 881.212 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 883—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM—STATE HOUSING AGENCIES

■ 21. The authority citation for part 883 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 3535(d), and 13611–13619.

■ 22. Add § 883.314 to subpart C to read as follows:

§ 883.314 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 884—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM, NEW CONSTRUCTION SET–ASIDE FOR SECTION 515 RURAL RENTAL HOUSING PROJECTS

■ 23. The authority citation for part 884 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 3535(d), and 13611–13619.

■ 24. Add § 884.125 to subpart A to read as follows:

§ 884.125 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 886—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM—SPECIAL ALLOCATIONS

■ 25. The authority citation for part 886 continues to read as follows:

Authority: 42 U.S.C. 1437a, 1437c, 1437f, 3535(d), and 13611–13619.

■ 26. Add § 886.140 to subpart A to read as follows:

§ 886.140 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

■ 27. Add § 886.340 to subpart C to read as follows:

§ 886.340 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and that is subject to a Housing Assistance Payments contract executed or renewed after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 891—SUPPORTIVE HOUSING FOR THE ELDERLY AND PERSONS WITH DISABILITIES

■ 28. The authority citation for part 891 continues to read as follows:

Authority: 12 U.S.C. 1701q; 42 U.S.C. 1437f, 3535(d), and 8013.

■ 29. In § 891.120, add paragraph (f) to read as follows:

§ 891.120 Project design and cost standards.

* * * * *

(f) *Broadband infrastructure.* Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and funded by a grant awarded after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

■ 30. Add § 891.550 to subpart E to read as follows:

§ 891.550 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and funded by a grant awarded after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of

its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

PART 905—THE PUBLIC HOUSING CAPITAL FUND PROGRAM

■ 31. The authority citation for part 905 continues to read as follows:

Authority: 42 U.S.C. 1437g, 42 U.S.C. 1437z–2, 42 U.S.C. 1437z–7, and 3535(d).

■ 32. In § 905.312, add paragraph (e) to read as follows:

§ 905.312 Design and construction.

* * * * *

(e) *Broadband infrastructure.* Any new construction or substantial rehabilitation, as substantial rehabilitation is defined in 24 CFR 5.100, of a building with more than 4 rental units and funded by a grant awarded or Capital Funds allocated after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the PHA determines and, in accordance with § 905.326, documents the determination that:

(1) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(2) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(3) The structure of the housing to be rehabilitated makes installation of broadband infrastructure infeasible.

PART 983—PROJECT-BASED VOUCHER (PBV) PROGRAM

■ 33. The authority citation for part 983 continues to read as follows:

Authority: 42 U.S.C. 1437f and 3535(d).

■ 34. Add § 983.157 to subpart D to read as follows:

§ 983.157 Broadband infrastructure.

Any new construction or substantial rehabilitation, as substantial rehabilitation is defined by 24 CFR 5.100, of a building with more than 4 rental units and where the date of the notice of owner proposal selection or the start of the rehabilitation while under a HAP contract is after January 19, 2017 must include installation of broadband infrastructure, as this term is also defined in 24 CFR 5.100, except where the owner determines and documents the determination that:

(a) The location of the new construction or substantial rehabilitation makes installation of broadband infrastructure infeasible;

(b) The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity or in an undue financial burden; or

(c) The structure of the housing to be substantially rehabilitated makes installation of broadband infrastructure infeasible.

Dated: December 15, 2016.

Nani A. Coloretti,

Deputy Secretary.

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR Part 2510

RIN 1210–AB76

Savings Arrangements Established by Qualified State Political Subdivisions for Non-Governmental Employees

AGENCY: Employee Benefits Security Administration, Department of Labor.

ACTION: Final rule.

SUMMARY: This document contains an amendment to a final regulation that describes how states may design and operate payroll deduction savings programs for private-sector employees, including programs that use automatic enrollment, without causing the states or private-sector employers to have established employee pension benefit plans under the Employee Retirement Income Security Act of 1974 (ERISA). The amendment expands the final regulation beyond states to cover qualified state political subdivisions and their programs that otherwise comply with the regulation. This final rule affects individuals and employers subject to such programs.

DATES: This rule is effective 30 days after the date of publication in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Janet Song, Office of Regulations and Interpretations, Employee Benefits Security Administration, (202) 693–8500. This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Background

A. The 2016 Final Safe Harbor Regulation

On August 30, 2016, the Department issued a final regulation establishing a safe harbor pursuant to which state governments can establish payroll deduction savings programs for private-sector employees, including programs with automatic enrollment, without causing either the state or the employers of those employees to have established employee pension benefit plans subject to ERISA. The Department published the safe harbor regulation in response to legislation in some states, and strongly-expressed interest in others, to encourage private-sector employees to save for retirement by giving those employees broader access to retirement savings arrangements through their employers. The safe harbor regulation became effective on October 31, 2016.

As the Department noted in the final regulation's preamble, concerns that tens of millions of America's workers do not have access to workplace retirement savings arrangements led some states to establish state-administered programs that allow private-sector employees to contribute salary withholdings to tax-favored individual retirement accounts described in 26 U.S.C. 408(a), individual retirement annuities described in 26 U.S.C. 408(b), and Roth IRAs described in 26 U.S.C. 408A (collectively, IRAs). California, Connecticut, Illinois, Maryland, and Oregon, for example, have adopted laws along these lines.[1] Those programs generally require certain employers that do not offer workplace savings arrangements to automatically deduct a specified amount of wages from their employees' paychecks, unless an employee affirmatively chooses not to participate in the program, and to remit those payroll deductions to state-administered programs consisting of IRAs established for each participating employee. All of these state initiatives allow employees to stop payroll deductions at any time once they have begun, and they typically require that employers provide employees with program-generated information, including information on employees' rights and various program features. None of the programs, however,

[1] California Secure Choice Retirement Savings Trust Act, Cal. Gov't Code §§ 100000–10044 (2012); Connecticut Retirement Security Program Act, P.A. 16–29 (2016); Illinois Secure Choice Savings Program Act, 820 Ill. Comp. Stat. 80/1–95 (2015); Maryland Small Business Retirement Savings Program Act, Ch. 24 (H.B. 1378) (2016); Oregon Retirement Savings Board Act, Ch. 557 (H.B. 2960) (2015).

currently require employers to make matching or other employer contributions to employee accounts, while some programs expressly prohibit employer contributions and other programs do not address that issue.

The Department also noted in the 2016 final safe harbor regulation's preamble that some stakeholders had expressed concern that their payroll deduction savings programs might cause either the state or the covered employers to inadvertently establish ERISA-covered plans, despite the states' express intent to avoid such a result. The states' concern is based in part on ERISA's broad definition of ''employee pension benefit plan'' and ''pension plan,'' which ERISA defines, in relevant part, as ''any plan, fund, or program which was heretofore or is hereafter established or maintained by an employer or by an employee organization, or by both, to the extent that by its express terms or as a result of surrounding circumstances such plan, fund, or program . . . provides retirement income to employees . . . .'' [2] That definition's broad scope is further evident in the fact that the Department and the courts have broadly interpreted the phrase ''established or maintained'' as requiring only minimal involvement by an employer or employee organization.[3] Thus, for example, it is possible for an employer to establish an ERISA plan simply by purchasing insurance products for an individual employee or employees. Given these expansive definitions, which Congress deemed essential to ERISA's purpose of protecting plan participants by ensuring the security of promised benefits, ERISA applies to nearly all benefit arrangements that private-sector employers establish for their employees.

The states' desire to avoid inadvertently creating ERISA plans through their payroll deduction savings programs stems from the fact that, with certain exceptions, ERISA preempts state laws that relate to ERISA-covered employee benefit plans.[4] Thus, if a state program requires private employers to take actions that effectively cause those employers to establish ERISA-covered plans, the state law underlying the program would likely be preempted. Similarly, if the state-sponsored program itself were deemed to be an ERISA plan, ERISA would likely preempt any state law that mandates private-sector employers to enroll their employees in that program. It is important to note in this regard that although ERISA does exempt from its scope benefit plans that states establish for their own employees, the state payroll deduction savings programs at issue here would not fit that definition.[5]

The Department responded to these concerns by publishing the 2016 final safe harbor regulation, which described specific conditions pursuant to which state payroll deduction savings programs, including those with automatic enrollment, would not result in the state or private-sector employers having established ERISA-covered employee pension benefit plans. The 2016 final safe harbor regulation thus helps states to establish and operate payroll deduction savings programs in a manner that reduces the risk that ERISA would preempt their laws and programs. That final regulation did not, however, include within its scope payroll deduction savings programs established by state political subdivisions.

B. Proposed Amendment to the 2016 Safe Harbor Regulation

1. Expanding the Safe Harbor To Include Political Subdivisions

On August 30, 2016, the Department published in the **Federal Register** a proposed rule amending the 2016 final safe harbor regulation to include within its scope laws and programs established by certain state political subdivisions.[6] The proposed amendment addressed certain public comments the Department received after it first published the safe harbor regulation in 2015 as a proposed rule.[7] In particular, several commenters had expressed the view that the Department's definition of ''State'' in the 2015 proposed safe harbor regulation was too narrow because it did not include political subdivisions. Some of these commenters identified New York City as being interested in offering a program. The 2015 proposal defined the term ''State'' by referencing section 3(10) of ERISA, which provides, in relevant part, that the term State ''includes any State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, [and] Wake Island.'' That definition excludes from the safe harbor any payroll deduction savings program established by state political subdivisions, such as a cities or counties.

Although the Department retained the section 3(10) definition in the 2016 final safe harbor regulation, the Department nevertheless agreed with commenters that there may be good reasons for expanding the safe harbor, subject to certain conditions, to cover political subdivisions and their programs. While it is not clear to the Department how many such political subdivisions eventually will have an interest in establishing programs of the kind described in the final safe harbor regulation, thus far the Department has only received written letters of interest from representatives of Seattle, Philadelphia and New York City.[8] Accordingly, the Department proposed amending the 2016 final safe harbor regulation to add to § 2510.3–2 paragraph (h) the term ''or qualified political subdivision'' wherever the term ''State'' appears. That change would cause the regulation's safe harbor to apply to ''qualified'' political subdivision payroll deduction savings programs in the same manner as it applies to state programs.

The proposed amendment also added a new subparagraph (h)(4) to define the term ''qualified political subdivision'' as any governmental unit of a state, including any city, county, or similar governmental body that met three criteria. First, the political subdivision must have the authority, under state law, whether implicit or explicit, to require employers' participation in the

[2] 29 U.S.C. 1002(2)(A). ERISA's Title I provisions ''shall apply to any employee benefit plan if it is established or maintained . . . by any employer engaged in commerce or in any industry or activity affecting commerce . . . .'' 29 U.S.C. 1003(a). Section 4(b) of ERISA includes express exemptions from coverage under Title I for governmental plans, church plans, plans maintained solely to comply with applicable state laws regarding workers compensation, unemployment, or disability, certain foreign plans, and unfunded excess benefit plans. 29 U.S.C. 1003(b).

[5] ERISA section (3)(32), 29 U.S.C. 1002(32).

[6] *See* 81 FR 59581 (August 30, 2016).

[7] *Id. See also* 80 FR 72006 (November 18, 2015). On the same day that the 2015 proposed rule was published, the Department also published an Interpretive Bulletin explaining the Department's views concerning the application of ERISA section 3(2)(A), 29 U.S.C. 1002(2)(A), section 3(5), 29 U.S.C. 1002(5), and section 514, 29 U.S.C. 1144, to certain state laws designed to expand retirement savings options for private-sector workers through state-sponsored ERISA-covered retirement plans. 80 FR 71936 (codified at 29 CFR 2509.2015–02). Although discussed in the context of a state as the responsible governmental body, in the Department's view the principles articulated in the Interpretive Bulletin regarding marketplace arrangements and sponsorship of ERISA-covered plans also apply with respect to laws of a political subdivision, provided applicable conditions in the bulletin can be and are satisfied by the political subdivision. A number of commenters asked the Department to amend the Interpretive Bulletin to reflect this view. Such an amendment is beyond the scope of this rulemaking.

[8] *See, e.g.,* Comment Letter #4 (Seattle City Councilmember Tim Burgess); Comment letter #5 (City of Philadelphia Controller); Comment Letter #20 (New York City Mayor).

payroll deduction savings program. Second, the political subdivision must have a population equal to or greater than the population of the least populous state.[9] Third, the political subdivision cannot be within a state that has a statewide retirement savings program for private-sector employees.[10]

The Department's goal in defining ''qualified political subdivision'' in this way was to reduce the number of political subdivisions that can fit within the safe harbor and focus the authority on those subdivisions most likely to have the capacity to implement successful programs. As the Department noted in the proposed rule's preamble, the U.S. Census Bureau reports that there are approximately 90,000 local governmental units in the United States, many of which could be considered ''political subdivisions'' for purposes of the proposed regulation.[11] Given this large number, the Department was concerned that expanding the safe harbor to all political subdivisions would result in overlapping programs within a given state.[12] The Department also had some concerns about expanding the safe harbor to very small political subdivisions, as the U.S. Census Bureau has reported that approximately 83% of state subdivisions have populations of less than 10,000 people.[13] These statistics led the Department to propose to further limit the types of political subdivisions that can fall within the safe harbor to those that are sufficiently large and sophisticated to have the ability to oversee and safeguard payroll deduction savings programs.

2. Criteria Limiting Political Subdivision Eligibility for the Safe Harbor

The first proposed criterion limiting the potential number of political subdivisions eligible for the safe harbor requires that the political subdivision have either explicit or implicit authority under state law to establish and operate a payroll deduction savings program and to require employers within its jurisdiction to participate. In the case of programs with automatic enrollment, that authority must encompass the power to require employers to execute payroll deduction wage withholdings.[14] This criterion will effectively limit the safe harbor's scope to so-called ''general-purpose'' subdivisions, which are political subdivisions that have the authority to exercise traditional sovereign powers, such as the power of taxation, the power of eminent domain, and the police power. It includes county governments, municipal governments, and township governments.[15] According to the U.S. Census Bureau, there are approximately 40,000 ''general-purpose'' political subdivisions in the United States.[16] By contrast, ''special-purpose'' subdivisions, such as utility districts or transit authorities, ordinarily would not have this kind of authority under state law. Thus, the Department expects that this criterion alone will reduce the universe of political subdivisions potentially eligible for the safe harbor from the approximate total of 90,000 U.S. political subdivisions to approximately 40,000.

The second proposed criterion limiting the number of potentially-eligible political subdivisions requires that the political subdivision have a population equal to or greater than the population of the least populous U.S. state (excluding the District of Columbia and the territories listed in section 3(10) of the ERISA). Based on the most recent U.S. Census Bureau statistics available, the least populous U.S. state had approximately 600,000 residents.[17] This criterion will significantly reduce the possibility of overlap by further limiting the universe of potentially-eligible political subdivisions from approximately 40,000 to a subset of approximately 136.[18]

The proposal's third criterion further limited the safe harbor to political subdivisions in states that do not offer their own statewide retirement savings program for private-sector employees.[19] As presented in the proposal, this criterion would have applied to state retirement savings programs described in the safe harbor rule itself, 29 CFR 2510.3–2(h), and also to programs described or referenced in the Department's Interpretive Bulletin found at 29 CFR 2509.2015–02. This criterion excluded from the safe harbor approximately 48 additional political subdivisions that otherwise meet the proposal's population threshold, thereby further limiting the universe of potentially eligible political subdivisions to approximately 88 as of the date of the proposed rule.

3. Solicitation of Comments on the Proposed Amendment

The Department solicited public comments on all aspects of the proposed amendment, including comments on criteria the Department did not specifically address in the proposal, but which might be useful in refining the qualified political subdivision definition. In addition, the Department also requested comments on other facets of the safe harbor more generally. In response to these solicitations, the Department received approximately 27 written comments, many of which are discussed under the topical headings below.

[9] For this purpose, the term ''state'' does not include the non-state authorities listed in section 3(10) of ERISA. Thus, it does not include the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and Wake Island.

[10] The proposal's paragraph (h)(4) definition would not, however, apply for other purposes under ERISA, such as for determining whether an entity is a political subdivision for purposes of the definition of a ''governmental plan'' in section 3(32) of ERISA, 29 U.S.C. 1002(32).

[11] This figure represents the U.S. Census Bureau's count for 2012 (the most recent data available). The U.S. Census Bureau produces data every 5 years as a part of the Census of Governments in years ending in ''2'' and ''7.'' *See* U.S. Census Bureau, Government Organization Summary Report: 2012 Census of Governments (*http://www.census.gov/govs/cog/index.html*).

[12] This could occur in situations where, for example, an employer operates in a state (or states) with multiple political subdivisions.

[13] U.S. Census Bureau, County Governments by Population-Size Group and State: 2012 Census of Governments; U.S. Census Bureau; Subcounty Governments by Population-Size Group and State: 2012 Census of Governments (*http://www.census.gov/govs/cog/index.html*).

[14] This criterion not only limits the number of political subdivisions that would be eligible for the safe harbor, it also is central to the Department's analysis under section 3(2) of ERISA and the conclusion that employers are not establishing or maintaining ERISA-covered plans. Other criteria in (h)(4) also serve this purpose by reducing the likelihood that an employer might become involved with the arrangement beyond the limits of the safe harbor.

[15] *See* U.S. Census Bureau, Government Organization Summary Report: 2012 Census of Governments (*http://www.census.gov/govs/cog/index.html*).

[16] The U.S. Census Bureau's count of general-purpose political subdivisions for 2012 was 38,910 (3,031 counties, 19,519 municipalities, and 16,360 townships). *Id.*

[17] Wyoming was the least populated state in the U.S., with a population of 586,107. *See* U.S. Census Bureau, Annual Estimates of the Resident Population for States: 2015 Population Estimate (*https://www.census.gov/popest/data/state/totals/2015/index.html*).

[18] As of 2015, there were approximately 136 general-purpose political subdivisions with populations equal to or greater than the population of Wyoming.

[19] Eight states have already adopted laws to implement some form of statewide retirement savings program for private-sector employees. California Secure Choice Retirement Savings Trust Act, Cal. Gov't Code §§ 100000–100044 (2012); Connecticut Retirement Security Program Act, Pub. Act. 16–29 (2016); Illinois Secure Choice Savings Program Act, 820 Ill. Comp. Stat. 80/1–95 (2015); Maryland Small Business Retirement Savings Program Act, ch. 324 (H.B. 1378) (2016); Mass. Gen. Laws Ch. 29, § 64E (2012); New Jersey Small Business Retirement Marketplace Act, Public Law 2015, Ch. 298; Oregon Retirement Savings Board Act, Ch. 557 (H.B. 2960) (2015); Washington State Small Business Retirement Savings Marketplace Act, Wash. Rev. Code §§ 43.330.730–750 (2015).

II. Final Rule

A. General Overview

The final rule largely adopts the proposal's general structure. Specifically, it amends paragraph (h) of § 2510.3–2 by adding the term ''or qualified political subdivision'' wherever the term ''State'' appears in the regulation. Thus, with these amendments, the final regulation's safe harbor provisions generally apply in the same manner to qualified political subdivision payroll deduction savings programs as they apply to state programs.

The final rule also adopts proposed new subparagraph (h)(4), but with modifications. In the final rule, paragraph (h)(4) defines the term ''qualified political subdivision'' as any governmental unit of a state, including any city, county, or similar governmental body that meets four criteria.[20] First, the political subdivision must have implicit or explicit authority under state law to require employers' participation in the payroll deduction savings program. 29 CFR 2510.3–2(h)(4)(i).[21] Second, the political subdivision must have a population equal to or greater than the population of the least populous state.[22] 29 CFR 2510.3–2(h)(4)(ii)(A). Third, the political subdivision cannot be within a state that has enacted a mandatory statewide payroll deduction savings program for private-sector employees; nor can the political subdivision have geographic overlap with another political subdivision that has enacted such a program. 29 CFR 2510.3–2(h)(4)(ii)(B).[23] Fourth, the political subdivision must implement and administer a retirement plan for its employees. 29 CFR 2510.3–2(h)(4)(ii)(C).[24] Compliance with the latter three conditions is determined as of the date the political subdivision's program is enacted.

B. The Authority Test

The final rule adopts the proposal's requirement that in order to be ''qualified'' a political subdivision must have the ''authority, implicit or explicit, under State law to require employers' participation in the program . . . .'' § 2510.3–2(h)(4)(i). This provision serves two purposes. The main purpose is to ensure that the political subdivision has the authority under state law to require employers within its jurisdiction to participate in the payroll deduction savings program and, in the case of programs with automatic enrollment, to require wage withholding. This is not to say, however, that a state law must explicitly authorize the political subdivision to establish a payroll deduction savings program; rather, it means that the political subdivision must have some measure of legal authority, even if implicit, to establish and operate the program and to compel employers to participate.[25] The provision's second purpose is to limit the qualified political subdivision definition—and by extension to limit the safe harbor's scope—to general-purpose subdivisions, a limitation that greatly reduces the approximate number of potentially-eligible subdivisions from 90,000 to 40,000. For these reasons, and noting that the Department did not receive significant or notable comments on this particular provision, the Department incorporates this provision in the final rule without change.

C. The Population Test

The final rule adopts the proposal's population test for safe harbor qualification, with one modification. As noted above, the final rule states, in relevant part, that a political subdivision must have ''a population equal to or greater than the population of the least populated State,'' and defines the term ''State'' to have the same meaning as in section 3(10) of ERISA (excluding the District of Columbia and territories listed in that section). 29 CFR 2510.3–2(h)(4)(ii)(A).[26] The final rule modifies the proposal by adding to (h)(4)(ii) the phrase ''[a]t the time of the enactment of the political subdivision's payroll deduction savings program,'' and applying this requirement to the population test, as well as the two other conditions that a political subdivision must satisfy to be a qualified political subdivision.

The Department has two primary policy reasons for adopting the population test. First, it is important that the safe harbor not include political subdivisions that may not have the experience, capacity, and resources to establish and oversee payroll deduction savings programs. Second, the Department is interested in reducing the possibility that employers would be subject to a multiplicity of overlapping political subdivision programs. It is the Department's view that the population test is an important measure in achieving both of those purposes. In the preamble to the proposed rule, the Department articulated these policy considerations for public notice and comment.

The Department received a number of comments on this issue that reflected apparently conflicting viewpoints. Some commenters supported the population test because they agree with the Department that population size correlates with a political subdivision having the experience, capacity, and resources to implement the necessary structures to establish and oversee payroll deduction savings programs and meet the safe harbor regulation's various requirements.[27] These commenters state that political subdivisions with larger populations are more likely to share states' concerns about the effect of inadequate retirement savings on social welfare programs. Other commenters disagreed with the population test's underlying premise, as they believe that a population test is arbitrary and does not prove either that the least populated state has sufficient capacity to establish and oversee a payroll deduction savings program or that political subdivisions with lesser populations are *per se* incapable of competently overseeing such a program.

The Department agrees with those commenters who recognize a relationship between population, on the one hand, and resources, experience, and capacity on the other. This is because larger cities and counties (in terms of population) likely have, among other things, a larger tax base and governmental infrastructure, which provides access to greater resources, experience, and capacity than smaller

[20] This new definition does not apply for other purposes under ERISA, such as for determining whether an entity is a political subdivision for purposes of the definition of a ''governmental plan'' in section 3(32) of ERISA, 29 U.S.C. 1002(32).

[21] This provision reduces the approximate number of potentially eligible political subdivisions from 90,000 to 40,000.

[22] This provision reduces the approximate number of potentially eligible political subdivisions from 40,000 to 128. For purposes of this provision, the term ''state'' does not include the non-state authorities listed in section 3(10) of ERISA. Thus, it does not include the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and Wake Island.

[23] This provision reduces the approximate number of potentially eligible political subdivisions from 128 to 80.

[24] This provision reduces the approximate number of potentially eligible political subdivisions from 80 to 51.

[25] This particular purpose is central to the Department's analysis under section 3(2) of ERISA and to its conclusion that employers are not establishing or maintaining ERISA-covered plans. 81 FR 59464, 70–71 (Aug. 30, 2016).

[26] The U.S. Census Bureau currently identifies Wyoming as the least populous state, with approximately 600,000 residents.

[27] *See* Comment Letter #11 (Corporation for Enterprise Development); Comment Letter #14 (AARP); Comment Letter #17 (AFSCME).

cities and counties.[28] In this regard, population can serve as one indicator of whether a city or county is likely to have sufficient resources, experience, and capacity to safely and competently establish and oversee a payroll deduction savings program. By keying off the least populated state, the final regulation's population test effectively establishes a federal floor, such that no political subdivision could qualify for the safe harbor unless the subdivision has a level of capacity and resources equal to or greater than the capacity and resources of the least populated state, using population as a proxy for capacity and resources.

The provisions of the Department's safe harbor pertaining to state payroll deduction savings programs assume that even the least populated states have the capacity and resources to manage a payroll deduction savings program. In the Department's view, political subdivisions that are the population size of small states could, in the right circumstances, have similar capacity and resources as their state counterparts of the same size. For that reason, the Department has decided not to flatly exclude such entities from coverage under the safe harbor. At the same time, however, the Department notes that states necessarily have a breadth of responsibilities, administrative systems, and experience that may not be matched by political subdivisions of equal size. Accordingly, the final regulation also adopts the demonstrated capacity test for these subdivisions, as discussed below. Together these tests ensure a high likelihood that qualified political subdivisions will have sufficient resources, experience, and capacity to safely and competently establish and oversee a payroll deduction savings programs. The application of both the size restriction and the demonstrated capacity test reduce the possibility that employers would be subject to a multiplicity of overlapping political subdivision programs. The population test directly advances this important policy interest by limiting the universe of political subdivisions potentially eligible for the safe harbor from approximately 40,000 general purpose political subdivisions to a far smaller number. As of 2015, there were approximately 136 general-purpose political subdivisions with populations equal to or greater than the population of Wyoming.

Even though the final regulation excludes smaller political subdivisions from the safe harbor, the Department acknowledges that cities and counties are not *per se* incapable of competently overseeing a payroll deduction savings program solely because they fail the final rule's population test. Indeed, many localities that fall below the population threshold may have sufficient experience, capacity, and resources to safely establish and oversee payroll deduction savings programs in a manner that sufficiently protects employees. Nevertheless, based on the public record, the Department's view continues to be that smaller political subdivisions do not, in general, have experience, resources, and capacity comparable to that of the least populous state, and therefore the Department chooses not to extend safe harbor status to such localities and their programs. It is also important to note that the final regulation does not—and the Department could not—bar smaller localities from establishing and maintaining payroll deduction savings programs for private-sector employees that fall outside the Department's safe harbor regulation.

As noted above, the Department did make one technical improvement to the proposed population test. Public comments raised concerns about the possibility that fluctuating populations could cause a qualified political subdivision to fall below the required population threshold—and therefore drop outside the safe harbor—after it had already enacted a payroll deduction savings program. To eliminate this possibility and its attendant uncertainty, the final rule contains new language to clarify that such cities and counties would not lose their qualified status merely because of population fluctuations. In that regard, the final regulation adds to paragraph (h)(4)(ii) the phrase ''[a]t the time of the enactment of the political subdivision's payroll deduction savings program.''

Finally, some commenters suggested that, because population size is only a rough indicator of a political subdivision's capacity and ability to safely operate a payroll deduction savings program, the Department should consider pairing the population test with some other more refined test or indicator. As mentioned above, the Department agrees that the population test could be improved by being paired with an additional criterion to gauge whether a sufficiently-large political subdivision should nonetheless fail to qualify under the safe harbor for lack of experience. The section below discusses the changes made to accomplish this result.

D. Demonstrated Capacity Test

The final regulation adopts a ''demonstrated capacity'' test in addition to the population test. As noted in the preceding sections, the population test removed from the safe harbor a significant number of smaller political subdivisions based solely on their size. The demonstrated capacity test, on the other hand, focuses on a political subdivision's ability to operate a payroll deduction savings program by requiring direct and objectively verifiable evidence of a political subdivision's experience, capacity, and resources to operate or administer such programs. The two tests (population test and demonstrated capacity test) combine to ensure a strong likelihood that political subdivisions that meet the safe harbor have sufficient experience, capacity, and resources to safely establish and oversee payroll deduction savings programs in a manner that sufficiently protects private-sector employees and that would not require employer involvement beyond the limits of the safe harbor regulation.

The Department adopted this new test in response to a significant number of commenters that strongly support this idea. These commenters encouraged the Department to consider two different approaches for developing a demonstrated capacity test. The first suggested approach focuses on whether the political subdivision has implemented and administers a retirement plan for its own employees.[29] The second suggested approach focuses on whether the political subdivision has an existing infrastructure for assessing and collecting income, sales, use or other similar taxes.[30] The apparent rationale behind these suggested approaches is that political subdivisions that are sophisticated enough to operate a retirement plan or levy and collect their own taxes should possess sufficient experience, capacity, and resources to safely establish and oversee a payroll deduction savings program. In addition, retirement plan administration and tax administration entail administrative activities that are highly comparable to the type of administrative activity that would be necessary to establish and oversee a successful

[28] For similar reasons, the population test also would reduce the likelihood of employer involvement beyond the limits of the safe harbor regulation. For instance, larger cities and counties with greater resources, experience and capacity likely will be better able to assert and maintain complete control over their programs such that there will be few or no occasions for participating employers to exercise their own discretion or control with respect to the program.

[29] *See, e.g.,* Comment Letter #16 (Investment Company Institute).

[30] *See, e.g.,* Comment Letter #19 (Georgetown University Center for Retirement Initiatives).

payroll deduction savings program for private-sector employees.

The final regulation adopts the suggested plan sponsorship approach as the sole basis for a demonstrated capacity test. Thus, in order to be qualified for the safe harbor under the final regulation, a political subdivision must implement and administer its own retirement plan. The Department agrees with the commenters that administering a public retirement plan for the political subdivision's own employees is sufficiently similar to establishing and overseeing a payroll deduction savings program for employees of other entities that successfully performing the former is strong evidence of an ability to successfully perform the latter. Both endeavors require, for example, receiving contributions, custodianship, investing assets or selecting investment options, deciding claims, furnishing account statements, meeting reporting requirements, distributing benefit payments, or selecting and overseeing others to perform some or all of these tasks. A political subdivision that does not implement and administer a retirement plan for its own employees, on the other hand, will fail to qualify under the safe harbor even if it passes the population test and all the other safe harbor conditions set forth in the qualified political subdivision definition.

The Department declined to adopt as part of the demonstrated capacity test the second of the commenters' suggested approaches, *i.e.,* the existence of a tax infrastructure. In support of that approach, the commenters suggested that a political subdivision's levying and collecting its own income, wage, or similar taxes may provide evidence that the political subdivision has the capacity to establish and oversee payroll deduction savings programs. The commenters noted that effective tax and program administration require political subdivisions to safely and efficiently exchange data and money with employers in a timely and ongoing fashion, usually by way of electronic payroll and other systems. In the Department's view, however, plan sponsorship is a better and more directly relevant indicator of a subdivision's ability to sponsor and administer a retirement savings program. Additionally, the Department is unable to verify the precise number of political subdivisions that both levy and collect their own income, wage, or similar taxes. Without such information, the Department is unable to assess the effect of this suggested approach on the safe harbor's scope. For these reasons, the Department declined to include this approach in the final rule's demonstrated capacity test.

Finally, the new test does not prescribe the type or size of plan a political subdivision must implement and administer in order to meet the safe harbor's new ''plan administration'' criterion. Thus, a political subdivision can satisfy this criterion by administering a defined benefit plan, an individual account plan, or both. Although a number of commenters suggested that the Department consider a plan size requirement, such as a minimum level of assets under management or number of participants covered, the Department declines to adopt these suggestions in the final rule.[31] As long as the plan provides retirement benefits for some or all of the political subdivision's employees, and provided that the political subdivision administers the plan directly or is responsible for selecting and overseeing others performing plan administration, the retirement plan is a ''plan, fund, or program'' within the meaning of paragraph (h)(4)(ii)(C) of the final regulation.

E. Consumer Protections

The final rule eliminates lingering ambiguity regarding the requirement in proposed paragraph (h)(1)(iii) that the state or political subdivision must assume responsibility for the security of payroll deductions. The Department previously attempted to clarify this requirement in the preamble to the final regulation dealing with state payroll deduction savings programs.[32] Despite those earlier efforts, commenters on the proposal continued to ask the Department to further clarify the meaning of this requirement. A number of commenters specifically focused on the need to clarify and strengthen proposed paragraph (h)(1)(iii), with some specifically stressing the importance of clear and strong standards protecting payroll deductions.[33] Many commenters also raised a generic concern that the proposal does not contain sufficient consumer protections as compared to the protections ERISA would offer.[34] The Department received similar comments on the 2015 proposed rule for state payroll deduction savings programs. Many of those commenters specifically referenced and supported a rule similar to the Department's regulation at 29 CFR 2510.3–102 (defining when participant contributions become ''plan assets'' for the purpose of triggering ERISA's protections).

In response to these concerns, the final rule clarifies and strengthens the requirement that states and political subdivisions must assume responsibility for the security of payroll deductions. Specifically, paragraph (h)(1)(iii) contains a new sub-clause clarifying that this requirement—to assume responsibility for the security of payroll deductions—includes two subsidiary requirements. The first subsidiary requirement is that states and political subdivisions must require that employers promptly transmit wage withholdings to the payroll deduction savings program. The second subsidiary requirement is that states and political subdivisions must provide an enforcement mechanism to ensure employer compliance with the first subsidiary requirement. These new requirements protect employees by ensuring that their payroll deductions are transmitted to their IRAs as quickly as possible, where they become subject to applicable Internal Revenue Code provisions, including the protective prohibited transaction provisions found in section 4975 of the Code.[35] States and political subdivisions may meet the new requirements in a variety of ways, including, for example, through legislation, ordinance, or administrative rulemaking.

The final regulation does not prescribe what is meant for wage withholdings to be transmitted ''promptly.'' Instead, each state and qualified political subdivision is best positioned to calibrate the appropriate timeframe for its own program. Nevertheless, in the interest of providing certainty to states and political subdivisions, the final regulation contains a special safe harbor for promptness. Paragraph (h)(5) provides that, for purposes of paragraph (h)(1)(iii), employer wage withholdings are ''deemed to be transmitted promptly'' if such amounts are

[35] *See* 81 FR 59469 (August 30, 2016).

transmitted to the program as of the earliest date on which such contributions can reasonably be segregated from the employer's general assets, but in no event later than the last day of the month following the month in which such amounts would otherwise have been payable to the employee in cash. This standard is closely aligned with the rules in 29 CFR 2510.3–102 for plans involving SIMPLE IRAs, as described in section 408(p) of the Internal Revenue Code.[36] Paragraph (h)(5) is not, however, the only method of complying with the promptness requirement in paragraph (h)(1)(iii) of the final regulation.

F. Overlap

The proposed rule limited the safe harbor to political subdivisions that are not located in a state that establishes a statewide retirement savings program for private-sector employees.[37] The purpose behind this criterion was to reduce the number of political subdivisions that could potentially meet the safe harbor, thereby mitigating the potential for overlap or duplication between political subdivision programs and state programs. In the proposal's preamble, the Department interpreted the term ''state-wide retirement savings program'' to include retirement savings programs described in the Department's Interpretive Bulletin found at 29 CFR 2509.2015–02, such as the voluntary marketplace and exchange models adopted by Washington State and New Jersey.[38]

A number of commenters expressed concern that including non-mandatory state programs within this limiting criterion is overly broad.[39] The commenters noted that where a state establishes the types of voluntary programs described in the Interpretive Bulletin, such as voluntary marketplaces and exchanges, there is little risk that employers would be subject to overlapping requirements or duplication because statewide information marketplaces and exchanges are merely vehicles for providing employees access to information about retirement savings options.[40] Thus, such programs would not impose upon employers any obligations that might conflict or overlap with a political subdivision's mandatory payroll deduction savings program. These commenters urged the Department to clarify in the final rule that a political subdivision is precluded from meeting this safe harbor condition only when the political subdivision is in a state that establishes a mandatory statewide payroll deduction savings program that requires employers to participate.

Commenters also expressed concern that the proposed rule's provision excluding a political subdivision from the safe harbor if the state subsequently enacts its own payroll deduction savings program could, in certain circumstances, result in legitimate political subdivision programs automatically dropping out of the safe harbor.[41] Specifically, the commenters pointed out that under the proposed rule, a political subdivision could be ''qualified'' at the time it enacts a payroll deduction savings program, but then suffer automatic disqualification if its state subsequently enacts a statewide program.[42] This is because the proposed rule excludes from the safe harbor any political subdivision that is in a state that ''enacts'' its own program, without regard to whether the political subdivision had enacted its own program before the state acted.

1. Clarifying ''Statewide Retirement Savings Program''

The Department agrees with the commenters that this criterion was overly broad. Accordingly, the final rule modifies the proposed rule to clarify that in order to be eligible for the safe harbor a political subdivision must not be located in a state that has enacted a *mandatory* statewide payroll deduction savings program for private sector employees. *See* § 2510.3(h)(4)(ii)(B). This modified language will continue to exclude from the safe harbor political subdivisions located in states (such as California, Connecticut, Illinois, Maryland, and Oregon) that have enacted a mandatory state payroll deduction savings program, as well as other political subdivisions that seek to enact a safe harbor program after the state in which they are located has already done so. Revised paragraph (h)(4)(ii)(B) does not, however, exclude from the safe harbor political subdivisions located in states that have enacted only *voluntary* programs such as those Massachusetts, New Jersey, and Washington State had enacted as of the date this final rule was published.[43]

2. Timing—Political Subdivisions Enacting Programs Before the State

The Department agrees with commenters that an otherwise-qualified political subdivision that has relied on the safe harbor to enact a payroll deduction savings program should not automatically lose its qualified status when its state subsequently enacts its own program. To allow an otherwise-qualified, pre-existing program to precipitously drop outside the safe harbor due to actions outside of its control would impose upon affected employers and participants undesirable uncertainty and complexities.[44] The final rule therefore revises paragraph (h)(4) to exclude from the safe harbor political subdivisions that are located in a state that already has enacted a *mandatory* statewide payroll deduction savings program *before the political subdivision enacts its own program.* Thus, if a state enacts such a program after the political subdivision has done so, the political subdivision does not automatically fall outside the safe harbor. Rather, in such instances it is incumbent upon the state and the political subdivision to determine how to coordinate the potentially overlapping programs in a way that does not require employer involvement beyond the limits of the safe harbor regulation, whether that means carving out the political subdivision from the state program, incorporating the political subdivision's program into the state program, or employing some other alternative.

3. Elimination of Overlapping Political Subdivision Programs

Some commenters asked the Department to clarify how the safe harbor would apply to political subdivisions that each enact a mandatory payroll deduction savings program for employees within their potentially overlapping jurisdictions. Some of those commenters further suggested that the Department should

[44] *See, e.g.,* Comment Letter #8 (American Retirement Association); Comment Letter #20 (New York City Mayor).

establish a rule that the larger political subdivision's program (*e.g.,* a county program) should take priority over any political subdivision program within its jurisdiction (*e.g.,* a city program), regardless of which program was first enacted.[45]

As a practical matter, and in view of the fact that only three political subdivisions have expressed a potential interest in establishing payroll deduction savings programs, the Department does not anticipate that there will be overlapping programs among political subdivisions. After careful deliberation, however, the Department decided to address concerns regarding the potential for conflicting requirements by modifying the proposed rule to preclude potentially overlapping political subdivision programs. As explained in the proposed rule's preamble, the Department has taken substantial measures to mitigate the potential that overlapping programs could simultaneously meet the safe harbor,[46] but there remains some potential for overlap. To eliminate any remaining potential for overlap, the Department has decided to extend the first-in-time coordination rule (the provisions of paragraph (h)(4)(ii)(B) of the rule that exclude from the safe harbor an otherwise qualified political subdivision when the state in which it is located has already enacted a mandatory payroll deduction savings program) to apply in situations where a mandatory payroll deduction savings program has already been enacted in another political subdivision. Thus, to the extent that a political subdivision meets the other conditions to be qualified but has a geographic overlap with another political subdivision that has already enacted a mandatory payroll deduction saving program for private-sector employees, the former political subdivision would be precluded from enacting a mandatory payroll deduction saving program that would satisfy the safe harbor. The Department has determined that this first-in-time rule will eliminate the few remaining situations in which the possibility of overlap among political subdivisions might otherwise exist.

G. Petition Process

Some commenters suggested that political subdivisions could petition or apply to the Department for an individual opinion or decision regarding whether or not the political subdivisions qualify for the safe harbor. These commenters propose that such a process could be available for political subdivisions that meet at least some of the four conditions in paragraph (h)(4) of the final regulation, but fail to meet all of the conditions. For example, the process could be available for a city or county that satisfies the demonstrated capacity test but not the population test, or vice-versa. These commenters envision a process in which the petitioner or applicant would present to the Department its best case for safe harbor status using a list of factors or criteria to be developed by the Department. This approach would give ''close-call'' cities and counties an avenue to obtain qualified status, while reserving to the Department the ability to deny potentially unsafe or improper applicants.

The Department declines to adopt this suggestion. The qualified political subdivision definition in paragraph (h)(4) of the final rule consists of four criteria, each of which is a bright-line measure that is either met or not. These objective criteria enable interested parties to readily determine whether or not they meet the definition. The commenters' suggested petition or application process, by contrast, is inherently subjective, and thus runs entirely counter to the Department's objective approach. Moreover, under the commenters' proposed model, the outcome in any particular case would depend on, among other things, the Department's view of the relevant facts and its weighing and balancing of a given list of factors or criteria. The present public record provides little, if any, direction on the type of criteria or factors the Department could or should adopt under such an approach, or whether each individual criterion or factor should be given equal weight. Apart from these significant shortcomings, the commenters' suggested proposal also raises Departmental budgetary and resource issues that are beyond the scope of this rulemaking.

H. Responsibility and Liability for Program Operations

The proposal required that states and political subdivisions assume and retain full responsibility for the payroll deduction savings programs they implement and administer. More specifically, the proposal provided that states and political subdivisions must assume responsibility (i) for investing employee savings or for selecting investment alternatives; (ii) for the security of payroll deductions and employee savings; and (iii) for operating and administering their programs, even if they delegate those functions to service or investment providers.[47] The proposal thus made it clear that in order for a program to qualify for the safe harbor, states and political subdivisions must assume and retain responsibility for operating and administering their programs.

At least one commenter requested that the Department clarify what it means for a state or political subdivision to assume and retain full responsibility for program operations, especially where the state or political subdivision chooses to delegate some of its responsibilities to third-party experts.[48] In the commenter's view, this requirement effectively prevents states and political subdivisions from delegating responsibilities and liabilities to third-party experts who are willing to assume such duties and liabilities. This commenter argues that this provision exposes states and political subdivisions to broader responsibility—and greater liability for third-party management—than they would have under ERISA's fiduciary standards, or possibly even under state statutes or common law. The commenter therefore asked the Department to modify the proposal to clarify that states and political subdivisions can delegate some of their management responsibility and attendant liability to third-party service or investment providers, on the condition that the state or political subdivision prudently selects and appropriately monitors those service providers.

The final regulation contains no such modification. The essence of the regulation's requirement that states and political subdivisions assume and retain full responsibility for operating and administering their payroll deduction savings programs is simply that states and political subdivisions must retain ultimate authority over those programs. Such authority includes, for example, determining whether or not to hire and fire qualified third-party service providers, and determining the scope of those service providers' duties. In drafting this rule, the Department fully anticipated that states and political subdivisions might choose to delegate program administration to qualified service providers that the states or political subdivisions oversee.[49] In that

[47] *See* §§ 2510.3–2(h)(1)(ii), (h)(1)(iii), and (h)(2)(ii), respectively.

[48] *See* Comment Letter #20 (New York City Mayor).

[49] *See* § 2510.3–2(h)(2)(ii) (states and political subdivisions may, without falling outside the safe harbor, utilize service or investment providers to

regard, the Department recognizes that prudently-selected third parties with relevant program administration and investment experience and expertise may, in many circumstances, be better equipped than a state or political subdivision to discharge the specialized duties associated with operating and managing payroll deduction savings programs. Thus, given that this requirement does not preclude sponsoring states and political subdivisions from delegating or assigning some or all of their administrative responsibilities to third-party service providers, states and political subdivisions would not lose their safe harbor status by doing so. It is important to note, however, that this requirement does not in any way govern the assignment of liability between states and political subdivisions and those to whom they delegate such responsibilities. Rather, issues of liability, such as whether and how states or political subdivisions and their service providers allocate liabilities among themselves, are matters for state and local law, and for applicable provisions of the Internal Revenue Code.

I. Timing

A few commenters asked the Department to delay extending the safe harbor to qualified political subdivisions until after the Department has had a chance to accumulate and fully analyze experience data on state-sponsored payroll deduction savings programs.[50] Among the concerns these commenters raised are the potential for overlapping programs; the uncertainty that a political subdivision could establish a program and then drop out of the safe harbor due to fluctuating populations; political subdivisions' assumed inferior level of financial sophistication, expertise and resources to properly manage payroll deduction savings programs; the inherently subjective nature of attempting to differentiate between sophisticated and unsophisticated political subdivisions; and a perceived lack of consumer protections. The commenters also suggested that a delay in implementing the final rule would allow more time for states to establish statewide programs, thereby alleviating the need for potentially overlapping political subdivisions to establish separate programs.

Although the Department declines the commenters' requests to delay implementing this final rule, the final rule reflects that the Department did take the commenters' concerns into account. As noted above in this preamble, the final rule addresses the commenters' concerns about potentially overlapping programs by adopting a new condition that further reduces the number of political subdivisions that can meet the safe harbor. That condition requires that in order to be eligible for the safe harbor a political subdivision must already administer a public-employee retirement program. The Department believes that this condition—which a number of commenters supported—measures, in objective terms, a political subdivision's ability to operate and administer a payroll deduction savings program for private-sector employees. The final rule also clarifies that an otherwise-qualified political subdivision will not automatically drop outside the safe harbor due to a drop in population, and it adds important consumer protections by requiring that employers remit employee wage withholdings to state and political subdivision programs in a timely manner. Moreover, the final rule does not preclude a state from moving forward with establishing its own payroll deduction savings program simply because a political subdivision within its borders has already done so.

The Department also notes that one very large political subdivision has already taken steps to establish a payroll deduction savings program for its private-sector employee residents, and, based on the comments the Department has received, it seems two others have expressed a potential interest in doing so.[51] As noted throughout this preamble, facilitating political subdivisions' ability to encourage their residents to save for retirement by enrolling them in payroll deduction savings programs furthers important state, federal, and Departmental goals and policies. For these reasons, and considering the modifications the Department already made to the final rule, the Department judges it appropriate to implement the final rule at this time.

III. Regulatory Impact Analysis

A. Executive Order 12866 and 13563 Statement

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing and streamlining rules, and of promoting flexibility. It also requires federal agencies to develop a plan under which the agencies will periodically review their existing significant regulations to make the agencies' regulatory programs more effective or less burdensome in achieving their regulatory objectives.

Under Executive Order 12866, the Office of Management and Budget (OMB) must determine whether a regulatory action is ''significant'' and therefore subject to the requirements of the Executive Order and review by the OMB. Section 3(f) of the Executive Order defines a ''significant regulatory action'' as an action that is likely to result in a rule (1) having an annual effect on the economy of $100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as an ''economically significant'' action); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal requirements, the President's priorities, or the principles set forth in the Executive Order.

OMB has determined that this regulatory action is not economically significant within the meaning of section 3(f)(1) of the Executive Order. However, it has determined that the action is significant within the meaning of section 3(f)(4) of the Executive Order. Accordingly, OMB has reviewed the final rule and the Department provides the following assessment of its benefits and costs.

B. Background

As discussed in detail above in Section I of this preamble, several

operate and administer their payroll deduction savings programs as long as the state or political subdivision retains full responsibility for operating and administering the program).

[50] Comment Letter #8 (American Retirement Association); Comment Letter #15 (American Benefits Council); Comment Letter #18 (U.S. Chamber of Commerce).

[51] *See, e.g., The New York City Nest Egg: A Plan for Addressing Retirement Security in New York City, Office of the New York City Comptroller (October 2016).*

commenters on the 2015 proposal [52] urged the Department to expand the safe harbor for state payroll deduction savings programs to include payroll deduction savings programs established by state political subdivisions. In particular, the commenters argued that an expansion of the safe harbor is necessary, because otherwise the safe harbor would not benefit employees of employers in political subdivisions that are located in states that have not adopted a statewide program and expressed a strong interest in establishing such programs.

In response, on August 30, 2016, the Department published a proposed rule [53] that would amend the 2016 final safe harbor regulation for state programs to include within its scope laws and programs established by certain state political subdivisions. The Department received and carefully reviewed the public comments submitted in response to the proposal. The Department now is publishing a final rule that amends paragraph (h) of § 2510.3–2 to cover payroll deduction savings programs of qualified political subdivisions defined in paragraph (h)(4) of the final rule. The Department discusses the benefits and costs attributable to the final rule below.

C. Benefits and Costs

In analyzing benefits and costs associated with this final rule, the Department focuses on the direct effects, which include both benefits and costs directly attributable to the rule. These benefits and costs are limited, because as stated above, the final rule would merely establish a safe harbor describing the circumstances under which qualified political subdivisions with authority under state law could establish payroll deduction savings programs that would not give rise to ERISA-covered employee pension benefit plans. It does not require qualified political subdivisions to take any actions nor employers to provide a retirement savings programs to their employees.

The Department also addresses indirect effects associated with the final rule, which include (1) potential benefits and costs directly associated with the requirements of qualified political subdivision payroll deduction savings programs, and (2) the potential increase in retirement savings and potential cost burden imposed on covered employers to comply with the requirements of such programs. Indirect effects vary by qualified political subdivisions depending on their program requirements and the degree to which the final rule might influence how political subdivisions design their payroll deduction savings programs.

Although the Department estimates that approximately 51 political subdivisions are potentially eligible to use this final rule,[54] the Department understands that many qualified political subdivisions may not be interested in establishing payroll deduction savings programs. As noted above, commenters have identified only three cities—New York City, Philadelphia, and Seattle—as having any potential interest to date. Therefore, the direct benefits and direct costs attributable to this final rule could be quite limited.

1. Direct Benefits

The Department believes that political subdivisions and other stakeholders would directly benefit from expanding the scope of the Department's final safe harbor regulation to include payroll deduction savings programs established by qualified political subdivisions. As with the states, this action will provide political subdivisions with clear guidelines to determine the circumstances under which programs they create for private-sector workers would not give rise to the establishment of ERISA-covered plans. The Department expects that the final rule will reduce legal costs, including litigation costs political subdivisions might otherwise incur, by (1) removing uncertainty about whether such political subdivision payroll deduction savings programs give rise to the establishment of plans that are covered by Title I of ERISA, and (2) creating efficiencies by eliminating the need for multiple political subdivisions to incur the same costs to determine that their programs would not give rise to the establishment of ERISA-covered plans. However, these benefits will be limited to qualified political subdivisions meeting all criteria set forth in this final rule. Those governmental units of a state, including any city, county, or similar governmental body that are not eligible to use the safe harbor may incur legal costs if they elect to establish their own payroll deduction savings programs.

In order to constitute a ''qualified political subdivision,'' the proposed rule required the political subdivision to have a population equal to or greater than the population of the least populous state. Several commenters asserted that based on this provision, it is possible that fluctuating populations could cause a previously qualified political subdivision to fall below the required population threshold and fall outside the safe harbor after it has established its program. To eliminate this possibility and reduce uncertainty, the Department clarified in the final rule that political subdivisions satisfying the population threshold when they enact a payroll deduction savings program would not lose their qualified status solely due to subsequent population fluctuations. This change will especially benefit political subdivisions close to the population threshold and encourage them to establish payroll deduction savings programs, because they will not have to continuously monitor their population if their population is equal to or greater than the population of the least populous state when their program is enacted.

In response to comments, the final rule clarifies that a qualified political subdivision would not automatically lose its qualified political subdivision status if the state establishes a payroll deduction savings program after the political subdivision has done so. Political subdivisions will benefit from this provision, because they will not have to be concerned that their programs will fall outside the safe harbor if the state subsequently establishes a program. The Department notes that in such situations, it expects that the state and qualified political subdivision will coordinate potentially overlapping programs to ensure a smooth transition. Although they may incur some costs associated with communication and coordination, these costs would be smaller compared to the costs that employers and participants may face if the qualified political subdivision's program experiences any disruptions or unexpected changes due to the lack of communication and coordination between the state and qualified political subdivision.

The Department estimates that there are approximately eight combinations where political subdivisions could potentially establish conflicting payroll deduction savings programs due to overlapping boundaries. In the final rule, the Department mitigated the possibility that political subdivisions with overlapping geographic boundaries could each become qualified political subdivisions by providing that a

[52] *See* 80 FR 72006 (November 18, 2015).

[53] *See* 81 FR 59581 (August 30, 2016).

[54] This estimate is based on the population estimates from the U.S. Census Bureau, the Census of Government data from the U.S. Census Bureau about defined benefit (DB) plans for local government employees, and BrightScope data about defined contribution (DC) plans for local government employees. For qualified political subdivision with overlapping boundaries, it counts only one per combination as the final rule precludes overlapping programs.

political subdivision that geographically overlaps with another political subdivision cannot be qualified if the overlapping subdivision already has enacted a mandatory payroll deduction savings program for private sector employees. Thus, the final rule benefits employers by providing certainty that they will not be subject to a multiplicity of overlapping political subdivision programs. It also benefits qualified political subdivisions by providing clarity regarding the circumstances under which political subdivisions with overlapping boundaries can enact payroll deduction savings programs that qualify for the safe harbor.

The final rule also clarifies the requirement that states and political subdivisions assume responsibility for the security of payroll deduction contributions in paragraph (h)(1)(iii). A number of commenters specifically focused on the need to clarify and strengthen this provision and some specifically stressed the importance of clear and strong standards protecting payroll deductions. The Department received similar comments on the 2015 proposed rule for state payroll deduction savings programs. In response to these comments, the Department buttressed paragraph (h)(1)(iii) in the final rule by including a new sub-clause clarifying that states and political subdivisions must (1) require that employers promptly transmit wage withholdings to the payroll deduction savings program, and (2) provide an enforcement mechanism to ensure that withheld wages are promptly transmitted.

These new requirements will benefit employees by ensuring that their payroll deductions are transmitted as quickly as possible to their IRAs, where they become subject to applicable Internal Revenue Code provisions, including the protective prohibited transaction provisions found in section 4975 of the Code. States and political subdivisions may adopt the new required protections in a variety of ways, including, for example, through legislation, ordinance, or administrative rulemaking. The provision also benefits states and political subdivisions that create payroll deduction savings programs and employers by providing clarity regarding the specific actions that are necessary to comply with the requirement for states and political subdivisions to assume responsibility for the security of payroll deductions.[55]

The Department notes that the final rule would not prevent political subdivisions from identifying and pursuing alternative policies, outside of the safe harbor, that also would not require employers to establish or maintain ERISA-covered plans. Thus, while the final rule would reduce uncertainty about political subdivision activity within the safe harbor, it would not impair political subdivision activity outside of it. This final regulation is a safe harbor and as such, it does not require employers to participate in qualified political subdivision payroll deduction savings programs; nor does it purport to define every possible program that does not give rise to the establishment of ERISA-covered plans.

2. Direct Costs

The final rule does not require any new action by employers or the political subdivisions. It merely establishes a safe harbor describing certain circumstances under which qualified political subdivision-required payroll deduction savings programs would not give rise to an ERISA-covered employee pension benefit plan and, therefore, would reduce the risks of being preempted by ERISA. Political subdivisions may incur legal costs to analyze the rule and determine whether their programs fall within the safe harbor. However, the Department expects that these costs will be less than the costs that would be incurred in the absence of the final rule. If a qualified political subdivision interested in developing its own payroll deduction savings program overlaps with another qualified political subdivision, it would also need to monitor the activities by the qualified political subdivision with an overlapping boundary and communicate with it to avoid any potential complications in relying on this safe harbor rule as the final rule precludes overlapping payroll deduction savings programs. Only one qualified political subdivision, out of approximately eight possible combinations, with a potentially overlapping boundary expressed interest in establishing its own payroll deduction savings program to the Department. Thus, the Department expects the monitoring and communication costs to be relatively small.

Qualified political subdivisions may incur administrative and operating costs including mailing and form production costs. These potential costs, however, are not directly attributable to the final rule; they are attributable to the political subdivision's creation of the payroll deduction savings program pursuant to its authority under state law.

Some commenters expressed the concern that smaller political subdivisions without the experience or capabilities to administer a payroll deduction savings program may contemplate creating and operating their own programs if the safe harbor rule is extended to all political subdivisions without any restrictions. This final rule addresses this concern by requiring political subdivisions to have a population equal to or greater than the least populous state and have a demonstrated capacity to operate a payroll deduction savings program in order to be qualified. The premise underlying these requirements is that political subdivisions that meet them are likely to have sufficient existing resources, experience, and infrastructure to create and implement payroll deduction savings programs.

3. Uncertainty

The Department is confident that the final rule will benefit political subdivisions and many other stakeholders otherwise beset by uncertainty by clarifying the circumstances under which qualified political subdivisions can create payroll deduction savings programs, including programs with automatic enrollment, without causing the political subdivision or employer to create an ERISA-covered employee benefit pension plan. However, the Department is unsure of the magnitude of the benefits, costs and transfer impacts of these programs, because they will depend on the qualified political subdivisions' independent decisions on whether and how best to take advantage of the safe harbor and on the cost that otherwise would have been attached to uncertainty about the legal status of the qualified political subdivisions' actions. The Department is also unsure of (1) the final rule's effects on political subdivisions that do not meet the safe harbor criteria, (2) whether any of these ineligible political subdivisions are currently developing their own payroll deduction savings programs, and (3) the extent to which ineligible political subdivisions would be discouraged from designing and implementing payroll deduction savings programs. The Department cannot predict what actions political subdivisions will take,

[55] The final regulation does not specifically define what is meant for wage withholdings to be transmitted ''promptly.'' Instead, each state and qualified political subdivision is best positioned to calibrate the appropriate timeframe for its own program. Nevertheless, in the interest of providing certainty to states and political subdivisions, the final regulation added paragraph (h)(5) to the rule, which contains a special safe harbor for promptness. For more detailed information, see the discussion about consumer protection in the preamble.

stakeholders' propensity to challenge such actions' legal status, either absent or pursuant to the final rule, or courts' resultant decisions.

4. Indirect Effects: Impact of Qualified Political Subdivision Payroll Deduction Savings Programs

As discussed above, the impact of qualified political subdivision payroll deduction savings programs is directly attributable to the qualified political subdivision legislation that creates such programs. As discussed below, however, under certain circumstances, these effects could be indirectly attributable to the final rule. For example, it is conceivable that more qualified political subdivisions could create payroll deduction savings programs due to the clear guidelines provided in the final rule and the reduced risk of an ERISA preemption challenge, and therefore, the increased prevalence of such programs would be indirectly attributable to the final rule. However, such an increase would be bounded by the eligibility restrictions for political subdivisions. With the authority, population and demonstrated capacity tests, and the preclusion of overlapping programs, the number of political subdivisions that are potentially eligible to use the safe harbor is very small (51). Moreover, as stated above, the Department is aware of only three political subdivisions that have expressed an interest in creating such programs. An additional possibility is that the rule would not change the prevalence of political subdivision payroll deduction savings programs, but would accelerate the implementation of programs that would exist anyway. With any of these possibilities, there would be benefits, costs and transfer impacts that are indirectly attributable to this rule, via the increased or accelerated creation of political subdivision-level payroll deduction savings programs.

The possibility exists that the final rule could result in an acceleration or deceleration of payroll deduction savings programs at the state level depending on the circumstances. For example, if multiple cities in a state set up robust, successful payroll deduction savings programs, a state that might otherwise create its own program could conclude that a statewide program no longer is necessary. On the other hand, states could feel pressure to create a statewide program if a city in the state does so in order to provide retirement income security for all of its citizens. However, problems could arise if the state and city programs overlap. Therefore, the Department solicited comments regarding whether the final regulation should clarify the status of a payroll deduction savings program of a qualified political subdivision when the state in which the subdivision is located establishes a statewide retirement savings program after the qualified political subdivision establishes and operates its program. Many commenters suggested that the Department should leave to the state to determine the appropriate relationship between the political subdivision's and the state's programs. Although this may appear to add another layer of complexity, the appropriate resolution would depend on the circumstances of each state and political subdivision. In some circumstances, it might be most cost effective to scale a political subdivision's payroll deduction program up to the entire state, whereas it might economically make more sense to maintain a political subdivision's program independent of the state's under different circumstances. As a commenter pointed out, it would be generally more cost effective if payroll deduction savings programs are able to take advantage of economies of scale.[56] To do so, a state may decide to discontinue the program established by a political subdivision and implement its own statewide program. In this case, the Department expects the state and the political subdivision will coordinate the potentially overlapping programs.

Qualified political subdivisions that elect to establish payroll deduction savings programs pursuant to the safe harbor would incur administrative and operating costs, which can be substantial especially in the beginning years until the payroll deduction savings programs become self-sustaining.

Employers may incur costs to update their payroll systems to transmit payroll deductions to the political subdivision or its agent, develop recordkeeping systems to document their collection and remittance of payments under the payroll deduction savings program, and provide information to employees regarding the political subdivision programs. As with political subdivisions' operational and administrative costs, some portion of these employer costs would be indirectly attributable to the rule if more political subdivision payroll deduction savings programs are implemented in the rule's presence than would be in its absence. Because the final rule narrows the number of political subdivisions that are eligible for the safe harbor by the population and demonstrated capacity tests, the aggregate costs imposed on employers would be limited. Moreover, in order to satisfy the safe harbor, most associated costs for employers would be nominal because the roles of employers are limited to ministerial functions, such as withholding the required contribution from employees' wages, remitting contributions to the political subdivision program and providing information about the program to employees. These costs would be incurred disproportionately by small employers and start-up companies, which tend to be least likely to offer pensions. These small employers may incur additional costs to acquire payroll software, use on-line payroll programs, or use external payroll companies to comply with their political subdivisions' programs.[57] However, some small employers may decide to use payroll software, an on-line payroll program, or a payroll service to withhold and remit payroll taxes independent of their political subdivisions' program requirement. Furthermore, compared to manually processing payroll taxes, utilizing payroll software or an on-line payroll program may be more cost effective for small employers in the long run. Therefore, the extent to which these costs can be attributable to political subdivisions' programs could be smaller than what some might estimate. Moreover such costs could be mitigated if political subdivisions exempt the smallest companies from their payroll deduction savings programs as some states do. Supporting this view, a commenter stated that complexity and administrative costs are often cited by small employers as barriers to offer retirement plans for their employees and argued that savings arrangements established by political subdivisions could in fact alleviate small employers' burdens.[58]

Employers, particularly those operating in multiple political subdivisions, may face potentially increased costs to comply with several political subdivision payroll deduction

[56] Comment Letter #6 (American Payroll Association).

[57] According to one survey, about 60 percent of small employers do not use a payroll service. National Small Business Association, April 11, 2013, ''2013 Small Business Taxation Survey.'' This survey says 23% of small employers who handle payroll taxes internally have no employees. Therefore, only about 46%, not 60%, of small employers would be in fact affected by political subdivisions' payroll deduction savings programs, based on this survey. The survey does not include small employers that use payroll software or on-line payroll programs, which provide a cost effective means for such employers to comply with payroll deduction savings programs.

[58] *See* Comment letter #5 (City of Philadelphia Controller).

savings programs, depending on whether and, if so, how, the requirements of those programs differ. This can be more challenging for employers if they operate in states where not all political subdivisions have their own payroll deduction savings programs and/or where some political subdivisions' programs differ in certain ways from others. However, several states have only one qualified political subdivision. Even if states have multiple qualified political subdivisions, the final rule precludes overlapping programs. Thus, the potential burden faced by employers operating in multiple political subdivisions is limited. Moreover, employers operating across several political subdivision borders are likely to have ERISA-covered plans in place for their employees. Thus, there may be no cost burden associated with complying with multiple political subdivision payroll deduction savings programs because employers that sponsor plans typically are exempt from the law enacting such programs. Furthermore, in order to satisfy the final safe harbor rule, the role of employers would be limited to ministerial functions such as timely transmitting payroll deductions, which implies that the increase in cost burden is further likely to be restricted. By limiting eligibility to political subdivisions based on the population, authority, and demonstrated capacity conditions and precluding overlapping political subdivision programs, this final rule further addresses the concerns raised by several commenters by substantially limiting the possibility of conflicting programs among multiple political subdivisions.

The Department believes that well-designed political subdivision-level payroll deduction savings programs have the potential to effectively reduce gaps in retirement security. The political subdivisions that expressed interest in establishing their own payroll deduction savings programs for private-sector workers in the political subdivision seem to be motivated by those workers' significantly lower access rates to employment-based retirement plans compared to the rates for workers nationwide.[59] In order to successfully reduce these significant gaps in retirement savings as intended, there are several factors to consider. Relevant variables such as pension coverage, labor market conditions,[60] population demographics, and elderly poverty, vary widely across the political subdivisions, suggesting a potential opportunity for progress at the political subdivision level. Many workers throughout these political subdivisions currently may save less than would be optimal due to (1) behavioral biases (such as myopia or inertia), (2) labor market conditions that prevent them from accessing plans at work, or (3) their employers' failure to offer retirement plans.[61] Some research suggests that automatic contribution policies are effective in increasing retirement savings and wealth in general by overcoming behavioral biases or inertia.[62] Well-designed political subdivisions' payroll deduction savings programs could help many savers who otherwise might not be saving enough or at all to begin to save earlier than they might have otherwise. Such workers will have traded some consumption today for more in retirement, potentially reaping net gains in overall lifetime well-being. Their additional savings may also reduce fiscal pressure on publicly financed retirement programs and other public assistance programs, such as Supplemental Security Income (SSI), which support low-income Americans, including older Americans.

The Department believes that well-designed political subdivision payroll deduction savings programs can achieve their intended, positive effects of fostering retirement security. However, the potential benefits—primarily increases in retirement savings—might be somewhat limited, because the final safe harbor does not allow employer contributions to political subdivisions' payroll deduction savings programs. Additionally, the initiatives potentially might have some unintended consequences. Those workers least equipped to make good retirement savings decisions arguably stand to benefit most from these programs, but also arguably could be at greater risk of suffering adverse unintended effects. Workers who would not benefit from increased retirement savings could opt out, but some might fail to do so. Such workers might increase their savings too much, unduly sacrificing current economic needs. Consequently, they might be more likely to cash out early and suffer tax losses (unless they receive a non-taxable Roth IRA distribution), and/or to take on more expensive debt to pay necessary bills. Similarly, political subdivisions' payroll deduction savings programs directed at workers who do not currently participate in workplace savings arrangements may be imperfectly targeted to address gaps in retirement security. For example, some college students might be better advised to take less in student loans rather than open an IRA and some young families might do well to save more first for their children's education and later for their own retirement. In general, workers without retirement plan coverage tend to be younger, lower-income or less attached to the workforce, thus these workers may be financially stressed or have other savings goals. Because only large political subdivisions can create and implement programs under the final rule, these demographic characteristics can be more pronounced, assuming large political subdivisions tend to have more diverse workforces. If so, then the benefits of political subdivisions' payroll deduction savings programs could be further limited and in some cases potentially harmful for certain workers. Although these might be valid concerns, political subdivisions are responsible for designing effective programs that minimize these types of harm and maximize benefits to participants.

Commenters have stated another concern—that political subdivision initiatives may ''crowd-out'' ERISA-covered plans. The final rule may inadvertently encourage employers operating in multiple political subdivisions to switch from ERISA-covered plans to political subdivision payroll deduction savings programs in order to reduce costs, especially if they are required to cover employees currently ineligible to participate in ERISA-covered plans under political subdivision programs. This final rule makes clear that political subdivision programs directed toward employers that do not offer other retirement plans fall within this final safe harbor rule.

[59] According to the comment letter submitted by the city of Philadelphia, in May 2016, 54% of employees in Philadelphia do not have access to workplace retirement plans. Similarly, 57% of New York City private-sector workers lack access to a retirement plan at their employment place according to the comment letter submitted by the office of Comptroller of the City of New York. These statistics are significantly higher than the nation-wide average of 34% lacking access to a retirement plan through employment for private-sector workers, according to the National Compensation Study in June of 2016.

[60] *See, e.g.,* U.S. Bureau of Labor Statistics, ''Metropolitan Area Employment and Unemployment—May 2016,'' USDL–16–1291 (June 29, 2016).

[61] According to the National Compensation Survey, March 2016, only 66% of private-sector workers have access to retirement benefits—including defined benefit and defined contribution plans—at work.

[62] *See* Chetty, Friedman, Leth-Petresen, Nielsen & Olsen, ''Active vs. Passive Decisions and Crowd-out in Retirement Savings Accounts: Evidence from Denmark,'' 129 Quarterly Journal of Economics 1141–1219 (2014). *See also* Madrian and Shea, ''The Power of Suggestion: Inertia in 401(k) Participation and Savings Behavior,'' 116 Quarterly Journal of Economics 1149–1187 (2001).

However, employers that wish to provide retirement benefits are likely to find that ERISA-covered programs, such as 401(k) plans, have important advantages for them and their employees over participation in political subdivision programs. Potential advantages include significantly higher limits on tax-favored contributions that may be elected by employees ($18,000 in 401(k) plans and $24,000 for those age 50 or older) versus $5,500 in IRAs ($6,500 for those age 50 or older), the opportunity for employers to make tax-favored matching or nonmatching contributions on behalf of employees (allowing a total of up to $54,000 ($60,000 for those age 50 or older) of employee plus employer contributions for an employee in a 401(k) plan versus $5,500 or $6,500 in IRAs), greater flexibility in plan selection and design, ERISA protections, and larger positive recruitment and retention effects.[63] Therefore it seems unlikely that political subdivision initiatives will ''crowd-out'' many ERISA-covered plans, although, if they do, some workers might lose ERISA-covered plans that could have been more generous than political subdivision-based (IRA) benefits.

There is also the possibility that some workers who would otherwise have saved more might reduce their savings to the low, default levels associated with some political subdivision programs. Political subdivisions can address this concern by incorporating into their programs participant education or ''auto-escalation'' features that increase default contribution rates over time and/or as pay increases.

D. Paperwork Reduction Act

As part of its continuing effort to reduce paperwork and respondent burden, the Department of Labor conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on final and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that the public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

In accordance with the requirements of the PRA, the Department solicited comments regarding its determination that the proposed rule is not subject to the requirements of the PRA, because it does not contain a ''collection of information'' as defined in 44 U.S.C. 3502(3). The Department's conclusion was based on the premise that the proposed rule does not require any action by or impose any requirements on employers or the political subdivisions. It merely clarifies that certain political subdivision payroll deduction savings programs that encourage retirement savings would not result in the creation of employee benefit plans covered by Title I of ERISA.

The Department did not receive any comments regarding this assessment. Therefore, the Department has determined that the final rule is not subject to the PRA, because it does not contain a collection of information. The PRA definition of ''burden'' excludes time, effort, and financial resources necessary to comply with a collection of information that would be incurred by respondents in the normal course of their activities. *See* 5 CFR 1320.3(b)(2). The definition of ''burden'' also excludes burdens imposed by a state, local, or tribal government independent of a Federal requirement. *See* 5 CFR 1320.3(b)(3). The final rule imposes no burden on employers, because political subdivisions will customarily include notice and recordkeeping requirements when enacting their payroll deduction savings programs. Thus, employers participating in such programs are responding to political subdivision, not Federal, requirements.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and which are likely to have a significant economic impact on a substantial number of small entities. Unless an agency certifies that a rule will not have a significant economic impact on a substantial number of small entities, section 604 of the RFA requires the agency to present a final regulatory flexibility analysis at the time of the publication of the final rule describing the impact of the rule on small entities. Small entities include small businesses, organizations and governmental jurisdictions.

Although several commenters maintained that the proposed rule would impose significant costs on small employers, similar to the proposal, the final rule merely establishes a new safe harbor describing circumstances in which payroll deduction savings programs established and maintained by political subdivisions would not give rise to ERISA-covered employee pension benefit plans. Therefore, the final rule imposes no requirements or costs on small employers, and the Department believes that it will not have a significant economic impact on a substantial number of small employers. Similarly, because the final rule does not impose any requirements or costs on small governments, the Department believes that it will not have a significant economic impact on a substantial number of small government entities, either. Accordingly, pursuant to section 605(b) of the RFA, the Assistant Secretary of the Employee Benefits Security Administration hereby certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

F. Unfunded Mandates Reform Act

For purposes of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*), as well as Executive Order 12875, this final rule does not include any federal mandate that may result in expenditures by state, local, or tribal governments, or the private sector, which may impose an annual burden of $100 million as adjusted for inflation.

G. Congressional Review Act

The final rule is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and will be transmitted to Congress and the Comptroller General for review. The final rule is not a ''major rule'' as that term is defined in 5 U.S.C. 804, because it is not likely to result in (1) an annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, or Federal, State, or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

H. Federalism Statement

Executive Order 13132 outlines fundamental principles of federalism. It

[63] These contribution limits are for year 2017. For more details, *see: https://www.irs.gov/retirement-plans/cola-increases-for-dollar-limitations-on-benefits-and-contributions.*

also requires adherence to specific criteria by federal agencies in formulating and implementing policies that have ''substantial direct effects'' on the states, the relationship between the national government and states, or on the distribution of power and responsibilities among the various levels of government. Federal agencies promulgating regulations that have these federalism implications must consult with state and local officials, and describe the extent of their consultation and the nature of the concerns of state and local officials in the preamble to the final regulation.

In the Department's view, the final rule, by clarifying that payroll deduction savings programs by certain political subdivisions will not result in creation of employee benefit plans under ERISA, would provide more latitude and certainty to political subdivisions and employers regarding the treatment of such arrangements under ERISA. Therefore, the final rule does not contain policies with federalism implications within the meaning of the Order.

Nonetheless, in respect for the fundamental federalism principles set forth in the Order, the Department affirmatively engaged in outreach, including meetings, conference calls, and outreach events, with officials of political subdivisions and other stakeholders regarding the final rule and sought their input on the safe harbor. The Department also received comment letters from local governments and their representatives. Many of the changes in the final rule stem from suggestions contained in the comment letters.

List of Subjects in 29 CFR Part 2510

Accounting, Employee benefit plans, Employee Retirement Income Security Act, Coverage, Pensions, Reporting.

For the reasons stated in the preamble, the Department of Labor amends 29 CFR part 2510 as set forth below:

PART 2510—DEFINITION OF TERMS USED IN SUBCHAPTERS C, D, E, F, G, AND L OF THIS CHAPTER

■ 1. The authority citation for part 2510 is revised to read as follows:

Authority: 29 U.S.C. 1002(2), 1002(21), 1002(37), 1002(38), 1002(40), 1031, and 1135; Secretary of Labor's Order No. 1–2011, 77 FR 1088 (Jan. 9, 2012); Sec. 2510.3–101 also issued under sec. 102 of Reorganization Plan No. 4 of 1978, 5 U.S.C. App. at 727 (2012), E.O. 12108, 44 FR 1065 (Jan. 3, 1979) and 29 U.S.C. 1135 note. Sec. 2510.3–38 is also issued under sec. 1, Pub. L. 105–72, 111 Stat. 1457 (1997).

■ 2. In § 2510.3–2, revise paragraph (h) to read as follows:

§ 2510.3–2 Employee pension benefit plan.

* * * * *

(h) *Certain governmental payroll deduction savings programs.* (1) For purposes of title I of the Act and this chapter, the terms ''employee pension benefit plan'' and ''pension plan'' shall not include an individual retirement plan (as defined in 26 U.S.C. 7701(a)(37)) established and maintained pursuant to a payroll deduction savings program of a State or qualified political subdivision of a State, provided that:

(i) The program is specifically established pursuant to State or qualified political subdivision law;

(ii) The program is implemented and administered by the State or qualified political subdivision establishing the program (or by a governmental agency or instrumentality of either), which is responsible for investing the employee savings or for selecting investment alternatives for employees to choose;

(iii) The State or qualified political subdivision (or governmental agency or instrumentality of either) assumes responsibility for the security of payroll deductions and employee savings, including by requiring that amounts withheld from wages by the employer be transmitted to the program promptly and by providing an enforcement mechanism to assure compliance with this requirement;

(iv) The State or qualified political subdivision (or governmental agency or instrumentality of either) adopts measures to ensure that employees are notified of their rights under the program, and creates a mechanism for enforcement of those rights;

(v) Participation in the program is voluntary for employees;

(vi) All rights of the employee, former employee, or beneficiary under the program are enforceable only by the employee, former employee, or beneficiary, an authorized representative of such a person, or by the State or qualified political subdivision (or governmental agency or instrumentality of either);

(vii) The involvement of the employer is limited to the following:

(A) Collecting employee contributions through payroll deductions and remitting them to the program;

(B) Providing notice to the employees and maintaining records regarding the employer's collection and remittance of payments under the program;

(C) Providing information to the State or qualified political subdivision (or governmental agency or instrumentality of either) necessary to facilitate the operation of the program; and

(D) Distributing program information to employees from the State or qualified political subdivision (or governmental agency or instrumentality of either) and permitting the State or qualified political subdivision (or governmental agency or instrumentality of either) to publicize the program to employees;

(viii) The employer contributes no funds to the program and provides no bonus or other monetary incentive to employees to participate in the program;

(ix) The employer's participation in the program is required by State or qualified political subdivision law;

(x) The employer has no discretionary authority, control, or responsibility under the program; and

(xi) The employer receives no direct or indirect consideration in the form of cash or otherwise, other than consideration (including tax incentives and credits) received directly from the State or qualified political subdivision (or governmental agency or instrumentality of either) that does not exceed an amount that reasonably approximates the employer's (or a typical employer's) costs under the program.

(2) A payroll deduction savings program will not fail to satisfy the provisions of paragraph (h)(1) of this section merely because the program—

(i) Is directed toward those employers that do not offer some other workplace savings arrangement;

(ii) Utilizes one or more service or investment providers to operate and administer the program, provided that the State or qualified political subdivision (or the governmental agency or instrumentality of either) retains full responsibility for the operation and administration of the program; or

(iii) Treats employees as having automatically elected payroll deductions in an amount or percentage of compensation, including any automatic increases in such amount or percentage, unless the employee specifically elects not to have such deductions made (or specifically elects to have the deductions made in a different amount or percentage of compensation allowed by the program), provided that the employee is given adequate advance notice of the right to make such elections, and provided, further, that a program may also satisfy this paragraph (h) without requiring or otherwise providing for automatic elections such as those described in this paragraph (h)(2)(iii).

(3) For purposes of this paragraph (h), the term ''State'' shall have the same

meaning as defined in section 3(10) of the Act.

(4) For purposes of this paragraph (h), the term ''qualified political subdivision'' means any governmental unit of a State, including a city, county, or similar governmental body, that—

(i) Has the authority, implicit or explicit, under State law to require employers' participation in the program as described in paragraph (h)(1)(ix) of this section; and

(ii) At the time of the enactment of the political subdivision's payroll deduction savings program:

(A) Has a population equal to or greater than the population of the least populated State (excluding the District of Columbia and territories listed in section 3(10) of the Act);

(B) Has no geographic overlap with any other political subdivision that has enacted a mandatory payroll deduction savings program for private-sector employees and is not located in a State that has enacted such a program statewide; and

(C) Has implemented and administers a plan, fund, or program that provides retirement income to its employees, or results in a deferral of income by its employees for periods extending to the termination of covered employment or beyond.

(5) For purposes of paragraph (h)(1)(iii) of this section, amounts withheld from an employee's wages by the employer are deemed to be transmitted promptly if such amounts are transmitted to the program as of the earliest date on which such contributions can reasonably be segregated from the employer's general assets, but in no event later than the last day of the month following the month in which such amounts would otherwise have been payable to the employee in cash.

Signed at Washington, DC, this 9th day of December, 2016.

Phyllis C. Borzi,

Assistant Secretary, Employee Benefits Security Administration, U.S. Department of Labor.

BILLING CODE 4510–29–P

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 89

[Docket ID: DOD–2015–OS–0020]

RIN 0790–AJ33

Interstate Compact on Educational Opportunity for Military Children

AGENCY: Under Secretary of Defense for Personnel and Readiness, DoD.

ACTION: Final rule.

SUMMARY: DoD is establishing policies to implement the Interstate Compact on Educational Opportunity for Military Children (referred to as the ''Compact'') within the DoD, informed by the sense of Congress, and in furtherance of the operation of DoD schools. The final rule provides components with policies to support the intent of the Compact, which is to aid the transition of school-age children in military families between school districts (to include between Department of Defense Educational Activity (DoDEA) schools and state school districts). Each state joining the Compact agrees to address specific school transition issues in a consistent way and minimize school disruptions for military children transferring from one state school system to another. The Compact consists of general policies in four key areas: Eligibility, enrollment, placement, and graduation. Children of active duty members of the uniformed services, National Guard and Reserve on active duty orders, and members or veterans who are medically discharged or retired for one year are eligible for assistance under the Compact.

DATES: This rule is effective on January 19, 2017.

FOR FURTHER INFORMATION CONTACT: Marcus Beauregard, 571–372–5357.

SUPPLEMENTARY INFORMATION: On March 7, 2016 (81 FR 11698–11706), the Department of Defense published a proposed rule titled Interstate Compact on Educational Opportunity for Military Children for a 60-day public comment period. The public comment period closed on May 6, 2016. Ten public comments were received. The preamble to this final rule addresses the comments. Due to one of the public comments received, the Department has revised the final rule to reflect that the Military Departments will nominate military representatives by position to act as liaisons to State Councils and the Deputy Assistant Secretary of Defense for Military Community and Family Policy (DASD(MC&FP)) will designate them in this manner.

Edits were made to adjust the process established to designate DoD liaisons to State Councils, so that liaisons are designated by position rather than by individual.

As the result of further internal coordination, administrative edits were made to the regulatory text.

Comment: ''This regulation is very beneficial for the States and as the DoD is to handle the majority of the cost, it has the promise of doing a great deal of good for the children of active duty military without being overly burdensome to the States participating. However, as the participation in the Compact is voluntary, it is possible that the degree of implementation will vary from state to state, perhaps by a large degree. This potential for variation would run against the purpose of the regulation. It is not always desirable to have penalties as part of a regulation, especially one that is voluntary, but without a clear idea of how the regulation would be enforced, the goals of the Compact may not be successful.''

Response: All fifty states and the District of Columbia (DC) have accepted the Compact into their state statutes. Consequently, complying with the provisions of the Compact is based on compliance with state law. Additionally, the Compact (approved by all fifty states and DC) includes the oversight of the Compact by a Commission composed of member states, with rules governing non-compliance and dispute resolution. Also, support for the administration of the Compact and the Commission is funded entirely by the member states without support from the federal government.

Comment: ''This new policy will not only bring awareness to schools, but will open up a need for additional staff to require training and employment in the schools to assist these [military] families. This rule will also open doors for additional policy to be made and other services not being addressed to have priority in legislation in the upcoming years so that the military families can have less strain than they already do with having a parent serve our country.''

Response: The fifty states and DC enacted laws approving the Compact with the understanding that implementation of the Compact would not require additional staffing in schools. Additionally, since enactment of the Compact in the 50 states and DC between 2008 and 2014, there have not been additional policies or services to address educational needs of children in

military families. Instead, states have addressed other concerns, such as licensure and employment of military spouses.

Comment: ''Since most moves occur during the summer months, in between school years, many of the challenges addressed by the proposed rule can be avoided with forethought and planning. For instance, every experienced military spouse knows to contact the gaining school system and/or base to gather as much enrollment information as possible and begin setting up a smooth transition. Required immunizations are dispensed at the base clinic, soccer registration forms and payment are mailed off, copies of IEP and special needs assessment tests are made. But what about things the family cannot control, such as high school prerequisites or differences in the number of required language courses a transferring high school student must take?''

Response: The focus of this rule is the implementation of the Compact provisions by DoDEA and facilitating the DoD liaison function on State Councils. With this said, the Compact provides broad policies to facilitate the transition of children in military families between schools. Forethought and planning can help families during these transitions, but there are elements of the transition process that the Compact addresses without requiring a school district to modify its educational standards.

Comment: ''In the definition for the children of military families, number four should be revised. I believe that children of military members who are severely wounded, ill, injured, or die on active duty or as a result of injuries sustained on active duty need to have this designation for longer than one year. I suggest they keep this designation until June 30th of their normal graduation year. This ensures the child/children will have this support until they graduate.

Similar Comment: Eligibility needs to include recently separated (regardless of despoliation as it is not child's fault for honorable, etc.) and retired/new retirement system??? soldiers (for more than 1 year and beyond ''retire'' as the military is looking to drastically change retirement in the next decade, not sure what those soldiers will be called. . . . thinking ahead here).''

Response: The suggested changes may be very worthwhile; however, the definitions included in this rule are the same as the definitions that have been enacted by the 50 states and DC, which have approved the Compact. Furthermore, the enrollment policies governing DoDEA schools is governed by 20 U.S.C. 921–932 and 10 U.S.C. 2164.

Comment: ''My high school split was awful after my dad retired between my sophomore and junior year. From KY to GA requirements. I was denied Calculus and French 3 due to GA requirements for freshmen PE & sophomore economics to graduate in their state. Guess taking Latin & biology & chemistry right off the bat in KY crowded out these GA requirements. Was such a joke to put a senior into a freshman class for a requirement not needed or looked favorably at for college transcripts. Would have been so much more streamlined if given a waiver and opt out of GA requirements to graduate.''

Response: The Compact allows for military families more flexibility to work with schools to accommodate requirements for the graduation of their children. Section 89.8(b)(4) outlines the provisions of Article VII of the Compact on graduation requirements.

Comment: ''The pact should also provide guidance for both state-side and DoD schools to provide transition tutoring for military children transferring to new schools. States have different standards and teachers teach to different standards per their school districts. There are times when new military children transfer to a different school and they are considered ''behind.'' Not because they have a learning disability, but the part of the curriculum may not have been taught at the old school. If a tutoring program for possibly 90 days or more (if necessary) could be provided at no expense to the parents, this will allow transferring students time to learn any coursework they may not have been taught at their old schools. This will also make the transition less stressful on the kids.''

Response: Adding services, such as tutoring, to the Compact would require the member states and DC to amend their laws that implement the Compact. Since enactment of the Compact in the 50 states and DC between 2008 and 2014, there have not been additional policies or services to address educational needs of children in military families.

Comment: ''Now that the Compact has been adopted by all 50 states and the District of Columbia, the next step must be to ensure each state has a functioning state council. These councils play an important role in raising awareness of the Compact among school districts, as well as answering questions and resolving conflicts. Although DoD cannot compel states to create and maintain state councils, it can and should ensure each council has one or more military representatives. While we commend DoD for its thoughtful approach to identifying military representatives, we have concerns about some of the procedures outlined in the proposed rule. Under the proposed rule, each Service will be assigned several states and will be responsible for selecting the military representative to serve on those states' councils. The military representative must be a military member or DoD civilian who can serve on the state council for two years. Given the transient nature of military life, we believe this places an undue burden on the Services, who will be required to identify a new representative each time an individual serving on a state council is reassigned to a new location. Rather than choosing an individual, we believe it makes more sense to formally attach the military representative role to a given position or billet. An assignment by billet would provide the state councils with the assurance the military representative role will be continuously occupied and reduce the burden on the Services.'' [1]

Response: The Department agrees with the perspective of designating military representatives by position to act as liaisons. The Department has heard informally from others within the Military Interstate Children's Compact Commission (MIC3) that designation by position would be the preferred approach. Consequently, the Department has revised the proposed rule and the DoD Instruction to reflect this change so that the Military Departments will nominate military representatives by position and the DASD(MC&FP) will designate them in this manner. These designations normally will remain in force until a State Commissioner requests a different position (or positions) be designated as the liaison to the State Council.

Executive Summary

I. Purpose of This Rulemaking

This final rule provides components of the DoD with policies to support the intent of the Compact, which is to aid the transition of school-age children in military families between school districts. The intent of the program is to ensure children are enrolled immediately in their new school, placed in the appropriate academic program, and are able to graduate on time.

Each state joining the Compact agrees to address specific school transition issues in a consistent way and minimize

[1] April 14, 2016 letter from the National Military Family Association, submitted as comment on DOD–2015–OS–0020–0001.

school disruptions for military children transferring from one state school system to another. The Compact consists of general policies in four key areas: Eligibility, enrollment, placement, and graduation.

As of August 2014, 50 states and DC have passed legislation to become members of the Compact, including most of those with large numbers of military residents. DoDEA cannot be a member of the Compact, but is complying with its provisions as a matter of policy in both overseas and domestic schools. In return, the Compact member states have agreed to treat students coming from a DoDEA school as though they were transferring from a member state.

The Compact has provisions for member states to facilitate school transition in the following areas:

Education Records and Enrollment

The Compact asks school districts in member states to assist military families with the transfer of education records, additional time for immunization and continuity of enrollment in kindergarten and first grade:

• Education records. When a family leaves a school district in a member state, the parents may receive a set of unofficial records to carry to the new school in another member state. It will include all the information the new school needs to enroll and place the child until it receives the official records. In addition, the Compact requires all sending school districts within member states to send official transcripts within 10 days of a request from the receiving state school district.

• Immunizations. If a child transferring to a member state needs additional immunizations, he or she may enroll and begin school. Parents then have 30 days to see that the child gets the required immunizations. If further immunizations are required, they must be started within 30 calendar days of enrollment. Tuberculosis testing is not covered under the Compact since the TB test is not an immunization but rather a health screening.

• Kindergarten and first grade entrance age. If the entrance age requirement in the new school system is different, transitioning children may continue in the same grade if they have already started kindergarten or first grade where the family was previously stationed. This provision also allows children to move up to first or second grade, regardless of age requirements, if they have completed kindergarten or first grade in another state.

Placement and Attendance

Students from military families often miss appropriate placement in required classes, advanced placement and special-needs programs while awaiting evaluation at the new school. The Compact requires cooperation in the following areas:

• Course and education program placement. A receiving school district in a member state must initially honor placement of a student based on his or her enrollment in the sending state, provided the new school has a similar or equivalent program. The receiving school may evaluate the student after placement to ensure it is appropriate, but the school may not put children into ''holding classes'' while they await assessment. The receiving school may allow the student to attend similar education courses in other schools within the district if the receiving school does not offer such courses.

• Special education services. Students covered by the Individuals with Disabilities Education Act receive the same services (although not necessarily identical programs) identified in the individual education plan from the sending state. This is a parallel requirement under federal law.

• Placement flexibility. School districts are encouraged to determine if course or program prerequisites can be waived for students who have completed similar coursework in the sending school district. This process allows students to take advanced courses rather than repeat similar basic courses.

• Absence related to deployment activities. Students in member states may request additional, excused absences to visit with their parent or legal guardian immediately before, during, and after deployment. Schools have flexibility in approving absences if there are competing circumstances such as state testing or if the student already has excessive absences.

Eligibility for Enrollment

The Compact asks school districts in member states to examine their rules for eligibility to allow children of military parents to have the continuity they need. The Compact requires cooperation in the following areas:

• *Enrollment.* When a child of a deployed parent is staying with a non-custodial parent, a relative or a friend who is officially acting in place of the parents and lives outside of the home school district, the child may continue to attend his or her own school as long as the care provider ensures transportation to school. The Compact also stipulates that a power of attorney for guardianship is sufficient for enrollment and all other actions requiring parental participation or consent.

• *Extracurricular participation.* When children transfer to a new school, their participation in extracurricular activities is facilitated—provided they're eligible—even if application deadlines and tryouts have passed. Schools must make reasonable accommodations, but are not required to hold spaces open for military-related transferees.

Graduation

School transitions can be especially challenging for high school students. The Compact requires school districts to make the following accommodations to facilitate on-time graduation:

• Course waivers. School districts in member states may waive courses required for graduation if similar coursework has been completed in another school. Such waivers are not mandatory under the Compact, but a school district must show reasonable justification to deny a waiver.

• *Exit exams.* Under the Compact, a school district may accept the sending state's exit exams, achievement tests or other tests required for graduation instead of requiring the student to meet the testing requirements of the receiving state. States have flexibility to determine what tests they will accept or require the student to take.

• *Transfers during senior year.* If a student moves during the senior year and the receiving state is unable to make the necessary accommodations for required courses and exit exams, the two school districts must work together to obtain a diploma from the sending school so the student can graduate on time.

The Compact does not address the quality of education or require a state to change any of its standards or education criteria. MIC3 has created a variety of downloadable brochures, webinars, and other resources to help parents and educators learn more about the Compact—See more at: *http://www.mic3.net.*

If a family has a concern about a provision of the Compact as it relates to a child, it's best to contact the school first. Each installation has a school liaison to help work with schools to get questions answered or to provide information on next steps to take if concerns cannot be successfully resolved.

II. Narrative Description of Legal Authorities for This Rule

The legal authorities for this rule clarify the definition of children in military families covered by this rule, cover the protections afforded these children, and provide the authority for establishing the policies included in this rule that describe the implementation of the principles of the Compact within DoD, including DoDEA:

(1) 10 U.S.C. 2164—Department of Defense Domestic Dependent Elementary and Secondary Schools (DDESS). This law authorizes DoD to operate a school system within the United States for DoD dependents when it is determined that appropriate educational programs are not available through a local educational agency.

(2) 20 U.S.C.—Education, Chapter 25A—Overseas Defense Dependents' Education. This law authorizes DoD to operate a program to provide a free public education through secondary school for dependents in overseas areas. It is the statutory basis for the DoD Dependent Schools.

III. Summary of the Major Focus Points of This Rulemaking

The major provisions of this regulatory action include designating military representatives as liaisons to State Councils of member states of the Compact, designating the DoD ex-officio member as a liaison to the Compact Commission (*i.e.,* the MIC3), implementing the relevant school transition policies established in the Compact within the DoDEA school system, and establishing a committee within DoDEA to advise on compliance by DoDEA schools.

(1) As required by the Compact, states establish Councils to oversee the implementation of the Compact within the state. The Compact prescribes membership of the State Council, which may include a representative from the military community within the state. Since this individual represents the interests of the military community to the State Council, the military representative can only fulfill a liaison role on the Council and must be designated by DoD. This rule defines the role for the military representative (§ 89.7(a)), along with the process (§ 89.7(b)) for coordinating the requests from State Commissioners and designating these military representatives.

(2) The Compact describes how DoD may send an ex-officio liaison to the Commission meetings, and also describes how the DoD ex-officio member will participate as a liaison on the Executive Committee of the Commission. This rule provides guidelines for the DoD ex-officio member (§ 89.7(d)).

(3) This rule establishes policies for DoDEA governing the transition of school age children in military families (§ 89.8 of this rule), which are equivalent to the following policies included in the Compact: Article IV—records and enrollment, Article V—placement and attendance, Article VI—eligibility for enrollment, and Article VII—graduation.

(4) This rule establishes a committee to advise DoDEA on compliance with provisions in § 89.8. The DoDEA Committee also provides input to the ex-officio member of the Commission on issues arising from DoDEA school interactions with member States of the Compact, and acts as a counterpart to State Councils of member States. Policies for assigning a representative from the Military Departments to this committee are included in § 89.7(c).

IV. Cost and Benefit Analysis

There are no provisions in this final rule that are expected to increase costs for members of the public. Requirements included in this rule may require action to be taken by state education departments and local education agencies as a result of requirements of the state laws.

The costs to the Department are summarized below:

• Military representative attending State Council meetings as a liaison. State Council meetings are generally held at a central location for the state, and are expected to be held at least once per year. The military representative would be required, while on duty and at government expense, to travel to and attend the meeting. A meeting would be expected to demand an average of 1.5 days (travel and meeting time), which would cost an approximate average of $569 [2] in opportunity labor cost. Additionally, intrastate travel and per diem is expected to cost an approximate average of $339.[3] States vary with regards to the number of military representatives they have requested to attend; however, the estimated number of military representatives is 77.[4] Applying the approximate average costs per year provides $43,810 in opportunity labor costs and $26,100 in travel and per diem.

• *Identifying, nominating and designating a position to act as a liaison to a State Council.* DoD estimates approximately 180 hours [5] of administrative time to coordinate nominations for the first year, plus approximately 80 hours [6] to process, review, coordinate, sign and distribute the designation letters. The opportunity labor cost of coordination would be approximately $7,220 [7] and completing the designation letter, with accompanying documents, would be $4,730 [8] for the first year. Subsequent years would be approximately 20 percent of the time and cost associated with the first year (approximately $1,440 for coordination and $950 for completing designation letters).

• *Ex-officio member to the MIC3.* This individual participates as a liaison in the annual conference, executive committee meeting, and other standing committee meetings and would cost DoD approximately $8,610 per year.[9]

Additionally, this final rule will direct DoDEA to transition children under specific policies. These are the same policies that are included in the Compact, Articles IV–VII, which have been shown to be cost-neutral (and perhaps a cost-benefit) when implemented by local education agencies within the states that are

[2] Cost estimated on the salary of a GS–14 step 5 without locality pay or percentage for benefits (average of $47.39 per hour—2016 GS Pay Scale) times approximately 12 hours.

[3] Cost of travel calculated at an average round trip requiring 300 miles times the mileage rate of $0.54 per mile (equals approximately $162), plus per diem costs of $142 per day, plus proportional meals and incidentals for the second day of $35 ($177). Unit rates based on Fiscal Year 2017 standard per diem rate for the Continental United States and 2016 GSA mileage rates.

[4] Estimated number of total military representatives for the 50 member states and the District of Columbia, based on the average of number currently designated in states with military representatives (41 reps in 27 states).

[5] Estimate 3 hours of staff time to receive the request; relay the requirement to the designated Military Department and obtain approval; and provide the name to the Office of Secretary of Defense. Estimate fulfilling requests from 40 states for the first year (designating approximately 60 positions).

[6] Estimate 2 hours of staff time to prepare the letter of designation and accompanying documents and obtain a signature from the Deputy Assistant Secretary of Defense for Military Community and Family Policy. Anticipate processing 40 letters of designation for the first year (some individuals will be included on the same designation letter).

[7] Cost estimated on the salary of a GS–13 step 5, without locality pay or percentage for benefits ($40.10 per hour—2016 GS Pay Scale).

[8] Cost estimated on the salary of a GS–14 step 5 with locality pay for Washington, DC, but no percentage for benefits ($59.13 per hour—2016 GS Pay Scale).

[9] Cost estimated on three trips per year, each involving 3 days, at a location outside of Washington, DC. The labor cost is estimated on the salary of a GS–15 step 5 with locality pay for Washington, DC and no benefits included ($69.56 per hour—2016 GS Pay Scale) times 72 hours ($5,010), plus $3,600 for travel and per diem (based on average cost for 20 similar 3-day temporary duty trips for 2015).

members of the Compact.[10] Essentially, schools are responsible for transitioning children, and the proposed rules, based upon the transition policies included in the Compact, provide a consistent approach that schools apply in member states to the Compact. Hence, there is less variability and uncertainty in the process. Applying these policies within DoDEA is expected to produce similar results, since these policies would apply to all children within the DoDEA school system (therefore applying a consistent policy regardless of the child), and many of these proposed policies represent the existing procedures used in DoDEA schools to transition students. The DoD committee to oversee the implementation of this rule within DoDEA is expected to cost approximately $3,310 per year [11] to administer and conduct meetings.

The benefits derived from DoD's participation in the Compact accrue to Service members and their families, particularly the 676,000 school-age children educated by local education agencies and DoDEA.[12] These benefits have not necessarily been quantified, but can be described in qualitative terms. Military moves are stressful for the entire family, and transitioning to a new school creates stresses because of uncertainty. Military children are confronted with unknown academic and social challenges, and their parents must overcome new administrative requirements to enroll them. The provisions included in the Compact provide relief for some of the administrative requirements faced by parents and the academic issues regularly experienced by military children who generally attend six-to-nine different schools between kindergarten and 12th grade.[13] The goal of the Compact is to replace the widely varying treatment of transitioning military students with a comprehensive approach that provides a uniform policy in every school district in every state that chooses to join. Through more uniform transition policies, military children have an opportunity to assimilate into their classes, extra-curricular activities and new social circles more quickly. Additionally the Compact recognizes the difficulties military children may have with being separated from a parent due to a military deployment, allowing for liberal absences for children to be with the deploying/returning parents.

The Compact Articles IV–VII were developed as a result of input from 17 representative national and state stakeholders who were asked to participate in a working group sponsored by the Council of State Governments, National Center for Interstate Compacts.[14] The majority of their recommendations came from work that had previously been presented in studies, such as the Military Child Education Coalition's *Secondary Education Transition Study,* conducted for the U.S. Army in 2001, and the subsequent Memoranda of Agreement signed by nine school districts which addressed ''the timely transfer of records, systems to ease student transition during the first 2 weeks of enrollment, practices that foster access to extracurricular programs, procedures to lessen the adverse impact of moves of juniors and seniors, [and] variations in school calendars and schedules,'' among other recommendations.[15]

Regulatory Analysis

Executive Order 12866, ''Regulatory Planning and Review'' and Executive Order 13563, ''Improving Regulation and Regulatory Review''

Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. It has been determined that this rule is not a significant regulatory action. The rule does not: (1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in these Executive Orders.

2 U.S.C. Ch. 25, ''Unfunded Mandates Reform Act''

Section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) requires agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Public Law 96–354, ''Regulatory Flexibility Act'' (5 U.S.C. Ch. 6)

DoD certifies that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Public Law 96–511, ''Paperwork Reduction Act'' (44 U.S.C. Chapter 35)

This rule does not impose reporting and record keeping requirements under the Paperwork Reduction Act of 1995.

Executive Order 13132, ''Federalism''

This rule was analyzed in accordance with the principles and criteria contained in Executive Order 13132 (''Federalism''). It has been determined that it does not have sufficient Federalism implications to warrant the preparation of a Federalism summary impact statement. This rule has no

[10] Analysis accomplished by states as part of their legislative process showed that the provisions of the Compact supporting the transition of military children were fiscally neutral. Transition occurs regardless of having an organized process, and the provisions of the Compact were considered as providing consistent expectations and administrative procedures capable of reducing the cost of administering transition for military children.

[11] Estimated on two meetings (each two hours in length) per year, attended by 12 people with an average salary of a GS–14 step 5, with Washington, DC locality pay and not including benefits ($59.13 per hour—2016 GS Pay Scale); plus 8 hours of preparation time for the two meetings by a GS–14 step 5, with Washington, DC locality pay.

substantial effect on the States, or on the current Federal-State relationship, or on the current distribution of power and responsibilities among the various local officials. Nothing in this rule preempts any State law or regulation. Therefore, DoD did not consult with State and local officials because it was not necessary.

List of Subjects in 32 CFR Part 89

Children, Education, Interstate Compact.

■ Accordingly 32 CFR part 89 is added to read as follows:

PART 89—INTERSTATE COMPACT ON EDUCATIONAL OPPORTUNITY FOR MILITARY CHILDREN

Sec.
89.1 Purpose.
89.2 Applicability.
89.3 Definitions.
89.4 Policy.
89.5 Responsibilities.
89.6 Procedures.
89.7 Representatives to State Councils, the DoDEA Committee and MIC3.
89.8 Compact provisions.

