FEDERAL REGISTER

Vol. 81 Friday,
No. 251 December 30, 2016

Book 1 of 2 Books

Pages 96329–96702

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Executive Order 13755 of December 23, 2016

Providing an Order of Succession Within the Department of Labor

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the Federal Vacancies Reform Act of 1998, as amended, 5 U.S.C. 3345 *et seq.* (the ''Act''), it is hereby ordered that:

Section 1. *Order of Succession.* Subject to the provisions of section 2 of this order, and to the limitations set forth in the Act, the following officials of the Department of Labor, in the order listed, shall act as and perform the functions and duties of the office of Secretary of Labor (Secretary) during any period in which both the Secretary and the Deputy Secretary of Labor have died, resigned, or otherwise become unable to perform the functions and duties of the office of Secretary:

(a) Solicitor of Labor;

(b) Assistant Secretary for Administration and Management;

(c) Assistant Secretary for Policy;

(d) Assistant Secretary for Congressional and Intergovernmental Affairs;

(e) Assistant Secretary for Employment and Training;

(f) Assistant Secretary for Employee Benefits Security;

(g) Assistant Secretary for Occupational Safety and Health;

(h) Assistant Secretary for Mine Safety and Health;

(i) Assistant Secretary for Public Affairs;

(j) Chief Financial Officer;

(k) Administrator, Wage and Hour Division;

(l) Assistant Secretary for Veterans' Employment and Training;

(m) Assistant Secretary for Disability Employment Policy;

(n) First assistants, pursuant to the Act, to the officials in the order listed in (a) and (c)–(h);

(o) Regional Solicitor—Dallas; and

(p) Regional Administrator for the Office of the Assistant Secretary for Administration and Management—Region VI/Dallas.

Sec. 2. *Exceptions.* (a) No individual who is serving in an office listed in section 1(a)–(p) of this order in an acting capacity shall, by virtue of so serving, act as Secretary pursuant to this order.

(b) No individual listed in section 1(a)–(p) of this order shall act as Secretary unless that individual is otherwise eligible to so serve under the Act.

(c) Notwithstanding the provisions of this order, the President retains discretion, to the extent permitted by law, to depart from this order in designating an acting Secretary.

Sec. 3. *Revocation.* Executive Order 13245 of December 18, 2001 (Providing An Order of Succession Within the Department of Labor), is hereby revoked.

Sec. 4. *Judicial Review.* This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Memorandum of December 23, 2016

Designation of Officers of the National Archives and Records Administration to Act as Archivist of the United States

Memorandum for the Archivist of the United States

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the Federal Vacancies Reform Act of 1998, as amended, 5 U.S.C. 3345 *et seq.* (the ''Act''), it is hereby ordered that:

Section 1. *Order of Succession.* Subject to the provisions of section 2 of this memorandum, and the limitations set forth in the Act, the following officials of the National Archives and Records Administration, in the order listed, shall act as and perform the functions and duties of the office of the Archivist of the United States (Archivist), during any period in which both the Archivist and the Deputy Archivist have died, resigned, or otherwise become unable to perform the functions and duties of the office of the Archivist:

(a) Chief Operating Officer;

(b) Chief of Management and Administration;

(c) Executive for Agency Services;

(d) Director, National Personnel Records Center; and

(e) Director, George Bush Presidential Library and Museum.

Sec. 2. *Exceptions.* (a) No individual who is serving in an office listed in section 1(a)–(e) of this memorandum in an acting capacity shall, by virtue of so serving, act as Archivist pursuant to this memorandum.

(b) No individual listed in section 1(a)–(e) of this memorandum shall act as Archivist unless that individual is otherwise eligible to so serve under the Federal Vacancies Reform Act of 1998, as amended.

(c) Notwithstanding the provisions of this memorandum, the President retains discretion, to the extent permitted by law, to depart from this memorandum in designating an acting Archivist.

Sec. 3. *Prior Memorandum Revoked.* The Memorandum for the Archivist of the United States of May 21, 2012 (Designation of Officers of the National Archives and Records Administration) is hereby revoked.

Sec. 4. *Judicial Review.* This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Sec. 5. *Publication.* You are authorized and directed to publish this memorandum in the *Federal Register*.

Memorandum of December 23, 2016

Providing an Order of Succession Within the Federal Mediation and Conciliation Service

Memorandum for the Director of the Federal Mediation and Conciliation Service

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the Federal Vacancies Reform Act of 1998, 5 U.S.C. 3345 *et seq.* (the ''Act''), it is hereby ordered that:

Section 1. *Order of Succession.* Subject to the provisions of section 2 of this memorandum, and to the limitations set forth in the Act, the following officials of the Federal Mediation and Conciliation Service, in the order listed, shall act as and perform the functions and duties of the Office of the Director of the Federal Mediation and Conciliation Service (Director), during any period in which the Director has died, resigned, or otherwise become unable to perform the functions and duties of the Office of Director:

(a) Deputy Director, Mediation Services and Field Operations;

(b) Deputy Director; and

(c) Most senior Regional Director (''most senior'' being defined as holding the longest tenure in the position of Regional Director).

Sec. 2. *Exceptions.* (a) No individual who is serving in an office listed in section 1 of this memorandum in an acting capacity, by virtue of so serving, shall act as Director pursuant to this memorandum.

(b) No individual listed in section 1 of this memorandum shall act as Director unless that individual is otherwise eligible to so serve under the Act.

(c) Notwithstanding the provisions of this memorandum, the President retains discretion, to the extent permitted by law, to depart from this memorandum in designating an acting Director.

Sec. 3. *General Provisions.* (a) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Vol. 81, No. 251

Friday, December 30, 2016

DEPARTMENT OF AGRICULTURE

Grain Inspection, Packers and Stockyards Administration

7 CFR Part 800

Fees for Official Inspection and Official Weighing Services Under the United States Grain Standards Act (USGSA)

AGENCY: Grain Inspection, Packers and Stockyards Administration, USDA.

ACTION: Final rule.

SUMMARY: The Department of Agriculture (USDA) Grain Inspection, Packers and Stockyards Administration (GIPSA) is announcing the fee schedule for official inspection and weighing services performed under the United States Grain Standards Act (USGSA), as amended, in order to comply with amendments to the USGSA made by the Agriculture Reauthorizations Act of 2015. The USGSA provides GIPSA with the authority to charge and collect reasonable fees to cover the costs of performing official services and the costs associated with managing the program. This action publishes the annual review of fees in Schedule A and the resulting fees that will be effective January 1, 2017.

DATES: Effective January 1, 2017.

FOR FURTHER INFORMATION CONTACT: Denise Ruggles, USDA–GIPSA–FGIS–ODA; Telephone: (816) 659–8406; Email: *Denise.M.Ruggles@usda.gov.*

SUPPLEMENTARY INFORMATION: USGSA authorizes the Secretary of Agriculture to provide official grain inspection and weighing services and to charge and collect reasonable fees for performing these services. The fees collected are to cover, as nearly as practicable, GIPSA's costs for performing these services, including associated administrative and supervisory costs. The fees are in the regulations at 7 CFR 800.71.

On July 29, 2016, GIPSA published in the **Federal Register** (81 FR 49855) a final rule amending 7 CFR 800.71 in accordance with the Reauthorizations Act of 2015, which required GIPSA to calculate fees assessed on tonnage based on the 5-year rolling average of export tonnage volume (§ 800.71) and adjust all Schedule A fees annually to maintain a 3 to 6 month operating reserve for inspection and supervision services (§ 800.71).

GIPSA has conducted the annual review of the fees and operating reserve for the purposes of the annual adjustment of the fees. Accordingly, GIPSA is setting new tonnage fees which will take effect on January 1, 2017, for all field offices. GIPSA has determined that a 5 percent reduction in all Schedule A fees, including the aforementioned tonnage fees, is necessary to attain the goal of 4½ months of operating reserve.

Fee Calculations

The regulations require GIPSA annually review the national tonnage fees, local tonnage fees, and fees for service. After calculating the tonnage fees according to the regulatory formula in section 800.71(b)(1), GIPSA then reviews the amount of funds in the operating reserve at the end of the fiscal year (FY2016 in this case) to ensure that it has 4½ months of operating expenses as required by section 800.71(b)(2) of the regulations. If the operating reserve has more, or less than 4½ months of operating expenses, then GIPSA must adjust all Schedule A fees. For each $1,000,000, rounded down, that the operating reserve varies from the target of 4½ months, GIPSA will adjust all Schedule A fees by 2 percent. If the operating reserve exceeds the target, all Schedule A fees will be reduced. If the operating reserve does not meet target, all Schedule A fees will be increased. The maximum annual increase or decrease in fees is 5 percent (§ 800.71(b)(2)(i)–(ii)).

(a) Tonnage fees for the 5-year rolling average tonnage were calculated on the previous 5 fiscal years 2012, 2013, 2014, 2015, and 2016. Tonnage fees consist of the national tonnage fee and local tonnage fee and are calculated and rounded to the nearest $0.001 per metric ton. The tonnage fees are calculated as following:

(1) *National tonnage fee.* The national tonnage fee is the national program administrative costs for the previous fiscal year divided by the average yearly tons of export grain officially inspected and/or weighed by delegated States and designated agencies, excluding land carrier shipments to Canada and Mexico, and outbound grain officially inspected and/or weighed by FGIS during the previous 5 fiscal years.

$$National\ Tonnage\ Fee = \frac{FY2016\ National\ Administrative\ Costs}{5\ Year\ Rolling\ Average\ Export\ Tons}$$

Fiscal year	Metric tons
2012*	95,290,621
2013*	81,207,695
2014	117,560,767
2015	118,758,937
2016	122,330,979
5-year Rolling Average	107,029,800

*To provide uniformity in the 5-year Rolling Average calculation, fiscal years 2012 and 2013 include tons of export grain officially inspected and/or weighed by delegated States and designated agencies prior to the implementation of the fee assessment in the **Federal Register** (78 FR 22151), effective May 1, 2013.

The national program administrative costs for fiscal year 2016 were $7,214,466. The fiscal year 2017 national tonnage fee, prior to the operating reserve review, is calculated to be at $0.067 per metric ton.

(2) *Local tonnage fee.* The local tonnage fee is the field office administrative costs for the previous fiscal year divided by the average yearly tons of outbound grain officially

inspected and/or weighed by the field office during the previous 5 fiscal years.

$$Local\ Tonnage = \frac{FY2016\ Field\ Office\ Administrative\ Costs}{5\ Year\ Rolling\ Average\ Export\ Tons\ (Local)}$$

The field offices fiscal year tons for the previous 5 fiscal years and calculated 5-year rolling average are as follows:

Field office	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016	5-year rolling average
New Orleans	49,507,254	42,399,760	62,862,914	65,244,517	66,077,535	57,218,396
League City	7,638,261	10,418,686	12,623,510	12,474,343	12,581,236	11,147,207
Portland	5,739,021	3,953,500	6,065,934	4,111,533	4,645,754	4,903,148
Toledo	1,276,334	1,329,718	1,802,339	2,484,604	2,030,506	1,784,700

The local field office administrative costs for fiscal year 2016 and the fiscal year 2017 calculated local field office tonnage fee, prior to the operating reserve review, are as follows:

Field office	FY 2016 local administrative costs	Calculated FY 2017 local tonnage fee
New Orleans	$2,179,027	$0.038
League City	1,380,064	0.124
Portland	417,349	0.085
Toledo	426,863	0.239

(3) *Operating reserve.* In order to maintain an operating reserve not less than 3 and not more than 6 months, GIPSA reviewed the value of the operating reserve at the end of FY2016 to ensure that an operating reserve of 4½ months is maintained.

The program operating reserve at the end of fiscal year 2016 was $18,863,026 with a monthly operating expense of $3,295,937. The target of 4.5 months of operating reserve is $14,831,717 therefore the operating reserve is greater than 4.5 times the monthly operating expenses by $4,031,311. For each $1,000,000, rounded down, above the target level, all Schedule A fees must be reduced by 2 percent. The operating reserve is $4 million above the target level resulting in a calculated 8 percent reduction. As required by 800.71(b)(2)(ii), the reduction is limited to 5 percent. Therefore, GIPSA is reducing all Schedule A fees for service in Schedule A in paragraph (a)(1) by the maximum 5 percent. All Schedule A fees for service are rounded to the nearest $0.10, except for fees based on tonnage or hundredweight.

List of Subjects in 7 CFR Part 800

Administrative practice and procedure, Exports, Grains, Reporting and recordkeeping requirements.

For the reasons set out in the preamble, GIPSA amends 7 CFR part 800 as follows:

PART 800—GENERAL REGULATIONS

■ 1. The authority citation for part 800 continues to read as follows:

Authority: 7 U.S.C. 71–87k.

■ 2. Section 800.71(a)(1) is amended by revising Tables 1, 2, and 3 of Schedule A to read as follows:

§ 800.71 Fees assessed by the Service.

(a) * * *

(1) * * *

TABLE 1 OF SCHEDULE A—FEES FOR OFFICIAL SERVICES PERFORMED AT AN APPLICANT'S FACILITY IN AN ONSITE FGIS LABORATORY [1]

	Monday to Friday (6 a.m. to 6 p.m.)	Monday to Friday (6 p.m. to 6 a.m.)	Saturday, Sunday, and overtime [2]	Holidays
(i) Inspection and Weighing Services Hourly Rates (per service representative):				
1-year contract ($ per hour)	$38.20	$40.00	$45.80	$67.80
Noncontract ($ per hour)	67.80	67.80	67.80	67.80
(ii) Additional Tests (cost per test, assessed in addition to the hourly rate): [3]				
(A) Aflatoxin (rapid test kit method)				10.80
(B) Aflatoxin (rapid test kit method-applicant provides kit) [4]				8.90
(C) All other Mycotoxins (rapid test kit method)				19.80
(D) All other Mycotoxins (rapid test kit method-applicant provides kit) [4]				17.90

TABLE 1 OF SCHEDULE A—FEES FOR OFFICIAL SERVICES PERFORMED AT AN APPLICANT'S FACILITY IN AN ONSITE FGIS LABORATORY [1]—Continued

	Monday to Friday (6 a.m. to 6 p.m.)	Monday to Friday (6 p.m. to 6 a.m.)	Saturday, Sunday, and overtime [2]	Holidays
(E) NIR or NMR Analysis (protein, oil, starch, etc.)				2.60
(F) Waxy corn (per test)				2.60
(G) Fees for other tests not listed above will be based on the lowest noncontract hourly rate				
(H) Other services				
(*1*) Class Y Weighing (per carrier):				
(*i*) Truck/container				0.70
(*ii*) Railcar				1.60
(*iii*) Barge				2.90
(iii) Tonnage Fee (assessed in addition to all other applicable fees, only one tonnage fee will be assessed when inspection and weighing services are performed on the same carrier):				
(A) All outbound carriers serviced by the specific Field Office (per-metric ton):				
(*1*) League City				0.182
(*2*) New Orleans				0.100
(*3*) Portland				0.145
(*4*) Toledo				0.291
(*5*) Delegated States [5]				0.064
(*6*) Designated Agencies [5]				0.064

[1] Fees apply to original inspection and weighing, re-inspection, and appeal inspection service and include, but are not limited to, sampling, grading, weighing, prior to loading stowage examinations, and certifying results performed within 25 miles of an employee's assigned duty station. Travel and related expenses will be charged for service outside 25 miles as found in § 800.72(a).

[2] Overtime rates will be assessed for all hours in excess of 8 consecutive hours that result from an applicant scheduling or requesting service beyond 8 hours, or if requests for additional shifts exceed existing staffing.

[3] Appeal and re-inspection services will be assessed the same fee as the original inspection service.

[4] Applicant must provide the test kit, instrument hardware, calibration control, and all supplies required by the test kit manufacturer.

[5] Tonnage fee is assessed on export grain inspected and/or weighed, excluding land carrier shipments to Canada and Mexico.

TABLE 2 OF SCHEDULE A—SERVICES PERFORMED AT OTHER THAN AN APPLICANT'S FACILITY IN AN FGIS LABORATORY [1 2]

(i) Original Inspection and Weighing (Class X) Services:	
(A) Sampling only (use hourly rates from Table 1 of this section):	
(B) Stationary lots (sampling, grade/factor, & check loading):	
(*1*) Truck/trailer/container (per carrier)	$21.40
(*2*) Railcar (per carrier)	31.60
(*3*) Barge (per carrier)	198.60
(*4*) Sacked grain (per hour per service representative plus an administrative fee per hundredweight) (CWT)	0.08
(C) Lots sampled online during loading (sampling charge under (1)(i) of this table, plus):	
(*1*) Truck/trailer container (per carrier)	12.80
(*2*) Railcar (per carrier)	26.70
(*3*) Barge (per carrier)	135.90
(*4*) Sacked grain (per hour per service representative plus an administrative fee per hundredweight) (CWT)	0.08
(D) Other services:	
(*1*) Submitted sample (per sample—grade and factor)	12.80
(*2*) Warehouseman inspection (per sample)	22.40
(*3*) Factor only (per factor—maximum 2 factors)	6.30
(*4*) Check loading/condition examination (use hourly rates from Table 1 of this section, plus an administrative fee per hundredweight if not previously assessed) (CWT)	0.08
(*5*) Re-inspection (grade and factor only. Sampling service additional, item (1)(i) of this table)	13.90
(*6*) Class X Weighing (per hour per service representative)	67.80
(E) Additional tests (excludes sampling):	
(*1*) Aflatoxin (rapid test kit method)	31.90
(*2*) Aflatoxin (rapid test kit method—applicant provides kit) [3]	30.00
(*3*) All other Mycotoxins (rapid test kit method)	41.00
(*4*) All other Mycotoxins (rapid test kit method—applicant provides kit) [3]	39.10
(*5*) NIR or NMR Analysis (protein, oil, starch, etc.)	10.80
(*6*) Waxy corn (per test)	10.80
(*7*) Canola (per test-00 dip test)	10.80
(*8*) Pesticide Residue Testing: [4]	
(*i*) Routine Compounds (per sample)	228.90
(*ii*) Special Compounds (Subject to availability)	122.00
(*9*) Fees for other tests not listed above will be based on the lowest noncontract hourly rate from Table 1 of this section	
(ii) Appeal inspection and review of weighing service: [5]	
(A) Board Appeals and Appeals (grade and factor)	86.90
(*1*) Factor only (per factor—max 2 factors)	45.80
(*2*) Sampling service for Appeals additional (hourly rates from Table 1 of this section)	
(B) Additional tests (assessed in addition to all other applicable tests):	
(*1*) Aflatoxin (rapid test kit method)	31.90
(*2*) Aflatoxin (rapid test kit method—applicant provides kit) [3]	29.80

TABLE 2 OF SCHEDULE A—SERVICES PERFORMED AT OTHER THAN AN APPLICANT'S FACILITY IN AN FGIS LABORATORY [1 2]—Continued

(*3*) All other Mycotoxins (rapid test kit method)	50.00
(*4*) All other Mycotoxins (rapid test kit method—applicant provides kit) [3]	48.10
(*5*) NIR or NMR Analysis (protein, oil, starch, etc.)	18.80
(*6*) Sunflower oil (per test)	18.80
(*7*) Mycotoxin (per test-HPLC)	149.40
(*8*) Pesticide Residue Testing: [4]	
(*i*) Routine Compounds (per sample)	228.90
(*ii*) Special Compounds (Subject to availability)	122.00
(*9*) Fees for other tests not listed above will be based on the lowest noncontract hourly rate from Table 1 of this section.	
(C) Review of weighing (per hour per service representative)	87.70
(iii) Stowage examination (service-on-request): [4]	
(A) Ship (per stowage space) (minimum $271.00 per ship)	54.20
(B) Subsequent ship examinations (same as original) (minimum $162.60 per ship)	54.20
(C) Barge (per examination)	43.50
(D) All other carriers (per examination)	17.10

[1] Fees apply to original inspection and weighing, re-inspection, and appeal inspection service and include, but are not limited to, sampling, grading, weighing, prior to loading stowage examinations, and certifying results performed within 25 miles of an employee's assigned duty station. Travel and related expenses will be charged for service outside 25 miles as found in § 800.72(a).

[2] An additional charge will be assessed when the revenue from the services in Schedule A, Table 2, does not cover what would have been collected at the applicable hourly rate as provided in § 800.72(b).

[3] Applicant must provide the test kit, instrument hardware, calibration control, and all supplies required by the test kit manufacturer.

[4] If performed outside of normal business, 1½ times the applicable unit fee will be charged.

[5] If, at the request of the Service, a file sample is located and forwarded by the Agency, the Agency may, upon request, be reimbursed at the rate of $3.50 per sample by the Service.

TABLE 3 OF SCHEDULE A—MISCELLANEOUS SERVICES [1]

(i) Grain grading seminars (per hour per service representative) [2]	$67.80.
(ii) Certification of diverter-type mechanical samplers (per hour per service representative) [2]	67.80.
(iii) Special weighing services (per hour per service representative): [2]	
(A) Scale testing and certification	88.30.
(B) Scale testing and certification of railroad track scales	88.30.
(C) Evaluation of weighing and material handling systems	88.30.
(D) NTEP Prototype evaluation (other than Railroad Track Scales)	88.30.
(E) NTEP Prototype evaluation of Railroad Track Scale	88.30.
(F) Use of GIPSA railroad track scale test equipment per facility for each requested service. (Track scales tested under the Association of American Railroads agreement are exempt.)	529.40.
(G) Mass standards calibration and re-verification	88.30.
(H) Special projects	88.30.
(iv) Foreign travel (hourly fee) [3]	88.30.
(v) Online customized data service:	
(A) One data file per week for 1 year	529.40.
(B) One data file per month for 1 year	317.70.
(v) Samples provided to interested parties (per sample)	3.30.
(vi) Divided-lot certificates (per certificate)	2.10.
(vii) Extra copies of certificates (per certificate)	2.10.
(viii) Faxing (per page)	2.10.
(ix) Special mailing	Actual Cost
(x) Preparing certificates onsite or during other than normal business hours (use hourly rates from Table 1)	

[1] Any requested service that is not listed will be performed at $67.80 per hour.

[2] Regular business hours—Monday through Friday—service provided at other than regular business hours will be charged at 11/2 times the applicable hourly rate. (See the definition of "business day" in § 800.0(b))

[3] Foreign travel charged hourly fee of $88.30 plus travel, per diem, and related expenditures.

BILLING CODE 3410–KD–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 983

[Doc. No. AMS–SC–16–0076; SC16–983–2 FIR]

Pistachios Grown in California, Arizona, and New Mexico; Decreased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Affirmation of interim rule as final rule.

SUMMARY: The Department of Agriculture (USDA) is adopting, as a final rule, without change, an interim rule that implemented a recommendation from the Administrative Committee for Pistachios (Committee) to decrease the assessment rate established for pistachios grown in California, Arizona, and New Mexico for the 2016–2017 and subsequent production years from

$0.0035 to $0.0010 per pound of assessed weight pistachios handled under the marketing order (order). The Committee locally administers the order and is comprised of producers and handlers of pistachios operating within the area of production. The interim rule was necessary to allow the Committee to reduce its financial reserve while still providing adequate funding to meet program expenses.

DATES: Effective December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Peter Sommers or Jeffrey Smutny, California Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (559) 487–5901, Fax: (559) 487–5906, or Email: *PeterR.Sommers@ams.usda.gov* or *Jeffrey.Smutny@ams.usda.gov.*

Small businesses may obtain information on complying with this and other marketing order regulations by viewing a guide at the following Web site: *http://www.ams.usda.gov/rules-regulations/moa/small-businesses;* or by contacting Richard Lower, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement and Order No. 983, both as amended (7 CFR part 983), regulating the handling of pistachios grown in California, Arizona, and New Mexico, hereinafter referred to as the ''order.'' The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.''

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

Under the order, pistachio handlers in California, Arizona, and New Mexico are subject to assessments, which provide funds to administer the order. Assessment rates issued under the order are intended to be applicable to all assessable pistachios grown in the production area for the entire production year, and continue indefinitely until amended, suspended, or terminated. The Committee's production year begins on September 1, and ends on August 31.

In an interim rule published in the **Federal Register** on September 16, 2016, and effective on September 19, 2016, (81 FR 63679, Doc. No. AMS–SC–16–0076, SC16–983–2 IR), § 983.253 was amended by decreasing the assessment rate established for pistachios grown in the production area for the 2016–2017 and subsequent production years from $0.0035 to $0.0010 per pound. The decrease in the per pound assessment rate allows the Committee to maintain its financial reserve while still providing adequate funding to meet program expenses.

Final Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 1,152 producers of pistachios in the production area and 19 handlers subject to regulation under the marketing order. The Small Business Administration defines small agricultural producers as those having annual receipts less than $750,000, and small agricultural service firms as those whose annual receipts are less than $7,500,000. (13 CFR 121.201)

The National Agricultural Statistics Service (NASS) 2012 data on pistachio farm size indicates that there were 1,305 pistachio farms, of which 1,125 were less than 250 acres. That is, 87 percent were too small to have annual receipts of $750,000. NASS 2015 annual production data indicates that the per-acre production of pistachios was 1,160 pounds. At an average value of $2.54 per pound, each acre of pistachios could return $2,948.40. In order for a producer to have $750,000 in annual receipts, the producer would have to have at least 255.3 acres. Thus, the majority of handlers and producers in the production area may be classified as small entities.

Based on Committee data, it is estimated that about 53 percent of the handlers annually ship less than $7,500,000 worth of pistachios. Nine of the 19 regulated handlers (47 percent) received enough pistachios at an average price of $3.00 pound to be considered large handlers, leaving the percentage of small handlers at 53 percent.

This rule continues in effect the action that decreased the assessment rate established for the Committee and collected from handlers for the 2016–17 and subsequent production years from $0.0035 to $0.0010 per pound of pistachios handled. The Committee unanimously recommended 2016–17 expenditures of $922,500 and an assessment rate of $0.0010 per pound of pistachios, which is $0.0025 lower than the 2015–16 rate. The quantity of assessable pistachios for the 2016–17 production year is estimated at 750 million pounds. Thus, the $0.0010 rate should provide $750,000 in assessment income. Income derived from handler's assessments, along with interest and funds from the Committee's authorized reserve, should be adequate to cover expenses for the 2016–17 production year.

This rule continues in effect the action that decreased the assessment obligation imposed on handlers. Assessments are applied uniformly on all handlers, and some of the costs may be passed on to producers. However, decreasing the assessment rate reduces the burden on handlers, and may reduce the burden on producers.

In addition, the Committee's meeting was widely publicized throughout the pistachio area of production and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the July 12, 2016, meeting was a public meeting and all entities, both large and small, were able to express views on this issue.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0278. No changes in those requirements as a result of this action are necessary. Should any changes become necessary, they would be submitted to OMB for approval.

This action imposes no additional reporting or recordkeeping requirements on either small or large pistachio handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

USDA has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule.

Comments on the interim rule were required to be received on or before November 15, 2016. No comments were received. Therefore, for reasons given in the interim rule, we are adopting the interim rule as a final rule, without change.

To view the interim rule, go to: *https://www.regulations.gov/docket?D=AMS-SC-16-0076.*

This action also affirms information contained in the interim rule concerning Executive Orders 12866, 12988, 13175, and 13563; the Paperwork Reduction Act (44 U.S.C. Chapter 35); and the E-Gov Act (44 U.S.C. 101).

After consideration of all relevant material presented, it is found that finalizing the interim rule, without change, as published in the **Federal Register** (81 FR 63679, September 16, 2016) will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 983

Marketing agreements, Pistachios, Reporting and recordkeeping requirements.

PART 983—PISTACHIOS GROWN IN CALIFORNIA, ARIZONA, AND NEW MEXICO

■ Accordingly, the interim rule amending 7 CFR part 983, which was published at 81 FR 63679 on September 16, 2016, is adopted as a final rule, without change.

Dated: December 23, 2016.

Elanor Starmer,

Administrator, Agricultural Marketing Service.

BILLING CODE P

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 2 and 9

[NRC–2016–0171]

RIN 3150–AJ84

Update To Incorporate FOIA Improvement Act of 2016 Requirements

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is amending its regulations to reflect changes to the Freedom of Information Act (FOIA). The FOIA Improvement Act of 2016 requires the NRC to amend its FOIA regulations to update procedures for requesting information from the NRC and procedures that the NRC must follow in responding to FOIA requests.

DATES: This final rule is effective on January 30, 2017.

ADDRESSES: Please refer to Docket ID NRC–2016–0171 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2016–0171. Address questions about NRC dockets to Carol Gallagher, telephone: 301–415–3463, email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in the **SUPPLEMENTARY INFORMATION** section.
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Stephanie Blaney, telephone: 301–415–6975, email: *Stephanie.Blaney@nrc.gov;* or Nina Argent, telephone: 301–415–5295, email: *Nina.Argent@nrc.gov.* Both are staff of the Office of the Chief Information Officer of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background

The FOIA was enacted to give the public a right to access records held by the executive branch that, although not classified, were not otherwise available to them. Since its enactment in 1966, the FOIA has been amended on a number of occasions to adapt to the times and changing priorities.

On June 30, 2016, the FOIA Improvement Act of 2016, Public Law 114–185, 130 Stat. 538 (the Act) was enacted. The Act specifically requires all agencies to review and update their FOIA regulations in accordance with its provisions. The Act addresses a range of procedural issues, including requiring that agencies establish a minimum of 90 days for requesters to file an administrative appeal and that they provide dispute resolution services at various times throughout the FOIA process. The Act also amends Exemption 5, codifies the foreseeable harm standard, and adds two new elements to agency Annual FOIA Reports.

The NRC has identified the areas where the revisions are necessary in order to comply with the Act and is amending parts 2 and 9 of title 10 of the *Code of Federal Regulations* (10 CFR) accordingly.

II. Discussion of Amendments by Section

The following paragraphs describe the specific changes adopted by this rulemaking.

Section 2.390 Public Inspections, Exemptions, Requests for Withholding

This final rule revises paragraph (a)(5) to be identical to 10 CFR 9.17(a)(5), which this final rule is also revising to include new criteria for FOIA Exemption 5. The Act amended Exemption 5 of the FOIA to provide that the deliberative process privilege does not apply to records that are 25 years or older before the date on which they are requested.

Section 9.17 Agency Records Exempt From Public Disclosure

This final rule revises paragraph (a)(5) to include new criteria for FOIA Exemption 5. The Act amended Exemption 5 of the FOIA to provide that the deliberative process privilege does not apply to records that are 25 years or older before the date on which they are requested. This final rule redesignates paragraph (c) as paragraph (d) without change and adds a new paragraph (c) to incorporate the foreseeable harm standard that the Act codified and to include clarifying language derived from the Act about the FOIA's relationship to laws prohibiting disclosure of information.

Section 9.19 Segregation of Exempt Information and Deletion of Identifying Details

This final rule revises paragraph (b)(1) to change the reference § 9.17(a) to § 9.17, to account for the foreseeable harm threshold standard in the revised § 9.17(c) that applies to the exemptions listed in § 9.17(a).

Section 9.21 Publicly-Available Records

This final rule revises paragraph (c) introductory text to include available viewing formats. This final rule revises paragraph (c)(5) to include copies of records regardless of format, as well as adding paragraphs (c)(5)(i), (c)(5)(ii), (c)(5)(ii)(A) and (c)(5)(ii)(B). This revision is to codify frequently requested records.

Section 9.25 Initial Disclosure Determination

This final rule revises paragraph (c) to include requirements to make the NRC's FOIA Public Liaison available to assist in resolving any disputes and to notify the requester of the right to seek dispute resolution services from the Office of Government Information Services (OGIS). This final rule revises paragraph (f) to change the reference to § 9.17(a) to § 9.17, to account for the foreseeable harm threshold standard in the revised § 9.17(c) that applies to the exemptions listed in § 9.17(a).

Section 9.27 Form and Content of Responses

This final rule (1) revises paragraph (a) to include a new requirement to notify the requester of the right to seek assistance from the NRC's FOIA Public Liaison; (2) revises paragraph (b)(5) to notify the requester they now have 90 calendar days to appeal; (3) adds paragraph (b)(6) to include a new requirement to notify the requester of the right to seek assistance from the NRC's FOIA Public Liaison; and (4) adds paragraph (b)(7) to include a new requirement to notify the requester of the right to seek dispute resolution services from the NRC's FOIA Public Liaison or OGIS.

Section 9.29 Appeal From Initial Determination

This final rule revises paragraph (a) to change the length of time to appeal from 30 calendar days to 90 calendar days.

Section 9.30 Contact for Dispute Resolution Services

This final rule adds new section 10 CFR 9.30 to include contact information for obtaining dispute resolution services from OGIS and the NRC's FOIA Public Liaison.

Section 9.39 Search and Duplication Provided Without Charge

This final rule adds new paragraph (f) to include new fee limitations for search and duplication.

Section 9.43 Processing Requests for a Waiver or Reduction of Fees

This final rule revises paragraph (d) to change the length of time to appeal from 30 calendar days to 90 calendar days.

Section 9.45 Annual Report to the Attorney General of the United States and Director of the Office of Government Information Services

This final rule (1) revises the section heading to include the Director of OGIS as a recipient of the annual FOIA report; (2) revises paragraph (a) to include the Director of OGIS as a recipient of the annual FOIA report and to replace the incomplete list of required contents of the report found in paragraphs (a)(1)–(8) with a reference to 5 U.S.C. 552(e)(1), which contains the full list of required contents of the report; and (3) revises the link where you can locate the NRC's annual FOIA reports.

III. Rulemaking Procedure

Under the Administrative Procedure Act (5 U.S.C. 553(b)), an agency may waive the normal notice and comment requirements if it finds, for good cause, that they are impracticable, unnecessary, or contrary to the public interest. As authorized by 5 U.S.C. 553(b)(3)(B), the NRC finds good cause to waive notice and opportunity for comment on the amendments. Notice and opportunity for comment are unnecessary, because the NRC is issuing this final rule for the limited purpose of complying with specific direction in the Act requiring agencies to update their FOIA regulations in accordance with the Act, and the final rule updates the NRC's FOIA regulations only as necessary to bring them into compliance with the Act.

IV. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, ''Plain Language in Government Writing,'' published June 10, 1998 (63 FR 31883).

IV. National Environmental Policy Act

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(1). Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this final rule.

V. Paperwork Reduction Act

This final rule does not contain a collection of information as defined in the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and, therefore, is not subject to the requirements of the Paperwork Reduction Act of 1995.

VI. Congressional Review Act

This final rule is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

List of Subjects

10 CFR Part 2

Administrative practice and procedure, Antitrust, Byproduct material, Classified information, Confidential business information, Freedom of information, Environmental protection, Hazardous waste, Nuclear energy, Nuclear materials, Nuclear power plants and reactors, Penalties, Reporting and recordkeeping requirements, Sex discrimination, Source material, Special nuclear material, Waste treatment and disposal.

10 CFR Part 9

Administrative practice and procedure, Courts, Criminal penalties, Freedom of information, Government employees, Privacy, Reporting and recordkeeping requirements, Sunshine Act.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended; the Energy Reorganization Act of 1974, as amended; and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR parts 2 and 9:

PART 2—AGENCY RULES OF PRACTICE AND PROCEDURE

■ 1. The authority citation for part 2 continues to read as follows:

Authority: Atomic Energy Act of 1954, secs. 29, 53, 62, 63, 81, 102, 103, 104, 105, 161, 181, 182, 183, 184, 186, 189, 191, 234 (42 U.S.C. 2039, 2073, 2092, 2093, 2111, 2132, 2133, 2134, 2135, 2201, 2231, 2232, 2233, 2234, 2236, 2239, 2241, 2282); Energy Reorganization Act of 1974, secs. 201, 206 (42 U.S.C. 5841, 5846); Nuclear Waste Policy Act of 1982, secs. 114(f), 134, 135, 141 (42 U.S.C. 10134(f), 10154, 10155, 10161); Administrative Procedure Act (5 U.S.C. 552, 553, 554, 557, 558); National Environmental Policy Act of 1969 (42 U.S.C. 4332); 44 U.S.C.

3504 note. Section 2.205(j) also issued under Sec. 31001(s), Pub. L. 104–134, 110 Stat. 1321–373 (28 U.S.C. 2461 note).

■ 2. In § 2.390, revise paragraph (a)(5) to read as follows:

§ 2.390 Public inspections, exemptions, requests for withholding.

(a) * * *

(5) Interagency or intra-agency memorandums or letters that would not be available by law to a party other than an agency in litigation with the agency, provided that the deliberative process privilege shall not apply to records created 25 years or more before the date on which the records were requested;

* * * * *

PART 9 — PUBLIC RECORDS

■ 3. The authority citation for part 9 continues to read as follows:

Authority: Atomic Energy Act of 1954, sec. 161 (42 U.S.C. 2201); Energy Reorganization Act of 1974, sec. 201 (42 U.S.C. 5841); 44 U.S.C. 3504 note. Subpart A also issued under 31 U.S.C. 9701. Subpart B also issued under 5 U.S.C. 552a. Subpart C also issued under 5 U.S.C. 552b.

■ 4. In § 9.17, revise paragraph (a)(5), redesignate paragraph (c) as paragraph (d), and add new paragraph (c) to read as follows:

§ 9.17 Agency records exempt for public disclosure.

(a) * * *

(5) Interagency or intra-agency memorandums or letters that would not be available by law to a party other than an agency in litigation with the agency, provided that the deliberative process privilege shall not apply to records created 25 years or more before the date on which the records were requested;

* * * * *

(c)(1) The NRC shall withhold information under this subpart only if—

(i) The NRC reasonably foresees that disclosure would harm an interest protected by an exemption described in paragraph (a) of this section; or

(ii) Disclosure is prohibited by law.

(2) Nothing in this subpart requires disclosure of information that is otherwise prohibited from disclosure by law, or otherwise exempted from disclosure under 5 U.S.C. 552(b)(3).

* * * * *

§ 9.19 [Amended]

■ 5. In § 9.19(b)(1), remove ''(a)'' after ''§ 9.17''.

■ 6. In § 9.21, revise the introductory text of paragraph (c) and paragraph (c)(5) to read as follows:

§ 9.21 Publicly available records.

* * * * *

(c) The following records of NRC activities are available for public inspection in an electronic format:

* * *

(5) Copies of all records, regardless of form or format—

(i) That have been released to any person under § 9.23; and

(ii)(A) That because of the nature of their subject matter, the NRC determines have become or are likely to become the subject of subsequent requests for substantially the same records; or

(B) That have been requested 3 or more times;

* * * * *

■ 7. In § 9.25, revise paragraph (c) and in the first sentence in paragraph (f) remove ''(a)'' after ''§ 9.17''. The revision to read as follows:

§ 9.25 Initial disclosure determination.

* * * * *

(c) *Exceptional circumstances.* A requester may be notified in certain exceptional circumstances, when it appears that a request cannot be completed within the allowable time, and will be provided an opportunity to limit the scope of the request so that it may be processed in the time limit, or to agree to a reasonable alternative time frame for processing. When notifying a requester under this paragraph, the NRC, to aid the requester, shall make available its FOIA Public Liaison to assist in the resolution of any disputes between the requester and the agency and shall notify the requester of the requester's right to seek dispute resolution services from the Office of Government Information Services within the National Archives and Records Administration. For purposes of this paragraph, the term ''exceptional circumstances'' does not include delays that result from the normal predictable workload of FOIA requests or a failure by the NRC to exercise due diligence in processing the request. A requester's unwillingness to agree to reasonable modification of the request or an alternative time for processing the request may be considered as factors in determining whether exceptional circumstances exist and whether the agency exercised due diligence in responding to the request.

* * * * *

■ 8. In § 9.27, revise add a second sentence to paragraph (a), in paragraph (b)(5) remove the number ''30'' and add in its place the number ''90'', and add paragraphs (b)(6) and (7).

The revision and additions to read as follows:

§ 9.27 Form and content of responses.

(a) * * * The NRC's response will notify the requester of the requester's right to seek assistance from the NRC's FOIA Public Liaison. * * *

(b) * * *

(6) A statement that the requester has a right to seek assistance from the NRC's FOIA Public Liaison; and

(7) A statement that the requester has a right to seek dispute resolution services from the NRC's FOIA Public Liaison or the Office of Government Information Services within the National Archives and Records Administration.

* * * * *

§ 9.29 [Amended]

■ 9. In § 9.29(a) remove the number ''30'' and add in its place the number ''90''.

■ 10. Add § 9.30 to read as follows:

§ 9.30 Contact for dispute resolution services.

(a) NRC's FOIA Public Liaison:

(1) By mail—11555 Rockville Pike, Rockville, MD 20852;

(2) By facsimile—301–415–5130; and

(3) By email—*FOIA.Resource@nrc.gov.*

(b) Office of Government Information Services within National Archives and Records Administration:

(1) By mail—8601 Adelphi Road-OGIS, College Park, MD 20740;

(2) By facsimile—202–741–5769; and

(3) By email—*ogis@nara.gov.*

■ 11. In § 9.39, add paragraph (f) to read as follows:

§ 9.39 Search and duplication provided without charge.

* * * * *

(f)(1) Except as described in paragraphs (f)(2), (3), and (4) of this section, if the NRC fails to comply with any time limit under §§ 9.25 or 9.29, it may not charge search fees or, in the case of requests from requesters described in § 9.33(a)(2), may not charge duplication fees.

(2) If the NRC has determined that unusual circumstances, as defined in § 9.13, apply and the NRC provided timely written notice to the requester in accordance with the Freedom of Information Act, a failure to comply with the time limit shall be excused for an additional 10 days.

(3) If the NRC has determined that unusual circumstances, as defined in § 9.13, apply and more than 5,000 pages are necessary to respond to the request, the NRC may charge search fees or, in the case of requests from requesters described in § 9.33(a)(2), may charge duplication fees, if the NRC has

provided timely written notice to the requester in accordance with the Freedom of Information Act and the NRC has discussed with the requester via written mail, email, or telephone (or made not less than three good-faith attempts to do so) how the requester could effectively limit the scope of the request in accordance with 5 U.S.C. 552(a)(6)(B)(ii).

(4) If a court has determined that exceptional circumstances exist, as defined by 5 U.S.C. 552(a)(6)(C), a failure to comply with the time limit shall be excused for the length of time provided by the court order.

§ 9.43 [Amended]

■ 12. In § 9.43(d), remove the number ''30'' and add in its place the number ''90''.

■ 13. Revise § 9.45 to read as follows:

§ 9.45 Annual report to the Attorney General of the United States and Director of the Office of Government Information Services.

(a) On or before February 1 of each year, the NRC will submit a report covering the preceding fiscal year to the Attorney General of the United States and to the Director of the Office of Government Information Services which shall include the information required by 5 U.S.C. 552(e)(1).

(b) The NRC will make its annual FOIA reports available to the public at the NRC Web site, *http://www.nrc.gov.*

Dated at Rockville, Maryland, this 15th day of December, 2016.

For the Nuclear Regulatory Commission.

Michael R. Johnson,

Acting Executive Director for Operations.

[FR Doc. 2016–31595 Filed 12–29–16; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 140

[NRC–2016–0164]

RIN 3150–AJ81

Increase in the Maximum Amount of Primary Nuclear Liability Insurance

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is amending its regulations to increase the required amount [1] of primary nuclear liability insurance from $375 million to $450 million for each nuclear reactor that is licensed to operate, is designed for the production of electrical energy, and has a rated capacity of 100,000 electrical kilowatts or more. This change conforms to the provision in the Price-Anderson Amendments Act of 1988 (Pub. L. 100–408) (Price-Anderson Act) that the amount of primary financial protection required of licensees by the NRC shall be the maximum amount available at reasonable cost and on reasonable terms from private sources.

DATES: *Effective Date:* This final rule is effective on January 1, 2017.

ADDRESSES: Please refer to Docket ID NRC–2016–0164 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2016–0164. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in the **SUPPLEMENTARY INFORMATION** section.
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Natreon Jordan, Office of Nuclear Reactor Regulation, telephone: 301–415–7410, email: *Natreon.Jordan@nrc.gov;* U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Discussion

The NRC's regulations in part 140 of title 10 of the *Code of Federal Regulations* (10 CFR), ''Financial Protection Requirements and Indemnity Agreements,'' provide requirements and procedures for implementing the financial protection requirements for certain licensees and other persons under the Price-Anderson Act, incorporated as Section 170 of the Atomic Energy Act of 1954, as amended (AEA). The Price-Anderson Act states that, for each nuclear reactor that is licensed to operate, is designed for the production of electrical energy, and has a rated capacity of 100,000 electrical kilowatts or more (henceforth referred to as large operating reactors), ''the amount of primary financial protection required shall be the maximum amount available at reasonable cost and on reasonable terms from private sources.'' (Section 170(b) of the AEA) This requirement of the Price-Anderson Act is implemented in the NRC's regulations at § 140.11(a)(4), ''Amounts of financial protection for certain reactors.'' The current maximum amount of primary financial protection available from private sources is $375 million. Therefore, § 140.11(a)(4) currently requires large commercial operating reactors to have and maintain primary nuclear liability insurance in the amount of $375 million.

On June 15, 2016, American Nuclear Insurers (ANI), the underwriter of American nuclear liability policies, acting on behalf of its member companies, notified the NRC that it will be increasing ''its maximum available primary nuclear liability limit from $375 million to $450 million, effective on January 1, 2017'' (ADAMS Accession No. ML16239A254). The ANI makes such adjustments on a non-periodic basis. The last such adjustment was made in 2010, and the NRC revised § 140.11 to reflect the increased maximum available amount of primary nuclear liability insurance (75 FR 16645; April 2, 2010).

[1] The title listed in the information submitted by the NRC for the *Unified Agenda* was ''Increase in the Maximum Limit of Primary Nuclear Liability Insurance.'' The title was changed here to reflect that the regulation makes reference to ''Maximum Amount.'' The use of the term ''Maximum Limit'' is an incorrect description of the statutory requirement and the regulation revision.

To implement this adjustment, in accordance with the Price-Anderson Act, the NRC is revising 10 CFR part 140 to require large operating reactors to have and maintain $450 million in primary financial protection.

The NRC is not currently revising the appendices in § 140.91, § 140.92, or § 140.93 that provide general forms of liability policies and indemnity agreements that were determined to be acceptable to the Commission. These appendices include historical insurance providers and protection amounts for primary liability insurance that are no longer in use (for example, values of $124 million and $36 million from the 1979 final rule (44 FR 20632; April 6, 1979) and values of $200 million, $155 million, and $45 million from the 1989 final rule (54 FR 24157; June 6, 1989)). However, these appendices continue to provide relevant general forms of policies and agreements.

II. Rulemaking Procedure

This final rule is being issued without prior public notice or opportunity for public comments. The Administrative Procedure Act (5 U.S.C. 553(b)(B)) does not require an agency to use the public notice and comment process ''when the agency for good cause finds (and incorporates the finding and a brief statement of reasons therefore in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest.'' In this instance, the NRC finds, for good cause, that solicitation of public comment on this final rule is unnecessary because the Price-Anderson Act requires a non-discretionary adjustment in the maximum amount required for primary nuclear liability insurance. Requesting public comment on this non-discretionary adjustment, which is required by statute, would not result in a change to the adjusted amount.

III. Section-By-Section Analysis

The following paragraphs describe the specific changes that are reflected in this final rule.

Section 140.11 Amounts of Financial Protection for Certain Reactors

In paragraph (a)(4), this final rule removes ''$375,000,000'' and replaces it with the increased maximum amount of primary nuclear liability insurance of ''$450,000,000.''

IV. Regulatory Flexibility Certification

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), the NRC certifies that this final rule does not have a significant economic impact on a substantial number of small entities. This final rule affects only the licensing and operation of nuclear power plants. The companies that own these plants do not fall within the scope of the definition of ''small entities'' set forth in the Regulatory Flexibility Act or the size standards established by the NRC (10 CFR 2.810).

V. Regulatory Analysis

A regulatory analysis was not prepared for this final rule because the change in the maximum amount of nuclear liability insurance is mandated by the Price-Anderson Act.

VI. Backfit and Issue Finality

The NRC has determined that the backfit rule does not apply to this final rule. A backfit analysis is not required for this final rule because this amendment is mandated by the Price-Anderson Act.

VII. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, ''Plain Language in Government Writing,'' published June 10, 1998 (63 FR 31883).

VIII. National Environmental Policy Act

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(1). Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this final rule.

IX. Paperwork Reduction Act

This final rule does not contain any new or amended collections of information subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). Existing collections of information were approved by the Office of Management and Budget (OMB), approval number 3150–0039.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the document requesting or requiring the collection displays a currently valid OMB control number.

X. Congressional Review Act

This final rule is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

List of Subjects in 10 CFR Part 140

Criminal penalties, Extraordinary nuclear occurrence, Insurance, Intergovernmental relations, Nuclear materials, Nuclear power plants and reactors, Penalties, Reporting and recordkeeping requirements.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended; the Energy Reorganization Act of 1974, as amended; and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR part 140.

PART 140—FINANCIAL PROTECTION REQUIREMENTS AND INDEMNITY AGREEMENTS

■ 1. The authority citation for part 140 continues to read as follows:

Authority: Atomic Energy Act of 1954, secs. 161, 170, 223, 234 (42 U.S.C. 2201, 2210, 2273, 2282); Energy Reorganization Act of 1974, secs. 201, 202 (42 U.S.C. 5841, 5842); 44 U.S.C. 3504 note.

■ 2. In § 140.11, paragraph (a)(4) is revised to read as follows:

§ 140.11 Amounts of financial protection for certain reactors.

(a) * * *

(4) In an amount equal to the sum of $450,000,000 and the amount available as secondary financial protection (in the form of private liability insurance available under an industry retrospective rating plan providing for deferred premium charges equal to the pro rata share of the aggregate public liability claims and costs, excluding costs payment of which is not authorized by section 170o.(1)(D) of the Act, in excess of that covered by primary financial protection) for each nuclear reactor which is licensed to operate and which is designed for the production of electrical energy and has a rated capacity of 100,000 electrical kilowatts or more: Provided, however, that under such a plan for deferred premium charges for each nuclear reactor that is licensed to operate, no more than $121,255,000 with respect to any nuclear incident (plus any surcharge assessed under subsection 170o.(1)(E) of the Act) and no more than $18,963,000 per incident within one calendar year shall be charged. *Except that,* where a person is authorized to operate a combination of 2 or more nuclear reactors located at a single site, each of which has a rated capacity of 100,000 or more electrical kilowatts but not more than 300,000 electrical kilowatts with a combined rated

capacity of not more than 1,300,000 electrical kilowatts, each such combination of reactors shall be considered to be a single nuclear reactor for the sole purpose of assessing the applicable financial protection required under this section.

BILLING CODE 7590–01–P

DEPARTMENT OF ENERGY

10 CFR Parts 207, 218, 429, 431, 490, 501, 601, 820, 824, 851, 1013, 1017, and 1050

RIN 1990–AA46

Inflation Adjustment of Civil Monetary Penalties

AGENCY: Office of the General Counsel, U.S. Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (''DOE'') publishes this final rule to adjust DOE's civil monetary penalties (''CMPs'') for inflation as mandated by the Federal Civil Penalties Inflation Adjustment Act of 1990, as further amended by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (collectively referred to herein as ''the Act''). This rule adjusts CMPs within the jurisdiction of DOE to the maximum amount required by the Act.

DATES: This rule is effective December 30, 2016.

FOR FURTHER INFORMATION CONTACT: Preeti Chaudhari, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586–8078.

SUPPLEMENTARY INFORMATION:

I. Background

In order to improve the effectiveness of CMPs and to maintain their deterrent effect, the Federal Civil Penalties Inflation Adjustment Act of 1990, 28 U.S.C. 2461 note (''the Inflation Adjustment Act''), as further amended by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (Pub. L. 114–74) (''the 2015 Act''), requires Federal agencies to adjust each CMP provided by law within the jurisdiction of the agency. The 2015 Act requires agencies to adjust the level of CMPs with an initial ''catch-up'' adjustment through an interim final rulemaking and to make subsequent annual adjustments for inflation, notwithstanding 5 U.S.C. 553. DOE's initial catch-up adjustment interim final rule was published June 28, 2016 (81 FR 41790). DOE received no public comments in response to the interim final rule. The interim final rule is today adopted as final without amendment. The 2015 Act also provides that any increase in a CMP shall apply only to CMPs, including those whose associated violation predated such increase, which are assessed after the date the increase takes effect.

In accordance with the 2015 Act, OMB issued a guidance memorandum on the implementation of the 2017 annual adjustment pursuant to the 2015 Act.[1] This final rule is issued in accordance with applicable law and the OMB guidance memorandum.

II. Method of Calculation

The method of calculating CMP adjustments applied in this final rule is required by the 2015 Act. Under the 2015 Act, annual inflation adjustments subsequent to the initial catch-up adjustment are to be based on the percent change between the October Consumer Price Index for all Urban Consumers (CPI–U) preceding the date of the adjustment, and the prior year's October CPI–U. Pursuant to the aforementioned OMB guidance memorandum, the adjustment multiplier for 2017 is 1.01636. In order to complete the 2017 annual adjustment, each CMP is multiplied by the 2017 adjustment multiplier. Under the 2015 Act, any increase in CMP must be rounded to the nearest multiple of $1.

III. Summary of the Final Rule

The following list summarizes DOE authorities containing CMPs, and the penalties before and after adjustment.

DOE Authority containing civil monetary penalty	Before adjustment	After adjustment
10 CFR 207.7	$10,000	$10,164.
10 CFR 218.42	21,661	22,015.
10 CFR 429.120	433	440.
10 CFR 431.382	433	440.
10 CFR 490.604	8,386	8,523.
10 CFR 501.181	—88,613	—90,063.
	—8/mcf	—8/mcf.
	—35/bbl	—36/bbl.
10 CFR 601.400 and App A	—minimum 18,936	—minimum 19,246
	—maximum 189,361	—maximum 192,459.
10 CFR 820.81	197,869	201,106.
10 CFR 824.1 and App A	141,402	143,715.
10 CFR 824.4 and App A	141,402	143,715.
10 CFR 851.5 and App B	91,830	93,332.
10 CFR 1013.3	10,781	10,957.
10 CFR 1017.29	254,645	258,811.
10 CFR 1050.303	19,305	19,621.
50 U.S.C. 2731[2]	8,655	8,797.

[1] The guidance memorandum was issued on December 16, 2016, provides the 2017 adjustment multiplier, and addresses how to apply it.

[2] Implemented by 10 CFR 820.81, 10 CFR 851.5, and appendix B to 10 CFR part 851.

IV. Final Rulemaking

The 2015 Act requires that annual adjustments for inflation subsequent to the initial ''catch-up'' adjustment be made notwithstanding 5 U.S.C. 553.

V. Regulatory Review

A. Executive Order 12866

This rule has been determined not to be a significant regulatory action under Executive Order 12866, ''Regulatory Planning and Review,'' 58 FR 51735 (October 4, 1993). Accordingly, this action was not subject to review under that Executive Order by the Office of Information and Regulatory Affairs of the Office of Management and Budget.

B. National Environmental Policy Act

DOE has determined that this final rule is covered under the Categorical Exclusion found in DOE's National Environmental Policy Act regulations at paragraph A5 of Appendix A to Subpart D, 10 CFR part 1021, which applies to a rulemaking that amends an existing rule or regulation and that does not change the environmental effect of the rule or regulation being amended. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis for any rule that by law must be proposed for public comment. As discussed above, the 2015 Act requires that annual inflation adjustments subsequent to the initial catch-up adjustment be made notwithstanding 5 U.S.C. 553. Because a notice of proposed rulemaking is not required for this action pursuant to 5 U.S.C. 553, or any other law, no regulatory flexibility analysis has been prepared for this final rule.

D. Paperwork Reduction Act

This final rule imposes no new information collection requirements subject to the Paperwork Reduction Act.

E. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) generally requires Federal agencies to examine closely the impacts of regulatory actions on State, local, and tribal governments. Section 201 excepts agencies from assessing effects on State, local or tribal governments or the private sector of rules that incorporate requirements specifically set forth in law. Because this rule incorporates requirements specifically set forth in 28 U.S.C. 2461 note, DOE is not required to assess its regulatory effects under Section 201. Unfunded Mandates Reform Act sections 202 and 205 do not apply to today's action because they apply only to rules for which a general notice of proposed rulemaking is published. Nevertheless, DOE has determined that this regulatory action does not impose a Federal mandate on State, local, or tribal governments or on the public sector.

F. Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any proposed rule that may affect family well being. This rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

G. Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 4, 1999) imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. DOE has examined this rule and has determined that it would not preempt State law and would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

H. Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (February 7, 1996), imposes on Executive agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for affected conduct rather than a general standard and promote simplification and burden reduction. With regard to the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this rule meets the relevant standards of Executive Order 12988.

I. Treasury and General Government Appropriations Act, 2001

The Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (February 22, 2002), and DOE's guidelines were published at 67 FR 62446 (October 7, 2002). DOE has reviewed this rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

J. Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001) requires Federal agencies to prepare and submit to OMB, a Statement of Energy Effects for any proposed significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgated or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any proposed significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use. This regulatory action would not have a significant adverse effect on the supply, distribution, or use of energy and is therefore not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

K. Congressional Notification

As required by 5 U.S.C. 801, DOE will submit to Congress a report regarding the issuance of this final rule prior to the effective date set forth at the outset of this rulemaking. The report will state that it has been determined that the rule is not a ''major rule'' as defined by 5 U.S.C. 801(2).

L. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 207

Administrative practice and procedure, Energy, Penalties.

10 CFR Part 218

Administrative practice and procedure, Penalties, Petroleum allocation.

10 CFR Part 820

Administrative practice and procedure, Government contracts, Penalties, Radiation protection.

10 CFR Part 824

Government contracts, Nuclear materials, Penalties, Security measures.

10 CFR Part 851

Civil penalty, Hazardous substances, Occupational safety and health, Safety, Reporting and recordkeeping requirements.

10 CFR Part 1013

Administrative practice and procedure, Claims, Fraud, Penalties.

10 CFR Part 1017

Administrative practice and procedure, Government contracts, National Defense, Nuclear Energy, Penalties, Security measures.

10 CFR Part 1050

Decorations, medals, awards, Foreign relations, Government employees, Government property, Reporting and recordkeeping requirements.

Issued in Washington, DC, on December 20, 2016.

Steven Croley,

General Counsel.

For the reasons set forth in the preamble, DOE amends chapters II, III, and X of title 10 of the Code of Federal Regulations as set forth below.

PART 207—COLLECTION OF INFORMATION

■ 1. The authority citation for part 207 continues to read as follows:

Authority: 15 U.S.C. 787 *et seq.;* 15 U.S.C. 791 *et seq.;* E.O. 11790, 39 FR 23185; 28 U.S.C. 2461 note.

■ 2. Section 207.7 is amended by revising the first sentence of paragraph (c)(1) to read as follows:

§ 207.7 Sanctions.

* * * * *

(c) * * * (1) Any person who violates any provision of this subpart or any order issued pursuant thereto shall be subject to a civil penalty of not more than $10,164 for each violation. * * *

* * * * *

PART 218—STANDBY MANDATORY INTERNATIONAL OIL ALLOCATION

■ 3. The authority citation for part 218 continues to read as follows:

Authority: 15 U.S.C. 751 *et seq.;* 15 U.S.C. 787 *et seq.;* 42 U.S.C. 6201 *et seq.;* 42 U.S.C. 7101 *et seq.;* E.O. 11790, 39 FR 23185; E.O. 12009, 42 FR 46267; 28 U.S.C. 2461 note.

■ 4. Section 218.42 is amended by revising paragraph (b)(1) to read as follows:

§ 218.42 Sanctions.

* * * * *

(b) * * * (1) Any person who violates any provision of this part 218 or any order issued pursuant thereto shall be subject to a civil penalty of not more than $22,015 for each violation.

* * * * *

PART 429—CERTIFICATION, COMPLIANCE, AND ENFORCEMENT FOR CONSUMER PRODUCTS AND COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 5. The authority citation for part 429 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 6. Section 429.120 is amended by revising the first sentence to read as follows:

§ 429.120 Maximum civil penalty.

Any person who knowingly violates any provision of § 429.102(a) may be subject to assessment of a civil penalty of no more than $440 for each violation. * * *

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 7. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 8. Section 431.382 is amended by revising paragraph (b) to read as follows:

§ 431.382 Prohibited acts.

* * * * *

(b) In accordance with sections 333 and 345 of the Act, any person who knowingly violates any provision of paragraph (a) of this section may be subject to assessment of a civil penalty of no more than $440 for each violation.

* * * * *

PART 490—ALTERNATIVE FUEL TRANSPORTATION PROGRAM

■ 9. The authority citation for part 490 continues to read as follows:

Authority: 42 U.S.C. 7191 *et seq.;* 42 U.S.C. 13201, 13211, 13220, 13251 *et seq;* 28 U.S.C. 2461 note.

■ 10. Section 490.604 is amended by revising paragraph (a) to read as follows:

§ 490.604 Penalties and Fines.

(a) *Civil Penalties.* Whoever violates § 490.603 of this part shall be subject to a civil penalty of not more than $8,523 for each violation.

* * * * *

PART 501—ADMINISTRATIVE PROCEDURES AND SANCTIONS

■ 11. The authority citation for part 501 continues to read as follows:

Authority: 42 U.S.C. 7101 *et seq.;* 42 U.S.C. 8301 *et seq.;* 42 U.S.C. 8701 *et seq.;* E.O. 12009, 42 FR 46267; 28 U.S.C. 2461 note.

■ 12. Section 501.181 is amended by revising paragraph (c)(1) to read as follows:

§ 501.181 Sanctions.

* * * * *

(c) * * * (1) Any person who violates any provisions of the Act (other than section 402) or any rule or order thereunder will be subject to the following civil penalty, which may not exceed $90,063 for each violation: Any person who operates a powerplant or major fuel burning installation under an exemption, during any 12-calendar-month period, in excess of that authorized in such exemption will be assessed a civil penalty of up to $8 for each MCF of natural gas or up to $36 for each barrel of oil used in excess of that authorized in the exemption.

* * * * *

PART 601—NEW RESTRICTIONS ON LOBBYING

■ 13. The authority citation for part 601 continues to read as follows:

Authority: 31 U.S.C. 1352; 42 U.S.C. 7254 and 7256; 31 U.S.C. 6301–6308; 28 U.S.C. 2461 note.

■ 14. Section 601.400 is amended by revising paragraphs (a), (b) and (e) to read as follows:

§ 601.400 Penalties.

(a) Any person who makes an expenditure prohibited herein shall be subject to a civil penalty of not less than $19,246 and not more than $192,459 for each such expenditure.

(b) Any person who fails to file or amend the disclosure form (see appendix B to this part) to be filed or amended if required herein, shall be subject to a civil penalty of not less than $19,246 and not more than $192,459 for each such failure.

* * * * *

(e) First offenders under paragraphs (a) or (b) of this section shall be subject to a civil penalty of $19,246, absent aggravating circumstances. Second and subsequent offenses by persons shall be subject to an appropriate civil penalty between $19,246 and $192,459, as determined by the agency head or his or her designee.

* * * * *

■ 15. Appendix A to part 601 is amended by:

■ a. Revising the last sentence of the second undesignated paragraph, in paragraph (3) of the section entitled, ‘‘Certification for Contracts, Grants, Loans, and Cooperative Agreements’’; and

■ b. Revising the last sentence of the third undesignated paragraph, in the section entitled, ‘‘Statement for Loan Guarantees and Loan Insurance’’.

The revisions read as follows:

Appendix A to Part 601—Certification Regarding Lobbying

Certification for Contracts, Grants, Loans, and Cooperative Agreements

* * * * *

(3) * * *

* * * Any person who fails to file the required certification shall be subject to a civil penalty of not less than $19,246 and not more than $192,459 for each such failure.

Statement for Loan Guarantees and Loan Insurance

* * * * *

* * * Any person who fails to file the required statement shall be subject to a civil penalty of not less than $19,246 and not more than $192,459 for each such failure.

PART 820—PROCEDURAL RULES FOR DOE NUCLEAR ACTIVITIES

■ 16. The authority citation for part 820 continues to read as follows:

Authority: 42 U.S.C. 2201; 2282(a); 7191; 28 U.S.C. 2461 note; 50 U.S.C. 2410.

■ 17. Section 820.81 is amended by revising the first sentence to read as follows:

§ 820.81 Amount of penalty.

Any person subject to a penalty under 42 U.S.C. 2282a shall be subject to a civil penalty in an amount not to exceed $201,106 for each such violation. * * *

PART 824—PROCEDURAL RULES FOR THE ASSESSMENT OF CIVIL PENALTIES FOR CLASSIFIED INFORMATION SECURITY VIOLATIONS

■ 18. The authority citation for part 824 continues to read as follows:

Authority: 42 U.S.C. 2201, 2282b, 7101 *et seq.,* 50 U.S.C. 2401 *et seq.;* 28 U.S.C. 2461 note.

■ 19. Section 824.1 is amended by revising the second sentence to read as follows:

§ 824.1 Purpose and scope.

* * * Subsection a. provides that any person who has entered into a contract or agreement with the Department of Energy, or a subcontract or subagreement thereto, and who violates (or whose employee violates) any applicable rule, regulation or order under the Act relating to the security or safeguarding of Restricted Data or other classified information, shall be subject to a civil penalty not to exceed $143,715 for each violation. * * *

■ 20. Section 824.4 is amended by revising paragraph (c) to read as follows:

§ 824.4 Civil penalties.

* * * * *

(c) The Director may propose imposition of a civil penalty for violation of a requirement of a regulation or rule under paragraph (a) of this section or a compliance order issued under paragraph (b) of this section, not to exceed $143,715 for each violation.

* * * * *

PART 851—WORKER SAFETY AND HEALTH PROGRAM

■ 21. The authority citation for part 851 continues to read as follows:

Authority: 42 U.S.C. 2201(i)(3), (p); 42 U.S.C. 2282c; 42 U.S.C. 5801 *et seq.;* 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 28 U.S.C. 2461 note.

■ 22. Section 851.5 is amended by revising the first sentence of paragraph (a) to read as follows:

§ 851.5 Enforcement.

(a) A contractor that is indemnified under section 170d. of the AEA (or any subcontractor or supplier thereto) and that violates (or whose employee violates) any requirement of this part shall be subject to a civil penalty of up to $93,332 for each such violation. * * *

* * * * *

■ 23. Appendix B to part 851 is amended by:

■ a. Revising the last sentences of paragraphs (b)(1) and (2) in section VI; and

■ b. Revising paragraph 1.(e)(1) in section IX.

The revisions read as follows:

Appendix B to Part 851—General Statement of Enforcement Policy

* * * * *

VI. Severity of Violations

* * * * *

(b) * * *

(1) * * * A Severity Level I violation would be subject to a base civil penalty of up to 100% of the maximum base civil penalty of $93,332.

(2) * * * A Severity Level II violation would be subject to a base civil penalty up

to 50% of the maximum base civil penalty ($46,666).

* * * * *

IX. Enforcement Actions

* * * * *

1. Notice of Violation

* * * * *

(e) * * *

(1) DOE may assess civil penalties of up to $93,332 per violation per day on contractors (and their subcontractors and suppliers) that are indemnified by the Price-Anderson Act, 42 U.S.C. 2210(d). *See* 10 CFR 851.5(a).

* * * * *

PART 1013—PROGRAM FRAUD CIVIL REMEDIES AND PROCEDURES

■ 24. The authority citation for part 1013 continues to reads as follows:

Authority: 31 U.S.C. 3801–3812; 28 U.S.C. 2461 note.

■ 25. Section 1013.3 is amended by revising paragraphs (a)(1)(iv) and (b)(1)(ii) to read as follows:

§ 1013.3 Basis for civil penalties and assessments.

(a) * * *

(1) * * *

(iv) Is for payment for the provision of property or services which the person has not provided as claimed, shall be subject, in addition to any other remedy that may be prescribed by law, to a civil penalty of not more than $10,957 for each such claim.

* * * * *

(b) * * *

(1) * * *

(ii) Contains or is accompanied by an express certification or affirmation of the truthfulness and accuracy of the contents of the statement, shall be subject, in addition to any other remedy that may be prescribed by law, to a civil penalty of not more than $10,957 for each such statement.

* * * * *

PART 1017—IDENTIFICATION AND PROTECTION OF UNCLASSIFIED CONTROLLED NUCLEAR INFORMATION

■ 26. The authority citation for part 1017 continues to read as follows:

Authority: 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 42 U.S.C. 2168; 28 U.S.C. 2461 note.

■ 27. Section 1017.29 is amended by revising paragraph (c) to read as follows:

§ 1017.29 Civil penalty.

* * * * *

(c) *Amount of penalty.* The Director may propose imposition of a civil penalty for violation of a requirement of a regulation under paragraph (a) of this section or a compliance order issued under paragraph (b) of this section, not to exceed $258,811 for each violation.

* * * * *

PART 1050—FOREIGN GIFTS AND DECORATIONS

■ 28. The authority citation for part 1050 continues to read as follows:

Authority: The Constitution of the United States, Article I, Section 9; 5 U.S.C. 7342; 22 U.S.C. 2694; 42 U.S.C. 7254 and 7262; 28 U.S.C. 2461 note.

■ 29. Section 1050.303 is amended by revising the last sentence in paragraph (d) to read as follows:

§ 1050.303 Enforcement.

* * * * *

(d) * * * The court in which such action is brought may assess a civil penalty against such employee in any amount not to exceed the retail value of the gift improperly solicited or received plus $19,621.

BILLING CODE 6450–01–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Part 7

[Docket ID OCC–2016–0022]

RIN 1557–AD93

Industrial and Commercial Metals

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Final rule.

SUMMARY: The OCC is finalizing a rule to prohibit national banks and federal savings associations from dealing or investing in industrial or commercial metals.

DATES: This final rule is effective April 1, 2017.

FOR FURTHER INFORMATION CONTACT: Casey Scott Laxton, Counsel, or Margo Dey, Counsel, Securities and Corporate Practices Division, (202) 649–5510; Carl Kaminski, Special Counsel, Legislative and Regulatory Activities Division, (202) 649–5490; or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, 400 7th Street SW., Washington, DC 22019.

SUPPLEMENTARY INFORMATION:

I. Background

In September 2016, the OCC issued a Notice of Proposed Rulemaking (NPRM) to prohibit national banks from dealing or investing in industrial or commercial metals.[1] The OCC proposed to: (i) Exclude industrial and commercial metals from the terms ''exchange,'' ''coin,'' and ''bullion'' in the ''powers clause'' of the National Bank Act at 12 U.S.C. 24(Seventh); and (ii) provide that dealing or investing in industrial or commercial metal is not part of, or incidental to, the business of banking. The proposed prohibitions were generally consistent with recommendations made by the U.S. Senate Permanent Subcommittee on Investigations in 2014,[2] as well as recommendations described in a September 2016 report to the U.S. Congress and the Financial Stability Oversight Council (FSOC) prepared by the OCC, the Board of Governors of the Federal Reserve System (''Board''), and the Federal Deposit Insurance Corporation pursuant to section 620 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (''Dodd-Frank Act'').[3]

A national bank may engage in activities that are part of, or incidental to, the business of banking under 12 U.S.C. 24(Seventh). Section 24(Seventh) lists several activities that are part of the business of banking; for example, it expressly provides that national banks may buy and sell exchange, coin, and bullion. In addition to these enumerated powers, section 24(Seventh) authorizes national banks to exercise all such incidental powers as shall be necessary to carry on the business of banking. National banks also are authorized to engage in any other activities not expressly enumerated in the statute that the Comptroller of the Currency

[1] 81 FR 63428 (Sept. 15, 2016).

[2] ''Wall Street Bank Involvement with Physical Commodities,'' U.S. Senate Permanent Subcommittee on Investigations, *available at: http://www.hsgac.senate.gov/download/report-wall-street-involvement-with-physical-commodities* (''PSI Report'').

[3] ''Report to Congress and the Financial Stability Oversight Council Pursuant to Section 620 of the Dodd-Frank Act,'' at 86–90 (September 2016), *available at: https://www.occ.gov/news-issuances/news-releases/2016/nr-ia-2016–107a.pdf* (''620 Study''). Section 620 of the Dodd-Frank Act required the federal banking agencies to conduct a study and prepare a report, including recommendations, on the types of activities and investments permissible for banking entities, the associated risks, and how banking entities mitigate those risks. In a parallel action, the Board also issued a proposed rule in September 2016. The proposed Board rule addressed the physical commodities activities and investments of banking holding companies and financial holding companies, including copper. *Risk-Based Capital and Other Regulatory Requirements for Activities of Financial Holding Companies Related to Physical Commodities and Risk-Based Capital Requirements for Merchant Banking Investments,* 81 FR 67220 (Sept. 30, 2016).

reasonably determines are part of the business of banking.[4]

In Interpretive Letter 693,[5] issued approximately twenty-one years ago, the OCC authorized national banks to buy and sell copper on the grounds that trading copper was becoming increasingly similar to trading gold, silver, platinum, and palladium. The letter observed that copper was traded in liquid markets; that it was traded in a form standardized as to weight and purity; and that the bank seeking authority to engage in the activity traded copper under policies and procedures similar to those that governed the bank's trading of precious metals. The letter concluded that national banks could buy and sell copper under the express authority to buy and sell coin and bullion and as part of or incidental to the business of banking. The scope of the authorization in Interpretive Letter 693 was sufficiently broad to permit national banks to buy and sell copper in the form of cathodes, which are used for industrial purposes.

In the NPRM, the OCC proposed to reconsider the interpretation set forth in Interpretive Letter 693.

Now, the OCC is finalizing the NPRM and revising its regulations to prohibit national banks from dealing and investing in a metal (or alloy), including copper, in a form primarily suited to industrial or commercial use (industrial or commercial metal).[6] The OCC has added a divestiture period to the final rule, provided clarifying language to the dealing and investing prohibition for national banks, and clarified federal savings associations' (FSA) authority to engage in activity that is not dealing or investing, but is otherwise finalizing the NPRM as proposed. The final rule: (i) Excludes industrial and commercial metals from the terms ''exchange,'' ''coin,'' and ''bullion'' in 12 U.S.C. 24(Seventh); and (ii) provides that dealing or investing in industrial or commercial metal is not part of, or incidental to, the business of banking. Examples of metals and alloys in a form primarily suited for industrial or commercial use include copper cathodes, aluminum T-bars, and gold jewelry. For the reasons stated in this preamble, the OCC has concluded that dealing or investing in these metals is not appropriate for national banks. The final rule supersedes Interpretive Letter 693.[7]

The final rule also applies to FSAs. The Home Owners' Loan Act does not expressly authorize FSAs to buy or sell exchange, coin, and bullion.[8] While FSAs have incidental authority to buy and sell precious metals in certain cases and to sell gold and silver coins minted by the U.S. Treasury, the OCC has not identified any precedent authorizing FSAs to buy and sell any industrial or commercial metal.[9] The OCC does not interpret FSAs' powers to buy and sell metals to be broader than those of national banks.[10] To avoid doubt, and to further integrate national bank and FSA regulations, the final rule prohibits FSAs from dealing or investing in industrial or commercial metal.[11]

II. Summary of the Comments on the Notice of Proposed Rulemaking

The OCC received four comments on the NPRM. Two comments were from financial industry trade associations and two were from individuals. While the comments generally were supportive of the NPRM, the trade association commenters requested that the OCC confirm the permissibility of certain lending and leasing transactions involving physical metals and expressed concern about the potential impact of the rulemaking on the liquidity of the copper market. A detailed discussion of the commenters' concerns and the OCC's response follows.

A. Prohibition on Dealing and Investing for Industrial and Commercial Metal (Including Copper)

Two commenters offered general views on the proposed dealing and investing prohibition for industrial and commercial metal, including copper, under the proposed rule. One was generally supportive of the NPRM's treatment of copper cathodes as an industrial and commercial metal. This commenter noted the proposal was consistent with banks' treatment of copper, as banks currently buy and sell copper based on its value for industrial and commercial purposes rather than as a store of value. The commenter also offered additional support for the rulemaking, noting that banks that own copper are exposed to large fluctuations in copper prices, encounter potential conflicts of interest between house positions and client positions, and may be able to manipulate copper markets through large physical positions. This commenter asserted that the proposed treatment is appropriate because bank copper trading activities more closely resemble commercial enterprises rather than a banking business. The commenter pointed to the PSI Report and 620 Study to support these comments.

The second commenter expressed concern that the OCC has not demonstrated a compelling reason to change its 1995 copper interpretation. The commenter argued that the reasons the OCC approved copper activities in Interpretive Letter 693 are still valid today and that the OCC should not pursue the rulemaking in the absence of a compelling need or corresponding regulatory benefit. After carefully considering these comments, the OCC continues to believe that dealing or investing in copper cathodes, and other industrial or commercial metal, is not appropriate for national banks. As the OCC explained in the NPRM, events subsequent to Interpretive Letter 693 have confirmed copper is a base metal and thus, should be distinguished from precious metals that are not held in industrial or commercial form.[12] For example, in 2000, the London Metals Exchange (''LME'') introduced a futures contract on a base metal index containing copper, aluminum, and

[5] 1995 WL 788816 (Nov. 14, 1995).

[6] The OCC considers the definition of *industrial or commercial metal* to include a warehouse receipt for such metal.

[7] *See* Nat'l Cable & Telecomms. Ass'n v. Brand X Internet Servs., 545 U.S. 967, 981–82 (2005) (agency reconsiderations of prior interpretations entitled to judicial deference so long as the agency adequately explains the reasons for the change); Motor Vehicle Manufacturers Association of the U.S., Inc. v. State Farm Mutual Automobile Insurance Company, 463 U.S. 29, 43 (1983) (''agency must examine the relevant data and articulate a satisfactory explanation for its action including a 'rational connection between the facts found and the choice made' '').

[8] *See* 12 U.S.C. 1464(c).

[9] *See, e.g.,* OTS Op. Ch. Couns. P–2006–1 (Mar. 6, 2006), 2006 WL 6195026 (engaging in precious metal transactions on behalf of customers); Gold Bullion Coin Transactions, 51 FR 34950 (Oct. 1, 1986); Letter from Jack D. Smith, Deputy General Counsel, Federal Home Loan Bank Board, 1988 WL 1021651 (May 18, 1988). All precedents (orders, resolutions, determinations, agreements, regulations, interpretive rules, interpretations, guidelines, procedures, and other advisory materials) made, prescribed, or allowed to become effective by the former Office of Thrift Supervision or its Director that apply to FSAs remain effective until the OCC modifies, terminates, sets aside, or supersedes those precedents. 12 U.S.C. 5414(b).

[10] *See* OTS Op. Ch. Couns. P–2006–1 (Mar. 6, 2006), 2006 WL 6195026 (permissibility of FSA metal activity is evaluated under a four-part test referencing the activities of national banks).

[11] The final rule indirectly applies to federal branches and agencies of foreign banks because they operate with the same rights and privileges (and subject to the same duties, restrictions, penalties, liabilities, conditions, and limitations) as national banks. 12 CFR 28.13(a)(1). The final rule also indirectly applies to insured state banks and state savings associations. *See* 12 U.S.C. 1831a, 1831e.

[12] 81 FR 63430, n.21.

zinc.[13] In 2006, the LME followed with ''mini'' futures for copper, aluminum and zinc. By contrast, firms have launched exchange-traded funds (ETFs) that invest solely in gold, silver, palladium, platinum, or some combination thereof, indicating a widespread belief that these metals are a store of value. The OCC notes there are no copper ETFs. In addition, the OCC understands that national banks that trade copper treat it as a base metal and trade it alongside aluminum and zinc rather than gold and silver. Finally, the OCC considered the issues and risks identified in the PSI Report with respect to physical copper.[14] The commenter's observations do not negate the information provided in the NPRM and these facts demonstrate that the OCC has adequately described its reasons for changing its 1995 interpretation.

B. Physical Holdings

The preamble to the NPRM explained that the OCC did not consider the proposed rule to prohibit national banks from buying or selling metal through a transitory title transfer entered into as part of a customer-driven financial intermediation business.[15] The OCC explained that metal owned through a transitory title transfer typically does not entail physical possession of a commodity; the ownership occurs solely to facilitate the underlying transaction and lasts only for a moment in time. However, the OCC invited comment on whether transitory title transfers involving metals present risks that warrant treating such transactions as physical holdings.

Three commenters addressed transitory title transfers. Two commenters generally supported the OCC's proposed treatment of transitory title transfers. One of these commenters agreed with the assertion in the NPRM that there is no physical possession of the metal in transitory title transfers. This commenter noted that the risks of legal liability typically associated with physical commodity positions are not present in transitory title transfers and that these transactions more closely resemble customer-driven, cash-settled commodity derivatives than physical positions. Another commenter also supported the treatment of transitory title transfers, but suggested the final rule text should limit transitory title transfers to customer-driven financial intermediation transactions that are part of the business of banking. A third commenter disagreed that transitory title transfers are different from dealing and investing in physical metal just because the bank holds the metal for a legal instant. As discussed in detail below, the OCC continues to believe that transitory title transfers do not entail physical possession of industrial and commercial metals. The OCC also notes that relevant precedent already provides that transitory title transfers must be part of a customer-driven financial intermediation business.[16] Therefore, the OCC is finalizing the rule as proposed.

In addition to addressing transitory title transfers, one of the commenters also requested that the OCC confirm that interests in unallocated metal accounts are not physical holdings under the final rule. The commenter identified various activities in which national banks are engaged that could involve an interest in an unallocated metals account. The OCC notes that these activities are fact specific, and determinations about fact-specific activities need to be evaluated on a case-by-case basis. Therefore, the OCC believes it is appropriate to address the applicability of the final rule to these activities on a case-by-case basis. National banks with questions regarding the permissibility of transactions that involve unallocated metals accounts should discuss the issue with the OCC. The OCC is willing to entertain requests for such determinations, consistent with its historical practice of providing interpretive opinions in cases where there is doubt about the permissibility of particular activities.

C. Reverse Repurchase Agreements

The NPRM explained that the OCC views national banks' lending authority to include reverse repurchase agreements that are the functional and economic equivalent of secured loans.[17] Banks may use commodity reverse repurchase agreements to finance customer inventory.[18] Using a standard reverse repurchase agreement for metal to provide financing for a bank customer rather than a traditional bank loan ordinarily does not indicate dealing or investing in the metal. However, the NPRM noted that the facts and circumstances of a particular transaction may warrant a different conclusion. For example, if a bank incurs commodity price risk or pledges, sells, or rehypothecates metal acquired under reverse repurchase agreements, the NPRM provided that the OCC may view the transaction to be dealing or investing in the metal. The OCC invited comment on the treatment of reverse repurchase agreements under the proposed rule.

Two commenters addressed the treatment of reverse repurchase agreements. One suggested the OCC prohibit all reverse repurchase agreements where there is commodity market or liquidity risk. This commenter wrote that a prohibition is a better approach than a facts and circumstances review in light of limited OCC resources. The other commenter asserted that OCC should confirm that these types of reverse repurchase agreements are permissible activities not affected by the rule. This commenter noted that the reuse of the collateral is a long-standing practice in asset-based financing and therefore pledging, selling, or rehypothecating metal owned under a reverse repurchase agreement should not be viewed as indicia of dealing activity.

The OCC continues to have concerns that reverse repurchase agreements that involve commodity price risk or that involve pledging, selling, or rehypothecating metal could be structured in some circumstances in a manner that constitutes dealing or investing activity. The OCC recognizes, as a commenter suggested, that banks may enter into hedges to mitigate price risk that exists at the conclusion of certain reverse repurchase agreements and may pledge collateral for the purpose of funding its customer financing activities. Structuring a transaction in these ways could, in some circumstances, reduce indicia of investing or dealing activity. However, the OCC does not believe it is appropriate to conclude that all reverse repurchase agreements that involve commodity price risk or pledging, etc. of collateral are permissible. Therefore, the OCC continues to believe that it is appropriate to evaluate reverse repurchase agreements that involve commodity price risk or pledging, etc. of collateral on a facts and circumstances basis, as appropriate. This approach will allow the OCC an opportunity to evaluate transactions in context and to consider relevant facts before reaching a determination as to whether a transaction involves dealing or investing. The OCC is therefore declining to make the changes the commenters have requested.

D. Other Permissible Transactions

The proposed rule identified two incidental authorities under which

[13] The LME describes itself as ''the world centre for industrial metals trading.'' *See https://www.lme.com/.*

[14] *See, e.g.,* PSI Report at 362–396.

[15] 81 FR 63431.

[16] Interpretive Letter 1073, 26 OCC Q.J. 46, 2007 WL 5122911 (Oct. 19, 2006).

[17] 81 FR 63431.

[18] 12 CFR 211.4(a)(7).

acquiring and selling metal would remain permissible for national banks: first, collateral foreclosure activities designed to mitigate loan losses; [19] second, nominal physical hedges of customer-driven commodity derivatives. The OCC also explained in the preamble to the NPRM that a bank may buy and sell metal in conjunction with certain leasing authorities.[20]

One commenter addressed the proposed treatment of nominal hedging activities. This commenter suggested that the OCC require banks to disclose hedging amounts to the OCC. This commenter also suggested that the OCC require the hedge be designed to reduce risk in order to prevent commodity speculation. The OCC notes that it monitors bank hedging activity through its regular course of bank supervision. Additionally, banks that engage in commodity hedging activities already must do so in accordance with applicable law, including requirements that the hedge be designed to reduce risk.[21] For these reasons, the OCC does not believe that the changes this commenter suggested are necessary.

Another commenter asked that the OCC modify the final rule to expressly permit certain metals-based financing activities. The commenter described several metal leasing and metal consignment transactions. As explained in the NPRM and below, banks may not buy and sell industrial or commercial metal for the purposes of dealing or investing in that metal. However, banks may continue to buy and sell industrial or commercial metal under other incidental authorities that do not involve dealing or investing. To the extent a bank proposes to engage in a metals-based transaction that presents an interpretive issue(s) under the authorities provided for in 12 U.S.C. 24(Seventh), the OCC will address permissibility on a facts and circumstances basis. The OCC may issue interpretive analysis, as appropriate.

E. Existing Holdings

The OCC solicited comment in the NPRM on the treatment of existing holdings of industrial and commercial metals. Specifically, the OCC asked whether five years to divest non-conforming assets, with the possibility of a five-year extension, would be an appropriate period of time. The OCC also asked whether there were compelling reasons to grandfather existing industrial and commercial metal holdings indefinitely.[22]

Two commenters addressed the issue of existing holdings of industrial and commercial metal. One commenter argued industrial and commercial metal held before the conformance date should be grandfathered because doing so would limit negative effects on copper markets and bank customers. This commenter also asked that the text of the rule include a minimum of five years to conform to the prohibition, arguing this would minimize the impact of the rule. Another commenter did not support allowing the banks additional time to divest their physical metals holdings.

National banks do not currently engage in significant dealing or investing activities in relation to physical industrial and commercial metal. Nor do national banks currently hold significant stores of industrial and commercial metal. Therefore, the OCC finds no compelling reason to grandfather existing activities. However, the OCC does believe that a short divestiture period would be appropriate. Given national banks' limited industrial and commercial metal activities, the OCC concludes that a full five-year divestiture period is not necessary. The OCC is therefore including a provision in the final rule that requires national banks to divest existing holdings of industrial and commercial metal acquired through dealing or investing activities as soon as practicable, but not later than one year from the effective date of the rule.[23] This provision enables the OCC to grant up to four separate one-year extensions of this divestiture period if the bank has made a good faith effort to dispose of the metal and the bank's retention of the metal is not inconsistent with its safe and sound operation. The OCC notes that the approach of granting a divestiture period with the possibility of an extension is consistent with the OCC's treatment of other types of nonconforming assets.[24] This divestiture provision applies only to existing holdings; national banks may not acquire additional holdings of industrial and commercial metal through dealing or investing activities during, or after, the divestiture period.

F. Impact of the Rule

Three commenters discussed the impact of the proposed rule. Two commenters noted, very generally, that they expect the rule to increase cost for customers if finalized as proposed. One of these commenters also suggested the proposal would have a negative impact on the copper market as a whole, asserting that the costs of the rule will not be minimal. This commenter also argued there would be no regulatory benefit to this prohibition. Another commenter said the NPRM would reduce financial risk and conflicts of interests for banks while also allowing the OCC to impose limits on copper and other industrial and commercial metals.

As noted above, national banks do not currently engage in significant dealing or investing activities in relation to physical industrial and commercial metal. Because these markets tend to be highly competitive, we expect that the removal of OCC-supervised institutions as just one class of potential investors/dealers will not have a material effect on these markets. Furthermore, as explained in more detail below, national banks may continue to buy and sell industrial and commercial metal under certain incidental authorities. The OCC expects these limited permissible activities will allow banks to continue to serve customers with interests in commercial and industrial metals in capacities that do not involve dealing or investing activities.

III. Description of the Final Rule

A. Industrial or Commercial Metal Is Not ''exchange, coin, and bullion''

As noted above, the National Bank Act authorizes national banks to buy and sell exchange, coin, and bullion. In this final rule, the OCC is interpreting these terms to exclude metals in a form primarily suited to industrial or commercial use.

Banking Circular 58 (BC–58) [25] sets forth general guidelines that apply to national banks' coin and bullion activities. It defines ''coin'' as ''coins held for their metallic value which are minted by a government, or exact restrikes of such coins minted at a later date by or under the authority of the issuing government.'' Contemporaneous OCC interpretive letters elaborated that ''coin'' referred only to media of exchange.[26] BC–58 defines ''bullion'' as

[19] 81 FR 63433.

[20] 81 FR 63431.

[21] *See, e.g.,* Interpretive Letter 684 (Aug. 4, 1995) 1995 WL 550219; OCC Bulletin 2015–3 (Aug. 4, 2015); 12 CFR 44.3(b) and 44.5(a) (Volcker Rule requirement that hedges be designed to reduce or otherwise significantly mitigate one or more specific identifiable risks).

[22] 81 FR 63432.

[23] The final rule provides a divestiture period for both national banks and FSAs. The OCC does not expect that a divestiture period will be necessary for FSAs and most national banks. However, in order to ensure an orderly asset liquidation process for all institutions that hold metal subject to this prohibition, the divestiture provision is available to both national banks and FSAs.

[24] *See, e.g.,* 12 U.S.C. 29 (holding period for other real estate owned).

[25] BC–58 (Rev.) (Nov. 3, 1981). The OCC published the original version in 1974.

[26] Interpretive Letter 326 (Jan. 17, 1985), 1985 WL 202590; Interpretive Letter 252 (Oct. 26, 1982), 1982

''uncoined gold or silver in bar or ingot form.'' These definitions do not encompass industrial or commercial metal.

Interpretive letters published after BC–58 interpreted national banks' authority to buy coin and bullion to include other precious metals, namely platinum and palladium. Consistent with BC–58's definition of ''coin,'' the OCC in 1987 found that legal tender platinum coins held for their metallic value were ''coin.'' [27] That same letter prohibited dealing in platinum bars. However, in 1991, the OCC concluded that market developments warranted treating platinum bars as bullion.[28] The OCC also found trading in platinum bars to be incidental to trading in platinum coins.[29] For similar reasons, the OCC concluded palladium was coin and bullion and national banks could trade and deal in palladium as part of the business of banking.[30] In support of its position, the OCC noted that the London Platinum and Palladium Market had linked platinum and palladium for market making and regulatory purposes and that most of the Market's members were banks.