Authority: 10 U.S.C. 2164, 20 U.S.C. 921–932.

§ 89.1 Purpose.

In accordance with the sense of Congress as set forth in section 539 of Public Law 111–84, this part establishes policy, assigns responsibilities, and provides procedures to implement the Interstate Compact on Educational Opportunity for Military Children (referred to in this part as the ''Compact'') within the DoD.

§ 89.2 Applicability.

This part applies to the Office of the Secretary of Defense, the Military Departments, the Office of the Chairman of the Joint Chiefs of Staff and the Joint Staff, the Combatant Commands, the Office of the Inspector General of the DoD, the Defense Agencies, the DoD Field Activities, and all other organizational entities within the DoD.

§ 89.3 Definitions.

These terms and their definitions are for the purposes of this part.

504 plan. A plan required pursuant to 29 U.S.C. 794 specifying the modifications and accommodations for a child with a disability to meet the individual educational needs of that child as adequately as the needs of children without disabilities are met. The plans can include accommodations such as wheelchair ramps, blood sugar monitoring, an extra set of textbooks, a peanut-free lunch environment, home instruction, or a tape recorder or keyboard for taking notes.

Children of military families. School-aged children who are enrolled in kindergarten through twelfth grade and are in the households of Service members who:

(1) Are on active duty, including members of the National Guard and Reserve on active duty orders pursuant to 10 U.S.C. 1211;

(2) Are active duty or veterans who are severely wounded, ill, or injured; or

(3) Die on active duty or as a result of injuries sustained on active duty;

Children of military members who are severely wounded, ill, or injured retain this designation for 1 year after discharge or retirement. Children of military members who die on active duty or as a result of injuries sustained on active duty, retain this designation for 1 year after death.

Deployment. The period 1 month prior to the military members' departure from their home station on military orders through 6 months after return to their home station.

DoDEA Committee. A DoD committee established pursuant to this part by Director, DoDEA to advise DoDEA on compliance with provisions in § 89.8 by DoDEA schools. The DoDEA Committee also provides input to the ex-officio member of the Commission on issues arising from DoDEA school interactions with member States of the Compact, and acts as a counterpart to State Councils of member States.

Education records. Those official records, files, and data directly related to a child and maintained by the school or local educational agency (LEA) or state educational agency (SEA), including but not limited to, records encompassing all the material kept in the child's cumulative folder such as general identifying data, records of attendance and of academic work completed, records of achievement and results of evaluative tests, health data, disciplinary status, test protocols, and individualized education programs (IEPs).

Ex-officio member of the Commission. Non-voting member of the Commission who may include, but not be limited to, members of the representative organizations of military family advocates, LEA officials, parent and teacher groups, the DoD, the Education Commission of the State, the Interstate Agreement on the Qualification of Educational Personnel, and other interstate compacts affecting the education of children of military members.

Extracurricular activity. A voluntary activity sponsored by the school or LEA or SEA or an organization sanctioned by the LEA or SEA. Extracurricular activities include, but are not limited to, preparation for and involvement in public performances, contests, athletic competitions, demonstrations, displays, and club activities.

IEP. When a child is identified as a child with disabilities in accordance with Individuals With Disabilities Education Act (IDEA), he or she must have a written document that describes the special education supports and services the child will receive. The IEP is developed by a team that includes the child's parents and school staff.

Interstate Compact on Education Opportunity for Military Children (the Compact). An agreement approved through State legislation that requires member States to follow provisions supporting the transition of children of military families between school systems in member States. As part of joining the Compact, States agree to participate in the Commission and pay dues to the Commission to support its oversight of the Compact.

LEA. A public authority legally constituted by the State as an administrative agency to provide control of and direction for kindergarten through twelfth grade public educational institutions. For the purpose of administering the provisions of the Compact in § 89.8 of this part, DoDEA school districts as defined in 20 U.S.C. 932 are equivalent to an LEA.

Member State. A State that has enacted the Compact.

MIC3. The MIC3, also known as the Interstate Commission on Educational Opportunity for Military Children (sometimes referred to as the ''Interstate Commission'' or ''the Commission''), is the governing body of the Compact composed of representatives from each member State, as well as various ex-officio members. The Commission provides general oversight of the agreement, creates and enforces rules governing the Compact, and promotes training and compliance with the Compact. Each member State will be allowed one vote on Compact matters, and the Commission will provide the venue for solving interstate issues and disputes.

Military Family Education Liaison. Individual appointed or designated by State Council of each member state to assist military families and the State in facilitating the implementation of the Compact. Military members and DoD civilian employees cannot perform this function.

Military installation. A base, camp, post, station, yard, center, homeport facility for any ship, or other activity under DoD jurisdiction, including any leased facility. (This term does not

include any facility used primarily for civil works, rivers and harbors projects, or flood control projects.)

Military representative as a liaison to a State Council. Incumbent of a position designated by the DASD(MC&FP), who performs the duties and responsibilities defined in § 89.5 of this part. The military representative is responsible for representing the interest of the DoD in fostering easier transition of children of military families according to their designation (installation representative, Military Department representative or statewide representative). The military representative will be a military member or DoD civilian who can remain in the position for at least 2 years and whose position has a direct interface with the State education system as part of official duties or has supervisory responsibility for those who do.

Military representative to the DoDEA Committee. Individual nominated to represent all four Services by the Office of the Assistant Secretary of the Army for Manpower and Reserve Affairs (OASA(M&RA)), the Office of the Assistant Secretary of the Navy for Manpower and Reserve Affairs (OASN(M&RA)), or the Office of the Assistant Secretary of the Air Force for Manpower and Reserve Affairs (OASAF(M&RA)) on a rotational basis and appointed by the DASD(MC&FP) for a 2-year term. Because DoDEA is a DoD Component the military representative may act as a full participant in the DoDEA Committee.

Receiving State. The State to which a child of a military family is sent, brought, or caused to be sent or brought.

SEA. A public authority similar to an LEA, legally constituted by the State as an administrative agency to provide control of and direction for kindergarten through twelfth grade public educational institutions for the entire State.

Sending State. The State from which a child of a military family is sent, brought, or caused to be sent or brought.

State. State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, the Northern Marianas Islands and any other U.S. territory or possession. For purposes of administering the provisions of the Compact in § 89.8 of this part, DoD is considered a State and DoDEA is considered the equivalent of a State department of education for DoD.

State Council. A body that coordinates among government agencies, LEAs, and military installations concerning the member State's participation in and compliance with the Compact and the Commission activities. A member State may determine the membership of its own Council, but membership must include at least: The State superintendent of education; superintendent of a school district with a high concentration of military children; representative (as a liaison) from a military installation; one representative each from the legislative and executive branches of State government; and other offices and stakeholder groups the State Council deems appropriate.

Transition. The formal and physical process of transferring from school to school; or the period of time in which a child moves from a school in the sending State to a school in the receiving State.

Veteran. A person who served in the military and who was discharged or released from the military under conditions other than dishonorable.

§ 89.4 Policy.

In accordance with the sense of Congress as set forth in section 539 of Public Law 111–84, ''National Defense Authorization Act for Fiscal Year 2010'' and DoD 5500.07–R, ''Joint Ethics Regulations (JER)'' (available at *http://www.dtic.mil/whs/directives/corres/pdf/550007r.pdf*), it is DoD policy to support the intent of the Compact by reducing the difficulty children of military families (referred to in this part as ''children'' or ''the child'') have in transferring between school systems because of frequent moves and deployment of their parents. DoD will support the Compact by:

(a) Designating military liaisons, by position, to State Councils of member States, the DoDEA Committee, and the MIC3.

(b) Implementing the intent of the Compact in the DoDEA to ensure:

(1) Timely enrollment of children in school so they are not penalized due to:

(i) Late or delayed transfers of education records from the previous school district(s); or

(ii) Differences in entrance or age requirements.

(2) Placement of children in educational courses and programs, including special educational services, so they are not penalized due to differences in attendance requirements, scheduling, sequencing, grading, or course content.

(3) Flexible qualification and eligibility of children so they can have an equitable chance at participation in extracurricular, academic, athletic, and social activities.

(4) Graduation within the same timeframe as the children's peers.

(c) Promoting through DoDEA and the Military Departments:

(1) Flexibility and cooperation among SEAs or LEAs, DoDEA, Military Departments, parents, and children to achieve educational success.

(2) Coordination among the various State agencies, LEAs, and military installations regarding the State's participation in the Compact.

§ 89.5 Responsibilities.

(a) Under the authority, direction, and control of the Under Secretary of Defense for Personnel and Readiness, the Assistant Secretary of Defense for Manpower and Reserve Affairs (ASD(M&RA)) oversees the implementation of this part.

(b) Under the authority, direction, and control of the ASD(M&RA), the DASD(MC&FP):

(1) Designates military representatives by position as liaisons to State councils, nominated by the Secretaries of the Military Departments by the procedures outlined in § 89.7 of this part.

(2) Designates the DoD ex-officio member serving as a liaison to MIC3, insofar as DoD is invited to do so by MIC3.

(3) Maintains a roster of designated liaisons to State councils in accordance with 32 CFR part 310.

(4) Monitors issues arising under the Compact:

(i) Affecting children of military families attending and transferring between member State schools; and

(ii) The implementation of § 89.8 of this part, affecting children of military families transferring between member state schools and DoDEA's schools (consisting of the Department of Defense Schools (DoDDS)—Europe, DoDDS—Pacific, and DDESS.

(c) Under the authority, direction, and control of ASD(M&RA), the Director, DoDEA:

(1) To the extent allowable by 10 U.S.C. 2164 and 20 U.S.C. 921–932, adjusts operating policies and procedures issued pursuant to DoD Directive 1342.20, ''Department of Defense Education Activity (DoDEA)'' (available at *http://www.dtic.mil/whs/directives/corres/pdf/134220p.pdf*) to implement the provisions of the Compact described in § 89.8 of this part.

(2) Informs boards and councils, described in DoD Instruction 1342.15, ''Educational Advisory Committees and Councils'' (available at *http://www.dtic.mil/whs/directives/corres/pdf/134215p.pdf*) and DoD Instruction 1342.25, ''School Boards for Department of Defense Domestic Dependent Elementary and Secondary Schools (DDESS)'' (available at *http://*

www.dtic.mil/whs/directives/corres/pdf/134225p.pdf), of the Compact provisions in § 89.8 of this part and the DoDEA administration of these provisions.

(3) Addresses disputes over provisions in § 89.8 of this part between member States and DoDEA. When differences cannot be resolved with a member State, works with MIC3 to resolve these disputes.

(4) Establishes the DoDEA Committee to review compliance with the provisions in § 89.8 of this part and to address issues raised by the Secretaries of the Military Departments concerning the implementation of these provisions.

(5) Ensures all personally identifiable information is collected, maintained, disseminated, and used in accordance with 32 CFR part 310.

(6) Ensures that DoDEA schools comply with § 89.8 and that DoDEA school-level officials inform DoDEA students transferring to schools in member States of the benefits extended by receiving States under the Compact.

(d) The Secretaries of the Military Departments:

(1) Nominate military representatives by position, in accordance with the procedures outlined in § 89.7 of this part, for designation as liaisons to State Councils by the DASD(MC&FP) when such DoD liaison is requested.

(2) Establish departmental policies and procedures to inform military communities of:

(i) The provisions of this part as it affects children of military families attending and transferring between member State schools; and

(ii) The provisions in § 89.8 of this part concerning students transferring between DoDEA and member State schools.

(3) Procedures to resolve issues or challenges raised by parents concerning the provisions of § 89.8 of this part.

§ 89.6 Procedures.

DoD implements policy in this part by:

(a) Establishing a committee within DoDEA (referred to in this part as the ''DoDEA Committee'').

(b) Designating military representatives by position to serve as liaisons to the State Councils of the member States and the DoDEA Committee in accordance with procedures in § 89.7.

(c) Designating the ex-officio member to serve as a liaison to MIC3 in accordance with § 89.5 and § 89.7.

(d) Ensuring DoDEA compliance with the selected provisions of the Compact described in § 89.8.

§ 89.7 Representatives to State Councils, the DoDEA Committee and MIC3.

(a) *Military Representatives designated by position as Liaisons to State Councils.* In accordance with section 3–201 of DoD 5500.07–R, incumbents of positions designated as liaisons to State Councils will:

(1) Be a military member or a civilian employee of DoD who has a direct interface with the State education system as part of official duties or has supervisory responsibility for those who do.

(2) Only represent DoD interests (not the interests of the State Council), and consequently may not:

(i) Engage in management or control of the State Council (therefore, may not vote or make decisions on daily administration of council);

(ii) Endorse or allow the appearance of DoD endorsement of the State Council or its events, products, services, or enterprises;

(iii) Represent the State Council to third parties; or

(iv) Represent the State Council to the U.S. Government, as prohibited by federal criminal statues.

(3) Make clear to the State Council that:

(i) The opinions expressed by the representative do not bind DoD or any DoD Component to any action.

(ii) If included on State Council Web sites, all references to the representative by name or title must indicate that they are the ''Military Representative'' as opposed to a council member.

(4) Notify the chain of command of issues requiring policy decisions or actions requested of the military community within the State.

(5) When called upon to act as the spokesperson for one or more than one installation:

(i) Get feedback from the designated points of contact at each military installation within his or her responsibility.

(ii) Coordinate proposed input to the State Council with the appropriate points of contact for each military installation within his or her responsibility.

(iii) Act as a conduit for information between the State Council and each military installation within his or her responsibility.

(iv) Provide feedback through the chain of command to the points of contact for each military installation within his or her responsibility and, as appropriate, to the OASA(M&RA), the OASN(M&RA), or the OASAF(M&RA).

(b) *Nomination Process for Positions Designated as Liaisons to State Councils.* (1) In accordance with DoD 5500.07–R, liaison positions are nominated by the Military Departments and designated by the DASD(MC&FP), not by State officials. Depending on the number of liaison positions required by State policy, designating liaison positions to a State Council will be accomplished according to the processes outlined in Table 1:

TABLE 1—PROCESS FOR DESIGNATING LIAISON POSITIONS TO STATE COUNCILS

If State statute concerning military representatives provides for:	The State Commissioner contacts:	Who requests a selection be made by:	Whereupon the official written designation is made by:
One representative for all military children in the State.	DASD(MC&FP)	OASA(M&RA), OASN(M&RA), or OASAF(M&RA) responsible for providing a representative for the State listed in Table 2.	DASD(MC&FP).
One representative for each Military Service.	DASD(MC&FP)	OASA(M&RA), OASN(M&RA), and OASAF(M&RA).	DASD(MC&FP).
One representative for each military installation in the State.	DASD(MC&FP)	OASA(M&RA), OASN(M&RA) and OASAF(M&RA).	DASD(MC&FP).

(2) When there is more than one military representative to a State Council (*e.g.,* one per installation or one per Military Department represented in the State), the incumbent of the position nominated by the responsible Military Department (Table 2) will serve as the lead military representative when DoD must speak with a single voice.

(3) In circumstances where the State requests an individual by name, the

DASD(MC&FP) will forward the request to the individual's Military Department for consideration of designating the position which the individual encumbers. If that Military Department is different from the one designated in Table 2, the DASD(MC&FP) will first obtain the concurrence of the responsible Military Department.

(4) In accordance with the Compact, State officials appoint or designate the Military Family Education Liaison for the State. Service members and DoD civilians cannot be appointed or designated to fill this position for the State.

TABLE 2—MILITARY DEPARTMENT AREAS OF AUTHORITY FOR SELECTING A SINGLE MILITARY REPRESENTATIVE POSITION TO SERVE AS A LIAISON TO THE STATE COUNCIL

Military department	Areas of Authority
Army	Alabama, Alaska, Colorado, Georgia, Hawaii, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, New York, Oklahoma, Pennsylvania, South Carolina, Texas, Vermont, Washington, West Virginia, Wisconsin.
Navy	American Samoa, California, Connecticut, District of Columbia, Florida, Guam, Maine, Mississippi, New Hampshire, North Carolina, Northern Marianas, Oregon, Puerto Rico, Rhode Island, Tennessee, Virginia, Virgin Islands.
Air Force	Arizona, Arkansas, Delaware, Idaho, Illinois, Massachusetts, Montana, Nebraska, Nevada, New Jersey, New Mexico, North Dakota, Ohio, South Dakota, Utah, Wyoming.

(c) *Military Representative to the DoDEA Committee.* Membership of the DoDEA Committee will include a representative from one of the Military Services to represent all four Services. OASA(M&RA), OASN(M&RA), or OASAF(M&RA) will nominate a representative on a rotational basis who will be designated for a 2-year term by the DASD(MC&FP).

(d) *Ex-Officio Member Serving as a Liaison to MIC3.* In accordance with section 3–201 of DoD 5500.07–R, the DoD ex-officio member to the Commission, must:

(1) Be a military member or a civilian employee of DoD who can remain in the position for at least 2 years and who has a direct interface with DoDEA and the U.S. public education system as part of official duties or has supervisory responsibility for those who do.

(2) Attend as a liaison meetings of MIC3, its Executive Committee, and other standing committees where requested by the Commission.

(3) Only represent DoD interests (not the interests of MIC3), and consequently may not:

(i) Engage in management or control of MIC3 (therefore, may not vote or make decisions on daily administration of MIC3);

(ii) Endorse or allow the appearance of DoD endorsement of MIC3, or its events, products, services, or enterprises;

(iii) Represent the Commission to third parties; or

(iv) Represent MIC3 to the U.S. Government, as prohibited by criminal statutes.

(4) Make clear to MIC3 that:

(i) The opinions expressed by the incumbent do not bind DoD or any DoD Component to any action.

(ii) If included on MIC3 Web sites, all references to the incumbent by name or title must indicate that they are the ''DoD Ex-Officio Member'' as opposed to a MIC3 member.

(5) Notify the chain of command of issues requiring policy decisions or actions requested of DoD.

§ 89.8 Compact provisions.

(a) *DoDEA Area School Districts Relationship With SEAs or LEAs in Member States.*

(1) For the purposes of DoD's implementation of the Compact in the schools it operates, DoDEA's area offices (DoDDS—Europe, DoDDS—Pacific, and DDESS) and their schools are considered as the equivalent of LEAs and SEAs, respectively.

(2) Each DoDEA area acts as the ''receiving LEA'' and ''sending LEA'' in working with LEAs or SEAs in member States.

(b) *Articles IV Through VII of the Compact.* This section describes the specific duties that DoDEA's LEAs have as ''sending'' or ''receiving'' LEAs. DoDEA's duties under this section will reciprocate the duties assumed by member State LEAs or SEAs to children of military families, as expressed by their respective State's implementation of the Compact Articles IV through VII. DoDEA will implement the provisions described below, which, while retaining the intent of the Compact, have been modified as needed in the DoDEA context.

(1) *Article IV: Education Records and Enrollment*—(i) *Unofficial or ''Hand-Carried'' Education Records.* (A) If official education records cannot be released to the parents for transfer, the DoDEA custodian of the records, as the sending LEA shall provide to the parent a complete set of unofficial education records.

(B) Upon receipt of the unofficial education records, the DoDEA school, as the school in the receiving LEA shall enroll and appropriately place the child as quickly as possible based on the information in the unofficial records, pending validation by the official records.

(ii) *Official education records or transcripts.* (A) The DoDEA school, acting as the receiving LEA shall request the child's official education record from the school in the sending State at the same time as DoDEA school enrolls and conditionally places the child.

(B) Upon receipt of the request for a child's records, the school in DoDEA, acting as the sending LEA will provide the child's official education records to the school in the receiving State, within 10 work days. If there is a designated school staff break, records will be provided as soon as possible; however, the time will not exceed 10 work days after the return of staff. DoDEA will initiate actions to meet these deadlines without violating the disclosure rules of the Privacy Act, 5 U.S.C. 552a.

(iii) *Immunizations.* (A) Parents have 30 days from the date of enrolling their child in a DoDEA school to have their child(ren) immunized in accordance with DoDEA's immunization requirements, as the receiving LEA.

(B) For a series of immunizations, parents must begin initial vaccinations of their child(ren) within 30 days.

(iv) *Entrance age.* (A) At the time of transition and regardless of the age of the child, the DoDEA school, acting as the receiving LEA, shall enroll the transitioning child at the grade level as the child's grade level (*i.e.,* in kindergarten through grade 12) in the sending state's LEA.

(B) A child who has satisfactorily completed the prerequisite grade level in the sending state's LEA will be eligible for enrollment in the next higher grade level in DoDEA school, acting as the receiving LEA, regardless of the child's age.

(C) To be admitted to a school in the receiving State, the parent or guardian of a child transferring from a DoDEA (sending) LEA must provide:

(*1*) Official military orders showing the military member or the member's spouse was assigned to the sending State or commuting area of the State in which the child was previously enrolled. If the child was residing with a guardian other than the military member during the previous enrollment, proof of guardianship (as specified in the Compact) should be provided by the parent or guardian to the receiving LEA or SEA to establish eligibility under the Compact.

(*2*) An official letter or transcript from the sending school authority that shows the student's record of attendance, academic information, and grade placement.

(*3*) Evidence of immunization against communicable diseases.

(*4*) Evidence of date of birth.

(2) *Article V: Placement and Attendance*—(i) *Course placement.* (A) As long as the course is offered by DoDEA, as the receiving LEA, it shall honor placement of a transfer student in courses based on the child's placement or educational assessment in the sending State school.

(B) Course placement includes, but is not limited to, Honors, International Baccalaureate, Advanced Placement, vocational, technical, and career pathways courses.

(C) Continuing the child's academic program from the previous school and promoting placement in academically and career challenging courses shall be a primary consideration when DoDEA considers the placement of a transferring child.

(D) DoDEA, acting as the receiving LEA, may perform subsequent evaluations to ensure the child's appropriate course placement.

(ii) *Educational Program Placement.* (A) As long as the program is offered by DoDEA, acting as a receiving LEA, it will honor placement of the child in educational programs based on current educational assessments and placement in like programs in the sending State. Such programs include, but are not limited to, gifted and talented programs and English language learners.

(B) The receiving State school may perform subsequent evaluations to ensure the child's appropriate educational program placement.

(iii) *Special Education Services.* (A) DoDEA, acting as the receiving LEA, will initially provide comparable services to a child with disabilities based on his or her current IEP in compliance with 20 U.S.C. chapter 33, also known and referred to in this part as the ''Individuals with Disabilities Education Act (IDEA),'' as amended, and the requirements of Executive Order 13160. DoDEA may perform subsequent evaluations to ensure the child's appropriate placement consistent with IDEA.

(B) DoDEA, acting as the receiving LEA, will make reasonable accommodations and modifications to address the needs of incoming children with disabilities, in compliance with the requirements of 29 U.S.C. 794 and Executive Order 13160, and subject to an existing 504 plan to provide the child with equal access to education.

(iv) *Placement Flexibility.* DoDEA's administrative officials must have flexibility in waiving course or program prerequisites or other preconditions for placement in courses or programs offered under the jurisdiction of DoDEA.

(v) *Absences Related to Deployment Activities.* A child whose parent or legal guardian is an active duty Service member and has been called to duty for, is on leave from, or has immediately returned from deployment to a combat zone or combat support posting, will be granted additional excused absences under governing DoDEA rules.

(3) *Article VI: Eligibility for enrollment.* (i) *Eligibility in DoDEA Schools.* Eligibility of dependents of military members is governed by the laws in 10 U.S.C. 2164 and 20 U.S.C. 921 through 932 and their implementing regulations. Only children who are eligible to attend DoDEA schools may do so, regardless of their transition status.

(ii) *Eligibility for extracurricular participation.* DoDEA, acting as the receiving LEA, will facilitate the opportunity for transitioning children's inclusion in extracurricular activities, regardless of application deadlines, to the extent the children are otherwise qualified.

(4) *Article VII: Graduation.* To facilitate the child's on-time graduation, DoDEA will incorporate the following procedures:

(i) *Waiver requirements.* (A) DoDEA administrative officials will waive specific courses required for graduation if similar course work has been satisfactorily completed in another LEA or provide reasonable justification for denial.

(B) If DoDEA, as a receiving LEA, does not grant a waiver to a child who would qualify to graduate from the sending school, DoDEA will provide an alternative means of acquiring required coursework so that graduation may occur on time.

(C) If DoDEA, as the receiving LEA, requires a graduation project, volunteer community service hours, or other DoDEA specific requirement, DoDEA may waive those requirements.

(ii) *Exit exams.* (A) DoDEA, as a receiving LEA, must:

(*1*) Accept exit or end-of-course exams required for graduation from the sending State.

(*2*) Accept national norm-referenced achievement tests.

(*3*) Provide alternative testing in lieu of testing requirements for graduation in the receiving from a DoDEA school.

(B) If the alternatives in paragraph (b)(2)(i) of this section cannot be accommodated by DoDEA as the receiving LEA for a child transferring in his or her senior year, then the provisions of paragraph (b)(1)(iv)(C) of this section will apply.

(iii) *Transfers during senior year.* (A) If a child transferring at the beginning or during his or her senior year is ineligible to graduate from DoDEA, as the receiving LEA, after all alternatives have been considered, DoDEA will request a diploma from the sending LEA or SEA. DoDEA will ensure the receipt of a diploma from the sending LEA or SEA, if the child meets the graduation requirements of the sending LEA or SEA.

(B) If one of the States in question is not a member of this Compact, DoDEA, as a receiving state, will use best efforts to facilitate a transferring child's on-time graduation in accordance with paragraphs (b)(1)(iv)(A) and (b)(1)(iv)(B) of this section.

Dated: December 12, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2016–1049]

Drawbridge Operation Regulation; Pearl River, LA/MS

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the operation of the US 90 highway bridge (East Pearl

River Bridge), a swing span bridge across the Pearl River, mile 8.8, between Slidell, St. Tammany Parish, Louisiana and Pearlington, Hancock County, Mississippi. The deviation is necessary to remove and repair three gear motors to allow for the continued safe operation of the bridge. This deviation allows the bridge to remain in the closed-to-navigation position for a period of 32 days, broken in to one 12-Day Period and two 10-Day periods, as repairs to each motor will be done separately.

DATES: This deviation is effective from 6 a.m. on Thursday January 19, 2017, through 5 p.m. on Tuesday, March 21, 2017.

ADDRESSES: The docket for this deviation, [USCG–2016–1049] is available at *http://www.regulations.gov*. Type the docket number in the ''SEARCH'' box and click ''SEARCH''. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Donna Gagliano, Bridge Administration Branch, Coast Guard, telephone (504) 671–2128, email *Donna.Gagliano@uscg.mil.*

SUPPLEMENTARY INFORMATION: Boh Bros. Construction Company, on behalf of the Louisiana Department of Transportation and Development, requested a temporary deviation from the operating schedule for the swing span bridge across the Pearl River, mile 8.8, between Slidell, St. Tammany Parish, Louisiana and Pearlington, Hancock County, Mississippi. The deviation was requested to accommodate necessary repairs to the swing span operation due to the complexity of the work requiring rewiring. The draw currently operates under 33 CFR 117.486(b).

For purposes of this deviation, the bridge over the Pearl River will be closed to marine traffic for three extended periods of time from Thursday, January 19, 2017, through Tuesday, March 21, 2017. This deviation allows the bridge to remain closed-to-navigation for the duration of these Phases.

Phase I: A 12-day closure from 6 a.m. on January 19, 2017 through 5 p.m. on January 30, 2017. Phase II: A 10-day closure from 6 a.m. on February 9, 2017 through 5 p.m. on February 18, 2017. Phase III: A 10-day closure from 6 a.m. on March 12, 2017 through 5 p.m. on March 21, 2017. During all Three Phases, the work requires the removal of gear motors #1, #2, and #3, delivery to machine shop to replace bearings and seals, sandblasting and painting, removal of motor armature from input shaft, cutting and broaching of the shafts, and repairing damaged conduit and wiring from the control house to span junction box. Due to the complexity of the work, it will require rewiring of electrical components and conducting testing and troubleshooting of the bridge to safely continue operation of the bridge.

Any vessel with a vertical clearance requirement of less than 10 feet above mean high water in the closed-to-navigation position may pass beneath the bridge at any time. Navigation on the waterway consists of small tugs with and without tows, commercial vessels, and recreational craft, including sailboats.

The bridge will not be able to open for emergencies, and there is no alternate route. LDOTD has coordinated these closing with the Stennis Space Center and other waterway users. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: December 14, 2016.

David M. Frank,

Bridge Administrator, Eighth Coast Guard District.

[FR Doc. 2016–30572 Filed 12–19–16; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2016–1056]

Drawbridge Operation Regulation; Calcasieu River, Westlake, LA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Westlake Bridge across the Calcasieu River, mile 36.4, at Westlake, Calcasieu Parish, Louisiana. The deviation is necessary to repair and replace the existing lift rails and actuators on the east end of the bridge. These repairs are essential for the continued safe operation of the bridge. This deviation allows the bridge to remain closed-to-navigation for a total of 36 hours on four different dates in December 2016 and January 2017.

DATES: This temporary deviation is effective from 6 a.m. on Sunday, December 25, 2016 through noon on Monday, January 2, 2017, as discussed in greater detail below.

ADDRESSES: The docket for this deviation, [USCG–2016–1056] is available at *http://www.regulations.gov.* Type the docket number in the ''SEARCH'' box and click ''SEARCH''. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Giselle MacDonald, Bridge Administration Branch, Coast Guard, telephone (504) 671–2128, email *Giselle.T.MacDonald@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Union Pacific Railroad requested a temporary deviation from the operating schedule of the Westlake Swing-Span Bridge across the Calcasieu River, mile 36.4, at Westlake, Calcasieu Parish, Louisiana.

The vertical clearance of the bridge is 1.07 feet above Mean High Water, elevation 3.56 feet Mean Gulf Level in the closed-to-navigation position and unlimited in the open-to-navigation position. The bridge will not be able to open for emergencies and there are no alternate routes available. Navigation on the waterway consists of tugs with tows, fishing vessels and recreational craft. These closures will not have a significant effect on vessels that use the waterway in the determination and coordination with waterway users.

In accordance with 33 CFR 117.5, the draw shall open on signal for the passage of vessels. This deviation allows the drawbridge to remain in the closed-to-navigation position for 36 hours, from 6 a.m. through 6 p.m. on Sunday, December 25, 2016; from 6 a.m. through noon on Monday, December 26, 2016; from 6 a.m. through 6 p.m. on Sunday, January 1, 2017; and from 6 a.m. through noon on Monday, January 2, 2017.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: December 14, 2016.

David M. Frank,

Bridge Administrator, Eighth Coast Guard District.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2016–0240; FRL–9956–65–Region 9]

Approval and Limited Approval and Limited Disapproval of Air Quality Implementation Plans; California; Northern Sonoma County Air Pollution Control District; Stationary Source Permits; Correcting Amendment

AGENCY: Environmental Protection Agency.

ACTION: Final rule, correcting amendment.

SUMMARY: On October 6, 2016, the Environmental Protection Agency (EPA) published a final rule in the **Federal Register** approving certain revisions to the Northern Sonoma County Air Pollution Control District (NSCAPCD, or the District) portion of the California State Implementation Plan (SIP), and disapproving others. The EPA indicated in this final action that these revisions would supersede certain older rules in the California SIP but inadvertently included erroneous references in the regulatory text. This document corrects the regulatory text to clarify the replacement of these superseded regulations.

DATES: This action is effective on December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Laura Yannayon, EPA Region IX, (415) 972–3534, *Yannayon.Laura@epa.gov.*

SUPPLEMENTARY INFORMATION: This action corrects inadvertent errors in a rulemaking related to NSCAPCD's rules governing the issuance of permits for stationary sources. On October 6, 2015 (81 FR 69390), the EPA published a rulemaking action finalizing approval of three rules, and a limited approval and limited disapproval of two rules as revisions to the California SIP. This action contained regulatory text amendments to 40 CFR part 52, subpart F. The amendments incorporated material by reference into section 52.220, Identification of plan, paragraphs (c)(461) and (c)(480), and eleven other amendments which indicated the deletion, with or without replacement, of obsolete regulatory language. Those amendments deleting obsolete language with replacement in paragraph (c)(480) erroneously state that they are being replaced by various regulations in paragraph (c)(481). Specifically, the amendments at paragraphs (c)(124)(ix)(D), (c)(156)(vi)(B), (c)(162)(i)(B), (c)(164)(i)(B)(*5*), and (c)(385)(i)(B)(*2*) include incorrect references to (481), when they should be referring to (480). This action adds regulatory text to correct these references.

The EPA has determined that this action falls under the ''good cause'' exemption in section 553(b)(3)(B) of the Administrative Procedures Act (APA) which, upon finding ''good cause,'' authorizes agencies to dispense with public participation where public notice and comment procedures are impracticable, unnecessary, or contrary to the public interest. Public notice and comment for this action is unnecessary because this action correcting inadvertent regulatory text errors included in the EPA's October 6, 2016 final rule is consistent with the substantive revision to the California SIP as described in the preamble of said action concerning regulations governing the issuance of permits in NSCAPCD. In addition, the EPA can identify no particular reason why the public would be interested in having the opportunity to comment on the correction prior to this action being finalized, since this correction action does not change the EPA's analysis or overall action related to the approval of NSCAPCD's revisions to their rules in the California SIP.

The EPA also finds that there is good cause under APA section 553(d)(3) for this correction to become effective on the date of publication of this action. Section 553(d)(3) of the APA allows an effective date of less than 30 days after publication ''as otherwise provided by the agency for good cause find and published with the rule.'' 5 U.S.C. 553(d)(3). The purpose of the 30-day waiting period prescribed in APA section 553(d)(3) is to give affected parties a reasonable time to adjust their behavior and prepare before the final rule takes effect. This rule does not create any new regulatory requirements such that affected parties would need time to prepare before the rule takes effect. This action merely corrects inadvertent errors for the regulatory text of the EPA's prior rulemaking for the California SIP. For these reasons, the EPA finds good cause under APA section 553(d)(3) for this correction to become effective on the date of publication of this action.

Need for Correction

As published, the final regulations incorrectly referenced 40 CFR 52.220(c)(481) in 5 instances, when they should have referenced 40 CFR 52.220(c)(480).

Statutory and Executive Order Reviews

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a ''significant regulatory action'' and is therefore not subject to review by the Office of Management and Budget. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), or require prior consultation with state officials as specified by Executive Order 12875 (58 FR 58093, October 28, 1993), or involve special consideration of environmental justice related issues as required by Executive Order 12898 (59 FR 7629, February 16, 1994).

Because this action is not subject to notice-and-comment requirements under the APA or any other statute, it is not subject to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

Under 5 U.S.C. 801(a)(1)(A) as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives and the Comptroller General of the General Accounting Office prior to publication of this rule in the **Federal Register**. This rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Carbon monoxide, Nitrogen dioxide, Ozone, Particulate matter, Sulfur oxides, Volatile organic compounds, Reporting and recordkeeping requirements.

Dated: December 1, 2016.

Alexis Strauss,

Acting Regional Administrator, Region IX.

Accordingly, 40 CFR part 52 is corrected by making the following correcting amendments:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart F—California

■ 2. Section 52.220 is amended by revising paragraphs (c)(124)(ix)(D), (c)(156)(vi)(B), (c)(162)(i)(B), (c)(164)(i)(B)(*5*), and (c)(385)(i)(B)(*2*) to read as follows:

§ 52.220 Identification of plan-in part.

RIN 2040–AF49

Revisions to the Unregulated Contaminant Monitoring Rule (UCMR 4) for Public Water Systems and Announcement of Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; notice of public meeting.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is finalizing a Safe Drinking Water Act (SDWA) rule that requires public water systems to collect occurrence data for contaminants that may be present in drinking water but are not yet subject to EPA's drinking water standards set under the SDWA. This rule identifies eleven analytical methods to support water system monitoring for a total of 30 chemical contaminants, consisting of nine cyanotoxins and one cyanotoxin group; two metals; eight pesticides plus one pesticide manufacturing byproduct (hereinafter collectively referred to as ''pesticides''); three brominated haloacetic acid disinfection byproduct groups; three alcohols; and three semivolatile organic chemicals. EPA is also announcing a public meeting and webinar to discuss the implementation of the fourth Unregulated Contaminant Monitoring Rule.

DATES: This final rule is effective on January 19, 2017, 30 days after publication in the **Federal Register**. The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 19, 2017.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2015–0218. All documents in the docket are listed on the *https://www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *e.g.,* confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov.*

I. General Information

A. Does this action apply to me?

The fourth Unregulated Contaminant Monitoring Rule (UCMR 4) applies to public water systems (PWSs). PWSs are systems that provide water for human consumption through pipes, or other constructed conveyances, to at least 15 service connections or that regularly serve an average of at least 25 individuals daily at least 60 days out of the year. This rule applies to all large community and non-transient non-community water systems (NTNCWSs) serving more than 10,000 people. A community water system (CWS) is a PWS that has at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents. A NTNCWS is a PWS that is not a CWS and that regularly serves at least 25 of the same people over six months per year. Some examples of NTNCWS are schools, factories, office buildings and hospitals, which have their own water systems. EPA selects the nationally representative sample of small CWSs and NTNCWSs serving 10,000 or fewer people that are required to monitor (see

''Statistical Design and Sample Selection for the Unregulated Contaminant Monitoring Regulation'' (USEPA, 2001a) for a description of the statistical approach for the nationally representative sample). This rule does not apply to transient non-community water systems (TNCWSs) (*i.e.,* non-community water systems that do not regularly serve at least 25 of the same people over six months per year). A TNCWSs provides water in a place such as a gas station or campground, where people do not remain for long periods of time.

States, territories and tribes with primary enforcement responsibility (primacy) to administer the regulatory program for PWSs under the SDWA can participate in the implementation of UCMR 4 through Partnership Agreements (PAs). Primacy agencies with PAs can choose to be involved in various aspects of the UCMR 4 monitoring for the PWSs they oversee; however, the PWS remains responsible for compliance with the rule requirements. Examples of potentially regulated categories and entities are identified in the following table.

Category	Examples of potentially regulated entities	NAICS [a]
State, local & tribal governments	States, local and tribal governments that analyze water samples on behalf of PWSs required to conduct such analysis; states, local and tribal governments that directly operate CWSs and NTNCWSs required to monitor.	924110
Industry	Private operators of CWSs and NTNCWSs required to monitor	221310
Municipalities	Municipal operators of CWSs and NTNCWSs required to monitor	924110

[a] NAICS = North American Industry Classification System.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this action. This table summarizes the types of entities that EPA is aware could potentially be regulated by this action. If you are uncertain whether your entity is regulated by this action, carefully examine the definition of a PWS found in §§ 141.2 and 141.3, and the applicability criteria found in § 141.40(a)(1) and (2) of Title 40 in the Code of Federal Regulations (CFR). If you have questions, please consult the contacts listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

B. What action is the Agency taking and why?

This final rule requires PWSs to analyze drinking water samples for 29 unregulated contaminants that do not have health based standards set under the SDWA, as well as one group of regulated contaminants (described in section I.C), and to report their results to EPA. This is the fourth national monitoring effort under the UCMR program, and builds upon the framework established under the prior three UCMR actions (see section II.A). The monitoring provides data to inform future regulatory actions to protect public health.

The public benefits from the information about whether or not unregulated contaminants are present in their drinking water. If contaminants are not found, consumer confidence in their drinking water will improve. If contaminants are found, illnesses may be avoided when subsequent actions, such as regulations, reduce or eliminate those contaminants.

C. What is the Agency's authority for taking this action?

As part of its responsibilities under the SDWA, EPA implements section 1445(a)(2), ''Monitoring Program for Unregulated Contaminants.'' This section, as amended in 1996, requires that once every five years, beginning in August 1999, EPA issue a list of no more than 30 unregulated contaminants to be monitored by PWSs. The list can include contaminants included in previous UCMR cycles but will generally focus on contaminants not yet monitored under UCMR. SDWA section 1445(g)(7) requires that EPA enter the monitoring data into the Agency's publicly-available National Contaminant Occurrence Database (NCOD). The SDWA also requires that EPA ensures that systems serving a population larger than 10,000 people, as well as a nationally representative sample of PWSs serving 10,000 or fewer people, monitor for the unregulated contaminants. EPA must vary the frequency and schedule for monitoring based on the number of persons served, the source of supply, and the contaminants likely to be found. EPA is using this authority as the basis for monitoring 29 of the 30 contaminants.

Section 1445(a)(1)(A) of the SDWA, as amended in 1996, requires that every person who is subject to any SDWA requirement establish and maintain such records, make such reports, conduct such monitoring and provide such information as the Administrator may reasonably require by regulation to assist the Administrator in establishing SDWA regulations. Pursuant to this provision, EPA can also require the monitoring of contaminants already subject to EPA's drinking water standards. EPA is using this authority as the basis for monitoring one of the chemical groups (Haloacetic Acids 5 (HAA5)) under this rule. Sample collection and analysis for HAA5 can be done concurrently with the unregulated HAA monitoring (for HAA6Br and HAA9) described in section III.B.3 (resulting in no significant additional burden since all three HAA groups can be measured by a single method) and will allow EPA to better understand co-occurrence between regulated and unregulated disinfection byproducts.

Hereinafter, all 30 chemicals/groups are collectively referred to as ''contaminants.''

D. What is the estimated cost of this action?

EPA estimates the total average national cost of this action will be $24.3 million per year from 2017–2021. EPA has documented the assumptions and data sources used in the preparation of this estimate in the Information Collection Request (ICR) (USEPA, 2016a). EPA identified eleven analytical methods (nine EPA-developed analytical methods and two alternate, equivalent, consensus organization-developed methods) to analyze samples for 30 UCMR 4 contaminants. EPA's estimate of the analytical cost for the UCMR 4 contaminants and related indicators is $2,500 per sample set. EPA calculated these costs by summing the laboratory unit cost of each method.

Small PWSs selected for UCMR 4 monitoring sample an average of 6.7 times per PWS (*i.e.,* number of responses per PWS) across the three-year ICR period. The estimated labor burden per response for small PWSs is 2.8 hours. Large PWSs and very large PWSs sample and report an average of 11.4 and 14.1 times per PWS, respectively, across the three-year ICR period. The estimated labor burden per

response for large and very large PWSs is 6.1 and 9.9 hours, respectively.

Exhibit 1 presents a breakdown of estimated annual average national costs. Estimated PWS (*i.e.,* large and very large) and EPA costs reflect the analytical cost (*i.e.,* non-labor) for all UCMR 4 methods as well as labor-related cost. EPA pays for the analytical costs for all systems serving a population of 10,000 or fewer people. Laboratory analysis and sample shipping account for approximately 79% of the total national cost for UCMR 4 implementation. EPA estimated laboratory unit costs based on consultations with multiple commercial drinking water laboratories. The cost of the laboratory methods includes shipping the sample from the facility to the laboratory as part of the cost for the analysis.

EPA expects that states will incur labor costs associated with voluntary assistance with UCMR 4 implementation. EPA estimated state costs using the relevant assumptions from the State Resource Model, which was developed by the Association of State Drinking Water Administrators (ASDWA) (ASDWA, 2013) to help states forecast resource needs. Model estimates were adjusted to account for actual levels of state participation under UCMR 3. State participation is voluntary; thus, the level of effort is expected to vary among states and will depend on their individual agreements with EPA.

Additional details regarding EPA's cost assumptions and estimates can be found in the ''Information Collection Request for the Unregulated Contaminant Monitoring Rule (UCMR 4)'' (USEPA, 2016a) EPA ICR Number 2192.08, which presents estimated cost and burden for the 2017–2019 period, consistent with the 3-year timeframe for ICRs. Estimates of costs over the entire 5-year UCMR 4 period of 2017–2021 are attached as an appendix to the ICR. Specifically, most of the burden is incurred in the second, third and fourth year (*i.e.,* monitoring and sample analysis) of the UCMR 4 monitoring period. The first year (the planning year) involves a lesser burden, and the final fifth year involves the least burden since the program is concluding. The next ICR period will overlap with the last two years of the 5-year UCMR 4 period, and therefore will have substantially lower figures.

Copies of the ICR and its appendix are available in the EPA public docket for this final rule, under Docket ID No. EPA–HQ–OW–2015–0218. The total estimated annual costs (labor and non-labor) are as follows:

EXHIBIT 1—ESTIMATED AVERAGE ANNUAL COSTS OF UCMR 4

Respondent	Avg. annual cost all respondents (2017–2021) [1]
Small Systems (25–10,000), including labor [2] only (non-labor costs [3] paid for by EPA)	$0.2 M
Large Systems (10,001–100,000), including labor and non-labor costs	15.0 M
Very Large Systems (100,001 and greater), including labor and non-labor costs	4.1 M
States, including labor costs related to implementation coordination	0.5 M
EPA, including labor for implementation and non-labor for small system testing	4.5 M
Average Annual National Total	24.3 M

[1] Totals may not equal the sum of components due to rounding.
[2] Labor costs pertain to systems, states and EPA. Costs include activities such as reading the rule, notifying systems selected to participate, sample collection, data review, reporting and record keeping.
[3] Non-labor costs will be incurred primarily by EPA and by very large and large PWSs. They include the cost of shipping samples to laboratories for testing and the cost of the laboratory analyses.

E. What is the applicability date?

The determination of whether a PWS is required to monitor under UCMR 4 is based on the type of system (*e.g.,* CWS, NTNCWS, etc.) and its retail population served, as indicated by the Federal Safe Drinking Water Information System (SDWIS/Fed) inventory on December 31, 2015. SDWIS/Fed can be accessed at *https://www.epa.gov/ground-water-and-drinking-water/safe-drinking-water-information-system-sdwis-federal-reporting.* If a PWS believes its retail population served in SDWIS/Fed is inaccurate, the system should contact its state to verify its population as of the applicability date and request a correction, if necessary. The 5-year UCMR 4 program will take place from January 2017 through December 2021, with sample collection occurring between January 1, 2018, and December 31, 2020.

II. Background

A. How has EPA implemented the Unregulated Contaminant Monitoring program?

EPA published the list of contaminants for the first UCMR (UCMR 1) in the **Federal Register** (FR) on September 17, 1999 (64 FR 50556, (USEPA, 1999)), the second UCMR (UCMR 2) on January 4, 2007 (72 FR 368, (USEPA, 2007)) and the third UCMR (UCMR 3) on May 2, 2012 (77 FR 26072, (USEPA, 2012a)). EPA established a three-tiered approach for monitoring contaminants under the UCMR program. Assessment Monitoring for ''List 1'' contaminants typically relies on analytical methods, techniques or technologies that are in common use by drinking water laboratories. Screening Survey monitoring for ''List 2'' contaminants typically relies on newer techniques or technologies that are not as commonly used, such that laboratory capacity to perform List 2 analyses may be limited. Finally, Pre-Screen Testing for ''List 3'' contaminants is often associated with techniques or technologies that are very recently developed and/or are particularly complex. In addition to method cost and complexity and laboratory capacity, EPA considers sampling frequency and the relevant universe of PWSs when deciding which of the three tiers is appropriate for the monitoring of a contaminant.

EPA designed the Assessment Monitoring sampling approach (USEPA, 2001a) to ensure that sample results would yield a high level of confidence and a low margin of error. The design for a nationally representative sample of small systems called for the sample set to be stratified by water source type (ground water (GW) or surface water (SW)), service size category and state (where each state is allocated a

minimum of two systems in its state monitoring plan (SMP)).

This final action identifies 30 List 1 contaminants to be measured during Assessment Monitoring from 2018–2020, with pre-monitoring activity in 2017 and post-monitoring activity in 2021. EPA developed this rule after considering input from public comments. For more information on EPA's response to public comments, please see section III.

B. How are the Contaminant Candidate List, the UCMR program, the Regulatory Determination process and the NCOD interrelated?

Under the 1996 amendments to the SDWA, Congress established a stepwise, risk-based approach for determining which contaminants would become subject to drinking water standards. Under the first step, EPA is required to publish, every five years, a list of contaminants that are not yet regulated but which are known or anticipated to occur in PWSs; this is known as the Contaminant Candidate List (CCL). Under the second step, EPA must require, every five years, monitoring of up to 30 unregulated contaminants (many of which have been selected from the CCL for the UCMR monitoring to-date) to determine their occurrence in drinking water systems; this is known as the UCMR program. Under the third step, EPA is required to determine, every five years, whether or not to begin the process of developing a national primary drinking water regulation for at least five CCL contaminants; this is known as a Regulatory Determination and involves evaluating the following questions:

(1) May the contaminant have an adverse effect on human health?

(2) Is the contaminant known to occur or substantially likely to occur in PWSs with a frequency and at levels of public health concern?

(3) In the sole judgement of the Administrator, does regulation of such contaminants present a meaningful opportunity for risk reduction for people served by PWSs?

Finally, the SDWA requires EPA to issue national primary drinking water regulations (NPDWRs) for contaminants the Agency determines should be regulated.

The CCL process identifies contaminants that may require regulation, while the UCMR program helps provide the data necessary for the Regulatory Determination process previously outlined. The data collected through the UCMR program are stored in the drinking water NCOD to facilitate analysis and review of contaminant occurrence, and support the Administrator's determination on whether regulation of a contaminant is in the public health interest, as required under SDWA section 1412(b)(1). UCMR results can be viewed by the public at: *https://www.epa.gov/dwucmr*. PWSs are also responsible for addressing UCMR results in their annual Consumer Confidence Reports, consistent with prior UCMR cycles and as required by § 141.153.

III. What are the key requirements of the rule, including notable changes between UCMR 3, the proposed UCMR 4 and the final UCMR 4?

EPA published ''Revisions to the Unregulated Contaminant Monitoring Rule (UCMR 4) for Public Water Systems and Announcement of a Public Meeting;'' Proposed Rule, on December 11, 2015 (80 FR 76897, (USEPA, 2015a)). The UCMR 4 proposal identified eleven new analytical methods to support water system monitoring for a total of 30 new contaminants, and detailed other potential changes relative to UCMR 3. Among the other changes reflected in the UCMR 4 proposal were identification of water systems subject to UCMR 4 and provisions for sampling locations, timeframe and frequency, as well as updated data elements.

EPA received input on the UCMR 4 proposal from 34 public commenters, including state and local government, utilities and utility stakeholder organizations, laboratories, academia, non-governmental organizations and other interested stakeholders . After considering the comments, EPA made the changes described in Exhibit 2 to develop the final UCMR 4 action. Sections III A–C summarize key aspects of this final rule and the associated notable and recurring comments received in response to the proposed rule. EPA has compiled all public comments and EPA's responses in the ''Response to Comments Document for the Unregulated Contaminant Monitoring Rule (UCMR 4),'' (USEPA, 2016b), which can be found in the electronic docket listed in the **ADDRESSES** section of this notice.

EXHIBIT 2—NOTABLE CHANGES TO UCMR 4 BETWEEN PROPOSED AND FINAL RULE

CFR rule section		Description of change	Corresponding preamble section
No.	Title/description		
§ 141.40(a)(3)	Related specifications for the analytes to be monitored.	Revises Table 1 to include EPA Method 546 Enzyme-linked Immunosorbent Assay (ELISA) and removes source water as a sample location for cyanotoxins.	III.A. & III.B.
§ 141.40(a)(3) and § 141.40(a)(4).	Sampling design requirements—frequency.	Revises Table 1 to update the monitoring dates to January 2018 through December 2020 for the 20 additional contaminants, and also updates Table 2 to reflect the traditional sample collection timeframe (consecutive 12-month period) for the 20 additional contaminants. Additionally, updates Table 2 to reflect the traditional sample collection frequency (four consecutive quarters for SW and ground water under the direct influence of surface water (GWUDI) water systems, and twice, 5–7 months apart, for GW systems) for those 20 contaminants.	III.B. & I.E.
§ 141.40(a)(3) and § 141.40(a)(4).	Phased sample analysis for microcystins.	Removes source water samples from the phased sample analysis for microcystins.	III.B.2
§ 141.40(a)(3)	Applicability of HAA monitoring requirements.	Removes UCMR 4 HAA requirement for water systems that are not subject to HAA5 monitoring under the Disinfectants and Disinfection Byproduct Rules (D/DBPRs).	III.B.3

A. What contaminants are in UCMR 4?

1. This Rule

EPA is maintaining the proposed list of unregulated contaminants and the methods associated with analyzing those contaminants, with the exception of updating the ELISA method for ''total microcystins'' (see Exhibit 3). Further information on the prioritization process, as well as contaminant-specific information (source, use, production, release, persistence, mobility, health effects and occurrence) that EPA used to select the contaminants is contained in ''UCMR 4 Contaminants—Information Compendium for Final Rule'' (USEPA, 2016c). This Information Compendium can be found in the electronic docket listed in the **ADDRESSES** section of this notice.

2. Summary of Major Comments and EPA Responses

Commenters who expressed an opinion about the proposed UCMR 4 analytes were generally supportive. Some commenters suggested alternative ways to collect the HAA information. Suggestions included collecting results for all nine HAAs individually; only collecting results for HAA9; or doing targeted research studies of HAAs independent of UCMR. EPA has concluded that monitoring for the three HAA groups (HAA5, HAA6Br and HAA9) will provide the information of interest on the relative occurrence between regulated and unregulated HAAs as well as brominated versus chlorinated HAAs. Though the targeted research proposed by some commenters is beyond the scope of today's action, EPA will take the recommendation under advisement and consider how such research may complement the UCMR data.

Some commenters supported EPA's proposal to not include *Legionella pneumophila* and *Mycobacterium avium* Complex (MAC) in UCMR 4; others encouraged EPA to add Legionella, and in some cases MAC. The latter commenters identified several candidate methods, suggested that Legionella is not exclusively a premise plumbing issue, and pointed to concerns with health effects. While EPA recognizes the Legionella concern, the Agency has concluded that this national survey will not be able to adequately address many of the variables, complexities and uncertainties discussed by commenters. More research is needed to identify the optimal sampling location, frequency of sampling events and proper sampling population, and address biofilms and associated indicators. Further research is also needed on the dose-response ecology of Legionella in the distribution system to identify the correct method needed to monitor at a level that would be instructive and cost effective.

Multiple commenters expressed concerns with the ELISA methodology and some of the specific elements of the ELISA Standard Operating Procedure (SOP) (Ohio EPA, 2015) identified in the proposal for cyanotoxins. In 2016, EPA finalized EPA Method 546: ''Determination of Total Microcystins and Nodularins in Drinking Water and Ambient Water by Adda Enzyme-Linked Immunosorbent Assay'' as the prescribed method for total microcystins (USEPA, 2016e). The fundamentals of Method 546 are quite similar to those of the Ohio EPA methodology, and Method 546 addresses concerns expressed about minimum reporting levels (MRLs), holding times and quality control.

EXHIBIT 3—30 UCMR 4 ANALYTES

List 1 Analytes	
One Cyanotoxin Group using EPA Method 546 (Adda ELISA): [1]	
''total microcystins''.	
Seven Cyanotoxins using EPA Method 544 (SPE LC–MS/MS): [2]	
microcystin-LA.	microcystin-RR.
microcystin-LF.	microcystin-YR.
microcystin-LR.	nodularin.
microcystin-LY.	
Two Cyanotoxins using EPA Method 545 (LC/ESI–MS/MS): [3]	
anatoxin-a.	cylindrospermopsin.
Two Metals using EPA Method 200.8 (ICP–MS) [4] **or alternate SM** [5] **or ASTM:** [6]	
germanium.	manganese.
Nine Pesticides using EPA Method 525.3 (SPE GC/MS): [7]	
alpha-hexachlorocyclohexane.	profenofos.
chlorpyrifos.	tebuconazole.
dimethipin.	total permethrin (cis- & trans-).
ethoprop.	tribufos.

EXHIBIT 3—30 UCMR 4 ANALYTES—Continued

oxyfluorfen.	
Three Brominated HAA Groups using EPA Method 552.3 (GC/ECD) or 557 (IC/ESI–MS/MS): [8 9 10]	
HAA5. HAA6Br.	HAA9.
Three Alcohols using EPA Method 541 (GC/MS): [11]	
1-butanol. 2-methoxyethanol.	2-propen-1-ol.
Three Semivolatile Organic Chemicals (SVOCs) using EPA Method 530 (GC/MS): [12]	
butylated hydroxyanisole. o-toluidine.	quinolone.

[1] EPA Method 546 Adda Enzyme-Linked Immunosorbent Assay (ELISA) (USEPA, 2016e).
[2] EPA Method 544 (Solid phase extraction (SPE) liquid chromatography/tandem mass spectrometry (LC–MS/MS)) (USEPA, 2015b). This method will only be used if analyses by ELISA (for ''total microcystins'') yield results above reporting limits.
[3] EPA Method 545 (Liquid chromatography/electrospray ionization/tandem mass spectrometry (LC/ESI–MS/MS)) (USEPA, 2015c).
[4] EPA Method 200.8 (Inductively coupled plasma mass spectrometry (ICP–MS)) (USEPA, 1994).
[5] Standard Methods (SM) 3125 (SM, 2005a) or SM 3125–09 (SM Online, 2009).
[6] ASTM International (ASTM) D5673–10 (ASTM, 2010).
[7] EPA Method 525.3 (SPE Gas chromatography/mass spectrometry (GC/MS)) (USEPA, 2012b).
[8] EPA Method 552.3 (Gas chromatography/electron capture detection (GC/ECD)) (USEPA, 2003) and EPA Method 557 (Ion chromatography-electrospray ionization-tandem mass spectrometry (IC–ESI–MS/MS)) (USEPA, 2009a). HAA5 includes: Dibromoacetic acid, dichloroacetic acid, monobromoacetic acid, monochloroacetic acid, trichloroacetic acid. HAA6Br includes: Bromochloroacetic acid, bromodichloroacetic acid, dibromoacetic acid, chlorodibromoacetic acid, monobromoacetic acid, tribromoacetic acid. HAA9 includes: Bromochloroacetic acid, bromodichloroacetic acid, chlorodibromoacetic acid, dibromoacetic acid, dichloroacetic acid, monobromoacetic acid, monochloroacetic acid, tribromoacetic acid, trichloroacetic acid.
[9] Regulated HAAs (HAA5) are included in the monitoring program to gain a better understanding of co-occurrence with currently unregulated disinfection byproducts.
[10] Brominated HAA monitoring also includes sampling for indicators total organic carbon (TOC) and bromide using methods approved for compliance monitoring. TOC methods include: SM 5310B, SM 5310C, SM 5310D (SM, 2005b, 2005c, 2005d), or SM 5310B–00, SM 5310C–00, SM 5310D–00 (SM Online, 2000a, 2000b, 2000c), EPA Method 415.3 (Rev. 1.1 or 1.2) (USEPA, 2005, 2009b). Bromide methods include: EPA Methods 300.0 (Rev. 2.1), 300.1 (Rev. 1.0), 317.0 (Rev. 2.0), 326.0 (Rev. 1.0) (USEPA, 1993, 1997, 2001b, 2002) or ASTM D 6581–12 (ASTM, 2012).
[11] EPA Method 541 (GC/MS) (USEPA, 2015d).
[12] EPA Method 530 (GC/MS) (USEPA, 2015e).

B. What are the UCMR 4 sampling design and timeline of activities?

EPA is maintaining the 2018 to 2020 monitoring timeframe identified in the proposal. Preparations prior to 2018 will include coordinating laboratory approval, selecting representative small systems (USEPA, 2001a), developing SMPs and establishing monitoring schedules. Exhibit 4 illustrates the major activities that will take place in preparation for and during the implementation of UCMR 4.

Exhibit 4: Timeline of UCMR 4 Activities

2017	2018	2019	2020	2021
After final rule publication: EPA/state primacy authorities (1) develop SMPs (including the nationally representative sample); (2) inform PWSs/ establish monitoring plans; and (3) continuation of laboratory approval	← **Assessment Monitoring** → List 1 Contaminants *All large systems serving more than 10,000 people;* *800 small systems serving 10,000 or fewer people for cyanotoxins;* *800 small systems serving 10,000 or fewer people for the 20 additional contaminants.* Reporting and analysis of data			Complete reporting and analysis of data

To minimize the impact of the rule on small systems (those serving 10,000 or fewer people), EPA pays for the sample kit preparation, sample shipping fees and analysis costs for these systems. In addition, no small system will be required to monitor for both cyanotoxins and the 20 additional UCMR contaminants. Consistent with prior UCMRs, large systems (those serving more than 10,000 people) pay for all costs associated with their monitoring. A summary of the estimated number of systems subject to monitoring is shown in Exhibit 5.

EXHIBIT 5—SYSTEMS TO PARTICIPATE IN UCMR 4 MONITORING

System size (number of people served)	National sample: Assessment monitoring design		Total number of systems per size category
	10 List 1 cyanotoxins	20 Additional list 1 contaminants [3]	
Small Systems [1] (25–10,000).	800 randomly selected SW or GWUDI systems	800 randomly selected SW, GWUDI and GW systems.	1,600
Large Systems [2] (10,001 and over).	All SW or GWUDI systems (2,725)	All SW, GWUDI and GW systems (4,292)	4,292
Total	3,525	5,092	5,892

[1] Total for small systems is additive because these systems will only be selected for one component of UCMR 4 sampling (10 cyanotoxins or 20 additional contaminants). EPA will pay for all analytical costs associated with monitoring at small systems.

[2] Large system counts are approximate. The number of large systems is not additive. All SW and GWUDI systems will monitor for cyanotoxins; those same systems will also monitor for the 20 additional List 1 contaminants, as will the large GW systems.

[3] Water systems that are not subject to HAA5 monitoring under the D/DBPRs (§ 141.Subparts L and V) are not required to monitor for the UCMR 4 HAAs or associated indicators (TOC and bromide).

1. Sampling Frequency, Timing

a. This Rule

Today's rule maintains the proposed increased sampling frequency and narrower monitoring timeframe for total microcystins and the nine cyanotoxins. Sampling will take place twice a month for four consecutive months (total of eight sampling events) for SW and GWUDI systems. These water systems will collect samples during the monitoring timeframe of March through November (excluding December, January and February). GW systems are excluded from cyanotoxin monitoring.

Monitoring for the 20 additional UCMR 4 contaminants will be based on the traditional UCMR sampling frequency and timeframe. For SW and GWUDI systems, sampling will take place for four consecutive quarters over the course of 12 months (total of four sampling events). Sampling events will occur three months apart. For example, if the first sample is taken in January, the second will then occur anytime in April, the third will occur anytime in July and the fourth will occur anytime in October. For GW systems, sampling will take place twice over the course of 12 months (total of two sampling events). Sampling events will occur five to seven months apart. For example, if the first sample is taken in April, the second sample will then occur anytime in September, October or November.

EPA, in conjunction with the states, will initially determine schedules (year and months of monitoring) for large water systems. These PWSs will then have an opportunity to modify their schedule for planning purposes or other reasons (*e.g.,* to conduct monitoring during the months the system or the state believes are most vulnerable, spread costs over multiple years, address a situation where the sampling location will be closed during the scheduled month of monitoring, etc.). PWSs are not permitted to reschedule monitoring specifically to avoid sample collection during a suspected vulnerable period for the cyanotoxins. EPA will schedule and coordinate small system monitoring by working closely with partnering states. SMPs provide an opportunity for states to review and revise the initial sampling schedules that EPA proposes.

b. Summary of Major Comments and EPA Responses

Commenters generally supported the narrower timeframe for cyanotoxin sampling but disfavored the narrower March through November timeframe for the 20 additional contaminants. For the latter group of contaminants, EPA received multiple comments that recommended using the traditional sampling frequency and timing of previous UCMR cycles. Commenters cited the potential for cost savings by allowing the UCMR 4 HAAs to be sampled on the same schedule as compliance monitoring, and they also suggested that traditional 12-month monitoring would be appropriate for assessing lifetime exposure. EPA agrees with these points and today's rule includes the traditional monitoring schedule for the 20 additional contaminants. EPA's response is detailed more fully in the ''Response to Comments Document for the Unregulated Contaminant Monitoring Rule (UCMR 4),'' (USEPA, 2016b), which can be found in the electronic docket listed in the **ADDRESSES** section of this notice.

Several commenters recommended that the Agency reduce the number of sample events for GW systems to one instead of the traditional two. Commenters provided an assessment of data on UCMR 3 contaminants in GW systems, and suggested that there is no significant statistical difference between the results for the two sample events for many of the contaminants. EPA acknowledges that based on the UCMR 3 data, the correlation between sample event 1 and sample event 2 for GW systems can be high, and the distributions of measured values can be very similar. However, when making regulatory determinations, EPA evaluates the number of systems (and populations) with means or single measured values above health levels of concern, as both values provide important information on the occurrence of UCMR contaminants in PWSs. The approach suggested by commenters would yield less accurate data for several reasons. First, the analysis provided by the commenters shows that the counts or percentage of systems above a concentration of interest can vary between sample events, and that there are individual cases where the contaminant is not detected in one sample event but occurs at significant levels in the second event. In addition, the analysis by commenters did not find a strong correlation between the two GW sampling events for chlorate, a disinfectant byproduct, likely due to the temporal variability in disinfection practices. This strongly suggests that having a single sample

event may not be appropriate for temporally variable contaminants like pesticides and other anthropogenic contaminants. EPA did consider making exceptions for certain classes of contaminants (*e.g.,* those contaminants that are not as temporally variable), however, the UCMR design must address all types of contaminants on a national scale, often without advance knowledge about the degree to which the contaminant occurrence may vary over time. Making exceptions would increase the complexity of the sample design. In addition, statistical means based on two measurements have considerably less error than a single measurement per system and provide a more robust dataset for future regulatory decisions. EPA also notes that the analysis provided by commenters only addressed a limited set of contaminants (*i.e.,* those from UCMR 3) and did not examine the results from other UCMR cycles; if EPA were to consider reducing sampling frequency as suggested, the Agency would need more robust information. EPA will re-evaluate this issue in future UCMR cycles if new information becomes available.

Finally, it is worth noting that the Agency does allow systems the opportunity to reduce monitoring by using approved GW representative entry points and, in the case of water systems that purchase water from the same source, by using representative connections.

2. Phased Sample Analysis for Microcystins

a. This Rule

Today's rule utilizes a phased sample analysis approach for the microcystins to reduce analytical costs (*i.e.,* PWSs will collect all required samples for each sampling event but not all samples may need to be analyzed). However, that phased approach has been simplified relative to the proposed approach and will begin with sample collection at the entry point to the distribution system (EPTDS). Three samples will be collected at the EPTDS for cyanotoxins. One sample will be collected for EPA Method 546 (Adda ELISA), another for potential analysis by EPA Method 544, and another for analysis by EPA Method 545. Adda ELISA is a widely used screening assay that allows for the aggregate detection of numerous microcystin congeners; it does not allow for measurement of the individual congeners (USEPA, 2015f; Fischer et al., 2001; McElhiney and Lawton, 2005; Zeck et al., 2001). If the EPTDS ELISA result is less than 0.3 micrograms per liter (µg/L) (*i.e.,* the reporting limit for total microcystins), then the sample collected for Method 544 will not be analyzed for that sample event and only the Adda ELISA result will be reported to EPA. If the ELISA result is greater than or equal to 0.3 µg/L, the result will be reported to EPA and the EPA Method 544 sample will then be analyzed to identify and quantify nodularin and the six specific microcystin congeners identified in Exhibit 3. Cylindrospermopsin and anatoxin-a will only be monitored at the EPTDS, with analysis by EPA Method 545.

In lieu of the proposed source-water ELISA monitoring, this final rule requires PWSs to answer four simple ''metadata'' questions (identifying the appropriate responses from the options provided) to help EPA understand the source water quality at the time their EPTDS samples are collected. These questions are identified in the Data Elements section III.C.1.

b. Summary of Major Comments and EPA Responses

EPA received multiple comments on the proposed phased approach to microcystins and the utility of measuring pH and temperature in the source water. Some commenters recommended omitting source water sampling for microcystins, suggesting that a correlation cannot be drawn between source water and finished water using the proposed approach. Commenters also suggested the following: Targeted studies should collect treatment plant metadata to support future analyses; the phased approach could potentially miss an increase in cyanotoxins released as a result of treatment (*e.g.,* cell rupture during treatment); the inclusion of both source water data and drinking water data in NCOD and other outreach materials would confuse consumers; and more appropriate candidate indicators could be considered. EPA has considered these concerns and is not requiring source water microcystin monitoring in the final rule, nor is the Agency requiring pH and temperature data collection. UCMR 4 focuses instead on finished water cyanotoxin data collection and a more qualitative characterization of source water. EPA estimates that the final rule approach, relying on the collection of source water metadata in lieu of source water sampling, reduces $1.8 million in costs from the proposed regulation over the five-year period of the UCMR 4. The collection of source water metadata can easily be incorporated into the data reporting system and will complement the quantitative analytical drinking water data used to support future regulatory determinations.

EPA also received comments reflecting confusion about the interpretation of results from the Adda ELISA microcystin method and Method 544 (microcystins by LC–MS/MS). EPA notes that the two methods provide different measures of microcystin occurrence and risk, and one result cannot practically be used to confirm the other. The Adda ELISA allows for an aggregate quantification of a wide spectrum of microcystin congeners based on the ability of the antibodies used in the assay to recognize microcystins, while Method 544 focuses on quantifying six specific microcystin congeners. The microcystins addressed in Method 544 may or may not be the dominant congeners in particular source waters.

3. Applicability of HAA Monitoring Requirements

a. This Rule

If a water system is not subject to HAA5 monitoring under the D/DBPRs (see § 141.622 for D/DBPR monitoring requirements), the water systems is not required to collect and analyze UCMR 4 HAA samples.

b. Summary of Major Comments and EPA Responses

One commenter suggested that EPA remove the UCMR 4 requirement for water systems to monitor for HAAs if the system is not subject to HAA5 monitoring under the D/DBPRs. The logic is that non-disinfecting GW systems would not be expected to have measureable HAAs as DBPs. EPA agrees with the comment and has removed the requirement. This change reduces the UCMR 4 cost by $826,000 from the proposed rule's cost over the 5-year UCMR 4 period.

4. Representative Sampling

a. This Rule

Consistent with previous UCMRs and as described in § 141.35(c)(3), UCMR 4 maintains the option for large GW systems that have multiple EPTDSs to sample, with prior approval, at representative sampling locations rather than at each EPTDS. Representative sampling plans approved under prior UCMRs will be recognized as valid for UCMR 4. Systems must submit a copy of documentation from their state or EPA representing the prior approval of their alternative sampling plan. Any *new* GW representative monitoring plans must be submitted to EPA for review (by the state or EPA) within 120 days from publication of this final rule.

Once approved, these representative EPTDS locations, along with previously approved EPTDS locations from prior UCMRs, must be loaded into the Safe Drinking Water Accession and Review System (SDWARS) by the water system by December 31, 2017.

Consistent with previous UCMRs and as described in § 141.40, Table 1, systems that purchase water with multiple connections from the same wholesaler may select one representative connection from that wholesaler. This EPTDS sampling location must be representative of the highest annual volume connections. If the connection selected as the representative EPTDS is not available for sampling, an alternate highest volume representative connection must be sampled. Water provided by multiple wholesalers will be considered different sources and will each need a representative connection.

b. Summary of Major Comments and EPA Responses

EPA received multiple comments about representative wholesale connections from consecutive systems. Commenters were concerned that this approach to reduce monitoring would be eliminated in UCMR 4. The proposed rule preamble explicitly highlighted the flexibility for *representative ground water sampling,* but did not highlight the option for *representative wholesale connections* (*i.e.,* for consecutive systems). In this preamble, EPA is affirming the opportunity for water systems that purchase water (with multiple connections from the same wholesaler) to reduce monitoring; this option will continue in UCMR 4. EPA will likewise address this in future meetings, webinars and outreach materials.

5. Sampling Locations

a. This Rule

Sample collection for the UCMR 4 contaminants will take place at the EPTDS for all contaminant groups except for the HAAs, which will take place in the distribution system. Sampling for the HAA indicators, TOC and bromide, will take place at a single source water influent for each treatment plant.

If the system's treatment plant/water source is subject to the D/DBPR's HAA5 monitoring requirements under § 141.622, the water system will collect samples for the UCMR 4 HAAs at the D/DBPR sampling location(s). UCMR 4 HAA samples and D/DBPR HAA5 compliance monitoring samples may be collected by the PWS at the same time. However, EPA notes that PWSs are required to arrange for UCMR 4 HAA samples to be analyzed by a UCMR 4 approved laboratory using EPA Method 552.3 or 557 (both of which are compliance methods also approved for analysis of D/DBPR samples).

For those systems subject to UCMR 4 HAA monitoring, sampling for the HAA indicators (TOC and bromide) will take place at the source water influent for each treatment plant (concurrent with UCMR 4 HAA sampling in the distribution system). This indicator-monitoring requirement does not pertain to consecutive systems (*i.e.,* those purchasing water from other systems). For purposes of TOC and bromide sampling, EPA defines source water influent under UCMR as untreated water entering the water treatment plant (*i.e.,* at a location prior to any treatment).

SW and GWUDI systems subject to TOC monitoring under the D/DBPRs will use their TOC source water sampling site(s) defined at § 141.132 for UCMR 4 TOC and bromide samples. If a SW or GWUDI system is not subject to the D/DBPR TOC monitoring, it will use its Long Term 2 Enhance Surface Water Treatment Rule (LT2) source water sampling site(s) (§ 141.703) to collect UCMR 4 samples for TOC and bromide. GW systems that are subject to the D/DBPRs will take TOC and bromide samples at their influents entering their treatment train.

b. Summary of Major Comments and EPA Responses

With the exception of microcystin monitoring, commenters generally agreed with the sampling location approach described in the proposal. Changes made to address the microcystin comments are addressed in section III.B.2.

C. What are the reporting requirements for UCMR 4?

1. Data Elements

a. This Rule

Today's final rule maintains the 26 data elements described in the proposed rule and updates some of the definitions for clarity and consistency in the reporting requirements. Additionally, EPA has included four data elements to address collection of the source water metadata discussed in section III.B.2.

The four new metadata elements are all yes or no questions, with a corresponding drop down menu of options if yes is selected:

(1) Bloom Occurrence—preceding the finished water sample collection, did you observe an algal bloom in your source waters near the intake?

(2) Cyanotoxin Occurrence—preceding the finished water sample collection, were cyanotoxins ever detected in your source waters, near the intake and prior to any treatment (based on sampling by you or another party)?

(3) Indicator of Possible Bloom—Treatment—preceding the finished water sample collection, did you notice any changes in your treatment system operation and/or treated water quality that may indicate a bloom in the source water?

(4) Indicator of Possible Bloom—Source Water Quality Parameters—preceding the finished water sample collection, did you observe any notable changes in source water quality parameters (if measured)?

Please see Table 1 of § 141.35(e) for the complete list of data elements, definitions and drop down options that will be provided in the data reporting system.

b. Summary of Major Comments and EPA Responses

EPA received many comments on the proposed data elements, particularly regarding the complexity and utility of collecting the new quality control (QC) parameters; concerns with how the data will be gathered and processed; and questions about how the database will function.

EPA will collect all 30 data elements in SDWARS 4, an updated version of the data reporting system used in previous UCMR actions. More than half of these data elements (*e.g.,* inventory and analytical results) were used in prior UCMR cycles and were included in the previous SDWARS system. The new QC data elements are already generated by the laboratory and do not constitute new analytical requirements.

SDWARS 4 will include improvements in the user interface and new QC checks will be built into the system to review the data in real-time. Consistent with prior UCMR cycles, states and EPA will have access to data once posted by the laboratory and reviewed by the PWS (or 60 days after the laboratory posting, whichever comes first). EPA will offer two database training sessions in 2017 to help users become familiar with the new system. One training session will be for the water systems and the other training session will be for the laboratories. A future **Federal Register** announcement will provide more details on these training sessions.

Other comments regarding the data elements included the following specific points: a request for a simpler

classification of treatment ''bins''; a recommendation that the final rule collect the primary and secondary disinfectant practice in place at the time of HAA sampling; an observation that the UCMR 4 data are more informative when there is information describing the associated treatment; a recommendation that EPA simplify the data elements and data definitions; and a recommendation that the rule not collect metadata about oxidant addition, oxidant order of application, oxidant dose and oxidant contact time.

The final rule simplifies and clarifies the treatment options available for the PWS to select as metadata; includes the collection of all disinfectant practices and information describing the treatment in place; simplifies the data elements and data definitions; and does not include the collection of metadata about oxidant order of application, dose or contact time. EPA's response is detailed more fully in the ''Response to Comments Document for the Unregulated Contaminant Monitoring Rule (UCMR 4),'' (USEPA, 2016b), which can be found in the electronic docket listed in the **ADDRESSES** section of this notice.

IV. How are laboratories approved for UCMR 4 monitoring?

Consistent with the proposal, and with past practice, the final rule requires EPA approval of all laboratories conducting analyses for UCMR 4. EPA will follow the traditional Agency approach, outlined in the proposal, to approving UCMR laboratories, which requires laboratories seeking approval to: (1) Provide EPA with data that demonstrates a successful completion of an initial demonstration of capability (IDC) as outlined in each method; (2) verify successful analytical performance at or below the MRLs as specified in this action; (3) provide information about laboratory operating procedures; and (4) successfully participate in an EPA proficiency testing (PT) program for the analytes of interest. Audits of laboratories may be conducted by EPA prior to and/or following approval. The ''UCMR 4 Laboratory Approval Requirements and Information Document'' (USEPA, 2016d) provides guidance on the EPA laboratory approval program and the specific method acceptance criteria.

EPA may supply analytical reference standards for select analytes to participating/approved laboratories when reliable standards are not readily available through commercial sources.

This final rule's structure for the laboratory approval program is the same as that proposed for UCMR 4 and employed in previous UCMRs, and provides an assessment of the laboratories' ability to perform analyses using the methods listed in § 141.40(a)(3), Table 1. The UCMR 4 laboratory approval process is designed to assess whether laboratories possess the required equipment and analyst skills and can meet the laboratory-performance and data-reporting criteria described in this action. Laboratory participation in the UCMR laboratory approval program is voluntary. However, as in previous UCMRs and as proposed for UCMR 4, EPA will require PWSs to exclusively use laboratories that have been approved under the program to analyze UCMR 4 samples. EPA expects to post a list of approved UCMR 4 laboratories to *https://www.epa.gov/dwucmr.* Laboratories are encouraged to apply for UCMR 4 approval as early as possible, as EPA anticipates that large PWSs scheduled for monitoring in the first year will be making arrangements for sample analyses soon after the final rule is published. The steps and requirements for the laboratory approval process are listed in sections A through F below.

A. Request To Participate

Laboratories interested in the UCMR 4 laboratory approval program can request registration materials by emailing EPA at *UCMR_Sampling_Coordinator@epa.gov* to request registration materials.

B. Registration

Laboratory applicants will provide registration information that includes: Laboratory name, mailing address, shipping address, contact name, phone number, email address and a list of the UCMR 4 methods for which the laboratory is seeking approval. This registration step provides EPA with the necessary contact information, and ensures that each laboratory receives a customized application package. Laboratories must complete and submit the necessary registration information by February 21, 2017.

C. Application Package

Laboratories wishing to participate will complete and return a customized application package that includes the following: IDC data, including precision, accuracy and results of MRL studies; information regarding analytical equipment and other materials; proof of current drinking water laboratory certification (for select compliance monitoring methods); and example chromatograms for each method under review. Laboratories must complete and submit the necessary application materials by April 19, 2017.

As a condition of receiving and maintaining approval, the laboratory is expected to confirm that it will post UCMR 4 monitoring results and quality control data that meet method criteria (on behalf of its PWS clients) to EPA's UCMR electronic data reporting system, SDWARS.

D. EPA's Review of Application Packages

EPA will review the application packages and, if necessary, request follow-up information. Laboratories that successfully complete the application process become eligible to participate in the UCMR 4 PT program.

E. Proficiency Testing

A PT sample is a synthetic sample containing a concentration of an analyte or mixture of analytes that is known to EPA, but unknown to the laboratory. To be approved, a laboratory is expected to meet specific acceptance criteria for the analysis of a UCMR 4 PT sample(s) for each analyte in each method, for which the laboratory is seeking approval. EPA intends to offer at least two opportunities for a laboratory to successfully analyze UCMR 4 PT samples after publication of the final rule. A laboratory is expected to pass one of the PT studies for each analytical method for which it is requesting approval, and will not be required to pass a PT study for a method it has already passed in a previous UCMR 4 PT study. EPA does not expect to conduct additional PT studies after the start of system monitoring; however, laboratory audits will likely be ongoing throughout UCMR 4 implementation. Initial laboratory approval is expected to be contingent on successful completion of a PT study. Continued laboratory approval is contingent on successful completion of the audit process and satisfactorily meeting all the other stated conditions.

F. Written EPA Approval

For laboratories that have already successfully completed the preceding steps (A through E), EPA will have sent the applicant a letter listing the methods for which approval is pending (*i.e.,* pending promulgation of this rule). Because no changes have been made to the final rule that impact the laboratory approval program, laboratories that received pending approval letters will be granted approval without further action on their part. Additional approval actions (*i.e.,* for those laboratories that apply and have not already proceeded to the point of being in ''approval pending'' status) will be based on laboratory completion of Steps

A through E. In both cases, EPA will document its final decision in writing.

EPA did not receive any adverse comments on the laboratory approval process or criteria that it proposed.

V. What is the past and future stakeholder involvement in the regulation process?

A. What is the states' role in the UCMR program?

UCMR is a direct implementation rule (*i.e.,* EPA has primary responsibility for its implementation) and state participation is voluntary. Under previous UCMRs, specific activities that individual states, tribes and territories agreed to carry out or assist with were identified and established exclusively through PAs. Through PAs, states, tribes and territories can help EPA implement the UCMR program and help ensure that the UCMR data are of the highest quality possible to best support Agency decision making. Under UCMR 4, EPA will continue to use the PA process to determine and document the following: the process for review and revision of the SMPs; replacing and updating system information; review and approval of proposed GW representative monitoring plans; notification and instructions for systems; and compliance assistance. EPA recognizes that states/primacy agencies often have the best information about PWSs in their state and encourages states to partner.

SMPs include tabular listings of the systems that EPA selected and the proposed schedule for their monitoring. Initial SMPs also typically include instructions to states for revising and/or correcting system information in the SMPs, including modifying the sampling schedules for small systems. EPA will incorporate revisions from states, resolve any outstanding questions and return the final SMPs to each state.

B. What stakeholder meetings have been held in preparation for UCMR 4?

EPA incorporates stakeholder involvement into each UCMR cycle. Specific to the development of UCMR 4, EPA held three public stakeholder meetings and is announcing a fourth in today's preamble (see section V.C). EPA held a meeting focused on drinking water methods for CCL contaminants on May 15, 2013, in Cincinnati, Ohio. Participants included representatives of state agencies, laboratories, PWSs, environmental organizations and drinking water associations. Meeting topics included an overview of the regulatory process (CCL, UCMR and Regulatory Determination) and drinking water methods under development, primarily for CCL contaminants (see USEPA, 2013 for presentation materials). EPA held a second stakeholder meeting on June 25, 2014, in Washington, DC. Attendees representing state agencies, tribes, laboratories, PWSs, environmental organizations and drinking water associations participated in the meeting via webinar and in person. Meeting topics included a status update on UCMR 3; UCMR 4 potential sampling design changes relative to UCMR 3; UCMR 4 candidate analytes and rationale; and the laboratory approval process (see USEPA, 2014 for meeting materials). The third stakeholder meeting was held on January 13, 2016, via a webinar, during the public comment period for the proposed rule. Attendees representing state agencies, laboratories, PWSs, environmental organizations and drinking water associations participated. Meeting topics included the proposed UCMR 4 monitoring requirements, analyte selection and rationale, analytical methods, the laboratory approval process and GW representative monitoring plans (see USEPA, 2016f for meeting materials).

C. How do I participate in the upcoming stakeholder meeting?

EPA will hold the fourth UCMR 4 public stakeholder meeting in Washington, DC, on April 12, 2017. Attendees can participate in person or via webinar. Topics will include the final UCMR 4 requirements for monitoring, sampling and reporting, analytical methods, the laboratory approval process, GW representative monitoring plans and consecutive system monitoring plans.

1. Meeting Participation

Those who wish to participate in the public meeting, whether in person or via webinar, need to register in advance no later than 5:00 p.m., eastern time on April 7, 2017, by going to *https://www.eventbrite.com/e/ucmr-4-public-stakeholder-meeting-registration-28264984329.* To ensure adequate time for questions, individuals or organizations with specific questions should identify any upfront questions when they register. Additional questions from attendees will be taken during the meeting and answered as time permits. The number of webinar connections available for the meeting is limited and will be available on a first-come, first-served basis. Further details about registration and participation can be found on EPA's Unregulated Contaminant Monitoring Program ''Meetings and Materials'' Web site at *https://www.epa.gov/dwucmr.*

2. Meeting Materials

Materials are expected to be sent by email to all registered attendees prior to the meeting. EPA will post the materials on the Agency's Web site for persons who are unable to participate.

D. How did EPA consider Children's Environmental Health?

Executive Order 13045 does not apply to UCMR 4, however, EPA's Policy on Evaluating Health Risks to Children is applicable (See VII.G. Executive Order 13045). By monitoring for unregulated contaminants that may pose health risks via drinking water, UCMR furthers the protection of public health for all citizens, including children. EPA considered children's health risks during the development of UCMR 4. This includes considering public comments about candidate contaminant priorities.

The objective of UCMR 4 is to collect nationally representative drinking water data on a set of unregulated contaminants. EPA generally collects occurrence data for contaminants at the lowest levels that are feasible for the national network of approved drinking water laboratories to quantify accurately. By setting reporting levels as low as is feasible, the Agency positions itself to better address contaminant risk information in the future, including that associated with unique risks to children.

E. How did EPA address Environmental Justice?

The EPA has concluded that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard (see VII.J. Executive Order 12898). This regulatory action provides EPA and other interested parties with scientifically valid data on the national occurrence of selected contaminants in drinking water. By seeking to identify unregulated contaminants that may pose health risks via drinking water from all PWSs, UCMR furthers the protection of public health for all citizens. EPA recognizes that unregulated contaminants in drinking water are of interest to all populations and structured the rulemaking process and implementation of the UCMR 4 rule to allow for meaningful involvement and transparency. EPA organized public meetings and webinars to share information regarding the development of UCMR 4; coordinated with tribal governments; and convened a

workgroup that included representatives from several states.

EPA will continue to collect U.S. Postal Service Zip Codes for each PWS's service area, as collected under UCMR 3, to support assessment in future regulatory evaluations of whether or not minority, low-income and/or indigenous-population communities are uniquely impacted by particular drinking water contaminants.

VI. What documents are being incorporated by reference?

The following methods are incorporated by reference into this section for UCMR 4 monitoring. All approved material is available for inspection electronically at *https://www.regulations.gov* (Docket ID No. EPA–HQ–OW–2015–0218), or from the sources listed for each method. EPA has worked to make these methods and documents reasonably available to interested parties. The EPA and non-EPA methods that support monitoring under this rule are as follows:

A. Methods From the U.S. Environmental Protection Agency

The following methods are from the U.S. Environmental Protection Agency, Water Docket, EPA/DC, EPA West, Room 3334, 1301 Constitution Avenue NW., Washington, DC 20004.

1. Method 200.8 ''Determination of Trace Elements in Waters and Wastes by Inductively Coupled Plasma—Mass Spectrometry,'' Revision 5.4, EMMC Version, 1994. Available on the Internet at *https://www.nemi.gov.* This is an EPA method for the analysis of elements in water by ICP–MS and will measure germanium and manganese during UCMR 4.

2. Method 300.0 ''Determination of Inorganic Anions by Ion Chromatography Samples,'' Revision 2.1, August 1993. Available on the Internet at *https://www.nemi.gov.* This is an EPA method for the analysis of inorganic anions in water samples using ion chromatography (IC) with conductivity detection. It will be used for the measurement of bromide, an indicator for the HAAs.

3. Method 300.1 ''Determination of Inorganic Anions in Drinking Water by Ion Chromatography,'' Revision 1.0, 1997. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of inorganic anions in water samples using IC with conductivity detection. It will be used for the measurement of TOC, an indicator for the HAAs.

4. Method 317.0 ''Determination of Inorganic Oxyhalide Disinfection By-Products in Drinking Water Using Ion Chromatography with the Addition of a Postcolumn Reagent for Trace Bromate Analysis,'' Revision 2.0, July 2001, EPA 815–B–01–001. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of inorganic anions in water samples using IC with conductivity detection. It will be used for the measurement of bromide, an indicator for the HAAs.

5. Method 326.0 ''Determination of Inorganic Oxyhalide Disinfection By-Products in Drinking Water Using Ion Chromatography Incorporating the Addition of a Suppressor Acidified Postcolumn Reagent for Trace Bromate Analysis,'' Revision 1.0, June 2002, EPA 815–R–03–007. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of inorganic anions in water samples using IC with conductivity detection. It will be used for the measurement of bromide, an indicator for the HAAs.

6. Method 415.3 ''Determination of Total Organic Carbon and Specific UV Absorbance at 254 nm in Source Water and Drinking Water,'' Revision 1.1, February 2005, EPA/600/R–05/055. Available on the Internet at *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

7. Method 415.3 ''Determination of Total Organic Carbon and Specific UV Absorbance at 254 nm in Source Water and Drinking Water,'' Revision 1.2, September 2009, EPA/600/R–09/122. Available on the Internet at *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

8. Method 525.3 ''Determination of Semivolatile Organic Chemicals in Drinking Water by Solid Phase Extraction and Capillary Column Gas Chromatography/Mass Spectrometry (GC/MS),'' Version 1.0, February 2012, EPA/600/R–12/010. Available on the Internet *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of semivolatile organic chemicals in drinking water using SPE and GC/MS and will measure the nine UCMR 4 pesticides (alpha-hexachlorocyclohexane, chlorpyrifos, dimethipin, ethoprop, oxyfluorfen, profenofos, tebuconazole, total cis- and trans- permethrin and tribufos).

9. Method 530 ''Determination of Select Semivolatile Organic Chemicals in Drinking Water by Solid Phase Extraction and Gas Chromatography/Mass Spectrometry (GC/MS),'' Version 1.0, January 2015, EPA/600/R–14/442. Available on the Internet at *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of semivolatile organic chemicals in drinking water using SPE and GC/MS and will measure butylated hydroxyanisole, o-toluidine and quinoline.

10. EPA Method 541: ''Determination of 1-Butanol, 1,4-Dioxane, 2-Methoxyethanol and 2-Propen-1-ol in Drinking Water by Solid Phase Extraction and Gas Chromatography/Mass Spectrometry,'' November 2015, EPA 815–R–15–011. Available on the Internet at *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of selected alcohols and 1,4-dioxane in drinking water using SPE and GC/MS and will measure 1-butanol, 2-methoxyethanol and 2-propen-1-ol.

11. Method 544 ''Determination of Microcystins and Nodularin in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS),'' Version 1.0, February 2015, EPA 600–R–14/474. Available on the Internet at *https://www.epa.gov/water-research/epa-drinking-water-research-methods.* This is an EPA method for the analysis of selected cyanotoxins in drinking water using SPE and LC–MS/MS with electrospray ionization (ESI) and will measure six microcystins (microcystin-LA, microcystin-LF, microcystin-LR, microcystin-LY, microcystin-RR and microcystin-YR) and nodularin.

12. EPA Method 545: ''Determination of Cylindrospermopsin and Anatoxin-a in Drinking Water by Liquid Chromatography Electrospray Ionization Tandem Mass Spectrometry (LC/ESI–MS/MS),'' April 2015, EPA 815–R–15–009. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of selected cyanotoxins in drinking water using LC–MS/MS with ESI and will measure cylindrospermopsin and anatoxin-a.

13. EPA Method 546: ''Determination of Total Microcystins and Nodularins in Drinking Water and Ambient Water by Adda Enzyme-Linked Immunosorbent Assay,'' August 2016, EPA–815–B–16–011. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of total microcystins and nodularins in drinking water using ELISA.

14. Method 552.3 ''Determination of Haloacetic Acids and Dalapon in Drinking Water by Liquid-Liquid Microextraction, Derivatization, and Gas Chromatography with Electron Capture Detection,'' Revision 1.0, July 2003, EPA 815–B–03–002. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of haloacetic acids and dalapon in drinking water using liquid-liquid microextraction, derivatization, and GC with ECD, and will measure the three UCMR 4 HAA groups (HAA5, HAA6Br and HAA9).

15. EPA Method 557: ''Determination of Haloacetic Acids, Bromate, and Dalapon in Drinking Water by Ion Chromatography Electrospray Ionization Tandem Mass Spectrometry (IC–ESI–MS/MS),'' Version 1.0, September 2009, EPA 815–B–09–012. Available on the Internet at *https://www.epa.gov/dwanalyticalmethods.* This is an EPA method for the analysis of haloacetic acids, bromate, and dalapon in drinking water using IC–MS/MS with ESI, and will measure the three UCMR 4 HAA groups (HAA5, HAA6Br and HAA9).

B. Methods From American Public Health Association—Standard Methods (SM)

The following methods are from American Public Health Association—Standard Methods (SM), 800 I Street NW., Washington, DC 20001–3710

1. ''Standard Methods for the Examination of Water & Wastewater,'' 21st edition (2005).

a. SM 3125 ''Metals by Inductively Coupled Plasma/Mass Spectrometry.'' This is a Standard Method for the analysis of metals and metalloids in water by ICP–MS and is used for the analysis of germanium and manganese.

b. SM 5310B ''Total Organic Carbon (TOC): High-Temperature Combustion Method.'' This is a Standard Method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

d. SM 5310D ''Total Organic Carbon (TOC): Wet-Oxidation Method.'' This is a Standard Method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

2. ''Standard Methods Online.,'' approved 2000 (unless noted). Available for purchase on the Internet at *http://www.standardmethods.org.*

a. SM 3125 ''Metals by Inductively Coupled Plasma/Mass Spectrometry'' Editorial revisions, 2011 (SM 3125–09). This is a Standard Method for the analysis of metals and metalloids in water by ICP–MS and is used to measure germanium and manganese.

b. SM 5310B ''Total Organic Carbon: High-Temperature Combustion Method,'' (5310B–00). This is a Standard Method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

c. SM 5310C ''Total Organic Carbon: Persulfate-UV or Heated-Persulfate Oxidation Method,'' (5310C–00). This is a Standard Method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

d. SM 5310D ''Total Organic Carbon: Wet-Oxidation Method,'' (5310D–00). This is a Standard Method for the analysis of TOC in water samples using a conductivity detector or a nondispersive infrared detector.

C. Methods From ASTM International

The following methods are from ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428–2959.

1. ASTM D5673–10 ''Standard Test Method for Elements in Water by Inductively Coupled Plasma-Mass Spectrometry,'' approved August 1, 2010. Available for purchase on the Internet at *http://www.astm.org/Standards/D5673.htm.* This is an ASTM method for the analysis of elements in water by ICP–MS and is used to measure germanium and manganese.

2. ASTM D6581–12 ''Standard Test Methods for Bromate, Bromide, Chlorate, and Chlorite in Drinking Water by Suppressed Ion Chromatography,'' approved March 1, 2012. Available for purchase on the Internet at *http://www.astm.org/Standards/D6581.htm.* This is an ASTM method for the analysis of inorganic anions in water samples using IC with conductivity detection. It will be used for the measurement of bromide, an indicator for the HAAs.

VII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is a significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review. Any changes made in response to OMB recommendations have been documented in the docket, ''Documentation of OMB Review Under Executive Order 12866: Revisions to the Unregulated Contaminant Monitoring Regulation (UCMR 4) for Public Water Systems.'' The EPA prepared an analysis of the potential costs associated with this action, and this is also available in the docket, ''Information Collection Request for the Unregulated Contaminant Monitoring Rule (UCMR 4).''

B. Paperwork Reduction Act (PRA)

The information collection activities in this rule have been submitted for approval to OMB under the PRA. The ICR document that the EPA prepared has been assigned EPA ICR number 2192.08. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The ICR requirements are not enforceable until OMB approves them.

The information that EPA will collect under this rule fulfills the statutory requirements of section 1445(a)(2) of the SDWA, as amended in 1996. EPA will collect information that describes the source of the water, location and test results for samples taken from PWSs as described in 40 CFR 141.35(e). The information collected will support Agency decisions as to whether or not to regulate particular contaminants under the SDWA. Reporting is mandatory. The data are not subject to confidentiality protection.

EPA received a number of comments regarding cost and burden of the proposed rule. Those comments recommended the following: Omit source water monitoring for microcystins; omit UCMR 4 HAA monitoring for PWSs that do not conduct HAA compliance monitoring; allow monitoring over a 12-month period for contaminants other than cyanotoxins; and provide more accurate cost estimates. Based on these public comments, the following changes were made to the final rule. EPA's response is detailed more fully in the ''Response to Comments Document for the Unregulated Contaminant Monitoring Rule (UCMR 4),'' (USEPA, 2016b), which can be found in the electronic docket listed in the **ADDRESSES** section of this notice.

1. Removed the proposed source water monitoring requirement for microcystins, temperature and pH.

2. Limited UCMR 4 HAA monitoring to only those PWSs that are subject to the D/DBPRs.

3. Restored the traditional 12-month monitoring schedule for the 20 additional (non-cyanotoxin) contaminants. This will support PWSs

that wish to do concurrent HAA compliance monitoring and UCMR 4 sampling.

4. Increased the wage estimates to 2016 rates using the Employment Cost Index for waters and salaries in trade, transport and utilities.

5. Updated the analytical costs of each method with new cost estimates from more laboratories.

The annual burden and cost estimates described in this section are based on the implementation assumptions described in section III. In general, burden hours were calculated by:

1. Determining the activities that PWSs and states would complete to comply with the UCMR activity;

2. Estimating the number of hours per activity;

3. Estimating the number of respondents per activity; and

4. Multiplying the hours per activity by the number of respondents for that activity.

Respondents to UCMR 4 include 1,600 small PWSs (800 for cyanotoxin monitoring and a different set of 800 for monitoring the additional 20 contaminants), the ~4,292 large PWSs and the 56 states and primacy agencies (~5,948 total respondents). The frequency of response varies across respondents and years. System costs (particularly laboratory analytical costs) vary depending on the number of sampling locations. For cost estimates, EPA assumed that systems will conduct sampling evenly from January 2018 through December 2020, excluding December, January and February of each year for cyanotoxins (*i.e.,* one-third of the systems in each year of monitoring). Because the applicable ICR period is 2017–2019, one year of monitoring activity (*i.e.,* 2020) is not captured in the ICR estimates; this will be addressed in a subsequent ICR renewal for UCMR 4.

Small PWSs that are selected for UCMR 4 monitoring will sample an average of 6.7 times per PWS (*i.e.,* number of responses per PWS) across the 3-year ICR period. The average burden per response for small PWSs is estimated to be 2.8 hours. Large PWSs (those serving 10,001 to 100,000 people) and very large PWSs (those serving more than 100,000 people) will sample and report an average of 11.4 and 14.1 times per PWS, respectively, across the 3-year ICR period. The average burden per response for large and very large PWSs is estimated at 6.1 and 9.9 hours, respectively. States are assumed to have an annual average burden of 244.3 hours related to coordination with EPA and PWSs. In the aggregate, during the ICR period, the average response (*e.g.,* responses from PWSs and states) is associated with a burden of 6.9 hours, with a labor plus non-labor cost of $1,636 per response.

The annual average per-respondent burden hours and costs for the ICR period are: Small PWSs—6.1 hours, or $169, for labor; large PWSs—23.3 hours, or $684, for labor and $5,756 for analytical costs; very large PWSs—46.4 hours, or $1,253, for labor and $15,680 for analytical costs; and states—244.3 hours, or $11,789, for labor. Annual average burden and cost per respondent (including both systems and states) is estimated to be 23.3 hours, with a labor plus non-labor cost of $3,718 per respondent. Burden is defined at 5 CFR 1320.3(b).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's rules in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

For purposes of assessing the impacts of this rule on small entities, EPA considered small entities to be PWSs serving 10,000 or fewer people, because this is the system size specified in the SDWA as requiring special consideration with respect to small system flexibility. As required by the RFA, EPA proposed using this alternative definition in the FR, (63 FR 7606, February 13, 1998 (USEPA, 1998a)), sought public comment, consulted with the Small Business Administration (SBA) and finalized the alternative definition in the Consumer Confidence Reports rulemaking, (63 FR 44512, August 19, 1998 (USEPA, 1998b)). As stated in that Final Rule, the alternative definition will be applied to future drinking water rules, including this rule.

An agency certifies that a rule will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, the impact of concern is any significant adverse economic impact on a substantial number of small entities if the rule relieves regulatory burden, has no net burden or otherwise has a positive economic effect on the small entities subject to the rule. The evaluation of the overall impact on small systems, summarized in the preceding discussion, is further described as follows. EPA analyzed the impacts for privately-owned and publicly-owned water systems separately, due to the different economic characteristics of these ownership types, such as different rate structures and profit goals. However, for both publicly- and privately-owned systems, EPA used the ''revenue test,'' which compares annual system costs attributed to the rule to the system's annual revenues. EPA used median revenue data from the 2006 CWS Survey for public and private water systems (USEPA, 2009c). The revenue figures were updated to 2016 dollars, and increased by three percent to account for inflation. EPA assumes that the distribution of the sample of participating small systems will reflect the proportions of publicly- and privately-owned systems in the national inventory. The estimated distribution of the representative sample, categorized by ownership type, source water and system size, is presented in Exhibit 6.

EXHIBIT 6—NUMBER OF PUBLICLY- AND PRIVATELY-OWNED SMALL SYSTEMS SUBJECT TO UCMR 4

System size (# of people served)	Publicly-owned	Privately-owned	Total [1]
Ground Water			
500 and under	21	64	85
501 to 3,300	161	62	223
3,301 to 10,000	179	41	220
Subtotal GW	*361*	*167*	*528*

EXHIBIT 6—NUMBER OF PUBLICLY- AND PRIVATELY-OWNED SMALL SYSTEMS SUBJECT TO UCMR 4—Continued

System size (# of people served)	Publicly-owned	Privately-owned	Total [1]
Surface Water (and GWUDI)			
500 and under	18	21	39
501 to 3,300	241	86	327
3,301 to 10,000	548	158	706
Subtotal SW	*807*	*265*	*1,072*
Total of Small Water Systems	*1,168*	*432*	*1,600*

[1] PWS counts were adjusted to display as whole numbers in each size category.

The basis for the UCMR 4 RFA certification is as follows: For the 1,600 small water systems that will be affected, the average annual cost for complying with this rule represents no more than 0.7% of system revenues (the highest estimated percentage is for GW systems serving 500 or fewer people, at 0.7% of its median revenue). Exhibit 7 presents the yearly cost to small systems and to EPA for the small system sampling program, along with an illustration of system participation for each year of UCMR 4.

EXHIBIT 7—IMPLEMENTATION OF UCMR 4 AT SMALL SYSTEMS

Cost description	2017	2018	2019	2020	2021	Total [1]
Costs to EPA for Small System Program (Assessment Monitoring)						
	$0	$5,635,113	$5,635,113	$5,635,113	$0	$16,905,340
Costs to Small Systems (Assessment Monitoring)						
	0	270,848	270,848	270,848	0	812,545
Total Costs to EPA and Small Systems for UCMR 4						
	0	5,905,962	5,905,962	5,905,962	0	17,717,886
System Monitoring Activity Timeline [2]						
Assessment Monitoring: Cyanotoxins	.....	1/3 PWSs Sample	1/3 PWSs Sample	1/3 PWSs Sample	.....	800
Assessment Monitoring: 20 Additional Contaminants	.....	1/3 PWSs Sample	1/3 PWSs Sample	1/3 PWSs Sample	.....	800

[1] Totals may not equal the sum of components due to rounding.
[2] Total number of systems is 1,600. No small system conducts Assessment Monitoring for both cyanotoxins and the 20 additional contaminants.

PWS costs are attributed to the labor required for reading about UCMR 4 requirements, monitoring, reporting and record keeping. The estimated average annual burden across the 5-year UCMR 4 implementation period of 2017–2021 is 2.8 hours at $102 per small system. Average annual cost, in all cases, is less than 0.7% of system revenues. By assuming all costs for laboratory analyses, shipping and quality control for small entities, EPA incurs the entirety of the non-labor costs associated with UCMR 4 small system monitoring, or 95% of total small system testing costs. Exhibit 8 and Exhibit 9 present the estimated economic impacts in the form of a revenue test for publicly- and privately-owned systems.

EXHIBIT 8—UCMR 4 RELATIVE COST ANALYSIS FOR SMALL PUBLICLY-OWNED SYSTEMS (2017–2021)

System size (# of people served)	Annual number of systems impacted [1]	Average annual hours per system (2017–2021)	Average annual cost per system (2017–2021)	Revenue test [2] (%)
Ground Water Systems				
500 and under	4	1.5	$55	0.14
501 to 3,300	32	1.6	59	0.04
3,301 to 10,000	36	1.7	63	0.01
Surface Water (and GWUDI) Systems				
500 and under	4	3.3	119	0.16
501 to 3,300	48	3.3	119	0.04
3,301 to 10,000	110	3.4	124	0.01

[1] PWS counts were adjusted to display as whole numbers in each size category.
[2] The Revenue Test was used to evaluate the economic impact of an information collection on small government entities (*e.g.,* publicly-owned systems); costs are presented as a percentage of median annual revenue in each size category (EPA, 2009c).

EXHIBIT 9—UCMR 4 RELATIVE COST ANALYSIS FOR SMALL PRIVATELY-OWNED SYSTEMS (2017–2021)

System size (# of people served)	Annual number of systems impacted [1]	Average annual hours per system (2017–2021)	Average annual cost per system (2017–2021)	Revenue test [2] (%)
Ground Water Systems				
500 and under	13	1.5	$55	0.74
501 to 3,300	12	1.6	59	0.04
3,301 to 10,000	8	1.7	63	0.01
Surface Water (and GWUDI) Systems				
500 and under	4	3.3	119	0.28
501 to 3,300	17	3.3	119	0.04
3,301 to 10,000	32	3.4	124	0.01

[1] PWS counts were adjusted to display as whole numbers in each size category.
[2] The Revenue Test was used to evaluate the economic impact of an information collection on small government entities (*e.g.,* privately-owned systems); costs are presented as a percentage of median annual revenue in each size category (EPA, 2009c).

The Agency has determined that 1,600 small PWSs (for Assessment Monitoring), or approximately 4.2% of all small systems, will experience an impact of no more than 0.7% of revenues; the remainder of small systems will not be impacted.

Although this rule will not have a significant economic impact on a substantial number of small entities, EPA has attempted to reduce this impact by assuming all costs for analyses of the samples and for shipping the samples from small systems to laboratories contracted by EPA to analyze UCMR 4 samples (the cost of shipping is now included in the cost of each analytical method). EPA has set aside $2.0 million each year from the Drinking Water State Revolving Fund (SRF), with its authority to use SRF monies for the purposes of implementing this provision of the SDWA. Thus, the costs to these small systems will be limited to the labor associated with collecting a sample and preparing it for shipping.

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, the impact of concern is any significant adverse economic impact on small entities. The Agency therefore concluded that this action will have no net regulatory burden for all directly regulated small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an annual unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action implements mandate(s) specifically and explicitly set forth in the SDWA without the exercise of any policy discretion by the EPA.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action will neither impose substantial direct compliance costs on federally recognized tribal governments, nor preempt tribal law. As described previously, this rule requires monitoring by all large PWSs. Information in the SDWIS/Fed water system inventory indicates there are 17 large tribal PWSs (ranging in size from 10,001 to 40,000 customers). EPA estimates the average annual cost to each of these large PWSs, over the 5-year rule period, to be $3,864. This cost is based on a labor component (associated with the collection of samples), and a non-labor component (associated with shipping and laboratory fees), and represents 1.1% of average revenue/sales for large PWSs. UCMR also requires monitoring by a nationally representative sample of small PWSs. EPA estimates that approximately 1.5% of small tribal systems will be selected as a nationally representative sample for Assessment Monitoring. EPA estimates the average annual cost to small tribal systems over the 5-year rule period to be $102. Such cost is based on the labor associated with collecting a sample and preparing it for shipping and represents less than 0.7% of average revenue/sales for small PWSs. All other small PWS expenses (associated with shipping and laboratory fees) are paid by EPA.

EPA consulted with tribal officials under the EPA Policy on Consultation and Coordination with Indian Tribes early in the process of developing this rule to permit them to have meaningful and timely input into its development. A summary of that consultation is provided in the electronic docket listed in the **ADDRESSES** section of this notice.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 because it is not economically significant as defined in Executive Order 12866, and because EPA does not think the environmental health or safety risks addressed by this action present a disproportionate risk to children. This action's health and risk assessments are addressed in section V.D of the preamble.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution or use of energy. This is a national drinking water occurrence study that was submitted to OMB for review.

I. National Technology Transfer and Advancement Act and 1 CFR Part 51

This action involves technical standards. This rule uses methods developed by the Agency and two major voluntary consensus method organizations to support UCMR 4 monitoring. The voluntary consensus method organizations are Standard Methods and ASTM International. EPA

identified acceptable consensus method organization standards for the analysis of manganese and germanium. In addition, there are several consensus standards that are approved for compliance monitoring that will be available for use in the analysis of TOC and bromide. A summary of each method along with how the method specifically applies to UCMR 4 can be found in section VI of the preamble.

All of these standards are reasonably available for public use. The Agency methods are free for download on EPA's Web site. The methods in the Standard Method 21st edition are consensus standards, available for purchase from the publisher, and are commonly used by the drinking water community. The methods in the Standard Method Online are consensus standards, available for purchase from the publisher's Web site, and are commonly used by the drinking water community. The methods from ASTM International are consensus standards, are available for purchase from the publisher's Web site, and are commonly used by the drinking water community.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA concludes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard. Background information regarding EPA's consideration of Executive Order 12898 in the development of this final rule is provided in section V.E of this preamble, and an additional supporting document has been placed in the electronic docket listed in the **ADDRESSES** section of this notice.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 141

Environmental protection, Chemicals, Incorporation by reference, Indian-lands, Intergovernmental relations, Radiation protection, Reporting and recordkeeping requirements, Water supply.

Dated: December 8, 2016.

Gina McCarthy,

Administrator.

For the reasons set forth in the preamble, EPA amends 40 CFR part 141 as follows:

PART 141—NATIONAL PRIMARY DRINKING WATER REGULATIONS

■ 1. The authority citation for part 141 continues to read as follows:

Authority: 42 U.S.C. 300f, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–4, 300j–9, and 300j–11.

Subpart D—Reporting and Recordkeeping

■ 2. In § 141.35:

■ a. Revise the third sentence in paragraph (b)(1).

■ b. Revise the second and third sentences in paragraph (b)(2).

■ c. Remove ''October 1, 2012,'' and add in its place ''December 31, 2017,'' in paragraph (c)(1).

■ d. Revise the second and third sentences in paragraph (c)(2).

■ e. Revise the last sentence in paragraph (c)(3)(i).

■ f. Revise the fifth sentence in paragraph (c)(3)(ii).

■ g. Remove ''October 1, 2012,'' and add in its place April 19, 2017, in paragraph (c)(4).

■ h. Revise paragraphs (c)(5)(i), (c)(6) introductory text, (d)(2), and (e).

The revisions and additions read as follows:

§ 141.35 Reporting for unregulated contaminant monitoring results.

* * * * *

(b) * * *

(1) * * * Information that must be submitted using EPA's electronic data reporting system must be submitted through: *https://www.epa.gov/dwucmr.* * * *

(2) * * * If you have received a letter from EPA or your State concerning your required monitoring and your system does not meet the applicability criteria for UCMR established in § 141.40(a)(1) or (2), or if a change occurs at your system that may affect your requirements under UCMR as defined in § 141.40(a)(3) through (5), you must mail or email a letter to EPA, as specified in paragraph (b)(1) of this section. The letter must be from your PWS Official and must include your PWS Identification (PWSID) Code along with an explanation as to why the UCMR requirements are not applicable to your PWS, or have changed for your PWS, along with the appropriate contact information.* * *

(c) * * *

(2) * * * You must provide your sampling location(s) and inventory information by December 31, 2017, using EPA's electronic data reporting system. You must submit, verify or update the following information for each sampling location, or for each approved representative sampling location (as specified in paragraph (c)(3) of this section regarding representative sampling locations): PWSID Code; PWS Name; PWS Facility Identification Code; PWS Facility Name; PWS Facility Type; Water Source Type; Sampling Point Identification Code; Sampling Point Name; and Sampling Point Type Code; (as defined in Table 1 of paragraph (e) of this section).

(3) * * *

(i) * * * You must submit a copy of the existing alternate EPTDS sampling

plan or your representative well proposal, as appropriate, April 19, 2017, as specified in paragraph (b)(1) of this section.

(ii) * * * You must submit the following information for each proposed representative sampling location: PWSID Code; PWS Name; PWS Facility Identification Code; PWS Facility Name; PWS Facility Type; Sampling Point Identification Code; and Sampling Point Name (as defined in Table 1, paragraph (e) of this section). * * *

* * * * *

(5) * * *

(i) *General rescheduling notification requirements.* Large systems may change their monitoring schedules up to December 31, 2017, using EPA's electronic data reporting system, as specified in paragraph (b)(1) of this section. After this date has passed, if your PWS cannot sample according to your assigned sampling schedule (*e.g.,* because of budget constraints, or if a sampling location will be closed during the scheduled month of monitoring), you must mail or email a letter to EPA, as specified in paragraph (b)(1) of this section, prior to the scheduled sampling date. You must include an explanation of why the samples cannot be taken according to the assigned schedule, and you must provide the alternative schedule you are requesting. You must not reschedule monitoring specifically to avoid sample collection during a suspected vulnerable period. You are subject to your assigned UCMR sampling schedule or the schedule that you revised on or before December 31, 2017, unless and until you receive a letter from EPA specifying a new schedule.

* * * * *

(6) *Reporting monitoring results.* For UCMR samples, you must report all data elements specified in Table 1 of paragraph (e) of this section, using EPA's electronic data reporting system. You also must report any changes, relative to what is currently posted, made to data elements 1 through 9 to EPA in writing, explaining the nature and purpose of the proposed change, as specified in paragraph (b)(1) of this section.

* * * * *

(d) * * *

(2) *Reporting sampling information.* You must provide your sampling location(s) by December 31, 2017, using EPA's electronic data reporting system, as specified in paragraph (b)(1) of this section. If this information changes, you must report updates, including new sources and sampling locations that are put in use before or during the PWS' UCMR sampling period, to EPA's electronic data reporting system within 30 days of the change, as specified in paragraph (b)(1) of this section. You must record all data elements listed in Table 1 of paragraph (e) of this section on each sample form and sample bottle, as appropriate, provided to you by the UCMR Sampling Coordinator. You must send this information as specified in the instructions of your sampling kit, which will include the due date and return address. You must report any changes made in data elements 1 through 9 by emailing an explanation of the nature and purpose of the proposed change to EPA, as specified in paragraph (b)(1) of this section.

(e) *Data elements.* Table 1 defines the data elements that must be provided for UCMR monitoring.

TABLE 1—UNREGULATED CONTAMINANT MONITORING REPORTING REQUIREMENTS

Data element	Definition
1. Public Water System Identification (PWSID) Code.	The code used to identify each PWS. The code begins with the standard 2-character postal State abbreviation or Region code; the remaining 7 numbers are unique to each PWS in the State. The same identification code must be used to represent the PWS identification for all current and future UCMR monitoring.
2. Public Water System Name	Unique name, assigned once by the PWS.
3. Public Water System Facility Identification Code.	An identification code established by the State or, at the State's discretion, by the PWS, following the format of a 5-digit number unique within each PWS for each applicable facility (*i.e.,* for each source of water, treatment plant, distribution system, or any other facility associated with water treatment or delivery). The same identification code must be used to represent the facility for all current and future UCMR monitoring.
4. Public Water System Facility Name.	Unique name, assigned once by the PWS, for every facility ID (*e.g.,* Treatment Plant).
5. Public Water System Facility Type.	That code that identifies that type of facility as either: CC = consecutive connection. DS = distribution system. IN = source water influent. SS = sampling station. TP = treatment plant. OT = other.
6. Water Source Type	The type of source water that supplies a water system facility. Systems must report one of the following codes for each sampling location: SW = surface water (to be reported for water facilities that are served entirely by a surface water source during the twelve-month period). GW = ground water (to be reported for water facilities that are served entirely by a ground water source during the twelve-month period). GU = ground water under the direct influence of surface water (to be reported for water facilities that are served all or in part by ground water under the direct influence of surface water at any time during the twelve-month sampling period), and are not served at all by surface water during this period. MX = mixed water (to be reported for water facilities that are served by a mix of surface water, ground water and/or ground water under the direct influence of surface water during the twelve-month period).
7. Sampling Point Identification Code.	An identification code established by the State, or at the State's discretion, by the PWS, that uniquely identifies each sampling point. Each sampling code must be unique within each applicable facility, for each applicable sampling location (*i.e.,* entry point to the distribution system, source water influent or distribution system sample at maximum residence time). The same identification code must be used to represent the sampling location for all current and future UCMR monitoring.
8. Sampling Point Name	Unique sample point name, assigned once by the PWS, for every sample point ID (*e.g.,* Entry Point).

TABLE 1—UNREGULATED CONTAMINANT MONITORING REPORTING REQUIREMENTS—Continued

Data element	Definition
9. Sampling Point Type Code	A code that identifies the location of the sampling point as either: SR = source water taken from plant influent; untreated water entering the water treatment plant (*i.e.,* a location prior to any treatment). EP = entry point to the distribution system. DS = distribution system sample.
10. Disinfectant Type	All of the disinfectants/oxidants that have been added prior to the entry point to the distribution system. Please select all that apply: PEMB = Permanganate. HPXB = Hydrogen peroxide. CLGA = Gaseous chlorine. CLOF = Offsite Generated Hypochlorite (stored as a liquid form). CLON = Onsite Generated Hypochlorite. CAGC = Chloramine (formed with gaseous chlorine). CAOF = Chloramine (formed with offsite hypochlorite). CAON = Chloramine (formed with onsite hypochlorite). CLDB = Chlorine dioxide. OZON = Ozone. ULVL = Ultraviolet light. OTHD = All other types of disinfectant/oxidant. NODU = No disinfectant/oxidant used.
11. Treatment Information	Treatment information associated with the sample point. Please select all that apply: CON = Conventional (non-softening, consisting of at least coagulation/sedimentation basins and filtration). SFN = Softening. RBF = River bank filtration. PSD = Pre-sedimentation. INF = In-line filtration. DFL = Direct filtration. SSF = Slow sand filtration. BIO = Biological filtration (operated with an intention of maintaining biological activity within filter). UTR = Unfiltered treatment for surface water source. GWD = Groundwater system with disinfection only. PAC = Application of powder activated carbon. GAC = Granular activated carbon adsorption (not part of filters in CON, SCO, INF, DFL, or SSF). AIR = Air stripping (packed towers, diffused gas contactors). POB = Pre-oxidation with chlorine (applied before coagulation for CON or SFN plants or before filtration for other filtration plants). MFL = Membrane filtration. IEX = Ionic exchange. DAF = Dissolved air floatation. CWL = Clear well/finished water storage without aeration. CWA = Clear well/finished water storage with aeration. ADS = Aeration in distribution system (localized treatment). OTH = All other types of treatment. NTU = No treatment used. DKN = Do not know.
12. Disinfectant Residual Type	Disinfectant residual type in the distribution system for each HAA sample. CL2 = Chlorine (*i.e.,* originating from addition of free chlorine only). CLO2 = chlorine dioxide. CLM = Chloramines (originating from with addition of chlorine and ammonia or pre-formed chloramines). CAC = Chlorine and chloramines (if being mixed from chlorinated and chloroaminated water). NOD = No disinfectant residual.
13. Sample Collection Date	The date the sample is collected, reported as 4-digit year, 2-digit month, and 2-digit day (YYYY/MM/DD).
14. Sample Identification Code	An alphanumeric value up to 30 characters assigned by the laboratory to uniquely identify containers, or groups of containers, containing water samples collected at the same sampling location for the same sampling date.
15. Contaminant	The unregulated contaminant for which the sample is being analyzed.
16. Analytical Method Code	The identification code of the analytical method used.
17. Extraction Batch Identification Code.	Laboratory assigned extraction batch ID. Must be unique for each extraction batch within the laboratory for each method. For CCC samples report the Analysis Batch Identification Code as the value for this field. For methods without an extraction batch, leave this field null.
18. Extraction Date	Date for the start of the extraction batch (YYYY/MM/DD). For methods without an extraction batch, leave this field null.
19. Analysis Batch Identification Code.	Laboratory assigned analysis batch ID. Must be unique for each analysis batch within the laboratory for each method.
20. Analysis Date	Date for the start of the analysis batch (YYYY/MM/DD).
21. Sample Analysis Type	The type of sample collected and/or prepared, as well as the fortification level. Permitted values include: CF = concentration fortified; the concentration of a known contaminant added to a field sample reported with sample analysis types LFSM, LFSMD, LFB, CCC and QCS. CCC = continuing calibration check; a calibration standard containing the contaminant, the internal standard, and surrogate analyzed to verify the existing calibration for those contaminants. FS = field sample; sample collected and submitted for analysis under this rule. IS = internal standard; a standard that measures the relative response of contaminants.

TABLE 1—UNREGULATED CONTAMINANT MONITORING REPORTING REQUIREMENTS—Continued

Data element	Definition
	LFB = laboratory fortified blank; an aliquot of reagent water fortified with known quantities of the contaminants and all preservation compounds. LRB = laboratory reagent blank; an aliquot of reagent water treated exactly as a field sample, including the addition of preservatives, internal standards, and surrogates to determine if interferences are present in the laboratory, reagents, or other equipment. LFSM = laboratory fortified sample matrix; a UCMR field sample with a known amount of the contaminant of interest and all preservation compounds added. LFSMD = laboratory fortified sample matrix duplicate; duplicate of the laboratory fortified sample matrix. QCS = quality control sample; a sample prepared with a source external to the one used for initial calibration and CCC. The QCS is used to check calibration standard integrity. QHS = quality HAA sample; HAA sample collected and submitted for quality control purposes. SUR = surrogate standard; a standard that assesses method performance for each extraction.
22. Analytical Results—Sign	A value indicating whether the sample analysis result was: (<) ''less than'' means the contaminant was not detected, or was detected at a level below the Minimum Reporting Level. (=) ''equal to'' means the contaminant was detected at the level reported in ''Analytical Result— Measured Value.''
23. Analytical Result—Measured Value.	The actual numeric value of the analytical results for: Field samples; laboratory fortified matrix samples; laboratory fortified sample matrix duplicates; and concentration fortified.
24. Additional Value	Represents the true value or the fortified concentration for spiked samples for QC Sample Analysis Types (CCC, EQC, LFB, LFSM and LFSMD). For Sample Analysis Type FS and LRB and for IS and surrogate QC Contaminants, leave this field null.
25. Laboratory Identification Code	The code, assigned by EPA, used to identify each laboratory. The code begins with the standard two-character State postal abbreviation; the remaining five numbers are unique to each laboratory in the State.
26. Sample Event Code	A code assigned by the PWS for each sample event. This will associate samples with the PWS monitoring plan to allow EPA to track compliance and completeness. Systems must assign the following codes: SEC1, SEC2, SEC3, SEC4, SEC5, SEC6, SEC7 and SEC8—represent samples collected to meet UCMR Assessment Monitoring requirements for cyanotoxins; where ''SEC1'' represents the first sampling period, ''SEC2'' the second period and so forth, for all eight sampling events. SEA1, SEA2, SEA3 and SEA4—represent samples collected to meet UCMR Assessment Monitoring requirements for the additional contaminants; where ''SEA1'' and ''SEA2'' represent the first and second sampling period for all water types; and ''SEA3'' and ''SEA4'' represent the third and fourth sampling period for SW and GU sources only.
27. Bloom Occurrence	A yes or no answer provided by the PWS for each cyanotoxin sample event. *Question:* Preceding the finished water sample collection, did you observe an algal bloom in your source waters near the intake? YES = if yes, select all the YESs that apply: YD = yes, on the day the UCMR cyanotoxin sample was collected. YW = yes, between the day the sample was taken and the past week. YM = yes, between the past week and past month. YY = yes, between the past month and past year. YP = yes, prior to the past year. NO = have never seen a bloom.
28. Cyanotoxin Occurrence	A yes or no answer provided by the PWS for each cyanotoxin sample event. *Question:* Preceding the finished water sample collection, were cyanotoxins ever detected in your source waters near the intake and prior to any treatment (based on sampling by you or another party)? YES = if yes, select all the YESs that apply: YD = yes, on the day the UCMR cyanotoxin sample was collected. YW = yes, between the day the sample was taken and the past week. YM = yes, between the past week and past month. YY = yes, between the past month and past year. YP = yes, prior to the past year. NO = have never detected cyanotoxins in source water. NS = unaware of any source water cyanotoxin sampling. Select all that apply (*i.e.,* all that were detected) if you answered YES to detecting cyanotoxins in source water: MIC = Microcystins. CYL = Cylindrospermopsin. ANA = Anatoxin-A. SAX = Saxitoxins. OTH = Other. DK = do not know.
29. Indicator of Possible Bloom—Treatment.	A yes or no answer provided by the PWS for each cyanotoxin sample event. *Question:* Preceding the finished water sample collection, did you notice any changes in your treatment system operation and/or treated water quality that may indicate a bloom in the source water? YES = if yes, select all that apply: DFR = Decrease in filter runtimes. ITF = Increase in turbidity in filtered water. ICD = Need for increased coagulant dose. TOI = Increase in taste and odor issues in finished water. IOD = Need for increase in oxidant/disinfectant dose. IDB = Increase in TTHM/HAA5 in finished water.

TABLE 1—UNREGULATED CONTAMINANT MONITORING REPORTING REQUIREMENTS—Continued

Data element	Definition
30. Indicator of Possible Bloom—Source Water Quality Parameters.	OTH = Describe other changes. NO = no changes. A yes or no answer provided by the PWS for each cyanotoxin sample event. *Question:* Preceding the finished water sample collection, did you observe any notable changes in source water quality parameters (if measured)? YES = if yes, select all that apply to the source water: ITP = Increase in water temperature. ITU = Increase in turbidity. IAL = Increase in alkalinity. ITO = Increase in total organic carbon. ICD = Increase in chlorine demand. IPH = Increase in pH. ICA = Increase in chlorophyll a. IPY = Increase in phycocyanin. INU = Increase in nutrients (example: nitrogen or phosphorus). OTH = Describe other changes. NO = no changes observed.

Subpart E—Special Regulations, Including Monitoring Regulations and Prohibition on Lead Use

■ 3. In § 141.40:
■ a. Remove ''December 31, 2010'' and add in its place ''December 31, 2015'' in paragraph (a) introductory text.
■ b. Revise paragraphs (a)(1), (a)(2)(i)(A), (a)(2)(ii)(A) and (C), (a)(3), and (a)(4)(i)(B) and (C).
■ c. Remove ''October 1, 2012.'' and add in its place ''December 31, 2017.'' in paragraph (a)(4)(i).
■ d. Revise paragraph (a)(4)(ii) introductory text.
■ e. Remove and reserve paragraph (a)(4)(ii)(F).
■ f. Add paragraph (a)(4)(iii).
■ g. Remove ''August 1, 2012.'' and add in its place ''February 21, 2017, and necessary application material April 19, 2017.'' in paragraph (a)(5)(ii).
■ h. Revise paragraph (a)(5)(v), the second sentence in paragraph (a)(5)(vi), and paragraph (c).

The revisions and addition read as follows:

§ 141.40 Monitoring requirements for unregulated contaminants.

(a) * * *

(1) *Applicability to transient non-community systems.* If you own or operate a transient non-community water system, you are not subject to monitoring requirements in this section.

(2) * * *

(i) * * *

(A) *Assessment monitoring.* You must monitor for the contaminants on List 1, per Table 1, UCMR Contaminant List, in paragraph (a)(3) of this section. If you serve a retail population of more than 10,000 people, you are required to perform this monitoring regardless of whether you have been notified by the State or EPA.

* * * * *

(ii) * * *

(A) *Assessment monitoring.* You must monitor for the contaminants on List 1 per Table 1, in paragraph (a)(3) of this section, if you are notified by your State or EPA that you are part of the State Monitoring Plan for Assessment Monitoring.

* * * * *

(C) *Pre-screen testing.* You must monitor for the contaminants on List 3 of Table 1, in paragraph (a)(3) of this section if you are notified by your State or EPA that you are part of the State Monitoring Plan for Pre-Screen Testing.

(3) *Analytes to be monitored.* Lists 1, 2, and 3 contaminants are provided in the following table:

TABLE 1—UCMR CONTAMINANT LIST

1—Contaminant	2—CAS Registry No.	3—Analytical methods [a]	4—Minimum reporting level [b]	5—Sampling location [c]	6—Period during which monitoring to be completed
List 1: Assessment Monitoring Cyanotoxin Chemical Contaminants					
"total microcystin"	N/A	EPA 546	0.3 µg/L	EPTDS	3/1/2018–11/30/2020.

List 2: Screening Survey					
Reserved	Reserved	Reserved	Reserved	Reserved	Reserved.
List 3: Pre-Screen Testing					
Reserved	Reserved	Reserved	Reserved	Reserved	Reserved.

Column headings are:

1—Contaminant: The name of the contaminant to be analyzed.

2—CAS (Chemical Abstract Service) Registry Number or Identification Number: A unique number identifying the chemical contaminants.

3—Analytical Methods: Method numbers identifying the methods that must be used to test the contaminants.

4—Minimum Reporting Level (MRL): The value and unit of measure at or above which the concentration of the contaminant must be measured using the approved analytical methods. If EPA determines, after the first six months of monitoring that the specified MRLs result in excessive resampling, EPA will establish alternate MRLs and will notify affected PWSs and laboratories of the new MRLs. N/A is defined as non-applicable.

5—Sampling Location: The locations within a PWS at which samples must be collected.

6—Period During Which Monitoring to be Completed: The time period during which the sampling and testing will occur for the indicated contaminant.

[a] The analytical procedures shall be performed in accordance with the documents associated with each method, see paragraph (c) of this section.

[b] The MRL is the minimum concentration of each analyte that must be reported to EPA.

[c] With the exception of HAA monitoring, sampling must occur at entry points to the distribution system (EPTDSs), after treatment is applied, that represent each non-emergency water source in routine use over the 12-month period of monitoring. Systems that purchase water with multiple connections from the same wholesaler may select one representative connection from that wholesaler. This EPTDS sampling location must be representative of the highest annual volume connections. If the connection selected as the representative EPTDS is not available for sampling, an alternate highest volume representative connection must be sampled. See 40 CFR 141.35(c)(3) for an explanation of the requirements related to the use of representative GW EPTDSs. Sampling for UCMR 4 HAA groups must be conducted at the Disinfectants and Disinfection Byproduct Rule (D/DBPR) sampling locations (40 CFR 141.622).

[d] UCMR 4 HAA monitoring applies only to those PWSs that are subject to D/DBPR HAA5 monitoring requirements.

[e] PWSs that purchase 100 percent of their water (''consecutive systems'') are not required to collect UCMR 4 source water samples for TOC or bromide analyses. Sampling for TOC and bromide must otherwise occur at source water influent locations representing untreated water entering the water treatment plant (*i.e.,* a location prior to any treatment). SW and GWUDI systems subject to the D/DBPR TOC monitoring must use their D/DBPR TOC source water sampling site(s) from 40 CFR 141.132 for UCMR 4 TOC and bromide samples. SW and GWUDI systems that are not subject to D/DBPR TOC monitoring will use their Long Term 2 Enhance Surface Water Treatment Rule (LT2) source water sampling site(s) (40 CFR 141.703) for UCMR 4 TOC and bromide samples. Ground water systems that are subject to the D/DBPRs, and therefore subject to UCMR 4 HAA monitoring, will take TOC and bromide samples at their influents entering their treatment train. TOC and bromide must be collected at the same time as HAA samples. These indicator samples must be collected at a single source water influent using methods already approved for compliance monitoring. TOC methods include: SM 5310 B, SM 5310 C, SM 5310 D (21st edition), or SM 5310 B–00, SM 5310 C–00, SM 5310 D–00 (SM Online), EPA Method 415.3 (Rev. 1.1 or 1.2). Bromide methods include: EPA Methods 300.0 (Rev. 2.1), 300.1 (Rev. 1.0), 317.0 (Rev. 2.0), 326.0 (Rev. 1.0) or ASTM D 6581–12. The MRLs for the individual HAAs are discussed in paragraph (a)(5)(v) of this section.

(4) * * *

(i) * * *

(B) *Frequency.* You must collect the samples within the timeframe and according to the frequency specified by contaminant type and water source type for each sampling location, as specified in Table 2, in this paragraph. For the second or subsequent round of sampling, if a sample location is non-operational for more than one month before and one month after the scheduled sampling month (*i.e.,* it is not possible for you to sample within the window specified in Table 2, in this paragraph), you must notify EPA as specified in § 141.35(c)(5) to reschedule your sampling.

TABLE 2—MONITORING FREQUENCY BY CONTAMINANT AND WATER SOURCE TYPES

Contaminant type	Water source type	Timeframe	Frequency [1]
List 1 Cyanotoxins Chemicals.	Surface water or Ground water under the direct influence of surface water (GWUDI).	March–November.	You must monitor twice a month for four consecutive months (total of eight sampling events). Sample events must occur two weeks apart.
List 1 Contaminants—Additional Chemicals.	Surface water or GWUDI	12 months	You must monitor for four consecutive quarters. Sample events must occur three months apart. (Example: If first monitoring is in January, the second monitoring must occur any time in April, the third any time in July and the fourth any time in October).
	Ground water	12 months	You must monitor twice in a consecutive 12-month period. Sample events must occur 5–7 months apart. (Example: If the first monitoring event is in April, the second monitoring event must occur any time in September, October or November).

[1] Systems must assign a sample event code for each contaminant listed in Table 1. Sample event codes must be assigned by the PWS for each sample event. For more information on sample event codes see § 141.35(e) Table 1.

(C) *Location.* You must collect samples for each List 1 Assessment Monitoring contaminant, and, if applicable, for each List 2 Screening Survey, or List 3 Pre-Screen Testing contaminant, as specified in Table 1, in paragraph (a)(3) of this section. Samples must be collected at each sample point that is specified in column 5 and footnote c of Table 1, in paragraph (a)(3) of this section. PWSs conducting List 1 monitoring for the brominated HAA groups must collect TOC and bromide samples as specified in footnote d of Table 1, in paragraph (a)(3) of this section. If you are a GW system with multiple EPTDSs, and you request and receive approval from EPA or the State for sampling at representative EPTDS(s), as specified in § 141.35(c)(3), you must collect your samples from the approved representative sampling location(s).

* * * * *

(ii) *Small systems.* If you serve 10,000 or fewer people and are notified that you are part of the State Monitoring Plan for Assessment Monitoring, Screening Survey or Pre-Screen monitoring, you must comply with the requirements specified in paragraphs (a)(4)(ii)(A) through (H) of this section. If EPA or the State informs you that they will be collecting your UCMR samples, you must assist them in identifying the appropriate sampling locations and in collecting the samples.

* * * * *

(iii) *Phased sample analysis for microcystins.* You must collect the three required samples (one each for EPA Methods 544, 545 and 546 (ELISA) at the EPTDS) for each sampling event, but not all samples may need to be analyzed. If the Method 546 ELISA result is less than 0.3 µg/L, report that result and do not analyze the EPA Method 544 sample for that sample event. If the Method 546 ELISA result is greater than or equal to 0.3 µg/L, report the value and analyze the other microcystin sample using EPA Method 544. You must analyze the EPA Method 545 sample for each sample event for Cylindrospermopsin and anatoxin-a only.

* * * * *

(5) * * *

(v) *Method defined quality control.* You must ensure that your laboratory analyzes Laboratory Fortified Blanks and conducts Laboratory Performance Checks, as appropriate to the method's requirements, for those methods listed in Table 1, column 3, in paragraph (a)(3) of this section. Each method specifies acceptance criteria for these QC checks. The following HAA results must be reported using EPA's electronic data reporting system for quality control purposes.

TABLE 4—HAA QC RESULTS

1—Contaminant	2—CAS Registry No.	3—Analytical methods [a]	4—Minimum reporting level [b]	5—HAA6Br Group	6—HAA9 Group	7—HAA5 Group
Brominated Haloacetic Acid (HAA) Groups						
Bromochloroacetic acid (BCAA)	5589–96–8	EPA 552.3 or EPA 557	0.3 µg/L.			
Bromodichloroacetic acid (BDCAA)	71133–14–7	EPA 552.3 or EPA 557	0.5 µg/L.			

TABLE 4—HAA QC RESULTS—Continued

1—Contaminant	2—CAS Registry No.	3—Analytical methods [a]	4—Minimum reporting level [b]	5—HAA6Br Group	6—HAA9 Group	7—HAA5 Group
Chlorodibromoacetic acid (CDBAA)	5278–95–5	EPA 552.3 or EPA 557	0.3 µg/L	HAA6Br		
Tribromoacetic acid (TBAA)	75–96–7	EPA 552.3 or EPA 557	2.0 µg/L.			
Monobromoacetic acid (MBAA)	79–08–3	EPA 552.3 or EPA 557	0.3 µg/L.			
Dibromoacetic acid (DBAA)	631–64–1	EPA 552.3 or EPA 557	0.3 µg/L		HAA9	
Dichloroacetic acid (DCAA)	79–43–6	EPA 552.3 or EPA 557	0.2 µg/L.			
Monochloroacetic acid (MCAA)	79–11–8	EPA 552.3 or EPA 557	2.0 µg/L			HAA5
Trichloroacetic acid (TCAA)	76–03–9	EPA 552.3 or EPA 557	0.5 µg/L.			

Column headings are:
1—Contaminant: The name of the contaminant to be analyzed.
2—CAS (Chemical Abstract Service) Registry Number or Identification Number: A unique number identifying the chemical contaminants.
3—Analytical Methods: Method numbers identifying the methods that must be used to test the contaminants.
4—Minimum Reporting Level (MRL): The value and unit of measure at or above which the concentration of the contaminant must be measured using the approved analytical methods. If EPA determines, after the first six months of monitoring that the specified MRLs result in excessive resampling, EPA will establish alternate MRLs and will notify affected PWSs and laboratories of the new MRLs.
5–7—HAA groups identified in paragraph (a)(3) of this section to be monitored as UCMR contaminants.
[a] The analytical procedures shall be performed in accordance with the documents associated with each method, see paragraph (c) of this section, and must meet all quality control requirements outlined paragraph (a)(5) of this section.
[b] The MRL is the minimum concentration of each analyte that must be reported to EPA.

(vi) * * * You must require your laboratory to submit these data electronically to the State and EPA using EPA's electronic data reporting system, accessible at *https://www.epa.gov/dwucmr,* within 120 days from the sample collection date. * * * * * * * * *

(c) *Incorporation by reference.* These standards are incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available for inspection either electronically at *http://www.regulations.gov,* in hard copy at the Water Docket, EPA/DC, and from the sources as follows. The Public Reading Room (EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC) is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for this Public Reading Room is (202) 566–1744, and the telephone number for the Water Docket is (202) 566–2426. The material is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741–6030 or go to *http://www.archives.gov/federal-register/cfr/about.html.*

[FR Doc. 2016–30469 Filed 12–19–16; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF THE INTERIOR

Office of the Secretary

43 CFR Part 2

[No. DOI–2016–0006; 17XD4523WS DS10200000 DWSN00000.000000 WBS DP10202]

RIN 1093–AA21

Freedom of Information Act Regulations

AGENCY: Office of the Secretary, Interior.

ACTION: Final rule.

SUMMARY: This rule revises the regulations that the Department of the Interior (Department) follows in processing records under the Freedom of Information Act in part to comply with the FOIA Improvement Act of 2016. The revisions clarify and update procedures for requesting information from the Department and procedures that the Department follows in responding to requests from the public.

DATES: This rule is effective on January 19, 2017.

FOR FURTHER INFORMATION CONTACT: Cindy Cafaro, Office of Executive Secretariat and Regulatory Affairs, 202–208–5342.

SUPPLEMENTARY INFORMATION:

I. Why We're Publishing This Rule and What It Does

A. Introduction

In late 2012, the Department published a final rule updating and replacing the Department's previous Freedom of Information Act (FOIA) regulations. In early 2016, the Department updated that final rule, primarily to authorize the Office of Inspector General to process their own FOIA appeals. On June 30, 2016, the FOIA Improvement Act of 2016, Public Law 114–185, 130 Stat. 538 (the Act) was enacted. The Act specifically requires all agencies to review and update their FOIA regulations in accordance with its provisions. In addition, the Department has received feedback from its FOIA practitioners and requesters and identified areas where it would be possible to further update, clarify, and streamline the language of some procedural provisions.

On September 20, 2016, the Department published a proposed rule in the **Federal Register** (81 FR 64401) to implement the Act and address the feedback received. We requested comments on the proposed rule over a 60-day period ending on November 21, 2016, and we considered all comments received in drafting this final rule. Accordingly, the Department is making the following changes to 43 CFR part 2:

- Section 2.4(e) is amended to provide additional guidance on how bureaus handle misdirected requests.
- Section 2.15 is amended to bring attention to the Department's existing FOIA Request Tracking Tool (*https://foia.doi.gov/requeststatus*).
- Section 2.19 is amended to bring further attention to the services provided by the Office of Government Information Services (OGIS), in accordance with the provisions of the Act.
- Section 2.21 is amended to reflect that the OGIS would be defined earlier in the regulations than it previously had been and to reference bureaus' FOIA Public Liaisons, in addition to the OGIS.
- Section 2.24 is amended to require a foreseeable harm analysis, in accordance with the provisions of the Act, and to require bureaus to provide an explanation to the requester when an estimate of the volume of any records withheld in full or in part is not provided.
- Section 2.37(f) is amended to reflect the provisions of the Act.
- Section 2.39 is amended to remove what will be superfluous language, after the changes to section 2.37(f).
- Section 2.58 is amended to provide more time for requesters to appeal, in accordance with the provisions of the Act.
- Section 2.66(d) is amended to reflect an updated Web site link.

B. Discussion of Comments

Six commenters responded to the invitation for comments, including two commenters from subcomponents of Federal agencies and four commenters from non-Federal sources. Two of these commenters offered substantive suggestions on specific existing provisions of the rule that are not being amended; these suggestions are outside the scope of this rulemaking and are not

addressed below. The commenters generally supported the proposed changes, with the exception of one commenter who stated the Act makes it harder to collect fees in FOIA requests that require submitter notifications (a comment that, because it concerns the Act itself, is not within the scope of this rulemaking). However, one commenter suggested that § 2.21 should require certain bureau responses to requesters inform the requesters of their right to seek assistance from FOIA Public Liaisons, in accordance with the Act. We agree and have modified our edits to this section accordingly.

C. Technical and Procedural Comments

In the interests of clarity and consistency, the Department made very minor clarifications and added, moved, and deleted phrases in § 2.37(f)(2)(i) and (ii). The Department also updated a Web site link in § 2.66(d).

II. Compliance With Laws and Executive Orders

1. Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs will review all significant rules. The Office of Information and Regulatory Affairs has determined that this rulemaking is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The Executive Order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

2. Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

3. Small Business Regulatory Enforcement Fairness Act

This is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule:

a. Does not have an annual effect on the economy of $100 million or more.

b. Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.

c. Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

4. Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than $100 million per year. This rule does not have a significant or unique effect on State, local, or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

5. Takings (E.O. 12630)

In accordance with Executive Order 12630, this rule does not have significant takings implications. A takings implication assessment is not required.

6. Federalism (E.O. 13132)

In accordance with Executive Order 13132, this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. It would not substantially and directly affect the relationship between the Federal and state governments. A federalism summary impact statement is not required.

7. Civil Justice Reform (E.O. 12988)

In accordance with Executive Order 12988, the Office of the Solicitor has determined that this rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Executive Order.

8. Consultation With Indian Tribes (E.O. 13175)

Under the criteria in Executive Order 13175, we have evaluated this rule and determined that it has no potential effects on federally recognized Indian tribes. This rule does not have tribal implications that impose substantial direct compliance costs on Indian Tribal governments.

9. Paperwork Reduction Act

This rule does not contain information collection requirements, and a submission to the Office of Management and Budget under the Paperwork Reduction Act is not required.

10. National Environmental Policy Act

This rule does not constitute a major Federal action significantly affecting the quality of the human environment. A detailed statement under the National Environmental Policy Act of 1969, 42 U.S.C. 4321 *et seq.* (NEPA), is not required. Pursuant to 43 CFR 46.205(b) and 43 CFR 46.210(i), the Department of the Interior NEPA implementing procedures exclude from preparation of an environmental assessment or impact statement ''[p]olicies, directives, regulations, and guidelines: that are of an administrative, financial, legal, technical, or procedural nature. . . .'' None of the extraordinary circumstances listed in 43 CFR 46.215 exists for this rule. Accordingly, this rule is categorically excluded from environmental analysis under 43 CFR 46.210(i).

11. Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required. This rule will not have a significant effect on the nation's energy supply, distribution, or use.

12. Clarity of This Regulation

We are required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(a) Be logically organized;

(b) Use the active voice to address readers directly;

(c) Use clear language rather than jargon;

(d) Be divided into short sections and sentences; and

(e) Use lists and tables wherever possible.

List of Subjects in 43 CFR Part 2

Freedom of information.

Elizabeth Klein,

Principal Deputy Assistant Secretary for Policy, Management and Budget.

For the reasons stated in the preamble, the Department of the Interior amends part 2 of title 43 of the Code of Federal Regulations as follows:

PART 2—FREEDOM OF INFORMATION ACT; RECORDS AND TESTIMONY

■ 1. The authority citation for part 2 continues to read as follows:

Authority: 5 U.S.C. 301, 552, 552a, 553; 31 U.S.C. 3717; 43 U.S.C. 1460, 1461.

Subpart B—How to Make a Request

■ 2. In § 2.4, revise paragraph (e) to read as follows:

§ 2.4 Does where you send your request affect its processing?

* * * * *

(e) If your request is received by a bureau that believes it is not the appropriate bureau to process your request, the bureau that received your request will attempt to contact you (if possible, via telephone or email) to confirm that you deliberately sent your request to that bureau for processing. If you do not confirm this, the bureau will deem your request misdirected and route the misdirected request to the appropriate bureau to respond under the basic time limit outlined in § 2.17.

* * * * *

Subpart D—Timing of Responses to Requests

■ 3. In § 2.15, add paragraph (g) to read as follows:

§ 2.15 What is multitrack processing and how does it affect your request?

* * * * *

(g) You may track the status of your request, including its estimated processing completion date, at *https://foia.doi.gov/requeststatus/.*

§ 2.19 [Amended]

■ 4. In § 2.19(b)(2), add the words ‘‘, and notify you of your right to seek dispute resolution from the Office of Government Information Services (OGIS)’’ after the words ‘‘you and the bureau’’.

Subpart E—Responses to Requests

■ 5. Amend § 2.21(a) by removing the second sentence and adding two sentences in its place to read as follows:

§ 2.21 How will the bureau respond to requests?

(a) * * * The bureau's written response will include a statement about the services offered by its FOIA Public Liaison. The bureau's written response will also include a statement about the services offered by OGIS, using standard language that can be found at: *https://www.doi.gov/foia/news/guidance.*’’

* * * * *

§ 2.24 [Amended]

■ 6. Amend § 2.24 by:

■ a. In paragraph (b)(3), adding the words ‘‘, along with a statement that the bureau reasonably foresees that disclosure would harm an interest protected by the applied exemption(s) or disclosure is prohibited by law’’ after the words ‘‘or in part’’; and

■ b. In paragraph (b)(4), adding the word ‘‘including’’ after the word ‘‘unless’’ and adding the words ‘‘and the bureau explains this harm to you’’ after the words ‘‘withhold the records’’.

Subpart G—Fees

■ 7. In § 2.37, revise paragraph (f) to read as follows:

§ 2.37 What general principles govern fees?

* * * * *

(f) If the bureau does not comply with any time limit in the FOIA:

(1) Except as provided in paragraph (f)(2) of this section, the bureau cannot assess any search fees (or, if you are in the fee category of a representative of the news media or an educational and noncommercial scientific institution, duplication fees).

(2)(i) If the bureau has determined that unusual circumstances apply (as the term is defined in § 2.70) and the bureau provided you a timely written notice to extend the basic time limit in accordance with § 2.19, the noncompliance is excused for an additional 10 workdays.

(ii) If the bureau has determined that unusual circumstances apply and more than 5,000 pages are necessary to respond to the request, the noncompliance is excused if the bureau has provided you a timely written notice in accordance with § 2.19 and has discussed with you via written mail, email, or telephone (or made not less than 3 good-faith attempts to do so) how you could effectively limit the scope of the request.

(iii) If a court has determined that exceptional circumstances exist (as that term is defined in § 2.70), the noncompliance is excused for the length of time provided by the court order.

* * * * *

§ 2.39 [Amended]

■ 8. In § 2.39, remove the paragraph (a) designation and remove paragraph (b).

Subpart H—Administrative Appeals

§ 2.58 [Amended]

■ 9. In § 2.58(a) and (b), remove the number ‘‘30’’ and add in its place the number ‘‘90’’.

Subpart I—General Information

§ 2.66 [Amended]

■ 10. In § 2.66(d), remove the Web site address ‘‘*http://www.doi.gov/foia/servicecenters.cfm*’’ and add in its place the Web site address ‘‘*https://www.doi.gov/foia/servicecenters*’’.

[FR Doc. 2016–30601 Filed 12–19–16; 8:45 am]

BILLING CODE 4334–63–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

44 CFR Part 64

[Docket ID FEMA–2016–0002; Internal Agency Docket No. FEMA–8461]

Suspension of Community Eligibility

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: This rule identifies communities where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP) that are scheduled for suspension on the effective dates listed within this rule because of noncompliance with the floodplain management requirements of the program. If the Federal Emergency Management Agency (FEMA) receives documentation that the community has adopted the required floodplain management measures prior to the effective suspension date given in this rule, the suspension will not occur and a notice of this will be provided by publication in the **Federal Register** on a subsequent date. Also, information identifying the current participation status of a community can be obtained from FEMA's Community Status Book (CSB). The CSB is available at *https://www.fema.gov/national-flood-insurance-program-community-status-book.*

DATES: The effective date of each community's scheduled suspension is the third date (‘‘Susp.’’) listed in the third column of the following tables.

FOR FURTHER INFORMATION CONTACT: If you want to determine whether a particular community was suspended on the suspension date or for further information, contact Patricia Suber, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 400 C Street SW., Washington, DC 20472, (202) 646–4149.

SUPPLEMENTARY INFORMATION: The NFIP enables property owners to purchase Federal flood insurance that is not otherwise generally available from private insurers. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended, 42 U.S.C. 4022, prohibits the sale of NFIP flood insurance unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed in this document no longer meet that statutory requirement for compliance with program regulations, 44 CFR part 59. Accordingly, the communities will be suspended on the effective date in the third column. As of that date, flood insurance will no longer be available in the community. We recognize that some of these communities may adopt and submit the required documentation of legally enforceable floodplain management measures after this rule is published but prior to the actual suspension date. These communities will not be suspended and will continue to be eligible for the sale of NFIP flood insurance. A notice withdrawing the suspension of such communities will be published in the **Federal Register.**

In addition, FEMA publishes a Flood Insurance Rate Map (FIRM) that identifies the Special Flood Hazard Areas (SFHAs) in these communities. The date of the FIRM, if one has been published, is indicated in the fourth column of the table. No direct Federal financial assistance (except assistance pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act not in connection with a flood) may be provided for construction or acquisition of buildings in identified SFHAs for communities not participating in the NFIP and identified for more than a year on FEMA's initial FIRM for the community as having flood-prone areas (section 202(a) of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4106(a), as amended). This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column. The Administrator finds that notice and public comment procedures under 5 U.S.C. 553(b), are impracticable and unnecessary because communities listed in this final rule have been adequately notified.

Each community receives 6-month, 90-day, and 30-day notification letters addressed to the Chief Executive Officer stating that the community will be suspended unless the required floodplain management measures are met prior to the effective suspension date. Since these notifications were made, this final rule may take effect within less than 30 days.

National Environmental Policy Act. FEMA has determined that the community suspension(s) included in this rule is a non-discretionary action and therefore the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) does not apply.

Regulatory Flexibility Act. The Administrator has determined that this rule is exempt from the requirements of the Regulatory Flexibility Act because the National Flood Insurance Act of 1968, as amended, Section 1315, 42 U.S.C. 4022, prohibits flood insurance coverage unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed no longer comply with the statutory requirements, and after the effective date, flood insurance will no longer be available in the communities unless remedial action takes place.

Regulatory Classification. This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 13132, Federalism. This rule involves no policies that have federalism implications under Executive Order 13132.

Executive Order 12988, Civil Justice Reform. This rule meets the applicable standards of Executive Order 12988.

Paperwork Reduction Act. This rule does not involve any collection of information for purposes of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

List of Subjects in 44 CFR Part 64

Flood insurance, Floodplains.

Accordingly, 44 CFR part 64 is amended as follows:

PART 64—[AMENDED]

■ 1. The authority citation for Part 64 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.;* Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp.; p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp.; p. 376.

§ 64.6 [Amended]

■ 2. The tables published under the authority of § 64.6 are amended as follows:

BILLING CODE 9110–12–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration on Aging

45 CFR Part 1324

RIN 0985–AA08

State Long-Term Care Ombudsman Programs

AGENCY: Administration on Aging, Administration for Community Living, HHS.

ACTION: Final rule; correction and correcting amendments.

SUMMARY: In the February 11, 2015 **Federal Register**, we published a final rule in order to implement provisions of the Older Americans Act (the Act) regarding States' Long-Term Care Ombudsman programs (Ombudsman programs). The effective date was July 1, 2016. This correcting amendment corrects a limited number of technical and typographical errors identified in the February 11, 2015 final rule.

DATES: This correcting document is effective December 19, 2016.

FOR FURTHER INFORMATION CONTACT: Becky Kurtz, Director, Office of Long-Term Care Ombudsman Programs, Administration for Community Living, Administration on Aging, Atlanta Federal Center, 61 Forsyth Street SW., Suite 5M69, Atlanta, Georgia 30303–8909, 404–562–7592.

SUPPLEMENTARY INFORMATION:

I. Background

In FR Doc. 2015–01914 of February 11, 2015 (80 FR 7704), the final rule entitled ''State Long-Term Care Ombudsman Programs,'' there were a number of technical and typographical errors that are identified and corrected in this correcting amendment. On July 1, 2016, those provisions of the final rule which had been originally codified as 45 CFR part 1327 were re-numbered as 45 CFR parts 1324 in FR Doc. 2016–13138 (81 FR 35644). The remaining provisions (originally codified as amendments to 45 CFR part 1321) remain unchanged. All of the provisions below refer to errors found in 45 CFR part 1324.

II. Summary of Changes

A. Summary of Changes in the Regulations Text

1. On page 7765, in the regulations text for § 1324.19(b)(5), we erroneously used the word ''paragraph'' instead of ''through.'' To correct this error, we have removed the word ''paragraph'' and replaced it with the word ''through.''

2. On page 7765, in the regulations text for § 1324.19(b)(7)(i), we erroneously included the term ''has no resident representative.'' Since this situation (regarding the authority for the Ombudsman program to make a referral when a resident has ''no resident representative'') is not needed in this paragraph and already provided for in § 1324.19(b)(6)(ii), the redundancy of this provision was in error. We believe elimination of this language will not change the requirements of this provision and will lessen confusion regarding its implementation.

The corrections to the errors summarized in this section appear in the regulations text of this correcting amendment.

III. Waiver of Notice and Comment Procedure and Delay in Effective Date

Under 5 U.S.C. 553(b) of the Administrative Procedure Act (APA), the agency is required to publish a notice of the proposed rule in the **Federal Register** before the provisions of a rule take effect. However, under section 553(b)(B) of the APA, an agency may dispense with normal rule-making requirements for good cause if the agency makes a finding that the notice and comment process is impracticable, unnecessary, or contrary to the public interest. We find that there is good cause to waive such requirements. We find that notice and comment is unnecessary because we are not altering our policies; rather, we are simply implementing correctly the policies that

we previously proposed, received comment on, and subsequently finalized.

In addition, section 553(d) of the APA mandates a 30-day delay in the effective date after issuance or publication of a rule. The section, however, creates an exception at section 553(d)(3) that allows the agency to avoid the 30-day delay in effective date when it has good cause and publishes it with the rule. We have found good cause to avoid the 30-day delay. As discussed above, this rule is merely a technical correction and makes no substantive changes to the rule. We believe the public is best served by having the final rule reflect these corrections as soon as possible.

List of Subjects for 45 CFR Part 1324

Administrative practice and procedure, Aged, Long-term care.

Accordingly, 45 CFR chapter XIII, subchapter C, is corrected by making the following correcting amendments to part 1324:

PART 1324—STATE LONG-TERM CARE OMBUDSMAN PROGRAMS

■ 1. The authority citation for part 1324 continues to read as follows:

Authority: 42 U.S.C. 3001 *et seq.;* the Older Americans Act, as amended.

§ 1324.19 [Amended]

■ 2. Section 1324.19 is amended as follows:

■ a. In paragraph (b)(5) by removing the word ''paragraph'' and adding in its place ''through''; and

■ b. In paragraph (b)(7)(i) by removing the words ''has no resident representative, or''.

Dated: December 13, 2016.

Madhura C. Valverde,

Executive Secretary to the Department, Department of Health and Human Services.

50 CFR Part 680

[Docket No. 160617541–6999–02]

RIN 0648–BG15

Fisheries of the Exclusive Economic Zone Off Alaska; Bering Sea and Aleutian Islands Crab Rationalization Program

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS issues regulations to implement Amendment 47 to the Fishery Management Plan for Bering Sea/Aleutian Islands King and Tanner Crabs (Crab FMP) and to make minor clarifications to regulations implementing the Crab FMP. This final rule addresses how individual processing quota (IPQ) use caps apply to the Bering Sea *Chionoecetes bairdi* Tanner crab fisheries: the eastern *C. bairdi* Tanner (EBT) and the western *C. bairdi* Tanner (WBT). This regulation exempts EBT and WBT IPQ crab that is custom processed at a facility through contractual arrangements with the processing facility owners from being applied against the IPQ use cap of the processing facility owners, thereby allowing a facility to process more crab without triggering the IPQ use cap. This exemption is necessary to allow all of the EBT and WBT Class A individual fishing quota crab to be processed at the facilities currently processing EBT and WBT crab, and will have significant positive economic effects on the fishermen, processors, and communities that participate in the EBT and WBT fisheries. This final rule is intended to promote the goals and objectives of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the Crab FMP, and other applicable law.

DATES: Effective January 19, 2017.

ADDRESSES: Electronic copies of Amendment 47 to the Crab FMP, the Regulatory Impact Review (RIR), Initial Regulatory Flexibility Analysis (IRFA), and the Categorical Exclusion prepared for this action are available from *http://www.regulations.gov* or from the NMFS Alaska Region Web site at *http://alaskafisheries.noaa.gov.*

The Environmental Impact Statement (Program EIS), RIR (Program RIR), Final Regulatory Flexibility Analysis (Program FRFA), and Social Impact Assessment prepared for the Crab Rationalization Program (Program) are available from the NMFS Alaska Region Web site at *http://alaskafisheries.noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Keeley Kent, 907–586–7228.

SUPPLEMENTARY INFORMATION: This final rule implements Amendment 47 to the Crab FMP and regulatory amendments to the Program. NMFS published a notice of availability for Amendment 47 in the **Federal Register** on September 13, 2016 (81 FR 62850). Comment on Amendment 47 was invited through November 14, 2016. The Secretary approved Amendment 47 on December 6, 2016, after accounting for information from the public, and determining that Amendment 47 is consistent with the Crab FMP, the Magnuson-Stevens Act, and other applicable law. NMFS published the proposed rule to implement Amendment 47 on September 23, 2016 (81 FR 65615). The comment period on the proposed rule ended on October 24, 2016. NMFS received four comments. A summary of these comments and NMFS' responses are provided in the Comments and Responses section of this preamble.

This final rule modifies regulations that specify how IPQ use caps apply to IPQ issued for EBT and WBT crab fisheries. The following sections describe: (1) The Bering Sea and Aleutian Islands (BSAI) crab fisheries under the Program, (2) IPQ use caps and custom processing arrangements, and (3) this final rule.

The BSAI Crab Fisheries Under the Program

This section and the following section of the preamble provide a brief description of the Program, and the elements of the Program, that apply to Amendment 47 and this final rule. For a more detailed description of the Program as it relates to this final rule, please see Sections 2.5 and 2.6 of the RIR (see **ADDRESSES**) and the preamble of the proposed rule (81 FR 65615; September 23, 2016).

The Program was implemented on March 2, 2005 (70 FR 10174). The Program established a limited access privilege program for nine crab fisheries in the BSAI, including the EBT and WBT crab fisheries, and assigned quota share (QS) to persons based on their historic participation in one or more of those nine BSAI crab fisheries during a specific period. Under the Program, NMFS issued four types of QS: catcher vessel owner (CVO) QS was assigned to holders of License Limitation Program (LLP) licenses who delivered their catch to shoreside crab processors or to stationary floating crab processors; catcher/processor vessel owner QS was assigned to LLP license holders who harvested and processed their catch at sea; catcher/processor crew QS was issued to captains and crew on board catcher/processor vessels; and catcher vessel crew QS was issued to captains and crew on board catcher vessels. Each year, a person who holds QS may receive an exclusive harvest privilege for a portion of the annual total allowable catch, called individual fishing quota (IFQ).

NMFS also issued processor quota share (PQS) under the Program. Each year, PQS yields an exclusive privilege to process a portion of the IFQ in each of the nine BSAI crab fisheries. This annual exclusive processing privilege is called individual processor quota (IPQ). Only a portion of the QS issued yields IFQ that is required to be delivered to a processor with IPQ. QS derived from deliveries made by catcher vessel owners (*i.e.,* CVO QS) is subject to designation as either Class A IFQ or Class B IFQ. Ninety percent of the IFQ derived from CVO QS is designated as Class A IFQ, and the remaining 10 percent is designated as Class B IFQ. Class A IFQ must be matched and delivered to a processor with IPQ. Class B IFQ is not required to be delivered to a processor holding IPQ for that fishery. Each year there is a one-to-one match of the total pounds of Class A IFQ with the total pounds of IPQ issued in each crab fishery.

NMFS issued QS and PQS for the EBT and WBT crab fisheries. Unlike the QS and PQS issued for most other Program fisheries, the QS and PQS issued for the EBT and WBT crab fisheries are not subject to regional delivery and processing requirements, commonly known as regionalization. Therefore, the Class A IFQ that results from EBT and WBT QS, and the IPQ that results from EBT and WBT PQS, can be delivered to, and processed at, any otherwise eligible processing facility. In addition, the PQS and resulting IPQ issued for the EBT and WBT crab fisheries are not subject to right-of-first-refusal (ROFR) provisions included in the Program. The ROFR provisions provide certain communities with an option to purchase PQS or IPQ that would otherwise be used outside of the community holding the ROFR.

Because the EBT and WBT crab fisheries are not subject to regionalization or ROFR provisions, crab harvested under a Class A IFQ permit in these fisheries can be delivered to processors in a broad geographic area more easily than crab harvested under Class A IFQ permits in Program fisheries subject to regionalization and ROFR provisions. The rationale for exempting the EBT and WBT crab fisheries from regionalization and ROFR provisions is described in the Program EIS (see **ADDRESSES**), and in the final rule implementing the Program (70 FR 10174, March 2, 2005).

IPQ Use Caps and Custom Processing Arrangements

The Program limits the amount of QS that a person can hold (*i.e.,* own), the amount of IFQ that a person can use, and the amount of IFQ that can be used on board a vessel. Similarly, the Program limits the amount of PQS that a person can hold, the amount of IPQ that a person can use, and the amount of IPQ that can be processed at a given facility. These limits are commonly referred to as use caps.

In most of the nine BSAI crab fisheries under the Program, including the Tanner crab fisheries, a person is limited to holding no more than 30 percent of the PQS initially issued in the fishery, and to using no more than the amount of IPQ resulting from 30 percent of the initially issued PQS in a given fishery, with a limited exemption for persons receiving more than 30 percent of the initially issued PQS. No person in the EBT or WBT crab fisheries received in excess of 30 percent of the initially issued PQS (see Section 2.5.2 of the RIR). Therefore, no person may use an amount of EBT or WBT IPQ greater than an amount resulting from 30 percent of the initially issued EBT or WBT PQS. The rationale for the IPQ use caps is described in the Program EIS and the final rule implementing the Program (70 FR 10174, March 2, 2005).

Section 680.7(a)(7) provides that IPQ use by a person is calculated by summing the total amount of IPQ that is held by that person and IPQ held by other persons who are affiliated with that person. The term ''affiliation'' is defined in § 680.2 as a relationship between two or more entities where one entity directly or indirectly owns or controls 10 percent or more of the other entity. Additional terms used in the definition of ''affiliation'' are described in § 680.2.

Under § 680.7(a)(7), any IPQ crab that is ''custom processed'' at a facility an IPQ holder owns will be applied against the IPQ use cap of the facility owner, unless specifically exempted by § 680.42(b)(7). A custom processing arrangement exists when an IPQ holder has a contract with the owners of a processing facility to have his or her crab processed at that facility, and the IPQ holder does not have an ownership interest in that processing facility or is not otherwise affiliated with the owners of that processing facility. In custom processing arrangements, the IPQ holder contracts with a facility operator to have the IPQ crab processed according to that IPQ holder's specifications. Custom processing arrangements typically occur when an IPQ holder does not own a shoreside processing facility or cannot economically operate a stationary floating crab processor.

This Final Rule

Below is a brief description of this final rule. For a more detailed description of the rationale for this final rule, please see Sections 1 and 2.9.2 of the RIR (see **ADDRESSES**) and the preamble of the proposed rule (81 FR 65615; September 23, 2016).

This final rule modifies § 680.42(b)(7)(ii)(A) by adding EBT and WBT IPQ crab to the list of BSAI crab fisheries already receiving a custom processing arrangement exemption. This final rule will allow EBT and WBT IPQ crab received for custom processing by the three processors currently operating in these fisheries to qualify for a custom processing arrangement exemption and not apply against the IPQ use caps for these processors. With this final rule, all EBT and WBT IPQ crab received under custom processing arrangements at the facilities owned by the three existing EBT and WBT processors (Maruha-Nichiro Corporation, Trident Seafoods, or Unisea Seafoods) will not be counted against the IPQ use cap of the facility or the facility owners. The custom processing arrangement exemption allows these processors to custom process crab for unaffiliated IPQ holders who have custom processing arrangements with the processors, thereby allowing harvesters to fully harvest and deliver their EBT and WBT Class A IFQ crab to IPQ holders with a custom processing arrangement at facilities operating in these fisheries.

At its June 2016 meeting, the North Pacific Fishery Management Council (Council) voted to recommend Amendment 47, which creates a custom processing arrangement exemption for EBT and WBT crab. The Council recognized that consolidation within the Tanner crab processing sector has constrained the ability of the processing sector to process all of the EBT and WBT Class A IFQ crab without exceeding the IPQ use caps. The Council determined that the likelihood of additional unique and unaffiliated processing facilities entering the Tanner crab processing sector for the 2016/2017 crab fishing year or the near future is low, creating a significant risk that the portion of the Tanner crab allocation in excess of the caps will not be processed. Without the ability to have all EBT and WBT Class A IFQ processed, that portion of the Tanner crab allocation in excess of the caps will likely go unharvested because sufficient processing facilities do not currently exist in the Bering Sea region.

The anticipated effects of this final rule include allowing the full processing of all EBT and WBT Class A IFQ crab

and the associated economic and social benefits of that processing activity for harvesters, the existing Tanner crab processors, and the communities where processing facilities are located. These communities include Akutan, Dutch Harbor/Unalaska, King Cove, and Saint Paul, AK. This final rule will allow all of the Tanner crab Class A IFQ to be harvested and processed by existing processors and will thus avoid the adverse economic and social impacts created by the lack of adequate processing capacity that would otherwise result if the EBT and WBT crab fisheries could not be fully processed. Without this rule, only 90 percent of the EBT and WBT Class A IFQ could be processed by the existing processors. The remaining ten percent of the EBT and WBT Class A IFQ crab represents approximately $3.4 million in ex-vessel value and $4.95 million in first wholesale value based on estimated ex-vessel and first wholesale values of EBT and WBT crab in the 2015/2016 crab fishing year, the most recent crab fishing year for which EBT and WBT total allowable catches (TACs) have been specified (see Section 2.9 of the RIR for additional detail).

The Council and NMFS considered whether this final rule could result in further consolidation of Tanner crab processing to fewer facilities than currently operating. Since EBT and WBT crab are not subject to regionalization or ROFR, there would be no regulatory limitations preventing all of the EBT and WBT IPQ crab from being processed by one company at one facility. The Council and NMFS determined that operational factors make it unlikely that additional consolidation will occur. First, the extent to which the exemption allows further consolidation depends on whether processors choose to enter custom processing arrangements with IPQ holders. The choice to enter those arrangements depends largely on the benefit to the IPQ holder arising from using the IPQ at the holder's own facility or custom processing the IPQ at a plant unaffiliated with the IPQ holder. Collectively, the three companies and their facilities that process Tanner crab have substantial holdings of IPQ (see Table 2–3 of the RIR). It is likely more economical for these companies to process the IPQ they hold at their facilities rather than to negotiate a custom processing agreement with another processor, which reduces the likelihood of further consolidation.

Second, the extent of further consolidation depends on the business decisions that participants make regarding their participation in other crab fisheries, such as Bristol Bay red king crab and Bering Sea *C. opilio* crab. None of the current Tanner crab processors only process Tanner crab; all companies and facilities that process Tanner crab also process Bristol Bay red king crab and Bering Sea *C. opilio.* Crab processing tends to be labor intensive, requiring relatively large crews. The cost of transporting, housing, and provisioning crews to run crab processing lines at a plant can be high. Processors that are active in other BSAI crab fisheries may be more likely to continue processing in the Tanner crab fisheries to help maintain a consistent amount of crab available for processing at the facility (see Section 2.9.2 of the RIR for more information).

Third, processors are likely to maintain processing facilities near the fishing grounds. Proximity to the fishing grounds may help prevent or reduce deadloss—dead crab landed at the dock, which is associated with increased transit time between the fishing grounds and offload. Additionally, proximity to the fishing grounds can help harvesters maximize their efficiency and prevent the need to spend significant time transiting to and from processing facilities for offload. Given these factors, the Council and NMFS concluded that additional consolidation of processing activity in the EBT and WBT fisheries is unlikely under current and projected operations.

This final rule will provide a benefit to processors willing to custom process Class A IFQ for EBT and WBT crab, and those IPQ holders who do not own processing facilities and must have their crab custom processed. The custom processing arrangement exemption for EBT and WBT IPQ crab avoids the adverse economic impacts created by the 30-percent IPQ use cap for Tanner crab fisheries to IPQ holders who own and operate processing facilities. This final rule will also benefit those IPQ holders who do not have processing facilities since their IPQ could be custom processed by an existing facility and their custom processing arrangement will not count against the 30-percent IPQ use cap (see Section 2.9.2 of the RIR for further information).

This final rule will benefit harvesters who hold Class A IFQ for EBT and WBT crab. Without this rule, harvesters with EBT or WBT Class A IFQ likely will be unable to fully harvest allocations provided to them due to IPQ use cap limitations imposed on IPQ holders and the three existing processors that receive EBT and WBT crab. This rule allows Class A IFQ holders in the EBT and WBT crab fisheries to fully harvest their IFQ allocations, because those Class A IFQ holders who match with IPQ holders who do not own processing facilities will be able to deliver their IFQ to a processing facility that has a custom processing arrangement with that IPQ holder.

The effects of this final rule on communities and community sustainability are expected to be beneficial relative to no action. This final rule continues the delivery of EBT and WBT Class A IFQ crab to processors at facilities owned by the Maruha-Nichiro Corporation, Trident Seafoods, or UniSea Seafoods in BSAI communities. This final rule is expected to maintain the amount of income generated and the amount of tax revenues in communities where existing processing facilities are located.

Although this final rule provides a benefit to the existing three processors with processing facilities, this final rule does not preclude the ability for new, unaffiliated processing companies to enter the EBT and WBT fisheries, establish custom processing arrangements with IPQ holders, and process EBT and WBT crab. Section 2.9.2 of the RIR provides more detail on the potential for new unaffiliated processing companies to enter the EBT and WBT crab fisheries.

Regulation To Make a Minor Clarification

This final rule also modifies § 680.42(b)(7)(ii)(B) to clarify the meaning of the phrase ''on the effective date of this rule'' that occurs in § 680.42(b)(7)(ii)(B). The phrase ''on the effective date of this rule'' in § 680.42(b)(7)(ii)(B) refers to the effective date of the regulations that implemented Amendment 27 to the Crab FMP and that added § 680.42(b)(7)(ii)(B) to the regulations (74 FR 25449, May 28, 2009). Regulations implementing Amendment 27 to the Crab FMP were published on May 28, 2009, and became effective on June 29, 2009. The phrase ''on the effective date of this rule'' was inadvertently left in the regulatory text and not replaced with the actual effective date of the rule. This final rule revises the phrase ''on the effective date of this rule'' to read ''on June 29, 2009'' to reduce any confusion about the applicable date for the requirements in § 680.42(b)(7)(ii)(B). This minor correction does not substantively change the intent or effect of § 680.42(b)(7)(ii)(B).

Comments and Responses

Comment 1: The commenter states that NOAA should reduce the ''quota'' (TACs) of the EBT and WBT fisheries by

50 percent. The commenter also states that existing fishery management regulations are causing biological harm, ''poaching'' (unreported harvest) is occurring, and additional law enforcement effort is required.

Response: This final rule does not modify the process for determining the total amount of EBT or WBT crab available for harvest each year. The EBT and WBT fisheries are not overfished, not subject to overfishing, and the TACs for these fisheries have not been exceeded in any year these fisheries have been open for fishing since the implementation of the Program. The commenter's recommendation to reduce the TACs is not supported by available information and is outside the scope of the rule.

The commenter does not provide any data to support the assertion that unreported harvest is occurring. NMFS does not have any data that indicates that unreported harvest is occurring. The NOAA Office of Law Enforcement allocates law enforcement resources as it deems necessary and appropriate to ensure adequate enforcement.

Comment 2: Two commenters express support for the proposed rule and concur with the rationale for the rule as laid out in the preamble to the proposed rule. The commenters urge NMFS to adopt this rule.

Response: NMFS acknowledges this comment.

Comment 3: The commenter states that most stakeholders have accepted the necessity of Amendment 47 and the proposed rule with the understanding that the Council will undertake a more comprehensive review of processor use caps in the EBT and WBT fisheries. The commenter cites to several sections of the RIR that state that large processors are the primary beneficiaries of custom processing cap exemptions for the EBT and WBT fisheries, and that smaller processors that participate in the fisheries could be disadvantaged by the exemption. The commenter also cites to sections in the RIR stating that processor consolidation could curtail product development in that some processors may wish to develop new products which might not be possible (or as advantageous) under custom processing arrangements. According to the commenter, the lack of new product forms has been a quantifiable result of processor consolidation which should be analyzed and addressed through a well-crafted amendment to the FMP.

Response: As described in the preamble to the proposed rule, this final rule, and Section 2.9.2 of the RIR, the Council and NMFS considered the potential impact of Amendment 47 and this final rule on existing and potential processing operations. Based on the information available and the analyses prepared for this action, the Council and NMFS determined for reasons provided in the preambles of the proposed rule and this final rule that Amendment 47 and this final rule are not likely to cause adverse impacts on fishermen, processors, or communities participating in the EBT and WBT crab fisheries.

The decision to enter into a custom processing arrangement is a voluntary decision made by each processor. The commenter incorrectly stated that the RIR concluded that processor consolidation would impede the development of new products. Section 2.9.2 of the RIR states that the theoretical interest of processor 'A' in the development of new products but the disinterest of other processors in new product forms may be a reason why processor 'A' would not engage in custom processing arrangements with other processors, thereby inhibiting further consolidation in the sector. Although the commenter states that there has been a ''quantifiable'' lack of new product forms due to processor consolidation, NMFS does not have data to determine the range of product forms provided by crab processors, and cannot determine if consolidation in the number of processors in the fishery has resulted in fewer new product forms. Although the commenter's suggestion to initiate a new analysis and FMP amendment to assess this issue is outside of the scope of this final rule, when the Council adopted Amendment 47 it also requested Council staff to prepare a discussion paper that will review various approaches to processor consolidation within the EBT and WBT crab fisheries, such as raising the Tanner crab IPQ use cap to 40%; converting Class A IFQ to Class B IFQ; and applying a custom processing arrangement exemption only in years when processing capacity is not sufficient (*i.e.,* when there are less than four processors).

Comment 4: The commenter requests expedited implementation of this rule so that the regulations are effective by January 13, 2017. The commenter states that actions taken by the Alaska Board of Fisheries (Board of Fisheries) in January 2017 could result in changes to State of Alaska (State) harvest policy regulations for the EBT and WBT fisheries. The current State harvest policy regulations do not provide for an EBT or WBT fishery for the 2016/2017 crab fishing year. However, if the Board of Fisheries modifies the EBT and WBT harvest policy regulations at its January 2017 meeting, this could result in changes that would provide an opportunity for the State to issue TACs for the EBT and WBT fisheries for the 2016/2017 crab fishing year. The commenter expresses concern that if issued, 10 percent of the EBT and WBT Class A IFQ could be stranded if this final rule is not effective by the start of the Board of Fisheries meeting on January 13, 2017.

Response: NMFS acknowledges this request and anticipates that this final rule will be published in the **Federal Register** prior to January 13, 2017, or shortly thereafter, and that the regulations will be effective well in advance of the end of the EBT and WBT fishing seasons on March 31, 2017. However, NMFS has determined that implementation (*i.e.,* publication and effectiveness) of this final rule is not required prior to January 13, 2017, in order for the Board of Fisheries to modify its harvest policy regulations, for the State to issue TACs for the EBT and WBT fisheries, for NMFS to issue IFQ or IPQ, or to prevent stranding of EBT and WBT Class A IFQ. By State regulation (5 AAC 35.510), the EBT and WBT crab fishing seasons end on March 31 of each year. If the Board of Fisheries were to modify its harvest policy regulations and the State issued TACs for the EBT and WBT fisheries, harvesting and processing in the EBT and WBT fisheries could begin because existing Federal regulations allow each of the three processors operating in the EBT and WBT fisheries to receive and process up to 30 percent of the EBT or WBT Class A IFQ (a total of 90 percent of the EBT or WBT Class A IFQ) before being constrained. NMFS anticipates that this final rule will be effective with sufficient time to allow for the complete harvesting and processing of the EBT and WBT fisheries before the end of the fishing seasons on March 31, 2017, should the State modify its harvest policy regulations so that IFQ and IPQ is issued for the 2016/2017 crab fishing year. NMFS is not waiving the 30-day delay in effectiveness requirement of the Administrative Procedure Act for this final rule based on this comment.

Classification

The Administrator, Alaska Region, NMFS, has determined that Amendment 47 to the Crab FMP and this final rule are necessary for the conservation and management of the EBT and WBT fisheries and are consistent with the Magnuson-Stevens Act and other applicable law.

This final rule has been determined to be not significant for the purposes of Executive Order 12866.

Small Entity Compliance Guide

Section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996 states that, for each rule or group of related rules for which an agency is required to prepare a final regulatory flexibility analysis, the agency shall publish one or more guides to assist small entities in complying with the rule, and shall designate such publications as ''small entity compliance guides.'' The agency shall explain the actions a small entity is required to take to comply with a rule or group of rules. The preamble to the proposed rule (81 FR 65615, September 23, 2016) and the preamble to this final rule serve as the small entity compliance guide for this action.

Final Regulatory Flexibility Analysis

Section 604 of the Regulatory Flexibility Act (RFA) requires an agency to prepare a final regulatory flexibility analysis (FRFA) after being required by that section or any other law to publish a general notice of proposed rulemaking and when an agency promulgates a final rule under section 553 of Title 5 of the U.S. Code. The following paragraphs constitute the FRFA for this action.

This FRFA incorporates the Initial Regulatory Flexibility Analysis (IRFA), a summary of the significant issues raised by the public comments, NMFS' responses to those comments, and a summary of the analyses completed to support the action. Analytical requirements for the FRFA are described in the RFA, section 604(a)(1) through (6). The FRFA must contain:

1. A statement of the need for, and objectives of, the rule;

2. A statement of the significant issues raised by the public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments;

3. The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA) in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments;

4. A description and an estimate of the number of small entities to which the rule will apply, or an explanation of why no such estimate is available;

5. A description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; and

6. A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

The ''universe'' of entities to be considered in a FRFA generally includes only those small entities that can reasonably be expected to be directly regulated by the action. If the effects of the rule fall primarily on a distinct segment of the industry, or portion thereof (*e.g.,* user group, gear type, geographic area), that segment will be considered the universe for purposes of this analysis.

In preparing a FRFA, an agency may provide either a quantifiable or numerical description of the effects of a rule (and alternatives to the rule), or more general descriptive statements, if quantification is not practicable or reliable.

Need for and Objectives of This Final Rule

C. bairdi crab processing facilities have consolidated to the extent that the IPQ use caps are constraining the ability of the remaining processing sector to process the entire allocation of Tanner crab under the caps. Without the entry of additional unique and unaffiliated processors into the Tanner crab processing sector, which appears unlikely in the near future, the portion of the *C. bairdi* Tanner crab allocation in excess of the caps (*i.e.,* 10 percent) will not be harvested because insufficient processing capacity, relative to the use caps, is currently available. In the 2015/2016 Tanner crab season, the gross ex-vessel value for 10 percent of the Class A IFQ for EBT and WBT crab was estimated at $3.4 million. Without relief from the use cap restriction, harvesters, processors, and communities are expected to lose the potential benefits from the foregone portion of this crab catch. Management objectives include providing relief from the processing use caps, so that the full *C. bairdi* crab allocation can be harvested, processed, and delivered to consumer markets, worldwide.

Summary of Significant Issues Raised During Public Comment

NMFS published the proposed rule to implement Amendment 47 on September 23, 2016 (81 FR 65615). An IRFA was prepared and summarized in the Classification section of the preamble to the proposed rule. The comment period on the proposed rule ended on October 24, 2016. NMFS received 4 comments on Amendment 47 and the proposed rule. None of these comments raise issues in response to the IRFA. The Chief Counsel for Advocacy of the SBA did not file any comments on the IRFA or the proposed rule. The public comments received for Amendment 47 were mostly supportive of the action. One comment requested further analysis of how the development of new products by some processors may not be possible or advantageous under custom processing arrangements. However, under this final rule, custom processing arrangements are not required, but rather remain a voluntary business arrangement that a processor may choose to enter. No changes were made to this rule or the RFA analysis as a result of public comments.

Number and Description of Directly Regulated Small Entities

For RFA purposes only, NMFS has established a small business size standard for businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (NAICS code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates), and has combined annual receipts not in excess of $11 million for all its affiliated operations worldwide.

The SBA has established size criteria for all other major industry sectors in the United States, including fish processing businesses. A seafood processor is a small business if it is independently owned and operated, not dominant in its field of operation, and employs 750 or fewer persons on a full-time, part-time, temporary, or other basis, at all its affiliated operations worldwide. A wholesale business servicing the fishing industry is a small business if it employs 100 or fewer persons on a full-time, part-time, temporary, or other basis, at all its affiliated operations worldwide.

The entities directly regulated by this action are those entities that process EBT and WBT crab. It does not include entities that harvest Class A IFQ EBT and WBT crab. From 2012 through

2014, the most recent period for which NMFS has data on processors, there are no processors considered small entities that will be directly regulated by this action.

This action will also directly regulate registered crab receivers (RCRs) as all Program crab must be received by an RCR. Some RCRs are the same entities that process Tanner crab, and others are those that have their Tanner crab custom processed. In 2015/2016, there were 10 RCRs that received Tanner crab, seven of which are considered large entities due to their affiliations with large seafood processing companies. The remaining three are considered small entities because they are affiliated with not-for-profit organizations.

Recordkeeping, Reporting, and Other Compliance Requirements

This action does not require any new recordkeeping and reporting requirements, or any modification of existing requirements.

Description of Significant Alternatives to This Final Rule That Minimize Economic Impacts on Small Entities

The Council and NMFS did not identify any alternatives to the action alternative that would minimize the impact on small entities better than the action alternative and still meet the objectives for this final rule. The impacts on small entities are defined in the IRFA for this action and are not repeated here. The action alternative will allow the full harvest and processing of the Tanner crab total allowable catch. This action is not expected to have negative economic impacts on the small entities directly impacted by this action.

The Council considered a limited duration option that would have created a temporary rule to provide a fix for the near term, but would require the Council to take further action if it intended to create a more long-term revision. The Council did not select this option as it already has the ability to examine processing activity in the Tanner crab fishery at any time and take future action on this subject. This option would not have had less economic impact on small entities than the action alternative, as the action alternative is not expected to have negative impacts.

List of Subjects in 50 CFR Part 680

Alaska, Reporting and recordkeeping requirements.

Dated: December 9, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 680 is amended as follows:

PART 680—SHELLFISH FISHERIES OF THE EXCLUSIVE ECONOMIC ZONE OFF ALASKA

■ 1. The authority citation for 50 CFR part 680 continues to read as follows:

Authority: 16 U.S.C. 1862; Pub. L. 109–241; Pub. L. 109–479.

■ 2. In § 680.42, revise paragraph (b)(7)(ii) introductory text, and paragraphs (b)(7)(ii)(A) and (B) to read as follows:

§ 680.42 Limitations on use of QS, PQS, IFQ, and IPQ.

* * * * *

(b) * * *

(7) * * *

(ii) The IPQ crab meets the conditions in paragraphs (b)(7)(ii)(A) and (B) of this section or the IPQ crab meets the conditions in paragraph (b)(7)(ii)(C) of this section:

(A) The IPQ crab is:

(*1*) BSS IPQ crab with a North region designation;

(*2*) EAG IPQ crab;

(*3*) EBT IPQ crab;

(*4*) PIK IPQ crab;

(*5*) SMB IPQ crab;

(*6*) WAG IPQ crab provided that IPQ crab is processed west of 174 degrees west longitude;

(*7*) WAI IPQ crab; or

(*8*) WBT IPQ crab.

(B) That IPQ crab is processed at:

(*1*) Any shoreside crab processor located within the boundaries of a home rule, first class, or second class city in the State of Alaska in existence on June 29, 2009; or

(*2*) Any stationary floating crab processor that is:

(*i*) Located within the boundaries of a home rule, first class, or second class city in the State of Alaska in existence on June 29, 2009;

(*ii*) Moored at a dock, docking facility, or at a permanent mooring buoy, unless that stationary floating crab processor is located within the boundaries of the city of Atka in which case that stationary floating crab processor is not required to be moored at a dock, docking facility, or at a permanent mooring buoy; and

(*iii*) Located within a harbor, unless that stationary floating crab processor is located within the boundaries of the city of Atka on June 29, 2009, in which case that stationary floating crab processor is not required to be located within a harbor.

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 81, No. 244
Tuesday, December 20, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

9 CFR Part 201

RIN 0580–AB27

Unfair Practices and Undue Preferences in Violation of the Packers and Stockyards Act

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Proposed rule.

SUMMARY: The Department of Agriculture's (USDA) Grain Inspection, Packers and Stockyards Administration (GIPSA), Packers and Stockyards Program (P&SP) is proposing to amend the regulations issued under the Packers and Stockyards Act, 1921, as amended and supplemented (P&S Act). The proposed amendments will clarify the conduct or action by packers, swine contractors, or live poultry dealers that GIPSA considers unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act. The proposed amendments will also identify criteria that the Secretary will consider in determining whether conduct or action by packers, swine contractors, or live poultry dealers constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the P&S Act.

This proposed rule identifies the conduct or action that is a per se violation of section 202(a) of the P&S Act, includes an illustrative list of conduct or action, absent demonstration of a legitimate business justification, GIPSA believes is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of harm to competition, and clarifies that any conduct or action that harms or is likely to harm competition is a violation of section 202(a) of the P&S Act. The proposed rule also includes criteria the Secretary will consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the P&S Act.

DATES: We will consider comments we receive by February 21, 2017.

ADDRESSES: We invite you to submit comments on this proposed rule. You may submit comments by any of the following methods:

- *Mail:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2542A–S, Washington, DC 20250–3613.
- *Hand Delivery or Courier:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2542A–S, Washington, DC 20250–3613.
- *Internet: http://www.regulations.gov*. Follow the on-line instructions for submitting comments.

Instructions: All comments should make reference to the date and page number of this issue of the **Federal Register**. Regulatory analyses and other documents relating to this rulemaking will be available for public inspection in Room 2542A–S, 1400 Independence Avenue SW., Washington, DC 20250–3613 during regular business hours. All comments received will be included in the public docket without change, including any personal information provided. All comments will be available for public inspection in the above office during regular business hours (7 CFR 1.27(b)). Please call the Management and Budget Services staff of GIPSA at (202) 720–8479 to arrange a public inspection of comments or other documents related to this rulemaking.

FOR FURTHER INFORMATION CONTACT: S. Brett Offutt, Director, Litigation and Economic Analysis Division, P&SP, GIPSA, 1400 Independence Ave. SW., Washington, DC 20250, (202) 720–7051, *s.brett.offutt@usda.gov*.

SUPPLEMENTARY INFORMATION:

Background on Prior Proposed Rule

In June 2010, GIPSA proposed a new regulation designated as § 201.210. Paragraph (a) in that regulation introduced a list of examples of conduct that GIPSA considered unfair, unjustly discriminatory, or deceptive under section 202(a) of the P&S Act. GIPSA intended the first seven examples in the list to exemplify conduct that would violate section 202(a) regardless of proof of harm or likely harm to competition. The seven (7) examples proposed were as follows: (1) An unjustified material breach of a contractual duty or an action or omission that a reasonable person would consider unscrupulous, deceitful, or in bad faith in connection with any transaction in or contract involving the production, maintenance, marketing or sale of livestock or poultry; (2) a retaliatory action or omission, such as coercion, intimidation, or disadvantage, by a packer, swine contractor, or live poultry dealer in response to the lawful expression, association, or action of a poultry grower, livestock producer, or swine production contract grower; (3) a refusal to provide to a poultry grower or swine production contract grower statistical information and data (*e.g.,* feed conversion rates, feed analysis, and origin and breeder history) used to determine compensation paid under a production contract; (4) an action or attempt to limit by contract a poultry grower, swine production contract grower, or livestock producer's legal rights and remedies afforded by law; (5) paying premiums or applying discounts on a swine production contract grower's payment or the purchase price received by the livestock producer from the sale of livestock without documenting the reason and substantiating the revenue and cost justification associated with the premium or discount; (6) terminating a poultry growing arrangement or a swine production contract based only on allegations that the poultry grower or swine production contract grower failed to comply with an applicable law, rule or regulation; and (7) a representation, omission or practice that is fraudulent or likely to mislead a reasonable poultry grower, swine production contract grower, or livestock producer regarding a material condition or term in a contract or business transaction. These seven (7) examples of conduct were followed by one last example, number eight (8), that read, ''Any act that causes competitive injury or creates a likelihood of competitive injury.''

Comments in opposition to proposed § 201.210 argued that the regulation was unclear, vague, and ambiguous. Some questioned whether the lack of clarity would make it impossible to determine whether a company was behaving in compliance with § 201.210. Other comments questioned whether it allowed for a balancing of interests. As

a result of the comments, GIPSA has restructured and revised proposed § 201.210.

Summary of Changes From the 2010 Proposed Rule

In this new proposed rule, GIPSA restructured § 201.210 into three paragraphs designated by letters (a) through (c). Paragraph (a) addresses ''per se'' violations of section 202(a), which are those behaviors specifically identified with the P&S Act as unfair, unjustly discriminatory, or deceptive practices or devices. A delay in payment or attempt to delay payment for livestock purchases by a market agency, dealer, or packer is specifically identified as an ''unfair practice'' in Section 409(c) of the P&S Act. When a packer violates section 409(c) of the P&S Act (7 U.S.C. 228b), the conduct is also a ''per se'' violation of section 202(a) of the P&S Act. Likewise, delays in payment or attempts to delay payment by a live poultry dealer are ''per se'' violations because such conduct is identified as an ''unfair practice'' in section 410(b) of the P&S Act (7 U.S.C. 228b–1). Paragraph (b) provides a list of examples of conduct or action that absent demonstration of a legitimate business justification, GIPSA considers as unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act whether or not the conduct harms or is likely to harm competition. Paragraph (c) states that any conduct or action that harms or is likely to harm competition is unfair, unjustly discriminatory, or deceptive and is a violation of section 202(a).

Proposed § 201.210 is consistent with USDA's long held position that a showing of harm or likely harm to competition is not required for all violations of section 202(a) of the P&S Act and with the scope of section 202(a) as set forth in the aforementioned interim final rule, § 201.3(a), which also appears in this edition of the **Federal Register**.

GIPSA is proposing § 201.210(a) to affirmatively assert that any conduct or action by a packer, swine contractor, or live poultry dealer that the P&S Act explicitly deems to be unfair, unjustly discriminatory, or deceptive is a violation of section 202(a) without a showing of harm or likely harm to competition. Examples of such conduct or action that would fall under this section are in sections 409(c) and 410(b) of the P&S Act, which state that a packer and live poultry dealer, respectively, have engaged in an ''unfair practice'' when they fail to pay timely for livestock or poultry.

GIPSA is proposing § 201.210(b) as a non-exhaustive list of the types of conduct or action that GIPSA believes is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of whether the conduct harms or is likely to harm competition. Neither the P&S Act nor the regulations have ever specifically defined the terms ''unfair,'' ''unjustly discriminatory,'' or ''deceptive.'' This list is intended to reduce confusion regarding conduct that is unfair, unjustly discriminatory, or deceptive, without harming or the likelihood of harming competition. This list provides a sufficient number of examples to convey an understanding of this category of conduct and is not intended to list all conduct that would fit this category. These examples are violations if there is no legitimate business justification for the conduct. Legitimate business justifications would allow certain conduct that otherwise would be deemed a violation of section 202(a).

Proposed § 201.210(b)(1) identifies retaliatory action or threat of retaliatory action by a packer, swine contractor or live poultry dealer as violations of section 202(a) when done in response to lawful communication, association, or assertion of rights by a livestock producer, swine production contract grower, or poultry grower. The threat of terminating a contract in retaliation for some action may be sufficient unfair conduct to violate the P&S Act. These retaliatory acts or threats of retaliatory action may be directed toward a single grower or small group of growers, causing them harm, but not having significant effects on competition. For this reason, we propose to include both ''retaliatory action'' and the ''threat of retaliatory action'' in proposed § 201.210(b)(1), as an example of conduct or action that is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of whether the conduct harms or is likely to harm competition.

Proposed § 201.210(b)(2) identifies conduct or action that attempts to contractually limit the legal rights or remedies afforded by law to a livestock producer, swine production contract grower, or poultry grower as unfair, unjustly discriminatory or deceptive in violation of section 202(a) of the P&S Act. This proposed paragraph only contains an illustrative list of examples of such conduct or action limiting the legal contractual rights and remedies afforded to livestock producers, swine production contract growers, or poultry growers. This list is intended to provide a sufficient number of examples of the types of legal rights and remedies intended to be protected under this section. It is an illustrative list and is not intended to list all applicable legal rights and remedies.

Under proposed § 201.210(b)(2)(i), GIPSA considers conduct or action that contractually limits a livestock producer, swine production contract grower, or poultry grower's right to a trial by jury as unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act. Proposed § 201.210(b)(2)(i) provides for an exception when the livestock producer, swine production contract grower, or poultry grower has agreed to be bound by arbitration provisions in a contract that complies with § 201.218(a) and that provides a meaningful opportunity to participate fully in the arbitration process after applying the criteria outlined in § 201.218(b).

The 2008 Farm Bill added section 209, *Choice of Law and Venue,* to the P&S Act. Section 209(a) provides that the forum to resolve any dispute among the parties to a poultry growing arrangement or swine production or marketing contract that arises out of that arrangement or contact must be located in the Federal judicial district where the principal part of the performance took place. GIPSA is proposing to add § 201.210(b)(2)(ii), which makes clear that requiring a trial, arbitration, or other means of dispute resolution to be held in a location other than the Federal judicial district where a grower or producer performs their contractual obligations is unfair and a violation of § 202(a) of the P&S Act. Due to differences in resources between the live poultry dealer, swine contractor or packer and the poultry grower, swine production contract grower or livestock producer, the growers and producers are at a disadvantage if required to travel great distances to resolve disputes. This conduct has the potential to impact a single grower or producer or a small group of growers or producers without harming competition. This proposed regulation interprets and implements a statutory requirement that does not include a harm to competition component.

Under proposed §§ 201.210(b)(2)(iii) and (iv), GIPSA considers any conduct or action that contractually limits a livestock producer's, swine production contract grower's, or poultry grower's right to pursue all damages available under applicable law, or right to seek an award of attorney fees, if such an award is available, under applicable law, respectively, as unfair, unjustly discriminatory, or deceptive in violation

of section 202(a) of the P&S Act. Livestock producers, swine production contract growers, and poultry growers commonly have little or no opportunity to negotiate the terms of their contracts with packers, swine contractors, and live poultry dealers. The livestock producers, swine production contract growers, and poultry growers are offered a contract and are typically expected to accept the terms as offered. If the livestock producer, swine production contract grower, or poultry grower has assumed considerable debt to finance their farming operation, the producer or grower may feel they have no choice but to accept the terms as offered. GIPSA believes that it is unfair, unjustly discriminatory or deceptive to limit a producer or grower from recovering damages that would otherwise be available, but for the limitations in the contract.

Proposed §§ 201.210(b)(3) through (7) identify the failure to act in compliance or in accordance with other specified regulations as conduct or action that is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act. Section 201.210(b)(3) clarifies that failing to comply with the requirements of § 201.100 is unfair, unjustly discriminatory or deceptive in violation of section 202(a) of the P&S Act. Regulation § 201.100 specifies certain information and notices that must be provided to poultry growers. The live poultry dealer has control over most, if not all, of the information relevant to the grower's operations. This information is critical to the grower in operating his or her business and places the grower at a great disadvantage without this information. The 2008 Farm Bill directed GIPSA to, among other things, promulgate regulations establishing criteria the Secretary will consider in determining: (1) Whether a live poultry dealer has provided reasonable notice to poultry growers of any suspension of the delivery of birds under a poultry growing arrangement; (2) when a requirement of additional capital investments over the life of a poultry growing arrangement or swine production contract constitutes a violation of the P&S Act; (3) whether a live poultry dealer or swine production contractor has provided a reasonable period of time for a poultry grower or a swine production contract grower to remedy a breach of their arrangement or contract that could lead to the termination of the poultry growing arrangement or swine production contact; and (4) whether the arbitration process provided in a contract provides a grower or producer a meaningful opportunity to participate fully in the arbitration process. As directed by the 2008 Farm Bill, GIPSA published the regulations establishing the criteria in a final rule on December 9, 2011 [76 FR 76874]. The regulations are codified in 9 CFR part 201 as 9 CFR 201.215,[1] 201.216, 201.217 and 201.218, respectively. These criteria, when applied, allow the Secretary to determine whether certain conduct has occurred, specifically whether reasonable notice of suspension of delivery of birds has been given (201.215), whether requiring additional capital investments violates the Act (201.216), whether a reasonable period of time has been given to remedy a breach of contract (201.217), and whether the grower or producer is given the option to decline arbitration and provided a meaningful opportunity to participate in the arbitration process if they so choose (201.218). After applying the criteria in each of these four (4) regulations, the Secretary could determine that a violation of the P&S Act has occurred. This proposed regulation makes clear that such violations are considered unfair, unjustly discriminatory or deceptive in violation of section 202(a) of the P&S Act.

Existing regulations under the P&S Act govern the weighing of livestock, poultry, and feed (§§ 201.55, 201.71, 201.72, 201.73, 201.73–1, 201.76, 201.82, 201.99, 201.108–1). The regulations at § 201.71 also address the proper use of carcass merit evaluation systems and devices. Packers, swine contractors, and live poultry dealers use sophisticated scales and electronic devices to determine weight and quality characteristics of live animals and carcasses. The weights and quality measurements are used in formulas that determine payment to livestock producers and poultry growers. Failure to properly use these devices can affect producer and grower payment. GIPSA has always considered inaccurate weighing and the use of inaccurate scales to be unfair conduct. This proposed rule sets forth GIPSA's position on these practices as unfair, unjustly discriminatory or deceptive in violation of section 202(a) of the P&S Act.

The regulations regarding the weighing of livestock, poultry, and feed require that packers, swine contractors, and live poultry dealers properly install, maintain, inspect, and operate scales to ensure livestock producers, swine production contract growers, and poultry growers are paid on accurate weights. Inaccurate weighing and inaccurate scales can have a significant impact on a poultry grower or livestock producer. Even slight inaccuracies can result in large financial losses when applied over an entire flock or large number of livestock. GIPSA considers, and now proposes for clarification, the failure to accurately weigh poultry and livestock to be a violation of section 202(a) of the P&S Act.

In 2014, GIPSA incorporated by reference applicable requirements of the 2013 edition of the National Institute of Standards and Technology (NIST) Handbook 44. The referenced requirements include standards for livestock, meat, and poultry evaluation systems and/or devices. These standards reference specifications established by the American Society for Testing Materials (ASTM) International. By incorporating the standards in Handbook 44, GIPSA requires regulated entities to comply with the standards. Misuse of these systems and devices or use of inaccurate devices can cause significant harm to a single producer or group of producers without necessarily harming competition. GIPSA considers such harm to producers unfair, unjustly discriminatory or deceptive in violation of section 202(a) of the P&S Act. GIPSA is therefore proposing to add, as a final example of an unfair practice that violates section 202(a) of the P&S Act that does not require a showing of harm or likely harm to competition, a failure to ensure accurate evaluation systems or devices at § 201.210(b)(9).

The specific conduct listed in this proposed rule violates section 202(a) of the P&S Act regardless of whether the conduct or action harms or is likely to harm competition. This list does not imply that conduct that harms competition or is likely to harm competition would not also violate the P&S Act. To make this clear, GIPSA is proposing to add § 201.210(c), which clarifies that, absent demonstration of a legitimate business justification, any conduct or action that harms or is likely to harm competition is an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device and a violation of section 202(a) of the P&S Act. However, nothing in this provision would apply to mergers and acquisitions by packers, swine contractors, or live poultry dealers.

Section 11006(1) of the 2008 Farm Bill directed GIPSA to amend the

[1] The criteria regarding suspension of delivery of birds § 201.215 included ''(a) Whether a live poultry dealer provides a grower written notice at least 90 days prior to the date it intends to suspend the delivery of birds under a poultry growing arrangement''. This criterion was rescinded effective February 5, 2015 [80 FR 6430].

regulations under the P&S Act to establish criteria that the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the P&S Act. In June 2010, GIPSA published a proposed rule, which included a new regulation addressing this Congressional mandate, § 201.211.

Throughout the history of the P&S Act, an ''undue or unreasonable preference or advantage'' has been determined according to the facts of each case within the purposes of the P&S Act. In proposed § 201.211, GIPSA proposed the following three (3) criteria the Secretary could consider to determine if an undue or unreasonable preference or advantage, or an undue or unreasonable prejudice or disadvantage, had occurred in violation of the P&S Act: (1) Whether contract terms based on number, volume or other condition, or contracts with price determined in whole or in part by the volume of livestock sold are made available to all poultry growers, livestock producers or swine production contract growers who individually or collectively meet the conditions set by the contract; (2) whether price premiums based on standards for product quality, time of delivery and production methods are offered in a manner that does not discriminate against a producer or group of producers that can meet the same standards; and (3) whether information regarding acquiring, handling, processing, and quality of livestock is disclosed to all producers when it is disclosed to one or more producers.

Many commenters supported proposed § 201.211 and specifically the criterion related to contract terms based on number, volume or other conditions. These commenters saw this section as a way to address potential disadvantages to small and medium-scale producers.

GIPSA received several comments expressing concerns regarding the practicality of the proposed criteria on contract distribution by the packer, swine contractor, or live poultry dealer to all livestock producers, swine production contract growers, or live poultry dealers. Some commenters also expressed a concern with the ambiguity and lack of clarity in certain criteria.

Many commenters expressed concerns that the proposed criterion related to price premiums and related types of contracts would have the unintended consequence of either directly or indirectly eliminating alternative marketing arrangements (AMA) Livestock producers use AMAs to market their livestock to a packer at least 14 days prior to slaughter under a verbal or written agreement. Many commenters opined that the proposed regulations would increase the potential for litigation thereby jeopardizing the continued use of these arrangements. The rapid growth of value-added segments of the livestock industry (*e.g.,* breed certifications, source verification, and production method certification) has benefitted many producers and supported consumer demand. GIPSA did not intend to limit the use of AMAs. Commenters also expressed concern about privacy issues in disclosing information regarding acquiring, handling, processing, and quality of livestock to all producers as discussed in proposed § 201.211(c). In response to the comments, GIPSA has revised proposed § 201.211. We do not intend for the current proposed provisions to affect value-added production and premiums, but commenters are encouraged to explain any concerns about how the proposed text will affect value-added production and how we might alter our rule to correct that.

In this new proposed rule, GIPSA would add new § 201.211, ''*Undue or unreasonable preferences or advantages,*'' which is consistent with Congress' instruction to the Secretary in the 2008 Farm Bill. The proposed regulation identifies five criteria the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the P&S Act. This list is not exhaustive and other criteria may be considered depending on the circumstances of a particular situation.

In response to concerns raised in comments received in 2010 about ambiguity and clarity, GIPSA deleted the criterion regarding contract terms based on number, volume, or other conditions. The originally proposed criteria related to price premiums and disclosing information have also been deleted. Additionally, we propose to add criteria addressing types of conduct considered to be favorable toward some producers and growers as compared to others.