However, other interpretive letters recognized that not every precious metal is coin or bullion. Jewelry, the OCC determined, is not.[31]

The OCC has long concluded that ''exchange, coin, and bullion'' does not encompass industrial or commercial metal. The OCC believes this conclusion is consistent with the National Bank Act and current market practice. For example, in the mid-19th century, when Congress passed the National Bank Act, ''bullion'' meant metal suitable for coining, not metal suitable for making wires.[32] The contemporary understanding of ''bullion'' is broader—most currency is no longer made of precious metal—but the contemporary understanding does distinguish bullion from industrial or commercial metal. For example, modern bullion markets trade precious metals by the kilogram.[33] By contrast, industrial and commercial metals markets trade base metals in quantities suitable for industrial or commercial use.[34] In general, gold, silver, platinum, and palladium are bullion today because they:

• Trade in troy ounces or grams rather than metric tons; [35]
• Trade in pure forms; [36]
• Trade in a form suitable for coining;
• Trade as precious metals in the world's major organized markets, including the London bullion markets; and
• Are considered currency by the International Organization for Standardization.[37]

Gold, silver, platinum, and palladium in industrial or commercial form are not exchange, coin, or bullion.

B. Dealing or Investing in Industrial or Commercial Metal Is Neither Part of, nor Incidental to, the Business of Banking

Interpretive Letter 693 concluded that national banks could buy and sell copper (including industrial copper) as a part of or incidental to the business of banking. The OCC has reviewed the bases for the conclusion in Interpretive Letter 693 that buying and selling industrial copper is part of the business of banking, including developments in copper markets that followed this letter. For the following reasons, the OCC has determined that buying and selling copper—or any other metal—in industrial or commercial form for the purpose of dealing or investing in that metal is not part of the business of banking.

When the OCC issued Interpretive Letter 693 in 1995, the agency noted increasing similarity between transactions involving copper and those transactions already conducted by national banks with respect to gold, silver, platinum and palladium (precious metals). This increasing similarity informed the OCC's view at that time that buying and selling copper, including dealing and investing, was part of, or incidental to, the business of banking. However, copper markets have not increased in similarity to precious metal markets.[38] Instead, as noted in detail above, copper is generally traded as a base metal.[39]

The OCC believes that dealing or investing in industrial or commercial metals, including base and precious metals in this form, is not the functional equivalent of dealing or investing in coin and bullion. The paradigmatic example of functional equivalence is that a lease is in economic substance a secured loan.[40] But the significant differences between dealing in industrial or commercial metals and dealing in coin and bullion demonstrate that the former is not, in economic substance, the same as the latter. Most importantly, industrial and commercial metals trade in base metal markets by the ton in cathode or other industrial form, while coin and bullion trade in precious metal markets by the troy ounce or kilogram in bar or ingot form.

[37] ISO 4217 (Aug. 1, 2015), *available at http://www.currency-iso.org/dam/downloads/lists/list_one.xls.*

[38] Events subsequent to Interpretive Letter 693 have confirmed copper's status as a base metal. In 2000, the LME introduced a future on a base metal index containing copper, aluminum, lead, nickel, tin, and zinc. Then, in 2006, it introduced ''mini'' futures for copper, aluminum, and zinc. Similarly, many firms have launched ETFs that invest solely in gold, silver, palladium, platinum, or some combination thereof, indicating a widespread belief that these metals are a store of value. However, there is no copper ETF. Finally, the OCC understands that national banks that trade copper treat it as a base metal and trade it alongside aluminum and zinc rather than gold and silver.

[39] *See generally* PSI Report at 364 (2014) (identifying banks, trading firms, analysts, and exchanges that treat copper as a base metal for trading and risk management purposes).

[40] *See M&M Leasing Corp.* v. *Seattle First Nat'l Bank,* 563 F.2d 1377 (9th Cir. 1977).

In addition, banks' risk management systems distinguish between precious metals and base metals.

The OCC has also considered other factors identified in relevant precedent for determining whether dealing in or investing in industrial or commercial metal is part of the business of banking.[41] The OCC does not believe that analysis under these factors supports a conclusion that this activity is part of the business of banking. For example, the OCC has not seen evidence that this activity strengthens a bank by benefiting its customers or its business.[42] Nor is the OCC aware of any state-chartered banks dealing in or investing in industrial or commercial metal.[43] Indeed, the OCC has not identified any precedent authorizing that activity for state banks. Such activity would suggest dealing or investing in commercial metals may be part of the business of banking.

As described above, under 12 U.S.C. 24(Seventh), a national bank has the power to exercise all such incidental powers as shall be necessary to carry on the business of banking. An activity is incidental to the business of banking if it is convenient or useful to an activity that is part of the business of banking.[44]

The OCC believes that dealing or investing in industrial or commercial metal is not incidental to the business of banking. Some customers may wish to trade industrial or commercial metal with national banks. However, because few banks buy or sell industrial or commercial metal in the ordinary course of business, it does not appear that dealing or investing in industrial or commercial metal significantly enhances national banks' ability to offer banking products and services, including those related to precious metals. Moreover, dealing or investing in industrial or commercial metal does not appear to enable national banks to use capacity acquired for banking operations or otherwise avoid economic loss or waste. Therefore, the OCC concludes national banks may not deal or invest in industrial or commercial metal under their incidental powers.

C. Transactions in Industrial or Commercial Metal That May Be Permissible

National banks do have incidental authority to buy and sell industrial or commercial metal in limited cases. Buying or selling industrial or commercial metal could be incidental to lending activities. For example, a mining company could post a copper cathode as collateral for a loan. Pursuant to the national bank's authority to acquire property in satisfaction of debt previously contracted, the bank could seize and then sell the copper to mitigate loan losses if the borrower defaulted.[45] National banks also have incidental authority to buy and sell nominal amounts of industrial or commercial metal to hedge customer-driven commodity derivatives.[46] The final rule does not prohibit these purchases and sales because they are not dealing or investing.[47]

Similarly, national banks may buy and sell industrial or commercial metal as part of their leasing business. 12 U.S.C. 24(Seventh); 12 U.S.C. 24(Tenth); 12 CFR 23.4. A car, for example, contains metal in a commercial form, but buying a car to lease it is not dealing or investing in commercial metal. Rather, a lease, like a reverse repurchase transaction, is a secured loan in a different form. National banks may also buy and sell industrial or commercial metals to install pipes and electrical wiring in their physical premises. 12 U.S.C. 29(First); 12 CFR 7.1000. This activity is clearly not dealing or investing in industrial or commercial metal.

In certain situations, national banks may buy and sell industrial and commercial metal as reverse repurchase agreements that are the functional and economic equivalent of secured loans.[48] In a reverse repurchase agreement, a bank extends credit by simultaneously buying collateral from a client and agreeing to sell the collateral back to the client at a future date. The difference between the sale and purchase price is effectively the interest the client pays for the extension of credit. If the reverse repurchase agreement counterparty defaults, the bank can mitigate its losses by selling the collateral without first foreclosing on it. Financing customer inventory is a traditional bank activity; using reverse repurchase agreements rather than loans to provide the financing is merely a different way of providing financing.[49] Financing customer inventory using reverse repurchase agreements in itself does not indicate dealing or investing in the metal. However, pledging, selling, or rehypothecating metal acquired under reverse repurchase agreements could suggest dealing or investing activity. So, too, could assuming commodity price risk. For example, an agreement in which the counterparty sells a metal at a certain price to the bank and then repurchases the metal at a price that depends on the metal's then-current market price could indicate dealing or investing activity: The bank is assuming the metal's price risk and, in some circumstances, could act to benefit from spot market price appreciation of the metal. On the other hand, setting the repurchase price at the sale price plus a spread based on the time value of money is equivalent to a secured loan. The determination of whether a reverse repurchase agreement that varies from this secured loan structure is dealing or investing is highly dependent upon the facts of each transaction. National banks with questions regarding the permissibility of reverse repurchase agreements that involve characteristics identified in this discussion should discuss the issue with the OCC. The

[41] *See, e.g.,* Merchants' Nat'l Bank v. State Nat'l Bank, 77 U.S. 604, 648 (1871) (holding that national banks could certify checks because the activity had ''grown out of the business needs of the country.'').

[42] Currently, national banks' dealing and investments in industrial or commercial metal are limited, suggesting that the business needs of the U.S. economy are not meaningfully affected by national banks' dealing in industrial or commercial metal. Nor is there evidence that the amount of revenue from industrial or commercial metal dealing and investing meaningfully improve national banks' financial strength. In any case, the prospect for additional revenue alone is not sufficient to deem an activity to be part of the business of banking. *See* VALIC, 513 U.S. at 258 n.2. *See also* No-objection Letter 88–8 (May 26, 1988), 1988 WL 284872 (concluding that it is impermissible for a national bank to make substantial profits from the sale of merchandise).

[44] Interpretive Letter 1071 (Sept. 6, 2006), 26 OCC Q.J. 46, 2007 WL 5122909 (citing *Arnold Tours, Inc.* v. *Camp,* 472 F.2d 427, 431–32 (1st Cir. 1972)).

[45] *Cf.* Cooper v. Hill, 94 F. 582 (8th Cir. 1899) (foreclosure of a mine); *First Nat'l Bank of Parker* v. *Peavy Elevator Co.,* 10 S.D. 167, 170 (1897) (foreclosure of grain seed and subsequent sale).

[46] Interpretive Letter 684 (Aug. 4, 1995) (permitting physical delivery of commodities as hedges for customer-driven, non-speculative transactions), 1995 WL 550219; OCC Bulletin 2015–35, Quantitative Limits on Physical Commodity Transactions (Aug. 4, 2015) (explaining that ''nominal'' means 5 percent of the bank's short positions in a particular commodity). The final rule explicitly provides that national banks may continue to buy and sell physical metal to hedge a derivative. A similar provision is not necessary for FSAs because they do not engage in this activity. *See* 620 Study at 88; OCC Bulletin 2015–35, n. 1.

[47] *Cf. First Nat'l Bank* v. *Nat'l Exch. Bank,* 92 U.S. 122, 128 (1875) (''In the honest exercise of the power to compromise a doubtful debt owing to a bank, it can hardly be doubted that stocks may be accepted in payment and satisfaction, with a view to their subsequent sale or conversion into money so as to make good or reduce an anticipated loss. Such a transaction would not amount to a dealing in stocks. It was, in effect, so decided in *Fleckner* v. *Bank U.S.,* 8 Wheat. 351 [22 U.S. 338 (1823)], where it was held that a prohibition against trading and dealing was nothing more than a prohibition against engaging in the ordinary business of buying and selling for profit, and did not include purchases resulting from ordinary banking transactions.'').

[48] *See* 12 CFR 211.4(a)(7)

[49] Under the National Bank Act, credit exposures from repurchase and reverse repurchase agreements are loans and extensions of credit subject to a national bank's lending limits. 12 U.S.C. 84(b)(1)(C). We note that Section 610 of the Dodd-Frank Act expanded the definition of ''loans and extensions of credit'' for purposes of lending limits to include credit exposure arising from repurchase agreements and reverse repurchase agreements, among other transactions. The OCC amended its lending limits regulation, 12 CFR 32, to implement the statutory change made by the Dodd-Frank Act.

OCC is willing to entertain requests for such determinations, consistent with its historical practice of providing interpretive opinions in cases where there is doubt about the permissibility of particular activities.

The final rule does not prohibit national banks from buying and selling metal through transitory title transfers entered into as part of a customer-driven financial intermediation business.[50] Interpretive Letter 1073 [51] provides that national banks may hedge metal derivative transactions on a portfolio basis with over-the-counter derivative transactions that settle in cash or transitory title transfer. Interpretive Letter 1073 also provides that a national bank may engage in transitory title transfers in metals for the accommodation of customers. The OCC concluded in Interpretive Letter 1073 that transitory title transfers involving metals do not entail the physical possession of commodities.[52] The OCC's analysis in this letter noted that transitory title transfers do not involve the customary activities relating to, or risks attendant to, commodity ownership, such as storage costs, insurance, and environmental protection. For these reasons, OCC believes that transitory title transfers do not constitute physical possession of commodities and therefore does not consider transitory title transfers to be dealing or investing in industrial or commercial metal for purposes of the final rule.[53] The OCC recognizes that banks may have questions about the permissibility of specific transitory title transfer transactions. The fact-specific nature of these issues merits a case-by-case review to determine the permissibility of the transaction. The OCC will continue to review requests for interpretive opinions on the permissibility of individual transactions proposed by a bank. Should the OCC become aware of additional risks that suggest transitory title transfer activity presents risks more closely akin to the risks of physical metal holdings, the OCC may reconsider the treatment of transitory title transfer transactions.

D. Divestiture Period

The final rule prohibits banks from dealing or investing in industrial or commercial metal. However, in response to a request from a commenter, the final rule provides a divestiture period for banks that acquired industrial or commercial metal through dealing or investing in that metal before the effective date of the rule.[54] Under the divestiture provision, banks must dispose of such metal as soon as practicable, but not later than one year from the effective date of the regulation. The OCC may grant up to four separate one-year extensions of this divestiture period for a national bank that makes a good faith effort to dispose of the metal and the bank's retention of the metal is not inconsistent with its safe and sound operation. The divestiture provision applies only to existing holdings; national banks may not acquire additional holdings of industrial and commercial metal through dealing or investing activities during, or after, the divestiture period.

This divestiture period is generally consistent with the OCC's approach to other nonconforming assets. Banks with questions about the permissibility of activities or holdings involving industrial or commercial metal should ask the OCC for a review of the specific holding or activity.

IV. Regulatory Analysis

Paperwork Reduction Act

Under the Paperwork Reduction Act, 44 U.S.C. 3501–3520, the OCC may not conduct or sponsor, and a person is not required to respond to, an information collection unless the information collection displays a valid Office of Management and Budget (OMB) control number. This final rule does not introduce any new collections of information, therefore, it does not require a submission to OMB.

Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* (RFA), requires an agency, in connection with a final rule, to prepare a Final Regulatory Flexibility Analysis describing the impact of the rule on small entities (defined by the Small Business Administration (SBA) for purposes of the RFA to include banking entities with total assets of $550 million or less) or to certify that the rule will not have a significant economic impact on a substantial number of small entities.

As of December 31, 2015, the OCC supervised 1,032 small entities.[55] Although the rule applies to all OCC-supervised small entities, and thus affects a substantial number of small entities, no small entities supervised by the OCC currently buy or sell metal in a physical form primarily suited to commercial or industrial use for the purpose of dealing or investing in that metal. Thus, the rule will not have a substantial impact on any OCC-supervised small entities.

Therefore, the OCC certifies that the final rule will not have a significant economic impact on a substantial number of OCC-supervised small entities.

Unfunded Mandates Reform Act of 1995 Determination

The OCC analyzed the final rule under the factors set forth in the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532). Under this analysis, the

---

[50] For purposes of the final rule, the OCC considers a transitory title transfer to be back-to-back contracts providing for the receipt and immediate transfer of title to the metal. This means that a bank holds title to the metal for no more than a legal instant. *See* Interpretive Letter 962 (Apr. 21, 2003), 2003 WL 21283155 (''[T]ransitory title transfers preclude actual delivery by passing title down the chain from the initial seller to the ultimate buyer in a series of instantaneous back-to-back transactions. Each party in the chain has title for an instant but does not take actual physical delivery (other than the ultimate buyer which, in no case, will be the Bank.'')).

[51] 26 OCC Q.J. 46, 2007 WL 5122911 (Oct. 19, 2006).

[52] *See also* OCC Bulletin 2015–35 (Aug. 4, 2015) (noting that a physical commodity that a bank acquired and then immediately sold by transitory title transfer would not be included in the bank's physical inventory of that commodity).

[53] In contrast to transitory title transfers, the OCC considers a commodity held by warehouse receipt for more than a legal instant to entail physical possession of the commodity. *See* OCC Bulletin 2015–35 (''[A] bank that satisfies certain conditions may engage in physical commodity transactions (for example, by buying or selling title to a commodity via a warehouse receipt or bill of lading) to manage the risks of commodity derivatives.''); Interpretive Letter 684 (Aug. 4, 1995), 1995 WL 550219 (recognizing physical possession of a commodity by warehouse receipt). The OCC notes that the customary activities relating to, or risks attendant to, commodity ownership by warehouse receipt are distinguishable from those involving transitory title transfer. For example, Interpretive Letter 684 provides that the OCC expects a bank engaged in physical commodity hedging, either through warehouse receipt or ''pass-through'' delivery, to adopt and maintain ''safeguards designed to manage the risks associated with storing, transporting, and disposing of commodities of which the bank has taken delivery, including policies and procedures designed to ensure that the bank has adequate levels of insurance (including insurance for environmental liabilities) which, after deductions, are commensurate with the risks assumed.''

[54] The final rule provides a divestiture period for both national banks and FSAs. The OCC does not expect that a divestiture period will be necessary for FSAs and most national banks. However, in order to ensure an orderly liquidation process for all institutions that hold metal subject to this prohibition, the divestiture provision is available to both national banks and FSAs.

[55] The OCC calculated the number of small entities using the SBA's size thresholds for commercial banks and savings institutions, and trust companies, which are $550 million and $38.5 million, respectively. Consistent with the General Principles of Affiliation, 13 CFR 121.103(a), the OCC counted the assets of affiliated financial institutions when determining whether to classify a national bank or FSA as a small entity. The OCC used December 31, 2015, to determine size because a ''financial institution's assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year.'' *See* footnote 8 of the SBA's *Table of Size Standards.*

OCC considered whether the rule includes a federal mandate that may result in the expenditure by state, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year (adjusted annually for inflation).

Although the final rule would apply to all OCC-supervised institutions, very few of these institutions are currently involved in activities involving dealing or investing in copper or other metals in a physical form primarily suited to commercial or industrial use.

While the final rule may prevent OCC-supervised institutions from realizing potential gains from prohibited investments in physical metals, the rule also may protect them from realizing potential losses from investments in physical metals. The OCC is not able to estimate these potential gains or losses because they will depend on future fluctuations in the prices of the various physical metals. However, the OCC does expect OCC-supervised institutions to be able to achieve comparable returns in alternative non-prohibited investment opportunities. Thus, the OCC estimates that the opportunity cost of the final rule will be near zero.

The final rule may impose one-time costs on affected institutions with respect to the disposal of current physical metal inventory that a bank may not deal in or invest in under the rule. This cost will depend to some extent on the amount of physical metal inventory that affected institutions must dispose of. Given the divestiture period in the final rule, a gradual sell-off should not affect market prices and the affected institutions would receive fair value for their metals. Under these circumstances, the OCC estimates that the disposal costs will also be minimal.

Finally, by establishing that buying and selling physical metal in commercial or industrial form is generally not part of the business of banking, the rule implies that customers of OCC-supervised institutions will have to identify another reliable source of supply of physical metals and that OCC-supervised institutions will be less able to compete with non-bank metals dealers. Given how technology has made the physical metals markets more accessible, the OCC expects bank customers will face minimal costs associated with identifying another supplier of physical metals. The OCC also expects that losing the ability to compete with non-bank metal dealers will not significantly detract from the strength of OCC-supervised institutions, especially given that the final rule would recognize several business-of-banking incidental exceptions to the prohibition on buying and selling physical metal. These permissible activities should enable OCC-supervised institutions to continue to provide metals related services to bank customers that do not involve dealing or investing in commercial and industrial metals.

For the reasons described above, the OCC has determined that the final rule would not result in expenditures by state, local, and Tribal governments, or by the private sector, of $100 million or more. Accordingly, the OCC has not prepared a written statement to accompany the final rule.

List of Subjects in 12 CFR Part 7

Banks, banking, Computer technology, Credit, Federal savings associations, Insurance, Investments, Metals, National banks, Reporting and recordkeeping requirements, Securities, Surety bonds.

For the reasons set forth in the preamble, OCC amends 12 CFR part 7 as follows:

PART 7—ACTIVITIES AND OPERATIONS

■ 1. The authority citation for part 7 is revised to read as follows:

Authority: 12 U.S.C. 1 *et seq.,* 25b, 71, 71a, 92, 92a, 93, 93a, 371, 371a, 481, 484, 1463, 1464, 1818, and 5412(b)(2)(B).

■ 2. Add § 7.1022 to subpart A to read as follows:

§ 7.1022 National banks' authority to buy and sell exchange, coin, and bullion.

(a) In this section, *industrial or commercial metal* means metal (including an alloy) in a physical form primarily suited to industrial or commercial use, for example, copper cathodes.

(b) *Scope of authorization.* Section 24(Seventh) of the National Bank Act authorizes national banks to buy and sell exchange, coin, and bullion. Industrial or commercial metal is not exchange, coin, and bullion within the meaning of this authorization.

(c) *Buying and selling metal as part of or incidental to the business of banking.* Section 24(Seventh) authorizes national banks to engage in activities that are part of, or incidental to, the business of banking. Buying and selling industrial or commercial metal for the purpose of dealing or investing in that metal is not part of or incidental to the business of banking pursuant to section 24(Seventh). Accordingly, national banks may not acquire industrial or commercial metal for purposes of dealing or investing.

(d) *Other authorities not affected.* This section shall not be construed to preclude a national bank from acquiring or selling metal in connection with its incidental authority to foreclose on loan collateral, compromise doubtful claims, or avoid loss in connection with a debt previously contracted. This section also shall not be construed to preclude a national bank from buying and selling physical metal to hedge a derivative for which that metal is the reference asset so long as the amount of the physical metal used for hedging purposes is nominal.

(e) *Nonconforming holdings.* National banks that hold industrial or commercial metal as a result of dealing or investing in that metal shall dispose of such metal as soon as practicable, but not later than one year from the effective date of this regulation. The OCC may grant up to four separate one-year extensions to dispose of industrial or commercial metal if a national bank makes a good faith effort to dispose of the metal and retention of the metal for an additional year is not inconsistent with the safe and sound operation of the bank.

■ 3. Add § 7.1023 to subpart A to read as follows:

§ 7.1023 Federal savings associations, prohibition on industrial or commercial metal dealing or investing.

(a) In this section, *industrial or commercial metal* means metal (including an alloy) in a physical form primarily suited to industrial or commercial use, for example, copper cathodes.

(b) Federal savings associations may not deal or invest in industrial or commercial metal.

(c) *Other authorities not affected.* This section shall not be construed to preclude a federal savings association from acquiring or selling metal in connection with its authority to foreclose on loan collateral, compromise doubtful claims, or avoid loss in connection with a debt previously contracted.

(d) *Nonconforming holdings.* Federal savings associations that hold industrial or commercial metal as a result of dealing or investing in that metal shall dispose of such metal as soon as practicable, but not later than one year from the effective date of this regulation. The OCC may grant up to four separate one-year extensions to dispose of industrial or commercial metal if a federal savings association makes a good faith effort to dispose of the metal and retention of the metal for an additional year is not inconsistent with safe and sound operation of the association.

Dated: December 15, 2016.

Thomas J. Curry,

Comptroller of the Currency.

[FR Doc. 2016–31572 Filed 12–29–16; 8:45 am]

BILLING CODE 4810–33–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2015–3142; Directorate Identifier 2015–NM–003–AD; Amendment 39–18728; AD 2016–25–02]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: The FAA is correcting an airworthiness directive (AD) that published in the **Federal Register**. That AD applies to certain The Boeing Company Model 787–8 airplanes. As published, the amendment number specified in the preamble and regulatory text is incorrect. This document corrects that error. In all other respects, the original document remains the same.

DATES: This final rule is effective January 20, 2017.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 20, 2017 (81 FR 90955, December 16, 2016).

ADDRESSES: For service information identified in this final rule, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740; telephone 562–797–1717; Internet *https://www.myboeingfleet.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–3142.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov*; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Fnu Winarto, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle Aircraft Certification Office (ACO), 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6659; fax: 425–917–6590; email: *fnu.winarto@faa.gov.*

SUPPLEMENTARY INFORMATION: Airworthiness Directive 2016–25–02 (81 FR 90955, December 16, 2016), requires installing markers to limit the hydraulic system fluid used to a specific brand, doing hydraulic fluid tests of the hydraulic systems, replacing hydraulic system fluid if necessary, and doing all applicable related investigative and corrective actions for certain The Boeing Company Model 787–8 airplanes.

Need for the Correction

As published, the amendment number specified in the preamble and regulatory text is incorrect. The incorrectly specified number was Amendment 39–18725; the correct number is Amendment 39–18728.

Related Service Information Under 1 CFR Part 51

We have reviewed Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016. This service information describes procedures for installing markers to limit the hydraulic system fluid used to a specific brand, doing hydraulic fluid tests of the hydraulic systems, replacing the hydraulic system fluid if necessary, and related investigative and corrective actions. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Correction of Publication

This document corrects an error and correctly adds the AD as an amendment to 14 CFR 39.13. Although no other part of the preamble or regulatory information has been corrected, we are publishing the entire rule in the **Federal Register**.

The effective date of this AD remains January 20, 2017.

Since this action only corrects an amendment number, it has no adverse economic impact and imposes no additional burden on any person. Therefore, we have determined that notice and public procedures are unnecessary.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Correction

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Corrected]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2016–25–02 The Boeing Company: Amendment 39–18728; Docket No. FAA–2015–3142; Directorate Identifier 2015–NM–003–AD.

(a) Effective Date

This AD is effective January 20, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 787–8 series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016.

(d) Subject

Air Transport Association (ATA) of America Code 27, Flight Control Systems.

(e) Unsafe Condition

This AD was prompted by reports of the accumulation of very fine particle deposits in the power control unit (PCU) electro-hydraulic servo valves (EHSVs) used in the flight control system; this accumulation caused degraded performance due to reduced EHSV internal hydraulic supply pressures, resulting in the display of PCU fault status messages from the engine indication and crew alerting system (EICAS). We are issuing this AD to prevent failure of flight control hydraulic PCUs, which could lead to reduced controllability of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Marker Installation

Within 36 months after the effective date of this AD, install markers to allow servicing of hydraulic systems with only HyJet V hydraulic fluid, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016.

Note 1 to paragraph (g) of this AD: Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016, refers to Boeing Service Bulletin B787–81205–SB290022–00, Issue 001, dated September 4, 2014, as an additional source of guidance for installing markers to allow servicing of hydraulic systems with only HyJet V hydraulic fluid.

Note 2 to paragraph (g) of this AD: Task 1, Figure 1, and Task 2, Figure 1, of Boeing Service Bulletin B787–81205–SB290022–00, Issue 001, dated September 4, 2014, identify P/N 710Z7290–9##ALT1 for the left and right engine diagonal braces; however, the correct P/N is 710Z7290–9 with no ##ALT suffix.

(h) Fluid Tests of the Left, Right, and Center Hydraulic Systems

For airplanes identified in Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016, as Group 1, Configuration 2, Group 2: Within 36 months after the effective date of this AD, do hydraulic fluid tests of the left, right, and center hydraulic systems, replace the hydraulic system fluid, if necessary, and do all applicable related investigative and corrective actions, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016. Do all applicable related investigative and corrective actions within 36 months after the effective date of this AD.

(i) Credit for Previous Actions

This paragraph provides credit for the actions required by paragraphs (g) and (h) of this AD, if those actions were performed before the effective date of this AD using Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 001, dated November 25, 2014.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (k)(1) of this AD. Information may be emailed to: *9-ANM-Seattle-ACO-AMOC-Requests@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (j)(3)(i) and (j)(3)(ii) apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or sub-step is labeled ''RC Exempt,'' then the RC requirement is removed from that step or sub-step. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(4) An AMOC that provides an acceptable level of safety may be used for any repair required by this AD if it is approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. For a repair method to be approved, the repair must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(k) Related Information

(1) For more information about this AD, contact Fnu Winarto, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle ACO, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6659; fax: 425–917–6590; email: *fnu.winarto@faa.gov.*

(2) Service information identified in this AD that is not incorporated by reference is available at the addresses specified in paragraphs (l)(4) and (l)(5) of this AD.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following service information was approved for IBR on January 20, 2017 (81 FR 90955, December 16, 2016).

(i) Boeing Alert Service Bulletin B787–81205–SB270026–00, Issue 002, dated June 13, 2016.

(ii) Reserved.

(4) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740; telephone 562–797–1717; Internet *https://www.myboeingfleet.com.*

(5) You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

(6) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued in Renton, Washington, on December 22, 2016.

Robert D. Breneman,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Safran Helicopter Engines, S.A. (Formerly Turbomeca S.A.) Turboshaft Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are superseding airworthiness directive (AD) 2016–04–12, that applies to certain Safran Helicopter Engines, S.A. (formerly Turbomeca S.A.) Arriel 2B, 2B1, 2C, 2C1, 2C2, 2D, 2E, 2S1, and 2S2 turboshaft engines. AD 2016–04–12 required spectrometric oil analysis (SOA) inspection of the engine accessory gearbox (AGB), and, depending on the results, removal of the engine AGB. This AD requires initial and repetitive wear inspections of the engine AGB cover. This AD was prompted by a report of an uncommanded in-flight shutdown (IFSD) of an Arriel 2S2 engine caused by rupture of the 41-tooth gear, which forms part of the bevel gear in the engine AGB. We are issuing this AD to correct the unsafe condition on these products.

DATES: This AD is effective February 3, 2017.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of February 3, 2017.

ADDRESSES: For service information identified in this final rule, contact Safran Helicopter Engines, S.A. 40220 Tarnos, France; phone: 33 0 5 59 74 40 00; fax: 33 0 5 59 74 45 15. You may view this service information at the FAA, Engine & Propeller Directorate, 1200 District Avenue, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–3753.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–3753; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the mandatory continuing airworthiness information (MCAI), regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Document Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Philip Haberlen, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7770; fax: 781–238–7199; email: *philip.haberlen@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2016–04–12, Amendment 39–18406 (81 FR 12583, March 10, 2016), (''AD 2016–04–12''). AD 2016–04–12 applied to the specified products. The NPRM published in the **Federal Register** on June 17, 2016 (81 FR 39601). The NPRM proposed to require initial and repetitive spectrometric oil analysis (SOA) of the AGB, and wear inspections of the engine AGB cover. However, this AD only mandates wear inspections of the engine AGB cover and does not add requirements beyond the scope of the NPRM.

Comments

We gave the public the opportunity to participate in developing this AD. We received no comments on the NPRM (81 FR 39601, June 17, 2016).

Since we issued AD 2016–04–12, the European Aviation Safety Agency (EASA) has issued MCAI European Aviation Safety Agency AD 2016–0055R1, dated October 11, 2016, to only specify that periodic wear inspections of the engine AGB cover are necessary. This AD removes the proposed requirements for initial and repetitive SOA of the AGB, which reduces the costs of compliance in this AD.

Also since we issued AD 2016–04–12, Safran Helicopter Engines, S.A. has issued Mandatory Service Bulletin (MSB) No. 292 72 2861, Version D, dated September 23, 2016. The MSB only requires performing periodic wear inspections of the engine AGB cover.

Conclusion

We reviewed the available data and determined that air safety and the public interest require adopting this AD with the changes described previously. We determined that these changes will not increase the economic burden on any operator or increase the scope of this AD.

Related Service Information Under 1 CFR Part 51

Safran Helicopter Engines, S.A. has issued MSB No. 292 72 2861, Version D, dated September 23, 2016. The MSB describes procedures for performing periodic wear inspections of the engine AGB cover. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 250 engines installed on helicopters of U.S. registry. We also estimate that it will take 1 hour to perform the engine AGB cover wear inspection. The average labor rate is $85 per hour. Required parts for the wear inspection cost about $3,100 per engine. We estimate that 5 engines will require AGB replacement at a cost of $44,397 per engine. We also estimate that it will take about 2 hours to replace the engine AGB. Based on these figures, we estimate the cost of this AD on U.S. operators to be $1,019,085.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701, ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by removing airworthiness directive (AD) AD 2016–04–12, Amendment 39–18406 (81 FR 12583, March 10, 2016), and adding the following new AD:

2016–25–13 Safran Helicopter Engines, S.A. (Type Certificate previously held by Turbomeca S.A.): Amendment 39–18739; Docket No. FAA–2015–3753; Directorate Identifier 2015–NE–26–AD.

(a) Effective Date

This AD is effective February 3, 2017.

(b) Affected ADs

This AD supersedes AD 2016–04–12, Amendment 39–18406 (81 FR 12583, March 10, 2016).

(c) Applicability

This AD applies to Safran Helicopter Engines, S.A. Arriel 2B, 2B1, 2C, 2C1, 2C2, 2D, 2E, 2S1, and 2S2 turboshaft engines with an engine accessory gearbox (AGB), part number 0292120650, with a machined front casing.

(d) Unsafe Condition

This AD was prompted by a report of an uncommanded in-flight shutdown (IFSD) of an Arriel 2S2 engine caused by rupture of the 41-tooth gear, which forms part of the bevel gear in the engine AGB. We are issuing this AD to prevent failure of the engine AGB, uncommanded IFSD, damage to the engine, and damage to the helicopter.

(e) Compliance

Comply with this AD within the compliance times specified, unless already done.

(1) Initial Wear Inspection

(i) For all affected engines, perform a wear inspection of the engine AGB cover before the engine AGB, module M01, exceeds 850 engine hours (EH) since new or since last overhaul (SLO), or within 50 EHs after April 14, 2016, or before the next flight after the effective date of this AD, whichever occurs latest.

(ii) Reserved.

(2) Repetitive Wear Inspection Intervals

(i) For Arriel 2E engines, repeat the engine AGB cover wear inspection within every 800 EH since last inspection (SLI).

(ii) For all affected engines, except for Arriel 2E engines, repeat the engine AGB cover wear inspection within every 600 EH SLI.

(3) Inspection Criteria

(i) Use paragraph 2.4.2 of Safran Helicopter Engines, S.A. Mandatory Service Bulletin (MSB) No. 292 72 2861, Version D, dated September 23, 2016, to do the inspections required by paragraphs (e)(1) and (e)(2) of this AD.

(ii) Reserved.

(4) Corrective Actions Based on the Results of the Most Recent Wear Inspection

(i) If the wear measured from the most recent wear inspection is 0.15 mm or less, no further action is required. However, you must still comply with the repetitive inspection requirements of paragraph (e)(2) of this AD.

(ii) If the most recent wear inspection was performed while the engine was in service, and the wear is greater than 0.15 mm, do the following:

(A) If the wear measured from the most recent wear inspection is greater than 0.15 mm, but 0.30 mm or less, remove the engine AGB from service within 200 EH SLI and replace with a part eligible for installation.

(B) If the wear measured from the most recent wear inspection is greater than 0.30 mm, but 0.40 mm or less, remove the engine AGB from service within 25 EH SLI and replace with a part eligible for installation.

(C) If the wear measured from the most recent wear inspection is greater than 0.40 mm, remove the engine AGB from service before further flight and replace with a part eligible for installation.

(iii) If the most recent wear inspection was performed on the engine during an engine shop visit, and the wear is greater than 0.15 mm, remove the engine AGB before further flight and replace with a part eligible for installation.

(f) Credit for Previous Action

If you have previously performed a wear inspection of the engine AGB cover prior to the effective date of this AD in accordance with the instructions given in Turbomeca MSB No. 292 72 2861, Version C, dated March 9, 2016, or Turbomeca MSB No. 292 72 2861, Version B, dated February 2, 2016, then you may take credit for that wear inspection as the ''most recent'' wear inspection for the purposes of paragraph (e)(4) of this AD.

(g) Definition

For the purpose of this AD, an engine shop visit is defined as the induction of an engine into the shop for maintenance involving the separation of any major mating engine flanges, except that the separation of engine flanges solely for the purposes of transportation without subsequent engine maintenance does not constitute an engine shop visit.

(h) Alternative Methods of Compliance (AMOCs)

The Manager, Engine Certification Office, FAA, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request. You may email your request to: *ANE-AD-AMOC@faa.gov.*

(i) Related Information

(1) For more information about this AD, contact Philip Haberlen, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7770; fax: 781–238–7199; email: *philip.haberlen@faa.gov.*

(2) Refer to MCAI European Aviation Safety Agency AD 2016–0055R1, dated October 11, 2016, for more information. You may examine the MCAI in the AD docket on the Internet at *http://www.regulations.gov/document?D=FAA-2015-3753-0006.*

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Safran Helicopter Engines, S.A. Mandatory Service Bulletin No. 292 72 2861, Version D, dated September 23, 2016.

Food Labeling; Nutrition Labeling of Standard Menu Items in Restaurants and Similar Retail Food Establishments; Extension of Compliance Date

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; extension of compliance date.

SUMMARY: The Food and Drug Administration (FDA or we) is extending the compliance date for the final rule requiring disclosure of certain nutrition information for standard menu items in certain restaurants and retail food establishments. The final rule appeared in the **Federal Register** of December 1, 2014, and on May 5, 2016, we stated in the **Federal Register** that the enforcement of the final rule would begin on May 5, 2017. We are taking this action to clarify and confirm that the compliance date for the final rule is May 5, 2017.

DATES: *Effective date:* This final rule is effective December 30, 2016. *Compliance date:* Covered establishments must comply with the rule published December 1, 2014 (79 FR 71156) by May 5, 2017.

FOR FURTHER INFORMATION CONTACT: Ashley Rulffes, Center for Food Safety and Applied Nutrition (HFS–820), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2371, email: *ashley.rulffes@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of December 1, 2014 (79 FR 71156), we published a final rule requiring disclosure of certain nutrition information for standard menu items in certain restaurants and retail food establishments. The final rule, which is now codified at § 101.11 (21 CFR 101.11), implements provisions of section 403(q)(5)(H) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 343(q)(5)(H)) and:

- Defines terms, including terms that describe criteria for determining whether an establishment is subject to the rule;
- establishes which foods are subject to the nutrition labeling requirements and which foods are not subject to these requirements;
- requires that calories for standard menu items be declared on menus and menu boards that list such foods for sale;
- requires that calories for standard menu items that are self-service or on display be declared on signs adjacent to such foods;
- requires that written nutrition information for standard menu items be available to consumers who ask to see it;
- requires, on menus and menu boards, a succinct statement concerning suggested daily caloric intake (succinct statement), designed to help the public understand the significance of the calorie declarations;
- requires, on menus and menu boards, a statement regarding the availability of the written nutrition information (statement of availability);
- establishes requirements for determination of nutrient content of standard menu items;
- establishes requirements for substantiation of nutrient content determined for standard menu items, including requirements for records that a covered establishment must make available to FDA within a reasonable period of time upon request; and
- establishes terms and conditions under which restaurants and similar retail food establishments not otherwise subject to the rule could elect to be subject to the requirements by registering with FDA.

In the preamble to the final rule (79 FR 71156 at 71239 through 71241), we stated that the rule would be effective on December 1, 2015, and also provided a compliance date of December 1, 2015, for covered establishments. The final rule (at § 101.11(a)) defines ''covered establishment'' as a restaurant or similar retail food establishment that is a part of a chain with 20 or more locations doing business under the same name (regardless of the type of ownership, *e.g.,* individual franchises) and offering for sale substantially the same menu items, as well as a restaurant or similar retail food establishment that is voluntarily registered to be covered under § 101.11(d).

II. Extending the Compliance Date

In the **Federal Register** of July 10, 2015 (80 FR 39675), in response to requests from affected entities, we announced our decision to extend the compliance date for the final rule to December 1, 2016. The final rule requirements are intended to ensure that consumers are provided accurate, clear, and consistent nutrition information for foods sold in covered establishments in a direct and accessible manner to enable consumers to make informed and healthful dietary choices. We stated in that extension that allowing adequate time for covered establishments to fully implement the final rule's requirements, as described in the requests, would help accomplish the primary objective of the final rule and is in the public interest.

On December 18, 2015, the President signed the Consolidated Appropriations Act, 2016 (Pub. L. 114–113). Section 747 of the Consolidated Appropriations Act states that none of the funds made available under the Consolidated Appropriations Act may be used to implement, administer, or enforce the final rule entitled ''Food Labeling; Nutrition Labeling of Standard Menu Items in Restaurants and Similar Retail Food Establishments'' until 1 year after the date we publish a Level 1 guidance with respect to nutrition labeling of standard menu items in restaurants and similar retail food establishments.

In the **Federal Register** of May 5, 2016 (81 FR 27067), we announced the availability of the Level 1 guidance document and stated that enforcement of the final rule published December 1, 2014, would commence on May 5, 2017 (81 FR 27067 at 27068). While FDA made clear that we would not begin enforcing menu labeling requirements prior to May 5, 2017, we did not at that time formally make a change to the compliance date through rulemaking.

Therefore, through this final rule, we are clarifying and confirming that the compliance date for the final rule entitled ''Food Labeling; Nutrition Labeling of Standard Menu Items in Restaurants and Similar Retail Food Establishments,'' codified at § 101.11, is May 5, 2017.

III. Economic Analysis of Impacts

We have examined the impacts of the final rule under Executive Order 12866, Executive Order 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct us to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). We have developed a comprehensive Economic Analysis of Impacts that assesses the impacts of the final rule. We believe that this final rule is not a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this rule provides more flexibility by further extending the compliance date for the ''Food Labeling: Nutrition Labeling of Standard Menu Items in Restaurants and Similar Retail Food Establishments'' final rule (79 FR 71156) (menu labeling final rule), we certify that the final rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes an assessment of anticipated costs and benefits, before issuing ''any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any one year.'' The current threshold after adjustment for inflation is $146 million, using the most current (2015) Implicit Price Deflator for the Gross Domestic Product. This final rule would not result in an expenditure in any year that meets or exceeds this amount.

This rule extends the compliance date of the menu labeling final rule by approximately 5 months: From December 1, 2016, to May 5, 2017. The estimated costs and benefits accrued in any given year that the menu labeling rule is in effect, relative to the first year of compliance, does not change; however, because the compliance date is being extended by 5 months, the discounted value of both total costs and total benefits decreases. The principal benefit of this final rule will be the reduction in costs associated with extending the compliance date by 5 months. The principal cost of this final rule will be the reduction in benefits associated with extending the compliance date by 5 months. Extending the compliance date of the menu labeling final rule by 5 months reduces the annualized net benefits (discounted at 3 percent) approximately 3 percent, from $457 million to $442 million. While average annualized net benefits decrease by $15 million, they are still positive. We note that this extension of the compliance date will not have an actual effect on the cost or benefits of the menu labeling rule, because, under section 747 of the Consolidated Appropriations Act, 2016, FDA was not authorized to spend funds to ''implement, administer, or enforce'' the rule until May 5, 2017, a year after the date on which published a Level 1 guidance with respect to nutrition labeling of standard menu items in restaurants and similar retail food establishments. We are presenting the benefits and costs of the menu labeling final rule, which takes effect according to the dates in this rule.

The full analysis of economic impacts is available in the docket for this final rule (Ref. 1) and at *http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/default.htm.*

IV. Paperwork Reduction Act

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

V. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. Reference

The following reference is on display in the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, and is available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; it is also available electronically at *https://www.regulations.gov.* FDA has verified the Web site addresses, as of the date this document publishes in the **Federal Register**, but Web sites are subject to change over time.

Orthopedic Devices; Reclassification of Pedicle Screw Systems, Henceforth To Be Known as Thoracolumbosacral Pedicle Screw Systems, Including Semi-Rigid Systems

AGENCY: Food and Drug Administration, HHS.

ACTION: Final order.

SUMMARY: The Food and Drug Administration (FDA) is issuing a final order to reclassify pedicle screw systems, a preamendments class III device (regulated under product code NKB), into class II (special controls), renaming the device ''thoracolumbosacral pedicle screw systems''; reclassify dynamic stabilization systems, a subtype of pedicle screw systems regulated under product code NQP when used as an adjunct to fusion, into class II (special controls), renaming this device subtype ''semi-rigid systems''; and clarify the device identification of pedicle screw systems to more clearly delineate between rigid pedicle screw systems and semi-rigid systems. FDA is finalizing this action based on a reevaluation of information pertaining to the device type.

DATES: This order is effective on December 30, 2016. See further discussion in section V, ''Implementation Strategy.''

FOR FURTHER INFORMATION CONTACT: Constance P. Soves, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1437, Silver Spring, MD 20993, 301–796–6951, *Constance.Soves@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background—Regulatory Authorities

The Federal Food, Drug, and Cosmetic Act (the FD&C Act), as amended by the Medical Device Amendments of 1976 (the 1976 amendments) (Pub. L. 94–295), the Safe Medical Devices Act of 1990 (Pub. L. 101–629), the Food and Drug Administration Modernization Act of 1997 (Pub. L. 105–115), the Medical Device User Fee and Modernization Act of 2002 (Pub. L. 107–250), the Medical Devices Technical Corrections Act (Pub. L. 108–214), the Food and Drug Administration Amendments Act of 2007 (Pub. L. 110–85), and the Food and Drug Administration Safety and Innovation Act (FDASIA) (Pub. L. 112–144), among other amendments, established a comprehensive system for the regulation of medical devices intended for human use. Section 513 of the FD&C Act (21 U.S.C. 360c) established three categories (classes) of devices, reflecting the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories of devices are class I (general controls), class II (special controls), and class III (premarket approval).

Under section 513(d) of the FD&C Act, devices that were in commercial distribution before the enactment of the 1976 amendments, May 28, 1976 (generally referred to as preamendments devices), are classified after FDA has: (1) Received a recommendation from a device classification panel (an FDA advisory committee); (2) published the panel's recommendation for comment, along with a proposed regulation classifying the device; and (3) published a final regulation classifying the device. FDA has classified most preamendments devices under these procedures.

Devices that were not in commercial distribution prior to May 28, 1976 (generally referred to as ''postamendments devices'') are automatically classified by section 513(f) of the FD&C Act into class III without any FDA rulemaking process. Those devices remain in class III and require premarket approval unless, and until, the device is reclassified into class I or II or FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(i) of the FD&C Act, to a predicate device that does not require premarket approval. The Agency determines whether new devices are substantially equivalent to predicate devices by means of premarket notification procedures in section 510(k) of the FD&C Act (21 U.S.C. 360(k)) and part 807 (21 Code of Federal Regulations (CFR) part 807).

A preamendments device that has been classified into class III and devices found substantially equivalent by means of premarket notification (510(k)) procedures to such a preamendments device or to a device within that type (both the preamendments and substantially equivalent devices are referred to as preamendments class III devices) may be marketed without submission of a premarket approval application (PMA) until FDA issues a final order under section 515(b) of the FD&C Act (21 U.S.C. 360e(b)) requiring premarket approval.

Under section 515(i)(2) of the FD&C Act, FDA has the authority to issue an administrative order revising the proposed classification of a device for which FDA has classified as a class III device and for which no administrative order has been issued calling for PMAs under section 515(b) of the FD&C Act, so that the device is classified into class I or class II, after issuance of a proposed order, a meeting of a device classification panel, and consideration of the comments of a proposed order. In determining whether to revise the proposed classification of a device or to require a device to remain in class III, FDA applies the criteria set forth in section 513(a) of the FD&C Act. Section 513(a)(1)(B) of the FD&C Act defines class II devices as those devices for which the general controls in section 513(a)(1)(A) by themselves are insufficient to provide reasonable assurance of safety and effectiveness, but for which there is sufficient information to establish special controls to provide a reasonable assurance of safety and effectiveness of a device.

On July 9, 2012, FDASIA was enacted. Section 608(a) of FDASIA amended section 513(e) of the FD&C Act, changing the mechanism for reclassifying a device from rulemaking to an administrative order.

Section 513(e) of the FD&C Act provides that FDA may, by administrative order, reclassify a device based upon ''new information.'' FDA can initiate a reclassification under section 513(e) or an interested person may petition FDA to reclassify a preamendments device. The term ''new information,'' as used in section 513(e), includes information developed as a result of a reevaluation of the data before the Agency when the device was originally classified, as well as information not presented, not available, or not developed at that time. (See, *e.g., Holland-Rantos Co.* v. *United States Department of Health, Education, and Welfare,* 587 F.2d 1173, 1174 n.1 (D.C. Cir. 1978); *Upjohn* v. *Finch,* 422 F.2d 944 (6th Cir. 1970); *Bell* v. *Goddard,* 366 F.2d 177 (7th Cir. 1966).)

Reevaluation of the data previously before the Agency is an appropriate basis for subsequent action where the reevaluation is made in light of newly available authority (see *Bell,* 366 F.2d at 181; *Ethicon, Inc.* v. *FDA,* 762 F.Supp. 382, 388–391 (D.D.C. 1991)), or in light of changes in ''medical science'' (*Upjohn,* 422 F.2d at 951). Whether data before the Agency are old or new data, the ''new information'' to support reclassification under section 513(e) must be ''valid scientific evidence,'' as defined in section 513(a)(3) of the FD&C Act and 21 CFR 860.7(c)(2). (See, *e.g., General Medical Co.* v. *FDA,* 770 F.2d 214 (D.C. Cir. 1985); *Contact Lens Mfrs. Ass'n* v. *FDA,* 766 F.2d 592 (D.C. Cir. 1985), cert. denied, 474 U.S. 1062 (1986).)

FDA relies upon ''valid scientific evidence'' in the classification process to determine the level of regulation for devices. To be considered in the reclassification process, the ''valid scientific evidence'' upon which the Agency relies must be publicly available. Publicly available information excludes trade secret and/or confidential commercial information, *e.g.,* the contents of a pending PMA. (See section 520(c) of the FD&C Act (21 U.S.C. 360j(c)).)

Section 513(e)(1) of the FD&C Act sets forth the process for issuing a final reclassification order. Specifically, prior to the issuance of a final order reclassifying a device, the following must occur: (1) Publication of a proposed order in the **Federal Register**; (2) a meeting of a device classification panel described in section 513(b) of the FD&C Act; and (3) consideration of comments to a public docket.

FDA published a proposed order to propose different classifications for rigid pedicle screw systems and semi-rigid systems (SRSs) in the **Federal Register** of November 12, 2014 (79 FR 67105) (2014 Proposed Order). Moreover, as explained in section II of the 2014 Proposed Order, on May 22, 2013, FDA held a classification meeting of the Orthopedic and Rehabilitation Devices Panel (the 2013 Panel) to discuss pedicle screw systems, which include rigid pedicle screw systems and SRSs. FDA received and has considered all the comments on the 2014 Proposed Order, as discussed in section III. Therefore, FDA has met the requirements under sections 513(e)(1) and 515(i)(2) of the FD&C Act.

II. Device Description

Pedicle screw systems consist of multiple component devices made from a variety of materials that allow the surgeon to build an implant system to fit the patient's anatomical and physiological requirements. Such a spinal implant assembly may consist of a combination of hooks, screws, longitudinal members (*e.g.,* plates, rods, plate/rod combinations), transverse or cross connectors, and interconnection mechanisms (*e.g.,* rod-to-rod connectors, offset connectors). Rigid pedicle screw systems provide immediate rigid fixation to the spinal column as an adjunct to spinal fusion procedures.

Since the 1998 classification (63 FR 40025, July 27, 1998), changes in technological characteristics have occurred, leading to the emergence of a new type of pedicle screw system, SRSs, previously referred to as dynamic stabilization systems (DSSs). SRSs are a subset of the pedicle screw systems regulated under § 888.3070 (21 CFR 888.3070). SRSs are defined as systems that contain one or more non-uniform and/or non-metallic longitudinal elements (*e.g.,* polymer cords, moveable screw heads, springs) that allow more motion or flexibility (*e.g.,* bending, rotation, translation) compared to rigid systems and do not provide immediate rigid fixation to the spinal column as an adjunct to spinal fusion procedures.

In the 2014 Proposed Order, FDA proposed to modify the identification language from the way it is presently written in § 888.3070(a) and sought comments on the means of providing distinction between rigid pedicle screw systems and pedicle screw systems that allow more motion or flexibility. As discussed in section III, FDA received several comments suggesting that § 888.3070 separate SRSs, which may allow for more flexibility than traditional rigid pedicle screw systems but still facilitate fusion, from truly ''dynamic'' systems that are intended for non-fusion use. Truly dynamic systems intended for non-fusion use are postamendments devices that are outside the scope of this regulatory action. FDA agrees with these comments and has modified the identification language from the way it is presently written in § 888.3070(a) to include SRSs.

FDA has also, on its own initiative, renamed ''pedicle screw spinal system'' as ''thoracolumbosacral pedicle screw system'' to clearly distinguish these devices from posterior cervical screw systems, which are not intended to be covered by § 888.3070.

III. Public Comments in Response to the Proposed Order

In response to the 2014 Proposed Order, FDA received 15 comments from industry, trade organizations, professional societies, and individuals. Certain comments are grouped together under a single number because the subject matter of the comments is similar. The number assigned to each comment is purely for organizational purposes and does not signify the comment's value or importance or the order in which it was submitted. The comments that follow are grouped into those that pertain to rigid pedicle screw systems and those that pertain to SRSs.

A. Rigid Pedicle Screw Systems

Of the 15 comments received, several specifically referenced the proposal to reclassify rigid pedicle screw systems when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of degenerative disc disease (DDD) and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment). Some commenters agreed with the recommendation to reclassify these as class II devices (special controls), most of whom specifically stated that they agreed with the Agency that general and special controls can provide reasonable assurance of the safety and effectiveness of rigid pedicle screw systems.

(Comment 1) Some commenters did not agree with the proposal to reclassify rigid pedicle screw systems to class II (special controls). One comment stated that labeling special controls are not appropriate risk mitigations and that clinical data should be required for these devices. Another comment noted that adverse events have been identified for rigid pedicle screw systems, and the final comment noted varied results in clinical literature, specifically citing a 1990 study by Matsuzaki et al. that found a 5.7 percent screw breakage rate (Ref. 1).

(Response 1) FDA disagrees that rigid pedicle screw systems for treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) should remain in class III. The Agency believes the labeling special controls proposed to inform users of the technological features of the device (including identification of device materials and the principles of device operation), intended use and indications for use (including levels of fixation), identification of magnetic resonance compatibility status, cleaning and sterilization instructions, and detailed instructions of each surgical step (including device removal) are appropriate to help mitigate the identified risks to health that may result from improper use of rigid pedicle screw systems. The Agency does not believe clinical data are necessary for rigid pedicle screw systems indicated for treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment). Clinical data from use of rigid pedicle screw systems for these indications were presented to the 2013 Panel to support reclassification to class II. Furthermore, non-clinical methods used to evaluate these devices have been demonstrated to adequately mitigate risks to health. FDA still retains the ability to request appropriate performance testing, including clinical data for individual devices with a different indication for use and/or different technological features that do not raise different questions of safety and effectiveness as compared to a predicate device, to demonstrate that the individual devices are as safe and effective as the predicate device, if necessary. FDA acknowledges that rigid pedicle screw systems, like all medical devices, have risks to health, as evidenced by the adverse events noted by one commenter, and the breakage rate identified in the 1990 Matsuzaki et al. study cited by another commenter (Ref. 1). On May 22, 2013, FDA held the 2013 Panel meeting to discuss the current classification of rigid pedicle screw systems for treatment of degenerative disc disease and spondylolisthesis other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment, which are currently class III indications (Ref. 2). FDA is not aware of evidence that indicates there is a higher rate of screw fracture for the class III indications, which is the focus of this reclassification effort, compared to the class II indications. The 2013 Panel discussed the adverse events and clinical literature associated with rigid pedicle screw systems for all indications, and recommended that traditional, rigid pedicle screw systems as an adjunct to fusion for the treatment of DDD and spondylolisthesis other than severe grades 3 or 4, or degenerative spondylolisthesis with objective evidence of neurologic impairment be reclassified as class II (special controls).

FDA agrees with the 2013 Panel's recommendation for reclassification. The Agency believes, as stated in the 2014 Proposed Order, that the risks of rigid pedicle screw systems as an adjunct to fusion for the treatment of DDD and spondylolisthesis other than severe grades 3 or 4, or degenerative spondylolisthesis with objective evidence of neurologic impairment, are sufficiently understood based on valid scientific evidence, which enables FDA to establish special controls to provide reasonable assurance of safety and effectiveness of rigid pedicle screw systems.

(Comment 2) One commenter provided an additional recommendation for the identification language for rigid pedicle screw systems. Specifically, to more completely characterize components that may be used as a part of these systems, the commenter suggested adding sublaminar wires and cables to the list of components of these systems.

(Response 2) FDA disagrees with this proposed edit to the identification language. These additional components, while often used in conjunction with pedicle screw systems, are classified under a separate classification regulation and, therefore, are not appropriate to include under § 888.3070. However, in review of this information, FDA acknowledges that hooks (currently listed in the identification language for pedicle screw systems) are also classified under a separate classification regulation. Therefore, the Agency has also taken the opportunity to remove ''hooks'' from the revised identification language for rigid pedicle screw systems.

(Comment 3) One commenter recommended removing design characteristics as a special control because this should be a requirement of all premarket notifications. This commenter also recommended removing the word ''rigid'' from the identification.

(Response 3) FDA disagrees with the recommendation of this commenter to remove design characteristics as a special control. FDA considers this special control critical to help differentiate technological features for rigid pedicle screw systems from SRSs. Similarly, inclusion of the word ''rigid'' in the identification language is necessary to distinguish between these and SRSs.

(Comment 4) One commenter recommended revising the biocompatibility special control to state ''compliance with biocompatibility standards.''

(Response 4) FDA disagrees with this comment and has determined that it is most appropriate not to reference consensus standards within special controls because relevant standards are subject to change over time. The special controls as worded allow for additional mechanisms by which manufacturers can meet the requirements to ensure conformity.

(Comment 5) One commenter recommended removing ''wear'' from the list of potential means by which a device could fail.

(Response 5) The risk of wear was raised at the 2013 Panel, specifically in the context of SRSs. FDA still considers there to be a potential for wear in traditional rigid systems as well and, therefore, has elected not to modify the definition of device failure accordingly.

(Comment 6) One commenter suggested editorial revisions to the risks and descriptive text associated with risks as outlined in the 2014 Proposed Order.

(Response 6) These edits were not considered to substantively change the intended meaning of the risks and associated mitigations and, therefore, FDA will not accept these suggested edits in this final order.

(Comment 7) One commenter provided several proposed edits that would impact § 888.3070(b)(1). Additionally, this commenter provided other editorial recommendations to the language from the 2014 Proposed Order.

(Response 7) While FDA agrees with the proposed modifications that would impact § 888.3070(b)(1), these will require a separate regulatory action because this section of the regulation is outside the scope of the call for information under section 515(i) of the FD&C Act. Edits that were proposed to the language from the 2014 Proposed Order did not materially impact the language within this final order.

In reviewing the 2014 Proposed Order, the comments received, and the 2013 Panel's recommendations, FDA is also making minor modifications to the identification for thoracolumbosacral pedicle screw systems. The identification for rigid pedicle screw systems will be revised from ''longitudinal members (*e.g.,* plates, rods, plate/rod combinations)'' to ''longitudinal members (*e.g.,* plates, rods including dual diameter rods, plate/rod combinations)'' as the latter statement clarifies that dual diameter rods would be considered to be part of rigid systems rather than as ''non-uniform longitudinal elements'' specified under the definition of SRSs.

B. SRSs

1. Identification

In the 2014 Proposed Order, FDA solicited comments to revise the identification language for pedicle screw spinal systems to distinguish between rigid pedicle screw systems and DSSs (now termed SRSs).

(Comment 8) While most commenters did not specifically comment on the proposed up-classification of SRSs to class III, approximately half of the comments suggested revisions to the definition of SRSs. These suggestions propose separating SRSs, which may allow for more flexibility than traditional rigid pedicle screw systems but still facilitate fusion, from truly ''dynamic'' systems that are intended for non-fusion use. Truly dynamic systems are postamendments devices that are outside the scope of this regulatory action.

(Response 8) FDA agrees with these comments and will henceforth refer to these systems as SRSs in this final order under § 880.3070(b)(3).

(Comment 9) Several commenters provided alternative identification language to FDA's initially proposed definition of DSSs, now termed SRSs, which was as follows: ''Dynamic stabilization systems are defined as systems that contain one or more non-uniform and/or non-metallic longitudinal elements (*e.g.,* polymer cords, moveable screw heads, springs) that allow more motion or flexibility (*e.g.,* bending, rotation, translation) compared to rigid pedicle screw systems and do not provide immediate rigid fixation to the spinal column as an adjunct [to] fusion.'' While most commenters agreed with the language that these systems ''allow more motion or flexibility,'' there were several comments that disagreed with the technological features called out within this definition (*i.e.,* non-uniform and/or non-metallic). For example, one commenter provided the case that an undersized metallic rod may allow for more flexibility than a larger non-metallic rod. Similar arguments were also made at the 2013 Panel, where the challenges of defining these systems based upon technological characteristics were also discussed. Accordingly, several commenters proposed modifications to the identification language of these systems based solely on intended use (*i.e.,* not intended for immediate rigid fixation, or intended to allow more motion or flexibility compared to rigid systems). Two commenters did not specifically provide alternate language; however, these commenters provided data from clinical and non-clinical studies to support the argument that rods manufactured from polyetheretherketone (PEEK) perform similarly to traditional metallic rods (Refs. 3 to 5). Qi et al. demonstrated that subjects undergoing single posterolateral fusion with either titanium rods or PEEK rods showed no difference in adjacent segment disease, spinal alignment, or clinical outcomes (Ref. 3). A biomechanical study by Sengupta et al. shows similar restriction in range of motion for PEEK rods compared to both the traditional metallic rods and another SRS device (Ref. 4). Kurtz et al. collected and analyzed explanted PEEK and traditional metallic rods and concluded that the PEEK rod retrievals showed similar wear patterns compared to traditional rigid rods (Ref. 5). These commenters also used terminology to distinguish these types of systems (*i.e.,* ''semi-rigid systems''), which are used as an adjunct to fusion, from ''non-rigid'' or ''flexible'' systems, which are ''intended for dynamic stabilization'' of the spine. An additional commenter also cited a cadaver study, which similarly showed that PEEK rods resulted in comparable stability to traditional metallic systems (Ref. 6).

(Response 9) In response to these comments, FDA has revised this identification to remove reference to ''non-metallic'' components and has also captured devices with less stiff materials (*i.e.,* ''features that allow more motion or flexibility compared to rigid systems''). FDA has also elected to alter the terminology used to identify these systems that ''allow more motion or flexibility'' when used as an adjunct to fusion as SRSs. This is also consistent with comments made at the 2013 Panel, in which the distinction between ''semi-rigid'' and ''dynamic'' systems was discussed. The features that may result in a device being classified as an SRS may include, but are not limited to, polymer cords, moveable screw heads, or springs. ''Dynamic stabilization systems'' for use in non-fusion procedures remain a postamendments class III device requiring PMAs.

2. Classification

In the 2014 Proposed Order, which was issued pursuant to sections 513(e)(1) and 515(i)(2) of the FD&C Act, FDA initially recommended that SRSs be classified into class III and require PMAs. Some commenters agreed with FDA's class III recommendation and other commenters proposed that SRSs be classified into class II.

(Comment 10) One comment agreed that SRSs for non-fusion uses should remain in class III, but SRSs used as an adjunct to fusion should be classified as class II. The commenter described that ''[w]e believe that this matter arose after two [SRS] products from two different manufacturers were recalled in 2008 and 2009. These two recalled devices created FDA concern over the entire category of [SRS], calling into question whether preclinical testing alone is sufficient to predict clinical outcomes for these devices. Other SRSs have not been recalled, nor are there significant safety concerns with these other [SRSs].'' Another commenter conducted a Medical Device Reporting (MDR) analysis, which separated out PEEK rods from other SRSs to demonstrate a similarity in reporting of adverse events associated with PEEK rods to that of traditional metallic rods.

Commenters specifically recommend that PEEK, or carbon-fiber reinforced PEEK, should remain in class II. This is based on several reported studies that demonstrate similarities in safety profiles and effectiveness outcomes for these devices as compared to devices incorporating traditional metallic rods, as also described previously in Comment 9 (Refs. 3 to 5). Two non-clinical literature articles provided in response to the proposed order demonstrate similar behavior between systems with PEEK rods and those with titanium rods.

Commenters also provided references to clinical studies using SRSs (Refs. 7 to 9). Each of these studies demonstrates fusion rates within a range deemed to be clinically acceptable in single- or multilevel posterolateral fusion using PEEK rod constructs.

(Response 10) Based on these comments to the proposed order and to corroborate findings from the literature following the 2013 Panel meeting, FDA conducted an additional MDR analysis of SRSs excluding the two recalled systems, as well as an MDR analysis of PEEK rods alone.

A search of the Manufacturer and User Facility Device Experience database was conducted to identify the relevant MDRs and identify the types of adverse events reported for pedicle screw spinal systems on or before October 17, 2016. Results from this MDR analysis demonstrated that the same types of adverse events are present in the same relative incidence for SRS devices as noted in traditional rigid pedicle screw systems (*i.e.,* the most common adverse events are device breakage, revision, and pain in all groups). FDA believes this evidence demonstrates that SRS devices have the same risks to health as rigid pedicle screw systems.

FDA additionally conducted an independent survey of literature published after the 2013 Panel related to the use of SRSs as an adjunct to fusion to assess current surgical practice and reported treatment outcome. FDA's literature search captured the articles identified previously in the comments as well as articles pertaining to additional SRS designs that have been cleared for marketing in the United States (Refs. 10 and 11). While only a subset of the 16 SRSs that have currently been determined to be substantially equivalent are represented in the literature, a wide range of currently cleared SRS designs is represented by this subset. The data demonstrated similar safety profiles for SRSs compared to traditional rigid pedicle screw systems. The adverse events reported in the literature for SRSs are similar to those cited in the Executive Summary for the 2013 Panel Meeting for traditional rigid pedicle screw systems used in currently class III indications that we proposed to reclassify to Class II rods (Ref. 2). Typical adverse events included pseudarthrosis, reoperation, screw loosening, and screw breakage. There were no reports of breakage of the longitudinal members of any of the SRSs studied.

The fusion rates of SRSs compare favorably to fusion rates of traditional systems for treatment of low-grade spondylolisthesis and DDD, which range from 78 to 100 percent and which the 2013 Panel deemed to be clinically acceptable to support reclassification for these indications (see the 2013 Panel Executive Summary for additional information (Ref. 2)). Based upon the currently available information, FDA agrees with the Panel's assessment that a fusion rate within the range of 78 to 100 percent would be clinically acceptable. Although the information presented to the 2013 Panel was limited in both the number of subjects and the number of SRSs represented, additional information that FDA received and considered after the 2013 Panel meeting supports FDA's determination that there is sufficient information to revise the proposed classification of SRSs from class III to II. FDA believes that the range of fusion rates found clinically acceptable by the 2013 Panel could serve as a performance parameter for providing reasonable assurance of safety and effectiveness for the device type based on the valid scientific evidence but due to some variability (*e.g.,* design and material used) among individual devices, FDA has determined that clinical data are needed to demonstrate that each device with its specific characteristics (*e.g.,* design and material used) and conditions of use meets that parameter. FDA believes that fusion rates higher than the current clinically acceptable range may be achieved with improvement in technology and, thus, may consider that factor in evaluating clinical data submitted from firms.

Based upon the information provided in response to the proposed order, and including additional analyses of the literature and MDRs since the 2013 Panel, FDA has determined that the risks to health are not substantially different from traditional rigid pedicle screw spinal systems. As discussed previously and in the 2014 Proposed Order, FDA agreed with the 2013 Panel that there is valid scientific evidence on the safety of rigid pedicle screw systems. FDA has also determined, as discussed previously, that an evaluation of additional MDR data and additional clinical literature provide valid scientific evidence regarding the safety of SRS devices for fusion (Refs. 3 to 11).

Whereas non-clinical performance testing appropriately mitigates the risks to health for rigid pedicle screw systems, non-clinical special controls are not sufficient to mitigate the risks to health, specifically, the risk of pseudarthrosis resulting in additional surgical procedures, for SRS devices. Non-clinical performance testing (such as standardized test methods or biomechanical testing of cadaveric specimens) does not adequately differentiate between different SRS technologies nor predict the ability to achieve spinal fusion with a particular SRS. While some SRSs can be tested using the typical bench testing as a means of comparing performance of traditional rigid pedicle screw systems (*e.g.,* per ASTM F1717–15, ''Standard Test Methods for Spinal Implant Constructs in a Vertebrectomy Model''), this testing may result in lower bending stiffness for SRSs than similarly sized uniform metallic rods (Ref. 12). Testing in accordance with ASTM F1717–15 is not typically used to evaluate SRS technologies as significant modifications to the test standards are often necessary to conduct the test. Given that the systems have not typically been tested in accordance with the accepted consensus standard and as standardized acceptance criteria for SRS technologies undergoing this testing have not been developed, it is challenging to solely use the results of non-clinical performance testing for comparison purposes to rigid pedicle screw systems.

While clinical data as a special control was not specifically mentioned in the comments, the 2013 Panel discussed the ability for clinical data to distinguish between successful and unsuccessful SRS device designs. FDA believes that clinical performance data would adequately mitigate the risks to health for SRS devices, particularly the risk of pseudarthrosis resulting in additional surgical procedures. In addition, there is sufficient valid scientific evidence showing that the device type is effective for use as an adjunct to fusion, when the fusion rate is within a clinically acceptable range, as discussed previously. FDA therefore believes there is sufficient information to establish special controls that, in addition to general controls, can provide a reasonable assurance of safety and effectiveness for SRSs. Table 1 summarizes how FDA believes the risks to health identified for SRSs can be mitigated by special controls, including clinical performance data.

TABLE 1—RISKS TO HEALTH AND MITIGATION MEASURES FOR SRSS

Identified risks to health	Mitigation method
Device failure	Design characteristics; Non-clinical performance testing; Labeling.
Failure of bone implant interface	Design characteristics; Biocompatibility evaluation; Non-clinical performance testing; Labeling.
Tissue injury	Labeling.
Adverse tissue reaction	Design characteristics; Biocompatibility evaluation; Sterility; Labeling.
Device malposition	Labeling.
Pseudarthrosis	Non-clinical performance testing; Clinical performance testing; Labeling.

As discussed in FDA's response to Comment 1, the risks to health and associated mitigation measures for rigid pedicle screw systems remain unchanged from those listed in table 1 of the 2014 Proposed Order.

3. SRS as Class II Device

As stated previously, FDA has reevaluated all of the valid scientific evidence for SRSs in finalizing this order. As described in the proposed order and in section I of this order, FDA has satisfied the requirements under section 515(i)(2) of the FD&C Act for revising the proposed classification for SRSs. Under section 515(i)(2) of the FD&C Act, FDA has the authority to issue an administrative order revising the proposed classification of a device for which FDA has classified as a class III device and for which no administrative order has been issued calling for PMAs under section 515(b) of the FD&C Act, so that the device is classified into class I or class II, after issuance of a proposed order, a meeting of a device classification panel, and consideration of the comments of a proposed order. In determining whether to revise the proposed classification of a device or to require a device to remain in class III, FDA applies the criteria set forth in section 513(a) of the FD&C Act. Section 513(a)(1)(B) of the FD&C Act defines class II devices as those devices for which the general controls in section 513(a)(1)(A) by themselves are insufficient to provide reasonable assurance of safety and effectiveness, but for which there is sufficient information to establish special controls to provide a reasonable assurance of safety and effectiveness of a device.

FDA has reviewed all of the initial procedures, scientific information presented at the 2013 Panel meeting, comments received from both the 2014 Proposed Order and 2009 Final Order under section 515(i)(1) of the FD&C Act calling for information on preamendment devices (74 FR 16214, April 9, 2009) for consideration of the classification of SRS devices under section 513(a) of the FD&C Act and has initiated revision of the proposed classification of the device under section 515(i)(2) of the FD&C Act.

The discussion at the 2013 Panel for SRSs was limited, as acknowledged by 2013 Panel members, by the small number of studies available at that time and reports in the MDRs regarding SRSs for fusion. Given limitations of the available data, in literature and MDR analysis, the 2013 Panel concluded that insufficient evidence was available to establish special controls. Although FDA recommended, and the 2013 Panel agreed, that a call for PMAs was the necessary measure to mitigate the risks to health for SRSs and ensure a reasonable assurance of safety and effectiveness, FDA has since reassessed the scientific evidence based upon comments received and additional information, reevaluating the scientific evidence presented at the 2013 Panel meeting to reconsider FDA's prior position regarding the necessary controls to provide reasonable assurance of safety and effectiveness for SRSs. Based on FDA's reevaluation of the available body of evidence, FDA has determined that sufficient information exists regarding the risks and benefits of SRSs for FDA to determine that general and special controls can provide reasonable assurance of the safety and effectiveness of the device type and, thus, revising the proposed classification for these devices from class III to II under section 515(i)(2) of the FD&C Act is appropriate.

Also, at the 2013 Panel meeting, the panel did discuss the feasibility of clinical data as being able to potentially distinguish between successful and non-successful SRS designs, without specifically discussing what level of data would be necessary. After further review of the scientific literature and comments, FDA believes that clinical performance data as a special control would adequately mitigate the risks to health for SRS devices, particularly the risk of pseudarthrosis resulting in additional surgical procedures (see response to Comment 10 in section II.B.2).

Upon reevaluation of the scientific evidence and additional information, FDA has determined that SRS devices do not have the degree of risk of illness or injury designed to be eliminated or reduced by requiring the device to have an approved PMA under section 515(b)(2) of the FD&C Act. In addition, the level of scientific evidence evaluated has allowed FDA to determine that SRSs can be classified as class II with the establishment of special controls because sufficient valid scientific evidence exists to determine that general controls, in combination with special controls, are sufficient to provide a reasonable assurance of safety and effectiveness. FDA has determined that revision of the proposed classification of SRSs under section 515(i)(2) of the FD&C Act will allow these devices to be classified in class II subject to a clinical performance data special control. As a result, instead of calling for PMAs for SRSs, FDA is finalizing this order to revise the proposed classification for SRS devices from class III to class II (special controls) following reassessment of all relevant scientific evidence and comments received from the 2014 Proposed Order. FDA believes the clinical performance data special control and other special controls, together with general controls, are sufficient to provide a reasonable assurance of safety and effectiveness for SRS devices.

IV. The Final Order

Under sections 513(e) and 515(i) of the FD&C Act, FDA is adopting its findings as published in the preamble to the proposed order with the modifications discussed in section II of this final order. FDA is issuing this final order to reclassify rigid pedicle screw systems and to revise classification of SRSs when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) when used as an adjunct to fusion from class III to class II and establish special controls for all SRSs by revising part 888. Rigid pedicle screw systems when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) and SRSs for any indication must comply with the special controls identified in this order (see Section V, ''Implementation Strategy'').

Section 510(m) of the FD&C Act provides that FDA may exempt a class II device from the premarket notification requirements under section 510(k) of the FD&C Act if FDA determines that premarket notification is not necessary to provide reasonable assurance of the safety and effectiveness of the devices. FDA has determined that premarket notification is necessary to provide reasonable assurance of safety and effectiveness of rigid pedicle screw systems and SRSs when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment). Therefore, these device types are not exempt from premarket notification requirements.

Following the effective date of this final order, firms marketing rigid pedicle screw systems when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) and SRSs for any indication must comply with the special controls set forth in this order (see section V, ''Implementation Strategy'').

V. Implementation Strategy

The special controls identified in this final order are effective as of the date of publication of this order, December 30, 2016. Both rigid pedicle screw systems and SRSs covered by this order must comply with the special controls following the effective date of the order. Specifically, devices subject to the special controls in this order include rigid pedicle screw systems intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment), and SRSs for any indication. However, FDA does not intend to enforce compliance with the special controls for currently legally marketed SRSs covered by this order until June 28, 2018. The 30-month enforcement discretion period was selected based on the following factors: (1) The 2014 Proposed Order initially called for PMAs containing clinical performance data to be submitted within a 30-month timeframe, and thus the request in this final order for 510(k) amendments, which include submission of clinical performance data as a special control, maintains the same expectation of sponsors; and (2) the effectiveness endpoint of fusion for SRSs is generally assessed at 1 to 2 years post-implantation, and thus if a new study were to be initiated to collect clinical performance data, FDA would expect the 30-month period to be appropriate for SRS and allow sponsors sufficient time to enroll patients, conduct the study, and analyze the data.

For those manufacturers who wish to continue to offer for sale currently legally marketed SRSs covered by this order, FDA expects them to submit an amendment to their previously cleared 510(k)s for the devices by June 28, 2018 that demonstrates compliance with the special controls. This approach is consistent with prior final orders for reclassifications of preamendment devices in which special controls requiring submission of clinical performance data were issued. An amendment to a 510(k) will be added to the 510(k) file but will not serve as a basis for a new substantial equivalence review. A submitted 510(k) amendment in this context will be used solely to demonstrate to FDA that an SRS system is in compliance with the special controls. If a 510(k) amendment for the device is not submitted by June 28, 2018 or if FDA determines that the amendment does not demonstrate compliance with the special controls, then this compliance policy would not apply, and FDA would intend to enforce compliance with these requirements. In that case, the device is deemed adulterated under section 501(f)(1)(B) of the FD&C Act (21 U.S.C. 351(f)(1)(B)) as of the date of FDA's determination of noncompliance or June 28, 2018, whichever is sooner.

For rigid pedicle screw systems intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) and SRSs for any indication that have not been legally marketed prior to December 30, 2016, or models that have been legally marketed but are required to submit a new 510(k) under 21 CFR 807.81(a)(3) because the device is about to be significantly changed or modified, manufacturers must obtain 510(k) clearance, among other relevant requirements, and demonstrate compliance with the special controls included in this final order, before marketing the new or changed device.

VI. Analysis of Environmental Impact

The Agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VII. Paperwork Reduction Act of 1995

This final order refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in part 807, subpart E, have been approved under OMB control number 0910–0120 and the collections of information under 21 CFR part 801 have been approved under OMB control number 0910–0485.

VIII. Codification of Orders

Prior to the amendments by FDASIA, section 513(e) of the FD&C Act provided for FDA to issue regulations to reclassify devices. Although section 513(e) as amended requires FDA to issue final orders rather than regulations, FDASIA also provides for FDA to revoke previously promulgated regulations by order. FDA will continue to codify classifications and reclassifications in the CFR. Changes resulting from final orders will appear in the CFR as changes to codified classification determinations or as newly codified orders. Therefore, pursuant to section 513(e)(1)(A)(i) of the FD&C Act, as amended by FDASIA, in this final order, we are revoking the requirements in § 888.3070 related to the classification of rigid pedicle screw systems and SRSs when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) as class III devices. We are codifying the reclassification of rigid pedicle screw systems and SRSs when intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of DDD and spondylolisthesis (other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment) into class II (special controls). In addition, as set forth in the 2014 Proposed Order, FDA has separated SRSs, a subtype of pedicle screw systems, from rigid pedicle screw systems in the identification section of the classification regulation (§ 888.3070(a)) and has established a separate subpart of the classification regulation (§ 888.3070(b)(3)), which is applicable to all SRSs regardless of indication.

List of Subjects in 21 CFR Part 888

Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 888 is amended as follows:

PART 888—ORTHOPEDIC DEVICES

■ 1. The authority citation for part 888 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

■ 2. Section 888.3070 is amended by revising the section heading and paragraphs (a) and (b)(2), adding paragraph (b)(3), and removing paragraph (c).

The revisions and addition read as follows:

§ 888.3070 Thoracolumbosacral pedicle screw system.

(a) *Identification.* (1) Rigid pedicle screw systems are comprised of multiple components, made from a variety of materials that allow the surgeon to build an implant system to fit the patient's anatomical and physiological requirements. Such a spinal implant assembly consists of a combination of screws, longitudinal members (*e.g.,* plates, rods including dual diameter rods, plate/rod combinations), transverse or cross connectors, and interconnection mechanisms (*e.g.,* rod-to-rod connectors, offset connectors).

(2) Semi-rigid systems are defined as systems that contain one or more of the following features (including but not limited to): Non-uniform longitudinal elements, or features that allow more motion or flexibility compared to rigid systems.

(b) * * *

(2) Class II (special controls), when a rigid pedicle screw system is intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion in the treatment of degenerative disc disease and spondylolisthesis other than either severe spondylolisthesis (grades 3 and 4) at L5–S1 or degenerative spondylolisthesis with objective evidence of neurologic impairment. These pedicle screw systems must comply with the following special controls:

(i) The design characteristics of the device, including engineering schematics, must ensure that the geometry and material composition are consistent with the intended use.

(ii) Non-clinical performance testing must demonstrate the mechanical function and durability of the implant.

(iii) Device components must be demonstrated to be biocompatible.

(iv) Validation testing must demonstrate the cleanliness and sterility of, or the ability to clean and sterilize, the device components and device-specific instruments.

(v) Labeling must include the following:

(A) A clear description of the technological features of the device including identification of device materials and the principles of device operation;

(B) Intended use and indications for use, including levels of fixation;

(C) Identification of magnetic resonance (MR) compatibility status;

(D) Cleaning and sterilization instructions for devices and instruments that are provided non-sterile to the end user; and

(E) Detailed instructions of each surgical step, including device removal.

(3) Class II (special controls), when a semi-rigid system is intended to provide immobilization and stabilization of spinal segments in the thoracic, lumbar, and sacral spine as an adjunct to fusion for any indication. In addition to complying with the special controls in paragraphs (b)(2)(i) through (v) of this section, these pedicle screw systems must comply with the following special controls:

(i) Demonstration that clinical performance characteristics of the device support the intended use of the product, including assessment of fusion compared to a clinically acceptable fusion rate.

(ii) Semi-rigid systems marketed prior to the effective date of this reclassification must submit an amendment to their previously cleared premarket notification (510(k)) demonstrating compliance with the special controls in paragraphs (b)(2)(i) through (v) and paragraph (b)(3)(i) of this section.

Dated: December 22, 2016.

Leslie Kux,

Associate Commissioner for Policy.

RIN 1545–BL68

Information Returns; Winnings From Bingo, Keno, and Slot Machines

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations under section 6041 regarding the filing of information returns to report winnings from bingo, keno, and slot machine play. The rules update the existing requirements regarding the filing, form, and content of such information returns; allow for an additional form of payee identification; and provide an optional aggregate reporting method. The final regulations affect persons who pay winnings of $1,200 or more from bingo and slot machine play, $1,500 or more from keno, and recipients of such payments.

DATES: These regulations are effective on December 30, 2016.

FOR FURTHER INFORMATION CONTACT: David Bergman, (202) 317–6845 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document contains final regulations in Title 26 of the Code of Federal Regulations under section 6041 of the Internal Revenue Code. The final regulations replace the existing information reporting requirements under § 7.6041–1 of the Temporary Income Tax Regulations under the Tax Reform Act of 1976 for persons who make reportable payments of bingo, keno, or slot machine winnings. The new requirements are set forth in a new § 1.6041–10 of the regulations. Because the new requirements replace the existing requirements, the regulations under § 7.6041–1 are being removed.

On March 4, 2015, the Treasury Department and the IRS published a notice of proposed rulemaking (REG–132253–11) in the **Federal Register**, 80 FR 11600, containing proposed regulations that would update the existing rules and add rules for electronically tracked slot machine play, payee identification, and an optional aggregate reporting method.

A public hearing was held on June 17, 2015, and five speakers provided testimony. In addition, over 14,000 written public comments were received. After careful consideration of the written comments and statements made during the hearing, the proposed regulations are adopted as modified by this Treasury Decision.

Explanation and Summary of Comments

All of the 14,000 written comments on the notice of proposed rulemaking were considered and are available at regulations.gov or upon request. Many of these comments addressed similar issues and expressed similar points of view. These comments are summarized in this preamble. Comments pertaining to parimutuel gambling in the case of horse races, dog races, and jai alai are being considered in a separate regulations project under section 3402(q).

Filing Requirement, Form, and Content of the Information Return

Commentators supported the proposed rules regarding filing requirements and the form and content of the information returns required to be filed. Accordingly, the Treasury Department and the IRS conclude that the final regulations should adopt the filing requirements without modification.

Electronically Tracked Slot Machine Play

The proposed regulations created rules for electronically tracked slot machine play, which was defined in proposed § 1.6041–10(b)(1) as slot machine play where an electronic player system controlled by the gaming establishment (such as through the use of a player's card or similar system) records the amount a specific individual wins and wagers on slot machine play. Section 1.6041–10(b)(2)(i)(D) of the proposed regulations provided that gambling winnings for electronically tracked slot machine play are required to be reported if (1) the total amount of winnings netted against the total amount of wagers during the same session of play was $1,200 or more, and (2) at least one single win during the session was $1,200 or more without regard to the wager. A ''session'' of play was determined with reference to a calendar day. The changes were intended to facilitate reporting by payees on their individual income tax returns under the proposed safe harbor in Notice 2015–21, 2015–12 I.R.B. 765.

Some commentators expressed concern regarding the feasibility of the proposed rules given existing technology and recommended that the proposed rules not be adopted. Commentators stated that one of the purposes of electronic player systems was for marketing and customer loyalty and that current systems should not be used as a mandatory method for tracking winnings and wagers for purposes of tax reporting. Moreover, commentators stated that the use of electronic player systems for tax reporting may chill customer use and have a negative effect on customer relations. In addition, some commentators stated that their electronic player systems lack the necessary controls to be used for tax reporting, and that implementing such controls may be costly and labor-intensive. Based on these comments, the final regulations do not adopt the proposed rules for electronically tracked slot machine play.

Payee Identification Requirements

The proposed regulations retain the rule in § 7.6041–1(c)(3) of the Temporary Income Tax Regulations that the payor must obtain two forms of identification from the payee to verify the payee's identity. However, § 1.6041–10(f) of the proposed regulations modifies the rules for acceptable identification by requiring that one of the forms of identification include the payee's photograph and by providing that the payor may accept a properly completed Form W–9 in lieu of identification that includes the payee's social security number. The proposed regulations provide that payors may rely on this provision prior to publication of final regulations in the **Federal Register**.

Most commentators supported the proposed rules regarding the types of identification that can be relied on to verify a payee's identity. In particular, commentators supported the provision that allows a Form W–9 to be used as an acceptable means of verifying a payee's identity in lieu of identification that includes the payee's social security number. This rule is consistent with procedures currently used by many payors to address the fact that, today, most forms of identification that payees carry with them do not contain a social security number.

Other commentators suggested that the list of examples of acceptable forms of government-issued identification be expanded to include tribal member identification cards issued by a federally recognized Indian tribe. Some commentators also suggested that an exception from the photo identification requirement be provided for tribal identification cards presented at tribal government gaming facilities because many tribal identification cards do not contain photographs.

In response to the comments received, the list of examples of acceptable government-issued identification has been expanded in § 1.6041–10(e)(1) of the final regulations to include tribal member identification cards issued by a federally recognized Indian tribe. In addition, in response to comments, § 1.6041–10(d)(2) of the final regulations provides an exception to the photo identification requirement if one of the forms of identification is a tribal identification card presented at a gaming establishment owned or licensed by the tribal government that issued the tribal member identification card.

Optional Aggregate Reporting Method and Session

Section 1.6041–10(h) of the proposed regulations provides a new rule for an optional aggregate reporting method. Under § 7.6041–1(a), reporting of gambling winnings from bingo, keno, and slot machine play is required each time a payor makes a payment of reportable gambling winnings (*i.e.,* a payment that meets the reporting threshold). The aggregate reporting method allows a payor who makes more than one payment of reportable gambling winnings to the same payee from the same type of game during a ''session'' to report the aggregate amount of such reportable gambling winnings on one Form W–2G, provided the payor satisfies certain recordkeeping requirements set forth in the regulations. Under § 1.6041–10(b)(3) of the proposed regulations, a ''session'' is generally defined as a period of play that begins when a patron places the first wager on a particular type of game at a gaming establishment and ends when the patron places his or her last wager on the same type of game before the end of the same calendar day at the same gaming establishment. This aggregate reporting method may be used at the payor's option. The proposed regulations provide that payors may rely on this provision prior to publication of final regulations in the **Federal Register**.

Commentators were generally supportive of the proposed optional aggregate reporting method but did suggest some changes. Accordingly, the final regulations adopt the proposed optional aggregate reporting method with some modifications.

First, the period for purposes of the aggregate reporting method in the final regulations is not referred to as a ''session.'' Rather, in § 1.6041–10(g) of the final regulations, the period used for purposes of the aggregate reporting method is now referred to as an ''information reporting period.'' The proposed regulations' definition of a ''session'' was intended to mirror the concept of ''session'' set forth in the safe harbor for the determination of wagering gains and losses from electronically tracked slot machine play that was published in a Notice and draft Revenue Procedure on the same date as the proposed regulations. Notice 2015–21. The Treasury Department and the IRS are still considering the income tax reporting rules in this area, and the draft Revenue Procedure has not been finalized. Therefore, to avoid confusion, the aggregate reporting method rules in § 1.6041–10(g) of the final regulations have been modified so that the period during which reporting may be aggregated is referred to as the ''information reporting period'' rather than as a ''session.''

Second, commentators suggested that rather than a calendar day, payors should have the option of using the 24-hour period known commonly in the industry as the ''gaming day'' for purposes of the aggregate reporting method. The comments explained that the period of a ''gaming day'' is used by gaming establishments for financial accounting, gaming control board, and other regulatory purposes, and allows each establishment the flexibility to define a day for these purposes by taking into account peak gaming times. The ''gaming day'' period is also utilized in complying with anti-money laundering reporting obligations. According to the comments, a gaming day is a 24-hour period that ends at a time during which the gaming establishment is closed or when business is slowest, typically between 3 a.m. and 6 a.m. The comments indicate that allowing payors to use the same period for purposes of information reporting as for other regulatory purposes will enhance the benefits of aggregate reporting for payors by not having a different reporting period for tax reporting, and by allowing aggregate reports to be generated during non-peak gaming times.

To give payors more flexibility, the final regulations adopt these suggestions and provide a flexible ''information reporting period'' as the period to be used for aggregate reporting. Under § 1.6041–10(b)(2) of the final regulations, an ''information reporting period'' is either a ''calendar day'' or a ''gaming day,'' so long as that period is applied uniformly by the payor to all payees during the calendar year. A payor may adopt a different ''information reporting period'' from one calendar year to the next, but may not change the ''information reporting period'' in the middle of a calendar year. Changes to a payor's ''information reporting period'' from one calendar year to the next must be implemented on January 1. In addition, the final regulations provide that on December 31st, all open information reporting periods must end at 11:59 p.m. in order to end by the end of the calendar year. This rule is necessary to maintain calendar year federal income tax reporting that is the bedrock of the information reporting regime and that is required by section 6041. Section 1.6041–10(b)(2)(iii) of the final regulations provides that if a ''gaming day'' is adopted for a calendar year, the information reporting period for

December 31st ends at 11:59 p.m. on December 31, and the information reporting period for January 1st begins at 12 a.m. on January 1, regardless of the number of hours of the December 31st and January 1st information reporting periods.

Third, commentators noted that the proposed regulations did not specifically define ''gaming establishment,'' and how to deal with common ownership between various casinos. Section 1.6041–10(b)(2)(iv) of the final regulations defines the term ''gaming establishment'' as a business entity of a payor of reportable gambling winnings with respect to bingo, keno, or slot machine play, and includes all gaming establishments owned by the payor using the same employer identification number (EIN) issued to such payor in accordance with section 6109.

Finally, commentators requested that the proposed recordkeeping requirements with respect to aggregate reporting be updated to reflect the actual credentials held by various casino representatives. These recordkeeping requirements require that payors maintain a record of every payment that will be reported using the aggregate reporting method and that each entry in the record be verified by a designated casino representative. Section § 1.6041–10(g)(3)(vii) of the proposed regulations requires that the designated individual provide a gaming license number. The final regulations do not require that a gaming license number be provided. Instead, § 1.6041–10(g)(3)(vii) of the final regulations requires that the person authorized by the applicable gaming regulatory control authority to ensure accuracy in reporting provide his or her unique identification number.

Reporting Thresholds

The proposed rules maintained the reporting thresholds of $1,200 for bingo and slot machine play and $1,500 for keno in § 7.6041–1(a), but invited comments on the feasibility of reducing these thresholds. Commentators overwhelmingly opposed the idea of reducing these reporting thresholds. Payors opposed lowering the thresholds because it would result in more reporting, which would increase compliance burdens for the industry. In fact, many commentators suggested that rather than reducing the current thresholds, they should be increased to account for inflation. These final regulations do not change the existing reporting thresholds for bingo, keno, and slot machine play.

Netting Wagers

The proposed regulations retain the rules in § 7.6041–1(b) that, in determining whether the reporting threshold is satisfied, the amount of winnings from bingo and slot machine play is not reduced by the amount of the wager, but the amount of winnings from one keno game is reduced by the amount of the wager in that one game. Commentators were divided as to whether uniform application of netting the wager against the winnings was feasible, citing compliance cost and labor concerns. In light of these concerns, the Treasury Department and the IRS conclude that the existing approach, as described in the proposed regulations, should be retained. Accordingly, § 1.6041–10(b)(1)(i) of the final regulations provides that reportable gambling winnings in the case of bingo and slot machine play are not determined by netting the wager against the winnings, but reportable gambling winnings in the case of keno are determined by netting the wager in that one game against the winnings from that game.

Definition of Slot Machine and Reportable Gambling Winnings

For purposes of information reporting, proposed § 1.6041–10(b)(4) defines a slot machine as a device that, by application of the element of chance, may deliver or entitle the person playing or operating the device to receive cash, premiums, merchandise, or tokens, whether or not the device is operated by inserting a coin, token, or similar object. One commentator suggested that the definition of slot machines be changed to adopt either of the definitions that has been adopted by the states of New Jersey or Nevada, both of which define slot machines more broadly. Other commentators suggested that the definition of slot machine in the proposed regulations is too broad because it could include technologic aids to Class II gaming as defined under the Indian Gaming Regulatory Act, 25 U.S.C. 2701–2721, such as electronic bingo or electronic pull-tabs.

As discussed in the preamble of the proposed regulations, the definition of slot machine in proposed § 1.6041–10(b)(4) is intended to be consistent with the definition of slot machine in § 44.4402–1(b)(1) of the Wagering Tax Regulations. Having consistent definitions benefits tax administration and may prevent unintended confusion that could arise from having different definitions for federal tax purposes. Because the Treasury Department and the IRS conclude that, on balance, the proposed definition of slot machine is the most appropriate definition, the final regulations adopt the proposed definition of the term ''slot machine'' without modification.

Section 1.6041–10(b)(2)(i) of the proposed regulations provides that all winnings from all cards played during one bingo game are combined and that all winnings from all ''ways'' on a multi-way keno ticket are combined. In addition, § 1.6041–10(b)(2)(ii) of the proposed regulations provides that winnings from different types of games are not combined to determine whether the reporting thresholds are satisfied, and that bingo, keno, and slot machine play are all different types of games. Commentators did not oppose inclusion of these rules in the definition of reportable gambling winnings in the proposed regulations. Accordingly, the final regulations adopt these aspects of the definition of reportable gambling winnings without modification.

Special Analyses

Certain IRS regulations, including this one, are exempt from the requirements of Executive Order 12866, as supplemented by Executive Order 13563. Therefore, a regulatory assessment is not required.

It is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that this rule merely provides guidance as to the filing of information reporting returns for payors who make reportable payments of bingo, keno, or slot machine winnings and who are required by section 6041 to make returns reporting those payments. The requirement for payors to make information returns is imposed by statute and not these regulations. In addition, this rule reduces the existing burden on payors to comply with the statutory requirement by simplifying the process for payors to verify payees' identities with a broader range of documents that are more readily available, and also by allowing payors to reduce the number of information returns they issue if they adopt the new aggregate reporting methodology. Therefore, a regulatory flexibility analysis under the Regulatory Flexibility Act (5 U.S.C. Chapter 6) is not required.

Pursuant to section 7805(f) of the Internal Revenue Code, the notice of proposed rulemaking preceding these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on the regulations' impact on small businesses, and no comments were received.

Drafting Information

The principal author of these regulations is David Bergman of the Office of Associate Chief Counsel (Procedure & Administration).

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 7

Temporary income tax regulations under the Tax Reform Act of 1976.

26 CFR Part 31

Employment Taxes and Collection of Income Tax at Source.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR parts 1, 7, and 31 are amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.6041–10 is added to read as follows:

§ 1.6041–10 Return of information as to payments of winnings from bingo, keno, and slot machine play.

(a) *In general.* Every person engaged in a trade or business (as defined in § 1.6041–1(b)) and who, in the course of such trade or business, makes a payment of reportable gambling winnings (defined in paragraph (b)(1) of this section) must make an information return with respect to such payment. Unless the provisions of paragraph (g) of this section (regarding aggregate reporting) apply, a separate information return is required with respect to each payment of reportable gambling winnings.

(b) *Definitions*—(1) *Reportable gambling winnings.* (i) For purposes of this section, the term reportable gambling winnings is defined as follows:

(A) For bingo, the term ''reportable gambling winnings'' means winnings of $1,200 or more from one bingo game, without reduction for the amount wagered. All winnings received from all wagers made during one bingo game are combined (for example, all winnings from all cards played during one bingo game are combined).

(B) For keno, the term ''reportable gambling winnings'' means winnings of $1,500 or more from one keno game reduced by the amount wagered on the same keno game. All winnings received from all wagers made during one keno game are combined (for example, all winnings from all ''ways'' on a multi-way keno ticket are combined).

(C) For slot machine play, the term ''reportable gambling winnings'' means winnings of $1,200 or more from one slot machine play, without reduction for the amount wagered.

(ii) Winnings and wagers from different types of games are not combined to determine if the reporting threshold is satisfied. Bingo, keno, and slot machine play are different types of games.

(iii) Winnings include the fair market value of a payment in any medium other than cash.

(iv) The amount wagered in the case of a free play is zero.

(2) *Information reporting period*—(i) *In general.* For purposes of paragraph (g) of this section, the ''information reporting period'' begins when a patron places the first wager on a particular type of game at a gaming establishment, as defined in paragraph (b)(2)(iv) of this section, and ends when the patron places his or her last wager on the same type of game at the same gaming establishment before the end of the ''information reporting period.'' An information reporting period is a 24-hour period. A payor may select a calendar day (as defined in paragraph (b)(2)(ii) of this section) or a gaming day (as defined in paragraph (b)(2)(iii) of this section) as the information reporting period for purposes of the aggregate reporting method in paragraph (g) of this section. For purposes of this paragraph (b)(2), time is determined by the time zone of the location where the patron places the wager. A payor must use the same information reporting period (a calendar day or gaming day) to report all ''reportable gambling winnings'' paid during the calendar year. Once selected, a payor may not change its information reporting period during a calendar year. Any changes to a payor's information reporting period from one calendar year to another must be implemented on January 1.

(ii) *Calendar day.* A calendar day is determined with reference to a period beginning at 12 a.m. and ending no later than 11:59 p.m. of the same calendar day.

(iii) *Gaming day*—(A) *In general.* A gaming day is a 24-hour period other than a calendar day (as defined in paragraph (b)(2)(ii) of this section) selected by the payor, subject to the special rules for December 31 and January 1 in paragraphs (b)(2)(iii)(B) and (C) of this section.

(B) *Special rule for December 31.* For purposes of paragraph (b)(2)(iii) of this section, the gaming day that begins on December 31 of any calendar year ends at 11:59 p.m. on December 31, regardless of the time on December 31 on which that gaming day began.

(C) *Special rule for January 1.* For purposes of paragraph (b)(2)(iii) of this section, the gaming day of January 1 begins at 12:00 a.m. on January 1, regardless of the time and calendar day on which that gaming day ends, and may extend beyond 24 hours.

(iv) *Gaming establishment.* For purposes of this section, a gaming establishment is a business entity of a payor of reportable gambling winnings with respect to bingo, keno, or slot machine play, and includes all gaming establishments owned by such payor using the same employer identification number (EIN) issued to such payor in accordance with section 6109.

(v) *Examples.* The following examples illustrate the provisions of paragraph (b)(2) of this section.

Example 1. Casino R uses the aggregate reporting method under paragraph (g) of this section to report certain reportable gambling winnings. For other regulatory purposes, Casino R uses a gaming day that begins at 3 a.m. and ends at 2:59 a.m. the following calendar day. Casino R chooses to use its gaming day as its information reporting period for purposes of paragraph (b)(2) of this section during Year 1. Accordingly, the information reporting period for purposes of paragraph (g) of this section for each day during Year 1 begins at 3 a.m. and ends at 2:59 a.m. the following day. The information reporting period for December 31 of Year 1 begins at 3 a.m. on December 31 of Year 1 and ends at 11:59 p.m. on December 31 of Year 1. The information reporting period for January 1 of Year 2 begins at 12 a.m. on January 1 of Year 2 and ends at 2:59 a.m. on January 2 of Year 2.

Example 2. The facts are the same as Example 1, except Casino R uses a calendar day as its information reporting period for purposes of paragraph (b)(2) of this section during Year 1. Accordingly, the information reporting period for purpose of paragraph (g) of this section for each day during Year 1 begins at 12 a.m. and ends at 11:59 p.m. on the same day.

Example 3. Casino R uses the aggregate reporting method under paragraph (g) of this section to report certain reportable gambling winnings. For other regulatory purposes, Casino R uses a gaming day that begins at 9:00 p.m. and ends at 8:59 p.m. the following calendar day. Casino R chooses to use its gaming day as its information reporting period for purposes of paragraph (b)(2) of this section during Year 1. Accordingly, the information reporting period for purposes of paragraph (g) of this section for each day during Year 1 begins at 9:00 p.m. and ends at 8:59 p.m. the following day. The information reporting period for December 31 of Year 1 begins at 9:00 p.m. on December 30 and ends at 8:59 p.m. on December 31. A second information reporting period for December 31 then begins at 9:00 p.m. on December 31 and ends at 11:59 p.m. on December 31. The information reporting period for January 1 of Year 2 begins at 12:00 a.m. on January 1 and ends at 8:59 p.m. on January 1 of Year 2.

Example 4. Casino R uses the aggregate reporting method under paragraph (g) of this section to report certain reportable gambling winnings. In Year 1, Casino R chooses to use a ''gaming day'' that begins at 3 a.m. and ends at 2:59 a.m. the following day as its information reporting period. During the course of Year 1, Casino R decides that it would like to change its information reporting period to instead begin at 5 a.m. and end at 4:59 a.m. the following day. Casino R must wait until January 1 of Year 2 to implement such a change. On January 1 of Year 2, Casino R's information reporting period will begin at 12 a.m. and end at 4:59 a.m. on January 2. On December 31 of Year 2, Casino R's information reporting period will begin at 5 a.m. and end at 11:59 p.m.

(3) *Slot machine.* The term ''slot machine'' means a device that, by application of the element of chance, may deliver, or entitle the person playing or operating the device to receive cash, premiums, merchandise, or tokens whether or not the device is operated by insertion of a coin, token, or similar object.

(c) *Prescribed form; time and place for filing the return.* The return described in paragraph (a) of this section is a Form W–2G, ''Certain Gambling Winnings.'' The Form W–2G must be filed with the appropriate Internal Revenue Service location designated in the instructions to the form on or before February 28 (March 31, if filed electronically) of the year following the calendar year in which the reportable gambling winnings were paid. See section 6011 and § 1.6011–2 for requirements to file electronically.

(d) *Information included on the return*—(1) *In general.* Each return required by paragraph (a) of this section must contain:

(i) The name, address, and taxpayer identification number of the payor;

(ii) The name, address, and taxpayer identification number of the payee;

(iii) A general description of the two types of identification (as described in paragraph (e) of this section), one of which must have the payee's photograph on it (except in the case of tribal member identification cards in certain circumstances as described in paragraph (d)(2) of this section) that the payor relied on to verify the payee's name, address, and taxpayer identification number;

(iv) The date and amount of payment;

(v) The type of wagering transaction (bingo, keno, or slot machine play);

(vi) In the case of a bingo or keno game, any number, color, or other designation assigned to the game for which the payment is made;

(vii) In the case of slot machine play, the identification number of the slot machine(s) (for example, location and asset number);

(viii) Any other information required by the forms, instructions, revenue procedures, or other applicable guidance published in the Internal Revenue Bulletin.

(2) *Special rule for tribal member identification cards.* A tribal member identification card need not contain the payee's photograph to meet the identification requirement described in paragraph (d)(1)(iii) of this section if:

(i) The payee is a member of a federally recognized Indian tribe;

(ii) The payee presents the payor with a tribal member identification card issued by a federally recognized Indian tribe stating that the payee is a member of such tribe; and

(iii) The payor is a gaming establishment (as described in paragraph (b)(2)(iv) of this section) owned or licensed (in accordance with 25 U.S.C. 2710) by the tribal government that issued the tribal member identification card referred to in (d)(2)(ii).

(3) *Special rule for optional aggregate reporting method.* In the case of aggregate reporting under paragraph (g) of this section, the amount of the payment in paragraph (d)(1)(iv) of this section is the aggregate amount of payments of reportable gambling winnings from the same type of game (bingo, keno, or slot machine play) made to the same payee during the same information reporting period (as defined in paragraph (b)(2) of this section). Unless otherwise provided in forms, instructions, or other guidance, in the case of aggregate reporting under paragraph (g) of this section, the information required by paragraphs (d)(1)(v) through (viii) of this section must be maintained by the payor as described in paragraph (g)(3) of this section.

(e) *Identification.* The following items are treated as identification for purposes of paragraph (d)(1)(iii) of this section—

(1) Government-issued identification (for example, a driver's license, passport, social security card, military identification card, tribal member identification card issued by a federally recognized Indian tribe, or voter registration card) in the name of the payee; and

(2) A Form W–9, ''Request for Taxpayer Identification Number and Certification,'' signed by the payee, that includes the payee's name, address, taxpayer identification number, and other information required by the form. A Form W–9 is not acceptable for this purpose if the payee has modified the form (other than pursuant to instructions to the form) or if the payee has deleted the jurat or other similar provisions by which the payee certifies or affirms the correctness of the statements contained on the form.

(f) *Furnishing a statement to the payee.* Every payor required to make a return under paragraph (a) of this section must also make and furnish to each payee, with respect to each payment of reportable gambling winnings, a written statement that contains the information that is required to be included on the return under paragraph (d) of this section. The payor must furnish the statement to the payee on or before January 31st of the year following the calendar year in which payment of the reportable gambling winnings is made. The statement will be considered furnished to the payee if it is provided to the payee at the time of payment or if it is mailed to the payee on or before January 31st of the year following the calendar year in which payment was made.

(g) *Aggregate reporting of bingo, keno, and slot machine winnings*—(1) *In general.* In lieu of filing a separate information return for each payment of reportable gambling winnings as required by paragraph (a) of this section, a payor may use the aggregate reporting method (defined in paragraph (g)(2) of this section) to report reportable gambling winnings from bingo, keno, or slot machine play. A payor using the aggregate reporting method to file information returns under paragraph (a) of this section must also furnish statements to the payee under paragraph (f) of this section using the aggregate reporting method.

(2) *Aggregate reporting method defined.* (i) The aggregate reporting method is a method of reporting more than one payment of reportable gambling winnings from the same type of game (bingo, keno, or slot machine play) made to the same payee during the same information reporting period (as defined in this paragraph (b)(2) of this section) on one information return or statement.

(ii) A payor may use the aggregate reporting method for payments to some payees and not others, at its own discretion. In addition, with respect to a single payee, the payor may use the aggregate reporting method to report winnings from one type of game, but not for winnings from another type of game.

(iii) Failure to report some reportable gambling winnings from a particular type of game during one information reporting period to a particular payee under the aggregate reporting method (for whatever reason, including because the winnings are not permitted to be reported using the aggregate reporting method under paragraph (g)(4) of this section) will not disqualify the payor from using the aggregate reporting method to report other reportable gambling winnings from that type of game during that information reporting period to that payee. The payor may stop using the aggregate reporting method for a particular payee or for all payees before the end of the payor's information reporting period for any reason.

(3) *Recordkeeping under the aggregate reporting method.* A payor using the aggregate reporting method must maintain a record of every payment of reportable gambling winnings from the same type of game made to the same payee during the information reporting period that will be reported using the aggregate reporting method. Every individual that the payor has determined is responsible for an entry in the record must confirm the information in the entry by signing the record in a manner that will enable the signature to be associated with the relevant entry. Each payment of a reportable gambling winning made to the same payee and reported under the aggregate reporting method must have its own entry in the record, however, the information required by paragraphs (d)(1)(i) through (iii) of this section is not required to be recorded more than one time per information reporting period. A payor that uses the aggregate reporting method must retain a copy of the record in its files. The record (which may be electronic provided the requirements set forth in forms, instructions, or guidance published in the Internal Revenue Bulletin are met) must include the following information about each payment:

(i) The payee's signature confirming the information in the record;

(ii) The information required under paragraph (d) of this section;

(iii) The time of the win resulting in the reportable gambling winnings;

(iv) The total amount of reportable gambling winnings with respect to all payments to the payee during the information reporting period;

(v) The amount of reportable gambling winnings with respect to each particular payment;

(vi) The method of payment to the payee (for example, cash, check, voucher, credit, token, or chips); and

(vii) The name and unique identification number of the individual who the payor has determined is responsible for ensuring that the entry with respect to the reportable gambling winnings (including the general description of two types of identification used to verify the payee's name, address, and taxpayer identification number) is complete and accurate and who is authorized to perform that function by the applicable gaming regulatory control authority. Such individual may or may not be the same individual who prepared the entry.

(4) *When the aggregate reporting method may not be used.* A payor cannot use the aggregate reporting method if—

(i) The payment is to a foreign person, as described in section 1.6041–10(h);

(ii) The payor knows or has reason to know that the person making the wager is not the person entitled to the winnings or is not the only person entitled to the winnings (regardless of whether the person making the wager furnishes a Form 5754, ''Statement by Person(s) Receiving Gambling Winnings''); or

(iii) Backup withholding under section 3406(a) applies to the payment.

(5) *Examples.* The following examples illustrate the provisions of this section. For each example, assume that for purposes of the aggregate reporting method in paragraph (g) of this section, Casino R's ''information reporting period'' for all calendar years is a gaming day that begins at 3 a.m. and ends at 2:59 a.m. the following day (except for January 1 and December 31) and that individuals C, D, and E are U.S. persons.

Example 1. On Day 1, between 7 a.m. and 4 p.m., C places five wagers at casino R on five different slot machines. The first two wagers result in no win. The third wager results in a $1,500 win. The fourth wager results in a $2,500 win. The fifth wager results in an $800 win:

(i) Under paragraph (b)(1)(i)(C) of this section, there are reportable gambling winnings from the slot machine play of $4,000 ($1,500 + $2,500). The $800 win is not a reportable gambling winning from slot machine play because it does not equal or exceed the $1,200 threshold.

(ii) Because all of the amounts were won on the same type of game (even though each of the winnings occurred on different machines) during the same information reporting period, R is permitted to use the aggregate reporting method under this paragraph (g). If R decides not to use the aggregate reporting method, a separate Form W–2G would have to be filed and furnished for the payment of reportable gambling winnings of $1,500 and for the payment of reportable gambling winnings of $2,500. However, if R decides to use the aggregate reporting method, R may report total reportable gambling winnings from slot machine play of $4,000 ($1,500 + $2,500) on one Form W–2G.

Example 2. Assume the same facts as *Example 1,* except that in addition to the winnings described in *Example 1,* at 5 a.m. on Day 2, C wins $3,250 from one slot machine play at casino R. Even though C played the same type of game (slot machine play) on Day 1 and Day 2, under paragraph (b)(2) of this section, the win at 5 a.m. on Day 2 is a win during a separate information reporting period. Under paragraph (g)(2)(i) of this section, the $3,250 of reportable gambling winnings on Day 2 cannot be aggregated with the reportable gambling winnings of $4,000 from Day 1 on a single Form W–2G. Accordingly, if R uses the aggregate reporting method, R must file two Forms W–2G with respect to C's reportable gambling winnings on Day 1 and Day 2. R must report $4,000 of reportable gambling winnings from slot machine play paid to C on Day 1 on the first Form W–2G, and $3,250 of reportable gambling winnings from slot machine play paid to C on Day 2 on the second Form W–2G.

Example 3. On December 31 of Year 1 at 4:00 p.m., C wins $10,000 from one slot machine play at casino R. At 12:30 a.m. on January 1 of Year 2, C wins $4,000 from one slot machine play at casino R. Under paragraphs (b)(2)(iii)(B) and (C) of this section, the win at 4 p.m. on December 31 of Year 1 and the win at 12:30 a.m. on January 1 of Year 2 are wins during different information reporting periods. Under paragraph (g)(2)(i) of this section, the $4,000 of reportable gambling winnings on January 1 cannot be aggregated with the reportable gambling winnings of $10,000 from December 31 on a single Form W–2G. Accordingly, if R uses the aggregate reporting method, R must file two Forms W–2G with respect to C's reportable gambling winnings on Day 1 and Day 2. R must report $10,000 of reportable gambling winnings from slot machine play paid to C on December 31 on the first Form W–2G and $4,000 of reportable gambling winnings from slot machine play paid to C on January 1 on the second Form W–2G.

Example 4. Assume the same facts as example 3, except that C also wins $5,000 from one slot machine play at 3:30 p.m. on January 1 and $7,000 from one slot machine play at 1:30 a.m. on January 2. Under the special rule of paragraph (b)(2)(iii) of this section, the ''information reporting period'' begins at 12:00 a.m. on January 1 and extends until the start of the next information reporting period, in this case 2:59 a.m. on January 2. Under paragraph (b)(1)(C) of this section, Casino R will pay C a total of $26,000 ($10,000 + $4,000 + $5,000 + $7,000) in reportable gambling winnings; however, $10,000 must be reported in Year 1, and $16,000 must be reported in Year 2. Because all of the amounts won in Year 2 were won on the same type of game and during the same information reporting period, R is permitted to use the aggregate reporting method under this paragraph (g). If R decides to use the aggregate reporting method, R may report $10,000 of reportable gambling winnings from slot machine play paid to C on December 31 on the first Form W–2G and $16,000 of total reportable gambling winnings from slot machine play paid to C on January 1 on the second Form W–2G.

Example 5. At 2 p.m. on Day 1, D won $2,000 (after reducing the amount of the win by the amount wagered) playing one keno game at casino R. D provides R with his driver's license. The driver's license has D's photograph on it, as well as D's name and address. The driver's license does not include D's social security number. D cannot remember his social security number and has no other identification at the time with his social security number on it. D does not provide R with his social security number before R pays the winnings to D. Because D cannot remember his social security number, D cannot complete and sign a Form W–9. R deducts and withholds $560 (28 percent of $2,000) under the backup withholding provisions of section 3406(a) and pays the remaining $1,440 in winnings to D. D returns to casino R and at 6 p.m. on Day 1 wins $1,500 (after reducing the amount of the win by the amount wagered) in one keno game. D provides R with his driver's license as well as D's social security card. R generally uses the aggregate reporting method and in all cases where it is used, R complies with the requirements of this paragraph (g). At 8 p.m. and 10 p.m. on Day 1, D wins an additional $1,800 and $1,700 (after reducing the amount of the win by the amount wagered), respectively, from two different keno games. For each of these two wins, an employee of R obtains the information from D required by this paragraph (g):

(i) Under paragraph (b)(1)(i)(B) of this section, each of D's wins from the four games of keno on Day 1 ($2,000, $1,500, $1,800, and $1,700) are reportable gambling winnings. Because D's first win on Day 1 was at 2 p.m. and D's last win on Day 1 was at 10 p.m., all of D's reportable gambling winnings from keno are won during the same information reporting period. Because R satisfies the requirements of paragraph (g)(2)(i), R may use the aggregate reporting method to report D's reportable gambling winnings from keno. However, pursuant to paragraph (g)(4)(iii) of this section, the $2,000 payment made to D at 2 p.m. cannot be reported under the aggregate reporting method because that payment was subject to backup withholding. Accordingly, if R uses the aggregate reporting method under this paragraph (g), R will have to file two Forms W–2G with respect to D's reportable gambling winnings from keno on Day 1. On the first Form W–2G, R will report $2,000 of reportable gambling winnings and $560 of backup withholding with respect to the 2 p.m. win from keno, and, on the second Form W–2G, R will report $5,000 of reportable gambling winnings from keno (representing the three payments of $1,500, $1,800, and $1,700 that D won between 6 p.m. and 10 p.m. on Day 1).

Example 6. In one information reporting period on Day 1, E won five reportable gambling winnings from five different bingo games at a casino R. R generally uses the aggregate reporting method and in all cases where it is used, R complies with the requirements of this paragraph (g). Although E signed the entry in the record R maintains for payment of the first four reportable gambling winnings, E refuses to sign the entry in the record for the fifth payment of reportable gambling winnings. R may use the aggregate reporting method for the first four payments of reportable gambling winnings to E. However, because the entry in the record for the fifth payment of reportable gambling winnings does not include E's signature, as required by paragraph (g)(3)(i) of this section, that payment may not be reported under the aggregate reporting method. Accordingly, if R uses the aggregate reporting method under paragraph (g) of this section, R must prepare two Forms W–2G as follows: On the first Form W–2G, R must report the first four payments of reportable gambling winnings from bingo made to E on Day 1. On the second Form W–2G, R must report the fifth payment of reportable gambling winnings from bingo made to E on Day 1.

(h) *Payments to foreign persons.* See § 1.6041–4 regarding payments to foreign persons. See § 1.6049–5(d) for determining whether the payee is a foreign person.

(i) *Effective/applicability date.* Section 1.6041–10(b)(2), concerning payor-selected ''information reporting periods,'' applies to payments of reportable gambling winnings from bingo, keno, or slot machine play made on or after January 1 of the year following the date these regulations are published in the **Federal Register**. All other sections contained herein apply to payments of reportable gambling winnings from bingo, keno, or slot machine play made on or after December 30, 2016.

(j) *Cross-references for certain gambling winnings.* For provisions relating to backup withholding for winnings from bingo, keno, and slot machine play and other reportable gambling winnings, see § 31.3406(g)–2(d). For provisions relating to withholding and reporting for gambling winnings from lotteries, sweepstakes, wagering pools, and other wagering transactions, including a wagering transaction in a parimutuel pool with respect to horse races, dog races, or jai alai, see § 31.3402(q)–1.

PART 7—TEMPORARY INCOME TAX REGULATIONS UNDER THE TAX REFORM ACT OF 1976

■ **Par. 3.** The authority citation for part 7 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

§ 7.6041–1 [Removed]

■ **Par. 4.** Section 7.6041–1 is removed.

PART 31—EMPLOYMENT TAXES AND COLLECTION OF INCOME TAX AT SOURCE

■ **Par. 5.** The authority citation for part 31 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

§ 31.3406(g)–2 [Amended]

■ **Par. 6.** In § 31.3406(g)–2, paragraph (d)(3) is amended by removing the citation ''§ 7.6041–1'' and adding the citation ''§ 1.6041–10'' in its place.

BILLING CODE 4830–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2016–0939]

Liberty Island Safety Zone; Fireworks Display in Captain of the Port New York Zone

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a safety zone within the Captain of the Port New York Zone on the specified date and time. This action is necessary to ensure the safety of vessels and spectators from hazards associated with fireworks displays. During the enforcement period, no person or vessel may enter the safety zone without permission of the Captain of the Port (COTP).

DATES: The regulation for the safety zone described in 33 CFR 165.160 will be enforced on the date and time listed in the table below.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or email Petty Officer First Class Ronald Sampert, U.S. Coast Guard; telephone 718–354–4154, email *ronald.j.sampert@uscg.mil.*

SUPPLEMENTARY INFORMATION:

The Coast Guard will enforce the safety zone listed in 33 CFR 165.160 on the specified date and time as indicated in Table 1 below. This regulation was published in the **Federal Register** on November 9, 2011 (76 FR 69614).

TABLE 1

1. Circle Line Sightseeing Yachts, NYE, Liberty Island Safety Zone, 33 CFR 165.160 (2.1).	• Launch site: A barge located in approximate position 40°41′16.5″ N, 074°02′23″ W (NAD 1983), approximately 360 yards east of Liberty Island. This Safety Zone is a 240-yard radius from the barge. • Date: December 31, 2016 • Time: 11:55 p.m.–12:10 a.m.

Under the provisions of 33 CFR 165.160, vessels may not enter the safety zone unless given permission from the COTP or a designated representative. Spectator vessels may transit outside the safety zones but may not anchor, block, loiter in, or impede the transit of other vessels. The Coast Guard may be assisted by other Federal, State, or local law enforcement agencies in enforcing this regulation.

This notice is issued under authority of 33 CFR 165.160(a) and 5 U.S.C. 552(a). In addition to this notice in the **Federal Register**, the Coast Guard will provide mariners with advanced notification of enforcement periods via the Local Notice to Mariners and marine information broadcasts.

If the COTP determines that a safety zone need not be enforced for the full duration stated in this notice, a Broadcast Notice to Mariners may be used to grant general permission to enter the safety zone.

Dated: December 7, 2016.

M. H. Day,

Captain, U.S. Coast Guard, Captain of the Port New York.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 58

[EPA–HQ–OAR–2015–0486; FRL–9957–78–OAR]

RIN 2060–AS71

Revision to the Near-road NO_2 Minimum Monitoring Requirements

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This action finalizes revisions to the minimum monitoring requirements for near-road nitrogen dioxide (NO_2) monitoring by removing the existing requirements for near-road NO_2 monitoring stations in Core Based Statistical Areas (CBSAs) having populations between 500,000 and 1,000,000 persons, that are due by January 1, 2017.

DATES: This final rule is effective December 30, 2016.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2015–0486. All documents in the docket are listed at *http://www.regulations.gov.* Although listed in the index, some information may not be publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *www.regulations.gov.* In addition to being available in the docket, an electronic copy of the rule will also be available at *https://www.epa.gov/no2-pollution/ambient-nitrogen-dioxide-monitoring-requirements.*

FOR FURTHER INFORMATION CONTACT: Mr. Nealson Watkins, Air Quality Assessment Division, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Mail code C304–06, Research Triangle Park, NC 27711; telephone: (919) 541–5522; fax: (919) 541–1903; email: *watkins.nealson@epa.gov.*

SUPPLEMENTARY INFORMATION:

Administrative Procedure Act: Section 553(d) of the Administrative Procedure Act (APA), 5 U.S.C. Chapter 5, generally provides that rules may not take effect earlier than 30 days after they are published in the **Federal Register**. The Environmental Protection Agency (EPA) is issuing this final rule under section 307(d)(1) of the Clean Air Act, which states: ''The provisions of section 553 through 557 . . . of Title 5 shall not, except as expressly provided in this section, apply to actions to which this subsection applies.'' Thus, section 553(d) of the APA does not apply to this rule. The EPA is nevertheless acting consistently with the purposes underlying APA section 553(d) in making this rule effective no later than January 1, 2017. Section 553(d) allows an effective date less than 30 days after publication for a rule that ''grants or recognizes an exemption or relieves a restriction'' or ''as otherwise provided by the agency for good cause found and published with the rule.'' The EPA finds that there is good cause for this rule to become effective immediately, because this rule removes a restriction. Specifically, this final rule removes the requirement for states to install air quality monitors in certain areas by January 1, 2017.

Judicial Review: This is a nationally applicable rulemaking because it revises generally applicable monitoring network requirements. Even if this rulemaking were not considered nationally applicable, EPA has determined that this action is of nationwide scope and effect because the monitors that will no longer be required under this rulemaking are located in 28 states, which fall within the jurisdiction of all 10 federal courts of appeals. Therefore, under CAA section 307(b)(1), judicial review of this final rule is available only by filing a petition for review in the U.S. Court of Appeals for the D.C. Circuit by February 28, 2017.

Table of Contents

The following topics are discussed in this preamble:

I. Background

On February 9, 2010, the EPA promulgated minimum monitoring requirements for the ambient NO_2 monitoring network in support of the revised NO_2 NAAQS (75 FR 6474; February 9, 2010). The 2010 NO_2 NAAQS revision introduced a 1-hour standard with a 98th percentile form averaged over 3 years and a level of 100 parts per billion (ppb), reflecting the maximum allowable NO_2 concentration anywhere in an area, while retaining the annual standard of 53 ppb.

As part of the 2010 NO_2 NAAQS rulemaking, the EPA promulgated revisions to requirements for minimum numbers of ambient NO_2 monitors which included new monitoring near major roads in larger urban areas, requirements to characterize NO_2 concentrations representative of wider spatial scales in larger urban areas (area-wide monitors), and monitors intended to characterize NO_2 exposures of susceptible and vulnerable populations. Specifically, the requirements for these minimum monitoring requirements that were promulgated in 2010 were as follows:

(a) The first tier of the ambient NO_2 monitoring network required near-road monitoring.[1] The requirements included the placement of one near-road NO_2 monitoring station in each CBSA with a population of 500,000 or more persons to monitor a location of expected maximum hourly concentrations sited near a major road. An additional near-road NO_2 monitoring station was required at a second location of expected maximum hourly concentrations for any CBSA with a population of 2,500,000 or more persons, or in any CBSA with a population of 500,000 or more persons that has one or more roadway segments with 250,000 or greater Annual Average Daily Traffic (AADT) counts. Based upon 2010 census data and data maintained by the U.S. Department of Transportation's Federal Highway Administration on the most heavily trafficked roads in the U.S. (*http://www.fhwa.dot.gov/policyinformation/tables/02.cfm*), approximately 126 near-road NO_2 sites were required within 103 CBSAs nationwide at the time of rule promulgation.

(b) The second tier of the NO_2 network required area-wide NO_2 monitoring,[2] where area-wide means that the monitor is representative of a spatial scale of representativeness of neighborhood scale (0.5 to 4 km in dimension) or larger, as defined in 40 Code of Federal Regulations (CFR) part 58, appendix D, section 1.2. Requirements included the placement of one monitor in each CBSA with a population of 1,000,000 or more persons to monitor a location of expected highest NO_2 concentrations representing the neighborhood or larger spatial scales. Based on 2010 census data, approximately 52 area-wide NO_2 sites were required within 52 CBSAs at the time of rule promulgation.

(c) The third tier of the NO_2 minimum monitoring requirements was for the characterization of NO_2 exposure for susceptible and vulnerable populations.[3] The EPA Regional Administrators, in collaboration with states, required 40 NO_2 monitoring stations nationwide in any area, inside or outside of CBSAs, in addition to the minimum monitoring requirements for near-road and area-wide monitors, with a primary focus on monitoring in locations with susceptible and vulnerable populations. Monitoring sites intended to satisfy these NO_2 minimum monitoring requirements were required to be submitted to the EPA for approval. Per 40 CFR 58.10 and 58.13, states were required to submit a plan to the EPA for establishing required area-wide NO_2 monitoring sites and those NO_2 monitoring sites intended to represent areas with susceptible and vulnerable populations by July 1, 2012, and ensure that the monitoring stations were operational by January 1, 2013. State and local air monitoring agencies fulfilled the requirements for area-wide monitors and those sites representing areas with susceptible and vulnerable populations on schedule.

The near-road component of the ambient NO_2 monitoring network was also originally required to be completely operational by January 1, 2013. However, in 2012, the EPA proposed (77 FR 64244; October 19, 2012) and then finalized in 2013 (78 FR 16184; March 14, 2013), through a public notice and comment rulemaking, a requirement that the near-road NO_2 monitoring stations be installed in three phases. The revised installation schedule allowed more time for states to establish the near-road NO_2 network on a schedule consistent with available resources. The revised installation schedule for the near-road NO_2 monitoring network was modified to reflect the following:

Phase 1: In CBSAs with a population of 1,000,000 or more persons, one near-road NO_2 monitor shall be reflected in the state Annual Monitoring Network Plan submitted July 1, 2013, and that monitor shall be operational by January 1, 2014.

Phase 2: In CBSAs where two near-road NO_2 monitors are required (either because the CBSA has a population of 2,500,000 or more persons, or has a population of 500,000 or more persons plus one or more roadway segments having AADT counts of 250,000 or more), the second near-road NO_2 monitor shall be reflected in the state Annual Monitoring Network Plan submitted July 1, 2014, and that monitor shall be operational by January 1, 2015.

Phase 3: In CBSAs with a population of at least 500,000 persons, but less than 1,000,000 persons, one near-road NO_2 monitor shall be reflected in the state Annual Monitoring Network Plan submitted July 1, 2016, and the monitor shall be operational by January 1, 2017.

As of November of 2016, the EPA estimates that 69 near-road NO_2 monitors are in operation. At the time of this rulemaking, the EPA notes that a handful of near-road sites (4 from Phase 1 and 6 from Phase 2) are still in the process of being installed due to various delays at the state and local level. A review of near-road site meta-data indicate that state and local air monitoring agencies have successfully installed these new monitors in the appropriate locations, collectively placing monitors adjacent to highly trafficked roads in their respective CBSAs. The latest available near-road NO_2 monitoring site meta-data can be found at *http://www3.epa.gov/ttn/amtic/nearroad.html.*

II. Proposed Revisions to Near-Road NO_2 Minimum Monitoring Requirements

We proposed revisions to the near-road NO_2 minimum monitoring requirements (81 FR 30224) on May 16, 2016, to remove the requirement for near-road NO_2 monitoring stations in CBSAs having populations between 500,000 and 1,000,000 persons, also known as Phase 3 of the near-road NO_2 network. The proposal also included a revision to the requirement for a second

[1] See 40 CFR part 58, appendix D, section 4.3.2.

[2] See 40 CFR part 58, appendix D, section 4.3.3.

[3] See 40 CFR part 58, appendix D, section 4.3.4.

near-road NO_2 monitor in any CBSA having 500,000 or more persons that also had one or more road segments with 250,000 or greater AADT counts to only apply to CBSAs having 1,000,000 or more persons, which was intended to align all near-road NO_2 monitoring requirement language to only apply to those CBSAs having 1,000,000 persons or more.

The proposed removal of Phase 3 of the required near-road NO_2 network was based on empirical data and technical rationale, which were discussed in detail in the preamble to the proposed rule and supported by the Near-road NO_2 Network and Data Analysis memo to the docket (docket memo) located at *https://www.regulations.gov/docket?D=EPA-HQ-OAR-2015-0486.* The three key foundations of the proposal were that:

- The Phase 1 and Phase 2 near-road sites that have been installed to date are located at maximum concentration locations consistent with the guidance in the Near-road NO_2 Monitoring Technical Assistance Document (TAD) (*http://www3.epa.gov/ttn/amtic/files/nearroad/NearRoadTAD.pdf*) as demonstrated by a detailed examination of site meta-data.
- The higher populated CBSAs that contain these near-road NO_2 sites have higher mobile source emissions and associated indicators, such as Vehicle Miles Traveled (VMTs), than lesser populated CBSAs.
- Ambient concentrations collected at all existing near-road monitoring sites are well below both the annual and 1-hour daily maximum NAAQS levels of 53 ppb and 100 ppb, respectively.

III. Public Comments

The EPA received 22 individual submissions on the proposal during the public comment period from public health and environmental groups, industry groups, state and local air monitoring agencies and multi-agency groups, and one anonymous public commenter.[4]

Overall, 18 of the 22 commenters supported the proposal. This included all 14 state or multi-state groups: Association of Air Pollution Control Agencies (AAPCA); Akron Regional Air Quality Management District (ARAQMD); Central States Air Resource Agencies Association (CENSARA); Colorado; Georgia; Iowa; Kentucky; Michigan; National Association of Clean Air Agencies (NACAA); Northeast States for Coordinated Air Use Management (NESCAUM); North Carolina; Regional Air Pollution Control Agency, Dayton, OH (RAPCA); South Carolina; and Wisconsin. In addition, all 4 of the industry commenters voiced support of the proposal, including: American Petroleum Institute (API); American Road and Transportation Builders Association (ARTBA); NAAQS Implementation Coalition; and the Utility Air Regulatory Group (UARG).

Those commenters who supported the proposal primarily reiterated that the use of existing network data and meta-data, plus other supporting data, provide the rationale necessary to finalize the proposed changes to remove requirements for Phase 3 monitors from the near-road NO_2 network requirements. For example, AAPCA stated that the ''. . . [proposed] revision is based on clear evidence from Phases 1 and 2 of the near-road network . . .'' and ultimately that the data ''. . . demonstrate the need to remove the monitoring requirements for Phase 3.'' The API noted that ''the Agency's phased monitoring approach has provided EPA the time to collect and analyze early monitoring data, and therefore develop a more accurate view of NO_2 concentrations near roads.'' The API went on to state that ''near-road NO_2 levels in 1,000,000 resident cities represent current high end exposures which are expected to decrease due to improving fleet fuel efficiency and turnover, the same is true for smaller cities addressed by Phase 3.'' Other commenters also noted Tier 3 Motor Vehicle Emissions and Fuel standards,[5] which the EPA expects to reduce on-road emissions that directly contribute to near-road NO_2 concentrations going into the future. For example, the Iowa Department of Natural Resources stated that ''NOx emissions from mobile sources are expected to decrease with implementation of the Tier 3 engine and fuel standards. . . .'' Finally, NACAA commented that its ''. . . monitoring experts agree with EPA's conclusion that data collected from Phase 3 monitors, which would be located in relatively smaller CBSAs, would almost certainly measure lower or similar NO_2 concentrations [than those measured in the larger CBSAs].''

Those commenters who opposed the proposed rule included all 3 submissions from public health and environmental groups. The first of the three adverse comment submissions was collectively from the following entities: Asthma and Allergy Network, Alliance of Nurses for Healthy Environments, American Lung Association, American Public Health Association, American Thoracic Society, Asthma and Allergy Foundation of America, Children's Environmental Health Network, and Health Care Trust for America's Health. For convenience, through the remainder of this preamble, this group will be referred to as the ''Public Health Organizations.'' The second submission with adverse comments was collectively from the following entities: Earth Justice, Catholic Charities of the Diocese of Stockton, Clean Air Council, Clean Wisconsin, Midwest Environmental Defense Center, Natural Resources Defense Council, Valley Improvement Projects, and We Act for Environmental Justice. For convenience through the remainder of this preamble, this second group will be referred to as the ''Environmental Groups.'' The third submission with adverse comment to the proposed rule was from Clean Air Watch.

The key issues raised in those adverse comments include: (1) Arguments that the proposal is inconsistent with the original reasoning behind the establishment of the near-road network requirements in the 2010 NO_2 NAAQS rulemaking; (2) issues related to the near-road NO_2 network design and its installation; and (3) the empirical data relied on in the rationale for the proposed rule, which commenters criticized as being of relatively limited duration and representation.

In regard to the assertion that the proposal is inconsistent with the original reasoning behind the establishment of the near-road network, the Environmental Groups and Clean Air Watch both cited rationale provided in the 2010 NO_2 NAAQS rulemaking that was used to establish the original requirements for the near-road NO_2 network. They stated that the reasoning behind needing the network as it was originally required has presently not changed. The Environmental Groups stated that ''EPA's proposal to eliminate the requirement to install near-road monitors in areas below 1 million people is fundamentally inconsistent with EPA's prior conclusion, and with the facts EPA found to support it.'' The Clean Air Watch noted that after the 2010 NO_2 NAAQS revision the Administrator had highlighted that there would be many new roadside monitors going into place.

The EPA disagrees that the rationale for this action is inconsistent with the

[4] The single anonymous public commenter provided comments that were not within the scope of this rule action, as they requested a revision of the NO_2 NAAQS. That comment is not within the scope of today's action because the EPA did not propose any revisions relating to the level of the NAAQS.

[5] More information on the Tier 3 standards can be found at *https://www.epa.gov/regulations-emissions-vehicles-and-engines/regulations-smog-soot-and-other-air-pollution-passenger.*

2010 rule. Rather, the revision to the 2010 rule's near-road monitoring provisions is based on the EPA's evaluation of monitoring data generated after issuance of the 2010 rule. The EPA notes that the key objective of the 2010 revision to the NO_2 NAAQS was to limit exposure to peak NO_2 concentrations that occur anywhere in an area. In recognition of the fact that the majority of exposure risks were found to be tied to mobile sources and the lack of specific information concerning the concentrations of NO_2 in the near-road environment that was available at the time, the near-road NO_2 monitoring network was required to address this lack of characterization. In the 2009 NO_2 NAAQS proposal, the agency noted that the NO_2 monitoring network at that time was ''. . .not oriented to address peak concentrations, such as the on-road and near-road environment. . .'' (74 FR 34440). At the time of that proposal and the promulgation of the 2010 final rule, there was a limited amount of near-road monitored data, which consisted mostly of integrated and continuous concentration data from research studies as opposed to compliance-quality data suitable for comparison to the NAAQS. The agency used those limited data in conjunction with information collected and presented in the Integrated Science Assessment (*https://www.regulations.gov/document?D=EPA-HQ-OAR-2006-0922-0048*) and the Risk and Exposure Assessment (*https://www.regulations.gov/document?D=EPA-HQ-OAR-2006-0922-0047*) to finalize the network design that originally required at least one monitor in all CBSAs having populations of 500,000 persons or more. As was noted by several commenters on the May 2016 proposal for this rule, the final 2010 network design was described as a near-road network that would provide ''. . . data from a geographically and spatially diverse set of CBSAs that supports the intent of the revised NAAQS . . .'' (75 FR 6508).

Subsequent to the 2010 NO_2 NAAQS rulemaking, the EPA has received and evaluated data from near-road NO_2 monitors installed in response to the requirements of the rule. As of November 2016, there are 69 operating near-road NO_2 sites, with an ever increasing data record. Due to the establishment and operation of these near-road NO_2 monitors, the EPA and the public now have a significantly better understanding of what ambient, near-road concentrations look like across a geographically diverse set of urban areas of differing population sizes, including several CBSAs with populations under 1,000,000 persons, than we did in 2010. It is the evaluation of these new data, not a change in the EPA's view that the near-road network reflects areas of peak NO_2 concentration, which led to the EPA's conclusion that the requirement to operate additional near-road NO_2 sites required by Phase 3 of the network is no longer necessary to provide adequate characterization on a national basis. These new data, which were not available during the 2010 NO_2 NAAQS rulemaking provide the EPA with a different and improved understanding of near-road NO_2 concentrations compared to the time when the network was originally required. In particular, these new data show that NO_2 concentrations from sites adjacent to some of the nation's highest trafficked roads in the most populated CBSAs (*i.e.,* expected maximum concentrations sites in the near-road environment) are not exceeding or even threatening to approach the level of the NAAQS. It is, therefore, evident that the degree of geographic and spatial diversity required of the near-road network is less than originally thought. Accordingly, the agency believes it is appropriate to reconsider the necessity of Phase 3 of the near-road NO_2 network by leveraging empirical evidence and targeted assessments and analyses of available near-road NO_2 network information, as explained in more detail in the docket memo associated with this action.

The second issue raised by the Environmental Groups and Public Health Organizations was in regard to the network design and physical characteristics of the existing near-road NO_2 network. The Public Health Organizations stated that ''limiting the required monitoring to only one or two locations in cities with millions of people severely limits the information available on near-road exposure in metropolitan areas.'' The Environmental Groups stated that ''the information relied upon by EPA does not show that the near-road monitors installed to date have been located to detect maximum [NO_2] levels.'' Finally, the Public Health Organizations also stated that ''new research examining the early results of some of these near-road monitors warn that the assumptions made in the initial siting decisions may not adequately reflect the wors[t] sources of highway emissions, even in major urban areas like Los Angeles.''

With regard to the Public Health Organizations' comment that the amount of near-road monitoring in a given urban area is limited, the EPA disagrees that additional monitors are needed. The network design targets expected maximum concentrations in the near-road environment. In the 2010 NO_2 NAAQS rulemaking, the near-road NO_2 network was required to be installed with consideration of six key factors: AADT, fleet mix, congestion patterns, roadway design, terrain, and meteorology. These factors varied by CBSA, where quantitative data was variable in availability and quality. The consideration of these six factors was required so that near-road monitors would be placed at locations in near-road environments where peak NO_2 concentrations, derived from on-road mobile sources, would be most likely to be observed within that CBSA. Because of this specific objective of the network, the need for multiple other near-road monitoring sites, above what is already required within a given CBSA to ascertain compliance with the NAAQS, is minimized.

The EPA strongly disagrees with the assertion that the near-road monitors installed to date have not been located to detect maximum NO_2 levels. The agency handled this issue through siting requirements in the CFR and through additional support via the production of the TAD. The TAD was created through collaboration amongst multiple offices across the agency, state and local air quality management agencies, the U.S. Department of Transportation, and several state departments of transportation. Further, the TAD was reviewed by the Clean Air Scientific Advisory Committee's Air Monitoring and Methods Subcommittee. The state and local air agencies' adherence to the siting requirements in the CFR and their use of the TAD is evidenced by meta-data presented and discussed in the proposal and the associated docket memo. As a result of the diligence of state and local air agencies, and the support and oversight of the agency, the near-road network meets all siting requirements and the selection of sites for the current near-road network was carried out with a high degree of success. For example, as was noted in the proposal, 55 percent of the near-road sites are adjacent to one of the top five highest trafficked road segments in their respective CBSA, 71 percent are adjacent to one of the top 10 most highly trafficked roads, and 91 percent are adjacent to one of the top 25 most highly trafficked roads. As there are thousands of road segments within each CBSA, this means that virtually all near-road monitors are adjacent to one of the most heavily trafficked roads within their respective CBSAs. And, as noted in the EPA's analysis of the existing near-road monitoring data, if the measure of traffic is adjusted for the fleet mix to account for higher oxides of nitrogen (NO_X) emissions from heavy-duty diesel vehicles, an even greater percentage of near-road monitors are adjacent to the road segments where NO_2 exposure is expected to be highest. Moreover, traffic volume was just one criterion out of a number of factors, plus logistical limitations, that all had bearing on site selection. These data, along with all the other data presented in the proposal and the docket memo, are indicative of a successful network deployment.

The EPA notes that in general, ambient monitor placement is a balancing act of knowing where an ideal monitoring location might be versus the reality of actually being able to place and operate a monitor in a particular location. This concept applies to all ambient monitoring endeavors, as the physical process of siting a monitor is subject to a myriad of logistical influences including, but not limited to: Permissions for access; physical limitations on site placement including the immediate terrain, topography, or the roadway design of a target road in the specific case of near-road monitoring; safety considerations, which are particularly important and evident in near-road siting situations; and utilities availability. Considering the factors and influences involved in the near-road siting process and the known characteristics of the network, the EPA strongly asserts that the network is appropriately deployed and situated to provide measurements that are a good representation of maximum near-road NO_2 concentrations that exist in a given CBSA, evidenced by meta-data presented and discussed in both the proposal and the docket memo.[6]

In response to the Public Health Organizations' statement that ''new research examining the early results of some of these near-road monitors warn that the assumptions made in the initial siting decisions may not adequately reflect the wors[t] sources of highway emissions, even in major urban areas like Los Angeles,'' the EPA would first like to point out that the research conducted for the referenced journal article did not utilize any data from the near-road NO_2 network, nor did it directly measure NO_2 during their on-road experiments. The data behind the referenced multi-pollutant research study were collected as part of an on-road mobile source emissions study primarily focused on improving understanding of the variability and influences on fleet-wide emissions via alternative methods of calculating emission factors. As such, the study does not indicate that information utilized in network siting decisions may not adequately reflect the worst sources of highway emissions. In fact, it does not even address near-road monitoring data from monitors installed to measure NO_2 levels. Instead, the EPA believes the study reinforces the fact that the required consideration of a number of previously mentioned factors including traffic volume and fleet mix, which were important to the cited literature, were appropriate and critical to the near-road site selection process.

The third issue raised was the claim that empirical data relied on in the proposal were too limited. To initiate their argument, the Environmental Groups stated that the ''. . . EPA has virtually no emissions data for CBSAs with populations under 1 million, so EPA's claim that 'higher populated CBSAs,' *i.e.,* CBSAs over 1 million people, will have 'higher mobile source emissions' is unfounded.''

In response, the EPA notes that data presented and reviewed in the docket memo clearly show otherwise. The emissions data used in the docket memo analysis came from the 2011 National Emissions Inventory (NEI). The NEI mobile source data come from the EPA's Motor Vehicle Emissions Simulator (MOVES), which aggregates mobile source emissions data from the county level across the entire country. Therefore, the commenter's statement that the EPA has ''virtually no emissions data'' from CBSAs with populations less than 1 million persons, and their subsequent argument, is incorrect. Still regarding emissions data and analysis, later in their arguments the Environmental Groups state that ''. . . NO_X emissions coming from on-road mobile sources in areas with 1 and 2.5 million persons is nearly the same in areas with 500,000 to 1 million people,'' suggesting that NO_X emissions are nearly the same in the smaller populated CBSAs as they are in the larger ones, with a difference of only 3.2 percentage points. In the docket memo, the EPA presents NO_X emissions inventory data, broken down by the categories of on-road mobile, non-road mobile, and all non-mobile source categories. These data are subsequently sorted into bins based on CBSA populations corresponding to the three phases by which the near-road network has been installed, plus a bin for all CBSAs with populations having less than 500,000 persons. The Environmental Group's comments are focused on the modest difference in percent contribution of on-road mobile sources to the total NO_X emissions between the 500,000 to 1 million person CBSA bin (48.1 percent) and the larger CBSA bins (51.3 percent for CBSAs having between 1 million and 2.5 million persons and 55.3 percent for CBSAs having 2.5 million or more persons). However, the differences between these CBSA groups are significant when considering the actual amount of NO_X in tons per year (tpy). The collective of CBSAs having 500,000 to 1 million persons have a NO_X emissions profile where 48.1 percent of a total of 950,000 tpy are attributable to on-road mobile sources (*i.e.,* 456,950 tpy). Meanwhile, the collective of CBSAs having 1 million to 2.5 million persons have a NO_X emissions profile where 51.3 percent of 2,000,000 tpy are attributable to on-road mobile sources (*i.e.,* 1,026,000 tpy) and the collective of CBSAs having 2.5 million persons or more have a NO_X emissions profile where 55.3 percent of 7,500,000 tpy are attributable to on-road mobile sources (*i.e.,* 4,147,500 tpy). It is clear by these data, and the analysis provided in the docket memo, that the larger CBSAs do in fact have much more on-road mobile source emissions than CBSAs with less than 1 million persons. Specifically, CBSAs with over 2.5 million persons have approximately 9 times more on-road mobile source NO_X emissions in tpy than CBSAs with populations between 500,000 and 1 million, while the CBSAs with populations between 1 million and 2.5 million have 2.2 times more. These data support the conclusion that the larger populated CBSAs have greater potential for exposure due to marked increases in coincidence between emissions and population. See Docket Memo at pp. 9–11.

Concluding the Public Health Organizations' and Environmental Groups' arguments, they commented that the EPA relied on monitored near-road NO_2 data from too few sites, particularly from CBSAs with less than 1 million persons, to substantiate the proposed rulemaking. The Public Health Organizations stated that ''. . . even if the preliminary data indicated compliance with the standards, the sparse number [of monitoring sites]

[6] In addition to the requirements for near-road monitors in state monitoring plans, the regulations also require the EPA Regional Administrators to identify locations for at least 40 additional NO_2 monitoring stations nationwide beyond the minimum monitoring requirements for each state, with the primary focus on siting these additional monitors in locations to protect susceptible and vulnerable populations. Moreover, even beyond that requirement, each Regional Administrator has the discretion to require additional monitors in any area. 40 CFR part 58, appendix D, section 4.3.4(a) and (b).

leaves open many questions. . . .'' The Environmental Groups argued that only having near-road NO_2 data from two CBSAs with populations under 1 million persons (Boise, Idaho and Des Moines, Iowa), ''. . . are not sufficient data from which to conclude that any kind of trend exists or to make any prediction about what one-hour NO_2 concentrations are likely to be reported in CBSAs with populations between 500,000 and 1 million; Boise and Des Moines alone are unlikely to be representative of all other CBSAs in this category.'' The Environmental Groups go on to discuss an analysis of the available near-road data and state that variability in the collected data, particularly for the 98th percentile 1-hour daily maximum values (1-hour values), makes ''. . . it exceedingly hard to predict whether an individual CBSA in either group [of different CBSA population sizes] would be likely to report high or low near-road NO_2 concentrations based on its population alone,'' and ultimately that ''. . . EPA's own data show that less-populated areas are not significantly less likely to have high near-road NO_2 concentrations (98th percentile one-hour daily max).''

Because Phases 1 and 2 of the network have nearly been fully deployed, there are sufficient data to analyze and to support a conclusion that the first two phases of the near-road monitoring network are sufficient to protect against risks associated with exposures to peak concentrations of NO_2. Regarding the length of the data record, we must consider the fact that the agency has multiple years of complete data that have already been used to judge compliance against the annual standard. Between 2013 and 2015, there were 69 annual design value data points across 39 different CBSAs (some with two near-road sites) available for analysis and comparison to the NAAQS. Further, regarding hourly data during the same (2013–2015) time period, there were a similar number of 98th percentile 1-hour daily maximum concentration values available for review. There were four sites in four separate CBSAs (Boise, ID; Des Moines, IA; Detroit, MI; and St. Louis, MO) with 3 years' worth of complete data that allowed the calculation of design values for the hourly standard. Although the remaining sites did not have enough data for the hourly design value calculation, the available data still provided evidence of what hourly near-road NO_2 concentrations look like across 1 or 2 years. All those data represent significant spatial representation nationally and across CBSAs of various population sizes, and were presented and discussed in the docket memo. (See Docket Memo, Figures 9, 10, and 11.) The data were ample enough to detect patterns and trends that provide an indication of whether or not near-road concentrations are threatening the NAAQS. Those indications, coupled with the understanding of NOx emissions and anticipated future emissions profiles, provided a strong basis for the proposal. We disagree that there are insufficient data on which to base our conclusions regarding the sufficiency of the near-road network. Commenters assert that the EPA has ''virtually no emissions data'' for CBSAs with populations under 1 million, which may have been intended to mean that the EPA has virtually no near-road NO_2 air quality data for CBSAs with populations under 1 million. This is incorrect. As explained in the docket memo, EPA has complete data for a full year from two sites, one in Boise and one in Des Moines. The commenters did not provide any explanation to support their comment that there are not enough data.

Regarding specific comments on variability of some of the data, particularly in the hourly data across different near-road sites in different CBSAs across a range of population sizes, the EPA notes that such variability is to be expected in more highly time-resolved data. Further, as explained above, each near-road site is influenced by a number of factors, which all can contribute to inter-site variability. The Environmental Groups believe that the Boise and Des Moines CBSAs would not likely be representative of all other CBSAs of the same CBSA size class, without explanation. The EPA notes that no single CBSA is expected to be totally representative of any other individual CBSA. However, as presented in the proposal and the docket memo, despite the expected variability, there are relationships within the data that are evident when analyzing emissions, traffic data, measured concentration data, and CBSA populations. Particularly, higher populated CBSAs correspondingly have more vehicles, which in turn increases the availability of mobile source derived emissions that lead to increased opportunity for higher NO_2 concentrations, particularly in the near-road environment. It is these relationships that lend to the concept that higher near-road NO_2 concentrations are expected in more heavily populated CBSAs as compared to those with lesser populations.[7]

It is also critical to conduct an analysis of the available near-road data. The analysis of all these data, which include data from the most heavily populated CBSAs and two CBSAs having populations between 500,000 and 1 million persons, reveals that there are no design values for either the annual or hourly NAAQS, or even a single 98th percentile 1-hour daily maximum value, that are approaching or exceeding the NAAQS. The highest recorded values throughout the 2013–2015 time period, analyzed and presented in the docket memo, were an annual average of 27 ppb in Los Angeles and an 98th percentile 1-hour value of 72 ppb from an incomplete year of data in New York City. In comparison, the NO_2 annual standard level is 53 ppb and the 98th percentile 1-hour daily maximum standard level averaged over 3 years is 100 ppb. The fact that no data collected to date have exceeded or are threatening to the NAAQS is paramount to the reasoning behind the approach to revise network requirements. There are no compelling concentration data or meta-data that indicate that the smaller CBSAs would be expected to have near-road NO_2 concentrations at or above those measured in more heavily populated CBSAs that have sites proximate to more heavily trafficked roads.

Further, the EPA expects a continuation in the reduction of on-road mobile source emissions on a per vehicle basis as a result of the implementation of mobile source standards such as the Tier 3 engine and fuel standards, which was echoed in the public comments. These continuing emission reductions should reduce the amount of measured NO_2 in the near-road environment, although other factors such as changes in traffic volume can impact those reductions.

Finally, the EPA notes that EPA Regional Administrators have the authority to work with state and local air monitoring agencies to require monitoring above the minimum requirements as needed to address a

[7] The commenters claim that the variability makes it difficult to predict NO_2 levels in a particular CBSA based on population alone, pointing to 2015 data showing one-hour concentrations in certain CBSAs with population between 1 million and 2.5 million that were higher than concentrations in some CBSAs with more than 2.5 million people. While NO_2 levels can vary from hour-to-hour, the EPA notes that the levels commenters refer to are all well below the level of the NO_2 NAAQS. (*e.g.,* the 98th percentile level in Providence, RI, is 67.4 ppb, which is well below the one-hour NAAQS of 100 ppb). See Docket Memo, Figure 11.

situation where near-road NO_2 concentrations are suspected to be approaching or exceeding the NAAQS. Accordingly, near-road monitoring could subsequently be required in smaller CBSAs should circumstances indicate the need to provide additional characterization beyond the monitoring provided by Phases 1 and 2 of the network. This Regional Administrator authority serves as an effective backstop against any unusual situation that could occur where monitoring might be warranted in an area that is not subject to minimum monitoring requirements.

Other comments received were outside the scope of this rule and not discussed in this preamble.

IV. Conclusion and Final Action

An analysis of available near-road NO_2 monitoring data indicates that air quality levels in the near-road environment are well below the NO_2 NAAQS. Based on the analysis of available concentration data, as well as related emissions, traffic, and network metadata, the EPA anticipates that measured near-road NO_2 concentrations in relatively smaller CBSAs (*i.e.,* CBSAs with populations less than 1,000,000 persons) would exhibit similar, and more likely, lower concentrations, than what is being measured at existing near-road NO_2 sites in larger urban areas. In consideration of the data presented and reviewed in the proposal and the public comments received on the proposal, the EPA is finalizing, as proposed, the removal of monitoring requirements for near-road NO_2 monitors in CBSAs having populations between 500,000 and 1,000,000 persons, also known as Phase 3 of the near-road NO_2 network. The agency is also finalizing, as proposed, the removal of the requirement for a second near-road NO_2 monitor in any CBSA having 500,000 or more persons that also had one or more road segments with 250,000 or greater AADT counts. The revised requirement for a second near-road NO_2 monitor will only apply to CBSAs having 1,000,000 or more persons with a road segment of 250,000 or greater AADT counts.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was, therefore, not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA. The final revisions do not add any information collection requirements beyond those imposed by the existing NO_2 monitoring requirements.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. In making this determination, the impact of concern is any significant adverse economic impact on small entities. An agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, has no net burden or otherwise has a positive economic effect on the small entities subject to the rule. This action will remove a sub-set of the current air monitoring requirements and, therefore, relieve state and local air monitoring agencies from having to provide evidence of compliance with the NO_2 NAAQS in the near-road environment in CBSAs with less than 1,000,000 persons. We have, therefore, concluded that this action will relieve regulatory burden for all directly regulated small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action imposes no enforceable duty on any state, local or tribal governments or the private sector. This action will reduce the number of required near-road NO_2 monitors to be operated by state and local air monitoring agencies.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175. This final rule imposes no requirements on tribal governments. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets EO 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve technical standards.

J. Executive Order 12898: Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. The results of the network and data evaluation are contained in the Near-road NO_2 Network and Data Analysis docket memo, which provides a review and analysis of the characteristics of the existing near-road NO_2 monitoring network and the relationships between NO_2 emissions, population, traffic, and NO_2 concentration data. Further, this rule does not modify the existing requirements for near-road monitors required in CBSAs having 1,000,000 or more persons, area-wide NO_2 monitors, or monitoring of NO_2 in areas with susceptible and vulnerable populations.

K. Congressional Review Act (CRA)

This action is subject to the Congressional Review Act (CRA), and the EPA will submit a rule report to each House of Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 58

Environmental protection, Administrative practice and procedure, Air pollution control, Intergovernmental relations.

Dated: December 22, 2016.

Gina McCarthy,

Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency is amending title 40, chapter I of the Code of Federal Regulations as follows:

PART 58—AMBIENT AIR QUALITY SURVEILLANCE

■ 1. The authority citation for part 58 continues to read as follows:

Authority: 42 U.S.C. 7403, 7405, 7410, 7414, 7601, 7611, 7614, and 7619.

■ 2. Amend § 58.10 by revising paragraph (a)(5)(iv) and removing paragraph (a)(5)(v) to read as follows:

§ 58.10 Annual monitoring network plan and periodic network assessment.

(a) * * *

(5) * * *

(iv) A plan for establishing a second near-road NO_2 monitor in any CBSA with a population of 2,500,000 persons or more, or a second monitor in any CBSA with a population of 1,000,000 or more persons that has one or more roadway segments with 250,000 or greater AADT counts, in accordance with the requirements of appendix D, section 4.3.2 to this part, shall be submitted as part of the Annual Monitoring Network Plan to the EPA Regional Administrator by July 1, 2014. The plan shall provide for these required monitors to be operational by January 1, 2015.

* * * * *

■ 3. Amend § 58.13 by revising paragraph (c)(4) and removing paragraph (c)(5) to read as follows:

§ 58.13 Monitoring network completion.

* * * * *

(c) * * *

(4) January 1, 2015, for a second near-road NO_2 monitor in CBSAs that have a population of 2,500,000 or more persons or a second monitor in any CBSA with a population of 1,000,000 or more persons that has one or more roadway segments with 250,000 or greater AADT counts that is required in appendix D, section 4.3.2.

* * * * *

■ 4. Appendix D to part 58 is amended by revising section 4.3.2 to read as follows:

Appendix D to Part 58—Network Design Criteria for Ambient Air Quality Monitoring

* * * * *

4.3.2 Requirement for Near-road NO_2 Monitors

(a) Within the NO_2 network, there must be one microscale near-road NO_2 monitoring station in each CBSA with a population of 1,000,000 or more persons to monitor a location of expected maximum hourly concentrations sited near a major road with high AADT counts as specified in paragraph 4.3.2(a)(1) of this appendix. An additional near-road NO_2 monitoring station is required for any CBSA with a population of 2,500,000 persons or more, or in any CBSA with a population of 1,000,000 or more persons that has one or more roadway segments with 250,000 or greater AADT counts to monitor a second location of expected maximum hourly concentrations. CBSA populations shall be based on the latest available census figures.

(1) The near-road NO_2 monitoring sites shall be selected by ranking all road segments within a CBSA by AADT and then identifying a location or locations adjacent to those highest ranked road segments, considering fleet mix, roadway design, congestion patterns, terrain, and meteorology, where maximum hourly NO_2 concentrations are expected to occur and siting criteria can be met in accordance with appendix E of this part. Where a state or local air monitoring agency identifies multiple acceptable candidate sites where maximum hourly NO_2 concentrations are expected to occur, the monitoring agency shall consider the potential for population exposure in the criteria utilized to select the final site location. Where one CBSA is required to have two near-road NO_2 monitoring stations, the sites shall be differentiated from each other by one or more of the following factors: fleet mix; congestion patterns; terrain; geographic area within the CBSA; or different route, interstate, or freeway designation.

(b) Measurements at required near-road NO_2 monitor sites utilizing chemiluminescence FRMs must include at a minimum: NO, NO_2, and NO_X.

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 622

[Docket No. 160302174–6999–02]

RIN 0648–BF81

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Dolphin and Wahoo Fishery Off the Atlantic States; Regulatory Amendment 1

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS issues regulations to implement Regulatory Amendment 1 for the Fishery Management Plan for the Dolphin and Wahoo Fishery off the Atlantic States (FMP), as prepared and submitted by the South Atlantic Fishery Management Council (Council). This final rule establishes a commercial trip limit for Atlantic dolphin for vessels with a Federal commercial permit for Atlantic dolphin and wahoo. The purpose of this final rule is to reduce the chance of an in-season closure of the dolphin commercial sector as a result of the annual catch limit (ACL) being reached during the fishing year, and to reduce the severity of economic or social impacts caused by these closures.

DATES: This rule is effective January 30, 2017.

ADDRESSES: Electronic copies of Regulatory Amendment 1, which includes an environmental assessment, an assessment under the Regulatory Flexibility Act (RFA), a regulatory impact review, and fishery impact statement, may be obtained from *www.regulations.gov* or the Southeast Regional Office Web site at *http://sero.nmfs.noaa.gov/sustainable_fisheries/s_atl/dw/2016/reg_am1/documents/pdfs/dw_reg_am1.pdf.*

FOR FURTHER INFORMATION CONTACT: Karla Gore, NMFS SERO, telephone: 727–551–5753, or email: *karla.gore@noaa.gov.*

SUPPLEMENTARY INFORMATION: The dolphin and wahoo fishery of the Atlantic is managed under the FMP. The FMP was prepared by the Council and implemented through regulations at 50 CFR part 622 under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Steven Act).

On June 30, 2016, NMFS published a proposed rule for Regulatory Amendment 1 and requested public comment (81 FR 42625). The proposed rule and Regulatory Amendment 1 outline the rationale for the action contained in this final rule. A summary of the action implemented by Regulatory Amendment 1 and this final rule is provided below.

Management Measure Contained in This Final Rule

This final rule establishes a commercial trip limit for dolphin for vessels that have a Federal commercial permit for Atlantic dolphin and wahoo.

Dolphin Commercial Trip Limit

Currently, no commercial trip limit exists for vessels that possess a Federal commercial permit for Atlantic dolphin and wahoo. However, there is a commercial trip limit of 200 lb (91 kg) of dolphin and wahoo, combined, for vessels that do not have a Federal commercial permit for Atlantic dolphin and wahoo but do have a Federal commercial permit in any other fishery, provided that all fishing and landings from that trip occur north of 39° N. lat. (50 CFR 622.278(a)(2)). This final rule establishes a commercial trip limit of 4,000 lb (1,814 kg), round weight, for the dolphin commercial sector in the Atlantic, once 75 percent of the commercial ACL is reached. This trip limit remains in effect until the end of the fishing year or until the commercial ACL is met, whichever comes first. This trip limit applies to vessels that have a Federal commercial permit for Atlantic dolphin and wahoo, provided that the vessel is not operating as a charter vessel or headboat. There will be no applicable trip limit for the dolphin commercial sector in the Atlantic prior to 75 percent of the commercial ACL being reached. The Council determined that establishing this commercial trip limit would reduce the chance of early closures during the fishing year as a result of the accountability measures being triggered, and thereby reduce the severity of any economic or social impacts as a result of a commercial sector closure.

Comments and Responses

NMFS received four comments on the proposed rule and Regulatory Amendment 1. One comment was outside the scope of the amendment and two were in support of the amendment as proposed. Those comments are not addressed below. The remaining single commenter opposed the management actions in the proposed rule and Regulatory Amendment 1; summaries of and responses to the comments in opposition to the proposed rule and Regulatory Amendment 1 are below.

Comment 1: The commercial trip limit selected in Regulatory Amendment 1 is not supported by the best available science, as mandated by the Magnuson-Stevens Act. No peer-reviewed stock assessment has ever been conducted for dolphin. Dolphin is the highest priority in the Council's list of species in need of a peer-reviewed stock assessment yet no Southeast Data, Assessment, and Review (SEDAR) assessment has been scheduled or requested. NMFS should conduct a stock assessment of dolphin in the Atlantic before implementing Regulatory Amendment 1.

Response: NMFS disagrees that dolphin needs to be assessed before implementing this amendment and has certified that Regulatory Amendment 1 is based on the best scientific information available. Although dolphin is not currently scheduled for a stock assessment, it is a short-lived, highly productive species that is not considered to be vulnerable to overfishing. The decision to manage the fishery represented a precautionary and risk-averse approach to management. The Report to Congress on the Status of U.S. Fisheries indicates that dolphin is not overfished and is not undergoing overfishing. The Southeast Fisheries Science Center listed dolphin as a stock assessment priority; however, the Council did not include dolphin in its list of long-term priorities due to the need to revise assessments that had already been completed with updated data from the Marine Recreational Information Program. Thus, dolphin is not the highest priority of species in need of a peer-reviewed stock assessment and the Council and NMFS need not await a stock assessment to proceed with the Regulatory Amendment 1.

Comment 2: The dolphin fishery is in need of management measures that will, when implemented, eliminate the need for commercial trip limits. NMFS should only implement Regulatory Amendment 1 as a temporary measure to give the Council and NMFS time to develop new management measures based on a new stock assessment. Therefore, a sunset date to the trip limit action should be included in Regulatory Amendment 1, to allow the commercial trip limits for the longline component of the commercial sector to be valid for a set number of years.

Response: Regulatory Amendment 1 establishes a dolphin commercial trip limit of 4,000 lb (1,814 kg), round weight, once 75 percent of the commercial ACL is reached. The Council did not consider a sunset date for the action in this amendment. In the future, if deemed necessary, the Council could modify or remove the trip limit.

Comment 3: The dolphin commercial trip limit will negatively impact commercial fishermen in the North Atlantic more significantly than fishermen in the Mid-Atlantic or South Atlantic as a result of dolphin's migratory patterns, in violation of National Standard 4. The fishing year should be changed from beginning on January 1 to begin on June 1 to allow the fishermen in the North Atlantic better access to the resource.

Response: NMFS disagrees. The amendment does not violate National Standard 4 because it is intended to lengthen the fishing year for all commercial fishermen fishing in the Atlantic. The Council did not consider revising the fishing year in Regulatory Amendment 1. In the future, if deemed necessary, the Council could revise the fishing year.

Comment 4: This amendment violates National Standard 9 and ''no less than 4 U.N. resolutions and the UN FAO Code of Conduct for Responsible Fisheries'' because the implementation of commercial trip limits will cause an increase in regulatory discards.

Response: NMFS disagrees. Marine fisheries in the United States are scientifically monitored and regionally managed under a number of requirements, including the ten national standards in the Magnuson-Stevens Act. The National Standards are requirements that must be followed in any FMP to ensure sustainable and responsible fishery management. When reviewing FMPs, FMP amendments, and regulations, the Secretary of Commerce must ensure that they are consistent with the National Standards. National Standard 9 states: Conservation and management measures shall, to the extent practicable, (a) minimize bycatch and (b) to the extent bycatch cannot be avoided, minimize the mortality of such bycatch. The dolphin and wahoo fishery is managed under the FMP which is consistent with the National Standards. As discussed in the bycatch practicability assessment included in the Regulatory Amendment, the magnitude of discards in the dolphin and wahoo fishery is small, and bycatch is believed to be minimal in both the commercial and recreational sectors. Action was taken in the original FMP to reduce bycatch by prohibiting the use of surface and pelagic longline gear for dolphin and wahoo within any ''time or area closure'' closed to the use of pelagic gear for highly migratory pelagic species in the Council's area of jurisdiction. Although this action may increase the regulatory discards when the commercial trip limit is triggered, any increase is likely to be minimal.

The commenter did not provide any information on, or citation to, the United Nations resolutions that it believes the rule violates, and thus NMFS cannot evaluate the comment that the rule is inconsistent with those resolutions. However, to the extent that those resolutions seek to minimize bycatch, this final rule is consistent with them. As explained above, although the final rule may increase regulatory discards when the rule is implemented, NMFS does not believe those increases in regulatory discards violate National Standard 9 or other efforts to minimize bycatch.

In addition, with respect to the comment that the rule violates the United Nation's 1995 Code of Conduct for Responsible Fisheries (CCRF), NMFS disagrees. Similar to National Standard 9, the CCRF seeks to minimize bycatch. As explained above, the final rule is consistent with National Standard 9 and thus is consistent with other initiatives to minimize bycatch, including the CCRF.

Comment 5: If trip limits are implemented, all forms of mortality, including regulatory discards, must be accounted for accurately in order to determine the effect of overall mortality on stock status. It is essential that NMFS collect data on discards of dolphin with the implementation of a commercial trip limit.

Response: As described in the response to comment 4, the bycatch in the dolphin fishery is minimal. Information on dolphin landings and discards are collected through a variety of ways in the Atlantic. Commercial dolphin fishermen who are selected by the NMFS Science and Research Director are required to maintain and submit fishing records. Commercial dolphin fishermen are also required to submit logbooks with trip and effort information. Currently, discard data are collected using a supplemental form that is sent to a stratified random sample of 20 percent of the active Federal dolphin and wahoo commercial permit holders in the dolphin and wahoo fishery. For the recreational sector, estimates of the number of recreational discards are available from the Marine Recreational Information Program and the NMFS Southeast Headboat Survey.

Additionally, the Council is currently developing the Bycatch Reporting Amendment to improve bycatch reporting in all of their managed fisheries. This amendment is intended to improve data collection on discards, including regulatory discards.

Classification

The Regional Administrator, Southeast Region, NMFS has determined that this final rule is necessary for the conservation and management of Atlantic dolphin and is consistent with Regulatory Amendment 1, the FMP, the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

The Magnuson-Stevens Act provides the statutory basis for this rule. No duplicative, overlapping, or conflicting Federal rules have been identified. In addition, no new reporting, record-keeping, or other compliance requirements are introduced by this final rule.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) during the proposed rule stage that this rule would not have a significant economic impact on a substantial number of small entities. The factual basis for this determination was published in the proposed rule and is not repeated here. NMFS did not receive any comments from SBA's Office of Advocacy or the public on the certification in the proposed rule.

On December 29, 2015, NMFS issued a final rule establishing a small business size standard of $11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry (NAICS 11411) for RFA compliance purposes only (80 FR 81194, December 29, 2015). The $11 million standard became effective on July 1, 2016, and is to be used in place of the SBA's current standards of $20.5 million, $5.5 million, and $7.5 million for the finfish (NAICS 114111), shellfish (NAICS 114112), and other marine fishing (NAICS 114119) sectors of the U.S. commercial fishing industry in all NMFS rules subject to the RFA that are published after July 1, 2016. *Id.* at 81194.

Pursuant to the RFA, and prior to July 1, 2016, a certification was developed for this regulatory action using SBA's size standards. NMFS has reviewed the analyses prepared for this regulatory action in light of the new size standard. All of the entities directly regulated by this regulatory action are finfish commercial fishing businesses and were considered small under the previously applicable SBA size standards. These commercial fishing businesses will not exceed the new threshold standard for small businesses, and thus they all will continue to be considered small under the new standard. Thus, NMFS has determined that the new size standard does not affect analyses prepared for this regulatory action.

The Chief Counsel for Regulation of the Department of Commerce hereby reaffirms that the rule will not have a significant economic impact on a substantial number of small entities. Because this final rule, if implemented, will not have a significant economic impact on a substantial number of small entities, a final regulatory flexibility analysis is not required and none has been prepared.

List of Subjects in 50 CFR Part 622

Commercial, Dolphin, Fisheries, Fishing, Trip limits.

Dated: December 22, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons stated in the preamble, NMFS amends 50 CFR part 622 as follows:

PART 622—FISHERIES OF THE CARIBBEAN, GULF OF MEXICO, AND SOUTH ATLANTIC

■ 1. The authority citation for part 622 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 622.278, revise paragraph (a) to read as follows:

§ 622.278 Commercial trip limits.

* * * * *

(a) *Trip-limited permits*—(1) *Atlantic wahoo.* (i) The trip limit for wahoo in or from the Atlantic EEZ is 500 lb (227 kg). This trip limit applies to a vessel that has a Federal commercial permit for Atlantic dolphin and wahoo, provided that the vessel is not operating as a charter vessel or headboat.

(ii) See § 622.280(b)(1) for the limitations regarding wahoo after the ACL is reached.

(2) The trip limit for a vessel that does not have a Federal commercial vessel permit for Atlantic dolphin and wahoo but has a Federal commercial vessel permit in any other fishery is 200 lb (91 kg) of dolphin and wahoo, combined, provided that all fishing on and landings from that trip are north of 39° N. lat. (A charter vessel/headboat permit is not a commercial vessel permit.)

(3) *Atlantic dolphin.* (i) Once 75 percent of the ACL specified in § 622.280(a)(1)(i) is reached, the trip limit is 4,000 lb (1,814 kg), round weight. When the conditions in this paragraph (a)(3)(i) have been met, the Assistant Administrator will implement this trip limit by filing a notification with the Office of the Federal Register. This trip limit applies to a vessel that has a Federal commercial permit for Atlantic dolphin and wahoo, provided that the vessel is not operating as a charter vessel or headboat.

(ii) See § 622.280(a)(1) for the limitations regarding dolphin after the ACL is reached.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 35

[Docket No. RM17–3–000]

Fast-Start Pricing in Markets Operated by Regional Transmission Organizations and Independent System Operators

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Energy Regulatory Commission is proposing to revise its regulations to require that each regional transmission organization and independent system operator incorporate market rules that meet certain requirements when pricing fast-start resources. These reforms should lead to prices that more transparently reflect the marginal cost of serving load, which will reduce uplift costs and thereby improve price signals to support efficient investments.

DATES: Comments are due February 28, 2017.

ADDRESSES: Comments, identified by docket number, may be filed in the following ways:

- Electronic Filing through *http://www.ferc.gov*. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format.
- Mail/Hand Delivery: Those unable to file electronically may mail or hand-deliver comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Comment Procedures Section of this document.

FOR FURTHER INFORMATION CONTACT:

Daniel Kheloussi (Technical Information), Office of Energy Policy and Innovation, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, (202) 502–6391, *daniel.kheloussi@ferc.gov*.

Eric Vandenberg (Technical Information), Office of Energy Market Regulation, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, (202) 502–6283, *eric.vandenberg@ferc.gov*.

Kaleb Lockwood (Legal Information), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, (202) 502–8255, *kaleb.lockwood@ferc.gov*.

SUPPLEMENTARY INFORMATION:

Table of Contents

Paragraph Numbers

1. In this Notice of Proposed Rulemaking (NOPR), the Federal Energy Regulatory Commission (Commission) is proposing to address the pricing of energy from resources that are able to start quickly (*i.e.,* any resource that is able to start up within ten minutes or less, that has a minimum run time of one hour or less, and that submitted an economic energy offer to the market) (fast-start resources). In this context, fast-start pricing addresses the software algorithms by which a regional transmission organization (RTO) or independent system operator (ISO) incorporates the offers of fast-start resources into the market prices for energy and ancillary services.[1]

2. Varied approaches exist among RTOs and ISOs to incorporate fast-start resources into energy and ancillary services prices (fast-start pricing). Fast-start resources are unique because they are often dispatched to their inflexible minimum or maximum operating limits, and are thus not eligible to set the locational marginal price (LMP).[2] In addition, fast-start resources are typically committed in real-time, very close to the interval when they are needed. As a result, the cost to commit these resources is incurred at roughly the same time the incremental energy costs are incurred, which raises the question of whether the commitment costs should be included in the LMP. Finally, fast-start resources can arguably respond quickly enough to be considered part of an RTO's/ISO's operating reserves even when they have

[1] In the November 20, 2015 Order Directing Reports issued in Docket No. AD14–14–000, the Commission noted that inflexible resources ''are generally referred to as block-loaded fast-start resources.'' *Price Formation in Energy and Ancillary Services Markets Operated by Regional Transmission Organizations and Independent System Operators,* 153 FERC ¶ 61,221, at P 9 (2015) (Order Directing Reports). The Commission also stated that

[a]n inflexible resource generally refers to a resource that may not be able to physically operate much below its maximum output and therefore cannot be dispatched up or down. For this reason, the energy supply offer parameters for these resources may stipulate that they be dispatched either to zero or to a minimum level that is at (or close to) their maximum output, but not in between.

Id. P 9 n.8. The Commission further noted that ''[a] block-loaded resource is a resource whose economic minimum operating limit is equal to its economic maximum output.'' *Id.* P 9 n.9. While this NOPR seeks to address issues discussed in the Order Directing Reports and the subsequent reports and comments submitted in that docket, we do not limit terms used in this NOPR to the definitions provided in the Order Directing Reports.

[2] At a high level, the LMP is set by the offer of the resource that is dispatched up to serve the next additional MW of demand or dispatched down to accommodate the next MW of reduced demand. Fast-start resources often have little or no dispatch range (*i.e.,* their economic minimum operating limit equals their economic maximum operating limit). A resource that is operating inflexibly at its economic minimum operating limit or maximum operating limit is not dispatchable to serve an additional increment or decrement of load, and is thus not eligible to set the LMP.

not yet been committed. As a result of these unique characteristics, RTOs/ISOs have developed pricing specific to this class of resources. This pricing is designed generally to recognize that fast-start resources are, for all intents and purposes, the marginal resource used to meet the next increment of energy or operating reserves demand. Based on experience with the different fast-start pricing used by each RTO/ISO, we believe some practices have emerged over time that better represent the marginal cost of serving load.

3. We preliminarily find that some of these approaches may not result in rates that are just and reasonable for several reasons. We are concerned that some existing practices may not ensure that prices accurately reflect the marginal cost of serving load, potentially resulting in prices that do not reflect the value of fast-start resources, potentially creating unnecessary uplift payments, and potentially failing to provide incentives for market participants to make efficient investments. As a result, we propose to require that each RTO/ISO incorporate the following five requirements for its fast-start pricing. First, an RTO/ISO must apply fast-start pricing to any resource committed by the RTO/ISO that is able to start up within ten minutes or less, has a minimum run time of one hour or less, and that submits economic energy offers to the market. Second, when an RTO/ISO makes a decision to commit a fast-start resource, it should incorporate commitment costs, *i.e.,* start-up and no-load costs, of fast-start resources in energy and operating reserve prices, but must do so only during the fast-start resource's minimum run time. Third, an RTO/ISO must modify its fast-start pricing to relax the economic minimum operating limit of fast-start resources and treat them as dispatchable from zero to the economic maximum operating limit for the purpose of calculating prices. Fourth, if an RTO/ISO allows offline fast-start resources to set prices for addressing certain system needs, the resource must be feasible and economic. Finally, an RTO/ISO must incorporate fast-start pricing in both the day-ahead and real-time markets.

4. We seek comment on these proposed reforms 60 days after publication of this NOPR in the **Federal Register**.

I. Background

5. In June 2014, the Commission initiated a proceeding, in Docket No. AD14–14–000, Price Formation in Energy and Ancillary Services Markets Operated by Regional Transmission Organizations and Independent System Operators, to evaluate issues regarding price formation in the energy and ancillary services markets operated by RTOs/ISOs (Price Formation Proceeding). The notice initiating that proceeding stated that there may be opportunities for the RTOs/ISOs to improve the price formation process in the energy and ancillary services markets. As set forth in the notice, prices used in energy and ancillary services markets ideally ''would reflect the true marginal cost of production, taking into account all physical system constraints, and these prices would fully compensate all resources for the variable cost of providing service.'' [3] Pursuant to the notice, staff conducted outreach and convened technical workshops on the following four general issues: (1) use of uplift payments; (2) offer price mitigation and offer price caps; (3) scarcity and shortage pricing; and (4) operator actions that affect prices.[4]

6. In January 2015, the Commission requested comments on questions that arose from the price formation technical workshops.[5] As a result of these comments, the Commission identified, among other things, five technical topics with potential for reform to improve price formation, but for which further information was needed. In November 2015, the Commission issued an order that directed each RTO/ISO to report on these five price formation topics: fast-start pricing; managing multiple contingencies; look-ahead modeling; uplift allocation; and transparency.[6] The order directed each RTO/ISO to file a report providing an update on its current practices in the topic areas, outlining the status of its efforts (if any) to address issues in each of the five topics, and responding to specific questions contained in the order. This NOPR addresses the pricing of fast-start resources.

7. In the reports filed and the subsequent comments, RTOs/ISOs and other commenters addressed the issue of fast-start pricing, as discussed below.[7]

II. Discussion

8. In RTOs/ISOs, LMPs reflect the system marginal cost of serving the next increment of load, taking into account transmission constraints and line losses. With certain exceptions, only resources that are dispatchable, *i.e.,* those that can be dispatched up or down in response to changes in system conditions, are eligible to set prices.[8] In many situations, this eligibility requirement ensures that LMPs reflect the marginal cost of serving the next increment of demand. However, this eligibility requirement can distort LMPs when a fast-start resource is committed and dispatched to serve expected load during a particular interval. This restriction often prevents a fast-start resource from setting prices when the resource is dispatched at its economic minimum operating limit. Fast-start resources are often required to be dispatched at their economic minimum operating limit or are block-loaded.[9] Because the system may need fewer megawatts (MW) than the fast-start resource's economic minimum operating limit to meet load, other resources must be dispatched down. The resources that were dispatched down become the most economic option to serve the next increment of load. Therefore, despite the fact that a fast-start resource is essentially marginal, this restriction prevents a fast-start resource dispatched at its economic minimum operating limit from setting the LMP. To allow fast-start resources to set prices so that LMPs better reflect the marginal cost of serving load, some RTOs/ISOs modify the market rules and software. Typically, they treat fast-start resources as dispatchable in a pricing algorithm (*i.e.,* pricing run) separate from the dispatch algorithm (*i.e.,* dispatch run). While the dispatch run meets all of the physical constraints of the resources, the pricing run relaxes the economic minimum operating limit of a fast-start resource so that the resource is treated as dispatchable by the market-clearing software and eligible to set prices.

9. Fast-start pricing can result in improved price signals, especially during tight or unexpected system conditions when the need for fast-start resources is the greatest. However, fast-start pricing can create a disconnect between prices and dispatch instructions, which can lead to over-generation. Specifically, fast-start

[3] Price Formation in Energy and Ancillary Services Markets Operated by Transmission Organizations and Independent System Operators, Notice, Docket No. AD14–14–000, at 2 (June 19, 2014).

[9] Block-loaded means the resource's economic minimum operating limit equals its economic maximum operating limit. The economic minimum and maximum operating limits are the minimum amount of electric power that a resource must be allowed to produce, and the highest level a resource can produce, while under economic dispatch, respectively.

pricing requires the pricing run to assume that fast-start resources can operate below the resources' economic minimum operating limit such that the pricing run also dispatches other units at levels greater than the level instructed by the dispatch run. Many RTOs/ISOs ensure that the disconnect in resource output levels between the pricing and dispatch runs are reconciled to avoid over-generation; however, some RTOs/ISOs do not reconcile the differences, leading to dispatch targets that produce energy in excess of what is needed to serve load, *i.e.,* over-generation. Further, generation resources that are dispatched downward to accommodate the commitment of fast-start resources may have incentives to produce energy above their dispatch targets to capture the higher prices set by fast-start resources, leading to over-generation. Thus, fast-start pricing rules are typically paired with market rules to reduce the incentives for producing energy above dispatch targets.

10. Further, reflecting commitment costs in LMPs requires some judgment regarding how and when to include those commitment costs. Similarly, reflecting the costs of offline resources in LMPs requires some judgment regarding when these resources are actually economically and technically able to address a reserve shortage or transmission constraint.

A. Current RTO/ISO Approaches to Fast-Start Pricing

11. Each RTO/ISO has developed its own unique pricing to accommodate the specific characteristics of fast-start resources in its respective market.