Under proposed § 201.211(a), the Secretary will consider whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to others similarly situated who have engaged in lawful communication, association, or assertion of their rights. Producers and growers are entitled to exercise their rights of speech and association, such as forming or joining a contract growers' union, without fear of experiencing disparate treatment. Packers, swine contractors or live poultry dealers who treat some producers and growers more favorably than producers or growers who choose to exercise their rights are giving an undue preference or advantage to a group of producers or growers to the detriment of others. GIPSA believes this conduct violates section 202(b) of the P&S Act and is proposing this regulation to clarify its position.

Under proposed § 201.211(b), the Secretary will consider whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to others similarly situated who the packer, swine contractor, or live poultry dealer contend have taken an action or engaged in conduct that violates any applicable law, rule or regulation related to the livestock or poultry operation without a reasonable basis to determine that the livestock producer, swine production contract grower, or poultry grower committed the violation. GIPSA has become aware of situations in which a packer, swine contractor, or live poultry dealer has terminated a contract with a producer or grower based on an allegation that some law or regulation was violated. For example, a live poultry dealer might terminate a poultry grower's contract on the basis that the live poultry dealer believes the poultry grower violated some aspect of the Clean Water Act. Unless there is some reasonable basis for such a determination, such as a finding by a government agency charged with enforcing the Clean Water Act, GIPSA believes treating growers differently under these circumstances would violate the prohibition of section 202(b) against giving undue preferences or advantages to some producers and growers as compared to other producers and growers.

Under proposed § 201.211(c), the Secretary will consider whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to others similarly situated for an arbitrary reason unrelated to the livestock or poultry operation. This is necessary to prevent disparate treatment for any reason unrelated to the sale or production of livestock or poultry. If the packer, swine contractor, or live poultry dealer demonstrates a legitimate business reason for the action, the action would not violate section 202(b) of the P&S Act.

Under proposed § 201.211(d), the Secretary will consider whether a packer, swine contractor, or live poultry

dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to others similarly situated on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status. Disparate treatment due to any of these bases could constitute a violation of one or more person's civil rights. GIPSA considers conduct that treats some producers or growers more favorably than others or to the detriment of a producer or grower because of the producer's or grower's status as a member of a class to be prohibited conduct in violation of section 202(b) of the P&S Act.

Finally under proposed § 201.211(e), the Secretary will consider whether the packer, swine contractor, or live poultry dealer has demonstrated a legitimate business justification for conduct or action that may otherwise constitute an undue or unreasonable preference or advantage. A packer, swine contractor, or live poultry dealer may have a legitimate business reason for treating some livestock producers, swine production contract growers, or poultry growers more favorably. In evaluating the criteria proposed above, the Secretary will also consider the proffered justification for the conduct in determining whether the packer swine contractor, or live poultry dealer has violated section 202(b) of the P&S Act.

Required Impact Analyses

Executive Order 12866 and Regulatory Flexibility Act

This rulemaking has been determined to be significant for the purposes of Executive Order 12866 and, therefore, has been reviewed by the Office of Management and Budget. GIPSA is proposing to make two changes to the regulations. The first will help to clarify the types of conduct considered unfair, unjustly discriminatory, or deceptive in violation of § 202(a) of the P&S Act. The second provides criteria, in response to requirements of the 2008 Farm Bill, to consider in determining whether a packer, swine contractor, or live poultry dealer has engaged in conduct resulting in an undue preference or advantage to one or more livestock producers or poultry growers in violation of § 202(b) of the P&S Act. As a required part of the regulatory process, GIPSA prepared an economic analysis of proposed §§ 201.210 and 201.211. The first section of the analysis is an introduction and a discussion of the prevalence of contracting in the cattle, hog, and poultry industries as well as a discussion of potential market failures. Next, GIPSA discusses three regulatory alternatives it considered and presents a summary cost-benefit analysis of each alternative. GIPSA then discusses the impact on small businesses.

Introduction

GIPSA issued a proposed rule on June 22, 2010, which included §§ 201.3, 201.210, and 201.211. GIPSA has revised the 2010 versions of §§ 201.210 and 201.211 and is now proposing new §§ 201.210 and 201.211 and issuing § 201.3(a) as an interim final rule. Section 201.3(a) states that certain conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition. Section 201.3(a) formalizes GIPSA's longstanding position that, in some cases, violations of sections 202(a) and 202(b) can be proven without demonstrating harm or likely harm to competition. Section 201.210, among other things, provides clarity to the industry regarding the conduct or action, absent demonstration of a legitimate business justification, that constitutes an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) regardless of harm to competition. Section 201.211 provides clarity to the industry regarding the conduct or action that constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) by establishing criteria that the Secretary will consider in making such a determination. GIPSA believes the proposed regulations will serve to strengthen the protection afforded the nation's livestock producers and growers while promoting fairness and equity among industry segments.

Proposed § 201.210(a) specifies that any conduct or action by a packer, swine contractor, or live poultry dealer that is explicitly deemed to be an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device by the P&S Act is a per se violation of section 202(a). Section 201.210(b) provides examples of conduct or action that, absent demonstration of a legitimate business justification, are ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' and a violation of section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Section 201.210(c) specifies that any conduct or action that harms or is likely to harm competition is an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device and a violation of section 202(a). Many of the examples provided in § 201.210(b) relate to conduct or action that limits, by contract, the legal rights and remedies afforded by law to poultry growers, swine production contract growers, and livestock producers. Other examples include conduct or action that could be violations of section 202(a) of the P&S Act upon application and consideration of criteria contained within other specified regulations.

As required by the 2008 Farm Bill, proposed § 201.211 specifies criteria the Secretary will consider when determining whether an undue or unreasonable preference or advantage has occurred in violation of section 202(b). The first four (4) criteria require the Secretary to consider whether one or more livestock producers, swine production contract growers, or poultry growers is treated more favorably as compared to other similarly situated livestock producers, swine contract growers, or poultry growers. The fifth criterion in § 201.211 requires the Secretary to consider whether the packer, swine contractor, or live poultry dealer has demonstrated a legitimate business justification for conduct or action that may otherwise be an undue or unreasonable preference or advantage.

Sections 201.210 and 201.211 focus heavily on contracts between livestock producers and packers, swine production contract growers and swine contractors, and poultry growers and live poultry dealers. A discussion of contracting in these industries is, therefore, useful in explaining the need for these additional regulations.

Prevalence of Contracting in Cattle, Hog, and Poultry Industries

Contracting is an important and prevalent feature in the production and marketing of livestock and poultry. Several provisions in §§ 201.210 and 201.211 affect livestock and poultry grown or marketed under contract. For example, under § 201.210(b)(2), absent demonstration of a legitimate business justification, GIPSA considers conduct or action by packers, swine contractors, or live poultry dealers that limit or attempt to limit, by contract, the legal rights and remedies of livestock producers, swine production contract growers, or poultry growers as unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Section 201.211 establishes criteria the Secretary will consider in determining whether conduct or action by a packer, swine contractor, or live poultry dealer

constitutes an undue or unreasonable preference or advantage and a violation of section 202(b).

The type of contracting varies among cattle, hogs, and poultry. Broilers, the largest segment of poultry, are almost exclusively grown under production contracts, in which the live poultry dealers own the birds and provide poultry growers with feed and medication to raise and care for the birds until they reach the desired market size. Poultry growers provide the housing, labor, water, electricity, fuel, and provide for waste removal. Cattle production contracts are not subject to the jurisdiction of the P&S Act. Hog production falls between these two extremes. As shown in Table 1 below, over 96 percent of all broilers and over 40 percent of all hogs are grown under contractual arrangements. Similarly, swine contractors typically own the slaughter hogs and sell the finished hogs to pork packers. The swine contractors typically provide feed and medication to the swine production contract growers who own the growing facilities and provide growing services. With the exception of turkey production, the use of contract growing arrangements has remained relatively stable over the last years that the Census of Agriculture has published data on commodities raised and delivered under production contracts as Table 1 shows.

TABLE 1—PERCENTAGE OF POULTRY AND HOG RAISED AND DELIVERED UNDER PRODUCTION CONTRACTS [2]

Species	2002	2007	2012
Broilers	98.0	96.5	96.4
Turkeys	41.7	67.7	68.5
Hogs	42.9	43.3	43.5

Another contract category is marketing contracts, where livestock producers market their livestock to a packer for slaughter under a verbal or written agreement. These are commonly referred to as Alternative Marketing Arrangements (AMA). Pricing mechanisms vary across AMAs. Some AMAs rely on a spot market for at least one aspect of its price, while others involve complicated pricing formulas with premiums and discounts based on carcass merits. The livestock producer and packer agree on a pricing mechanism under AMAs, but usually not on a specific price.

USDA's Agricultural Marketing Service (AMS) reports the number of cattle sold to packers under formula, forward contract, and negotiated pricing mechanisms. The following table illustrates the prevalence of contracting in the marketing of fed cattle. Formula pricing methods and forward contracts are two forms of AMA contracts. Thus, the first two columns in Table 2 are cattle marketed under contract and the third column represents the spot market for fed cattle. The data in Table 2 show that the contracting of cattle has increased since 2005. Approximately 35 percent of fed cattle were marketed under contracts in 2005. By 2015, the percentage of fed cattle marketed to packers under contracts had increased to almost 75 percent.

TABLE 2—PERCENTAGE OF FED CATTLE SOLD BY TYPE OF PURCHASE [3]

Year	Formula	Forward contract	Negotiated
2005	30.4	5.0	64.6
2006	31.5	6.8	61.7
2007	33.2	8.3	58.5
2008	37.4	9.9	52.7
2009	43.7	7.0	49.3
2010	44.9	9.5	45.6
2011	48.4	10.9	40.7
2012	54.7	11.4	33.8
2013	60.0	10.2	29.8
2014	58.1	14.2	27.6
2015	58.2	16.5	25.3

As previously discussed and illustrated in Table 1 above, over 40 percent of hogs are grown under production contracts. These hogs are then sold by swine contractors to packers under marketing contracts. The prevalence of marketing contracts in the sale of finished hogs, which includes production contract and non-production contract hogs, to packers is even more prevalent as shown in the table below.

TABLE 3—PERCENTAGE OF HOGS SOLD BY TYPE OF PURCHASE [4]—Continued

Year	Other marketing arrangements [5]	Formula [6]	Negotiated
2006	44.0	46.4	9.6
2007	44.8	46.5	8.7
2008	43.9	47.6	8.5
2009	42.8	50.4	6.8
2010	45.4	49.4	5.2
2011	47.6	48.2	4.2
2012	47.7	48.6	3.6
2013	48.3	48.4	3.2
2014	45.9	51.4	2.7
2015	46.0	51.4	2.6

Similar to cattle, the percentage of hogs sold under marketing contracts has increased since 2005 to over 97 percent in 2015. The spot market for hogs has declined to 2.6 percent in 2015. As these data demonstrate, almost all hogs are marketed under some type of marketing contract.

Benefits of Contracting in Cattle, Hog, and Poultry Industries

Contracts have many benefits. They help farmers and livestock producers manage price and production risks, elicit the production of products with specific quality attributes by tying prices to those attributes, and facilitate the smooth the flow of commodities to processing plants encouraging more efficient use of farm and processing capacities. Agricultural contracts can also lead to improvements in efficiency throughout the supply chain for products by providing farmers with incentives to deliver products consumers desire and produce products in ways that reduce processing costs and, ultimately, retail prices.

In 2007, RTI International conducted a comprehensive study of marketing practices in the livestock and red meat industries from farmers to retailers (the RTI Study).[7] The RTI Study analyzed the extent of use, price relationships, and costs and benefits of contracting, including AMAs. The RTI Study found that AMAs increased the economic efficiency of the cattle and hog markets and yielded economic benefits to consumers, livestock producers and packers.

The RTI Study found that increased economic efficiencies came from less volatility in volume and more intensive use of production and processing facilities, meaning less capital, labor, and feed per pound of meat produced. Increased economic efficiencies also came from reduced transaction costs and from sending price signals to better match the meat attributes to consumer demand. Consumers benefit from lower meat prices and from getting meat with desired attributes. In turn, the consumer benefits increase livestock demand, which provides benefits to livestock producers.

Structural Issues in the Cattle, Hog, and Poultry Industries

As the above discussion highlights, there are important benefits associated with the use of agriculture contracts in the cattle, hog, and poultry industries. However, if there are large disparities in the bargaining power among contracting parties resulting from size differences between contracting parties or the use of market power by one of the contracting parties, the contracts may have detrimental effects on one of the contracting parties and may result in inefficiencies in the marketplace.

For example, a contract that ties a grower to a single purchaser of a specialized commodity, even if the contract provides for fair compensation to the grower, still leaves the grower subject to default risks should the contractor fail. Another example is a contract that covers a shorter term than the life of the capital (a poultry house, for example). The grower may face the hold-up risk that the contractor may require additional capital investments or may impose lower returns at the time of contract renewal. Hold-up risk is a potential market failure and is discussed in detail in the next section. These risks may be heightened when there are no alternative buyers for the grower to switch to, or when the capital investment is specific to the original buyer.[8] Some growers make substantial long-term capital investments as part of livestock or poultry production contracts, including land, poultry or hog houses, and equipment. Those investments may tie the grower to a single contractor or integrator. Costs associated with default risks and hold-up risks are important to many growers in the industry. The table below shows the number of integrators that broiler growers have in their local areas by percent of total farms and by total production.

TABLE 4—INTEGRATOR CHOICE FOR BROILER GROWERS [9]

Integrators in grower's area [10] (number)	Farms (% of total)	Birds (% of total)	Production (% of total)	Can change to another integrator (% of farms)
1	21.7	23.4	24.5	7

[10] Percentages were determined from the USDA Agricultural Resource Management Survey (ARMS), 2011. ''Respondents were asked the number of integrators in their area. They were also asked if they could change to another integrator if they stopped raising broilers for their current integrator.'' Ibid. p. 30.

TABLE 4—INTEGRATOR CHOICE FOR BROILER GROWERS [9]—Continued

Integrators in grower's area [10] (number)	Farms (% of total)	Birds (% of total)	Production (% of total)	Can change to another integrator (% of farms)
2	30.2	31.9	31.7	52
3	20.4	20.4	19.7	62
4	16.1	14.9	14.8	71
>4	7.8	6.7	6.6	77
No Response	3.8	2.7	2.7	Na

The data in the table show that 52 percent of broiler growers, accounting for 56 percent of total production, report having only one or two integrators in their local areas. This limited integrator choice may accentuate the contract risks. A 2006 survey indicated that growers facing a single integrator received 7 to 8 percent less compensation, on average, than farmers located in areas with 4 or more integrators.[11] If live poultry dealers already possess some market power to force down prices for poultry growing services, some contracts can extend that power by raising the costs of entry for new competitors, or allowing for price discrimination.[12]

Many beef, pork, and poultry processing markets face barriers to entry including; (1) Economies of scale; (2) high asset-specific capital costs with few alternative uses of the capital; (3) brand loyalty of consumers, customer loyalty to the incumbent processors, and high customer switching costs; and (4) governmental food safety, bio-hazard, and environmental regulations. Consistent with these barriers, there has been limited new entry.

However, an area where entry has been successful is in developing and niche markets, such as organic meat and free-range chicken. Developing and niche markets have a relatively small consumer market that is willing to pay higher prices, which supports smaller plant sizes. Niche processors are generally small, however, and do not offer opportunities to many producers or growers.

Economies of scale have resulted in large processing plants in the beef, pork, and poultry processing industries. The barriers to entry discussed above may have limited the entry of new processors, which limits the expansion of choice of processors to which livestock producers market their livestock. Barriers to entry also limit the expansion of choice for poultry growers who have only one or two integrators in their local areas with no potential entrants on the horizon. The limited expansion of choice of processors by livestock producers, swine production contract growers, and poultry growers may limit contract choices and the bargaining power of producers and growers in negotiating contracts.

One indication of potential market power is industry concentration.[13] The following table shows the level of concentration in the livestock and poultry slaughtering industries for 2005–2015.

TABLE 5—FOUR-FIRM CONCENTRATION IN LIVESTOCK AND POULTRY SLAUGHTER [14]

Year	Steers & heifers (%)	Hogs (%)	Broilers (%)	Turkeys (%)
2005	80	64	n.a.	n.a.
2006	81	61	n.a.	n.a.
2007	80	65	57	52
2008	79	65	57	51
2009	86	63	53	58
2010	85	65	51	56
2011	85	64	52	55
2012	85	64	51	53
2013	85	64	54	53
2014	83	62	51	58
2015	85	66	51	57

The table above shows the concentration of the four largest steer and heifer slaughterers has remained relatively stable between 79 and 86 percent since 2005. Hog and broiler slaughter concentration has also remained relatively steady at over 60 percent and 50 percent, respectively.

The data in Table 5 are estimates of national concentration and the size differences discussed below are also at the national level, but the economic markets for livestock and poultry may be regional or local, and concentration in regional or local areas may be higher than national measures. For example, while poultry markets may appear to be the least concentrated in terms of the four-firm concentration ratios presented above, economic markets for poultry growing services are more localized than markets for fed cattle or hogs, and local concentration in poultry markets is greater than in hog and other livestock

[14] The data on cattle and hogs were compiled from USDA's NASS data of federally inspected slaughter plants. Data on broilers and turkeys were compiled from Packers and Stockyards industry annual reports. Both data sources are proprietary.

markets.[15] The data presented earlier in Table 4 highlight this issue by showing the limited ability a poultry grower has to switch to a different integrator. As a result, national concentration may not demonstrate accurately the options poultry growers in a particular region actually face.

Empirical evidence does not show a strong or simple relationship between increases in concentration and increases in market power. Other factors matter, including the ease of entry by new producers into a concentrated industry and the ease with which retail food buyers or agricultural commodity sellers can change their buying or marketing strategies in response to attempts to exploit market power.

For example, in 2009, the Government Accountability Office (GAO) reviewed 33 studies published since 1990 that were relevant for assessing the effect of concentration on commodity or food prices in the beef, pork, or dairy sectors.[16] Most of the studies found no evidence of market power, or found that the efficiency gains from concentration were larger than the market power effects. Efficiency gains would be larger if increased concentration led to reduced processing costs (likely to occur if there are scale economies [17] in processing), and if the reduced costs led to a larger effect on prices than the opposing impact of fewer firms. For example, with respect to beef processing, the GAO report concluded that concentration in the beef processing sector has been, overall, beneficial because the efficiency effects dominated the market power effects, thereby reducing farm-to-wholesale beef margins.

Several studies reviewed by the GAO did find evidence of market power in the retail sector, in that food prices exceeded competitive levels or that commodity prices fell below competitive levels. However, the GAO study also concluded that it was not clear whether market power was caused by concentration or some other factor. In interviews with experts, the GAO report concluded that increases in concentration may raise greater concerns in the future about the potential for market power and the manipulation of commodity or food prices.

Another factor GIPSA considered in proposing §§ 201.210 and 201.211 is the contrast in size and scale between livestock producers, swine production contract growers, and poultry growers and the packers, swine contractors, and live poultry dealers they supply. The disparity in size between large oligopsonistic buyers and atomistic sellers may lead to market power and asymmetric information. The 2012 Census of Agriculture reported 740,978 cattle and calf farms with 69.76 million head of cattle for an average of 94 head per operation. Ninety-one percent of these were family or individually-owned operations.[18] The largest one percent of cattle farms sold about 51 percent of the cattle sold by all cattle farms.

There were 33,880 cattle feeding operations in 2012 that sold 25.47 million head of fed cattle for an average of 752 head per feedlot. The 607 largest feedlots sold about 75 percent of the fed cattle, and averaged 32,111 head sold. About 80 percent of feedlots were family or individually owned.[19] As Table 5 shows, the four largest cattle packers processed about 85 percent, 25.47 million head, for an average of 5.41 million head per cattle packer. This means the average top four cattle packers had 57,574 times the volume of the average cattle farm, and 1,054 times the volume of the largest one percent of cattle farms. It also means the average top four cattle packers had 7,197 times the volume of the average feedlot, and 169 times the volume of the very largest feedlots.

The USDA, National Agricultural Statistics Service 2012 livestock slaughter summary reported that in 2012, 113.16 million head of hogs were commercially slaughtered in the United States.[20] Table 5 shows that the top four hog packers processed about 64 percent of those hogs, which comes to an average of about 18.1 million head of hogs per top four packer. The 2012 Census of Agriculture reported 55,882 farms with hog and pig sales.[21] About 83 percent of the farms were family or individually owned. Of the 55,882 farms with hog and pig sales, 47,336 farms were independent growers raising hogs and pigs for themselves (sold an average of 1,931 head), 8,031 were swine production contract growers raising hogs and pigs for someone else (an average of 10,970 head per swine production contract grower), and 515 were swine contractors (sold an average of 38,058 head per swine contractor).[22]

The National Chicken Council states that in 2016, approximately 35 companies were involved in the business of raising, processing, and marketing chicken on a vertically integrated basis, while about 25,000 family farmers had production contracts with those companies.[23] That comes to about 714 family-growers per company. Collectively, the family-growers produced about 95 percent of the nearly 9 billion broilers produced in the United States in 2015. The other 5 percent were grown on company-owned farms. That means the average family-grower produced about 342,000 broilers. As Table 5 shows, the four largest poultry companies in the United States accounted for 51 percent of the broilers processed. That means the average volume processed by the four largest poultry companies was about 1.15 billion head, which was 3,357 times the average family grower's volume.

As the above discussion highlights, there are large size differences between livestock producers and meat packers. There are also large size differences between poultry growers and the live poultry dealers which they supply. These size differences may contribute to unequal bargaining power due to monopsony market power or oligopsony market power, or asymmetric information. The result is that the contracts bargained between the parties may have detrimental effects on livestock producers, swine production contract growers, and poultry growers due to the structural issues discussed above and may result in inefficiencies in the marketplace.

Hold-Up as a Potential Market Failure

Integrators demand investment in fixed assets from the growers. One example is specific types of poultry houses and equipment the integrator may require the grower to utilize in their growing operations. These investments may improve efficiency by more than the cost of installation. Typically, the improved efficiency would accrue to both the integrator and the grower. The integrator has lower feed costs, and the grower performs better relative to other poultry growers in a settlement group. If the grower bears the entire cost of installation, then the grower should be further compensated for the feed conversion gains that accrue to the integrator. The

[23] *http://www.nationalchickencouncil.org/about-the-industry/statistics/broiler-chicken-industry-key-facts/.*

risk is that after the assets are installed, the cost to the grower is ''sunk.'' This means that if the integrator reneges on paying compensation for the additional capital investments, and insists on maintaining the lower price, the grower will accept that lower price rather than receive nothing. This allows the integrator to get the benefit of efficiency gains, at no expense to them, with the grower bearing all of the cost. This reneging is termed ''hold-up'' in the economic literature.[24]

Hold-up can have two consequences that result in a misallocation of resources. If the growers do not anticipate hold-up, then growers will spend too much on investments because the integrator who demands them is not incurring any cost. That is inefficient. If the grower does anticipate hold-up, they will act as if the integrator were going to renege even when they were not, resulting in too little investment and loss of potential efficiency gains.

Hold-up can be resolved with increased competition. If an integrator developed a reputation for reneging, and growers could go elsewhere, the initial integrator would be punished and disincentivized from reneging in the future. Unfortunately, in practice, many growers do not have the option of going elsewhere.

Data shown above in Table 4 indicate that there are few integrators in these markets, and that growers have limited choice. Table 5, above, indicates the level of concentration in the livestock and poultry slaughtering industries and shows that integrators and livestock packers operate in concentrated markets.

This rule would allow growers to file complaints against integrators that renege, giving some of the incentive benefit of competition, without compromising the efficiency of having a few large processors.

Contracting, Industry Structure, and Market Failure: Summary of the Need for Regulation

There are benefits of contracting in the livestock and poultry industries, as well as structural issues that may result in unequal bargaining power and market failures. These structural issues and market failures will be mitigated by relieving plaintiffs from the requirement to demonstrate competitive injury. Because proving competitive injury is difficult and costly, removing that burden will facilitate the use of litigation by producers and growers to address violations of the Packers and Stockyards Act. If growers are able to seek legal remedies, then their contracts are easier to enforce. This will incentivize packers, swine contractors, and integrators to avoid exploitation of market power and asymmetric information, as well as behaviors that result in the market failure of hold-up. The result will be improved efficiency in the livestock and poultry markets.

GIPSA has a clear role to ensure that market failures are mitigated so that livestock and poultry markets remain fair and competitive. Moreover, even assuming that the market organization is efficient from a societal perspective, the disparity in bargaining power between the regulated entities and the producers from whom they purchase may lead to individual cases of unfair, unjustly discriminatory, deceptive, or undue or unreasonable prejudice or disadvantage that result in harm to individual producers but not harm to competition at a market level. Sections 201.210 and 201.211 promote fairness and equity for livestock producers, swine production contract growers, and poultry growers regardless of whether or not harm rises to the level of harm to competition.

Costs of the Regulations Proposed on June 22, 2010

GIPSA issued a proposed rule on June 22, 2010, which included §§ 201.3, 201.210, and 201.211. GIPSA considered thousands of comments before proposing the current versions of §§ 201.210 and 201.211. Many of the provisions that contributed to the costs estimated by the Informa Study and the Elam Study are not in the current proposed regulations. The following provisions were in the 2010 rule, but are not in the currently proposed regulations.

- Requirement that packers, live poultry dealers, and swine contractors maintain records justifying differences in prices (§ 201.210(a)(5)).
- Provision prohibiting packers from purchasing livestock from other packers (§ 201.212(c)).
- Requirement that packers offer the same terms to groups of small producers as offered to large producers when the group can collectively meet the same quantity commitments (§ 201.211(a)).
- Requirement that packers refrain from entering into exclusive agreements with livestock dealers (§ 201.212(b)).
- Requirements that packers and live poultry dealers submit sample contracts to GIPSA for posting to the public (§ 201.213).

Additionally, GIPSA adjusted the rule proposed in 2010 to give live poultry dealers more flexibility in suspending the delivery of birds and requiring capital improvements and those adjustments are reflected in current §§ 201.215 and 201.216, respectively, which were finalized in 2011 and modified in 2015. Although many thousands of the comments submitted contained general qualitative assessments of either the costs or benefits of the proposed rule, only two comments systematically described quantitative costs across the rule provisions. Comments from the National Meat Association (NMA) included cost estimates by Informa Economics (the Informa Study). The Informa Study projected costs of $880 million, $401 million, and $362 million for U.S. cattle and beef, hogs and pork, and poultry industries respectively.[25] However, these cost estimates were for all of the 2010 proposed changes, many of which do not apply. The Informa Study estimated $133.4 million to be one-time direct costs resulting from rewriting contracts, additional record keeping, etc.[26] In the study, the majority of the costs would be indirect costs. The Informa Study estimated $880.9 million in costs due to efficiency losses and $459.9 million in costs due to reduced demand caused by a reduction in meat quality resulting from fewer AMAs.

Comments from the National Chicken Council included cost estimates prepared by Dr. Thomas E. Elam, President, FarmEcon LLC (the Elam Study).[27] The Elam Study estimated that the entire 2010 rule would cost the chicken industry $84 million in the first year increasing to $337 million in the fifth year, with a total cost of $1.03 billion over the first five years.[28] The Elam Study identified $6 million as one-time administrative costs. The study states that most of the costs would be indirect costs resulting from efficiency losses,[29] while more than half of the costs estimated would be due to a reduced rate of improvement in feed efficiency. Again, these cost estimates were for all of the 2010 proposed changes, many of which do not apply.

Estimates of the costs in the Informa Study and the Elam Study were largely due to projections that packers, swine contractors, and live poultry dealers would alter business practices in

[24] See for example, Benjamin Klein, Robert G. Crawford, and Armen A. Alchian, ''Vertical Integration, Appropriable Rents, and the Competitive Contracting Process,'' *The Journal of Law and Economics* 21, no 2 (Oct., 1978): 297–326.

[26] Ibid. Page 53

[27] See Elam, Dr. Thomas E. ''Proposed GIPSA Rules Relating to the Chicken Industry: Economic Impact.'' FarmEcon LLC, 2010.

[28] Ibid. Page 24

[29] Ibid. Page 24

reaction to the proposed rule. For example, the Informa Study projected that packers would reduce the number and types of AMAs to avoid potential litigation,[30] and the Elam Study expected live poultry dealers to evaluate each load of feed delivered to growers to avoid litigation.[31]

The studies relied on interviews that queried the willingness of packers, swine contractors, or live poultry dealers to alter their business practices. The estimates, based on interviews, may overstate costs because the packers, swine contractors, live poultry dealers, and other stakeholders would face adjustment costs from the rule proposed in 2010 and had incentives to respond that they would discontinue current practices.

There also may have been some confusion concerning GIPSA's administrative enforcement authority. The Informa Study indicated that 75 percent of the costs of the rule proposed in 2010, were directly related to proposed § 201.3(c) enabling a finding of a violation of sections 202(a) or (b) of the P&S Act without a finding of harm or likely harm to competition.[32] However, with respect to packers buying livestock for the purpose of slaughter, proposed § 201.3(c) would not cause a change with respect to GIPSA's enforcement activities. For several decades, GIPSA has brought administrative enforcement actions against packers for violations of the regulations under the P&S Act without demonstrating harm or likely harm to competition. It is only in the poultry industry that, with the exception of timely payment to growers (section 410), GIPSA does not have the authority to bring administrative enforcement actions. Though GIPSA has administratively enforced section 202(a) and/or 202(b) violations in the livestock industry without demonstrating harm or likely harm to competition, some federal courts have held that it is necessary to demonstrate harm or likely harm to competition in some livestock cases and in many poultry cases.

Given the changes made in response to comments, GIPSA does not expect that either new proposed § 201.210 or new proposed § 201.211 will cause packers to reduce their use of AMAs.

Cost-Benefit Analysis of Proposed §§ 201.210 and 201.211

Regulatory Alternatives Considered

Executive Order 12866 requires an assessment of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation and an explanation of why the planned regulatory action is preferable to the identified potential alternatives.[33] GIPSA considered three regulatory alternatives. The first alternative that GIPSA considered was to maintain the status quo and not propose the regulations. The second alternative that GIPSA considered was revising the versions of §§ 201.210 and 201.211 that were published in 2010 and proposing new versions. This is GIPSA's preferred alternative as will be explained below. The third alternative that GIPSA considered was proposing new versions of §§ 201.210 and 201.211, but instituting a phased implementation of the proposed regulations. Under this alternative, proposed §§ 201.210 and 201.211 would only take effect when a written or verbal livestock marketing, swine growing, or poultry growing contract expires, is replaced, or is modified. The costs and benefits of these alternatives are discussed in order below.

Regulatory Alternative 1: Status Quo

If §§ 201.210 and 201.211 are never finalized, there are no marginal costs and marginal benefits as industry participants will not alter their conduct. This alternative would not address the 2008 Farm Bill requirement to promulgate regulations establishing criteria the Secretary would consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the P&S Act, nor would it connect the criteria established in 2011 to a violation of the P&S Act. From a cost standpoint, this alternative costs the least as compared to the other two alternatives. This alternative also has no marginal benefits. Since there are no changes from the status quo under this regulatory alternative, it will serve as the baseline against which to measure the other two alternatives.

Regulatory Alternative 2: The Preferred Alternative

A. Cost Estimation of the Preferred Alternative

GIPSA believes that the costs of §§ 201.210 and 201.211 will mostly consist of the costs of reviewing and re-writing marketing and production contracts to ensure that packers, swine contractors, and live poultry dealers are not engaging in conduct or action that is unfair, unjustly discriminatory, or deceptive or that in any way gives an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower or subjects any livestock producer, swine production contract grower, or poultry grower to an undue or unreasonable prejudice or disadvantage.

Sections 201.210 and 201.211 do not impose any new requirements and mainly serve as guidance for compliance with sections 202(a) and 202(b). GIPSA does not expect the proposed regulations will result in a decrease in the use of AMAs or other incentive payment systems, or decreased efficiencies in the cattle, hog, and poultry industries. The only indirect costs that GIPSA anticipates are the effects of the increase in administrative costs on supply and demand and the resulting quantity and price impacts on the retail markets for beef, pork, and chicken and the related input markets for cattle, hogs, and broilers.

To estimate costs, GIPSA divided costs into two major categories, direct and indirect costs. GIPSA expects the direct costs to be comprised of administrative costs. Administrative costs for regulated entities include items such as review of marketing and production contracts, additional record keeping, and all other associated administrative office work to demonstrate that they are not engaging in conduct or action that is unfair, unjustly discriminatory, or deceptive or that in any way gives an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower or subjects any livestock producer, swine production contract grower, or poultry grower to an undue or unreasonable prejudice or disadvantage.

Indirect costs include costs caused by changes in supply and/or demand in the markets for beef, pork, and chicken and the related input markets for cattle, hogs, and poultry resulting from the proposed rule.

1. Direct Costs—Administrative Costs of the Preferred Alternative

To estimate administrative costs of the proposed rule, GIPSA relied on its experience reviewing contracts and other business records commonly maintained in the livestock and poultry industries for compliance with the P&S Act and regulations. GIPSA has data on the number of production contracts between swine production contract growers and swine contractors and poultry growers and live poultry dealers. GIPSA estimated the number of

[30] Informa, page 30.

[31] Elam, page 18.

[32] Informa, page 71.

[33] See section 6(a)(3)(C) of Executive Order 12866.

marketing contracts between producers and packers based on the number of feedlots and the percentage of livestock procured under AMAs. GIPSA then multiplied the hourly estimates of the administrative functions of reviewing and revising contracts by the average annual wages to arrive at the total estimated administrative costs for implementation of §§ 201.210 and 201.211. Since packers, swine contractors, and live poultry dealers have to review their contracts to ensure that they are not engaging in conduct or action that is unfair, unjustly discriminatory, or deceptive or that in any way gives an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower or subjects any livestock producer, swine production contract grower, or poultry grower to an undue or unreasonable prejudice or disadvantage, GIPSA estimates that the regulated entities will only review the contract once and split the contract review time between the two regulations.

Based on GIPSA's experience, it developed time estimates for the number of hours for attorneys and company managers to review and revise marketing and production contracts and for staff to make changes, copy, and obtain signed copies of the contracts. For poultry contracts, GIPSA estimates that each unique contract type would require 12 hours of attorney time to review and rewrite a contract, 20 hours of company management time, and for each individual contract, 4 hours of administrative time, and 6.5 hours of additional record keeping time. GIPSA estimates that each of the 133 live poultry dealers who report to GIPSA rely on 10 unique contract types on average. For cattle marketing contracts, GIPSA estimates that each contract would require 4 hours of attorney time to review and rewrite a contract, 4 hours of company management time, 2 hours of administrative time, and 8 hours of additional record keeping time. For hog production and marketing contracts, GIPSA estimates that each contract would require 2 hours of attorney time to review and rewrite a contract, 2 hours of company management time, 1 hour of administrative time, and 6.5 hours of additional record keeping time.

GIPSA multiplied estimated hours to conduct these administrative tasks by the average hourly wages for managers at $58/hour, attorneys at $83/hour, and administrative assistants at $34/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics to arrive at its estimate of contract review costs for regulated entities.[34]

GIPSA recognizes that contract review costs will also be borne by livestock producers, swine production contract growers, and poultry growers. GIPSA estimates that each livestock producer, swine production contract grower, and poultry grower will spend two hours of time reviewing a contract and will spend two hours of their attorney's time to review the contract. GIPSA multiplied two hours of livestock producer, swine production contract grower, and poultry grower time and two hours of attorney time to conduct the marketing and production contract review by the average hourly wages for attorneys at $83/hour and managers at $58/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics to arrive at its estimate of contract review costs for livestock producers, swine contract growers, and poultry growers. GIPSA then applied this cost to the estimated 2,355 cattle marketing contracts, 1,290 hog marketing contracts, 8,031 hog production contracts, and 21,925 poultry growing contracts that have been reported to GIPSA.

After determining the administrative costs to both the regulated entities and those they contract with, GIPSA then added the administrative costs of the regulated entities and the livestock producers, swine production contract growers, and poultry growers together and subsequently split them in half to arrive at the first-year total estimated administrative costs attributable to each of the two regulations. A summary of the first-year total estimated administrative costs for implementation of §§ 201.210 and 201.211 appear in the following table:

TABLE 6—FIRST-YEAR ADMINISTRATIVE COSTS OF §§ 201.210 AND 201.211

[Indirect costs include costs caused by:]

Regulation	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
201.210	1.39	3.81	8.40	13.60
201.211	1.39	3.81	8.40	13.60
Total	2.79	7.61	16.79	27.19

The first-year total administrative costs are $27.19 million and are the same for §§ 201.210 and 201.211 for cattle, hogs, and poultry because packers, swine contractors, live poultry dealers, livestock producers, swine production contract growers, and poultry growers must conduct the same administrative functions of contract review and record keeping in response to both regulations. The administrative costs are the highest for poultry, followed by hogs and cattle. This is due to the greater prevalence of contract growing arrangements in the poultry industry.

2. Direct Costs—Litigation Costs of the Preferred Alternative

Interim final regulation 201.3(a) will be in effect when §§ 201.210 and 201.211 become effective. GIPSA expects that § 201.3(a) will result in additional litigation as this rule states that certain conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without harm or likely harm to competition in all cases. Section 201.3(a) formalizes GIPSA's longstanding position that, in some cases, violations of sections 202(a) and 202(b) can be proven without demonstrating harm or likely harm to competition in all cases. Section 201.210 provides clarity to the industry regarding the conduct or action, absent demonstration of a legitimate business justification that constitutes an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) regardless of harm to competition. Section 201.211 provides

[34] All salary costs are based on mean annual 2015 salary adjusted for benefit costs, set to an hourly basis. *http://www.bls.gov/oes/*. Accessed on August 26, 2016.

clarity to the industry regarding the conduct or action that constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) by establishing criteria that the Secretary will consider in making such a determination.

Regulation 201.3(a) is broad in nature. Sections 201.210 and 201.211 provide additional clarity. Thus, GIPSA considers the additional litigation under § 201.3(a) to be the baseline litigation costs for §§ 201.210 and 201.211 and that the litigation costs for § 201.3(a) already include the litigation costs of §§ 201.210 and 201.211. Since those litigation costs have already been counted under § 201.3(a), GIPSA does not allocate any additional litigation costs to §§ 201.210 and 201.211. For the purposes of this RIA, the marginal litigation costs of §§ 201.210 and 201.210 are zero.

3. Total Direct Costs of the Preferred Alternative

The total first-year direct costs of §§ 201.210 and 201.211 are the sum of administrative and litigation costs from above and are summarized in the following table.

TABLE 7—DIRECT COSTS OF §§ 201.210 AND 201.211

Cost Type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
Admin Costs	2.79	7.61	16.79	27.19
Litigation Costs	0.00	0.00	0.00	0.00
Total Direct Costs	2.79	7.61	16.79	27.19

GIPSA estimates that the total direct costs of proposed §§ 201.210 and 201.211 to be $27.19 million. As the above table shows, the costs are highest for the poultry industry, followed by hogs and cattle. The primary reason is the high utilization of growing contracts and the estimated higher administrative costs in the poultry industry.

4. Indirect Costs of the Preferred Option

As previously discussed, GIPSA does not expect that proposed §§ 201.210 and 201.211 will result in a decreased use of AMAs, use of grower ranking systems or other incentive pay, reduced capital formation, or decreased efficiencies in the meat and poultry industries because the regulations simply clarify conduct and action that are unfair, unjustly discriminatory, and deceptive and a violation of section 202(a) and clarify the conduct or action that constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) by establishing criteria the Secretary will consider in making such a determination. The only indirect costs that GIPSA expects are the effects of the increase in total industry costs from the administrative costs on supply and demand, and the resulting quantity and price impacts of the retail markets for beef, pork, and poultry, and the related input markets for cattle, hogs, and poultry.

GIPSA modeled the impact of the increase in total industry costs resulting from the direct costs of implementing §§ 201.210 and 201.211 in a Marketing Margins Model (MMM) framework.[35] The MMM allows for the estimation of changes in consumer and producer surplus and the quantification of deadweight loss or gain caused by changes in supply and demand in the retail markets for beef, pork, and poultry and the input markets for cattle, hogs, and poultry.

GIPSA modeled the increases in industry costs resulting from higher direct costs as an inward (or upward) shift in the supply curves for beef, pork, and poultry. This has the effect of increasing the equilibrium prices and reducing the equilibrium quantity traded. This also has the effect of reducing the derived demand for cattle, hogs, and poultry, which causes a reduction in the equilibrium prices and quantity traded. Economic theory suggests that these shifts in the supply curves and derived demand curves and the resulting price and quantity impacts will result in a reduction in social welfare through a deadweight loss.

To estimate the output and input supply and demand curves for the MMM, GIPSA constructed linear supply and demand curves around equilibrium price and quantity points using price elasticities of supply and demand from the GIPSA Livestock Meat and Marketing Study and from USDA's Economic Research Service.[36]

GIPSA then shifted the supply curves for beef, pork, and chicken up by the amount of the increase in total cost for each industry and calculated the new equilibrium prices and quantities. GIPSA calculated the new equilibrium prices and quantities in the input markets resulting from the decreases in derived demand. GIPSA also calculated the resulting social welfare changes in the input and output markets for each industry.

The calculation of the price impacts from the increases in industry costs from §§ 201.210 and 201.211 resulted in price increases of approximately one-hundredth of a cent or less in retail prices for beef, pork, and poultry. This is because the increase in total industry costs is very small in relation to overall industry costs.[37] The result is that the resulting deadweight losses from the increases in total industry costs are indistinguishable from zero and, therefore, GIPSA concludes that the indirect costs of §§ 201.210 and 201.211 for each industry are zero.

5. Total Costs of the Preferred Alternative

GIPSA added all direct costs to the indirect costs (equal to zero), to arrive at the estimated total first-year costs of §§ 201.210 and 201.211. The total first-year costs are summarized in the following table.

[35] The framework is explained in detail in Tomek, W.G. and K.L. Robinson ''*Agricultural Product Prices,*'' third edition, 1990, Cornell University Press.

[36] RTI International ''GIPSA Livestock Meat and Marketing Study'' prepared for Grain Inspection, Packers and Stockyards Administration, 2007.

ERS Price Elasticities: *http://www.ers.usda.gov/data-products/commodity-and-food-elasticities/demand-elasticities-from-literature.aspx*.

[37] The $27.19 million increase in total industry costs from §§ 201.210 and 201.211 is only 0.02 percent of total industry costs of approximately $178 billion for the beef, pork, and poultry industries.

TABLE 8—TOTAL COSTS OF §§ 201.210 AND 201.211

Cost type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
Admin Costs	2.79	7.61	16.79	27.19
Litigation Costs	0.00	0.00	0.00	0.00
Total Direct Costs	2.79	7.61	16.79	27.19
Total Indirect Costs	0.00	0.00	0.00	0.00
Total Costs	2.79	7.61	16.79	27.19

GIPSA estimates that the total costs of §§ 201.210 and 201.211 will be $27.19 million in the first year of implementation.

6. Ten-Year Total Costs of the Preferred Option

To arrive at the estimated ten-year costs of §§ 201.210 and 201.211, GIPSA expects the costs of the regulations to be constant for the first five years while courts are setting precedents for the interpretation of the regulations. GIPSA expects that case law with respect to the regulations will be settled after five years and by then, industry participants will know how GIPSA will enforce the regulations and how courts will interpret the regulations. Once courts establish precedents in case law, GIPSA expects the direct administrative costs of reviewing and revising contracts to decrease rapidly as contracts will already contain any language modifications necessitated by implementation of the regulations.

To arrive at the estimated ten-year costs of §§ 201.210 and 201.211, GIPSA estimates that in the first five years, 20 percent of all contracts will either expire and need to be renewed each year or new marketing and production contracts will be put in place each year. As discussed above, GIPSA expects the costs of reviewing and revising contracts will remain constant in the first five years. However, the overall costs will be lower because the direct administrative costs of reviewing and revising contracts will only apply to the 20 percent of expiring contracts or new contracts. GIPSA estimates that in the second five years, the direct administrative costs of reviewing and revising contracts will decrease by 50 percent per year as the courts establish precedents and contracts already contain any language modifications necessitated by implementation of the regulations.

The total ten-year costs of the regulations appear in the table below.

TABLE 9—TEN-YEAR TOTAL COSTS OF §§ 201.210 AND 201.211

Year	Total direct ($ millions)
2018[38]	27.19
2019	5.44
2020	5.44
2021	5.44
2022	5.44
2023	2.72
2024	1.36
2025	0.68
2026	0.34
2027	0.17
Totals	54.21

Based on the analysis, GIPSA expects the ten-year total costs of §§ 201.210 and 201.211 will be $54.21 million.

7. Net Present Value of Ten-Year Total Costs of the Preferred Alternative

The total costs of §§ 201.210 and 201.211 in the table above show that the costs are highest in the first year, decline to a constant lower level over the next four years, and then gradually decrease again over the subsequent five years. Costs to be incurred in the future are less expensive than the same costs to be incurred today. This is because the money that will be used to pay the costs in the future can be invested today and earn interest until the time period in which the cost is incurred.

To account for the time value of money, the costs of the regulations to be incurred in the future are discounted back to today's dollars using a discount rate. The sum of all costs discounted back to the present is called the net present value (NPV) of total costs. GIPSA relied on both a three percent and seven percent discount rate as discussed in Circular A–4.[39] GIPSA measured all costs using constant dollars.

GIPSA calculated the NPV of the ten-year total costs of the regulations using both a three percent and seven percent discount rate and the NPVs appear in the following table.

TABLE 10—NPV OF TEN-YEAR TOTAL COSTS OF §§ 201.210 AND 201.211

Discount rate	($ millions)
3 Percent	50.33
7 Percent	45.95

GIPSA expects the NPV of the ten-year total costs of §§ 201.210 and 201.211 will be $50.33 million at a three percent discount rate and $45.95 million at a seven percent discount rate.

8. Annualized Costs of the Preferred Alternative

GIPSA then annualized the NPV of the ten-year total costs (referred to as annualized costs) of §§ 201.210 and 201.211 using both a three percent and seven percent discount rate as required by Circular A–4 and the results appear in the following table.[40]

TABLE 11—ANNUALIZED COSTS OF §§ 201.210 AND 201.211

Discount rate	($ millions)
3 Percent	5.90
7 Percent	6.54

GIPSA expects the annualized costs of §§ 201.210 and 201.211 will be $5.90 million at a three percent discount rate and $6.54 million at a seven percent discount rate.

B. Impacts on Costs of Interim Final § 201.3(a)

Concurrent with proposing §§ 201.210 and 201.211, GIPSA is issuing an interim final version of § 201.3(a). Section 201.3(a) states that conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition. As a stand-alone regulation, § 201.3(a) formalizes GIPSA's longstanding position that, in some cases, violations of sections 202(a) and 202(b) can be proven without

[38] GIPSA uses 2018 as the date for the proposed rule to be in effect for analytical purposes only. The date the proposed rule becomes final is not known.

[39] *https://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf.*

[40] Ibid.

demonstrating harm or likely harm to competition.

In its Regulatory Impact Analysis, GIPSA estimated the annualized costs of § 201.3(a) to range from $6.87 million to $96.01 million at a three percent discount rate and from $7.12 million to $98.60 million at a seven percent discount rate. The range of potential costs is broad and GIPSA relied on its expertise to arrive at a point estimate of expected annualized costs. GIPSA expects the cattle, hog, and poultry industries to primarily take a ''wait and see'' approach to how courts will interpret § 201.3(a) and only slightly adjust its use of AMAs, and incentive or performance-based payment systems. GIPSA estimates that the annualized costs of § 201.3(a) at the point estimate will be $51.44 million at a three percent discount rate and $52.86 million at a seven percent discount rate based on an anticipated ''wait and see'' approach by the cattle, hog, and poultry industries.

GIPSA recognizes that courts, after the implementation of § 201.3(a), may opt to continue to apply earlier precedents of requiring the showing of harm or potential harm to competition in section 202(a) and 202(b) cases. This has the potential to affect the costs of §§ 201.210 and 201.211 should they become finalized. GIPSA expects that even if courts continue to require showing of harm or potential harm to competition in section 202(a) and 202(b) cases, that firms will likely still incur costs of complying with §§ 201.210 and 201.211. Even if regulated entities expect that courts will require showing of a harm to competition for §§ 201.210 and 201.211 violations, the regulated entities may still expect litigation as private parties test the courts application of § 201.3 as it relates to §§ 201.210 and 201.211 violations. To reduce this threat of litigation, regulated entities may still incur the administrative costs detailed above. Should §§ 201.210 and 201.211 become finalized and courts still require a showing of harm or potential harm to competition, regulated entities may still voluntarily undertake the adjustment costs detailed above.

GIPSA expects proposed §§ 201.210 and 201.211 to reduce the costs of implementing § 201.3 by providing more clarity in the appropriate application of sections 202(a) and (b) of the P&S Act. Section 201.210 provides illustrative examples of conduct or action, absent demonstration of a legitimate business justification, that GIPSA considers as unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Section 201.211 provides criteria the Secretary will consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage and a violation of section 202(b).

C. Benefits of the Preferred Alternative

GIPSA was unable to quantify the benefits of §§ 201.210 and 201.211. However, there are qualitative benefits of §§ 201.210 and 201.211 coupled with § 201.3(a) that merit discussion.

An important qualitative benefit of § 201.210 coupled with § 201.3(a) is the increased ability for the enforcement of the P&S Act for violations of 202(a) that do not result in harm or likely harm to competition. An illustrative example is the inaccurate weighing of live poultry grown to a target slaughter weight by a poultry grower under contract for a live poultry dealer. The weight of poultry is used as one factor to determine the payment to growers under most contract growing arrangements. The poultry grower is harmed if the true weight is more than the inaccurate weight used to compensate the poultry grower. The harm to the poultry grower is very small when compared to the entire industry and there is no discernible or provable harm to competition from this one instance. Because there is no discernible or provable harm or likely harm to competition, courts have been reluctant to find a violation of section 202(a) of the P&S Act in such a situation, despite the harm suffered by the individual poultry grower. However, if similar, though unrelated, harm is experienced by a large number of poultry growers, the cumulative effect does result in significant harm to competition. The individual harm is inconsequential to the industry, but the sum total of all individual harm has the potential to be quite significant when compared to the poultry industry. Under proposed § 201.210(b)(8), failing to ensure accurate weights of live poultry, absent a legitimate business justification, will constitute unfair, unjustly discriminatory, or deceptive practices or devices and a violation of section 202(a) of the P&S Act. Whether or not the conduct harms or is likely to harm competition becomes irrelevant.

The sum of all individual harm is likely to increase total industry costs of producing beef, pork, and chicken due to inefficiencies through the production and marketing complex due to an inefficient allocation of resources. The costs of all unfair, unjustly discriminatory, or deceptive practices or devices are reflected in higher costs of producing cattle, hogs, and poultry at the producer/grower level of the industry and of producing beef, pork, and chicken in the packing/wholesale level of the industry, with some portion of these costs passed along to consumers in the form of higher prices.

GIPSA expects proposed §§ 201.210 and 201.211 coupled with interim final § 201.3(a) to increase enforcement actions against packers, swine contractors, and live poultry dealers for violations of sections 202(a) and/or 202(b) when the conduct or action does not harm or is not likely to harm competition. Several appellate courts have disagreed with USDA's interpretation of the P&S Act that harm or likely harm to competition is not necessary in all cases to prove a violation of sections 202(a) or 202(b). In some cases in which the United States was not a party, these courts have concluded that plaintiffs could not prove their claims under sections 202(a) and/or 202(b) without proving harm to competition or likely harm to competition. One reason the courts gave for declining to defer to USDA's interpretation of the statute is that USDA had not previously formalized its interpretation in a regulation. Section 201.3(a) addresses that issue and §§ 201.210 and 201.211 provide further clarity.

GIPSA expects the successful litigation of enforcement actions brought under proposed §§ 201.210 or 201.211 combined with interim final 201.3(a) to deter violations of sections 202(a) and (b). Successful deterrence will result in lower overall costs throughout the entire production and marketing complex of all livestock, poultry, and meat.

Sections 201.210 and 201.211 also contain several provisions that GIPSA expects will improve efficiencies in the regulated markets for cattle, hogs, and poultry and reduce market failures. For regulations to improve efficiencies for market participants and generate benefits for consumers and producers, they must increase the amount of relevant information to market participants, protect private property rights, and foster competition.

Section 201.210(b) will increase the amount of relevant information to market participants by providing notice to all market participants of specific examples of conduct or action that, absent demonstration of a legitimate business justification, are unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of whether the conduct or action harms or is likely to harm competition. Market participants will all know, for example, that absent demonstration of a legitimate business justification, retaliatory conduct and the

limiting, by contract, the legal rights and remedies afforded by law to livestock producers, swine production contract growers, or poultry growers is a violation of § 201.210 and section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Additionally, market participants will all know that absent demonstration of a legitimate business justification, failure to ensure accurate scales and weights, and failing to ensure the accuracy of electronic evaluation systems and devices is a violation of § 201.210 and section 202(a) regardless of whether the conduct or action harms or is likely to harm competition. Ensuring the accuracy of weighing and grading devices serves to increase economic efficiency. Inaccurate weighing and grading reduces economic efficiency by effectively distorting per-unit prices and harms livestock producers, swine production contract growers, and poultry growers, even though the resulting harm may not have an overall effect on competition if the conduct is directed at only one livestock producer, swine production contract grower, or poultry grower.

Similarly, § 201.211 increases the amount of relevant information to market participants and offsets any potential abuse of market power by clearly stating to all contracting parties the criteria that the Secretary will consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage and a violation of 202(b) of the P&S Act.

Both regulations may also serve to reduce the risk of violating sections 202(a) and 202(b) because they provide clarification to the livestock and poultry industries as to the conduct or action that, absent demonstration of a legitimate business justification, is unfair, unjustly discriminatory, or deceptive and violates section 202(a) of the Act regardless of whether the conduct or action harms or is likely to harm competition and the criteria that the Secretary will consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the P&S Act. Less risk through the clarification provided in the regulations will likely foster competitiveness and fairness in contracting and provide protections for livestock producers, swine production contract growers, and poultry growers against unfair, unjustly discriminatory, and deceptive practices and devices and undue or unreasonable preferences or advantages.

Benefits to the livestock and poultry industries and the cattle, hog, and poultry markets also arise from establishing parity of negotiating power between packers, swine contractors, and live poultry dealers and livestock producers, swine production contract growers, and poultry growers by reducing the ability to use market power with the resulting deadweight losses.[41] Establishing parity of negotiating power in contracts promotes fairness and equity and is consistent with GIPSA's mission [t]o protect fair trade practices, financial integrity, and competitive markets for livestock, meats, and poultry.''[42]

D. Cost-Benefit Summary of the Preferred Alternative

GIPSA expects the annualized costs of §§ 201.210 and 201.211 will be $5.90 million at a three percent discount rate and $6.54 million at a seven percent discount rate. GIPSA expects the costs to be highest for the poultry industry due to its extensive use of poultry growing contracts, followed by the hog industry and the cattle industry, respectively.

GIPSA was unable to quantify the benefits of the regulations, but explained numerous qualitative benefits that will protect livestock producers, swine production contract growers, and poultry growers from retaliation, promote fairness and equity in contracting, increase economic efficiencies, and reduce the negative effects of market failures throughout the entire livestock and poultry value chain. The primary benefit of § 201.210 and § 201.211 is the increased ability for the enforcement of the P&S Act for violations of sections 202(a) and (b) that do not result in harm or likely harm to competition. This, in turn, will reduce instances of unfair, unjustly discriminatory, or deceptive practices or devices, unfair advantages and increased efficiencies in the marketplace. This benefit of additional enforcement of the P&S Act will accrue to all segments of the value chain in the production of livestock and poultry, and ultimately to consumers.

Regulatory Alternative 3: Contract Duration—Phased Implementation

GIPSA considered a third regulatory alternative of phased implementation. Under this third alternative, §§ 201.210 and 201.211 would only apply to marketing and production contracts when they expire, are altered, or new contracts are put in place. Consider for example, a poultry growing contract with three years remaining in the contract when the regulations become effective. The provisions of the regulations that apply to contracts would not be applicable to this contract until the contract expires after three years and is either renewed or replaced.

A. Cost Estimation of Phased Implementation

GIPSA estimated the costs of phased implementation by multiplying the costs of §§ 201.210 and 201.211 for the preferred alternative (Table 8) for each year of the first 10 years the regulations would be effective starting in 2018 by the percentage of contracts expiring or altered in the same year. USDA's Economic Research Service Agricultural Resource Management Surveys conducted in 2003 and 2011 provided data about the length of hog and broiler production contracts. GIPSA relied on its knowledge of hog and cattle marketing contracts based on regular reviews of packer procurement practices to estimate contract lengths for hog and cattle marketing contracts. The data on contract length appear in the following table:

TABLE 12—PRODUCTION AND MARKETING CONTRACT DURATIONS

Contract duration	Broilers production[43] (percent)	Hogs production[44] (percent)	Hogs marketing (percent)	Cattle marketing (percent)
Short Term <= 12 months	65.20	40.50	100.00	100.00

[41] Nigel Key and Jim M. MacDonald discuss evidence for the effect of concentration on grower compensation in ''Local Monopsony Power in the Market for Broilers? Evidence from a Farm Survey'' selected paper American Agri. Economics Assn. meeting Orlando, Florida, July 27–29, 2008.

[42] See additional discussion in Steven Y. Wu and James MacDonald (2015) ''Economics of Agricultural Contract Grower Protection Legislation,'' *Choices* 30(3): 1–6.

[43] USDA's Economic Research Service Agricultural Resource Management Survey (ARMS) 2011.

[44] USDA's Economic Research Service Agricultural Resource Management Survey (ARMS) 2003.

TABLE 12—PRODUCTION AND MARKETING CONTRACT DURATIONS—Continued

Contract duration	Broilers production [43] (percent)	Hogs production [44] (percent)	Hogs marketing (percent)	Cattle marketing (percent)
Medium Term 13–60 months	19.20	3.50	0.00	0.00
Long Term > 60 months	15.60	56.00	0.00	0.00

The data in the table show that 65.2 percent of broiler production contracts have a duration of 12 months or less. GIPSA estimates that 100 percent of all hog and cattle marketing contracts expire or are altered every 12 months or less. Even if the contracts do not expire, GIPSA expects changes every year to the base prices, premiums and discounts, lean percentages, etc. of hog and cattle marketing contracts and GIPSA would consider a change to any one of these items in the contract as an alteration to the contract, which would trigger the application of the new regulations.

For the first year of the regulations, GIPSA multiplied the poultry costs of the regulations by 65.20 percent, the percentage of the hog costs attributable to hog production contracts by 40.5 percent, the percentage of the hog costs attributable to hog marketing contracts by 100 percent, and the cattle costs by 100 percent. For years two through five, GIPSA followed the same procedure, but adjusted poultry and hog production costs by the number of contracts that are five years or less. For broilers, 84.4 percent are five years or less in duration and 44 percent of all hog production contracts are five years or less years in duration. For years six through ten, GIPSA applied 100 percent of the preferred alternative costs to reflect full implementation costs.

The following table shows the ten-year total costs for each year of the phased implementation alternative. The ten-year total costs for each year of the preferred alternative (Table 9) are also shown for convenience.

TABLE 13—PHASED IMPLEMENTATION TOTAL COSTS OF §§ 201.210 AND 201.211

Year	Preferred option ($ millions)	Phased implementation ($ millions)
2018	27.19	17.45
2019	5.44	4.18
2020	5.44	4.18
2021	5.44	4.18
2022	5.44	4.18
2023	2.72	2.72
2024	1.36	1.36
2025	0.68	0.68
2026	0.34	0.34
2027	0.17	0.17

TABLE 13—PHASED IMPLEMENTATION TOTAL COSTS OF §§ 201.210 AND 201.211—Continued

Year	Preferred option ($ millions)	Phased implementation ($ millions)
Totals	54.21	39.43

GIPSA estimates that the first-year total costs of §§ 201.210 and 201.211 under the phased implementation alternative will be $17.45 million and the ten-year total costs will be $39.43 million. As the table shows, the costs in the first five years are lower under the phased implementation alternative than under the preferred alternative because the regulations apply to fewer contracts until the time period in which all contracts are phased in.

B. NPV of Ten-Year Total Costs of Phased Implementation

GIPSA calculated the NPV of the ten-year total costs of §§ 201.210 and 201.211 under phased implementation using both a three percent and seven percent discount rate and the NPVs are shown in the following table.

TABLE 14—NPVS OF TEN-YEAR TOTAL COSTS OF §§ 201.210 AND 201.211—PHASED IMPLEMENTATION

Discount rate	($ Millions)
3 Percent	36.33
7 Percent	32.86

GIPSA expects the NPV of the ten-year total costs of §§ 201.210 and 201.211 under the phased implementation option to be $36.33 million at a three percent discount rate and $32.86 million at a seven percent discount rate.

C. Annualized Costs of Phased Implementation

GIPSA then annualized the costs of §§ 201.210 and 201.211 using both a three percent and seven percent discount rate as required by Circular A–4 and the results appear in the following table.

TABLE 15—ANNUALIZED COSTS OF REGULATIONS—PHASED IMPLEMENTATION

Discount rate	($ millions)
3 Percent	4.26
7 Percent	4.68

GIPSA expects the annualized costs of §§ 201.210 and 201.211 under phased implementation will be $4.26 million at a three percent discount rate and $4.68 million at a seven percent discount rate.

D. Benefits of the Phased Implementation Alternative

The benefits of phased implementation are identical to the benefits of the preferred alternative with the exception of when the benefits will be received and the amount of the benefits. Like the costs, the benefits will be received only when contracts expire, are altered, or new contracts are put in place. Moreover, benefits to be received in the future are worth less than benefits received today. The benefits will be received in the same proportion of the total costs and are based on contract durations. The benefits of the phased implementation alternative are less than under the preferred alternative, because the full benefits will not be received until all contracts have expired, been altered, or replaced by new contracts. The full benefits of phased implementation will be received beginning in year six.

E. Cost-Benefit Summary of Phased Implementation

GIPSA expects the annualized costs of §§ 201.210 and 201.211 under phased implementation will be $4.26 million at a three percent discount rate and $4.68 million at a seven percent discount rate. The benefits will be received in the same proportion as total costs and are based on contract durations. The benefits of the phased implementation alternative are less than under the preferred alternative because the full benefits will not be received until all contracts have expired, been altered, or replaced by new contracts.

Cost-Benefit Comparison of Regulatory Alternatives

The status quo alternative has zero marginal costs and benefits as GIPSA does not expect any changes in the livestock and poultry industries. GIPSA compared the annualized costs of the preferred alternative to the annualized costs of the phased implementation alternative by subtracting the annualized costs of the phased implementation alternative from the preferred alternative and the results appear in the following table.

TABLE 16—DIFFERENCE IN ANNUALIZED COSTS OF §§ 201.210 AND 201.211 BETWEEN PREFERRED ALTERNATIVE AND PHASED IMPLEMENTATION ALTERNATIVE

Discount rate	($ millions)
3 Percent	1.64
7 Percent	1.86

The annualized costs of the phased implementation alternative is $1.64 million less expensive using a three percent discount rate and $1.86 million less expensive using a seven percent discount rate. As is the case with costs, the benefits will be highest for the preferred alternative because the full benefits will be received immediately and not when contracts have expired, been altered, or replaced by new contracts as is the case under the phased implementation alternative.

Though the phased implementation alternative would save between $1.64 million and $1.86 million on an annualized basis, this alternative would deny the benefits offered by §§ 201.210 and 201.211 to a substantial percentage of poultry growers and swine production contract growers for five or more years based on the length of their production contracts. As the data in Table 12 show, 15.6 percent of poultry growers and 56 percent of swine production contract growers have contracts with durations exceeding five years. Under the phased implementation alternative, these poultry growers and swine production contract growers would continue to be exposed to the potential market failures discussed above in the section on *Contracting, Industry Structure, and Market Failure: Summary of the Need for Regulation* until an alteration to an existing contract or the entering of a new contract triggered application of §§ 201.210 and 201.211. GIPSA considered all three regulatory alternatives and believes that the preferred alternative is the best alternative as the benefits of the regulations will be captured immediately by all livestock producers, swine production contract growers, and poultry growers, regardless of the length of their production or marketing contracts.

Regulatory Flexibility Analysis of the Preferred Option

The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS).[45] SBA considers broiler and turkey producers and swine contractors, NAICS codes 112320, 112330, and 112210 respectively, to be small businesses if sales are less than $750,000 per year. Live poultry dealers, NAICS 311615, are considered small businesses if they have fewer than 1,250 employees. Cattle and hog packers, NAICS 311611, are defined as small businesses if they have fewer than 1,000 employees.

The Census of Agriculture (Census) indicates there were 558 farms that sold their own hogs and pigs in 2012 and that identified themselves as contractors or integrators. The Census provides the number of head sold from their own operations by size classes for swine contractors, but not the value of sales nor number of head sold from the farms of the contracted production. Thus, to estimate the entity size and average per-entity revenue by the SBA classification, the average value per head for sales of all swine operations is multiplied by production values for firms in the Census size classes for swine contractors. The estimates reveal that although about 65 percent of swine contractors had sales of less than $750,000 in 2012 and would have been classified as small businesses, these small businesses accounted for only 2.8 percent of the hogs produced under production contracts. Additionally, there were 8,031 swine producers in 2012 with swine contracts and about half of these producers would have been classified as small businesses.

GIPSA maintains data on live poultry dealers from the annual reports these firms file with GIPSA. Currently, there are 133 live poultry dealers that would be subject to the proposed regulations. According to U.S. Census data on County Business Patterns, there were 74 poultry slaughter firms that had more than 1,250 employees in 2013. The difference yields approximately 59 poultry slaughterers that have fewer than 1,250 employees and would be considered as small businesses that would be subject to the proposed regulations.

Another factor that is important in determining the economic effect of the regulations is the number of contracts held by a firm. GIPSA records for 2014 indicated there were 21,925 poultry production contracts in effect, of which 13,370, or 61 percent, were held by the largest six poultry slaughterers and 90 percent (19,673) were held by the largest 25 firms. These 25 firms are all in the large business SBA category, whereas the 21,925 poultry growers holding the other end of the contracts are almost all small businesses by SBA's definitions.

Live poultry dealers classified as large businesses are responsible for about 89.7 percent of the poultry contracts. Assuming that small businesses will bear 10.3 percent of the costs, in the first year the regulations are effective, $1.7 [46] million would fall on live poultry dealers classified as small businesses. This amounts to average estimated costs for each small live poultry dealer of $29,200.

As of June 2016, GIPSA records identified 359 beef and pork packers actively purchasing cattle or hogs for slaughter. Many firms slaughtered more than one species of livestock. Of the 359 beef and pork packers, 161 processed both cattle and hogs, 132 processed cattle but not hogs, and 66 processed hogs but not cattle.

GIPSA estimates that small businesses accounted for 19.3 percent of the cattle and 17.8 percent of the hogs slaughtered in 2015. If the costs of implementing §§ 201.210 and 201.211 are proportional to the number of head processed, then in 2018, the first year the regulations would be effective, GIPSA estimates that $538,000 [47] in additional costs would fall on beef packers classified as small businesses. This amounts to estimated costs of $1,900 for each small beef packer.

On average, $188,000 [48] in additional first-year costs would be expected to fall on pork packers classified as small businesses, and $184,000 [49] would fall on swine contractors classified as small businesses. This amounts to average

[45] See: *http://www.sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf.*

[46] Estimated cost to live poultry dealers of $16.79 million × 10.27 percent of firms that are small businesses = $1.7 million.

[47] Estimated cost to beef packers of $2.79 million × 19.3 percent of firms that are small businesses = $538 thousand.

[48] Estimated cost to hogs and pork of $7.61 million × 17.8 percent of slaughter in small businesses × 13.8 percent of costs attributed to packers = $188 thousand.

[49] Estimated cost to hogs and pork of $7.61 million × 2.8 percent of contracted hogs produced by swine contractors that are small businesses × 86.2 percent of costs attributed to contractors = $184 thousand.

estimated costs for each small pork packer of $860, and average estimated costs for each small swine contractor of $506 in the first year the regulations would be effective. To the extent that smaller beef and pork packers rely on AMA purchases less than large packers, the estimates might tend to overstate costs.

Annualized costs discounted at a three percent interest rate would be $117,000 for the cattle industry, $80,500 for the hog industry, and $374,000 for the poultry industry. This amounts to annualized costs of $410 for each beef packer, $190 for each pork packer, $110 for each swine contractor, and $6,300 for each live poultry dealer that is a small business. The total annualized costs for small businesses would be $571,500.

Annualized costs at a seven percent discount rate would be $129,400 for the cattle industry, $89,300 for the hog industry, and $415,000 for the poultry industry. This amounts to annualized costs of $450 for each beef packer, $206 for each pork packer, $122 for each swine contractor, and $7,000 for each live poultry dealer that is a small business. The total annualized costs for small businesses would be $633,800.

The table below lists the estimated additional costs associated with the proposed regulations in the first year. It also lists annualized costs discounted at three percent and seven percent discount rates.

TABLE 17—ESTIMATED COSTS TO SMALL BUSINESSES FROM §§ 201.210 AND 201.211

Estimate type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
First-Year Costs	0.538	0.371	1.725	2.634
10 years Annualized at 3 Percent	0.117	0.081	0.374	0.572
10 years Annualized at 7 Percent	0.129	0.089	0.415	0.634

In considering the impact on small businesses, GIPSA considered the average costs and revenues of each small business impacted by §§ 201.210 and 201.211. The number of small businesses impacted by §§ 201.210 and 201.211, by NAICS code, as well as the per entity, first-year and annualized costs at both the three percent and seven percent discount rates appear in the following table.

TABLE 18—PER ENTITY COSTS TO SMALL BUSINESSES OF §§ 201.210 AND 201.211

NAICS	Number of small business	First year ($)	Annualized Costs—3% ($)	Annualized Costs—7% ($)
112210—Swine Contractor	363	506	110	122
311615—Poultry	59	29,236	6,344	7,035
311611—Cattle	287	1,874	407	451
311611—Hogs	219	856	186	206

The following table compares the average per entity first-year and annualized costs of §§ 201.210 and 201.211 to the average revenue per establishment for all firms in the same NAICS code. The annualized costs are slightly higher at the seven percent rate than at the three percent rate, so only the seven percent rate is shown as it is the higher annualized cost.

TABLE 19—COMPARISON OF PER ENTITY COST TO SMALL BUSINESSES OF §§ 201.210 AND 201.211 TO REVENUES

NAICS	Number of small business	Average first-year cost per entity ($)	Average annualized cost per entity ($)	Average revenue per establishment ($)	First-year cost as percent of revenue	Annualized cost as percent of revenue
112210—Swine Contractor	363	506	122	485,860	0.10	0.03
311615—Poultry	59	29,236	7,035	13,842,548	0.21	0.05
311611—Cattle	287	1,874	451	6,882,205	0.03	0.01
311611—Hogs	219	856	206	6,882,205	0.01	0.00

The revenue figures in the above table come from Census data for live poultry dealers and cattle and hog slaughterers, NAICS codes 311615 and 311611, respectively.[50] As discussed above, the Census provides the number of head sold by size classes for farms that sold their own hogs and pigs in 2012 and that that identified themselves as contractors or integrators, but not the value of sales nor the number of head sold from the farms of the contracted production. Thus, to estimate average revenue per establishment, GIPSA used the estimated average value per head for sales of all swine operations and the production values for firms in the Census size classes for swine contractors.

As the results in Table 19 demonstrate, the costs of §§ 201.210 and 201.211 as a percent of revenue are small as they are less than one percent, with the exception of the upper boundary for swine contractors.[51]

[50] Source: *http://www.census.gov/data/tables/2012/econ/susb/2012-susb-annual.html.* Accessed on November 29, 2016.

[51] There are significant differences in average revenues between swine contractors and cattle, hog, and poultry processors, resulting from the difference in SBA thresholds.

Annualized cost savings of exempting small businesses would be about $570,000 using a three percent discount rate and about $634,000 using a seven percent discount rate.

One purpose of § 201.3(a) is to mitigate the risks of potential market failures or unequal bargaining power to all livestock producers, swine production contract growers, and poultry growers, not just the livestock producers, swine production contract growers, and poultry growers selling or growing livestock and poultry for large packers, swine contractors, and poultry dealers. Exempting small businesses would continue to subject the livestock producers, swine production contract growers, and poultry growers with contractual arrangements with small packers, swine contractors, and live poultry dealers to the contracting risks and potential market failures discussed above. GIPSA believes that the benefits of §§ 201.210 and 201.211 should be captured by all livestock producers, swine production contract growers, and poultry growers.

Based on the above analyses regarding §§ 201.210 and § 201.211, GIPSA certifies that this rule is not expected to have a significant economic impact on a substantial number of small business entities as defined in the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). While confident in this certification, GIPSA acknowledges that individual businesses may have relevant data to supplement our analysis. We would encourage small stakeholders to submit any relevant data during the comment period.

Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. These actions are not intended to have retroactive effect, although in some instances they merely reiterate GIPSA's previous interpretation of the P&S Act. This proposed rule will not pre-empt state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. There are no administrative procedures that must be exhausted prior to any judicial challenge to the provisions of this proposed rule. Nothing in this proposed rule is intended to interfere with a person's right to enforce liability against any person subject to the P&S Act under authority granted in section 308 of the P&S Act.

Executive Order 13175

This proposed rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

GIPSA has assessed the impact of this rule on Indian tribes and determined that this rule does not, to our knowledge, have tribal implications that require tribal consultation under EO 13175. If a tribe requests consultation, GIPSA will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Paperwork Reduction Act

This proposed rule does not contain new or amended information collection requirements subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). It does not involve collection of new or additional information by the federal government.

E-Government Act Compliance

GIPSA is committed to compliance with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects in 9 CFR Part 201

Contracts, Poultry, Livestock, Trade Practices.

For the reasons set forth in the preamble, we propose to amend 9 CFR part 201 as follows:

PART 201—REGULATIONS UNDER THE PACKERS AND STOCKYARDS ACT

■ 1. The authority citation for Part 201 continues to read as follows:

Authority: 7 U.S.C. 181–229c.

■ 2. Section 201.210 is added to read as follows:

§ 201.210 Unfair, unjustly discriminatory, or deceptive practices or devices by packers, swine contractors, or live poultry dealers.

Any packer, swine contractor, or live poultry dealer is prohibited from engaging in conduct or action that constitutes an unfair, unjustly discriminatory, or deceptive practice or device in violation of section 202(a) of the Act. Such conduct or action includes, but is not limited to:

(a) *Per se violation of section 202(a).* Any conduct or action explicitly deemed to be an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device by the Act is a violation of section 202(a) of the Act.

(b) *Violation of section 202(a) regardless of harm to competition.* Absent demonstration of a legitimate business justification, the following is an illustrative list of conduct or action that constitutes an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device and a violation of section 202(a) of the Act regardless of whether the conduct or action harms or is likely to harm competition:

(1) A retaliatory action or the threat of retaliatory action in response to lawful communication, association, or assertion of rights by a livestock producer, swine production contract grower, or poultry grower. A retaliatory action or the threat of retaliatory action against any livestock producer, swine production contract grower, or poultry grower includes, but is not limited to, coercion, intimidation, or unjust discrimination;

(2) Conduct or action that limits or attempts to limit by contract the legal rights and remedies afforded by law of a livestock producer, swine production contract grower, or poultry grower:

(i) The right to a trial by jury except when the livestock producer, swine production contract grower, or poultry grower has agreed to be bound by arbitration provisions in a contract that complies with § 201.218(a) and that provides a meaningful opportunity to participate fully in the arbitration process after applying the criteria in § 201.218(b);

(ii) The right, pursuant to section 209(a) of the Act, to resolve any dispute among the parties to a poultry growing arrangement, or swine production or marketing contract, in the Federal judicial district in which the principal part of the performance took place under the arrangement or contract;

(iii) The right to pursue all damages available under applicable law; or

(iv) The right to seek an award of attorney fees available under applicable law;

(3) Failing to comply with the requirements of § 201.100;

(4) Failing to provide reasonable notice to a poultry grower before suspending the delivery of birds after applying the criteria in § 201.215;

(5) Requiring unreasonable additional capital investments from a poultry grower or swine production contract grower after applying the criteria in § 201.216;

(6) Failing to provide a reasonable period of time to remedy a breach of contract before termination of the contract after applying the criteria in § 201.217;

(7) Failing to provide a meaningful opportunity to participate fully in the arbitration process after applying the criteria in § 201.218;

(8) Failing to ensure accurate scales and weighing of livestock, livestock carcasses, live poultry, or feed for the purposes of purchase, sale, acquisition, payment, or settlement as required by the regulations under the Act; or

(9) Failing to ensure the accuracy of livestock, meat, and poultry electronic evaluation systems and devices for the purposes of purchase, sale, acquisition, payment, or settlement as required by the regulations under the Act.

(c) *Conduct or action that harms competition.* Absent demonstration of a legitimate business justification, any conduct or action that harms or is likely to harm competition is an ''unfair,'' ''unjustly discriminatory,'' or ''deceptive'' practice or device and a violation of section 202(a) of the Act.

■ 3. Section 201.211 is added to read as follows:

§ 201.211 Undue or unreasonable preferences or advantages.

The Secretary will consider the following criteria when determining whether a packer, swine contractor, or live poultry dealer has engaged in conduct or action that constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the Act. These criteria include, but are not limited to:

(a) Whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to one or more similarly situated livestock producers, swine production contract growers, or poultry growers who have engaged in lawful communication, association, or assertion of their rights;

(b) Whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to one or more similarly situated livestock producers, swine production contract growers, or poultry growers who the packer, swine contractor, or live poultry dealer contends have taken an action or engaged in conduct that violates any applicable law, rule, or regulation related to the livestock or poultry operation without a reasonable basis to determine that the livestock producer, swine production contract grower, or poultry grower committed the violation;

(c) Whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to one or more similarly situated livestock producers, swine production contract growers, or poultry growers for an arbitrary reason unrelated to the livestock or poultry operation;

(d) Whether a packer, swine contractor, or live poultry dealer treats one or more livestock producers, swine production contract growers, or poultry growers more favorably as compared to one or more similarly situated livestock producers, swine production contract growers, or poultry growers on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status;

(e) Whether the packer, swine contractor, or live poultry dealer has demonstrated a legitimate business justification for conduct or action that may otherwise constitute an undue or unreasonable preference or advantage; and

(f) Whether the conduct or action by a packer, swine contractor, or live poultry dealer harms or is likely to harm competition.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

[FR Doc. 2016–30430 Filed 12–19–16; 8:45 am]

BILLING CODE 3410–KD–P

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

9 CFR Part 201

RIN 0580–AB26

Poultry Grower Ranking Systems

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Proposed rule.

SUMMARY: The Department of Agriculture's (USDA) Grain Inspection, Packers and Stockyards Administration (GIPSA), Packers and Stockyards Program (P&SP) is proposing to amend the regulations issued under the Packers and Stockyards Act, 1921, as amended and supplemented (P&S Act). The proposed amendments will identify criteria that the Secretary may consider when determining whether a live poultry dealer's use of a poultry grower ranking system for ranking poultry growers for settlement purposes is unfair, unjustly discriminatory, or deceptive or gives an undue or unreasonable preference, advantage, prejudice, or disadvantage. The proposed amendments will also clarify that absent demonstration of a legitimate business justification, failing to use a poultry grower ranking system in a fair manner after applying the identified criteria is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of whether it harms or is likely to harm competition.

DATES: We will consider comments we receive by February 21, 2017.

ADDRESSES: We invite you to submit comments on this proposed rule. You may submit comments by any of the following methods:

- *Mail:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2542A–S, Washington, DC 20250–3613.
- *Hand Delivery or Courier:* M. Irene Omade, GIPSA, USDA, 1400 Independence Avenue SW., Room 2542A–S, Washington, DC 20250–3613.
- *Internet: http://www.regulations.gov*. Follow the on-line instructions for submitting comments.

Instructions: All comments should make reference to the date and page number of this issue of the **Federal Register**. Regulatory analyses and other documents relating to this rulemaking will be available for public inspection in Room 2542A–S, 1400 Independence Avenue SW., Washington, DC 20250–3613 during regular business hours. All comments received will be included in the public docket without change, including any personal information provided. All comments will be available for public inspection in the above office during regular business hours (7 CFR 1.27(b)). Please call the Management and Budget Services staff of GIPSA at (202) 720–8479 to arrange a public inspection of comments or other documents related to this rulemaking.

FOR FURTHER INFORMATION CONTACT: S. Brett Offutt, Director, Litigation and Economic Analysis Division, P&SP, GIPSA, 1400 Independence Ave. SW., Washington, DC 20250–3601, (202) 720–7051, *s.brett.offutt@usda.gov*.

SUPPLEMENTARY INFORMATION:

Background on Prior Rulemaking

GIPSA previously published a notice of proposed rulemaking on June 22, 2010, which included requirements regarding a live poultry dealer's use of a poultry grower ranking system when determining payment for grower services. That proposed rule would have required live poultry dealers paying growers on a tournament system to pay growers raising the same type and kind of poultry the same base pay and further required that growers be settled in groups with other growers with like house types. Upon review of public comments received both in writing and through public meetings held during the comment period in 2010, we have elected not to publish this rule as a final rule, but rather have modified proposed § 201.214 and are publishing it as a proposed rule and requesting further public comment.

Background on Current Rulemaking

The P&S Act (7 U.S.C. 181 *et seq.*) sets forth broad prohibitions on the conduct of entities operating subject to its jurisdiction. For example, section 202(a) of the P&S Act prohibits packers, swine contractors, and live poultry dealers from engaging in any unfair, unjustly discriminatory, or deceptive practices. 7 U.S.C. 192(a). Section 202(b) of the P&S Act prohibits packers, swine contractors, and live poultry dealers from making or giving any undue or unreasonable preference or advantage to any particular person, or subjecting any particular person to any undue or unreasonable prejudice or disadvantage. 7 U.S.C. 192(b). These broad provisions, which have not previously been interpreted in regulations, make enforcement difficult and create uncertainty among industry participants regarding compliance.

GIPSA is proposing these regulations to clarify when certain conduct in the poultry industry related to poultry grower ranking systems violates sections 202(a) or 202(b) of the P&S Act. A poultry grower ranking system, sometimes called a ''tournament,'' is the process used by live poultry dealers to determine final payment to poultry growers upon settlement of each flock. Under a poultry grower ranking system, growers whose flocks are slaughtered during the same settlement week are paid according to a structure that compares growers' feed efficiency and live weight of the grown birds delivered to the plant. Growers with better performance according to a live poultry dealer's standards are ranked higher than growers with lower performance and, therefore, receive more compensation.

Poultry grower ranking systems are widely used by live poultry dealers operating as vertically integrated companies. The vertically integrated company is responsible for every step of the poultry production process except the raising and caring of the live birds meant for slaughter. Independent farmers, acting as contractors and referred to as ''poultry growers,'' perform this function. The vertically integrated live poultry dealer provides the chicks,[1] feed, and medication to poultry growers who house and feed the birds under a contract. The poultry grower grows the birds to market size (preferred weight for slaughter) and then, after slaughter, receives a settlement check for that flock. The payment received depends on how efficiently the poultry grower converted feed to meat as compared to the other poultry growers in the settlement group.

GIPSA has received complaints from poultry growers alleging unfair treatment in poultry grower ranking systems. Many of the underlying factors in these complaints were shared with GIPSA in the comments to the 2010 proposed rule. The 2010 proposed rule (§ 201.214) would have required live poultry dealers paying growers on a tournament system to pay growers raising the same type and kind of poultry the same base pay and further required that growers be settled in groups with other growers with like house types. Comments in favor of the proposed rule most often cited the imbalance in power and control between the poultry companies and the growers. Most common among the reasons for supporting the proposed rule was the control the poultry company has over inputs. Growers have no control over numerous inputs that ultimately determine pay. In particular, the poultry companies control the following inputs and production variables: Chick health, number of chicks placed, feed quality, medications, growout time, breed and type of bird, weighing of the birds, and weighing of the feed. Commenters complained that the poultry grower ranking system is a poor indicator of the grower's abilities and performance in growing chickens. One commenter pointed out that bird age can vary as much as 9 days in a group. Due to the relatively short growing period for poultry, there can be significant differences in bird size, and as a result, grower pay, in birds just a few days apart in age. Comments also expressed concern that company employees who are also poultry growers get preferential treatment and may get better birds or get to keep flocks longer.

Comments opposed to the proposed rule overwhelmingly cited the loss of the incentive for growers to perform. For example, commenters complained that ''there will be no incentive available for above-average growers,'' ''the pay system rewards the ones who strive to do best,'' it ''will take money from the most progressive growers,'' and ''is grossly unfair to the most productive and successful growers, only benefits the least productive and least successful.'' Those opposed to the proposed rule commented that everyone should not be paid the same, that competition is good for the industry, and that those that spend money and expend effort should be rewarded. Some commenters stated there will not be enough like houses to group together for ranking purposes.

A few commenters offered recommendations. Specifically, they suggested ''same type and kind'' of poultry should be defined as same breed, age range, sex, and target weight. Also, they suggested that the base pay rate should reflect grower's cost of production plus a reasonable rate of return. Other commenters suggested that GIPSA should clarify that incentive pay would still be allowed under the proposed rule. In GIPSA's experience reviewing live poultry dealer records, some poultry companies use the base pay as the minimum pay rate, so implementing the provision regarding base pay would not be difficult. Several comments said that ''like house type'' was poorly defined. Depending on the interpretation, there could be many different categories of like house types in which case, there could be very few growers in a given settlement group.

Commenters critical of the poultry grower ranking system focused on the live poultry dealer's control over the inputs. Inputs and other factors influencing performance and pay are not equal among growers. Commenters noted that variations in chicks, feed, and medications have a significant influence on the poultry grower's performance, but the grower has no control or influence over the quality of those inputs. As an example, one comment stated that male chickens have higher average weight gain than female chickens. Therefore, if one grower gets a higher percentage of male chickens than other growers, that grower could

[1] Poultry grower ranking systems are used extensively in broiler production. The ranking systems are also used in turkey production. References in this document to chicks, chickens, or broilers are also relevant to the use of grower ranking systems in turkey production.

have an advantage in the ranking system over growers who receive all or a higher percentage of female chickens. The breed of the poultry is also a factor. Growers who receive a breed that does not perform as well, due to the characteristics of that breed, are disadvantaged compared to growers who receive a better-performing breed. Another factor noted by commenters was the age of the breeder flock and that chicks from breeder hens that are very young or very old are known to be inferior to chicks from hens that are of prime egg-laying age. Commenters stated that poultry growers who get all or a higher percentage of chicks from very old or very young breeder hens are at a disadvantage compared to growers who receive chicks from hens in the prime weeks of laying good eggs. Citing these examples, commenters pointed out the ways live poultry dealers could give preferential treatment to some growers by delivering superior chicks to their farms.

Other comments focused on the quantity and quality of feed. One poultry grower commented about the effect on rankings when the live poultry dealer assumes that the grower receives more feed than the live poultry dealer actually delivered. The grower explained that a 200 pound under-delivery of feed in a system where production costs are averaged to ten-thousandths of a cent, would affect the rankings and cause the grower to be paid less than other growers in the settlement group. Another grower commented that he had received a delivery of bad feed that made the chickens sick. Although the live poultry dealer replaced the bad or spoiled feed, the damage had been done and the grower's flock ranked at the bottom of the poultry grower ranking for that settlement group. These commenters were expressing their frustration with the poultry grower ranking system that relied on inputs over which they had no control.

Recognizing that not all inputs are the same, in proposed new § 201.214, GIPSA is not proposing that all poultry growers receive the same quality inputs, or that growers only be ranked in settlement groups where all growers receive the same quality inputs. In each settlement group, it is very likely that the live poultry dealer will place chicks on some farms that are inferior to other chicks simply due to the variation in the birds. Likewise, feed quality or the delivery quantity may vary.

Unlike the proposed rule published in 2010 regarding poultry grower ranking systems, this proposed rule would not prohibit or prescribe certain conduct, nor would it prescribe specific payment to be made to growers. Instead, after consideration of the comments received, we are proposing a rule that encourages better sharing of information with growers and fairness in areas under a live poultry dealer's control. Proposed new § 201.214 sets forth criteria that the Secretary may consider to determine whether live poultry dealers have used the poultry grower ranking system in a manner that violates sections 202(a) or (b) of the P&S Act.

Proposed new § 201.214, ''Poultry Grower Ranking Systems'' would establish a non-exhaustive list of criteria the Secretary may consider when determining whether a live poultry dealer has violated the P&S Act with respect to the use of a poultry grower ranking system. Under proposed § 201.214(a), the Secretary may consider whether the grower is provided enough information to make informed decisions regarding the grower's poultry production operation. Such information would include the anticipated number of flocks per year and the average gross income from each flock. Because most growers borrow substantial sums of money to build and upgrade houses to meet the live poultry dealer's specifications, a grower would want a contract of sufficient length and with sufficient poultry production to repay the loan. For that reason, it is important for the poultry grower to know the anticipated average gross income from each flock in order to plan accordingly for future earnings and investments. Live poultry dealers should disclose information necessary to enable the grower to make informed decisions.

Under proposed § 201.214(b), the Secretary may consider whether a live poultry dealer supplies inputs (*e.g.,* birds, feed, and medication) of comparable quality and quantity to all poultry growers in the ranking group. When considering the inputs provided by the live poultry dealer to the poultry grower and the growout specifications established for the poultry grower, GIPSA does not require uniformity, but rather fairness among the growers in a settlement group. Growers are not paid based solely on their individual performance, but as compared to other growers in a settlement group. When a grower received inputs of either superior or inferior quality as compared to the inputs provided to other growers, that grower may be at either an advantage or disadvantage when flocks are settled depending on the quality of the inputs received. Under proposed § 201.214(b), the Secretary may also consider whether there is a pattern of supplying inferior inputs (*e.g.,* birds, feed, and medication) to one or more poultry growers in the ranking group. With regards to supplying inferior birds, as discussed above, lower quality chicks may result from very young or very old breeder hens, from a poultry breed that does not perform as well as other breeds in the growout, or for other reasons. If a poultry grower consistently receives lower quality or inferior chicks, the grower will experience higher mortality rates and lower efficiency. The grower will rank lower in the settlement group and receive less compensation as compared to the other growers in the settlement group. Similarly, if a poultry grower receives lower quality feed, or if the grower receives less feed than the quantity used to calculate payment, the grower's performance will suffer as compared to other growers in the settlement group. Also, if a grower's flock needs medication, but the live poultry dealer fails to provide the medication, or if one flock is placed on a different treatment schedule, the flock performance may suffer as compared to other flocks in the settlement group. Under proposed § 201.214(c), the Secretary may consider additional company-controlled factors that could affect a grower's performance in a settlement group.

Proposed § 201.214(d) provides that the Secretary may consider whether the live poultry dealer has demonstrated a legitimate business justification for conduct that may otherwise be unfair, unjustly discriminatory, or deceptive, or that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage. A legitimate business justification for certain conduct may be sufficient to find that the conduct does not violate the P&S Act. We request comment on the types of conduct that might be considered for a legitimate business justification, in order to give further context to this provision in the final rule.

Concurrent with the publication of this proposed rule, GIPSA is also proposing another rule in this issue of the **Federal Register** that, among other things, would clarify the conduct or action by packers, swine contractors, or live poultry dealers that GIPSA considers unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act. Specifically, this proposed rule includes § 201.210, ''Unfair, unjustly discriminatory, or deceptive practices or devices by packers, swine contractors, or live poultry dealers,'' which includes in paragraph (b) a non-exhaustive list of conduct or action that, absent

demonstration of a legitimate business justification, GIPSA believes is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act, regardless of whether the conduct harms or is likely to harm competition. Currently, proposed § 201.210(b) contains nine examples. In this rule, GIPSA is proposing to add to proposed § 201.210(b) a tenth example, § 201.210(b)(10) GIPSA also considers a live poultry dealer's failure to use a poultry grower ranking system in a fair manner after applying the criteria in § 201.214 to be an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) of the P&S Act regardless of whether it harms or is likely to harm competition.

IV. Required Impact Analyses

Executive Order 12866 and Regulatory Flexibility Act

This rulemaking has been determined to be significant for the purposes of Executive Order 12866 and, therefore, has been reviewed by the Office of Management and Budget. As a required part of the regulatory process, GIPSA prepared an economic analysis of proposed § 201.214. The first section of the analysis is an introduction and discussion of the prevalence of contracting in the poultry industry as well as a discussion of potential market failures. Next, GIPSA discusses three regulatory alternatives it considered and presents a summary cost-benefit analysis of each alternative. GIPSA then discusses the impact on small businesses.

Introduction

GIPSA issued a proposed rule on June 22, 2010, which included § 201.214. GIPSA has revised the 2010 version of § 201.214 and is now proposing a new § 201.214. The rule GIPSA proposed on June 22, 2010, included several requirements regarding live poultry dealers' use of tournament systems. That section of the proposed rule would have required live poultry dealers paying growers on a tournament system to pay growers raising the same type and kind of poultry the same base compensation and further required that growers be settled in groups with other growers with like house types. The rule also prohibited live poultry dealers from offering poultry growing arrangements containing provisions that decrease or reduce grower compensation below the base compensation amount.

Upon review of public comments received both in writing and through public meetings held during the comment period in 2010, GIPSA elected not to publish this rule as a final rule and has removed the requirements and prohibitions in the rule proposed on June 22, 2010.

GIPSA has re-written § 201.214 and is proposing this regulation to establish criteria the Secretary may consider in determining whether a live poultry dealer has used a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.[2] Coupled with § 201.3(a), which is being published as an interim final rule concurrently in this edition of the **Federal Register** and proposed § 201.210(b)(10), which is discussed below, the criteria clarify whether a live poultry dealer's use of a poultry grower ranking system violates sections 202(a) and/or 202(b) of the P&S Act.

Interim Final § 201.3(a) states that certain conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition in all cases. Proposed § 201.210(b)(10) would add to proposed § 201.210(b), which is published as part of a separate proposed rule in this edition of the **Federal Register**, another example of conduct or action by a live poultry dealer that absent demonstration of a legitimate business justification, GIPSA considers an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) of the P&S Act regardless of whether the conduct or action harms or is likely to harm competition. Specifically, proposed § 201.210(b)(10) would clarify that absent demonstration of a legitimate business justification, GIPSA considers the failure to use a poultry grower ranking system in a fair manner after applying the criteria in proposed § 201.214 to be an unfair, unjustly discriminatory, or deceptive practice or device and a violation of section 202(a) of the P&S Act regardless of whether it harms or is likely to harm competition. Since § 201.210(b)(10) relies on the criteria in § 201.214, the estimated costs and benefits of § 201.210(b)(10) are included in the estimated costs and benefits of § 201.214.

The criteria in proposed § 201.214 would include whether a live poultry dealer has provided sufficient information to enable a poultry grower to make informed business decisions. The criteria would also address whether the inputs, including birds, feed, and medication, provided by live poultry dealers to poultry growers are of consistent quality and quantity. The criteria would recognize the non-uniformity of inputs provided by live poultry dealers to growers and discourage the live poultry dealer from consistently providing superior or inferior inputs to growers in a manner that consistently affects grower compensation. The criteria also would consider whether live poultry dealers have provided poultry growers with dissimilar production variables such as the density at which the live poultry dealer places birds, target bird sizes, and age of birds at slaughter that affects the performance and grower ranking. Finally, the criteria would consider whether a live poultry dealer has demonstrated a legitimate business justification for conduct that may otherwise be unfair, unjustly discriminatory, or deceptive or gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Prevalence of Poultry Contracts and Poultry Grower Ranking Systems

The production of poultry is highly vertically integrated with live poultry dealers owning or controlling most segments of the value chain. Live poultry dealers typically own the breeding stock, the hatcheries, the feedmills, the live birds, and they own and operate the slaughter operations. Live poultry dealers typically contract out the growing operations for their live birds to independent poultry growers. Live poultry dealers who own or control most segments of the value chain and contract out the growing operations of live birds are commonly referred to as integrators.[3]

Broilers are almost exclusively grown under production contracts. In 2012, 96.4% of broilers were grown under contract, while 68.5% of turkeys were grown under production contracts. Under a production contract, the live poultry dealer provides the poultry grower with many inputs including the live chicks, feed, and medications. The poultry grower in turn provides the housing, labor, water, electricity, fuel,

[2] A tournament system is a type of poultry grower ranking system.

[3] For the purposes of this Regulatory Impact Analysis, the terms live poultry dealer and integrator are used interchangeably. P&SP has jurisdiction over live poultry dealers, most of which are also integrators. The only time the Regulatory Impact Analysis will refer to integrators is when another author uses the term integrator as in Table 2.

and provides for waste removal. At the end of the grow-out period, the live poultry dealer typically picks up the birds for slaughter. The payment to the poultry grower for the growing services is often determined by a poultry grower ranking system outlined in the production contract.

Under a typical poultry grower ranking system, all growers who grew birds that were shipped to the same plant in the same week are grouped together for payment purposes. Their cost per pound of live weight is averaged using standard costs for chicks and feed. Live poultry dealers then rank the growers based on cost. Live poultry dealers typically reward growers with lower costs by providing higher compensation for their growing services. Live poultry dealers typically provide less compensation to growers with higher costs.

Contracting is an important and prevalent feature in the production of poultry. The following table shows the share of poultry, by type, produced under contract over the years that the Census of Agriculture has published data on commodities raised and delivered under production contracts.

TABLE 1—PERCENTAGE OF POULTRY RAISED AND DELIVERED UNDER PRODUCTION CONTRACTS [4]

Poultry	2002	2007	2012
Broilers (%)	98.0	96.5	96.4
Turkeys (%)	41.7	67.7	68.5

Benefits of Contracting in Agricultural Production and the Poultry Industry

Agricultural production contracts have many benefits. They help farmers and livestock producers manage price and production risks, elicit the production of products with specific quality attributes by tying prices to those attributes, and facilitate the smooth flow of commodities to processing plants encouraging more efficient use of farm and processing capacities. Agricultural production contracts can also lead to improvements in efficiency throughout the supply chain for products by providing farmers with incentives to deliver products consumers desire and produce products in ways that reduce processing costs and, ultimately, retail prices. Poultry production contracts are a specific type of agricultural production contract that are widely used due to the benefits of growing poultry under production contract arrangements.

There are benefits to both live poultry dealers and poultry growers from entering into agricultural production contracts, referred to as contract poultry growing arrangements [5] in the poultry industry. Contract poultry growing arrangements allow for a sharing of risk between the live poultry dealer and the poultry grower. Contract poultry growing arrangements have provided poultry growers with predictable income and access to financing to invest in more efficient types of houses. More efficient housing may lead to higher compensation under poultry grower ranking systems. Contract poultry growing arrangements have benefited live poultry dealers by shifting the capital expenses of growing poultry to the poultry growers.

The pervasive use of contract poultry growing arrangements has benefited the poultry industry and consumers by increasing the rate of adoption of new technology, increasing feed conversion, and increasing the ability of the industry to respond to changes in consumer demand.[6] The prevalence of contract poultry growing arrangements in the poultry industry is evidence of the benefits to growers, live poultry dealers, and consumers.

Structural Issues in the Poultry Industry

As the above discussion highlights, there are important benefits associated with the use of agriculture contracts in the poultry industry. However, if there are large disparities in the bargaining power among contracting parties resulting from size differences between contracting parties or the use of market power by one of the contracting parties, the contracts may have detrimental effects on one of the contracting parties and may result in inefficiencies in the marketplace.

For example, a contract that ties a grower to a single purchaser of a specialized commodity, even if the contract provides for fair compensation to the grower, still leaves the grower subject to default risks should the contractor fail. Another example is a contract that covers a shorter term than the life of the capital (a poultry house, for example). The grower may face the hold-up risk that the contractor (live poultry dealer) may require additional capital investments or may impose lower returns at the time of contract renewal. Hold-up risk is a potential market failure and is discussed in detail in the next section. These risks may be heightened when there are no alternative buyers for the grower to switch to, or when the capital investment is specific to the original buyer.[7] Some growers make substantial long-term capital investments as part of poultry production contracts, including land, poultry houses, and equipment. Those investments may tie the grower to a single integrator. Costs associated with default risks and hold-up risks are important to many growers in the industry. The table below shows the number of integrators that broiler growers have in their local areas by percent of total farms and by total production.

[4] Agricultural Census, 2007 and 2012. *https://www.agcensus.usda.gov/Publications/2012/Full_Report/Volume_1,_Chapter_1_US/* and *https://www.agcensus.usda.gov/Publications/2007/Full_Report/Volume_1,_Chapter_1_US/*.

[5] Under section 2(a)(9) of the P&S Act, a ''poultry growing arrangement'' is defined as ''any growout contract, marketing agreement, or other arrangement under which a poultry grower raises and cares for live poultry for delivery, in accord with another's instructions, for slaughter.''

TABLE 4—INTEGRATOR CHOICE FOR BROILER GROWERS [8]

Integrators in grower's area [9]	Farms	Birds	Production	Can change to another integrator
Number	Percent of total			Percent of farms
1	21.7	23.4	24.5	7
2	30.2	31.9	31.7	52
3	20.4	20.4	19.7	62
4	16.1	14.9	14.8	71
>4	7.8	6.7	6.6	77
No Response	3.8	2.7	2.7	Na

The data in the table show that 52 percent of broiler growers, accounting for 56 percent of total production, report having only one or two integrators in their local areas. This limited integrator choice may accentuate the contract risks. A 2006 survey indicated that growers facing a single integrator received 7 to 8 percent less compensation, on average, than farmers located in areas with 4 or more integrators.[10] If live poultry dealers already possess some market power to force down prices for poultry growing services, some contracts can extend that power by raising the costs of entry for new competitors, or allowing for price discrimination.[11]

Many poultry processing markets face barriers to entry, including: (1) Economies of scale; (2) high asset-specific capital costs with few alternative uses of the capital; (3) brand loyalty of consumers, customer loyalty to the incumbent processors, and high customer switching costs; and (4) governmental food safety, bio-hazard, and environmental regulations. Consistent with these barriers, there has been limited new entry.

However, an area where entry has been successful is in developing and niche markets, such as organic meat and free-range chicken. Developing and niche markets have a relatively small consumer market that is willing to pay higher prices, which supports smaller plant sizes. Niche processors are generally small, however, and do not offer opportunities to many producers or growers.

Economies of scale have resulted in large processing plants in the poultry processing industry. Barriers to entry limit the expansion of choice for poultry growers who have only one or two integrators in their local areas with no potential entrants on the horizon. The limited expansion of choice of processors by poultry growers may limit contract choices and the bargaining power of growers in negotiating contracts.

One indication of potential market power is industry concentration.[12] The following table shows the level of concentration in the poultry slaughtering industry for 2007–2015.

TABLE 5—FOUR-FIRM CONCENTRATION IN POULTRY SLAUGHTER [13]

Year	Broilers (%)	Turkeys (%)
2007	57	52
2008	57	51
2009	53	58
2010	51	56
2011	52	55
2012	51	53
2013	54	53
2014	51	58
2015	51	57

The table above shows the concentration of the four largest broiler and turkey processors has remained relatively steady at between 50 and 60 percent.

The data in Table 5 are estimates of national concentration and the size differences discussed below are also at the national level, but the economic markets for poultry may be regional or local, and concentration in regional or local areas may be higher than national measures.[14] The data presented earlier in Table 4 highlight this issue by showing the limited ability a poultry grower has to switch to a different integrator. As a result, national concentration may not demonstrate accurately the options poultry growers in a particular region actually face.