12. CAISO defines fast-start resources as those that can come online in under two hours and can be committed in CAISO's fifteen-minute market or the short-term unit commitment process. CAISO states that there is no special treatment for the commitment or pricing of generating units related to whether they are fast, medium, or long start.[10] However, CAISO applies special modeling logic to certain block-loaded or nearly block-loaded resources known as Constrained Output Generators.[11] CAISO currently allows minimum load costs to affect LMPs but does not include start-up costs.[12] In the day-ahead market, Constrained Output Generators are treated as dispatchable resources in both the scheduling and pricing run; thus, in the day-ahead market, Constrained Output Generators can set prices. In the real-time market, the scheduling run does not allow Constrained Output Generators to be dispatched below their economic minimum operating limit, but in the pricing run the economic minimum operating limit is relaxed to zero. CAISO does not allow offline resources to set LMP.[13] CAISO states that because so few resources have registered as Constrained Output Generators, it has no anecdotal data that its Constrained Output Generator-related pricing logic results in over-generation issues. However, CAISO notes that over-generation could be a concern if a large number of resources were to register as Constrained Output Generators.[14] CAISO states that it is not currently working on any stakeholder initiatives to modify commitment or pricing logic related to fast-start units, but notes that some of its stakeholders have argued for an extended pricing mechanism similar to MISO's Extended LMP mechanism.[15]

13. ISO–NE recently proposed revisions to its process for dispatching and pricing fast-start units, which will become effective March 31, 2017.[16] ISO–NE defines fast-start resources as those with start-up times of thirty minutes or less and which have a minimum run time of one hour or less and a minimum down time of one hour or less.[17] ISO–NE states that its pricing mechanism will allow start-up and no-load costs to be included in LMPs. ISO–NE will have separate dispatch and pricing runs, with the pricing run following the dispatch run, where economic minimum operating limits are relaxed.[18]

However, ISO–NE does not allow offline resources to set the LMP.[19] ISO–NE states that its revised fast-start pricing is being implemented in the real-time market only.[20] ISO–NE argues that its revised fast-start pricing logic will eliminate over-generation issues and states that it will compensate certain re-dispatched resources for their opportunity costs.[21]

14. MISO's fast-start pricing logic, referred to as Extended LMP (ELMP), became effective in 2015.[22] MISO defines a fast-start generating resource as a generating unit with a start-up time of ten minutes or less and a minimum run time of one hour or less.[23] MISO allows a fast-start resource's start-up and no-load costs to affect the LMP. MISO also allows an offline fast-start resource to set LMPs but only under reserve or transmission scarcity conditions.[24] MISO's ELMP is applied to both day-ahead and real-time markets in order to facilitate price convergence between the two markets.[25] MISO states that, though it recognizes that fast-start pricing can result in over-generation, it has not observed any significant over-generation issues. However, MISO emphasizes that its settlement rules incentivize following dispatch instructions because it penalizes resources that deviate.[26] MISO states that it is currently planning to implement ELMP Phase II, which it states will expand upon Phase I principles by applying fast-start pricing to more peaking resources.[27]

15. NYISO does not apply fast-start pricing to all fast-start resources. Instead, NYISO applies special pricing logic, referred to as ''hybrid gas turbine pricing logic,'' to all committed block-loaded resources qualified to provide 10-minute non-synchronous reserves. This pricing logic allows block-loaded gas turbines to set prices.[28] Under this logic, start-up and no-load costs are not reflected in LMP. In the day-ahead

[10] Report of CAISO, Docket No. AD14–14–000, at 4 (Mar. 4, 2016) (CAISO Report).

[11] CAISO defines a Constrained Output Generator as any generating unit with an operating range that is no greater than the highest of three MW or five percent of its maximum operating range. *Id.* at 1–2. Block-loaded resources in CAISO are required to register as Constrained Output Generators, while certain nearly-block loaded resources are permitted to register as Constrained Output Generators, if desired. CAISO notes that there are currently no resources registered as Constrained Output Generators. *Id.* at 11.

[12] *Id.* at 2. In CAISO, a Constrained Output Generator's calculated energy bid (which is the unit's minimum load costs divided by the MW quantity of the unit's maximum output) can set the LMP.

[13] *Id.* at 10.

[14] *Id.* at 8. Fast-start pricing could result in over-generation (*i.e.,* producing energy in excess of what is needed to serve load) due to several factors. First, price signals generated by fast-start pricing could incent some resources to produce energy above their dispatch targets. Specifically, if LMP is higher than a resource's incremental energy offer, that resource would have an incentive to increase its profits by generating above energy dispatch targets, leading to over-generation. Second, an RTO/ISO may use a scheduling run that incorporates relaxed economic minimum operating limits and does not require that generation be equal to load, resulting in over-generation. *See* PJM Report on Price Formation Issues, Docket No. AD14–14–000, at 12–13 (Feb. 17, 2016) (PJM Report).

market, all resources are modeled as dispatchable in the pricing pass of the Security Constrained Unit Commitment process, but NYISO states that this process does not employ the same fast-start pricing as is used in real-time.[29] NYISO explains that, in the real-time market, its hybrid gas turbine pricing logic allows block-loaded resources to be modeled as fully dispatchable to determine prices.[30] NYISO applies fast-start pricing during a fast-start resource's minimum run time if it is economic.[31] NYISO also allows offline fast-start resources to set prices and allows start-up costs for those resources to be reflected in the price.[32] NYISO states that it will be working with stakeholders during 2016 to allow all block-loaded units economically committed by the real-time commitment software to set prices.[33]

16. PJM's tariff and other governing documents do not include formal definitions for fast-start or block-loaded resources. For the purposes of its report, PJM describes a fast-start resource as a combustion turbine that can start within two hours and a block-loaded resource as one with an economic minimum operating limit equal to its economic maximum operating limit. In practice, PJM allows block-loaded resources to set prices.[34] PJM's pricing logic does not allow block-loaded resources' start-up or no-load costs to be included in prices. PJM states that in the day-ahead market, the pricing and dispatch runs are combined, while in the real-time market, the pricing run executes first, followed by the dispatch run.[35] PJM states that in both the day-ahead and real-time markets, it relaxes the economic minimum operating level of block-loaded resources up to ten percent.[36] However, PJM does not allow offline resources to set prices.[37] PJM explains that it allows resources with a limited operating range, other than block-loaded resources, to set prices when operating to control a specific transmission constraint.[38] PJM states that it is not currently working on any stakeholder initiatives regarding fast-start unit pricing.[39]

17. SPP has special pricing logic that it applies to what it refers to as quick-start resources. SPP defines a quick-start resource as a resource that (1) is registered as a quick-start resource; (2) has a cold start-up time of ten minutes or less; (3) has a minimum run time of one hour or less; and (4) has a total minimum down time of one hour or less.[40] SPP does not allow start-up or no-load costs to affect LMP directly, but does allow quick-start resources to include start-up and no-load costs in their mitigated energy offer curves for the purpose of unit commitment.[41] SPP's production run determines both dispatch and pricing for all resources but resources constrained by their economic minimum or maximum operating limits are not eligible to set LMP.[42] Specifically, SPP states that it relaxes the economic minimum operating limit of quick-start resources to zero in a screening run that is executed prior to the final production run, which includes both dispatch and pricing. SPP explains that if the quick-start resource is dispatched below its economic minimum operating limit in the screening run, it will be considered offline in the final production run. Conversely, SPP states that if the quick-start resource is committed at or above its economic minimum operating limit, it will be considered online in the final production run.[43] Additionally, SPP does not allow offline quick-start resources to set LMP.[44] SPP reports that it intends to implement new fast-start pricing to commit quick-start resources more efficiently in real-time in the second quarter of 2017.[45]

B. Comments on Fast-Start Pricing

18. Multiple commenters support the use of fast-start pricing methods that allow resources dispatched at their operating limits to set LMP and allow start-up and no-load costs to affect prices.[46] EPSA/WPTF [47] argues that such fast-start pricing methods could improve pricing signals and help correct CAISO's ''duck curve problem'' by redistributing excess costs incurred during the middle of the day to the ramping periods.[48] Similarly, Exelon believes that RTOs/ISOs should ensure that start-up and no-load costs of resources dispatched at operational limits can affect prices by using a particular mathematical technique called ''convex hull pricing,'' which would better reflect the cost of electricity, reduce uplift, and enhance incentives for all resources to perform.[49]

19. Commenters identified a number of best practices across the RTOs/ISOs. Entergy, EPSA, and Westar generally support certain aspects of MISO's ELMP. EPSA believes that MISO's ELMP approach yields favorable results by ensuring that generators follow dispatch signals and that generators' minimum operating limits are satisfied in dispatch.[50] EPSA states that several components of MISO's ELMP can be widely adopted across all RTO/ISO pricing mechanisms.[51] Further, EPSA and PSEG Companies believe the approaches used by MISO and ISO–NE to relax the economic minimum limits represent a best practice.[52] Further, PSEG Companies states that ISO–NE's revised fast-start pricing method addresses over-generation concerns by paying lost opportunity payments to those resources that follow dispatch instructions but are subsequently re-dispatched down to their economic set point.[53] In addition, EPSA and EPSA/IPPNY are generally supportive of NYISO's fast-start pricing methods.[54]

20. On the other hand, EPSA and Golden Spread express concern that the fast-start pricing methods employed by SPP are insufficient.[55] Specifically, Golden Spread states that certain aspects of SPP's market design features and operator practices result in inefficient market prices and fail to reflect the costs to start and operate fast-start resources or the value they provide to the system.[56]

21. In contrast, the PJM Market Monitor argues that relaxing economic minimum limits for price setting artificially overrides fundamental pricing logic in order to reduce uplift. The PJM Market Monitor argues that

this can result in an increase in total production costs.[57] Specifically, the PJM Market Monitor opposes PJM's practice of reducing the economic minimum limit of certain resources to change LMPs. The PJM Market Monitor argues that this pricing logic is a form of subjective pricing because it varies from fundamental LMP logic based on an administrative decision to reduce uplift.[58]

1. Fast-Start Resource Definitions and Resource Eligibility

22. Commenters generally support applying enhanced technology-neutral fast-start pricing logic to an expanded set of resources. Exelon and IMG Midstream/Tangibl recommend that the definition of fast-start resources be technology agnostic.[59] EPSA and Entergy support expanding MISO's ELMP pricing to include units that can respond within thirty minutes and to include more emergency demand response resources.[60] EPSA/NEPGA also supports prioritizing fast-start demand response resource pricing.[61] IMG Midstream/Tangibl states that PJM's and CAISO's definitions of fast-start resources do not coincide with the definition used by other RTOs/ISOs, which define fast-start resources as being able to start up within ten minutes, rather than two hours as defined by PJM and CAISO. Further, IMG Midstream/Tangibl argues that PJM's definition inappropriately rewards less flexible resources.[62] IMG Midstream/Tangibl recommends that the Commission direct PJM and CAISO to define stricter start-up time requirements for fast-start resources, or create two different classes for these resources to better differentiate those that are truly fast-start from those that are not.[63] With respect to CAISO's Constrained Output Generator commitment process, EPSA/WPTF points out that not all fast-start resources are registered or would qualify for this process.[64]

2. Inclusion of Start-Up and No-Load Costs in Prices

23. Multiple commenters believe that the start-up and no-load costs of fast-start resources should be allowed to affect LMPs, particularly when a unit is within its minimum run time.[65] According to EEI, including start-up and no-load costs in appropriate markets could minimize uplift and result in more complete and accurate price signals for market participants.[66] DC Energy, Inertia Power, and Vitol note that both ISO–NE and MISO use reasonable methods of amortizing a fast-start resource's start-up costs over its minimum run time, and that resource's no-load costs over its actual run time, which appropriately includes these costs in prices.[67]

24. EPSA/IPPNY urges the Commission to direct NYISO to review whether the start-up and no-load costs of fast-start resources should be allowed to affect LMPs and supports NYISO's current efforts in this regard.[68] Similarly, Golden Spread, Westar, and EPSA believe that SPP should incorporate the start-up and no-load costs of fast-start resources into the LMP[69] in order to reduce uplift and prevent price suppression.[70]

25. Conversely, the PJM Market Monitor states that PJM appropriately explains in its report the likely negative impacts of including start-up and no-load costs in PJM's price-setting logic.[71] PJM argues that to account for start-up costs in LMP would involve assumptions regarding the run time of a fast-start resource in order to amortize these costs over that period. PJM contends that assumptions regarding actual run time would introduce uncertainty and error in LMP calculations and cause potential divergence between the dispatch instructions given to a resource and the LMP at the resource's location.[72] In addition, PJM explains that incorporating no-load costs into the calculation of LMP would represent a significant change to the status quo and produce negligible benefits. PJM asserts that such a change would introduce a divergence between LMPs and dispatch signals for all resources.[73]

26. CAISO asserts that LMPs are intended to reflect the incremental cost of serving load, which does not include commitment costs, but states that the logic by which the no-load costs of block-loaded Constrained Output Generators are included in LMPs could be extended to other resources with a limited operating range.[74]

3. Relaxation of Economic Minimum Operating Limit

27. Several commenters argue that the economic minimum operating limit of block-loaded or fast-start resources should be relaxed to zero when determining prices. EPSA, EPSA/P3, Exelon, and PSEG Companies argue that PJM's practice of relaxing the economic minimum operating limit by at most ten percent limits the ability for block-loaded resources to set LMPs whenever they are required to meet load and prevents a full consideration of a block-loaded resource's costs.[75] PSEG Companies requests that the Commission find that relaxing a block-loaded fast-start resource's minimum operating limit to zero (*i.e.,* relaxing the minimum operating limit by 100 percent) is the best practice because it ensures that block-loaded resources can set the price whenever they are needed.[76] PJM argues that because it limits the relaxation of the economic minimum operating limit by at most ten percent, over-generation is kept to a minimum and any imbalances are managed by existing grid services.[77]

28. EPSA encourages the Commission to direct all RTOs/ISOs to incorporate the principles exemplified by MISO's ELMP pricing logic, which it believes relaxes economic minimum operating limits in a pricing run that occurs after the dispatch run, and appears to have resulted in robust dispatch operations and not resulted in significant over-generation. EPSA states that such logic will help adequately compensate resources for their distinct capabilities

through LMPs and lead to efficient and orderly dispatch.[78]

29. NYISO states that it allows block-loaded resources to be considered as fully dispatchable from zero to their upper limit when determining prices so that these resources can set the price whenever they are needed to meet load.[79] NYISO argues that not treating such resources as fully dispatchable could prevent these resources from setting prices, especially in load pockets within New York where only block-loaded resources are available to meet reliability needs.[80]

4. Offline Fast-Start Resources

30. Several commenters express concern that allowing offline resources to set prices when they are not actually capable of resolving a transmission or reserve shortage could lead to inaccurate price signals.[81] Specifically, Entergy, EPSA, and Westar express concern that MISO is over-including offline resources in price setting even when they are not available to serve an increase in demand.[82] Westar further states that the use of offline unit costs can inappropriately prevent scarcity price signals, prevent online resources with higher costs from setting the price, lead to increased uplift, and result in prices that do not represent the true marginal cost of production.[83] To remedy this issue, EPSA argues that MISO must make significant improvements to its dispatch modeling and pricing processes in order to allow offline resources to set prices only when these resources are both economic and available.[84] MISO states that it allows offline fast-start resources to set LMP, but has, per guidance from its market monitor, revised its commitment methodology to better reflect unit economics and availability.[85]

31. CAISO does not believe that allowing offline resources to contribute to LMP would lead to the most economical market solution.[86] CAISO explains that it clears its markets using classical unit commitment methodologies where the objective is to minimize the overall system costs, including the commitment costs. Under this approach, CAISO states that offline resources would not be committed in CAISO markets because they are considered to not lead to the most economical solution. PJM and ISO–NE argue that, since LMP is based on the cost of the next incremental unit of energy at that moment in time and an offline resource cannot provide that next incremental unit of energy, offline resources should not be eligible to set prices.[87]

32. With respect to NYISO's treatment of offline resources, LIPA states that NYISO's model reflects the availability of offline units in LMPs while not accurately representing the actual flexibility of the system. LIPA explains that this leads to inefficient pricing and system dispatch, as well as excessive start-ups of offline units.[88]

5. Day-Ahead and Real-Time Market Consistency

33. Commenters also generally support the use of fast-start pricing in both the day-ahead and real-time markets. Some commenters contend that RTOs/ISOs should use consistent fast-start pricing for both day-ahead and real-time models to encourage price convergence, regardless of how infrequently fast-start units are committed in the day-ahead market.[89] Entergy supports MISO's past efforts to implement ELMP as a day-ahead and real-time market platform such that LMP reflects the true marginal cost of production.[90] PJM states that its fast-start pricing logic is applied to both markets in order to reflect the costs of resources operated to address transmission constraints in both day-ahead and real-time LMPs.[91] On the other hand, ISO–NE states that its revised fast-start pricing is being implemented in the real-time market only.[92] ISO–NE explains that implementation in the day-ahead market would have a smaller beneficial impact given that most fast-start resources do not clear in the day-ahead market. ISO–NE states that this is especially true with respect to fossil fuel fast-start resources, which have inherently high operating costs and primarily operate in response to unanticipated real-time system conditions.[93]

C. Need for Reform of Fast-Start Pricing

34. We preliminarily find that RTOs'/ISOs' existing practices regarding the pricing of fast-start resources may result in rates that are unjust and unreasonable.

35. The Commission has stated that the goals of price formation are to: (1) Maximize market surplus for consumers and suppliers; (2) provide correct incentives for market participants to follow commitment and dispatch instructions, make efficient investments in facilities and equipment, and maintain reliability; (3) provide transparency so that market participants understand how prices reflect the actual marginal cost of serving load and the operational constraints of reliably operating the system; and (4) ensure that all suppliers have an opportunity to recover their costs.[94] The accurate pricing of fast-start resources can advance price formation goals by more transparently reflecting the marginal cost of serving load, which will reduce uplift costs and thereby improve price signals to support efficient investments in facilities and equipment.

36. While most RTOs/ISOs have incorporated some form of fast-start pricing into their market-clearing software, based on experience with the different fast-start pricing used by each RTO/ISO, we believe some practices have emerged that better represent the marginal cost of serving load. Specifically, we believe that some existing fast-start pricing practices, or a lack of fast-start pricing practices, may result in market prices that fail to accurately reflect the marginal cost of serving load. These prices may fail to reflect the value of fast-start resources and create unnecessary uplift payments.

37. For the reasons outlined below, we preliminarily find that such market outcomes may produce rates that are unjust and unreasonable. First, we preliminarily find that some current RTO/ISO practices may fail to accurately reflect the marginal cost of serving load because fast-start resources are inappropriately prevented from setting prices.[95] Fast-start resources are often dispatched to meet real-time system needs but are often ineligible to

[94] *See* Notice Inviting Post-Technical Workshop Comments, Docket No. AD14–14–000 at 2 Price Formation in Energy and Ancillary Services Market Operated by Transmission Organizations and Independent System Operators, Notice, Docket No. AD14–14–000.

[95] *See Midwest Indep. Transmission Sys. Operator, Inc.*, 140 FERC ¶ 61,067, at P 38 (2012) (finding that MISO's LMP pricing algorithm, which prohibited fast-start resources from setting the market clearing price, "may produce an inaccurate price signal").

set the clearing price because these resources are either dispatched at an economic minimum operating limit or are block-loaded. This is the case because LMP is set by the offer of the resource that is dispatched up to serve the next additional MW of demand or dispatched down to accommodate the next MW of reduced demand. Fast-start resources often have little or no dispatch range (*i.e.,* their economic minimum operating limit equals their economic maximum operating limit). A resource that is operating inflexibly at its economic minimum operating limit or economic maximum operating limit is not dispatchable to serve an additional increment or decrement of demand, so is not eligible to set prices.[96] Rules or modeling practices that prevent fast-start resources from setting prices result in prices that fail to reflect the cost of the marginal resource on the system when that resource is needed to serve load.

38. While PJM and NYISO allow certain block-loaded resources to set prices, they do not generally allow fast-start resources that are not block-loaded to set prices. CAISO allows only certain block-loaded and nearly block-loaded resources to set prices. In addition, PJM's practice of relaxing the economic minimum operating limits of block-loaded resources by at most ten percent could restrict the set of circumstances in which such a resource could set prices.

39. Second, even if fast-start resources were allowed to set prices, certain other aspects of some current RTO/ISO fast-start pricing practices, such as not choosing to include commitment costs, can prevent prices from accurately reflecting the marginal cost of serving load. Because of their operating characteristics, fast-start resources are uniquely situated to respond to unforeseen real-time system needs. When fast-start resources are committed in real-time, it is often at short notice to meet some system condition or market need over a short time period, and, as such, we preliminarily find that these commitment costs should be considered marginal costs. However, this is not the current practice in all RTOs/ISOs, and we preliminarily find that market rules in some RTOs/ISOs that prevent prices from reflecting commitment costs of fast-start resources may contribute to inaccurate price signals.

40. Third, some current practices regarding the use of offline resources to set prices in certain RTOs/ISOs may distort price signals. For example, MISO allows offline fast-start resources to set prices under transmission constraint violations or reserve shortage conditions, although sometimes such resources are not feasible (*i.e.,* the resources are not able to start up quickly enough to address the shortage or transmission constraint violation) or economic for addressing the shortage or transmission constraint violation.[97] If an offline fast-start resource is not actually feasible or economic for addressing a shortage or transmission constraint violation, then the resulting prices could be inefficiently low and mute the price signals associated with shortages or transmission constraint violations.[98]

41. Fourth, we are concerned that implementation of fast-start pricing in the real-time market only, or implementation of fast-start pricing practices in the day-ahead market that are significantly different from the real-time market, can negatively impact day-ahead and real-time price convergence and may result in day-ahead market prices that fail to reflect the marginal cost of fast-start resources. Furthermore, even though some RTOs/ISOs have implemented some form of fast-start pricing in the day-ahead market, current rules limit which resources qualify as fast-start resources in a manner that is inconsistent with the requirements herein.

42. Accordingly, we preliminarily find that, based on experience with existing RTO/ISO fast-start pricing practices, some forms of fast-start pricing may result in prices that fail to reflect the marginal cost of production in intervals when fast-start resources are needed to serve load. As a result, prices in RTO/ISO energy markets in some periods may not reflect the value that fast-start resources provide. As a result, over the long run, prices in RTO/ISO energy markets may fail to reflect the need for fast-start resources and thus fail to provide appropriate incentives for investment.

43. We also preliminarily find that existing RTO/ISO fast-start pricing could create unnecessary uplift payments. For example, when prices do not sufficiently reflect a marginal fast-start resource's commitment cost, the resource must be compensated through out-of-market uplift payments. Compensating resources through uplift payments is less transparent than compensating resources through market clearing prices that reflect the marginal cost of production, which could be based on the costs of a fast-start resource. Additionally, uplift payments are often allocated more broadly, which can mute the investment signals provided by prices over longer time periods, therefore inhibiting efficient market entry and exit. In addition, resources with costs below the market-clearing price may also have a lower financial incentive to perform at times when fast-start resources typically operate, such as during stressed system conditions, when the performance of all resources is particularly important.[99]

D. Commission Proposal

44. To remedy the potentially unjust and unreasonable rates caused by existing RTO/ISO fast-start pricing practices, we propose, pursuant to section 206 of the Federal Power Act,[100] to establish a set of fast-start pricing requirements in RTOs/ISOs. These requirements would ensure RTO/ISO day-ahead and real-time markets more accurately reflect the marginal costs of operating fast-start resources. Specifically, we propose to require each RTO/ISO to establish the following set of requirements for its fast-start pricing: (1) Apply fast-start pricing to any resource committed by the RTO/ISO that is able to start up within ten minutes, has a minimum run time of one hour or less, and that submits economic energy offers to the market; (2) incorporate commitment costs, *i.e.,* start-up and no-load costs, of fast-start resources in energy and operating reserve prices; (3) modify fast-start pricing to relax the economic minimum operating limit of fast-start resources and treat them as dispatchable from zero to the economic maximum operating limit for the purpose of calculating prices; (4) if the RTO/ISO allows offline fast-start resources to set prices for addressing certain system needs, the resource must be feasible and economic; and (5) incorporate fast-start pricing in both the day-ahead and real-time markets. We seek comment on each of these proposals.

[96] *See* Federal Energy Regulatory Commission, *Price Formation in Organized Wholesale Electricity Markets: Staff Analysis of Operator-Initiated Commitments in RTO and ISO Markets,* Docket No. AD14–14–000, at 26–27 (Dec. 2014), *http://www.ferc.gov/legal/staff-reports/2014/AD14-14-operator-actions.pdf.*

[97] MISO, Informational Report on Extended Locational Marginal Pricing, Docket No. ER12–668–000, at 9 (Aug. 29, 2016). MISO states that for reserve shortages, 53 percent of participating offline fast-start units were feasible and economic. For transmission violations, it states that 77 percent of participating offline units were feasible and economic.

[98] *See, e.g.,* Potomac Economics, 2015 State of the Market Report for the MISO Electricity Markets at 33 (June 2016).

[99] *Settlement Intervals and Shortage Pricing in Markets Operated by Regional Transmission Organizations and Independent System Operators,* Order No. 825, FERC Stats. & Regs. ¶ 31,384, at P 58 & n.99 (2016).

[100] 16 U.S.C. 824e (2012).

45. We expect that the proposed reforms will remedy current RTO/ISO fast-start pricing practices that potentially lead to unjust and unreasonable rates and will provide benefits that are consistent with the goals of the Commission's price formation initiative. For instance, the proposed reforms are intended to more accurately reflect the marginal cost of production in periods when a fast-start resource is the marginal resource and provide price signals that better inform investment decisions, including where and when fast-start resources should be built or maintained. The proposed reforms will also benefit markets by providing more accurate and transparent price signals that better reflect the actual marginal cost of serving load and reduce uplift.

1. Fast-Start Resource Definitions and Resource Eligibility

46. In order to establish consistent treatment for fast-start resources across RTOs/ISOs and ensure that prices appropriately reflect the cost of serving load, we propose to require that each RTO/ISO must define fast-start resources as resources that meet the following performance requirements: [101] (1) Are able to start up within ten minutes or less; (2) have a minimum run time of one hour or less; and (3) submit economic energy offers to the market, *i.e.,* not self-scheduling energy. We preliminarily find that this definition of fast-start resources will address the deficiencies in current RTO/ISO fast-start pricing practices that limit the eligibility of certain fast-start resources to set prices.[102] In addition, any resource, regardless of technology type, that meets the above definition would qualify as a fast-start resource and would then be covered by the fast-start pricing requirements, as defined further herein.

47. We preliminarily find that it is appropriate to include both dispatchable fast-start resources and block-loaded fast-start resources in the definition of a fast-start resource, as is done in ISO–NE and MISO. That is, some fast-start resources are committed and dispatched to an output level equal to the resource's economic minimum operating limit that is lower than the resource's economic maximum operating limit. Such a resource would not be eligible to set prices in all circumstances and would therefore create the same concerns we have regarding block-loaded fast-start resources. Further, if only block-loaded fast-start resources are included in the definition, as is done in CAISO and NYISO, certain resources could have the incentive to restrict the operating range in their energy supply offers.[103] Moreover, it appears that a variety of technologies beyond conventional generation can and should be eligible for dispatch under fast-start pricing. For example, both MISO and ISO–NE allow certain demand response resources to set prices under their fast-start pricing.[104] Given that a variety of resources could be the last resource dispatched to serve load (*i.e.,* the marginal resource), we propose to use the performance requirements noted earlier to define fast-start resources, rather than specific technological characteristics.

48. We seek comment on this proposed definition of fast-start resources. For example, we seek comment on whether the definition of fast-start resources should include resources that have start-up times of greater than ten minutes. Similarly, we seek comment on whether the definition of fast-start resources should include resources with minimum run times of longer than one hour. We also seek comment on whether there are other characteristics that should be included in the definition of fast-start resources. Additionally, we seek comment on any additional tariff changes that may be necessary to implement the reforms proposed herein. Finally, we seek comment on whether this proposed definition should instead define minimum standards for each operating characteristic necessary to be considered a fast-start resource, to, among other things, allow regional variation.

2. Inclusion of Start-Up and No-Load Costs in Prices

49. We propose to require RTOs/ISOs to allow fast-start resources' commitment costs, *i.e.,* start-up and no-load costs,[105] to be reflected in prices. Specifically, we propose to require that, in the pricing run, each RTO/ISO determine prices by calculating an enhanced energy offer for each fast-start resource that includes not just the incremental energy offer but also incorporates start-up and no-load costs. Specifically, the enhanced energy offer should include the following components: (1) The incremental energy offer; (2) the amortized start-up cost; and (3) an amortized portion of the no-load cost, as described below. The enhanced energy offer can only be used to set prices during the resource's minimum run time, as discussed further below.

50. To incorporate a fast-start resource's start-up and no-load costs into prices, we propose to define specific formulations. Recognizing that commitment costs may be determined in different ways in RTOs/ISOs, these proposals are not intended to alter how a resource's start-up and no-load costs are calculated. To incorporate a fast-start resource's start-up cost into prices, we propose to define a resource's amortized start-up cost as equal to its start-up cost divided by the product of its economic maximum operating limit and minimum run time. To determine the portion of a fast-start resource's no-load costs that is reflected in prices, we propose to define the amortized no-load cost as the no-load cost divided by the resource's economic maximum operating limit. For both amortized start-up and no-load costs, we propose to accept any mathematically equivalent formula.[106]

51. We preliminarily find that given the unique operating characteristics of fast-start resources, their commitment costs, *i.e.,* start-up and no-load costs, should be viewed as marginal costs and, as such, should be included in prices. The Commission previously accepted MISO's ELMP methodology, which allows commitment costs to affect prices. There, the Commission found that incorporating the commitment costs of fast-start resources in prices leads to prices that better reflect the costs of committing and dispatching resources.[107] Moreover, incorporating a fast-start resource's start-up and no-load costs would ensure that prices reflect

[101] RTOs/ISOs would need to routinely assess a resource's currently effective parameters and status prior to conferring fast-start pricing eligibility.

[102] *See supra* section II.C. We understand that this proposed definition of fast-start resource could require changes to previously approved RTO/ISO pricing practices. However, as discussed further below, we seek comment on this proposed definition, and will consider these comments in the development of any Final Rule in this proceeding.

[103] For example, if only block-loaded fast-start resources are eligible for fast-start pricing, some resources may have an incentive to reduce their dispatchable range, which could lead to inefficient results, such as a reduction in system flexibility.

[104] MISO, FERC Electric Tariff, Schedule 29A, ELMP for Energy and Operating Reserve Market: Ex-Post Pricing Formulations (40.0.0); ISO–NE, Transmission, Markets and Services Tariff, Market Rule 1, III.2.4 (19.0.0).

[105] No-load costs are the theoretical costs in $/hour for operating a resource at zero MW output.

[106] For instance, the RTO/ISO could introduce a fractional commitment variable for fast-start resources within the market pricing algorithm. Adding such a variable provides an additional option of introducing a portion of the capability of a resource in the solution while adding only an equivalent fraction of the amortized commitment cost.

[107] *Midwest Indep. Transmission Sys. Operator, Inc.,* 140 FERC ¶ 61,067 at P 39.

the actual marginal cost of production and will thus reduce uplift.

52. As noted above, we propose that the enhanced energy offer can only be used to set prices during the resource's minimum run time. While it could be argued that commitment costs for fast-start resources are still marginal costs of operating the system even beyond a fast-start resource's minimum run time, attempting to amortize start-up costs beyond the minimum run time is problematic from a practical standpoint, specifically in the real-time market. This is because, after the minimum run time is completed, the unit commitment algorithm may decommit the fast-start resource if it is no longer economic, making the total run time unknown. When the actual run time of the fast-start resource is unknown, it is difficult to define an appropriate period over which to amortize that resource's start-up cost. Given that the resource must operate for no less than its minimum run time, we believe that amortizing a fast-start resource's commitment costs during this period represents a reasonable approach.[108]

53. We seek comment on the proposal to include a fast-start resource's start-up and no-load costs as marginal costs. We also seek comment on whether to amortize commitment costs for the purpose of calculating prices, and the proposed formulas to amortize these costs. In particular, we understand that the amortization period for commitment costs acts as a proxy for the timeframe over which the committed fast-start resource is likely to be marginal. Therefore, we seek comment on whether there are better or alternative timeframes over which commitment costs for fast-start resources should be amortized. We also specifically seek comment on whether the economic maximum operating limit is the appropriate value to use when amortizing start-up and no-load costs or whether another capacity value may be more appropriate.

3. Relaxation of Economic Minimum Operating Limit

54. We propose to require RTOs/ISOs, in the pricing run, to relax to zero each fast-start resource's economic minimum operating limit, thereby treating these resources as fully dispatchable for the purpose of calculating prices. Relaxing the economic minimum operating limit of a fast-start resource to zero will permit an inflexible or mostly inflexible fast-start resource to be treated as dispatchable by the RTO/ISO market software during the pricing run. The purpose of this proposal is to enable a fast-start resource to set the market clearing price if it is, indeed, the marginal unit needed to serve load. Additionally, RTOs/ISOs must ensure that they sufficiently address over-generation concerns. Specifically, each RTO/ISO must ensure that physical dispatch instructions to resources do not result in over-generation and must have market rules that address the potential for over-generation due to deviations from dispatch instructions. As noted above, RTOs/ISOs with fast-start pricing already use penalties and/or opportunity cost payments to ensure that resources adhere to scheduled dispatch instructions.[109] We propose that, as part of its compliance filing to any Final Rule, each RTO/ISO should either demonstrate that its current practices meet the requirements established here to address over-generation, or propose additional tariff changes to do so.

55. We seek comment on whether there are challenges associated with relaxing the economic minimum operating limit for the pricing run. We also seek comment on any over-generation concerns, such as whether over-generation can be managed through penalties for deviations, opportunity cost payments, or other existing mechanisms. Additionally, we seek comment on alternative methods to treat fast-start resources as fully dispatchable for the purpose of calculating prices.

4. Offline Fast-Start Resources

56. Allowing offline fast-start resources to set prices can better reflect the cost of providing energy at a given location or of meeting reserve requirements. For instance, if the real-time dispatch algorithm optimizes spinning reserve[110] supply among online resources and these online resources are not sufficient to meet the RTO's/ISO's spinning reserve requirements, the dispatch algorithm will determine there is a shortage of spinning reserve and implement the appropriate shortage pricing. However, in such circumstances, while online resources may not be sufficient to meet spinning reserve requirements, there may be offline fast-start resources that can quickly provide energy in the same time frame as spinning reserve. If RTOs/ISOs do not adequately consider all resources that are available to meet system needs, including fast-start resources that are offline, this may result in the use of administrative pricing or other measures (*e.g.,* committing additional resources) that are less economically efficient because they do not reflect the availability of less expensive fast-start resources that could resolve the issue and thus result in higher overall system costs. Allowing RTOs/ISOs to include offline fast-start resources may have benefits; however, we do not propose to require that all RTOs/ISOs allow offline resources to set prices. Instead, we propose to establish certain requirements for those RTOs/ISOs that choose to allow offline fast-start resources to set prices.

57. While allowing offline fast-start resources to set prices can be beneficial, it is imperative that the offline resources actually be feasible (*i.e.,* able to start quickly) and economic for addressing certain system needs.[111] For example, an offline fast-start resource that has not reached its minimum down time would not actually be able to start to remedy a transmission constraint violation, energy shortage, or reserve shortage. Such an offline fast-start resource is not a feasible option to resolve the system issue and should not be allowed to set prices. Further, if online resources were not able to meet an RTO's/ISO's spinning reserve requirement, the dispatch algorithm would calculate the price based on an applicable shortage price. However, if offline fast-start resources are considered, there may be an offline fast-start resource that can be used to meet the spinning reserve requirement at a price lower than the shortage price. If, for example, the shortage price for spinning reserve was $80/MWh, it would only be economic to allow a fast-start resource to set prices if the full cost to operate the resource was less than $80/MWh. To accurately reflect the full cost of operating the fast-start resource, its offer would need to include start-up costs and no-load costs (amortized over a certain timeframe and capacity value). If the offline fast-start resource set prices at a level that did not reflect its full cost of operation, the resulting prices could be inefficiently low. For instance, if the offline fast-start resource set the spinning reserve price

[108] This proposal does not address RTOs/ISOs including no-load costs in prices beyond a fast-start resource's minimum run time.

[109] *See supra* section II.A; MISO, FERC Electric Tariff, § 40.3.4 (33.0.0) (charges for excessive or deficient energy deployment); ISO–NE., Transmission, Markets and Services Tariff, Market Rule 1, III.F.2.3.10 (24.0.0) (lost opportunity cost credit for resources displaced by fast-start resources).

[110] Spinning reserve refers to reserve capacity that is online and synchronized to the system and is ready to meet electric demand within ten minutes of a dispatch instruction by an RTO/ISO.

[111] *See* Order No. 825, FERC Stats. & Regs. ¶ 31,384 at P 168 (''. . . we agree with Potomac Economics that if an RTO's/ISO's pricing model allows infeasible or uneconomic units to set prices, the offline units represent an artificial increase in real-time supply that will depress real-time prices.'').

based on an offer that included only its incremental energy cost of $75/MWh, the resource would be setting the spinning reserve price, even though, if its full cost of operation was considered, it may not be more economic than establishing the shortage price of $80/MWh.

58. We propose to allow offline fast-start resources to be eligible to set prices if the resource is feasible and economic. As a threshold requirement, an offline fast-start resource may only be used to set prices (1) during a transmission constraint violation; or (2) if energy or ancillary service shortage conditions exist. Transmission constraint violations are defined as any instance where a transmission constraint is exceeded because the cost of redispatching resources to resolve the constraint is greater than the penalty factor associated with that constraint.[112] Energy or ancillary service shortage conditions are defined as any instance where prices for energy or ancillary services are calculated using administrative prices as defined in the RTO's/ISO's tariff. To be considered feasible, we propose that an offline fast-start resource must meet the following criteria: (1) Have a start-up time of ten minutes or less; (2) have a generation shift factor of no less than 5 percent on the applicable transmission constraint that is being exceeded; and (3) must not have any operational constraints that would prevent the resource from starting and providing energy.[113] We preliminarily find that a start-up time of ten minutes or less will ensure that offline fast-start resources are feasible to address transmission constraint violations or reserve shortages in a timeframe that is consistent with applicable facility ratings and contingency reserve deployment periods. Similarly, we preliminarily find that requiring a generation shift factor of no less than 5 percent will ensure that an offline fast-start resource used to set price during a transmission constraint violation can actually relieve the constraint if started. This minimum generation shift factor is similar to the threshold used in MISO, which is 6 percent.[114] To be considered economic, the RTO/ISO's fast-start pricing must consider the full cost of an offline fast-start resource, including its amortized start-up and no-load costs. The offline fast-start resource's full cost must be less than the administrative shortage price for the shortage or transmission constraint violation the resource is resolving.

59. We seek comment on the proposal to reflect the costs of offline fast-start resources in prices in certain circumstances. Specifically, we seek comment on whether we should establish a standard amortization period for the commitment costs of offline fast-start resources for all RTOs/ISOs, similar to online fast-start resources, or whether RTOs/ISOs should be allowed to propose an amortization period on compliance. To determine a resource's full cost for the purpose of pricing, RTOs/ISOs could amortize a resource's costs over a particular time period. We also seek input on any additional rules for offline fast-start resources to ensure they will respond in time to meet the system needs beyond requiring that they be feasible and economic for addressing system needs. We also seek comment on the market conditions under which offline fast-start resources should be able to set prices (*e.g.,* transmission constraint violations, energy or operating reserve shortages).

5. Day-Ahead and Real-Time Market Consistency

60. We propose to require RTOs/ISOs to incorporate fast-start pricing in both the day-ahead and real-time markets. We preliminarily find that doing so provides a more accurate price signal in the day-ahead market and supports price convergence between the day-ahead and real-time markets.

61. As discussed above, fast-start resources are frequently used to quickly respond to real-time system conditions. However, under certain market conditions, such as high day-ahead demand or persistent congestion patterns, fast-start resources may economically clear the day-ahead market. For reasons similar to the ones discussed above, we believe that when these resources economically clear the market, market prices should reflect the marginal cost of these resources. By allowing fast-start resources to set prices, RTO/ISO markets will send a transparent price signal that more accurately reflects marginal costs.

62. We further preliminarily find that requiring consistent pricing practices in both the day-ahead and real-time markets will lead to better price convergence, and therefore we believe these benefits merit implementation of fast-start pricing in both the day-ahead and real-time markets. Absent consistent pricing in both the day-ahead and real-time markets, day-ahead and real-time market prices may be different even under similar market conditions. For example, the day-ahead and real-time markets in ISO–NE could produce different energy prices even under identical market conditions because the day-ahead market does not incorporate the commitment costs of fast-start resources in energy prices.

63. We seek comment on the proposal to incorporate consistent fast-start pricing in both day-ahead and real-time markets. Specifically, we acknowledge that implementation in the day-ahead market may have a smaller benefit given that most fast-start resources clear in the real-time market, and we thus seek comment on the extent to which there are benefits or drawbacks to applying the proposed reforms to both the day-ahead and real-time markets, as opposed to only the real-time markets. Further, we seek comment on whether there are any reasons for establishing different fast-start pricing practices in the day-ahead and real-time markets. In particular, we seek comment on including commitment costs in the day-ahead market given different forecast, optimization, and commitment time horizons than the real-time market, where fast-start units can have brief dispatch periods to meet system needs.

6. Additional Comments Sought on This Proposal

64. We seek comment on the need for reform and on the five proposals outlined above.[115] We also seek comment on whether allowing fast-start resources to set prices could result in the exercise of market power. For example, the concentrated ownership of fast-start resources could raise market power concerns that are not addressed in existing RTO/ISO market power mitigation procedures.[116]

[112] *See* Comments of Potomac Economics, Docket No. AD14–14–000, at 20 (Feb. 24, 2015).

[113] For example, the resource cannot be within its minimum down time and must not be prevented from starting due to environmental restrictions, fuel use restrictions, or other operational restrictions.

[114] MISO, FERC Electric Tariff, Schedule 29A, ELMP for Energy and Operating Reserve Market: Ex-Post Pricing Formulations (40.0.0), II.B, III.B.

[115] These five proposals are: (1) An RTO/ISO must apply fast-start pricing to any resource committed by the RTO/ISO that is able to start up within ten minutes, has a minimum run time of one hour or less, and that submits economic energy offers to the market; (2) an RTO/ISO should incorporate commitment costs of fast-start resources in energy and operating reserve prices; (3) an RTO/ISO must modify its fast-start pricing to relax the economic minimum operating limit of fast-start resources and treat them as dispatchable from zero to the economic maximum operating limit for the purpose of calculating prices; (4) if an RTO/ISO allows offline fast-start resources to set prices for addressing certain system needs, the resource must be feasible and economic; and (5) an RTO/ISO must incorporate fast-start pricing in both the day-ahead and real-time markets.

[116] Such procedures could include any procedures or conduct and impact tests that provide offer and physical operating parameter mitigation for economic withholding, physical withholding, or out-of-market commitment.

65. We recognize the potential that the proposed reforms may require significant changes to RTO/ISO software systems, which can be a complex and costly endeavor. We seek comment on the required software changes, updates to optimization modeling and parameter inputs, estimated costs and time necessary to implement aspects of the reforms proposed in this NOPR, and any additional considerations for implementing the requirements proposed herein.

III. Compliance

66. We propose to require that each RTO/ISO submit a compliance filing within 90 days of the effective date of any eventual Final Rule in this proceeding to demonstrate that it meets the proposed requirements set forth in any Final Rule. We note that this compliance deadline is for RTOs/ISOs to submit proposed tariff changes or otherwise demonstrate compliance with any Final Rule. We understand that implementing the reforms required by any Final Rule in this proceeding may be a complex endeavor. However, we preliminarily find that implementation of these reforms is important to ensure rates remain just and reasonable. Therefore, we propose that tariff changes filed in response to a Final Rule in this proceeding must become effective no more than six months after compliance filings are due. We seek comment on this proposed compliance timeline.

67. We seek comment on the proposed deadline for RTOs/ISOs to submit the compliance filing 90 days following the effective date of any Final Rule in this proceeding. Specifically, we seek comment on whether 90 days is sufficient time for RTOs/ISOs to develop new tariff language in response to any Final Rule.

68. To the extent that any RTO/ISO believes that it already complies with the reforms proposed in this NOPR, the RTO/ISO would be required to demonstrate how it complies in the compliance filing required 90 days after the effective date of any Final Rule in this proceeding. To the extent that any RTO/ISO seeks to argue on compliance that its existing market rules are consistent with or superior to the reforms adopted in any Final Rule, the Commission will entertain those at that time.[117]

IV. Information Collection Statement

69. The Paperwork Reduction Act (PRA)[118] requires each federal agency to seek and obtain Office of Management and Budget (OMB) approval before undertaking a collection of information directed to ten or more persons or contained in a rule of general applicability. OMB regulations[119] require approval of certain information collection requirements imposed by agency rules. Upon approval of a collection of information, OMB will assign an OMB control number and an expiration date. Respondents subject to the filing requirements of an agency rule will not be penalized for failing to respond to the collection of information unless the collection of information displays a valid OMB control number.

70. The reforms proposed in this NOPR would amend the Commission's regulations to improve the operation of organized wholesale electric power markets operated by RTOs/ISOs. The Commission proposes to require each RTO and ISO implement market rules that meet certain requirements when pricing fast-start resources. The reforms proposed in this NOPR would require one-time filings of tariffs with the Commission and potential software upgrades to implement the reforms proposed in this NOPR. The Commission anticipates the reforms proposed in this NOPR, once implemented, would not significantly change currently existing burdens on an ongoing basis. With regard to those RTOs/ISOs that believe that they already comply with the reforms proposed in this NOPR, they could demonstrate their compliance in the compliance filing required 90 days after the effective date of any Final Rule in this proceeding. The Commission will submit the proposed reporting requirements to OMB for its review and approval under section 3507(d) of the Paperwork Reduction Act.[120]

71. While the Commission expects the adoption of the reforms proposed in this NOPR to provide significant benefits, the Commission understands implementation can be a complex endeavor. The Commission solicits comments on the accuracy of provided burden and cost estimates and any suggested methods for minimizing the respondents' burdens, including the use of automated information techniques. Specifically, the Commission seeks detailed comments on the potential cost and time necessary to implement aspects of the reforms proposed in this NOPR, including (1) hardware, software, and business processes changes; and (2) processes for RTOs/ISOs to vet proposed changes amongst their stakeholders.

72. *Burden Estimate:*[121] The Commission believes that the burden estimates below are representative of the average burden on respondents, including necessary communications with stakeholders. The estimated burden and cost for the requirements contained in this NOPR follow.[122]

	Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden hours and cost per response[123] (4)	Total annual burden hours and total annual cost (3) * (4) = (5)	Cost per respondent ($) (5) ÷ (1)
Tariff filing costs	6	1	6	80 hours, $5,920	480 hours, $35,520	....

[117] *See, e.g.,* Order No. 825, FERC Stats. & Regs. ¶ 31,384 at P 72; *Demand Response Compensation in Organized Wholesale Energy Markets,* Order No. 745, FERC Stats. & Regs. ¶ 31,322, at P 4 & n.7, *order on reh'g and clarification,* Order No. 745–A, 137 FERC ¶ 61,215 (2011), *reh'g denied,* Order No. 745–B, 138 FERC ¶ 61,148 (2012), *vacated sub nom. Elec. Power Supply Ass'n* v. *FERC,* 753 F.3d 216 (D.C. Cir. 2014), *rev'd & remanded sub nom. FERC* v. *Elec. Power Supply Ass'n,* 136 S. Ct. 760 (2016).

[118] 44 U.S.C. 3507(d).

[119] 5 CFR 1320.

[120] 44 U.S.C. 3507(d) (2012).

[121] Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose, or provide information to or for a federal agency, including: ''. . . (ii) Developing, acquiring, installing, and utilizing technology and systems for the purpose of collecting, validating, and verifying information; (iii) Developing, acquiring, installing, and utilizing technology and systems for the purpose of processing and maintaining information; (iv) Developing, acquiring, installing, and utilizing technology and systems for the purpose of disclosing and providing information. . . .'' 5 CFR 1320.3(b)(1) (2016). The time, effort, and financial resources necessary to comply with a collection of information that would be incurred by persons in the normal course of their activities (*e.g.,* in compiling and maintaining business records) will be excluded from the ''burden'' if the agency demonstrates that the reporting, recordkeeping, or disclosure activities needed to comply are usual and customary.

[122] For this information collection, the Commission staff estimates that industry is similarly situated in terms of hourly cost (wages plus benefits). Based on the Commission's average cost (wages plus benefits) for 2016, the Commission is using $74.50/hour.

	Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden hours and cost per response [123] (4)	Total annual burden hours and total annual cost (3) * (4) = (5)	Cost per respondent ($) (5) ÷ (1)
Implementation costs ..	6	1	6	3,853 hours, $285,122	23,118 hours, $1,710,732.	....
Total (one-time in Year 1).				3,933 hours, $291,042	23,598 hours, $1,746,252.	$291,042

Cost to Comply: The Commission has projected the total cost of compliance, all within six months of a Final Rule plus initial implementation, to be $1,746,252. After Year 1, the reforms proposed in this NOPR, once implemented, would not significantly change existing burdens on an ongoing basis.

Title: FERC–516E, NOPR in RM17–3.

Action: Proposed revisions to an information collection.

OMB Control No.: TBD.

Respondents for this Rulemaking: RTOs and ISOs.

Frequency of Information: One-time during year one.

Necessity of Information: The Commission proposes this rule to improve competitive wholesale electric markets in the RTO and ISO regions.

Internal Review: The Commission has reviewed the proposed changes and has determined that the changes are necessary. These requirements conform to the Commission's need for efficient information collection, communication, and management within the energy industry. The Commission has assured itself, by means of internal review, that there is specific, objective support for the burden estimates associated with the information collection requirements.

65. Interested persons may obtain information on the reporting requirements by contacting the following: Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426 [Attention: Ellen Brown, Office of the Executive Director], email: *DataClearance@ferc.gov*, Phone: (202) 502–8663, fax: (202) 273–0873. Comments on the collection of information and the associated burden estimate in the proposed rule should be sent to the Commission in this docket and may also be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503 [Attention: Desk Officer for the Federal Energy Regulatory Commission], at the following email address: *oira_submission@omb.eop.gov*. Please refer to Docket No.: RM17–3, FERC–516E, OMB Control No. 1902–0286 in your submission.

V. Environmental Analysis

73. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[124] We conclude that neither an Environmental Assessment nor an Environmental Impact Statement is required for this NOPR under section 380.4(a)(15) of the Commission's regulations, which provides a categorical exemption for approval of actions under sections 205 and 206 of the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts and regulations that affect rates, charges, classifications, and services.[125]

VI. Regulatory Flexibility Act

74. The Regulatory Flexibility Act of 1980 (RFA) [126] generally requires a description and analysis of proposed rules that will have significant economic impact on a substantial number of small entities. The RFA mandates consideration of regulatory alternatives that accomplish the stated objectives of a rule and that minimize any significant economic impact on a substantial number of small entities. The Small Business Administration's (SBA) Office of Size Standards develops the numerical definition of a small business.[127] These standards are provided on the SBA Web site.[128]

75. The SBA classifies an entity as an electric utility if it is primarily engaged in the transmission, generation and/or distribution of electric energy for sale. Under this definition, the six RTOs/ISOs are considered electric utilities, specifically focused on electric bulk power and control. The size criterion for a small electric utility is 500 or fewer employees.[129] Since every RTO/ISO has more than 500 employees, none are considered small entities.

76. Furthermore, because of their pivotal roles in wholesale electric power markets in their regions, none of the RTOs/ISOs meet the last criterion of the two-part RFA definition of a small entity: ''not dominant in its field of operation.'' [130] As a result, we certify that the reforms required by this NOPR would not have a significant economic impact on a substantial number of small entities.

VII. Comment Procedures

77. The Commission invites interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due February 28, 2017. Comments must refer to Docket No. RM17–3–000, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments.

78. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's Web site at *http://www.ferc.gov*. The Commission accepts most standard

[123] The Commission staff anticipates that the average respondent for this collection is similarly situated to the Commission, in terms of salary plus benefits. Based upon FERC's 2016 annual average of $154,647 (for salary plus benefits), the average hourly cost is $74.50/hour.

[124] *Regulations Implementing the National Environmental Policy Act of 1969,* Order No. 486, FERC Stats. & Regs. ¶ 30,783 (1987).

[125] 18 CFR 380.4(a)(15).

[126] 5 U.S.C. 601–12.

[127] 13 CFR 121.101.

[128] U.S. Small Business Administration, *Table of Small Business Size Standards Matched to North American Industry Classification System Codes* (effective Feb. 26, 2016), *https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*.

[129] 13 CFR 121.201 (Sector 22, Utilities).

[130] The RFA definition of ''small entity'' refers to the definition provided in the Small Business Act, which defines a ''small business concern'' as a business that is independently owned and operated and that is not dominant in its field of operation. The Small Business Administration's regulations at 13 CFR 121.201 define the threshold for a small Electric Bulk Power Transmission and Control entity (NAICS code 221121) to be 500 employees. *See* 5 U.S.C. 601(3) (citing to section 3 of the Small Business Act, 15 U.S.C. 632).

word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

79. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

80. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

VIII. Document Availability

81. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the Internet through the Commission's Home Page (*http://www.ferc.gov*) and in the Commission's Public Reference Room during normal business hours (8:30 a.m. to 5:00 p.m. Eastern time) at 888 First Street NE., Room 2A, Washington, DC 20426.

82. From the Commission's Home Page on the Internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

83. User assistance is available for eLibrary and the Commission's Web site during normal business hours from the Commission's Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov*, or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov*.

List of Subjects in 18 CFR Part 35

Electric power rates, Electric utilities.

By direction of the Commission.

Dated: December 15, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

Regulatory Text

In consideration of the foregoing, the Commission proposes to amend Part 35, Chapter I, Title 18, *Code of Federal Regulations*, as follows:

PART 35—FILING OF RATE SCHEDULES AND TARIFFS

■ 1. The authority citation for part 35 continues to read as follows:

Authority: 16 U.S.C. 791a–825r, 2601–2645; 31 U.S.C. 9701; 42 U.S.C. 7101–7352.

■ 2. Amend § 35.28 by adding paragraph (g)(10) to read as follows:

§ 35.28 Non-discriminatory open access transmission tariff.

* * * * *

(g) * * *

(10) *Pricing fast-start resources*—(i) *Definition of fast-start resources.* A fast-start resource is any resource that is able to start up within ten minutes or less, that has a minimum run time of one hour or less, and that submitted an economic energy offer to the market.

(ii) *Application to both day-ahead and real-time markets.* A Commission-approved independent system operator or regional transmission organization with a tariff that contains a day-ahead and a real-time market must implement the following requirements in both the day-ahead and real-time markets. Implementation of the following requirements must be consistent between the day-ahead and real-time markets.

(iii) *Start-up and no-load costs.* When a Commission-approved independent system operator or regional transmission organization makes a decision to commit a fast-start resource, it must calculate prices by determining a fast-start resource's enhanced energy offer, which includes the following components: The resource's incremental energy offer, amortized start-up cost, and amortized no-load cost. In using that offer to calculate prices for the real-time and day-ahead markets, each Commission-approved independent system operator and regional transmission organization must amortize a fast-start resource's start-up cost over the resource's minimum run time and its economic maximum operating limit and must divide a fast-start resource's no-load cost by the resource's economic maximum operating limit, but are only required to do so during the resource's minimum run time.

(iv) *Relaxation of economic minimum operating limit.* Each Commission-approved independent system operator and regional transmission organization must relax to zero each fast-start resource's economic minimum operating limit such that the resource is able to be treated as fully dispatchable for purposes of calculating prices. Each Commission-approved independent system operator and regional transmission organization must ensure that physical dispatch instructions to resources do not result in over-generation and must have market rules that address the potential for over-generation due to deviations from dispatch instructions.

(v) *Offline fast-start resources.* If a Commission-approved independent system operator or regional transmission organization uses offline fast-start resources to calculate prices, the resource must have a start-up time of ten minutes or less, must not have any operational constraints that would prevent the resource from starting and providing energy, and must set prices based on the resource's amortized full cost, including start-up and no-load costs, which must be less than the administrative shortage price for the shortage or transmission constraint violation the resource is resolving. In addition, an offline fast-start resource used to resolve a transmission constraint violation must have a generation shift factor of no less than 5 percent on the applicable transmission constraint that is being exceeded. Each Commission-approved independent system operator and regional transmission organization may use an offline fast-start resource to calculate prices only during a transmission constraint violation or during energy or ancillary service shortage conditions.

The following appendix will not appear in the *Code of Federal Regulations.*

Appendix—List of Short Names/Acronyms of Commenters

Short name/acronym	Commenter
CAISO	California Independent System Operator Corporation.
DC Energy, Inertia Power, and Vitol	DC Energy, LLC, Inertia Power, LP, and Vitol Inc.
EEI	Edison Electric Institute.
EPSA	Electric Power Supply Association.
EPSA/IPPNY	Electric Power Supply Association and Independent Power Producers of New York.
EPSA/NEPGA	Electric Power Supply Association and New England Power Generators Association, Inc.

Short name/acronym	Commenter
EPSA/P3	Electric Power Supply Association and PJM Power Providers.
EPSA/WPTF	Electric Power Supply Association and Western Power Trading Forum.
Entergy	Entergy Services, Inc. commented on behalf of the Entergy Operating Companies (Entergy Arkansas, Inc.; Entergy Louisiana, LLC; Entergy Mississippi, Inc.; Entergy New Orleans, Inc.; and Entergy Texas, Inc.).
Exelon	Exelon Corporation.
Golden Spread Electric	Golden Spread Electric Cooperative, Inc.
IMG Midstream/Tangibl	IMG Midstream LLC and Tangibl LLC.
ISO–NE	ISO New England Inc.
LIPA	Long Island Power Authority and Long Island Lighting Company d/b/a Power Supply Long Island.
MISO	Midcontinent Independent System Operator, Inc.
PJM Market Monitor	Monitoring Analytics, LLC.
NYISO	New York Independent System Operator, Inc.
PJM	PJM Interconnection, L.L.C.
PSEG Companies	PSEG Companies (Public Service Electric and Gas Company; PSEG Power LLC; and PSEG Energy Resources & Trade LLC).
SPP	Southwest Power Pool, Inc.
Westar	Westar Energy, Inc.

BILLING CODE 6717–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 101

[Docket No. FDA–2016–D–2335]

Use of the Term ''Healthy'' in the Labeling of Human Food Products; Request for Information and Comments; Extension of Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notification; extension of comment period.

SUMMARY: The Food and Drug Administration (FDA or we) is extending the comment period for a docket to receive information and comments on the use of the term ''healthy'' in the labeling of human food products. We established the docket through a notice that appeared in the **Federal Register** of September 28, 2016. In the notice, we requested comments on the term ''healthy'', generally, and as a nutrient content claim in the context of food labeling; we also requested comments on specific questions contained in the notice. We are taking this action in response to requests for an extension to allow interested persons additional time to submit comments.

DATES: FDA is extending the comment period on the notice that published in the **Federal Register** of September 28, 2016 (81 FR 66562). Submit either electronic or written comments by April 26, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2016–D–2335 for ''Use of the Term 'Healthy' in the Labeling of Human Food Products; Request for Information and Comments.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

• *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Vincent de Jesus, Center for Food Safety and Applied Nutrition (HFS–830), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–1450.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of September 28, 2016, we published a notice announcing the establishment of a docket to receive information and comments on the use of the term ''healthy'' in the labeling of human food products. The notice discussed FDA's position regarding the use of the term ''healthy'', the events that prompted us to establish a docket to request information and comments on this issue, and specific issues for consideration. We provided a 120-day comment period that was scheduled to end on January 26, 2017.

We have received requests to extend the comment period. The requests conveyed concern that the current 120-day comment period does not allow sufficient time to develop meaningful or thoughtful comments to the questions and issues we presented in the notice.

We have considered the requests and are extending the comment period for 90 days, until April 26, 2017. We believe that a 90-day extension allows adequate time for interested persons to submit comments.

Dated: December 27, 2016.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 573

[Docket No. FDA–2016–F–3880]

Novus International, Inc.; Filing of Food Additive Petition (Animal Use); Reopening of the Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of petition; reopening of the comment period.

SUMMARY: The Food and Drug Administration (FDA) is reopening the comment period for the notice of petition, published in the **Federal Register** of November 8, 2016 (81 FR 78528), proposing that the food additive regulations be amended to provide for the safe use of poly (2-vinylpyridine-co-styrene) as a nutrient protectant for methionine hydroxy analog in animal food for beef cattle, dairy cattle, and replacement dairy heifers. Additionally, the petition proposes that the food additive regulations be amended to provide for the safe use of ethyl cellulose as a binder for methionine hydroxy analog to be incorporated into animal food. FDA is reopening the comment period to allow additional time for comments on environmental impacts.

DATES: Submit either electronic or written comments by January 30, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2016–F–3880 for ''Food Additives Permitted in Feed and Drinking Water of Animals; 2-Vinylpyridine-Co-Styrene.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

• *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT:
Carissa Doody, Center for Veterinary Medicine (HFV–228), Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855, 240–402–6283, *carissa.doody@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In the **Federal Register** of November 8, 2016 (81 FR 78528), Novus Inc. proposed regulations be amended to provide for the safe use of poly (2-vinylpyridine-co-styrene) as a nutrient protectant for methionine hydroxy analog in animal food for beef cattle, dairy cattle, and replacement dairy heifers. Additionally, the petition proposes that the food additive regulations be amended to provide for the safe use of ethyl cellulose as a binder for methionine hydroxy analog to be incorporated into animal food.

Interested persons were originally given until December 8, 2016, to comment on the petitioner's environmental assessment. The November 8, 2016, notice of petition was published with the incorrect docket number. A correction published in the **Federal Register** of November 29, 2016 (81 FR 85972). On our own initiative, we are reopening the comment period to allow potential respondents to thoroughly evaluate and address pertinent environmental issues.

Dated: December 23, 2016.

Leslie Kux,

Associate Commissioner for Policy.

Withholding on Payments of Certain Gambling Winnings

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations under section 3402(q) with respect to withholding on certain payments of gambling winnings from horse races, dog races, and jai alai and on certain other payments of gambling winnings. The proposed regulations affect both payers and payees of the gambling winnings subject to withholding under section 3402(q).

DATES: Written or electronic comments and requests for a public hearing must be received by March 30, 2017.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–123841–16), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand-delivered Monday through Friday between the hours of 8 a.m. and 4 p.m. to CC:PA:LPD:PR (REG–123841–16), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC 20224, or sent electronically, via the Federal eRulemaking Portal at *http://www.regulations.gov* (IRS REG–123841–16).

FOR FURTHER INFORMATION CONTACT:
Concerning the proposed regulations, David Bergman, (202) 317–6845; concerning submissions of comments or to request a public hearing, Regina Johnson, (202) 317–6901 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

The collection of information contained in this notice of proposed rulemaking has been approved by the Office of Management and Budget through Form W–2G (OMB No. 1545–0238) in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)). Notice and an opportunity to comment on the proposed changes to burden hours for the forms related to this proposed rule will be published in a separate notice in the **Federal Register**.

Background

This document contains proposed regulations to amend the Employment Tax Regulations (26 CFR 31) under section 3402 of the Internal Revenue Code relating to withholding from gambling winnings for horse races, dog races, and jai alai. The proposed regulations update and clarify other provisions of § 31.3402(q)–1 and make conforming changes to § 31.3406(g)–2.

Section 3402(q)(1) requires every person, including the United States government, a state, a political subdivision thereof, or any instrumentality of the foregoing, that makes any payment of gambling winnings to deduct and withhold tax on certain payments at the third-lowest tax rate applicable under section 1(c), which for the 2016 tax year is 25 percent. Section 3402(q)(2) provides an exemption from withholding under this section for payments of winnings to nonresident aliens and foreign corporations subject to withholding under sections 1441(a) or 1442(a). Section 3402(q)(3) describes the winnings subject to withholding as proceeds from a wager determined in accordance with the rules in that subsection.

Whether winnings are subject to withholding depends on the type of wagering transaction, the proceeds from a wager, and in some cases the odds associated with a wager. Under sections 3402(q)(3)(B) and (C)(i), payers generally must withhold if the proceeds from a wager exceed $5,000 in a State-conducted lottery, other lottery, sweepstakes, or wagering pool. Under section 3402(q)(3)(A) and (C)(ii), in the case of a wagering transaction in a parimutuel pool with respect to horse races, dog races, or jai alai, the payer must withhold if the proceeds exceed $5,000 and are at least 300 times as large as the amount wagered. Winnings from bingo, keno, and slot machines are exempted from withholding under section 3402(q)(1) by section 3402(q)(5).

Proceeds From a Wager and Identical Wagers

Section 3402(q)(4) provides that proceeds from a wager are determined by reducing the amount received by the amount of the wager, and proceeds which are not money are taken into account at fair market value. The current regulations provide rules for determining the amount of proceeds from a wager, including a special rule for ''identical wagers.'' The rule treats ''identical wagers'' as paid with respect to a single wager for purposes of calculating the proceeds from the wager. See § 31.3402(q)–1(c)(ii).

Neither the statute nor the existing regulations explicitly define the terms ''wager'' or ''identical wagers,'' but the regulation text of § 31.3402(q)–1(c)(ii), regarding rules for determining the amount of proceeds from a wager, and § 31.3402(q)–1(d) provide examples of wagers that are and are not identical wagers. For example, amounts paid on two bets placed in a parimutuel pool on a particular horse to win a particular race are treated as paid with respect to the same wager. These two bets would not be identical, however, if one bet was for the horse to win and the other bet was for the horse to place (which are bets in two separate parimutuel pools, as explained below). Those two bets would also not be identical if one bet was placed in a pool conducted by the racetrack and the other bet was placed in a separate pool conducted by an off-track betting establishment and such wagers are not pooled with those placed at the racetrack. In addition, two bets on the same race are not identical where the bettor makes an exacta bet on horse M to win and horse N to place and a trifecta bet on horse M to win, horse N to place, and horse O to show. See § 31.3402(q)–1(d), Example 11. The preamble to the current regulations provides the following definition for identical bets: ''Identical bets are those in which winning depends on the occurrence (or non-occurrence) of the same event or events.'' T.D. 7919 (48 FR 46296) (Oct. 12, 1983).

The statute does not explicitly address how to determine the amount of the wager in the case of exotic wagers. Exotic wagers are those other than straight wagers. Straight wagers include bets to win (selecting the first-place finisher), place (selecting a finisher to place first or second), and show (selecting a finisher to place first, second, or third). Examples of exotic bets include multi-contestant bets, such as an exacta (selecting the first and second-place finishers in a single contest, in the correct order) and a trifecta (selecting the first, second, and third-place finishers in a single contest, in the correct order). Other examples include multi-contest bets such as a Pick 6 (selecting the first-place finisher in six consecutive contests).

The instructions to Form W–2G provide the rule for multiple wagers reflected on a single ticket as follows: ''For multiple wagers sold on one ticket, such as the $12 box bet on a Big Triple or Trifecta, the wager is considered as six $2 bets and not one $12 bet for purposes of computing the amount to be reported or withheld.'' *See, e.g.,* 2016 Instructions to Forms W–2G and 5754, at 2, available at *https://www.irs.gov/pub/irs-pdf/iw2g.pdf.* Thus, according to the instructions, the bettor may only consider the cost of a single winning combination when determining the amount wagered for purposes of determining whether proceeds from a wager meets the threshold for withholding in section 3402(q)(3)(C)(ii).

2015 Request for Comments

The Treasury Department and the IRS requested comments from the public on the treatment of wagers in parimutuel gambling on March 4, 2015, in a notice of proposed rulemaking (REG–132253–11) under section 6041 regarding information returns to report winnings from bingo, keno, and slot machine play. The notice of proposed rulemaking stated that taxpayers required to report winnings from parimutuel gambling may have concerns relating to when wagers with respect to horse races, dog races, and jai alai may be treated as identical and that the Treasury Department and the IRS intend to amend the regulations under § 31.3402(q)–1.

Multiple commentators requested a rule that would take into account all money wagered in a particular parimutuel pool when determining proceeds from a wager for purposes of determining whether withholding under section 3402(q) was required. In particular, some commentators requested that the Treasury Department and the IRS revise the regulations to provide a definition of the ''amount of the wager'' when multiple bets are placed in the same pool to include the total amount wagered by a bettor into a specific parimutuel pool for purposes of determining whether wagering proceeds are subject to withholding and reporting. The commentators stated that this change would reflect innovations and changes to today's modern parimutuel wagering strategies.

Reporting Rules

Section 3402(q)(6) provides that recipients of gambling winnings subject to withholding must furnish a statement to the payer, under penalties of perjury, containing the name, address, and taxpayer identification number of the recipient and each person entitled to any portion of the payment. The current regulations provide that the statement, furnished on a Form W–2G, Certain Gambling Winnings, or Form 5754, Statement by Person(s) Receiving Gambling Winnings, also must indicate if the payee and any other persons entitled to payment are entitled to winnings from identical wagers. §§ 1.6011–3, 31.3402(q)–1(c)(ii). The payer may rely on this statement in determining the amount of proceeds from the wager. § 31.3402(q)–1(c)(ii).

On or before February 28 (March 31 if filed electronically) of the calendar year following the calendar year in which the payment is made, the payer must file a return on Form W–2G with the Internal Revenue Service reporting the gambling winnings subject to withholding. § 31.3402(q)–1(f). Section 6041(d) and the instructions to Form W–2G require that the payer filing a Form W–2G also furnish a statement to the payee on or before January 31 of the calendar year following the calendar year in which the payment is made.

Explanation of Provisions

The current regulations for withholding from gambling winnings under section 3402(q) were last substantively amended in 1983. According to commentators, since that time, exotic bets on horse races, dog races, and jai alai have accounted for an increasing percentage of total bets placed on horse races, dog races, and jai alai. The increase in exotic betting, and in particular the use of certain methods of exotic betting, has resulted in scenarios where the current rules may result in withholding that significantly exceeds the individual gambler's ultimate income tax liability. In light of this, the proposed regulations amend the rules regarding how payers determine the amount of the wager in parimutuel wagering transactions with respect to horse races, dog races, and jai alai. Specifically, these proposed regulations address exotic bets on horse races, dog races, and jai alai by providing a new rule to determine the amount of the wager when wagers are placed in a single parimutuel pool and are reflected on a single ticket. In addition, the current regulations under section 3402(q) are updated to reflect current law regarding the withholding thresholds and certain information reporting requirements.

I. Wagers in the Case of Horse Races, Dog Races, and Jai Alai

A. Parimutuel Betting

In parimutuel betting, which translates to betting ''amongst ourselves,'' the bettors themselves establish the odds and payouts, as opposed to having fixed odds. Each type of bet on a contest or series of contests goes into its own parimutuel pool. For example, each win bet goes into the win pool for that contest, regardless of the finisher selected to win. As amounts are wagered in the pool, the odds and payouts adjust accordingly. Following the contest or contests determinative of a particular pool, all bettors who placed a winning bet share the money placed in that particular pool, less the applicable takeout. Parimutuel betting in the United States is used in betting on horse races, dog races, and jai alai.

Parimutuel betting involves both straight and exotic bets. Each type of straight or exotic bet is placed in its own parimutuel pool. For example, a trifecta bet on a particular contest goes into that contest's trifecta pool, regardless of the finishers or order of finish selected, and the trifecta pool is separate from the win pool, the exacta pool, and all other pools associated with that particular contest. Exotic bets provide greater odds and bigger pay-offs than straight bets.

Multiple combinations of exotic bets may be placed on a single ticket, making it easier for bettors to place wagers on the various possible outcomes. For example in horse racing, bettors often use box, key, and wheel bets to place the same type of exotic bet (*e.g.,* exacta or trifecta) on multiple combinations of outcomes. Box bets involve betting on all possible outcomes of a specific group of horses in the same race; for example, a three-horse exacta box is a bet in which three specific horses are selected to place first or second in any combination or order of finish. A bettor wins a three-horse exacta box bet if any combination of the bettor's three horses finishes first and second. Key bets involve betting a single horse in one position with all possible combinations of the other selected horses; for example, a trifecta key is a bet where a single horse is selected to win and the other horses included in the bet are selected to place second or third in any combination or order of finish. Finally, a wheel bet involves multiple horses in multiple combinations in multiple races; for example, a Daily Double wheel is a bet where a single horse is selected to win the first race and every horse is selected in the second race.

B. Comments Regarding Current Treatment of Parimutuel Betting

Commentators stated that since the regulations were last substantively amended, the rise in the number of exotic bets available at certain racetracks and the popularity of exotic betting has altered parimutuel betting practices. Commentators stated that, for example, in the 1978 Kentucky Derby, there were three types of bets available to be placed at Churchill Downs racetrack, where the Kentucky Derby is run. Those bets were bets to win, place, or show. By contrast, in the 2015 Kentucky Derby, there were twenty-three types of bets available to be placed at Churchill Downs racetrack, including the superfecta, super high five, and pick 7 jackpot. Furthermore, commentators stated that today approximately 67% of all parimutuel wagering occurs on exotic wagers (versus straight wagers), as compared to the 1970s when approximately 10% of parimutuel wagering occurred on exotic wagers.

Further, commentators stated that the increase in availability of exotic betting has caused bettors to substantially increase their amounts wagered, often by placing box, key, and wheel bets, in a particular parimutuel pool to increase their chances of winning and increase the potential payout. In addition, commentators attributed the rise in popularity of exotic bets to the fact that exotic bets offer significantly higher odds. As a result, commentators stated that modern bettors are putting more money towards bets with greater potential payouts in anticipation of significant winnings.

Commentators also stated that payouts from straight bets were rarely subject to withholding because they virtually never came close to exceeding the 300 to 1 ratio of proceeds to the amount of the wager. On the other hand, exotic bets do result in proceeds exceeding the amount of the wager by a 300 to 1 ratio; for example, seven different exotic bets at the 2015 Kentucky Derby produced payouts exceeding the 300 to 1 ratio. However, given the vast number of potential outcomes possible with exotic bets, the commentators stated that bettors are using techniques such as box, key, or wheel bets to increase their odds. As a result, it is undoubtedly the case that the winners wagered far more into the pool than the cost of the winning bet.

Commentators stated that the tax treatment under the current rules ignores the actual investment in a single parimutuel pool and may result in withholding that significantly exceeds the amount necessary to cover the individual gambler's ultimate income tax liability and suggested changing the rule to take into account all wagers in the same parimutuel pool. The commentators provided the following example to illustrate this. A bettor makes a seven-horse trifecta box wager, which involves selecting a group of seven horses to place first, second, and third, in any order. This bet has 210 unique possible results. Assuming the bettor bets $20 on each combination, the total amount wagered is $4,200. At race time the winning combination carries 304 to 1 odds. After the race, the bettor holds a winning ticket that pays $6,100 ($304 × $20 wagered + $20 return of bet). Under the current rules, the racetrack would withhold $1,520 (($6,100 − 20) × 25%) and report $6,080 in winnings ($6,100 − $20) because the rules treat only the $20 paid for the single winning combination as the amount wagered. However, the commentators stated that the individual has netted only $1,900 ($6,100 winnings less $4,200 wagered), and is left with $380 ($1,900 − $1,520) once withholding taxes are taken out, which makes the withholding rate 80% of net winnings.

Under the commentators' proposed change, the amount of the wager would be considered to be $4,200. Thus the racetrack would not withhold because the proceeds from the wager ($1,900) are less than the $5,000 withholding threshold and are also less than $1,260,000 (300 times the amount wagered). Similarly, the racetrack would not report the proceeds because they are not at least 300 times the amount wagered.

The commentators noted that although the bettor may be able to deduct the losing wagers on the bettor's tax return at the end of the year as a miscellaneous itemized deduction, there would be other consequences. For example, the $1,520 withholding lowers the amount of money in circulation at the racetrack that day and reduces the bettor's cash on hand, whereas the commentators' proposed change would result in additional cash on hand to be bet in subsequent races.

In addition, the commentators stated that the deduction for losing wagers results in reporting of higher adjusted gross income than would result under the commentator's proposed change. Commentators further stated that a higher adjusted gross income can cause the bettor to lose unrelated tax benefits. In addition, the deduction is only available if the bettor itemizes deductions and is not subject to the alternative minimum tax. Finally the commentators noted that many states limit itemized deductions for state tax purposes.

C. Proposed Rule for the Amount of the Wager in the Case of Horse Races, Dog Races, and Jai Alai

Proposed § 31.3402(q)–1(c)(ii) provides a new rule for purposes of determining the amount of the wager for wagering transactions in horse races, dog races, and jai alai. The proposed rule allows all wagers placed in a single parimutuel pool and represented on a single ticket to be aggregated and treated as a single wager for purposes of determining the amount of the wager. The proposed rule allows a payer to take into account the total amount wagered in a particular pool as reflected on a single ticket to determine whether the winnings are subject to withholding and reporting. This treatment better reflects the full cost of exotic bets. In addition, straight wagers are unlikely to have odds and produce payouts of at least 300 to 1, so they generally are not subject to withholding, regardless of the application of the proposed rule. The proposed regulations contain examples to illustrate the proposed rule for wagering transactions in the case of horse races, dog races, and jai alai.

The proposed rule for determining the amount of the wager addresses the fact that the current rules may result in withholding that significantly exceeds the amount necessary to cover the individual gambler's ultimate income tax liability, and that creates an unnecessary burden on the bettor and the horse racing, dog racing, and jai alai industries. As described in the commentators' example, current rules for exotic bets placed as box, key, or wheel bets can result in an 80% withholding rate on net winnings from wagers placed in the same pool. This result has become more common in the decades since the regulations were last amended because the number of exotic bet types and the popularity of exotic bets have increased substantially, and various combinations of these exotic bets are often placed together on a single ticket as part of the same transaction.

By limiting the amount of the wager in a wagering transaction with respect to horse races, dog races, and jai alai to the wagers represented on a single ticket, the proposed rule limits the potential for fraud and creates an administrable system for payers. The rule is administrable because it does not require payers to collect information regarding winning wagers where additional wagers placed in the same pool are reflected on multiple tickets. If bettors want to place additional wagers in the same parimutuel pool after already having purchased a ticket, commentators stated that bettors may be able to cancel the first ticket and place the original and additional wagers for that pool on a new ticket.

The proposed regulations maintain the current rule regarding identical wagers. To clarify the meaning of the term, however, the proposed regulations provide a definition of identical wagers taken from the preamble of the current regulations. T.D. 7919 (48 FR 46296). The proposed regulations also move examples of identical wagers from the regulatory text to the examples section.

The Treasury Department and the IRS request comments regarding whether the proposed rule addressing the amount of the wager in a wagering transaction in the case of horse races, dog races, and jai alai should apply to other types of gambling subject to withholding under section 3402(q), such as lotteries.

II. Ministerial Updates to Current Regulations

In addition to the proposed rule for wagers in horse races, dog races, and jai alai, the proposed regulations make ministerial updates to the current regulations to reflect current law.

Proposed regulations § 31.3402(q)–1(a) and (b) are amended to reflect the current statutory tax rate for withholding (the third-lowest tax rate under section 1(c)) and the current statutory thresholds for withholding for all types of gambling covered by this regulation ($5,000). In 1992 and again in 2001, Congress amended section 3402(q)(1) to change the withholding rate first from 20 percent to 28 percent and then to its current level of ''the third lowest rate of tax applicable under section 1(c),'' but the current regulations do not reflect either of these statutory amendments. *See* Economic Growth and Tax Relief Reconciliation Act of 2001, Public Law 107–16, § 101(c)(8); Energy Policy Act of 1992, Public Law 102–486, § 1934(a). In 1992, Congress also amended sections 3402(q)(3)(A) and (C) to change the withholding threshold for certain types of gambling from $1,000 to $5,000, which the current regulations do not reflect. Energy Policy Act, § 1942(a). In addition, the proposed regulations remove certain dates reflecting transition periods, which are no longer necessary.

In addition, proposed regulation § 31.3402(q)–1(c)(4) updates the rule regarding payments to nonresident aliens or foreign corporations.

III. Information Reporting for Gambling Winnings Subject to Withholding Under Section 3402(q)

Proposed regulations § 31.3402(q)–1(d) and (e) update and clarify the reporting rules for gambling winnings subject to withholding under section 3402(q). The amendments to § 31.3402(q)–1(d), regarding the statement by the payee of gambling winnings subject to withholding under section 3402(q), reorganize the current regulations into new sub-sections. Proposed § 31.3402(q)–1(d)(1) provides the general rule that each payer of gambling winnings subject to withholding under section 3402(q) must obtain a payee statement. Proposed § 31.3402(q)–1(d)(2) describes the content of the payee statement. Proposed § 31.3402(q)–1(d)(3) states the reliance rule currently described in § 31.3402(q)–1(c)(1)(ii) that where a payee furnishes the required payee statement and, as required by § 1.6011–3, indicates that he or she is entitled to winnings from identical wagers, the payer may rely on the statement in determining the total amount of proceeds from the wager.

The amendments to proposed § 31.3402(q)–1(e), regarding the information return filed by the payer on Form W–2G, modernize the current reporting rules. First, the proposed regulations replace outdated references to the place of filing with a requirement that the return be filed with the appropriate Internal Revenue Service location designated in the instructions to the form.

Second, the proposed regulations require the payer to report the taxpayer identification number of the winner in lieu of the social security number to allow for a broader range of taxpayer identification numbers, including individual taxpayer identification numbers (ITINs) and adoption taxpayer identification numbers (ATINs). This amendment allows truncation of the taxpayer identification number on the statement furnished by the payer to the payee because the regulation no longer requires a social security number. For provisions relating to the use of truncated taxpayer identification numbers, see § 31.6109–4 of this chapter.

Third, the proposed regulations update the payee identification provisions. Section 31.3402(q)–1(f)(1)(v) of the current regulations provides that the identification verifying the payee's identity must include the payee's social security number. According to the current regulations, examples of acceptable identification include a driver's license, a social security card, or a voter registration card. However, today most forms of identification do not include a person's social security number. Therefore, many payees do not have identification that contains the payee's social security number and, even if they do, they may not have this identification with them at the time that they receive a payment of gambling winnings subject to withholding under section 3402(q).

To address this issue, proposed §§ 31.3402(q)–1(e)(1)(v) and (e)(2) provide that, in addition to government-issued identification, a properly completed Form W–9 signed by the payee is an acceptable form of identification to verify the payee's identifying information. Payers who verify payee information using identification set forth in proposed

§§ 31.3402(q)–1(e)(1)(v) and (e)(2) before the date that final regulations implementing these provisions are published in the **Federal Register** will be treated as meeting the requirements of § 31.3402(q)–1(f)(1)(v) of the current regulations.

Fourth, the proposed regulations contain a special rule in § 31.3402(q)–1(e)(3) that tribal member identification cards need not contain the payee's photograph to meet the identification requirements in § 31.3402(q)–1(e)(1)(v) of the proposed regulations, provided specific criteria are met. This special rule responds to comments raised by Indian tribes in response to the notice of proposed rulemaking (REG–132253–11) under section 6041 regarding information returns to report winnings from bingo, keno, and slot machine play that many tribal identification cards do not contain photographs.

Fifth, the proposed regulations update the obsolete reference to Form W–3G to reflect that payers should use Form 1096 to transmit Forms W–2G to the Internal Revenue Service.

Finally, the proposed regulations in § 31.3402(q)–1(e)(5) provides that a payer filing an information return with the Internal Revenue Service must furnish a statement to the payee containing the same information on or before January 31st of the year following the calendar year in which payment of the winnings subject to withholding is made. See section 6041(d).

Proposed amendments to the regulations under section 3406 update the reporting requirements to address horse races, dog races, and jai alai. Proposed § 31.3406(g)–2(d) is amended to clarify the definition of a reportable gambling winning and to add a cross-reference to § 31.3402(q)–1(c) for determining the amount of the wager in a wagering transaction with respect to horse races, dog races, and jai alai, or amounts paid with respect to identical wagers.

Proposed Effective/Applicability Date

These regulations are proposed to apply to payments made after the date of publication of the Treasury Decision adopting these rules as final regulations in the **Federal Register**.

Statement of Availability of IRS Documents

IRS published guidance cited in this preamble is published in the Internal Revenue Bulletin and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS Web site at *http://www.irs.gov.*

Special Analyses

Certain IRS regulations, including this one, are exempt from the requirements of Executive Order 12866, as supplemented and reaffirmed by Executive Order 13563. Therefore, a regulatory assessment is not required. It is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that this rule merely provides guidance regarding withholding and reporting requirements for payers of certain gambling winnings. The requirement for payers to withhold and make information returns is imposed by statute and not these regulations. In addition, this rule reduces the existing burden on payers to comply with the statutory requirement by decreasing the number of payments subject to withholding and reporting. Therefore, a Regulatory Flexibility Analysis under the Regulatory Flexibility Act (5 U.S.C. Chapter 6) is not required.

Pursuant to section 7805(f) of the Internal Revenue Code, this notice of proposed rulemaking has been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written comments (a signed original and eight (8) copies) or electronic comments that are submitted timely to the IRS. In addition to the requests for comments noted in the Background Section, Treasury and the IRS request comments on any other aspects of the proposed rules, and any other issues relating to the payment of gambling winnings that are not addressed in the proposed regulations. All comments will be available at *www.regulations.gov* for public inspection or upon request.

A public hearing will be scheduled if requested in writing by any person that timely submits written comments. If a public hearing is scheduled, notice of the date, time, and place for the public hearing will be published in the **Federal Register**.

Drafting Information

The principal author of these proposed regulations is David Bergman of the Office of the Associate Chief Counsel (Procedure and Administration).

List of Subjects in 26 CFR Part 31

Employment taxes and collection of income tax at source.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 31 is proposed to be amended as follows:

PART 31—EMPLOYMENT TAXES AND COLLECTION OF INCOME TAXES AT THE SOURCE

■ **Paragraph 1.** The authority citation for part 31 continues to read in part as follows:

Authority: 26 U.S.C. 7805. * * *

■ **Par. 2.** Section 31.3402(q)–1 is amended:

■ 1. By revising paragraphs (a)(1), (b), and (c)(1) and (4).

■ 2. By redesignating paragraph (d) as paragraph (f), paragraph (e) as paragraph (d), and paragraph (f) as paragraph (e).

■ 3. By revising newly designated paragraphs (d) and (e).

■ 4. In paragraph (f), removing Example 3 and Example 11, by redesignating Examples 4 through 10 as Examples 3 through 9, and adding examples 10 through 16.

■ 5. In paragraph (f), in newly redesignated Example 4 by removing the language ''Example 4'' and adding in its place the language ''Example 3'' and in newly redesignated Example 6 by removing the language ''Example 6'' and adding in its place the language ''Example 5'' wherever it appears.

■ 6. By adding paragraph (g).

The revisions and additions read as follows:

§ 31.3402(q)–1 Extension of withholding to certain gambling winnings.

(a) *Withholding obligation*—(1) *General rule.* Every person, including the Government of the United States, a State, or a political subdivision thereof, or any instrumentality of any of the foregoing making any payment of ''winnings subject to withholding'' (defined in paragraph (b) of the section) shall deduct and withhold a tax in an amount equal to the product of the third lowest rate of tax applicable under section 1(c) and such payment. The tax shall be deducted and withheld upon payment of the winnings by the person making such payment (''payer''). See paragraph (c)(5)(ii) of this section for a special rule relating to the time for making deposits of withheld amounts and filing the return with respect to those amounts. Any person receiving a payment of winnings subject to withholding must furnish the payer a statement as required in paragraph (d) of this section. Payers of winnings subject to withholding must file a return with the Internal Revenue Service and furnish a statement to the payee as required in paragraph (e) of this section. With respect to reporting requirements for certain payments of gambling winnings not subject to withholding, see section 6041 and the regulations thereunder.

* * * * *

(b) *Winnings subject to withholding.* (1) *In general.* Winnings subject to withholding means any payment from—

(i) A wager placed in a State-conducted lottery (defined in paragraph (c)(2) of this section) but only if the proceeds from the wager exceed $5,000;

(ii) A wager placed in a sweepstakes, wagering pool, or lottery other than a State-conducted lottery but only if the proceeds from the wager exceed $5,000; or

(iii) Any other wagering transaction (as defined in paragraph (c)(3) of this section) but only if the proceeds from the wager (A) exceed $5,000 and (B) are at least 300 times as large as the amount of the wager.

(2) *Total proceeds subject to withholding.* If proceeds from the wager qualify as winnings subject to withholding, then the total proceeds from the wager, and not merely amounts in excess of $5,000, are subject to withholding.

(c) *Definitions; special rules*—(1) *Rules for determining amount of proceeds from a wager*—(i) *In general.* The amount of ''proceeds from a wager'' is the amount paid with respect to the wager, less the amount of the wager.

(ii) *Amount of the wager in the case of horse races, dog races, and jai alai.* In the case of a wagering transaction with respect to horse races, dog races, or jai alai, all wagers placed in a single parimutuel pool and represented on a single ticket are aggregated and treated as a single wager for purposes of determining the amount of the wager. A ticket in the case of horse races, dog races, or jai alai is a written or electronic record that the payee must present to collect proceeds from a wager or wagers.

(iii) *Amount paid with respect to a wager*—(A) *Identical wagers.* Amounts paid with respect to identical wagers are treated as paid with respect to a single wager for purposes of calculating the amount of proceeds from a wager. Two or more wagers are identical wagers if winning depends on the occurrence (or non-occurrence) of the same event or events; the wagers are placed with the same payer; and, in the case of horse races, dog races, or jai alai, the wagers are placed in the same parimutuel pool. Wagers may be identical wagers even if the amounts wagered differ as long as the wagers are otherwise treated as identical wagers under this paragraph (c)(1)(iii)(A). Tickets purchased in a lottery generally are not identical wagers, because the designation of each ticket as a winner generally would not be based on the occurrence of the same event, *e.g.,* the drawing of a particular number.

(B) *Non-monetary proceeds.* In determining the amount paid with respect to a wager, proceeds which are not money are taken into account at the fair market value.

(C) *Periodic payments.* Periodic payments, including installment payments or payments which are to be made periodically for the life of a person, are aggregated for purposes of determining the amount paid with respect to the wager. The aggregate amount of periodic payments to be made for a person's life is based on that person's life expectancy. See §§ 1.72–5 and 1.72–9 of this chapter for rules used in computing the expected return on annuities. For purposes of determining the amount subject to withholding, the first periodic payment shall be reduced by the amount of the wager.

* * * * *

(4) *Certain payments to nonresident aliens or foreign corporations.* A payment of winnings that is subject to withholding tax under section 1441(a) (relating to withholding on nonresident aliens) or 1442(a) (relating to withholding on foreign corporations) is not subject to the tax imposed by section 3402(q) and this section if the payer complies with the requirements of withholding, documentation, and information reporting rules of section 1441(a) or 1442(a) and the regulations thereunder. A payment is treated as being subject to withholding tax under section 1441(a) or 1442(a) notwithstanding that the rate of such tax is reduced (even to zero) as may be provided by an applicable treaty with another country. However, a reduced or zero rate of withholding of tax shall not be applied by the payer in lieu of the rate imposed by sections 1441 and 1442 unless the person receiving the winnings has provided to the payer the documentation required by § 1.1441–6 of this chapter to establish entitlement to treaty benefits.

* * * * *

(d) *Statement furnished by payee*—(1) *In general.* Each person who is making a payment subject to withholding under this section must obtain from the payee a statement described in paragraph (d)(2) of this section.

(2) *Contents of statement.* (i) Each person who is to receive a payment of winnings subject to withholding under this section must furnish the payer a statement on Form W–2G or 5754 (whichever is applicable) made under the penalties of perjury containing—

(A) The name, address, and taxpayer identification number of the winner accompanied by a declaration that no other person is entitled to any portion of such payment, or

(B) The name, address, and taxpayer identification number of the payee and of every person entitled to any portion of such payment.

(3) If more than one payment of winnings subject to withholding is to be made with respect to a single wager, for example in the case of an annuity, the payee is required to furnish the payer a statement with respect to the first such payment only, provided that such other payments are taken into account in a return required by paragraph (e) of this section.

(4) *Reliance on statement for identical wagers.* If the payee furnishes the statement which may be required pursuant to § 1.6011–3 of this chapter (regarding the requirement of a statement from payees of certain gambling winnings), indicating that the payee (and any other persons entitled to a portion of the winnings) is entitled to winnings from identical wagers, as defined in paragraph (c)(1)(iii)(A) of this section, and indicating the amount of such winnings, if any, then the payer may rely upon such statement in determining the total amount of proceeds from the wager under paragraph (c)(1) of this section.