Another factor GIPSA considered in proposing § 201.214 is the contrast in size and scale between poultry growers and the live poultry dealers they supply. The disparity in size between large oligopsonistic buyers and atomistic sellers may lead to market power. The National Chicken Council states that in 2016, approximately 35 companies were involved in the business of raising, processing, and marketing chicken on a vertically integrated basis, while about 25,000 family farmers had production contracts with those companies.[15] That comes to about 714 family-growers per company. Collectively, the family-growers produced about 95 percent of the nearly 9 billion broilers produced in the United States in 2015. The other 5 percent were grown on company-owned farms. That means the average family-grower produced about 342,000 broilers. As Table 5 shows, the four largest poultry companies in the United States accounted for 51 percent of the broilers processed. That means the average volume processed by the four largest poultry companies was about 1.15 billion head, which was 3,357 times the average family grower's volume.

As the above discussion highlights, there are large size differences between poultry growers and the live poultry dealers which they supply. These size differences may contribute to unequal

bargaining power due to monopsony market power or oligopsony market power, or asymmetric information. The result is that the contracts bargained between the parties may have detrimental effects on poultry growers due to the structural issues discussed above and may result in inefficiencies in the marketplace.

Hold-Up as a Potential Market Failure

Integrators demand investment in fixed assets from the growers. One example is specific types of poultry houses and equipment the integrator may require the grower to utilize in their growing operations. These investments may improve efficiency by more than the cost of installation. Typically, the improved efficiency would accrue to both the integrator and the grower. The integrator has lower feed costs, and the grower performs better relative to other poultry growers in a settlement group. If the grower bears the entire cost of installation, then the grower should be further compensated for the feed conversion gains that accrue to the integrator. The risk is that after the assets are installed, the cost to the grower is ''sunk.'' This means that if the integrator reneges on paying compensation for the additional capital investments, and insists on maintaining the lower price, the grower will accept that lower price rather than receive nothing. This allows the integrator to get the benefit of efficiency gains, at no expense to them, with the grower bearing all of the cost. This reneging is termed ''hold-up'' in the economic literature.[16]

Hold-up can have two consequences that result in market failures. If the growers do not anticipate hold-up, then growers will spend too much on investments because the integrator who demands them is not incurring any cost. That is inefficient. If the grower does anticipate hold-up, they will act as if the integrator was going to renege even when it was not, resulting in too little investment and loss of potential efficiency gains.

Hold-up can be resolved with increased competition. If an integrator developed a reputation for reneging, and growers could go elsewhere, the initial integrator would be punished and disincentivized from reneging in the future. Unfortunately, in practice, many growers do not have the option of going elsewhere.

[16] See for example, Benjamin Klein, Robert G. Crawford, and Armen A. Alchian, ''Vertical Integration, Appropriable Rents, and the Competitive Contracting Process,'' *The Journal of Law and Economics* 21, no 2 (Oct., 1978): 297–326.

Data shown above in Table 4 indicate that there are few integrators in these markets, and that growers have limited choice. Table 5, above, indicates the level of concentration in the poultry processing industry and shows that integrators operate in concentrated markets.

This rule would allow growers to file complaints against integrators that renege, giving some of the incentive benefit of competition, without compromising the efficiency of having few large processors. In addition to addressing the potential market failure of hold-up, this rule would address inefficiencies due to incomplete and asymmetric information in poultry markets. Poultry growers who lack adequate information on the expected revenue from a growing arrangement may make inefficient investment decisions. For instance, a grower may invest too much money in building new houses or purchasing upgrades relative to what they would choose if they were fully informed about the expected return from those investments. By requiring that growers be provided sufficient information to make informed business decisions, this rule would help mitigate non-optimal investment by growers and improves social welfare.

Contracting, Industry Structure, and Market Failure: Summary of the Need for Regulation

There are benefits of contracting in the poultry industry, as well as structural issues that may result in unequal bargaining power and market failures. These structural issues and market failures would be mitigated by relieving plaintiffs from the requirement to demonstrate competitive injury. For instance, contracting parties can alleviate hold-up problems if they are able to write complete contracts, and are able to litigate to enforce the terms of those contracts when there is an attempt to engage in ex-post hold-up. Because proving competitive injury is difficult and costly, removing that burden facilitate the use of litigation by producers and growers to address violations of the Packers and Stockyards Act. If growers are able to seek legal remedies, then their contracts would be easier to enforce. This will incentivize integrators to avoid exploitation of market power and asymmetric information, as well as behaviors that result in the market failure of hold-up. The result will be improved efficiency in poultry markets. GIPSA has a clear role to ensure that market failures are mitigated so that poultry markets remain fair and competitive. Section 201.214 seeks to fulfill that role by promoting fairness and equity for poultry growers.

Cost-Benefit Analysis of the Proposed Rule

Costs of the Regulations Proposed on June 22, 2010

GIPSA issued a proposed rule on June 22, 2010, with several new regulations, many of which had the potential to impact the poultry industry. A brief summary of the regulations proposed in 2010 follows.

- Proposed § 201.3(c) stated that certain conduct may be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition.
- Proposed § 201.210 would have provided specific examples of conduct that violate section 202(a) regardless of whether the conduct harms or is likely to harm competition.
- Proposed § 201.211 would have provided specific criteria the Secretary may consider when determining whether an undue or unreasonable preference or advantage or an undue or unreasonable prejudice or disadvantage has occurred in violation of section 202(b) of the P&S Act.
- Proposed § 201.213 stated that live poultry dealers obtaining poultry under a poultry growing arrangement must submit a sample copy of each unique contract or agreement to GIPSA for posting on its Web site.
- Proposed § 201.214 would have required live poultry dealers paying growers on a tournament system to pay growers raising the same type and kind of poultry the same base compensation and further required that growers be settled in groups with other growers with like house types. Proposed § 201.214 also would have prohibited live poultry dealers from offering poultry growing arrangements containing provisions that decrease or reduce grower compensation below the base compensation amount.
- Proposed § 201.215 would have provided specific criteria the Secretary may consider when determining whether a poultry grower was provided with reasonable notice prior to suspension of the delivery of birds to a poultry grower.
- Proposed § 201.216 would have set forth specific criteria the Secretary may consider when determining whether a requirement that a poultry grower make additional capital investments constitutes an unfair practice in violation of the P&S Act.
- Proposed § 201.217 would have set forth the conditions under which a poultry grower may be required to make additional capital investments.

• Proposed § 201.218 would have provided specific criteria the Secretary may consider in determining whether a live poultry dealer has provided a poultry grower a reasonable period of time to remedy a breach of contract.

• Proposed § 201.219 would have provided specific criteria the Secretary may consider when determining whether the arbitration process in a contract provides a meaningful opportunity for the poultry grower to participate fully in the arbitration process.

GIPSA considered thousands of comments before proposing the current version of § 201.214. The following provisions were in the 2010 rule, but not in the currently proposed regulation.

• Requirement that live poultry dealers paying poultry growers on a tournament system pay poultry growers raising the same type and kind of poultry the same base compensation, and that poultry growers be settled in groups with other poultry growers with like house types (§ 201.214).

• Prohibition on live poultry dealers from offering growing arrangements containing provisions that decrease or reduce poultry grower compensation below the base compensation amount (§ 201.214(a)).

• Requirement that live poultry dealers submit sample contracts to GIPSA for posting to the public (§ 201.213).

Additionally, GIPSA has adjusted the rule proposed in 2010 to give live poultry dealers more flexibility in suspending the delivery of birds and requiring capital improvements and those adjustments are reflected in current proposed §§ 201.215 and 201.216, respectively.

GIPSA is issuing § 201.3(a) as an interim final rule concurrently in this issue of the **Federal Register**. GIPSA has also revised and is currently proposing new versions of §§ 201.210 and 201.211 concurrently in a separate proposed rule in this issue of the **Federal Register**. In December 2011, GIPSA issued as a final rule §§ 201.215, 201.216, 201.217, and 201.218. Proposed § 201.217, capital investments requirements and prohibitions, was removed, and proposed §§ 201.218 and 201.219 were renumbered as §§ 201.217 and 201.218.

GIPSA has now revised § 201.214 and instead of proscribing certain conduct, new proposed § 201.214 would establish criteria the Secretary may consider in determining whether a live poultry dealer has used a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

GIPSA received numerous comments on the proposed rule in 2010. Although many thousands of the comments submitted contained general qualitative assessments of either the costs or benefits of the proposed rule, only two comments systematically described quantitative costs across the rule's provisions.

Comments from the National Meat Association included cost estimates by Informa Economics (the Informa Study). The Informa Study estimated that the proposed rule would cost the U.S. poultry industry approximately $361.6 million.[17] The Informa Study estimated $26.0 million for the one-time direct costs of rewriting contracts, additional record keeping, etc., $33.4 million for the ongoing direct costs, and $302.2 million for cost increases due to efficiency losses.[18] However, these cost estimates assumed all of the 2010 proposed changes, many of which now do not apply.

The Informa Study recognized that the economic costs of the 2010 proposed rule would take time to materialize. The Informa Study estimated that only the direct, one-time costs would occur shortly after implementation and the more significant impacts, such as declining efficiency, would happen more slowly and would not reach the full impact until years 3 and 4 in the poultry industry after the rule become effective.[19] Thus, the $361.6 million cost estimate by the Informa Study was for when the rule reached its full impact in years 3 and 4. The Informa Study further recognized that companies would find ways to adapt to the provisions of the rule and the impact of the rule would decrease after year 4.[20]

The Informa Study posited that the several elements in the proposed rule would likely alter the integrator-grower relationship in such a way as to slow down the adoption of new technologies that increase efficiency and reduce costs.[21] The Informa Study also posited that the proposed rule would significantly increase the threat of litigation, which would reduce monetary incentives to encourage innovation and investment in new technology by growers. The resulting slowdown in investment in new and upgraded buildings would negatively impact efficiency, measured by feed conversion.

Comments from the National Chicken Council included cost estimates prepared by Dr. Thomas E. Elam, President, FarmEcon LLC (the Elam Study).[22] The Elam Study estimated that the proposed rule would cost the chicken industry $84 million in the first year increasing to $337 million in the fifth year, with a total cost of $1.03 billion over the first five years.[23] The Elam Study identified $6 million as one-time administrative costs. The study states that most of the costs would be indirect costs resulting from efficiency losses,[24] while more than half of the costs estimated would be due to a reduced rate of improvement in feed efficiency due to the proposed rule slowing the pace of innovation in the poultry industry. For litigation costs, the Elam Study concluded that the litigation costs are substantial, but unknown. Again, these cost estimates were for all of the 2010 proposed changes, many of which now do not apply.

Estimates of the costs in the Informa Study and the Elam Study were largely due to business practices that live poultry dealers were projected to alter in reaction to the proposed rule rather than changes in business practices directly imposed by the rule proposed in 2010. For example, the Elam Study expected live poultry dealers to assay (a test to determine the quality of feed) each load of feed delivered to growers to avoid litigation.[25]

GIPSA believes the cost estimates presented in the Informa Study and the Elam Study were overstated. The studies relied on interviews that queried the willingness of live poultry dealers to alter their business practices. The estimates, based on interviews, may overstate costs because the live poultry dealers would face adjustment costs from the rule proposed in 2010 and had incentives to respond that they would discontinue current practices. GIPSA also believes that certain adjustments are unlikely to occur. For example, GIPSA believes it is unlikely that live poultry dealers would take on the costly

task of assaying each load of feed solely to avoid litigation.

Cost-Benefit Analysis of Proposed § 201.214

Regulatory Alternatives Considered

Executive Order 12866 requires an assessment of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation and an explanation of why the planned regulatory action is preferable to the identified potential alternatives.[26] GIPSA considered three regulatory alternatives. The first alternative that GIPSA considered was to maintain the status quo and not propose the rule. The second alternative that GIPSA considered was revising the version of § 201.214 that GIPSA published in 2010 and proposing it as a new rule. This is GIPSA's preferred alternative as will be explained below. The third alternative that GIPSA considered was proposing a new version of § 201.214, but instituting a phased implementation of the proposed rule. Under this alternative, proposed § 201.214 would only take effect when a poultry growing contract expires, is replaced, or modified. The costs and benefits of the alternatives are discussed in order below.

Regulatory Alternative 1: Status Quo

If § 201.214 is never finalized, there are no marginal costs and marginal benefits as industry participants will not alter their conduct. From a cost standpoint, this is the least cost alternative compared to the other two alternatives. This alternative also has no marginal benefits. Since there are no changes from the status quo under this regulatory alternative, it will serve as the baseline against which to measure the other two alternatives.

Regulatory Alternative 2: The Preferred Alternative—Costs of the Proposed Rule

GIPSA expects that the direct costs of proposed § 201.214 would consist of the costs of developing a consistency management system, providing income projections to poultry growers, keeping additional records, and reviewing and re-writing poultry growing contracts to ensure that poultry grower ranking systems are not used in an unfair, unjustly discriminatory, or deceptive manner or in any way that gives an undue or unreasonable preference, advantage, prejudice, or disadvantage.

Based on its expertise regulating the poultry industry over several decades, GIPSA does not expect the proposed rule to result in a decrease in the use of poultry grower ranking systems, lower capital formation, or decreases in efficiencies in the poultry industry. The only indirect costs that GIPSA anticipates are the effects of the increase in industry costs from the direct costs on supply and demand and the resulting quantity and price impacts on the retail market for chicken and the related input market for broilers.

To estimate the costs of the proposed rule, GIPSA divided costs into two major categories, direct and indirect costs. GIPSA expects that direct costs would be comprised of administrative costs. Administrative costs include items such as the following: (1) Providing income projections to growers; (2) development of company-specific consistency management systems (CMSs) to ensure poultry grower ranking systems are not used in an unfair, unjustly discriminatory, or deceptive manner or in any way that gives an undue or unreasonable preference, advantage, prejudice, or disadvantage; (3) additional record keeping; (4) review of written contracts by attorneys and the employees of regulated companies; and (5) all other administrative office work associated with review of contracts.

Indirect costs include costs caused by changes in supply and/or demand resulting from the proposed rule. Indirect costs also include potential efficiency losses due to potential changes in poultry grower ranking systems.

Regulatory Alternative 2: Direct Costs—Administrative Costs

To estimate administrative costs of the proposed rule, GIPSA relied on its experience reviewing the operations and business records of live poultry dealers, poultry growing contracts, and other business records for compliance with the P&S Act and regulations. GIPSA also considered the impact of each criterion contained in § 201.214 on administrative costs.

Under § 201.214(a), the Secretary may consider whether a live poultry dealer has provided sufficient information to a poultry grower to enable the poultry grower to make informed business decisions. Such information should include information necessary to calculate the expected income from the poultry growing arrangement. Current poultry growers who have been compensated for multiple flocks under a poultry grower ranking system may already have sufficient information because they have already established income patterns by participating in the poultry grower ranking system. The criterion in proposed § 201.214(a) would mainly apply to new growers, those growers switching to different live poultry dealers, or to growers considering housing upgrades where this information is not already available to the poultry grower.

In the past, live poultry dealers commonly provided prospective growers with projection sheets that would provide a grower with estimates of the minimum and maximum compensation they could expect under a contract. GIPSA's experience conducting investigations and compliance reviews in the poultry industry has indicated that not all live poultry dealers currently provide projection sheets to poultry growers.

GIPSA expects that it would not be difficult for live poultry dealers to develop and provide projection sheets for each contract type to all current and prospective growers. GIPSA believes that providing projection sheets to growers that contained the minimum, average, and maximum compensation they can expect for the contract type they are considering or under which they are currently growing would be sufficient information to enable the poultry growers to make informed business decisions about their future compensation and whether the compensation is sufficient to warrant increasing capital investments, for example.

Based on GIPSA's experience regulating live poultry dealers and reviewing their records, it developed time estimates for the number of hours for company managers and information technology (IT) staff to develop new projection sheets or review and revise existing sheets for each type of poultry growing contract that contains a poultry grower ranking system on which to base grower compensation. GIPSA estimates that there are 10 individual contract types for each of the 133 live poultry dealers who report to GIPSA. GIPSA also developed time estimates for legal staff to review the projection sheets and for the company to deliver the projection sheets to all current and prospective growers. GIPSA estimates that each projection sheet for each of the 1,330 unique contract types would take eight hours of management and IT time to prepare, and two hours of attorney time to review and rewrite the contract. In addition, it will take 0.2 hours of administrative time to print, and mail the projection sheets and revised contracts for each of the 21,925 individual poultry production contracts of which GIPSA is aware. GIPSA multiplied the estimated hours to conduct these tasks by the average

[26] See Section 6(a)(3)(C) of Executive Order 12866.

hourly wages for managers and IT staff at $58/hour, attorneys at $83/hour, and administrative assistants at $34/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics.[27] GIPSA estimates the development and delivery of projection sheets to cost the poultry industry $0.99 million.

The criterion in § 201.214(b) permits the Secretary to consider whether a live poultry dealer supplies inputs of comparable quality and quantity to all poultry growers in the ranking group and whether there is a pattern or practice of supplying inferior inputs to one or more poultry growers in the ranking group. Inputs include birds, feed, medication, and any other input supplied by the live poultry dealer.

The U.S. Food and Drug Administration (FDA) approves all medication that can be administered to broilers that are grown for human consumption.[28] GIPSA believes that live poultry dealers would not alter medication to such an extent that inferior medicine is consistently supplied to a grower and that this criterion would not be costly to the industry.

GIPSA also believes that feed provided by live poultry dealers would be consistent across a group of growers and that this criterion would not be costly to the industry. Feed is produced by live poultry dealers at a feedmill and the same batch of feed is distributed to growers until more feed is produced and then that feed is distributed. The process of the production and distribution of feed ensures consistency across the group of growers that receive the same batch of feed. Once a batch of feed is produced, live poultry dealers truck it to growers according to established routes and schedules. All growers on the same route should receive feed of similar quality.

The chicks supplied by a live poultry dealer to a poultry grower have the potential to be inconsistent and GIPSA believes that live poultry dealers would have to take action to ensure a poultry grower is not consistently supplied with inferior chicks. The factors that affect chick quality include the age and breed of the breeder stock and the conditions at the hatchery. Hatchery conditions affecting chick quality include, hatching egg quality, time of collection, egg storage temperature and humidity, incubation temperature, incubator carbon dioxide concentration, and chick hatching time in relation to being removed from the incubator.[29]

It is possible that the rotation of chicks being hatched and delivered could result in the same grower(s) receiving inferior chicks on a consistent basis. In order to avoid the possibility of consistent placement of inferior chicks with the same grower, even if unintentional, live poultry dealers would likely respond by designing and implementing a CMS to identify and evenly distribute inferior chicks.

GIPSA expects the same CMS to be used to demonstrate that a poultry grower ranking system is not used in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage. Proposed § 201.214(c) would allow the Secretary to consider whether a live poultry dealer provides poultry growers with dissimilar production variables in the ranking group in a manner that affects a poultry grower's compensation. Production variables include, but are not limited to, the density at which the live poultry dealer places birds, the target slaughter weights of the birds, and bird ages that vary by more than seven days. The live production and broiler management teams must work together to ensure that medication, bird densities, target bird sizes, and the timing of the harvesting of flocks does not consistently affect grower rankings. Each live poultry dealer, whether large or small, would need to design and implement one CMS to cover all of its breeding, hatching, feedmill, and broiler operations. This CMS would ensure that growers are not treated inconsistently and that there is not a pattern or practice of unfair, unjustly discriminatory, or deceptive treatment or undue or unreasonable preference, advantage, prejudice, or disadvantage.

GIPSA relied on its knowledge of the poultry industry to estimate the cost of designing and implementing a CMS that could be used by both large and small live poultry dealers. GIPSA estimates that it would take 640 hours of management and IT staff time to develop a CMS. GIPSA estimates it would take 8 hours per live poultry dealer for its legal team to review the CMS and 96 hours to train the breeding, hatching, and broiler staff how to use the CMS to ensure the uniform distribution of inferior chicks. GIPSA multiplied the estimated hours to conduct these tasks by the average hourly wages for managers and IT staff at $58/hour, attorneys at $83/hour, and administrative assistants at $34/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics.[30] GIPSA estimates that if all 133 live poultry dealers who report operations to GIPSA develop and implement a CMS, the cost would total $5.46 million. This estimate overstates the cost because some of the 133 live poultry dealers do not use a poultry grower ranking system. Rather than risk underestimating the potential cost, GIPSA chose to include all 133 live poultry dealers in the calculations. We have not estimated any capital costs associated with the creation and implementation of a CMS, as we believe that there are none or existing equipment would be used; however, we seek comment on the validity of this assumption and if commenters disagree with it, to provide estimates of the capital costs.

Each live poultry dealer that uses a poultry grower ranking system to calculate grower compensation would need to keep additional records to demonstrate that poultry grower ranking systems are used in a fair manner after applying the criteria in proposed § 201.214. Proposed § 201.214(d) allows the Secretary to consider whether a live poultry dealer has demonstrated a legitimate business justification for use of a poultry grower ranking system in a manner that may otherwise be unfair, unjustly discriminatory, or deceptive or gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Based on GIPSA's knowledge and review of records kept by live poultry dealers, GIPSA believes that the live poultry dealers already keep very detailed records regarding the performance of each grower. The records include all information needed to calculate feed conversion such as weights and quantities of inputs provided, and all other data used to determine grower performance and compensation. Based on GIPSA's experience reviewing these records and the business operations of live poultry dealers, GIPSA estimates that live poultry dealers will spend an additional 8 hours of time preparing records for

[30] All salary costs are based on mean annual 2015 salary adjusted for benefit costs, set to an hourly basis. *http://www.bls.gov/oes/.* Accessed on August 26, 2016.

each poultry contract in order to be able demonstrate that the poultry grower ranking system is used in a fair manner after applying the criteria in proposed § 201.214. GIPSA has data on the number of production contracts between poultry growers and live poultry dealers. GIPSA multiplied 8 hours of time by the average hourly wages of $34/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics [31] and then multiplied this total by the 21,925 individual poultry growing contracts reported to GIPSA by live poultry dealers to arrive at $5.96 million for additional record keeping costs for live poultry dealers. This record keeping estimate includes keeping records to demonstrate legitimate business justifications for proposed § 201.214(d).

Given that proposed § 201.214 is a new regulation, live poultry dealers would need to review the contractual language in their existing contracts with respect to poultry grower ranking systems to ensure that they are used in a fair and non-preferential manner after applying the criteria in proposed § 201.214. GIPSA again relied on its experience and developed time estimates for the number of hours for attorneys and company managers to review and revise verbal and written production contracts and for staff to make changes, copy, and obtain signed copies of the contracts. For poultry growing contracts, GIPSA estimates that each of the 1,330 unique contract types would take 2 hours of attorney time and 2 hours of company management time to review and rewrite, and it would take 2 hours of administrative time to review each of the 21,925 individual poultry production contracts. GIPSA multiplied the estimated hours to conduct these administrative tasks by the average hourly wages for attorneys at $83/hour, managers at $58/hour, and administrative assistants at $34/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics.[32]

GIPSA recognizes that contract review costs would also be borne by poultry growers. GIPSA estimates the each grower would spend 1 hour of time reviewing a contract and would spend 1 hour of their attorney's time to review the contract. GIPSA multiplied 1 hour of grower time and 1 hour of attorney time to conduct the production contract review by the average hourly wages for attorneys at $83/hour and managers at $58/hour. GIPSA then applied this cost to the 21,925 poultry growing contracts that have been reported to GIPSA to arrive at the total contract review costs that would be incurred by poultry growers. GIPSA then added together the contract review costs by live poultry dealers and by poultry growers to arrive at estimated contract review costs of $4.96 million for the poultry industry.

GIPSA then added together all of the estimated types of administrative costs and the estimated first-year total administrative costs appear in the following table:

TABLE 4—FIRST-YEAR ADMINISTRATIVE COSTS OF PROPOSED § 201.214

Administrative cost type	$ millions
Projection Sheet Costs	0.99
Develop Consistency Management System	5.46
Industry Record Keeping	5.96
Contract Review Costs	4.96
Total Industry Administrative Cost	17.37

The first-year total administrative costs would be $17.37 million for the poultry industry. The two largest costs would be industry record keeping and the development of CMSs, followed by record keeping and the costs of developing projection sheets.

A. Regulatory Alternative 2: Direct Costs—Litigation Costs of the Preferred Alternative

Interim final regulation 201.3(a) will already be in effect if and when § 201.214 becomes effective. GIPSA expects that § 201.3(a) will result in additional litigation as this rule states that certain conduct or action can violate sections 202(a) and/or 202(b) of the P&S Act without a harm or likely harm to competition in all cases. Section 201.3(a) formalizes GIPSA's longstanding position that, in some cases, violations of sections 202(a) and 202(b) can be proven without demonstrating harm or likely harm to competition. Section 201.214 provides clarity to the industry by establishing criteria the Secretary may consider in determining whether a live poultry dealer has used a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Regulation 201.3(a) is broad in nature. Section 201.214 simply provides clarity and GIPSA believes that § 201.214 will not lead to litigation above that already expected as a result of § 201.3(a). Thus, GIPSA considers the additional litigation under § 201.3(a) to be the baseline litigation costs for § 201.214 and that the litigation costs for § 201.3(a) already include the litigation costs of § 201.214. Since those litigation costs have already been counted under § 201.3(a), GIPSA does not allocate any additional litigation costs to § 201.214 and for the purposes of this RIA, the marginal litigation costs are zero.

Regulatory Alternative 2: Total Direct Costs of the Preferred Alternative

The total first-year direct costs of proposed § 201.214 would consist of administrative and litigation costs (which are equal to zero) from above and they are summarized in the following table.

TABLE 5—DIRECT COSTS OF PROPOSED § 201.214

Cost type	($ millions)
Admin Costs	17.37
Litigation Costs	0.00
Total Direct Costs	17.37

GIPSA estimates that the direct costs of proposed § 201.214 would be $17.37 million.

Regulatory Alternative 2: Indirect Costs of the Preferred Alternative

As discussed previously, GIPSA does not expect proposed § 201.214 to result in a decrease in the use of poultry grower ranking systems, lower capital formation, or decreases in efficiencies in the poultry industry. The regulation simply establishes the criteria under which the Secretary may determine whether live poultry dealers are using poultry grower ranking systems in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any grower to an undue or unreasonable prejudice or disadvantage.

The only indirect costs that GIPSA anticipates are the effects of the increase in industry costs from the direct administrative costs on supply and demand, and the resulting quantity and price impacts on the retail market for chicken and the related input market for broilers.

GIPSA modeled the impact of the increase in total industry costs resulting from the direct costs of proposed § 201.214 in a Marketing Margins Model

[31] Ibid.

[32] All salary costs are based on mean annual 2015 salary adjusted for benefit costs, set to an hourly basis. *http://www.bls.gov/oes/*. Accessed on August 26, 2016.

(MMM) framework.[33] The MMM allows for the estimation of changes in consumer and producer surplus and the quantification of deadweight loss or gain caused by changes in supply and demand conditions in the retail market for chicken as well as the input market for poultry growing services.

GIPSA modeled the increases in industry costs resulting from higher direct costs as an inward (or upward) shift in the supply curve for chicken. This has the effect of increasing the equilibrium prices and reducing the equilibrium quantity traded. This also has the effect of reducing the derived demand for poultry growing services, which causes a reduction in the equilibrium prices and quantity traded. Established economic theory suggests that these shifts in the supply curve and derived demand curve and the resulting price and quantity impacts will result in a reduction in social welfare through a deadweight loss.

To estimate the output and input supply and demand curves for the MMM, GIPSA constructed linear supply and demand curves around equilibrium price and quantity points using price elasticities of supply and demand from the USDA's Economic Research Service.[34]

GIPSA then shifted the supply curve for chicken up by the amount of the increase in total costs for the poultry industry from Table 5 above. GIPSA calculated the new equilibrium price and quantity traded of chicken. GIPSA also calculated the new equilibrium price and quantity in the poultry growing services market resulting from the decreases in derived demand for growing services. GIPSA calculated the resulting social welfare changes in the input and output markets.

The calculation of the price impact from the increase in poultry industry costs from proposed § 201.214 would have in a price increase of approximately two-hundredths of a cent in the retail price of chicken.[35] This is because the increase in total industry costs is very small in relation to overall industry costs. The result is that the resulting deadweight losses from the increases in total industry costs is indistinguishable from zero and therefore, GIPSA concludes that the indirect costs of proposed § 201.214 are zero.

Regulatory Alternative 2: Total Costs of the Preferred Alternative

GIPSA added all direct costs to the indirect costs, which are equal to zero, to arrive at the estimated total first-year costs of proposed § 201.214. The total costs are summarized in the following table.

TABLE 6—TOTAL COSTS OF PROPOSED § 201.214

Cost type	($ millions)
Admin Costs	17.37
Litigation Costs	0.00
Total Direct Costs	17.37
Total Indirect Costs	0.00
Total Costs	17.37

GIPSA estimates that the total costs of proposed § 201.214 to be $17.37 million for the poultry industry in the first full year of implementation

Regulatory Alternative 2: 10-Year Total Costs of the Preferred Alternative

To arrive at the estimated 10-year costs of proposed § 201.214, GIPSA expects the costs to be constant for the first 5 years while courts are setting precedents for the interpretation of proposed § 201.214 if indeed it is finalized. GIPSA expects that case law with respect to proposed § 201.214 would be settled after 5 years, and by then, industry participants would likely know how GIPSA would enforce the proposed regulation and how courts would interpret the proposed regulation if finalized. The effect of courts establishing precedents is that administrative costs would likely decline after 5 years.

Once courts establish precedents in case law, GIPSA expects the direct administrative costs of reviewing and revising contracts and developing projection sheets would decrease rapidly as contracts would already contain any language modifications necessitated by implementation of the proposed rule, and projection sheets would already have been developed for most contracts. GIPSA also expects that the direct costs of record keeping and operating CMSs would decrease rapidly as courts set precedents on which records would be required and how detailed a CMS must be, and as companies become more efficient in ensuring that poultry grower ranking systems are used in a fair manner after applying the criteria in proposed § 201.214.

To arrive at the estimated 10-year costs of proposed § 201.214, GIPSA estimates that contracts would expire at a steady rate. Based on its expertise, GIPSA believes that 20 percent of contracts would expire on a yearly basis and thus, in the first five years, 20 percent of all contracts would expire and need to be renewed each year or new production contracts would be put in place. Thus in years 2 through year 5, contract review costs would be 20 percent of the costs of review in the first year because the costs of reviewing and revising contracts would only apply to the 20 percent of contracts that are expiring or are new contracts each year. Based on GIPSA's expertise, GIPSA also estimates that in years 2 through year 5, 20 percent of all projection sheets would require updating each year, the cost of operating and updating CMSs would be 20 percent of first-year development costs, and that record keeping costs would be 20 percent of the first-year cost as companies become more efficient in record keeping and learn which records are required. Based on its expertise, GIPSA estimates that in the second 5 years, the direct administrative costs of revising contracts, projection sheets, CMS operation, and record keeping would decrease by 50 percent per year as the courts establish precedents, contracts would contain standard language, and companies would become more efficient at ensuring poultry grower ranking systems are used in a fair manner after applying the criteria in proposed § 201.214. The total 10-year costs of proposed § 201.214 appear in the table below.

TABLE 7—TEN-YEAR TOTAL COSTS OF PROPOSED § 202.214

Year	Total direct ($ millions)
2018[36]	17.37
2019	3.47
2020	3.47
2021	3.47
2022	3.47
2023	1.74
2024	0.87
2025	0.43
2026	0.22
2027	0.11
Totals	34.64

Based on the analysis, GIPSA expects the 10-year total costs of proposed § 201.214 would be $34.64 million.

[33] The framework is explained in detail in Tomek, W.G. and K.L. Robinson "*Agricultural Product Prices,*" third edition, 1990, Cornell University Press.

[34] ERS Price Elasticities: *http://www.ers.usda.gov/data-products/commodity-and-food-elasticities/demand-elasticities-from-literature.aspx.* Accessed on August 26, 2016.

[35] The $17.37 million increase in total industry costs from proposed § 201.214 is only 0.04 percent of total poultry industry costs of approximately $40 billion.

[36] GIPSA uses 2018 as the date for the proposed rule to be in effect for analytical purposes only. The date the proposed rule becomes final is not known.

Regulatory Alternative 2: Net Present Value of Ten-Year Total Costs of the Preferred Alternative

The total costs of proposed § 201.214 in the table above show that the costs are highest in the first year, decline to a constant lower level over the next 4 years, and then gradually decrease again over the subsequent 5 years. Costs to be incurred in the future are less expensive than the same costs to be incurred today. This is because the money that is used to pay the costs in the future can be invested today and earn interest until the time period in which the cost is incurred. After the cost has been incurred, the interest earned would still be available.

To account for the time value of money, the costs of the regulations to be incurred in the future are discounted back to today's dollars using a discount rate. The sum of all costs discounted back to the present is called the net present value (NPV) of total costs. GIPSA relied on both a three percent and seven percent discount rate as discussed in Circular A–4.[37] GIPSA measured all costs using constant dollars.

GIPSA calculated the NPV of the ten-year total costs of the proposed regulation using both a three percent and seven percent discount rate and the NPVs appear in the following table.

TABLE 8—NPV OF TEN-YEAR TOTAL COSTS OF PROPOSED § 201.214

Discount rate	($ millions)
3 Percent	32.16
7 Percent	29.36

GIPSA expects the NPV of the 10-year total costs of § 201.214 will be $32.16 million at a three percent discount rate and $29.36 million at a seven percent discount rate.

Regulatory Alternative 2: Annualized Costs of the Preferred Alternative

GIPSA then annualized the NPV of the 10-year total costs (referred to as annualized costs) of proposed § 201.214 using both a three percent and seven percent discount rate as required by Circular A–4 and the results appear in the following table.[38]

TABLE 9—ANNUALIZED COSTS OF PROPOSED § 201.214

Discount rate	($ millions)
3 Percent	3.77
7 Percent	4.18

GIPSA expects that the annualized costs of § 201.214 would be $3.77 million at a three percent discount rate and $4.18 million at a seven percent discount rate.

Impacts on Costs of Interim Final § 201.3(a)

Concurrent with proposing § 201.214, GIPSA is issuing an interim final version of § 201.3(a). Section 201.3(a) states that conduct or action can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition in all cases. As a stand-alone regulation, § 201.3(a) formalizes GIPSA's longstanding position that, in some cases, violations of sections 202(a) and 202(b) can be proven without demonstrating harm or likely harm to competition.

In its Regulatory Impact Analysis, GIPSA estimated the annualized costs of § 201.3(a) would range from $6.87 million to $96.01 million at a three percent discount rate and from $7.12 million to $98.60 million at a seven percent discount rate. The range of potential costs is broad and GIPSA relied on its expertise to arrive at a point estimate of expected annualized costs. GIPSA expects the cattle, hog, and poultry industries to primarily take a ''wait and see'' approach to how courts will interpret § 201.3(a) and only slightly adjust its use of AMAs, and incentive or performance-based payment systems. GIPSA estimates that the annualized costs of § 201.3(a) at the point estimate will be $51.44 million at a three percent discount rate and $52.86 million at a seven percent discount rate based on an anticipated ''wait and see'' approach by the cattle, hog, and poultry industries.

GIPSA recognizes that courts, after the implementation of a finalized § 201.3(a), may opt to continue to apply earlier precedents of requiring the showing of harm or potential harm to competition in section 202(a) and 202(b) cases. This has the potential to affect the costs of § 201.214 and 201.211 should they become finalized. GIPSA expects that even if courts continue to require showing of harm or potential harm to competition in section 202(a) and 202(b) cases, that firms would likely still incur costs of complying with § 201.214. Even if regulated entities expect that courts would require showing of a harm to competition for § 201.214 violations, the regulated entities may still expect litigation as private parties test the courts application of § 201.3 as it relates to § 201.214 violations. To reduce this threat of litigation, regulated entities may still incur the administrative costs detailed above. Should § 201.214 become finalized and courts still require a showing of harm or potential harm to competition, regulated entities may still voluntarily undertake the adjustment costs detailed above.

GIPSA expects proposed § 201.214 to reduce the costs of implementing § 201.3 by providing more clarity in the appropriate application of sections 202(a) and (b) of the P&S Act as they apply to poultry grower ranking systems. Section 201.214 provides clarity to the industry by establishing criteria the Secretary may consider in determining whether a live poultry dealer has used a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Regulatory Alternative 2: Benefits of the Preferred Alternative

GIPSA was unable to quantify all the benefits of proposed § 201.214. However, there are a number of important qualitative benefits of proposed § 201.214 that merit discussion. Proposed § 201.214 contains several provisions that GIPSA expects would improve efficiencies and reduce market failures. For regulations to improve efficiencies for market participants and generate benefits for consumers and producers, they must increase the amount of relevant information to market participants, reduce information asymmetries, protect private property rights, or foster competition.

Proposed § 201.214(a) would reduce information asymmetries and result in poultry growers making informed business decisions such as whether to enter the industry and in which capital improvements to invest. Growers having more complete information would result in more efficient levels of capital in the growing industry than with less information. Less information may lead to too much or too little capital. More complete information in the growing industry would allow live poultry dealers to send price signals to growers about levels of capital they desire. For example, if a live poultry dealer desires

[37] *https://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf.* Accessed on August 26, 2016.

[38] Ibid.

its birds be grown with a more capital-intensive housing type, it can increase its base payment rate in a grower ranking system for that particular housing type and provide projection sheets to growers so they can assess whether to upgrade. Live poultry dealers would have to increase the base compensation to a high enough level to spur the additional capital investment in upgrades. Similarly, too little compensation may result in under investment in capital, which is also inefficient.

Proposed § 201.214(b) would encourage live poultry dealers to supply inputs of more consistent quantity and quality to all growers. Thus, inferior chicks, which are more costly to grow, would likely be distributed more uniformly across growers. This would facilitate a level playing field and foster fair competition in poultry grower ranking systems. If proposed § 201.214 is finalized and becomes effective, growers would be compensated for their performance based more accurately on their skill and less so on the quality of inputs provided. The more efficient growers would receive more compensation in poultry grower ranking systems, which sends a signal to expand their offering of growing services. Less efficient growers would earn less, which sends a signal to reduce their offering of growing services or, at the extreme, to exit the industry. The result is lower costs to the industry as poultry grower ranking systems would incentivize the more efficient growers to expand and less efficient growers to contract or exit the industry.

Proposed § 201.214(c) would also provide a similar benefit to the industry. Under this section, the Secretary may consider whether a live poultry dealer includes poultry growers provided with dissimilar production variables in the ranking group in a manner that affects a poultry grower's compensation. The live poultry dealer would be expected to assure that growers are treated consistently as compared to other growers in the settlement group. This would allow growers to compete in poultry grower ranking systems on their skill level and not be disadvantaged by factors outside of their control. The result, again, is lower costs to the industry as the poultry grower ranking system would likely incentivize the more efficient growers to expand and the less efficient growers to reduce operations or exit the industry.

Proposed § 201.214(d) would benefit the industry by allowing the Secretary to consider whether a live poultry dealer has demonstrated a legitimate business justification for use of a poultry grower ranking system that would otherwise violate the P&S Act. This is a benefit for live poultry dealers as it provides a level of protection against potentially frivolous litigation.

Another important qualitative benefit of proposed § 201.214 is the increased ability for the enforcement of the P&S Act for use of poultry grower ranking systems in a manner that does not result in a harm or likelihood of harm to competition. This occurs through § 201.3(a), which states that conduct can be found to violate sections 202(a) and/or 202(b) of the P&S Act without a finding of harm or likely harm to competition and more specifically through § 201.210(b)(10) which clarifies that absent demonstration of a legitimate business justification, failing to use a poultry grower ranking system in a fair manner after applying the criteria in § 201.214 is unfair, unjustly discriminatory, or deceptive and a violation of section 202(a) of the P&S Act regardless of whether it harms or is likely to harm competition.

A simple example is a live poultry dealer consistently supplying inferior chicks to a particular grower. The grower is harmed by this conduct because the grower consistently under-performs in the poultry grower ranking system and receives lower compensation than if the grower had been provided higher quality chicks. This can be considered an unfair and deceptive practice under section 202(a) and/or as subjecting the grower to an unfair disadvantage under section 202(b). The impact of this harm to the grower is very small when compared to the entire industry and there is no harm to competition from this one instance. Because there is no harm or likely harm to competition, courts have been reluctant to find a violation of section 202(a) or (b) of the P&S Act in such a situation, despite the harm suffered by the individual poultry grower.

However, if similar, though unrelated, harm is experienced by a large number of growers, the cumulative effect does result in a harm to competition. The individual harm is inconsequential to the industry, but the sum total of all individual harm has the potential to be quite significant when compared to the industry and therefore, courts have found harm or likely harm to competition in such a situation. The regulations in this proposed rule, in conjunction with § 201.3(a), clarify that consistently supplying inferior chicks, absent demonstration of a legitimate business justification, would constitute unfair, unjustly discriminatory, or deceptive practices or devices under section 202(a) of the P&S Act or the giving of an undue or unreasonable preference, advantage, prejudice or disadvantage under section 202(b) of the P&S Act.

The sum of all individual harm is likely to increase total industry costs of producing poultry due to an inefficient allocation of resources. The cost of all unfair, unjustly discriminatory, or deceptive practices, or undue or unreasonable preferences or advantages to any poultry grower or undue or unreasonable prejudices or disadvantages are reflected in higher costs of producing poultry, with some portion of these costs passed along to consumers in the form of higher prices.

GIPSA expects proposed § 201.214 coupled with §§ 201.3(a) and 201.210(b)(10) to increase enforcement actions against live poultry dealers for use of poultry grower ranking systems in a manner that violates sections 202(a) and/or 202(b) when the use of the poultry grower ranking system does not harm or is not likely to harm to competition. Several appellate courts have disagreed with USDA's interpretation of the P&S Act that harm or likely harm to competition is not necessary in all instances to prove a violation of sections 202(a) or 202(b). In some cases in which the United States was not a party, these courts have concluded that plaintiffs could not prove their claims under section 202(a) and/or (b) without proving harm to competition or likely harm to competition. One reason the courts gave for declining to defer to USDA's interpretation of the statute is that USDA had not previously formalized its interpretation in a regulation.

Section 201.3 addresses that issue and §§ 201.214 and 201.210(b)(10) provide clarity regarding the circumstances under which use of a poultry grower ranking system, absent demonstration of a legitimate business justification, would constitute an unfair, unjustly discriminatory, or deceptive practice or device under section 202(a) of the P&S Act or the giving of an undue or unreasonable preference, advantage, prejudice or disadvantage under section 202(b) of the P&S Act. GIPSA expects the result would be additional enforcement actions successfully litigated, which will serve as a deterrent to using a poultry grower ranking system in a manner that violates sections 202(a) or (b) of the P&S Act. Successful deterrence would likely result in lower overall costs throughout the entire production and marketing complex of all poultry and chicken.

Benefits to the industry and the market also arise from establishing parity of negotiating power between live

poultry dealers and poultry growers by reducing the ability to abuse market power with the resulting deadweight losses.[39] Establishing parity of negotiating power in contracts promotes fairness and equity and is consistent with GIPSA's mission ''[T]o protect fair trade practices, financial integrity, and competitive markets for livestock, meats and poultry.'' [40]

Regulatory Alternative 2: Cost-Benefit Summary of the Preferred Alternative

GIPSA expects the annualized costs of § 201.214 will be $3.77 million at a three percent discount rate and $4.18 million at a seven percent discount rate. GIPSA was unable to quantify the benefits of the regulations, but explained numerous qualitative benefits derived from increased information and reduced information asymmetries. The regulation contains several provisions that GIPSA expects will: (1) Improve efficiencies in the formation of capital in the poultry growing industry; and (2) lower costs to the industry as grower ranking systems will incentivize the more efficient growers to expand and less efficient growers to reduce operations or exit the industry. Another benefit of proposed § 201.214 is the deterrent effect of increased enforcement of the P&S Act for violations of section 202(a) or (b). This, in turn, would reduce instances of unfair, unjustly discriminatory, or deceptive practices or devices and undue or unreasonable preferences, advantages, prejudices, or disadvantages and increased efficiencies in the marketplace. At the same time, allowing the Secretary to consider legitimate business justifications for use of a poultry grower ranking system in a manner that might otherwise be seen as a violation of section 202(a) or (b) of the P&S Act would provide a level of protection against potentially frivolous litigation. Thus, proposed § 201.214 would likely increase efficiency, lower costs, and reduce market failures in the poultry industry. These benefits would accrue to all segments of the poultry value chain, and ultimately consumers.

Regulatory Alternative 3: Contract Duration—Phased Implementation

GIPSA considered a third regulatory alternative of phased implementation. Under this third alternative, proposed § 201.214 would only apply to poultry growing contracts when they expire, are altered, or new contracts are put in place. Consider for example, a poultry growing contract with 3 years remaining in the contract when the regulations become effective. Proposed § 201.214 would not be applicable to this contract, under phased implementation, until the contract expires after 3 years and is either modified or replaced.

Regulatory Alternative 3: Cost Estimation of Phased Implementation

GIPSA estimated the costs of phased implementation by multiplying the majority of the ten-year total costs of the preferred alternative (Table 7) for each year of the first 10 years the rule would be in effect by the percentage of contracts expiring or altered in the same year. The data on contract lengths for broiler production appear in the table below.

TABLE 10—PRODUCTION AND MARKETING CONTRACT DURATIONS

Contract duration	Broiler production [41] (%)
Short Term < = 12 months ...	65.20
Medium Term 13–60 months	19.20
Long Term > 60 months	15.60

The data in the table above show that 65.2 percent of broiler production contracts have a duration of 12 months or less and 84.4 percent have a duration of 60 months or less. Only 15.64 percent of broiler production contracts are longer than 60 months in duration.

For the first year of the regulation, GIPSA multiplied the costs of § 201.214 by 65.20 percent. The one exception is the cost of the development of CMSs. GIPSA's experience reviewing poultry growing contracts suggests that most live poultry dealers have some contracts that are of a short-term duration. Therefore, GIPSA estimates that all live poultry dealers would have to develop a CMS in the first year after the implementation of the regulation. GIPSA allocates 100 percent of CMS development costs in the first year under the phased implementation alternative. All other direct administrative costs are multiplied by 65.20 percent in the first year.

For years 2 through 5, GIPSA followed the same procedure and adjusted total industry costs by 84.4 percent, the number of contracts that are 5 years or less in duration. For years 6 through 10, GIPSA applied 100 percent of the preferred alternative costs to reflect the full phase in of costs.

The following tables show the 10-year total costs of the phased implementation alternative. The 10-year total costs for each year of the preferred alternative (Table 7) are also shown for convenience.

TABLE 11—PHASED IMPLEMENTATION TOTAL COSTS OF § 201.214

Year	Preferred alternative ($ millions)	Phased implementation ($ millions)
2018	17.37	13.23
2019	3.47	2.93
2020	3.47	2.93
2021	3.47	2.93
2022	3.47	2.93
2023	1.74	1.74
2024	0.87	0.87
2025	0.43	0.43
2026	0.22	0.22

[39] MacDonald, J. and N. Key. ''Market Power in Poultry Production Contracting? Evidence from a Farm Survey.'' *Journal of Agricultural and Applied Economics.* 44(4) (November 2012): 477–490. Discusses evidence for the effect of concentration on grower compensation.

[40] See additional discussion in Steven Y. Wu and James MacDonald (2015) ''Economics of Agricultural Contract Grower Protection Legislation,'' *Choices* 30(3): 1–6.

[41] USDA's Economic Research Service Agricultural Resource Management Survey (ARMS) 2011.

TABLE 11—PHASED IMPLEMENTATION TOTAL COSTS OF § 201.214—Continued

Year	Preferred alternative ($ millions)	Phased implementation ($ millions)
2027	0.11	0.11
Totals	34.64	28.32

GIPSA estimates that the first-year total costs of § 201.214 under the phased implementation alternative would be $13.23 million and the 10-year total costs would be $28.32 million. As the table shows, the costs in the first 5 years are lower under the phased implementation option than under the preferred alternative because regulated entities with contracts longer than 1 year are not covered until the contracts expire, are modified, or replaced.

Regulatory Alternative 3: NPV of 10-Year Total Costs of Phased Implementation

GIPSA calculated the NPV of the 10-year total costs of proposed § 201.214 under phased implementation using both a three percent and seven percent discount rate as required by Circular A–4. The NPVs are shown in the following table.

TABLE 12—NPVS OF TEN-YEAR TOTAL COSTS OF PROPOSED § 201.214—PHASED IMPLEMENTATION

Discount rate	($ millions)
3 Percent	26.18
7 Percent	23.77

GIPSA expects the NPV of the 10-year total costs of § 201.214 under the phased implementation option to be $26.18 million at a three percent discount rate and $23.77 million at a seven percent discount rate.

Regulatory Alternative 3: Annualized Costs of Phased Implementation

GIPSA then annualized the costs of § 201.214 using both a three percent and seven percent discount rate as required by Circular A–4 and the results appear in the following table.

TABLE 13—ANNUALIZED COSTS OF PROPOSED § 201.214—PHASED IMPLEMENTATION

Discount rate	($ millions)
3 Percent	3.07
7 Percent	3.38

GIPSA expects the annualized costs of § 201.214 under the phased implementation option to be $3.07 million at a three percent discount rate and $3.38 million at a seven percent discount rate.

Regulatory Alternative 3: Benefits of the Phased Implementation Alternative

The benefits of phased implementation are identical to the benefits of the preferred alternative with the exception of when the benefits will be received and the amount of the benefits. Like the costs, the benefits will be received only when contracts expire, are modified, or new contracts are put in place. Moreover, benefits to be received in the future are worth less than benefits received today. The benefits will be received in the same proportion of the total costs and are based on contract durations. The benefits of phased implementation are less than under the preferred alternative because the full benefits will not be received until all contracts have expired, been modified, or replaced by new contracts. The full benefits of phased implementation will be received beginning in year 6.

Regulatory Alternative 3: Cost-Benefit Summary of Phased Implementation

GIPSA expects the annualized costs of § 201.214 under the phased implementation option to be $3.07 million at a three percent discount rate and $3.38 million at a seven percent discount rate. The benefits will be received in the same proportion as total costs and are based on contract durations. The benefits of the phased implementation alternative are less than under the preferred alternative because the full benefits will not be received until all contracts have expired, been altered, or replaced by new contracts.

Cost-Benefit Comparison of Regulatory Alternatives

The status quo alternative has zero marginal costs and benefits as GIPSA does not expect any changes in the industry. GIPSA compared the annualized costs of the preferred alternative to the annualized costs of the phased implementation alternative by subtracting the annualized costs of phased implementation from the preferred alternative and the results appear in the following table.

TABLE 14—DIFFERENCE IN ANNUALIZED COSTS OF PROPOSED § 201.214 BETWEEN THE PREFERRED ALTERNATIVE AND THE PHASED IMPLEMENTATION ALTERNATIVE

Discount rate	($ millions)
3 Percent	0.70
7 Percent	0.80

The annualized costs of the phased implementation alternative is $0.70 million less expensive using a three percent discount rate and $0.80 million less expensive using a seven percent discount rate. As is the case with costs, the benefits of the preferred alternative will be highest for the preferred alternative because the full benefits will be received immediately and not when contracts have expired, been altered, or replaced by new contracts as is the case under the phased implementation alternative.

Though the phased implementation alternative would save between $0.70 million and $0.80 million on an annualized basis, this alternative would deny the protections offered by proposed § 201.214 to a substantial percentage of poultry growers for five or more years based on the length of their production contracts. As the data in Table 10 show, 15.6 percent of poultry growers have contracts with durations exceeding five years. Under the phased implementation alternative, these growers would continue to be exposed to the potential market failures discussed above until their contracts expire or are renewed. GIPSA considered all three regulatory alternatives and believes that the preferred alternative is the best alternative as the benefits of the regulation will be captured immediately by all growers, regardless of the length of their contracts.

Regulatory Flexibility Analysis

The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS).[42] Live poultry dealers, NAICS 311615, are considered small businesses if they have fewer than 1,250 employees. Broiler and turkey producers, NAICS 112320 and 112330, are considered small businesses if their sales are less than $750,000 per year.

GIPSA maintains data on live poultry dealers from the annual reports these firms file with GIPSA. Currently, there are 133 live poultry dealers that would be subject to the proposed regulations. According to U.S. Census data on County Business Patterns, there were 74 poultry slaughter firms that had more than 1,000 employees in 2013.[43] The difference yields approximately 59 poultry slaughters that have fewer than 1,000 employees and would be considered small businesses that would be subject to the proposed regulations.

Another factor, however, that is important in determining the economic effect of the regulations is the number of contracts held by a firm. GIPSA records for 2014 indicated there were 21,925 poultry production contracts in effect, of which 13,370, or 61 percent, were held by the largest six live poultry dealers, and 90 percent (19,673) were held by the largest 25 live poultry dealers. These 25 live poultry dealers are all in the large business SBA category, whereas the 21,925 poultry growers holding the other end of the contracts are almost all small businesses by SBA's definitions.

To the extent the proposed rule imposes costs, these costs are expected to be borne by live poultry dealers. The costs likely include legal review of contracts, record-keeping, administrative costs, developing a CMS, and developing projection sheets.

Live poultry dealers classified as large businesses are responsible for about 89.7 percent of the poultry growing contracts. Assuming that live poultry dealers classified as small businesses will bear about 10.3 percent of the costs, expected costs in the first year for live poultry dealers classified as small businesses would be $1.8 million.[44] Expected 10-year costs annualized at a three percent discount rate for live poultry dealers classified as small businesses would be $387,000. Expected 10-year costs annualized at a seven percent discount rate for live poultry dealers classified as small businesses would be $429,000.

In considering the impact on small businesses, GIPSA considered the average costs and revenues of each small business impacted by § 201.214. The number of small businesses impacted by § 201.214, by NAICS code, as well as the per entity, first-year and annualized costs at both the three percent and seven percent discount rates appear in the following table.

TABLE 15—PER ENTITY COSTS TO SMALL BUSINESSES OF § 201.214

NAICS	Number of small business	First year ($)	Annualized costs—3% ($)	Annualized costs—7% ($)
311615—Poultry	59	30,246	6,563	7,278

The following table compares the average per entity first-year and annualized costs of § 201.214 to the average revenue per establishment for all firms in the same NAICS code. The annualized costs are slightly higher at the seven percent rate than at the three percent rate, so only the seven percent rate is shown as it is the higher annualized cost.

TABLE 16—COMPARISON OF PER ENTITY COST TO SMALL BUSINESSES OF § 201.214 TO REVENUES

NAICS	Number of small business	Average first-year cost per entity ($)	Average annualized cost per entity ($)	Average revenue per establishment ($)	First-year cost as percent of revenue (%)	Annualized cost as percent of revenue (%)
311615—Poultry	59	30,246	7,278	13,842,548	0.22	0.05

The revenue figure in the above table come from Census data for live poultry dealers, NAICS code 311615.[45]

As the results in Table 16 demonstrate, the first-year and annualized costs of § 201.214 as a percent of revenue is small at less than one percent.

Based on the above analyses regarding § 201.214, GIPSA certifies that this rule is not expected to have a significant economic impact on a substantial number of small business entities as defined in the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). While confident in this certification, GIPSA acknowledges that individual businesses may have relevant data to supplement our analysis. We would encourage small stakeholders to submit any relevant data during the comment period.

Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. These actions are not intended to have retroactive effect, although in some instances they merely reiterate GIPSA's previous interpretation of the P&S Act. This proposed rule would not pre-empt state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. There are no

[42] See: *http://www.sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf.* Accessed on August 26, 2016.

[43] *http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?src=bkmk*. Accessed on August 26, 2016. The U.S. Census data reports data in thousands making 1,000 the closest number of employees to SBA's small business classification of 1,250 employees.

[44] Estimated first year costs of $17.37 million × 10.27 percent of firms that are small businesses = $1.8 million.

administrative procedures that must be exhausted prior to any judicial challenge to the provisions of this proposed rule. Nothing in this proposed rule is intended to interfere with a person's right to enforce liability against any person subject to the P&S Act under authority granted in section 308 of the P&S Act.

Executive Order 13175

This proposed rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

GIPSA has assessed the impact of this rule on Indian tribes and determined that this rule does not, to our knowledge, have tribal implications that require tribal consultation under EO 13175. If a tribe requests consultation, GIPSA will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Paperwork Reduction Act

This proposed rule does not contain new or amended information collection requirements subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). It does not involve collection of new or additional information by the federal government.

E-Government Act Compliance

GIPSA is committed to compliance with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects in 9 CFR Part 201

Contracts, Poultry, Livestock, Trade Practices.

For the reasons set forth in the preamble, we propose to amend 9 CFR part 201 to read as follows:

PART 201—Regulations Under the Packers and Stockyards Act

■ 1. The authority citation for Part 201 continues to read as follows:

Authority: 7 U.S.C. 181–229c.

■ 2. Amend § 201.210 by adding paragraph (b)(10) to read as follows:

* * * * *

(b) * * *

(10) Failing to use a poultry grower ranking system in a fair manner after applying the criteria in § 201.214.

■ 2. Add new § 201.214 to read as follows:

§ 201.214 Poultry grower ranking systems.

The Secretary may consider various criteria when determining whether a live poultry dealer has engaged in a pattern or practice to use a poultry grower ranking system to compensate poultry growers in an unfair, unjustly discriminatory, or deceptive manner, or in a way that gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage. These criteria include, but are not limited to:

(a) Whether a live poultry dealer provides sufficient information to enable a poultry grower to make informed business decisions. Such information should include the anticipated number of flocks per year, the average gross income from each flock, and any other information necessary to enable a poultry grower to calculate the expected income from the poultry growing arrangement;

(b) Whether a live poultry dealer supplies inputs of comparable quality and quantity to all poultry growers in the ranking group; and whether there is a pattern or practice of supplying inferior inputs to one or more poultry growers in the ranking group. Inputs include birds, feed, medication, and any other input supplied by the live poultry dealer;

(c) Whether a live poultry dealer includes poultry growers provided with dissimilar production variables in the ranking group in a manner that affects a poultry grower's compensation. Production variables include, but are not limited to, the density at which the live poultry dealer places birds, the target slaughter weights of the birds, and bird ages that vary by more than seven days; and

(d) Whether a live poultry dealer has demonstrated a legitimate business justification for use of a poultry grower ranking system that may otherwise be unfair, unjustly discriminatory, or deceptive or gives an undue or unreasonable preference or advantage to any poultry grower or subjects any poultry grower to an undue or unreasonable prejudice or disadvantage.

Larry Mitchell,

Administrator, Grain Inspection, Packers and Stockyards Administration.

BILLING CODE 3410–KD–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–9501; Directorate Identifier 2016–NM–137–AD]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for The Boeing Company Model 777 airplanes. This proposed AD was prompted by reports of uncommanded altitude display changes in the mode control panel (MCP) altitude window. This proposed AD would require replacing the existing MCP with a new MCP having a different part number. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet: *https://www.myboeingfleet.com.* You may view

this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9501.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9501; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Frank Carreras, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle Aircraft Certification Office (ACO), 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6442; fax: 425–917–6590; email: *frank.carreras@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9501; Directorate Identifier 2016–NM–137–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We have received reports of uncommanded altitude display changes in the MCP altitude window. Most of the reports indicated that the altitude changes occurred in whole increments of 100 feet or 1,000 feet, with a general range of between 1,000 and 2,000 feet (the largest reported change was 12,000 feet). Boeing has also received reports of uncommanded changes in the MCP's speed/mach window. Uncommanded changes to the MCP selected altitude could result in incorrect spatial separation between airplanes, midair collision, or controlled flight into terrain.

Related Service Information Under 1 CFR Part 51

We reviewed Boeing Special Attention Service Bulletin 777–22–0034, dated March 3, 2016. The service information describes procedures for replacing the existing MCP with a new MCP having a different part number, in the glareshield in the flight compartment. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under ''Differences Between this Proposed AD and the Service Information.'' For information on the procedures and compliance times, see this service information at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9501.

Differences Between This Proposed AD and the Service Information

Boeing Special Attention Service Bulletin 777–22–0034, dated March 3, 2016, specifies the compliance time as 1,875 days. For this proposed AD, we specified a compliance time of 60 months.

Costs of Compliance

We estimate that this proposed AD affects 203 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replacement	2 work-hours × $85 per hour = $170	[1] Up to $5,800	Up to $5,970	Up to $1,211,910

[1] We have received no definitive data regarding the cost of the new MCP part number.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

The Boeing Company; Docket No. FAA–2016–9501; Directorate Identifier 2016–NM–137–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 777–200, –200LR, –300, –300ER, and 777F series airplanes, certificated in any category, identified in Boeing Special Attention Service Bulletin 777–22–0034, dated March 3, 2016.

(d) Subject

Air Transport Association (ATA) of America Code 22, Auto flight.

(e) Unsafe Condition

This AD was prompted by reports of uncommanded altitude display changes in the mode control panel (MCP) altitude window. We are issuing this AD to prevent uncommanded changes to the MCP selected altitude; such uncommanded changes could result in incorrect spatial separation between airplanes, midair collision, or controlled flight into terrain.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Replacement of MCP

Within 60 months after the effective date of this AD: Replace the existing MCP with a new MCP having a different part number, in accordance with the Accomplishment Instructions of Boeing Special Attention Service Bulletin 777–22–0034, dated March 3, 2016.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (i)(1) of this AD. Information may be emailed to: *9-ANM-Seattle-ACO-AMOC-Requests@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (h)(4)(i) and (h)(4)(ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or substep is labeled ''RC Exempt,'' then the RC requirement is removed from that step or substep. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(i) Related Information

(1) For more information about this AD, contact Frank Carreras, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle ACO, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6442; fax: 425–917–6590; email: *frank.carreras@faa.gov.*

(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet: *https://www.myboeingfleet.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 2, 2016.

Michael Kaszycki,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 2016–30026 Filed 12–19–16; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–9502; Directorate Identifier 2016–NM–128–AD]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 757–200 and –200PF series airplanes. This proposed AD was prompted by an evaluation by the design approval holder (DAH) indicating that certain areas of the frame webs are subject to widespread fatigue damage (WFD). This proposed AD would require high frequency eddy current (HFEC) inspections of the frame webs for any open coordinating holes, tooling holes, and insulation blanket attachment holes; repair if necessary; and modification of the frame webs at all open hole locations, which would terminate the repetitive inspections. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet: *https://www.myboeingfleet.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9502.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9502; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Muoi Vuong, Aerospace Engineer, Airframe Branch, ANM–120L, FAA, Los Angeles Aircraft Certification Office (ACO), 3960 Paramount Boulevard, Lakewood, CA 90712–4137; phone: 562–627–5205; fax: 562–627–5210; email: *muoi.vuong@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9502; Directorate Identifier 2016–NM–128–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

Fatigue damage can occur locally, in small areas or structural design details, or globally, in widespread areas. Multiple-site damage is widespread damage that occurs in a large structural element such as a single rivet line of a lap splice joining two large skin panels. Widespread damage can also occur in multiple elements such as adjacent frames or stringers. Multiple-site damage and multiple-element damage cracks are typically too small initially to be reliably detected with normal inspection methods. Without intervention, these cracks will grow, and eventually compromise the structural integrity of the airplane. This condition is known as widespread fatigue damage. It is associated with general degradation of large areas of structure with similar structural details and stress levels. As an airplane ages, WFD will likely occur, and will certainly occur if the airplane is operated long enough without any intervention.

The FAA's WFD final rule (75 FR 69746, November 15, 2010) became effective on January 14, 2011. The WFD rule requires certain actions to prevent structural failure due to WFD throughout the operational life of certain existing transport category airplanes and all of these airplanes that will be certificated in the future. For existing and future airplanes subject to the WFD rule, the rule requires that DAHs establish a limit of validity (LOV) of the engineering data that support the structural maintenance program. Operators affected by the WFD rule may not fly an airplane beyond its LOV, unless an extended LOV is approved.

The WFD rule (75 FR 69746, November 15, 2010) does not require identifying and developing maintenance actions if the DAHs can show that such actions are not necessary to prevent WFD before the airplane reaches the LOV. Many LOVs, however, do depend on accomplishment of future maintenance actions. As stated in the WFD rule, any maintenance actions necessary to reach the LOV will be mandated by airworthiness directives through separate rulemaking actions.

In the context of WFD, this action is necessary to enable DAHs to propose LOVs that allow operators the longest operational lives for their airplanes, and still ensure that WFD will not occur. This approach allows for an implementation strategy that provides flexibility to DAHs in determining the timing of service information development (with FAA approval), while providing operators with certainty regarding the LOV applicable to their airplanes.

We have received a report indicating that certain Model 757 airplanes have open coordinating holes, tooling holes, and insulation blanket attachment holes in the frame webs that were not filled during production. There have been no reports of frame web cracking at open hole locations. Cracking was found on a fatigue test article where WFD analysis identified the need for the inspection. Open attachment holes, if not corrected, could result in fatigue cracking that could adversely affect the structural integrity of the airplane.

Related Service Information Under 1 CFR Part 51

We reviewed Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016. The service information describes procedures for performing repetitive HFEC inspections of the frame webs for any open coordinating holes, tooling holes, insulation blanket attachment holes; and modifying the frame webs between stringers S–20 and S–25. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under ''Differences Between this Proposed AD and the Service Information.'' For information on the procedures and compliance times, see this service information at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9502.

Differences Between This Proposed AD and the Service Information

Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016, specifies to contact the manufacturer for certain instructions, but this proposed AD would require accomplishment of repair methods, modification deviations, and alteration deviations in one of the following ways:

- In accordance with a method that we approve; or

• Using data that meet the certification basis of the airplane, and that have been approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) whom we have authorized to make those findings.

Costs of Compliance

We estimate that this proposed AD affects 74 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
HFEC inspection	68 work-hours × $85 per hour = $5,780 per inspection cycle.	$0	$5,780 per inspection cycle.	$427,720 per inspection cycle.
Modification	1 work-hour × $85 per hour = $85	[1] $0	85	85.

[1] Parts supplied by the operator.

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this proposed AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

The Boeing Company: Docket No. FAA–2016–9502; Directorate Identifier 2016–NM–128–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 757–200 and –200PF series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by an evaluation by the design approval holder (DAH) indicating that the frame webs between stringers S–20 and S–25 on the left side and right side, from station (STA) 440 to STA 820 and from STA 1300 to STA 1701, are subject to widespread fatigue damage (WFD). We are issuing this AD to prevent fatigue cracking that could adversely affect the reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Repetitive High Frequency Eddy Current (HFEC) Inspections of the Frame Webs

At the applicable time specified in paragraph 1.E., ''Compliance,'' of Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016, do an HFEC inspection of the frame webs for any crack in any open coordinating holes, tooling holes, and insulation blanket attachment holes in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016. If any cracking is found, repair before further flight using a method approved in accordance with the procedures specified in paragraph (i) of this AD. Repeat the inspection at the time specified in paragraph 1.E., ''Compliance,'' of Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016.

(h) Modification of the Frame Webs

Before the accumulation of 59,000 total flight cycles, modify the frame webs at all open hole locations, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 757–53A0103, dated June 22, 2016. Accomplishment of this modification terminates the repetitive inspection requirements of paragraph (g) of this AD at the modified locations only.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Los Angeles Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to *9-ANM-LAACO-AMOC-Requests@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager

of the local flight standards district office/certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Los Angeles ACO, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) Except as required by paragraph (g) of this AD: For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (i)(4)(i) and (i)(4)(ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or substep is labeled ''RC Exempt,'' then the RC requirement is removed from that step or substep. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(j) Related Information

(1) For more information about this AD, contact Muoi Vuong, Aerospace Engineer, Airframe Branch, ANM–120L, FAA, Los Angeles ACO, 3960 Paramount Boulevard, Lakewood, CA 90712–4137; phone: 562–627–5205; fax: 562–627–5210; email: *muoi.vuong@faa.gov.*

(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P. O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet: *https://www.myboeingfleet.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 2, 2016.

Michael Kaszycki,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–9505; Directorate Identifier 2016–NM–155–AD]

RIN 2120–AA64

Airworthiness Directives; Learjet, Inc. Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Learjet Inc. Model 60 airplanes. This proposed AD was prompted by an evaluation by the design approval holder (DAH) indicating that the upper fuselage skin under the aft oxygen line fairing is subject to multi-site damage (MSD). This proposed AD would require a one-time inspection of the fuselage skin for corrosion and related investigative and corrective actions if necessary. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Learjet, Inc., One Learjet Way, Wichita, KS 67209–2942; telephone: 316–946–2000; fax: 316–946–2220; email: *ac.ict@aero.bombardier.com;* Internet: *http://www.bombardier.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9505; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Paul Chapman, Aerospace Engineer, Airframe Branch, ACE–118W, FAA, Wichita Aircraft Certification Office (ACO), 1801 Airport Road, Room 100, Dwight D. Eisenhower Airport, Wichita, KS 67209; phone: 316–946–4152; fax: 316–946–4107; email: *Wichita-COS@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9505; Directorate Identifier 2016–NM–155–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We have received a report indicating that the upper fuselage skin under the aft oxygen line fairing is subject to MSD (corrosion at multiple sites under the fairing). This condition, if not corrected, could result in reduced structural integrity of the airplane.

Related Service Information Under 1 CFR Part 51

We reviewed Learjet 60 Service Bulletin 60–53–19, Revision 3, dated August 29, 2016. The service information describes procedures for inspections of the fuselage crown skin for corrosion and related investigative and corrective actions, if necessary. This service information is reasonably

available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under ''Differences Between this Proposed AD and the Service Information.'' This proposed AD also would require sending the inspection results to the FAA.

Related investigative actions include a high frequency eddy current inspection of the affected skin sections and an ultrasonic skin thickness check. Corrective actions include repairing corrosion.

Differences Between This Proposed AD and the Service Information

Learjet 60 Service Bulletin 60–53–19, Revision 3, dated August 29, 2016, specifies to contact the manufacturer for instructions on how to repair certain conditions, but this proposed AD would require repairing those conditions in one of the following ways:

- In accordance with a method that we approve; or
- Using data that meet the certification basis of the airplane, and that have been approved by a Delegated Engineering Representative (DER) for Learjet Inc., or a Unit Member (UM) of the Learjet Organization Designation Authorization (ODA), whom we have authorized to make those findings.

Interim Action

We consider this proposed AD interim action. Because the cause of the corrosion is not known, the inspection reports will help determine the extent of the corrosion in the affected fleet. Based on the results of these reports, we might determine that further corrective action is warranted. Once further corrective action has been identified, we might consider further rulemaking.

Costs of Compliance

We estimate that this proposed AD affects 284 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspections	46 work-hours × $85 per hour = $3,910	$265	$4,175	$1,185,700
Reporting	1 work-hour × $85 per hour = $85	0	85	24,140

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this proposed AD.

According to the manufacturer, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number. The control number for the collection of information required by this AD is 2120–0056. The paperwork cost associated with this AD has been detailed in the Costs of Compliance section of this document and includes time for reviewing instructions, as well as completing and reviewing the collection of information. Therefore, all reporting associated with this AD is mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at 800 Independence Ave. SW., Washington, DC 20591, ATTN: Information Collection Clearance Officer, AES–200.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Learjet Inc.: Docket No. FAA–2016–9505; Directorate Identifier 2016–NM–155–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Learjet Inc. Model 60 airplanes, certificated in any category, serial numbers 60–002 through 60–430 inclusive.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by an evaluation by the design approval holder indicating that the upper fuselage skin under the aft oxygen line fairing is subject to multi-site damage. We are issuing this AD to detect and correct corrosion of the fuselage skin, which could result in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection of the Fuselage Skin and Related Investigative and Corrective Actions

At the applicable time specified in paragraph (g)(1), (g)(2), or (g)(3) of this AD: Do a fluorescent dye penetrant inspection of the fuselage skin between stringers (S)–2L and S–2R for corrosion; and do all applicable related investigative and corrective actions; in accordance with the Accomplishment Instructions of Learjet 60 Service Bulletin 60–53–19, Revision 3, dated August 29, 2016, except as required by paragraph (h) of this AD. Do all applicable related investigative and corrective actions before further flight.

(1) For airplanes with more than 12 years since the date of issuance of the original airworthiness certificate or the date of issuance of the original export certificate of airworthiness as of the effective date of this AD: Within 12 months after the effective date of this AD.

(2) For airplanes with more than 6 years but equal to or less than 12 years since the date of issuance of the original airworthiness certificate or the date of issuance of the original export certificate of airworthiness as of the effective date of this AD: Within 24 months after the effective date of this AD.

(3) For airplanes with 6 years or less since the date of issuance of the original airworthiness certificate or the date of issuance of the original export certificate of airworthiness as of the effective date of this AD: Within 36 months after the effective date of this AD.

(h) Service Information Exception

Where Learjet 60 Service Bulletin 60–53–19, Revision 3, dated August 29, 2016, specifies contacting Learjet Inc. for appropriate action: Before further flight, repair using a method approved in accordance with the procedures specified in paragraph (l) of this AD.

(i) Reporting

At the applicable time specified in paragraph (i)(1) or (i)(2) of this AD: Submit a report of the findings (both positive and negative) of the inspection required by paragraph (g) of this AD to *Wichita-COS@faa.gov* or Ann Johnson, 1801 Airport Road, Wichita, KS 67209. The report must include the name of the owner, the address of the owner, the name of the organization incorporating Learjet 60 Service Bulletin 60–53–19, the date that inspection was completed, the name of the person submitting the report, the address, telephone number, and email of the person submitting the report, the airplane serial number, the total time (hours) on the airplane, the total landings on the airplane, whether corrosion was detected, whether corrosion was repaired, the structural repair manual (SRM) chapter and revision (if repaired), and whether corrosion exceeded the minimum thickness specified in Learjet 60 Service Bulletin 60–53–19 (and specify the SRM chapter and revision that was used).

(1) If the inspection was done on or after the effective date of this AD: Submit the report within 30 days after the inspection.

(2) If the inspection was done before the effective date of this AD: Submit the report within 30 days after the effective date of this AD.

(j) Credit for Previous Actions

This paragraph provides credit for the actions specified in paragraph (g) of this AD, if those actions were performed before the effective date of this AD using Learjet 60 Service Bulletin 60–53–19, dated November 23, 2015; Learjet 60 Service Bulletin 60–53–19, Revision 1, dated April 4, 2016; or Learjet 60 Service Bulletin 60–53–19, Revision 2, dated April 18, 2016.

(k) Paperwork Reduction Act Burden Statement

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 5 minutes per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW., Washington, DC 20591, Attn: Information Collection Clearance Officer, AES–200.

(l) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Wichita ACO, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (m)(1) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by a Learjet Inc. Designated Engineering Representative (DER), or a Unit Member (UM) of the Learjet Organization Designation Authorization (ODA), that has been authorized by the Manager, Wichita ACO, to make those findings. To be approved, the repair, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(m) Related Information

(1) For more information about this AD, contact Paul Chapman, Aerospace Engineer, Airframe Branch, ACE–118W, FAA, Wichita ACO, 1801 Airport Road, Room 100, Dwight D. Eisenhower Airport, Wichita, KS 67209; phone: 316–946–4152; fax: 316–946–4107; email: *Wichita-COS@faa.gov.*

(2) For service information identified in this AD, contact Learjet, Inc., One Learjet Way, Wichita, KS 67209–2942; telephone: 316–946–2000; fax: 316–946–2220; email: *ac.ict@aero.bombardier.com;* Internet: *http://www.bombardier.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 2, 2016.

Michael Kaszycki,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; Dassault Aviation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all Dassault Aviation Model FAN JET FALCON, Model MYSTERE–FALCON 20–C5, 20–D5, 20–E5, and 20–F5 airplanes. This proposed AD was prompted by reports of defective fire extinguisher tubes. This proposed AD would require replacement of the affected fire extinguisher tubes with improved fire extinguisher tubes. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Dassault Falcon Jet Corporation, Teterboro Airport, P.O. Box 2000, South Hackensack, NJ 07606; telephone: 201–440–6700; Internet: *http://www.dassaultfalcon.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9500; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Tom Rodriguez, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone: 425–227–1137; fax: 425–227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9500; Directorate Identifier 2016–NM–140–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2016–0154, dated July 28, 2016 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Dassault Aviation Model FAN JET FALCON, Model MYSTERE–FALCON 20–C5, 20–D5, 20–E5, and 20–F5 airplanes. The MCAI states:

> Several defective extinguisher tubes have been found on certain Dassault Aviation Fan Jet Falcon aeroplanes. The results of the investigations concluded that these occurrences were caused by corrosion. This condition, if not corrected, could impact the capability to extinguish a fire in the rear compartment of the aeroplane, possibly resulting in damage to the aeroplane and injury to the occupants.
> For the reason described above, this [EASA] AD requires the replacement of the affected tubes with improved fire extinguisher tube. In addition, this [EASA] AD prohibits (re)installation of the affected fire extinguisher tubes on an aeroplane.

You may examine the MCAI in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9500.

Related Service Information Under 1 CFR Part 51

We reviewed Dassault Service Bulletin F20–790, dated September 14, 2016. This service information describes procedures for the replacement of affected fire extinguisher tubes with improved fire extinguisher tubes. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of the same type design.

Costs of Compliance

We estimate that this proposed AD affects 133 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Fire Extinguisher tube replacement	3 work-hours × $85 per hour = $255	$3,100	$3,355	$446,215

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII,

Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Dassault Aviation: Docket No. FAA–2016–9500; Directorate Identifier 2016–NM–140–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Dassault Aviation Model FAN JET FALCON, Model MYSTERE–FALCON 20–C5, 20–D5, 20–E5, and 20–F5 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 26, Fire protection.

(e) Reason

This AD was prompted by reports of defective fire extinguisher tubes. We are issuing this AD to prevent fire extinguisher failure. Such a failure could result in the inability to extinguish a fire in the rear compartment, and possible damage to the airplane and injury to the occupants.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Fire Extinguisher Tubes Replacement

Within 450 flight cycles after the effective date of this AD, replace each affected hose, part numbers (P/N) MY20791–121 and P/N MY20791–122, with a serviceable hose, P/N MY20791–121–1 or MY20791–122–1, as applicable, in accordance with the Accomplishment Instructions of Dassault Service Bulletin F20–790, dated September 14, 2016.

(h) Parts Installation Prohibition

No person may install a fire extinguisher tube, P/N MY20791–121 or P/N MY20791–122, on any airplane, as of the applicable time specified in paragraph (h)(1) or (h)(2) of this AD.

(1) For an airplane equipped with an affected fire extinguisher tube as of the effective date of this AD: After modification of that airplane as required by paragraph (g) of this AD.

(2) For an airplane that is not equipped with an affected fire extinguisher tube as of the effective date of this AD: As of the effective date of this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Branch, ANM–116, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Tom Rodriguez, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone: 425–227–1137; fax: 425–227–1149. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Dassault Aviation's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(j) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2016–0154, dated July 28, 2016, for related information. This MCAI may be found in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9500.

(2) For service information identified in this AD, contact Dassault Falcon Jet Corporation, Teterboro Airport, P.O. Box 2000, South Hackensack, NJ 07606; telephone: 201–440–6700; Internet: *http://www.dassaultfalcon.com.* You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 6, 2016.

Dionne Palermo,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. FAA–2016–9508; Directorate Identifier 2016–NM–065–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to supersede Airworthiness Directive (AD) 2015–22–06 for all Airbus Model A318, A319, A320, and A321 series airplanes. AD 2015–22–06 currently requires revising the After Start Normal Procedures section of the airplane flight manual (AFM) to provide procedures that address latent failures in the Spoiler and Elevator Computer (SEC). Since we issued AD 2015–22–06, there have been reports that some maintenance messages pointed out the loss of elevator servo

control monitoring performed by SEC 1, SEC 2, or both, during the engine start. This proposed AD would add a requirement to install updated SEC software. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Airbus, Airworthiness Office–EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com;* Internet *http://www.airbus.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425 227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9508; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Sanjay Ralhan, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1405; fax 425–227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9508; Directorate Identifier 2016–NM–065–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

On October 22, 2015, we issued AD 2015–22–06, Amendment 39–18311 (80 FR 68429, November 5, 2015) (''AD 2015–22–06''). AD 2015–22–06 requires revision of the AFM intended to address an unsafe condition that can occur in the SEC for all Airbus Model A318, A319, A320, and A321 series airplanes.

Since we issued AD 2015–22–06, there have been reports that some maintenance messages were recorded within the Post Flight Report (PFR) that pointed out the loss of elevator servo control monitoring performed by SEC 1, SEC 2, or both, during the engine start.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA Airworthiness Directive, 2016–0056, dated March 18, 2016 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus Model A318, A319, A320, and A321 series airplanes. The MCAI states:

> Following the introduction of new Spoiler and Elevator Computer (SEC) hardware C Part Number (P/N) B372CAM0100 with software (SW) standards 122, 124 and 125 (identified by P/N B372CAM0101, P/N B372CAM0102 and P/N B372CAM0103, respectively, and hereafter referred to as an ''affected SEC software standard'' in this [EASA] AD), some airlines reported receiving maintenance messages, *e.g.* ''SEC OR WIRING FROM L or R ELEV POS MON XDCR'' and/or ''SEC OR WIRING FROM G or Y ELEV POS XDCR'', which are associated with servo control or elevator transducer monitoring. Such messages are triggered by a short data inconsistency due to power transients, when the engines are started.
>
> This condition, if not corrected, could lead to an undetected loss of redundancy during flight if an affected SEC cannot control the related elevator servo control(s), possibly resulting in reduced control of the aeroplane.
>
> To address this potential unsafe condition, EASA issued AD 2015–0191 [which corresponds to AD 2015–22–06] to require amendment of the applicable [Airbus] Airplane Flight Manual (AFM) to include the flight crew procedure necessary to recover full SEC redundancy.
>
> Since that [EASA] AD was issued, to fix the software deficiency, SEC software standard 126 (identified by P/N B372CAM0104) was developed, which is embodied in production through Airbus modification (mod) 161208 (installation of SEC software standard 126), and introduced in service through Airbus Service Bulletin (SB) A320–27–1252.
>
> For the reason described above, this [EASA] AD retains the AFM change requirements of EASA AD 2015–0191, which is superseded, and requires the removal and/or upgrade of [an affected] SEC.

You may examine the MCAI in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9508.

Related Service Information Under 1 CFR Part 51

Airbus has issued the following service information:

- Airbus Service Bulletin A320–27–1252, Revision 01, dated February 18, 2016.
- Airbus Service Bulletin A320–27–1257, dated December 18, 2015.

This service information provides information for identifying affected SECs and updating the software on affected SECs. These documents are distinct since they apply to different airplane configurations.

Airbus also issued A318/A319/A320/A321 Temporary Revision TR572, Issue 1.0, dated August 13, 2015, to the Airbus A318/A319/A320/A321 Airplane Flight Manual. This service information describes the reset of SEC 1 and SEC 2 that must be done after engines start.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or

develop on other products of these same type designs.

Differences Between This Proposed AD and the Service Information

Subtask 271257–832–006–001, Instructions ''*2*'' and ''*3,*'' in the Accomplishment Instructions of Airbus Service Bulletin A320–27–1257, dated December 18, 2015, have software part numbers that are incorrect. Paragraph (n) of this proposed AD provides the corrected part numbers. The correct part numbers were provided by Airbus in Operators Information Transmission (OIT) 16–0001, Revision 00, dated January 20, 2016.

Costs of Compliance

We estimate that this proposed AD affects 959 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
AFM revision (retained action from AD 2015–22–06)	1 work-hour × $85 per hour = $85	$0	$85	$81,515
Removal and replacement of SEC (new proposed action).	4 work-hours × $85 per hour = $340	0	340	326,060

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by removing Airworthiness Directive (AD) 2015–22–06, Amendment 39–18311 (80 FR 68429, November 5, 2015), and adding the following new AD:

Airbus: Docket No. FAA–2016–9508; Directorate Identifier 2016–NM–065–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

This AD replaces AD 2015–22–06, Amendment 39–18311 (80 FR 68429, November 5, 2015) (''AD 2015–22–06'').

(c) Applicability

This AD applies to the Airbus airplanes, certificated in any category, identified in paragraphs (c)(1) through (c)(4) of this AD, all manufacturer serial numbers.

(1) Airbus Model A318–111, –112, –121, and –122 airplanes.

(2) Airbus Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes.

(3) Airbus Model A320–211, –212, –214, –231, –232, and –233 airplanes.

(4) Airbus Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 27, Flight Controls.

(e) Reason

This AD was prompted by reports that some maintenance messages were recorded within the Post Flight Report (PFR) that pointed out the loss of elevator servo control monitoring performed by Spoiler and Elevator Computer (SEC) 1, SEC 2, or both, during the engine start. We are issuing this AD to prevent an undetected loss of redundancy during flight if an affected SEC cannot control the related elevator servo control(s), possibly resulting in reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Airplane Flight Manual Revision, With Revised Compliance Language

This paragraph restates the requirements of paragraph (g) of AD 2015–22–06, with revised compliance language. For airplanes equipped with SEC hardware C part number (P/N) B372CAM0100 with software standards 122 (P/N B372CAM0101), 124 (P/N B372CAM0102), or 125 (P/N B372CAM0103), on SEC position 1 or 2, or both: Within 30 days after November 20, 2015 (the effective date of AD 2015–22–06), revise the After Start Normal Procedures section of the airplane flight manual (AFM) to include the statement specified in figure 1 to paragraph (g) of this AD. This may be done by inserting a copy of this AD, or AD 2015–22–06, or Airbus A318/A319/A320/A321 Temporary Revision TR572, Issue 1.0, dated August 13, 2015, to the Airbus A318/A319/A320/A321 AFM, into the applicable AFM.

Figure 1 to Paragraph (g) of this AD – AFM Temporary Revision

AFTER START NORMAL PROCEDURE

After both engines start:

Turn OFF then ON SEC 1 and SEC 2 one after the other.

Note 1 to paragraph (g) of this AD: When a statement identical to that in figure 1 to paragraph (g) of this AD has been included in the After Start Normal Procedures section of the general revisions of the AFM, the general revisions may be inserted into the AFM, and this AD, or AD 2015–22–06, or Airbus A318/A319/A320/A321 Temporary Revision TR572, Issue 1.0, dated August 13, 2015, may be removed from the AFM.

Note 2 to paragraph (g) of this AD: Airbus Operations Engineering Bulletin OEB–50 provides additional information on the subject addressed by this AD.

(h) Retained Parts Installation Limitation, With No Change

This paragraph restates the requirements of paragraph (i) of AD 2015–22–06, with no change. For all airplanes: As of November 20, 2015 (the effective date of AD 2015–22–06), do not install SEC hardware C P/N B372CAM0100 with software standard 122 (P/N B372CAM0101), 124 (P/N B372CAM0102), or 125 (P/N B372CAM0103), on SEC position 1 or 2, or both, on any airplane, unless the AFM of the airplane is revised concurrently with that installation, as required by paragraph (g) of this AD.

(i) New Requirement of This AD: Replacement of Software

Within 3 months after the effective date of this AD, comply with the actions in paragraphs (i)(1) or (i)(2) of this AD, as applicable.

(1) For an airplane that has received Airbus modification 39429 (installation of SEC hardware C P/N B372CAM0100) in production: Install SEC software standard 126, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1252, Revision 01, dated February 18, 2016.

(2) For an airplane that has not received Airbus modification 39429 in production: Inspect to determine whether an affected SEC software standard is installed. Do the inspection in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1257, dated December 18, 2015, except as required by paragraph (n) of this AD. A review of airplane maintenance records is acceptable in lieu of this inspection if the part number of the SEC C can be conclusively determined from that review. If an affected SEC software standard is found installed, replace the affected software standard using an installation method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus's EASA Design Organization Approval (DOA).

(j) New Requirement of This AD: Compliance for Airplanes Having Airbus Modification 161208 Embodied in Production

An airplane on which Airbus modification 161208 has been embodied in production is compliant with the requirements of paragraph (i) of this AD, provided it is determined that no affected SEC software standard, as identified in paragraph (g) of this AD, is installed on that airplane.

(k) New Requirement of This AD: Disposition of AFM After Airplane Modification

After modification of an airplane as required by paragraph (i) of this AD, remove the information specified in Airbus A318/A319/A320/A321 TR572, Issue 1.0, dated August 13, 2015, to the Airbus A318/A319/A320/A321 AFM from the AFM of that airplane.

(l) New Requirement of This AD: Parts Installation Prohibition

As of the effective date of this AD, no person may install on any airplane an affected SEC software standard, or a SEC hardware C hosting an affected SEC software standard.

(m) New Provision of This AD: Installation of Equivalent Software and Hardware

Installation on an airplane of a SEC software standard, or of a SEC hardware standard, approved after the effective date of this AD, is acceptable for compliance with the requirements of paragraph (i) of this AD for that airplane, provided the conditions specified in paragraphs (m)(1) and (m)(2) of this AD are met.

(1) The software and hardware standard, as applicable, is approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or EASA; or Airbus's EASA DOA; and

(2) Replacement of the affected software standard is done using an installation method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or EASA; or Airbus's EASA DOA.

(n) Exception to Service Information Specifications

Subtask 271257–832–006–001 of Airbus Service Bulletin A320–27–1257, dated December 18, 2015, includes incorrect instructions. This AD requires that those instructions be followed as specified in paragraphs (n)(1) and (n)(2) of this AD.

(1) For Subtask 271257–832–006–001 instruction ''*2*'': If SEC C 126 software P/N B372CAM0104 is found, no further action is required by this AD.

(2) For Subtask 271257–832–006–001 instruction ''*3*'': If SEC C 122 software P/N B372CAM0101, SEC C 124 software P/N B372CAM0102, or SEC C 125 software P/N B372CAM0103 is found, do corrective actions using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or EASA; or Airbus's EASA DOA.

(o) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Sanjay Ralhan, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1405; fax 425–227–1149. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or EASA; or Airbus's EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* If any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(p) Special Flight Permits

Special flight permits, as described in Section 21.197 and Section 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199), are not allowed.

(q) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA Airworthiness Directive 2016–0056, dated March 18, 2016, for related information. This MCAI may be found in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9508.

(2) For service information identified in this AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com;* Internet *http://www.airbus.com.*

Issued in Renton, Washington, on December 7, 2016.

Dionne Palermo,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER series airplanes. This proposed AD was prompted by a report of an aborted takeoff because the rudder pedals were not operating correctly. Investigation revealed a protruding screw in the rudder pedal heel rest adjacent to the pedals. This proposed AD would require a torque check of the screws in the cover assembly of the heel rest for both the Captain and the First Officer's rudder pedals, and corrective action if necessary. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 3, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone 206–544–5000, extension 1; fax 206–766–5680; Internet *https://www.myboeingfleet.com*. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9506.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9506; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Kelly McGuckin, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle Aircraft Certification Office (ACO), 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6490; fax: 425–917–6590; email: *Kelly.McGuckin@faa.gov*.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2016–9506; Directorate Identifier 2016–NM–090–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We have received a report of an aborted takeoff because the rudder pedals were not operating correctly. Investigation revealed a protruding screw in the rudder pedal heel rest adjacent to the pedals. It was determined that the screws in the cover assembly of the heel rest for both the Captain and the First Officer's rudder pedals may not have been properly torqued. A protruding screw from the cover assembly of the heel rest of a rudder pedal could restrict rudder pedal motion and reduce differential braking control during takeoff or landing, which could cause a high speed runway excursion.

Related Service Information Under 1 CFR Part 51

We reviewed Boeing Alert Service Bulletin 737–25A1732, Revision 1, dated August 15, 2016. The service information describes procedures for a torque check of the screws in the cover assembly of the heel rest for both the Captain and the First Officer's rudder pedals, and corrective action. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously. For information on the procedures and compliance times, see this service information at *http://www.regulations.gov* by searching for

and locating Docket No. FAA–2016–9506.

The phrase ''corrective actions'' is used in this proposed AD. Corrective actions correct or address any condition found. Corrective actions in an AD could include, for example, repairs.

Costs of Compliance

We estimate that this proposed AD affects 1,187 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Torque check	2 work-hours × $85 per hour = $170 per inspection cycle.	$0	$170	$201,790

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this proposed AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

The Boeing Company: Docket No. FAA–2016–9506; Directorate Identifier 2016–NM–090–AD.

(a) Comments Due Date

We must receive comments by February 3, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin 737–25A1732, Revision 1, dated August 15, 2016.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment and Furnishings.

(e) Unsafe Condition

This proposed AD was prompted by a report of an aborted takeoff because the rudder pedals were not operating correctly. Investigation revealed a protruding screw in the rudder pedal heel rest adjacent to the pedals. It was determined that the screws in the cover assembly of the heel rest for both the Captain and the First Officer's rudder pedals may not have been properly torqued. We are issuing this AD to detect and correct a protruding screw in the cover assembly of the heel rest of a rudder pedal. A protruding screw could restrict rudder pedal motion and reduce differential braking control during takeoff or landing, which could cause a high speed runway excursion.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Torque Check

Within 21 months after the effective date of this AD: Do a one-time torque check of the screws in the cover assembly of the heel rest for both the Captain and the First Officer's rudder pedals, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 737–25A1732, Revision 1, dated August 15, 2016.

(h) Corrective Action

If the results of the torque check required by paragraph (g) of this AD indicate that any screw does not hold torque to the required value, before further flight, replace the affected screw and associated nutplate, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 737–25A1732, Revision 1, dated August 15, 2016.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *9-ANM-Seattle-ACO-AMOC-Requests@faa.gov*.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airplanes Organization

Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (i)(4)(i) and (i)(4)(ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or sub-step is labeled ''RC Exempt,'' then the RC requirement is removed from that step or sub-step. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(j) Related Information

(1) For more information about this AD, contact Kelly McGuckin, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle ACO, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6490; fax: 425–917–6590; email: *Kelly.McGuckin@faa.gov*.

(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone 206–544–5000, extension 1; fax 206–766–5680; Internet *https://www.myboeingfleet.com*. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 7, 2016.

Dionne Palermo,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2016–0588; FRL–9957–02–Region 8]

Approval and Promulgation of State Implementation Plans; Interstate Transport for Utah

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing action on a portion of a January 31, 2013 submission and a December 22, 2015 supplemental submission from the State of Utah that are intended to demonstrate that the State Implementation Plan (SIP) meets certain interstate transport requirements of the Clean Air Act (Act or CAA) for the 2008 ozone National Ambient Air Quality Standards (NAAQS). Specifically, the EPA is proposing to approve interstate transport prong 1 for the 2008 ozone NAAQS.

DATES: Comments must be received on or before January 10, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R08–OAR–2016–0588 at *http://www.regulations.gov*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.,) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Adam Clark, Air Program, U.S. Environmental Protection Agency (EPA), Region 8, Mail Code 8P–AR, 1595 Wynkoop Street, Denver, Colorado 80202–1129. (303) 312–7104, *clark.adam@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

What should I consider as I prepare my comments for EPA?

1. *Submitting Confidential Business Information (CBI).* Do not submit CBI to the EPA through *http://www.regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information on a disk or CD ROM that you mail to the EPA, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When submitting comments, remember to:

- Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** volume, date, and page number);
- Follow directions and organize your comments;
- Explain why you agree or disagree;
- Suggest alternatives and substitute language for your requested changes;
- Describe any assumptions and provide any technical information and/or data that you used;
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced;
- Provide specific examples to illustrate your concerns, and suggest alternatives;
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats; and
- Make sure to submit your comments by the comment period deadline identified.

II. Background

On March 12, 2008, the EPA revised the levels of the primary and secondary 8-hour ozone standards to 0.075 parts per million (ppm). 73 FR 16436 (March 27, 2008). Pursuant to section 110(a)(1) of the CAA, states are required to submit SIPs meeting the applicable requirements of section 110(a)(2) within three years after promulgation of a new or revised NAAQS or within such shorter period as the EPA may prescribe. Section 110(a)(2) requires states to address structural SIP elements such as requirements for monitoring, basic program requirements, and legal authority that are designed to provide for implementation, maintenance, and enforcement of the NAAQS. The SIP submission required by these provisions is referred to as the ''infrastructure'' SIP. Section 110(a) imposes the obligation upon states to make a SIP submission to the EPA for a new or revised NAAQS, but the contents of individual state

submissions may vary depending upon the facts and circumstances.

CAA Section 110(a)(2)(D)(i)(I) requires SIPs to include provisions prohibiting any source or other type of emissions activity in one state from emitting any air pollutant in amounts that will contribute significantly to nonattainment, or interfere with maintenance, of the NAAQS in another state. The two provisions of this section are referred to as prong 1 (significant contribution to nonattainment) and prong 2 (interfere with maintenance). Section 110(a)(2)(D)(i)(II) requires SIPs to contain adequate provisions to prohibit emissions that will interfere with measures required to be included in the applicable implementation plan for any other state under part C to prevent significant deterioration of air quality (prong 3) or to protect visibility (prong 4).

In this action, the EPA is only addressing prong 1 of CAA section 110(a)(2)(D)(i) with regard to the 2008 ozone NAAQS. The EPA proposed action on prongs 1, 2 and 4 for this NAAQS on May 10, 2016. 81 FR 28807. In that action, we proposed to disapprove prongs 1 and 2 of Utah's SIP for the 2008 ozone NAAQS based a number of deficiencies in the SIP submission and in light of on the results of EPA modeling which initially indicated that emissions from Utah sources contribute to two nonattainment receptors in the Denver, Colorado area. *Id.* at 28810. As described below, the EPA has updated its air quality modeling, and now indicates that Utah sources do not contribute to any nonattainment receptors in the U.S. Details regarding this modeling information, and its impact on this proposed action, are discussed in the following section. The EPA finalized disapproval of Utah's SIP submission with respect to prongs 2 and 4 in a final action published October 19, 2016. 81 FR 71991.

III. State Submissions and EPA's Assessment

The Utah Department of Environmental Quality (Department or UDEQ) submitted a certification of Utah's infrastructure SIP for the 2008 ozone NAAQS on January 31, 2013, and a supplement regarding CAA section 110(a)(2)(D)(i)(I) with respect to the 2008 ozone NAAQS on December 22, 2015.[1]

These infrastructure certifications addressed all of the infrastructure elements including section 110(a)(2)(D)(i), referred to as infrastructure element (D).[2] In this action, we are only addressing element (D) prong 1 from the 2008 ozone certification and the December 22, 2015 supplement which addressed prong 1 for the 2008 ozone NAAQS. All other infrastructure elements from these certifications have been addressed in separate actions.

In its January 31, 2013, 2008 ozone infrastructure submittal, UDEQ addressed 110(a)(2)(D)(i)(I) prongs 1 and 2 by citing EPA Administrator Gina McCarthy's November 19, 2012 memo [3] which outlined the EPA's intention to abide by the decision of the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) in *EME Homer City Generation, L.P.* v. *E.P.A.,* 696 F.3d 7 (D.C. Cir. 2012). The *EME Homer City* decision addressed the Cross-State Air Pollution Rule (CSAPR) promulgated by the EPA to address the interstate transport requirements under section 110(a)(2)(D)(i)(I) with respect to the 1997 ozone NAAQS, the 1997 fine particulate matter ($PM_{2.5}$) NAAQS, and the 2006 $PM_{2.5}$ NAAQS. Among other things, the D.C. Circuit held that states did not have an obligation to submit SIPs addressing section 110(a)(2)(D)(i)(I) interstate transport requirements as to any NAAQS until the EPA first quantified each state's emissions reduction obligation. *Id.* at 30 through 31. In its submittal, the Department noted that the EPA had not quantified Utah's transport obligation as to the 2008 ozone NAAQS and that Utah's infrastructure SIP was therefore adequate with regard to prongs 1 and 2 of CAA section 110(a)(2)(D)(i)(I).

Subsequent to the UDEQ submission, on April 29, 2014, the U.S. Supreme Court reversed and remanded the D.C. Circuit's *EME Homer City* decision on CSAPR and held, among other things, that under the plain language of the CAA, states must submit SIPs addressing interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) within three years of the promulgation of a new or revised NAAQS, regardless of whether the EPA first provides guidance, technical data or rulemaking to quantify the state's obligation. *EPA* v. *EME Homer City Generation, L.P.,* 134 S. Ct. 1584, 1601 (2014). UDEQ therefore additionally addressed 110(a)(2)(D)(i) prongs 1 and 2 for the 2008 ozone NAAQS as part of its December 22, 2015 infrastructure submittal that otherwise addressed the 2012 $PM_{2.5}$ NAAQS. As stated, the EPA is proposing action on both the January 31, 2013 and December 22, 2015 certifications with regard to prong 1 for the 2008 ozone NAAQS.

In its December 22, 2015 infrastructure submittal, UDEQ acknowledged the changed legal landscape, and asserted that emissions from the State did not significantly contribute to nonattainment or interfere with maintenance of the 2008 ozone NAAQS in any other state. The Department cited air quality modeling assessing interstate transport of ozone that was released by the EPA on August 4, 2015, (*see* Notice of Availability of the Environmental Protection Agency's Updated Ozone Transport Modeling Data for the 2008 Ozone NAAQS, 80 FR 46271), and explained that it did not consider the modeled contribution levels to nonattainment and maintenance receptors in the Denver, Colorado area and in southern California to be significant.

In the December 22, 2015 supplement, UDEQ cited various SIP-approved area source rules which it asserts will result in additional reductions in ozone precursor emissions as further evidence that emissions from the State do not contribute significantly to nonattainment of the 2008 ozone NAAQS in any other state. The Department listed several VOC emissions limitations on various industries submitted as part of the State's greater $PM_{2.5}$ control strategy, which were recently approved by the EPA.[4] UDEQ also pointed to a rule prohibiting the sale of water heaters that do not comply with low NOx emission rates which will go into effect on November 1, 2017. UDEQ insisted that because NOx and VOC are precursors to ozone, these emission limitations would further reduce ozone transport to downwind nonattainment and maintenance receptors below the levels which Utah claimed were already insignificant. UDEQ did not quantify or explain how these limitations would significantly reduce Utah ozone emissions, or how those reductions might impact downwind transport. UDEQ also cited the general west to east wind direction in the western U.S. as

[1] The 110(a)(2)(D)(i)(I) 2008 ozone supplement was submitted as part of Utah's infrastructure SIP certification for the 2012 $PM_{2.5}$ NAAQS.

[2] For discussion of other infrastructure elements, see EPA's ''Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and (2),'' September 13, 2013.

[3] Memo from Gina McCarthy to Air Division Directors, Regions 1–10 re: Next Steps for Pending Redesignation Requests and State Implementation Plan Actions Affected by the Recent Court Decision Vacating the 2011 Cross-State Air Pollution Rule (Nov. 19, 2012).

[4] For more detail, see EPA's final action on these area source rules at 81 FR 9343, February 25, 2016, and the associated docket at EPA–R08–OAR–2014–0369.

further evidence that Utah emissions are unlikely to significantly impact ozone pollution in southern California.

The EPA developed technical information and a related analysis to assist states with meeting section 110(a)(2)(D)(i)(I) requirements for the 2008 ozone NAAQS and used this technical analysis to support the recently finalized Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS (''CSAPR Update'').[5] As explained below, this analysis supports the conclusions of UDEQ's analysis for prong 1.