(e) *Return of payer*—(1) *In general.* Every person making payment of winnings for which a statement is required under paragraph (d) of this section shall file a return on Form W–2G with the Internal Revenue Service location designated in the instructions to the form on or before February 28 (March 31 if filed electronically) of the calendar year following the calendar year in which the payment of winnings is made. The return required by this paragraph (e) need not include the statement by the payee required by paragraph (d) of this section and, therefore, need not be signed by the payee, provided such statement is retained by the payer as long as the contents thereof may become material in the administration of any internal revenue law. In addition, the return required by this paragraph (e) need not contain the information required by paragraph (e)(1)(v) of this section provided such information is obtained with respect to the payee and retained by the payer as long as the contents thereof may become material in the administration of any internal revenue law. For payments to more than one winner, a separate Form W–2G, which in no event need be signed by the winner, shall be filed with respect to each such winner. Each Form W–2G shall contain the following:

(i) The name, address, and employer identification number of the payer;

(ii) The name, address, and taxpayer identification number of the winner;

(iii) The date, amount of the payment, and amount withheld;

(iv) The type of wagering transaction;

(v) Except with respect to winnings from a wager placed in a State-conducted lottery, a general description of the two types of identification (as described in paragraph (e)(2) of this section), one of which must have the payee's photograph on it (except in the case of tribal member identification cards in certain circumstances as described in paragraph (e)(3) of this section), that the payer relied on to verify the payee's name, address, and taxpayer identification number;

(vi) The amount of winnings from identical wagers; and

(vii) Any other information required by the form, instructions, or other applicable guidance published in the Internal Revenue Bulletin.

(2) *Identification.* The following items are treated as identification for purposes of paragraph (e)(1)(v) of this section—

(i) Government-issued identification (for example, a driver's license, passport, social security card, military identification card, tribal member identification card issued by a federally-recognized Indian tribe, or voter registration card) in the name of the payee; and

(ii) A Form W–9, ''Request for Taxpayer Identification Number and Certification,'' signed by the payee that includes the payee's name, address, taxpayer identification number, and other information required by the form. A Form W–9 is not acceptable for this purpose if the payee has modified the form (other than pursuant to instructions to the form) or if the payee has deleted the jurat or other similar provisions by which the payee certifies or affirms the correctness of the statements contained on the form.

(3) *Special rule for tribal member identification cards.* A tribal member identification card need not contain the payee's photograph to meet the identification requirement described in paragraph (e)(1)(v) of this section if—

(i) The payee is a member of a federally-recognized Indian tribe;

(ii) The payee presents the payer with a tribal member identification card issued by a federally-recognized Indian tribe stating that the payee is a member of such tribe; and

(iii) The payer is a gaming establishment (as described in § 1.6041–10(b)(2)(iv) of this chapter) owned or licensed (in accordance with 25 U.S.C. 2710) by the tribal government that issued the tribal member identification card referred to in paragraph (e)(3)(ii) of this section.

(4) *Transmittal form.* Persons making payments of winnings subject to withholding shall use Form 1096 to transmit Forms W–2G to the Internal Revenue Service.

(5) *Furnishing a statement to the payee.* Every payer required to make a return under paragraph (e)(1) of this section must also make and furnish to each payee, with respect to each payment of winnings subject to withholding, a written statement that contains the information that is required to be included on the return under paragraph (e)(1) of this section. The payer must furnish the statement to the payee on or before January 31st of the year following the calendar year in which payment of the winnings subject to withholding is made. The statement will be considered furnished to the payee if it is provided to the payee at the time of payment or if it is mailed to the payee on or before January 31st of the year following the calendar year in which payment was made.

(f) *Examples.* * * *

Example 10. B places a $15 bet at the cashier window at the racetrack for horse A to win the fifth race at the racetrack that day. After placing the first bet, B gains confidence in horse A's prospects to win and places an additional $40 bet at the cashier window at the racetrack for horse A to win the fifth race, receiving a second ticket for this second bet. Horse A wins the fifth race, and B wins a total of $5,500 (100 to 1 odds) on those bets. The $15 bet and the $40 bet are identical wagers under paragraph (c)(1)(iii)(A) of this section because winning on both bets depended on the occurrence of the same event and the bets are placed in the same parimutuel pool with the same payer. This is true regardless of the fact that the amount of the wager differs in each case.

B cashes the tickets at different cashier windows. Pursuant to paragraph (d) of this section and § 1.6011–3, B completes a Form W–2G indicating that the amount of winnings is from identical wagers and provides the form to each cashier. The payments by each cashier of $1,500 and $4,000 are less than the $5,000 threshold for withholding, but under paragraph (c)(1)(iii)(A) of this section, identical wagers are treated as paid with respect to a single wager for purposes of determining the proceeds from a wager. The payment is not subject to withholding or reporting because although the proceeds from the wager are $5,445 ($1,500 + $4,000 − $55), the proceeds from the wager are not at least 300 times as great as the amount wagered ($55 × 300 = $16,500).

Example 11. B makes two $1,000 bets in a single ''show'' pool for the same jai alai game, one bet on Player X to show and one bet on Player Y to show. A show bet is a winning bet if the player comes in first, second, or third in a single game. The bets are placed at the same time at the same cashier window, and B receives a single ticket showing both bets. Player X places second in the game, and Player Y does not place first, second, or third in the game. B wins $8,000 from his bet on Player X. Because winning on both bets does not depend on the occurrence of the same event, the bets are not identical bets under paragraph (c)(1)(iii)(A) of this section. However, pursuant to the rule in paragraph (c)(1)(ii) of this section, the amount of the wager is the aggregate amount of both wagers ($2,000) because the bets were placed in a single parimutuel pool and reflected on a single ticket. The payment is not subject to withholding or reporting because although the proceeds from the wager are $6,000 ($8,000 − $2,000), the proceeds from the wager are not at least 300 times as great as the amount wagered ($2,000 × 300 = $600,000).

Example 12. B bets a total of $120 on a three-dog exacta box bet ($20 for each one of the six combinations played) at the dog racetrack and receives a single ticket reflecting the bet from the cashier. B wins $5,040 from one of the selected combinations. Pursuant to the rule in paragraph (c)(1)(ii) of this section, the amount of the wager is $120, not $20 for the single winning combination of the six combinations played. The payment is not subject to withholding under section 3402(q) because the proceeds from the wager are $4,920 ($5,040 − $120), which is below the section 3402(q) withholding threshold.

Example 13. B makes two $12 Pick 6 bets at the horse racetrack at two different cashier windows and receives two different tickets each representing a single $12 Pick 6 bet. In his two Pick 6 bets, B selects the same horses to win races 1–5 but selects different horses to win race 6. All Pick 6 bets on those races at that racetrack are part of a single parimutuel pool from which Pick 6 winning bets are paid. B wins $5,020 from one of his Pick 6 bets. Pursuant to the rule in paragraph (c)(1)(ii) of this section, the bets are not aggregated for purposes of determining the amount of the wager because the bets are reflected on separate tickets. Assuming that the applicable rate is 25%, the racetrack must deduct and withhold $1,252 (($5,020 − $12) × 25%) because the amounts of the proceeds of $5,008 ($5,020 − $12) is greater than $5,000 and is at least 300 times as great as the amount wagered ($12 × 300 = $3,600). The racetrack also must report B's winnings on Form W–2G pursuant to paragraph (e) of this section and furnish a copy of the Form W–2G to B.

Example 14. C makes two $50 bets in two different parimutuel pools for the same jai alai game. One bet is an ''exacta'' in which C bets on player M to win and player N to ''place''. The other bet is a ''trifecta'' in which C bets on player M to win, player N to ''place,'' and player O to ''show.'' C wins both bets and is paid $2,000 with respect to the bet in the ''exacta'' pool and $3,100 with respect to the bet in the ''trifecta'' pool. Under paragraph (c)(1)(iii)(A) of this section, the bets are not identical bets. Under paragraph (c)(1)(ii) of this section, the bets are not aggregated for purposes of determining the amount of the wager for either payment because they are not wagers in the same parimutuel pool. No section 3402(q) withholding is required on either payment because neither payment separately exceeds the $5,000 withholding threshold.

Example 15. C makes two $100 bets for the same dog to win a particular race. C places one bet at the racetrack and one bet at an off-track betting establishment, but the two pools constitute a single pool. C receives separate tickets for each bet. C wins both bets and is paid $4,000 from the racetrack and $4,000 from the off-track betting establishment. Under paragraph (c)(1)(ii) of this section, the bets are not aggregated for purposes of determining the amount of the wager because the wager placed at the racetrack and the wager placed at the off-track betting establishment are reflected on separate tickets, despite being placed in the same parimutuel pool. No section 3402(q) withholding is required because neither payment separately exceeds the $5,000 withholding threshold.

Example 16. C places a $200 Pick 6 bet for a series of races at the racetrack on a particular day and receives a single ticket for the bet. No wager correctly picks all six races that day, so that portion of the pool carries over to the following day. On the following day, C places an additional $200 Pick 6 bet for that day's series of races and receives a new ticket for that bet. C wins $100,000 on the second day. Pursuant to the rule in paragraph (c)(1)(ii) of this section, the bets are on two separate tickets, so C's two Pick 6 bets are not aggregated for purposes of determining the amount of the wager. Assuming that the applicable rate is 25%, the racetrack must deduct and withhold $24,950 (($100,000 − $200) × 25%) because the amount of the proceeds of $99,800 ($100,000 − $200) is greater than $5,000, and is at least 300 times as great as the amount wagered ($200 × 300 = $60,000). The racetrack also must report C's winnings on Form W–2G pursuant to paragraph (e) of this section and furnish a copy of the Form W–2G to C.

(g) *Applicability date.* These rules apply to payments made after [*the date of publication of the Treasury decision adopting these rules as final regulations in the* **Federal Register**]. For rules that apply to payments made before that date, see 26 CFR 31.3402(q)–1 (revised April 2015).

■ **Par. 3.** Section 31.3406–0 is amended by adding an entry for paragraph (h) to § 31.3406(g)–2 to read as follows:

§ 31.3406–0 Outline of the backup withholding regulations.

* * * * *

§ 31.3406(g)–2 Exception for reportable payments for which backup withholding is otherwise required.

* * * * *

(h) Effective/applicability date.

* * * * *

■ **Par. 4.** Section 31.3406(g)–2 is amended by revising paragraphs (d)(2) and (3) and adding paragraph (h) to read as follows:

§ 31.3406(g)–2 Exception for reportable payment for which withholding is otherwise required.

* * * * *

(d) * * *

(2) *Definition of a reportable gambling winning and determination of amount subject to backup withholding.* For purposes of withholding under section 3406, a reportable gambling winning is any gambling winning subject to information reporting under section 6041. A gambling winning (other than a winning from bingo, keno, or slot machines) is a reportable gambling winning only if the amount paid with respect to the wager is $600 or more and if the proceeds are at least 300 times as large as the amount wagered. See § 1.6041–10 of this chapter to determine whether a winning from bingo, keno, or slot machines is a reportable gambling winning and thus subject to withholding under section 3406. The amount of a reportable gambling winning is—

(i) The amount paid with respect to the amount of the wager reduced, at the option of the payer; by

(ii) The amount of the wager.

(3) *Special rules.* For special rules for determining the amount of the wager in a wagering transaction with respect to horse racing, dog racing, and jai alai, or amounts paid with respect to identical wagers, see § 31.3402(q)–1(c).

* * * * *

(h) *Applicability date.* The rules apply to reportable gambling winnings paid after [*the date of publication of the Treasury decision adopting these rules as final regulations in the* ***Federal Register***]. For reportable gambling winnings paid on or before [*the date of publication of the Treasury decision adopting these rules as final regulations in the* ***Federal Register***], § 31.3406(g)–2 (as contained in 26 CFR part 31, revised April 2015) applies.

John Dalrymple,

Deputy Commissioner for Services and Enforcement.

Reconsideration of Finding That Greenhouse Gas Emissions From Aircraft Cause or Contribute to Air Pollution That May Reasonably Be Anticipated To Endanger Public Health and Welfare

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final action denying petition for reconsideration.

SUMMARY: This action provides notice that the U.S. Environmental Protection Agency (EPA) Administrator, Gina McCarthy, denied a petition for reconsideration of the final Finding that Greenhouse Gas Emissions from Aircraft Cause or Contribute to Air Pollution that May Reasonably Be Anticipated to Endanger Public Health and Welfare, published in the **Federal Register** on August 15, 2016.

DATES: The EPA took final action to deny the petition for reconsideration on December 21, 2016.

FOR FURTHER INFORMATION CONTACT: Lesley Jantarasami, Office of Atmospheric Programs, Climate Change Division, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Mail Code 6207–A, Washington DC 20460; Telephone number: (202) 343–9990; Email address: *ghgendangerment@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. How can I get copies of this document and other related information?

This **Federal Register** document, the petition for reconsideration and the EPA's response addressing the petition for reconsideration are available in the docket under Docket ID No. EPA–HQ–OAR–2014–0828.

Docket. The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2014–0828. Publicly available docket materials are available either electronically through *http://www.regulations.gov* or in hard copy at the EPA Docket Center (EPA/DC), EPA WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is

(202) 566–1744, and the telephone number for the Air Docket is (202) 566–1742. This action, the petition for reconsideration and the EPA's response addressing the petition can also be found on the EPA's Web site at *https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-finding-greenhouse-gas-emissions-aircraft.*

Electronic access. You may access this **Federal Register** document electronically from the Government Printing Office under the ''**Federal Register**'' listings at FDSys (*http://www.gpo.gov/fdsys/browse/collection.action?collectionCode=FR*).

II. Judicial Review

Section 307(b)(1) of the Clean Air Act (CAA) indicates which Federal Court of Appeals have venue over petitions for review of final EPA actions. This section provides, in part, that the petitions for review must be filed in the Court of Appeals for the District of Columbia Circuit if: (i) The agency action consists of ''nationally applicable regulations promulgated, or final action taken, by the Administrator;'' or (ii) such actions are locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.''

The EPA has determined that its action denying the petition for reconsideration is nationally applicable for purposes of CAA section 307(b)(1) because it affects the final Finding that Greenhouse Gas Emissions from Aircraft Cause or Contribute to Air Pollution that May Reasonably Be Anticipated to Endanger Public Health and Welfare, and that finding triggers the EPA's statutory duty to promulgate aircraft engine emission standards under CAA section 231, which are nationally applicable regulations and for which judicial review will be available only in the U.S. Court of Appeals for the District of Columbia Circuit. Moreover, EPA already determined that the subject finding was nationally applicable, *see* 81 FR 54422 (Aug. 15, 2016), and that finding has in fact been challenged in the U.S. Court of Appeals for the District of Columbia Circuit. In the alternative, even if this action were considered to be only locally or regionally applicable, the Administrator has determined that it has nationwide scope and effect within the meaning of CAA section 307(b)(1) both because EPA has determined that the final finding has nationwide scope and effect within the meaning of CAA section 307(b)(1), *see* 81 FR 54422 (Aug. 15, 2016), and because it concerns risks from GHG pollution and contributions to such pollution that occur across the nation.

Thus, any petition for judicial review of the EPA's decision to deny the petition for reconsideration described in this document must be filed in the U.S. Court of Appeals for the District of Columbia Circuit by February 28, 2017.

III. Description of Action

On July 25, 2016, EPA Administrator McCarthy signed the action entitled ''Finding that Greenhouse Gas Emissions from Aircraft Cause or Contribute to Air Pollution that May Reasonably Be Anticipated to Endanger Public Health and Welfare.'' That action included two findings under section 231(a)(2)(A) of the CAA. These findings were that: (1) Concentrations of six well-mixed greenhouse gases (GHGs) in the atmosphere endanger the public health and welfare of current and future generations (the endangerment finding), and (2) GHGs emitted from certain classes of engines used in certain aircraft [1] are contributing to the air pollution—the mix of those six GHGs in the atmosphere—that endangers public health and welfare (the cause or contribute finding, or contribution finding). The Administrator made these findings using the same definitions of ''air pollution'' and ''air pollutant'' as were used in earlier findings under CAA section 202(a)(1) regarding motor vehicle GHG emissions (the 2009 Findings), namely the combined mix of six key well-mixed GHGs: carbon dioxide (CO_2), methane, nitrous oxide, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). While the 2009 Findings under CAA section 202(a)(1) relate to GHG emissions from new motor vehicles and new motor vehicle engines, these findings under CAA section 231(a)(2)(A) relate to GHG emissions from certain classes of engines used in certain aircraft. These findings were published in the **Federal Register** on August 15, 2016 (81 FR 54422), and became effective on September 14, 2016 (2016 Findings).

The Biogenic CO_2 Coalition (Petitioner) submitted a petition dated October 14, 2016 asking the EPA to reconsider the 2016 Findings with respect to the Agency's treatment of biogenic carbon dioxide (CO_2) emissions from short-cycle annual herbaceous crops. CAA section 307(d)(7)(B) states that ''[o]nly an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. If the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed.''

The EPA carefully reviewed the petition for reconsideration and evaluated all the information presented on the issues raised, along with information contained in the docket for the 2016 Findings, in reaching a decision on the petition. The EPA has concluded that the petition does not meet the criteria for reconsideration in CAA section 307(d)(7)(B). In a letter to the petitioner, the EPA Administrator, Gina McCarthy, denied the petition for reconsideration. The letter included an enclosure, a Reconsideration Response document entitled ''Response to the Biogenic CO_2 Coalition's Petition for Reconsideration of the Final Finding that Greenhouse Gas Emissions from Aircraft Cause or Contribute to Air Pollution that May Reasonably Be Anticipated to Endanger Public Health and Welfare,'' that articulates in detail the rationale for the EPA's final responses to the petition for reconsideration and the EPA Administrator's denial of that petition. These documents are all available in the docket for this action.

IV. Conclusion

For the reasons discussed in the letter to the petitioner and the Reconsideration Response document, the petition to reconsider the final Finding that Greenhouse Gas Emissions from Aircraft Cause or Contribute to Air Pollution that May Reasonably Be Anticipated to Endanger Public Health and Welfare is denied.

[1] The contribution finding concludes that GHG emissions from certain classes of engines used in ''U.S. covered aircraft'' contribute to the air pollution that endangers public health and welfare. The finding defines ''U.S. covered aircraft'' to be subsonic jet aircraft with a maximum takeoff mass (MTOM) greater than 5,700 kilograms and subsonic propeller driven aircraft (*e.g.,* turboprops) with a MTOM greater than 8,618 kilograms. This contribution finding for engines used in U.S. covered aircraft results in the vast majority (89 percent) of total U.S. aircraft GHG emissions being included in this determination.

Dated: December 21, 2016.

Gina McCarthy,

Administrator.

AGENCY: Federal Communications Commission.

ACTION: Petition for Reconsideration.

SUMMARY: Petitions for Reconsideration (Petitions) have been filed in the Commission's rulemaking proceeding by David Oxenford and Kelly Donohue, on behalf of Connoisseur Media, LLC.; Richard J. Bodorff *et al.,* on behalf of Nexstar Broadcasting, Inc.; and Rick Kaplan *et al.,* on behalf of National Association of Broadcasters.

DATES: Oppositions to the Petitions must be filed on or before January 17, 2017. Replies to an opposition must be filed on or before January 24, 2017.

ADDRESSES: Federal Communications Commission, 445 12th Street SW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Benjamin Arden, Media Bureau, (202) 418–2605; email: *Benjamin.Arden@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's document, Report No. 3064, released December 21, 2016. The full text of the Petitions is available for viewing and copying at the FCC Reference Information Center, 445 12th Street SW., Room CY–A257, Washington, DC 20554 or may be accessed online via the Commission's Electronic Comment Filing System at: *http://apps.fcc.gov/ecfs/.* The Commission will not send a copy of this document pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A), because this document does not have an impact on any rules of particular applicability.

Subject: 2014 Quadrennial Regulatory Review—Review of the Commission's Broadcast Ownership Rules and Other Rules Adopted Pursuant to Section 202 of the Telecommunications Act of 1996, FCC 16–107, published at 81 FR 76220, November 1, 2016, in MB Docket Nos. 14–50, 09–182, 07–294, and 04–256. This document is being published pursuant to 47 CFR 1.429(e). *See also* 47 CFR 1.4(b)(1) and 1.429(f), (g).

Number of Petitions Filed: 3.

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Russian River Estuary Management Activities

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule.

SUMMARY: NMFS has received a request from the Sonoma County Water Agency (SCWA) for authorization to take marine mammals incidental to Russian River estuary management activities in Sonoma County, California, over the course of five years (2017–2022). As required by the Marine Mammal Protection Act (MMPA), NMFS is proposing regulations to govern that

take and requests comments on the proposed regulations.

DATES: Comments and information must be received no later than January 30, 2017.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2016–0163, by any of the following methods:

- *Electronic submission:* Submit all electronic public comments via the federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2016-0163,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East West Highway, Silver Spring, MD 20910.

Comments regarding any aspect of the collection of information requirement contained in this proposed rule should be sent to NMFS via one of the means provided here and to the Office of Information and Regulatory Affairs, NEOB–10202, Office of Management and Budget, Attn: Desk Office, Washington, DC 20503, *OIRA@omb.eop.gov.*

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Availability

A copy of SCWA's application and any supporting documents, as well as a list of the references cited in this document, may be obtained online at: *www.nmfs.noaa.gov/pr/permits/incidental/construction.htm.* In case of problems accessing these documents, please call the contact listed above (see **FOR FURTHER INFORMATION CONTACT**).

National Environmental Policy Act (NEPA)

NMFS prepared an Environmental Assessment (EA; 2010) and associated Finding of No Significant Impact (FONSI) in accordance with NEPA and the regulations published by the Council on Environmental Quality. These documents are posted at the aforementioned Internet address. Information in SCWA's application, NMFS's EA (2010), and this notice collectively provide the environmental information related to proposed issuance of these regulations for public review and comment. We will review all comments submitted in response to this notice as we complete the NEPA process, including a decision of whether the existing EA and FONSI provide adequate analysis related to the potential environmental effects of issuing an incidental take authorization to SCWA, prior to a final decision on the request.

Purpose and Need for Regulatory Action

This proposed rule, to be issued under the authority of the Marine Mammal Protection Act (MMPA) (16 U.S.C. 1361 *et seq.*), would establish a framework for authorizing the take of marine mammals incidental to SCWA's estuary management activities at the mouth of the Russian River in Sonoma County, CA. SCWA proposes to manage the naturally-formed barrier beach at the mouth of the Russian River in order to minimize potential for flooding adjacent to the estuary and to enhance habitat for juvenile salmonids, as well as to conduct biological and physical monitoring of the barrier beach and estuary. Breaching of the naturally-formed barrier beach at the mouth of the Russian River requires the use of heavy equipment and increased human presence, and monitoring in the estuary requires the use of small boats.

We received an application from SCWA requesting five-year regulations and authorization to take multiple species of marine mammals. Take would occur by Level B harassment incidental to estuary management activities due to disturbance of hauled pinnipeds. The regulations would be valid from 2017 to 2022. Please see ''Background'' below for definitions of harassment.

Legal Authority for the Proposed Action

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1371(a)(5)(A)) directs the Secretary of Commerce to allow, upon request, the incidental, but not intentional taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region for up to five years if, after notice and public comment, the agency makes certain findings and issues regulations that set forth permissible methods of taking pursuant to that activity, as well as monitoring and reporting requirements. Section 101(a)(5)(A) of the MMPA and the implementing regulations at 50 CFR part 216, subpart I provide the legal basis for issuing this proposed rule containing five-year regulations, and for any subsequent Letters of Authorization. As directed by this legal authority, this proposed rule contains mitigation, monitoring, and reporting requirements.

Summary of Major Provisions Within the Proposed Rule

The following provides a summary of some of the major provisions within the proposed rulemaking for SCWA estuary management activities. We have preliminarily determined that SCWA's adherence to the proposed mitigation, monitoring, and reporting measures listed below would achieve the least practicable adverse impact on the affected marine mammals. They include:

- Measures to minimize the number and intensity of incidental takes during sensitive times of year and to minimize the duration of disturbances.
- Measures designed to eliminate startling reactions.
- Eliminating or altering management activities on the beach when pups are present, and by setting limits on the frequency and duration of events during pupping season.

Background

Paragraphs 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1371 (a)(5)(A) and (D)) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s); will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant); and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.''

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

On September 2, 2016, we received an adequate and complete request from SCWA for authorization to take marine mammals incidental to estuary management activities. On September 20, 2016 (81 FR 64440), we published a notice of receipt of SCWA's application in the **Federal Register**, requesting comments and information related to the request for 30 days. We did not receive any comments. SCWA provided a revised draft incorporating minor revisions on November 1, 2016.

SCWA proposes to manage the naturally-formed barrier beach at the mouth of the Russian River in order to minimize potential for flooding adjacent to the estuary and to enhance habitat for juvenile salmonids, as well as to conduct biological and physical monitoring of the barrier beach and estuary. Flood control-related breaching of the barrier beach at the mouth of the river may include artificial breaches, as well as construction and maintenance of a lagoon outlet channel. The latter activity, an alternative management technique conducted to mitigate impacts of flood control on rearing habitat for Endangered Species Act (ESA)-listed salmonids, occurs only from May 15 through October 15 (hereafter, the ''lagoon management period''). Artificial breaching and monitoring activities may occur at any time during the period of validity of the proposed regulations. The requested regulations would be valid for 5 years, from April 21, 2017, through April 20, 2022.

Breaching of the naturally-formed barrier beach at the mouth of the Russian River requires the use of heavy equipment (*e.g.,* bulldozer, excavator) and increased human presence, and monitoring in the estuary requires the use of small boats. As a result, pinnipeds hauled out on the beach or at peripheral haul-outs in the estuary may exhibit behavioral responses that indicate incidental take by Level B harassment under the MMPA. Species known from the haul-out at the mouth of the Russian River or from peripheral haul-outs, and therefore anticipated to be taken incidental to the specified activity, include the harbor seal (*Phoca vitulina richardii*), California sea lion (*Zalophus californianus*), and northern elephant seal (*Mirounga angustirostris*).

Prior to this request for incidental take regulations and a subsequent Letter of Authorization (LOA), we issued seven consecutive incidental harassment authorizations (IHA) to SCWA for incidental take associated with the same ongoing activities. SCWA was first issued an IHA, valid for a period of one year, effective on April 1, 2010 (75 FR 17382), and was subsequently issued one-year IHAs for incidental take associated with the same activities, effective on April 21, 2011 (76 FR 23306), April 21, 2012 (77 FR 24471), April 21, 2013 (78 FR 23746), April 21, 2014 (79 FR 20180), April 21, 2015 (80 FR 24237), and April 21, 2016 (81 FR 22050).

Description of the Specified Activity

Overview

The proposed action involves management of the estuary to prevent flooding while preventing adverse modification to critical habitat for ESA-listed salmonids. Requirements related to the ESA are described in further detail below. During the lagoon management period, this involves construction and maintenance of a lagoon outlet channel that would facilitate formation of a perched lagoon. A perched lagoon, which is an estuary closed to tidal influence in which water surface elevation is above mean high tide, would reduce flooding while maintaining beneficial conditions for juvenile salmonids. Additional breaches of the barrier beach may be conducted for the sole purpose of reducing flood risk. SCWA's proposed activity was described in detail in our notice of proposed authorization prior to the 2011 IHA (76 FR 14924; March 18, 2011); please see that document for a detailed description of SCWA's estuary management activities. Aside from minor additions to SCWA's biological and physical estuary monitoring measures, the specified activity remains the same as that described in the 2011 document.

Dates and Duration

The specified activity may occur at any time during the five-year period of validity for these proposed regulations (April 21, 2017 through April 20, 2022), although construction and maintenance of a lagoon outlet channel would occur only during the lagoon management period. In addition, there are certain restrictions placed on SCWA during the harbor seal pupping season. These, as well as periodicity and frequency of the specified activities, are described in further detail below.

Specified Geographical Region

The estuary is located about 97 kilometers (km) (60 miles (mi)) northwest of San Francisco in Sonoma County, near Jenner, California (see Figure 1 of SCWA's application). The Russian River watershed encompasses 3,847 km^2 (1,485 mi^2) in Sonoma, Mendocino, and Lake Counties. The mouth of the Russian River is located at Goat Rock State Beach (see Figure 2 of SCWA's application); the estuary extends from the mouth upstream approximately 10 to 11 km (6–7 mi) between Austin Creek and the community of Duncans Mills (Heckel and McIver, 1994).

Detailed Description of Activities

Within the Russian River watershed, the U.S. Army Corps of Engineers (Corps), SCWA, and the Mendocino County Russian River Flood Control and Water Conservation Improvement District (District) operate and maintain Federal facilities and conduct activities in addition to the estuary management, including flood control, water diversion and storage, instream flow releases, hydroelectric power generation, channel maintenance, and fish hatchery production. The Corps, SCWA, and the District conducted these activities for many years before salmonid species in the Russian River were protected under the ESA. Upon determination that these actions were likely to affect ESA-listed salmonids, as well as designated critical habitat for these species, formal consultation under section 7 of the ESA was initiated. In 2008, NMFS issued a Biological Opinion (BiOp) for Water Supply, Flood Control Operations, and Channel Maintenance conducted by the Corps, SCWA, and the District in the Russian River watershed (NMFS, 2008). This BiOp found that the activities—including SCWA's estuary management activities—authorized by the Corps and undertaken by SCWA and the District, if continued in a manner similar to recent historic practices, were likely to jeopardize the continued existence of ESA-listed salmonids and were likely to adversely modify critical habitat.

If a project is found to jeopardize a species or adversely modify its critical habitat, NMFS must develop and recommend a non-jeopardizing Reasonable and Prudent Alternative (RPA) to the proposed project, in coordination with the federal action agency and any applicant. A component of the RPA described in the 2008 BiOp requires SCWA to collaborate with NMFS and modify their estuary water level management in order to reduce marine influence (*i.e.,* high salinity and tidal inflow) and promote a higher water surface elevation in the estuary in order to enhance the quality of rearing habitat for juvenile salmonids. A program of potential incremental steps prescribed to reach that goal includes adaptive management of the outlet channel. SCWA is also required to monitor the response of water quality, invertebrate production, and salmonids in and near the estuary to water surface elevation management in the estuary-lagoon system.

The analysis contained in the BiOp found that maintenance of lagoon conditions was necessary only for the lagoon management period. See NMFS's BiOp (2008) for details of that analysis. As a result of that determination, there are three components to SCWA's estuary management activities: (1) Lagoon outlet channel management, during the lagoon management period only, required to accomplish the dual purposes of flood risk abatement and maintenance of juvenile salmonid habitat; (2) traditional artificial breaching, with the sole goal of flood risk abatement; and (3) physical and biological monitoring. The latter activity, physical and biological monitoring, will remain the same as in past years and as described in our 2015 notice of proposed authorization (80 FR 14073; March 18, 2015). Please see the previously referenced **Federal Register** notice (76 FR 14924; March 18, 2011) for detailed discussion of lagoon outlet channel management, artificial breaching, and other monitoring activities.

NMFS's BiOp determined that salmonid estuarine habitat may be improved by managing the Russian River estuary as a perched, freshwater lagoon and, therefore, stipulates as an RPA to existing conditions that the estuary be managed to achieve such conditions between May 15th and October 15th. In recognition of the complexity and uncertainty inherent in attempting to manage conditions in a dynamic beach environment, the BiOp stipulates that the estuarine water surface elevation RPA be managed adaptively, meaning that it should be planned, implemented, and then iteratively refined based on experience gained from implementation. The first phase of adaptive management, which has been implemented since 2010, is limited to outlet channel management (ESA, 2015).

Proposed Mitigation

In order to issue an incidental take authorization (ITA) under section 101(a)(5)(A) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, ''and other means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for subsistence uses.'' NMFS's implementing regulations require applicants for ITAs to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)).

SCWA has proposed to continue the following mitigation measures, as implemented during the previous ITAs, designed to minimize impact to affected species and stocks:

- SCWA crews would cautiously approach (*e.g.,* walking slowly with limited arm movement and minimal sound) the haul-out ahead of heavy equipment to minimize the potential for sudden flushes, which may result in a stampede—a particular concern during pupping season.
- SCWA staff would avoid walking or driving equipment through the seal haul-out.
- Crews on foot would make an effort to be seen by seals from a distance, if possible, rather than appearing suddenly, again preventing sudden flushes.
- During breaching events, all monitoring would be conducted from the overlook on the bluff along Highway 1 adjacent to the haul-out in order to minimize potential for harassment.
- A water level management event may not occur for more than two consecutive days unless flooding threats cannot be controlled.

In addition, SCWA proposes to continue mitigation measures specific to pupping season (March 15–June 30), as implemented in the previous ITAs:

- SCWA will maintain a one week no-work period between water level management events (unless flooding is an immediate threat) to allow for an adequate disturbance recovery period. During the no-work period, equipment must be removed from the beach.
- If a pup less than one week old is on the beach where heavy machinery would be used or on the path used to access the work location, the management action will be delayed until the pup has left the site or the latest day possible to prevent flooding while still maintaining suitable fish rearing habitat. In the event that a pup remains present on the beach in the presence of flood risk, SCWA would consult with NMFS to determine the appropriate course of action. SCWA will coordinate with the locally established seal monitoring program (Stewards' Seal Watch) to determine if pups less than one week old are on the beach prior to a breaching event.
- Physical and biological monitoring will not be conducted if a pup less than one week old is present at the monitoring site or on a path to the site.

For all activities, personnel on the beach would include up to two equipment operators, three safety team members on the beach (one on each side of the channel observing the equipment operators, and one at the barrier to warn beach visitors away from the activities), and one safety team member at the overlook on Highway 1 above the beach. Occasionally, there would be two or more additional people (SCWA staff or regulatory agency staff) on the beach to observe the activities. SCWA staff would be followed by the equipment, which would then be followed by an SCWA vehicle (typically a small pickup truck, the vehicle would be parked at the previously posted signs and barriers on the south side of the excavation location). Equipment would be driven slowly on the beach and care would be taken to minimize the number of shut-downs and start-ups when the equipment is on the beach. All work would be completed as efficiently as possible, with the smallest amount of heavy equipment possible, to minimize disturbance of seals at the haul-out. Boats operating near river haul-outs during monitoring would be kept within posted speed limits and driven as far from the haul-outs as safely possible to minimize flushing seals.

We have carefully evaluated SCWA's proposed mitigation measures and considered a range of other measures in the context of ensuring that we prescribed the means of effecting the least practicable adverse impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another: (1) The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals, (2) the proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and (3) the practicability of the measure for applicant implementation.

Any mitigation measure(s) we prescribe should be able to accomplish, have a reasonable likelihood of accomplishing (based on current science), or contribute to the accomplishment of one or more of the general goals listed below:

(1) Avoidance or minimization of injury or death of marine mammals wherever possible (goals 2, 3, and 4 may contribute to this goal).

(2) A reduction in the number (total number or number at biologically important time or location) of individual marine mammals exposed to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing takes by behavioral harassment only).

(3) A reduction in the number (total number or number at a biologically important time or location) of times any individual marine mammal would be exposed to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing takes by behavioral harassment only).

(4) A reduction in the intensity of exposure to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing the severity of behavioral harassment only).

(5) Avoidance or minimization of adverse effects to marine mammal habitat, paying particular attention to the prey base, blockage or limitation of passage to or from biologically important areas, permanent destruction of habitat, or temporary disturbance of habitat during a biologically important time.

(6) For monitoring directly related to mitigation, an increase in the probability of detecting marine mammals, thus allowing for more effective implementation of the mitigation.

Based on our evaluation of SCWA's proposed measures, we have preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Description of Marine Mammals in the Area of the Specified Activity

Harbor seals are the most common species inhabiting the haul-out at the mouth of the Russian River (Jenner haul-out) and fine-scale local abundance data for harbor seals have been recorded extensively since 1972. California sea lions and northern elephant seals have also been observed infrequently in the project area. In addition to the primary Jenner haul-out, there are eight peripheral haul-outs nearby (see Figure 1 of SCWA's application). These include North Jenner and Odin Cove to the north; Pocked Rock, Kabemali, and Rock Point to the south; and Penny Logs, Patty's Rock, and Chalanchawi upstream within the estuary.

This section provides summary information regarding local occurrence of these species. We have reviewed SCWA's detailed species descriptions, including life history information, for accuracy and completeness and refer the reader to Sections 3 and 4 of SCWA's application instead of reprinting the information here. Please also see NMFS Stock Assessment Reports, which may be accessed online at *www.nmfs.noaa.gov/pr/sars/species.htm.*

Harbor Seals

Harbor seals inhabit coastal and estuarine waters and shoreline areas of the Northern Hemisphere from temperate to polar regions. The eastern North Pacific subspecies is found from Baja California north to the Aleutian Islands and into the Bering Sea. Multiple lines of evidence support the existence of geographic structure among harbor seal populations from California to Alaska (Carretta *et al.,* 2016). However, because stock boundaries are difficult to meaningfully draw from a biological perspective, three separate harbor seal stocks are recognized for management purposes along the west coast of the continental U.S.: (1) Inland waters of Washington, (2) outer coast of Oregon and Washington, and (3) California (Carretta *et al.,* 2016). Placement of a stock boundary at the California-Oregon border is not based on biology but is considered a political and jurisdictional convenience (Carretta *et al.,* 2016). In addition, harbor seals may occur in Mexican waters, but these animals are not considered part of the California stock. Only the California stock is expected to be found in the project area.

California harbor seals are not protected under the ESA or listed as depleted under the MMPA, and are not considered a strategic stock under the MMPA because annual human-caused mortality (43) is significantly less than the calculated potential biological removal (PBR; 1,641) (Carretta *et al.,* 2016). The population appears to be stabilizing at what may be its carrying capacity and the fishery mortality is declining. The best abundance estimate of the California stock of harbor seals is 30,968 and the minimum population size of this stock is 27,348 individuals (Carretta *et al.,* 2016).

Harbor seal pupping normally occurs at the Russian River from March until late June, and sometimes into early July. The Jenner haul-out is the largest in Sonoma County. A substantial amount of monitoring effort has been conducted at the Jenner haul-out and surrounding areas. Concerned local residents formed the Stewards' Seal Watch Public Education Program in 1985 to educate beach visitors and monitor seal populations. State Parks Volunteer Docents continue this effort towards safeguarding local harbor seal habitat. On weekends during the pupping and molting season (approximately March-August), volunteers conduct public outreach and record the numbers of visitors and seals on the beach, other marine mammals observed, and the number of boats and kayaks present.

Ongoing monthly seal counts at the Jenner haul-out were begun by J. Mortenson in January 1987, with additional nearby haul-outs added to the counts thereafter. In addition, local resident E. Twohy began daily observations of seals and people at the Jenner haul-out in November 1989. These datasets note whether the mouth at the Jenner haul-out was opened or closed at each observation, as well as various other daily and annual patterns of haul-out usage (Mortenson and Twohy, 1994). In 2009, SCWA began regular baseline monitoring of the haul-out as a component of its estuary management activity. Table 1 shows average daily numbers of seals observed at the mouth of the Russian River from 1993–2005 and from 2009–15.

Data from 1993–2005 adapted from Mortenson and Twohy (1994) and E. Twohy (unpublished data). Data from 2009–15 collected by SCWA. Months represented by dash indicate periods where data were missing or incomplete.

[1] Mean calculated as a weighted average to account for unequal sample sizes between years. See Table 4 of SCWA's application.

The number of seals present at the Jenner haul-out generally declines during bar-closed conditions (Mortenson, 1996). SCWA's pinniped monitoring efforts from 1996 to 2000 focused on artificial breaching activities and their effects on the Jenner haul-out. Seal counts and disturbances were recorded from one to two days prior to breaching, the day of breaching, and the day after breaching (MSC, 1997, 1998, 1999, 2000; SCWA and MSC, 2001). In each year, the trend observed was that harbor seal numbers generally declined during a beach closure and increased the day following an artificial breaching event. Heckel and McIver (1994) speculated that the loss of easy access to the haul-out and ready escape to the sea during bar-closed conditions may account for the lower numbers. Table 2 shows average daily seal counts recorded during SCWA monitoring of breaching events from 2009–15, representing bar-closed conditions, when seal numbers decline.

TABLE 2—AVERAGE NUMBER OF HARBOR SEALS OBSERVED AT THE MOUTH OF THE RUSSIAN RIVER DURING BREACHING EVENTS

[*i.e.,* bar-closed conditions—by Month]

Year	Jan.	Feb.	Mar.	Apr.	May	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
2009–15	49	75	133	99	80	98	117	17 [1]	30	28	32	59

[1] No estuary management events occurred; data from earlier monitoring effort (1996–2000).

Mortenson (1996) observed that pups were first seen at the Jenner haul-out in late March, with maximum counts in May. In this study, pups were not counted separately from other age classes at the haul-out after August due to the difficulty in discriminating pups from small yearlings. From 1989 to 1991, Hanson (1993) observed that pupping began at the Jenner haul-out in mid-April, with a maximum number of pups observed during the first two weeks of May. This corresponds with the peaks observed at Point Reyes, where the first viable pups are born in March and the peak is the last week of April to early May (SCWA, 2014). Based on this information, pupping season at the Jenner haul-out is conservatively defined here as March 15 to June 30.

California Sea Lions

California sea lions range from the Gulf of California north to the Gulf of Alaska, with breeding areas located in the Gulf of California, western Baja California, and southern California. Five genetically distinct geographic populations have been identified: (1) Pacific Temperate, (2) Pacific Subtropical, (3) Southern Gulf of California, (4) Central Gulf of California and (5) Northern Gulf of California (Schramm *et al.,* 2009). Rookeries for the Pacific Temperate population are found within U.S. waters and just south of the U.S.-Mexico border, and animals belonging to this population may be found from the Gulf of Alaska to Mexican waters off Baja California. Animals belonging to other populations (*e.g.,* Pacific Subtropical) may range into U.S. waters during non-breeding periods. For management purposes, a stock of California sea lions comprising those animals at rookeries within the U.S. is defined (*i.e.,* the U.S. stock of California sea lions) (Carretta *et al.,* 2016). Pup production at the Coronado Islands rookery in Mexican waters is considered an insignificant contribution to the overall size of the Pacific Temperate population (Lowry and Maravilla-Chavez, 2005).

California sea lions are not protected under the ESA or listed as depleted under the MMPA. Total annual human-caused mortality (389) is substantially less than the PBR (estimated at 9,200); therefore, California sea lions are not considered a strategic stock under the MMPA. The best abundance estimate of the U.S. stock of California sea lions is 296,750 and the minimum population size of this stock is 153,337 individuals (Carretta *et al.,* 2016).

Beginning in January 2013, elevated strandings of California sea lion pups were observed in southern California, with live sea lion strandings nearly three times higher than the historical average. Findings to date indicate that a likely contributor to the large number of stranded, malnourished pups was a change in the availability of sea lion prey for nursing mothers, especially sardines. Although the pups showed signs of some viruses and infections, findings indicate that this event was not caused by disease or a single infectious agent but by the lack of high quality, close-by food sources for nursing mothers. Several different kinds of one sort of virus (astroviruses, including some new species of astrovirus) were identified in a high percentage of the samples; however, the importance of this finding is still under investigation. The causes and mechanisms of this remain under investigation (*www.nmfs.noaa.gov/pr/health/mmume/californiasealions2013.htm;* accessed December 6, 2016).

Solitary California sea lions have occasionally been observed at or in the vicinity of the Russian River estuary (MSC, 1999, 2000), in all months of the year except June. Male California sea lions are occasionally observed hauled out at or near the Russian River mouth in most years: August 2009, January and December 2011, January 2012, December 2013, February 2014, and February and April 2015. Other individuals were observed in the surf at the mouth of the river or swimming inside the estuary. Juvenile sea lions were observed during the summer of 2009 at the Patty's Rock haul-out, and some sea lions were observed during monitoring of peripheral haul-outs in October 2009. The occurrence of individual California sea lions in the action area may occur year-round, but is infrequent and sporadic.

Northern Elephant Seals

Northern elephant seals gather at breeding areas, located primarily on offshore islands of Baja California and California, from approximately December to March before dispersing for feeding. Males feed near the eastern Aleutian Islands and in the Gulf of Alaska, while females feed at sea south of 45 °N (Stewart and Huber, 1993; Le Boeuf *et al.,* 1993). Adults then return to land between March and August to molt, with males returning later than females, before dispersing again to their respective feeding areas between molting and the winter breeding season. Populations of northern elephant seals in the U.S. and Mexico are derived from a few tens or hundreds of individuals surviving in Mexico after being nearly hunted to extinction (Stewart *et al.,* 1994). Given the recent derivation of most rookeries, no genetic differentiation would be expected. Although movement and genetic exchange continues between rookeries, most elephant seals return to their natal rookeries when they start breeding (Huber *et al.,* 1991). The California breeding population is now demographically isolated from the Baja California population and is considered to be a separate stock.

Northern elephant seals are not protected under the ESA or listed as depleted under the MMPA. Total annual human-caused mortality (8.8) is substantially less than the PBR (estimated at 4,882); therefore, northern elephant seals are not considered a strategic stock under the MMPA. The best abundance estimate of the California breeding population of northern elephant seals is 179,000 and the minimum population size of this stock is 81,368 individuals (Carretta *et al.,* 2016).

Censuses of pinnipeds at the mouth of the Russian River have been taken at least semi-monthly since 1987. Elephant seals were noted from 1987–95, with one or two elephant seals typically counted during May censuses, and occasional records during the fall and winter (Mortenson and Follis, 1997). A single, tagged northern elephant seal sub-adult was present at the Jenner haul-out from 2002–07. This individual seal, which was observed harassing harbor seals also present at the haul-out, was generally present during molt and again from late December through March. A single juvenile elephant seal was observed at the Jenner haul-out in June 2009 and, in recent years, a sub-adult seal was observed in late summer of 2013–14. The occurrence of individual northern elephant seals in the action area has generally been infrequent and sporadic in the past ten years.

Potential Effects of the Specified Activity on Marine Mammals and Their Habitat

This section includes a summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat. The ''Estimated Take by Incidental Harassment'' section later in this document will include a quantitative analysis of the number of incidents of take expected to occur incidental to this activity. The ''Negligible Impact Analysis'' section will include an analysis of how this specific activity will impact marine mammals and will consider the content of this section, the ''Estimated Take by Incidental Harassment'' section, and the ''Proposed Mitigation'' section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and from that on the affected marine mammal populations or stocks.

A significant body of monitoring data exists for pinnipeds at the mouth of the Russian River. In addition, pinnipeds have co-existed with regular estuary management activity for decades, as well as with regular human use activity at the beach, and are likely habituated to human presence and activity. Nevertheless, SCWA's estuary management activities have the potential to disturb pinnipeds present on the beach or at peripheral haul-outs in the estuary. During breaching operations, past monitoring has revealed that some or all of the seals present typically move or flush from the beach in response to the presence of crew and equipment, though some may remain hauled-out. No stampeding of seals—a potentially dangerous occurrence in which large numbers of animals succumb to mass panic and rush away from a stimulus—has been documented since SCWA developed protocols to prevent such events in 1999. While it is likely impossible to conduct required estuary management activities without provoking some response in hauled-out animals, precautionary mitigation measures, described later in this document, ensure that animals are gradually apprised of human approach. Under these conditions, seals typically exhibit a continuum of responses, beginning with alert movements (*e.g.,* raising the head), which may then escalate to movement away from the stimulus and possible flushing into the water. Flushed seals typically re-occupy the haul-out within minutes to hours of the stimulus.

In the absence of appropriate mitigation measures, it is possible that pinnipeds could be subject to injury, serious injury, or mortality, likely through stampeding or abandonment of pups. However, based on a significant body of site-specific data, harbor seals are unlikely to sustain any harassment that may be considered biologically significant. Individual animals would, at most, flush into the water in response to maintenance activities but may also simply become alert or move across the beach away from equipment and crews. During 2013, SCWA observed that harbor seals are less likely to flush from the beach when the primary aggregation of seals is north of the breaching activity (please refer to Figure 2 of SCWA's application), meaning that personnel and equipment are not required to pass the seals. Four artificial breaching events were implemented in 2013, with two of these events occurring north of the primary aggregation and two to the south (at approximately 250 and 50 m distance) (SCWA, 2014). In both of the former cases, all seals present eventually flushed to the water, but when breaching activity remained to the south of the haul-out, only 11 and 53 percent of seals, respectively, were flushed.

California sea lions and northern elephant seals have been observed as less sensitive to stimulus than harbor seals during monitoring at numerous other sites. For example, monitoring of pinniped disturbance as a result of abalone research in the Channel Islands showed that while harbor seals flushed at a rate of 69 percent, California sea lions flushed at a rate of only 21 percent. The rate for elephant seals declined to 0.1 percent (VanBlaricom, 2010). In the event that either of these species is present during management activities, they would be expected to display a minimal reaction to maintenance activities—less than that expected of harbor seals.

Although the Jenner haul-out is not known as a primary pupping beach, pups have been observed during the pupping season; therefore, we have evaluated the potential for injury, serious injury, or mortality to pups. There is a lack of published data regarding pupping at the mouth of the Russian River, but SCWA monitors have observed pups on the beach. No births were observed during recent monitoring, but may be inferred based on signs indicating pupping (*e.g.,* blood spots on the sand, birds consuming possible placental remains). Pup injury or mortality would be most likely to occur in the event of extended separation of a mother and pup, or trampling in a stampede. As discussed previously, no stampedes have been recorded since development of appropriate protocols in 1999. Any California sea lions or northern elephant seals present would be independent juveniles or adults; therefore, analysis of impacts on pups is not relevant for those species.

Similarly, the period of mother-pup bonding, critical time needed to ensure pup survival and maximize pup health, is not expected to be impacted by estuary management activities. Harbor seal pups are extremely precocious, swimming and diving immediately after birth and throughout the lactation period, unlike most other phocids which normally enter the sea only after weaning (Lawson and Renouf, 1985; Cottrell *et al.,* 2002; Burns *et al.,* 2005). Lawson and Renouf (1987) investigated harbor seal mother-pup bonding in response to natural and anthropogenic disturbance. In summary, they found that the most critical bonding time is within minutes after birth. As described previously, the peak of pupping season is typically concluded by mid-May, when the lagoon management period begins. As such, it is expected that mother-pup bonding would likely be concluded as well. The number of management events during the months of March and April has been relatively low in the past, and the breaching activities occur in a single day over several hours. In addition, mitigation measures described later in this document further reduce the likelihood of any impacts to pups, whether through injury or mortality or interruption of mother-pup bonding (which may lead to abandonment).

In summary, and based on extensive monitoring data, we believe that impacts to hauled-out pinnipeds during estuary management activities would be behavioral harassment of limited duration (*i.e.,* less than one day) and limited intensity (*i.e.,* temporary flushing at most). Stampeding, and therefore injury or mortality, is not expected—nor been documented—in the years since appropriate protocols were established (see ''Mitigation'' for more details). Further, the continued, and increasingly heavy (see SCWA's monitoring reports), use of the haul-out despite decades of breaching events indicates that abandonment of the haul-out is unlikely.

Anticipated Effects on Marine Mammal Habitat

The purposes of the estuary management activities are to improve summer rearing habitat for juvenile salmonids in the Russian River estuary and/or to minimize potential flood risk to properties adjacent to the estuary. These activities would result in temporary physical alteration of the Jenner haul-out, but are essential to conserving and recovering endangered salmonid species, as prescribed by the BiOp. These salmonids are themselves prey for pinnipeds. In addition, with barrier beach closure, seal usage of the beach haul-out declines, and the three nearby river haul-outs may not be available for usage due to rising water surface elevations. Breaching of the barrier beach, subsequent to the temporary habitat disturbance, likely increases suitability and availability of habitat for pinnipeds. Biological and water quality monitoring would not physically alter pinniped habitat. Please see the previously referenced **Federal Register** notice (76 FR 14924; March 18, 2011) for a more detailed discussion of anticipated effects on habitat.

During SCWA's pinniped monitoring associated with artificial breaching activities from 1996 to 2000, the number of harbor seals hauled out declined when the barrier beach closed and then increased the day following an artificial breaching event (MSC, 1997, 1998, 1999, and 2000; SCWA and MSC, 2001). This response to barrier beach closure followed by artificial breaching has remained consistent in recent years and is anticipated to continue. However, it is possible that the number of pinnipeds using the haul-out could decline during the extended lagoon management period, when SCWA would seek to maintain a shallow outlet channel rather than the deeper channel associated with artificial breaching. Collection of baseline information during the lagoon management period is included in the monitoring requirements described later in this document. SCWA's previous monitoring, as well as Twohy's daily counts of seals at the sandbar (Table 1) indicate that the number of seals at the haul-out declines from August to October, so management of the lagoon outlet channel (and managing the sandbar as a summer lagoon) would have little effect on haul-out use during the latter portion of the lagoon management period. The early portion of the lagoon management period coincides with the pupping season. Past monitoring during this period, which represents some of the longest beach closures in the late spring and early summer months, shows that the number of pinnipeds at the haul-out tends to fluctuate, rather than showing the more straightforward declines and increases associated with closures and openings seen at other times of year (MSC, 1998). This may indicate that seal haul-out usage during the pupping season is less dependent on bar status. As such, the number of seals hauled out from May through July would be expected to fluctuate but is unlikely to respond dramatically to the absence of artificial breaching events. Regardless, any impacts to habitat resulting from

SCWA's management of the estuary during the lagoon management period are not in relation to natural conditions but, rather, in relation to conditions resulting from SCWA's discontinued approach of artificial breaching during this period.

In summary, there will be temporary physical alteration of the beach. However, natural opening and closure of the beach results in the same impacts to habitat. Therefore, seals are likely adapted to this cycle. In addition, the increase in rearing habitat quality has the goal of increasing salmonid abundance, ultimately providing more food for seals present within the action area. Thus, any impacts to marine mammal habitat are not expected to cause significant or long-term consequences for individual marine mammals or their populations.

Estimated Take by Incidental Harassment

Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as: ''. . . any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).''

SCWA has requested, and NMFS proposes, authorization to take harbor seals, California sea lions, and northern elephant seals, by Level B harassment only, incidental to estuary management activities. These activities, involving increased human presence and the use of heavy equipment and support vehicles, are expected to harass pinnipeds present at the haul-out through disturbance only. In addition, monitoring activities prescribed in the BiOp may harass additional animals at the Jenner haul-out and at the three haul-outs located in the estuary (Penny Logs, Patty's Rock, and Chalanchawi). Estimates of the number of harbor seals, California sea lions, and northern elephant seals that may be harassed by the proposed activities is based upon the number of potential events associated with Russian River estuary management activities and the average number of individuals of each species that are present during conditions appropriate to the activity. As described previously in this document, monitoring effort at the mouth of the Russian River has shown that the number of seals utilizing the haul-out declines during bar-closed conditions. Table 3 details the total number of estimated takes for harbor seals.

Events associated with lagoon outlet channel management would occur only during the lagoon management period and are split into two categories: (1) Initial channel implementation, which would likely occur between May and September; and (2) maintenance and monitoring of the outlet channel, which would continue until October 15. In addition, it is possible that the initial outlet channel could close through natural processes, requiring additional channel implementation events. Based on past experience, SCWA estimates that a maximum of three outlet channel implementation events could be required, with each event lasting up to two days. Outlet channel implementation events would only occur when the bar is closed. Therefore, it is appropriate to use data from bar-closed monitoring events in estimating take (Table 2). Construction of the outlet channel is designed to produce a perched outflow, resulting in conditions that more closely resemble bar-closed than bar-open with regard to pinniped haul-out usage. As such, bar-closed data is appropriate for estimating take during all lagoon management period maintenance and monitoring activity. As dates of outlet channel implementation cannot be known in advance, the highest daily average of seals per month—the March average for 2009–15—is used in estimating take. For maintenance and monitoring activities associated with the lagoon outlet channel, which would occur on a weekly basis following implementation of the outlet channel, the average number of harbor seals for each month was used.

Artificial breaching activities would also occur during bar-closed conditions. Data collected specifically during bar-closed conditions may be used for estimating take associated with artificial breaching (Table 2). The number of estimated artificial breaching events is also informed by experience. For those months with more frequent historical bar closure events, we assume that two such events could occur in any given year. For other months, we assume that only one such event would occur in a given year. Please see Table 1 in SCWA's application for more information.

For monthly topographic surveys on the barrier beach, potential incidental take of harbor seals is typically calculated as one hundred percent of the seals expected to be encountered. The exception is during the month of April, when surveyors would avoid seals to reduce harassment of pups and/or mothers with neonates. For the monthly topographic survey during April, a pinniped monitor is positioned at the Highway 1 overlook and would notify the surveyors via radio when any seals on the haul-out begin to alert to their presence. This enables the surveyors to retreat slowly away from the haul-out, typically resulting in no disturbance. For that survey, the assumption is therefore that only ten percent of seals present would be harassed. The number of seals expected to be encountered is based on the average monthly number of seals hauled out as recorded during baseline surveys conducted by SCWA in 2011–15 (Table 1).

For biological and physical habitat monitoring activities in the estuary, it was assumed that pinnipeds may be encountered once per event and flush from a river haul-out. The potential for harassment associated with these events is limited to the three haul-outs located in the estuary. In past experience, SCWA typically sees no more than a single harbor seal at these haul-outs, which consist of scattered logs and rocks that often submerge at high tide.

As described previously, California sea lions and northern elephant seals are occasional visitors to the estuary. Based on limited information regarding occurrence of these species at the mouth of the Russian River estuary, we assume there is the potential to encounter one animal of each species per month throughout the year. Lagoon outlet channel activities could potentially occur over six months of the year, artificial breaching activities over eight months, topographic surveys year-round, and biological and physical monitoring in the estuary over eight months. Therefore, we assume that up to 34 incidents of take could occur per year for both the California sea lion and northern elephant seal. Based on past occurrence records, the proposed take authorization for these two species is likely a precautionary overestimate.

TABLE 3—ESTIMATED NUMBER OF HARBOR SEAL TAKES RESULTING FROM RUSSIAN RIVER ESTUARY MANAGEMENT ACTIVITIES

Biological and Physical Habitat Monitoring in the Estuary		
1 [e]	113	113
Total		4,692

[a] For Lagoon Outlet Channel Management and Artificial Breaching, average daily number of animals corresponds with data from Table 2. For Topographic and Geophysical Beach Surveys, average daily number of animals corresponds with 2011–15 data from Table 1.

[b] For implementation of the lagoon outlet channel, an event is defined as a single, two-day episode. For the remaining activities, an event is defined as a single day on which an activity occurs. Some events may include multiple activities.

[c] Number of events for artificial breaching derived from historical data. The average number of events for each month was rounded up to the nearest whole number; estimated number of events for December was increased from one to two because multiple closures resulting from storm events have occurred in recent years during that month. The total numbers (12) likely represent an overestimate, as the average annual number of events is five.

[d] Although implementation could occur at any time during the lagoon management period, the highest daily average per month from the lagoon management period was used.

[e] Based on past experience, SCWA expects that no more than one seal may be present, and thus have the potential to be disturbed, at the three river haul-outs.

The take numbers described in the preceding text are annual estimates. Therefore, over the course of the 5-year period of validity of the proposed regulations, we propose to authorize a total of 23,460 incidents of take for harbor seals and 170 such incidents each for the California sea lion and northern elephant seal.

Analyses and Preliminary Determinations

Negligible Impact Analysis

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as ''. . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.'' A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through behavioral harassment, we consider other factors, such as the likely nature of any responses (*e.g.,* intensity, duration), the context of any such responses (*e.g.,* critical reproductive time or location, migration), as well as the number and nature of estimated Level A harassment takes (if any), and effects on habitat. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status.

Consistent with the 1989 preamble for NMFS's implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into these analyses via their impacts on the environmental baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, sources of human-caused mortality).

Although SCWA's estuary management activities may disturb pinnipeds hauled out at the mouth of the Russian River, as well as those hauled out at several locations in the estuary during recurring monitoring activities, impacts are occurring to a small, localized group of animals. While these impacts can occur year-round, they occur sporadically and for limited duration (*e.g.,* a maximum of two consecutive days for water level management events). Seals will likely become alert or, at most, flush into the water in reaction to the presence of crews and equipment on the beach. While disturbance may occur during a sensitive time (during the March 15–June 30 pupping season), mitigation measures have been specifically designed to further minimize harm during this period and eliminate the possibility of pup injury or mother-pup separation.

No injury, serious injury, or mortality is anticipated, nor is the proposed action likely to result in long-term impacts such as permanent abandonment of the haul-out. Injury, serious injury, or mortality to pinnipeds would likely result from startling animals inhabiting the haul-out into a stampede reaction, or from extended mother-pup separation as a result of such a stampede. Long-term impacts to pinniped usage of the haul-out could result from significantly increased presence of humans and equipment on the beach. To avoid these possibilities, we have worked with SCWA to develop the previously described mitigation measures. These are designed to reduce the possibility of startling pinnipeds, by gradually apprising them of the presence of humans and equipment on the beach, and to reduce the possibility of impacts to pups by eliminating or altering management activities on the beach when pups are present and by setting limits on the frequency and duration of events during pupping season. During the past fifteen years of flood control management, implementation of similar mitigation measures has resulted in no known stampede events and no known injury, serious injury, or mortality. Over the course of that time period, management events have generally been infrequent and of limited duration.

No pinniped stocks for which incidental take authorization is proposed are listed as threatened or endangered under the ESA or determined to be strategic or depleted under the MMPA. Recent data suggests that harbor seal populations have reached carrying capacity; populations of California sea lions and northern elephant seals in California are also considered healthy.

In summary, and based on extensive monitoring data, we believe that impacts to hauled-out pinnipeds during estuary management activities would be behavioral harassment of limited duration (*i.e.,* less than one day) and limited intensity (*i.e.,* temporary flushing at most). Stampeding, and therefore injury or mortality, is not expected—nor been documented—in the years since appropriate protocols were established (see ''Proposed Mitigation'' for more details). Further, the continued, and increasingly heavy (see figures in SCWA documents), use of the haul-out despite decades of breaching events indicates that abandonment of the haul-out is unlikely. Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, we preliminarily find that the total marine mammal take from SCWA's estuary management activities will have a negligible impact on the affected marine mammal species or stocks.

Small Numbers Analysis

The proposed number of animals taken for each species of pinniped can be considered small relative to the population size. There are an estimated 30,968 harbor seals in the California stock, 296,750 California sea lions, and 179,000 northern elephant seals in the California breeding population. Based on extensive monitoring effort specific to the affected haul-out and historical data on the frequency of the specified activity, we are proposing to authorize annual levels of take, by Level B harassment only, of 4,692 incidents of harassment for harbor seals, 34 incidents of harassment for California sea lions, and 34 incidents of harassment for northern elephant seals, representing 15.2, 0.01, and 0.02 percent of the populations, respectively. However, this represents an overestimate of the number of individuals harassed annually over the duration of the proposed regulations, because these totals represent much smaller numbers of individuals that may be harassed multiple times. Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the mitigation and monitoring measures, we preliminarily find that small numbers of marine mammals will be taken relative to the populations of the affected species or stocks.

Proposed Monitoring and Reporting

In order to issue an incidental take authorization for an activity, section 101(a)(5)(A) of the MMPA states that NMFS must set forth ''requirements pertaining to the monitoring and reporting of such taking.'' The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for incidental take authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area.

Any monitoring requirement we prescribe should improve our understanding of one or more of the following:

• Occurrence of marine mammal species in action area (*e.g.,* presence, abundance, distribution, density).

• Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving, or feeding areas).

• Individual responses to acute stressors, or impacts of chronic exposures (behavioral or physiological).

• How anticipated responses to stressors impact either: (1) Long-term fitness and survival of an individual; or (2) population, species, or stock.

• Effects on marine mammal habitat and resultant impacts to marine mammals.

• Mitigation and monitoring effectiveness.

SCWA submitted a marine mammal monitoring plan as part of the ITA application. It can be found online at *www.nmfs.noaa.gov/pr/permits/incidental/construction.htm.* The plan, which has been successfully implemented (in slightly different form from the currently proposed plan) by SCWA under previous ITAs, may be modified or supplemented based on comments or new information received from the public during the public comment period. The purpose of this monitoring plan, which is carried out collaboratively with the Stewards of the Coasts and Redwoods (Stewards) organization, is to detect the response of pinnipeds to estuary management activities at the Russian River estuary. SCWA has designed the plan both to satisfy the requirements of the IHA, and to address the following questions of interest:

1. Under what conditions do pinnipeds haul out at the Russian River estuary mouth at Jenner?

2. How do seals at the Jenner haul-out respond to activities associated with the construction and maintenance of the lagoon outlet channel and artificial breaching activities?

3. Does the number of seals at the Jenner haul-out significantly differ from historic averages with formation of a summer (May 15 to October 15) lagoon in the Russian River estuary?

4. Are seals at the Jenner haul-out displaced to nearby river and coastal haul-outs when the mouth remains closed in the summer?

Proposed Monitoring Measures

Baseline Monitoring—Seals at the Jenner haul-out would be counted for four hours every week, with no more than four baseline surveys each month. Two monitoring events each month would occur in the morning and two would occur in the afternoon with an effort to schedule a morning survey at low and high tide each month and an afternoon survey at low and high tide each month. This baseline information will provide SCWA with details that may help to plan estuary management activities in the future to minimize pinniped interaction. Survey protocols are as follows: All seals hauled out on the beach are counted every 30 minutes from the overlook on the bluff along Highway 1 adjacent to the haul-out using spotting scopes. Monitoring may conclude for the day if weather conditions affect visibility (*e.g.,* heavy fog in the afternoon). Depending on how the sandbar is formed, seals may haul out in multiple groups at the mouth. At each 30-minute count, the observer indicates where groups of seals are hauled out on the sandbar and provides a total count for each group. If possible, adults and pups are counted separately.

This primary haul-out is where the majority of seals are found and where pupping occurs, and SCWA's proposed monitoring would allow continued development in understanding the physical and biological factors that influence seal abundance and behavior at the site. In particular, SCWA notes that the proposed frequency of surveys would allow them to be able to observe the influence of physical changes that do not persist for more than ten days, like brief periods of barrier beach closures or other environmental changes, and would allow for assessment of how seals respond to barrier beach closures as well as accurate estimation of the number of harbor seal pups born at Jenner each year.

In addition to the census data, disturbances of the haul-out are recorded. The method for recording disturbances follows those in Mortenson (1996). Disturbances would be recorded on a three-point scale that represents an increasing seal response to the disturbance (Table 4). The time, source, and duration of the disturbance, as well as an estimated distance between the source and haul-out, are recorded. It should be noted that only responses falling into Mortenson's Levels 2 and 3 will be considered as harassment under the MMPA, under the terms of these proposed regulations.

TABLE 4—SEAL RESPONSE TO DISTURBANCE

Level	Type of response	Definition
1	Alert	Seal head orientation or brief movement in response to disturbance, which may include turning head towards the disturbance, craning head and neck while holding the body rigid in a u-shaped position, changing from a lying to a sitting position, or brief movement of less than twice the animal's body length.
2	Movement	Movements in response to the source of disturbance, ranging from short withdrawals at least twice the animal's body length to longer retreats over the beach, or if already moving a change of direction of greater than 90 degrees.
3	Flight	All retreats (flushes) to the water.

Weather conditions are recorded at the beginning of each census. These include temperature, Beaufort sea state, precipitation/visibility, and wind speed. Tide levels and estuary water surface elevations are correlated to the monitoring start and end times.

In an effort towards understanding possible relationships between use of the Jenner haul-out and nearby coastal and river haul-outs, several other haul-outs on the coast and in the Russian River estuary are monitored as well (see Figure 1 of SCWA's application). Peripheral site monitoring would occur only in the event of an extended period of lagoon conditions (*i.e.,* barrier beach closed with perched outlet channel for three weeks or more). Abundance at these sites has been observed to generally be very low regardless of river mouth condition. These sites are generally very small physically, composed of small rocks or outcrops or logs in the river, and therefore could not accommodate significant displacement from the main beach haul-out. Monitoring of peripheral sites under extended lagoon conditions will allow for possible detection of any changed use patterns.

Estuary Management Event Monitoring, Lagoon Outlet Channel—Should the mouth close during the lagoon management period, SCWA would construct a lagoon outlet channel as required by the BiOp. Activities associated with the initial construction of the outlet channel, as well as the maintenance of the channel that may be required, would be monitored for disturbances to the seals at the Jenner haul-out.

A one-day pre-event channel survey would be made within one to three days prior to constructing the outlet channel. The haul-out would be monitored on the day the outlet channel is constructed and daily for up to the maximum two days allowed for channel excavation activities. Monitoring would also occur on each day that the outlet channel is maintained using heavy equipment for the duration of the lagoon management period. Monitoring of outlet channel construction and maintenance would correspond with that described under the ''Baseline Monitoring'' section previously, with the exception that management activity monitoring duration is defined by event duration. On the day of the management event, pinniped monitoring begins at least one hour prior to the crew and equipment accessing the beach work area and continues through the duration of the event, until at least one hour after the crew and equipment leave the beach.

In an attempt to understand whether seals from the Jenner haul-out are displaced to coastal and river haul-outs nearby when management events occur, other nearby haul-outs are monitored concurrently with monitoring of outlet channel construction and maintenance activities. This provides an opportunity to qualitatively assess whether these haul-outs are being used by seals displaced from the Jenner haul-out during lagoon outlet channel excavation and maintenance. This monitoring would not provide definitive results regarding displacement to nearby coastal and river haul-outs, as individual seals are not marked or photo-identified, but is useful in tracking general trends in haul-out use during lagoon outlet channel excavation and maintenance. As volunteers are required to monitor these peripheral haul-outs, haul-out locations may need to be prioritized if there are not enough volunteers available. In that case, priority would be assigned to the nearest haul-outs (North Jenner and Odin Cove), followed by the Russian River estuary haul-outs, and finally the more distant coastal haul-outs.

Estuary Management Event Monitoring, Artificial Breaching Events—In accordance with the Russian River BiOp, SCWA may artificially breach the barrier beach outside of the summer lagoon management period, and may conduct a maximum of two such breachings during the lagoon management period, when estuary water surface elevations rise above seven feet. In that case, NMFS may be consulted regarding potential scheduling of an artificial breaching event to open the barrier beach and reduce flooding risk.

Pinniped response to artificial breaching will be monitored at each such event during the period of validity of these proposed regulations. Methods would follow the census and disturbance monitoring protocols described in the ''Baseline Monitoring'' section, which were also used for the 1996 to 2000 monitoring events (MSC, 1997, 1998, 1999, 2000; SCWA and MSC, 2001). The exception, as for lagoon management events, is that duration of monitoring is dependent upon duration of the event. On the day of the management event, pinniped monitoring begins at least one hour prior to the crew and equipment accessing the beach work area and continues through the duration of the event, until at least one hour after the crew and equipment leave the beach.

For all counts, the following information would be recorded in thirty-minute intervals: (1) Pinniped counts, by species; (2) behavior; (3) time, source and duration of any disturbance; (4) estimated distances between source of disturbance and pinnipeds; (5) weather conditions (*e.g.,* temperature, wind); and (5) tide levels and estuary water surface elevation.

Monitoring During Pupping Season—The pupping season is defined as March 15 to June 30. Baseline, lagoon outlet channel, and artificial breaching monitoring during the pupping season will include records of neonate (pups less than one week old) observations. Characteristics of a neonate pup include: Body weight less than 15 kg; thin for their body length; an umbilicus or natal pelage present; wrinkled skin; and awkward or jerky movements on land. SCWA will coordinate with the Seal Watch monitoring program to determine if pups less than one week old are on the beach prior to a water level management event.

If, during monitoring, observers sight any pup that might be abandoned, SCWA would contact the NMFS stranding response network immediately and also report the incident to NMFS's West Coast Regional Office and Office of Protected Resources within 48 hours. Observers will not approach or move the pup. Potential indications that a pup may be abandoned are no observed contact with adult seals, no movement of the pup, and the pup's attempts to nurse are rebuffed.

Staffing—Monitoring is conducted by qualified individuals, which may include professional biologists employed by NMFS or SCWA or volunteers trained by the Stewards' Seal Watch program (Stewards). All volunteer monitors are required to attend classroom-style training and field site visits to the haul-outs. Training covers the MMPA and conditions of the ITA, SCWA's pinniped monitoring protocols, pinniped species identification, age class identification (including a specific discussion regarding neonates), recording of count and disturbance observations (including completion of datasheets), and use of equipment. Pinniped identification includes the harbor seal, California sea lion, and northern elephant seal, as well as other pinniped species with potential to occur in the area. Generally, SCWA staff and volunteers collect baseline data on Jenner haul-out use during the twice-monthly monitoring events. A schedule for this monitoring would be established with Stewards once volunteers are available for the monitoring effort. SCWA staff monitors lagoon outlet channel excavation and maintenance activities and artificial breaching events at the Jenner haul-out, with assistance from Stewards volunteers as available. Stewards volunteers monitor the coastal and river haul-out locations during lagoon outlet channel excavation and maintenance activities.

Training on the MMPA, pinniped identification, and the conditions of the ITA is held for staff and contractors assigned to estuary management activities. The training includes equipment operators, safety crew members, and surveyors. In addition, prior to beginning each water surface elevation management event, the biologist monitoring the event participates in the onsite safety meeting to discuss the location(s) of pinnipeds at the Jenner haul-out that day and methods of avoiding and minimizing disturbances to the haul-out as outlined in the ITA.

Reporting

SCWA is required to submit an annual report on all activities and marine mammal monitoring results to NMFS within ninety days following the end of the monitoring period. These reports would contain the following information:

- The number of pinnipeds taken, by species and age class (if possible);
- Behavior prior to and during water level management events;
- Start and end time of activity;
- Estimated distances between source and pinnipeds when disturbance occurs;
- Weather conditions (*e.g.,* temperature, wind, etc.);

• Haul-out reoccupation time of any pinnipeds based on post-activity monitoring;
• Tide levels and estuary water surface elevation; and
• Pinniped census from bi-monthly and nearby haul-out monitoring.

The annual report includes descriptions of monitoring methodology, tabulation of estuary management events, summary of monitoring results, and discussion of problems noted and proposed remedial measures.

SCWA must also submit a comprehensive summary report with any future application for renewed regulations and Letters of Authorization.

Summary of Previous Monitoring

SCWA complied with the mitigation and monitoring required under previous authorizations. Prior notices of proposed authorization have provided summaries of monitoring results from 2009–15; please see those documents for more information. Previous monitoring reports are available online at *www.nmfs.noaa.gov/pr/permits/incidental/construction.htm.*

While the observed take in all years was significantly lower than the level authorized, it is possible that incidental take in future years could approach the level authorized. Actual take is dependent largely upon the number of water level management events that occur, which is unpredictable. Take of species other than harbor seals depends upon whether those species, which do not consistently utilize the Jenner haul-out, are present. The authorized take, though much higher than the actual take, is justified based on conservative estimated scenarios for animal presence and necessity of water level management. No significant departure from the method of estimation is used for these proposed regulations (see ''Estimated Take by Incidental Harassment'') for the same activities in 2017–22.

SCWA has continued to investigate the relative disturbance caused by their activities versus that caused by other sources (see Figures 5–6 of SCWA's 2015 monitoring report as well as the 2014 report). Harbor seals are most frequently disturbed by people on foot, with an increase in frequency of people present during bar-closed conditions (see Figure 5 of SCWA's 2015 monitoring report). Kayakers are the next most frequent source of disturbance overall, also with an increase during bar-closed conditions. For any disturbance event it is often only a fraction of the total haul-out that responds. Some sources of disturbance, though rare, have a larger disturbing effect when they occur. For example, disturbances from dogs occur less frequently, but these incidents often disturb over half of the seals hauled out.

Conclusions

The following section provides a summary of information available in SCWA's 2015 monitoring report. The primary purpose of SCWA's pinniped monitoring plan is to detect the response of pinnipeds to estuary management activities at the Russian River estuary. However, as described previously, the questions listed below are also of specific interest. The limited data available thus far precludes drawing definitive conclusions regarding the key questions in SCWA's monitoring plan, but we discuss preliminary conclusions and available evidence below.

1. Under what conditions do pinnipeds haul out at the Russian River estuary mouth at Jenner?

Although multiple factors likely influence harbor seal presence at the haul-out, SCWA has shown that since 2009 harbor seal attendance is influenced by hour of day (increasing from morning through early afternoon; see Figure 2 in SCWA's monitoring plan), tidal state (decrease with higher tides; see Figure 3 of SCWA's monitoring plan), month of year (peak in July and decrease in fall; see Figure 4 of SCWA's monitoring plan), and river mouth condition (*i.e.,* open or closed).

Daily average abundance of seals was lower during bar-closed conditions compared to bar-open conditions. This effect is likely due to a combination of factors, including increased human disturbance, reduced access to the ocean from the estuary side of the barrier beach, and the increased disturbance from wave action when seals utilize the ocean side of the barrier beach. Baseline data indicate that the highest numbers of seals are observed at the Jenner haul-out in July (during the molting season; see Figure 2 of SCWA's 2015 monitoring report), as would be expected on the basis of harbor seal biological and physiological requirements (Herder, 1986; Allen *et al.,* 1989; Stewart and Yochem, 1994; Hanan, 1996; Gemmer, 2002).

Overall, seals appear to utilize the Jenner haul-out throughout the tidal cycle. Seal abundance is significantly lower during the highest of tides when the haul-out is subject to an increase in wave overwash. Time of day had some effect on seal abundance at the Jenner haul-out, as abundance was greater in the afternoon hours compared to the morning hours. More analysis exploring the relationship of ambient temperature, incidence of disturbance, and season on time of day effects would help to explain why these variations in seal abundance occur. It is likely that a combination of multiple factors (*e.g.,* season, tides, wave heights, level of beach disturbance) influence when the haul-out is most utilized.

2. How do seals at the Jenner haul-out respond to activities associated with the construction and maintenance of the lagoon outlet channel and artificial breaching activities?

SCWA has, thus far, implemented the lagoon outlet channel only once, in 2010. The response of harbor seals at the Jenner haul-out to the outlet channel implementation activities was similar to responses observed during past artificial breaching events (MSC, 1997, 1998, 1999, 2000; SCWA and MSC, 2001). The harbor seals typically alert to the sound of equipment on the beach and leave the haul-out as the crew and equipment approach. Individuals then haul out on the beach while equipment is operating, leaving the beach again when equipment and staff depart, and typically begin to return to the haul-out within thirty minutes of the work ending. Because the barrier beach reformed soon after outlet channel implementation and subsequently breached on its own following the 2010 event, maintenance of the outlet channel was not necessary and monitoring of the continued response of pinnipeds at the Jenner haul-out to maintenance of the outlet channel and management of the lagoon for the duration of the lagoon management period has not yet been possible. As noted previously, when breaching activities were conducted south of the haul-out location seals often remained on the beach during all or some of the breaching activity. This indicates that seals are less disturbed by activities when equipment and crew do not pass directly past their haul-out.

3. Does the number of seals at the Jenner haul-out significantly differ from historic averages with formation of a summer lagoon in the Russian River estuary?

The duration of closures in recent years has not generally been dissimilar from the duration of closures that have been previously observed at the estuary, and lagoon outlet channel implementation has occurred only once, meaning that there has been a lack of opportunity to study harbor seal response to extended lagoon conditions. A barrier beach has formed during the lagoon management period sixteen times since SCWA began implementing the lagoon outlet channel adaptive management plan, with an average duration of fourteen days. However, the sustained river outlet closures observed in 2014–15 during the lagoon management period provide some information regarding the abundance of seals during the formation of a summer lagoon. While seal abundance was lower overall during bar-closed conditions, overall there continues to be a slight increasing trend in seal abundance. These observations may indicate that, while seal abundance exhibits a short-term decline following bar closure, the number of seals utilizing the Jenner haul-out overall during such conditions is not affected. Short-term fluctuations in abundance aside, it appears that the general trends of increased abundance during summer and decreased abundance during fall, which coincide with the annual molt and likely foraging dispersal, respectively, are not affected. Such short-term fluctuations are likely not an indicator that seals are less likely to use the Jenner haul-out at any time.

4. Are seals at the Jenner haul-out displaced to nearby river and coastal haul-outs when the mouth remains closed in the summer?

Initial comparisons of peripheral (river and coastal) haul-out count data to the Jenner haul-out counts have been inconclusive (see Table 2 and Figures 6–7 of SCWA's 2015 monitoring report). As noted above, SCWA will focus ongoing effort at peripheral sites during periods of extended bar-closure and lagoon formation.

Adaptive Management

The regulations governing the take of marine mammals incidental to SCWA estuary management activities would contain an adaptive management component.

The reporting requirements associated with this proposed rule are designed to provide NMFS with monitoring data from the previous year to allow consideration of whether any changes are appropriate. The use of adaptive management allows NMFS to consider new information from different sources to determine (with input from SCWA regarding practicability) on an annual or biennial basis if mitigation or monitoring measures should be modified (including additions or deletions). Mitigation measures could be modified if new data suggests that such modifications would have a reasonable likelihood of reducing adverse effects to marine mammals and if the measures are practicable.

SCWA's monitoring program (see ''Proposed Monitoring and Reporting'') would be managed adaptively. Changes to the proposed monitoring program may be adopted if they are reasonably likely to better accomplish the MMPA monitoring goals described previously or may better answer the specific questions associated with SCWA's monitoring plan.

The following are some of the possible sources of applicable data to be considered through the adaptive management process: (1) Results from monitoring reports, as required by MMPA authorizations; (2) results from general marine mammal and sound research; and (3) any information which reveals that marine mammals may have been taken in a manner, extent, or number not authorized by these regulations or subsequent LOAs.

Impact on Availability of Affected Species for Taking for Subsistence Uses

There are no relevant subsistence uses of marine mammals implicated by the specified activity. Therefore, we have determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

No marine mammal species listed under the ESA are expected to be affected by these activities. Therefore, we have determined that section 7 consultation under the ESA is not required.

National Environmental Policy Act

NMFS prepared an EA (2010) and associated FONSI in accordance with NEPA and the regulations published by the Council on Environmental Quality. These documents are posted at the aforementioned Internet address. Information in SCWA's application, NMFS's EA (2010), and this notice collectively provide the environmental information related to proposed issuance of these regulations for public review and comment. We will review all comments submitted in response to this notice as we complete the NEPA process, including a decision of whether the existing EA and FONSI provide adequate analysis related to the potential environmental effects of issuing an incidental take authorization to SCWA, prior to a final decision on the request.

Request for Information

NMFS requests interested persons to submit comments, information, and suggestions concerning SCWA's request and the proposed regulations (see **ADDRESSES**). All comments will be reviewed and evaluated as we prepare the final rule and make final determinations on whether to issue the requested authorizations. This notice and referenced documents provide all environmental information relating to our proposed action for public review.

Classification

Pursuant to the procedures established to implement Executive Order 12866, the Office of Management and Budget has determined that this proposed rule is not significant.

Pursuant to section 605(b) of the Regulatory Flexibility Act (RFA), the Chief Counsel for Regulation of the Department of Commerce has certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. SCWA is the sole entity that would be subject to the requirements in these proposed regulations, and the Sonoma County Water Agency is not a small governmental jurisdiction, small organization, or small business, as defined by the RFA. Under the RFA, governmental jurisdictions are considered to be small if they are ''. . . governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than 50,000 . . . .'' As of the 2010 census, Sonoma County, CA had a population of nearly 500,000 people. Because of this certification, a regulatory flexibility analysis is not required and none has been prepared.

Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act (PRA) unless that collection of information displays a currently valid OMB control number. These requirements have been approved by OMB under control number 0648–0151 and include applications for regulations, subsequent LOAs, and reports. Send comments regarding any aspect of this data collection, including suggestions for reducing the burden, to NMFS and the OMB Desk Officer (see **ADDRESSES**).

List of Subjects in 50 CFR Part 217

Exports, Fish, Imports, Indians, Labeling, Marine mammals, Penalties, Reporting and recordkeeping requirements, Seafood, Transportation.

Dated: December 23, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 217 is proposed to be amended as follows:

PART 217—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

■ 1. The authority citation for part 217 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

■ 2. Add subpart A to part 217 to read as follows:

Subpart A—Taking Marine Mammals Incidental to Russian River Estuary Management Activities

Sec.

Subpart A—Taking Marine Mammals Incidental to Russian River Estuary Management Activities

§ 217.1 Specified activity and specified geographical region.

(a) Regulations in this subpart apply only to the Sonoma County Water Agency (SCWA) and those persons it authorizes or funds to conduct activities on its behalf for the taking of marine mammals that occurs in the area outlined in paragraph (b) of this section and that occurs incidental to estuary management activities.

(b) The taking of marine mammals by SCWA may be authorized in a Letter of Authorization (LOA) only if it occurs at Goat Rock State Beach or in the Russian River estuary in California.

§ 217.2 Effective dates.

Regulations in this subpart are effective from [EFFECTIVE DATE OF FINAL RULE] through [DATE 5 YEARS AFTER EFFECTIVE DATE OF FINAL RULE].

§ 217.3 Permissible methods of taking.

(a) Under LOAs issued pursuant to §§ 216.106 and 217.7 of this chapter, the Holder of the LOA (hereinafter ''SCWA'') may incidentally, but not intentionally, take marine mammals within the area described in § 217.1(b) of this chapter by Level B harassment associated with estuary management activities, provided the activity is in compliance with all terms, conditions, and requirements of the regulations in this subpart and the appropriate LOA.

§ 217.4 Prohibitions.

Notwithstanding takings contemplated in § 217.1 and authorized by an LOA issued under §§ 216.106 and 217.7 of this chapter, no person in connection with the activities described in § 217.1 of this chapter may:

(a) Violate, or fail to comply with, the terms, conditions, and requirements of this subpart or an LOA issued under §§ 216.106 and 217.7 of this chapter;

(b) Take any marine mammal not specified in such LOAs;

(c) Take any marine mammal specified in such LOAs in any manner other than as specified;

(d) Take a marine mammal specified in such LOAs if NMFS determines such taking results in more than a negligible impact on the species or stocks of such marine mammal; or

(e) Take a marine mammal specified in such LOAs if NMFS determines such taking results in an unmitigable adverse impact on the species or stock of such marine mammal for taking for subsistence uses.

§ 217.5 Mitigation requirements.

When conducting the activities identified in § 217.1(a) of this chapter, the mitigation measures contained in any LOA issued under §§ 216.106 and 217.7 of this chapter must be implemented. These mitigation measures shall include but are not limited to:

(a) *General conditions:* (1) A copy of any issued LOA must be in the possession of SCWA, its designees, and work crew personnel operating under the authority of the issued LOA.

(2) If SCWA observes a pup that may be abandoned, it shall contact the National Marine Fisheries Service (NMFS) West Coast Regional Stranding Coordinator immediately and also report the incident to NMFS Office of Protected Resources within 48 hours. Observers shall not approach or move the pup.

(b) SCWA crews shall cautiously approach the haul-out ahead of heavy equipment.

(c) SCWA staff shall avoid walking or driving equipment through the seal haul-out.

(d) Crews on foot shall make an effort to be seen by seals from a distance.

(e) During breaching events, all monitoring shall be conducted from the overlook on the bluff along Highway 1 adjacent to the haul-out.

(f) A water level management event may not occur for more than two consecutive days unless flooding threats cannot be controlled.

(g) All work shall be completed as efficiently as possible and with the smallest amount of heavy equipment possible.

(h) Boats operating near river haul-outs during monitoring shall be kept within posted speed limits and driven as far from the haul-outs as safely possible.

(i) SCWA shall implement the following mitigation measures during pupping season (March 15–June 30):

(1) SCWA shall maintain a one week no-work period between water level management events (unless flooding is an immediate threat) to allow for an adequate disturbance recovery period. During the no-work period, equipment must be removed from the beach.

(2) If a pup less than one week old is on the beach where heavy machinery will be used or on the path used to access the work location, the management action shall be delayed until the pup has left the site or the latest day possible to prevent flooding while still maintaining suitable fish rearing habitat. In the event that a pup remains present on the beach in the presence of flood risk, SCWA shall consult with NMFS and the California Department of Fish and Wildlife to determine the appropriate course of action. SCWA shall coordinate with the locally established seal monitoring program (Stewards of the Coast and Redwoods) to determine if pups less than one week old are on the beach prior to a breaching event.

(3) Physical and biological monitoring shall not be conducted if a pup less than one week old is present at the monitoring site or on a path to the site.

§ 217.6 Requirements for monitoring and reporting.

(a) Monitoring and reporting shall be conducted in accordance with the approved Pinniped Monitoring Plan.

(b) Baseline monitoring shall be conducted each week, with two events per month occurring in the morning and two per month in the afternoon. These censuses shall continue for four hours, weather permitting; the census days shall be chosen to ensure that monitoring encompasses a low and high tide each in the morning and afternoon. All seals hauled out on the beach shall be counted every 30 minutes from the overlook on the bluff along Highway 1 adjacent to the haul-out using high-powered spotting scopes. Observers shall indicate where groups of seals are hauled out on the sandbar and provide a total count for each group. If possible, adults and pups shall be counted separately.

(c) Peripheral coastal haul-outs shall be visited concurrently with baseline monitoring in the event that a lagoon outlet channel is implemented and maintained for a prolonged period of over 21 days.

(d) During estuary management events, monitoring shall occur on all days that activity is occurring using the same protocols as described for baseline monitoring, with the difference that monitoring shall begin at least one hour prior to the crew and equipment accessing the beach work area and continue through the duration of the event, until at least one hour after the crew and equipment leave the beach. In addition, a one-day pre-event survey of the area shall be made within one to three days of the event and a one-day post-event survey shall be made after the event, weather permitting.

(e) For all monitoring, the following information shall be recorded in 30-minute intervals:

(1) Pinniped counts by species;

(2) Behavior;

(3) Time, source and duration of any disturbance, with takes incidental to SCWA actions recorded only for responses involving movement away from the disturbance or responses of greater intensity (*e.g.,* not for alerts);

(4) Estimated distances between source of disturbance and pinnipeds;

(5) Weather conditions (*e.g.,* temperature, percent cloud cover, and wind speed); and

(6) Tide levels and estuary water surface elevation.

(f) *Reporting:* (1) Annual reporting: (i) SCWA shall submit an annual summary report to NMFS not later than ninety days following the end of a given reporting period. SCWA shall provide a final report within thirty days following resolution of comments on the draft report.

(ii) These reports shall contain, at minimum, the following:

(A) The number of seals taken, by species and age class (if possible);

(B) Behavior prior to and during water level management events;

(C) Start and end time of activity;

(D) Estimated distances between source and seals when disturbance occurs;

(E) Weather conditions (*e.g.,* temperature, wind, etc.);

(F) Haul-out reoccupation time of any seals based on post-activity monitoring;

(G) Tide levels and estuary water surface elevation;

(H) Seal census from bi-monthly and nearby haul-out monitoring; and

(I) Specific conclusions that may be drawn from the data in relation to the four questions of interest in SCWA's Pinniped Monitoring Plan, if possible.

(2) SCWA shall submit a comprehensive summary report to NMFS in conjunction with any future submitted request for incidental take authorization.

(g) Reporting of injured or dead marine mammals:

(1) In the unanticipated event that the activity defined in § 217.1(a) clearly causes the take of a marine mammal in a prohibited manner, SCWA shall immediately cease such activity and report the incident to the Office of Protected Resources (OPR), NMFS and the West Coast Regional Stranding Coordinator, NMFS. Activities shall not resume until NMFS is able to review the circumstances of the prohibited take. NMFS will work with SCWA to determine what measures are necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. SCWA may not resume their activities until notified by NMFS. The report must include the following information:

(i) Time and date of the incident;

(ii) Description of the incident;

(iii) Environmental conditions;

(iv) Description of all marine mammal observations in the 24 hours preceding the incident;

(v) Species identification or description of the animal(s) involved;

(vi) Fate of the animal(s); and

(vii) Photographs or video footage of the animal(s).