In the technical analysis supporting the CSAPR Update, the EPA used detailed air quality analyses to determine where projected nonattainment or maintenance areas would be and whether emissions from an eastern state contribute to downwind air quality problems at those projected nonattainment or maintenance receptors.[6] Specifically, the EPA determined whether the state's contributing emissions were at or above a specific threshold (*i.e.,* one percent of the ozone NAAQS). If a state's contribution did not exceed the one percent threshold, the state was not considered ''linked'' to identified downwind nonattainment and maintenance receptors and was therefore not considered to significantly contribute to nonattainment or interfere with maintenance of the standard in those downwind areas. If a state's contribution was equal to or exceeded the one percent threshold, that state was considered ''linked'' to the downwind nonattainment or maintenance receptor(s) and the state's emissions were further evaluated, taking into account both air quality and cost considerations, to determine what, if any, emissions reductions might be necessary to address the state's obligation pursuant to CAA section 110(a)(2)(D)(i)(I).

As discussed in the final CSAPR Update, the air quality modeling contained in the EPA's technical analysis (1) identified locations in the U.S. where the EPA anticipates nonattainment or maintenance issues in 2017 for the 2008 ozone NAAQS (these are identified as nonattainment and maintenance receptors), and (2) quantified the projected contributions from emissions from upwind states to downwind ozone concentrations at the receptors in 2017. 81 FR 74526. This modeling used the Comprehensive Air Quality Model with Extensions (CAMx version 6.11) to model the 2011 base year, and the 2017 future base case emissions scenarios to identify projected nonattainment and maintenance sites with respect to the 2008 8-hour ozone NAAQS in 2017. The EPA used nationwide state-level ozone source apportionment modeling (the CAMx Ozone Source Apportionment Technology/Anthropogenic Precursor Culpability Analysis technique) to quantify the contribution of 2017 base case NO_X and VOC emissions from all sources in each state to the 2017 projected receptors. The air quality model runs were performed for a modeling domain that covers the 48 contiguous U.S. and adjacent portions of Canada and Mexico. *Id.* at 81 FR 74526 through 74527. The updated modeling data released to support the final CSAPR Update are the most up-to-date information the EPA has developed to inform our analysis of upwind state linkages to downwind air quality problems for the 2008 ozone NAAQS.[7] *See* ''Air Quality Modeling Final Rule Technical Support Document for the Final CSAPR Update'' in the docket for this action for more details regarding the EPA's modeling analysis.

Consistent with the framework established in the original CSAPR rulemaking, the EPA's technical analysis in support of the CSAPR Update applied a threshold of one percent of the 2008 ozone NAAQS of 75 ppb (0.75 ppb) to identify linkages between upwind states and the downwind nonattainment and maintenance receptors. *See* CSAPR Update at 81 FR 74518 through 74519. The EPA considered eastern states whose contributions to a specific receptor meet or exceed the threshold ''linked'' to that receptor and we analyzed these states further to determine if emissions reductions might be required from each state to address the downwind air quality problem. The EPA determined that one percent was an appropriate threshold to use in this analysis because there were important, even if relatively small, contributions to identified nonattainment and maintenance receptors from multiple upwind states. In response to commenters who advocated a higher or lower threshold than one percent, the EPA compiled the contribution modeling results for the CSAPR Update to analyze the impact of different possible thresholds for the eastern United States. The EPA's analysis showed that the one percent threshold captures a high percentage of the total pollution transport affecting downwind states. The EPA's analysis further showed that the application of a lower threshold would result in relatively modest increases in the overall percentage of ozone transport pollution captured, while the use of higher thresholds would result in a relatively large reduction in the overall percentage of ozone pollution transport captured relative to the levels captured at one percent at the majority of the receptors. *Id.; See also* Air Quality Modeling Final Rule Technical Support Document for the Final CSAPR Update, Appendix F, Analysis of Contribution Thresholds. This approach is consistent with the use of a one percent threshold to identify those states ''linked'' to air quality problems with respect to the 1997 ozone NAAQS in the original CSAPR rulemaking, wherein the EPA noted that there are adverse health impacts associated with ambient ozone even at low levels. 76 FR 48208, 48236 through 48237 (August 8, 2011).

As to western states, the EPA noted in the CSAPR Update that there may be geographically specific factors to consider in evaluating interstate transport, and given the near-term 2017 implementation timeframe, the EPA focused the final CSAPR Update on eastern states. *See* CSAPR Update at 81 FR 74523. Consistent with our statements in the CSAPR Update, the EPA intends to address western states, like Utah, on a case-by-case basis.

In spite of deficiencies with Utah's technical analysis described above, the EPA's technical analysis in support of the CSAPR Update indicates that Utah does not contribute above the one percent threshold to any nonattainment receptors.[8] Utah's largest modeled contribution to a nonattainment receptor is .32 ppb, below half of the one percent threshold, at a receptor in Fresno County, California. *Id.* The EPA is not necessarily determining that one percent of the NAAQS is always an appropriate threshold for identifying interstate transport linkages for all states in the west. In this instance, the State's low modeled level of contribution to any receptors identified in the EPA's technical analysis supports Utah's conclusion that the State does not contribute significantly to nonattainment of the 2008 ozone NAAQS in any other state. Thus, the EPA is proposing to approve Utah's SIP

[5] 81 FR 74504 (Oct. 26, 2016).

[6] For purposes of the CSAPR Update, ''eastern'' states refer to all contiguous states east of the Rocky Mountains, specifically not including: Montana, Wyoming, Colorado and New Mexico.

[7] The updated modeling results for the final CSAPR Update can be found in the docket for this action.

[8] Please see the spreadsheet titled ''Final CSAPR Update—Ozone Design Values & Contributions,'' in the docket for this action.

as meeting the 110(a)(2)(D)(i) prong 1 requirement for the 2008 ozone NAAQS. This proposed action supersedes the EPA's May 10, 2016 proposed disapproval of prong 1 of the Utah SIP for the 2008 ozone NAAQS. *See* 81 FR 28807.

IV. Proposed Action

The EPA is proposing to approve the section 110(a)(2)(D)(i)(I) prong 1 portion of Utah's January 31, 2013 submittal and the December 22, 2015 submittal with respect to the 2008 ozone NAAQS. The EPA is soliciting public comments on this proposed action and will consider public comments received during the comment period.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state actions, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely proposes approval of state law as meeting federal requirements; this proposed action does not propose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, Oct. 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: December 12, 2016.

Richard D. Buhl,

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2015–0032; FRL–9956–04]

Receipt of Several Pesticide Petitions Filed for Residues of Pesticide Chemicals in or on Various Commodities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of filing of petitions and request for comment.

SUMMARY: This document announces EPA's receipt of several initial filings of pesticide petitions requesting the establishment or modification of regulations for residues of pesticide chemicals in or on various commodities.

DATES: Comments must be received on or before January 19, 2017.

ADDRESSES: Submit your comments, identified by the Docket Identification (ID) Number and the Pesticide Petition Number (PP) of interest as shown in the body of this document, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Robert McNally, Biopesticides and Pollution Prevention Division (7511P), main telephone number: (703) 305–7090, email address: *BPPDFRNotices@epa.gov;* or Michael Goodis, Registration Division (7505P), main telephone number: (703) 305–7090, email address: *RDFRNotices@epa.gov.* The mailing address for each contact person is: Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001. As part of the mailing address, include the contact person's name, division, and mail code. The division to contact is listed at the end of each pesticide petition summary.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT** for the division listed at the

end of the pesticide petition summary of interest.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *http://www.epa.gov/dockets/comments.html.*

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, EPA seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. What action is EPA taking?

EPA is announcing its receipt of several pesticide petitions filed under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, requesting the establishment or modification of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. EPA is taking public comment on the requests before responding to the petitioners. EPA is not proposing any particular action at this time. EPA has determined that the pesticide petitions described in this document contain the data or information prescribed in FFDCA section 408(d)(2), 21 U.S.C. 346a(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petitions. After considering the public comments, EPA intends to evaluate whether and what action may be warranted. Additional data may be needed before EPA can make a final determination on these pesticide petitions.

Pursuant to 40 CFR 180.7(f), a summary of each of the petitions that are the subject of this document, prepared by the petitioner, is included in a docket EPA has created for each rulemaking. The docket for each of the petitions is available at *http://www.regulations.gov.*

As specified in FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), EPA is publishing notice of the petitions so that the public has an opportunity to comment on these requests for the establishment or modification of regulations for residues of pesticides in or on food commodities. Further information on the petitions may be obtained through the petition summaries referenced in this unit.

New Tolerances

1. *PP 5E8440.* (EPA–HQ–OPP–2016–0392). Dow AgroSciences LLC, 9330 Zionsville Rd., Indianapolis, IN 46268, requests to establish tolerances in 40 CFR part 180 without a U.S. registration for residues of the fungicide fenpicoxomid (XDE 777) in or on the raw agricultural commodities banana at 0.1 parts per million (ppm), rye at 0.7 ppm, and wheat at 0.7 ppm; and residues of fenpicoxomid plus its metabolite X12326349, expressed as fenpicoxomid equivalents, in or on meat and fat from cattle, goats, and sheep at 0.01 ppm; and meat byproducts of cattle, goats, and sheep at 0.02 ppm. The Method S12–01537, ''XDE 777 and its Metabolite X642188—Validation of the Method for the Determination of XDE 777 and its Metabolite X642188 in Crops by LC MS/MS,'' was used for the analysis of XDE 777 and its metabolite X642188 in the plant materials. Samples were analyzed by liquid chromatography using a Phenomenex Luna C18 column coupled with positive-ion electrospray tandem mass spectrometry (LC/MS/MS), monitoring two MS/MS transitions characteristic of each analyte. Contact: RD.

2. *PP 5F8403.* (EPA–HQ–OPP–2016–0560). Dow AgroSciences LLC, 9330 Zionsville Rd., Indianapolis, IN 46268, requests to establish tolerances in 40 CFR part 180 for residues of the herbicide florpyrauxifen-benzyl (2-Pyridinecarboxylic acid, 4-amino-3-chloro-6-(4-chloro-2-fluoro-3-methoxyphenyl)-5-fluoro-, phenylmethyl ester) and florpyrauxifen (metabolite; 2-Pyridinecarboxylic acid, 4-amino-3-chloro-6-(4-chloro-2-fluoro-3-methoxyphenyl)-5-fluoro-) in or on the raw agricultural commodities rice, grain (dehulled) at 0.01 ppm; rice, grain at 0.2 ppm; fish, freshwater at 2 ppm; shellfish, crustacean at 0.5 ppm; and shellfish, mollusk at 9 ppm. The liquid chromatography with tandem mass spectrometry analytical method 130794.1 is used to validate rice grain and straw matrices. A separate liquid chromatography with tandem mass spectrometry analytical method 130794.02 is used to validate matrices of rice processed fractions. Contact: RD.

3. *PP 5F8417.* (EPA–HQ–OPP–2015–0787). K–I Chemical USA, Inc., 11 Martine Ave., Suite 970, White Plains, NY 10606, requests to establish tolerances in 40 CFR 180.659 for residues of the herbicide pyroxasulfone (3-[(5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl) pyrazole-4-ylmethylsulfonyl]-4,5-dihydro-5,5-dimethyl-1,2-oxazole) and its metabolites in or on dried shelled peas and beans (crop subgroup 6C) at 0.15 ppm, pea hay at 0.40 ppm, pea vines at 0.20 ppm, cowpea hay at 0.07 ppm, cowpea forage at 3.0 ppm flax at 0.07 ppm, peanut at 0.20 ppm, peanut hay at 3.0 ppm, peanut meal at 0.40 ppm, and vegetable, foliage of legume, except soybean, subgroup 07A at 3.0 ppm. The LC/MS/MS has been proposed to enforce the tolerance expression for pyroxasulfone. Contact: RD.

4. *PP 6E8505.* (EPA–HQ–OPP–2016–0049). Interregional Research Project No. 4 (IR–4), Rutgers, The State University of New Jersey, 500 College Rd. East, Suite 201W, Princeton, NJ 08540, requests to establish tolerances in 40 CFR 180.685 for residues of the fungicide oxathiapiprolin, 1-[4-[4-[5-(2,6-difluorophenyl)-4,5-dihydro-3-isoxazolyl]-2-thiazolyl]-1-piperidinyl]-2-[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]-ethanone, in or on cacao bean, bean at 0.10 ppm; cacao bean, chocolate at 0.15 ppm; cacao bean, cocoa powder at 0.15 ppm; and cacao bean, roasted bean at 0.15 ppm. Adequate analytical methodology, high-pressure liquid chromatography with tandem mass spectrometry (MS/MS) detection, is available for tolerance enforcement purposes. Contact: RD.

5. *PP 6E8511.* (EPA–HQ–OPP–2016–0587). IR–4, Rutgers, The State University of New Jersey, 500 College Rd. East, Suite 201W, Princeton, NJ 08540, requests to establish a tolerance in 40 CFR 180.444 for residues of sulfur dioxide, including its metabolites and degradates, in or on fig at 25 ppm. An analytical enforcement method, the

Monier-Williams Procedure for Sulfites (21 CFR part 101 Appendix A), is available for enforcement of tolerances for sulfites in food. Contact: RD.

6. *PP 6F8507.* (EPA–HQ–OPP–2016–0573). Isagro S.p.A. d/b/a Isagro USA, Inc., 430 Davis Dr., Suite 240, Morrisville, NC 27560, requests to establish tolerances in 40 CFR 180.557 for residues of the fungicide tetraconazole in or on barley at 0.3 ppm; crop group 16, forage, fodder, and straw of cereal grains group (except corn) at 8.0 ppm; dried shelled pea and bean (except soybean) subgroup 6C, hay at 8.0 ppm; dried shelled pea and bean (except soybean) subgroup 6C, seed at 0.15 ppm; dried shelled pea and bean (except soybean) subgroup 6C, vine at 2.0 ppm; rapeseed crop subgroup 20A at 0.9 ppm; and wheat at 0.1 ppm. The adequate enforcement methodology (capillary gas chromatography with electron capture detector (GC/ECD)), as well as a QuEChERS multi-residue method (LC/MS–MS detection), is used to measure and evaluate the chemical tetraconazole. Contact: RD.

Amended Tolerance

1. PP 4F8258. (EPA–HQ–OPP–2014–0357). DuPont Crop Protection, P.O. Box 30, Newark, DE 19714–0030, requests to amend the tolerance in 40 CFR 180.672 for residues of the insecticide cyantraniliprole in or on vegetable, cucurbit (group 9) at 0.70 ppm. Adequate analytical methodology, high-pressure liquid chromatography with tandem mass spectrometry (MS/MS) detection, is available for tolerance enforcement purposes. Contact: RD.

2. *PP 6F8476.* (EPA–HQ–OPP–2016–0360). Albaugh, LLC, P.O. Box 2127, Valdosta, GA 31604, requests to amend the tolerances in 40 CFR 180.441(a)(1) for the residues of the herbicide quizalofop ethyl, including its metabolites and degradates, in or on wheat, bran at 0.40 ppm; wheat, forage at 2.0 ppm; wheat, germ at 0.40 ppm; wheat, hay at 2.0 ppm; wheat, milled byproducts at 0.40 ppm; and wheat, straw at 0.80 ppm. The modified Morse Method-147 is used to measure and evaluate the chemical quizalofop-P-ethyl and quizalofop-P acid, convertible to 6-chloro-2-methoxyquinoxaline (MeCHQ). Contact: RD.

New Tolerance Exemptions

1. *PP IN–10970.* (EPA–HQ–OPP–2016–0606). AgroFresh Inc., 400 Arcola Rd., P.O. Box 7000, Collegeville, PA 19426, requests to establish an exemption from the requirement of a tolerance for residues of polyglycerol polyricinoleic acid (CAS Reg. No. 29894–35–7) with a minimum number average molecular weight (in amu) of 2,000 when used as an inert ingredient in pesticide formulations under 40 CFR 180.960. The petitioner believes no analytical method is needed because it is not required for an exemption from the requirement of a tolerance. Contact: RD.

2. *PP IN–10984.* (EPA–HQ–OPP–2016–0617). Spring Trading Company, on behalf of Ethox Chemicals, LLC, 1801 Perimeter Rd., Greenville, SC 29605, requests to establish an exemption from the requirement of a tolerance for residues of octadecanoic acid, 12-hydroxy-, homopolymer, ester with α, α′,α″-1,2,3-propanetriyltris[ω-hydroxypoly(oxy-1,2-ethanediyl)] (CAS Reg. No. 1939051–18–9) with a minimum number average molecular weight (in amu) of 5,000 when used as an inert ingredient in pesticide formulations under 40 CFR 180.960. The petitioner believes no analytical method is needed because it is not required for an exemption from the requirement of a tolerance. Contact: RD.

3. *PP 5F8410.* (EPA–HQ–OPP–2016–0284). AFS009 Plant Protection, Inc., 104 T.W. Alexander Dr., Building 18, Research Triangle Park, NC 27709, requests to establish an exemption from the requirement of a tolerance in 40 CFR part 180 for residues of the fungicide *Pseudomonas chlororaphis* strain AFS009 in or on all food commodities. The petitioner believes no analytical method is needed because it is expected that, when used as proposed, *Pseudomonas chlororaphis* strain AFS009, would not result in residues that are of toxicological concern. Note: In the **Federal Register** of June 22, 2016 (81 FR 40594) (FRL–9947–32), EPA announced the filing of this petition to establish an exemption from the requirement of a tolerance for residues of *Pseudomonas chlororaphis* subsp. *aurantiaca* strain AFS009 in or on all food commodities. Since that time, the petitioner provided additional data on the identity of the active ingredient to EPA. After reviewing these data, EPA now considers the correct identity of the active ingredient to be *Pseudomonas chlororaphis* strain AFS009 and not *Pseudomonas chlororaphis* subsp. *aurantiaca* strain AFS009. In order to give the public an opportunity to comment on this new information, EPA is republishing its receipt of this tolerance exemption petition filing with an updated and accurate description. Contact: BPPD.

4. *PP 6F8485.* (EPA–HQ–OPP–2016–0608). BASF Corporation, 26 Davis Dr., Research Triangle Park, NC 27709, requests to establish an exemption from the requirement of a tolerance in 40 CFR part 180 for residues of the insecticide *Beauveria bassiana* strain PPRI 5339 in or on all food commodities. The petitioner believes no analytical method is needed because it is expected that, when used as proposed, *Beauveria bassiana* strain PPRI 5339, would not result in residues that are of toxicological concern. Contact: BPPD.

Amended Tolerance Exemption

1. *PP 6F8481.* (EPA–HQ–OPP–2016–0578). Verdesian Life Sciences U.S., LLC, 1001 Winstead Dr., Suite 480, Cary, NC 27513, requests to amend an exemption from the requirement of a tolerance in 40 CFR 180.1210 for residues of the systemic fungicide/systemic acquired resistance (SAR) inducer calcium salts of phosphorous acid in or on all food commodities when used as an agricultural fungicide and in or on potatoes when applied as a post-harvest treatment at 35,600 ppm or less phosphorous acid. The two analytical methods available to EPA for the detection and measurement of the pesticide residues are the modified AOAC Method 958.01 and the modified AOAC Method 965.09. Contact: BPPD.

Authority: 21 U.S.C. 346a.

Dated: December 9, 2016.

Robert McNally,

Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

RIN 0648–XD669–X

Endangered and Threatened Wildlife and Plants: Notice of 12-Month Finding on a Petition To List the Gulf of Mexico Bryde's Whale as Endangered Under the Endangered Species Act (ESA); Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; correction.

SUMMARY: NMFS published in the **Federal Register** on December 8, 2016, a document proposing to list the Gulf of Mexico Bryde's whale as an endangered species under the Endangered Species Act of 1973 (ESA). This document

corrects an error regarding the January 30, 2017, scheduled close date of the public comment period and identifies that comments must be received by February 6, 2017. This document also corrects the reference number used to identify public comments submitted electronically through the Federal eRulemaking portal.

DATES: Comments on the proposed rule published in the **Federal Register** on December 8, 2016 (81 FR 88639), must be received by February 6, 2017.

ADDRESSES: You may submit comments, information, or data on this document, identified by the code NOAA–NMFS–2014–0157 by any of the following methods:

- *Electronic Submissions:* Submit all electronic comments via the Federal eRulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2014-0157,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments;
- *Mail:* NMFS, Southeast Regional Office, 263 13th Avenue South, St. Petersburg, FL 33701;
- *Hand delivery:* You may hand deliver written information to our office during normal business hours at the street address given above.

Instructions: Comments must be submitted by one of the above methods to ensure that the comments are received, documented, and considered by NMFS. Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.) submitted voluntarily by the sender will be publicly accessible. Do not submit confidential business information, or otherwise sensitive or protected information. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Laura Engleby or Calusa Horn, NMFS, Southeast Regional Office (727) 824–5312 or Marta Nammack, NMFS, Office of Protected Resources (301) 427–8469.

Correction

The proposed rule that published in the **Federal Register** on December 8, 2016 (81 FR 88639) contained the wrong closure date for the public comment period. The original language incorrectly stated that the public comment period would close on January 30, 2017. This date does not allow for a 60-day public comment period. Therefore, we are correcting the date and inserting the date of February 6, 2017, allowing for a 60-day public comment period. We are also correcting the Federal Docket Management System reference number associated with this proposed rule so that public comments submitted electronically through *www.regulations.gov* will be associated correctly with this proposed rule.

In the proposed rule (81 FR 88639) published on December 8, 2016, the **DATES** and **ADDRESSES** sections are corrected as set above in this document.

Dated: December 15, 2016.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

Fisheries of the Northeastern United States; Amendment 18 to the Northeast Multispecies Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: We are proposing regulations to implement Amendment 18 to the Northeast Multispecies Fishery Management Plan. Amendment 18 was developed by the New England Fishery Management Council to promote fleet diversity in the groundfish fishery and enhance sector management. This action proposes to limit the number of permits and annual groundfish allocation that an entity could hold. This action also removes several effort restrictions to increase operational flexibility for limited access handgear vessels.

DATES: Comments must be received on or before February 3, 2017.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2015–0143, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go *to www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2015-0143,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to John K. Bullard, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope: ''Comments on Northeast Multispecies Amendment 18.''

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the commenter may be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements contained in this proposed rule may be submitted to the Greater Atlantic Regional Fisheries Office and by email to *OIRA_Submission@omb.eop.gov* or fax to (202) 395–7285.

Copies of Amendment 18, including its environmental impact statement, preliminary Regulatory Impact Review, and Initial Regulatory Flexibility Analysis (EIS/RIR/IRFA), are available from the New England Fishery Management Council, 50 Water Street, Newburyport, MA 01950. The EIS/RIR/IRFA is also accessible via the Internet at: *www.greateratlantic.fisheries.noaa.gov.*

FOR FURTHER INFORMATION CONTACT: William Whitmore, Fishery Policy Analyst, 978–281–9182.

SUPPLEMENTARY INFORMATION:

Background

Since the approval of Amendment 16 to the Northeast Multispecies Fishery Management Plan (FMP) and the expanded use of catch shares in the groundfish fishery, many industry members and stakeholders have become increasingly concerned about excessive

fleet consolidation and lack of diversity with regards to the composition of the fishing fleet. Amendment 18 was developed to address these concerns, primarily by limiting both the number of permits and allocation an individual or entity could hold (referred to as an entity from here on).

Development of Amendment 18 began in 2011, with initial public scoping taking place between December 2011 and March 2012. Subsequently, the stock status for many groundfish stocks declined and the associated annual catch limits were significantly reduced. As a result, some groundfish fishermen were concerned that implementing an accumulation limit could be problematic if it reduced flexibility and prevented them from obtaining additional quota necessary to maintain viable fishing operations.

However, many industry members and stakeholders remained concerned that excessive consolidation is a risk to the fishery. Several groundfish stocks, particularly Georges Bank haddock, redfish, and pollock, continue to grow and remain consistently underharvested. As other stocks rebuild and quotas increase, there may be further consolidation and decreased diversity if vessels are able to earn above market rates of return and have an opportunity to acquire more permits.

Under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), we are required to publish proposed rules for comment after preliminarily determining whether they are consistent with applicable law. The Magnuson-Stevens Act permits us to approve, partially approve, or disapprove measures proposed by the Council based only on whether the measures are consistent with the fishery management plan, plan amendment, the Magnuson-Stevens Act and its National Standards, and other applicable law. Otherwise, we must defer to the Council's policy choices. We are seeking comment on the Council's proposed measures in Amendment 18 and whether they are consistent with the Northeast Multispecies FMP, the Magnuson-Stevens Act and its National Standards, and other applicable law.

The primary purpose of this action is to limit the level of allocation that an entity may control to prevent excessive consolidation and retain fleet diversity.

The Council identified four goals for Amendment 18:

1. Promote a diverse groundfish fishery, including different gear types, vessel sizes, ownership patterns, geographic locations, and levels of participation through sectors and permit banks;

2. Enhance sector management to effectively engage industry to achieve management goals and improve data quality;

3. Promote resilience and stability of fishing businesses by encouraging diversification, quota utilization, and capital investment; and

4. Prevent any individual(s), corporation(s), or other entity(ies) from acquiring or controlling excessive shares of the fishery access privileges.

Proposed Measures

The goals and objectives of Amendment 18 are addressed through two mechanisms. First, this action proposes to establish accumulation limits on the number of groundfish permits and the amount of Potential Sector Contribution (PSC) that an entity may hold. PSC is the proportion of total landings of a particular stock associated with the landing history of a limited access permit. PSC also represents the share of allocation that an individual permit contributes to a sector. Second, this action proposes to remove several restrictions on limited access handgear vessels (Handgear A permitted vessels) to promote that small-boat fishery.

1. Accumulation Limits

Background

The New England Fishery Management Council contracted Compass Lexecon, an economic consulting firm, to provide independent advice regarding the establishment of northeast multispecies permit accumulation limits. The Council tasked Compass Lexecon to determine whether any entity already holds an excessive share of permits, and if not, what an excessive share would be in the groundfish fishery. Compass Lexecon defined an excessive share as a share of quota that would allow a permit owner or sector to influence the prices of the fishery's output or the prices paid for leased quota to its advantage, which is called market power. Compass Lexecon's analyses did not find that market power is currently being exercised through the withholding of quota in any part of the groundfish fishery, or in the sales of fish or transfers of permits.

Compass Lexecon recommended setting an excessive-share cap on the PSC conferred to a permit holder at 15.5 percent of the available PSC for any groundfish stock. Analyses suggested that this cap would prevent the accumulation of excessive shares, and that a lower limit was likely not necessary. The final report was completed in December 2013, and was peer reviewed in June 2014 by three reviewers from the Center for Independent Experts and one independent reviewer. A variation of Compass Lexecon's recommendation is proposed in this action.

Accumulation Limit Guidelines

Amendment 18 includes several general measures detailing how permit accumulation limits would be applied.

- Accumulation limits apply to individuals, permit banks, and other entities, including groundfish sectors, at the individual permit and PSC level.
- Accumulation limits do not apply to the amount of annual groundfish allocated to a sector, technically referred to as a sector's annual catch entitlement, or ACE.
- Accumulation limits may be modified in a future framework due to a Federal permit buyback or buyout.
- If an entity held permits or PSC on the control date (April 7, 2011) that exceeded the accumulation limits, it would be exempt from the accumulation limit, but would be restricted to holding no more permits or PSC than it held as of the control date. The grandfathered holdings may be fished or leased by the entity but are not transferrable. Current analyses suggest that no entity exceeds the control date accumulation limits.
- There is no calculation of partial ownership when considering accumulation limits. Any entity that is a partial owner is assumed to have full-ownership when calculating permit and PSC accumulation limits.

Limiting the Number of Permits

This action proposes to limit an entity to holding no more than 5 percent of all limited access groundfish permits. An entity would be prohibited from acquiring a permit that would result in it exceeding the 5-percent permit cap. There are approximately 1,373 limited access permits currently in the fishery; a 5-percent cap would limit an entity to approximately 69 permits. As of May 1, 2014, the most permits held by any entity is 55. Therefore, if approved, this alternative is unlikely to immediately restrict any entity.

Using this permit cap alone could still allow for accumulation of PSC sufficient to exert market power in limited and unlikely circumstances. For example, if only a 5-percent permit cap was adopted, an entity could potentially hold 85 PSC of the Georges Bank winter flounder stock. To address this potential, the Council proposed an additional PSC limit proposed in this action.

Limiting the Potential Sector Contribution

This action also proposes to limit the aggregated average of all allocated groundfish stocks PSC that may be held by an entity to no more than 15.5. With 15 groundfish stocks currently allocated to the fishery, the total PSC across all stocks used by an individual or an entity must be ≤232.5 (an average of 15.5 per stock multiplied by 15 stocks). This would allow an entity to hold PSC for a single stock in excess of 15.5, so long as the total holdings used do not exceed 232.5. If additional groundfish stocks are allocation (or unallocated) to sectors in the future, then this number would change by 15.5 per stock.

This PSC limit was developed based on Compass Lexecon's recommendation to establish a stock-specific PSC limit of 15.5 (as explained above). However, to allow fishermen additional operational flexibility in light of current groundfish stock conditions, the Council elected to use an aggregate average as defined above. Compared to other PSC limit alternatives that the Council considered, this option is the least restrictive because there is no stock-specific limit. Further, an entity would be permitted to purchase a vessel permit during a fishing year that would result in exceeding the aggregate 232.5 PSC limit. In this case, the entity would have to render at least one permit unusable (or ''shelve'' the permit) so that the entity is not operating above the PSC limit the following fishing year. A shelved permit would be unusable for an entire fishing year; a shelved permit could not be enrolled in a sector, fished, or leased, but could be sold. An entity would be prohibited from purchasing any additional permit once it exceeds the PSC limit. This is intended to allow a permit holder to acquire a new permit and improve their operational flexibility, while still restricting them to the overall accumulation limit. A shelved permit that is rendered unusable can be sold.

The aggregate limit provides flexibility for accumulating shares in single stocks. By itself, an aggregate PSC limit could result in an entity accumulating sufficient PSC in a single stock to exert market power, though exerting market power over multiple stocks appears highly unlikely. Recent analyses indicate that no one entity currently holds more than 140.4 PSC. Consequently, if approved, the 232.5 PSC limit is unlikely to immediately constrain any entity. Analyses within sections 7.6 and 9.11 of the Amendment suggest that purchasing vessel permits with enough PSC to exceed the PSC limit of 232.5 would require substantial capital and logistically would likely be complex and time consuming. As a result, the increased flexibility for accumulating PSC in individual stocks is curbed by the combination of the PSC limit and the permit caps.

Effect of Combined Accumulation Limits

The combination of PSC limits and the permit cap make it highly unlikely that market power could be exerted. Analyses show that the maximum allocation that an entity could acquire would be around 20 PSC for the majority of stocks, though PSC for certain stocks such as Georges Bank winter flounder could be acquired at higher levels than others. These analyses suggest that the proposed combination of an aggregate PSC limit of 232.5 and a 5-percent permit cap should be sufficient to prevent market power from being exerted. These analyses are discussed in more detail in sections 7.7.4.5 and 9.11 of the Amendment 18 EIS (see **ADDRESSES**).

Transfer of Permits by an Individual Entity That Has Exceeded the PSC Limit

We have some concern that Amendment 18 does not include any permit transfer restrictions on an individual entity that has exceeded the permit accumulation limit. As proposed, an individual who has exceeded the permit accumulation limit could maintain an interest in the PSC by transferring a permit to a spouse, family member, or business partner at little to no cost. We see this as a potential loophole to the PSC limit restriction. Including a requirement that any permit transfer from an entity that has exceeded the permit accumulation limit be an ''arms-length'' transaction would address this potential loophole. In this case, an arms-length transaction would be a permit transfer in the ordinary course of business between independent and unrelated entities, which would result in the owner who exceeded the limit maintaining no interest in the transferred permit and its PSC. We welcome comment on this topic.

Future Changes to Accumulation Limits

Amendment 18 proposes to allow modifications to the accumulation limits through a future framework adjustment if a vessel/permit buyback or buyout were enacted in the groundfish fishery. However, any other changes to the accumulation limits would require an amendment to the FMP. Should certain factors change dramatically, such as a substantial reduction in the number of northeast multispecies limited access permits (due to permit holders relinquishing their permits), then NMFS would encourage the Council to revisit the accumulation limits proposed in this Amendment.

Ownership Interest

In order for an accumulation limit to be developed and applied it is necessary to first define an ownership interest. A unique definition of ownership interest as applied to the groundfish fishery is proposed for section 50 CFR 648.2 of the regulations. To better identify ownership interest and account for accumulation limits in the groundfish fishery, a permit holder would be required to identify all persons who hold an ownership interest with a particular permit when submitting a groundfish permit application or renewal form.

2. Handgear A Measures

To reduce effort controls and increase flexibility for small boat fishermen, this action proposes to remove or modify several management measures affecting limited access permitted vessels fishing with handgear (Handgear A vessels).

First, this action would remove the March 1–20 spawning-block closure for all Handgear A vessels. Fishing effort by Handgear A vessels is restricted by a very small annual catch limit, and vessels are subject to other spawning closures. This measure would make the regulations for Handgear A vessels more consistent with vessels fishing in sectors, which are already exempted from the 20-day spawning block and is not anticipated to have any substantial biological consequences.

Handgear A vessels would also no longer be required to carry a standard fish tote on board. This measure was initially implemented to aid in the sorting and weighing of fish by both fishermen and enforcement personnel. However, enforcement no longer uses totes for at-sea weight and volume estimates, so the requirement for vessels to carry a tote is no longer necessary.

Lastly, this action would allow a sector to request an exemption from the requirement for Handgear A vessels to use a Vessel Monitoring System (VMS). Handgear A fishermen enrolled in a sector are currently required to utilize a VMS. Handgear A fishermen have commented that installing and utilizing a VMS system makes enrolling in a sector cost prohibitive. Any sector interested in utilizing this exemption would be required to submit an exemption request to us for approval. If a sector exemption is approved, a Handgear A vessel fishing within a sector utilizing the exemption would

declare its trips through the interactive voice response (IVR) call-in system instead of through a VMS. This measure is intended to encourage Handgear A vessels to enroll in a sector by reducing operating expenses. Sectors receive regulatory exemptions and larger allocations that could provide additional flexibility and fishing opportunities to Handgear A vessels.

Measures That Could Be Addressed in a Future Framework

This action proposes to allow two measures analyzed in Amendment 18 to be implemented through a future framework action. The Council explored establishing a separate allocation for the Handgear A fishery. Additionally, there was some interest in considering separate management measures for an inshore/offshore Gulf of Maine (GOM) boundary, including separate allocations for inshore and offshore GOM cod. However, because current catch limits for key groundfish stocks, including GOM cod, are so low, further sub-dividing allocations for the Handgear A, as well as inshore and offshore GOM cod, were controversial and would be difficult to develop and implement at this time. As a result, the Council elected to potentially consider these measures in a future framework.

In addition, several regulatory clarifications are proposed at § 648.90 to better delineate the responsibilities of the groundfish plan development team as well as which Council management measures could be modified in a future framework.

Public comments on the NOA for the FMP/amendment are being solicited through February 6, 2017 (81 FR 87862; December 6, 2016). Public comments on the proposed rule must be received by the end of the comment period on the Amendment, as published in the NOA, to be considered in the approval/disapproval decision on the Amendment. All comments received by the end of the comment period on the Amendment, whether specifically directed to the Amendment, or the proposed rule, will be considered in the approval/disapproval decision. Comments received after that date will not be considered in the approval/disapproval decision on Amendment 18. To be considered, comments must be received by close of business on the last day of the comment period; that does not mean postmarked or otherwise transmitted by that date.

Pursuant to section 303(c) of the Magnuson-Stevens Act, the Council has deemed the proposed regulations to be necessary and appropriate for the purpose of implementing Amendment 18.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has preliminarily determined that this proposed rule is consistent with Amendment 18, the FMP, other provisions of the Magnuson-Stevens Act, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

The Council prepared an environmental impact statement (EIS) for Amendment 18 that analyzes the impacts on the environment as a result of this action. A copy of the Amendment 18 EIS is available upon request from the Council and from our Web site (see **ADDRESSES**). A copy is also available from the Federal e-Rulemaking portal at *www.regulations.gov.* Type ''NOAA–NMFS–2015–0143'' in the Enter Keyword or ID field and click search.

An initial regulatory flexibility analysis (IRFA) was prepared, as required by section 603 of the Regulatory Flexibility Act (RFA). The IRFA describes the economic impact that this proposed rule, if adopted, would have on small entities. A description of the action, why it is being considered, and the legal basis for this action are contained at the beginning of this section, in the preamble, and in the **SUMMARY** section of the preamble. A summary of the IRFA follows. A copy of this analysis is available from the Council (see **ADDRESSES**).

The purpose of the Regulatory Flexibility Act (RFA) analysis is to establish a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure such proposals are given serious consideration. The RFA does not contain any decision criteria. Instead, the purpose of the RFA is to inform the agency, as well as the public, of the expected economic impacts of various alternatives contained in the FMP or Amendment (including framework management measures and other regulatory actions) and to ensure the agency considers alternatives that minimize the expected impacts while meeting the goals and objectives of the FMP and applicable statutes.

With certain exceptions, the RFA requires agencies to conduct an Initial Regulatory IRFA for each proposed rule. The IRFA is designed to assess the impacts various regulatory alternatives would have on small entities, including small businesses, and to determine ways to minimize those impacts. An IRFA is primarily conducted to determine whether the proposed action would have a ''significant economic impact on a substantial number of small entities.'' In addition to analyses conducted for the RIR, the IRFA provides:

1. A description of the reasons why action by the agency is being considered;

2. A succinct statement of the objectives of, and legal basis for, the proposed rule;

3. A description and, where feasible, an estimate of the number of small entities to which the proposed rule will apply;

4. A description of the projected reporting, record-keeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities which will be subject to the requirements of the report or record; and,

5. Identification, to the extent practicable, of all relevant federal rules, which may duplicate, overlap, or conflict with the proposed rule.

Description of the Reasons Why Action by the Agency Is Being Considered

The purpose and need of Amendment 18 are set forth in Section 3.2 of the EIS (see page 30).

Statement of the Objectives of, and Legal Basis for, This Proposed Rule

The goals and objectives of Amendment 18 are set forth in Section 3.3 of the EIS (see page 31–32). These were also summarized in the Background section of the preamble.

Description and Estimate of the Number of Small Entities To Which This Proposed Rule Would Apply

Small entities include ''small businesses,'' ''small organizations,'' and ''small governmental jurisdictions.'' The Small Business Administration (SBA) has established size standards for all major industry sectors in the U.S. including commercial finfish harvesters (NAICS code 114111), commercial shellfish harvesters (NAICS code 114112), other commercial marine harvesters (NAICS code 114119), for-hire businesses (NAICS code 487210),

marinas (NAICS code 713930), seafood dealers/wholesalers (NAICS code 424460), and seafood processors (NAICS code 311710). A business primarily involved in finfish harvesting is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates), and has combined annual receipts not in excess of $20.5 million for all its affiliated operations worldwide. For commercial shellfish harvesters, the other qualifiers apply and the receipts threshold is $5.5 million. For other commercial marine harvesters, for-hire businesses, and marinas, the other qualifiers apply and the receipts threshold is $7.5 million.

On December 29, 2015, the National Marine Fisheries Service (NMFS) issued a final rule establishing a small business size standard of $11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry (NAICS 11411) for Regulatory Flexibility Act (RFA) compliance purposes only (80 FR 81194, December 29, 2015). The $11 million standard became effective on July 1, 2016, and is to be used in place of the U.S. Small Business Administration's (SBA) current standards of $20.5 million, $5.5 million, and $7.5 million for the finfish (NAICS 114111), shellfish (NAICS 114112), and other marine fishing (NAICS 114119) sectors of the U.S. commercial fishing industry in all NMFS rules subject to the RFA after July 1, 2016. Id. at 81194.

Pursuant to the RFA, and prior to July 1, 2016, an IRFA was developed for this regulatory action using SBA's former size standards. NMFS has reviewed the analyses prepared for this regulatory action in light of the new size standard. Under the SBA's size standards, all of the commercial finfish and other marine fishing businesses were considered small, while 12 of the 237 shellfish businesses were determined not to be small (Tables 1 and 2). The new standard could result in a few more commercial shellfish businesses being considered small. Analyses in Tables 2 and 3 below reveal that no groundfish-dependent entities exceeded $5.5 million in gross sales, with the mean gross sale per entity being less than $2 million. As a result, it is unlikely that any finfish, or more specifically, groundfish-dependent vessels, would be considered a large business under the new NMFS size standard.

Amendment 18 regulates commercial fish harvesting entities engaged in the Northeast multispecies limited access fishery. A description of the specific entities that are likely to be impacted is included below for informational purposes, followed by a discussion of those regulated entities likely to be impacted by the proposed regulations. For the purposes of the RFA analysis, the ownership entities, not the individual vessels, are considered the regulated entities.

Ownership Entities in Regulated Commercial Harvesting Businesses

Individually-permitted vessels may hold permits for several fisheries, harvesting species of fish that are regulated by several different FMPs, even beyond those impacted by Amendment 18. Furthermore, multiple permitted vessels and/or permits may be owned by entities affiliated by stock ownership, common management, identity of interest, contractual relationships, or economic dependency. For this analysis, ownership entities are defined by those entities with common ownership personnel as listed on permit application documentation. Only permits with identical ownership personnel are categorized as an ownership entity. For example, if five permits have the same seven personnel listed as co-owners on their application paperwork, those seven personnel form one ownership entity, covering those five permits. If one or several of the seven owners also own additional vessels, with sub-sets of the original seven personnel or with new co-owners, those ownership arrangements are deemed to be separate ownership entities for the purpose of this analysis.

Regulated Commercial Harvesting Entities

Ownership entities are identified on June 1 of each year based on the list of all permit numbers for the most recent complete calendar year that have applied for any type of Northeast Federal fishing permit. The current ownership data set is based on calendar year 2014 permits and contains gross sales associated with those permits for calendar years 2012 through 2014. As of June 1, 2015, there were 661 commercial business entities potentially regulated by this action. Entities permitted to operate in the Northeast multispecies limited access fishery are described in Tables 1 and 2. As of June 1, 2015, there were 1,147 individual limited access permits. The 34 for-hire businesses included here are entities affiliated with limited access commercial groundfish permits, but derive greater than 50% of their gross sales from party/charter operations. All are small businesses (average gross revenues from 2012–14 are less than $7.5 million). The remaining 75 entities had no revenue and are classified as small.

These totals may mask some diversity among the entities. Many, if not most, of these ownership entities maintain diversified harvest portfolios, obtaining gross sales from many fisheries and are not dependent on any one. However, not all are equally diversified. Those that depend most heavily on sales from harvesting species impacted directly by Amendment 18 are most likely to be affected. By defining dependence as deriving greater than 50% of gross sales from sales of regulated species associated with a specific fishery, those ownership groups most likely to be impacted by the proposed regulations can be identified. Using this threshold, 61 entities are groundfish-dependent; all of which are small under both the SBA and NMFS size standards (Table 3).

TABLE 1—ENTITIES REGULATED BY THE PROPOSED ACTION

Type	Number	Number small
Primarily finfish	315	315
Primarily shellfish	237	225
Primarily for-hire	34	34
No Revenue	75	75
Total	661	649

TABLE 2—DESCRIPTION OF REGULATED ENTITIES BY GROSS SALES

Sales category	Number	Number small	Mean gross sales	Median gross sales	Mean permits per entity	Max permits per entity
<$50K	186	186	$10,597	$1,954	1.3	30
$50–100K	71	71	76,466	78,736	1.3	3

Total ownership entities	61	0						

Description of Projected Reporting, Record Keeping, and Other Compliance Requirements of This Proposed Rule

This action contains a change to an information collection requirement, which has been approved by the Office of Management and Budget (OMB) under OMB Control Number 0648–0202. This revision would require any entity that has exceeded the potential sector contribution (PSC) allocation limit to render one or more permits ''unusable'' so that the entity would be operating within the allocation limit. If an entity exceeds the PSC limit, the entity would be required to complete a ''Permit Shelving Form'' and render one or more permits unusable. If two entities had to complete a ''Permit Shelving Form'', the burden estimate would be 1 hr and cost $1.

Currently, no entity exceeds the PSC allocation limit; the most PSC any entity holds is approximately 140 PSC, and the proposed limit would be 232.5. As a result, it is unlikely that any entity would reach this threshold, and that the proposed action would not affect fishing operations.

Public comment is sought regarding whether this collection of information is necessary for the proper performance of the function of the agency, including whether the information shall have practical utility; the accuracy of the burden estimate; ways to enhance the quality, utility, and clarify of the information to be collected; and ways to minimize the burden of the collection of information, including through the use of automated collection techniques or other forms of information technology. Send comments on these or any other aspects of the collection of information to NMFS and to OMB (see **ADDRESSES**).

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB control number.

Federal Rules Which May Duplicate, Overlap, or Conflict With This Proposed Rule

No relevant Federal rules have been identified that would duplicate or overlap with Amendment 18.

Description of Significant Alternatives to the Proposed Action Which Accomplish the Stated Objectives of Applicable Statutes and Which Minimize Any Significant Economic Impact on Small Entities

This IRFA summary is intended to analyze how small entities would be impacted by the proposed management measures. These measures are expected to have minimal, if any, impact on small entities regulated by this action. The vast majority (649 out of 661) of potentially regulated entities are classified as small businesses by SBA and NMFS business size standards.

In general, the small entities regulated by this action would be unaffected. The majority of limited access groundfish permit holders possess permits and PSC in far smaller quantities than the proposed accumulation limits. However, as proposed, individuals who comprise a part of, or the entirety of, these small entities could be restricted in the number of permits or the amount of PSC shares they wish to accumulate in the future, which could impact revenue. Based on the Compass Lexecon report, scalability would not be affected by the reduced accumulation potential, although a definitive statement cannot be made at this time. Further, the PSC limit alternative would allow substantial flexibility so that vessel permit holders could continue to accumulate permits in a manner that allows them to maximize fishing opportunities within their portfolio.

There were several other PSC limit alternatives considered in the Amendment that were not selected because the Council determined the alternatives would have been too restrictive. For example, limiting an ownership entity to an accumulation limit equivalent to the PSC held as of the control date could have forced divestiture in the fishery and would have prevented ownership entities from growing. Similarly, establishing a specific accumulation limit for a specific groundfish stock would have reduced opportunities for entities to expand and restricted operational flexibility. Additional information on these alternatives is available in section 4.1 of the Amendment.

Handgear A permit holders would be largely unaffected by the limited access handgear measures. Minimal fishing activity by these vessels occurs during the winter and early spring, and the removal of the March 1–20 closure would not change this behavior. The removal of the standard fish tote requirement would be inconsequential, as this rule is not currently enforced and it is a minor operational change. The sector exemption for VMS requirement would likely also not affect Handgear A permit holders. Joining a sector would remain a challenge for these permit holders, given the small PSC associated with Handgear A permits. However, if they were to join a sector, this provision would reduce the cost burden for those vessels.

Several management measures and alternatives were considered but not selected by the Council. Other alternatives may be considered in a future framework, as explained in the preamble above. Additional information on these alternatives and justifications for the Council's decision are explained in section 4 of the Amendment.

Impacts to Groundfish-Dependent Small Entities

The impacts of the proposed accumulation limits on groundfish-dependent small entities would be minimal. No entity would be immediately impacted by the proposed accumulation limits, and few would be potentially impacted in the long term. For those that are potentially impacted,

it is not possible to state whether scalability would be lessened. The proposed PSC and permit caps would limit the ability of any individual from monopolizing the fishery.

It is not clear how many Handgear A permit holders are groundfish-dependent, but the number is likely very small. There were 28 Handgear A permit holders that took at least one groundfish trip during fishing year 2013; any of these 28 would be minimally impacted by Amendment 18. There may be a few trips taken during the removed March 1–20 closure block. However, groundfish trips taken by Handgear A permit holders have generally been more profitable during the warmer months in recent years. The management measures proposed in this rule would provide greater operational flexibility to Handgear A vessels, therefore benefiting small businesses.

List of Subjects in 50 CFR Part 648

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: December 13, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons stated in the preamble, 50 CFR part 648 is proposed to be amended as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 648.2, add a definition for ''*Ownership interest*'' *in alphabetical order* to read as follows:

* * * * *

Ownership interest, in the NE multispecies fishery, includes, but is not limited to holding share(s) or stock in any corporation, any partnership interest, or membership in a limited liability company, or personal ownership, in whole or in part, of a vessel issued a limited access NE multispecies permit or confirmation of permit history (CPH), including any ownership interest in any entity or its subsidiaries or partners, no matter how far removed.

* * * * *

■ 3. In § 648.4, add paragraph (a)(1)(i)(N) and revise paragraph (c)(2)(i) to read as follows:

§ 648.4 Vessel permits.

(a) * * *

(1) * * *

(i) * * *

(N) *Accumulation Limits.* (*1*) *5-percent Permit/CPH Restriction.* Any person with an ownership interest in the NE multispecies fishery is not eligible to be issued a limited access NE multispecies permit or CPH for a vessel after April 7, 2011, if the issuance results in the person having an ownership interest in excess of 5 percent of all limited access NE multispecies permits and CPH that are issued as of the date the permit/CPH application is received by the NMFS.

(*2*) *PSC Limit.* Any person with an ownership interest in the NE multispecies fishery is not eligible to be issued a limited access NE multispecies permit or CPH for a vessel after April 7, 2011, that results in that person's average potential sector contribution (PSC) exceeding a share of 15.5 for all the allocated stocks in aggregate, except as provided in paragraph (a)(1)(i)(N)(*4*) of this section.

(*3*) *Grandfather Provision.* Any person initially issued a limited access NE multispecies permit or CPH prior to April 7, 2011, is eligible to renew such permits(s) and/or CPH, regardless of whether the renewal of the permits or CPH results in the person exceeding the 5-percent ownership restriction or an average PSC share of 15.5 for all the allocated stocks in aggregate. Any additional permitted vessels that a person acquires after April 7, 2011, are subject to the accumulation limits specified within this section.

(*4*) Any person can be issued one limited access NE multispecies permit or CPH that results in that person's total PSC exceeding the PSC limit as described in this section. That person must identify to NMFS on or before March 31 of each year, vessel permits or CPH that will be rendered unusable the upcoming fishing year so that the person's total PSC for the upcoming fishing year is an amount equal to or below the PSC limit. Beginning on May 1, the permits or CPH rendered unusable may not be fished, leased, or enrolled in a sector by that person for the remainder of the fishing year. A permit rendered unusable may be transferred.

* * * * *

(c) * * *

(2) *Vessel permit information requirements.* (i) An application for a permit issued under this section, in addition to the information specified in paragraph (c)(1) of this section, also must contain at least the following information, and any other information required by the Regional Administrator: Vessel name, owner name or name of the owner's authorized representative, mailing address, and telephone number; USCG documentation number and a copy of the vessel's current USCG documentation or, for a vessel not required to be documented under title 46 U.S.C., the vessel's state registration number and a copy of the current state registration; a copy of the vessel's current party/charter boat license (if applicable); home port and principal port of landing, length overall, GRT, NT, engine horsepower, year the vessel was built, type of construction, type of propulsion, approximate fish hold capacity, type of fishing gear used by the vessel, number of crew, number of party or charter passengers licensed to be carried (if applicable), permit category; if the owner is a corporation, a copy of the current Certificate of Incorporation or other corporate papers showing the date of incorporation and the names of the current officers of the corporation, and the names and addresses of all persons holding any ownership interest in a NE multispecies permit or CPH or shareholders owning 25 percent or more of the corporation's shares for other fishery permits; if the owner is a partnership, a copy of the current Partnership Agreement and the names and addresses of all partners; permit number of any current or, if expired, previous Federal fishery permit issued to the vessel.

* * * * *

■ 4. In § 648.14,

■ a. Add paragraphs (k)(2)(v) and (vi);

■ b. Revise paragraph (k)(9)(i); and

■ c. Add paragraph (k)(9)(ii)(N) to read as follows:

§ 648.14 Prohibitions.

* * * * *

(k) * * *

(2) * * *

(v) Fish for, possess, land fish, enroll in a sector, or lease a permit or confirmation of permit history (CPH) as a lessor or lessee, with a permit that has been rendered unusable as specified in § 648.4(a)(1)(i)(N).

(vi) Acquire a limited access NE multispecies permit that would result in a permit holder exceeding any of the ownership accumulation limits specified in § 648.4(a)(1)(i)(N), unless authorized under § 648.4(a)(1)(i)(N).

* * * * *

(9) * * *

(i) If operating under the provisions of a limited access NE multispecies Handgear A permit south of the GOM Regulated Mesh Area, as defined at § 648.80(a)(1), fail to declare the vessel operator's intent to fish in this area via VMS or fail to obtain or retain on board a letter of authorization from the

Regional Administrator, as required by § 648.82(b)(6)(iii).

* * * * *

(ii) * * *

(N) Act as a lessor or lessee of NE multispecies DAS to or from a limited access permit that has been rendered unusable as specified in § 648.4(a)(1)(i)(N).

* * * * *

■ 5. In § 648.82, revise paragraphs (b)(6) and (g) to read as follows:

§ 648.82 Effort-control program for NE multispecies limited access vessels.

* * * * *

(b) * * *

(6) *Handgear A category.* A vessel qualified and electing to fish under the Handgear A category, as described in § 648.4(a)(1)(i)(A), may retain, per trip, up to 300 lb (135 kg) of cod, one Atlantic halibut, and the daily possession limit for other regulated species and ocean pout, as specified under § 648.86. If either the GOM or GB cod trip limit applicable to a vessel fishing under a NE multispecies DAS permit, as specified in § 648.86(b)(1) and (2), respectively, is reduced below 300 lb (135 kg) per DAS by NMFS, the cod trip limit specified in this paragraph (b)(6) shall be adjusted to be the same as the applicable cod trip limit specified for NE multispecies DAS permits. For example, if the GOM cod trip limit for NE multispecies DAS vessels was reduced to 250 lb (113.4 kg) per DAS, then the cod trip limit for a vessel issued a Handgear A category permit that is fishing in the GOM Regulated Mesh Area would also be reduced to 250 lb (113.4 kg). Qualified vessels electing to fish under the Handgear A category are subject to the following restrictions:

(i) The vessel must not use or possess on board gear other than handgear while in possession of, fishing for, or landing NE multispecies;

(ii) Tub-trawls must be hand-hauled only, with a maximum of 250 hooks; and

(iii) *Declaration.* For any such vessel that is not required to use VMS pursuant to § 648.10(b)(4), to fish for GB cod south of the GOM Regulated Mesh Area, as defined at § 648.80(a)(1), a vessel owner or operator must obtain, and retain on board, a letter of authorization from the Regional Administrator stating an intent to fish south of the GOM Regulated Mesh Area and may not fish in any other area for a minimum of 7 consecutive days from the effective date of the letter of authorization. For any such vessel that is required, or elects, to use VMS pursuant to § 648.10(b)(4), to fish for GB cod south of the GOM Regulated Mesh Area, as defined at § 648.80(a)(1), a vessel owner or operator must declare an intent to fish south of the GOM Regulated Mesh Area on each trip through the VMS prior to leaving port, in accordance with instructions provided by the Regional Administrator. Such vessels may transit the GOM Regulated Mesh Area, as defined at § 648.80(a)(1), provided that their gear is stowed and not available for immediate use as defined in § 648.2.

* * * * *

(g) *Spawning season restrictions.* A vessel issued a valid Small Vessel category permit specified in paragraph (b)(5) of this section, or a vessel issued an open access Handgear B permit, as specified in § 648.88(a), may not fish for, possess, or land regulated species or ocean pout from March 1 through March 20 of each year. A common pool vessel must declare out and be out of the NE multispecies DAS program, and a sector must declare that the vessel will not fish with gear capable of catching NE multispecies (*i.e.,* gear that is not defined as exempted gear under this part), for a 20-day period between March 1 and May 31 of each calendar year, using the notification requirements specified in § 648.10. A vessel fishing under a Day gillnet category designation is prohibited from fishing with gillnet gear capable of catching NE multispecies during its declared 20-day spawning block, unless the vessel is fishing in an exempted fishery, as described in § 648.80. If a vessel owner has not declared and been out of the fishery for a 20-day period between March 1 and May 31 of each calendar year on or before May 12 of each year, the vessel is prohibited from fishing for, possessing or landing any regulated species, ocean pout, or non-exempt species during the period from May 12 through May 31.

* * * * *

■ 6. In § 648.87, revise paragraph (c)(2)(i) introductory text to read as follows:

§ 648.87 Sector allocation.

* * * * *

(c) * * *

(2) * * *

(i) *Regulations that may not be exempted for sector participants.* The Regional Administrator may not exempt participants in a sector from the following Federal fishing regulations: Specific times and areas within the NE multispecies year-round closure areas; permitting restrictions (*e.g.,* vessel upgrades, etc.); gear restrictions designed to minimize habitat impacts (*e.g.,* roller gear restrictions, etc.); reporting requirements; and AMs specified in § 648.90(a)(5)(i)(D). For the purposes of this paragraph (c)(2)(i), the DAS reporting requirements specified in § 648.82, the SAP-specific reporting requirements specified in § 648.85, VMS requirements for Handgear A category permitted vessels as specified in § 648.10, and the reporting requirements associated with a dockside monitoring program are not considered reporting requirements, and the Regional Administrator may exempt sector participants from these requirements as part of the approval of yearly operations plans. For the purpose of this paragraph (c)(2)(i), the Regional Administrator may not grant sector participants exemptions from the NE multispecies year-round closures areas defined as Essential Fish Habitat Closure Areas as defined in § 648.81(h); the Fippennies Ledge Area as defined in paragraph (c)(2)(i)(A) of this section; Closed Area I and Closed Area II, as defined in § 648.81(a) and (b), respectively, during the period February 16 through April 30; and the Western GOM Closure Area, as defined at § 648.81(e), where it overlaps with GOM Cod Protection Closures I through III, as defined in § 648.81(f)(4). This list may be modified through a framework adjustment, as specified in § 648.90.

* * * * *

■ 7. In § 648.90, revise paragraphs (a)(2)(i) through (iii) to read as follows:

§ 648.90 NE multispecies assessment, framework procedures and specifications, and flexible area action system.

* * * * *

(a) * * *

(2) *Biennial review.* (i) At a minimum, the NE multispecies PDT shall meet on or before September 30 every other year to perform a review of the fishery, using the most current scientific information available provided primarily from the NEFSC. Data provided by states, ASMFC, the USCG, and other sources may also be considered by the PDT. The PDT shall review available data pertaining to: Catch and landings, discards, DAS allocations, DAS use, sector operations, and other measures of fishing effort; survey results; stock status; current estimates of fishing mortality and overfishing levels; social and economic impacts; enforcement issues; and any other relevant information. The PDT may also review the performance of different user groups or fleet sectors.

(ii) Based on this review, the PDT shall recommend ACLs for the upcoming fishing year(s), as described in paragraph (a)(4) of this section, and develop options for consideration by the

Council, if necessary, on any changes, adjustments, or additions to DAS allocations, closed areas, or other measures necessary to rebuild overfished stocks and achieve the FMP goals and objectives, which may include a preferred option. The range of options developed by the PDT may include any of the management measures in the FMP, including, but not limited to: ACLs, which must be based on the projected fishing mortality levels required to meet the goals and objectives outlined in the FMP for the 12 regulated species and ocean pout if able to be determined; identifying and distributing ACLs and other sub-components of the ACLs among various segments of the fishery; AMs; DAS changes; possession limits; gear restrictions; closed areas; permitting restrictions; minimum fish sizes; recreational fishing measures; describing and identifying EFH; fishing gear management measures to protect EFH; designating habitat areas of particular concern within EFH; and changes to the SBRM, including the CV-based performance standard, the means by which discard data are collected/obtained, fishery stratification, the process for prioritizing observer sea-day allocations, reports, and/or industry-funded observers or observer set aside programs. The PDT must demonstrate through analyses and documentation that the options it develops are expected to meet the FMP goals and objectives.

(iii) In addition, the PDT may develop ranges of options for any of the management measures in the FMP and the following conditions that may be adjusted through a framework adjustment to achieve FMP goals and objectives including, but not limited to: Revisions to DAS measures, including DAS allocations (such as the distribution of DAS among the four categories of DAS), future uses for Category C DAS, and DAS baselines, adjustments for steaming time, etc.; accumulation limits due to a permit buyout or buyback; modifications to capacity measures, such as changes to the DAS transfer or DAS leasing measures; calculation of area-specific ACLs (including sub-ACLs for specific stocks and areas (*e.g.,* Gulf of Maine cod)), area management boundaries, and adoption of area-specific management measures including the delineation of inshore/offshore fishing practices, gear restrictions, declaration time periods; sector allocation requirements and specifications, including the establishment of a new sector, the disapproval of an existing sector, the allowable percent of ACL available to a sector through a sector allocation, an optional sub-ACL specific to Handgear A permitted vessels, and the calculation of PSCs; sector administration provisions, including at-sea and dockside monitoring measures; sector reporting requirements; state-operated permit bank administrative provisions; measures to implement the U.S./Canada Resource Sharing Understanding, including any specified TACs (hard or target); changes to administrative measures; additional uses for Regular B DAS; reporting requirements; declaration requirements pertaining to when and what time period a vessel must declare into or out of a fishery management area; the GOM Inshore Conservation and Management Stewardship Plan; adjustments to the Handgear A or B permits; gear requirements to improve selectivity, reduce bycatch, and/or reduce impacts of the fishery on EFH; SAP modifications; revisions to the ABC control rule and status determination criteria, including, but not limited to, changes in the target fishing mortality rates, minimum biomass thresholds, numerical estimates of parameter values, and the use of a proxy for biomass may be made either through a biennial adjustment or framework adjustment; changes to the SBRM, including the CV-based performance standard, the means by which discard data are collected/obtained, fishery stratification, the process for prioritizing observer sea-day allocations, reports, and/or industry-funded observers or observer set aside programs; and any other measures currently included in the FMP.

Notices

Federal Register
Vol. 81, No. 244
Tuesday, December 20, 2016

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

December 15, 2016.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by January 19, 2017 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725 17th Street NW., Washington, DC 20502. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Foreign Agricultural Service

Title: USDA Local and Regional Food Aid Procurement Program.

OMB Control Number: 0551–0046.

Summary of Collection: The U.S. Department of Agriculture's Foreign Agricultural Service (FAS) awards funds to recipients under the USDA Local and Regional Food Aid Procurement Program (USDA LRP Program). The Food, Conservation, and Energy Act of 2008 (the ''2008 Farm Bill''), as amended by the Agricultural Act of 2014 (the ''2014 Farm Bill''), provided that the Secretary of Agriculture will provide grants to, or enter into cooperative agreements with, eligible organizations to implement field-based projects that consist of local or regional procurements of eligible commodities in developing countries to provide development assistance and respond to food crisis and disasters, in the case of emergencies, in consultation with United States Agency for International Development's (USAID) Offices of Food for Peace. The USDA LRP Program aims to support development activities to strengthen the capacity of food-insecure developing countries and address the cause of chronic food insecurity.

Need and Use of the Information: FAS will collect information from the Participant to determine its ability to carry out a food aid program, to establish the terms under which procured commodities will be provided, to monitor the progress of procurement of commodities (including how transportation is procured), to monitor the progress of expenditure of funds, and to evaluate both the program's success and the Participant's effectiveness in meeting intended results.

Description of Respondents: Not-for-profit institutions; Business or other for-profit; Federal Government; State, Local and Tribal Government.

Number of Respondents: 22.

Frequency of Responses: Recordkeeping; Reporting: Semi-annually; Annually.

Total Burden Hours: 14,365.

Ruth Brown,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–10–P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket No. FSIS–2016–0045]

Codex Alimentarius Commission: Meeting of the Codex Committee on Fats and Oils

AGENCY: Office of the Deputy Under Secretary for Food Safety, USDA.

ACTION: Notice of public meeting and request for comments.

SUMMARY: The Office of the Deputy Under Secretary for Food Safety, U.S. Department of Agriculture (USDA), and the Food and Drug Administration (FDA), Center for Food Safety and Applied Nutrition (CFSAN) are sponsoring a public meeting on January 24, 2017. The objective of the public meeting is to provide information and receive public comments on agenda items and draft United States (U.S.) positions that will be discussed at the 25th Session of the Codex Committee on Fats and Oils (CCFO) of the Codex Alimentarius Commission (Codex), taking place in Kuala Lumpur, Malaysia, February 27–March 3, 2017. The Deputy Under Secretary for Food Safety and the FDA recognize the importance of providing interested parties the opportunity to obtain background information on the 25th Session of the CCFO and to address items on the agenda.

DATES: The public meeting is scheduled for Tuesday, January 24, 2017 from 2:00 p.m.–4:00 p.m.

ADDRESSES: The public meeting will take place at the Harvey Wiley Building, United States Food and Drug Administration, CFSAN, 5001 Campus Drive, Room Number 1A–001, College Park, MD 20740.

Documents related to the 25th Session of the CCFO will be accessible via the Internet at the following address: *http://www.codexalimentarius.org/meetings-reports/en/.*

Paul South, U.S. Delegate to the 25th Session of the CCFO, invites U.S.

interested parties to submit their comments electronically to the following email address: *Paul.South@fda.hhs.gov.*

Call-in-Number: If you wish to participate in the public meeting for the 25th Session of the CCFO by conference call, please use the call-in-number and participant code listed below.

Call-in-Number: 1–888–844–9904.

The participant code will be posted on the following Web page below: *http://www.fsis.usda.gov/wps/portal/fsis/topics/international-affairs/us-codex-alimentarius/public-meetings.*

FOR FURTHER INFORMATION ABOUT THE 25TH SESSION OF THE CCFO CONTACT: Paul South, Review Chemist, Office of Food Safety, Center for Food Safety and Applied Nutrition, U.S. Food and Drug Administration, 5100 Paint Branch Parkway, College Park, MD 20740, Telephone: (240) 402–1640, Fax: (301) 436–2632, Email: *Paul.South@fda.hhs.gov.*

FOR FURTHER INFORMATION ABOUT THE PUBLIC MEETING CONTACT: Marie Maratos, U.S. Codex Office, 1400 Independence Avenue SW., Room 4861, Washington, DC 20250, Telephone: (202) 205–7760, Fax: (202) 720–3157, Email: *Marie.Maratos@fsis.usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Codex was established in 1963 by two United Nations organizations, the Food and Agriculture Organization and the World Health Organization. Through adoption of food standards, codes of practice, and other guidelines developed by its committees, and by promoting their adoption and implementation by governments, the Codex seeks to protect the health of consumers and ensure that fair practices are used in the food trade.

The CCFO is responsible for elaborating worldwide standards for fats and oils of animal, vegetable and marine origin including margarine and olive oil. The Committee is hosted by Malaysia.

Issues To Be Discussed at the Public Meeting

The following items on the Agenda for the 25th Session of the CCFO will be discussed during the public meeting:

- Matters referred by the Codex Alimentarius Commission and other Subsidiary Bodies;
- Activities of International Organizations relevant to the Work of the CCFO;
- Proposed draft Standard for Fish Oils and Proposed draft Revision to the Standard for Olive Oils and Olive Pomace Oils (CODEX STAN 33–1981): Revision of the Limit for Campesterol;
- Proposed draft revision to the Standard for Named Vegetable Oils (CODEX STAN 210–1999): Addition of Palm Oil with High Oleic Acid (OxG);
- Proposed draft revision to the Standard for Named Vegetable Oils (CODEX STAN 210–1999): Revision of Fatty Acid Composition and Other Quality Factors of Peanut Oil;
- Proposals for the transfer of provisions, other than those in Table 3 and Table 4, from the Appendix into the main body of the Standard for Named Vegetable Oils (CODEX STAN 210–1999);
- Review of the List of Acceptable Previous Cargoes (Appendix II to RCP 36–1987);
- Discussion Paper on the Revision of Limits of Oleic and Linoleic Acids in Sunflower seed Oils in the Standard for Named Vegetable Oils (CODEX STAN 210–1999);
- Discussion Paper on the Inclusion of Provisions for Walnut Oil, Almond Oil, Hazelnut Oil, Pistachio Oil, Flaxseed Oil, and Avocado Oil in the Standard for Named Vegetable Oils (CODEX STAN 210–1999);
- Discussion Paper on the Replacement of Acid Value with Free Fatty Acids for Virgin Palm Oils in the Standard for Named Vegetable Oils (CODEX STAN 210–1999);
- Discussion Paper on the Inclusion of Quality Parameters for Crude Rice Bran Oil in the Standard for Named Vegetable Oils (CODEX STAN 210–1999);
- Discussion Paper on the Inclusion of Unrefined Edible Tallow in the Standard for Named Animal Fats (CODEX STAN 211–1999); and
- Other business and future work.

Each issue listed will be fully described in documents distributed, or to be distributed, by the Secretariat before to the Meeting. Members of the public may access or request copies of these documents (see **ADDRESSES**).

Public Meeting

At the January 24, 2017 public meeting, draft U.S. positions on the agenda items will be described and discussed. Attendees will have the opportunity to pose questions and offer comments. Written comments may be offered at the meeting or sent to the U.S. Delegate for the 25th Session of CCFO, Paul South (see **ADDRESSES**). Written comments should state that they relate to activities of the 25th Session of the CCFO.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication on-line through the FSIS Web page located at: *http://www.fsis.usda.gov/federal-register*.

FSIS also will make copies of this publication available through the FSIS Constituent Update, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The Update is available on the FSIS Web page. Through the Web page, FSIS is able to provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at: *http://www.fsis.usda.gov/subscribe*. Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves, and have the option to password protect their accounts.

USDA Non-Discrimination Statement

No agency, officer, or employee of the USDA shall, on the grounds of race, color, national origin, religion, sex, gender identity, sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, or political beliefs, exclude from participation in, deny the benefits of, or subject to discrimination any person in the United States under any program or activity conducted by the USDA.

How To File a Complaint of Discrimination

To file a complaint of discrimination, complete the USDA Program Discrimination Complaint Form, which may be accessed online at *http://www.ocio.usda.gov/sites/default/files/docs/2012/Complain_combined_6_8_12.pdf,* or write a letter signed by you or your authorized representative.

Send your completed complaint form or letter to USDA by mail, fax, or email:

Mail: U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW., Washington, DC 20250–9410, *Fax:* (202) 690–7442, *Email: program.intake@usda.gov.*

Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.), should contact USDA's TARGET Center at (202) 720–2600 (voice and TDD).

Done at Washington, DC, on December 13, 2016.

Paulo Almeida,

Acting U.S. Manager for Codex Alimentarius.

[FR Doc. 2016–30600 Filed 12–19–16; 8:45 am]

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket No. FSIS–2016–0036]

Notice of Request for a New Information Collection: In-Home Food Safety Behaviors and Consumer Education: Annual Observational Study

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 and Office of Management and Budget (OMB) regulations, the Food Safety and Inspection Service (FSIS) is announcing its intention to collect information in the form of observational studies to inform the development of food safety communication products and to evaluate public health education and communication activities.

DATES: Submit comments on or before February 21, 2017.

ADDRESSES: FSIS invites interested persons to submit comments on this information collection. Comments may be submitted by one of the following methods:

- *Federal eRulemaking Portal:* This Web site provides the ability to type short comments directly into the comment field on this Web page or attach a file for lengthier comments. Go to *http://www.regulations.gov.* Follow the on-line instructions at that site for submitting comments.
- *Mail, including CD–ROMs, etc.:* Send to Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, Docket Clerk, Patriots Plaza 3, 1400 Independence Avenue SW., Mailstop 3782, Room 8–163A, Washington, DC 20250–3700.
- *Hand- or courier-delivered submittals:* Deliver to Patriots Plaza 3, 355 E Street SW., Room 8–163A, Washington, DC 20250–3700.

Instructions: All items submitted by mail or electronic mail must include the Agency name and docket number FSIS–2016–0036. Comments received in response to this docket will be made available for public inspection and posted without change, including any personal information, to *http://www.regulations.gov.*

Docket: For access to background documents or comments received, go to the FSIS Docket Room at Patriots Plaza 3, 355 E Street SW., Room 8–164, Washington, DC 20250–3700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Gina Kouba, Office of Policy and Program Development, Food Safety and Inspection Service, USDA, 1400 Independence Avenue SW., Room 6065, South Building, Washington, DC 20250–3700; (202) 720–5627.

SUPPLEMENTARY INFORMATION: *Title:* In-Home Food Safety Behaviors and Consumer Education: Annual Observational Study.

Type of Request: New information collection.

Abstract: FSIS has been delegated the authority to exercise the functions of the Secretary of Agriculture (7 CFR 2.18, 2.53) as specified in the Federal Meat Inspection Act and the Poultry Products Inspection Act (21 U.S.C. 453 *et seq.,* 601 *et seq.*). FSIS protects the public by verifying that meat and poultry products are wholesome, not adulterated, and properly marked, labeled, and packaged.

The U.S. Department of Agriculture's Food Safety and Inspection Service's Office of Public Affairs and Consumer Education (USDA, FSIS, OPACE) ensures that all segments of the farm-to-table chain receive valuable food safety information. The consumer education programs developed by OPACE's Food Safety Education Staff inform the public on how to safely handle, prepare, and store meat, poultry, and processed egg products to minimize incidence of foodborne illness.

OPACE strives to continuously increase consumer awareness of recommended food safety practices with the intent to improve food-handling behaviors at home. OPACE shares its messages through The *Food Safe Families* campaign (a cooperative effort of USDA, Food and Drug Administration, and Centers for Disease Control and Prevention); other advertising; social media; AskKaren (an online database of frequently asked food safety questions); the FSIS Web site; the Meat and Poultry Hotline; publications; and events. These messages are focused on the four core food safety behaviors: Clean, separate, cook, and chill.

To test new consumer messaging and tailor existing messaging, FSIS can help ensure that it is effectively communicating with the public and working to improve consumer food safety practices. This behavioral research will provide insight into the effect FSIS consumer outreach campaigns have on consumers' food safety behaviors. The results of this research will be used to enhance messaging and accompanying materials to improve their food safety behavior. Additionally, this research will provide useful information for tracking progress toward the goals outlined in the FSIS Fiscal Years 2017–2021 Strategic Plan.

To inform the development of food safety communication products and to evaluate public health education and communication activities, FSIS is requesting approval for a new information collection to conduct observational studies using an experimental design. Previous research suggests that self-reported data (*e.g.,* surveys) on consumers' food safety practices are unreliable, thus observational studies are a preferred approach for collecting information on consumers' actual food safety practices. These observational studies will help FSIS assess adherence to the four recommended food safety behaviors of clean, separate, cook, and chill, and to determine whether food safety messaging focused on those behaviors affects consumer food safety handling behaviors and whether consumers introduce cross-contamination during food preparation. For this 3-year study, FSIS plans to conduct an observational study each year and to focus on a different behavior, food and food preparation task, and food safety communication product each year. The initial study will examine participants' use of a food thermometer to determine if meat and poultry products are cooked to the proper temperatures. FSIS may decide to continue to conduct these studies annually, and if so, will request a renewal to extend the expiration date for the information collection request.

FSIS has contracted with RTI International to conduct the observational studies. The observational studies will be conducted in North Carolina State University's test kitchen. Participants will be recruited using convenience sampling, and recruited participants will reflect the demographics of the U.S. population with regard to race, ethnicity, age, education, income, and household size. Using a fully randomized experimental design, participants will be assigned to a treatment or control group. Treatment participants will receive food safety messaging prior to the study, while control participants will receive messaging unrelated to food safety. Participants will be given ingredients and asked to prepare a meal consisting of ready to eat products and meat or

poultry products. Prior to meal preparation, the meat/poultry product will be inoculated with a harmless tracer bacterium or virus to assess the extent of cross-contamination. Researchers will video-record meal preparation. Trained researchers will subsequently view the videos and use a coding rubric to assess adherence to recommended practices and notational analysis to assess recorded actions and their frequency.

Following food preparation, trained surface sample collectors will take surface swab samples from multiple sites within the test kitchen. The swabs will be plated at a laboratory to determine presence of the tracer bacterium or virus and concentration of the tracer if any is present. The presence of this tracer will indicate that cross-contamination occurred during food preparation. The level of cross-contamination will be compared across the sampling sites to determine the highest risk areas. Kitchen surfaces, appliances, and other potentially contaminated sites will be cleaned and sanitized after each participant in order to ensure that any bacterial samples collected were from the participant's behaviors.

Participants will be asked to complete an interview after the observation to collect additional information on food handling practices and what they would do in particular situations when practices could not be observed. Certain relevant food handling practices are unable to be observed during the course of the in-person study; therefore, participants will be asked to provide information on these practices.

Statistical analysis will be conducted comparing the differences in handling behavior scores between the treatment and control groups for the four food handling behaviors. A comparative analysis will also be conducted on the samples collected from the designated kitchen sites and food samples to determine whether levels of cross-contamination differed between the two groups, as well as to identify the kitchen sites with the highest levels of contamination. This information will help to determine whether the food safety communication products tested in the experimental study affect consumer food handling behavior and thus help OPACE refine existing materials or inform the development of new food safety communication products. Improving consumer food safety practices in the home may help to minimize incidence of foodborne illness.

Estimate of Burden: Each year of the 3-year study, it is expected that 833 individuals will complete the web-based screener and it is assumed that 625 will be eligible and subsequently contacted by phone to schedule an appointment for the observation study. Of these, it is assumed that 500 will agree to take part in the study and schedule an appointment, and of these, it is assumed that 400 will show up and complete the observation study and interview. Each web-screening is expected to take 8 minutes (0.133 hour) and each phone call to schedule an appointment is expected to take 7 minutes (0.116 hour). Taking part in the observation study appointment will take a total of 120 minutes (2 hours): 15 minutes (0.25 hours) to obtain informed consent and provide exposure to the messaging, 90 minutes (1.5 hours) for the meal preparation/observation, and 15 minutes (0.25 hours) for the post-observation interview. For each iteration of the study, the estimated annual reporting burden is 983.289 hours, which is the sum of the burden estimates for each component of the study (including the burden for consumers who initially completed the web-based survey but do not agree to participate or do not show up for the observation study). For a 3-year study the estimated total number of individuals to be screened is 2,499 (833 each year) and the estimated total number of individuals to complete the observation study is 1,200 (400 each year). The estimated total burden for the 3-year study is 2,949.867 hours (983.289 *3).

ESTIMATED ANNUAL REPORTING BURDEN FOR EACH ITERATION OF THE OBSERVATIONAL STUDY

Study component	Estimated number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
Web-based screening questionnaire	833	1	833	0.133 (8 min.)	110.789
Appointment phone script, confirmation email, reminder phone script.	625	1	625	0.116 (7 min.)	72.5
Consent Form and Messaging	400	1	400	0.25 (15 min.)	100.0
Food Preparation Task/Observation	400	1	400	1.5 (90 min.)	600.0
Post-observation interview	400	1	400	0.25 (15 min.)	100.0
Total					983.289

Respondents: Consumers.

Estimated Number of Respondents: 2,499.

Estimated Number of Annual Responses per Respondent: 1.

Estimated Total Burden on Respondents: 2,949.867 hours.

Copies of this information collection assessment can be obtained from Gina Kouba, Office of Policy and Program Development, Food Safety and Inspection Service, USDA, 1400 Independence SW., Room 6077, South Building, Washington, DC 20250, (202) 690–6510.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of FSIS's functions, including whether the information will have practical utility; (b) the accuracy of FSIS's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques, or other forms of information technology. Comments may be sent to both FSIS, at the addresses provided above, and the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20253.

Responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication on-line through the FSIS Web page located at: *http://www.fsis.usda.gov/federal-register.*

FSIS also will make copies of this publication available through the FSIS Constituent Update, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The Update is available on the FSIS Web page. Through the Web page, FSIS is able to provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at: *http://www.fsis.usda.gov/subscribe.* Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves, and have the option to password protect their accounts.

USDA Non-Discrimination Statement

No agency, officer, or employee of the USDA shall, on the grounds of race, color, national origin, religion, sex, gender identity, sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, or political beliefs, exclude from participation in, deny the benefits of, or subject to discrimination any person in the United States under any program or activity conducted by the USDA.

How To File a Complaint of Discrimination

To file a complaint of discrimination, complete the USDA Program Discrimination Complaint Form, which may be accessed online at *http://www.ocio.usda.gov/sites/default/files/docs/2012/Complain_combined_6_8_12.pdf,* or write a letter signed by you or your authorized representative.

Send your completed complaint form or letter to USDA by mail, fax, or email:

Mail: U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW., Washington, DC 20250–9410, *Fax:* (202) 690–7442, *Email: program.intake@usda.gov.*

Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.), should contact USDA's TARGET Center at (202) 720–2600 (voice and TDD).

Done at Washington, DC, on December 15, 2016.

Alfred V. Almanza,

Acting Administrator.

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Confidentiality Pledge Revision Notice

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice.

SUMMARY: Under 44 U.S.C. 3506(e), and 44 U.S.C. 3501, the National Agricultural Statistics Service (NASS) is renewing a revision to the confidentiality pledge it provides to its respondents under CIPSEA and Title 7, Chapter 55, Section 2276. This renewal will be valid for three years. The revision was originally approved by the Office of Management and Budget (OMB) on December 1, 2016 under an emergency request. The original request was warranted by the passage and implementation of provisions of the Federal Cybersecurity Enhancement Act of 2015 (H.R. 2029, Division N, Title II, Subtitle B, Sec. 223), which permits and requires the Secretary of Homeland Security to provide federal civilian agencies' information technology systems with cybersecurity protection for their Internet traffic. More details on this announcement are presented in the **SUPPLEMENTARY INFORMATION** section below.

DATES: Comments on this notice must be received by February 21, 2017 to be assured of consideration.

ADDRESSES: You may submit comments, identified by docket number 0535–0260, by any of the following methods:

- *Email: omboffficer@nass.usda.gov.* Include docket number above in the subject line of the message.
- *E-fax:* (855) 838–6382.
- *Mail:* Mail any paper, disk, or CD–ROM submissions to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.
- *Hand Delivery/Courier:* Hand deliver to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336, South Building, 1400 Independence Avenue SW., Washington, DC 20250–2024.

FOR FURTHER INFORMATION CONTACT: R. Renee Picanso, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, (202) 720–4333, or email *HQOA@nass.usda.gov.* Copies of this information collection and related instructions can be obtained without charge from David Hancock, NASS—OMB Clearance Officer, at (202) 690–2388 or at *omboffficer@nass.usda.gov.*

SUPPLEMENTARY INFORMATION: Under CIPSEA; Title 7, Chapter 55, Section 2276; and similar statistical confidentiality protection statutes, many federal statistical agencies, including NASS, make statutory pledges that the information respondents provide will be seen only by statistical agency personnel or their sworn agents, and will be used only for statistical purposes. CIPSEA and Title 7, Chapter 55, Section 2276 protect such statistical information from administrative, law enforcement, taxation, regulatory, or any other non-statistical use and immunize the information submitted to statistical agencies from legal process. Moreover, many of these statutes carry criminal penalties of a Class E felony (fines up to $250,000, or up to five years in prison, or both) for conviction of a knowing and willful unauthorized disclosure of covered information.

As part of the Consolidated Appropriations Act for Fiscal Year 2016 signed on December 17, 2015, the Congress included the Federal Cybersecurity Enhancement Act of 2015 (H.R. 2029, Division N, Title II, Subtitle B, Sec. 223). This Act, among other provisions, permits and requires the Secretary of Homeland Security to provide federal civilian agencies' information technology systems with cybersecurity protection for their Internet traffic. The technology currently used to provide this protection against cyber malware is known as ''Einstein 3A''. It electronically searches Internet traffic in and out of federal civilian agencies in real time for malware signatures.

When such a signature is found, the Internet packets that contain the malware signature are shunted aside for further inspection by Department of Homeland Security (DHS) personnel. Because it is possible that such packets entering or leaving a statistical agency's information technology system may contain confidential statistical data, statistical agencies can no longer promise their respondents that their responses will be seen only by statistical agency personnel or their sworn agents. However, they can promise, in accordance with provisions of the

Federal Cybersecurity Enhancement Act of 2015, that such monitoring can be used only to protect information and information systems from cybersecurity risks, thereby, in effect, providing stronger protection to the integrity of the respondents' submissions.

Consequently, with the passage of the Federal Cybersecurity Enhancement Act of 2015, the federal statistical community has an opportunity to welcome the further protection of its confidential data offered by DHS' Einstein 3A cybersecurity protection program. The DHS cybersecurity program's objective is to protect federal civilian information systems from malicious malware attacks. The federal statistical system's objective is to ensure that the DHS Secretary performs those essential duties in a manner that honors the Government's statutory promises to the public to protect their confidential data. Given that the Department of Homeland Security is not a federal statistical agency, both DHS and the federal statistical agencies have been engaged in finding a way to balance both objectives and achieve these mutually reinforcing objectives.

Accordingly, DHS and federal statistical agencies (including NASS), in cooperation with their parent departments, have developed a Memorandum of Agreement for the installation of Einstein 3A cybersecurity protection technology to monitor their Internet traffic and have incorporated an associated Addendum on Highly Sensitive Agency Information that provides additional protection and enhanced security handling of confidential statistical data. However, CIPSEA; Title 7, Chapter 55, Section 2276; and similar statistical confidentiality pledges promise that respondents' data will be seen only by statistical agency personnel or their sworn agents. Since it is possible that DHS personnel could see some portion of those confidential data in the course of examining the suspicious Internet packets identified by the Einstein 3A technology, statistical agencies need to revise their confidentiality pledges to reflect this process change.

Therefore, NASS is providing this notice to alert the public to this confidentiality pledge revision in an efficient and coordinated fashion. Below is the revised confidentiality pledge as it will appear on NASS survey questionnaires, as well as the revision to NASS's confidentiality Web page. A list of the NASS OMB numbers and information collection titles that will be affected by this revision is also included below.

The revised confidentiality pledge to appear on NASS questionnaires is below:

The information you provide will be used for statistical purposes only. Your responses will be kept confidential and any person who willfully discloses ANY identifiable information about you or your operation is subject to a jail term, a fine, or both.

This survey is conducted in accordance with the Confidential Information Protection provisions of Title V, Subtitle A, Public Law 107–347 and other applicable Federal laws. For more information on how we protect your information please visit: *https://www.nass.usda.gov/confidentiality.*

For voluntary surveys the statement, ''Response to this survey is voluntary.'' will follow this pledge. For mandatory surveys the statement, ''Response to this survey is mandatory.'' or ''Response to this survey is required by law.'' will follow.

The NASS confidentiality pledge Web page: *https://www.nass.usda.gov/confidentiality* will be revised to include a fifth item explaining that DHS will monitor the transmission of data for cybersecurity threats. Item 5 is below:

5. Data Are Protected From Cybersecurity Threats

Per the Cybersecurity Enhancement Act of 2015, your data are further protected by the Department of Homeland Security (DHS) through cybersecurity monitoring of the systems that transmit your data. DHS will be monitoring these systems to look for viruses, malware and other threats. In the event of a cybersecurity incident, and pursuant to any required legal process, information from these sources may be used to help identify and mitigate the incident.

Affected information collections:

BILLING CODE 3410–20–P

DEPARTMENT OF COMMERCE

Bureau of the Census

Census Bureau 2020 Advisory Committee

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of Committee Establishment.

SUMMARY: The Bureau of the Census (Census Bureau) is hereby giving notice that the Secretary of Commerce has determined that the establishment of the Census Bureau 2020 Advisory Committee is necessary and in the public interest. The Committee will function solely as an advisory body and in compliance with provisions of the Federal Advisory Committee Act. Copies of the charter will be filed with the appropriate Committees of the U.S. Congress and with the Library of Congress.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop Jackson, Branch Chief for Advisory Committees, Customer Liaison and Marketing Services Office, *tara.t.dunlop@census.gov,* Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, telephone 301–763–5222. For TTY callers, please use the Federal Relay Service 1–800–877–8339.

SUPPLEMENTARY INFORMATION: The Census Bureau 2020 Advisory Committee will advise the Director of the Census Bureau on the full range of 2020 Census programs including an incremental transition from current state to target state, along with operationalizing methods and new technology across multiple locations and time zones to deliver a secure and successful, cost-effective 2020 Census. The Committee will advise the Census Bureau through the 2020 Census Lifecycle on the identification of new strategies for improved census operations and on ways to increase 2020 Census participation and beyond.

The Committee will address census policies, methodology, tests, operations, communications/messaging, and other activities to ascertain needs and best practices to improve the 2020 Census program. The Committee will provide advice on 2020 Census programs that will use a complete address list, generate the largest possible self-response, employ administrative records and third-party data, and reengineer nonresponse follow-up.

The Committee will review and provide formal recommendations and feedback on key operations and the efficacy of planned and implemented innovations related to accurately counting every person living in America while saving taxpayer money.

Dated: December 9, 2016.

John H. Thompson,

Director, Bureau of the Census.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Bureau of the Census

Census Bureau 2020 Advisory Committee

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of Request for Nominations.

SUMMARY: The Bureau of the Census (Census Bureau) is requesting nominations of organizations to the Census Bureau 2020 Advisory Committee. The Census Bureau will consider nominations received in response to this notice, as well as from other sources. The **SUPPLEMENTARY INFORMATION** section of this notice provides Committee and membership criteria.

DATES: Please submit nominations by January 19, 2017.

ADDRESSES: Please submit nominations to Tara Dunlop Jackson, Branch Chief for Advisory Committees, Customer Liaison and Marketing Services Office, *tara.t.dunlop@census.gov,* Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, telephone 301–763–5222.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop Jackson, Branch Chief for Advisory Committees, Customer Liaison Marketing Services Offices, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, telephone (301) 763–5222 or *tara.t.dunlop@census.gov.* For TTY callers, please use the Federal Relay Service 1–800–877–8339.

SUPPLEMENTARY INFORMATION: The Census Bureau 2020 Advisory Committee (''Committee'') is established in accordance with the Federal Advisory Committee Act (FACA), Title 5, United States Code (U.S.C.), Appendix 2. The following provides information about the Committee, membership, and the nomination process.

Objectives and Duties

1. The Committee will provide formal review and feedback related to 2020 Census plans and execution to devise strategies to increase census awareness, reduce barriers to response, and enhance the public's trust and willingness to respond.

2. The Committee will consider implications of enumeration strategies, new technologies, the role of state and local governments, social media and marketing, and the outreach and mobilization needs of historically undercounted populations.

3. The Committee will address and provide recommendations on external factors and policies that may affect 2020 Census plans and identify strategies to increase Census awareness, participation and response by the American public.

4. The Committee will help the Census Bureau communicate with and educate diverse audiences on 2020 Census plans and operations.

5. The Committee will provide recommendations to educate the public at key 2020 Census decision points, milestones, and production dates to ensure maximum self-response and participation by the public in the 2020 Census.

6. The Committee will devise and recommend strategies to motivate people to respond to the 2020 Census through Internet self-response and other forms of enumeration, as appropriate (*i.e.,* paper or by telephone through the Census Questionnaire Assistance Program).

7. The Committee will consider the Census Bureau's outreach,

communications, and partnership efforts providing perspectives on community trends, challenges, and opportunities to increase public awareness and participation in the 2020 Census.

8. The Committee will provide insight, perspectives, and expertise on all aspects of 2020 Census planning and implementation to assist the Census Bureau in conducting an accurate decennial census.

9. The Committee will function solely as an advisory body and shall fully comply with the provisions of the FACA in providing insight, perspectives, and expertise on 2020 Census plans and execution.

Membership

1. The Committee will consist of up to 25 members who will be appointed by and serve at the discretion of the Director.

2. Member organizations will be selected from the public and private sectors, and have expertise in census and survey matters. Members will represent specific areas to include: Diverse populations; national, state, local and tribal interest; hard-to-count populations; research; community-based organizations; academia; business interests; marketing and media industries; and professional associations.

3. Membership shall include representatives of organizations reflecting diverse populations; national, state, local and tribal interests; organizations serving hard to count populations; community-based organizations; and the private sector.

4. Organizations should designate both a primary and an alternate representative.

5. Members will serve for a three-year term. All members will be reevaluated at the conclusion of each term with the prospect of renewal, pending Committee and 2020 decennial census needs. Active attendance and participation in meetings and activities (*i.e.,* conference calls and assignments) will be factors considered when determining term renewal or membership continuance. Members may be appointed for a second, three-year term at the discretion of the Director.

6. The Committee aims to have a balanced representation among its members, considering such factors as geography, technical expertise, community involvement and knowledge of census programs and/or activities.

7. No employee of the federal government can serve as a member of the Committee.

8. Members will be selected according to protocols and applicable Department of Commerce guidance.

Miscellaneous

1. Members of the Committee serve without compensation, but receive reimbursement for Committee-related travel and lodging expenses.

2. The Committee meets at least twice a year, budget permitting, but additional meetings may be held as deemed necessary by the Census Director or Designated Federal Officer. All Committee meetings are open to the public in accordance with the FACA.

Nomination Process

1. Nominations should satisfy the requirements described in the Membership section above.

2. Individuals, groups, and/or organizations may submit nominations on behalf of candidates. A summary of the candidate's qualifications (resumé or curriculum vitae) *must* be included along with the nomination letter. Nominees must be able to actively participate in the tasks of the Committee, including, but not limited to regular meeting attendance, Committee meeting discussant responsibilities, review of materials, as well as participation in conference calls, webinars, working groups, and/or special Committee activities.

3. The Department of Commerce is committed to equal opportunity in the workplace and seeks diverse Advisory Committee membership.

Dated: December 9, 2016.

John H. Thompson,

Director, Bureau of the Census.

DEPARTMENT OF COMMERCE

Economic Development Administration

Notice of Petitions by Firms for Determination of Eligibility To Apply for Trade Adjustment Assistance

AGENCY: Economic Development Administration, Department of Commerce.

ACTION: Notice and Opportunity for Public Comment.

Pursuant to Section 251 of the Trade Act 1974, as amended (19 U.S.C. 2341 *et seq.*), the Economic Development Administration (EDA) has received petitions for certification of eligibility to apply for Trade Adjustment Assistance from the firms listed below. Accordingly, EDA has initiated investigations to determine whether increased imports into the United States of articles like or directly competitive with those produced by each of these firms contributed importantly to the total or partial separation of the firm's workers, or threat thereof, and to a decrease in sales or production of each petitioning firm.

LIST OF PETITIONS RECEIVED BY EDA FOR CERTIFICATION ELIGIBILITY TO APPLY FOR TRADE ADJUSTMENT ASSISTANCE

[12/10/2016 through 12/14/2016]

Firm name	Firm address	Date accepted for investigation	Product(s)
Lester Electrical of Nebraska, Inc..	625 West A Street, Lincoln, NE 68522.	12/13/2016	The firm manufactures battery chargers and other electrical power conversion/storage products for industrial and commercial vehicle applications.
Current River Die Sinking, Inc.	100 E. Loyal Hood, Industrial Park, Doniphan, MO, 63935.	12/14/2016	The firm manufactures tool and die made of metal primarily for the forging industry.

Any party having a substantial interest in these proceedings may request a public hearing on the matter. A written request for a hearing must be submitted to the Trade Adjustment Assistance for Firms Division, Room 71030, Economic Development Administration, U.S. Department of Commerce, Washington, DC 20230, no later than ten (10) calendar days following publication of this notice.

Please follow the requirements set forth in EDA's regulations at 13 CFR 315.9 for procedures to request a public

hearing. The Catalog of Federal Domestic Assistance official number and title for the program under which these petitions are submitted is 11.313, Trade Adjustment Assistance for Firms.

Miriam Kearse,

Lead Program Analyst.

DEPARTMENT OF COMMERCE

International Trade Administration

Civil Nuclear Trade Advisory Committee: Cancellation of the Meeting of the Civil Nuclear Trade Advisory Committee

AGENCY: International Trade Administration, U.S. Department of Commerce

ACTION: Cancellation of Federal Advisory Committee Meeting.

SUMMARY: This notice announces cancellation of the December 21 meeting of the Civil Nuclear Trade Advisory Committee (CINTAC).

DATES: The meeting scheduled for Wednesday, December 21, 2016, from 10:30 a.m. to 11:30 a.m. Eastern Standard Time (EST) is cancelled. The meeting will be rescheduled in early 2017. The **Federal Register** Notice announcing this meeting was published on December 12, 2016 (*https://www.federalregister.gov/documents/2016/12/12/2016–29703/civil-nuclear-trade-advisory-committee-meeting-of-the-civil-nuclear-trade-advisory-committee*).

FOR FURTHER INFORMATION CONTACT: Mr. Jonathan Chesebro, Office of Energy & Environmental Industries, International Trade Administration, Room 20010, 1401 Constitution Ave. NW., Washington, DC 20230. (Phone: 202–482–1297; Fax: 202–482–5665; email: *jonathan.chesebro@trade.gov*).

SUPPLEMENTARY INFORMATION:

Background: The CINTAC was established under the discretionary authority of the Secretary of Commerce and in accordance with the Federal Advisory Committee Act (5 U.S.C. App.), in response to an identified need for consensus advice from U.S. industry to the U.S. Government regarding the development and administration of programs to expand United States exports of civil nuclear goods and services in accordance with applicable U.S. laws and regulations, including advice on how U.S. civil nuclear goods and services export policies, programs, and activities will affect the U.S. civil nuclear industry's competitiveness and ability to participate in the international market.

Man Cho,

Deputy Director, Office of Energy and Environmental Industries.

Aluminum Extrusions from the People's Republic of China: Final Results and Partial Rescission of Countervailing Duty Administrative Review; 2014

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) has completed its administrative review of the countervailing duty (CVD) order on aluminum extrusions from the People's Republic of China (PRC) for the January 1, 2014 through December 31, 2014 period of review (POR). We have determined that mandatory respondents Jangho and Zhongya received countervailable subsidies during the POR. The final net subsidies are listed below in the section entitled ''Final Results of Administrative Review.''

DATES: Effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Davina Friedmann or Tyler Weinhold, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–0698 or (202) 482–1121, respectively.

SUPPLEMENTARY INFORMATION:

Background

The Department selected Jangho [1] and Zhongya [2] as mandatory respondents in this administrative review of the CVD order [3] on aluminum extrusions from

[1] For purposes of this administrative review, ''Jangho'' refers to the crossed-owned entities consisting of the following members and affiliates of the Jangho Group: Guangzhou Jangho Curtain Wall System Engineering Co., Ltd.; Guangzhou Jangho's parent company, Jangho Group Co., Ltd.; Jangho Group Company's corporate parent, Beijing Jiangheyuan Holding Com., Ltd.; and Jangho Group Company's producer subsidiaries, Beijing Jangho Curtain Wall System Engineering Co., Ltd., Shanghai Jangho Curtain Wall System Engineering Co., Ltd., and Chengdu Jangho Curtain Wall System Engineering Co., Ltd. As stated above, we have used ''Jangho'' to refer to the cross-owned entities to which we will assign a subsidy rate. *See* ''Final Results of Administrative Review,'' below. We have used ''the Jangho Group'' and ''Jangho Group'' to refer to the corporate group consisting of Jangho Group Company and its subsidiaries (*i.e.,* not including Beijing Jiangheyuan Holding Com., Ltd. and Jangho Group Company's other corporate parent, Xinjiang Jianghe Huizhong Equity Investment Limited Partnership). We have used ''the Jangho companies,'' to refer to the members of the Jangho Group as well as Beijing Jiangheyuan Holding Com., Ltd.and Xinjiang Jianghe Huizhong Equity Investment Limited Partnership. Further, Jangho Curtain Wall Hong Kong Ltd. is an affiliated Hong Kong reseller/trading company and member of the Jangho Group. For these final results, we are treating Jangho Curtain Wall Hong Kong Ltd. as a Hong Kong, or non-PRC, company, and have not attributed any subsidies to Jangho Curtain Wall Hong Kong Ltd., consistent with 19 CFR 351.525(b)(7). Any shipments of subject merchandise to the United States by Jangho Curtain Wall Hong Kong Ltd. will be subject to the Department's cash deposit requirements. For entries of subject merchandise exported by Jangho Curtain Wall Hong Kong Ltd., the Department intends to instruct CBP to collect cash deposits according to the appropriate rates assigned to the producer, or the all-others rate if the producer does not have its own assigned cash deposit rate.

[2] For purposes of the final results of this administrative review, ''Zhongya'' refers to the following companies: Guangdong Zhongya Aluminium Company Limited, Zhaoqing New Zhongya Aluminum Co., Ltd., New Zhongya Aluminum Factory, Karlton Aluminum Company Ltd., and Zhongya Shaped Aluminum (HK) Holding Limited (collectively, ''Zhongya''). ''Zhongya'' includes companies selected as mandatory respondents, as well as companies that responded to the Department's initial questionnaire as a group by submitting a letter indicating that they would not be participating in this administrative review. *See* ''*Application of Adverse Facts Available to Non-Cooperative Mandatory Respondent Zhongya*'' for more information. We inadvertently omitted Zhongya Shaped Aluminum (HK) Holding Limited from the list of companies included in ''Zhongya'' in the *Preliminary Results,* but did include all companies in the Department's draft cash deposit and liquidation instructions, which were released to interested parties for comment. We clarify that it was the Department's intent to include Zhongya Shaped Aluminum (HK) Holding Limited in ''Zhongya.'' No parties commented in case briefs on the Department's treatment of these companies as a group in the *Preliminary Results* or on the Department's draft instructions. Use of ''Zhongya'' to refer to these companies collectively does not denote a cross-ownership determination with respect to any of these companies in this administrative review.

[3] *See Aluminum Extrusions from the People's Republic of China: Countervailing Duty Order,* 76 FR 30653 (May 26, 2011) (*Order*).

the PRC. The Department issued the *Preliminary Results* of this administrative review on June 3, 2016, and published them in the **Federal Register** on June 13, 2016.[4] At that time, we invited interested parties to comment on the *Preliminary Results.* On June 9, 2016, we received a case brief from Wuxi Huida Aluminum Co., Ltd. (Wuxi Huida), a non-selected respondent.[5] On July 13, 2016 and July 22, 2016, we granted parties extensions of time to submit case and rebuttal briefs.[6] On July 18, 2016, we received case briefs from the Aluminum Extrusions Fair Trade Committee (Petitioner), the Government of China (GOC), Jangho, and RMD Kwikform North America, Inc. (RMD).[7] On July 28, 2016, we received rebuttal briefs from the Petitioner and Jangho.[8] On August 4, 2016, the Department released draft cash deposit and liquidation instructions, and on August 9, 2016, released a letter inviting comments on these draft instructions.[9] On August 11, 2016, RMD and Jangho Americas, importers of subject merchandise, submitted comments on the draft customs instructions.[10] While the Department received a request for a hearing, that request was subsequently withdrawn; therefore, the Department did not conduct a hearing for the instant administrative review.[11] The Department extended the final results of this administrative review on October 4, 2016 and October 20, 2016.[12] On November 14, 2016, the Department extended the deadline for the final results to November 20, 2016.[13]

Scope of the Order

The merchandise covered by the order is aluminum extrusions which are shapes and forms, produced by an extrusion process, made from aluminum alloys having metallic elements corresponding to the alloy series designations published by The Aluminum Association commencing with the numbers 1, 3, and 6 (or proprietary equivalents or other certifying body equivalents).