(2) In the event that SCWA discovers an injured or dead marine mammal and determines that the cause of the injury or death is unknown and the death is relatively recent (*e.g.,* in less than a moderate state of decomposition), SCWA shall immediately report the incident to OPR and the West Coast Regional Stranding Coordinator, NMFS. The report must include the information identified in paragraph (g)(1) of this section. Activities may continue while NMFS reviews the circumstances of the incident. NMFS will work with SCWA to determine whether additional mitigation measures or modifications to the activities are appropriate.

(3) In the event that SCWA discovers an injured or dead marine mammal and determines that the injury or death is not associated with or related to the activities defined in § 217.1(a) (*e.g.,* previously wounded animal, carcass with moderate to advanced decomposition, scavenger damage), SCWA shall report the incident to OPR and the West Coast Regional Stranding Coordinator, NMFS, within 24 hours of the discovery. SCWA shall provide photographs or video footage or other documentation of the stranded animal sighting to NMFS.

(4) Pursuant to paragraphs (g)(2) and (3) of this section, SCWA may use discretion in determining what injuries (*i.e.,* nature and severity) are appropriate for reporting. At minimum, SCWA must report those injuries considered to be serious (*i.e.,* will likely result in death) or that are likely caused by human interaction (*e.g.,* entanglement, gunshot). Also pursuant to sections paragraphs (g)(2) and (3) of this section, SCWA may use discretion in determining the appropriate vantage point for obtaining photographs of injured/dead marine mammals.

§ 217.7 Letters of Authorization.

(a) To incidentally take marine mammals pursuant to these regulations, SCWA must apply for and obtain an LOA.

(b) An LOA, unless suspended or revoked, may be effective for a period of time not to exceed the expiration date of these regulations.

(c) If an LOA expires prior to the expiration date of these regulations, SCWA may apply for and obtain a renewal of the LOA.

(d) In the event of projected changes to the activity or to mitigation and monitoring measures required by an LOA, SCWA must apply for and obtain a modification of the LOA as described in § 217.8 of this chapter.

(e) The LOA shall set forth:

(1) Permissible methods of incidental taking;

(2) Means of effecting the least practicable adverse impact (*i.e.,* mitigation) on the species, its habitat, and on the availability of the species for subsistence uses; and

(3) Requirements for monitoring and reporting.

(f) Issuance of the LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations.

(g) Notice of issuance or denial of an LOA shall be published in the **Federal Register** within 30 days of a determination.

§ 217.8 Renewals and modifications of Letters of Authorization.

(a) An LOA issued under §§ 216.106 and 217.7 of this chapter for the activity identified in § 217.1(a) shall be renewed or modified upon request by the applicant, provided that:

(1) The proposed specified activity and mitigation, monitoring, and reporting measures, as well as the

anticipated impacts, are the same as those described and analyzed for these regulations (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section), and

(2) NMFS determines that the mitigation, monitoring, and reporting measures required by the previous LOA under these regulations were implemented.

(b) For an LOA modification or renewal requests by the applicant that include changes to the activity or the mitigation, monitoring, or reporting (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section) that do not change the findings made for the regulations or result in no more than a minor change in the total estimated number of takes (or distribution by species or years), NMFS may publish a notice of proposed LOA in the **Federal Register**, including the associated analysis of the change, and solicit public comment before issuing the LOA.

(c) An LOA issued under §§ 216.106 and 217.7 of this chapter for the activity identified in § 217.1(a) may be modified by NMFS under the following circumstances:

(1) Adaptive Management—NMFS may modify (including augment) the existing mitigation, monitoring, or reporting measures (after consulting with SCWA regarding the practicability of the modifications) if doing so creates a reasonable likelihood of more effectively accomplishing the goals of the mitigation and monitoring set forth in the preamble for these regulations.

(i) Possible sources of data that could contribute to the decision to modify the mitigation, monitoring, or reporting measures in an LOA:

(A) Results from SCWA's monitoring from the previous year(s).

(B) Results from other marine mammal and/or sound research or studies.

(C) Any information that reveals marine mammals may have been taken in a manner, extent or number not authorized by these regulations or subsequent LOAs.

(ii) If, through adaptive management, the modifications to the mitigation, monitoring, or reporting measures are substantial, NMFS will publish a notice of proposed LOA in the **Federal Register** and solicit public comment.

(2) Emergencies—If NMFS determines that an emergency exists that poses a significant risk to the well-being of the species or stocks of marine mammals specified in LOAs issued pursuant to §§ 216.106 and 217.7 of this chapter, an LOA may be modified without prior notice or opportunity for public comment. Notice would be published in the **Federal Register** within thirty days of the action.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

December 27, 2016.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by January 30, 2017 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725 17th Street NW., Washington, DC 20502. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Business-Cooperative Service

Title: Rural Economic Development Loan and Grant Program.

OMB Control Number: 0570–0035.

Summary of Collection: The information collected is necessary to implement Section 313(b) (2) of the Rural Electrification Act of 1936 (7 U.S.C. 940(c)) that established a loan and grant program. Rural Business Service (RBS) mission is to improve the quality of life in rural America by financing community facilities and businesses, providing technical assistance and creating effective strategies for rural development. Under this program, zero interest loans and grants are provided to electric and telecommunications utilities that have borrowed funds from RUS. The purpose of the program is to encourage these electric and telecommunications utilities to promote rural economic development and job creation projects such as business start-up costs, business expansion, community development, and business incubator projects.

Need and Use of the Information: Various forms and narrative requirements will be used to collect the necessary information. RBS needs this collected information to select the projects it believes will provide the most long-term economic benefit to rural areas. The selection process is competitive and RBS has generally received more applications than it could fund. RBS also needs to make sure the funds are used for the intended purpose, and in the case of the loan, the funds will be repaid. RBS must determine that loans made from revolving loan funds established with grants are used for eligible purposes.

Description of Respondents: Not-for-profit Institutions; Business or other for-profit.

Number of Respondents: 120.

Frequency of Responses: Reporting: On Occasion, Annually.

Total Burden Hours: 4,781.

Rural Business-Cooperative Service

Title: Rural Micro-Entrepreneur Assistance Program.

OMB Control Number: 0570–0062.

Summary of Collection: Section 6022 of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) authorizes the Rural Microentrepreneur Assistance Program (RMAP). The Secretary makes direct loans to rural microenterprise development organizations (MDOs) that are participating in the program (who are referred to as "microlenders") for the purpose of capitalizing microloan revolving funds to provide fixed interest rate business loans of $50,000 or less to microentrepreneurs, as defined in the 2008 Farm Bill.

Need and Use of the Information: The program provides rural microentrepreneurs with the skills necessary to establish new rural microenterprises; to provide continuing technical and financial assistance related to the successful operation of rural microenterprises; and to assist with the cost of providing other activities and services related to the successful operation of MDOs and rural microenterprises. Microlenders seeking loans and/or grants will have to submit applications that include specified information, certifications, and agreements to the Agency. This information will be used to determine applicant eligibility and to ensure that funds are used for authorized purposes.

Description of Respondents: Business or other for-profit; Not-for-profit Institutions; State, Local or Tribal governments.

Number of Respondents: 75.

Frequency of Responses: Reporting: Quarterly, Annually.

Total Burden Hours: 3,254.

Charlene Parker,

Departmental Information Collection Clearance Officer.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–821–801]

Solid Urea From the Russian Federation: Rescission of Antidumping Duty Administrative Review; 2015–2016

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) is rescinding the administrative review of the antidumping duty order on solid urea from the Russian Federation for the period of July 1, 2015 through June 30, 2016.

DATES: Effective December 30, 2016.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Denisa Ursu, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–1766 or (202) 482–2285, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 5, 2016, the Department published in the **Federal Register** a notice of ''Opportunity to Request Administrative Review'' of the antidumping duty order on solid urea from the Russian Federation for the period of July 1, 2015 through June 30, 2016.[1] On July 29 2016, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.213(b), the Department received a timely request from the petitioners, the Ad Hoc Committee of Domestic Nitrogen Producers and its individual members, CF Industries, Inc. and PCS Nitrogen Fertilizer L.P., to conduct an administrative review of the antidumping duty order on solid urea from the Russian Federation manufactured or exported by MCC EuroChem, or its urea production subsidiaries OJSC Nevinnomysskiy Azot and OJSC NAKAzot (MCC EuroChem), and Joint Stock Company PhosAgro-Cherepovets.[2]

On September 12, 2016, the Department published in the **Federal Register** a notice of initiation of an administrative review of the antidumping duty order.[3] This administrative review covers MCC EuroChem and Joint Stock Company PhosAgro-Cherepovets during the period July 1, 2015 through June 30, 2016. On November 21, 2016, the petitioners timely withdrew their request for an administrative review for both MCC EuroChem and Joint Stock Company PhosAgro-Cherepovets.[4]

Rescission of Review

Pursuant to 19 CFR 351.213(d)(1), the Department will rescind an administrative review, if the party that requested the review withdraws its request within 90 days of the date of publication of notice of initiation of the requested review. The petitioner withdrew its review request before the 90-day deadline, and no other party requested an administrative review of the antidumping duty order. Therefore, in response to the timely withdrawal of the review request, the Department is rescinding in its entirety the administrative review of the antidumping duty order on solid urea from the Russian Federation for the review period July 1, 2015 through June 30, 2016.

Assessment

The Department will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). The Department intends to issue appropriate assessment instructions directly to CBP 15 days after the date of publication of this notice in the **Federal Register**.

Notification to Importers

This notice serves as the only reminder to importers whose entries will be liquidated as a result of this rescission notice, of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties and/or countervailing duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement may result in the presumption that reimbursement of antidumping duties and/or countervailing duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Order

This notice serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This notice is published in accordance with section 751 of the Act and 19 CFR 351.213(d)(4).

Dated: December 23, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Solid Urea From the Russian Federation and Ukraine: Final Results of Sunset Reviews and Revocation of Antidumping Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On November 1, 2016, the Department of Commerce (Department) initiated the sunset reviews of the antidumping duty orders on solid urea from the Russian Federation and Ukraine. Because the domestic interested parties did not participate in these sunset reviews, the Department is revoking these antidumping duty orders.

DATES: Effective December 20, 2016.

FOR FURTHER INFORMATION CONTACT: Robert James or John Anwesen, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: 202–482–0649 and 202–482–0131, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 14, 1987, the Department issued an antidumping duty order on solid urea from the Union of Soviet Socialist Republics (USSR).[1] In December 1991, the USSR divided into 15 republics. In response to the dissolution, the Department transferred the original order to all 15 republics and applied a uniform cash deposit rate.[2]

[1] *See Urea from the Union of Soviet Socialist Republics,* 52 FR 26367 (July 14, 1987).

[2] *See Solid Urea from the Union of Soviet Socialist Republics; Transfer of the Antidumping*

On March 1, 1999, the Department initiated sunset reviews on these orders and later published its notice of continuation of the antidumping duty orders for certain countries.[3] On October 1, 2004, the Department initiated the second sunset reviews of these orders and later published its notice of continuation of the antidumping duty orders on solid urea from the Russian Federation and Ukraine.[4] On December 1, 2010, the Department initiated the third sunset reviews of these orders and later published its notice of continuation of the antidumping duty orders.[5] On November 1, 2016, the Department initiated the fourth sunset reviews of these orders.[6]

We did not receive a notice of intent to participate from domestic interested parties in these fourth sunset reviews by the deadline date.[7] As a result, the Department determined that no domestic interested party intends to participate in the sunset reviews,[8] and on November 21, 2016, we notified the International Trade Commission, in writing, that we intended to issue a final determination revoking these antidumping duty orders.[9] On December 1, 2016, the Department received a submission from the Ministry of Economic Development and Trade of Ukraine regarding its position on this matter.[10]

[7] *See* 19 CFR 351.218(d)(1)(i).

[8] *See* 19 CFR 351.218(d)(1)(iii)(A).

[9] *See* 19 CFR 351.218(d)(1)(iii)(B)(2).

Scope of the Orders

The merchandise subject to the orders is solid urea, a high-nitrogen content fertilizer which is produced by reacting ammonia with carbon dioxide. The product is currently classified under the Harmonized Tariff Schedule of the United States (HTSUS) item number 3102.10.00.00. Previously such merchandise was classified under item number 480.3000 of the Tariff Schedules of the United States. Although the HTSUS subheading is provided for convenience and customs purposes, the written description of the merchandise subject to the orders is dispositive.

Determination To Revoke

Pursuant to section 751(c)(3)(A) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.218(d)(1)(iii)(B)(3), if no domestic interested party files a notice of intent to participate, the Department shall, within 90 days after the initiation of the review, issue a final determination revoking the order. Because the domestic interested parties did not file a notice of intent to participate in these sunset reviews, the Department finds that no domestic interested party is participating in these sunset reviews. Therefore, consistent with 19 CFR 351.222(i)(2)(i) we are revoking these antidumping duty orders effective December 20, 2016, the fifth anniversary of the date the Department published its most recent notice of continuation of the antidumping duty orders.

Effective Date of Revocation

Pursuant to section 751(c)(3)(A) of the Act and 19 CFR 351.222(i)(2)(i), the Department will instruct U.S. Customs and Border Protection to terminate the suspension of liquidation of the merchandise subject to these orders entered, or withdrawn from warehouse, on or after December 20, 2016. Entries of subject merchandise prior to the effective date of revocation will continue to be subject to suspension of liquidation and antidumping duty deposit requirements. The Department will complete any pending administrative reviews of these orders and will conduct administrative reviews of subject merchandise entered prior to the effective date of revocation in response to appropriately filed requests for review.

[10] *See* Letter from Ministry of Economic Development and Trade of Ukraine, ''Solid Urea from Ukraine, 4th Sunset Review: A–823–801,'' dated December 1, 2016.

We are issuing and publishing the final determination in these five-year (sunset) reviews and notice in accordance with sections 751(c) and 777(i)(1) of the Act.

Dated: December 23, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Welded ASTM A–312 Stainless Steel Pipe From the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review; 2014–2015

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Department) is conducting an administrative review of the antidumping duty order on welded ASTM A–312 stainless steel pipe from Republic of Korea (Korea). The period of review (POR) is December 1, 2014, through November 30, 2015. The review covers two exporters and/or producers of the subject merchandise: SeAH Steel Corporation (SeAH) and LS Metal Co., Ltd. (LS Metal). The Department preliminarily determines that during the POR SeAH made sales of subject merchandise at less than normal value and LS Metal had no shipments. We invite interested parties to comment on these preliminary results.

DATES: Effective December 30, 2016.

FOR FURTHER INFORMATION CONTACT: Lingjun Wang, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–2316.

SUPPLEMENTARY INFORMATION:

Background

On February 9, 2016, the Department published a notice of initiation of this review.[1] On January 27, 2016, the Department exercised its discretion to toll all administrative deadlines by four

[1] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 81 FR 6832 (February 9, 2016).

business days.[2] On May 3, 2016 and December 13, 2016, the Department extended the deadline for the preliminary results to December 20, 2016.[3] For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[4] A list of topics included in the Preliminary Decision Memorandum is included as Appendix I.

Scope of the Order

The products covered by this order are shipments of welded austenitic stainless steel pipe (WSSP) from Korea that meets the standards and specifications set forth by the American Society for Testing and Materials (ASTM) for the welded form of chromium-nickel pipe designated ASTM A–312. Imports of these products are currently classifiable under the following United States Harmonized Tariff Schedule (HTSUS) subheadings: 7306.40.5005, 7306.40.5015, 7306.40.5040, 7306.40.5065, and 7306.40.5085.[5]

Preliminary Determination of No Shipments

LS Metal, in its questionnaire response, claimed that it made no sales or shipments of subject merchandise during the POR. We issued a no shipments inquiry to, and received no contradictory information from, U.S. Customs and Border Protection (CBP). As there is no record information contrary to LS Metal's claim, we preliminarily determine that LS Metal had no shipments of the subject merchandise and, therefore, no reviewable transactions during the POR. The Department intends to complete the review with respect to LS Metal and will issue appropriate instructions to CBP based on the final results of this review. *See* the Preliminary Decision Memorandum for further discussion of this issue.

Methodology

The Department is conducting this review in accordance with section 751(a)(2) of the Tariff Act of 1930, as amended (the Act). Constructed export prices or export prices are calculated in accordance with section 772 of the Act. Normal value is calculated in accordance with section 773 of the Act.

For a full description of the methodology underlying these preliminary results, *see* the Preliminary Decision Memorandum. A list of the topics discussed in the Preliminary Decision Memorandum is attached as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov,* and is available to all parties in the Central Records Unit, room B8024 of the Department's main building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly on the internet at *http://www.trade.gov/enforcement/.* The signed Preliminary Decision Memorandum and the electronic versions of the Preliminary Decision Memorandum are identical in content.

Preliminary Results of Review

As a result of this review, we preliminarily determine that the weighted-average dumping margin for the POR is as follows:

Producer and/or exporter	Margin (percent)
SeAH Steel Corporation	1.91

Assessment Rate

Upon issuance of the final results, the Department shall determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review. For any individually examined respondents whose weighted-average dumping margin is above *de minimis,* we will calculate importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the importer's examined sales to the total entered value of those same sales in accordance with 19 CFR 351.212(b)(1).[6] We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review when the importer-specific assessment rate calculated in the final results is above *de minimis* (*i.e.,* 0.50 percent). Where either the respondent's weighted-average dumping margin is zero or *de minimis,* or an importer-specific assessment rate is zero or *de minimis,* we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties. The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review where applicable.

The Department clarified its ''automatic assessment'' regulation on May 6, 2003.[7] This clarification applies to entries of subject merchandise during the POR produced by a respondent for which it did not know its merchandise was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company or companies involved in the transaction.

We intend to issue instructions to CBP 15 days after publication of the final results of this review.

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the notice of final results of this review for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rate for the companies under review will be equal to the weighted-average dumping margin established in the final results of this review except if that rate is *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for merchandise exported by manufacturers or exporters not covered in this review but covered in a prior completed segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the manufacturer or exporter participated; (3) if the exporter is not a firm covered in this review, a prior review, or the original investigation, but the manufacturer is, then the cash deposit rate will be the

rate established for the most recently completed segment of this proceeding for the manufacturer of the merchandise; and (4) if neither the exporter nor the manufacturer is a firm covered in this or any previously completed segment of this proceeding, then the cash deposit rate will be the ''all-others'' rate of 7.00 percent established in the *Amended Final Determination and Order*.[8] These deposit requirements, when imposed, shall remain in effect until further notice.

Disclosure and Public Comment

The Department intends to disclose the calculations performed in connection with these preliminary results within five days after the date of publication of this notice in accordance with 19 CFR 351.224(b).

Interested parties may submit case briefs no later than 30 days after the publication date of this notice.[9] Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[10] Parties who submit case briefs or rebuttal briefs are requested to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.[11] Executive summaries should be limited to five pages total, including footnotes.[12] All briefs must be filed electronically via ACCESS.[13] An electronically filed document must be received successfully in its entirety by ACCESS, by 5:00 p.m. Eastern Time on the on which it is due.[14]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance within 30 days of the publication date of this notice, filed electronically via ACCESS. Requests should contain: (1) The party's name, address and telephone number; (2) the number of participants; and (3) a list of issues parties intend to discuss. Issues raised in the hearing will be limited to those raised in the respective case and rebuttal briefs. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230, at a date and time to be determined.[15] Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

We intend to issue the final results of this review within 120 days after the date of publication of this notice, unless otherwise extended.[16]

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Department's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties

These preliminary results of this review are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.213(h).

Dated: December 20, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XF068

Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; Application for an Exempted Fishing Permit (EFP)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of EFP application; request for comments.

SUMMARY: NMFS announces the receipt of an exempted fishing permit (EFP) application from the West Coast Seafood Processors Association, Environmental Defense Fund, Oregon Trawl Commission, and Pacific Seafoods for an EFP Program to monitor and minimize salmon bycatch when vessels target rockfish in the shorebased individual fishing quota (IFQ) fishery. The NMFS West Coast Region's Assistant Regional Administrator for Sustainable Fisheries has made a preliminary determination that the subject EFP application contains all the required information and the EFP Program warrants further consideration. Therefore, NMFS announces that the Assistant Regional Administrator for Sustainable Fisheries proposes to recommend that EFPs be issued under an EFP Program that would allow as many as 50 commercial fishing vessels to conduct fishing operations that are otherwise restricted by the regulations governing the fisheries of the west coast of the United States. If awarded, the EFP Program would exempt participating limited entry bottom trawl vessels from the requirement to use selective flatfish trawl gear shoreward of the Trawl Rockfish Conservation Area (RCA) north of 40°10′ N. latitude in waters off the west coast. In addition, if awarded, the EFP Program would also allow participating bottom trawl vessels that fish any place along the west coast an exemption to the minimum mesh size requirement of 4.5 inches.

The EFP Program is intended to provide additional flexibility in the configuration and use of bottom trawl gear for the vessels, as well as provide additional information on potential impacts to protected resources, particularly Chinook salmon bycatch, resulting from this added flexibility. The additional information would be used to enhance the management of the groundfish fishery and promote the objectives of the Pacific Coast

Groundfish Fishery Management Plan (FMP). This EFP would be effective for 2017 and would expire no later than December 31, 2017, but could be terminated earlier under the terms and conditions of the EFP and other applicable laws. Additionally, NMFS, with input from the Pacific Fishery Management Council (Council), may extend the EFP beyond 2017, if appropriate. Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs.

DATES: Comments must be received no later than 5 p.m., local time on January 24, 2017.

ADDRESSES: You may submit comments, identified by 0648–XF068, by any one of the following methods:

- *Email: nmfs.wcr.trawlgearefp@noaa.gov.*
- *Mail:* Barry Thom, Regional Administrator, West Coast Region, NMFS, 7600 Sand Point Way NE., Seattle, WA 98115–0070, Attn: Melissa Hooper.

FOR FURTHER INFORMATION CONTACT: Melissa Hooper: (206) 526–4357 or *melissa.hooper@noaa.gov.*

SUPPLEMENTARY INFORMATION: This action is authorized by the FMP and implementing regulations at 50 CFR 600.745, which states that EFPs may be used to authorize fishing activities that would otherwise be prohibited.

If awarded, the EFP Program would give participating vessels an exemption from the current requirement at 50 CFR 660.130(b)(3)(ii)(A) to use selective flatfish trawl gear shoreward of the RCA and north of 40°10′ N. lat. EFP vessels would instead be subject to a small footrope requirement similar to what is required south of 40°10′ N. lat. Additionally, if awarded, the EFP Program would give participating vessels an exemption from the current requirement at 50 CFR 660.130(b)(2) to use a 4.5 inch (11.4 cm) mesh throughout the net for bottom trawl vessels with a Federal limited entry permit. Participating vessels would carry observers or electronic monitoring on 100-percent of trips, as is currently required in the IFQ program.

This exempted fishing activity is designed to provide participants with additional flexibility to configure their gear to re-establish a targeted rockfish fishery for widow, yellowtail, and chilipepper rockfish. The annual catch limits (ACLs) for both widow and chilipepper rockfish are increasing to levels not seen in several years, and the additional fish available could provide an opportunity for the redevelopment of processing and harvesting in those areas of the coast that had been constrained by the lower ACLs for these overfished species. Additionally, according to the applicants, the two-seam design of the nets can make it difficult to include some types of bycatch excluders. Eliminating the selective flatfish trawl gear requirement could provide vessels with more flexibility in designing their gear and would increase the opportunity for using bycatch reduction devices of different types.

Changes to the minimum mesh size would provide participating vessels with the flexibility to set their mesh size for the size of fish they intend to target. It is unlikely that vessels would set their mesh size much lower than the current minimum of 4.5 inches as smaller fish tend to be less marketable. However, a smaller mesh size may reduce the number of fish that are gilled (*i.e.* stuck in the mesh) and, as a result, are unmarketable.

Information collected during under the EFP Program would be used to support the analysis for potential new and modification to existing gear regulations, including the Council's trawl gear modifications regulatory amendment which the Council took final action on earlier in 2016. With many of the current gear regulations having been in place for more than ten years, it is difficult for NMFS, the Council, and industry to predict the impacts of removing these regulations. In the past ten years, the industry has changed significantly. Reduction in capacity, innovations in gear technologies, and changes in management have all contributed to these changes. The EFP Program would help demonstrate what potential impacts today's fleet could have when some of the current gear regulations are eliminated.

In the early 1990s, the Council redefined bottom trawl gear and established 4.5 inches as the minimum mesh size for bottom trawl codends coastwide, and then required the larger mesh throughout the remainder of the trawl nets. These initial mesh regulations were intended to: (1) Reduce the harvest of small and unmarketable fish, (2) reduce the incidental harvest of unwanted species, and (3) establish a standard, coastwide mesh requirement. However, the two different sizes throughout the mesh created a loophole for some vessels. By 1995, regulations were implemented by the Council to address this loophole. The new regulations required all bottom trawl nets to have a minimum of 4.5 inch mesh throughout the net (60 FR 13377, March 13, 1995). These measures were intended to give smaller-size fish the opportunity to escape from the entire trawl net, reducing the likelihood those fish would be caught.

Beginning in 2005, the Council required the use of selective flatfish trawl for all groundfish trawling on the west coast north of 40°10′ N. lat. shoreward of the RCA. The selective flatfish trawl gear was originally designed and implemented to reduce the bycatch of round fish, such as canary rockfish and salmon, while increasing the catch of flatfish species. Previously, management actions to protect vulnerable rockfish had greatly expanded the boundaries of the trawl RCA, moving the eastern boundary shoreward. These changes, while addressing the issues with vulnerable rockfish, also severely limited access to productive flatfish stocks. Selective flatfish trawl was seen as a way for the fleet to still access the fishing grounds while protecting the vulnerable rockfish species.

NMFS is concerned with the potential impacts a selective flatfish trawl exemption and minimum mesh size exemption may have on protected species. Available information suggests that bycatch rates of ESA-listed salmon, eulachon, and green sturgeon could increase as a result of the increased effort resulting from this EFP Program. NMFS is focused on developing an EFP that would meet the applicants' objectives to better target pelagic rockfish species while collecting information about bycatch and minimizing bycatch to the extent practicable. To address NMFS' concerns, the applicants are proposing that bycatch information, as well as haul level data and genetics will be collected on all salmon caught. Because a targeted fishery for chilipepper, widow, and yellowtail rockfish has not existed in more than a decade, there is limited information about expected bycatch in these target fisheries. The applicants are proposing that all salmon caught under this EFP Program would be counted against a salmon bycatch limit set by the NMFS for the EFP.

The applicants are proposing the following additional measures to minimize and monitor bycatch under the EFP Program:

- *Enrollment provisions*—Vessels will be required to contact NMFS prior to a specified deadline to enroll in the EFP for a minimum of one month. Vessels may opt in or out of the EFP Program on a monthly basis only, with the exception of the month of May, by notifying NMFS. During May, vessels using midwater gear after May 15th must declare out before they begin to use the gear and can only declare back in once they revert back to bottom trawl gear.

• *Salmon bycatch provisions*—Vessels will be required to operate under a 3,500 Chinook salmon bycatch cap under this EFP, and a specific Chinook salmon sub-cap of 595 Chinook (17 percent of the total Chinook salmon cap) on EFP Program trips south of 43° N, also known as the Eureka Management Area. Once the sub-cap limit is reached, the Eureka Management Area would be closed to participating vessels, but participating vessels could continue to fish under this EFP north of 43° N. If the Chinook salmon bycatch cap for the EFP Program (3,500 Chinook) is reached, the entire EFP Program would be closed for the remainder of the year. Vessels will be required to retain and land all salmon bycatch on all trips that fall under this EFP. Vessels participating in the EFP Program are also required to provide all salmon bycatch information as quickly as possible and without any restrictions on confidentiality.

• *Monitoring provisions*—Vessels participating in this EFP will be required to use 100 percent monitoring on all EFP Program trips, as is consistent with the requirements of the shoreside IFQ fishery. Vessels carrying observers must continue to sort their salmon bycatch by haul. Vessels participating in both the electronic monitoring EFP Program and this EFP Program must continue using the same monitoring and reporting provisions required under the electronic monitoring EFP Program. All vessels, regardless of using electronic monitoring or observers, will be required to have 100 percent shoreside monitoring.

○ *Real-Time Bycatch Monitoring provisions*—The participating vessels would work with Pacific States Marine Fisheries Commission to provide real-time, or close to it, monitoring of salmon bycatch on all EFP Program trips through fishtickets and shoreside monitoring reports. The reports would include number of landing events (total and since last report) and number of Chinook salmon landed (total and since last report).

• *Fleet accountability provisions*—In this EFP, the applicants have developed rules and definitions for bycatch avoidance and mitigation. These include definitions of a ''high bycatch tow'', ''adult salmon'', and ''high bycatch trip.'' Bycatch avoidances measures include moving locations when experiencing a ''high bycatch tow'' and a ''stand down'' rule where a participating vessel would have to declare out of the EFP Program following a series of high bycatch trips as defined in the application.

• *Area-based Avoidance provisions*—The EFP Program includes provisions regarding two closed areas:

○ Klamath River Salmon Conservation Zone—The Klamath River Conservation Zone, as defined in regulation at 50 CFR 660.131(c)(1), will be closed to participating vessels for the duration of the EFP Program.

○ Columbia River Salmon Conservation Zone—The Columbia River Salmon Conservation Zone, as defined in regulation at 50 CFR 660.131(c)(2), will be closed to participating vessels for the duration of the EFP Program.

The Pacific Fishery Management Council reviewed the EFP application at its September and November 2016 meetings and recommended that NMFS issue permits, under this EFP Program, as proposed with the following amendments:

• Set the Chinook salmon bycatch limit for this EFP Program at no more than 4,000 fish.

• Include a sub-limit of 17 percent, or 680 Chinook, for the Eureka management area.

• Remove the provision to trigger a closure of the Columbia River Salmon Conservation Zone to EFP fishing when 1,000 Chinook have been caught by EFP participants.

• Include the following criteria in the definition of a high bycatch trip: 1 adult Chinook (defined as 20 inches or greater) caught in the California portion of the Klamath Management Zone (KMZ) defined consistent with salmon regulations as waters from the California/Oregon border south to Horse Mountain.

• Vessels could fish concurrently under both this EFP Program and the electronic monitoring EFP Program.

• Participants must submit an informal report for the April 2017 Council meeting and a formal report for the June 2017 Council meeting.

• The permits under this EFP Program will not automatically renew for the 2018 year, but a resubmission of an application can be made to the Council in September 2017.

The applicants have not proposed a specific list of participating vessels, as is traditionally the case, but rather are proposing an overall EFP program that any vessel in the fleet could enroll in by applying to NMFS. Depending on the diversity of interested vessels, NMFS may need to develop several EFPs within the overall EFP program to accommodate different protocols for different gear configurations and monitoring types (*e.g.,* electronic monitoring vs. observers). Therefore, NMFS is proposing to approve an overall EFP program, covering all of the individual EFPs, with consistent general requirements following the conclusion of the public comment period. Subsequently, we will issue the actual permits for the EFPs to individual participants according to the nature of their fishing activities. NMFS intends to use an adaptive management approach in which NMFS may revise requirements and protocols to improve the program without issuing another **Federal Register** notice, provided that the modifications fall within the scope of the original EFP Program. In addition, the applicants may request minor modifications and extensions to the EFP Program throughout the course of research. EFP Program modifications and extensions may be granted without further public notice if they are deemed essential to facilitate completion of the proposed research and result in only a minimal change in the scope or impacts of the initially approved EFP request.

In accordance with NAO Administrative Order 216–6, a Categorical Exclusion or other appropriate National Environmental Policy Act document would be completed prior to the issuance of any permits under this EFP Program. Further review and consultation may be necessary before a final determination is made to issue the permits. After publication of this document in the **Federal Register**, the EFP Program, if approved by NMFS, may be implemented following the public comment period. NMFS will consider comments submitted, as well as the Council's discussion at their November 2016 Council meeting, in deciding whether or not to approve the application as requested. NMFS may approve the application in its entirety or may make any alternations needed to achieve the goals of the EFP Program.

Authority: 16 U.S.C. 1801 *et seq.,* 16 U.S.C. 773 *et seq.,* and 16 U.S.C. 7001 *et seq.*

Dated: December 27, 2016.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: American Lobster—Annual Trap Transfer Program.

OMB Control Number: 0648–0673.

Form Number(s): None.

Type of Request: Regular (revision and extension of a currently approved information collection).

Number of Respondents: 204.

Average Hours Per Response: 10 minutes.

Burden Hours: 17.

Needs and Uses: This is a request for revision and extension of a currently approved information collection.

The American lobster resource and fishery are cooperatively managed by the states and NMFS under the authority of the Atlantic Coastal Fisheries Cooperative Management Act, according to the framework set forth by the Atlantic States Marine Fisheries Commission (ASMFC) in Amendment 3 of its Interstate Fishery Management Plan (ISFMP). This collection of information is in response to several addenda to Amendment 3 of the ISFMP that work to reduce trap fishing effort through limited entry fishing and trap allocation limit reductions. This program is intended to help control fishing efforts while increasing economic flexibility in the American lobster trap fishery.

Currently, Federal lobster permit holders qualified to fish with trap gear in Lobster Conservation Management Areas 2 and 3 are undergoing scheduled annual trap allocation reductions of 5 percent per year until 2021 (Area 2) and 2020 (Area 3). In 2015, in an effort to help mitigate the initial economic burden of these reductions, NMFS and state agencies implemented the Lobster Trap Transfer Program that allows all qualified Federal lobster permit holders to buy and sell trap allocation from Areas 2, 3, or Outer Cape Cod. Each transaction includes a conservation tax of 10 percent, which deducts a number of traps equal to 10 percent of the total number of traps with each transfer, permanently removing them from the fishery.

NMFS collects annual application forms from Lobster permit holders who wish to buy and/or sell Area 2, 3, or Outer Cape trap allocation through the Trap Transfer Program. The transfer applications are only accepted during a 2-month period (from August 1 through September 30) each year, and the revised allocations for each participating lobster permit resulting from the transfers become effective at the start of the following Federal lobster fishing year, on May 1. Both the seller and buyer of the traps are required to sign the application form, which includes each permit holder's permit and vessel information, the number of traps sold, and the revised number of traps received by the buyer, inclusive of the amount removed according to the transfer tax. The parties must date the document and clearly show that the transferring permit holder has sufficient allocation to transfer and the permit holder receiving the traps has sufficient room under any applicable trap cap. This information allows NMFS to process and track transfers of lobster trap allocations through the Trap Transfer Program, and better enables the monitoring and management of the American lobster fishery as a whole.

Originally, this collection was part of a new rulemaking action, and included efforts to obtain information from American lobster permit holders to implement a limited access permit program. NMFS used the information to qualify permit holders for participation in Area 2 and/or the Outer Cape Area, and to allocate traps to each qualified permit. This limited access portion of the collection is complete and no longer necessary, so a revision is requested to remove it from the collection.

Affected Public: Business or other for-profit organizations; individuals or households; state, local or tribal governments.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

This information collection request may be viewed at *reginfo.gov*. Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov* or fax to (202) 395–5806.

Dated: December 27, 2016.

Sarah Brabson,

NOAA PRA Clearance Officer.

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

BroadbandUSA Webinar Series

AGENCY: National Telecommunications and Information Administration, U.S. Department of Commerce.

ACTION: Notice of Open Meetings; Monthly Webinars.

SUMMARY: The National Telecommunications and Information Administration (NTIA), as part of its BroadbandUSA program, will host a series of webinars on a monthly basis to engage the public and stakeholders with information to accelerate broadband access, improve digital inclusion, strengthen policies, and support local community priorities. The webinar series will provide ongoing source information on the range of topics and issues being addressed by BroadbandUSA, including best practices for improving broadband deployment, digital literacy, and e-government.

DATES: BroadbandUSA will hold the webinars from 2:00 p.m. to 3:00 p.m. Eastern Time on the third Wednesday of every month, beginning February 15, 2017, and continuing through September 20, 2017.

ADDRESSES: These are virtual meetings. NTIA will post the registration information on its BroadbandUSA Web site, *http://www2.ntia.doc.gov/,* under *Events.*

FOR FURTHER INFORMATION CONTACT: Lynn Chadwick, National Telecommunications and Information Administration, U.S. Department of Commerce, Room 4627, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–8338; email: *lchadwick@ntia.doc.gov.* Please direct media inquiries to NTIA's Office of Public Affairs, (202) 482–7002; email *press@ntia.doc.gov.*

SUPPLEMENTARY INFORMATION: NTIA's BroadbandUSA program provides expert advice and field-proven tools for assessing broadband adoption, planning new infrastructure and engaging a wide range of partners in broadband projects. BroadbandUSA convenes workshops on a regular basis to bring stakeholders together to discuss ways to improve broadband policies, share best practices, and connect communities to other federal agencies and funding sources for the purpose of expanding broadband infrastructure and adoption throughout America's communities. Experts from NTIA's BroadbandUSA program are available to provide technical assistance and to connect communities with additional resources, such as best practices, guides and program models. NTIA's BroadbandUSA team is developing tools to support communities working to expand broadband access, adoption and use. These webinars are among the tools BroadbandUSA uses to provide broadband information to the public, broadband stakeholders, tribal, local, and state governments, and federal programs. Other tools include publications, workshops, meetings and co-hosted events with stakeholder organizations and agencies.

The public is invited to participate in these webinars. General questions and comments are welcome at any time via email to *BroadbandUSA@ntia.doc.gov.* The webinars are open to the public and press. Pre-registration is recommended. NTIA asks registrants to provide their first and last names, city, state, organization, job title, and email addresses for both registration purposes and to receive any updates on BroadbandUSA via email at *BroadbandUSA@ntia.doc.gov.* Information on webinar content and how to register for one or more webinars will available on NTIA's Web site at *http://www2.ntia.doc.gov/WEBINARS.*

Individuals requiring accommodations should review the PowerPoint slides, transcript and recording from the webinar posted at the BroadbandUSA Web site, *http://www2.ntia.doc.gov/,* within 7 days following the live webinar.

Dated: December 27, 2016.

Kathy D. Smith,

Chief Counsel, National Telecommunications and Information Administration.

BILLING CODE 3510–60–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: This action deletes products and services from the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Effective January 29, 2017.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia, 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Deletions

On 11/28/2016 (81 FR 85538–85540), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the products and services listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.
2. The action may result in authorizing small entities to furnish the products and services to the Government.
3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the products and services deleted from the Procurement List.

End of Certification

Accordingly, the following products and services are deleted from the Procurement List:

Products

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from the procurement list.

SUMMARY: The Committee is proposing to add products to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes products previously furnished by such agency.

DATES: Comments must be received on or before January 29, 2017.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov*.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following products are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Products

NSN(s)—Product Name(s):
9905–00–NIB–0376—Flag, Marking, 2½″ x 3½″, 21″ Staff, Fluorescent Orange
9905–00–NIB–0377—Flag, Marking, 2½″ x 3½″, 21″ Staff, Fluorescent Pink
9905–00–NIB–0378—Flag, Marking, 2½″ x 3½″, 21″ Staff, Orange
9905–00–NIB–0379—Flag, Marking, 2½″ x 3½″, 21″ Staff, Red
9905–00–NIB–0380—Flag, Marking, 2½″ x 3½″, 21″ Staff, Yellow
9905–00–NIB–0384—Flag, Marking, 2½″ x 3½″, 15″ Staff, Yellow
9905–00–NIB–0386—Flag, Marking, 2½″ x 3½″, 15″ Staff, Red
9905–00–NIB–0387—Flag, Marking, 2½″ x 3½″, 15″ Staff, Orange
9905–00–NIB–0389—Flag, Marking, 4″ x 5″, 21″ Staff, Fluorescent Orange
9905–00–NIB–0390—Flag, Marking, 4″ x 5″, 21″ Staff, Fluorescent Pink
9905–00–NIB–0391—Flag, Marking, 4″ x 5″, 21″ Staff, Orange
9905–00–NIB–0392—Flag, Marking, 4″ x 5″, 21″ Staff, Red
9905–00–NIB–0393—Flag, Marking, 4″ x 5″, 21″ Staff, Yellow
Mandatory for: Total Government Requirement
Mandatory Source(s) of Supply: West Texas Lighthouse for the Blind, San Angelo, TX
Contracting Activity: General Services Administration, Fort Worth, TX
Distribution: B-List
NSN(s)—Product Name(s):
6530–00–NIB–0209—Hot Pack, Instant, Disposable, 6″ x 8″
6530–00–NIB–0217—Cold Pack, Instant, Disposable, 5″ x 6″
6530–00–NIB–0219—Cold Pack, Instant, Disposable, 5″ x 7″
6530–00–NIB–0221—Cold Pack, Instant, Disposable, 6″ x 8.75″
6530–00–NIB–0222—Hot Pack, Instant, Disposable, 5″ x 6″
6530–00–NIB–0223—Hot Pack, Instant, Disposable, 5″ x 7″
Mandatory Source(s) of Supply: Central Association for the Blind and Visually Impaired, Utica, NY
Mandatory for: Total Government Requirement
Contracting Activity: Defense Logistics Agency Troop Support
Distribution: B-List

Deletions

The following products are proposed for deletion from the Procurement List:

BILLING CODE 6353–01–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

[Docket Number DARS–2016–0040; OMB Control Number 0704–0232]

Information Collection Requirement; Defense Federal Acquisition Regulation Supplement, Contract Pricing

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Notice and request for comments regarding a proposed extension of an approved information collection requirement.

SUMMARY: DoD announces the proposed extension of a public information collection requirement and seeks public comment on the provisions thereof. The Office of Management and Budget (OMB) has approved this information collection requirement for use through March 31, 2017. DoD proposes that OMB extend its approval for an additional three years.

DATES: DoD will consider all comments received by February 28, 2017.

ADDRESSES: You may submit comments, identified by OMB Control Number 0704–0232 regarding this public burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, using any of the following methods:

○ *Federal eRulemaking portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

○ *Email: osd.dfars@mail.mil.* Include OMB Control Number 0704–0232 in the subject line of the message.

○ *Fax:* 571–372–6094.

○ *Mail:* Defense Acquisition Regulations System, Attn: Mr. Tom Ruckdaschel, OUSD(AT&L)DPAP/DARS, Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *www.regulations.gov* approximately two to three days after submission to verify posting. Please allow 30 days for posting of comments submitted by postal mail.

FOR FURTHER INFORMATION CONTACT: Mr. Tom Ruckdaschel, telephone 571–372–6088. The information collection requirements addresses in this notice are available at *http://www.acq.osd.mil/dpap/dars/dfarspgi/current/index.html* Paper copies are available from Mr. Tom Ruckdaschel, OUSD (AT&L) DPAP DARS, Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

SUPPLEMENTARY INFORMATION:

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), *DoD invites comments on:* (a) whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology.

Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS) Subpart 215.4, Contract Pricing, and related clause at DFARS 252.215; OMB Control Number 0704–0232.

Needs and Uses: DoD contracting officers use this information to determine if the contractor has an adequate system for generating cost estimates, which forecasts costs based on appropriate source information available at the time, and has the ability to monitor the correction of significant deficiencies. The need for information collection decreases as contractor estimating systems improve and gain contracting officer approval.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Number of Respondents: 302.

Responses per Respondent: 1.4 (approximately).

Annual Responses: 427.

Hours per Response: 40.7 (approximately).

Estimated Hours: 17,400.

Frequency: On occasion.

Summary of Information Collection

The clause at DFARS 252.215–7002, Cost Estimating System Requirements, requires that certain large business contractors—

- Establish an acceptable cost estimating system and disclose the estimating system to the administrative contracting officer (ACO) in writing;
- Maintain the estimating system and disclose significant changes in the system to the ACO on a timely basis; and
- Respond in writing to written reports from the Government that identify deficiencies in the estimating system.

Jennifer L. Hawes,

Editor, Defense Acquisition Regulations System.

The information collection requirements addresses in this notice are available at: *http://www.acq.osd.mil/dpap/dars/dfarspgi/current/index.html.* Paper copies are available from Mr. Tom Ruckdaschel, OUSD (AT&L) DPAP (DARS), Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

SUPPLEMENTARY INFORMATION: In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), DoD invites comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology.

Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS) Part 232, Contract Financing and Related Clauses at 252.232; OMB Control Number 0704–0359.

Needs and Uses:

- *DFARS 252.232–7007, Limitation of Government's Obligation.* The data submitted by contractors enables contracting officers to calculate improved financing opportunities that will provide benefit to both industry (prime and subcontractor level) and the taxpayer.
- *DFARS 252.232–7012, Performance Based Payments—Whole Contract Basis, and 252.232–7013, Performance Based Payments—Deliverable-Item Basis.* Contracting officers use the information provided by contractors to create a cash-flow model for use in evaluating alternative financing arrangements. The analysis tool calculates improved financing opportunities that will provide benefit to both industry (prime and subcontractor level) and the taxpayer.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Number of Respondents: 1,800.

Responses per Respondent: 1.

Annual Responses: 1,800.

Average Burden per Response: 1 hour.

Annual Burden Hours: 1,800.

Frequency: On occasion.

Summary of Information Collection

- DFARS 252.232–7007 is prescribed for use in solicitations and resultant incrementally-funded fixed-price contracts. Paragraph (c) of the clause requires a written notification from the contractor that: (1) States the estimated date when the total amount payable by the Government, including any cost for termination for convenience, will approximate 85 percent of the total amount then allotted to the contract for performance of the applicable items; (2) states an estimate of additional funding, if any, needed to continue performance of applicable line items up to the next scheduled date for allotment of funds, or to a mutually agreed upon substitute date; and (3) advises the contracting officer of the estimated amount of additional funds that will be required for the timely performance of the items funded pursuant to the clause, for a subsequent period as may be specified in the allotment schedule, or otherwise agreed to by the parties to the contract.
- DFARS 252.232–7012 is prescribed for use at DFARS 232.1005–70(a). This clause requires contractors to report the negotiated value of all previously completed performance-based payments; negotiated value of current performance-based payment(s) event(s); cumulative negotiated value of performance-based payment(s) events completed to date; total costs incurred to date; cumulative amount of payments previously requested; and the payment amount requested for the current performance based payment.

• DFARS 252.232–7013 is prescribed for use at 232.1005–70(b). This clause requires contractors to report the negotiated value of current performance-based payment(s) event(s); cumulative negotiated value of performance-based payment(s) events completed to date; total costs incurred to date; cumulative amount of payments previously requested; and the payment amount requested for the current performance based payment.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

[Docket Number DARS–2016–0039; OMB Control Number 0704–0229]

Information Collection Requirement; Defense Federal Acquisition Regulation Supplement, Foreign Acquisition

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Notice and request for comments regarding a proposed extension of an approved information collection requirement.

SUMMARY: DoD announces the proposed extension of a public information collection requirement and seeks public comment on the provisions thereof. The Office of Management and Budget (OMB) has approved this information collection requirement for use through March 31, 2017. DoD proposes that OMB extend its approval for use for three additional years beyond the current expiration date.

DATES: DoD will consider all comments received by February 28, 2017.

ADDRESSES: You may submit comments, identified by OMB Control Number 0704–0398, using any of the following methods:

○ *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

○ *Email: osd.dfars@mail.mil.* Include OMB Control Number 0704–0229 in the subject line of the message.

○ *Fax:* 571–372–6094.

○ *Mail:* Defense Acquisition Regulations System, Attn: Ms. Amy Williams, OUSD(AT&L)DPAP/DARS, Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *www.regulations.gov* approximately two to three days after submission to verify posting. Please allow 30 days for posting of comments submitted by postal mail.

FOR FURTHER INFORMATION CONTACT: Ms. Amy Williams, (571) 372–6106. The information collection requirements addressed in this notice are available on the World Wide Web at: *http://www.acq.osd.mil/dpap/dars/dfarspgi/current/index.html.* Paper copies are available from Ms. Amy Williams, OUSD(AT&L)DPAP(DARS), Room 3B941, 3060 Defense Pentagon, Washington, DC 20301–3060.

SUPPLEMENTARY INFORMATION: In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), *DoD invites comments on:* (a) Whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology.

Title, Associated Form, and OMB Number: Defense Federal Acquisition Regulation Supplement Part 225, Foreign Acquisition, and Related Clauses at 252.225; DD Form 2139; OMB Control Number 0704–0229.

Needs and Uses: DoD needs this information to ensure compliance with restrictions on the acquisition of foreign products imposed by statute or policy to protect the industrial base; to ensure compliance with U.S. trade agreements and memoranda of understanding that promote reciprocal trade with U.S. allies; and to prepare reports for submission to the Department of Commerce on the Balance of Payments Program.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Number of Respondents: 26,669.

Responses Per Respondent: About 10.

Annual Responses: 263,863.

Average Burden Per Response: .29 hours.

Annual Burden Hours: 77,209 (76,944 reporting hours and 265 recordkeeping hours).

Reporting Frequency: On occasion.

Summary of Information Collection

This information collection includes requirements related to foreign acquisition in DFARS Part 225, Foreign Acquisition, and the related clause at DFARS 252.225.

DFARS 252.225–7000, Buy American Act—Balance of Payments Program Certificate, as prescribed in 225.1101(1), requires an offeror to identify, in its proposal, supplies that are not domestic end products, separately listing qualifying country and other foreign end products.

DFARS 252.225–7003, Report of Intended Performance Outside the United States and Canada—Submission with Offer, and 252.225–7004, Report of Intended Performance Outside the United States and Canada—Submission after Award, as prescribed in 225.7204(a) and (b) respectively, require offerors and contractors to submit a Report of Contract Performance Outside the United States for subcontracts to be performed outside the United States. The reporting threshold is $700,000 for contracts that exceed $13.5 million. The contractor may submit the report on DD Form 2139, Report of Contract Performance Outside the United States, or a computer-generated report that contains all information required by DD Form 2139.

DFARS 252.225–7005, Identification of Expenditures in the United States, as prescribed in 225.1103(1), requires contractors incorporated or located in the United States to identify, on each request for payment under contracts for supplies to be used, or for construction or services to be performed, outside the United States, that part of the requested payment representing estimated expenditures in the United States.

DFARS 252.225–7010, Commercial Derivative Military Article—Specialty Metals Compliance Certificate, as prescribed at 225.7003–5(b), requires the offeror to certify that it will take certain actions with regard to specialty metals if the offeror chooses to use the alternative compliance approach when providing commercial derivative military articles to the Government.

DFARS 252.225–7013, Duty-Free Entry, as prescribed in 225.1101(4), requires the contractor to provide information on shipping documents and customs forms regarding products that are eligible for duty-free entry.

DFARS 252.225–7018, Photovoltaic Devices—Certificate, as prescribed at 225.7017–4(b), requires offerors to certify that no photovoltaic devices with an estimated value exceeding $3,000 will be utilized in performance of the contract or to specify the country of origin.

DFARS 252.225–7020, Trade Agreements Certificate, as prescribed in 225.1101(5), requires an offeror to list the item number and country of origin of any nondesignated country end product that it intends to furnish under the contract. Either 252.225–7020 or 252.225–7022 is used in any solicitation for products subject to the World Trade Organization Government Procurement Agreement.

DFARS 252.225–7021, Alternate II, Trade Agreements, as prescribed in 225.1101(6)(ii), in order to comply with a condition of the waiver authority provided by the United States Trade Representative to the Secretary of Defense, requires contractors from a south Caucasus/central or south Asian state to inform the government of its participation in the acquisition and also advise their governments that they generally will not have such opportunities in the future unless their governments provide reciprocal procurement opportunities to U.S. products and services and suppliers of such products and services.

DFARS 252.225–7023, Preference for Products or Services from Afghanistan, as prescribed in 225.7703–5(a), requires an offeror to identify, in its proposal, products or services that are not products or services from Iraq or Afghanistan.

DFARS 252.225–7025, Restriction on Acquisition of Forgings, as prescribed in 225.7102–4, requires the contractor to retain records showing compliance with the requirement that end items and their components delivered under the contract contain forging items that are of domestic manufacture only. The contractor must retain the records for 3 years after final payment and must make the records available upon request of the contracting officer. The contractor may request a waiver of this requirement in accordance with DFARS 225.7102–3.

DFARS 252.225–7032, Waiver of United Kingdom Levies—Evaluation of Offers, and 252.225–7033, Waiver of United Kingdom Levies, as prescribed in 225.1101(7) and (8), require an offeror to provide information to the contracting officer regarding any United Kingdom levies included in the offered price, and require the contractor to provide information to the contracting officer regarding any United Kingdom levies to be included in a subcontract that exceeds $1 million, before award of the subcontract.

DFARS 252.225–7035, Buy American Act—North American Free Trade Agreement Implementation Act—Balance of Payments Program Certificate, as prescribed in 225.1101(9), requires an offeror to list any qualifying country, NAFTA country, or other foreign end product that it intends to furnish under the contract. The Buy American Act no longer applies to acquisitions of commercial information technology.

DFARS 252.225–7046, Exports of Approved Community Members in Response to the Solicitation, requires a representation whether exports or transfers of qualifying defense articles were made in preparing the response to the solicitation. If yes, the offeror represents that such exports or transfers complied with the requirements of the provision.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0147]

Agency Information Collection Activities; Comment Request; Mandatory Civil Rights Data Collection

AGENCY: Office for Civil Rights (OCR), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before February 28, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2016–ICCD–0147. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 224–82, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Rosa Olmeda, 202–453–5968.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Mandatory Civil Rights Data Collection.

OMB Control Number: 1870–0504.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 17,620.

Total Estimated Number of Annual Burden Hours: 1,511,450.

Abstract: The collection, use and reporting of education data is an integral component of the mission of the U.S. Department of Education (ED). EDFacts, an ED initiative to put performance data at the center of ED's policy, management, and budget decision-making processes for all K–12 education programs, has transformed the way in which ED collects and uses data. For school years 2009–10 and 2011–12, the Civil Rights Data Collection (CRDC) was approved by OMB as part of the EDFacts information collection (1875–0240). For school years 2013–14 and 2015–16, the Office for Civil Rights (OCR) cleared the CRDC as a separate collection from

EDFacts. OCR used the most current EDFacts information collection approved by OMB (1875–0240) as a model for the 2013–14 and 2015–16 CRDC information collections that were approved by OMB (1870–0504). Similarly, the currently proposed revised CRDC information collection for school year 2017–18 is modeled after the most recent OMB-approved EDFacts information collection (1850–0925). For the 2017–18 CRDC, OCR is proposing few changes, and those changes will have the net effect of reducing burden on school districts. As with previous CRDC collections, the purpose of the 2017–18 CRDC is to obtain vital data related to the civil rights laws' requirement that public local educational agencies and elementary and secondary schools provide equal educational opportunity. ED has analyzed the uses of many data elements collected in the 2013–14 CRDC and sought advice from experts across ED to refine, improve, and where appropriate, add or remove data elements from the collection. ED also made the CRDC data definitions and metrics consistent with other mandatory collections across ED wherever possible. ED seeks OMB approval under the Paperwork Reduction Act to collect from LEAs, the elementary and secondary education data described in the sections of Attachment A. In addition, ED requests that LEAs and other stakeholders respond to the directed questions found in Attachment A–5.

Dated: December 27, 2016.

Stephanie Valentine,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. AC16–199–000]

Central Kentucky Transmission Company; Notice of Filing

Take notice that on September 19, 2016, pursuant to Rule 212 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 CFR 385.212, Central Kentucky Transmission Company submitted a request for a waiver of the reporting requirement to file the FERC Form 2–A for calendar year ending 2016 and all subsequent years; and a waiver of the reporting requirement to file the FERC Form 3–Q for quarter ending September 30, 2016 and all subsequent quarters.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: January 3, 2017.

Dated: December 23, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER17–623–000]

Rubicon NYP Corp; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Rubicon NYP Corp's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is January 12, 2017.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: December 23, 2016.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP17–23–000]

Florida Gas Transmission Company, LLC; Notice of Request Under Blanket Authorization

Take notice that on December 13, 2016, Florida Gas Transmission Company, LLC (FGT), 1300 Main Street, Houston, Texas 77002, filed in Docket No. CP17–23–000 a prior notice request pursuant to sections 157.205, 157.208, and 157.210 of the Commission's regulations under the Natural Gas Act (NGA), as amended, requesting authorization to construct, install, own, maintain, and operate its Western Division Project. Specifically, FGT proposes to construct approximately one mile of 36-inch-diameter pipeline loop, relocate an existing receiver, and install one new mainline valve downstream of Compressor Station 11 in Santa Rosa County, Florida. Additionally, FGT proposes to install approximately 100 feet of 8-inch-diameter connection piping, a custody transfer flange, and other auxiliary and appurtenant facilities at a new interconnection to be constructed with Florida Public Utilities Company (FPU) in Escambia County, Alabama, near the Alabama/Florida border. FGT states that the Western Division Project will provide 68,500 million British thermal units per day of natural gas to FPU and Ascend Performance Materials, Inc. FGT estimates the cost of the Western Division Project to be approximately $10,655,060, all as more fully set forth in the application which is on file with the Commission and open to public inspection. The filing may also be viewed on the web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or TTY, contact (202) 502–8659.

Any questions concerning this application may be directed to Stephen T. Veatch, Senior Director of Certificates, Florida Gas Transmission Company, LLC, 1300 Main Street, Houston, Texas 77002, by telephone at (713) 989–2024, by fax at (713) 989–1205, or by email at *stephen.veatch@energytransfer.com.*

Any person or the Commission's staff may, within 60 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to section 157.205 of the regulations under the NGA (18 CFR 157.205), a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the allowed time for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the NGA.

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenter's will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenter's will not be required to serve copies of filed documents on all other parties. However, the non-party commentary, will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 7 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

Dated: December 23, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER17–615–000]

Albany Green Energy, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Albany Green Energy, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is January 12, 2017.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: December 23, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OGC–2016–0773; FRL 9957–82–OGC]

Proposed Settlement Agreement, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA)

ACTION: Notice of proposed settlement agreement; request for public comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended (''CAA''), notice is hereby given of a proposed settlement agreement to address a consolidated set of petitions for review filed by several parties in the United States Court of Appeals for the Tenth Circuit. Basin Electric Power Cooperative (''Basin Electric'') and the State of Wyoming (''Wyoming'') (collectively, ''Petitioners'') filed petitions for review of an EPA rule addressing the regional haze requirements in Wyoming. Specifically, Basin Electric challenged the rule as it pertained to the NO_X BART emission limits for Laramie River Units 1–3. Wyoming also challenged the rule based on EPA's action on the Laramie River Units and on other grounds. The proposed settlement agreement would establish deadlines for EPA to take specified actions.

DATES: Written comments on the proposed settlement agreement must be received by January 30, 2017.

ADDRESSES: Submit your comments, identified by Docket ID number EPA–HQ–OGC–2016–0773, online at *www.regulations.gov.* For comments submitted at *www.regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *www.regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (''CBI'') or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Lea Anderson, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone: (202) 564–5571; fax number (202) 564–5603; email address: *anderson.lea@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Settlement Agreement

Petitioners filed petitions for review of EPA's rule titled ''Approval, Disapproval and Promulgation of Implementation Plans; State of Wyoming; Regional Haze State Implementation Plan; Federal Implementation Plan for Regional Haze,'' 79 FR 5032 (Jan. 30, 2014) (''Final Rule''). In the Final Rule, EPA disapproved, in part, the Wyoming regional haze SIP, including the NO_X BART requirements as to Laramie River Units 1–3, and promulgated a federal implementation plan (''FIP'') that imposed a NO_X BART emission limit of 0.07 lb/MMBtu (30-day rolling average) at Laramie River Units 1–3. Petitioners have raised various challenges to the Final Rule. This settlement agreement would resolve all of Basin Electric's challenges to the Final Rule and those portions of Wyoming's challenge to the Final Rule related to the establishment of NO_X BART emission limits for Laramie River Units 1–3.

Under the terms of the proposed settlement agreement, after the settlement agreement becomes final the parties will take specified actions as provided for in the settlement agreement. Please review the settlement agreement for additional details, available in the public docket at EPA–HQ–OGC–2016–0773.

For a period of 30 days following the date of publication of this notice, the Agency will receive written comments relating to the proposed settlement agreement from persons who were not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed settlement agreement if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Act. Unless EPA or the Department of Justice determines that consent to the agreement should be withdrawn or withheld, the terms of the agreement will be affirmed.

II. Additional Information About Commenting on the Proposed Settlement Agreement

A. How can I get a copy of the proposed settlement agreement?

The official public docket for this action under Docket ID No. EPA–HQ–OGC–2016–0773 contains a copy of the proposed settlement agreement. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

An electronic version of the public docket is available through *www.regulations.gov.* You may use the *www.regulations.gov* to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select ''search''.

It is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing online at *www.regulations.gov* without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA's policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the **ADDRESSES** section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment and with any disk or CD–ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the *www.regulations.gov* Web site to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an ''anonymous access'' system, which means EPA will not know your identity, email address, or other contact information unless you provide it in the body of your comment. In contrast to EPA's electronic public docket, EPA's electronic mail (email) system is not an ''anonymous access'' system. If you send an email comment directly to the Docket without going through *www.regulations.gov,* your email address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

Dated: December 22, 2016.

Gautam Srinivasan,

Acting Associate General Counsel.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0157 and 3060–1163]

Information Collections Being Reviewed by the Federal Communications Commission Under Delegated Authority

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before February 28, 2017. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0157.

Title: Section 73.99, Presunrise Service Authorization (PSRA) and Postsunset Service Authorization (PSSA).

Form Number: Not applicable.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities.

Number of Respondents and Responses: 200 respondents; 200 responses.

Frequency of Response: Annual and on occasion reporting requirements.

Estimated Time per Response: 0.25 hours.

Total Annual Burden: 50 hours.

Total Annual Costs: $15,000.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection is contained in Section 154(i) of the Communications Act of 1934, as amended.

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Privacy Impact Assessment(s): No impact(s).

Needs and Uses: The information collection requirements contained in 47 CFR 73.99(e) requires the licensee of an AM broadcast station intending to operate with a presunrise or postsunset service authorization to submit by letter to the Commission the licensee's name, call letters, location, the intended service, and a description of the method whereby any necessary power reduction will be achieved. Upon submission of this information, operation may begin without further authority. The FCC staff uses the letter to maintain complete technical information about the station to ensure that the licensee is in full compliance with the Commission's rules and will not cause interference to other stations.

OMB Control Number: 3060–0288.

Title: 47 CFR 78.33, Special Temporary Authority (Cable Television Relay Stations).

Form Number: Not applicable.

Type of Review: Extension of a currently approved collection.

Respondents: Business and other for-profit entities.

Number of Respondents and Responses: 35 respondents and 35 responses.

Estimated Time per Response: 4 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection of information is contained Section 154(i) of the Communications Act of 1934, as amended.

Total Annual Burden: 140 hours.

Total Annual Costs: $5,250.

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Privacy Impact Assessment(s): No impacts.

Needs and Uses: The information collection requirements contained in 47 CFR 78.33 permits cable television relay station (CARS) operators to file informal requests for special temporary authority (STA) to install and operate equipment in a manner different than the way normally authorized in the station license. The special temporary authority also may be used by cable operators to conduct field surveys to determine necessary data in connection with a formal application for installation of a radio system, or to conduct equipment, program, service, and path tests.

Federal Communications Commission.

Katura Howard,

Federal Register Liaison Officer, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0863]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before February 28, 2017. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0863.

Title: Satellite Delivery of Network Signals to Unserved Households for Purposes of the Satellite Home Viewer Act.

Form Number: Not applicable.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities.

Number of Respondents and Responses: 848 respondents; 250,000 responses.

Estimated Time per Response: 0.50 hours.

Frequency of Response: Recordkeeping requirement, On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection action is contained in the Satellite Home Viewer Act, 17 U.S.C. 119. The Satellite Home Viewer Act is an amendment of the Copyright Act; and Satellite Television Extension and Localism Act of 2010, Title V of the ''American Workers, State, and Business Relief Act of 2010,'' Public Law 111–175, 124 Stat. 1218 (2010) (STELA), see footnote 3.

Total Annual Burden to Respondents: 125,000 hours.

Total Annual Costs: None.

Privacy Impact Assessment(s): No impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Needs and Uses: The information collection requirements contained in 47 CFR 73.686 describes a method for measuring signal strength at a household so that the satellite and broadcast industries would have a uniform method for making an actual determination of the signal strength that a household received. The information gathered as part of the Grade B contour signal strength tests will be used to indicate whether a household is ''unserved'' by over-the-air network signals.

Satellite and broadcast industries making field strength measurements for formal submission to the Commission in rulemaking proceedings, or making such measurements upon the request of the Commission, shall follow the procedure for making and reporting such measurements which shall be included in a report to the Commission and submitted in affidavit form, in triplicate. The report shall contain the following information:

(a) Tables of field strength measurements, which for each measuring location; (b) U.S. Geological Survey topographic maps; (c) All information necessary to determine the pertinent characteristics of the transmitting installation; (d) A list of calibrated equipment used in the field strength survey; (e) A detailed description of the calibration of the measuring equipment, and (f) Terrain profiles in each direction in which measurements were made.

The information collection requirements contained in 47 CFR 73.686 also requires satellite and broadcast companies to maintain a written record describing, for each location, factors which may affect the recorded field (*i.e.,* the approximate time or measurement, weather, topography, overhead wiring, heights and types of vegetation, buildings and other structures, the orientation of the measuring location, objects of such shape and size that cause shadows or reflections, signals received that arrived from a direction other than that of the transmitter, survey, list of the measured value field strength, time and date of the measurements and signature of the person making the measurements).

The information collection requirements contained in 47 CFR 73.686(e) describes the procedures for measuring the field strength of digital television signals. These procedures will be used to determine whether a household is eligible to receive a distant digital network signal from a satellite television provider, largely rely on existing, proven methods the Commission has already established for measuring analog television signal strength at any individual location, as set forth in Section 73.686(d) of the existing rules, but include modifications as necessary to accommodate the inherent differences between analog and digital TV signals. The new digital signal measurement procedures include provisions for the location of the measurement antenna, antenna height, signal measurement method, antenna orientation and polarization, and data recording.

Therefore, satellite and broadcast industries making field strength measurements shall maintain written records and include the following information: (a) A list of calibrated equipment used in the field strength survey, which for each instrument specifies the manufacturer, type, serial number and rated accuracy, and the date of the most recent calibration by the manufacturer or by a laboratory. Include complete details of any instrument not of standard manufacture; (b) A detailed description of the calibration of the measuring equipment, including field strength meters, measuring antenna, and connecting cable; (c) For each spot at the measuring site, all factors which may affect the recorded field, such as topography, height and types of vegetation, buildings, obstacles, weather, and other local features; (d) A description of where the cluster measurements were made; (e) Time and date of the measurements and signature of the person making the measurements; (f) For each channel being measured, a list of the measured value of field strength (in units of dBµ after adjustment for line loss and antenna factor) of the five readings made during the cluster measurement process, with the median value highlighted.

Federal Communications Commission.

Katura Howard,

Federal Register Liaison Officer. Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–XXXX]

Information Collection Being Submitted for Review and Approval to the Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the

quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments should be submitted on or before January 30, 2017. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contacts below as soon as possible.

ADDRESSES: Direct all PRA comments to Kimberly R. Keravuori, OMB, via email *Kimberly_R_Keravuori@omb.eop.gov;* and to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *Nicole.Ongele@fcc.gov*. Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** section below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Nicole Ongele at (202) 418–2991. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the Web page *http://www.reginfo.gov/public/do/PRAMain*, (2) look for the section of the Web page called ''Currently Under Review,'' (3) click on the downward-pointing arrow in the ''Select Agency'' box below the ''Currently Under Review'' heading, (4) select ''Federal Communications Commission'' from the list of agencies presented in the ''Select Agency'' box, (5) click the ''Submit'' button to the right of the ''Select Agency'' box, (6) when the list of FCC ICRs currently under review appears, look for the OMB control number of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–XXXX.

Title: Connect America Fund—High Cost Portal Filing.

Form Number: N/A.

Type of Review: New collection.

Respondents: Business or other for-profit.

Number of Respondents and Responses: 1,526 unique respondents; 3,595 responses.

Estimated Time per Response: 8 hours—30 hours.

Frequency of Response: On occasion, quarterly reporting requirements, annual reporting requirements, one-time reporting requirement and recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151–154, 155, 201–206, 214, 218–220, 251, 252, 254, 256, 303(r), 332, 403, 405, 410, and 1302.

Total Annual Burden: 65,713 hours.

Total Annual Cost: No Cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: We note that USAC must preserve the confidentiality of certain data obtained from respondents; must not use the data except for purposes of administering the universal service programs or other purposes specified by the Commission; and must not disclose data in company-specific form unless directed to do so by the Commission. Respondents may request materials or information submitted to the Commission or the Administrator believed confidential to be withheld from public inspection under 47 CFR 0.459 of the FCC's rules.

Needs and Uses: The Commission is requesting approval for this new information collection. In March 2016, the Commission adopted an order reforming its universal service support program in areas served by rate-of-return carriers. Connect America Fund *et al.*, WC Docket Nos. 10–90 *et al.*, Report and Order, Order and Order on Reconsideration, and Further Notice of Proposed Rulemaking, FCC 16–33 (*Rate-of-Return Order*). Also, in May 2016, the Commission adopted rules to implement a competitive bidding process for Phase II of the Connect America Fund. Connect America Fund *et al.*, WC Docket Nos. 10–90 et al., Report and Order and Further Notice of Proposed Rulemaking, FCC 16–64 (*Phase II Auction Order*).

This information collection addresses the requirement that certain carriers with high cost reporting obligations must file information about their locations which meet their broadband deployment public interest obligations via an electronic portal (''portal''). *The Rate-of-Return Order* required that the Universal Service Administrative Company (USAC) establish the portal so that carriers could file their location data with the portal starting in 2017. The *Rate-of-Return Order* required all recipients of Phase II model-based support and rate-of-return carriers to submit geocoded location data and related certifications to the portal. Recipients of Phase II model-based support had been required to file such information in their annual reports due by July 1. The *Phase II Auction Order* requires auction winners to build-out networks capable of meeting their public interest obligations and report, to an online portal, locations to which auction winners had deployed such networks. This collection also implements the Rate-of-Return Order by moving and revising the currently approved requirements under OMB Control Numbers 3060–1200 and 3060–0986 to enable recipients of Phase II model-based support and rural broadband experiment funding to file their location information and associated reports and certifications in the portal instead of on the FCC Form 481 or as is currently required.

Federal Communications Commission.

Katura Howard,

Federal Register Liaison Officer. Office of the Secretary.

BILLING CODE 6712–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[60Day–17–17IY; Docket No. ATSDR–2016–0122]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on ''Biomonitoring of Great Lakes Populations Program III.'' The purpose of the proposed study is to evaluate body burden levels of priority contaminants in Great Lakes residents,

particularly those who are at high exposure risk, in the Milwaukee Bay Estuary Area of Concern (AOC) area that was not previously addressed in ATSDR's previous biomonitoring programs around the Great Lakes.

DATES: Written comments must be received on or before February 28, 2017.

ADDRESSES: You may submit comments, identified by Docket No. ATSDR–2016–0122 by any of the following methods:

- *Federal eRulemaking Portal: Regulations.gov*. Follow the instructions for submitting comments.
- *Mail:* Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. All relevant comments received will be posted without change to *Regulations.gov*, including any personal information provided. For access to the docket to read background documents or comments received, go to *Regulations.gov*.

Please note: All public comment should be submitted through the Federal eRulemaking portal (*Regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact the Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: *omb@cdc.gov*.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Biomonitoring of Great Lakes Populations Program III—New—Agency for Toxic Substances and Disease Registry (ATSDR).

Background and Brief Description

The Agency for Toxic Substances and Disease Registry (ATSDR) is requesting a three-year Paperwork Reduction Act (PRA) clearance for a new information collection request (ICR) titled ''Biomonitoring of Great Lakes Populations Program III.'' ATSDR awarded funds to the Wisconsin Department of Health Services (WIDHS) to conduct this information collection under cooperative agreement #NU61TS000269–01–00. The purpose of the current program is to evaluate body burden levels of legacy and emerging contaminants in susceptible Great Lakes populations in the Milwaukee Estuary Area of Concern (AOC) in Wisconsin, an area that has not been previously covered by other Great Lakes initiatives.

The Great Lakes Basin has suffered decades of pollution and ecosystem damage. Many chemicals persist in Great Lakes waters and sediments, as well as in wildlife. These chemicals can build up in the aquatic food chain, and eating contaminated fish is a known route of human exposure.

In 2009, the Great Lakes Restoration Initiative (GLRI) was enacted by Public Law 111–88 to make restoration and protection of the Great Lakes a national priority. The GLRI is led by the U.S. Environmental Protection Agency (US EPA). Under a 2015 interagency agreement with the US EPA, ATSDR initiated the Biomonitoring of Great Lakes Populations Program III program. This project will provide additional public health information to supplement the previous cooperative agreement programs CDC–RFA–TS10–1001 ''Biomonitoring of Great Lakes Populations'' (hereafter referred to as ''Program I,'' OMB Control Number 0923–0044) and CDC–RFA–TS13–1302 ''Biomonitoring of Great Lakes Populations-II'' (hereafter referred to as ''Program II,'' OMB Control Number 0923–0052) initiated in FY2010 and FY2013, respectively.

WIDHS received funding for the current program. WIDHS will recruit and enroll two subpopulations of adults in the Milwaukee Bay Estuary Area of Concern (AOC) who are known to eat fish from the Milwaukee River Basin and Lake Michigan. This study will not include pregnant women.

The target populations are: (1) Licensed anglers living in proximity to the Milwaukee Estuary AOC and (2) Burmese refugees who are known to eat a substantial amount of fish from this area. WIDHS study staff will work closely with local refugee and citizen support organizations on participant recruitment.

The aims of the information collection in this surveillance project are:

1. Assess levels of contaminants (metals, polychlorinated biphenyls, chlorinated pesticides, perfluorinated compounds, and polyaromatic hydrocarbons) in blood and urine of residents who consume fish from contaminated areas that had not been studied in previous Programs I and II;

2. Use the project findings to inform public health officials and offer guidance on public health actions to reduce exposure to Great Lakes contaminants.

This applied public health program aims to measure contaminants in biological samples (blood, urine and hair) from people who may be at high risk of chemical exposure in the Great Lakes area. These measurements will provide a baseline for current and future restoration activities. The results will be compared to available national estimates, such as those reported by the National Health and Nutrition Examination Survey (NHANES).

Respondents will be screened for eligibility and consent will be obtained. Participants who consent will respond to a questionnaire and participate in clinic visits for body measurements and biological specimen collection (blood, urine, and hair). Their blood will be tested for polychlorinated biphenyls, metals, perfluorinated compounds, persistent pesticides, and lipids. Urine will be tested for polycyclic aromatic hydrocarbons and creatinine. The hair samples (optional) will be saved for a later analysis.

Respondents will also be interviewed. They will be asked about demographic and lifestyle factors, hobbies, health conditions that may affect fish consumption and fishing habits, and types of jobs which can contribute to chemical exposure. Some dietary questions will be asked with a focus on consumption of Great Lakes fish.

Participation in the study is voluntary and there is no cost to respondents other than their time. The estimated annualized burden for the program averaged over the three-year study period is 231 hours among 166 respondents. There is no cost to respondents other than their time spent in the study.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Licensed Anglers	Eligibility Screening Survey (paper)	156	1	5/60	13
	Eligibility Screening Survey (online)	28	1	5/60	2
	Study Questionnaire (paper)	58	1	30/60	29
	Study Questionnaire (online)	87	1	30/60	44
	Clinic Visit Checklist and Body Measurements	133	1	35/60	78
	Follow-up Survey	133	1	5/60	11
Burmese Refugees	Eligibility Screening Survey	42	1	5/60	4
	Contact Information Form	33	1	5/60	3
	Study Questionnaire	33	1	40/60	22
	Clinic Visit Checklist and Body Measurements	33	1	35/60	19
	Network Size Questions	33	1	5/60	3
	Follow-up Survey	33	1	5/60	3
Total					231

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–17–0576; Docket No. CDC–2016–0125]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed revision of the CDC information collection project entitled ''Possession, Use, and Transfer of Select Agents and Toxins.''

DATES: Written comments must be received on or before February 28, 2017.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2016–0125 by any of the following methods:

- *Federal eRulemaking Portal: Regulations.gov*. Follow the instructions for submitting comments.
- *Mail:* Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. All relevant comments received will be posted without change to *Regulations.gov*, including any personal information provided. For access to the docket to read background documents or comments received, go to *Regulations.gov*.

Please note: All public comments should be submitted through the Federal eRulemaking portal (Regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact the Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden is the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose, or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel to respond to a collection of information, search data sources, and complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Possession, Use, and Transfer of Select Agents and Toxins (42 CFR 73) (OMB Control No. 0920–0576, exp. 12/31/2018)—Revision—Office of Public Health Preparedness and Response (OPHPR), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Subtitle A of the *Public Health Security and Bioterrorism Preparedness and Response Act of 2002, (42 U.S.C. 262a),* requires the United States Department of Health and Human Services (HHS) to regulate the possession, use, and transfer of biological agents or toxins that have the potential to pose a severe threat to public health and safety (select agents and toxins). Subtitle B of the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (which may be cited as the *Agricultural Bioterrorism Protection Act of 2002), (7 U.S.C. 8401),* requires the United States Department of Agriculture (USDA) to regulate the possession, use, and transfer of biological agents or toxins that have the potential to pose a severe threat to animal or plant health, or animal or plant products (select agents and toxins). The HHS Secretary delegated the responsibility for promulgating and implementing select agent regulations found at 42 CFR part 73 to CDC Division of Select Agents and Toxins (DSAT). The Animal and Plant Health Inspection Service (APHIS)/Agriculture Select Agent Services (AgSAS) was delegated responsibility by USDA for select agent regulations (7 CFR part 331, and 9 CFR part 121). The Federal Select Agent Program (FSAP) is the collaboration of the DSAT and AgSAS to administer the select agent regulations in a manner to minimize the administrative burden on persons subject to the select agent regulations. Accordingly, CDC and APHIS have adopted an identical system to collect information for the possession, use, and transfer of select agents and toxins.

CDC is requesting OMB approval to revise the collected information under the select agent regulations through the use of the APHIS/CDC Form 3 (Report of Theft, Loss, or Release of Select Agents and Toxins). The Report of Theft, Loss, or Release of Select Agent and Toxin form (42 CFR 73.19(a),(b)) must be completed by an individual or an entity whenever the individual or entity experiences a theft, loss, or release of a select agent or toxin.

CDC is proposing to revise the form to further clarify what needs to be reported as a ''release'' and ''loss'' and additional fields to assist with categorizing the type of release (*e.g.,* spill within secondary containment, occupational exposure, possible breach of facility containment, etc.), type of exposure, and the understanding of safety and security risk levels relative to human illness. Estimated average time to complete this form is one hour.

The total estimated annualized burden for this collection was calculated using data obtained from the FSAP database and is estimated as 430 hours. Information will be collected via fax, email and hard copy mail from respondents. Upon OMB approval, CDC will continue use of the revised form through November 2018. There is no cost to the respondents.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
73.19 Section	Report of Theft, Loss, or Release of Select Agents and Toxins.	215	1	2	430
Total	....	....	....	....	430

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Colorectal Cancer Control Program (CRCCP) Monitoring Activities—(OMB Control No. 0920–1074, exp. 6/30/2018)—Revision—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

CDC is requesting a revision of the information collection approved under OMB Control Number 0920–1074. Based on feedback from grantees and internal subject matter experts, CDC proposes use of a revised annual grantee survey instrument, as well as a revised clinic-level data collection template. The number of respondents will also decrease from 31 to 30 grantees. Total estimated annualized burden will decrease. OMB approval is requested for three years.

Colorectal cancer (CRC) is the second leading cause of death from cancer in the United States among cancers that affect both men and women. CRC screening has been shown to reduce incidence of and death from the disease. Screening for CRC can detect disease early when treatment is more effective and prevent cancer by finding and removing precancerous polyps. Of individuals diagnosed with early stage CRC, more than 90% live five or more years. Despite strong evidence supporting screening, only 65% of adults currently report being up-to-date with CRC screening as recommended by the U.S. Preventive Services Task Force, with more than 22 million age-eligible adults estimated to be untested. To reduce CRC morbidity, mortality, and associated costs, use of CRC screening tests must be increased among age-eligible adults with the lowest CRC screening rates.

CDC's Colorectal Cancer Control Program (CRCCP) currently provides funding to 30 grantees under ''Organized Approaches to Increase Colorectal Cancer Screening'' (CDC–RFA–DP15–1502). CRCCP grantees include state governments or bona-fide agents, universities, and tribal organizations. The purpose of the cooperative agreement program is to increase CRC screening rates among an applicant defined target population of persons 50–75 years of age within a partner health system serving a defined geographical area or disparate population. The CDC significantly redesigned the CRCCP in 2015. The CRCCP has two components.

Component 1: Funding for component 1 is limited to partnerships with health systems to implement up to four priority evidence-based interventions (EBIs) described in the Guide to Community Preventive Services as well as other supporting strategies. Grantees must implement at least two EBIs in each partnering health system. All 30 CRCCP grantees received Component 1 funding.

Component 2: Funding for component 2 is used by grantees to provide direct screening and follow-up clinical services for a limited number of individuals aged 50–64 in the program's priority population who are asymptomatic, at average risk for CRC, have inadequate or no health insurance for CRC screening, and are low income. Six of the 30 CRCCP grantees received Component 2 funding.

Two forms of data collection have been implemented to assess program processes and outcomes. In Program Year 1, the annual grantee survey monitored grantee program implementation, including (1) program management, (2) implementation of the EBIs and Supporting Activities (SAs) (3) health information technology (IT), (4) partnerships, (5) data use, (6) training and technical assistance (TA), and (7) clinical service delivery (for programs receiving Component 2 funding only). Clinic-level data collection assessed CRCCP's primary outcome of interest—CRC screening rates within partner health systems—by measuring the following components: (1) Partner health system, clinic, and patient population characteristics, (2) reporting period (for screening rates), (3) Chart review screening rate data, (4) Electronic Health Record (EHR) screening rate, and (5) Priority evidence-based EBIs and SAs. CRCCP grantees collected and reported CRCCP clinic-level information for all partnering health system primary care clinic sites.

For Program Years 2–5, based on feedback from grantees, CDC proposes use of updated data collection instruments. Specifically, CDC plans to implement a revised CRCCP annual grantee survey that eliminates survey items related to implementation of EBIs and SAs as these data are more accurately reported at the clinic level. Conversely, CDC plans to implement a revised CRCCP clinic-level data collection template that includes additional data variables related to implementation of EBIs and SAs, as well as monitoring and evaluation activities, at the clinic level.

Redesigned data elements will enable CDC to better gauge progress in meeting CRCCP program goals and monitor implementation activities, evaluate outcomes, and identify grantee technical assistance needs. In addition, data collected will inform program improvement and help identify successful activities that need to be maintained, replicated, or expanded.

OMB approval is requested for three years. The number of grantees decreased from 31 grantees in program year one to 30 grantees in program year two. In addition, the total estimated annualized burden hours have decreased from 210 to 204 hours. There are no costs to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
CRCCP Grantees	CRCCP Annual Grantee Survey	30	1	24/60	12
	CRCCP Clinic-level Information Collection Template.	30	12	32/60	192
Total					204

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Electronic Filing of Certain Import Data Into the Document Image System Through the Automated Commercial Environment

AGENCY: Centers for Disease Control and Prevention, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: Through publication of this notice, the Centers for Disease Control and Prevention (CDC) located within the Department of Health and Human Services (HHS) announces a new policy and guidance for the electronic submission of data related to the importation of CDC-regulated items in the International Trade Data System (ITDS). Certain data, forms, and documents required to be submitted to HHS/CDC will be submitted through the U.S. Customs and Border Protection (CBP)'s Automated Commercial Environment (ACE) system, using the Document Image System (DIS). This electronic process will replace certain paper-based processes in keeping with Federal policy and improve operations to further assist HHS/CDC's mission to protect public health.

DATES: This action is effective December 30, 2016.

FOR FURTHER INFORMATION CONTACT: For information regarding this Notice: Ashley A. Marrone, J.D., Division of Global Migration and Quarantine, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–E03, Atlanta, GA 30329. For information regarding CDC operations related to this Notice: Kendra Stauffer, D.V.M., Division of Global Migration and Quarantine, Quarantine and Border Health Services Branch, Importations and Animal Contact Team, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–E28, Atlanta, GA 30345. Either may also be reached by telephone 404–498–1600 or email *CDCAnimalImports@cdc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On February 19, 2014, the President signed Executive Order 13659, *Streamlining the Export/Import Process for America's Businesses* (79 FR 10655), that requires the completion and government-wide utilization by December 31, 2016 of the International Trade Data System (ITDS) and establishes a two-tiered governance process to oversee its implementation. Once fully implemented, ITDS, through the Automated Commercial Environment (ACE), will allow importers to submit the data required by U.S. Customs and Border Protection and its Partner Government Agencies (PGAs) relating to the import or export of cargo through a ''single window'' concept. CBP has developed ACE as the single window for the trade community to transmit electronically all required cargo-related information.

This notice announces HHS/CDC's updated policy concerning the electronic transmission of HHS/CDC permits, forms, and documents using CBP's Document Image System (DIS). This DIS capability will satisfy the HHS/CDC data and electronic document requirements for any entry filed electronically in ACE and enable the trade community to have a CBP-managed single window for the electronic submission of data and documents required by HHS/CDC during the cargo importation and review process. The list of PGA forms and documents, including documents required by HHS/CDC, which may be transmitted using DIS may be found at *http://www.cbp.gov/trade/ace/features* under the DIS tab by clicking on the ''ACE PGA Forms List'' hyperlink in the ''References'' column. The HHS/CDC permits, forms, and documents listed in the ACE PGA Forms List are those eligible to be transmitted using DIS.

II. Current HHS/CDC Paper-Based Procedures

Under current applicable HHS/CDC policy and operations, the importation of HHS/CDC-regulated commodities into the customs territory of the United States typically requires the submission of one or more of the following documents:

(1) Animal and Plant Health Inspection Service (APHIS)/CDC Form 2—Request to Transfer Select Agents and Toxins (42 CFR 73);

(2) CDC Form 0.0728—Permit to Import or Transfer Etiologic Agents or Vectors of Human Disease (42 CFR 71.54);

(3) Rabies Vaccination Certificate (42 CFR 71.51);

(4) CDC Approval of Confinement Agreement Issuance Letter (42 CFR 71.51);

(5) CDC Permission Letter—Permit to Import African Rodents, Civets, or Turtles (42 CFR 71.56, 42 CFR 71.32(b), 42 CFR 71.52);

(6) CDC Nonhuman Primate Notification Message—Confirmation from CDC to the importer that CDC has given permission to import the nonhuman primate shipment (42 CFR 71.53); and

(7) Certification statement of a material that is not known to contain or suspected of containing an infectious biological agent, or has been rendered noninfectious (42 CFR 71.54).

Under the new policy, for those HHS/CDC items filed within ACE, individuals will continue to use the designated HHS/CDC application and filing processes; however, the processes will be electronic rather than paper-based.

III. Implementation of E.O. 13659

Under this new Federal policy, which HHS/CDC has adopted, importers and brokers who file electronic entries for HHS/CDC-regulated items are now required to:

• Obtain the copy of the permit/permission letter, form, or document for submission to DIS:

(1) The APHIS/CDC Form 2, Request to Transfer Select Agents and Toxins, is used by entities to request prior authorization of a transfer including importation into the United States of select agent(s) or toxin(s) from the Federal Select Agent Program as required by regulations (7 CFR 331, 9 CFR 121, and 42 CFR 73). The form is available at: *http://www.selectagents.gov/form2.html.*

(2) CDC Form 0.0728—Permit to Import or Transfer Etiologic Agents or Vectors of Human Disease: *http://www.cdc.gov/od/eaipp/index.htm.* For infectious biological agents, infectious substances, and vectors of human disease, importers must have a permit from HHS/CDC's Import Permit Program.

(3) A rabies vaccination certificate for a dog must be issued by a licensed veterinarian.

(4) and (5) For certain animals and animal products capable of causing human disease, you must have a permit or letter of permission. See *https://www.cdc.gov/importation/bringing-an-animal-into-the-united-states/index.html.* Email inquiries about these importations to *CDCAnimalImports@cdc.gov.* Note that CDC is transitioning to the CDC Import Permit for a Dog not immunized against Rabies during the first quarter of 2017. Permits will be issued using an online application process.

(6) Only registered importers may bring nonhuman primates into the United States. HHS/CDC emails this approval to the broker after receiving notification of an incoming shipment by a registered importer. For information on how to become a registered importer, see *http://www.cdc.gov/importation/bringing-an-animal-into-the-united-states/monkeys.html.* The HHS/CDC Nonhuman Primate Notification Message is automatically generated when a registered importer notifies HHS/CDC of an incoming shipment.

(7) For material that is not known to contain or suspected of containing an infectious biological agent, or has been rendered noninfectious, importers must provide an importer certification statement with the imported material. The certification statement must include a detailed description of the material and a statement on official letterhead signed by the sender or recipient clearly stating that (1) the material is not known or suspected to contain an infectious biological agent and (2) how the person making the certification knows that the specimen does not contain an infectious biological agent; or why that person believes there is no reason to suspect that the specimen contains an infectious biological agent; or a detailed description of how the material was rendered noninfectious. For more information, see the Import Regulations for Infectious Biological Agents, Infectious Substances and Vectors at *http://www.cdc.gov/phpr/ipp/regulations.htm.*

• Follow all applicable rules for obtaining and certifying DIS software as set forth by CBP. For more information, see *https://www.cbp.gov/trade/automated/systems.*

• Transmit import filings to CBP via ACE.

• Transmit only information to CBP that has been requested by CBP or CDC.

• Check CDC's Importation Web site *http://www.cdc.gov/importation/index.html* regularly for updated guidance for electronic filing.

The following processes will remain as paper-based submissions:

A. Human remains for interment or cremation after entering the United States will not have an electronic entry within ACE. The required paper-based documents must continue to accompany the human remains, including those required by 42 CFR 71.55. For more information, see *http://www.cdc.gov/quarantine/human-remains.html.*

B. Form 75.37—''Notice to Owners and Importers of Dogs (Requirement for Dog Confinement)'' Dogs imported into the United States are expected to be healthy and vaccinated against rabies. There is no requirement to have this information electronically available within ACE. CBP issues a notice to owners and importers post-arrival only when dogs arrive in the U.S. port of entry without the required vaccination, meet certain criteria, and have been preapproved by HHS/CDC. For more information, visit the CDC Web page for how to bring an animal into the United States at *http://www.cdc.gov/importation/bringing-an-animal-into-the-united-states/dogs.html.*

For more information on this policy and updates or changes to the forms eligible for electronic submission, please see *http://www.cdc.gov/importation/index.html.*

IV. Paperwork Reduction Act

This change does not institute a new collection of information. The collection of information, including the use of the DIS, has been previously approved by the Office of Management and Budget (OMB) in accordance with the requirements of the Paperwork Reduction Act (44 U.S.C. 3507) and assigned the following OMB control numbers: (1) Foreign Quarantine: OMB Control No. 0920–0134, expiration date 5/31/2019; (2) Import Permit Applications: OMB Control No. 0920–0199, expiration date 1/31/2017; (3) Requirements for the Importation of Nonhuman Primates into the United States: OMB Control No. 0920–0263, expiration date 9/30/2017; and (4) Possession, Use, and Transfer of Select Agents and Toxins: OMB Control No. 0920–0576, expiration date 12/31/18.

Dated: December 27, 2016.

Lauren Hoffmann,

Acting Executive Secretary, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day–17–17IX; Docket No. CDC–2016–0124]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project entitled ''Assessment of Interventions Intended to Protect Pregnant Women in Puerto Rico from Zika Infections.'' This project consists of telephone interviews with pregnant WIC participants in Puerto Rico.

DATES: Written comments must be received on or before February 28, 2017.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2016–0124 by any of the following methods:

- *Federal eRulemaking Portal: Regulations.gov*. Follow the instructions for submitting comments.
- *Mail:* Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. All relevant comments received will be posted without change to *Regulations.gov*, including any personal information provided. For access to the docket to read background documents or comments received, go to *Regulations.gov*.

Please note: All public comment should be submitted through the Federal eRulemaking portal (*Regulations.gov*) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact the Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Assessment of Interventions Intended to Protect Pregnant Women in Puerto Rico from Zika Infections—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

CDC proposes to continue the information collection initially cleared by OMB as an emergency ICR in June, 2016 (OMB Control No. 0920–1118). The expiration date for 0920–1118 is December 31, 2016. However, CDC intends to continue information collection for an additional nine months and is seeking OMB clearance to do so.

In December 2015, the Commonwealth of Puerto Rico, a United States territory, reported its first confirmed locally transmitted Zika virus case.

Starting in March 2016, The Centers for Disease Control and Prevention's (CDC) National Center for Emerging and Zoonotic Infections Diseases (NCEZID) initiated several interventions targeting pregnant women. The ultimate goal of these interventions is/was to protect pregnant women from Zika virus and encourage Zika prevention behaviors among pregnant women. The interventions include the following:

1. Zika Education Sessions (at WIC clinics;
2. Zika Prevention Kits;
3. Communication activities; and
4. Vector control services in the community.

This ICR is for data collection over the next nine months related to Zika prevention efforts that have been and will be implemented in Puerto Rico. Specifically, CDC needs this assessment to ensure that Zika prevention activities effectively educate, equip, and encourage women to participate in as many Zika prevention behaviors as possible. On-going evaluation is an important part of this program because it can reveal novel ways that women protect themselves from Zika, how effective the distribution of the Zika Prevention Kit has been in Puerto Rico, perceived severity and susceptibility to Zika, pregnant women's self-efficacy in protecting themselves from Zika after the interventions have been implemented, as well as the extent to which target populations are using contents of the Zika Prevention Kit.

Interviews with pregnant women in Puerto Rico can help articulate motivations for and against engaging in Zika prevention behaviors that are critical for preventing Zika-associated birth defects and morbidities. Implementing changes based on results from this assessment is expected to facilitate program improvement and ensure the most efficient allocation of resources for this public health emergency. The goal of this project is to find out if interventions are reaching pregnant women and having the intended effects along with getting feedback from pregnant women about the Zika prevention activities that have been implemented (*e.g.,* Zika education sessions and prevention kits, vector control activities, and communication activities).

Findings will be used to improve the delivery of interventions and to inform decisions about future Zika prevention activities for pregnant women in Puerto Rico. The plan is to conduct up to 500 telephone interviews every two months over a 9-month period, (a total of four rounds), analyze the data, and generate a report for leaders of the response to offer insights on the delivery of interventions to pregnant women. The information will be used to make recommendations for improving interventions. Information may also be used to develop presentations, reports, and manuscripts to document the program and lessons learned in order to inform future programs of this sort.

The purpose of this assessment is also to assess core components of CDC's Zika response in communicating prevention behaviors, risk messages to the public about vector control activities, and the Zika Prevention kit.

The following factors will be assessed:

- Knowledge about Zika virus and related prevention behaviors
- Self-efficacy in engaging in Zika prevention behaviors
- Engagement in Zika prevention behaviors (*e.g.,* protective clothing use, condom use, and bed net use)
- Knowledge about, attitudes about, and use of the Zika Prevention Kit materials
- Knowledge about, attitudes about, and use of environmental vector control activities
- Risk perceptions of Zika
- Exposures to communications along with other factors that may be important considerations in their taking action or not (*e.g.,* does their house have screens, etc.)

CDC will conduct telephone interviews with a mix of closed-ended and open-ended questions with pregnant women. We estimate 2,000 pregnant women will participate in the project over a nine month period.

Another component of this project is to conduct qualitative inquiry to explore emerging issues related to vector control, sexual transmission, contraception, mental health/emotional support, service/support needs of families with babies affected by Zika, or vaccine communications (if applicable). While pregnant women will be the main focus of most inquiry, other audiences could include community leaders, community members, and health care providers. The goal is to identify specific unmet needs, which can then be shared with the Department of Health and other human service agencies. The plan is to hold up to 7 focus groups (with up to 10 persons each), or up to 20 in-depth individual interviews or up to 75 brief intercept interviews. A maximum of 75 individuals would participate in this part.

Results of this project will have limited generalizability. However, results of this evaluation should provide information that can be used to enhance and revise the existing program as well as offer lessons learned to inform infectious disease control programs that use education materials.

Authorizing legislation comes from Section 301 of the Public Health Service Act (42 U.S.C. 241). There is no cost to respondents other than their time to participate.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hrs.)	Total burden (in hrs.)
Pregnant WIC participant	Initial Telephone Interview.	2,000	1	20/60	667
WIC participants, other families affected by Zika	Focus group	70	1	120/60	140
WIC participants, other families	In-depth Interviews	20	1	60/60	20
General population in Zika affected neighborhood.	Brief intercept interview	75	1	10/60	13
Total					840

Leroy A. Richardson,

Chief, Information Collection Review Office, Office of Scientific Integrity, Office of the Associate Director for Science, Office of the Director, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2013–N–1155]

Agency Information Collection Activities; Proposed Collection; Comment Request; Food Labeling Regulations

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the information collection provisions of our food labeling regulations and on Form FDA 3570, Model Small Business Nutrition Labeling Exemption Notice, which small businesses may use to claim the small business exemption from nutrition labeling.

DATES: Submit either electronic or written comments on the collection of information by February 28, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–N–1155 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Food Labeling Regulations.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, Three White Flint North, 10A63, 11601 Landsdown St., North Bethesda, MD 20852, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Food Labeling Regulations—21 CFR Parts 101, 102, 104, and 105; OMB Control Number 0910–0381—Extension

Our food labeling regulations require food producers to disclose to consumers and others specific information about themselves or their products on the label or labeling of their products. Related regulations require that food producers retain records establishing the basis for the information contained in the label or labeling of their products and provide those records to regulatory officials. Finally, certain regulations provide for the submission of food labeling petitions to us. We issued our food labeling regulations under parts 101, 102, 104, and 105 (21 CFR parts 101, 102, 104, and 105) under the authority of sections 4, 5, and 6 of the Fair Packaging and Labeling Act (the FPLA) (15 U.S.C. 1453, 1454, and 1455) and sections 201, 301, 402, 403, 409, 411, 701, and 721 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 321, 331, 342, 343, 348, 350, 371, and 379e). Most of these regulations derive from section 403 of the FD&C Act, which provides that a food product shall be deemed to be misbranded if, among other things, its label or labeling fails to bear certain required information concerning the food product, is false or misleading in any particular, or bears certain types of unauthorized claims. The disclosure requirements and other collections of information in the regulations in parts 101, 102, 104, and 105 are necessary to ensure that food products produced or sold in the United States are in compliance with the labeling provisions of the FD&C Act and the FPLA.

Section 101.3 of our food labeling regulations requires that the label of a food product in packaged form bear a statement of identity (*i.e.,* the name of the product), including, as appropriate, the form of the food or the name of the food imitated. Section 101.4 prescribes requirements for the declaration of ingredients on the label or labeling of food products in packaged form. Section 101.5 requires that the label of a food product in packaged form specify the name and place of business of the manufacturer, packer, or distributor and, if the food producer is not the manufacturer of the food product, its connection with the food product. Section 101.9 requires that nutrition information be provided for all food products intended for human consumption and offered for sale, unless an exemption in § 101.9(j) applies to the product. In particular, § 101.9(c)(2)(ii) requires that the amount of *trans* fatty acids present in a food must be declared on the nutrition label on a separate line immediately under the line for the declaration of saturated fat. Section 101.9(g)(9) provides that interested parties may submit to us requests for alternative approaches to nutrition labeling requirements. Finally, § 101.9(j)(18) provides that firms claiming the small business exemption from nutrition labeling must submit notice to us supporting their claim exemption. We developed Form FDA 3570 to assist small businesses in claiming the small business exemption from nutrition labeling. The form contains all the elements required by § 101.9(j)(18).

Section 101.10 requires that restaurants provide nutrition information, upon request, for any food or meal for which a nutrient content claim or health claim is made. Section 101.12(b) provides the reference amount that is used for determining the serving sizes for specific products, including baking powder, baking soda, and pectin. Section 101.12(e) provides that a manufacturer that adjusts the reference amount customarily consumed (RACC) of an aerated food for the difference in density of the aerated food relative to the density of the appropriate nonaerated reference food must be prepared to show us detailed protocols and records of all data that were used to determine the density-adjusted RACC. Section 101.12(g) requires that the label or labeling of a food product disclose the serving size that is the basis for a claim made for the product if the serving size on which the claim is based differs from the RACC. Section 101.12(h) provides for the submission of petitions requesting that we change the reference amounts defined by regulation.

Section 101.13 requires that nutrition information be provided in accordance with § 101.9 for any food product for which a nutrient content claim is made. Under some circumstances, § 101.13 also requires the disclosure of other types of information as a condition for the use of a nutrient content claim. For example, under § 101.13(j), if the claim compares the level of a nutrient in the food with the level of the same nutrient in another ''reference'' food, the claim must also disclose the identity of the reference food, the amount of the nutrient in each food, and the percentage or fractional amount by which the amount of the nutrient in the labeled food differs from the amount of the nutrient in the reference food. It also requires that when this comparison is based on an average of food products, this information must be provided to consumers or regulatory officials upon request. Section 101.13(q)(5) requires that restaurants document and provide to appropriate regulatory officials, upon request, the basis for any nutrient content claims they have made for the foods they sell.

Section 101.14(d)(2) and (d)(3) provides for the disclosure of nutrition information in accordance with § 101.9 and, under some circumstances, certain other information as a condition for making a health claim for a food product. Section 101.15 provides that, if the label of a food product contains any representation in a foreign language, all words, statements, and other information required by or under authority of the FD&C Act to appear on the label must appear in both the foreign language and in English. Section 101.22 contains labeling requirements for the disclosure of spices, flavorings, colorings, and chemical preservatives in food products. Section 101.22(i)(4) sets forth disclosure and recordkeeping requirements pertaining to certifications for flavors designated as containing no artificial flavors. Section 101.30 specifies the conditions under which a beverage that purports to contain any fruit or vegetable juice must declare the percentage of juice present in the beverage and the manner in which the declaration is to be made.

Section 101.36 requires that nutrition information be provided for dietary supplements offered for sale, unless an exemption in § 101.36(h) applies. In particular, § 101.36(b)(2) requires that the amount of *trans* fatty acids present in dietary supplements must be declared on the nutrition label on a separate line immediately under the line for the declaration of saturated fat. Section 101.36(e) permits the voluntary declaration of the quantitative amount and the percent of Daily Value of a dietary ingredient on a ''per day'' basis in addition to the required ''per serving'' basis, if a dietary supplement label recommends that the dietary supplement be consumed more than once per day. Section 101.36(f)(2) cross-references the provisions in § 101.9(g)(9) for the submission to us of requests for alternative approaches to nutrition labeling requirements. Also, § 101.36(h)(2) cross-references the provisions in § 101.9(j)(18) for the submission of small business exemption notices. As noted previously, we developed Form FDA 3570 to assist small businesses in claiming the small business exemption from nutrition labeling. The form contains all the elements required by § 101.36(h)(2).

Section 101.42 requests that food retailers voluntarily provide nutrition information for raw fruits, vegetables, and fish at the point of purchase, and § 101.45 contains guidelines for providing such information. Also, § 101.45(c) provides for the submission to us of nutrient databases and proposed nutrition labeling values for raw fruit, vegetables, and fish for review and approval.

Sections 101.54, 101.56, 101.60, 101.61, and 101.62 specify information that must be disclosed as a condition for making particular nutrient content claims. Section 101.67 provides for the use of nutrient content claims for butter, and cross-references requirements in other regulations for information declaration (§ 101.4) and disclosure of information concerning performance characteristics (§ 101.13(d)). Section 101.69 provides for the submission of a petition requesting that we authorize a particular nutrient content claim by regulation. Section 101.70 provides for the submission of a petition requesting that we authorize a particular health claim by regulation. Section 101.77(c)(2)(ii)(D) requires the disclosure of soluble fiber per serving in the nutrition labeling of a food bearing a health claim about the relationship between soluble fiber and a reduced risk of coronary heart disease. Section 101.79(c)(2)(iv) requires the disclosure of the amount of folate in the nutrition label of a food bearing a health claim about the relationship between folate and a reduced risk of neural tube defects.

Section 101.100(d) provides that any agreement that forms the basis for an exemption from the labeling requirements of section 403(c), (e), (g), (h), (i), (k), and (q) of the FD&C Act be in writing and that a copy of the agreement be made available to us upon request. Section 101.100 also contains reporting and disclosure requirements as conditions for claiming certain labeling exemptions (*e.g.,* 101.100(h)).

Section 101.105 specifies requirements for the declaration of the net quantity of contents on the label of a food in packaged form and prescribes conditions under which a food whose label does not accurately reflect the actual quantity of contents may be sold, with appropriate disclosures, to an institution operated by a Federal, State, or local government. Section 101.108 provides for the submission to us of a written proposal requesting a temporary exemption from certain requirements of §§ 101.9 and 105.66 for the purpose of conducting food labeling experiments with our authorization.

Regulations in part 102 define the information that must be included as part of the statement of identity for particular foods and prescribe related labeling requirements for some of these foods. For example, § 102.22 requires that the name of a protein hydrolysate will include the identity of the food source from which the protein was derived.

Part 104, which pertains to nutritional quality guidelines for foods, cross references several labeling provisions in part 101 but contains no separate information collection requirements.

Part 105 contains special labeling requirements for hypoallergenic foods, infant foods, and certain foods represented as useful in reducing or maintaining body weight.

The purpose of our food labeling requirements is to allow consumers to be knowledgeable about the foods they purchase. Nutrition labeling provides information for use by consumers in selecting a nutritious diet. Other information enables a consumer to comparison shop. Ingredient information also enables consumers to avoid substances to which they may be sensitive. Petitions or other requests submitted to us provide the basis for us to permit new labeling statements or to grant exemptions from certain labeling requirements. Recordkeeping requirements enable us to monitor the basis upon which certain label statements are made for food products and whether those statements are in compliance with the requirements of the FD&C Act or the FPLA.

Description of Respondents: Respondents to this information collection are manufacturers, packers, and distributors of food products. Because of the existence of exemptions and exceptions, not all of the requirements apply to all food producers or to all of their products. Some of the regulations affect food retailers, such as supermarkets and restaurants.

We estimate the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL THIRD PARTY DISCLOSURE BURDEN [1]

21 CFR section	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours
101.3, 101.22, 102 and 104; statement of identity labeling requirements.	25,000	1.03	25,750	.5 (30 minutes)	12,875
101.4, 101.22, 101.100, 102, 104 and 105; ingredient labeling requirements.	25,000	1.03	25,750	1	25,750
101.5; requirement to specify the name and place of business of the manufacturer, packer, or distributor and, if the food producer is not the manufacturer of the food product, its connection with the food product.	25,000	1.03	25,750	0.25 (15 minutes)	6,438
101.9, 101.13(n), 101.14(d)(3), 101.62, and 104; labeling requirements for disclosure of nutrition information.	25,000	1.03	25,750	.40 (24 minutes)	103,000
101.9(g)(9) and 101.36(f)(2); alternative means of compliance permitted.	12	1	12	4	48
101.10; requirements for nutrition labeling of restaurant foods.	300,000	1.5	450,000	0.25 (15 minutes)	112,500
101.12(b); RACC for baking powder, baking soda and pectin.	29	2.3	67	1	67
101.12(e); adjustment to the RACC of an aerated food permitted.	25	1	25	1	25
101.12(g); requirement to disclose the serving size that is the basis for a claim made for the product if the serving size on which the claim is based differs from the RACC.	5,000	1	5,000	1	5,000
101.13(d)(1) and 101.67; requirements to disclose nutrition information for any food product for which a nutrient content claim is made.	200	1	200	1	200
101.13(j)(2), 101.13(k), 101.54, 101.56, 101.60, 101.61, and 101.62; additional disclosure required if the nutrient content claim compares the level of a nutrient in one food with the level of the same nutrient in another food.	5,000	1	5,000	1	5,000
101.13(q)(5); requirement that restaurants disclose the basis for nutrient content claims made for their food.	300,000	1.5	450,000	0.75 (45 minutes)	337,500
101.14(d)(2); general requirements for disclosure of nutrition information related to health claims for food products.	300,000	1.5	450,000	0.75 (45 minutes)	337,500

TABLE 1—ESTIMATED ANNUAL THIRD PARTY DISCLOSURE BURDEN [1]—Continued

21 CFR section	Number of respondents	Number of disclosures per respondent	Total annual disclosures	Average burden per disclosure	Total hours
101.15; requirements pertaining to prominence of required statements and use of foreign language.	160	10	1,600	8	12,800
101.22(i)(4); supplier certifications for flavors designated as containing no artificial flavors.	25	1	25	1	25
101.30 and 102.33; labeling requirements for fruit or vegetable juice beverages.	1,500	5	7,500	1	7,500
101.36; nutrition labeling of dietary supplements	300	40	12,000	4.025	48,300
101.42 and 101.45; nutrition labeling of raw fruits, vegetables, and fish.	1,000	1	1,000	0.5 (30 minutes)	500
101.45(c); databases of nutrient values for raw fruits, vegetables, and fish.	5	4	20	4	80
101.79(c)(2)(i)(D); disclosure requirements for food labels that contain a folate/neural tube defect health claim.	1,000	1	1,000	0.25 (15 minutes)	250
101.79(c)(2)(iv); disclosure of amount of folate for food labels that contain a folate/neural tube defect health claim.	100	1	100	0.25 (15 minutes)	25
101.100(d); disclosure of agreements that form the basis for exemption from the labeling requirements of section 403(c), (e), (g), (h), (i), (k), and (q) of the FD&C Act.	1,000	1	1,000	1	1,000
101.105 and 101.100(h); disclosure requirements for food not accurately labeled for quantity of contents and for claiming certain labeling exemptions.	25,000	1.03	25,750	0.5 (30 minutes)	12,875
Total					1,029,258

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]

21 CFR section	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
101.12(e); recordkeeping to document the basis for density-adjusted RACC.	25	1	25	1	25
101.13(q)(5); recordkeeping to document the basis for nutrient content claims.	300,000	1.5	450,000	0.75 (45 minutes)	337,500
101.14(d)(2); recordkeeping to document nutrition information related to health claims for food products.	300,000	1.5	450,000	0.75 (45 minutes)	337,500
101.22(i)(4); recordkeeping to document supplier certifications for flavors designated as containing no artificial flavors.	25	1	25	1	25
101.100(d)(2); recordkeeping pertaining to agreements that form the basis for an exemption from the labeling requirements of section 403(c), (e), (g), (h), (i), (k), and (q) of the FD&C Act.	1,000	1	1,000	1	1,000
101.105(t); recordkeeping pertaining to disclosure requirements for food not accurately labeled for quantity of contents.	100	1	100	1	100
Total					676,150

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 3—ESTIMATED ANNUAL REPORTING BURDEN [1]

21 CFR section/Form No.	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
101.9(j)(18) and 101.36(h)(2); procedure for small business nutrition labeling exemption notice using Form FDA 3570	10,000	1	10,000	8	80,000
101.12(h); petitions to establish or amend a RACC	5	1	5	80	400
101.69; petitions for nutrient content claims	3	1	3	25	75
101.70; petitions for health claims	5	1	5	80	400

TABLE 3—ESTIMATED ANNUAL REPORTING BURDEN [1]—Continued

21 CFR section/Form No.	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
101.108; written proposal for requesting temporary exemptions from certain regulations for the purpose of conducting food labeling experiments	1	1	1	40	40
Total					80,915

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

The estimated annual third party disclosure, recordkeeping, and reporting burdens are based on our communications with industry and our knowledge of and experience with food labeling and the submission of petitions and requests to us.

We expect that the burden hours for submissions under § 101.108 will be insignificant. Section 101.108 was originally issued to provide a procedure whereby we could grant exemptions from certain food labeling requirements. Exemption petitions have infrequently been submitted in the recent past; none have been submitted since publication on January 6, 1993, of the final regulations implementing section 403(q) and (r) of the FD&C Act. Thus, in order to maintain OMB approval of § 101.108 to accommodate the possibility that a food producer may propose to conduct a labeling experiment on its own initiative, we estimate that we will receive one or fewer submissions under § 101.108 in the next 3 years.

Dated: December 27, 2016.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2015–D–0025]

Medical Device Accessories—Describing Accessories and Classification Pathway for New Accessory Types; Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the guidance entitled ''Medical Device Accessories—Describing Accessories and Classification Pathways for New Accessory Types.'' This document provides guidance to industry and FDA staff about the regulation of accessories to medical devices. The guidance explains what devices FDA generally considers an ''accessory'' and encourages use of the *de novo* classification process under the Federal Food, Drug, and Cosmetic Act (the FD&C Act) to allow manufacturers and other parties to request risk- and regulatory control-based classification of accessories of a new type (*i.e.,* accessories of a type that has not been previously classified under the FD&C Act, cleared for marketing under a 510(k) submission, or approved in an application for premarket approval (PMA)).

DATES: Submit either electronic or written comments on this guidance at any time. General comments on Agency guidance documents are welcome at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2015–D–0025 for ''Medical Device Accessories—Describing Accessories and Classification Pathway for New Accessory Types.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

• *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

An electronic copy of the guidance document is available for download from the Internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled ''Medical Device Accessories—Describing Accessories and Classification Pathway for New Accessory Types'' to the Office of the Center Director, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Erica Takai, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5456, Silver Spring, MD 20993–0002, 301–796–6353 or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave,. Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA has jurisdiction over accessories because the definition of the term ''device'' provided in section 201(h) of the FD&C Act defines ''device'' to include, among other things, an ''accessory.'' All accessories to articles that meet this definition of ''device'' are regulated under the FD&C Act.

This guidance is intended to provide guidance to industry and FDA staff about the regulation of accessories to medical devices. Accordingly, this guidance describes the types of devices that FDA generally considers as accessories and discusses the risk- and regulatory control-based classification paradigm for these accessories. This information is expected to provide a greater level of transparency with regards to the classification of accessories and will aid FDA staff and industry in assuring that these devices are subject to an appropriate level of regulatory oversight by FDA. In addition, this guidance describes the use of the *de novo* classification process under section 513(f)(2) of the FD&C Act (21 U.S.C. 360c(f)(2)) for manufacturers to request risk- and regulatory control-based classifications of accessories of a new type that are low-moderate risk for which general controls or general and special controls provide a reasonable assurance of safety and effectiveness, but for which there is no legally marketed predicate device.

For the purposes of this guidance document, an ''accessory'' is defined as ''a finished device that is intended to support, supplement, and/or augment the performance of one or more parent devices.'' It is important to note that FDA does not generally consider articles that do not meet the definition of an accessory as accessories simply because they may be used in conjunction with a device.

This guidance clarifies that classification of accessory devices, as for non-accessory devices, should reflect the risks of the device when used as intended and the level of regulatory controls necessary to provide a reasonable assurance of safety and effectiveness. Classifying an accessory in the same class as its parent device is appropriate when the accessory, when used as intended with the parent device, meets the criteria for placement in the class of the parent device. However, some accessories can have a lower risk profile than that of their parent device and, therefore, may warrant being regulated in a lower class.

In the **Federal Register** of January 20, 2015 (80 FR 2710), FDA published a notice of availability for the draft guidance entitled ''Medical Device Accessories: Defining Accessories and Classification Pathway for New Accessory Types.'' FDA revised the guidance as appropriate in response to the comments. We received comments requesting that the scope of the guidance be expanded to apply to existing accessories that were previously classified. FDA is continuing to explore mechanisms for risk- and regulatory control-based reclassification of existing accessories. Therefore, the scope of the guidance has not been expanded and includes the use of the *de novo* classification process to classify accessories of a new type.

II. Significance of Guidance

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the Agency's current thinking on the regulation of medical device accessories. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by downloading an electronic copy from the Internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm.* Guidance documents are also available at *https://www.regulations.gov.* Persons unable to download an electronic copy of ''Medical Device Accessories: Describing Accessories and Classification Pathway for New Accessory Types'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number 1770 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The guidance also refers to previously approved collections of information found in FDA regulations. The collections of information in 21 CFR parts 801 and 809 have been approved under OMB control number 0910–0485; the collections of information in 21 CFR part 807, subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 814 have been approved under OMB control number 0910–0231; the collections of information in 21 CFR part 860, subpart C have been approved under OMB control number 0910–0138; and the collection of information for new medical device accessories devices have been approved under OMB control number 0910–0823.

Dated: December 23, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institutes of Health Statement of Organization, Functions, and Delegations of Authority

Part N, National Institutes of Health (NIH), of the Statement of Organization, Functions, and Delegations of Authority for the Department of Health and Human Services (40 FR 22859, May 27, 1975, as amended most recently at 77 FR 1941, January 12, 2012, and redesignated from Part HN as Part N at 60 FR 56605, November 9, 1995), is amended as set forth below to establish the *All of Us*SM Research Program Office.

Section N–A, Organization and Functions, is amended as follows: Immediately after the paragraph headed ''Office of the Director''(OD), insert the following:

All Of Us Research Program Office

(HNAK) (1) Oversees the design, development, implementation, and evaluation of the *All of Us* Resesarch Program, creating the largest and most diverse research cohort of its kind, to foster a new era of medicine in which researchers, providers and patients work together to develop individualized care by supporting research into the complex factors promoting health and treatments to cure disease.

Delegations of Authority Statement: All delegations and redelegations of authority to officers and employees of the NIH that were in effect immediately prior to the effective date of this reorganization and are consistent with this reorganization shall continue in effect, pending further redelegation.

Dated: December 23, 2016.

Francis S. Collins,

Director, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5907–N–53]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), call the toll-free Title V information line at 800–927–7588 or send an email to *title5@hud.gov* .

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 12–07, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301)-443–2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 or send an email to *title5@hud.gov* for detailed instructions, or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*e.g.,* acreage, floor plan, condition of property, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following address(es): AGRICULTURE: Ms. Debra Kerr, Department of

Agriculture, OPPM, Property Management Division, Agriculture South Building, 300 7th Street SW., Washington, DC 20024, (202)–720–8873; AIR FORCE: Mr. Robert E. Endangered and Threatened Wildlife and Plants; Incidental Take Permit Application; Proposed Low-Effect Habitat Conservation Plan and Associated Documents; City of Monterey Park, California

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), have received an application from Monterey Park Retail Partners, LLC (applicant) for a 5-year incidental take permit for the threatened coastal California gnatcatcher (*Polioptila californica californica*) pursuant to the Endangered Species Act of 1973, as amended (Act). We are requesting comments on the permit application and on the preliminary determination that the proposed Habitat Conservation Plan qualifies as a ''low-effect'' habitat conservation plan, eligible for a categorical exclusion under the National Environmental Policy Act (NEPA) of 1969, as amended. The basis for this determination is discussed in the environmental action statement (EAS) and the associated low-effect screening form, which are also available for public review.

DATES: Written comments should be received on or before January 30, 2017.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *U.S. Mail:* Field Supervisor, Fish and Wildlife Service, Carlsbad Fish and Wildlife Office, 2177 Salk Avenue, Suite 250, Carlsbad, CA 92008.
- *Fax:* Field Supervisor, 760–431–9624.

Obtaining Documents: To request copies of the application, proposed HCP, and EAS, contact the Service, by telephone at 760–431–9440 or by letter to the Carlsbad Fish and Wildlife Office (see **ADDRESSES**). Copies of the proposed HCP and EAS also are available for public inspection during regular business hours at the Carlsbad Fish and Wildlife Office (see **ADDRESSES**).

FOR FURTHER INFORMATION CONTACT: Ms. Karen Goebel, Assistant Field Supervisor, Carlsbad Fish and Wildlife Office (see **ADDRESSES**); telephone: 760–431–9440. If you use a telecommunications device for the deaf, please call the Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service (Service), have received an application from Monterey Park Retail Partners, LLC (applicant) for a 5-year incidental take permit for one covered species pursuant to section 10(a)(1)(B) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.,* Act). The application addresses the potential ''take'' of the threatened coastal California gnatcatcher (*Polioptila californica californica;* gnatcatcher) in the course of activities associated with the construction, operation, and maintenance of the Monterey Park Market Place project, in the City of Monterey Park, Los Angeles County, California. A conservation program to avoid, minimize, and mitigate for project activities would be implemented as described in the applicant's proposed habitat conservation plan (HCP).

We are requesting comments on the permit application and on the preliminary determination that the proposed HCP qualifies as a ''low-effect'' HCP, eligible for a categorical exclusion under the National Environmental Policy Act (NEPA) of 1969, as amended. The basis for this determination is discussed in the environmental action statement (EAS) and associated low-effect screening form, which are also available for public review.

Background

Section 9 of the Act and its implementing Federal regulations prohibit the ''take'' of animal species listed as endangered or threatened. Take is defined under the Act as to ''harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect listed animal species, or to attempt to engage in such conduct'' (16 U.S.C. 1538). ''Harm'' includes significant habitat modification or degradation that actually kills or injures listed wildlife by significantly impairing essential behavioral patterns such as breeding, feeding, or sheltering (50 CFR 17.3). However, under section 10(a) of the Act, the Service may issue permits to authorize incidental take of listed species. ''Incidental take'' is defined by the Act as take that is incidental to, and not the purpose of, carrying out an otherwise lawful activity. Regulations governing incidental take permits for threatened and endangered species, respectively, are found in the Code of Federal Regulations at 50 CFR 17.22 and 50 CFR 17.32.

Applicant's Proposed Project

The applicant requests a 5-year permit under section 10(a)(1)(B) of the Act. If we approve the permit, the applicant anticipates taking gnatcatcher as a result of permanent impacts to 2.77 acres of habitat the species uses for breeding, feeding, and sheltering. The take would be incidental to the applicant's activities associated with the construction of the Monterey Park Market Place project in the City of Monterey Park, California, and includes restoration and in-perpetuity preservation and management of 12 acres of gnatcatcher habitat.

The Monterey Park Market Place project consists of the construction of a 62-acre commercial retail development in the City of Monterey Park. The project will permanently impact 2.77 acres of gnatcatcher-occupied habitat as a result of clearing and grading activities. Up to three gnatcatcher territories have been documented on the project site.

To minimize take of gnatcatcher by the Monterey Park Market Place project and offset impacts to its habitat, the applicant proposes to mitigate for permanent impacts to 2.77 acres of occupied gnatcatcher habitat through the restoration, conservation, and in-perpetuity management of 12 acres of coastal sage scrub suitable for the gnatcatcher by a Service-approved restoration contractor and the Puente Hills Habitat Authority. The applicant's proposed HCP also contains the following proposed measures to minimize the effects of construction activities on the gnatcatcher:

- Grading limits will be delineated with construction fencing and silt fencing to ensure that impact limits do not extend beyond the allowed limits of development.
- A Service-approved biologist will monitor grading of the site and provide a letter summarizing compliance with the construction limits of the proposed project to the Service within one month of completion of grading.
- Vegetation clearing will take place outside of the bird nesting season (February l5 through August 31) to the fullest extent practicable. Clearing may only occur during this period once a Service-approved biologist has conducted at least three surveys of the impact areas for nesting birds, with each survey taking place one week apart and the last survey conducted within 24 hours prior to clearing. The Service-approved biologist will document compliance with the Migratory Bird Treaty Act (MBTA) and other applicable regulations that protect nesting birds. If an active bird nest is observed, an appropriate buffer (minimum of 300 feet for any active gnatcatcher nest) will be established wherein no project activities will occur until the nest is no longer active.

Proposed Action and Alternatives

The Proposed Action consists of the issuance of an incidental take permit and implementation of the proposed HCP, which includes measures to avoid, minimize, and mitigate impacts to the gnatcatcher. If we approve the permit, take of gnatcatcher would be authorized for the applicant's activities associated with the construction of the Monterey Park Market Place project. In the proposed HCP, the applicant considers alternatives to the taking of gnatcatcher under the proposed action. Alternative development configuration was considered; however, because of the small size and irregular shape of the project site, further avoidance of impacts to gnatcatcher habitat could not be achieved. The applicant also considered the No Action Alternative. Under the No Action Alternative, no incidental take of gnatcatcher habitat would occur, and no long-term protection and management would be afforded to the species.

Our Preliminary Determination

The Service has made a preliminary determination that the approval of the HCP and issuance of an incidental take permit qualify for categorical exclusion under NEPA (42 U.S.C. 4321 *et seq.*), as provided by the Department of the Interior implementing regulations in part 46 of title 43 of the Code of Federal Regulations (43 CFR 46.205, 46.210, and 46.215), and that the HCP qualifies as a ''low-effect'' plan as defined by the *Habitat Conservation Planning Handbook* (December 2016).

We base our determination that an HCP qualifies as a low-effect plan on the following three criteria:

(1) Implementation of the HCP would result in minor or negligible effects on federally listed, proposed, and candidate species and their habitats;

(2) Implementation of the HCP would result in minor or negligible effects on other environmental values or resources; and

(3) Impacts of the HCP, considered together with the impacts of other past, present, and reasonably foreseeable similarly situated projects, would not result, over time, in cumulative effects to environmental values or resources that would be considered significant.

Based upon this preliminary determination, we do not intend to prepare further NEPA documentation. We will consider public comments in making the final determination on whether to prepare such additional documentation.

Next Steps

We will evaluate the proposed HCP and comments we receive to determine whether the permit application meets the requirements and issuance criteria under section 10(a) of the Act (16 U.S.C. 1531 *et seq.*). We will also evaluate whether issuance of a section 10(a)(1)(B) incidental take permit would comply with section 7 of the Act by conducting an intra-Service consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether or not to issue a permit. If the requirements and issuance criteria under section 10(a) are met, we will issue the permit to the applicant for incidental take of gnatcatcher.

Public Comments

If you wish to comment on the permit application, proposed HCP, and associated documents, you may submit comments by any of the methods noted in **ADDRESSES**.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

We provide this notice under section 10 of the Act (16 U.S.C. 1531 *et seq.*) and NEPA regulations (40 CFR 1506.6).

Karen A. Goebel,

Acting Field Supervisor, Carlsbad Fish and Wildlife Office, Carlsbad, California.

Endangered and Threatened Wildlife and Plants; Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications for a permit to conduct activities intended to enhance the survival of endangered or threatened species. Federal law prohibits certain activities with endangered species unless a permit is obtained.

DATES: We must receive any written comments on or before January 30, 2017.

ADDRESSES: Send written comments by U.S. mail to the Regional Director, Attn: Carlita Payne, U.S. Fish and Wildlife Service, Ecological Services, 5600 American Blvd. West, Suite 990, Bloomington, MN 55437–1458; or by electronic mail to *permitsR3ES@fws.gov.*

FOR FURTHER INFORMATION CONTACT: Carlita Payne, (612) 713–5343.

SUPPLEMENTARY INFORMATION:

Background

The Endangered Species Act of 1973 (ESA), as amended (16 U.S.C. 1531 *et seq.*), prohibits certain activities with endangered and threatened species unless the activities are specifically authorized by a Federal permit. The ESA and our implementing regulations in part 17 of title 50 of the Code of Federal Regulations (CFR) provide for the issuance of such permits and require that we invite public comment before issuing permits for activities involving endangered species.

A permit granted by us under section 10(a)(1)(A) of the ESA authorizes the permittee to conduct activities with U.S. endangered or threatened species for scientific purposes, enhancement of propagation or survival, or interstate commerce (the latter only in the event that it facilitates scientific purposes or enhancement of propagation or survival). Our regulations implementing section 10(a)(1)(A) of the ESA for these permits are found at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Applications Available for Review and Comment

We invite local, State, Tribal, and Federal agencies and the public to comment on the following applications. Please refer to the permit number when you submit comments. Documents and other information the applicants have submitted with the applications are available for review, subject to the requirements of the Privacy Act (5 U.S.C. 552a) and Freedom of Information Act (5 U.S.C. 552).

Permit Applications

Proposed activities in the following permit requests are for the recovery and enhancement of survival of the species in the wild.

Application No.	Applicant	Species	Location	Activity	Type of take	Permit action
TE38793A	Kenneth Mierzwa.	Hine's emerald dragonfly (*Somatochlora hineana*).	Alabama, Illinois, Indiana, Iowa, Michigan, Missouri, Ohio, Wisconsin.	Survey and monitor, habitat assessment.	Capture and release, exuviae collection, adult counts.	Renew.
TE11170C	Ashleigh Cable.	Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), northern long-eared bat (*M. septentrionalis*).	Illinois	Conduct presence/absence surveys, document habitat use, conduct population monitoring, evaluate impacts.	Capture, handle, radio-tag, harp trap, release.	New.
TE01311C	Shawn McKinley.	Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), northern long-eared bat (*M. septentrionalis*), Virginia big-eared bat (*Plecotus townsendii virginianus*).	Rangewide	Conduct presence/absence surveys, document habitat use, conduct population monitoring, evaluate impacts.	Capture, handle, mist-net, harp trap, radio-tag, band, release.	New.
TE13571C	Jennifer Moore.	Eastern massasauga rattlesnake (*Sistrurus catenatus*).	Michigan	Survey and monitoring, habitat assessment, population connectivity assessment.	Capture, handle, pit-tag, tissue collection, release.	New.
TE14588C	Dane Smith	Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), northern long-eared bat (*M. septentrionalis*).	Missouri	Conduct presence/absence surveys, document habitat use, conduct population monitoring, evaluate impacts.	Capture, handle, mist-net, radio-tag, band, tissue collection, release.	New.

Application No.	Applicant	Species	Location	Activity	Type of take	Permit action
TE15664C	April McKay	Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), northern long-eared bat (*M. septentrionalis*).	Rangewide	Conduct presence/absence surveys, document habitat use, conduct population monitoring, evaluate impacts.	Capture, handle, mist-net, harp trap, radio-tag, band, release.	New.
TE106217	The Toledo Zoological Society.	Mitchell's satyr butterfly (*Neonympha mitchellii mitchellii*).	Ohio	Propagation and transport	Capture, handle, hold, release.	Amend, renew.
TE85231B	Kalamazoo Nature Center.	Mitchell's satyr butterfly (*N.m. mitchellii*).	Michigan	Propagation and transport	Capture, handle, temporarily hold, release.	Amend.
TE02373A	Environmental Solutions and Innovations.	Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), northern long-eared bat (*M. septentrionalis*), Virginia big-eared bat (*Plecotus townsendii virginianus*), Ozark big-eared bat (*P.t.ingens*), American burying beetle (*Nicrophorus americanus*), eastern massasauga rattlesnake (*Sistrurus catenatus*), Karner blue butterfly (*Lycaeides melissa samuelis*), Mitchell's satyr butterfly (*Neonympha mitchellii mitchellii*), St. Francis' satyr butterfly (*N.m. francisci),* rusty patched bumble bee (*Bombus affinis*), Guyandotte River crayfish (*Cambarus veteranus*), Big Sandy crayfish (*C. callainus*), 12 fish species, 57 freshwater mussel species.	Rangewide	Conduct presence/absence surveys, habitat assessment, DNA sampling, relocation, transport.	Capture, handle, temporarily hold, release.	Amend, renew.
TE194099	Michael Hoggarth.	30 freshwater mussel species.	Indiana, Michigan, Ohio, Kentucky, New York, Pennsylvania, West Virginia.	Conduct presence/absence surveys, relocations, transport.	Capture, handle, relocate, release.	Renew.
TE14549C	Larissa Herrera.	10 freshwater mussel species.	Illinois, Iowa, Indiana, Michigan, Ohio, Wisconsin.	Conduct presence/absence surveys.	Capture, handle, release	New.
TE181256	Lewis Environmental Consulting, LLC.	62 freshwater mussel species.	Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Michigan, Mississippi, Missouri, Ohio, Pennsylvania, Tennessee, West Virginia.	Conduct presence/absence surveys, transport, propagation.	Capture, handle, hold, transport, release.	Amend, renew.

National Environmental Policy Act

The proposed activities in the requested permits qualify as categorical exclusions under the National Environmental Policy Act, as provided by Department of the Interior implementing regulations in part 46 of title 43 of the CFR (43 CFR 46.205, 46.210, and 46.215).

Public Availability of Comments

We seek public review and comments on these permit applications. Please refer to the permit number when you submit comments. Comments and materials we receive in response to this notice are available for public inspection, by appointment, during normal business hours at the address listed above in **ADDRESSES.**

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

We provide this notice under section 10 of the ESA (16 U.S.C. 1531 *et seq.*).

Dated: December 23, 2016.

Lori H. Nordstrom,

Assistant Regional Director, Ecological Services, Midwest Region.

Endangered and Threatened Wildlife and Plants; Incidental Take Permit Application; Proposed Low-Effect Habitat Conservation Plan and Associated Documents; San Diego Gas and Electric, San Diego, Riverside, and Orange Counties, California

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), have received an application from the San Diego Gas and Electric Company (SDG&E) for an incidental take permit for 15 animal species pursuant to the Endangered Species Act of 1973, as amended. SDG&E is also seeking assurances for 22 plant species under the Service's ''No Surprises'' regulation. We are requesting comments on the permit application and on the preliminary determination that the proposed habitat conservation (HCP) qualifies as a ''low-effect'' HCP, eligible for a categorical exclusion under the National Environmental Policy Act (NEPA) of 1969, as amended. The basis for this determination is discussed in the environmental action statement (EAS) and the associated low-effect screening form, which are also available for public review.

DATES: Written comments should be received on or before January 30, 2017.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *U.S. Mail:* Field Supervisor, Fish and Wildlife Service, Carlsbad Fish and Wildlife Office, 2177 Salk Avenue, Suite 250, Carlsbad, CA 92008.
- *Fax:* Field Supervisor, 760–431–9624.

Obtaining Documents: To request copies of the application, proposed HCP, and EAS, contact the Service, by telephone at 760–431–9440 or by letter to the Carlsbad Fish and Wildlife Office (see **ADDRESSES**). Copies of the proposed HCP and EAS also are available for public inspection during regular business hours at the Carlsbad Fish and Wildlife Office (see **ADDRESSES**).

FOR FURTHER INFORMATION CONTACT: Ms. Karen Goebel, Assistant Field Supervisor, Carlsbad Fish and Wildlife Office (see **ADDRESSES**); telephone: 760–431–9440. If you use a telecommunications device for the deaf, please call the Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service (Service), have received an application from the San Diego Gas and Electric Company (SDG&E) for a 5-year incidental take permit for 15 animal species pursuant to section 10(a)(1)(B) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*). The application addresses the potential ''take'' of 15 animal species and impacts to 22 plant species associated with routine utility infrastructure operation and maintenance (O&M) activities and minor new construction within SDG&E's service territory, which covers San Diego County and portions of Orange and Riverside Counties, California. A conservation program to avoid, minimize, and mitigate for project activities would be implemented by SDG&E as described in the applicant's proposed habitat conservation plan (HCP).

The HCP is designed to support the continuation of activities covered by Endangered Species Act (ESA) Permit No. PRT–809637, which is a multi-species incidental take permit issued by the Service to SDG&E in December 1995 (1995 ESA permit). The 1995 permit is subject to SDG&E's compliance with its 1995 Subregional Natural Community Conservation Plan/Habitat Conservation Plan (1995 NCCP/HCP) and a 400-acre cap on habitat impacts. Under this new HCP, SDG&E would continue to apply all of the conservation efforts, mitigation measures, and operational protocols implemented under the 1995 NCCP/HCP. The HCP would allow a maximum of 60 acres of impact over a 5-year permit term.

We are requesting comments on the permit application and on the preliminary determination that the proposed HCP qualifies as a ''low-effect'' HCP, eligible for a categorical exclusion under the National Environmental Policy Act (NEPA) of 1969, as amended. The basis for this determination is discussed in the environmental action statement (EAS) and associated low-effect screening form, which are also available for public review.

Background

Section 9 of the Endangered Species Act and its implementing Federal regulations prohibit the ''take'' of animal species listed as endangered or threatened. Take is defined under the Act as to ''harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect listed animal species, or to attempt to engage in such conduct'' (16 U.S.C. 1538). ''Harm'' includes significant habitat modification or degradation that actually kills or injures listed wildlife by significantly impairing essential behavioral patterns such as breeding, feeding, or sheltering (50 CFR 17.3). However, under section 10(a) of the Act, the Service may issue permits to authorize incidental take of listed species. ''Incidental take'' is defined by the Act as take that is incidental to, and not the purpose of, carrying out an otherwise lawful activity.

Take of plant species is not prohibited under the Endangered Species Act and therefore cannot be authorized under an incidental take permit. However, 22 plant species, including 16 federally listed plants, are proposed to be included on the permit in recognition of the conservation benefits provided to them under the HCP.

Regulations governing incidental take permits for threatened and endangered species are found in 50 CFR 17.32 and 17.22, respectively. All species included on the incidental take permit, if issued, would receive assurances under the Service's ''No Surprises'' regulation (50 CFR 17.22(b)(5) and 17.32)(b)(5).

SDG&E seeks incidental take authorization for 15 animal species, including 8 federally endangered, 3 federally threatened, and 4 unlisted species, and assurances for 22 plant species, including 11 federally endangered, 5 federally threatened, and 6 unlisted species. Collectively the 37 listed and unlisted species are referred to as ''Covered Species'' in the HCP. The permit would provide take authorization for all 15 animal species and assurances for all 22 plant species identified in the HCP as ''Covered Species'' during the requested permit term of 5 years.

If we approve the permit, incidental take of the 15 animal species and impacts to 22 plant species listed in Table 2 of the HCP would occur as a result of covered species habitat removal at a rate of 5 to 12 acres annually over the course of the 5-year permit term, or up to a 60-acre maximum impact. The 60-acre habitat impact, including take of covered animal species, would be incidental to SDG&E's O&M activities on existing infrastructure and minor new construction within their service territory in San Diego, Orange, and Riverside Counties.

To minimize and mitigate impacts to covered species, including take of animal species, from O&M activities and minor new construction, SDG&E will implement all of the conservation efforts, mitigation measures, and operational protocols identified under their 1995 NCCP/HCP. Specific measures include implementing 61 operational protocols to minimize impacts to covered species and deducting mitigation credits from existing preserved and managed lands conserved by SDG&E to benefit the covered species.

Proposed Action and Alternatives

The Proposed Action consists of the issuance of an incidental take permit and implementation of the proposed HCP, which includes measures to avoid, minimize, and mitigate impacts to 37 covered species. If we approve the permit, take of the 15 animal species and impacts to 22 plant species would be authorized for SDG&E to conduct O&M activities and minor new construction. In the proposed HCP, the applicant considers alternatives to the taking of covered species under the proposed action. A ''No Action'' alternative was considered where SDG&E would continue to conduct its activities in accordance with the applicant's 1995 NCCP/HCP until the 400-acre cap on habitat impacts is reached. Simultaneously, SDG&E would work with the Service and the California Department of Fish and Wildlife to develop and adopt a revised NCCP/HCP. However, if this process is not completed by the time the 400-acre cap is reached, SDG&E would have to suspend its routine O&M activities until the process is complete or seek individual permits for distinct activities. Any suspension would pose significant risks to SDG&E's ability to provide safe and reliable service to its customers and pursuing individual permits for routine activities would impose significant administrative burdens and costs and potential delays on SDG&E.

Our Preliminary Determination

The Service has made a preliminary determination that approval of the proposed HCP qualifies as a categorical exclusion under NEPA (42 U.S.C. 4321 *et seq.*), as provided by the Department of the Interior implementing regulations in part 46 of title 43 of the Code of Federal Regulations (43 CFR 46.205, 46.210, and 46.215), and that the HCP qualifies as a ''low-effect'' plan as defined by the *Habitat Conservation Planning Handbook* (December 2016).

We base our determination that a HCP qualifies as a low-effect plan on the following three criteria:

(1) Implementation of the HCP would result in minor or negligible effects on federally listed, proposed, and candidate species and their habitats;

(2) Implementation of the HCP would result in minor or negligible effects on other environmental values or resources; and

(3) Impacts of the HCP, considered together with the impacts of other past, present, and reasonably foreseeable similarly situated projects, would not result, over time, in cumulative effects to environmental values or resources that would be considered significant.

Based upon this preliminary determination, we do not intend to prepare further NEPA documentation. We will consider public comments in making the final determination on whether to prepare such additional documentation.

Next Steps

We will evaluate the proposed HCP and comments we receive to determine whether the permit application meets the requirements and issuance criteria under section 10(a) of the Act (16 U.S.C. 1531 *et seq.*). We will also evaluate whether issuance of a section 10(a)(1)(B) incidental take permit would comply with section 7 of the Act by conducting an intra-Service consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether or not to issue a permit. If the requirements and issuance criteria under section 10(a) are met, we will issue the permit to the applicant for incidental take and assurances, as appropriate, for the 37 covered species.

Public Comments

If you wish to comment on the permit application, proposed HCP, and associated documents, you may submit comments by any of the methods noted in **ADDRESSES**.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

We provide this notice under section 10 of the Act (16 U.S.C. 1531 *et seq.*) and NEPA regulations (40 CFR 1506.6).

Karen A. Goebel,

Acting Field Supervisor, Carlsbad Fish and Wildlife Office, Carlsbad, California.

Guidelines for Implementing the Indian Child Welfare Act

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of availability.

SUMMARY: This notice announces the availability of the Department's new *Guidelines for Implementing the Indian Child Welfare Act.* These guidelines are intended to assist those involved in child custody proceedings in understanding and uniformly applying the Indian Child Welfare Act (ICWA) and the Department's regulations. All such parties—including the courts, State child welfare agencies, private adoption agencies, Tribes, and family members—have a stake in ensuring the proper implementation of this important Federal law designed to protect Indian children, their parents, and Indian tribes.

ADDRESSES: The guidelines are available at: *http://bia.gov/WhoWeAre/BIA/OIS/HumanServices/IndianChildWelfareAct/index.htm.* You can also reach this Web page by going to *www.bia.gov* and clicking the ''Indian Child Welfare Act'' icon on the right-hand side of the page.

FOR FURTHER INFORMATION CONTACT: For information on implementation of these guidelines, please contact Ms. Debra Burton, ICWA Specialist, Bureau of Indian Affairs, U.S. Department of the Interior, 1849 C Street NW., MS 3642, Washington, DC 20240, (202) 513–7610; *debra.burton@bia.gov.* For information regarding the development of these guidelines, please contact Ms. Elizabeth Appel, Office of Regulatory Affairs & Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1849 C Street NW., MS 3642, Washington, DC 20240, (202) 273–4680; *elizabeth.appel@bia.gov.*

SUPPLEMENTARY INFORMATION: The ICWA is a statute passed by Congress and codified in the United States Code (U.S.C.) at 25 U.S.C. 1901 *et seq.* The Department promulgated ICWA regulations to implement the statute; the regulations were published in the **Federal Register** at 81 FR 38778 (June 14, 2016) and will be codified in the Code of Federal Regulations (CFR) at 25 CFR part 23.

The Department is now issuing *Guidelines for Implementing the Indian Child Welfare Act* to complement the regulations. While not imposing binding requirements, the guidelines provide a reference and resource for all parties involved in child custody proceedings involving Indian children. The guidelines explain the statute and regulations and also provide examples of best practices for the implementation of the statute, with the goal of encouraging greater uniformity in the application of ICWA. The guidelines replace the 1979 and 2015 versions of the Department's guidelines.

The Department encourages all involved in child custody proceedings who seek to understand and uniformly apply ICWA and the Department's regulations to review the guidelines, which are available at the Web page listed in the **ADDRESSES** section of this notice.

Dated: December 16, 2016.

Lawrence S. Roberts,

Principal Deputy Assistant Secretary—Indian Affairs.

Indian Gaming; Tribal-State Class III Gaming Compacts Taking Effect in the State of New Mexico

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: The Pueblo of Santa Ana and the State of New Mexico entered into a compact governing Class III gaming. This notice announces that the compact is taking effect.

DATES: The effective date of the compact is December 30, 2016.

FOR FURTHER INFORMATION CONTACT: Ms. Paula L. Hart, Director, Office of Indian Gaming, Office of the Assistant Secretary—Indian Affairs, Washington, DC 20240, (202) 219–4066.

SUPPLEMENTARY INFORMATION: Section 11 of the Indian Gaming Regulatory Act (IGRA) requires the Secretary of the Interior to publish in the **Federal Register** notice of approved Tribal-State compacts that are for the purpose of engaging in Class III gaming activities on Indian lands. *See* Public Law 100–497, 25 U.S.C. 2701 *et seq.* All Tribal-State Class III compacts, including amendments, are subject to review and approval by the Secretary under 25 CFR 293.4. The Secretary took no action on the compact within 45 days of its submission. Therefore, the compact is considered to have been approved, but only to the extent the compact is consistent with IGRA. *See* 25 U.S.C. 2710(d)(8)(C).

Dated: December 22, 2016.

Lawrence S. Roberts,

Principal Deputy Assistant Secretary—Indian Affairs.

Notice of Intent To Prepare an Environmental Impact Statement for the Tule River Tribe's Proposed Fee-to-Trust and Eagle Mountain Casino Relocation Project, Tulare County, California

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: This notice advises the public that the Bureau of Indian Affairs (BIA), as lead agency, intends to gather information necessary for preparing an environmental impact statement (EIS) in connection with the Tule River Tribe's (Tribe) proposed Eagle Mountain Casino Relocation Project in Tulare County, California. This notice also opens public scoping to identify potential issues, concerns and alternatives to be considered in the EIS.

DATES: To ensure consideration during the development of the EIS, written comments on the scope of the EIS should be sent as soon as possible and no later than January 30, 2017. The date of the public scoping meeting will be announced at least 15 days in advance through a notice to be published in the local newspaper (Porterville Recorder) and online at *http://www.tulerivereis.com.*

ADDRESSES: You may mail or hand-deliver written comments to Ms. Amy Dutschke, Regional Director, Bureau of Indian Affairs, Pacific Region, 2800 Cottage Way, Sacramento, California 95825. Please include your name, return address, and ''NOI Comments, Tule River Tribe Casino Relocation Project'' on the first page of your written comments. You may also submit comments through email to Mr. John Rydzik, Chief, Division of Environmental, Cultural Resource Management and Safety, Bureau of Indian Affairs, at *john.rydzik@bia.gov.* If emailing comments, please use ''NOI Comments, Tule River Tribe Casino Relocation Project'' as the subject of your email.

The location of the public scoping meeting will be announced at least 15 days in advance through a notice to be published in the local newspaper (Porterville Recorder) and online at *http://www.tulerivereis.com.*

FOR FURTHER INFORMATION CONTACT: Mr. John Rydzik, Chief, Division of Environmental, Cultural Resource Management and Safety, Bureau of Indian Affairs, Pacific Regional Office, 2800 Cottage Way, Room W–2820, Sacramento, California 95825; telephone: (916) 978–6051; email: *john.rydzik@bia.gov.* Information is also available online at *http://www.tulerivereis.com.*

SUPPLEMENTARY INFORMATION: The Tribe submitted an application to the Bureau of Indian Affairs (BIA) requesting the placement of approximately 40 acres of fee land in trust by the United States upon which the Tribe would construct a casino resort. The facility would include an approximately 105,000 square foot casino, an approximately 250-room hotel, approximately 36,000 square feet of food and beverage facilities, administrative space, a multi-purpose events center, a conference center, and associated parking and infrastructure. The new facility would replace the Tribe's existing casino, and the existing casino buildings would be converted to tribal government or service uses. Accordingly, the proposed action for the Department is the acquisition requested by the Tribe. The proposed fee-to-trust property is located within the boundaries of the City of Porterville, in Tulare County, California, adjacent to the Porterville Airport and approximately 15 miles west of the Tule River Tribe Reservation. The proposed trust property includes 17 parcels, bound by West Street on the west, an off-highway vehicle park (OHV) owned by the City of Porterville to the north and east, and a photovoltaic power station (solar farm) to the south. The Assessor's parcel numbers (APNs) for the property are 302–400–001 through 302–400–017. The purpose of the proposed action is to improve the economic status of the tribal government so it can better provide housing, health care, education, cultural programs, and other services to its members.

The proposed action encompasses the various Federal approvals which may be required to implement the Tribe's proposed project, including approval of the Tribe's fee-to-trust application and a secretarial determination pursuant to Section 2719(b)(1)(A) of the Indian Gaming Regulatory Act. The EIS will identify and evaluate issues related to these approvals, and will also evaluate a range of reasonable alternatives. Possible alternatives currently under consideration include: (1) An expanded site alternative that involves acquiring additional adjacent fee-land into trust for the development of ancillary infrastructure and overflow parking; (2) a reduced-intensity casino alternative; (3) an alternate-use (non-casino) alternative; and (4) an alternative involving expansion of the Tribe's existing casino. The range of issues and alternatives may be expanded based on comments received during the scoping process.

Areas of environmental concern identified for analysis in the EIS include land resources; water resources; air quality; noise; biological resources; cultural/historical/archaeological resources; resource use patterns; traffic and transportation; public health and safety; hazardous materials and hazardous wastes; public services and utilities; socioeconomics; environmental justice; visual resources/aesthetics; and cumulative, indirect, and growth-inducing effects. The range of issues and alternatives to be addressed in the EIS may be expanded or reduced based on comments received in response to this notice and at the public scoping meeting. Additional information, including a map of the proposed trust property, is available by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Public Comment Availability: Comments, including names and addresses of respondents, will be available for public review at the BIA address shown in the **ADDRESSES** section, during regular business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask in your comment that your personal identifying information be withheld from public review, the BIA cannot guarantee that this will occur.

Authority: This notice is published in accordance with sections 1503.1 and 1506.6 of the Council on Environmental Quality Regulations (40 CFR parts 1500 through 1508) implementing the procedural requirements of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321–4345 *et seq.*), and the Department of the Interior National Environmental Policy Act Implementation Policy (43 CFR part 46), and is in the exercise of authority delegated to the Assistant Secretary—Indian Affairs by 209 DM 8.

Dated: December 22, 2016.

Lawrence S. Roberts,

Principal Deputy Assistant Secretary—Indian Affairs.

[FR Doc. 2016–31724 Filed 12–29–16; 8:45 am]

BILLING CODE 4337–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLWO350000.16X.L11100000.PI0000 LXSISGMW0000]

Notice of Amended Proposed Withdrawal, Release of Draft Environmental Impact Statement, and Notice of Public Meetings; Idaho, Montana, Nevada, Oregon, Utah, and Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: This notice announces the amendment of the September 24, 2015, application by the Assistant Secretary of the Interior for Land and Minerals Management to withdraw approximately 10 million acres of public and National Forest System lands from location and entry under the United States mining laws to protect the Greater Sage-Grouse and its habitat. The amendment adds 387,981.42 acres in the State of Nevada and refines the proposed withdrawal boundaries in Idaho, Montana, Nevada, Oregon, Utah, and Wyoming. In addition, this notice announces the release of the draft Environmental Impact Statement (EIS) for public review, which analyzes and discloses the impacts of the proposed withdrawal.

DATES: Comments must be received by March 28, 2017. Meetings will be held to provide the public with an opportunity to review and comment on the proposed withdrawal amendment and the draft EIS. Please see the **SUPPLEMENTARY INFORMATION** section for the locations, dates, and times of the scheduled public meetings.

ADDRESSES: Written comments should be sent to Mark Mackiewicz, Bureau of Land Management (BLM) WO, C/O Price Field Office, 125 South 600 West, Price, UT 84501 or submitted electronically to *sagebrush_withdrawals@blm.gov.* Please see the **SUPPLEMENTARY INFORMATION** section for an electronic link and office locations where specific legal descriptions and maps of the lands may be reviewed.

FOR FURTHER INFORMATION CONTACT: Mark A. Mackiewicz, BLM, by telephone at 435–636–3616, or by email at *mmackiew@blm.gov.* Persons using a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 800–877–8339. FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: On September 24, 2015, a Notice of Proposed Withdrawal was published in the **Federal Register** (80 FR 57635), as corrected (80 FR 63583), which provided notice of the proposal to withdraw the identified lands from location and entry under the United States mining laws for 20 years, subject to valid existing rights. As a result of a request submitted by the State of Nevada, the BLM (applicant) petitioned the Assistant Secretary of the Interior for Land and Minerals Management to amend the original proposal through the addition of 387,981.42 acres of lands in that state. These lands represent a proposal by the State of Nevada to substitute for withdrawal 487,756 acres of high mineral development potential areas in Sagebrush Focal Areas (SFAs) for areas adjacent to SFAs that contain high value habitat and identified Greater Sage-Grouse populations. This petition also amends the original withdrawal proposal by adjusting the boundary of lands located in Idaho, Montana, Nevada, Oregon, Utah, and Wyoming as a result of legal land description refinements that defined the proposed withdrawal boundaries utilizing the public land survey system standards. The boundary adjustments resulted in a slight decrease in overall acres proposed for withdrawal, though refinements vary section-by-section.

The Assistant Secretary of the Interior for Land and Minerals Management has approved the BLM's petition. This action therefore, constitutes a withdrawal proposal of the Secretary of the Interior (43 CFR 2310.1–3(e)).

Exhibit ''A'' of the application amendment describes the proposed additional public lands in Nevada being considered for withdrawal.

Exhibit ''B'' describes all of the lands in both the original withdrawal application and the proposed withdrawal amendment under consideration by the BLM and the U.S. Forest Service (USFS). The withdrawal amendment includes 387,981.42 acres in the State of Nevada and the boundary adjustment of lands located in Idaho, Montana, Nevada, Oregon, Utah, and Wyoming that were identified as a result of legal land description refinements.

The written legal land descriptions and the maps depicting the proposed withdrawal for both Exhibit ''A'' and Exhibit ''B'' may be found on the BLM internet Web site link: *https://www.blm.gov/node/3282*.

The maps, legal land descriptions, and records relating to the amendment application may be examined at the following BLM State Offices or USFS Regional Offices or by contacting Mark Mackiewicz at 435–636–3616.

Idaho State Office, 1387 S. Vinnell Way, Boise, ID 83709.

Montana State Office, 5001 Southgate Drive, Billings, MT 59101–4669.

Nevada State Office, 1340 Financial Boulevard, Reno, NV 89502.

Oregon State Office, 1220 SW 3rd Avenue, Portland OR 97204.

Utah State Office, 440 West 200 South, Suite 500, Salt Lake City, UT 84101.

Wyoming State Office, 5353 Yellowstone Road, Cheyenne, Wyoming 82009.

U.S. Forest Service, Region 1, 200 E Broadway St, Missoula, MT 59802.

U.S. Forest Service, Region 4, Federal Building, 324 25th Street, Ogden, UT 84401.

U.S. Forest Service, Region 6, 1220 SW 3rd Avenue, Portland OR 97204.

The withdrawal proposal (including the amendment) will be processed in accordance with the regulations set forth in 43 CFR part 2300.

The purpose of the proposed withdrawal is to protect the Greater Sage-Grouse and its habitat from adverse effects of locatable mineral exploration and mining.

Publication of this notice segregates the lands described in the amended withdrawal application from location or entry under the United States mining laws, subject to valid existing rights, until September 24, 2017, unless the withdrawal application is denied or cancelled or the withdrawal is approved prior to that date. All of the lands (unless otherwise subject to an existing withdrawal) will remain open to the public land laws, leasing under the mineral and geothermal leasing laws, and disposal under the mineral material sales laws.

Non-Federal mineral lands located within the boundaries of the proposed withdrawal areas will not be affected.

Licenses, permits, cooperative agreements, or discretionary land use authorizations may be allowed during the temporary segregative period, but only with the approval of the authorized officer of the BLM or the USFS.

The use of a right-of-way, interagency or cooperative agreement, or surface management by the BLM under 43 CFR 3715 or 43 CFR 3809 regulations will not adequately constrain nondiscretionary uses, which could result in loss of critical Greater Sage-Grouse habitat.

There are no suitable alternative sites for the withdrawal.

No water rights would be needed to fulfill the purpose of the requested withdrawal.

The proposed action analyzed in the draft EIS considers a withdrawal of approximately 10 million acres of Federal lands from location and entry under the United States mining laws for a maximum period of 20 years, subject to valid existing rights. The lands included in the proposed action are National System of Public Lands and National Forest System lands administered by the BLM and the USFS. Public scoping for this project began on September 24, 2015, and closed on January 15, 2016, with the publication in the **Federal Register** of the Notice of Proposed Withdrawal; Sagebrush Focal Areas; Idaho, Montana, Nevada, Oregon, Utah, and Wyoming and Notice of Intent to Prepare an EIS. During public scoping there were 5,078 unique letters submitted. The issues identified include, but are not limited to:

- Development of Federal mineral resources is authorized by law on BLM and National Forest System Lands; restrictions or closures may decrease the ability to provide mineral resources;
- The proposed action could affect the social and economic conditions within the analysis area, particularly in smaller communities;
- The proposed action could reduce the potential for disturbance to vegetation communities and habitat alteration and fragmentation that otherwise might have occurred from mining activity; and
- Mineral exploration and development has the potential to impact wildlife, including special status species and associated habitat within and adjacent to the proposed withdrawal area.

An interdisciplinary approach was used to develop the draft EIS to consider a variety of resource issues and concerns. Based on internal and external scoping, the issues analyzed in detail in the draft EIS include:

- Geology and mineral resources;
- Vegetation, including special status plant species;
- Wildlife and special status animal species, including Greater Sage-Grouse; and
- Socioeconomic conditions, including environmental justice and human health and safety.

In addition to the proposed action, the draft EIS analyzes and discloses the potential effects of the No Action alternative, State of Nevada alternative, High Mineral Potential alternative, and State of Idaho alternative.

Under the No Action alternative, the proposed withdrawal area would remain open to location and entry under the United States mining laws. New mining claims could be located and the BLM and USFS would continue to oversee and regulate locatable mineral exploration and development in accordance with existing programs, polices, and regulations.

Under the State of Nevada alternative, 487,756 acres of lands in Nevada, that are part of the proposed action would not be withdrawn and 387,981.42 acres of priority Greater Sage-Grouse habitat located contiguous to but outside the SFAs in the State would be included in the withdrawal. Nevada suggested that this alternative be considered to reduce the anticipated economic effect of the proposed withdrawal to the State of Nevada while still meeting the purpose and need for the proposed action.

Under the High Mineral Potential alternative, all areas within the SFAs that contain lands with high mineral potential, as defined by the Sagebrush Mineral-Resource Assessment prepared by the U.S. Geological Survey, would not be withdrawn. Under this alternative, 558,918 acres of high mineral potential lands in the six states that are part of the proposed action would not be withdrawn.

Under the State of Idaho alternative, 538,742 acres of economically developable lands in the State of Idaho that are part of the proposed action would be excluded from the proposed withdrawal and left open to location and entry under the United States mining laws. The State of Idaho identified these areas as economically developable. No additional lands are being proposed for inclusion in the withdrawal under this alternative.

Thirty-one agencies and two American Indian Tribes have entered into Cooperating Agency agreements with the BLM for this EIS effort. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal (40 CFR 1508.5). Cooperating agencies participate in the preparation of the NEPA analysis and documentation. Cooperating agency status does not imply the agency supports the proposed action.

The BLM also contacted 53 American Indian governments via letter or face-to-face meetings during scoping and prior to the release of the draft EIS. The governments were provided a project update, an offer to provide more information, and an offer for government-to-government consultation.

In accordance with 36 CFR 800.3(a)(1), the BLM determined that the proposed SFA withdrawal is an undertaking that has no potential to affect historic properties, assuming such historic properties were present, and therefore the agency official has no further obligation under the National Historic Preservation Act. The BLM informed 53 American Indian governments; the Idaho, Montana, Nevada, Oregon, Utah, and Wyoming State Historic Preservation Offices; and the Advisory Council on Historic Preservation of this determination of effect.

The draft EIS is available at the following libraries and offices online at: *https://www.blm.gov/node/3282*.

Specific comments or concerns about the proposed withdrawal will be most helpful to the BLM. Your comments should identify specific concerns with the potential environmental effects, reasonable alternatives, and measures to avoid or lessen the proposed withdrawal's environmental impacts. The more specific your comments, the more useful they will be. To ensure consideration of your comments on the proposal in the final EIS, it is important that the BLM receive your comments before March 28, 2017.

After the comments are reviewed, any significant new issues will be investigated, modifications will be made to the draft EIS, and a final EIS will be published and distributed. The final EIS will contain the agency's responses to timely comments received on the draft EIS.

In accordance with the requirements of 43 CFR 2310.3–1(b)(2)(iv) and 40 CFR 1506.6(b), for a period until March 28, 2017, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal amendment as it relates to the lands in the six states and/or the draft EIS may present their views in writing to Mark Mackiewicz, BLM WO, C/O Price Field Office, 125 South 600 West, Price, Utah 84501, or by email to: *sagebrush_withdrawals@blm.gov* or by attending one of the public meetings on the dates and times as noted below.

Notice is also hereby given that public meetings in connection with the proposed withdrawal and the release of the draft EIS will be held on the following dates, times, and locations:

Monday, February 13, 2017, from 2 p.m. to 4 p.m.—Great Northern Hotel, 2 South 1st Street, Malta, MT 59538
Tuesday, February 14, 2017, from 5 p.m. to 7 p.m.—BLM West Desert District Office, 2370 S. Decker Lake Dr., West Valley City, UT 84119
Wednesday, February 15, 2017, from 5 p.m. to 7 p.m.—Rock Springs BLM Office, 280 Hwy 191 N, Rock Springs, WY 82901
Thursday, February 16, 2017, from 5p.m. to 7 p.m.—Shiloh Suites Conference Hotel, 780 Lindsay Blvd., Idaho Falls, ID 83402
Tuesday, February 21, 2017, from 5 p.m. to 7 p.m.—The Nugget, 1100 Nugget Avenue, Sparks, NV 89431
Wednesday, February 22, 2017, from 5 p.m. to 7 p.m.—Lakeview BLM District Office, 1301 South G Street, Lakeview, OR 97720
Thursday, February 23, 2017, from 5 p.m. to 7 p.m.—Elko Conference Center, 724 Moren Way, Elko, NV 89801
Friday, February 24, 2017, from 5 p.m. to 7 p.m.—Best Western Vista Inn, 2645 Airport Way, Boise, ID 83709

The public will have an opportunity to provide oral and written comments at the meetings. All comments received will be considered before any recommendation concerning the proposed withdrawal is submitted to the Assistant Secretary of the Interior for Land and Minerals Management for final action.

Comments including names and street addresses of respondents will be available for public review at the BLM Washington Office at the address noted above, during regular business hours, Monday through Friday, except Federal holidays. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Jenna Whitlock,

Acting Deputy Director, Operations, Bureau of Land Management.

Notice of Application for Withdrawal and Opportunity for Public Meeting; Washington

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The United States Department of Agriculture, Forest Service (USFS) has filed an application with the Bureau of Land Management (BLM) requesting that the Secretary of the Interior withdraw, for a period of 20 years, approximately 340,079 acres of National Forest System lands located in the Methow Valley, Okanagan National Forest. The purpose of the withdrawal is to protect the area while Congress considers legislation to permanently withdraw the lands, and to protect the value of ecological and recreational resources of the Methow Valley. Publication of this notice segregates the lands, subject to valid existing rights, for up to 2 years from settlement, sale, location, and entry under the public land laws, location and entry under the United States mining laws, and operation of the mineral and geothermal leasing laws. This notice also gives the public an opportunity to comment on the application for withdrawal.

DATES: Comments must be received by March 30, 2017. The date(s) and location(s) of meetings related to the application for withdrawal will be announced at least 30 days in advance of the meetings through local media, newspapers and the **Federal Register**.

ADDRESSES: Comments should be sent to the BLM Oregon/Washington State Director, P.O. Box 2965, Portland, OR 97208–2965.

FOR FURTHER INFORMATION CONTACT: Jacob Childers, BLM Oregon/Washington State Office, P.O. Box 2965, Portland, OR 97208–2965 or by phone at 503–808–6225. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 1–800–877–8339 to contact the above individual. The service is available 24 hours a day, 7 days a week. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The applicant is the USFS. The application requests the Secretary of the Interior withdraw for a period of 20 years, subject to valid existing rights, the following described National Forest System lands from settlement, sale, location, and entry under the public land laws, location and entry under the United States mining laws, and operation of the mineral and geothermal leasing laws to protect the value of ecological and recreational resources of the Methow Valley and to protect the area while legislation to permanently withdraw the lands is being considered. Recreation accounts for a substantial share of the Methow Valley community's economy while the watershed provides habitat for several threatened and endangered species. Legislation is currently pending in the 114th Congress as S.2991 and identified as the ''Methow Headwaters Protection Act of 2016.''

The areas described aggregate 340,079 acres of National Forest System lands in Okanogan County, Washington.

Non-Federal mineral lands located within the boundaries of the proposed withdrawal areas will not be affected.

Licenses, permits, cooperative agreements, or discretionary land use authorizations of a temporary nature that will not significantly impact the values to be protected by the withdrawal may be allowed with the approval of the authorized FS officer during the temporary segregation period. FS surface occupancy regulations will not adequately constrain land uses allowed under the General Mining Law (as amended) and the Mineral Leasing Act of 1920 (as amended).

There are no suitable alternative sites for the withdrawal.

No water rights would be needed to fulfill the purpose of the requested withdrawal.

Records related to the application may be examined by contacting Jacob Childers, BLM Oregon/Washington State Office at the address or phone number listed above.

For a period until March 30, 2017, all persons who wish to submit comments, suggestions, or objections in connection with the proposed withdrawal may present their views in writing to the BLM Oregon/Washington State Office, State Director at the address indicated above. Information regarding the withdrawal application will be available for public review at the BLM Oregon State Office, 1220 SW 3rd Avenue, Portland, OR 97204 and at the Okanogan-Wenatchee National Forest, 215 Melody Lane, Wenatchee, WA 98801 during regular business hours, 8:45 a.m. to 4:30 p.m. Monday through Friday, except Federal holidays. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. Individuals who submit written comments may request confidentiality by asking us in your comment to withhold your personal identifying information from public review; however, we cannot guarantee that we will be able to do so.

Notice is hereby given that a minimum of at least one public meeting will be held in conjunction with the withdrawal application. A notice of the time and place will be published in the **Federal Register** and a local newspaper at least 30 days before the scheduled date of any meetings.

For a period until December 31, 2018, subject to valid existing rights, the lands described in this notice will be segregated from settlement, sale, location, and entry under the public land laws, location and entry under the United States mining laws, and operation of the mineral and geothermal leasing laws, unless the application is denied or canceled or the withdrawal is approved prior to that date.

This application will be processed in accordance with the regulations set forth in 43 CFR part 2300.

Lenore Heppler,
Branch Chief, Land, Mineral and Energy Resources.

Bureau of Land Management

[LLNV912000. L13400000.PQ0000 LXSS006F0000 261A; 14–1109; MO#4500102930]

Notice of Public Meetings: Sierra Front-Northwestern Great Basin Resource Advisory Council, Nevada

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meetings.

SUMMARY: In accordance with the Federal Land Policy and Management Act (FLPMA) and the Federal Advisory Committee Act of 1972 (FACA), the U.S. Department of the Interior, Bureau of Land Management (BLM) Sierra Front-

Northwestern Great Basin Resource Advisory Council (RAC), will hold one meeting in Nevada, in January 2017. The meeting is open to the public.

DATES AND TIME: January 26, 2017, at the Carson City BLM Office (5665 Morgan Mill Road) in Carson City, Nevada. A field trip will be held the same day in the afternoon within the Carson City BLM District. Approximate meeting time is 8 a.m. to 1 p.m. with a field tour in the afternoon. However, the meeting and field tour could end earlier if discussions and presentations conclude before 4 p.m. The meeting will include a public comment period at approximately 8:15 a.m. and approximately 12:15 p.m.

FOR FURTHER INFORMATION CONTACT: Lisa Ross, Public Affairs Specialist, Carson City District Office, 5665 Morgan Mill Road, Carson City, NV 89701, telephone: (775) 885–6107, email: *lross@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The 15-member Council advises the Secretary of the Interior, through the BLM, on a variety of planning and management issues associated with public land management in Nevada. Topics for discussion at the meeting will include, but are not limited to:

- January 26—Review of last year's goals and assess achievements, spring/riparian management discussion and recommendations, RAC subcommittee report, and District managers' updates.

The Council may raise other topics at the meetings.

Final agendas will be posted on-line at the BLM Sierra Front-Northwestern Great Basin RAC Web site at *https://www.blm.gov/node/6214* and will be published in local and regional media sources at least 14 days before each meeting.

Individuals who need special assistance such as sign language interpretation or other reasonable accommodations, or who wish to receive a copy of each agenda, may contact Lisa Ross no later than 10 days prior to each meeting.

Stephen D. Clutter,

Chief, Office of Communications.

Notice of Availability of the Record of Decision for the Moab Master Leasing Plan/Approved Resource Management Plan Amendments for the Moab and Monticello Field Offices, UT

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Land Management (BLM) announces the availability of the Record of Decision (ROD) for the Moab Master Leasing Plan (MLP)/Approved Resource Management Plan Amendments for the Moab and Monticello Field Offices (Approved Plan). On December 15, 2016, the Utah State Director signed the ROD, which constitutes the final decision of the BLM and makes the Approved Plan effective immediately.

ADDRESSES: Copies of the ROD and Approved Plan are available upon request, and available for public inspection at the following locations:

- Bureau of Land Management, Utah State Office, 440 West 200 South, Suite 500, Salt Lake City, Utah.
- Bureau of Land Management, Moab Field Office, 82 East Dogwood, Moab, Utah.
- Bureau of Land Management, Monticello Field Office, 365 North Main, Monticello, Utah.

The ROD and Approved Plan, together with accompanying background documents, are available online at: *http://go.usa.gov/xksyS.*

FOR FURTHER INFORMATION CONTACT: Brent Northrup, Project Manager, BLM Moab Field Office, 82 East Dogwood, Moab, UT 84532, telephone 435–259–2151 or email *bnorthup@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 1–800–877–8339 to contact the above individual. The Service is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Approved Plan is the culmination of a significant effort by the BLM and interested members of the public, community stakeholders, and other local, State, and Federal partners, to provide for responsible mineral development in balance with healthy wildlife habitat, clean air and water, and a vital recreation economy.

The Approved Plan addresses mineral leasing and development on 785,567 acres of BLM-administered land within the Moab and Monticello Field Offices. The Approved Plan amends mineral leasing decisions in portions of the existing Moab and Monticello Resource Management Plans that were completed in 2008.

The Proposed Plan was selected as the Approved Plan because it is the alternative that best balances competing considerations between outdoor recreation, iconic scenery, and development of oil/gas and potash deposits. The Approved Plan allows recreation and mineral extraction to occur in specified areas in order to minimize conflicts with resources.

The Preferred Alternative in the MLP Draft Amendment/Draft Environmental Impact Statement (EIS), with adjustments and clarifications, was carried forward as the Proposed Plan in the MLP/Final EIS released to the public on July 21, 2016. Five protest letters were received during the 30-day protest period on the Proposed Plan, which ended on August 22, 2016. The letters were addressed by the BLM Washington Office. During the Governor's Consistency Review Process, the Governor sent correspondence to the BLM on September 22, 2016, identifying alleged inconsistencies between the Proposed Plan and the State's San Juan County Energy Zone. After reviewing the information submitted, the BLM determined that the Proposed Plan is consistent with the Zone to the maximum extent practical based on the identified resource values. No modifications or corrections were made to the Approved Plan in response to the protest process and the Governor's Consistency Review. The Governor did not appeal the BLM Utah State Director's determination to the BLM Director.

The ROD does not include any implementation actions. The mineral leasing decisions in the Approved Plan are planning-level decisions and therefore are not appealable. Future implementation actions must be in conformance with the management direction in the Approved Plan; any such actions will result from future decisionmaking process(es), including appropriate environmental review.

Authority: 40 CFR 1506.6.

Edwin L. Roberson,

State Director.

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

[RR02800000, 17XR0687ND, RX185279142060200]

Notice of Availability of the Final Environmental Impact Report/Final Environmental Impact Statement, Bay Delta Conservation Plan/California WaterFix

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Reclamation (Reclamation), in coordination with the California Department of Water Resources (DWR), has prepared a Final Environmental Impact Report/Final Environmental Impact Statement (Final EIR/EIS) for the Bay Delta Conservation Plan/California WaterFix pursuant to the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). The DWR proposes to implement a strategy to help restore ecological functions of the Delta and improve water supply reliability in the state of California. The Final EIR/EIS describes and analyzes potential environmental impacts of alternatives and identifies mitigation measures to help avoid or minimize impacts. The initial approach focused on a Habitat Conservation Plan, referred to as the Bay Delta Conservation Plan (BDCP), which included modifications to the State Water Project (SWP) and associated Conservation Measures. A new alternative strategy emerged after public input on the Draft EIR/EIS and was further refined in a Recirculated Draft EIR/Supplemental Draft EIS (RDEIR/SDEIS). This new strategy, the California Waterfix, focuses on a new water conveyance facility, habitat restoration measures necessary to minimize or avoid project effects, and a revised set of Conservation Measures. Endangered Species Act compliance would be achieved through Section 7 consultation.

DATES: No Federal or State decision on the proposed action will be made until at least 30 days after the U.S. Environmental Protection Agency (EPA) publishes a notice of availability of the Final EIR/EIS. After the 30-day period, the U.S. Department of the Interior will sign a Record of Decision and DWR will complete a Notice of Decision. The Record of Decision will state the actions that will be implemented by Reclamation and will discuss factors leading to the decisions.

ADDRESSES: Send requests for the Final EIR/EIS to Brook White, Bureau of Reclamation, Mid-Pacific Region, Bay-Delta Office, 801 I Street, Suite 140, Sacramento, CA 95814–2536, by calling (916) 414–2402, or emailing *bwhite@usbr.gov.*

To view or download the Final EIR/EIS, or for a list of locations to view hard-bound copies, go to *www.baydeltaconservationplan.com.*

FOR FURTHER INFORMATION CONTACT: Brook White, Bureau of Reclamation, (916) 414–2402, or by email at *bwhite@usbr.gov.*

SUPPLEMENTARY INFORMATION:

Background

On January 24, 2008, the U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) issued a Notice of Intent (NOI) to prepare an EIS on the BDCP (73 FR 4178). The NOI was reissued on April 15, 2008, to include Reclamation as a co-lead Federal agency, update the status of the planning process, and provide revised information related to scoping meetings (73 FR 20326). The NOI dated April 15, 2008 identified scoping meeting locations and stated that written comments would be accepted until May 30, 2008. Additional information was later developed to describe the proposed BDCP, and subsequent scoping activities were initiated on February 13, 2009, with the publication of a revised NOI (74 FR 7257). The NOI identified scoping meeting locations and stated that written comments would be accepted until May 14, 2009.

In December 2010, the California Natural Resources Agency provided to the public a summary of the BDCP, its status, and a list of outstanding issues. In 2011 and 2012, public meetings continued in Sacramento, California, to update stakeholders and the public on elements of the Draft BDCP and EIR/EIS that were being developed.

On December 13, 2013, the Draft BDCP and associated Draft EIR/EIS were released to the public and a 120-day public comment period was opened through notification in the **Federal Register** (78 FR 75939). This notice described the proposed action and a reasonable range of alternatives. Twelve more public meetings were held in California in early 2014. In response to requests from the public, the comment period was extended for an additional 60 days and closed on June 13, 2014 (79 FR 17135). A Draft Implementing Agreement for the BDCP was also made available to the public on May 30, 2014, for a 60-day review and comment period, which closed on July 29, 2014. The comment period for the Draft EIR/EIS was also extended to the later date. All draft documents are available at *www.BayDeltaConservationPlan.com.*

As a result of considering comments on the Draft BDCP, Draft EIR/EIS, and Draft Implementing Agreement, Reclamation and DWR proposed three additional conveyance alternatives for analysis in a RDEIR/SDEIS released on July 10, 2015 (80 FR 39797). These new alternatives, 2D, 4A, and 5A, each contain fewer Conservation Measures than the alternatives circulated in the Draft EIS/EIR. Each of the new alternatives is not structured as a Habitat Conservation Plan/Natural Communities Conservation Plan but is structured to achieve compliance with the Endangered Species Act through consultation under Section 7 and with the California Endangered Species Act through the incidental take permit process under Section 2081(b) of the California Fish & Game Code. On July 10, 2015, the RDEIR/SDEIS was released to the public. Comments were due on August 31, 2015.

The RDEIR/SDEIS described and analyzed project modifications and refinement of the resource area analyses, alternatives, and actions. Reclamation became the Federal lead agency and NMFS, USFWS, and the U.S. Army Corps of Engineers, by virtue of their regulatory review requirements, became cooperating agencies for the RDEIR/SDEIS. All other entities identified as Cooperating Agencies through prior agreements retained their status for the RDEIR/SDEIS.

DWR identified Alternative 4A (known as the California WaterFix) as their proposed project and Reclamation has selected Alternative 4A as the National Environmental Policy Act preferred alternative. This alternative consists of a water conveyance facility with three intakes, habitat restoration measures necessary to minimize or avoid project effects, and modified versions of a subset of Conservation Measures from the BDCP. Alternative 4A is proposed to make physical and operational improvements to the SWP in the Delta necessary to restore and protect ecosystem health, water supplies of the SWP and CVP south-of-Delta, and water quality within a stable regulatory framework, consistent with statutory and contractual obligations. For further background information, see the December 13, 2013 **Federal Register** notice for the draft EIR/EIS (78 FR 75939).

The Final EIR/EIS contains responses to all substantive comments received on the Draft EIR/EIS and RDEIR/SDEIS, and reflects comments and any additional information received during the review period.

DWR's certification of the EIR and final decision-making under the CEQA will not occur until at least 30 days after EPA publishes a notice of availability of the Final EIR/EIS. This distribution of the Final EIR/EIS, including the written proposed responses to comments submitted by public agencies, is intended to satisfy the requirement to provide these responses to commenting public agencies at least 10 days prior to certification, consistent with CEQA Guidelines Section 15088(b). In addition, the end of the **Federal Register** notice period is intended by DWR to close the period by which any person may submit to DWR any grounds for noncompliance with CEQA, CA Public Resources Code Section 21177(a).

Public Disclosure

Before including your address, phone number, email address, or other personal identifying information in any correspondence, you should be aware that your entire correspondence—including your personal identifying information—may be made publicly available at any time. While you may ask us in your correspondence to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: December 27, 2016.

Camille Touton,

Acting Principal Deputy Assistant Secretary—Water and Science.

[FR Doc. 2016–31735 Filed 12–29–16; 8:45 am]

BILLING CODE 4332–90–P

DEPARTMENT OF JUSTICE

Antitrust Division

United States v. AMC Entertainment Holdings, Inc., et al.; Proposed Final Judgment and Competitive Impact Statement

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that a proposed Final Judgment, Hold Separate Stipulation and Order, and Competitive Impact Statement have been filed with the United States District Court for the District of Columbia in *United States of America* v. *AMC Entertainment Holdings, Inc., et al.,* Civil Action No. 1:16–cv–2475. On December 20, 2016, the United States filed a Complaint alleging that the proposed acquisition by AMC Entertainment Holdings, Inc. of Carmike Cinemas, Inc. would violate Section 7 of the Clayton Act, 15 U.S.C. 18. The proposed Final Judgment, filed at the same time as the Complaint, requires AMC to divest certain theatre assets, reduce its equity holdings and relinquish its governance rights in National CineMedia, LLC, and complete screen transfers to the cinema advertising network of Screenvision, LLC.

Copies of the Complaint, proposed Final Judgment, Hold Separate Stipulation and Order, and Competitive Impact Statement are available for inspection on the Antitrust Division's website at *http://www.justice.gov/atr* and at the Office of the Clerk of the United States District Court for the District of Columbia. Copies of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Public comment is invited within 60 days of the date of this notice. Such comments, including the name of the submitter, and responses thereto, will be posted on the Antitrust Division's website, filed with the Court, and, under certain circumstances, published in the **Federal Register**.Comments should be directed to Owen M. Kendler, Acting Chief, Litigation III Section, Antitrust Division, Department of Justice, 450 Fifth Street N.W., Suite 4000, Washington, DC 20530 (telephone: 202–305–8376).

Patricia A. Brink,

Director of Civil Enforcement.

United States District Court for the District of Columbia

United States of America, Antitrust Division, 450 Fifth Street NW., Suite 4000, Washington, DC 20530, Plaintiff, v. *AMC Entertainment Holdings, Inc., One AMC Way, 11500 Ash Street, Leawood, KS 64105,* and, *Carmike Cinemas, Inc., 1301 First Avenue, Columbus, GA 31901,* Defendants.

Case No.: 1:16–cv–02475.
Judge: Randolph D. Moss.
Filed: 12/20/2016.

Complaint

The United States of America, acting under the direction of the Attorney General of the United States, brings this civil antitrust action to prevent the proposed acquisition by Defendant AMC Entertainment Holdings, Inc. (''AMC'') of all of the outstanding voting securities of Defendant Carmike Cinemas, Inc. (''Carmike'').

I. Nature of Action

1. AMC is a significant competitor to Carmike in the exhibition of first-run commercial movies in multiple areas around the United States, including the areas in and around Montgomery, Alabama; Destin and Miramar Beach, Florida; Orange Park and Fleming Island, Florida; Cumming, Georgia; Lithonia and Conyers, Georgia; Crestwood and Lansing, Illinois; Normal and Bloomington, Illinois; Pekin, Peoria, and Washington, Illinois; Inver Grove Heights and Oakdale, Minnesota; Coon Rapids and Mounds View, Minnesota; Rockaway and Sparta, New Jersey; Westfield and Cranford, New Jersey; Lawton, Oklahoma; Allentown and Center Valley, Pennsylvania; and Madison and Fitchburg, Wisconsin (collectively, the ''Local Markets''). If AMC acquires Carmike, AMC would obtain direct control of one of its most significant competitors in the Local Markets, likely resulting in higher ticket prices and/or a lower quality viewing experience for moviegoers in these areas.

2. AMC is also a founding member of National CineMedia, LLC (''NCM'')—the nation's largest provider of preshow services to exhibitors—and remains one of NCM's largest investors and exhibitors. Carmike is the largest exhibitor in the network of NCM's main competitor, Screenvision Exhibitions, Inc. (''Screenvision''), and is one of Screenvision's largest investors. NCM and Screenvision are the country's two leading preshow cinema advertising networks and together cover over 80% of movie theatre screens in the United States. If AMC's proposed acquisition of Carmike were to proceed, it would likely weaken competition between NCM and Screenvision because they would have a significant common owner. In addition, the proposed merger would undermine Screenvision's ability to compete for advertisers and exhibitors because, as explained below, Screenvision will no longer be able to rely on Carmike's growth to expand its network. The loss of competition in the markets for preshow services and cinema advertising will likely result in lower preshow services revenues to exhibitors, higher prices to cinema advertisers, and lower quality preshow services and advertising.

3. Accordingly, AMC's proposed acquisition of Carmike likely would substantially lessen competition in each of the Local Markets for the exhibition of first-run, commercial movies and in the markets for the sale of preshow services to exhibitors and the sale of cinema advertising to advertisers in the United States in violation of Section 7 of the Clayton Act, 15 U.S.C. 18, and should be enjoined.

II. Jurisdiction and Venue

4. This action is filed by the United States pursuant to Section 15 of the Clayton Act, as amended, 15 U.S.C. 25, to obtain equitable relief and to prevent a violation of Section 7 of the Clayton Act, as amended, 15 U.S.C. 18.

5. The distribution and theatrical exhibition of first-run, commercial films, the provision of preshow services to thousands of theatres across the United States, and the sale of cinema advertising to advertisers throughout the United States are commercial activities that substantially affect, and are in the flow of, interstate trade and commerce. Defendants' activities in purchasing preshow advertising and other content, equipment, services, and supplies, as well as licensing films for exhibition, substantially affect interstate commerce.