Imports of the subject merchandise are provided for under the following categories of the Harmonized Tariff Schedule of the United States (''HTSUS''): 9405.99.40.20, 8424.90.90.80, 9031.90.90.95, 7616.10.90.90, 7609.00.00, 7610.10.00, 7610.90.00, 7615.10.30, 7615.10.71, 7615.10.91, 7615.19.10, 7615.19.30, 7615.19.50, 7615.19.70, 7615.19.90, 7615.20.00, 7616.99.10, 7616.99.50, 8479.89.98, 8479.90.94, 8513.90.20, 9403.10.00, 9403.20.00, 7604.21.00.00, 7604.29.10.00, 7604.29.30.10, 7604.29.30.50, 7604.29.50.30, 7604.29.50.60, 7608.20.00.30, 7608.20.00.90, 8302.10.30.00, 8302.10.60.30, 8302.10.60.60, 8302.10.60.90, 8302.20.00.00, 8302.30.30.10, 8302.30.30.60, 8302.41.30.00, 8302.41.60.15, 8302.41.60.45, 8302.41.60.50, 8302.41.60.80, 8302.42.30.10, 8302.42.30.15, 8302.42.30.65, 8302.49.60.35, 8302.49.60.45, 8302.49.60.55, 8302.49.60.85, 8302.50.00.00, 8302.60.90.00, 8305.10.00.50, 8306.30.00.00, 8414.59.60.90, 8415.90.80.45, 8418.99.80.05, 8418.99.80.50, 8418.99.80.60, 8419.90.10.00, 8422.90.06.40, 8473.30.20.00, 8473.30.51.00, 8479.90.85.00, 8486.90.00.00, 8487.90.00.80, 8503.00.95.20, 8508.70.00.00, 8515.90.20.00, 8516.90.50.00, 8516.90.80.50, 8517.70.00.00, 8529.90.73.00, 8529.90.97.60, 8536.90.80.85, 8538.10.00.00, 8543.90.88.80, 8708.29.50.60, 8708.80.65.90, 8803.30.00.60, 9013.90.50.00, 9013.90.90.00, 9401.90.50.81, 9403.90.10.40, 9403.90.10.50, 9403.90.10.85, 9403.90.25.40, 9403.90.25.80, 9403.90.40.05, 9403.90.40.10, 9403.90.40.60, 9403.90.50.05, 9403.90.50.10, 9403.90.50.80, 9403.90.60.05, 9403.90.60.10, 9403.90.60.80, 9403.90.70.05, 9403.90.70.10, 9403.90.70.80, 9403.90.80.10, 9403.90.80.15, 9403.90.80.20, 9403.90.80.41, 9403.90.80.51, 9403.90.80.61, 9506.11.40.80, 9506.51.40.00, 9506.51.60.00, 9506.59.40.40, 9506.70.20.90, 9506.91.00.10, 9506.91.00.20, 9506.91.00.30, 9506.99.05.10, 9506.99.05.20, 9506.99.05.30, 9506.99.15.00, 9506.99.20.00, 9506.99.25.80, 9506.99.28.00, 9506.99.55.00, 9506.99.60.80, 9507.30.20.00, 9507.30.40.00, 9507.30.60.00, 9507.90.60.00, and 9603.90.80.50.

The subject merchandise entered as parts of other aluminum products may be classifiable under the following additional Chapter 76 subheadings: 7610.10, 7610.90, 7615.19, 7615.20, and 7616.99, as well as under other HTSUS chapters. In addition, fin evaporator coils may be classifiable under HTSUS numbers: 8418.99.80.50 and 8418.99.80.60. Although the HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope of the order, which is contained in the

accompanying Issues and Decision Memorandum is dispositive.[14]

Analysis of Comments Received

All issues raised in the parties' briefs are addressed in the Issues and Decision Memorandum, dated concurrently with this notice, and which is hereby adopted by this notice. A list of issues addressed is attached to this notice at Appendix I. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*; the Issues and Decision Memorandum is available to all parties in the Central Records Unit (CRU), Room B8024 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Methodology

The Department conducted this review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, we find that there is a subsidy, *i.e.,* a government-provided financial contribution that gives rise to a benefit to the recipient, and that the subsidy is specific.[15] For a full description of the methodology underlying all of the Department's conclusions, including any determination that relied upon the use of adverse facts available pursuant to sections 776(a) and (b) of the Act, *see* the Issues and Decision Memorandum.

Partial Rescission of Review

For those companies named in the *Initiation Notice*[16] for which all review requests have timely been withdrawn, we are rescinding this administrative review in accordance with 19 CFR 351.213(d)(1). These companies are listed at Appendix II to this notice. For these companies, countervailing duties shall be assessed at rates equal to the rates of the cash deposits for estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the POR, in accordance with 19 CFR 351.212(c)(2).

Also, between July 1, 2015 and August 1, 2015, the Department timely received no-shipment certifications from certain companies. In the *Preliminary Results,* the Department stated its intention to rescind the review with respect to these companies. The Department inquired with U.S. Customs and Border Protection (CBP) whether these companies had shipped merchandise to the United States during this review period,[17] and CBP provided no evidence to contradict the claims made by these companies. However, these companies were also included in the Petitioner's timely withdrawal of its review requests, and because no party other than the Petitioner requested a review of these companies, the Department is rescinding the administrative review of these companies pursuant to 19 CFR 351.213(d)(1).

Rate for Non-Selected Companies Under Review

In this review, and in addition to the two selected mandatory respondents, there are 45 companies for which a review was requested and not rescinded (non-selected companies). For these non-selected companies, we could not calculate a rate by weight averaging Jangho's and Zhongya's individual rates, as Zhongya's rate is based entirely on adverse facts available.[18] Instead, for these final results, we based the non-selected companies' rate on the subsidy rate calculated for Jangho. For further information on the calculation of the non-selected companies' rate, refer to the section in the Issues and Decision Memorandum entitled, ''Final *Ad Valorem* Rate for Non-Selected Companies Under Review.''

Final Results of Administrative Review

In accordance with 19 CFR 351.221(b)(5), we determine the following final net subsidy rates for the 2014 administrative review:

Company	2014 *Ad valorem* rate (percent)
Jangho	16.08
Zhongya	195.69
Allied Maker Limited	16.08
A-Plus Industries Ltd	16.08
Asia Pacific Industrial (Group) Co., Ltd	16.08
Birchwoods (Lin'an) Leisure Products Co., Ltd	16.08
Changzhou Jinxi Machinery Co., Ltd	16.08
Classic & Contemporary Inc	16.08
Dongguang Aoda Aluminum Co., Ltd	16.08
Dongguan Dazhan Metal Co., Ltd	16.08
Dongguan Golden Tiger Hardware Industrial Co., Ltd	16.08
ETLA Technology (Wuxi) Co., Ltd	16.08
Fenghua Metal Product Factory	16.08
Foshan Golden Source Aluminum Products Co., Ltd	16.08
Foshan Guangcheng Aluminium Co., Ltd	16.08
Genimex Shanghai, Ltd	16.08
Global Hi-Tek Precision Limited	16.08
Global Point Technology (Far East) Limited	16.08

[14] For a full description of the scope of the order, *see* Memorandum from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations to Paul Piquado Assistant Secretary for Enforcement and Compliance regarding: ''Decision Memorandum for the Final Results of Countervailing Duty Administrative Review: Aluminum Extrusions from the People's Republic of China, 2014 (Fourth Review),'' dated concurrently with this notice (Issues and Decision Memorandum).

Whirlpool Microwave Products Development Ltd	16.08
Wuxi Huida Aluminum Co., Ltd	16.08
Zhejiang Dongfeng Refrigeration Components Co., Ltd	16.08

Assessment Rates

The Department intends to issue appropriate assessment instructions directly to CBP, 15 days after publication of these final results of review, to liquidate shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after January 1, 2014, through December 31, 2014, at the *ad valorem* rates listed above.

Cash Deposit Requirements

The Department also intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts indicated above for each company listed on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. For all non-reviewed firms, we will instruct CBP to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. Accordingly, the cash deposit requirements that will be applied to companies covered by this order, but not examined in this administrative review, are those established in the most recently completed segment of the proceeding for each company. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Administrative Protective Order

This notice serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: December 12, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Appendix I

List of Topics Discussed in the Final Decision Memorandum

Remuneration for Jangho's Aluminum Extrusions and Glass Purchases.
Comment 9: Whether Commercial Loans from PRC Banks to Aluminum Extrusions Producers are Covered by the Policy Loans Program Previously Countervailed by the Department.
Comment 10: Whether the Department's Benchmark Interest Rate Computations are Arbitrary, Unsupported by the Record, or Unlawful.
Comment 11: Whether the Preferential Tax Policies for High or New Technology Enterprises Program and the Tax Offset for Research and Development Program are Specific.
Comment 12: Whether the Department has the Authority to Investigate or Countervail the Technology Innovation Assistance Fund (the Niulanshan Industrial Development Center—Technology Products Fund), Enterprise Technology Center Fund, and Trade Promotion and Brand Building Fund (the 2014 Guangdong Trade Promoting by Science & Tech and Brand Building Fund).
Comment 13: Whether the Department Erred in its Calculations of Benchmark Aluminum Extrusions and Glass Prices.
Comment 14: Whether the Department Should Include Exports of Merchandise Under HTS Heading 7610.10 in its Calculation of Benchmark Aluminum Extrusions Prices.
Comment 15: Whether the Department Erred by Excluding Wuxi Huida From the List of Companies for Which the Department Calculated a Net Countervailable Subsidy Rate.
Comment 16: Whether the Department Erred by Including Jiangsu Susun Among the List of Companies for Which the Department Intends to Rescind the Administrative Review.
Comment 17: The Department's Liquidation Instructions to United States Customs and Border Protection (CBP) Should Ensure That All of Jangho's Entries Remain Suspended Pursuant to the Preliminary Injunction Granted in December 2014.

Conclusion

Appendix II

List of Companies for Which We Are Rescinding this Administrative Review [19]

1. Acro Import and Export Co.

Certain Polyester Staple Fiber From the Republic of Korea and Taiwan: Final Results of Expedited Sunset Review of the Antidumping Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) finds that revocation of the antidumping duty order (AD) orders on certain cased polyester staple fiber from the Republic of Korea (Korea) and Taiwan would be likely to lead to continuation or recurrence of dumping at the level indicated in the ''Final Results of Review'' section of this notice.

DATES: Effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Mary Kolberg, Office I, AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–1785.

SUPPLEMENTARY INFORMATION:

Background

On August 1, 2016, the Department initiated a sunset review of the *AD Orders* [1] on certain polyester staple fiber from Korea and Taiwan pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act).[2] Auriga Polymers Inc. (Auriga), DAK Americas, LLC (DAK Americas), and Nan Ya Plastics Corporation, America (Nan Ya America) notified the Department of their intent to participate in both sunset reviews as domestic interested parties on August 12, 2016, pursuant to 19 CFR 351.218(d)(1)(i).[3] Each of these companies claimed interested party status under section 771(9)(C) of the Act, as domestic producers of the domestic like product.

On August 31, 2016, the Department received a collective substantive response from Auriga, DAK Americas, and Nan Ya America, within the 30-day deadline specified in 19 CFR 351.218(d)(3)(i).[4] The Department did not receive a substantive response from any respondent interested party to the sunset proceeding. Because the Department received no response from the respondent interested parties, the Department conducted an expedited review of these *AD Orders,* pursuant to section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(l)(ii)(C)(2).

Scope of the Orders

Imports covered by the orders are defined as synthetic staple fibers, not carded, combed or otherwise processed for spinning, of polyesters measuring 3.3 decitex (3 denier, inclusive) or more in diameter. This merchandise is cut to lengths varying from one inch (25 mm) to five inches (127 mm). The merchandise subject to the order may be coated, usually with a silicon, or other finish, or not coated. Polyester staple fiber is generally used as stuffing in sleeping bags, mattresses, ski jackets, comforters, cushions, pillows, and furniture. Merchandise of less than 3.3 decitex (less than 3 denier) currently classifiable in the Harmonized Tariff Schedule of the United States (''HTSUS'') at subheading 5503.20.00.25 is specifically excluded from the order. Also, specifically excluded from the order are polyester staple fibers of 10 to18 denier that are cut to lengths of 6 to 8 inches (fibers used in the manufacture of carpeting). In addition, low-melt polyester staple fiber is excluded from the order. Low-melt polyester staple fiber is defined as a bi-component fiber with an outer sheath that melts at a significantly lower temperature than its inner core. The merchandise subject to the order is currently classifiable in the HTSUS at subheadings 5503.20.00.45 and 5503.20.00.65. The HTSUS subheadings are provided for convenience and customs purposes only; the written description of the merchandise covered by the scope of the order is dispositive.

Analysis of Comments Received

All issues raised in this review are addressed in the Issues and Decision Memorandum, which is dated concurrently with this notice.[5] The issues discussed in the Issues and Decision Memorandum include the likelihood of continuation or recurrence of dumping and the magnitude of the margins likely to prevail if the *AD Orders* were revoked. Parties can find a complete discussion of all issues raised in this expedited sunset review and the corresponding recommendations in this public memorandum, which is on file electronically *via* the Enforcement and Compliance Antidumping and

[30] No shipments company.

[31] No shipments company.

[32] In the third administrative review, the role of this company was that of an input supplier. Absent information to the contrary placed on the record of this administrative review, we are treating this company as an input supplier, and are, therefore, rescinding the review of this company.

Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov* and in the Central Records Unit, room B8024 of the main Department of Commerce building. A list of topics discussed in the Issues and Decision Memorandum is included as an Appendix to this notice. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly on the Internet at *http://enforcement.trade.gov/frn/index.html.* The signed Issues and Decision Memorandum and the electronic versions of the Issues and Decision Memorandum are identical in content.

Final Results of Review

Pursuant to sections 751(c)(1) and 752(c)(1) and (3) of the Act, we determine that revocation of the *AD Orders* on certain staple fiber from Korea and Taiwan would be likely to lead to continuation or recurrence of dumping at weighted-average percent margins up to 7.48 percent and 9.90 percent, respectively.

Notification Regarding Administrative Protective Order

This notice serves as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing these final results and notice in accordance with sections 751(c), 752(c), and 777(i)(1) of the Act, and 19 CFR 351.218.

Dated: November 29, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–827]

Certain Cased Pencils From the People's Republic of China: Amended Final Results of Antidumping Duty New Shipper Review; 2014–2015

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Department) is amending the final results of the new shipper review (NSR) of the antidumping duty order on certain cased pencils from the People's Republic of China (PRC) to correct ministerial errors. The Department has reviewed Wah Yuen's allegation and determined that there were errors in the calculation of Wah Yuen's weighted-average dumping margin.

DATES: Effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Mary Kolberg, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–1785.

SUPPLEMENTARY INFORMATION:

Background

On October 27, 2016, the Department published the final results of the NSR of the antidumping duty order on certain cased pencils from the PRC. The review covers Wah Yuen Stationery Co., Ltd. and its affiliate, Shandong Wah Yuen Stationery Co., Ltd. (collectively, Wah Yuen) for the period of review (POR) December 1, 2014, through May 31, 2015.

On October 28, 2016, Wah Yuen filed an allegation that the Department's calculation of the margin for Wah Yuen contained ministerial errors. In its ministerial error comments, Wah Yuen alleged that the Department erred in its calculation of the extended values for alkyd resin and acrylic resin. Wah Yuen argued that the Department calculated the freight component of the two input values incorrectly because it omitted the factors of production variable in both calculations. The Department reviewed the allegation and revised the calculation of the two inputs by multiplying the freight component for each input by the respective factor of production variable.[1]

Amended Final Results

The corrected weighted-average dumping margin for Wah Yuen is as follows:

[1] *See* Memorandum to The File From Mary Kolberg, International Trade Analyst, re: ''Analysis for the Amended Final Results of the Antidumping Duty New Shipper Review of Certain Cased Pencils from the People's Republic of China,'' dated October 31, 2016.

Exporter	Producer	Revised weighted-average dumping margin (percent)
Wah Yuen Stationery Co., Ltd.	Shandong Wah Yuen Stationery Co., Ltd	30.55

Assessment Rates

Consistent with section 751(a)(2)(C) of the Tariff Act of 1930, as amended, (the Act) and 19 CFR 351.212(b)(1), we intend to issue assessment instructions to the U.S. Customs and Border Protection (CBP) fifteen days after the date of publication of these amended final results. We will instruct CBP to assess antidumping duties on period of review entries in the corrected amount shown above.

Cash Deposit Requirements

The following cash deposit requirements will be effective October 27, 2016, the date of publication of the final results of this NSR for shipments of the subject merchandise from the PRC entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) For merchandise produced by Shandong Wah Yuen Stationery Co., Ltd. and exported by Wah Yuen Stationery Co., Ltd., the cash deposit rates will be that established in the amended final results of this review (except, if the rate is zero or *de minimis,* then zero cash deposit will be required); (2) for subject merchandise exported by Wah Yuen Stationery Co., Ltd. but not produced by Shandong Wah Yuen Stationery Co., Ltd., the cash deposit rate will be that for the PRC-wide entity (*i.e.,* 114.90 percent); and (3) for subject merchandise produced by Shandong Wah Yuen Stationery Co., Ltd. but not exported by Wah Yuen Stationery Co., Ltd., the cash deposit rate will be that applicable to the exporter. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Interested Parties

The Department intends to disclose calculations performed in connection with these amended final results within five days of the date of publication of this notice, in accordance with 19 CFR 351.224(b).

This corrected notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.214.

Dated: November 28, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A–489–501]

Welded Carbon Steel Standard Pipe and Tube Products From Turkey: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2014–2015

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On June 13, 2016, the Department of Commerce (the Department) published the preliminary results of the administrative review of the antidumping duty order on welded carbon steel standard pipe and tube products (welded pipe and tube) from Turkey. The period of review (POR) is May 1, 2014 through April 30, 2015. Based on our analysis of the comments received, we have made certain changes in the margin calculations. Therefore, the final results differ from the preliminary results. The final weighted-average dumping margins for the reviewed firms are listed below in the section entitled, ''Final Results of the Review.'' Further, we continue to find that Erbosan and Yucel Group had no reviewable shipments of subject merchandise during the POR.

DATES: Effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Michael J. Heaney or Scott Hoefke, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–4475 or (202) 482–4947, respectively.

SUPPLEMENTARY INFORMATION:

Background

On June 13, 2016, the Department published the *Preliminary Results* of this review in the **Federal Register**.[1] For the events following the *Preliminary Results,* see (insert cite to memo.) The Department conducted this review in accordance with section 751(a)(2) of the Tariff Act of 1930, as amended (the Act).

Scope of the Order

The merchandise subject to the order is welded pipe and tube. The welded pipe and tube subject to the order is currently classifiable under subheading 7306.30.1000, 7306.30.5025, 7306.30.5032, 7306.30.5040, 7306.30.5055, 7306.30.5085, and 7306.30.5090 of the Harmonized Tariff Schedule of the United States (HTSUS). The HTSUS subheadings are provided for convenience and customs purposes only. The written description is dispositive.[2]

Final Determination of No Shipments

In the *Preliminary Results,* the Department preliminarily determined that Erbosan and Yucel Group had no shipments during the POR.[3] Following publication of the *Preliminary Results,* we received no comments from interested parties regarding these companies. As a result, and because the record contains no evidence to the contrary, we continue to find that Erbosan and Yucel Group made no shipments during the POR. Accordingly, consistent with the Department's practice, we will instruct U.S. Customs and Border Protection (CBP) to liquidate

[1] *See Welded Carbon Steel Standard Pipe and Tube Products from Turkey: Preliminary Results of Antidumping Duty Administrative Review, and Partial Rescission of Review; 2014–2015,* 81 FR 38131 (June 13, 2015) (*Preliminary Results*) and the accompanying Memorandum to Paul Piquado, Assistant Secretary for Enforcement and Compliance, ''Decision Memorandum for Preliminary Results of Antidumping Duty Administrative Review: Welded Carbon Steel Standard Pipe and Tube Products from Turkey; 2014–2015 Administrative Review,'' dated June 6, 2016 (Preliminary Decision Memorandum).

[2] A full written description of the scope of the order is contained in the memorandum to Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, ''Issues and Decision Memorandum for the Final Results of the Antidumping Duty Administrative Review: Welded Carbon Steel Standard Pipe and Tube Products from Turkey; 2014–2015,'' (Issues and Decision Memorandum), dated concurrently with this notice and incorporated herein by reference.

[3] *See Preliminary Results,* 81 FR at 38132, and accompanying Preliminary Decision Memorandum, at 3–4.

any existing entries of merchandise produced by Erbosan and Yucel Group, but exported by other parties without their own rate, at the all-others rate.[4]

Analysis of the Comments Received

All issues raised in the case and rebuttal briefs submitted in this review are addressed in the Issues and Decision Memorandum, which is hereby adopted with this notice. A list of the issues raised is attached as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov* and it is available to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/index.html.* The signed Issues and Decision Memorandum and the electronic versions of the Issues and Decision Memorandum are identical in content.

Changes Since the Preliminary Results

Based on our analysis of the comments received, we made certain changes to the *Preliminary Results.* For Toscelik, we adjusted its duty drawback adjustment, its indirect selling expense ratio, and its net financial expense ratio. For Borusan, we excluded its overrun and further processed sales, and adjusted its duty drawback adjustment, its indirect selling expenses, and its movement expenses. For a full discussion of these changes, *see* Issues and Decision Memorandum.

Rates for Non-Examined Companies

The statute and the Department's regulations do not address the establishment of a rate to be applied to companies not selected for examination when the Department limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, the Department looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in a market economy investigation, for guidance when calculating the rate for companies which were not selected for individual review in an administrative review. Under section 735(c)(5)(A) of the Act, the all-others rate is normally ''an amount equal to the weighted average of the estimated weighted average dumping margins established for exporters and producers individually investigated, excluding any zero or *de minimis* margins, and any margins determined entirely {on the basis of facts available}.''

In this review, we have a calculated a weighted-average dumping margin for Toscelik that is not zero, *de minimis,* or determined entirely on the basis of facts available. Accordingly, the Department assigns to the companies not individually examined (Borusan Birlesik, Borusan Gemlik, Borusan Ihracat, Borusan Ithicat, and Tubeco) the 1.91 percent weighted-average dumping margin calculated for Toscelik.

Final Results of the Review

As a result of this review, we determine that the following weighted-average dumping margins exist for the period May 1, 2014 through April 30, 2015:

Producer or exporter	Weighted-average dumping margin (percent)
Borusan Mannesmann Boru Sanayi ve Ticaret A.S.[5]	0.00
Toscelik Profil ve Sac Endustrisi A.S.[6]	1.91
Borusan Birlesik Boru Fabrikalari San ve Tic	1.91
Borusan Gemlik Boru Tesisleri A.S.	1.91
Borusan Ihracat Ithalat ve Dagitim A.S.	1.91
Borusan Ithicat ve Dagitim A.S.	1.91
Tubeco Pipe and Steel Corporation	1.91

Disclosure

We intend to disclose the calculations performed for these final results of review within five days of the date of publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment

The Department shall determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b).

For Toscelik, because its weighted-average dumping margin is not zero or *de minimis* (*i.e.,* less than 0.5 percent), the Department has calculated importer-specific antidumping duty assessment rates. We calculated importer-specific *ad valorem* antidumping duty assessment rates by aggregating the total amount of dumping calculated for the examined sales of each importer and dividing each of these amounts by the total entered value associated with those sales. We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review where an importer-specific assessment rate is not zero or *de minimis.* Pursuant to 19 CFR 351.106(c)(2), we will instruct CBP to liquidate without regard to antidumping duties any entries for which the importer-specific assessment rate is zero or *de minimis.*

For Borusan, we will instruct CBP to liquidate its entries during the POR imported by the importers identified in its questionnaire responses without regard to antidumping duties because its weighted-average dumping margin in these final results is zero.[7] Consistent with the Department's assessment practice, for entries of subject merchandise during the POR produced by Borusan, Erbosan, Yucel Group, or Toscelik for which they did not know that the merchandise was destined for the United States, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.[8]

For the companies which were not selected for individual review, we will assign an assessment rate based on the methodology described in the ''Rate for Non-Examined Companies'' section, above. We intend to issue instructions to CBP 15 days after publication of the final results of this review.

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2) of the Act: (1) The cash deposit rates will be equal to the weighted-average dumping margins established in the final results of this review; (2) for previously reviewed or

[4] *See, e.g., Magnesium Metal from the Russian Federation: Preliminary Results of Antidumping Duty Administrative Review,* 75 FR 26922, 26923 (May 13, 2010), unchanged in *Magnesium Metal from the Russian Federation: Final Results of Antidumping Duty Administrative Review,* 75 FR 56989 (September 17, 2010).

[5] Also includes Borusan Istikbal Ticaret T.A.S. *See* footnote 3.

[6] Also includes Tosyali Dis Ticaret A.S. *See* footnote 4.

[7] *See Antidumping Proceeding: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification,* 77 FR 8103, 8103 (February 14, 2012).

[8] For a full discussion of this practice, *see Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties,* 68 FR 23954 (May 6, 2003).

investigated companies not participating in this review, the cash deposit rate will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the company was reviewed; (3) if the exporter is not a firm covered in this review, a previous review, or the original less-than-fair-value (LTFV) investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recently completed segment of this proceeding for the manufacturer of subject merchandise; and (4) the cash deposit rate for all other manufacturers or exporters will continue to be 14.74 percent, the all-others rate established in the LTFV investigation.[9] These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: December 12, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

[Docket No. 161116999–6999–02]

Announcing Request for Nominations for Public-Key Post-Quantum Cryptographic Algorithms

AGENCY: National Institute of Standards and Technology (NIST), Commerce.

ACTION: Notice and request for nominations for candidate post-quantum algorithms.

SUMMARY: This notice solicits nominations from any interested party for candidate algorithms to be considered for public-key post-quantum standards. The submission requirements and the minimum acceptability requirements of a ''complete and proper'' candidate algorithm submission, as well as the evaluation criteria that will be used to appraise the candidate algorithms, can be found at *http://www.nist.gov/pqcrypto.*

DATES: Proposals must be received by November 30, 2017. Further details are available at *http://www.nist.gov/pqcrypto.*

ADDRESSES: Algorithm submission packages should be sent to Dr. Dustin Moody, Information Technology Laboratory, Attention: Post-Quantum Cryptographic Algorithm Submissions, 100 Bureau Drive—Stop 8930, National Institute of Standards and Technology, Gaithersburg, MD 20899–8930. Submissions may also be sent by email to: *pqc-submissions@nist.gov.* Note that for email submissions, some of the supporting documentation requires a signature and must be physically mailed to the above address. See *http://www.nist.gov/pqcrypto* for complete submission instructions.

FOR FURTHER INFORMATION CONTACT: For general information, send email to *pqc-comments@nist.gov.* For questions related to a specific submission package, contact Dr. Dustin Moody, National Institute of Standards and Technology, 100 Bureau Drive, Mail Stop 8930, Gaithersburg, MD 20899–8930, email: *dustin.moody@nist.gov,* or by telephone: (301) 975–8136.

A public email list-serve has been set up for announcements, as well as a forum to discuss the standardization effort being initiated by NIST. For directions on how to subscribe, please visit *http://www.nist.gov/pqcrypto.*

SUPPLEMENTARY INFORMATION: The National Institute of Standards and Technology (NIST) has initiated a process to develop and standardize one or more additional public-key cryptographic algorithms to augment FIPS 186–4, Digital Signature Standard, as well as special publications SP 800–56A, Revision 2, Recommendation for Pair-Wise Key Establishment Schemes Using Discrete Logarithm Cryptography, and SP 800–56B, Recommendation for Pair-Wise Key-Establishment Schemes Using Integer Factorization Cryptography. It is intended that the new public-key cryptography standards will specify one or more additional unclassified, publicly disclosed digital signature, public-key encryption, and key-establishment algorithms that are capable of protecting sensitive government information well into the foreseeable future, including after the advent of quantum computers.

As a first step in this process, NIST solicited public comment on draft minimum acceptability requirements, submission requirements, and evaluation criteria for candidate algorithms. The comments received are posted at *http://www.nist.gov/pqcrypto,* along with a summary of the changes made as a result of these comments.

The purpose of this notice is to announce that nominations for post-quantum candidate algorithms may now be submitted, up until the final deadline of November 30, 2017. Complete instructions on how to submit a candidate package, including the minimal acceptability requirements, are posted at *http://www.nist.gov/pqcrypto.* The finalized evaluation criteria which will be used to assess the submissions are also posted at the same Web site.

Authority: In accordance with the Information Technology Management Reform Act of 1996 (Pub. L. 104–106) and the Federal Information Security Management Act of 2002 (FISMA) (Pub. L. 107–347), the Secretary of Commerce is authorized to approve FIPS. NIST activities to develop computer security standards to protect

federal sensitive (unclassified) information systems are undertaken pursuant to specific responsibilities assigned to NIST by Section 20 of the National Institute of Standards and Technology Act (15 U.S.C. 278g–3), as amended.

Kevin Kimball,

NIST Chief of Staff.

BILLING CODE P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XF065

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys in the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of revised application for marine mammal incidental take regulations (ITRs); request for comments and information; extension of public comment period.

SUMMARY: NMFS has received a revised application for ITRs from the Bureau of Ocean Energy Management (BOEM), on behalf of oil and gas industry operators. The specified activity considered in the application is geophysical survey activity conducted in the Gulf of Mexico (GOM), over the course of five years from the date of issuance. Pursuant to regulations implementing the Marine Mammal Protection Act (MMPA), NMFS is announcing receipt of BOEM's request for the development of regulations governing the incidental taking of marine mammals. NMFS invites the public to provide information, suggestions, and comments on BOEM's application.

The original notice announcing receipt of the revised application (81 FR 88664; December 8, 2016) indicated that comments and information must be received no later than January 9, 2017, which allowed 30 days for public input. We subsequently received a request to extend the comment period by a period of 14 days and have granted that request.

DATES: Comments and information must be received no later than January 23, 2017.

ADDRESSES: Comments on the application should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service. Physical comments should be sent to 1315 East-West Highway, Silver Spring, MD 20910 and electronic comments should be sent to *ITP.Laws@noaa.gov*.

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *www.nmfs.noaa.gov/pr/permits/incidental/oilgas.htm* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Availability

Electronic copies of the application and supporting documents may be obtained online at: *www.nmfs.noaa.gov/pr/permits/incidental/oilgas.htm*. BOEM has separately released a draft Programmatic Environmental Impact Statement (EIS) for public review (September 30, 2016; 81 FR 67380). This draft EIS was prepared in order to evaluate the potential significant effects of multiple geological and geophysical activities on the GOM Outer Continental Shelf (OCS) pursuant to the National Environmental Policy Act. The document is available online at: *www.boem.gov/GOM-G-G-PEIS/*.

Background

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1361 *et seq.*) directs the Secretary of Commerce (Secretary) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) if certain findings are made and regulations are issued.

Incidental taking shall be allowed if NMFS finds that the taking will have a negligible impact on the species or stock(s) affected and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses, and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such taking are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.''

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: ''any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).''

The use of sound sources such as those described in the application (*e.g.,* airgun arrays) may result in the disturbance of marine mammals through disruption of behavioral patterns or may cause auditory injury of marine mammals. Therefore, incidental take authorization under the MMPA is warranted.

Summary

BOEM was formerly known as the Minerals Management Service (MMS) and, later, the Bureau of Ocean Energy Management, Regulation, and Enforcement (BOEMRE). On December 20, 2002, MMS petitioned NMFS for rulemaking under Section 101(a)(5)(A) of the MMPA to authorize take of sperm whales (*Physeter macrocephalus*) incidental to conducting geophysical surveys during oil and gas exploration activities in the GOM. On March 3, 2003, NMFS published a notice of receipt of MMS's application and requested comments and information from the public (68 FR 9991). This comment period was later extended to April 16, 2003 (68 FR 16263). MMS subsequently submitted a revised petition on September 30, 2004, to include a request for incidental take authorization of additional species of marine mammals. On April 18, 2011, BOEMRE submitted a revision to the petition, which incorporated updated information and analyses. NMFS published a notice of receipt of this revised petition on June 14, 2011 (76 FR 34656). In order to incorporate the best available information, BOEM submitted another revision to the petition on March 28, 2016, which was followed on

October 17, 2016, by a revised version that we have deemed adequate and complete based on our implementing regulations at 50 CFR 216.104.

The requested regulations would establish a framework for authorization of incidental take by Level A and Level B harassment through Letters of Authorization (LOAs). Following development of the ITRs, implementation could occur via issuance of LOAs upon request from individual industry applicants planning specific geophysical survey activities.

Specified Activities

The application describes geophysical survey activity, conducted by industry operators in OCS waters of the GOM within BOEM's GOM planning areas (*i.e.,* the Western, Central, and Eastern Planning Areas). Geophysical surveys are conducted by industry operators to characterize the shallow and deep structure of the OCS, including the shelf, slope, and deepwater ocean environment, in order to obtain data for hydrocarbon exploration and production, aid in siting oil and gas structures and facilities, identify possible seafloor or shallow-depth geologic hazards, and locate potential archaeological resources and benthic habitats that should be avoided.

Deep penetration seismic surveys, used largely for oil and gas exploration and development and involving a vessel or vessels towing an airgun or array of airguns that emit acoustic energy pulses through the overlying water and into the seafloor, are one of the most extensive survey types and are expected to carry the greatest potential for effects to marine mammals. Non-airgun high resolution geophysical surveys are used to detect and monitor geohazards, archaeological resources, and certain types of benthic communities.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning BOEM's request (see **ADDRESSES**). NMFS will consider all relevant information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals, as appropriate.

Dated: December 14, 2016.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Southeast Region Permit Family of Forms

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act (PRA) of 1995.

DATES: Written comments must be submitted on or before February 21, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Adam Bailey, NMFS Southeast Regional Office (SERO), 263 13th Avenue South, St. Petersburg, FL 33701, phone: 727–824–5305, or email: *adam.bailey@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a renewal with revisions to the existing reporting requirements approved under the Office of Management and Budget's (OMB) Control Number 0648–0205, Southeast Region Permit Family of Forms. The SERO Permits Office administers Federal fishing permits in the United States (U.S.) exclusive economic zone (EEZ) of the Caribbean Sea, Gulf of Mexico (Gulf), and South Atlantic under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801. The SERO Permits Office also proposes to revise parts of the current collection-of-information approved under OMB Control Number 0648–0205.

The National Marine Fisheries Service (NMFS) Southeast Region manages the U.S. Federal fisheries in the Caribbean, Gulf, and South Atlantic under the fishery management plans (FMPs) for each region. The regional fishery management councils prepared the FMPs pursuant to the Magnuson-Stevens Act. The regulations implementing the FMPs, including those that have reporting requirements, are at 50 CFR part 622.

The recordkeeping and reporting requirements at 50 CFR part 622 form the basis for this collection of information. The NMFS Southeast Region requests information from fishery participants. This information, upon receipt, results in an increasingly more efficient and accurate database for management and monitoring of the Federal fisheries in the Caribbean, Gulf, and South Atlantic.

The SERO Permits Office proposes to revise the collection-of-information approved under OMB Control Number 0648–0205. NMFS proposes to revise the Federal permit applications for Vessels Fishing in the EEZ (Vessel EEZ), Harvest of Aquacultured Live Rock in the EEZ, Vessels Fishing for Wreckfish in the South Atlantic States (Wreckfish), and the Annual Dealer permit.

The purpose of revising certain Southeast Region permit application forms is to better comply with National Standard 4 (NS4) of the Magnuson-Stevens Act, the Regulatory Flexibility Act (RFA) and the Small Business Administration's regulations implementing the RFA, Executive Order 12898, and the ''fairness and equitable distribution'' provisions of the Magnuson-Stevens Act, including NS4 and section 303(b)(6).

The SERO Permits Office also proposes to split the single application form, Federal Permit Application for the Harvest of Aquacultured Live Rock, into two application forms, Federal Permit Application for New Permit for the Harvest of Aquacultured Live Rock (Aquacultured Live Rock New Permit) and Federal Permit Application to Renew Permit for the Harvest of Aquacultured Live Rock (Aquacultured Live Rock Permit Renewal).

The Aquacultured Live Rock New Permit includes the collection of data previously collected via a separate form, Aquaculture Site Evaluation Report, among other revisions. The proposed revisions to establish the Aquacultured Live Rock New Permit application do not affect the time burden for applicants for new sites or new permit holders, but should clarify the application process for most applicants of new sites. The application form for the Aquacultured Live Rock Permit Renewal does not include the Aquaculture Site Evaluation Report; however, the Aquacultured Live

Rock Permit Renewal form does include other clarifying revisions. NMFS does not anticipate these revisions to both forms will materially change the time burden to the applicants.

The proposed revisions to the specified application forms are administrative and generally divide existing data fields into smaller parts to gather information that is more specific. NMFS intends the revisions to make the requested information clearer and easier to understand, and therefore, applications may require less time to complete in some cases. Additionally, NMFS removed some data fields that were collecting less meaningful data. NMFS estimates that the proposed revisions would not change the annual number of respondents or responses, or annual costs to affected permit applicants from estimates in the currently approved collection. Across the application forms, NMFS estimates these revisions would increase the overall time burden.

In addition to the proposed revisions above, NMFS also increases its estimated time burden for the Vessel Permit Transfers and Notarizations form and the Annual Landings Report for Gulf of Mexico Shrimp form to more accurately account for the time required to complete these forms.

II. Method of Collection

Respondents complete applications on paper forms, and then can either mail or bring applications to the SERO Permits Office. Online application renewals are currently available only for some of the permits included on the Federal Permit Application for Vessels Fishing in the Exclusive Economic Zone. The SERO Permits Office can mail applications and instructions or they can be downloaded from the SERO Permits Office Web site at *sero.nmfs.noaa.gov/permits.*

III. Data

OMB Control Number: 0648–0205.

Form Number(s): None.

Type of Review: Regular submission (revision and extension of a current information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 13,909.

Estimated Time per Response:

- Dealer Permit Application, 30 minutes;
- Vessel EEZ Permit Application, including Golden Tilefish Endorsement and Smoothhound Shark Permit, 40 minutes;
- Wreckfish Permit Application, 40 minutes;
- Vessel Operator Card Application for Dolphin/Wahoo or Rock Shrimp, 21 minutes;
- Fishing in Colombian Treaty Waters Vessel Permit Application, 30 minutes;
- Golden Crab Permittee Zone Transit Notification, 12 minutes;
- Notifications of Authorization for Retrieval of Lost or Stolen Traps (golden crab, reef fish, snapper-grouper, spiny lobster), 13 minutes;
- Vessel Permit Transfers and Notarizations, 10 minutes;
- Annual Landings Report for Gulf of Mexico Shrimp, 20 minutes;
- International Maritime Organization (IMO) Number Registration, 30 minutes;
- Aquacultured Live Rock Permitting and Reporting—New Permit—Deposit Harvest Report, 15 minutes; Notice of Intent to Harvest, 5 minutes; Site Evaluation Report, 20 minutes; Federal Permit Application, including Site Evaluation Report, 50 minutes; and
- Aquacultured Live Rock Permitting and Reporting—Renew Permit—Deposit Harvest Report, 15 minutes; Notice of Intent to Harvest, 5 minutes; Federal Permit Application, 30 minutes.

Estimated Total Annual Burden Hours: 7,940.

Estimated Total Annual Cost to Public: $483,828 in recordkeeping or reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: December 15, 2016.

Sarah Brabson,

NOAA PRA Clearance Officer.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XF087

Gulf of Mexico Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a webinar meeting.

SUMMARY: The Gulf of Mexico Fishery Management Council will hold a meeting of its Pulley Ridge Working Group via webinar.

DATES: The webinar will convene on Wednesday, January 4, 2017, 10 a.m. to 12 p.m. EST.

ADDRESSES: The meeting will take place via webinar.

Council address: Gulf of Mexico Fishery Management Council, 2203 N. Lois Avenue, Suite 1100, Tampa, FL 33607; telephone: (813) 348–1630.

FOR FURTHER INFORMATION CONTACT: Dr. Morgan Kilgour, Fishery Biologist, Gulf of Mexico Fishery Management Council; *morgan.kilgour@gulfcouncil.org,* telephone: (813) 348–1630.

SUPPLEMENTARY INFORMATION:

Wednesday, January 4, 2017; 10 a.m.–12 p.m., EST:

Agenda: The working group will discuss available information about Pulley Ridge and potential boundary modifications to the existing habitat area of particular concern.

—Meeting Adjourns—

You may register for Pulley Ridge Working Group webinar on January 4, 2017 at: *https://attendee.gotowebinar.com/register/3018060841235901185.*

The Agenda is subject to change, and the latest version along with other meeting materials will be posted on the Council's file server. To access the file server, the URL is *https://public.gulfcouncil.org:5001/webman/index.cgi* or go to the Council's Web site and click on the FTP link in the lower left of the Council Web site (*http://www.gulfcouncil.org*). The username and password are both ''gulfguest''. Click on the ''Library Folder'' then scroll down to ''Pulley Ridge Working Group Jan 2017''.

The meeting will be webcast over the internet. A link to the webcast will be available on the Council's Web site, *http://www.gulfcouncil.org.*

Although other non-emergency issues not on the agenda may come before the Working Group for discussion, in

accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal action during this meeting. Actions of the Working Group will be restricted to those issues specifically identified in the agenda and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take action to address the emergency.

Dated: December 14, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Submission for OMB Review; Comment Request; Secrecy and License To Export

The United States Patent and Trademark Office (USTPO) will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: United States Patent and Trademark Office, Commerce.

Title: Secrecy and License to Export.

OMB Control Number: 0651–0034.

Form Number(s): None.

Type of Request: Revision of a currently approved collection.

Number of Respondents: 2,559 per year.

Average Hours Per Response: Between 30 minutes (0.5 hours) and 4 hours to gather the necessary information, prepare the materials, and to submit it to the USPTO, depending upon the instrument used and the complexity of the situation.

Burden Hours: 1607.5 hours.

Cost Burden: $448,267.70.

Needs and Uses: This information is required by 35 U.S.C. 181–188 and administered by the USPTO through 37 CFR 5.1–5.22 and 1.17. This collection includes the information needed by the USPTO to review the various types of petitions regarding secrecy orders and to issue or revoke foreign filing licenses. Responses to this information collection is necessary to obtain a permit to disclose, modify or rescind a secrecy order; to obtain general or group permits; to obtain foreign filing licenses, including retroactive foreign filing licenses; or to change the scope of a license.

Affected Public: Businesses or other for-profits; not-for-profit institutions.

Frequency: On occasion.

Respondent's Obligation: Required to Obtain or Retain Benefits.

OMB Desk Officer: Kimberly R. Keravouri, email: *Kimberly_R_Keravouri@omb.eop.gov.*

Once submitted, the request will be publicly available in electronic format through *reginfo.gov.* Follow the instructions to view Department of Commerce collections currently under review by OMB.

Further information can be obtained by:

- *Email: InformationCollection@uspto.gov.* Include ''0651–0034 copy request'' in the subject line of the message.
- *Mail:* Marcie Lovett, Records Management Division Director, Office of the Chief Information Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450.

Written comments and recommendations for the proposed information collection should be sent on or before January 19, 2017 to Kimberly R. Keravouri, OMB Desk Officer, via email to *Kimberly_R_Keravouri@omb.eop.gov,* or by fax to 202–395–5167, marked to the attention of Kimberly R. Keravouri.

Dated: December 13, 2016.

Marcie Lovett,

Records Management Division Director, OCIO, United States Patent and Trademark Office.

Department of the Air Force

Divert Activities and Exercises, Commonwealth of the Northern Mariana Islands

ACTION: Notice of Availability (NOA) Record of Decision (ROD).

SUMMARY: On December 7, 2016, the United States Air Force signed the ROD for the Divert Activities and Exercises, Commenwealth of the Northern Mariana Islands Final Environmental Impact Statement (EIS). This ROD states the Air Force decision is to implement Alternative 2—Modified Tinian Alternative, and specifically the North Option. The decision means that the Air Force will construct the facilities and infrastructure needed to achieve divert capabilities in the western Pacific and conduct military exercises.

The decision was based on matters discussed in the Final EIS; inputs from the public, Federal, the Commonwealth of the Northern Mariana Islands, and local units of government, and regulatory agencies; and other relevant factors. The Final EIS was made available to the public on September 26, 2016 through a NOA in the **Federal Register** (Volume 81, Page 66013) with a post-filing waiting period that ended on October 26, 2016. This ROD documents only the Air Force decision on the proposed actions analyzed in the Final EIS. Authority: This NOA is published pursuant to the regulations (40 CFR Sec. 1506.6) implementing the provisions of the National Environmental Policy Act of 1969 (42 U.S.C. 4321, *et seq.*) and the Air Force's Environmental Impact Analysis Process (32 CFR Secs. 989.21(b) and 989.24(b)(7)).

FOR FURTHER INFORMATION CONTACT: Mark Petersen, 25 E Street, C–310, JBPHH, HI 96853, (808) 449–1078.

Henry Williams,

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Teacher and School Leader Incentive Program

AGENCY: Office of Innovation and Improvement, Department of Education.

ACTION: Notice.

Overview Information

Teacher and School Leader Incentive Program (TSL) Notice inviting applications for new awards for fiscal year (FY) 2017.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.374A.

DATES:

Applications Available: December 20, 2016.

Deadline for Notice of Intent to Apply: February 4, 2017.

Dates of Pre-Application Workshops: For information about pre-application workshops, visit the TSL Web site at: *http://innovation.ed.gov/what-we-do/teacher-quality/teacher-incentive-fund/.*

Deadline for Transmittal of Applications: March 24, 2017.

Deadline for Intergovernmental Review: April 23, 2017.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purpose of TSL is to assist States, local educational agencies (LEAs), and nonprofit organizations to develop, implement, improve, or expand comprehensive performance-based compensation systems or human capital management systems for teachers, principals, and other school leaders (especially for teachers, principals, and other school leaders in high-need schools) who raise student academic achievement and close the achievement gap between high- and low-performing students. In addition, a portion of TSL funds are dedicated to study the effectiveness, fairness, quality, consistency, and reliability of performance-based compensation systems or human capital management systems for teachers, principals, and other school leaders.

Background:

The Elementary and Secondary Education Act of 1965 (ESEA), as reauthorized on December 10, 2015, by the Every Student Succeeds Act (ESSA),[1] established the Teacher and School Leader Incentive Fund (TSL) program. TSL builds on the former Teacher Incentive Fund (TIF) program and promotes Performance-Based Compensation Systems (PBCSs)[2] and comprehensive Human Capital Management Systems (HCMSs) that support teachers, principals, and other school leaders (*i.e.,* Educators as used in this notice). In recognition of the importance that effective school leadership has on student achievement, TSL also promotes comprehensive Evaluation and Support Systems for all Educators within an LEA, especially those serving in high-need schools. In addition, TSL seeks to contribute to the body of knowledge regarding impactful approaches to enhancing Educator effectiveness by promoting the study of the efficacy, fairness, quality, consistency, and reliability of these systems to support Educators through an independent, Department-led evaluation to assess the program's effectiveness and relevant lessons learned. Further, the Department seeks to ensure that the design of the TSL competition reflects the new provisions of the TSL statute in ESEA sections 2211–2213, as well as the lessons learned from 10 years of implementing the TIF program.

Results from the TIF program have varied across and within the portfolio of five cohorts of TIF grantees, comprised of over 140 grantees that received a total of about $2 billion in grant awards. Successful TIF grantees implemented comprehensive efforts to help teachers and principals learn and grow throughout their professional trajectories. Successful TIF grantees also considered recruitment, induction, support and career development, and growth and leadership opportunities aligned with the LEA's overall improvement strategy; and they used multi-measure evaluation systems to inform the development of innovative incentives and structures that support teachers' and principals' growth and advancement. LEAs also used TIF funds to develop their cadre of leaders.

With the priorities, requirements, definitions, and selection criterion used for this competition, we seek to build on the efforts of the TIF program and abundant research over two decades showing that teachers and teacher effectiveness are the most critical in-school factors in improving student outcomes.[3]

In addition, we have learned that effective principals and other School Leaders are crucial to strengthening teaching and school communities, and play a critical role in students' academic success—especially in high-need schools—by creating cultures of high expectations.[4] Indeed, teachers cite a principal's support and effectiveness as a leading factor that contributes to their decision to remain in the profession.[5] Effective School Leaders directly impact the quality of instruction through hiring decisions of school personnel that provide instructional leadership, support, and develop teachers—which, in turn, can help teachers focus their

[1] Unless otherwise noted, references in this notice to sections of the ESEA as reauthorized by ESSA are identified as sections of the ESEA.

[2] Throughout this notice, all defined terms are denoted with capitals.

efforts on student learning.[6] Effective School Leaders also create a vision of academic success for all children in their schools and encourage other Educators to take on leadership roles and responsibilities.

Given the importance of ensuring that Educators are as effective as possible—especially in high-need schools, where equal educational opportunity is particularly important for historically underserved students—TSL is designed to utilize PBCSs and other supports for Educators as a central part of an LEA's effort to improve student academic achievement. Indeed, the TSL statute gives priority to applicants that propose to focus supports on Educators in High-Need Schools. By providing Educators with PBCSs, in which performance-based compensation may include robust career ladder opportunities for effective Educators, TSL aims to reward Educators for their effectiveness and improved student outcomes.

Recent cohorts of TIF grantees expanded LEA teacher and principal evaluation systems to include all teachers and principals in a given LEA, and measured educator performance using multiple factors, including classroom observations and gains in student academic achievement. Using the information generated from these more comprehensive teacher and principal evaluation systems, successful TIF grantees began to transform how effective teachers and principals were compensated, moving beyond the episodic performance-based bonuses that were more typical of early TIF cohorts. Recent cohorts of TIF grantees also began complementing their compensation incentives with non-compensation supports in order to build stronger support systems throughout teachers' and principals' trajectory, from pre-service through retention. These strategies included using teacher and principal evaluation systems to inform decisions about recruitment, retention, tenure, compensation, support, and leadership potential.

Successful TIF grantees also demonstrated that implementing successful Educator Evaluation and Support Systems that inform performance-based compensation can occur across a wide range of contexts. However, based on reports from grantees and from evaluations of early TIF cohorts, the most promising TIF-supported efforts appear to be those that are designed to support instructional improvements through use of classroom and school-level data, to create a shared understanding of effective classroom-level practices.

In recent years, many States and LEAs have developed high-quality Educator Evaluation and Support systems as part of their efforts to improve LEAs' hiring practices, provide Educators with meaningful feedback and targeted professional development, and use information on Educator performance to inform key school- and district-level decisions. As such, an increasing number of LEAs are well-equipped to make human capital decisions that both support Educators and improve student outcomes. In view of the work and resources that many LEAs have already invested in an HCMS, PBCS, and Educator Evaluation and Support Systems that already meet provisions of the TSL statute, and the desire to have make awards to applicants who are ready to expand upon their existing work, we have structured this competition to permit LEAs to build upon and improve existing HCMS, PBCS, and Educator Evaluation and Support Systems that meet the definitions of these terms in this notice that come from the TSL statute. Doing so could include efforts to improve the Educator Evaluation and Support Systems (*e.g.,* make them even more fair, reliable, and credible; better align formative and summative assessments with college- and career-ready standards; or provide more mentoring and coaching to support Educators) as well as efforts to have the HCMS and Educator Evaluation and Support Systems address new challenges or opportunities (*e.g.,* partnering with institutions of higher education to strengthen pre-service programming or creating a teacher residency program, including one that is consistent with the definition of the term in section 2002(5) of the ESEA.) The Department encourages applicants to reflect these types of efforts in their TSL applications.

Moreover, much work remains to ensure that students, particularly those whose families live in poverty, have equitable access to the most effective Educators. In order to help ensure that every public school student has equitable access to excellent Educators, in 2014 the Department asked each State educational agency (SEA) to submit a State Plan to Ensure Equitable Access to Excellent Educators describing how it will ensure that ''poor and minority children are not taught at higher rates than other children by inexperienced, unqualified, or out-of-field teachers,'' as formerly required by section 1111(b)(8)(C) of the ESEA, as reauthorized by the No Child Left Behind Act (now section 1111(g)(1)(B) of the ESEA, as amended by ESSA). All 50 States, the District of Columbia, and the Commonwealth of Puerto Rico developed plans that the Department approved in 2015. States began to implement these plans in the 2015–16 school year. Several of the States' proposed approaches reflected in these plans include performance-based compensation, including strategies such as career pathways that TSL funds could support. Therefore, the Department encourages applicants to align their TSL proposals to their State plans, and has established a priority for this purpose. In addition, given the emerging literature on the importance of educator diversity, the Department encourages applicants to leverage TSL resources to diversify their Educator workforce, and, similarly, has established a second priority for this purpose. More information on the importance of educator workforce diversity can be found in the Department's report on The State of Racial Diversity in the Educator Workforce at the following link: *https://www2.ed.gov/rschstat/eval/highered/racial-diversity/state-racial-diversity-workforce.pdf.*

Historically, the TIF program focused its efforts on implementing performance-based compensation in high-need schools. Under provisions that include ESEA sections 2211(a) and (b)(2) and 2212(d)(1), TSL continues to ensure that grantees focus their activities on teachers and School Leaders in high-need schools. In this regard, ESEA section 2211(b)(2) defines a High-Need School as a public elementary or secondary school that is located in an area in which the percentage of students from families with incomes below the poverty line is 30 percent or more. The definition of poverty line in ESEA section 8101(41) effectively requires the Department to use poverty line data gathered by the U.S. Census Bureau since no other data that meet this definition are available.

However, the Department has determined that the school-level poverty-line data required by the definition of High-Need School are unavailable; the U.S. Census Bureau reports these data only by LEA. As such,

[6] Papa, Frank, Hamilton Lankford, and James Wyckoff, ''Hiring Teachers in New York's Public Schools: Can the Principal Make a Difference?'' University (2008) available at Albany, SUNY. *www.tandfonline.com/doi/full/10.1080/15700760701655524?mobileUi=0&;* Wallace Foundation, ''The School Principal as Leader: Guiding Schools to Better Teaching and Learning'' (2013 available at *www.wallacefoundation.org/knowledge-center/Documents/The-School-Principal-as-Leader-Guiding-Schools-to-Better-Teaching-and-Learning-2nd-Ed.pdf;* Ikemoto, Gina, et al., New Leaders, ''Playmakers: How great principals build and lead great teams of teachers''(2012) available at *www.newleaders.org/wp-content/uploads/Playmakers.pdf.*

in order to ensure that awards made under this competition still focus on schools that are high-poverty, the Secretary is exercising the orderly transition authority in section 4(b) of ESSA to define a High-Need School for purposes of this competition using the same poverty measure applicable to the definition of a High-Need School for the past three TIF competitions. Since the income of a family below the poverty line is much lower than the income a family needs to enable its children to be eligible for free or reduced-price lunch subsidies under the Richard B. Russell National School Lunch Act (the poverty measure used in all prior TIF competitions), we believe that use of the prior TIF poverty measure to determine which schools are high-need is also a reasonable approach to implementing Congressional intent for TSL.

Priorities: This notice contains four absolute priorities and two competitive preference priorities. We are establishing these priorities, requirements, and definitions for the FY 2017 grant competition, and any subsequent year in which we make awards from the list of unfunded applications from this competition, in accordance with section 437(d)(1) of the General Education Provisions Act (GEPA), 20 U.S.C. 1232(d)(1).

Absolute Priorities: The following priorities are absolute priorities. Under 34 CFR 75.105(c)(3), applications must meet the following absolute priorities in order to be considered for awards:

- *Absolute Priority 1:* Human Capital Management System; and one of the three following Absolute Priorities:
- *Absolute Priority 2:* Evaluation and Support Systems for Teachers;
- *Absolute Priority 3:* Evaluation and Support Systems for School Leaders; or
- *Absolute Priority 4:* Evaluation and Support Systems for Teachers and School Leaders.

Note: Applicants must indicate in their applications under which absolute priorities they are applying. Applications that do not clearly address Absolute Priority 1 and one of the other absolute priorities (Absolute Priorities 2, 3, or 4) will not be reviewed.

Assuming that applications in each funding category are of sufficient quality, the Secretary intends to award grants under each of the three following funding categories:

(a) Evaluation and Support Systems for Teachers;

(b) Evaluation and Support Systems for School Leaders; and

(c) Evaluation and Support Systems for Teachers and School Leaders.

Applications in each funding category will be peer reviewed, scored based on the selection criteria announced in this notice, and placed in rank order. Consistent with section 2212(d)(2) of the ESEA, to the extent practicable, the Secretary will award an equitable geographic distribution of grants, including the distribution of such grants between rural and urban areas.

The absolute priorities are:

Absolute Priority 1: Human Capital Management System (HCMS). To meet this priority, the applicant must include, in its application, a description of its existing LEA-wide HCMS (or, in the case of a consortium application or an SEA application, the shared HCMS that currently exists across the proposed LEAs that will participate in this project), including a description of its PBCS. In addition, the application must describe—

(1) How the HCMS currently includes an Evaluation and Support System for teachers, School Leaders, or both, that reflects clear and fair measures of performance, based in part on demonstrated improvement in student academic achievement;

(2) Any proposed modifications of the HCMS under the proposed project, including modifications that expand or improve the Evaluation and Support System as defined in this notice;

(3) How the Evaluation and Support System will provide ongoing, differentiated, targeted, and personalized support and feedback for improvement, including professional development opportunities designed to increase effectiveness during the entire project period;

(4) A data system that links Educators with student academic achievement data; and

(5) How the HCMS uses performance information from the Evaluation and Support System to inform key school- and district-level human capital decisions as decisions on preparation, recruitment, hiring, placement, retention, dismissal, compensation (including performance-based compensation), professional development, tenure, and promotion, particularly as they affect Educators working in High-Need Schools in the LEA or LEAs the project will serve.

Note: The described HCMS, PBCS, and the applicable Educator Evaluation and Support Systems must meet the definition of these terms in this notice. In addition, applicants may optionally include other school personnel (*e.g.,* support staff, counselors, and aides) in their HCMS as local circumstances warrant.

Absolute Priority 2: Evaluation and Support Systems for Teachers. To meet this priority, the applicant must include, in its application, a description of how its project would enhance its Evaluation and Support System for teachers in High-Need Schools in the LEA or LEAs the project will serve.

Absolute Priority 3: Evaluation and Support Systems for School Leaders. To meet this priority, the applicant must include, in its application, a description of how its project would enhance its Evaluation and Support System for School Leaders in High-Need Schools in the LEA or LEAs the project will serve.

Absolute Priority 4: Evaluation and Support Systems for Teachers and School Leaders. To meet this priority, the applicant must include, in its application, a description of how its project would enhance its Evaluation and Support System for teachers and School Leaders in High-Need Schools in the LEA or LEAs the project will serve.

Competitive Preference Priorities: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition, the following priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2) we award additional points to an application depending on how well the application meets the competitive preference priorities.

Applicants may apply under one, two, or both competitive preference priorities. An application can receive up to 10 points for meeting Competitive Preference Priority 1 and up to 5 points for meeting Competitive Preference Priority 2, depending on how well the application meets these competitive preference priorities. The maximum total competitive preference priority points an application may receive under this competition is 15.

The competitive preference priorities are:

Competitive Preference Priority 1: Using the HCMS to Improve Equitable Access to Effective Educators (up to 10 points). Projects that are designed to address the most significant gaps or insufficiencies in student access to effective teachers, School Leaders, or both teachers and School Leaders, in High-Need Schools, including gaps or inequities in how effective teachers, School Leaders, or both, are distributed across the LEA or LEAs the project will serve. At minimum, applicants must:

(1) Identify the most significant gaps or insufficiencies in student access to effective teachers, School Leaders, or both, in High-Need Schools, including gaps or inequities in how effective teachers, School Leaders, or both, are distributed across the LEA(s) the project will serve;

(2) Identify relevant factors used in determining such gaps, such as data on

availability of school resources, staffing patterns, school climate, and educator support; and

(3) Describe how the strategies proposed for closing the identified gaps are aligned to and are consistent with the strategies identified in the State's Plan to Ensure Equitable Access to Excellent Educators, approved by the Department in 2015.

Competitive Preference Priority 2: Attracting, Supporting, and Retaining a Diverse and Effective Workforce (up to 5 points). Projects that are designed to attract, support, and retain a diverse and effective workforce, including effective teachers, School Leaders, or both, from historically underrepresented populations. At minimum, applicants must provide a description detailing their commitment to creating and maintaining a diverse workforce, and their plan for attracting, supporting, and retaining diverse Educators.

Requirements: The following requirements are from ESEA sections 2212 and 2213:

Requirement 1—Use of Funds:

Each applicant must demonstrate how it will use TSL grant funds to develop, implement, improve, or expand, in collaboration with Educators and members of the public, one or more of the following:

(A) Developing or improving an Evaluation and Support System, including as part of an HCMS, that—

(i) Reflects clear and fair measures of teacher or School Leader performance, or both, based in part on demonstrated improvement in student academic achievement; and

(ii) Provides teachers, or School Leaders, or both, with ongoing, differentiated, targeted, and personalized support and feedback for improvement, including professional development opportunities designed to increase effectiveness.

(B) Conducting outreach within an LEA or a State to gain input on how to construct an Evaluation and Support System and to develop support for the Evaluation and Support System, including by training appropriate personnel in how to observe and evaluate teachers, or School Leaders, or both.

(C) Providing School Leaders with—

(i) Balanced autonomy to make budgeting, scheduling, and other school-level decisions in a manner that meets the needs of the school without compromising the intent or essential components of the policies of the LEA or State; and

(ii) Authority to make staffing decisions that meet the needs of the school, such as building an instructional leadership team that includes teacher leaders or offering opportunities for teams or pairs of effective teachers or candidates to teach or start teaching in High-Need Schools together.

(D) Implementing, as part of a comprehensive PBCS, a differentiated salary structure, which may include bonuses and stipends, to one or both of the following:

(i) Teachers who—

(I) Teach in High-Need Schools or high-need subjects;

(II) Raise student academic achievement; or

(III) Take on additional leadership responsibilities; or

(ii) School Leaders who serve in High-Need Schools and raise student academic achievement in the schools.

(E) Improving the LEA's system and process for the recruitment, selection, placement, and retention of effective teachers, or School Leaders, or both, in High-Need Schools, such as by improving LEA policies and procedures to ensure that High-Need schools are competitive and timely in—

(i) Attracting, hiring, and retaining effective Educators;

(ii) Offering bonuses or higher salaries to effective Educators; or

(iii) Establishing or strengthening School Leader Residency Programs and Teacher Residency Programs.

(F) Instituting career advancement opportunities characterized by increased responsibility and pay that reward and recognize effective teachers, principals, or other School Leaders in High-Need Schools and enable them to expand their leadership and results, such as through teacher-led professional development, mentoring, coaching, hybrid roles, administrative duties, and career ladders.

Requirement 2—Matching:

Each applicant must provide a signed assurance attesting to its intent and ability to meet the TSL requirement in section 2212(f) of the ESEA that the applicant provide, from non-Federal sources, an amount equal to 50 percent of the amount of the grant, which may be provided in cash or in kind, to carry out the activities supported by the grant. Applicants and grantees must budget their matching contributions on an annual basis relative to each annual award of TSL grant funds.

Requirement 3—Documentation of High-Need Schools:

Each applicant must demonstrate, in its application, that at least the majority of schools whose Educators will participate in the implementation of the TSL-funded PBCS are High-Need Schools (as defined in this notice). In doing so, each applicant must provide, in its application—

(a) A list of schools in which the proposed TSL-supported PBCS would be implemented, and an identification of which of these schools are High-Need Schools;

(b) For each High-Need School listed, the most current data on the percentage of students who are eligible for free or reduced-price lunch subsidies under the Richard B. Russell National School Lunch Act, or are considered students from low-income families based on another poverty measure that the LEA uses under section 1113(a)(5) of the ESEA (20 U.S.C. 6313(a)(5)); and

(c) A description of the applicant's rationale for extending the TSL-funded PBCS to any Educators who are not working in High-Need Schools.

Note: Data provided to demonstrate eligibility as a High-Need School must be school-level data; the Department will not accept LEA- or State-level data for purposes of documenting whether a school is a High-Need School.

Definitions: The definitions of *Evaluation and Support System, Evidence-Based, Human Capital Management System (HCMS), Performance-Based Compensation System, School Leader, School Leader Residency Program,* and *Teacher Residency Program* are from sections 2002, 2211, 2212, 8101(21), and 8101(44) of the ESEA. The definition of *High-Need School* is based on definitions of the term used in the 2012 and 2016 TIF competitions but, like the definition in section 2211(b) of the ESEA, focuses only on the extent of family poverty of the students the school serves. We are establishing the definitions for *Correlational Study with Statistical Controls for Selection Bias, Demonstrates a Rationale, Educators, Experimental Study, Large Sample, Logic Model, Meets What Works Clearinghouse Evidence Standards with Reservations, Meets What Works Clearinghouse Evidence Standards without Reservations, Moderate Evidence, Multi-Site Sample, Project Component, Promising Evidence, Quasi-Experimental Design Study, Randomized Controlled Trial, Regression Discontinuity Design Study, Relevant Finding, Relevant Outcome, Single-Case Design Study, and Strong Evidence* for the FY 2017 grant competition only, in accordance with section 437(d)(1) of GEPA, 20 U.S.C. 1232(d)(1).

Correlational Study with Statistical Controls for Selection Bias means a study that (1) estimates how a relevant outcome varies with the receipt of a

project component, and (2) uses sampling of analysis methods (*e.g.,* multiple regression) to account for at least some of the differences between the groups being compared.

Demonstrates a Rationale means the project component is supported by a reasonable logic model that is informed by research or an evaluation that suggests how the project component is likely to improve relevant outcomes.

Educator means a teacher, principal or other School Leader.

Evaluation and Support System means a system that is fair, rigorous, valid, reliable, and objective and reflects clear and fair measures of teacher, principal, or other School Leader performance, based in part on demonstrated improvement in student academic achievement; and provides teachers, principals, or other School Leaders with ongoing, differentiated, targeted, and personalized support and feedback for improvement, including professional development opportunities designed to increase effectiveness. (ESEA Section 2212(c)(4) and (e)(2)(A))

Evidence-Based means the proposed activity, strategy, or intervention is: supported by strong evidence, supported by moderate evidence, supported by promising evidence, or demonstrates a rationale. (ESEA section 8101(21))

Experimental Study means a study, such as a *Randomized Controlled Trial* (RCT), that is designed to compare outcomes between two groups of individuals that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. In some circumstances, a finding from a R*egression Discontinuity Design Study* (RDD) or findings from a collection of *Single-Case Design Studies* (SCDs) may be considered equivalent to a finding from an RCT. RCTs and RDDs, and collections of SCDs, depending on design and implementation, can Meet What Works Clearinghouse Evidence Standards without Reservations.

High-Need School means a school with 50 percent or more of its enrollment from low-income families, based on eligibility for free or reduced-price lunch subsidies under the Richard B. Russell National School Lunch Act, or other poverty measures that LEAs use consistent with ESEA section 1113(a)(5) (20 U.S.C. 6313(a)(5). For middle and high schools, eligibility may be calculated on the basis of comparable data from feeder schools. Eligibility as a High-Need School under this definition is determined on the basis of the most currently available data.

Human Capital Management System (HCMS) means a system—

(A) By which a LEA makes and implements human capital decisions, such as decisions on preparation, recruitment, hiring, placement, retention, dismissal, compensation, professional development, tenure, and promotion; and

(B) That includes a Performance-Based Compensation System. (ESEA section 2211(b)(3))

Large Sample means an analytic sample of 350 or more students (or other single analysis units), or 50 or more groups (such as classrooms or schools) that each contain, on average, 10 or more students (or other single analysis units, regardless of whether these single analysis units are disaggregated in the analysis of outcomes for the groups). Multiple studies can cumulatively meet the Multi-Site Sample and Large Sample requirements of Moderate Evidence or Strong Evidence, as long as each study meets the other requirements of the particular level of evidence (*i.e.,* Moderate Evidence or Strong Evidence).

Logic Model (also known as a theory of action) means a reasonable conceptual framework that identifies key components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key components and outcomes.

Meets What Works Clearinghouse Evidence Standards without Reservations is the highest possible rating for a study finding reviewed by the What Works Clearinghouse (WWC). Studies receiving this rating provide the highest degree of confidence that an estimated effect was caused by the project component studied. Experimental studies (as defined above) may receive this highest rating. These standards are described in the WWC Procedures and Standards Handbooks, Version 3.0, which can be accessed at *http://ies.ed.gov/ncee/wwc/Handbooks.*

Meets What Works Clearinghouse Evidence Standards with Reservations is the second-highest rating for a group design study reviewed by the WWC. Studies receiving this rating provide a reasonable degree of confidence that an estimated effect was caused by the project component studied. Both Experimental Studies (such as Randomized Controlled Trials with high rates of sample attrition) and Quasi-Experimental Design Studies (as defined below) may receive this rating if they establish the equivalence of the treatment and comparison groups in key baseline characteristics. These standards are described in the WWC Procedures and Standards Handbooks, Version 3.0, which can be accessed at *http://ies.ed.gov/ncee/wwc/Handbooks.http://ies.ed.gov/ncee/wwc/Handbooks.*

Moderate Evidence means the following conditions are met:

(a) There is at least one Experimental or Quasi-Experimental Design Study of the effectiveness of the project component with a Relevant Finding that Meets What Works Clearinghouse Evidence Standards With or without Reservations (*e.g.,* a Quasi-Experimental Design Study or high-attrition Randomized Controlled Trial that establishes the equivalence of the treatment and comparison groups in student achievement at baseline);

(b) The Relevant Finding in the study described in paragraph (a) of this definition is of a statistically significant and positive (*i.e.,* favorable) effect on a student outcome or other Relevant Outcome, with no statistically significant and overriding negative (*i.e.,* unfavorable) evidence on that project component from other findings reviewed by and reported in the What Works Clearinghouse that Meet What Works Clearinghouse Evidence Standards with or without Reservations;

(c) The Relevant Finding in the study described in paragraph (a) of this definition is based on a sample that overlaps with the populations (*e.g.,* the types of student served) *or* settings proposed to receive the project component (*e.g.,* an after-school program studied in urban high schools and proposed for rural high schools); and

(d) The Relevant Finding in the study described in paragraph (a) of this definition is based on a Large Sample and a Multi-Site Sample.

Multi-Site Sample means more than one site, where site can be defined as a local educational agency (LEA), locality, or State. A sample could be multi-site if it includes campuses in two or more localities (*e.g.,* cities or counties), even if the campuses all belong to the same LEA or postsecondary school system. Multiple studies can cumulatively meet the Multi-Site Sample and Large Sample requirements of Moderate Evidence or Strong Evidence, as long as each study meets the other requirements of the particular level of evidence (*i.e.* Moderate Evidence or Strong Evidence).

Performance-Based Compensation System (PBCS) means a system of compensation for teachers, principals, or other School Leaders—

(A) That differentiates levels of compensation based in part on measurable increases in student academic achievement; and

(B) Which may include—

(i) Differentiated levels of compensation, which may include bonus pay, on the basis of the employment responsibilities and success of effective teachers, principals, or other School Leaders in hard-to-staff schools or high-need subject areas; and

(ii) Recognition of the skills and knowledge of teachers, principals, or other School Leaders as demonstrated through—

(I) Successful fulfillment of additional responsibilities or job functions, such as teacher leadership roles; and

(II) Evidence of professional achievement and mastery of content knowledge and superior teaching and leadership skills. (ESEA section 2211(b)(4))

Project Component means an activity, strategy, or intervention included in a project. Evidence may pertain to an individual project component, or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Promising Evidence means the following conditions are met:

(a) There is at least one study that is a Correlational Study with Statistical Controls for selection bias with a Relevant Finding; and

(b) The Relevant Finding in the study described in paragraph (a) of this definition is of a statistically significant and positive (*i.e.,* favorable) effect of the Project Component on a student outcome or other Relevant Outcome with no statistically significant and overriding negative (*i.e.,* unfavorable) evidence on that Project Component from other findings on the intervention reviewed by and reported in the What Works Clearinghouse that Meets What Works Clearinghouse Evidence Standards with or without Reservations.

Quasi-Experimental Design Study (QED) means a study using a design that attempts to approximate an Experimental Design by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation, can Meet What Works Clearinghouse Evidence Standards with Reservations (but not without Reservations).

Randomized Controlled Trial (RCT) means a study that employs random assignment of, for example, students, teachers, classrooms, or schools, to receive the Project Component being evaluated (the treatment group) or not to receive the Project Component (the control group). The estimated effectiveness of the Project Component is the difference between the average outcomes for the treatment group and for the control group. These studies, depending on design and implementation, can Meet What Works Clearinghouse Evidence Standards without Reservations.

Regression Discontinuity Design Study (RDD) means a study that assigns the Project Component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes. The effectiveness of the Project Component is estimated for individuals who barely qualify to receive that component. These studies, depending on design and implementation, can Meet What Works Clearinghouse Evidence Standards without Reservations.

Relevant Finding means a finding from a study regarding the relationship between (A) an activity, strategy, or intervention included as a component of the Logic Model for the proposed project, and (B) a student outcome or other Relevant Outcome included in the Logic Model for the proposed project.

Relevant Outcome means the student outcome(s) (or the ultimate outcome if not related to students) the proposed Project Component is designed to improve, consistent with the specific goals of a program.

School Leader means a principal, assistant principal, or other individual who is:

(A) An employee or officer of an elementary school or secondary school, LEA, or other entity operating an elementary school or secondary school; and

(B) Responsible for the daily instructional leadership and managerial operations in the elementary school or secondary school building. (ESEA section 8101(44))

School Leader Residency Program means a school-based principal or other School Leader preparation program in which a prospective principal or other school leader—

(A) For one academic year, engages in sustained and rigorous clinical learning with substantial leadership responsibilities and an opportunity to practice and be evaluated in an authentic school setting; and

(B) During that academic year—

(i) Participates in Evidence-Based coursework, to the extent the State (in consultation with LEAs in the State) determines that such evidence is reasonably available, that is integrated with the clinical residency experience; and

(ii) Receives ongoing support from a mentor principal or other school leader, who is effective. (ESEA section 2002(1))

Single-case Design Study (SCD) means a study that uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment. According to the WWC Single Case Design Pilot Standards, a collection of these studies, depending on design and implementation (*e.g.,* including a sufficient number of cases and of data points per condition), can Meet What Works Clearinghouse Evidence Standards without Reservations.

Strong Evidence means the following conditions are met:

(a) There is at least one Experimental Study (*e.g.,* a Randomized Controlled Trial) of the effectiveness of the Project Component that has a Relevant Finding that Meets the What Works Clearinghouse Evidence Standards without Reservations (*e.g.,* a randomized controlled trial with low rates of sample attrition overall and between the treatment and control groups);

(b) The Relevant Finding in the study described in paragraph (a) of this definition is of a statistically significant and positive (*i.e.,* favorable) effect on a student outcome or other Relevant Outcome, with no statistically significant and overriding negative (*i.e.,* unfavorable) evidence on that Project Component from other findings that Meet What Works Clearinghouse Evidence Standards with or without Reservations;

(c) The Relevant Finding in the study described in paragraph (a) of this definition is based on a sample that overlaps with the populations (*e.g.,* the types of student served) *and* settings proposed to receive the Project Component (*e.g.,* an after-school program both studied in, and proposed for, urban high schools); and

(d) The Relevant Finding in the study described in paragraph (a) of this definition is based on a Large Sample and a Multi-Site Sample.

Teacher Residency Program means a school-based teacher preparation program in which a prospective teacher—

(A) For not less than one academic year, teaches alongside an effective teacher, as determined by the State or LEA, who is the teacher of record for the classroom;

(B) Receives concurrent instruction during the year described in subparagraph (A)—

(i) Through courses that may be taught by LEA personnel or by faculty of the teacher preparation program; and

(ii) In the teaching of the content area in which the teacher will become certified or licensed; and

(C) Acquires effective teaching skills, as demonstrated through completion of a residency program, or other measure determined by the State, which may include a teacher performance assessment. (ESEA section 2002(5))

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (5 U.S.C. 553), the Department generally offers interested parties the opportunity to comment on proposed priorities, definitions, and requirements. Section 437(d)(1) of GEPA, however, allows the Secretary to exempt from rulemaking requirements, regulations governing the first grant competition under a new or substantially revised program authority. This is the first grant competition under sections 2211–2213 of the ESEA, as amended by the ESSA, and therefore qualifies for this exemption. In order to ensure timely grant awards, the Secretary has decided to forego public comment on the priorities, requirements, and definitions under section 437(d)(1) of GEPA. These priorities, requirements, and definitions will apply to the FY 17 grant competition and any subsequent year in which we make awards from the list of unfunded applications from this competition.

Program Authority: Sections 2211–13 of the ESEA.

Applicable Regulations: (a) The Education Department General Administrative Regulations in (EDGAR) 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget (OMB) Guidelines to Agencies on Government-wide Debarment and Suspension (Non-procurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: $159 million.

For FY 2017, the Administration has requested $250,000,000 under TSL. We intend to use an estimated $159,000,000 of this funding for new awards under this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications now to allow enough time to complete the grant process if Congress appropriates funds for this program. Contingent upon the availability of funds and the quality of applications, we may make additional awards in future years from the list of unfunded applications from this competition.

Estimated Range of Awards: $500,000–$12,000,000 for the first year of the project period.

Note: The Department estimates a wide range of awards given the potentially large differences in the scope of funded projects, including the size and number of participating LEAs.

Estimated Average Size of Awards: $10,000,000 for the first year of the project period. Funding for the second through fifth years of the project period is subject to the availability of funds and the approval of continuation awards (see 34 CFR 75.253).

Estimated Number of Awards: 15–20.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 36 months, with renewal of up two additional years if the grantee demonstrates to the Secretary that the grantee is effectively using funds. Such renewal may include allowing the grantee to scale up or replicate the successful program. Consistent with ESEA section 2212(b)(3), a grantee may receive a TSL grant (whether individually or as part of a consortium or partnership) only twice.

III. Eligibility Information

1. *Eligible Applicants:*

(a) An LEA, including a charter school that is an LEA, or a consortium of LEAs.

(b) An SEA or other State agency designated by the Chief Executive of a State to participate.

(c) The Bureau of Indian Education; or

(d) A partnership consisting of—

(i) One or more agencies described in subparagraph (a), (b), or (c); and

(ii) At least one nonprofit organization as defined in 2 CFR 200.70 or at least one for-profit entity.

2. *Cost Sharing or Matching:*

a. *Matching:* Under section 2212(f) of the ESEA, each grant recipient must provide, from non-Federal sources an amount equal to 50 percent of the amount of the grant (which may be provided in cash or in kind) to carry out the activities supported by the grant. Each applicant will be required to provide a signed assurance attesting to its intent and ability to meet the matching requirement.

b. *Supplement-Not-Supplant:* This program involves supplement-not-supplant funding requirements. In accordance with section 2212(g) of the ESEA, funds made available under this program must be used to supplement, and not supplant, other Federal or State funds that would otherwise be expended to carry out activities under this program. The Secretary considers all schools funded by the Department of Interior's Bureau of Indian Education to be LEAs, and the funds that these schools receive from the Department of Interior's annual appropriation to be neither Federal nor State funds. Further, the prohibition against supplanting also means that grantees seeking to charge indirect costs to TSL funds will need to use their negotiated restricted indirect cost rates. See 34 CFR 75.563.

3. *Other: Application Requirements:*

All applicants must meet the following application requirements in order to be considered for funding. The application requirements are from ESEA section 2212(c).

Each eligible applicant desiring a grant under this program must submit an application that contains—

(a) A description of the PBCS or HCMS that the eligible applicant proposes to develop, implement, improve, or expand through the grant;

(b) A description of the most significant gaps or insufficiencies in student access to effective teachers, principals, or other School Leaders in High-Need Schools, as applicable to the proposed project, including gaps or inequities in how effective teachers, principals, or other School Leaders are distributed across the LEA, as identified using factors such as data on school resources, staffing patterns, school environment, educator support systems, and other school-level factors;

(c) A description and evidence of the support and commitment from teachers, principals, or other School Leaders, as applicable to the proposed project, which may include charter school leaders, in the school (including organizations representing teachers, principals, or other school leaders), the community, and the LEA to the activities proposed under the grant;

(d) A description of how the eligible applicant will develop and implement a fair, rigorous, valid, reliable, and objective process to evaluate teacher, principal, or other school leader performance, as applicable to the proposed project, under the system that is based in part on measures of student academic achievement, including the baseline performance against which evaluations of improved performance will be made;

(e) A description of the LEAs or schools to be served under the grant, including student academic

achievement, demographic, and socioeconomic information as identified in the application package for this program;

(f) A description of the effectiveness of teachers, principals, or other School Leaders, as applicable to the proposed project, in the LEA or LEAs and the schools to be served under the grant, and the extent to which the system will increase the effectiveness of teachers, principals, or other School Leaders in such schools;

(g) A description of how the eligible applicant will use grant funds in each year of the grant, including a timeline for implementation of key grant activities;

(h) A description of how the eligible applicant will continue the activities assisted under the grant after the grant period ends;

(i) A description of the State, local, or other public or private funds that will be used to supplement the grant, including funds under Title II, part A of the ESEA, and sustain the activities assisted under the grant after the end of the grant period;

(j) A description of the rationale for the project; how the proposed activities are evidence-based; and if applicable the prior experience of the eligible entity in developing and implementing such activities.

Note: In order to demonstrate that the activities are evidence-based, an applicant may, among other things, provide supporting documentation for the study or studies that serve as the evidence base for one or more of the activities that will be implemented as part of the proposed project. Additionally, we encourage applicants to demonstrate in their application that at least one of the activities to be implemented as part of their proposed project is based on Promising Evidence (as defined in this notice). In recent years, the TIF program has released various reports that document the value of, and explore the implementation of, an HCMS [7] that includes a PBCS.[8] In addition, other recent research also explores TSL-type activities. We encourage applicants to include evidence-based activities when considering the full set of TSL activities, such as:

- Educator preparation [9]
- Recruitment
- Educator Induction [10]
- Retention [11]
- Mentoring [12]

(k) A description of how grant activities will be evaluated, monitored, and reported to the public.

Note: In addition, under 34 CFR 75.591, all TSL grantees must cooperate in any evaluation of the program conducted by the Department.

IV. Application and Submission Information

1. *Address to Request Application Package:* Orman Feres, U.S. Department of Education, 400 Maryland Avenue SW., Room 453–6921 4W109, Washington, DC 20202–6200. Telephone: (202) 453–6921 or by email: *TSL@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) by contacting the program contact person listed in this section.

2. *Content and Form of Application Submission:* Requirements concerning the content and form of an application, together with the forms you must submit, are in the application package for this program.

Notice of Intent to Apply: We will be able to develop a more efficient process for reviewing grant applications if we can anticipate the number of applicants that intend to apply for funding under this competition. Therefore, we strongly encourage each potential applicant to notify us of the applicant's intent to submit an application for funding by sending a short email message. This short email should provide (1) the applicant organization's name and address; and (2) all priorities the applicant intends to address. Please send this email notification to *TSL@ed.gov* with ''Intent to Apply'' in the email subject line. Applicants that do not provide this email notification may still apply for funding and are not required to, or prohibited from, addressing priorities they do not mention in their notice of intent to apply.

Page Limit: The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. Applicants should limit the application narrative to no more than 40 pages, using the following standards:

- A ''page'' is 8.5″ × 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Calibri, or Arial.

The suggested page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract, the resumes, the bibliography, or the letters of support. However, the suggested page limit does apply to all of the application narrative.

b. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for TSL, an application may include business information that the applicant considers proprietary. The Department's regulations define ''business information'' in 34 CFR 5.11.

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application,

under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Submission Dates and Times:*

Applications Available: December 20, 2016.

Deadline for Notice of Intent to Apply: February 4, 2017.

Deadline for Transmittal of Applications: March 24, 2017.

Pre-application workshops will be held for this competition shortly after the date that this notice will publish. The workshops are intended to provide technical assistance to all interested grant applicants. Detailed information regarding the pre-application workshops times, and online registration form, can be found on the TSL Web site at: *http://innovation.ed.gov/what-we-do/teacher-quality/teacher-incentive-fund/.*

Applications for grants under this program must be submitted electronically using the *Grants.gov* Apply site (*Grants.gov*). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to *Other Submission Requirements* in section IV of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: April 23, 2017.

4. *Intergovernmental Review:* This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this program.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and System for Award Management:* To do business with the Department of Education, you must—

a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

b. Register both your DUNS number and TIN with the System for Award Management (SAM), the Government's primary registrant database;

c. Provide your DUNS number and TIN on your application; and

d. Maintain an active SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet at the following Web site: *http://fedgov.dnb.com/webform.* A DUNS number can be created within one to two business days.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow two to five weeks for your TIN to become active.

The SAM registration process can take approximately seven business days, but may take upwards of several weeks, depending on the completeness and accuracy of the data you enter into the SAM database. Thus, if you think you might want to apply for Federal financial assistance under a program administered by the Department, please allow sufficient time to obtain and register your DUNS number and TIN. We strongly recommend that you register early.

Note: Once your SAM registration is active, it may be 24 to 48 hours before you can access the information in, and submit an application through, *Grants.gov.*

If you are currently registered with SAM, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days.

Information about SAM is available at *www.SAM.gov.* To further assist you with obtaining and registering your DUNS number and TIN in SAM or updating your existing SAM account, we have prepared a *SAM.gov* Tip Sheet, which you can find at: *www2.ed.gov/fund/grant/apply/sam-faqs.html.*

In addition, if you are submitting your application via *Grants.gov*, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with *Grants.gov* as an AOR. Details on these steps are outlined at the following *Grants.gov* Web page: *www.grants.gov/web/grants/register.html.*

7. *Other Submission Requirements:*

Applications for grants under this program must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. *Electronic Submission of Applications.*

Applications for grants under TSL, CFDA number 84.374A, must be submitted electronically using the Government-wide *Grants.gov* Apply site at *www.Grants.gov*. Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement *and* submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement.*

You may access the electronic grant application for the TSL competition at *www.Grants.gov.*You must search for the downloadable application package for this program by the CFDA number. Do not include the CFDA number's alpha suffix in your search (*e.g.,* search for 84.374, not 84.374A).

Please note the following:

- When you enter the *Grants.gov* site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by *Grants.gov* are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the *Grants.gov* system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the *Grants.gov* system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does

not comply with the deadline requirements. When we retrieve your application from *Grants.gov*, we will notify you if we are rejecting your application because it was date and time stamped by the *Grants.gov* system after 4:30:00 p.m., Washington, DC time, on the application deadline date.

- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through *Grants.gov*.
- You should review and follow the Education Submission Procedures for submitting an application through *Grants.gov* that are included in the application package for this program to ensure that you submit your application in a timely manner to the *Grants.gov* system. You can also find the Education Submission Procedures pertaining to *Grants.gov* under News and Events on the Department's G5 system home page at *www.G5.gov.* In addition, for specific guidance and procedures for submitting an application through *Grants.gov*, please refer to the *Grants.gov* Web site at: *www.grants.gov/web/grants/applicants/apply-for-grants.html.*
- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.
- You must submit all documents electronically, including all information you typically provide on the following forms: the Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.
- You must upload any narrative sections and all other attachments to your application as files in a read-only, non-modifiable Portable Document Format (PDF). Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only, non-modifiable PDF (*e.g.,* Word, Excel, WordPerfect, etc.) or submit a password-protected file, we will not review that material. Please note that this could result in your application not being considered for funding because the material in question—for example, the application narrative—is critical to a meaningful review of your proposal. For that reason it is important to allow yourself adequate time to upload all material as PDF files. The Department will not convert material from other formats to PDF.
- Your electronic application must comply with any page-limit requirements described in this notice.
- After you electronically submit your application, you will receive from *Grants.gov* an automatic notification of receipt that contains a *Grants.gov* tracking number. This notification indicates receipt by *Grants.gov* only, not receipt by the Department. *Grants.gov* will also notify you automatically by email if your application met all the *Grants.gov* validation requirements or if there were any errors (such as submission of your application by someone other than a registered Authorized Organization Representative, or inclusion of an attachment with a file name that contains special characters). You will be given an opportunity to correct any errors and resubmit, but you must still meet the deadline for submission of applications.

Once your application is successfully validated by *Grants.gov*, the Department will retrieve your application from *Grants.gov* and send you an email with a unique PR/Award number for your application.

These emails do not mean that your application is without any disqualifying errors. While your application may have been successfully validated by *Grants.gov*, it must also meet the Department's application requirements as specified in this notice and in the application instructions. Disqualifying errors could include, for instance, failure to upload attachments in a read-only, non-modifiable PDF; failure to submit a required part of the application; or failure to meet applicant eligibility requirements. It is your responsibility to ensure that your submitted application has met all of the Department's requirements.

- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through *Grants.gov*, please contact the *Grants.gov* Support Desk, toll free, at 1–800–518–4726. You must obtain a *Grants.gov* Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the *Grants.gov* system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with *Grants.gov*, along with the *Grants.gov* Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the *Grants.gov* system and that the problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. We will contact you after we determine whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the *Grants.gov* system. We will not grant you an extension if you failed to fully register to submit your application to *Grants.gov* before the application deadline date and time or if the technical problem you experienced is unrelated to the *Grants.gov* system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the *Grants.gov* system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the *Grants.gov* system; and
- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Orman Feres, U.S. Department of Education, 400 Maryland Avenue SW., Room 4W109,

Washington, DC 20202–6200. FAX: (202) 260–8969.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. *Submission of Paper Applications by Mail.*

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.374A), LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

(1) A private metered postmark.

(2) A mail receipt that is not dated by the U.S. Postal Service.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

We will not consider applications postmarked after the application deadline date.

c. *Submission of Paper Applications by Hand Delivery.*

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.374A), 550 12th Street SW., Room 7039, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. Application Review Information

1. *Selection Criteria:* We are establishing the selection criterion ''The extent to which the proposed project demonstrates a rationale'' and criterion (c)(3) for the FY 2017 grant competition only, in accordance with section 437(d)(1) of GEPA, 20 U.S.C. 1232(d)(1). The other selection criteria for this program are from 34 CFR 75.210.

The maximum score for all the selection criteria is 100 points. The maximum score for each criterion is indicated in parentheses. The selection criteria for this competition are as follows:

(a) *Evidence of Support(30 points).*

In determining evidence of support of the proposed project, the Secretary considers the following factors:

(1) The extent to which the proposed project is part of a comprehensive effort to improve teaching and learning and support rigorous academic standards for students.

(2) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners for maximizing the effectiveness of project services.

(3) The extent to which the proposed project will integrate with or build on similar or related efforts to improve relevant outcomes (as defined in 34 CFR 77.1(c)), using existing funding streams from other programs or policies supported by community, State, and Federal resources.

(b) *Need for Project (25 points).*

In determining the need for the proposed project, the Secretary considers the following factors:

(1) The extent to which the proposed project will provide services or otherwise address the needs of students at risk of educational failure.

(2) The extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses.

(c) *Quality of the Project Design (20 points).*

In determining the quality of the project design of the proposed project, the Secretary considers the following factors:

(1) The extent to which the proposed project demonstrates a rationale.

(2) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs.

(3) The extent to which the grant activities will be evaluated, monitored, and reported to the public.

(d) *Quality of the management plan (20 points).*

In determining the quality of the management plan for the proposed project, the Secretary considers the adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

(e) *Adequacy of resources (5 points).*

The Secretary considers the adequacy of resources for the proposed project based on the following factors:

(1) The potential for continued support of the project after Federal funding ends, including, as appropriate, the demonstrated commitment of appropriate entities to such support.

(2) The potential for the incorporation of project purposes, activities, or benefits into the ongoing program of the agency of organization at the end of the Federal funding.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Special Conditions:* Consistent with 2 CFR 200.205, before awarding grants under

this program the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $150,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through SAM. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

(d) By reporting on these performance measures in annual and final performance reports, grantees will satisfy the requirement in Section 8101 (21)(A)(ii)(II) of the ESEA, as amended, for projects relying on the ''demonstrates a rationale'' evidence level, to have ''ongoing efforts to examine the effects'' of the funded activity, strategy, or intervention.

4. *Performance Measures:* Pursuant to the Government Performance and Results Act of 1993, the Department has established the following performance measures that it will use to evaluate the overall effectiveness of the grantee's project, as well as the TIF program as a whole:

(a) The percentage of Educators in all schools who earned Performance-Based Compensation.

(b) The percentage of Educators in all High-Need Schools who earned Performance-Based Compensation.

(c) The gap between the retention rate of Educators receiving Performance-Based Compensation and the average retention rate of Educators in each High-Need School whose Educators participate in the project.

(d) The number of school districts participating in a TSL grant that use Educator Evaluation and Support Systems to inform the following human capital decisions: recruitment; hiring; placement; retention; dismissal; professional development; tenure; promotion; or all of the above.

(e) The number of High-Need Schools within districts participating in a TSL grant that use Educator Evaluation and Support Systems to inform the following human capital decisions: recruitment; hiring; placement; retention; dismissal; professional development; tenure; promotion; or all of the above.

(f) The percentage of Performance-Based Compensation paid to Educators with State, local, or other non-TIF Federal resources.

(g) The percentage of teachers and principals who receive the highest effectiveness rating.

(h) The percentage of teachers and principals in High-Needs Schools who receive the highest effectiveness rating.

5. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT: Orman Feres, U.S. Department of Education, 400 Maryland Avenue SW., Room 4W109, Washington, DC 20202–6200. Telephone: (202) 453–6921 or by email: *TSL@ed.gov.*

If you use a TDD or a TTY, call the FRS, toll free, at 1–800–877–8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: The official version of this document is

the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or PDF. To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Nadya Chinoy Dabby,

Assistant Deputy Secretary for Office of Innovation and Improvement.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No. ED–2016–ICCD–0113]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; NCER–NPNCER–NPSAS Grant Study—Financial Aid Nudges 2017: A National Experiment To Increase Retention of Financial Aid and College Persistence

AGENCY: National Center for Education Statistics (NCES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before January 19, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2016–ICCD–0113. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E–347, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact NCES Information Collections at *NCES.Information.Collections@ed.gov*.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: NCER–NPNCER–NPSAS Grant Study—Financial Aid Nudges 2017: A National Experiment to Increase Retention of Financial Aid and College Persistence.

OMB Control Number: 1850–NEW.

Type of Review: A new information collection.

Respondents/Affected Public: Individuals or Households.

Total Estimated Number of Annual Responses: 102,000.

Total Estimated Number of Annual Burden Hours: 10,540.

Abstract: In 2010, the National Center for Education Research (NCER) and the National Center for Education Statistics (NCES), both within the U.S. Department of Education's Institute of Education Sciences (IES), began collaborating on an education grant opportunity related to the cross-sectional National Postsecondary Student Aid Study (NPSAS). NPSAS is a large, nationally-representative sample of postsecondary institutions and students that contains student-level records on student demographics and family background, work experience, expectations, receipt of financial aid, and postsecondary enrollment (see *http://nces.ed.gov/surveys/npsas/about.asp*; (OMB #1850–0666)). Since 1987, NPSAS has been fielded every 3 to 4 years, most recently during the 2015–16 academic year. The goal of the NCER–NPSAS grant opportunity collaboration is to provide researchers with the possibility of developing unique research projects pertaining to college persistence and completion that utilize a subset of the NPSAS sample that is not already set aside for one of the NPSAS-based longitudinal studies (BPS or B&B). Under the NCER–NPSAS grant opportunity, researchers can submit applications to the Postsecondary and Adult Education topic within the Education Research Grants program (CFDA 84.305A), under either the Exploration or Efficacy and Replication research goal. Consistent with these two goals, NCER supports research projects using NPSAS to: (1) Explore relationships between malleable factors (*e.g.,* information on benefits of financial aid and FAFSA renewal) and postsecondary persistence and completion, as well as the mediators and moderators of those relationships; and (2) evaluate the efficacy of interventions aimed at improving persistence and completion of postsecondary education (e. g., financial aid and FAFSA renewal advice delivered via text messaging). Researchers approved for funding through this program can obtain indirect access to a subsample of the national NPSAS sample (after the study's student interviews are completed) in order to conduct unique research projects that adhere to the guidelines set forth in the Request for Applications (RFA) for the Education Research Grants Program, as well as guidelines set forth by NCES and the NPSAS program. This request is to conduct, in 2017, the ''Financial Aid Nudges 2017: A National Experiment to Increase Retention of Financial Aid and College Persistence'' study, funded by the NCER–NPSAS grant and designed to measure the effectiveness of an intervention that will provide financial aid information, reminders, and advising to college students who were initially interviewed as part of NPSAS:16.

Dated: December 14, 2016.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP17–2–000]

National Fuel Gas Supply Corporation; Notice of Intent To Prepare an Environmental Assessment for the Proposed Heath Compressor Station Abandonment and Line FM–92 Refunctionalization Project and Request for Comments on Environmental Issues

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Heath Compressor Station Abandonment and Line FM–92 Refunctionalization Project involving construction and operation of facilities by National Fuel Gas Supply Corporation (National Fuel) in Jefferson County, Pennsylvania. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies on the project. You can make a difference by providing us with your specific comments or concerns about the project. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the EA. To ensure that your comments are timely and properly recorded, please send your comments so that the Commission receives them in Washington, DC on or before January 13, 2017.

If you sent comments on this project to the Commission before the opening of this docket on October 14, 2016, you will need to file those comments in Docket No. CP17–2–000 to ensure they are considered as part of this proceeding.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

Public Participation

For your convenience, there are three methods you can use to submit your comments to the Commission. The Commission encourages electronic filing of comments and has expert staff available to assist you at (202) 502–8258 or *efiling@ferc.gov*. Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the *eComment* feature on the Commission's Web site (*www.ferc.gov*) under the link to *Documents and Filings.* This is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature on the Commission's Web site (*www.ferc.gov*) under the link to *Documents and Filings.* With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''*eRegister.*'' If you are filing a comment on a particular project, please select ''Comment on a Filing'' as the filing type; or

(3) You can file a paper copy of your comments by mailing them to the following address. Be sure to reference the project docket number (CP17–2–000) with your submission: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Summary of the Proposed Project

National Fuel proposes to abandon the Heath Compressor Station and to refunctionalize its existing 3.0 mile, 12-inch diameter Line FM–92 pipeline from a jurisdictional natural gas transmission pipeline to a non-jurisdictional natural gas gathering pipeline in Jefferson County, Pennsylvania. Existing above ground structures and piping, not required for gathering, would be removed. Underground pipelines associated with the compressor station would be abandoned in place.

The purpose of the Project is to abandon the compressor station due to production decline rendering the facility idle.

National Fuel would also install non-jurisdictional facilities, including 610 feet of new non-jurisdictional 12-inch diameter plastic pipeline to maintain gas flow along Line FM–92 and gathering compression facilities about 3.0 miles northwest of the Heath Compressor Station.

The general location of the project facilities is shown in appendix 1.[1]

Land Requirements for Construction

The Project would disturb about 2.9 acres of land owned by National Fuel for the aboveground facilities removal and FM–92 refunctionalization. No new access roads or temporary work space will be utilized outside the existing right of way. National Fuel will remain in ownership of the land following project activities.

The EA Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us [2] to discover and address concerns the public may have about proposals. This process is referred to as ''scoping.'' The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this notice, the Commission requests public comments on the scope of the issues to address in the EA. We will consider all filed comments during the preparation of the EA.

In the EA we will discuss impacts that could occur as a result of the construction and operation of the proposed project under these general headings:

- Geology and soils;
- Land use;
- Water resources, fisheries, and wetlands;
- Cultural resources;
- Vegetation and wildlife;
- Air quality and noise;
- Endangered and threatened species;
- Public safety; and
- Cumulative impacts

We will also evaluate reasonable alternatives to the proposed project or portions of the project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

The EA will present our independent analysis of the issues. The EA will be available in the public record through eLibrary. Depending on the comments received during the scoping process, we may also publish and distribute the EA to the public for an allotted comment period. We will consider all comments on the EA before making our recommendations to the Commission.

[1] The appendices referenced in this notice will not appear in the **Federal Register**. Copies of appendices were sent to all those receiving this notice in the mail and are available at *www.ferc.gov* using the link called ''eLibrary'' or from the Commission's Public Reference Room, 888 First Street NE., Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

[2] ''We,'' ''us,'' and ''our'' refer to the environmental staff of the Commission's Office of Energy Projects.

To ensure we have the opportunity to consider and address your comments, please carefully follow the instructions in the Public Participation section, beginning on page 2.

With this notice, we are asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues of this project to formally cooperate with us in the preparation of the EA.[3] Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the Public Participation section of this notice.

Consultations Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, we are using this notice to initiate consultation with the applicable State Historic Preservation Office (SHPO), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.[4] We will define the project-specific Area of Potential Effects (APE) in consultation with the SHPO as the project develops. On natural gas facility projects, the APE at a minimum encompasses all areas subject to ground disturbance (examples include construction right-of-way, contractor/pipe storage yards, compressor stations, and access roads). Our EA for this project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list includes federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project. We will update the environmental mailing list as the analysis proceeds to ensure that we send the information related to this environmental review to all individuals, organizations, and government entities interested in and/or potentially affected by the proposed project.

If we publish and distribute the EA, copies of the EA will be sent to the environmental mailing list for public review and comment. If you would prefer to receive a paper copy of the document instead of the CD version or would like to remove your name from the mailing list, please return the attached Information Request (appendix 2).

Becoming an Intervenor

In addition to involvement in the EA scoping process, you may want to become an ''intervenor'' which is an official party to the Commission's proceeding. Intervenors play a more formal role in the process and are able to file briefs, appear at hearings, and be heard by the courts if they choose to appeal the Commission's final ruling. An intervenor formally participates in the proceeding by filing a request to intervene. Instructions for becoming an intervenor are in the ''Document-less Intervention Guide'' under the ''e-filing'' link on the Commission's Web site. Motions to intervene are more fully described at *http://www.ferc.gov/resources/guides/how-to/intervene.asp.*

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC Web site at *www.ferc.gov* using the ''eLibrary'' link. Click on the eLibrary link, click on ''General Search'' and enter the docket number, excluding the last three digits in the Docket Number field (*i.e.,* CP17–2). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *www.ferc.gov/docs-filing/esubscription.asp.*

Finally, public meetings or site visits will be posted on the Commission's calendar located at *www.ferc.gov/EventCalendar/EventsList.aspx* along with other related information.

Dated: December 13, 2016.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Applications

	Docket Nos.
Port Arthur LNG, LLC and PALNG Common Facilities Company, LLC.	CP17–20–000 PF15–18–000
Port Arthur Pipeline, LLC ..	CP17–21–000 PF15–19–000

Take notice that on November 29, 2016, Port Arthur LNG, LLC (Port Arthur LNG) and PALNG Common Facilities Company, LLC, 2925 Briarpark, Suite 900, Houston, Texas 77042, filed an application, in Docket No. CP17–20–000, pursuant to section 3(a) of the Natural Gas Act (NGA) and Parts 153 and 380 of the Commission's Regulations, requesting authorization to site, construct, modify, and operate a natural gas liquefaction facility and liquefied natural gas export marine and truck loading terminal facilities (Liquefaction Project), located in Jefferson County, Texas.

Also, take notice that on November 29, 2016, Port Arthur Pipeline, LLC (Port Arthur Pipeline), 2925 Briarpark, Suite 900, Houston, Texas 77042, filed an application pursuant to section 7(c) of the NGA, and Parts 157 and 284 of the Commission's regulations, an application in Docket No. CP17–21–000 for (1) a certificate of public convenience and necessity (i) authorizing Port Arthur Pipeline to construct, own, and operate a new natural gas pipeline system, (ii) approving a *pro forma* Tariff, and (iii) approving the proposed initial rates for service; (2) a Part 157, Subpart F blanket certificate authorizing Port Arthur Pipeline to engage in certain self-implementing routine activities; and (3) a Part 284, Subpart G blanket certificate authorizing Port Arthur Pipeline to transport natural gas, on an open-access and self-implementing basis with pre-granted abandonment authority.

Specifically, Port Arthur LNG's proposed Liquefaction Project consists of two liquefaction trains with a total capacity of 13.5 MTPA (1,865 MMcf/d), three LNG tanks capable of storing 160,000 m^3 each, for a total working capacity of 480,000 m^3, marine and truck loading facilities, and all necessary ancillary and support facilities. Port Arthur LNG states that the purpose of the Liquefaction Project is liquefying supplies of domestic natural gas for export to foreign markets.

Port Arthur Pipeline proposes to construct 34.2 miles of new 42-inch-diameter pipeline, approximately 4.65 miles of variable diameter lateral pipelines, two compressor stations totaling 65,052 horsepower, and associated facilities to deliver up to 2,000 MMcf/d of natural gas to the Liquefaction Project. Port Arthur Pipeline's proposed facilities will be located in Orange and Jefferson Counties, Texas and Cameron Parish, Louisiana. Port Arthur Pipeline estimates the proposed pipeline facilities cost to be approximately $899,739,889, all as more fully set forth in the applications which are on file with the Commission and open to public inspection. These filings are available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in

the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

On March 31, 2015, the Commission staff granted Port Arthur LNG's and Port Arthur Pipeline's requests to use the National Environmental Policy Act (NEPA) Pre-Filing Process and assigned Docket Nos. PF15–18–000 and PF15–19–000, respectively, to staff activities involved in the above referenced projects. Now, as of the filing of these applications on November 29, 2016, the NEPA Pre-Filing Process for this project has ended. From this time forward, these proceedings will be conducted in Docket Nos. CP17–20–000 and CP17–21–000, as noted in the caption of this Notice.

Any questions regarding these two applications should be directed to Dan King, Director & Regulatory Counsel, Port Arthur LNG/Pipeline, 488 8th Avenue, HQ12S1, San Diego, CA 92101, by phone at (619) 696–4350, or by email to *daking@semprausgp.com.*

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice, the Commission staff will issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) for this proposal. The issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below, file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit five copies of filings made with the Commission and must mail a copy to the applicant and to every other party in the proceeding. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and five copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

Comment Date: January 3, 2017.

Dated: December 13, 2016 .

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM98–1–000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication, and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. The communications listed are grouped by docket numbers in ascending order. These filings are available for electronic review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the eLibrary link.

Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER17–532–000]

PPA Grand Johanna LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding PPA Grand Johanna LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to

intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is January 3, 2017.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comments Due: 5 p.m. ET 1/3/17.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: December 13, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC17–47–000.

Applicants: Wisconsin Power and Light Company, Wisconsin Public Service Corporation, Madison Gas and Electric Company.

Description: Joint Application under Section 203 of the Federal Power Act of Wisconsin Power and Light Company, et al.

Filed Date: 12/13/16.

Accession Number: 20161213–5296.

Comments Due: 5 p.m. ET 1/3/17.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER17–38–001.

Applicants: Puget Sound Energy, Inc.

Description: Compliance filing: Amendment to Order Nos. 827 and 828 Compliance Filing to be effective 10/14/2016.

Filed Date: 12/13/16.

Accession Number: 20161213–5243.

Comments Due: 5 p.m. ET 1/3/17.

Docket Numbers: ER17–219–000.

Applicants: PacifiCorp.

Description: Answer to Protests and Comments of PacifiCorp under ER17–219.

Filed Date: 12/14/16.

Accession Number: 20161214–5024.

Comments Due: 5 p.m. ET 1/4/17.

Docket Numbers: ER17–351–000; ER17–354–000.

Applicants: American Falls Solar, LLC, American Falls Solar II, LLC.

Description: Supplement to November 11, 2016 American Falls Solar, LLC and American Falls Solar, LLC tariff filings.

Filed Date: 12/12/16.

Accession Number: 20161212–5277.

Comments Due: 5 p.m. ET 1/3/17.

Docket Numbers: ER17–536–000.

Applicants: Southern California Edison Company.

Description: § 205(d) Rate Filing: GIA and Amended DSA Center Install EGT WDT1429 to be effective 12/14/2016.

Filed Date: 12/13/16.

Accession Number: 20161213–5251.

Comments Due: 5 p.m. ET 1/3/17.

Docket Numbers: ER17–537–000.

Applicants: Southern California Edison Company.

Description: § 205(d) Rate Filing: First Amendment to GIA and DSA and Cancellation of Letter Agreement to be effective 12/14/2016.

Filed Date: 12/13/16.
Accession Number: 20161213–5252.
Comments Due: 5 p.m. ET 1/3/17.
Docket Numbers: ER17–539–000.
Applicants: Wildwood Solar I, LLC.
Description: Baseline eTariff Filing: MBR Application and Tariff to be effective 12/15/2016.
Filed Date: 12/14/16.
Accession Number: 20161214–5070.
Comments Due: 5 p.m. ET 1/4/17.
Docket Numbers: ER17–540–000.
Applicants: Wildwood Solar II, LLC.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER17–527–000]

InterGen Energy Solutions, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of InterGen Energy Solutions, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is January 3, 2017.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: December 13, 2016.

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

Sunshine Act Notice

[BAC 6735–01]

TIME AND DATE: December 16, 2016, 10:00 a.m., Thursday, January 19, 2017.

PLACE: The Richard V. Backley Hearing Room, Room 511N, 1331 Pennsylvania Avenue NW., Washington, DC 20004 (enter from F Street entrance).

STATUS: Open.

MATTERS TO BE CONSIDERED: The Commission will consider and act upon the following in open session: *Secretary of Labor* v. *Consolidation Coal Company,* Docket Nos. VA 2012–42 et al. (Issues include whether the Judge erred by ruling that a deep cut in violation of the operator's roof control plan was not ''significant and substantial.'')

Any person attending this meeting who requires special accessibility features and/or auxiliary aids, such as sign language interpreters, must inform the Commission in advance of those needs. Subject to 29 CFR 2706.150(a)(3) and 2706.160(d).

CONTACT PERSON FOR MORE INFO: Emogene Johnson (202) 434–9935, (202) 708–9300 for TDD Relay, 1–800–877–8339 for toll free.

PHONE NUMBER FOR LISTENING TO MEETING: 1 (866) 867–4769; Passcode: 129–339.

Sarah L. Stewart,

Deputy General Counsel.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than January 3, 2017.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198–0001:

1. *Steven L. Bihlmaier, Osborne, Kansas, and Douglas D. Bihlmaier, Dairen, Connecticut;* to acquire shares of Osborne Investments, Inc., of The Farmers Bank of Osborne, both of Osborne, Kansas and thereby acquire shares and for approval as a member of the Bihlmaier Family Group. In addition, Cheryl A. Bihlmaier, Osborne, Kansas, as a member of the Bihlmaier Family Group, to retain shares of Osborne Investments, Inc.

Board of Governors of the Federal Reserve System, December 14, 2016.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than January 19, 2017.

A. Federal Reserve Bank of New York (Ivan Hurwitz, Vice President) 33 Liberty Street, New York, New York 10045–0001. Comments can also be sent electronically to *Comments.applications@ny.frb.org:*

1. *PCSB Financial Corporation,* Yorktown Heights, New York; to become a bank holding company by acquiring 100 percent of the voting shares of PCSB Bank, Brewster, New York.

2. *Community Bank System, Inc.,* Dewitt, New York; to acquire 100 percent of Merchants Bancshares, Inc. and thereby indirectly acquire Merchants Bank, both of South Burlington, Vermont.

Board of Governors of the Federal Reserve System, December 15, 2016.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the proposed information collection project ''*Generic*

Clearance for the Collection of Data Through ACTION III Field-Based Investigations to Improve Health Care Delivery.'' In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501–3521, AHRQ invites the public to comment on this proposed information collection.

DATES: Comments on this notice must be received by February 21, 2017.

ADDRESSES: Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at *doris.lefkowitz@AHRQ.hhs.gov.*

Copies of the proposed collection plans, data collection instruments, and specific details on the estimated burden can be obtained from the AHRQ Reports Clearance Officer.

FOR FURTHER INFORMATION CONTACT: Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427–1477, or by emails at *doris.lefkowitz@AHRQ.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Proposed Project

Generic Clearance for the Collection of Data Through ACTION III Field-Based Investigations To Improve Health Care Delivery

The Agency for Healthcare Research and Quality (AHRQ) is requesting OMB approval of a generic clearance for purposes of conducting field-based research to improve care delivery in diverse health care settings. More specifically, AHRQ seeks this clearance to support timely and meaningful answers to research questions investigated through AHRQ's ACTION Program. ACTION III research produces field-based, stakeholder-informed knowledge about ways to improve care delivery, and real-world-driven implementation and dissemination of evidence across diverse care settings. A generic clearance to support expedited performance of ACTION III research activities would enable us to more efficiently meet agency goals while fully meeting the intent and requirements of the Paperwork Reduction Act in a timely manner.

Collection of the information described in this request is essential to supporting AHRQ's mission, which is to produce evidence to make health care safer, higher quality, more accessible, equitable, and affordable, and to work with HHS and other partners to make sure that the evidence is understood and used. More specifically, in support of this mission, AHRQ initiates and oversees projects with the following overarching aims:

- Expand knowledge about how specific changes to processes or structures of care delivery might improve care quality;
- Develop and test interventions, strategies, tools, trainings and guidance for putting that knowledge into practice;
- Disseminate and implement evidence-based practices across diverse care settings

This study is being conducted by AHRQ through its contractor, WESTAT, pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency, appropriateness and value of health care services and with respect to quality measurement and improvement. 42 U.S.C 299a(a)(1) and (2).

Method of Collection

Information collections conducted under this clearance will be collected via the following methods:

- Interviews—Interviews (telephone or in-person) will be conducted with clinical or management staff from diverse health care settings, patients, or other providers or recipients of care with the purposes of: Expanding knowledge about how specific changes to processes or structures of care delivery might improve care quality; obtaining stakeholder-informed input about how and why an intervention or strategy will or won't work in a particular real world setting; identifying contextual factors that facilitate or impede implementation of complex system interventions or evidence-based practices; identifying needs and challenges of intended users of tools and/or beneficiaries of trainings and other resources.
- Small discussion groups/Focus groups—Small discussion groups/Focus groups will be conducted with providers or recipients of care from diverse health care settings with the purposes of: Obtaining stakeholder-informed input about how and why an intervention or strategy is or is not working in a particular real world setting and identifying needs and gaining user/beneficiary feedback on value and limitations of prototype redesigned care processes, tools, resources or trainings.
- Implementation Logs will be used to track activities, time and resource use associated with use of tools, trainings or other resources, and to monitor progress and identify needed revisions to implementation methods.
- Recruitment and Screening calls will be used to identify and enroll individuals, groups, or organizations that will be willing to participate in the broader research study
- Questionnaires or brief surveys will be used to capture broad, high level staff or patient level feedback on experience with tools, redesigned care processes, trainings or other resources.
- Cognitive testing of surveys, Web sites, or other resources will be used to support the development of materials that resonate and can be understood by intended users.
- Collection of published and internal documents, performance assessments, and other data or information will provide important contextual information about the specific settings of care into which new tools, resources, training, or redesigned care processes will be introduced.

AHRQ will use the proposed generic clearance to obtain field-based, stakeholder-informed input and feedback about how and why interventions or strategies designed to improve care quality (*i.e.,* safety, effectiveness, patient-centeredness, timeliness, efficiency, and equity) do or do not work in the real world. Information collected under this clearance would be expected to increase understanding of how contextual factors and other key variables might affect the implementation and effectiveness of specific strategies, interventions or tools when utilized in particular settings. This knowledge would help health care providers and other decision-makers consider whether, when and how to use and adapt such strategies, interventions or tools to conform to their own needs and to the distinctive characteristics of the intended settings. Additionally, information collected under this clearance would be expected to increase AHRQ's understanding of contextual variables and other factors that facilitate or impede dissemination and implementation of clinical guidelines, evidence-based practices, and other research-based findings from the Patient-Centered Outcomes Research Institute (PCORI), National Institutes of Health (NIH), and other partners.

Estimated Annual Respondent Burden

As described above a variety of instruments and platforms will be used to collect information from respondents, though few, if any, single projects would be expected to use all the methods listed.

The average number annual burden hours per year requested (2189.5) are presented in Table 1 below, and is based on an assumed average of 5 projects per year (we rounded up the past average of 4.5 projects per year to 5). The

maximum total burden across all three years is thus 6568.5 hours.

TABLE 1—ESTIMATED ANNUALIZED BURDEN HOURS

Data collection type	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours
Interviews	375	2	1	750
Focus Groups/Small Discussions	420	1.5	1.5	945
Implementation Logs	20	8	1	160
Recruitment and Screening	139	1	0.5	69.5
Cognitive Testing	40	1	1	40
Questionnaires/Brief Surveys	1,000	1	0.2	200
Collection of Internal Documents	25	1	1	25
Total				2,189.5

TABLE 2—ESTIMATED ANNUALIZED COST BURDEN

Form name	Number of respondents	Total burden hours	Average hourly wage rate *	Total cost burden
Interviews	250	500	[a] $95.05	$47,525.00
(Clinicians—line 1; Patients—line 2)	125	250	[b] 27.12	6780.00
Focus Groups/Small Discussions	420	945	[c] 27.12	25,628.40
Implementation Logs	20	160	[c] 27.12	4,339.20
Recruitment and Screening	139	69.5	[a] 95.05	6,605.98
Cognitive Testing	40	40	[c] 27.12	1,084.80
Questionnaires/Brief Surveys	1000	200	[c] 27.12	5,424.00
Collection of Internal Documents	25	25	[a] 95.05	2,376.25
Total				99,763.63

* National Compensation Survey: Occupational wages in the United States May 2015 "U.S. Department of Labor, Bureau of Labor Statistics:" *http://www.bls.gov/oes/current/oes_stru.htm.*

[a] Based on the mean wages for *29–1069 Physicians and Surgeons, All Other.*

[b] Based on the mean wages for *00–0000 All Occupations.*

[c] Based on the mean wages for *29–9099 Miscellaneous Health Practitioners and Technical Workers: Healthcare Practitioners and Technical Workers, All Other.*

Using average wage rates for relevant job categories from 2016 BLS data, the total annual costs associated with these data collections per year are $116,746.13 as shown in Table 2 above, for a total cost for all three years of $350,238.39.

Request for Comments

In accordance with the Paperwork Reduction Act, comments on AHRQ's information collection are requested with regard to any of the following: (a) Whether the proposed collection of information is necessary for the proper performance of AHRQ health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Sharon B. Arnold,

Deputy Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Common Formats for Reporting on Health Care Quality and Patient Safety

AGENCY: Agency for Healthcare Research and Quality (AHRQ), Department of Health and Human Services (HHS).

ACTION: Notice of Availability—New Common Formats.

SUMMARY: As authorized by the Secretary of HHS, AHRQ coordinates the development of sets of common definitions and reporting formats (Common Formats) for reporting on health care quality and patient safety. The purpose of this notice is to announce the release of the Common Formats—Community Pharmacy Version 1.0.

DATES: Ongoing public input.

ADDRESSES: The Common Formats—Community Pharmacy Version 1.0 and the remaining Common Formats can be accessed electronically at the following HHS Web site: *http://www.pso.ahrq.gov/common/.*

FOR FURTHER INFORMATION CONTACT: Dr. Barbara Choo, Center for Quality Improvement and Patient Safety, AHRQ, 5600 Fishers Lane, Room 06N100B, Rockville, MD 20857; Telephone (toll free): (866) 403–3697; Telephone (local): (301) 427–1111; TTY (toll free): (866) 438–7231; TTY (local): (301) 427–1130; Email: *pso@ahrq.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Patient Safety and Quality Improvement Act of 2005, 42 U.S.C. 299b–21 to b–26, (Patient Safety Act) and the related Patient Safety and Quality Improvement Final Rule, 42 CFR part 3 (Patient Safety Rule), published in the **Federal Register** on November 21, 2008, 73 FR 70732–70814, provide for the formation of Patient Safety Organizations (PSOs), which collect, aggregate, and analyze confidential information regarding the quality and safety of health care delivery. The collection of patient safety work product allows the aggregation of data that help to identify and address underlying causal factors of patient safety and quality issues.

The Patient Safety Act and Patient Safety Rule establish a framework by which doctors, hospitals, skilled nursing facilities, and other health care providers may assemble information regarding patient safety events and quality of care. Information that is assembled and developed by providers for reporting to PSOs and the information received and analyzed by PSOs—called ''patient safety work product''—is privileged and confidential. Patient safety work product is used to conduct patient safety activities, which may include identifying events, patterns of care, and unsafe conditions that increase risks and hazards to patients. Definitions and other details about PSOs and patient safety work product are included in the Patient Safety Act and Patient Safety Rule which can be accessed electronically at: *http://www.pso.ahrq.gov/legislation/.*

Definition of Common Formats

The term ''Common Formats'' refers to the common definitions and reporting formats, specified by AHRQ, that allow health care providers to collect and submit standardized information regarding patient quality and safety to PSOs and other entities. The Common Formats are not intended to replace any current mandatory reporting system, collaborative/voluntary reporting system, research-related reporting system, or other reporting/recording system; rather the formats are intended to enhance the ability of health care providers to report information that is standardized both clinically and electronically.

In collaboration with the interagency Federal Patient Safety Workgroup (PSWG), the National Quality Forum (NQF), and the public, AHRQ has developed Common Formats for three settings of care—acute care hospitals, skilled nursing facilities, and community pharmacies—in order to facilitate standardized data collection and analysis. The scope of Common Formats applies to all patient safety concerns including: Incidents—patient safety events that reached the patient, whether or not there was harm; near misses or close calls—patient safety events that did not reach the patient; and unsafe conditions—circumstances that increase the probability of a patient safety event.

AHRQ's Common Formats for patient safety event reporting include:

- Event descriptions (definitions of patient safety events, near misses, and unsafe conditions to be reported);
- Specifications for patient safety aggregate reports that derive from event descriptions;
- Delineation of data elements and algorithms to be used for collection of adverse event data to populate the reports; and
- Technical specifications for electronic data collection and reporting.

The technical specifications promote standardization of collected patient safety event information by specifying rules for data collection and submission, as well as by providing guidance for how and when to create data elements, their valid values, conditional and go-to logic, and reports. These specifications will ensure that data collected by PSOs and other entities have comparable clinical meaning. They also provide direction to software developers, so that the Common Formats can be implemented electronically, and to PSOs, so that the Common Formats can be submitted electronically to the PSO Privacy Protection Center (PPC) for data de-identification and transmission to the Network of Patient Safety Databases.

Common Formats Development

In anticipation of the need for Common Formats, AHRQ began their development by creating an inventory of functioning private and public sector patient safety reporting systems. This inventory provided an evidence base to inform construction of the Common Formats. The inventory included many systems from the private sector, including prominent academic settings, hospital systems, and international reporting systems (*e.g.,* from the United Kingdom and the Commonwealth of Australia). In addition, virtually all major Federal patient safety reporting systems were included, such as those from the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), the Department of Defense (DoD), and the Department of Veterans Affairs (VA).

Since February 2005, AHRQ has convened the PSWG to assist AHRQ with developing and maintaining the Common Formats. The PSWG includes major health agencies within HHS—CDC, Centers for Medicare & Medicaid Services, FDA, Health Resources and Services Administration, Indian Health Service, National Institutes of Health, National Library of Medicine, Office of the National Coordinator for Health Information Technology, Office of Public Health and Science, and Substance Abuse and Mental Health Services Administration—as well as the DoD and VA.

Since the initial release of the Common Formats in August 2008, AHRQ has regularly revised the formats based upon public comment. First, AHRQ reviews existing patient safety practices and event reporting systems. Then, AHRQ works in collaboration with the PSWG and Federal subject matter experts to develop and draft the Common Formats. In addition, the PSWG assists AHRQ with assuring the consistency of definitions/formats with those of relevant government agencies as refinement of the Common Formats continues. Next, AHRQ solicits feedback from private sector organizations and individuals. Finally, based upon the feedback received, AHRQ further revises the Common Formats.

Participation by the private sector in the development and subsequent revision of the Common Formats is achieved through working with the NQF. The Agency engages the NQF, a non-profit organization focused on health care quality, to solicit comments and advice regarding proposed versions of the Common Formats. AHRQ began this process with the NQF in 2008, receiving feedback on AHRQ's 0.1 Beta release of the Common Formats for Event Reporting—Hospital. After receiving public comment, the NQF solicits the review and advice of its Common Formats Expert Panel and subsequently provides feedback to AHRQ. The Agency then revises and refines the Common Formats and issues them as a production version. AHRQ has continued to employ this process for all subsequent versions of the Common Formats.

In 2014, representatives from U.S. community pharmacies approached AHRQ regarding collaboration to develop Common Formats for the community pharmacy setting. Development of the new Formats began using the existing AHRQ Common Formats Medication module from the AHRQ Common Formats for Event

Reporting—Hospital, Version 1.2, as a starting point. AHRQ, in conjunction with community pharmacy representatives, designed these new formats to facilitate improved detection and understanding of medication-related events originating in pharmacies. If implemented as specified, the Common Formats—Community Pharmacy Version 1.0 will allow aggregation of medication-related data across different pharmacy providers.

On October 6, 2015, AHRQ announced the availability of the—Common Formats Retail Pharmacy Version 0.1 Beta—for review and comment in the **Federal Register** (80 FR 60385–60387). After obtaining feedback from both the private and public sectors, the Agency finalized the format and renamed it Common Formats—Community Pharmacy Version 1.0. All elements—including the event description, aggregate reports, data elements and algorithms, and technical specifications—will be posted at the PSOPPC Web site: *https://www.psoppc.org/psoppc_web.*

More information on the Common Formats can be obtained through AHRQ's PSO Web site: *http://www.pso.ahrq.gov/.*

Mine Safety and Health Research Advisory Committee: Notice of Charter Renewal

This gives notice under the Federal Advisory Committee Act (Pub. L. 92–463) of October 6, 1972, that the Mine Safety and Health Research Advisory Committee, Centers for Disease Control and Prevention, Department of Health and Human Services, has been renewed for a 2-year period through November 30, 2018.

For information, contact Jeffrey H. Welsh, B.A., Designated Federal Officer, Mine Safety and Health Research Advisory Committee, Centers for Disease Control and Prevention, Department of Health and Human Services, 626 Cochrans Mill Road, Mailstop P05, Pittsburgh, Pennsylvania 15236, Telephone (412) 386–4040 or fax (412) 386–6614.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both CDC and the Agency for Toxic Substances and Disease Registry.

Catherine Ramadei,

Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Board on Radiation and Worker Health (ABRWH or the Advisory Board), Subcommittee on Procedures Review (SPR), National Institute for Occupational Safety and Health (NIOSH)

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Centers for Disease Control and Prevention (CDC), announces the following meeting for the aforementioned subcommittee:

Time and Date: 11:00 a.m.–4:30 p.m., EST, January 10, 2017

Place: Audio Conference Call via FTS Conferencing.

Status: Open to the public, but without a public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. Written comments received in advance of the meeting will be included in the official record of the meeting. The public is also welcome to listen to the meeting by joining the teleconference at the USA toll-free, dial-in number at 1–866–659–0537 and the pass code is 9933701.

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the new compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines that have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC).

In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to CDC. NIOSH implements this responsibility for CDC. The charter was issued on August 3, 2001, renewed at appropriate intervals, rechartered on March 22, 2016, pursuant to Executive Order 13708, and will expire on September 30, 2017.

Purpose: The Advisory Board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and (c) upon request by the Secretary, HHS, advise the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class. SPR was established to aid the Advisory Board in carrying out its duty to advise the Secretary, HHS, on dose reconstruction. SPR is responsible for overseeing, tracking, and participating in the reviews of all procedures used in the dose reconstruction process by the NIOSH Division of Compensation Analysis and Support (DCAS) and its dose reconstruction contractor (Oak Ridge Associated Universities—ORAU).

Matters for Discussion: The agenda for the Subcommittee meeting includes: discussion of procedures in the following ORAU and DCAS technical documents:

OCAS Technical Information Bulletin (TIB) 0013 and ORAUT Procedure 0042 (''Individual Dose Adjustment Procedure for Y–12 Dose Reconstruction'' and ''Accounting for Incomplete Personal Monitoring Data on Penetrating Gamma-Ray Doses to Workers in Radiation Areas at the Oak Ridge Y–12 Plant Prior to 1961''); Program Evaluation Report OCAS–PER–011, (''K–25 TBD and TIB Revisions''), PER–055 (''TBD 6000 Revisions''), PER–057 (''General Steel Industries''), PER 60 (''Blockson Chemical Company''), PER–064 (''DuPont Deep Water Works''), and PER–066 (''Huntington Pilot Plant''), and a continuation of the comment-resolution process for other dose

reconstruction procedures under review by the Subcommittee.

The agenda is subject to change as priorities dictate.

Contact Person for More Information: Theodore Katz, Designated Federal Officer, NIOSH, CDC, 1600 Clifton Road, Mailstop E–20, Atlanta, Georgia 30333, Telephone (513)533–6800, Toll Free 1(800) CDC–INFO, Email *ocas@cdc.gov.*

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Catherine Ramadei,

Acting Director, Management Analysis and Services Office Centers for Disease Control and Prevention.

Advisory Board on Radiation and Worker Health (ABRWH or the Advisory Board), Subcommittee for Dose Reconstruction Reviews (SDRR), National Institute for Occupational Safety and Health (NIOSH)

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Centers for Disease Control and Prevention (CDC), announces the following meeting for the aforementioned subcommittee:

Time and Date: 10:30 a.m.–5:00 p.m., EST, January 30, 2017.

Place: Audio Conference Call via FTS Conferencing.

Status: Open to the public, but without a public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. Written comments received in advance of the meeting will be included in the official record of the meeting. The public is also welcome to listen to the meeting by joining the teleconference at the USA toll-free, dial-in number at 1–866–659–0537 and the pass code is 9933701.

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the new compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines that have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC).

In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to CDC. NIOSH implements this responsibility for CDC. The charter was issued on August 3, 2001, renewed at appropriate intervals, rechartered on March 22, 2016 pursuant to Executive Order 13708, and will expire on September 30, 2017.

Purpose: The Advisory Board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and (c) upon request by the Secretary, HHS, advise the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class. The Subcommittee for Dose Reconstruction Reviews was established to aid the Advisory Board in carrying out its duty to advise the Secretary, HHS, on dose reconstruction.

Matters for Discussion: The agenda for the Subcommittee meeting includes the following dose reconstruction program quality management and assurance activities: dose reconstruction cases under review from Sets 14–23, including the Oak Ridge sites (Y–12, K–25, Oak Ridge National Laboratory), Hanford, Feed Materials Production Center (''Fernald''), Mound Plant, Rocky Flats Plant, Nevada Test Site, Idaho National Laboratory, Savannah River Site, and other facilities.

The agenda is subject to change as priorities dictate.

Contact Person for More Information: Theodore Katz, Designated Federal Officer, NIOSH, CDC, 1600 Clifton Road, Mailstop E–20, Atlanta, Georgia 30329, Telephone (513)533–6800, Toll Free 1(800)CDC–INFO, Email *ocas@cdc.gov.*

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention and the Agency for Toxic Substances and Disease Registry.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Board of Scientific Counselors, Office of Infectious Diseases (BSC, OID)

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Centers for Disease Control and Prevention (CDC), announces the following meeting of the aforementioned committee:

Time and Date: 11:00 a.m.–1:00 p.m., EST, January 23, 2017.

Place: Teleconference.

Status: The meeting is open to the public; the toll free dial in number is 1–877–951–7311 with a pass code of 4530516.

Purpose: The BSC, OID, provides advice and guidance to the Secretary, Department of Health and Human Services; the Director, CDC; the Director, OID; and the Directors of the National Center for Immunization and Respiratory Diseases, the National Center for Emerging and Zoonotic Infectious Diseases, and the National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, CDC, in the following areas: Strategies, goals, and priorities for programs; research within the national centers; and overall strategic direction and focus of OID and the national centers.

Matters for Discussion: Topics to be discussed during the teleconference include (1) discussion and vote on the Food Safety Modernization Act Surveillance Working Group Annual Report to the Secretary of Health and Human Services and (2) a report back from a recent external review of CDC's advanced molecular detection activities.

The agenda and any supplemental material will be available at *www.cdc.gov/oid/BSC/meetingschedule.html* after January 16.

Agenda items are subject to change as priorities dictate.

Contact Person for More Information: Robin Moseley, M.A.T., Designated Federal Officer, OID, CDC, 1600 Clifton Road NE., Mailstop D10, Atlanta, Georgia 30333, Telephone: (404) 639–4461.

The Director, Management Analysis and Services Office has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket Number NIOSH 278]

Request for Nominations of Candidates To Serve on the Board of Scientific Counselors (BSC), National Institute for Occupational Safety and Health (NIOSH)

The Centers for Disease Control and Prevention (CDC) is soliciting nominations for possible membership on the BSC, NIOSH.

The BSC, NIOSH consists of 15 experts in fields related to occupational safety and health. The members are selected by the Secretary of the U.S. Department of Health and Human Services (HHS). The board advises the NIOSH Director on occupational safety and health research and prevention programs. The board also provides advice on standards of scientific excellence, current needs in the field of occupational safety and health, and the applicability and dissemination of research findings. This advice may take the form of reports or verbal communications to the NIOSH Director during BSC meetings. Nominations are being sought for individuals who have expertise and qualifications necessary to contribute to the accomplishment of the board's mission. More information is available on the NIOSH BSC Web site: *http://www.cdc.gov/niosh/BSC/default.html.*

Nominees will be selected based on expertise in occupational safety and health fields, such as occupational medicine, occupational nursing, industrial hygiene, occupational safety and health engineering, toxicology, chemistry, safety and health education, ergonomics, epidemiology, biostatistics, and psychology. Members may be invited to serve for terms of two to four years. Selected nominees would begin service on the BSC, NIOSH in January 2018.

The U.S. Department of Health and Human Services policy stipulates that committee membership shall be balanced in terms of points of view represented, and the committee's function. Appointments shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, gender identity, HIV status, disability, and cultural, religious, or socioeconomic status. Nominees must be U.S. citizens, and cannot be full-time employees of the U.S. Government or federally registered lobbyists. Current participation on federal workgroups or prior experience serving on a federal advisory committee does not disqualify a candidate; however, HHS policy is to avoid excessive individual service on advisory committees and multiple committee memberships. Board members are Special Government Employees, requiring the filing of financial disclosure reports at the beginning and annually during their terms. CDC reviews potential candidates for the Board membership each year, and provides a slate of nominees for consideration to the Secretary of HHS for final selection.

Candidates should submit the following items:

- Current *curriculum vitae,* including complete contact information (name, affiliation, mailing address, telephone number, email address)
- A letter of recommendation stating the qualifications of the candidate.

Nominations must be submitted (postmarked or electronically received) by January 31, 2017.

Submissions must be electronic or by mail. Submissions should reference docket 278. Electronic submissions: You may electronically submit nominations, including attachments, to *nioshdocket@cdc.gov.*

Attachments in Microsoft Word are preferred. Regular, Express, or Overnight Mail: Written nominations may be submitted (one original and two copies) to the following address only: NIOSH Docket 278, c/o Richie Dickerson, Committee Management Specialist, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS: E–20, Atlanta, Georgia 30329. Telephone and facsimile submissions cannot be accepted.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities for both the Centers for Disease Control and Prevention, and the Agency for Toxic Substances and Disease Registry.

Catherine Ramadei,

Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–N–4320]

Sun Pharmaceutical Industries, Inc.; Withdrawal of Approval of 28 Abbreviated New Drug Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is withdrawing approval of 28 abbreviated new drug applications held by Sun Pharmaceutical Industries, Inc. (Sun Pharmaceutical), U.S. Agent for Sun Pharmaceutical Industries Limited, 270 Prospect Plains Rd., Cranbury, NJ 08512. The drug products are no longer marketed, and Sun Pharmaceutical has requested that the approval of the applications be withdrawn.

DATES: January 19, 2017.

FOR FURTHER INFORMATION CONTACT: Florine P. Purdie, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6248, Silver Spring, MD 20993–0002, 301–796–3601.

SUPPLEMENTARY INFORMATION: The applications listed in the table in this document are no longer marketed, and Sun Pharmaceutical has requested that FDA withdraw approval of the applications. The company has also, by its request, waived its opportunity for a hearing.

Application No.	Drug
065007	Cephalexin Capsules USP, Equivalent to (EQ) 250 milligrams (mg) base and EQ 500 mg base.
065016	Amoxicillin Capsules USP, 250 mg and 500 mg.
065021	Amoxicillin Tablets USP (Chewable), 125 mg and 250 mg.
065059	Amoxicillin Tablets USP, 500 mg and 875 mg.
065060	Amoxicillin Tablets USP (Chewable), 200 mg and 400 mg.
065081	Cephalexin for Oral Suspension USP, EQ 125 mg base/5 milliliters (mL) and EQ 250 mg base/5 mL.
065082	Cefpodoxime Proxetil for Oral Suspension USP, EQ 50 mg base/5 mL and EQ 100 mg base/5 mL.
065083	Cefpodoxime Proxetil Tablets USP, EQ 100 mg base and EQ 200 mg base.

Application No.	Drug
065102	Amoxicillin and Clavulanate Potassium Tablets USP, 875 mg/EQ 125 mg base.
065109	Amoxicillin and Clavulanate Potassium Tablets USP, 500 mg/EQ 125 mg base.
065113	Amoxicillin for Oral Suspension USP, 200 mg/5 mL and 400 mg/5 mL.
065115	Cefadroxil for Oral Suspension USP, EQ 125 mg base/5 mL, EQ 250 mg base/5 mL, and EQ 500 mg base/5 mL.
065118	Cefuroxime Axetil Tablets USP, EQ 125 mg base, EQ 250 mg base, and EQ 500 mg base.
065132	Amoxicillin and Clavulanate Potassium for Oral Suspension USP, 200 mg/EQ 28.5 mg base per 5 mL and 400 mg/EQ 57 mg base per 5 mL.
065161	Amoxicillin and Clavulanate Potassium Tablets USP (Chewable), 200 mg/EQ 28.5 mg base and 400 mg/EQ 57 mg base.
065207	Amoxicillin and Clavulanate Potassium for Oral Suspension USP, 600 mg/EQ 42.9 mg base per 5 mL.
065323	Cefuroxime Axetil for Oral Suspension USP, EQ 125 mg base/5 mL and EQ 250 mg base/5 mL.
074975	Acyclovir Capsules USP, 200 mg.
074980	Acyclovir Tablets USP, 400 mg and 800 mg.
075132	Ranitidine Tablets USP, EQ 75 mg base.
075439	Ranitidine Tablets USP, EQ 150 mg base and EQ 300 mg base.
076041	Sotret (isotretinoin) Capsules USP, 10 mg, 20 mg, and 40 mg.
076285	Simvastatin Tablets USP, 5 mg, 10 mg, 20 mg, 40 mg, and 80 mg.
076332	Fluconazole for Oral Suspension, 10 mg/mL and 40 mg/mL.
076409	Nefazodone Hydrochloride Tablets USP, 50 mg, 100 mg, 150 mg, 200 mg, and 250 mg.
076503	Sotret (isotretinoin) Capsules USP, 30 mg.
076606	Gabapentin Capsules USP, 100 mg, 300 mg, and 400 mg.
076739	Fosinopril Sodium and Hydrochlorothiazide Tablets USP, 10 mg/12.5 mg and 20 mg/12.5 mg.

Therefore, under section 505(e) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(e)) and under authority delegated to the Director, Center for Drug Evaluation and Research, by the Commissioner, approval of the applications listed in the table, and all amendments and supplements thereto, is hereby withdrawn, effective January 19, 2017.

Dated: December 15, 2016.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–N–0969]

Authorization of Emergency Use of an In Vitro Diagnostic Device for Detection of Zika Virus; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of an Emergency Use Authorization (EUA) (the Authorization) for an in vitro diagnostic device for detection of the Zika virus in response to the Zika virus outbreak in the Americas. FDA issued this Authorization under the Federal Food, Drug, and Cosmetic Act (the FD&C Act), as requested by Abbott Molecular, Inc. The Authorization contains, among other things, conditions on the emergency use of the authorized in vitro diagnostic device. The Authorization follows the February 26, 2016, determination by the Secretary of Health and Human Services (HHS) that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus. On the basis of such determination, the Secretary of HHS declared on February 26, 2016, that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection, subject to the terms of any authorization issued under the FD&C Act. The Authorization, which includes an explanation of the reasons for issuance, is reprinted in this document.

DATES: The Authorization is effective as of November 21, 2016.

ADDRESSES: Submit written requests for single copies of the EUA to the Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4338, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request or include a fax number to which the Authorization may be sent. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the Authorization.

FOR FURTHER INFORMATION CONTACT: Carmen Maher, Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4347, Silver Spring, MD 20993–0002, 301–796–8510 (this is not a toll free number).

SUPPLEMENTARY INFORMATION:

I. Background

Section 564 of the FD&C Act (21 U.S.C. 360bbb–3) as amended by the Project BioShield Act of 2004 (Pub L. 108–276) and the Pandemic and All-Hazards Preparedness Reauthorization Act of 2013 (Pub L. 113–5) allows FDA to strengthen the public health protections against biological, chemical, nuclear, and radiological agents. Among other things, section 564 of the FD&C Act allows FDA to authorize the use of an unapproved medical product or an unapproved use of an approved medical product in certain situations. With this EUA authority, FDA can help assure that medical countermeasures may be used in emergencies to diagnose, treat, or prevent serious or life-threatening diseases or conditions caused by biological, chemical, nuclear, or radiological agents when there are no adequate, approved, and available alternatives.

Section 564(b)(1) of the FD&C Act provides that, before an EUA may be issued, the Secretary of HHS must declare that circumstances exist justifying the authorization based on one of the following grounds: (1) A determination by the Secretary of Homeland Security that there is a domestic emergency, or a significant potential for a domestic emergency, involving a heightened risk of attack with a biological, chemical, radiological, or nuclear agent or agents; (2) a determination by the Secretary of Defense that there is a military

emergency, or a significant potential for a military emergency, involving a heightened risk to U.S. military forces of attack with a biological, chemical, radiological, or nuclear agent or agents; (3) a determination by the Secretary of HHS that there is a public health emergency, or a significant potential for a public health emergency, that affects, or has a significant potential to affect, national security or the health and security of U.S. citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such agent or agents; or (4) the identification of a material threat by the Secretary of Homeland Security under section 319F–2 of the Public Health Service (PHS) Act (42 U.S.C. 247d–6b) sufficient to affect national security or the health and security of U.S. citizens living abroad.

Once the Secretary of HHS has declared that circumstances exist justifying an authorization under section 564 of the FD&C Act, FDA may authorize the emergency use of a drug, device, or biological product if the Agency concludes that the statutory criteria are satisfied. Under section 564(h)(1) of the FD&C Act, FDA is required to publish in the **Federal Register** a notice of each authorization, and each termination or revocation of an authorization, and an explanation of the reasons for the action. Section 564 of the FD&C Act permits FDA to authorize the introduction into interstate commerce of a drug, device, or biological product intended for use when the Secretary of HHS has declared that circumstances exist justifying the authorization of emergency use. Products appropriate for emergency use may include products and uses that are not approved, cleared, or licensed under sections 505, 510(k), or 515 of the FD&C Act (21 U.S.C. 355, 360(k), and 360e) or section 351 of the PHS Act (42 U.S.C. 262). FDA may issue an EUA only if, after consultation with the HHS Assistant Secretary for Preparedness and Response, the Director of the National Institutes of Health, and the Director of the Centers for Disease Control and Prevention (to the extent feasible and appropriate given the applicable circumstances), FDA [1] concludes: (1) That an agent referred to in a declaration of emergency or threat can cause a serious or life-threatening disease or condition; (2) that, based on the totality of scientific evidence available to FDA, including data from adequate and well-controlled clinical trials, if available, it is reasonable to believe that: (A) The product may be effective in diagnosing, treating, or preventing (i) such disease or condition; or (ii) a serious or life-threatening disease or condition caused by a product authorized under section 564, approved or cleared under the FD&C Act, or licensed under section 351 of the PHS Act, for diagnosing, treating, or preventing such a disease or condition caused by such an agent; and (B) the known and potential benefits of the product, when used to diagnose, prevent, or treat such disease or condition, outweigh the known and potential risks of the product, taking into consideration the material threat posed by the agent or agents identified in a declaration under section 564(b)(1)(D) of the FD&C Act, if applicable; (3) that there is no adequate, approved, and available alternative to the product for diagnosing, preventing, or treating such disease or condition; and (4) that such other criteria as may be prescribed by regulation are satisfied.

No other criteria for issuance have been prescribed by regulation under section 564(c)(4) of the FD&C Act. Because the statute is self-executing, regulations or guidance are not required for FDA to implement the EUA authority.

[1] The Secretary of HHS has delegated the authority to issue an EUA under section 564 of the FD&C Act to the Commissioner of Food and Drugs.

II. EUA Request for an In Vitro Diagnostic Device for Detection of the Zika Virus

On February 26, 2016, the Secretary of HHS determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus. On February 26, 2016, under section 564(b)(1) of the FD&C Act, and on the basis of such determination, the Secretary of HHS declared that circumstances exist justifying the authorization of emergency use of in vitro diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection, subject to the terms of any authorization issued under section 564 of the FD&C Act. Notice of the determination and declaration of the Secretary was published in the **Federal Register** on March 2, 2016 (81 FR 10878). On November 9, 2016, Abbott Molecular, Inc. requested, and on November 21, 2016, FDA issued, an EUA for the Abbott Real Time ZIKA assay, subject to the terms of the Authorization.

III. Electronic Access

An electronic version of this document and the full text of the Authorization are available on the Internet at *https://www.regulations.gov.*

IV. The Authorization

Having concluded that the criteria for issuance of the Authorization under section 564(c) of the FD&C Act are met, FDA has authorized the emergency use of an in vitro diagnostic device for detection of Zika virus subject to the terms of the Authorization. The Authorization in its entirety (not including the authorized versions of the fact sheets and other written materials) follows and provides an explanation of the reasons for its issuance, as required by section 564(h)(1) of the FD&C Act.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH & HUMAN SERVICES

Public Health Service

Food and Drug Administration
Silver Spring, MD 20993

November 21, 2016

Stacy Ferguson
Regulatory Affairs Project Manager
Abbott Molecular Inc.
1300 East Touhy Avenue
Des Plaines, IL 60018

Dear Ms. Ferguson:

This letter is in response to your request that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of Abbott Molecular Inc.'s ("Abbott") RealTi*me* ZIKA assay for the qualitative detection of RNA from Zika virus in human serum, EDTA plasma, and urine (collected alongside a patient-matched serum or plasma specimen) from individuals meeting Centers for Disease Control and Prevention (CDC) Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated), by laboratories in the United States (U.S.) that are certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. §263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories, pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (the Act) (21 U.S.C. § 360bbb-3).[1] Test results are for the identification of Zika virus RNA. Zika virus RNA is generally detectable in these specimens during the acute phase of infection and, according to the updated CDC Guidance for U.S. Laboratories Testing for Zika Virus Infection,[2] up to 14 days in serum and urine (possibly longer in urine), following onset of symptoms, if present. Positive results are indicative of current infection.

On February 26, pursuant to section 564(b)(1)(C) of the Act (21 U.S.C. § 360bbb-3(b)(1)(C)), the Secretary of Health and Human Services (HHS) determined that there is a significant potential for a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves Zika virus.[3] Pursuant to section 564(b)(1) of the Act (21 U.S.C. § 360bbb-3(b)(1)), and on the basis of such determination, the Secretary of HHS then declared that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection, subject to the terms of any authorization issued under 21 U.S.C. § 360bbb-3(a).[4]

[1] For ease of reference, this letter will refer to "laboratories in the United States (U.S.) that are certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, to perform high complexity tests, or by similarly qualified non-U.S. laboratories" as "authorized laboratories."

[2] Available at http://www.cdc.gov/zika/laboratories/lab-guidance.html (last updated on November 16, 2016).

[3] As amended by the Pandemic and All Hazards Preparedness Reauthorization Act, Pub. L. No. 113-5, under section 564(b)(1)(C) of the Act, the Secretary may make a determination of a public health emergency, or of significant potential for a public health emergency.

[4] HHS. *Determination and Declaration Regarding Emergency Use of in Vitro Diagnostic Tests for Detection of Zika*

Having concluded that the criteria for issuance of this authorization under section 564(c) of the Act (21 U.S.C. § 360bbb-3(c)) are met, I am authorizing the emergency use of the Abbott RealTi*m*e ZIKA assay (as described in the Scope of Authorization section of this letter (Section II)) in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated) (as described in the Scope of Authorization section of this letter (Section II)) for the detection of Zika virus infection by authorized laboratories, subject to the terms of this authorization.

I. Criteria for Issuance of Authorization

I have concluded that the emergency use of the Abbott RealTi*m*e ZIKA assay for the detection of Zika virus and diagnosis of Zika virus infection in the specified population meets the criteria for issuance of an authorization under section 564(c) of the Act, because I have concluded that:

1. The Zika virus can cause Zika virus infection, a serious or life-threatening disease or condition to humans infected with the virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that the Abbott RealTi*m*e ZIKA assay, when used with the specified instrument(s) and in accordance with the Scope of Authorization, may be effective in detecting Zika virus and diagnosing Zika virus infection, and that the known and potential benefits of the Abbott RealTi*m*e Zika assay for detecting Zika virus and diagnosing Zika virus infection outweigh the known and potential risks of such product; and

3. There is no adequate, approved, and available alternative to the emergency use of the Abbott RealTi*m*e ZIKA assay for detecting Zika virus and diagnosing Zika virus infection.[5]

II. Scope of Authorization

I have concluded, pursuant to section 564(d)(1) of the Act, that the scope of this authorization is limited to the use of the authorized Abbott RealTi*m*e ZIKA assay by authorized laboratories for the detection of RNA from Zika virus and diagnosis of Zika virus infection in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika transmission at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated).

The Authorized Abbott RealTi*m*e ZIKA assay

The Abbott RealTi*m*e ZIKA assay is a real-time reverse transcription polymerase chain reaction (RT-PCR) assay for the qualitative detection of RNA from Zika virus in human serum, EDTA

Virus and/or Diagnosis of Zika Virus Infection. 81 Fed. Reg. 10878 (March 2, 2016).

[6] No other criteria of issuance have been prescribed by regulation under section 564(c)(4) of the Act.

plasma, urine (collected alongside a patient-matched serum or plasma specimen) and other authorized specimen types.

To perform the Abbott RealTi*m*e ZIKA assay, nucleic acids are isolated from the sample and purified using the Abbott *m*Sample Preparation System on the Abbott *m*2000*sp* instrument, an automated instrument for performing sample preparation, or other authorized instruments. Magnetic microparticle technology captures nucleic acids, and the particles are washed to remove unbound sample components. The bound nucleic acids are eluted and transferred to a 96 deep-well plate. The purified nucleic acid is reverse transcribed into cDNA which is then amplified in the Abbott *m*2000*rt* instrument, or other authorized instruments. This is followed by the detection of the target of interest.

The Abbott RealTi*m*e ZIKA assay uses the following materials, or other authorized materials or ancillary products:

- Abbott *m*Sample Preparation System, containing
  - Abbott *m*Lysis
  - *m*Wash 1
  - *m*Wash 2
  - *m*Elution Buffer
  - *m*Microparticles reagent bottles

- Abbott RealTi*m*e ZIKA Amplification Reagent Kit, containing
  - Abbott RealTi*m*e ZIKA Internal Control in negative human serum
  - Abbott RealTi*m*e ZIKA Amplification Reagent (Thermostable rTth Polymerase Enzyme; ZIKA Amplification Reagent with primers, probes and nucleotides; Activation Reagent)

The Abbott RealTi*m*e ZIKA assay requires the following control materials, or other authorized control materials, to be included in each run; all controls listed below must generate expected results in order for a test to be considered valid, as outlined in the Abbott RealTi*m*e ZIKA Instructions for Use:

- Abbott RealTi*m*e ZIKA Control Kit
  - Abbott RealTi*m*e ZIKA Negative Control: Negative human plasma is used for monitoring of contaminations.
  - Abbott RealTi*m*e ZIKA Positive Control: Inactivated Zika virus (strain PRVABC59) in human serum monitors for substantial reagent failure and is used throughout the extraction and PCR set-up for each run.

- Internal Control: noninfectious Armored RNA with internal control sequences in negative human plasma. It confirms the validity of the extraction process and identifies potential PCR inhibition; it is used throughout the extraction and PCR set-up for each sample.

To produce a valid run the test controls must meet the performance specifications outlined in the Abbott RealTi*m*e ZIKA Instructions for Use.

The Abbott RealTime ZIKA assay also requires the use of additional materials and ancillary reagents commonly used in clinical laboratories and that are described in the authorized Abbott RealTime ZIKA Instructions for Use.

The above described Abbott RealTime ZIKA assay, when labeled consistently with the labeling authorized by FDA entitled "Abbott RealTime ZIKA Instructions for Use" and "Abbott RealTime ZIKA Control Kit" (available at http://www.fda.gov/MedicalDevices/Safety/EmergencySituations/ucm161496.htm), which may be revised by Abbott in consultation with the Division of Microbiology Devices (DMD)/Office of In Vitro Diagnostics and Radiological Health (OIR)/Center for Devices and Radiological Health (CDRH), is authorized to be distributed to and used by authorized laboratories under this EUA, despite the fact that it does not meet certain requirements otherwise required by federal law.

The above described Abbott RealTime ZIKA assay is authorized to be accompanied by the following information pertaining to the emergency use, which is authorized to be made available to healthcare providers and patients, including pregnant women:

- Fact Sheet for Healthcare Providers: Interpreting Abbott RealTime ZIKA Assay Results
- Fact Sheet for Patients: Understanding Results from the Abbott RealTime ZIKA Assay

As described in Section IV below, Abbott and its authorized distributors are also authorized to make available additional information relating to the emergency use of the authorized Abbott RealTime ZIKA assay that is consistent with, and does not exceed, the terms of this letter of authorization.

I have concluded, pursuant to section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of the authorized Abbott RealTime ZIKA assay in the specified population, when used for detection of Zika virus and to diagnose Zika virus infection and used consistently with the Scope of Authorization of this letter (Section II), outweigh the known and potential risks of such a product.

I have concluded, pursuant to section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that the authorized Abbott RealTime ZIKA assay may be effective in the detection of Zika virus and diagnosis of Zika virus infection, when used consistently with the Scope of Authorization of this letter (Section II), pursuant to section 564(c)(2)(A) of the Act.

FDA has reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, and concludes that the authorized Abbott RealTime ZIKA assay, when used for detection of Zika virus and to diagnose Zika virus infection in the specified population (as described in the Scope of Authorization of this letter (Section II)), meets the criteria set forth in section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of the authorized Abbott RealTime ZIKA assay under this EUA must be consistent with, and may not exceed, the terms of this letter, including the Scope of

Authorization (Section II) and the Conditions of Authorization (Section IV). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination described above and the Secretary of HHS's corresponding declaration under section 564(b)(1), the Abbott RealTi*m*e ZIKA assay described above is authorized to detect Zika virus and diagnose Zika virus infection in individuals meeting CDC Zika virus clinical criteria (e.g., clinical signs and symptoms associated with Zika virus infection) and/or CDC Zika virus epidemiological criteria (e.g., history of residence in or travel to a geographic region with active Zika virus transmissions at the time of travel, or other epidemiological criteria for which Zika virus testing may be indicated).

This EUA will cease to be effective when the HHS declaration that circumstances exist to justify the EUA is terminated under section 564(b)(2) of the Act or when the EUA is revoked under section 564(g) of the Act.

III. Waiver of Certain Requirements

I am waiving the following requirements for the Abbott RealTi*m*e ZIKA assay during the duration of this EUA:

- Current good manufacturing practice requirements, including the quality system requirements under 21 CFR Part 820 with respect to the design, manufacture, packaging, labeling, storage, and distribution of the Abbott RealTi*m*e ZIKA assay.

- Labeling requirements for cleared, approved, or investigational devices, including labeling requirements under 21 CFR 809.10 and 21 CFR 809.30, except for the intended use statement (21 CFR 809.10(a)(2), (b)(2)), adequate directions for use (21 U.S.C. 352(f)), (21 CFR 809.10(b)(5), (7), and (8)), any appropriate limitations on the use of the device including information required under 21 CFR 809.10(a)(4), and any available information regarding performance of the device, including requirements under 21 CFR 809.10(b)(12).

IV. Conditions of Authorization

Pursuant to section 564 of the Act, I am establishing the following conditions on this authorization:

Abbott Molecular Inc. and Its Authorized Distributor(s)

A. Abbott and its authorized distributor(s) will distribute the authorized Abbott RealTi*m*e ZIKA assay with the authorized labeling only to authorized laboratories. Changes to the authorized labeling may be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

B. Abbott and its authorized distributor(s) will provide to authorized laboratories the authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Healthcare Providers and the authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Patients.

C. Abbott and its authorized distributor(s) will make available on their websites the

authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Healthcare Providers and the authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Patients.

D. Abbott and its authorized distributor(s) will inform authorized laboratories and relevant public health authority(ies) of this EUA, including the terms and conditions herein.

E. Abbott and its authorized distributor(s) will ensure that the authorized laboratories using the authorized Abbott RealTi*m*e ZIKA assay have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.[6]

F. Through a process of inventory control, Abbott and its authorized distributor(s) will maintain records of device usage.

G. Abbott and its authorized distributor(s) will collect information on the performance of the test. Abbott will report to FDA any suspected occurrence of false positive and false negative results and significant deviations from the established performance characteristics of the test of which Abbott becomes aware.

H. Abbott and its authorized distributor(s) are authorized to make available additional information relating to the emergency use of the authorized Abbott RealTi*m*e ZIKA assay that is consistent with, and does not exceed, the terms of this letter of authorization.

Abbott Molecular Inc.

I. Abbott will notify FDA of any authorized distributor(s) of the Abbott RealTi*m*e ZIKA assay, including the name, address, and phone number of any authorized distributor(s).

J. Abbott will provide its authorized distributor(s) with a copy of this EUA, and communicate to its authorized distributor(s) any subsequent amendments that might be made to this EUA and its authorized accompanying materials (e.g., Fact Sheets, Instructions for Use).

K. Abbott may request changes to the authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Healthcare Providers and the authorized Abbott RealTi*m*e ZIKA assay Fact Sheet for Patients. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

L. Abbott may request the addition of other instruments for use with the authorized Abbott RealTi*m*e ZIKA assay. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

[7] For questions related to reporting Zika test results to relevant public health authorities, it is recommended that Abbott, other authorized distributor(s), and authorized laboratories consult with the applicable country, state or territory health department(s). According to CDC, Zika virus disease is a nationally notifiable condition (see http://www.cdc.gov/zika/).

M. Abbott may request the addition of other extraction methods for use with the authorized Abbott RealTi*me* ZIKA assay. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

N. Abbott may request the addition of other specimen types for use with the authorized Abbott RealTi*me* ZIKA assay. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

O. Abbott may request the addition of other control materials for use with the authorized Abbott RealTi*me* ZIKA assay. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

P. Abbott may request the addition and/or substitution of other ancillary reagents and materials for use with the authorized Abbott RealTi*me* ZIKA assay. Such requests will be made by Abbott in consultation with, and require concurrence of, DMD/OIR/CDRH.

Q. Abbott will assess traceability[7] of the Abbott RealTi*me* ZIKA assay with FDA-recommended reference material(s). After submission to FDA and DMD/OIR/CDRH's review of and concurrence with the data, Abbott will update its labeling to reflect the additional testing.

R. Abbott, assuming the medical device reporting responsibilities of the manufacturer of the Abbott RealTi*me* ZIKA assay, will track adverse events and report to FDA under 21 CFR Part 803.

Authorized Laboratories

S. Authorized laboratories will include with reports of the results of the Abbott RealTi*me* ZIKA assay the authorized Fact Sheet for Healthcare Providers and the authorized Fact Sheet for Patients. Under exigent circumstances, other appropriate methods for disseminating these Fact Sheets may be used, which may include mass media.

T. Authorized laboratories will perform the Abbott RealTi*me* ZIKA assay using nucleic acid extraction and PCR set-up procedures automated by the Abbott *m*2000*sp* instruments, or other authorized instruments.

U. Authorized laboratories will perform the Abbott RealTi*me* ZIKA assay on the Abbott *m*2000*rt* instrument, or other authorized instruments.

V. Authorized laboratories will perform the Abbott RealTi*me* ZIKA assay using the Abbott *m*Sample Preparation System for nucleic acid extraction, or other authorized extraction methods.

W. Authorized laboratories will perform the Abbott RealTi*me* ZIKA assay on human serum, EDTA plasma, or urine (collected alongside a patient-matched serum or plasma specimen) or other authorized specimen types.

[7] Traceability refers to tracing analytical sensitivity/reactivity back to a FDA recommended reference material.

X. Authorized laboratories will have a process in place for reporting test results to healthcare providers and relevant public health authorities, as appropriate.[8]

Y. Authorized laboratories will collect information on the performance of the test and report to Abbott any suspected occurrence of false positive or false negative results of which they become aware.

Z. All laboratory personnel using the test should be appropriately trained in RT-PCR techniques and use appropriate laboratory and personal protective equipment when handling this kit, and use the test in accordance with the authorized labeling.

Abbott Molecular Inc., Its Authorized Distributor(s) and Authorized Laboratories

AA. Abbott, its authorized distributor(s), and authorized laboratories, will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to FDA for inspection upon request.

Conditions Related to Advertising and Promotion

BB. All advertising and promotional descriptive printed matter relating to the use of the authorized Abbott RealTi*m*e ZIKA assay shall be consistent with the Fact Sheets and authorized labeling, as well as the terms set forth in this EUA and the applicable requirements set forth in the Act and FDA regulations.

CC. All advertising and promotional descriptive printed matter relating to the use of the authorized Abbott RealTi*m*e ZIKA assay shall clearly and conspicuously state that:

- This test has not been FDA cleared or approved;
- This test has been authorized by FDA under an EUA for use by authorized laboratories;
- This test has been authorized only for the detection of RNA from Zika virus and diagnosis of Zika virus infection, not for any other viruses or pathogens; and
- This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection under section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

[8] For questions related to reporting Zika test results to relevant public health authorities, it is recommended that Abbott, other authorized distributor(s), and authorized laboratories consult with the applicable country, state or territory health department(s). According to CDC, Zika virus disease is a nationally notifiable condition. http://www.cdc.gov/zika/.

Page 9 – Ms. Stacy Ferguson, Abbott Molecular Inc., USA

No advertising or promotional descriptive printed matter relating to the use of the authorized Abbott RealTi*me* ZIKA assay may represent or suggest that this test is safe or effective for the diagnosis of Zika virus infection.

The emergency use of the authorized Abbott RealTi*me* ZIKA assay as described in this letter of authorization must comply with the conditions and all other terms of this authorization.

V. Duration of Authorization

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of *in vitro* diagnostic tests for detection of Zika virus and/or diagnosis of Zika virus infection is terminated under section 564(b)(2) of the Act or the EUA is revoked under section 564(g) of the Act.

Sincerely,

Robert M. Califf, M.D.
Commissioner of Food and Drugs

Enclosures

BILLING CODE 4164–01–C

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–E–0626]

Determination of Regulatory Review Period for Purposes of Patent Extension; COSENTYX

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for COSENTYX and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human biological product.

DATES: Anyone with knowledge that any of the dates as published (see the **SUPPLEMENTARY INFORMATION** section) are incorrect may submit either electronic or written comments and ask for a redetermination by February 21, 2017. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period by June 19, 2017. See ''Petitions'' in the **SUPPLEMENTARY INFORMATION** section for more information.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2016–E–0626 for ''Determination of Regulatory Review Period for Purposes of Patent Extension; COSENTYX.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper

submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6250, Silver Spring, MD 20993, 301–796–3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98–417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100–670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and an approval phase. For human biological products, the testing phase begins when the exemption to permit the clinical investigations of the biological becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human biological product and continues until FDA grants permission to market the biological product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a human biological product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human biologic product COSENTYX (secukinumab). COSENTYX is indicated for treatment of moderate to severe plaque psoriasis in adult patients who are candidates for systemic therapy or phototherapy. Subsequent to this approval, the USPTO received a patent term restoration application for COSENTYX (U.S. Patent No. 7,807,155) from Novartis AG, and the USPTO requested FDA's assistance in determining this patent's eligibility for patent term restoration. In a letter dated May 2, 2016, FDA advised the USPTO that this human biological product had undergone a regulatory review period and that the approval of COSENTYX represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product's regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for COSENTYX is 3,381 days. Of this time, 2,926 days occurred during the testing phase of the regulatory review period, while 455 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(i)) became effective:* October 21, 2005. The applicant claims December 17, 2006, as the date the investigational new drug application (IND) became effective. However, FDA records indicate that the IND effective date was October 21, 2005, which was thirty days after FDA receipt of an earlier IND.

2. *The date the application was initially submitted with respect to the human biological product under section 351 of the Public Health Service Act (42 U.S.C. 262*): October 24, 2013. FDA has verified the applicant's claim that the biologics license application (BLA) for COSENTYX (BLA 125504/0) was initially submitted on October 24, 2013.

3. *The date the application was approved:* January 21, 2015. FDA has verified the applicant's claim that BLA 125504/0 was approved on January 21, 2015.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 629 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and ask for a redetermination (see **DATES**). Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must be timely (see **DATES**) and contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41–42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to *http://www.regulations.gov* at Docket No. FDA–2013–S–0610. Submit written petitions (two copies are required) to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: December 14, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–D–0620]

Question-Based Review for the Chemistry, Manufacturing, and Controls Technical Section of Animal Drug Applications; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a guidance for industry #234 entitled ''Question-Based Review for the Chemistry, Manufacturing, and Controls Technical Section of Animal Drug Applications.'' To improve the process for submission and review of chemistry, manufacturing, and controls (CMC) information for animal drugs, the Center for Veterinary Medicine has developed a series of questions that focus on the critical scientific and regulatory issues and pharmaceutical attributes essential for ensuring the quality of new animal drug substances and products. Termed Question-based Review, these questions provide a general framework for original CMC submissions to investigational new animal drug files, generic investigational new animal drug files, new animal drug applications, abbreviated new animal drug applications, conditional approval of applications for conditional approval, and veterinary master files.

DATES: Submit either electronic or written comments on Agency guidances at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2016–D–0620 for ''Question-Based Review for the Chemistry, Manufacturing, and Controls Technical Section of Animal Drug Applications.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV–6), Center for Veterinary Medicine, Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Julie Bailey, Center for Veterinary Medicine (HFV–145), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–402–0700, *julie.bailey@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of March 18, 2016 (81 FR 14859), FDA published the notice of availability for a draft guidance entitled ''Question-Based Review for the Chemistry, Manufacturing, and Controls Technical Section of Animal Drug Applications'' giving interested persons until May 17, 2016, to comment on the draft guidance. FDA received no comments on the draft guidance. The guidance announced in this notice finalizes the draft guidance dated March 2016.

II. Significance of Guidance

This level 1 guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Question-Based Review for the Chemistry, Manufacturing, and Controls Technical Section of Animal Drug Applications.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements

of the applicable statutes and regulations.

III. Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 514 have been approved under OMB control number 0910–0032; the collections of information in section 512(n)(1) of the FD&C Act (21 U.S.C. 360b(n)(1)) have been approved under OMB control number 0910–0669.

IV. Electronic Access

Persons with access to the Internet may obtain the guidance at either *http://www.fda.gov/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/default.htm* or *https://www.regulations.gov.*

Dated: December 15, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651–0139]

Agency Information Collection Activities: Electronic Visa Update System

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: 60-Day notice and request for comments; extension of an existing collection of information.

SUMMARY: U.S. Customs and Border Protection (CBP) of the Department of Homeland Security will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act: Electronic Visa Update System (EVUS). CBP is proposing that this information collection be extended with no change to the burden hours or to the information collected. This document is published to obtain comments from the public and affected agencies.

DATES: Written comments should be received on or before February 21, 2017 to be assured of consideration.

ADDRESSES: All submissions received must include the OMB Control Number 1651–0139 in the subject line and the agency name. To avoid duplicate submissions, please use only *one* of the following methods to submit comments:

(1) *Email.* Submit comments to: (*CBP_PRA@cbp.dhs.gov*). The email should include the OMB Control number in the subject line.

(2) *Mail.* Submit written comments to CBP PRA Officer, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, Economic Impact Analysis Branch, 10th Floor, 90 K St NE., Washington, DC 20229–1177.

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Paperwork Reduction Act Officer, U.S. Customs and Border Protection, Regulations and Rulings, Office of Trade, 90 K Street NE., 10th Floor, Washington, DC 20229–1177, or via email (*CBP_PRA@cbp.dhs.gov*). Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP Web site at *https://www.cbp.gov/*. For additional help: *https://help.cbp.gov/app/home/search/1*.

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3507). The comments should address: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden including the use of automated collection techniques or the use of other forms of information technology; and (e) the annual cost burden to respondents or record keepers from the collection of information (total capital/startup costs and operations and maintenance costs). The comments that are submitted will be summarized and included in the CBP request for OMB approval. All comments will become a matter of public record. In this document, CBP is soliciting comments concerning the following Information collection:

Title: Electronic Visa Update System.

OMB Number: 1651–0139.

Form Number: N/A.

Abstract: The Electronic Visa Update System (EVUS) provides a mechanism through which visa information updates can be obtained from certain nonimmigrant aliens in advance of their travel to the United States. This provides CBP access to updated information without requiring aliens to apply for a visa more frequently. The EVUS requirements apply to nonimmigrant aliens who hold a passport issued by an identified country containing a U.S. nonimmigrant visa of a designated category. EVUS enrollment is currently limited to nonimmigrant aliens who hold unrestricted, maximum validity B–1 (business visitor), B–2 (visitor for pleasure), or combination B–1/B–2 visas, which are generally valid for 10 years, contained in a passport issued by the People's Republic of China.

EVUS provides for greater efficiencies in the screening of international travelers by allowing DHS to identify nonimmigrant aliens who may be inadmissible before they depart for the United States, thereby increasing security and reducing traveler delays upon arrival at U.S. ports of entry. EVUS aids DHS in facilitating legitimate travel while also enhancing public safety and national security.

Current Actions: This submission is being made to extend the expiration date. There are no changes to the information collected.

Type of Review: Extension without change to the burden hours.

Affected Public: Individuals.

Estimated Number of Respondents: 3,595,904.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Responses: 3,595,904.

Estimated Time per Response: 25 minutes.

Estimated Total Annual Burden Hours: 1,499,492.

Dated: December 14, 2016.

Seth Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

[FR Doc. 2016–30527 Filed 12–19–16; 8:45 am]

BILLING CODE 9111–14–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5976–N–05]

Housing Opportunity Through Modernization Act of 2016: Solicitation of Comments on Implementation of Public Housing Income Limit: Extension of Comment Period

AGENCY: Office of the General Counsel, HUD.

ACTION: Notice for comment, Extension of public comment period.

SUMMARY: On November 29, 2016, HUD published a notice in the **Federal Register** inviting public comment on the methodology HUD proposes to use to implement a new income limit in public housing. The November 29, 2016, notice set December 29, 2016, as the comment due date. In response to recent requests for additional time to submit public comments, this notice announces that HUD is extending the public comment period for an additional 30-day period to January 30, 2017.

DATES: *Comment Due Date:* For the notice published on November 29, 2016, (81 FR 85996), the comment due date is extended to January 30, 2017.

ADDRESSES: Interested persons are invited to submit comments regarding this notice for comment. All communications must refer to the above docket number and title. There are two methods for submitting public comments.

1. Submission of Comments by Mail. Comments may be submitted by mail to the Regulations Division, Office of General Counsel, Department of Housing and Urban Development, 451 7th Street SW., Room 10276, Washington, DC 20410–0500.

2. Electronic Submission of Comments. Interested persons may submit comments electronically through the Federal eRulemaking Portal at *www.regulations.gov*. HUD strongly encourages commenters to submit comments electronically. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt by HUD, and enables HUD to make comments immediately available to the public. Comments submitted electronically through the *www.regulations.gov* Web site can be viewed by other commenters and interested members of the public. Commenters should follow the instructions provided on that site to submit comments electronically.

No Facsimile Comments. Facsimile (fax) comments are not acceptable.

Public Inspection of Public Comments. All properly submitted comments and communications submitted to HUD will be available for public inspection and copying between 8 a.m. and 5 p.m., weekdays, at the above address. Due to security measures at the HUD Headquarters building, an advance appointment to review the public comments must be scheduled by calling the Regulations Division at 202–708–3055 (this is not a toll-free number). Individuals with speech or hearing impairments may access this number via TTY by calling the Federal Relay Service at 800–877–8339 (this is a toll-free number). Copies of all comments submitted are available for inspection and downloading at *www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: If you have any questions, please send an email to *HOTMAquestions@hud.gov*.

SUPPLEMENTARY INFORMATION: On November 29, 2016, at 81 FR 85996, HUD published a notice for comment seeking the public's input on a proposed methodology to implement the public income limit created by section 103 of the Housing Opportunity Through Modernization Act of 2016 (HOTMA) (Public Law 114–201, 130 Stat. 782). That notice set out the proposed methodology and included specific requests for comment. In response to recent requests for additional time to submit public comments, HUD is announcing through this notice that it is extending the public comment period for an additional 30-day period. Interested persons should refer to the November 29, 2016 notice for the list of topics for which HUD is seeking information.

Dated: December 15, 2016.

Aaron Santa Anna,

Assistant General Counsel for Regulations.

[FR Doc. 2016–30627 Filed 12–19–16; 8:45 am]

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5958–N–01]

Request for Comments and Recommendations on a Revised Methodology To Track the Extent to Which Moving to Work Agencies Continue To Serve Substantially the Same Number of Eligible Families

AGENCY: Office of the Assistant Secretary for Public and Indian Housing, HUD.

ACTION: Notice.

SUMMARY: This Notice solicits comments and recommendations on developing a revised methodology to be used to track the extent to which Public Housing Agencies (PHAs) in the Moving to Work (MTW) Demonstration Program are meeting the statutory requirement in Section 204 of the Omnibus Consolidated Rescissions and Appropriations Act of 1996, (1996 MTW Statute) to serve substantially the same number of families had they not combined their funds under the MTW Demonstration Program. This statutory requirement is further reinforced in the Standard MTW Agreements for all 39 current MTW PHAs.

DATES: Comments Due Date: February 21, 2017.

ADDRESSES: Interested persons are invited to submit comments and recommendations to the Moving to Work Office, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh Street SW., Room 4130, Washington, DC 20410–0001 or email at *mtw-info@hud.gov*. HUD strongly encourages commenters to submit comments electronically. Communications must refer to the above docket number and title and should contain the information specified in the ''Request for Public Comments'' section.

No Facsimile Comments. Facsimile (FAX) comments are not acceptable.

Public Inspection of Public Comments. A summary of comments received by HUD will be made available on HUD's Web site at: *http://www.hud.gov/mtw*.

FOR FURTHER INFORMATION CONTACT: Questions concerning this Notice should be directed to the Moving to Work Office, Office of Public and Indian Housing, Department of Housing and Urban Development at: *mtw-info@hud.gov*. Communications must refer to the above docket number and title.

SUPPLEMENTARY INFORMATION:

I. Background

The purpose of the MTW Demonstration Program, as provided in the 1996 MTW Statute (Pub. L. 104–134; 42 U.S.C. 1437f note), is to give PHAs and HUD the flexibility to design and test various approaches for providing and administering housing assistance that:

- Reduce cost and achieve greater cost effectiveness in federal expenditures;
- give incentives to families with children where the head of household is working; is seeking work; or is preparing for work by participating in job training, educational programs, or

programs that assist people to obtain employment and become economically self-sufficient; and

• increase housing choices for eligible low-income families.

In addition to the ability to request statutory and regulatory flexibility from certain public housing and Housing Choice Voucher (HCV) program rules under the U.S. Housing Act of 1937, as amended, 42 U.S.C. 1437, *et seq,* (1937 Act) [1] MTW PHAs combine public housing operating, public housing capital, and HCV assistance into a single agency-wide funding source referred to as the ''MTW Block Grant.'' [2]

Throughout participation in the MTW Demonstration Program, MTW PHAs must continue to meet five statutory requirements. These five statutory requirements, also provided in the 1996 MTW Statute, are:

• *Statutory Requirement #1:* To ensure at least 75% of families assisted are very low-income as defined in Section 3(b)(2) of the 1937 Act;

• *Statutory Requirement #2:* To establish a reasonable rent policy that is designed to encourage employment and self-sufficiency;

• *Statutory Requirement #3:* To continue to assist substantially the same total number of eligible low-income families as would have been served had funds not been combined (herein after, the ''STS requirement'');

• *Statutory Requirement #4:* To maintain a comparable mix of families (by family size) as would have been provided had the funds not been used under the MTW Demonstration Program; and

• *Statutory Requirement #5:* To ensure housing assisted under the MTW Demonstration Program meets housing quality standards established or approved by the Secretary.

HUD has processes in place to effectively monitor statutory requirements numbers 1, 2, 4, and 5. In 2013, HUD published PIH Notice 2013–02, detailing a process for monitoring and quantifying compliance with the STS Requirement, which was previously verified with only an annual certification by the MTW PHA. Since publishing PIH Notice 2013–02, HUD has determined that its methodology requires revision in order to more accurately ensure that an MTW PHA is serving substantially the same number of families as would have been served had it not combined its funds under the MTW Demonstration Program.

PIH Notice 2013–02 currently utilizes a ratio that compares the number of families served annually by each MTW PHA (the numerator) to an approximation of how many families the MTW PHA would have served absent participation in the MTW Demonstration Program (the denominator). HUD then analyzes that ratio, represented as a percentage, and makes an annual determination of whether each MTW PHA is meeting the statutory requirement to serve substantially the same number of families. Through this Notice, HUD seeks to maintain the overall structure of the methodology described in PIH Notice 2013–02, but requests public feedback in revising some of the variables and how they are calculated in order to address areas identified as needing improvement.

Throughout calendar year 2015, HUD had numerous conversations with the existing 39 MTW PHAs on potential changes to improve the tracking of the STS Requirement. At that time, many points of agreement between HUD and the 39 MTW PHAs were reached, including: Any tracking of the STS Requirement should be based on a combined look at public housing and HCV programs to account for an MTW PHA's available fungibility between these two programs; at a minimum, all families housed by an MTW PHA with Section 8 and Section 9 funds should be counted towards the STS Requirement in some way; and the statutory language of ''substantially'' indicates some flexibility below the full number of families to be served.

From these conversations between HUD and the existing 39 MTW PHAs, the following areas of feedback were developed. Specifically, the areas are:

• Connecting the number of families an MTW PHA must serve to funding received;

• Addressing the varied subsidy levels at which MTW PHAs serve families;

• Accounting for the development of affordable units with the MTW Block Grant that are outside of the public housing and HCV programs;

• Setting reasonable levels and categories of compliance;

• Adjusting for changes to the capacity of an MTW PHA to serve families and unforeseen effects; and

• Ensuring predictability under the STS Requirement for current and future MTW PHAs.

II. Request for Public Comments

HUD requests public comments and recommendations on how to revise the methodology to determine compliance with the STS Requirement in order to strengthen the areas identified for improvement. MTW and non-MTW PHAs, HUD-assisted housing residents, resident advocacy organizations, researchers, and HUD stakeholders are encouraged to submit comments. While all comments are welcome, HUD specifically requests comments in the following areas:

A. Connecting the Number of Families an MTW PHA Must Serve to Funding Received

The current methodology contained in PIH Notice 2013–02 relies on a historic snapshot of public housing occupancy and HCV utilization rates in order to set the number of families an MTW PHA is obligated to serve (the denominator of the ratio). In collecting these figures, issues related to availability and accuracy of historic data and anomalies associated with a ''point-in-time'' approach have arisen. Subsequent inventory adjustments affecting the denominator also rely on historic data, compounding these concerns. Further, historic public housing occupancy and HCV utilization figures do not necessarily correlate to the funding resources that MTW PHAs receive today.

Connecting the number of families an MTW PHA must serve to the MTW Block Grant funding it receives ensures equity between MTW PHAs that entered the MTW Demonstration Program at differing levels of public housing occupancy and HCV utilization and ensures that the data upon which the STS Requirement methodology relies is accurate and verifiable by HUD systems. While the denominator will still be set as a snapshot at a point in time that is then adjusted up or down according to incremental changes in inventory, connecting the denominator to funding more directly ties the STS Requirement to an MTW PHA's capacity to house families (regardless of participation in the MTW Demonstration Program).

(1) HCV Denominator of STS Requirement Ratio

To connect the number of families an MTW PHA must serve to the funding it receives in the HCV program, HUD is considering starting with a snapshot of HCV funds received by the MTW PHA in the first calendar year the revised methodology is effective (excluding Administrative Fees and, to the extent feasible, funds provided for specific

[1] For more information about the MTW Demonstration Program and the specific programs of current MTW PHAs, please refer to the MTW Web site at: *http://www.hud.gov/mtw.*

[2] Funds awarded under Sections 8(o), 9(d), and 9(e) of the 1937 Act are eligible for inclusion in the MTW Block Grant, with the exception of funds provided for specific non-MTW HCV sub-programs.

non-MTW HCV subprograms) and dividing that figure by the average agency cost to house a family in the HCV program.

One way to capture the average agency cost to house a family in the HCV program would be to take an annualized payment standard amount based on the MTW PHA's HUD-published Fair Market Rent [3] and subtract an annualized average tenant contribution. This average cost to serve a family in the HCV program would need to be calculated and weighted to account for the different household sizes in each MTW PHA's locality.

(a) How should the average agency cost to house a family in the HCV program for MTW PHAs be established to ensure it: Is unaffected by MTW flexibilities already in place, is accurately weighted by household size, and reflects local market costs and factors?

(b) If payment standards are utilized in determining the average cost to house a family in the HCV program for MTW PHAs, what level of payment standard should be used? [4]

(c) What other factors should HUD consider in establishing the number of families an MTW PHA must serve with HCV funds?

(2) Public Housing Denominator of STS Requirement Ratio

To connect the number of families an MTW PHA must serve to the funding it receives in the public housing program, HUD is considering starting with a snapshot of public housing operating funds received by the MTW PHA in the first calendar year the revised methodology is effective and dividing that figure by the average agency cost to operate a public housing unit.

One way to capture the average agency cost to operate a public housing unit would be to approximate the amount of public housing operating subsidy the MTW PHA would receive per unit under regulation for the MTW PHA's existing inventory of public housing units.

HUD seeks suggestions on other approaches that establish a public housing denominator that encourages the use of existing public housing units and ensures accountability for MTW PHAs that receive more public housing operating subsidy than other MTW and non-MTW PHAs.[5]

(a) How should the average agency cost to operate a public housing unit for MTW PHAs be established to ensure it: Is unaffected by MTW flexibilities already in place, accounts for local market costs and factors, and ensures accountability for MTW PHAs that receive higher levels of public housing operating subsidy?

(b) What other factors should HUD consider in establishing the number of families an MTW PHA must serve with public housing funds?

B. Addressing the Varied Subsidy Levels at Which MTW PHAs Serve Families

The MTW Demonstration Program allows MTW PHAs to design local programs that serve eligible families in unique ways to address local issues and needs. This may result in an MTW PHA creating a rental assistance structure that offers a lower level of subsidy than would be available to non-MTW PHAs in the traditional HCV and public housing programs. For example, an MTW PHA may lower its share of housing assistance, increasing the tenant share, to serve a larger number of families that do not require a high level of housing assistance. Such local programs in the MTW Demonstration Program are often referred to as ''Shallow Subsidies.'' In order to maintain the integrity of the STS Requirement and avoid allowing Shallow Subsidies to artificially inflate the numerator of the ratio, it is necessary to include families served in this manner, but also to count them in a modified way.

HUD is considering approaching Shallow Subsidies by identifying families receiving assistance from the MTW PHA with a rent burden of 50% or greater and counting those families with half a credit in the numerator of a ratio. For example, two households with a rent burden of 50% or greater would count as one full family served in the numerator of the ratio.

(1) How should HUD define and address Shallow Subsidies in the STS Requirement methodology?

(2) If the rent burden of the family receiving assistance is utilized in defining Shallow Subsidies, what level of rent burden should be used? How should the households meeting that level of rent burden be counted in the numerator of the STS Requirement methodology?

(3) If the rent burden of the family receiving assistance is utilized in defining Shallow Subsides, should certain exceptions be made for households paying minimum rent, zero income households, and/or households opting for a unit in an area of opportunity that is above the standard affordability threshold? Are there other households that should be included as exceptions, therefore receiving a full credit despite rent burden?

(4) What other factors should HUD consider in addressing Shallow Subsidies?

C. Accounting for the Development of Affordable Units With the MTW Block Grant That Are Outside of the Public Housing and HCV Programs

The MTW Demonstration Program allows MTW PHAs to use the MTW Block Grant to develop affordable housing units that are outside of the public housing and HCV programs. Such development allows for the creation of important affordable housing resources, but must be balanced with the existing and immediate needs of families waiting for housing assistance. It is therefore necessary to relate the amount of the MTW PHA's MTW Block Grant investment to the number of affordable units developed.

One way to accomplish this is to divide the MTW Block Grant investment in the development of affordable housing units outside the public housing and HCV programs by the HUD-published Total Development Cost (TDC).[6] This number of units would then be credited annually in the numerator of the MTW PHA's STS Requirement calculation for the length of time the units remained affordable. There would be no effect on the denominator.

(1) Does the MTW Block Grant investment amount divided by TDC approach appropriately capture this type of MTW flexibility?

(2) Are there other suggestions for how the development of affordable housing units outside of the public housing and HCV programs can be included in the numerator of the ratio?

D. Setting Reasonable Levels and Categories of Compliance

PIH Notice 2013–02 currently measures compliance of the STS Requirement annually based the fiscal year of the MTW PHA. This annual

[3] Fair Market Rents are calculated by HUD annually and available at: *www.huduser.gov/portal/datasets/fmr.html.*

[4] Non-MTW PHAs may set payment standards between 90–110% of HUD-published Fair Market Rents. For non- MTW PHAs payment standards outside of this basic range must be approved by HUD.

[5] While the public housing operating subsidy is calculated differently for some MTW PHAs, all MTW PHAs receive public housing capital funds in accordance with regulation (24 CFR part 905 or its successor).

[6] Total Development Costs are calculated by HUD annually and available at: *http://portal.hud.gov/hudportal/HUD?src=/program_offices/public_indian_housing/programs/ph/capfund.* HUD would use these and not any locally defined Total Development Costs, in this analysis.

assessment is important in ensuring ongoing monitoring, but as HUD seeks to connect the methodology of the STS Requirement to annual funding received (which is provided based on a calendar year), a transition to determinations being made each calendar year for all MTW PHAs is necessary.

In making annual determinations, PIH Notice 2013–02 established levels of compliance that allow for small or ''nominal'' dips below 100 percent and that recognize a variety of scenarios that may cause an MTW PHA to have lower percentages in a given year or years. With a revised methodology to track the STS Requirement, it is necessary to reexamine the levels and categories of compliance.

(1) How should ''Substantially the Same'' be interpreted under the 1996 MTW Statute?

(2) Should there be a percentage below 100% that is considered fully compliant with the STS Requirement without further justification by the MTW PHA? What should this level be and why?

(3) Should there be a percentage below 100% that is considered fully compliant with the STS Requirement with further justification by the MTW PHA and approval by HUD? What should this level be and why? What justifications should be allowable?

(4) What should be considered ''non-compliance'' under the STS Requirement? What enforcement actions should be taken by HUD and what opportunities for corrective actions should be available to MTW PHAs?

E. Adjusting for Changes to the Capacity of an MTW PHA To Serve Families and Unforeseen Effects

To determine the number of families an MTW PHA must serve under the STS Requirement, HUD envisions annually aggregating the HCV and public housing denominators (discussed in Section II.A(1) and (2) above) and then adjusting that figure up or down according to increases or decreases in an MTW PHA's capacity to serve families (incremental changes to the MTW PHA's inventory). This approach addresses standard inventory changes and is similar to that contained in the existing PIH Notice 2013–02.

In addition to annual adjustments for standard inventory changes, there may also be a need for limited adjustments to account for unforeseen effects caused by changes in markets and costs. As the revised STS methodology will likely rely on variables that include market and program costs, an opportunity to account for significant changes that occur to those costs after the denominator is established may be necessary. This would be separate from any of the standard incremental inventory increases or decreases contained in PIH Notice 2013–02.

(1) The variables that result in standard, annual incremental increases or decreases to an MTW PHA's capacity to serve families are listed in PIH Notice 2013–02. Should HUD consider any changes to this list?

(2) Should there be future adjustments of the denominator to account for cost changes outside the scope of the MTW Demonstration Program? If so should such adjustments be elective for each MTW PHA or applied at fixed points to all MTW PHAs? If applied at fixed points, at what intervals should such adjustments occur? What types and levels of changes to costs should be considered in such potential recalculations?

F. Ensuring Predictability Under the STS Requirement for Current MTW PHAs

If a new methodology for tracking the STS Requirement for current MTW PHAs is put in place, sufficient transition and notification of such a change would be important. With this in mind:

(1) What, if any, transition time should be made available to current MTW PHAs in moving from the existing methodology in PIH Notice 2013–02 to the revised methodology?

(2) What testing and provisional data should be made available to MTW PHAs in moving from the existing methodology in PIH Notice 2013–02 to the revised methodology?

(3) What are other suggestions to ensure predictability for MTW PHAs with regard to the STS Requirement?

G. Other Feedback

In addition to the specific areas above, the Department welcomes any feedback from the public on improvements that could be made to improve monitoring of the STS Requirement.

(1) What are other suggestions to improve monitoring of the STS Requirement not covered in other portions of this Notice?

(2) Should this revised methodology apply to both current MTW PHAs and PHAs that will be added to the MTW Demonstration Program through the MTW Expansion detailed in the 2016 Consolidated Appropriations Act, Public Law 114–113, Sec. 239?

Dated: December 14, 2016.

Jemine A. Bryon,

General Deputy Assistant, Secretary for Public and Indian Housing.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5913–N–37]

60-Day Notice of Proposed Information Collection: HUD Conditional Commitment/Statement of Appraised Value

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date: February 21, 2017.*

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410–5000; telephone 202–402–3400 (this is not a toll-free number) or email at *Colette.Pollard@hud.gov* for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

FOR FURTHER INFORMATION CONTACT: Cheryl Walker, Director, Home Valuation Policy Division, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email at *Cheryl.B.Walker@hud.gov* or telephone 202–708–2121, x6880. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: HUD Conditional Commitment/Direct Endorsement Statement of Appraised Value.

OMB Approval Number: 2502–0494.

Type of Request: Revision.

Form Number: HUD 92800.5b.

Description of the need for the information and proposed use: Lenders must provide to loan applicants either a completed copy of form HUD–92800.5B, or a copy of the completed appraisal report, at or before loan closing. Form HUD 92800.5B serves as the mortgagee's conditional commitment/direct endorsement statement of value of FHA mortgage insurance on the property. The form provides a section for a statement of the property's appraised value and other required FHA disclosures to the homebuyer, including specific conditions that must be met before HUD can endorse a firm commitment for mortgage insurance. HUD uses the information only to determine the eligibility of a property for mortgage insurance.

Respondents (i.e. affected public): Business.

Estimated Number of Respondents: 1800.

Estimated Number of Responses: 928,119.

Frequency of Response: On occasion.

Average Hours per Response: .12.

Total Estimated Burdens: 111,374.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: December 8, 2016.

Janet M. Golrick,

Associate General Deputy Assistant Secretary for Housing-Associate Deputy Federal Housing Commissioner.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5991–N–01]

Section 8 Housing Assistance Payments Program—Annual Adjustment Factors, Fiscal Year 2017

AGENCY: Office of the Assistant Secretary for Policy Development and Research, HUD.

ACTION: Notice of Fiscal Year (FY) 2017 Annual Adjustment Factors (AAFs).

SUMMARY: The United States Housing Act of 1937 requires that certain assistance contracts signed by owners participating in the Department's Section 8 housing assistance payment programs provide annual adjustments to monthly rentals for units covered by the contracts. This notice announces FY 2017 AAFs for adjustment of contract rents on the anniversary of those assistance contracts. The factors are based on a formula using residential rent and utility cost changes from the most recent annual Bureau of Labor Statistics Consumer Price Index (CPI) survey. Beginning with the FY 2014 AAFs and continuing with these FY 2017 AAFs, the Puerto Rico CPI is used in place of the South Region CPI for all areas in Puerto Rico. These factors are applied at the anniversary of Housing Assistance Payment (HAP) contracts for which rents are to be adjusted using the AAF for those calendar months commencing after the effective date of this notice. A separate **Federal Register** Notice that will be published at a later date will identify the inflation factors that will be used to adjust FY 2017 tenant-based rental assistance funding.

DATES: December 20, 2016.

FOR FURTHER INFORMATION: Contact Becky Primeaux, Director, Management and Operations Division, Office of Housing Voucher Programs, Office of Public and Indian Housing, 202–708–1380, for questions relating to the Project-Based Certificate and Moderate Rehabilitation programs (not the Single Room Occupancy program); Ann Oliva, Director, Office of Special Needs Assistance Programs, Office of Community Planning and Development, 202–708–4300, for questions regarding the Single Room Occupancy (SRO) Moderate Rehabilitation program; Catherine Brennan, Director, Office of Housing Assistance and Grant Administration, Office of Housing, 202–708–3000, for questions relating to all other Section 8 programs; and Marie Lihn, Economist, Economic and Market Analysis Division, Office of Policy Development and Research, 202–402–5866, for technical information regarding the development of the schedules for specific areas or the methods used for calculating the AAFs. The mailing address for these individuals is: Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410. Hearing- or speech-impaired persons may contact the Federal Information Relay Service at 800–877–8339 (TTY). (Other than the ''800'' TTY number, the above-listed telephone numbers are not toll free.)

SUPPLEMENTARY INFORMATION: Tables showing AAFs will be available electronically from the HUD data information page at *http://www.huduser.gov/portal/datasets/aaf.html*.

I. Applying AAFs to Various Section 8 Programs

AAFs established by this Notice are used to adjust contract rents for units assisted in certain Section 8 housing assistance payment programs during the initial (*i.e.,* pre-renewal) term of the HAP contract and for all units in the Project-Based Certificate program. There are three categories of Section 8 programs that use the AAFs:

Category 1: The Section 8 New Construction, Substantial Rehabilitation, and Moderate Rehabilitation programs;

Category 2: The Section 8 Loan Management (LM) and Property Disposition (PD) programs; and

Category 3: The Section 8 Project-Based Certificate (PBC) program.

Each Section 8 program category uses the AAFs differently. The specific application of the AAFs is determined by the law, the HAP contract, and appropriate program regulations or requirements.

AAFs are not used in the following cases:

Renewal Rents. With the exception of the Project-Based Certificate program, AAFs are not used to determine renewal rents after expiration of the original Section 8 HAP contract (either for projects where the Section 8 HAP contract is renewed under a restructuring plan adopted under 24 CFR part 401; or renewed without restructuring under 24 CFR part 402). In

general, renewal rents are established in accordance with the statutory provision in the Multifamily Assisted Housing Reform and Affordability Act of 1997 (MAHRA), as amended, under which the HAP is renewed. After renewal, annual rent adjustments will be provided in accordance with MAHRA.

Budget-based Rents. AAFs are not used for budget-based rent adjustments. For projects receiving Section 8 subsidies under the LM program (24 CFR part 886, subpart A) and for projects receiving Section 8 subsidies under the PD program (24 CFR part 886, subpart C), contract rents are adjusted, at HUD's option, either by applying the AAFs or by budget-based adjustments in accordance with 24 CFR 886.112(b) and 24 CFR 886.312(b). Budget-based adjustments are used for most Section 8/202 projects.

Tenant-based Certificate Program. In the past, AAFs were used to adjust the contract rent (including manufactured home space rentals) in both the tenant-based and project-based certificate programs. The tenant-based certificate program has been terminated and all tenancies in the tenant-based certificate program have been converted to the Housing Choice Voucher Program, which does not use AAFs to adjust rents. All tenancies remaining in the project-based certificate program continue to use AAFs to adjust contract rent for outstanding HAP contracts.

Voucher Program. AAFs are not used to adjust rents in the Tenant-Based or the Project-Based Voucher programs.

II. Adjustment Procedures

This section of the notice provides a broad description of procedures for adjusting the contract rent. Technical details and requirements are described in HUD notices H 2002–10 (Section 8 New Construction and Substantial Rehabilitation, Loan Management, and Property Disposition) and PIH 97–57 (Moderate Rehabilitation and Project-Based Certificates).

Because of statutory and structural distinctions among the various Section 8 programs, there are separate rent adjustment procedures for the three program categories:

Category 1: Section 8 New Construction, Substantial Rehabilitation, and Moderate Rehabilitation Programs

In the Section 8 New Construction and Substantial Rehabilitation programs, the published AAF factor is applied to the pre-adjustment contract rent. In the Section 8 Moderate Rehabilitation program (both the regular program and the single room occupancy program) the published AAF is applied to the pre-adjustment base rent.

For Category 1 programs, the Table 1 AAF factor is applied before determining comparability (rent reasonableness). Comparability applies if the pre-adjustment gross rent (pre-adjustment contract rent plus any allowance for tenant-paid utilities) is above the published Fair Market Rent (FMR).

If the comparable rent level (plus any initial difference) is lower than the contract rent as adjusted by application of the Table 1 AAF, the comparable rent level (plus any initial difference) will be the new contract rent. However, the pre-adjustment contract rent will not be decreased by application of comparability.

In all other cases (*i.e.,* unless the contract rent is reduced by comparability):

- Table 1 AAF is used for a unit occupied by a new family since the last annual contract anniversary.
- Table 2 AAF is used for a unit occupied by the same family as at the time of the last annual contract anniversary.

Category 2: Section 8 Loan Management Program (24 CFR Part 886, Subpart A) and Property Disposition Program (24 CFR Part 886, Subpart C)

At this time Category 2 programs are not subject to comparability. Comparability will again apply if HUD establishes regulations for conducting comparability studies under 42 U.S.C. 1437f(c)(2)(C).

The applicable AAF is determined as follows:

- Table 1 AAF is used for a unit occupied by a new family since the last annual contract anniversary.
- Table 2 AAF is used for a unit occupied by the same family as at the time of the last annual contract anniversary.

Category 3: Section 8 Project-Based Certificate Program

The following procedures are used to adjust contract rent for outstanding HAP contracts in the Section 8 PBC program:

- Table 2 AAF is always used. The Table 1 AAF is not used.
- Table 2 AAF is always applied before determining comparability (rent reasonableness).
- Comparability always applies. If the comparable rent level is lower than the rent to owner (contract rent) as adjusted by application of the Table 2 AAF, the comparable rent level will be the new rent to owner.
- The new rent to owner will not be reduced below the contract rent on the effective date of the HAP contract.

III. When to Use Reduced AAFs (From AAF Table 2)

In accordance with Section 8(c)(2)(A) of the United States Housing Act of 1937 (42 U.S.C. 1437f(c)(2)(A)), the AAF is reduced by 0.01:

- For all tenancies assisted in the Section 8 Project-Based Certificate program.
- In other Section 8 programs, for a unit occupied by the same family at the time of the last annual rent adjustment (and where the rent is not reduced by application of comparability (rent reasonableness)).

The law provides that:

> Except for assistance under the certificate program, for any unit occupied by the same family at the time of the last annual rental adjustment, where the assistance contract provides for the adjustment of the maximum monthly rent by applying an annual adjustment factor and where the rent for a unit is otherwise eligible for an adjustment based on the full amount of the factor, 0.01 shall be subtracted from the amount of the factor, except that the factor shall not be reduced to less than 1.0. In the case of assistance under the certificate program, 0.01 shall be subtracted from the amount of the annual adjustment factor (except that the factor shall not be reduced to less than 1.0), and the adjusted rent shall not exceed the rent for a comparable unassisted unit of similar quality, type and age in the market area. 42 U.S.C. 1437f(c)(2)(A).

Legislative history for this statutory provision states that ''the rationale [for lower AAFs for non-turnover units is] that operating costs are less if tenant turnover is less . . .'' (see Department of Veteran Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1995, Hearings Before a Subcommittee of the Committee on Appropriations 103d Cong., 2d Sess. 591 (1994)). The Congressional Record also states the following:

> Because the cost to owners of turnover-related vacancies, maintenance, and marketing are lower for long-term stable tenants, these tenants are typically charged less than recent movers in the unassisted market. Since HUD pays the full amount of any rent increases for assisted tenants in section 8 projects and under the Certificate program, HUD should expect to benefit from this 'tenure discount.' Turnover is lower in assisted properties than in the unassisted market, so the effect of the current inconsistency with market-based rent increases is exacerbated. (140 Cong. Rec. 8659, 8693 (1994)).

To implement the law, HUD publishes two separate AAF Tables, Table 1 and Table 2. The difference between Table 1 and Table 2 is that each AAF in Table 2 is 0.01 less than the corresponding AAF in Table 1. Where

an AAF in Table 1 would otherwise be less than 1.0, it is set at 1.0, as required by statute; the corresponding AAF in Table 2 will also be set at 1.0, as required by statute.

IV. How to Find the AAF

AAF Table 1 and Table 2 are posted on the HUD User Web site at *http://www.huduser.gov/portal/datasets/aaf.html.* There are two columns in each AAF table. The first column is used to adjust contract rent for rental units where the highest cost utility is included in the contract rent, *i.e.,* where the owner pays for the highest cost utility. The second column is used where the highest cost utility is not included in the contract rent, *i.e.,* where the tenant pays for the highest cost utility.

The applicable AAF is selected as follows:

- Determine whether Table 1 or Table 2 is applicable. In Table 1 or Table 2, locate the AAF for the geographic area where the contract unit is located.
- Determine whether the highest cost utility is or is not included in contract rent for the contract unit.
- If highest cost utility is included, select the AAF from the column for ''Highest Cost Utility Included.'' If highest cost utility is not included, select the AAF from the column for ''Highest Cost Utility Excluded.''

V. Methodology

AAFs are rent inflation factors. Two types of rent inflation factors are calculated for AAFs: Gross rent factors and shelter rent factors. The gross rent factor accounts for inflation in the cost of both the rent of the residence and the utilities used by the unit; the shelter rent factor accounts for the inflation in the rent of the residence, but does not reflect any change in the cost of utilities. The gross rent inflation factor is designated as ''Highest Cost Utility Included'' and the shelter rent inflation factor is designated as ''Highest Cost Utility Excluded.''

AAFs are calculated using CPI data on ''rent of primary residence'' and ''fuels and utilities.'' [1] The CPI inflation index for rent of primary residence measures the inflation of all surveyed units regardless of whether utilities are included in the rent of the unit or not. In other words, it measures the inflation of the ''contract rent'' which includes units with all utilities included in the rent, units with some utilities included in the rent, and units with no utilities included in the rent. In producing a gross rent inflation factor and a shelter rent inflation factor, HUD decomposes the contract rent CPI inflation factor into parts to represent the gross rent change and the shelter rent change. This is done by applying data from the Consumer Expenditure Survey (CEX) on the percentage of renters who pay for heat (a proxy for the percentage of renters who pay shelter rent) and also American Community Survey (ACS) data on the ratio of utilities to rents. For Puerto Rico, the Puerto Rico Community Survey (PRCS) is used to determine the ratio of utilities to rents, resulting in different AAFs for some metropolitan areas in Puerto Rico.[2]

Survey Data Used to Produce AAFs

The rent and fuel and utilities inflation factors for large metropolitan areas and Census regions are based on changes in the rent of primary residence and fuels and utilities CPI indices from 2014 to 2015. The CEX data used to decompose the contract rent inflation factor into gross rent and shelter rent inflation factors come from a special tabulation of 2015 CEX survey data produced for HUD for the purpose of computing AAFs. The utility-to-rent ratio used to produce AAFs comes from 2014 ACS median rent and utility costs.

Geographic Areas

AAFs are produced for all Class A CPI cities (CPI cities with a population of 1.5 million or more) and for the four Census Regions. They are applied to core-based statistical areas (CBSAs), as defined by the Office of Management and Budget (OMB), according to how much of the CBSA is covered by the CPI city-survey. If more than 75 percent of the CBSA is covered by the CPI city-survey, the AAF that is based on that CPI survey is applied to the whole CBSA and to any HUD-defined metropolitan area, called the ''HUD Metro FMR Area'' (HMFA), within that CBSA. If the CBSA is not covered by a CPI city-survey, the CBSA uses the relevant regional CPI factor. All non-metropolitan counties use regional CPI factors. For areas assigned the Census Region CPI factor, both metropolitan and non-metropolitan areas receive the same factor.

Each metropolitan area that uses a local CPI update factor is listed alphabetically in the tables and each HMFA is listed alphabetically within its respective CBSA. Each AAF applies to a specific geographic area and to units of all bedroom sizes. AAFs are provided:

- For separate metropolitan areas, including HMFAs and counties that are currently designated as non-metropolitan, but are part of the metropolitan area defined in the local CPI survey.
- For the four Census Regions (to be used for those metropolitan and non-metropolitan areas that are not covered by a CPI city-survey).

AAFs use the same OMB metropolitan area definitions, as revised by HUD, that are used for the FY 2017 FMRs.

Area Definitions

To make certain that they are using the correct AAFs, users should refer to the Area Definitions Table section at *http://www.huduser.gov/portal/datasets/aaf.html.* The Area Definitions Table lists CPI areas in alphabetical order by state, and the associated Census region is shown next to each state name. Areas whose AAFs are determined by local CPI surveys are listed first. All metropolitan areas with local CPI surveys have separate AAF schedules and are shown with their corresponding county definitions or as metropolitan counties. In the six New England states, the listings are for counties or parts of counties as defined by towns or cities. The remaining counties use the CPI for the Census Region and are not separately listed in the Area Definitions Table at *http://www.huduser.gov/portal/datasets/aaf.html.*

Puerto Rico uses its own AAFs calculated from the Puerto Rico CPI as adjusted by the PRCS, the Virgin Islands uses the South Region AAFs and the Pacific Islands uses the West Region AAFs. All areas in Hawaii use the AAFs listed next to ''Hawaii'' in the Tables which are based on the CPI survey for the Honolulu metropolitan area. The Pacific Islands use the West Region AAFs.

Dated: December 12, 2016.

Katherine M. O'Regan,

Assistant Secretary for Policy Development and Research.