6. The Court has jurisdiction over the subject matter of this action pursuant to 15 U.S.C. 25 and 28 U.S.C. 1331, 1337(a), and 1345.

7. Defendants consent to personal jurisdiction and venue in this district, and AMC operates theatres in this district. This Court has personal jurisdiction over each Defendant, and venue is proper under 15 U.S.C. 22, and 28 U.S.C. 1391(b) and (c).

III. Defendants and the Proposed Acquisition

8. Defendant AMC is a Delaware corporation with its headquarters in Leawood, Kansas. As of September 30, 2016, AMC operated approximately 388 theatres with a total of 5,295 screens located across 31 states and the District of Columbia. AMC reported approximately $1.89 billion in U.S. box office revenues in 2015 and approximately $1.46 billion in U.S. box office revenues for the first nine months of 2016. Measured by number of theatres, screens, and box office revenue, AMC is the second-largest theatre circuit in the United States.

9. Defendant Carmike is a Delaware corporation with its headquarters in Columbus, Georgia. As of September 30, 2016, Carmike operated approximately 271 movie theatres with a total of 2,917 screens located across 41 states. Carmike reported approximately $490.0 million in U.S. box office revenues in 2015, and approximately $370.8 million in U.S. box office revenue for the first nine months of 2016. Measured by number of theatres, screens, and box office revenue, Carmike is the fourth-largest theatre circuit in the United States.

10. On March 3, 2016, AMC and Carmike executed an Agreement and Plan of Merger, under which AMC would acquire all outstanding voting securities of Carmike for approximately $1.2 billion. If the parties consummate the merger, AMC will be the nation's largest theatre exhibitor.

IV. Background

A. Movie Theatres

11. Viewing movies in a theatre is a popular pastime. Over 1.3 billion movie tickets were sold in the United States and Canada in 2015, with total box office revenues reaching approximately $11.1 billion.

12. Companies that operate movie theatres are called ''exhibitors.'' Some exhibitors own a single theatre, whereas others own a circuit of theatres within one or more regions of the United States. AMC and Carmike are two of the largest exhibitors in the United States.

13. Exhibitors set ticket prices for a theatre based on a number of factors, including the age and condition of the theatre, the number and type of amenities the theatre offers (such as the range of snacks, food and beverages offered, the size of its screens and quality of its sound systems, and whether it provides stadium and/or reserved seating), competitive pressures facing the theatre (such as the price of tickets at nearby theatres, the age and condition of those theatres, and the number and types of amenities they offer), and the population demographics and density surrounding the theatre.

B. Preshow Services and Cinema Advertising

14. On almost all movie screens, before the previews and feature film begin, the audience is presented with a preshow—a video program consisting of national, regional, and local advertisements; special content segments (*e.g.,* a ''behind the scenes'' look at a new TV show); and theatre announcements. The preshow is typically twenty to thirty minutes long and is designed to engage moviegoers as they wait for the feature film to start.

15. Cinema advertising networks act as intermediaries between exhibitors and advertisers. For advertisers, the preshow is a unique opportunity to reach an attentive audience using a large screen with the benefit of high-quality video and sound. For exhibitors, the preshow provides a lucrative way to supplement revenue earned through ticket sales and concessions at a time when its movie screens screens are otherwise unused.

16. To obtain preshow services, exhibitors typically enter into long-term, exclusive contracts with the cinema advertising networks. The contracts for the largest few exhibitors, including AMC and Carmike, tend to be longest—approximately 30 years—whereas the contracts for the smaller exhibitors tend to last five to ten years. Under the contracts, the networks commit to marketing the preshow screen time to advertisers and packaging the advertisements and other content into an entertaining video program. Exhibitors agree to display the preshow on their movie screens. The cinema advertising networks retain a negotiated portion of the advertising proceeds for the services they provide, and the exhibitors retain the remaining portion of the advertising proceeds.

17. Cinema advertising networks sell advertising time in preshows to advertisers seeking to market their products on a local, regional, or national basis. Generally, national advertisers seek to purchase cinema advertising from firms that can provide access to a nationwide network of movie screens. Thus, the cinema advertising networks work hard to enter into contracts with exhibitors throughout the country and compete vigorously to woo exhibitors away from each other.

18. NCM and Screenvision are the dominant cinema advertising networks in the United States. They compete head-to-head to win exclusive contracts with exhibitors and to offer advertisers access to their exhibitors' movie audiences. Together, NCM and Screenvision serve over 80% of all movie screens in the country.

19. NCM has a national cinema advertising network that covers about 20,500 of the approximately 40,500 movie screens in the United States. In 2015, NCM earned approximately $447 million in gross advertising revenue.

20. National CineMedia, Inc. is the managing member and owner of 43.6% of NCM. The remaining 56.4% is owned by the three largest exhibitors in the United States: AMC (17.4%), Regal Entertainment Group (''Regal'') (19.8%), and Cinemark Holdings, Inc. (''Cinemark'') (19.2%). Under NCM's governing documents, post-merger, AMC ownership would increase to approximately 26.5%.

21. Regal, Cinemark, and AMC (the so-called ''Founding Members'') exercise a significant degree of control and influence over NCM and account for approximately 83% of its screens. In addition to holding a majority of NCM's equity, they have representatives on NCM's Board of Directors and enjoy substantial governance rights, including approval rights over certain NCM contracts with competing exhibitors. NCM management routinely consults with executives of the Founding

Members in making business decisions. AMC can fill two seats on the NCM board.

22. Screenvision has a national cinema advertising network that covers 14,300 screens in more than 2,300 theatres. Carmike is by far the largest exhibitor in Screenvision's network, and, as of September 30, 2016, owned approximately 19% of Screenvision through SV Holdco, LLC, a holding company that owns and operates Screenvision. Carmike also holds a seat on Screenvision's board of directors and possesses certain governance rights. No other major theatre exhibitor holds significant equity interests in Screenvision. Following the merger, AMC plans to divest or convert Carmike's Screenvision shares such that AMC will hold no more than 10% of Screenvision's voting stock.

V. Relevant Markets

A. The Exhibition of First-Run, Commercial Movies in the Local Markets

23. The exhibition of first-run, commercial movies in the Local Markets are relevant markets under Section 7 of the Clayton Act, 15 U.S.C. 18.

The Exhibition of First-Run, Commercial Movies Product Market

24. Movies are a unique form of entertainment. The experience of viewing a movie in a theatre is an inherently different experience from live entertainment (*e.g.,* a stage production or attending a sporting event) or viewing a movie in the home (*e.g.,* through streaming video, on a DVD, or via pay-per-view).

25. Reflecting the significant differences of viewing a movie in a theatre, ticket prices for movies generally differ from prices for other forms of entertainment. For example, typically, tickets for live entertainment are significantly more expensive than a movie ticket, whereas the costs of home viewing through streaming video, a DVD rental, or pay-per-view is usually significantly less expensive than viewing a movie in a theatre.

26. Viewing a movie at home differs from viewing a movie in a theatre in many ways. For example, the size of the screens differ, the sophistication of the sound systems differ, and, unlike at home, in the theatre, one has the social experience of viewing a movie with other patrons.

27. In addition, the most popular newly released or ''first-run'' movies are not available for home viewing at the time they are released in theatres. Movies are considered to be in their ''first-run'' during the four to five weeks following initial release in a given locality. If successful, a movie may be exhibited at other theatres after the first-run as part of a second or subsequent run (often called a ''sub-run'' or ''second-run'').

28. Moviegoers generally do not regard sub-run movies as an adequate substitute for first-run movies. Reflecting the significant difference between viewing a newly released, first-run movie and an older sub-run movie, tickets at theatres exhibiting first-run movies usually cost significantly more than tickets at sub-run theatres.

29. Art movies and foreign-language movies are also not reasonable substitutes for commercial, first-run movies. Art movies, which include documentaries, are sometimes referred to as independent films. Although art and foreign-language movies appeal to some viewers of commercial movies, art and foreign-language movies tend to have more narrow appeal and typically attract an older audience than commercial movies. Exhibitors consider the operation of theatres that predominantly exhibit art and foreign-language movies to be distinct from the operation of theatres that predominantly exhibit commercial movies.

30. A hypothetical monopolist controlling the exhibition of all first-run, commercial movies in a relevant geographic market would profitably impose at least a small but significant and non-transitory increase (SSNIP) in ticket prices. Thus, the exhibition of first-run, commercial movies is a relevant product market and line of commerce under Section 7 of the Clayton Act in which to assess the competitive effects of this acquisition.

Relevant Geographic Markets for the Exhibition of First-Run, Commercial Movies

31. Moviegoers typically are not willing to travel very far from their home to attend a movie. As a result, geographic markets for the exhibition of first-run, commercial movies are relatively local. Each of the following areas is a relevant geographic market and section of the country for purposes of Section 7 of the Clayton Act.

Area In and Around Montgomery, Alabama

32. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Montgomery, Alabama. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Chantilly 13 BigD, the Carmike Promenade 12, and the AMC Festival Plaza 16. No other predominately first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

33. Moviegoers who reside in and around Montgomery, Alabama are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Montgomery, Alabama constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Destin and Miramar Beach, Florida

34. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Destin and Miramar Beach, Florida. The only theatres that predominantly show first-run commercial movies in this area are the AMC Destin Commons 14 and the Carmike Boulevard 10 BigD. No other predominantly first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

35. Moviegoers who reside in and around Destin and Miramar Beach, Florida are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Destin and Miramar Beach, Florida constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Orange Park and Fleming Island, Florida

36. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Orange Park and Fleming Island, Florida. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Fleming Island 12, the AMC Orange Park 24, and the EPIC Theater at Oakleaf. Other than the EPIC Theater, no other first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

37. Moviegoers who reside in and around Orange Park and Fleming Island, Florida are unlikely to travel significant

distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Orange Park and Fleming Island, Florida constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Cumming, Georgia

38. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Cumming, Georgia. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Movies 400 12, the AMC Avenue Forsyth 12, and the Regal Avalon 12. Other than the Regal Avalon 12, no other predominantly first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

39. Moviegoers who reside in and around Cumming, Georgia are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Cumming, Georgia constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Lithonia and Conyers, Georgia

40. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Lithonia and Conyers, Georgia. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Conyers Crossing 16 and the AMC Stonecrest Mall 16. No other predominately first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

41. Moviegoers who reside in and around Lithonia and Conyers, Georgia are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Lithonia and Conyers, Georgia constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Crestwood and Lansing, Illinois

42. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Crestwood and Lansing, Illinois. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Digiplex Lansing 8, the AMC Crestwood 18, the AMC Schererville 12, the AMC Schererville 16, the Marcus Country Club Hills Cinema, the Marcus Chicago Heights Cinema, the Studio Movie Grill Chatham, and the Hoosier Theater. Other than the Marcus Country Club Hills Cinema, the Marcus Chicago Heights Cinema, the Studio Movie Grill Chatham, and the Hoosier Theater, no other predominantly first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

43. Moviegoers who reside in and around Crestwood and Lansing, Illinois are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Crestwood and Lansing, Illinois constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Normal and Bloomington, Illinois

44. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Normal and Bloomington, Illinois. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Ovation 10, the AMC Normal 14, and the Wehrenberg Bloomington Galaxy 14 Cinema. Other than the Wehrenberg Bloomington Galaxy 14 Cinema, no other predominantly first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

45. Moviegoers who reside in and around Normal and Bloomington, Illinois are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Normal and Bloomington, Illinois constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Pekin, Peoria, and Washington, Illinois

46. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Pekin, Peoria, and Washington, Illinois. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Sunnyland 10, the Carmike Grand Prairie 18, the AMC Pekin 14, the Goodrich Willow Knolls 14, the Morton Cinema, and the Landmark Cinemas. Other than the Goodrich Willow Knolls, the Morton Cinema, and the Landmark Cinemas, no predominantly first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

47. Moviegoers who reside in and around Pekin, Peoria, and Washington, Illinois are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Pekin, Peoria, and Washington, Illinois constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Inver Grove Heights and Oakdale, Minnesota

48. AMC and Carmike account for nearly a majority of the first-run, commercial movie box office revenue in and around Inver Grove Heights and Oakdale, Minnesota. The only theatres that predominantly show first-run commercial movies in this area are the AMC Inver Grove 16, the Carmike Oakdale 20, the Woodbury 10, and the Marcus Oakdale 17. Other than the Woodbury 10 and the Marcus Oakdale 17, no other predominantly first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

49. Moviegoers who reside in and around Inver Grove Heights and Oakdale, Minnesota are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial

movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Inver Grove Heights and Oakdale, Minnesota constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Coon Rapids and Mounds View, Minnesota

50. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Coon Rapids and Mounds View, Minnesota. The only theatres that predominantly show first-run commercial movies in this area are the AMC Coon Rapids 16, the AMC Arbor Lakes, the Carmike Wynnsong 15, the Andover 10, the Regal Brooklyn Center 20, and the Mann Champlin. Other than the Andover 10, the Regal Brooklyn Center 20, and the Mann Champlin, no other predominantly first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

51. Moviegoers who reside in and around Coon Rapids and Mounds View, Minnesota are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Coon Rapids and Mounds View, Minnesota constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Rockaway and Sparta, New Jersey

52. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Rockaway and Sparta, New Jersey. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Digiplex Sparta 3 and the AMC Rockaway 16. No other predominantly first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

53. Moviegoers who reside in and around Rockaway and Sparta, New Jersey are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Rockaway and Sparta, New Jersey constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Westfield and Cranford, New Jersey

54. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Westfield and Cranford, New Jersey. Carmike operates two first-run, commercial movie theatres in the area: the Digiplex Rialto Westfield and the Digiplex Cranford 5. AMC operates five theaters in the area: the Mountainside 10, the Aviation 12, the Jersey Gardens 20, the Menlo Park 12, and the Essex Green 9. While there are several other first-run, commercial movie theatres operating in the vicinity of the AMC and Carmike theatres in the area, AMC and Carmike are first and fourth, respectively, in term of the number of screens and box office revenue.

55. Moviegoers who reside in and around Westfield and Cranford, New Jersey are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Westfield and Cranford, New Jersey constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Lawton, Oklahoma

56. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Lawton, Oklahoma. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Patriot 13 and the AMC Lawton 12. No other predominately first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

57. Moviegoers who reside in and around Lawton, Oklahoma are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Lawton, Oklahoma constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Allentown and Center Valley, Pennsylvania

58. AMC and Carmike account for all of the first-run, commercial movie box office revenue in and around Allentown and Center Valley, Pennsylvania. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Promenade 16 IMAX, the Carmike Promenade 16, and the AMC Tilghman Square 8. No other predominately first-run, commercial movie theatre is in the vicinity of the Carmike and AMC theatres.

59. Moviegoers who reside in and around Allentown and Center Valley, Pennsylvania are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Allentown and Center Valley, Pennsylvania constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

Area In and Around Madison and Fitchburg, Wisconsin

60. AMC and Carmike account for the majority of the first-run, commercial movie box office revenue in and around Madison and Fitchburg, Wisconsin. The only theatres that predominantly show first-run commercial movies in this area are the Carmike Sundance Madison 6, the AMC Fitchburg 18, and the Marcus Point Cinema 15. Other than the Marcus Point Cinema 15, no predominately first-run, commercial movie theatre is in the vicinity of the AMC and Carmike theatres.

61. Moviegoers who reside in and around Madison and Fitchburg, Wisconsin are unlikely to travel significant distances out of that area to attend a first-run, commercial movie. A small but significant increase in the price of tickets by a hypothetical monopolist of first-run, commercial movie theatres in this area would likely not cause a sufficient number of moviegoers to travel out of that area to make the increase unprofitable. The area in and around Madison and Fitchburg, Wisconsin constitutes a relevant geographic market in which to assess the competitive effects of this acquisition.

B. Preshow Services and Cinema Advertising in the United States

62. Preshow services sold to exhibitors and cinema advertising sold to advertisers in the United States are relevant markets under Section 7 of the Clayton Act, 15 U.S.C. § 18.

Preshow Services and Cinema Advertising Product Markets

i. Preshow Services

63. Preshow services consist of the packaging of advertisements and content into a preshow delivered to exhibitors, enabling them to earn revenue from the use of their screens before the feature film. The price charged to exhibitors for preshow services is the portion of advertising revenue retained by the network.

64. The sale of preshow services to exhibitors constitutes a relevant product market and line of commerce under Section 7 of the Clayton Act. There are no reasonable substitutes for preshow services. Exhibitors cannot easily replace the preshow services that they buy from cinema advertising networks because individual exhibitors generally lack sufficient screens and geographic reach to secure national advertising. Nor can exhibitors sufficiently replace national advertising in preshows with local and regional advertising because local and regional advertising generates far less revenue than national advertising. Because there are no reasonable substitutes for preshow services, a hypothetical monopolist of all such services could profitably impose a SSNIP. Thus, the market for preshow services is a relevant product market in which to assess the competitive effects of this acquisition.

ii. Cinema Advertising

65. Cinema advertising is the on-screen advertising incorporated in the preshow. The sale of cinema advertising to advertisers is a relevant product market and line of commerce under Section 7 of the Clayton Act. Cinema advertising has important attributes that differentiate it from other forms of video advertising. For example, the preshow is projected on a large screen with high-quality video and sound in a darkened auditorium. In contrast to TV and other video advertising platforms, the audience cannot avoid the advertisements by fast forwarding through them, clicking past them, or changing a channel. The preshow also allows for long-form advertisements typically not available on TV, and it reaches a weekend audience and light TV viewers who are otherwise difficult to reach.

66. Many advertisers value the combination of attributes afforded by cinema advertising, and few would switch to other forms of video advertising in response to a SSNIP of cinema advertising. A hypothetical monopolist over all cinema advertising would profitably impose a SSNIP and, thus, the market for cinema advertising is a relevant product market in which to assess the competitive effects of this acquisition.

Relevant Geographic Market for Preshow Services and Cinema Advertising

67. NCM and Screenvision compete with each other throughout the United States. Exhibitors and advertisers in the United States would not switch to cinema advertising networks located outside of the United States in the event of a SSNIP in the United States. Accordingly, the United States is a relevant geographic market for preshow services sold to exhibitors and for cinema advertising sold to advertisers within the meaning of Section 7 of the Clayton Act.

VI. COMPETITIVE EFFECTS

A. Exhibition of First-Run, Commercial Movies in the Local Markets

68. Exhibitors compete to attract moviegoers to their theatres over the theatres of their rivals. They do that by competing on price, knowing that if they charge too much (or do not offer sufficient discounted tickets for matinees, seniors, students, or children) moviegoers will begin to frequent their rivals' theatres. Exhibitors also compete by seeking to license the first-run movies that are likely to attract the largest numbers of moviegoers. In addition, exhibitors compete over the quality of the viewing experience by offering moviegoers the most sophisticated sound systems, largest screens, best picture clarity, best seating (including stadium, reserved, and recliner seating), and the broadest variety and highest quality snacks, food, and drinks at concession stands or cafés in the lobby or served to moviegoers at their seats.

69. AMC and Carmike currently compete for moviegoers in the Local Markets. These markets are highly concentrated, and in each market, AMC and Carmike are significant competitors, given their close proximity. Their rivalry spurs each to improve the quality of its theatres and keeps ticket prices in check.

70. In each of the Local Markets, AMC's acquisition of Carmike will lead to significant increases in concentration and eliminate existing competition between AMC and Carmike.

71. Market concentration is often a useful indicator of the level of competitive vigor in a market and the likely competitive effects of a merger. The more concentrated a market, and the more a transaction would increase that concentration, the more likely it is that the transaction would result in reduced competition, harming consumers. Market concentration commonly is measured by the Herfindahl-Hirschman Index (''HHI''), as discussed in Appendix A. Markets in which the HHI exceeds 2,500 points are considered highly concentrated, and transactions that increase the HHI by more than 200 points in highly concentrated markets are presumed likely to enhance market power.

72. All of the Local Markets are highly concentrated and will experience significant HHI increases as a result of the transaction. In each of the Local Markets, the proposed acquisition would give AMC control of at least half, and sometimes all, of the first-run, commercial movie theatre screens and between 48% and 100% of the annual box office revenues. In each of the Local Markets, the acquisition would yield post-acquisition HHIs of between 3,800 and 10,000, representing increases in the range of 600 to 5,000 points.

73. Today, were one of Defendants' theatres to increase unilaterally ticket prices in each of Local Markets, the exhibitor that increased price would likely suffer financially as a substantial number of its customers would patronize the other exhibitor. The acquisition would eliminate this pricing constraint. Thus, the acquisition is likely to lead to higher ticket prices for moviegoers, which could take the form of a higher adult evening ticket price or reduced discounting for matinees, children, seniors, or students.

74. The proposed acquisition likely would also reduce competition between AMC and Carmike over the quality of the viewing experience at the theatres in the Local Markets. If no longer motivated to compete, AMC and Carmike would have reduced incentives to maintain, upgrade, and renovate their theatres, to improve the theatres' amenities and services, or to license the most popular movies, thus reducing the quality of the viewing experience for moviegoers in the Local Markets.

75. For all of these reasons, AMC's acquisition of Carmike likely will result in a substantial lessening of competition in each of the Local Markets.

B. Preshow Services and Cinema Advertising in the United States

76. The proposed transaction also would likely substantially lessen competition in the markets for the sale of preshow services to exhibitors and the sale of cinema advertising to advertisers in the United States.

AMC's Simultaneous Ownership of Equity Interests in NCM and Screenvision Will Likely Substantially Lessen Competition

77. As a significant owner of equity interests in both NCM and Screenvision post-merger, AMC would have an incentive to reduce the head-to-head competition between NCM and Screenvision. AMC will not benefit from strong competition between NCM and Screenvision post-merger because the competition will lower the profits AMC earns from NCM and Screenvision through its ownership interest.

78. In light of this incentive, AMC will likely use its influence and governance rights in both companies to ensure that NCM and Screenvision compete less aggressively to sign contracts with exhibitors and advertisers at the expense of the other network. AMC will also have the ability to use its access to confidential, nonpublic, and trade secret information from NCM and Screenvision to facilitate collusion by passing that competitively sensitive information between NCM and Screenvision.

79. The lessening of competition between NCM and Screenvision will likely result in lower payments to exhibitors and/or lower quality preshows for exhibitors. Given that NCM and Screenvision control over 80% of screens in the United States, it would be difficult for exhibitors to substitute to other, smaller networks.

80. Additionally, as a result of this lessening of competition, advertisers will no longer benefit from the lower prices that have resulted from the competition between NCM and Screenvision. Advertisers do not have choices other than these two networks to reach a broad number of viewers of their cinema advertising.

The Merger Will Likely Substantially Lessen Competition in Both Markets Because It Will Likely Weaken Screenvision's Ability to Compete

81. The loss of an independent Carmike also likely would weaken Screenvision's ability to remain a robust, competitive check on NCM, the only other significant competitor in the preshow services and cinema advertising markets. Scale is an important element of competition for advertisers and, in turn, for exhibitors. Carmike is Screenvision's largest exhibitor, and Screenvision touts the Carmike theatre network's current, broad scale when competing to execute deals with advertisers and exhibitors.

82. Screenvision also relies on Carmike's expansion plans to maintain and possibly expand the scale of its network of screens. Under Carmike's contract with Screenvision, all newly-acquired or -built Carmike theatres that have a preshow are automatically assigned to the Screenvision network. As a result, Carmike has fueled much of Screenvision's growth in recent years through its acquisitions of existing theatres and new theatre builds. This growth is important to maintaining scale since exhibitors, including Carmike, periodically close theaters that are no longer economically viable. Additionally, Screenvision's scale is at risk as the industry consolidates and more of the exhibitors with which it had previously contracted migrate to the contracts between NCM and its Founding Members: AMC, Regal, and Cinemark.

83. NCM's Founding Members and Carmike are the only exhibitors that have made significant acquisitions as the exhibitor industry has been consolidating. These exhibitors have long-term exclusive contracts with either NCM or Screenvision. If AMC acquires Carmike, the AMC/NCM exclusive arrangement will be expanded to Carmike and all of the merged firm's future theatre acquisitions and new builds will affiliate with NCM. Screenvision will lose access to its only substantial source of theatre acquisitions and the number of independent exhibitors unencumbered by long-term exclusive dealing arrangements for which Screenvision can compete will shrink even more as industry consolidation continues. Screenvision will only be able to rely on the other, smaller exhibitors for theatre acquisitions or new builds to maintain its network scale. These exhibitors will be unable to replace the growth that Carmike would have likely provided in the absence of the merger.

84. Competition will be lessened in the preshow services and cinema advertising markets because the merger will weaken one of the only two competitors. In the preshow services market, because NCM and Screenvision closely monitor each other and battle for market share, the competition between them provides tangible benefits for exhibitors with respect to price and quality of preshows. The proposed merger would likely substantially lessen the competition between NCM and Screenvision that has yielded these benefits, potentially forcing exhibitors to raise prices to consumers or forgo theatre improvements to offset the resulting reduction in revenue that they earn from preshows.

85. In the cinema advertising market, the resulting lessening of competition from the proposed acquisition would negatively impact advertisers, who pay NCM and Screenvision to place their ads in the movie preshows. Currently, advertisers benefit from competition between NCM and Screenvision for the placement of their ads. The proposed merger would likely substantially lessen the competition between NCM and Screenvision that has yielded these benefits, likely forcing advertisers to pay higher prices or accept lower quality placement of their advertising in the movie pre-shows.

VII. ENTRY

86. Sufficient, timely entry that would deter or counteract the anticompetitive effects in the relevant markets alleged above is unlikely. Exhibitors are reluctant to locate new, first-run, commercial theatres near existing, first-run, commercial theatres unless the population density, demographics, or the quality of existing theatres makes new entry viable. Timely entry of new, first-run, commercial movie theatres in the areas in and around the Local Markets would be unlikely to defeat a price increase by the merged firm.

87. Additionally, the entry barriers associated with developing a cinema advertising network are high, and thus new entry or expansion by existing competitors is unlikely to prevent or remedy the proposed merger's likely anticompetitive effects in the preshow services and cinema advertising markets. Barriers to entry and expansion include the time and cost of developing a network of screens to achieve sufficient scale. NCM's and Screenvision's lock-up of almost all of the exhibitors in the United States through staggered long-term contracts makes entry a long process. This adds to the already high cost of building the infrastructure necessary to develop and attract national advertisers. It also increases the length of time an entrant must sustain losses before its scale is large enough to sell advertising at long-term profitable rates.

88. Exhibitors generally cannot supply preshow services themselves to replace the likely substantial lessening of competition in the preshow services market. Individual exhibitors or groups of small exhibitors whose contracts with NCM or Screenvision are expiring are unlikely to be able to establish cost-effective sales forces, attract national advertisers, or otherwise develop a

sufficient infrastructure to reasonably replace lost competition.

VIII. VIOLATION ALLEGED

89. Plaintiff hereby reincorporates paragraphs 1 through 88.

90. The likely effect of AMC's proposed acquisition of Carmike would be to substantially lessen competition in each of the relevant markets identified above in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

91. Unless enjoined, the proposed transaction would likely have the following effects, among others:

(a) the prices of tickets at first-run, commercial movie theatres in the areas in and around the Local Markets would likely increase above levels that would prevail absent the acquisition;

(b) the quality of first-run, commercial theatres and the viewing experience at those theatres in the Local Markets would likely decrease below levels that would prevail absent the acquisition;

(c) the quality of and revenues from preshow services provided to exhibitors would likely decrease below levels that would prevail absent the acquisition; and

(d) the cost to place ads in theatre preshows to advertisers will likely increase to levels above, and the quality of advertising will decrease to levels below, those that would prevail absent the acquisition.

IX. REQUESTED RELIEF

92. Plaintiff requests that:

(a) AMC's proposed acquisition of Carmike be adjudged to violate Section 7 of the Clayton Act, 15 U.S.C. 18;

(b) Defendants be permanently enjoined from and restrained from carrying out the proposed acquisition or any other transaction that would combine the two companies;

(c) Plaintiff be awarded its costs of this action; and

(d) Plaintiff be awarded such other reliefs as the Court may deem just and proper.

Dated: 12/20/2016.

APPENDIX A

Herfindahl-Hirschman Index

The term ''HHI'' means the Herfindahl-Hirschman Index, a commonly accepted measure of market concentration. The HHI is calculated by squaring the market share of each firm competing in the relevant market and then summing the resulting numbers. For example, for a market consisting of four firms with shares of 30, 30, 20, and 20 percent, the HHI is 2,600 (302 + 302 + 202 + 202 = 2,600). The HHI takes into account the relative size distribution of the firms in a market. It approaches zero when a market is occupied by a large number of firms of relatively equal size, and reaches its maximum of 10,000 points when a market is controlled by a single firm. The HHI increases both as the number of firms in the market decreases and as the disparity in size between those firms increases.

Markets in which the HHI is between 1,500 and 2,500 points are considered to be moderately concentrated, and markets in which the HHI is in excess of 2,500 points are considered to be highly concentrated. *See* U.S. Department of Justice & Federal Trade Commission, *Horizontal Merger Guidelines* § 5.3 (2010) (''Guidelines''). Transactions that increase the HHI by more than 200 points in highly concentrated markets presumptively raise antitrust concerns under the Guidelines. *Id.*

United States District Court for the District of Columbia

United States of America Plaintiff, v. *AMC Entertainment Holdings, Inc., and Carmike Cinemas, Inc.,* Defendants.

Case No.: 1:16–cv–02475
Judge: Randolph D. Moss
Filed: 12/20/2016

COMPETITIVE IMPACT STATEMENT

Plaintiff, United States of America, pursuant to Section 2(b) of the Antitrust Procedures and Penalties Act (''APPA'' or ''Tunney Act''), 15 U.S.C. § 16(b)–(h), files this Competitive Impact Statement relating to the proposed Final Judgment submitted for entry in this civil antitrust proceeding.

I. NATURE AND PURPOSE OF PROCEEDING

On March 3, 2016, Defendant AMC Entertainment Holdings, Inc. (''AMC'') agreed to acquire all of the outstanding voting securities of Defendant Carmike Cinemas, Inc. (''Carmike''). AMC and Carmike are the second-largest and fourth-largest movie theatre circuits, respectively, in the United States.

AMC owns significant equity in National CineMedia, LLC (''NCM'') and Carmike owns significant equity in SV Holdco, LLC, a holding company that owns and operates Screenvision Exhibition, Inc. (collectively ''Screenvision''). NCM and Screenvision are the country's two main, preshow cinema advertising networks, covering over 80% of movie theatre screens in the United States.

The United States filed a civil antitrust complaint on December 20, 2016, seeking to enjoin the proposed acquisition and to obtain equitable relief. The Complaint alleges that the acquisition, if permitted to proceed, would give AMC direct control of one of its most significant movie theatre competitors, and in some cases, its only competitor, in 15 local markets (identified as the ''Local Markets'' in the Complaint) [1] in nine states. Moviegoers would likely experience higher ticket and concession prices and lower quality services in these local markets as a consequence.

The Complaint further alleges that because AMC will hold sizable interests in both NCM and Screenvision post-transaction, and Screenvision will lose Carmike as a source of future growth of its network, the acquisition would substantially lessen competition in the markets for preshow services and cinema advertising. This loss of competition likely would result in increased prices and reduced services for advertisers and theatre exhibitors seeking preshow services.

The likely effect of AMC's acquisition of Carmike will be to substantially lessen competition in the exhibition of first-run, commercial movies in the 15 Local Markets, and in the sale of preshow services and cinema advertising on a nationwide basis, in violation of Section 7 of the Clayton Act, 15 U.S.C. § 18.

At the same time the Complaint was filed, the United States also filed a Hold Separate Stipulation and Order (''Hold

[1] As alleged in the Complaint, the 15 Local Markets are Montgomery, Alabama; Destin and Miramar Beach, Florida; Orange Park and Fleming Island, Florida; Cumming, Georgia; Lithonia and Conyers, Georgia; Crestwood and Lansing, Illinois; Normal and Bloomington, Illinois; Pekin, Peoria, and Washington, Illinois; Inver Grove Heights and Oakdale, Minnesota; Coon Rapids and Mounds View, Minnesota; Rockaway and Sparta, New Jersey; Westfield and Cranford, New Jersey; Lawton, Oklahoma; Allentown and Center Valley, Pennsylvania; and Madison and Fitchburg, Wisconsin.

Separate'') and a proposed Final Judgment. Under the terms of the proposed Final Judgment, which is explained more fully below, AMC is required to take certain actions that are designed to eliminate the anticompetitive effects that are likely to result from AMC's acquisition of Carmike. Specifically, the Defendants are required to: (1) Divest movie theatres in the 15 Local Markets where it and Carmike are direct competitors; (2) sell down its equity interest in NCM such that it owns no more than 4.99%; (3) relinquish its seats on NCM's Board of Directors and all other governance rights it holds in NCM, (4) transfer 24 theaters with a total of 384 screens to the Screenvision cinema advertising network and divest any of those theatres it does not successfully transfer; and (5) implement and maintain ''firewalls'' to further ensure that it does not obtain NCM's, Screenvision's, or other exhibitors' competitively sensitive information or become a conduit for the flow of such information between NCM and Screenvision.

The United States and Defendants have stipulated that the proposed Final Judgment may be entered after compliance with the APPA. Entry of the proposed Final Judgment would terminate this action, except that the Court would retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof.

II. DESCRIPTION OF THE EVENTS GIVING RISE TO THE ALLEGED VIOLATION

A. Defendants and the Proposed Transaction

Defendant AMC is a Delaware corporation with its headquarters in Leawood, Kansas. As of September 30, 2016, AMC operated approximately 388 theatres with a total of 5,295 screens located across 31 states and the District of Columbia. AMC reported approximately $1.89 billion in U.S. box office revenues in 2015 and approximately $1.46 billion in U.S. box office revenues for the first nine months of 2016. Measured by number of theatres, screens, and box office revenue, AMC is the second-largest theatre circuit in the United States.

AMC is one of the three founders of the NCM cinema advertising network, owns 17.4% of NCM, controls two seats on NCM's Board of Directors, and has certain governance rights over NCM. AMC's ownership interest in NCM will increase to 26.5% after it acquires Carmike.

Defendant Carmike is a Delaware corporation with its headquarters in Columbus, Georgia. As of September 30, 2016, Carmike operated approximately 271 movie theatres with a total of 2,917 screens located across 41 states. Carmike reported approximately $490.0 million in U.S. box office revenues in 2015, and approximately $370.8 million in U.S. box office revenue for the first nine months of 2016. Measured by number of theatres, screens, and box office revenue, Carmike is the fourth-largest theatre circuit in the United States.

Carmike is the largest theatre circuit in the Screenvision cinema advertising network. It also owns approximately 19% of Screenvision, controls a seat on Screenvision's Board of Directors, and has certain governance rights over Screenvision.

B. The Competitive Effects of the Transaction on the Exhibition of First-Run, Commercial Movies

1. The Relevant Markets

As alleged in the Complaint, movies are a unique form of entertainment. The experience of viewing a movie in a theatre is an inherently different experience from live entertainment (*e.g.,* a stage production or attending a sporting event) or viewing a movie in the home (*e.g.,* through streaming video, on a DVD, or via pay-per-view).

Reflecting the significant differences of viewing a movie in a theatre, ticket prices for movies generally differ from prices for other forms of entertainment. For example, typically, tickets for live entertainment are significantly more expensive than a movie ticket, whereas the costs of home viewing through streaming video, a DVD rental, or pay-per-view is usually significantly less expensive than viewing a movie in a theatre.

Viewing a movie at home differs from viewing a movie in a theatre in many ways. For example, the size of the screens and sophistication of the sound systems differ, and, unlike at home, in the theatre, one has the social experience of viewing a movie with other patrons.

In addition, the most popular newly released or ''first-run'' movies are not available for home viewing at the time they are released in theatres. Movies are considered to be in their ''first-run'' during the four to five weeks following initial release in a given locality. If successful, a movie may be exhibited at other theatres after the first-run as part of a second or subsequent run (often called a ''sub-run'' or ''second-run'').

Moviegoers generally do not regard sub-run movies as an adequate substitute for first-run movies. Reflecting the significant difference between viewing a newly released, first-run movie and an older sub-run movie, tickets at theatres exhibiting first-run movies usually cost significantly more than tickets at sub-run theatres.

Art movies and foreign-language movies are also not reasonable substitutes for commercial, first-run movies. Art movies, which include documentaries, are sometimes referred to as independent films. Although art and foreign-language movies appeal to some viewers of commercial movies, art and foreign-language movies tend to have more narrow appeal and typically attract an older audience than commercial movies. Exhibitors consider the operation of theatres that predominantly exhibit art and foreign-language movies to be distinct from the operation of theatres that predominantly exhibit commercial movies.

For all of these reasons, the Complaint alleges that a hypothetical monopolist controlling the exhibition of all first-run, commercial movies in a relevant geographic market would profitably impose at least a small but significant and non-transitory increase (''SSNIP'') in ticket prices. Thus, the exhibition of first-run, commercial movies is a relevant product market and line of commerce under Section 7 of the Clayton Act in which to assess the competitive effects of this acquisition.

Moviegoers typically are not willing to travel very far from their home to attend a movie. As a result, geographic markets for the exhibition of first-run, commercial movies are relatively local. As detailed in the Complaint, there are 15 Local Markets in which AMC and Carmike compete today and each is a relevant geographic market in a section of the country for purposes of Section 7 of the Clayton Act.

2. Competitive Effects

Exhibitors compete to attract moviegoers to their theatres over the theatres of their rivals. They do that by competing on price, knowing that if they charge too much (or do not offer sufficient discounted tickets for matinees, seniors, students, or children) moviegoers will begin to frequent their rivals. Exhibitors also compete by seeking to license the first-run movies that are likely to attract the largest numbers of moviegoers. In addition, exhibitors compete over the quality of the viewing experience by offering moviegoers the most sophisticated sound systems, largest screens, best picture clarity, best seating (including stadium, reserved, and recliner seating), and the broadest variety and highest quality of snacks, food, and drinks at concession stands or cafés in the lobby or served to moviegoers at their seats.

AMC and Carmike currently compete for moviegoers in the Local Markets. As detailed in the Complaint, all 15 Local Markets are highly concentrated, and will experience significant additional increases in concentration as a result of the transaction. In each of the Local Markets, the proposed acquisition would give AMC control of a majority, or all, of the first-run, commercial movie theatres and between 48% and 100% of the annual box office revenues. The transaction will also eliminate substantial head-to-head competition between AMC and Carmike that has provided consumers with lower prices and a higher quality movie-going experience.

3. Entry and Expansion

Sufficient, timely entry that would deter or counteract the anticompetitive effects in the Local Markets is unlikely. Exhibitors are reluctant to locate new, first-run, commercial theatres near existing, first-run, commercial theatres unless the population density, demographics, or quality of existing theatres makes new entry viable. Timely entry of new, first-run, commercial movie theatres in the areas in and around the Local Markets would be unlikely to defeat a price increase by the merged firm.

C. The Competitive Effects of the Transaction on the Preshow Services and Cinema Advertising Markets

1. Relevant Markets

As alleged in the Complaint, both preshow services sold to exhibitors and cinema advertising sold to advertisers in the United States are relevant markets under Section 7 of the Clayton Act, 15 U.S.C. § 18.

Preshow services consist of the packaging of advertisements and content into a preshow delivered to exhibitors, enabling them to earn revenue from the use of their screens before the feature film. The price charged to exhibitors for preshow services is the portion of advertising revenue retained by the network.

The sale of preshow services to exhibitors constitutes a relevant product market and line of commerce under Section 7 of the Clayton Act. There are no reasonable substitutes for preshow services. Exhibitors cannot easily replace the preshow services that they buy from cinema advertising networks because individual exhibitors generally lack sufficient screens and geographic reach to secure national advertising. Nor can exhibitors sufficiently replace national advertising in preshows with local and regional advertising because local and regional advertising generates far less revenue than national advertising. Because there are no reasonable substitutes for preshow services, a hypothetical monopolist of all such services could profitably impose a SSNIP. Thus, the Complaint alleges that the market for preshow services is a relevant product market in which to assess the competitive effects of the acquisition.

Cinema advertising is the on-screen advertising incorporated in the preshow. The Complaint alleges that the sale of cinema advertising to advertisers is a relevant product market and line of commerce under Section 7 of the Clayton Act. Cinema advertising has important attributes that differentiate it from other forms of video advertising. For example, the preshow is projected on a large screen with high-quality video and sound in a darkened auditorium. In contrast to TV and other video advertising platforms, the audience cannot avoid the advertisements by fast forwarding through them, clicking past them, or changing a channel. The preshow also allows for long-form advertisements typically not available on TV, and it reaches a weekend audience and light TV viewers who are otherwise difficult to reach.

NCM and Screenvision compete with each other throughout the United States. Exhibitors and advertisers in the United States would not switch to cinema advertising networks located outside of the United States in the event of a SSNIP in the United States. Accordingly, the Complaint alleges that United States is a relevant geographic market and section of the country for preshow services sold to exhibitors and for cinema advertising sold to advertisers within the meaning of Section 7 of the Clayton Act.

2. Competitive Effects

As a significant owner of equity interests in both NCM and Screenvision post-merger, AMC would have an incentive to reduce the head-to-head competition between NCM and Screenvision. AMC will likely use its influence and governance rights in both companies to ensure that NCM and Screenvision compete less aggressively to sign contracts with exhibitors and advertisers at the expense of the other network. AMC will also have the ability to use its access to confidential, nonpublic, and trade secret information of NCM and Screenvision to reduce competition by passing that competitively sensitive information between the companies.

The lessening of competition between NCM and Screenvision will likely result in lower payments and/or lower quality preshows for exhibitors. Additionally, advertisers will no longer benefit from the lower prices that have resulted from the competition between NCM and Screenvision. Advertisers do not have choices other than these two networks to reach a broad number of viewers of their cinema advertising.

As further alleged in the Complaint, the loss of an independent Carmike also likely would weaken Screenvision's ability to remain a robust competitive check on NCM, the only other significant competitor in the preshow services and cinema advertising markets. In 2014, the United States filed a civil antitrust lawsuit to block NCM's acquisition of Screenvision and preserve the intense competition between the companies. NCM and Screenvision subsequently abandoned their merger in early 2015. As was the case in 2014, Carmike remains Screenvision's largest exhibitor, and Screenvision touts the Carmike theatre network's current, broad scale when competing to execute deals with advertisers and exhibitors. The merger, however, will extend AMC's exclusive contract with NCM to include any new theatres that Carmike would have opened or acquired. This shift from Screenvision to NCM will likely weaken Screenvision's ability to compete because: (1) It will be unable to rely on Carmike's growth to increase its network's scale; and (2) the number of independent theatre exhibitors unencumbered by an exclusive preshow agreement with NCM will shrink as exhibitor consolidation continues. For all of these reasons, the Complaint alleges that the merger is likely to substantially lessen competition in the preshow services and cinema advertising markets.

3. Entry and Expansion

According to the Complaint, the entry barriers associated with developing a cinema advertising network are high, and thus new entry or expansion by existing competitors is unlikely to prevent or remedy the proposed merger's likely anticompetitive effects in the preshow services and cinema advertising markets. Barriers to entry and expansion include the time and cost of developing a network of screens to achieve sufficient scale. NCM's and Screenvision's lock-up of almost all of the exhibitors in the United States through staggered long-term contracts makes entry a long process. This adds to the already high cost of building the infrastructure necessary to develop and attract national advertisers. It also increases the length of time an entrant must sustain losses before its scale is large enough to sell advertising at long-term profitable rates.

Exhibitors generally cannot supply preshow services themselves to replace the substantial lessening of competition in the preshow services market. Individual exhibitors or groups of small exhibitors whose contracts with NCM or Screenvision are expiring are unlikely to be able to establish cost-effective sales forces, attract national advertisers, or otherwise develop a sufficient infrastructure to reasonably replace lost competition.

III. EXPLANATION OF THE PROPOSED FINAL JUDGMENT

The movie theatre divestiture requirement of the proposed Final Judgment will eliminate the anticompetitive effects of AMC's acquisition of Carmike in each of the 15 Local Markets for the exhibition of first-run, commercial movies by establishing new, independent, and economically-viable competitors. The other requirements of the proposed Final Judgment will eliminate the anticompetitive effects of the acquisition on the preshow services and cinema advertising markets by requiring AMC to divest most of its ownership interest in NCM, relinquish its NCM Board seats and all governance rights, transfer 24 AMC theatres with a total of 384 screens to the Screenvision network, and implement firewalls to prevent the misuse of competitively sensitive information.

A. Theatre Exhibition of First-Run, Commercial Movies

Section IV.A of the proposed Final Judgment requires Defendants within sixty calendar days after the filing of the Complaint, or five calendar days after the Court's entry of Final Judgment, whichever is later, to divest as viable, ongoing businesses the theatres identified on the ''Initial Theatre Divestiture Assets'' list in Appendix A to the proposed Final Judgment to one or more acquirers acceptable to the United States in its sole discretion. This will require Defendants to divest a minimum of 15 theatres covering each of the Local Markets.

The theatres must be divested in such a way as to satisfy the United States that they can and will be operated by the purchaser as viable, ongoing businesses that can compete effectively as first-run, commercial theatres. To that end, the proposed Final Judgment provides the acquirer(s) of the theatres with an option to enter into a transitional agreement with Defendants of up to 120 days in length, with the possibility of one or more extensions not to exceed six months in total, for the supply of any goods, services, support, including software service and support, and reasonable use of the name AMC, the name Carmike, and any registered service marks of AMC or Carmike, for use in operating those theatres during the period of transition. The availability of a transitional agreement will ensure that the acquirer(s) of the theatres can operate without interruption while long-term supply agreements are arranged and the theatres rebranded.

In the event that Defendants do not accomplish the theatre divestitures within the periods prescribed in the proposed Final Judgment, Section VI of the proposed Final Judgment provides that the Court will appoint a Divestiture Trustee selected by the United States to effectuate the theatre divestitures required by the Final Judgment.

If Defendants are unable to effectuate any of the divestitures due to their inability to obtain the consent of the landlord from whom a theatre is leased, Section IV.K of the proposed Final Judgment requires them to divest alternative theatre assets that compete effectively with the theatres for which the landlord consent was not obtained. This provision will ensure that any failure by Defendants to obtain landlord consent does not thwart the relief obtained in the proposed Final Judgment.

The theatre divestiture provisions of the proposed Final Judgment will eliminate the anticompetitive effects of AMC's acquisition of Carmike in the exhibition of first-run, commercial movies in the Local Markets.

In addition to the proposed Final Judgment's provisions, the Hold Separate provides that, until the divestitures take place, AMC and Carmike must maintain the sales and marketing of the theatres, and maintain the theatres in operable condition at current capacity configurations. In addition, AMC and Carmike must not transfer or reassign to other areas within the company their employees with primary responsibility for the operation of the theatres, except for transfer bids initiated by employees pursuant to Defendants' regular, established job-posting policies.

B. Preshow Services and Cinema Advertising

The proposed Final Judgment will remedy the anticompetitive effects of the proposed transaction in the markets for preshow services and cinema advertising in two principal ways.

First, the proposed Final Judgment will significantly reduce AMC's incentive and ability to weaken head-to-head competition between NCM and Screenvision following the merger. In the absence of relief, AMC's significant equity holdings in both NCM and Screenvision would give AMC the incentive post-merger to use its governance rights to soften each company's competitive actions towards the other and use its access to each company's competitively sensitive information to help the companies coordinate their actions. The proposed Final Judgment significantly reduces AMC's incentives to lessen competition or favor NCM over Screenvision by requiring AMC to sell down its NCM equity holdings to a level of no more than 4.99%. Pursuant to NCM's governing documents, AMC would lose its right to seats on NCM's board of directors. Because the divestiture will leave AMC with a relatively small stake in NCM—both in terms of its proportion of the whole and total value—it would no longer earn significant profits from a lessening of competition between NCM and Screenvision. Moreover, the NCM profits to be earned from any action AMC were to take to lessen such competition would largely accrue to its theatre exhibitor rivals Regal and Cinemark, an unappealing outcome to AMC.

To further reduce AMC's ability to lessen head-to-head competition between NCM and Screenvision, Section X.A of the proposed Final Judgment prohibits AMC from holding NCM board seats or otherwise exercising any governance rights in NCM. In addition, Section X.B of the proposed Final Judgment prohibits AMC from, among other activities, attending NCM board meetings, receiving nonpublic information from NCM, or proposing NCM make future acquisitions. These provisions, along with the loss of AMC's rights to participate in NCM's business as a result of the sell down of AMC's equity interest below 5%, will render AMC unable to direct or influence NCM to soften its competitive actions towards Screenvision.

In order to further ensure that AMC cannot use its position as an owner and major customer of NCM and Screenvision to obtain competitively sensitive information that could be used to facilitate improper coordination or otherwise cause competitive harm, Section XII of the proposed Final Judgment requires AMC to institute firewalls to prevent AMC from obtaining competitively sensitive information from either NCM or Screenvision, passing competitively sensitive information between NCM and Screenvision, or obtaining from NCM or Screenvision competitively sensitive information about any of NCM or Screenvision's other exhibitor customers.

Second, the proposed Final Judgment seeks to ensure that Screenvision will remain a strong competitor to NCM in the preshow services and cinema advertising markets. As alleged in the Complaint, Screenvision is NCM's only significant competitor in these markets, and Carmike is Screenvision's largest theatre exhibitor. While Carmike's legacy theatres will remain in Screenvision's network for the remainder of the Carmike/Screenvision contract, the merger will deprive Screenvision of Carmike's expected growth through future acquisitions and new theatre builds. To offset this loss of future Carmike growth, Section XI.A of the proposed Final Judgment requires the Defendants to transfer the 24 theatres identified in Appendix B to the proposed Final Judgment, comprising a total of 384 screens, to Screenvision for the term of the Final Judgment and to stop utilizing NCM preshow and theatre advertising services at these theatres. If the Defendants fail to effectuate the Screenvision transfer at any of the 24 theatres within the time period set forth in Section XI.A, Section XI.B requires AMC to divest such theatres pursuant to the procedures set forth in Section IV.B of the proposed Final Judgment. In addition to the screen transfer, Screenvision will also benefit from AMC's plans to remodel a significant number of Carmike theatres, which will likely increase audience attendance at those theatres. Taken together, Screenvision will obtain through the screen transfers and theatre remodeling the credibility and additional scale—both in terms of geographic coverage and increased audiences—to compete effectively for advertisers and exhibitors against NCM.

In addition, the proposed Final Judgment requires AMC to designate a Compliance Officer who will supervise the AMC's compliance with the Final Judgment, distributing the Final Judgment to the company's personnel, and reporting decree violations, including violations of the firewall provisions, to the United States.

IV. REMEDIES AVAILABLE TO POTENTIAL PRIVATE LITIGANTS

Section 4 of the Clayton Act, 15 U.S.C. 15, provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages the person has suffered, as well as costs and reasonable attorneys' fees. Entry of the proposed Final Judgment will neither impair nor assist the bringing of any private antitrust damage action. Under the provisions of Section 5(a) of the Clayton Act, 15 U.S.C. 16(a), the proposed Final Judgment has no *prima facie* effect in any subsequent private lawsuit that may be brought against Defendants.

V. PROCEDURES AVAILABLE FOR MODIFICATION OF THE PROPOSED FINAL JUDGMENT

The United States and Defendants have stipulated that the proposed Final Judgment may be entered by the Court after compliance with the provisions of the APPA, provided that the United States has not withdrawn its consent. The APPA conditions entry upon the Court's determination that the proposed Final Judgment is in the public interest.

The APPA provides a period of at least sixty (60) days preceding the effective date of the proposed Final Judgment within which any person may submit to the United States written comments regarding the proposed Final Judgment. Any person who wishes to comment should do so within sixty (60) days of the date of publication of this Competitive Impact Statement in the **Federal Register**, or the last date of publication in a newspaper of the summary of this Competitive Impact Statement, whichever is later. All comments received during this period will be considered by the United States Department of Justice, which remains free to withdraw its consent to the proposed Final Judgment at any time prior to the Court's entry of judgment. The comments and the response of the United States will be filed with the Court. In addition, comments will be posted on the U.S. Department of Justice, Antitrust Division's internet website and, under certain circumstances, published in the **Federal Register**.

Written comments should be submitted to: Owen M. Kendler, Acting Chief, Litigation III, Antitrust Division, United States Department of Justice, 450 5th Street NW., Suite 4000, Washington, DC 20530.

The proposed Final Judgment provides that the Court retains jurisdiction over this action, and the parties may apply to the Court for any order necessary or appropriate for the modification, interpretation, or enforcement of the Final Judgment.

VI. ALTERNATIVES TO THE PROPOSED FINAL JUDGMENT

The United States considered, as an alternative to the proposed Final Judgment, a full trial on the merits against Defendants. Plaintiff could have continued the litigation and sought preliminary and permanent injunctions against AMC's acquisition of Carmike. Plaintiff is satisfied, however, that the divestiture of assets and other relief described in the proposed Final Judgment will preserve competition for the exhibition of first-run, commercial movies in the Local Markets, as well as preserve competition in preshow services and cinema advertising. Thus, the proposed Final Judgment would achieve all or substantially all of the relief that the United States would have obtained through litigation, but avoids the time, expense, and uncertainty of a full trial on the merits of the Complaint.

VII. STANDARD OF REVIEW UNDER THE APPA FOR THE PROPOSED FINAL JUDGMENT

The APPA requires that proposed consent judgments in antitrust cases brought by the United States be subject to a sixty-day comment period, after which the court shall determine whether entry of the proposed Final Judgment is ''in the public interest.'' 15 U.S.C. 16(e)(1). In making that determination, the court, in accordance with the statute as amended in 2004, is required to consider:

(A) the competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, and any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and

(B) the impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

Id. at § 16(e)(1)(A) & (B). In considering these statutory factors, the court's inquiry is necessarily a limited one as the government is entitled to ''broad discretion to settle with the defendant within the reaches of the public interest.'' *United States* v. *Microsoft Corp.,* 56 F.3d 1448, 1461 (D.C. Cir. 1995); *see generally United States* v. *SBC Commc'ns, Inc.,* 489 F. Supp. 2d 1 (D.D.C. 2007) (assessing public interest standard under the Tunney Act); *United States* v. *US*

Airways Group, Inc., 38 F. Supp. 3d 69, 75 (D.D.C. 2014) (noting that the court's ''inquiry is limited'' because the government has ''broad discretion'' to determine the adequacy of the relief secured through a settlement); *United States* v. *InBev N.V./S.A.,* No. 08–1965 (JR), 2009–2 Trade Cas. (CCH) ¶ 76,736, 2009 U.S. Dist. LEXIS 84787, at *3 (D.D.C. Aug. 11, 2009) (noting that the court's review of a consent judgment is limited and only inquires ''into whether the government's determination that the proposed remedies will cure the antitrust violations alleged in the complaint was reasonable, and whether the mechanism to enforce the final judgment are clear and manageable.'').[2]

As the United States Court of Appeals for the District of Columbia Circuit has held, a court conducting inquiry under the APPA may consider, among other things, the relationship between the remedy secured and the specific allegations set forth in the government's complaint, whether the decree is sufficiently clear, whether enforcement mechanisms are sufficient, and whether the decree may positively harm third parties. *See Microsoft,* 56 F.3d at 1458–62. With respect to the adequacy of the relief secured by the decree, a court may not ''engage in an unrestricted evaluation of what relief would best serve the public.'' *United States* v. *BNS, Inc.,* 858 F.2d 456, 462 (9th Cir. 1988) (quoting *United States* v. *Bechtel Corp.,* 648 F.2d 660, 666 (9th Cir. 1981)); *see also Microsoft,* 56 F.3d at 1460–62; *United States* v. *Alcoa, Inc.,* 152 F. Supp. 2d 37, 40 (D.D.C. 2001); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *3. Courts have held that:

> [t]he balancing of competing social and political interests affected by a proposed antitrust consent decree must be left, in the first instance, to the discretion of the Attorney General. The court's role in protecting the public interest is one of insuring that the government has not breached its duty to the public in consenting to the decree. The court is required to determine not whether a particular decree is the one that will best serve society, but whether the settlement is ''*within the reaches of the public interest.*'' More elaborate requirements might undermine the effectiveness of antitrust enforcement by consent decree.

Bechtel, 648 F.2d at 666 (emphasis added) (citations omitted).[3] In determining whether a proposed settlement is in the public interest, a district court ''must accord deference to the government's predictions about the efficacy of its remedies, and may not require that the remedies perfectly match the alleged violations.'' *SBC Commc'ns,* 489 F. Supp. 2d at 17; *see also US Airways,* 8 F. Supp. 3d at 75 (noting that a court should not reject the proposed remedies because it believes others are preferable); *Microsoft,* 56 F.3d at 1461 (noting the need for courts to be ''deferential to the government's predictions as to the effect of the proposed remedies''); *United States* v. *Archer-Daniels-Midland Co.,* 272 F. Supp. 2d 1, 6 (D.D.C. 2003) (noting that the court should grant due respect to the government's prediction as to the effect of proposed remedies, its perception of the market structure, and its views of the nature of the case).

Courts have greater flexibility in approving proposed consent decrees than in crafting their own decrees following a finding of liability in a litigated matter. ''[A] proposed decree must be approved even if it falls short of the remedy the court would impose on its own, as long as it falls within the range of acceptability or is 'within the reaches of public interest.' '' *United States* v. *Am. Tel. & Tel. Co.,* 552 F. Supp. 131, 151 (D.D.C. 1982) (citations omitted) (quoting *United States* v. *Gillette Co.,* 406 F. Supp. 713, 716 (D. Mass. 1975)), *aff'd sub nom. Maryland* v. *United States,* 460 U.S. 1001 (1983); *see also US Airways,* 38 F. Supp. 3d at 76 (noting that room must be made for the government to grant concessions in the negotiation process for settlements (citing *Microsoft,* 56 F.3d at 1461)); *United States* v. *Alcan Aluminum Ltd.,* 605 F. Supp. 619, 622 (W.D. Ky. 1985) (approving the consent decree even though the court would have imposed a greater remedy). To meet this standard, the United States ''need only provide a factual basis for concluding that the settlements are reasonably adequate remedies for the alleged harms.'' *SBC Commc'ns,* 489 F. Supp. 2d at 17.

Moreover, the court's role under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its Complaint and does not authorize the court to ''construct [its] own hypothetical case and then evaluate the decree against that case.'' *Microsoft,* 56 F.3d at 1459; *see also US Airways,* 38 F. Supp 3d at 75 (noting that the court must simply determine whether there is a factual foundation for the government's decisions such that its conclusions regarding the proposed settlements are reasonable); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *20 (concluding that ''the 'public interest' is not to be measured by comparing the violations alleged in the complaint against those the court believes could have, or even should have, been alleged''). Because the ''court's authority to review the decree depends entirely on the government's exercising its prosecutorial discretion by bringing a case in the first place,'' it follows that ''the court is only authorized to review the decree itself,'' and not to ''effectively redraft the complaint'' to inquire into other matters that the United States did not pursue. *Microsoft,* 56 F.3d at 1459–60. As this Court confirmed in *SBC Communications,* courts ''cannot look beyond the complaint in making the public interest determination unless the complaint is drafted so narrowly as to make a mockery of judicial power.'' 489 F. Supp. 2d at 15.

In its 2004 amendments, Congress made clear its intent to preserve the practical benefits of utilizing consent decrees in antitrust enforcement, adding the unambiguous instruction that ''[n]othing in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.'' 15 U.S.C. 16(e)(2); *see also US Airways,* 38 F. Supp. 3d at 76 (indicating that a court is not required to hold an evidentiary hearing or to permit intervenors as part of its review under the Tunney Act). This language codified what Congress intended when it enacted the Tunney Act in 1974, as the author of this legislation, Senator Tunney explained: ''The court is nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of prompt and less costly settlement through the consent decree process.'' 119 Cong. Rec. 24,598 (1973) (statement of Sen. Tunney). Rather, the procedure for the public interest determination is left to the discretion of the court, with the recognition that the court's ''scope of review remains sharply proscribed by precedent and the nature of Tunney Act proceedings.''

[2] The 2004 amendments substituted ''shall'' for ''may'' in directing relevant factors for court to consider and amended the list of factors to focus on competitive considerations and to address potentially ambiguous judgment terms. *Compare* 15 U.S.C. 16(e) (2004), *with* 15 U.S.C. 16(e)(1) (2006); *see also SBC Commc'ns,* 489 F. Supp. 2d at 11 (concluding that the 2004 amendments ''effected minimal changes'' to Tunney Act review).

[3] *Cf. BNS,* 858 F.2d at 464 (holding that the court's ''ultimate authority under the [APPA] is limited to approving or disapproving the consent decree''); *United States* v. *Gillette Co.,* 406 F. Supp. 713, 716 (D. Mass. 1975) (noting that, in this way, the court is constrained to ''look at the overall picture not hypercritically, nor with a microscope, but with an artist's reducing glass''). *See generally Microsoft,* 56 F.3d at 1461 (discussing whether ''the remedies [obtained in the decree are] so inconsonant with the allegations charged as to fall outside of the 'reaches of the public interest' '').

SBC Commc'ns, 489 F. Supp. 2d at 11.[4] A court can make its public interest determination based on the competitive impact statement and response to public comments alone. *US Airways,* 38 F. Supp. 3d at 76.

VIII. DETERMINATIVE DOCUMENTS

There are no determinative materials or documents within the meaning of the APPA that were considered by the United States in formulating the proposed Final Judgment.

Dated: December 20, 2016

Respectfully submitted,

/s/

Attorney for the United States.

United States District Court for the District of Columbia

United States of America, Plaintiff, v. *AMC Entertainment Holdings, Inc., and Carmike Cinemas, Inc.,* Defendants.

Case No.: 1:16–cv–02475
Judge: Randolph D. Moss
Filed: 12/20/2016

[PROPOSED] FINAL JUDGMENT

WHEREAS, Plaintiff United States of America filed its Complaint on December 20, 2016 the United States and Defendants, AMC Entertainment Holdings, Inc. (''AMC'') and Carmike Cinemas, Inc. (''Carmike''), by their respective attorneys, have consented to the entry of this Final Judgment without trial or adjudication of any issue of fact or law, and without this Final Judgment constituting any evidence against or admission by any party regarding any issue of fact or law;

AND WHEREAS, Defendants agree to be bound by the provisions of this Final Judgment pending its approval by the Court;

AND WHEREAS, the essence of this Final Judgment is the prompt and certain divestiture of certain rights or assets by the Defendants to assure that competition is not substantially lessened;

AND WHEREAS, Plaintiff requires Defendants to make certain divestitures, undertake certain actions, and refrain from certain conduct for the purpose of remedying the loss of competition alleged in the Complaint;

AND WHEREAS, Defendants have represented to Plaintiff that the divestitures required below can and will be made and the actions and conduct restrictions can and will be undertaken, and that Defendants will later raise no claim of hardship or difficulty as grounds for asking the Court to modify any of the divestiture and other remedy provisions contained below;

NOW THEREFORE, before any testimony is taken, without trial or adjudication of any issue of fact or law, and upon consent of the parties, it is ORDERED, ADJUDGED AND DECREED:

I. JURISDICTION

This Court has jurisdiction over the subject matter of and each of the parties to this action. The Complaint states a claim upon which relief may be granted against Defendants under Section 7 of the Clayton Act, as amended, 15 U.S.C. § 18.

II. DEFINITIONS

As used in this Final Judgment:

A. ''Acquirer'' or ''Acquirers'' means the entity or entities to which Defendants divest the Theatre Divestiture Assets.

B. ''AMC'' means AMC Entertainment Holdings, Inc., a Delaware corporation with its headquarters in Leawood, Kansas, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

C. ''Carmike'' means Carmike Cinemas, Inc., a Delaware corporation with its headquarters in Columbus, Georgia, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

D. ''NCM Divestiture Assets'' means that portion of Defendants' NCM Holdings required to be divested under this Final Judgment.

E. ''Initial Theatre Divestiture Assets'' means the theatre assets listed in Appendix A. The term ''Initial Theatre Divestiture Assets'' includes:

1. All tangible assets that comprise the business of operating theatres that exhibit movies, including, but not limited to, real property and improvements, research and development activities, all equipment, fixed assets, and fixtures, personal property, inventory, office furniture, materials, supplies, and other tangible property and all assets used in connection with the Initial Theatre Divestiture Assets; all licenses, permits, and authorizations issued by any governmental organization relating to the Initial Theatre Divestiture Assets; all contracts (including management contracts), teaming arrangements, agreements, leases, commitments, certifications, and understandings relating to the Initial Theatre Divestiture Assets, including supply agreements (provided however, that supply agreements that apply to all of each Defendant's theatres may be excluded from the Initial Theatre Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)); all customer lists (including rewards and loyalty club data at the option of the Acquirer(s), copies of which may be retained by Defendants at their option), contracts, accounts, and credit records relating to the Initial Theatre Divestiture Assets; all repair and performance records and all other records relating to the Initial Theatre Divestiture Assets; and

2. All intangible assets relating to the operation of the Initial Theatre Divestiture Assets, including, but not limited, to all patents, licenses and sublicenses, intellectual property, copyrights, trademarks, trade names, service marks, service names, (provided, however, that the names Carmike, AMC, and any registered service marks of Carmike or AMC may be excluded from the Initial Theatre Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)), technical information, computer software and related documentation (provided, however, that Defendants' proprietary software may be excluded from the Initial Theatre Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)), know-how and trade secrets, drawings, blueprints, designs, design protocols, specifications for materials, specifications for parts and devices, safety procedures for the handling of materials and substances, all research data concerning historic and current research and development, quality assurance and control procedures, design tools and simulation capability, all manuals and technical information Carmike or AMC provide to their own employees, customers,

[4] *See also United States* v. *Enova Corp.,* 107 F. Supp. 2d 10, 17 (D.D.C. 2000) (noting that the ''Tunney Act expressly allows the court to make its public interest determination on the basis of the competitive impact statement and response to comments alone''); *United States* v. *Mid-Am. Dairymen, Inc.,* No. 73–CV–681–W–1, 1977–1 Trade Cas. (CCH) ¶ 61,508, at 71,980, *22 (W.D. Mo. 1977) (''Absent a showing of corrupt failure of the government to discharge its duty, the Court, in making its public interest finding, should . . . carefully consider the explanations of the government in the competitive impact statement and its responses to comments in order to determine whether those explanations are reasonable under the circumstances.''); S. Rep. No. 93–298, at 6 (1973) (''Where the public interest can be meaningfully evaluated simply on the basis of briefs and oral arguments, that is the approach that should be utilized.'').

suppliers, agents, or licensees (except for the employee manuals that Carmike or AMC provide to all its employees), and all research data concerning historic and current research and development.

F. ''Screen Transfer Theatres'' means the theatres listed in Appendix B.

G. ''Screen Transfer Divestiture Assets'' means any Screen Transfer Theatres that Defendants must divest pursuant to Section XI(B) of this Final Judgment due to Defendants' failure to fully effect the screen transfers required by Section XI(A). The term ''Screen Transfer Divestiture Assets'' also includes for any such Screen Transfer Theatre:

1. All tangible assets that comprise the business of operating theatres that exhibit movies, including, but not limited to, real property and improvements, research and development activities, all equipment, fixed assets, and fixtures, personal property, inventory, office furniture, materials, supplies, and other tangible property and all assets used in connection with the Screen Transfer Divestiture Assets; all licenses, permits, and authorizations issued by any governmental organization relating to the Screen Transfer Divestiture Assets; all contracts (including management contracts), teaming arrangements, agreements, leases, commitments, certifications, and understandings relating to the Screen Transfer Divestiture Assets, including supply agreements (provided, however, that supply agreements that apply to all of each Defendant's theatres may be excluded from the Screen Transfer Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)); all customer lists (including rewards and loyalty club data at the option of the Acquirer(s), copies of which may be retained by Defendants at their option), contracts, accounts, and credit records relating to the Screen Transfer Divestiture Assets; all repair and performance records and all other records relating to the Screen Transfer Divestiture Assets; and

2. All intangible assets relating to the operation of the Screen Transfer Divestiture Assets, including, but not limited to, all patents, licenses and sublicenses, intellectual property, copyrights, trademarks, trade names, service marks, service names, (provided, however, that the names Carmike and AMC, and any registered service marks of Carmike and AMC may be excluded from the Screen Transfer Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)), technical information, computer software and related documentation (provided, however, that Defendants' proprietary software may be excluded from the Screen Transfer Divestiture Assets, subject to the transitional agreement provisions specified in Section IV(F)), know-how and trade secrets, drawings, blueprints, designs, design protocols, specifications for materials, specifications for parts and devices, safety procedures for the handling of materials and substances, all research data concerning historic and current research and development, quality assurance and control procedures, design tools and simulation capability, all manuals and technical information Carmike or AMC provide to their own employees, customers, suppliers, agents, or licensees (except for the employee manuals that Carmike or AMC provide to all its employees), and all research data concerning historic and current research and development.

H. ''Theatre Divestiture Assets'' means the Initial Theatre Divestiture Assets and the Screen Transfer Divestiture Assets.

I. ''Landlord Consent'' means any contractual approval or consent that the landlord or owner of one or more of the Theatre Divestiture Assets, or of the property on which one or more of the Theatre Divestiture Assets is situated, must grant prior to the transfer of one of the Theatre Divestiture Assets to an Acquirer.

J. ''NCM'' means National CineMedia, LLC, a Delaware limited liability company together with National CineMedia, Inc., headquartered in Centennial, Colorado, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

K. ''NCM Holdings'' means any equity interest of NCM that AMC owns or controls, directly or indirectly, of NCM, whether voting or nonvoting.

L. ''Competitively Sensitive Information'' means all non-public information, provided, disclosed, or otherwise made available to the Defendants by NCM or Screenvision, including but not limited to, information related to: (i) Current or future business plans; (ii) technological tests or initiatives; (iii) investments, finances or budgets; (iv) pricing; (v) information related to other movie theatre exhibitors; (vi) terms and conditions (including but not limited to fees or prices) of any actual or prospective contract, agreement, understanding, or relationship concerning the exhibition of first-run commercial movies or preshow and cinema advertising services, to specific or identifiable customers or classes of groups of customers; or (vii) the existence of any such prospective contract, agreement, understanding, or relationship, as well as any proprietary customer information.

M. ''Person'' means any natural person, corporation, association, firm, partnership, or other business or legal entity.

N. ''Screenvision'' means, SV Holdco, LLC, a Delaware limited liability company, headquartered in New York, New York, and the subsidiary it owns and operates, Screenvision Exhibition, Inc., its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships and joint ventures, and their directors, officers, managers, agents, and employees.

III. APPLICABILITY

A. This Final Judgment applies to AMC and Carmike, as defined above, and all other persons in active concert or participation with any of them who receive actual notice of this Final Judgment by personal service or otherwise.

B. If, prior to complying with Sections IV, VI, VII or XI of this Final Judgment, Defendants sell or otherwise dispose of all or substantially all of their assets or of lesser business units that include the Theatre Divestiture Assets or NCM Divestiture Assets, they shall require the purchaser to be bound by the provisions of this Final Judgment. Defendants need not obtain such an agreement from the Acquirer(s) of the assets divested pursuant to this Final Judgment.

IV. DIVESTITURES OF THEATRES

A. Defendants are ordered and directed, within sixty (60) calendar days after the filing of the Complaint in this matter, or five (5) calendar days after notice of entry of this Final Judgment by the Court, whichever is later, to divest the Initial Theatre Divestiture Assets in a manner consistent with this Final Judgment to one or more Acquirer(s) acceptable to the United States in its sole discretion. The United States, in its sole discretion, may agree to one or more extensions of this time period, not to exceed sixty (60) calendar days in total, and shall notify the Court in such circumstances. Defendants agree to use their best efforts to divest the Initial Theatre Divestiture Assets as expeditiously as possible.

B. If Defendants fail to accomplish the screen transfer required by Section XI(A) below for any Screen Transfer Theatre, Defendants are ordered and directed, within sixty (60) calendar days after the expiration of the transfer period provided for in Section XI(A), and any extensions to that period granted by the United States, to divest the Screen Transfer Divestiture Assets in a manner consistent with this Final Judgment to one or more Acquirer(s) acceptable to the United States in its sole discretion. The United States, in its sole discretion, may agree to one or more extensions of this time period, not to exceed ninety (90) calendar days in total, and shall notify the Court in such circumstances. Defendants agree to use their best efforts to divest the Screen Transfer Divestiture Assets as expeditiously as possible. Defendants shall not divest the Screen Transfer Divestiture Assets to any Acquirer that contracts with NCM to provide pre-show and cinema advertising services. Such Screen Transfer Theatres must be divested free and clear of any contracts with NCM to provide pre-show and cinema advertising services.

C. In accomplishing the divestitures ordered by this Final Judgment, Defendants promptly shall make known, by usual and customary means, the availability of the Theatre Divestiture Assets. Defendants shall inform any person making an inquiry regarding a possible purchase of the Theatre Divestiture Assets that they are being divested pursuant to this Final Judgment and provide that person with a copy of this Final Judgment. Defendants shall offer to furnish to all prospective Acquirers, subject to customary confidentiality assurances, all information and documents relating to the Theatre Divestiture Assets customarily provided in a due diligence process except such information or documents subject to the attorney-client privilege or work-product doctrine. Defendants shall make available such information to the United States at the same time that such information is made available to any other person.

D. Defendants shall provide the Acquirer(s) and the United States information relating to the personnel involved in the operation and management of the applicable Theatre Divestiture Assets to enable the Acquirer(s) to make offers of employment. Defendants shall not interfere with any negotiations by the Acquirer(s) to employ or contract with any employee of any Defendant whose primary responsibility relates to the operation or management of the applicable Theatre Divestiture Assets being sold to the Acquirer(s).

E. Defendants shall permit prospective Acquirer(s) of the Theatre Divestiture Assets to have reasonable access to personnel and to make inspections of the physical facilities of the Theatre Divestiture Assets; access to any and all environmental, zoning, and other permit documents and information; and access to any and all financial, operational, or other documents and information customarily provided as part of a due diligence process.

F. In connection with the divestiture of the Theatre Divestiture Assets, at the option of the Acquirer(s), Defendants shall enter into a transitional supply, service, support, and use agreement (''transitional agreement''), of up to 120 days in length, for the supply of any goods, services, support, including software service and support, and reasonable use of the names AMC and Carmike, and any registered service marks of AMC or Carmike, that the Acquirer(s) request for the operation of the Theatre Divestiture Assets, during the period covered by the transitional agreement. At the request of the Acquirer(s), the United States in its sole discretion may agree to one or more extensions of this time period not to exceed six (6) months in total. The terms and conditions of the transitional agreement must be acceptable to the United States in its sole discretion. The transitional agreement shall be deemed incorporated into this Final Judgment and a failure by Defendants to comply with any of the terms or conditions of the transitional agreement shall constitute a failure to comply with this Final Judgment.

G. Defendants shall warrant to the Acquirer(s) of the Theatre Divestiture Assets that each asset will be operational on the date of sale.

H. Defendants shall not take any action that will impede in any way the permitting, operation, or divestiture of the Theatre Divestiture Assets.

I. Defendants shall warrant to the Acquirer(s) that there are no material defects in the environmental, zoning, or other permits pertaining to the operation of the Theatre Divestiture Assets. Following the sale of the Theatre Divestiture Assets, Defendants will not undertake, directly or indirectly, any challenges to the environmental, zoning, or other permits relating to the operation of the Theatre Divestiture Assets.

J. Unless the United States otherwise consents in writing, the divestitures made pursuant to Section IV(A) and IV(B), or by a Divestiture Trustee appointed pursuant to Section VI of this Final Judgment, shall include the entire Theatre Divestiture Assets, and shall be accomplished in such a way as to satisfy the United States, in its sole discretion that the Theatre Divestiture Assets can and will be used by the Acquirer(s) as part of a viable, ongoing business of operating theatres that exhibit primarily first-run, commercial movies. Divestiture of the Theatre Divestiture Assets may be made to one or more Acquirers, provided that in each instance it is demonstrated to the sole satisfaction of the United States that the Theatre Divestiture Assets will remain viable and the divestiture of such assets will remedy the competitive harm alleged in the Complaint. The divestitures, whether pursuant to Section IV (A), IV (B), or VI of this Final Judgment,

(1) shall be made to Acquirers that, in the United States' sole judgment have the intent and capability (including the necessary managerial, operational, technical, and financial capability) of competing effectively in the business of theatres exhibiting primarily first-run, commercial movies; and

(2) shall be accomplished so as to satisfy the United States, in its sole discretion, that none of the terms of any agreement between Acquirers and Defendants gives Defendants the ability unreasonably to raise the Acquirers' costs, to lower the Acquirers' efficiency, or otherwise to interfere in the ability of any Acquirer to compete effectively.

K. If Defendants are unable to effect any of the divestitures required herein due to the inability to obtain the Landlord Consent for any of the Theatre Divestiture Assets, Defendants shall divest alternative theatre assets that compete effectively with the theatre or theatres for which the Landlord Consent was not obtained. The United States shall, in its sole discretion, determine whether such theatre assets compete effectively with the theatres for which Landlord Consent was not obtained.

L. Within five (5) business days following a determination that Landlord Consent cannot be obtained for any of the Theatre Divestiture Assets, Defendants shall notify the United States, and Defendants shall propose an alternative divestiture pursuant to Section IV(K). The United States shall have then ten (10) business days in which to determine whether such theatre assets are a suitable alternative pursuant to Section IV(K). If Defendants' selection is deemed not to be a suitable alternative, the United States shall in its sole discretion select alternative theatre assets to be divested from among those theatre(s) that the United States has determined, in its sole discretion, compete effectively with the theatre(s) for which Landlord Consent was not obtained.

M. If a Divestiture Trustee is responsible for effecting divestiture of the Theatre Divestiture Assets, it shall notify the United States and Defendants within five (5) business days following a determination that Landlord Consent cannot be obtained for one or more of the Theatre Divestiture Assets. Defendants shall thereafter have five (5) business days to propose an alternative divestiture pursuant to Section IV(K). The United States shall then have ten (10) business days to determine whether the proposed theatre assets are a suitable competitive alternative pursuant to Section IV(K). If Defendants' selection is deemed not to be a suitable competitive alternative, the United States shall in its sole discretion select alternative theatre assets to be divested from among those theatre(s) that the United States has determined, in its sole discretion, compete effectively with the theatre(s) for which Landlord Consent was not obtained.

V. NOTICE OF PROPOSED THEATRE DIVESTITURES

A. Within two (2) business days following execution of a definitive divestiture agreement, Defendants or the Divestiture Trustee, whoever is then responsible for effecting the divestitures required herein, shall notify the United States of any proposed divestitures required by Sections IV(A), IV(B), and VI of this Final Judgment. If the Divestiture Trustee is responsible, it shall similarly notify Defendants. The notice shall set forth the details of the proposed divestitures and list the name, address, and telephone number of each person not previously identified who offered or expressed an interest in or desire to acquire any ownership interest in the Theatre Divestiture Assets, together with full details of the same.

B. Within fifteen (15) calendar days of receipt by the United States of such notice, the United States, in its sole discretion, may request from Defendants, the proposed Acquirer(s), any other third party, or the Divestiture Trustee, if applicable, additional information concerning the proposed divestitures, the proposed Acquirer(s), and any other potential Acquirer(s). Defendants and the Divestiture Trustee shall furnish any additional information requested to the United States within fifteen (15) calendar days of receipt of the request, unless the parties otherwise agree.

C. Within thirty (30) calendar days after receipt of the notice or within twenty (20) calendar days after the United States has been provided the additional information requested from Defendants, the proposed Acquirer(s), any third party, and the Divestiture Trustee, whichever is later, the United States shall provide written notice to Defendants, and the Divestiture Trustee, if there is one, stating whether it objects to the proposed divestitures. If the United States provides written notice that it does not object, the divestitures may be consummated, subject only to the Defendants' limited right to object to the sale under Section VI(C) of this Final Judgment. Absent written notice that the United States does not object to the proposed Acquirer(s) or upon objection by the United States, a divestiture proposed under Section IV(A), IV(B), or VI shall not be consummated. Upon objection by Defendants under Section VI(C), a divestiture proposed under Section VI shall not be consummated unless approved by the Court.

VI. APPOINTMENT OF TRUSTEE FOR THEATRE DIVESTITURES

A. If Defendants have not divested the Theatre Divestiture Assets within the time period specified in Section IV(A) and IV(B), respectively, Defendants shall notify the United States of that fact in writing, specifically identifying the Theatre Divestiture Assets that have not been divested. Upon application of the United States, the Court shall appoint a Divestiture Trustee selected by the United States and approved by the Court to effect the divestiture of the applicable Theatre Divestiture Assets.

B. After the appointment of a Divestiture Trustee becomes effective, only the Divestiture Trustee shall have the right to sell the applicable Theatre Divestiture Assets. The Divestiture Trustee shall have the power and authority to accomplish the divestitures to Acquirer(s) acceptable to the United States at such price and on such terms as are then obtainable upon reasonable effort by the Divestiture Trustee, subject to the provisions of Sections IV, V, VI VIII, IX, and XIV, of this Final Judgment, and shall have such other powers as this Court deems appropriate. Subject to Section VI (D) of this Final Judgment, the Divestiture Trustee may hire at the cost and expense of Defendants any investment bankers, attorneys, or other agents, who shall be solely accountable to the Divestiture Trustee and reasonably necessary in the Divestiture Trustee's judgment to assist in the divestiture(s). Any such investment bankers, attorneys, or other agents shall serve on such terms and conditions as the United States approves, including confidentiality requirements and conflict of interest certifications.

C. Defendants shall not object to a sale by the Divestiture Trustee on any ground other than the Divestiture Trustee's malfeasance. Any such objections by Defendants must be conveyed in writing to the United States and the Divestiture Trustee within ten (10) calendar days after the Divestiture Trustee has provided the notice required under Section V.

D. The Divestiture Trustee shall serve at the cost and expense of Defendants pursuant to a written agreement, on such terms and conditions as the United States approves, including confidentiality requirements and conflict of interest certifications. The Divestiture Trustee shall account for all monies derived from the sale of the applicable Theatre Divestiture Assets, and all costs and expenses so incurred. After approval by the Court of the Divestiture Trustee's accounting, including fees for its services yet unpaid and those of any professionals and agents retained by the Divestiture Trustee, all remaining money shall be paid to Defendants and the trust shall then be terminated. The compensation of the Divestiture Trustee and any professionals and agents retained by the Divestiture Trustee shall be reasonable in light of the value of the Theatre Divestiture Assets subject to sale by the Divestiture Trustee and based on a fee arrangement providing the Divestiture Trustee with an incentive based on the price and terms of the divestitures and the speed with which they are accomplished, but timeliness is paramount. If the Divestiture Trustee and Defendants are unable to reach agreement on the Divestiture Trustee's or any agents' or consultants' compensation or other terms and conditions of engagement within 14 calendar days of appointment of the Divestiture Trustee, the United States may, in its sole discretion, take appropriate action, including making a recommendation to the Court. The Divestiture Trustee shall, within three (3) business days of hiring any other professionals or agents, provide written notice of such hiring and the rate of compensation to Defendants and the United States.

E. Defendants shall use their best efforts to assist the Divestiture Trustee in accomplishing the required divestitures. The Divestiture Trustee and any consultants, accountants, attorneys, and other persons retained by the Divestiture Trustee shall have full and complete access to the personnel, books, records, and facilities of the assets and business to be divested, and Defendants shall develop financial and other information relevant to such assets and business as the Divestiture Trustee may reasonably request, subject to reasonable protection for trade secret or other confidential research, development, or commercial information or any applicable privileges. Defendants shall take no action to interfere with or to impede the Divestiture Trustee's accomplishment of the divestitures.

F. After its appointment, the Divestiture Trustee shall file monthly reports with the parties and the Court setting forth the Divestiture Trustee's efforts to accomplish the divestitures ordered under this Final Judgment. To the extent such reports contain information that the Divestiture Trustee deems confidential, such reports shall not be filed in the public docket of the Court. Such reports shall include the name, address, and telephone number of each person who, during the preceding month, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Theatre Divestiture Assets, and shall describe in detail each contact with any such person. The Divestiture Trustee shall maintain full records of all efforts made to divest the Theatre Divestiture Assets.

G. If the Divestiture Trustee has not accomplished the divestitures ordered under this Final Judgment within six (6) months after its appointment, the Divestiture Trustee shall promptly file with the Court a report setting forth (1) the Divestiture Trustee's efforts to accomplish the required divestitures, (2) the reasons, in the Divestiture Trustee's judgment, why the required divestitures have not been accomplished, and (3) the Divestiture Trustee's recommendations. To the extent such reports contain information that the Divestiture Trustee deems confidential, such reports shall not be filed in the public docket of the Court. The Divestiture Trustee shall at the same time furnish such report to the United States, which shall have the right to make additional recommendations consistent with the purpose of the trust. The Court thereafter shall enter such orders as it shall deem appropriate to carry out the purpose of the Final Judgment, which may, if necessary, include extending the trust and the term of the Divestiture Trustee's appointment by a period requested by the United States.

H. If the United States determines that the Divestiture Trustee has ceased to act or failed to act diligently or in a reasonably cost-effective manner, it may recommend the Court appoint a substitute Divestiture Trustee.

VII. DIVESTITURE OF NCM HOLDINGS

A. Defendants are hereby ordered and directed, in accordance with the terms of this Final Judgment, on or before June 20, 2019, to divest that portion of the NCM Holdings sufficient to cause Defendants to own no more than 4.99 percent of the outstanding shares of NCM on a fully converted basis (the ''NCM Divestiture Assets''). Defendants must divest the NCM Divestiture Assets on the following schedule: (i) On or before twelve (12) months from the date of the filing of the Complaint in this matter that portion of the NCM Holdings sufficient to cause Defendants to own no more than 15 percent of all outstanding shares of NCM on a fully converted basis, (ii) on or before twenty-four (24) months from the date of the filing of the Complaint in this matter that portion of the NCM Holdings sufficient to cause Defendants to own no more than 7.5 percent of all outstanding shares of NCM on a fully converted basis; and (iii) on or before June 20, 2019 that portion of the NCM Holdings sufficient to cause Defendants to own no more than 4.99 percent of all outstanding shares of NCM on a fully converted basis. The United States, in its sole discretion, may agree to one or more extensions of this time period, not to exceed sixty (60) calendar days in total, and shall notify the Court in such circumstances.

B. Defendants are enjoined and restrained from the date of the filing of the Complaint in this matter from acquiring, directly or indirectly, any additional NCM Holdings except to the extent an NCM annual audience attendance adjustment or an acquisition of a movie theatre or movie theatre chain results in Defendants' NCM Holdings exceeding the thresholds set forth in Section VII (A). To the extent an NCM annual audience attendance adjustment or an acquisition of a movie theatre or movie theatre chain results in Defendants' NCM Holdings' exceeding the thresholds set forth in Section VII (A), then Defendants shall have 90 days from the date their NCM Holdings exceed the applicable threshold in Section VII (A) to sell down their NCM Holdings so that their NCM Holdings comply with the applicable threshold. The United States, in its sole discretion, may agree to one or more extensions of this time period, not to exceed 60 calendar days in total, and shall notify the Court in such circumstances.

C. The divestitures required by Section VII(A) may be made by open market sale, public offering, private sale, repurchase by NCM, or a combination thereof. Such divestitures shall not be made by private sale or placement to any person who provides pre-show and cinema advertising services other than NCM unless the United States, in its sole discretion, shall otherwise agree in writing.

VIII. FINANCING

Defendants shall not finance all or any part of any purchase made pursuant to Sections IV or VII of this Final Judgment.

IX. HOLD SEPARATE

Until the divestitures of the Theatre Divestiture Assets required by this Final Judgment have been accomplished, Defendants shall take all steps necessary to comply with the Hold Separate Stipulation and Order entered by this Court. Defendants shall take no action that would jeopardize the divestitures ordered by this Court.

X. NCM PROHIBITED CONDUCT

A. From the date of the filing of the Complaint in this matter, Defendants are enjoined and restrained, directly or indirectly, from holding any governance rights in NCM, including any seats on NCM's Board of Directors and from exercising any voting rights in NCM.

B. From the date of the filing the Complaint in this matter, Defendants are enjoined and restrained, directly or indirectly, from:

1. Suggesting, individually or as part of a group, any candidate for election to NCM's Board of Directors, or having any officer, director, manager, employee, or agent serve as an officer, director, manager, employee, or in a comparable position with or for NCM;

2. Using or attempting to use any ownership interest in NCM to exert any influence over NCM in the conduct of NCM's business, including but not limited to, NCM's strategies regarding the pricing of NCM's services;

3. Using or attempting to use any rights or duties under any advertising agreement or relationship between Defendants and NCM (including any rights or duties Defendants may have as a customer of NCM), to influence NCM in the conduct of NCM's business with respect to any Person other than AMC;

4. Participating in, being present at, or receiving any notes, minutes, or agendas of, information from, or any documents distributed in connection with, any nonpublic meeting of NCM's Board of Directors or any committee thereof, or any other governing body of NCM. For purposes of this provision, the term ''meeting'' includes any action taken by consent of the relevant directors in lieu of a meeting;

5. Voting or permitting to be voted any NCM shares that Defendants own unless the United States, in its sole discretion, otherwise consents in writing;

6. Communicating to or receiving from any officer, director, manager, employee, or agent of NCM any nonpublic information regarding any aspect of Defendants' or NCM's business, including any plans or proposals with respect thereto; and

7. Proposing to any officer, director, manager, employee, or agent of NCM that NCM merge with, acquire, or sell itself to another Person.

C. Nothing in this Section, however, is intended to prevent: (i) Defendants from procuring preshow and cinema advertising services from NCM, including receiving necessary non-public information from NCM in the context of the Defendants' customer relationship regarding the same, or to prevent NCM from providing pre-show and cinema advertising services to Defendants, including providing necessary non-public information to Defendants in the context of NCM's vendor relationship regarding the same; (ii) joint promotions between NCM and Defendants and communications regarding the provision or procurement of pre-show and cinema advertising services from NCM or Defendants, respectively; (iii) Defendants from hiring NCM personnel or NCM from hiring Defendants personnel (provided that such personnel are not simultaneously employed or otherwise affiliated with NCM or Defendants, respectively); and (iv) nonpublic communications regarding industry-wide issues or possible potential business transactions between the two companies provided that such communications do not violate the antitrust laws or any other applicable law or regulation.

XI. TRANSFER OF NCM–ALIGNED THEATRE SCREENS

A. Defendants are hereby ordered and directed, within sixty (60) calendar days of the filing of the Complaint in this matter, to (i) implement, use, and continuously display Screenvision pre-show services and cinema advertising at the Screen Transfer Theatres for the term of this Final Judgment; and (ii) discontinue and permanently remove NCM pre-show services and cinema advertising at the Screen Transfer Theatres for the term of this Final Judgment. The United States, in its sole discretion, may agree to one or more extensions of this time period, not to exceed sixty (60) days in total, and shall notify the Court in such circumstances.

B. If Defendants do not effectuate the implementation of Screenvision pre-show services and cinema advertising at any Screen Transfer Theatre and the termination, if applicable, of any NCM pre-show services and cinema advertising at that Screen Transfer Theatre during the time period set forth in Section XI(A) (including any extensions to that time period granted pursuant to that Section), then Defendants are ordered and directed to divest that Screen Transfer Theatre pursuant to the terms of Section IV(B) of this Final Judgment. For the avoidance of doubt, the Screen Transfer Theatres that Defendants must divest pursuant to this paragraph are referred to herein as the ''Screen Transfer Divestiture Assets.''

XII. FIREWALLS

A. Defendants shall implement and maintain reasonable procedures to prevent (i) the sharing of Competitively Sensitive Information between Defendants and NCM except as necessary to administer an exhibitor services agreement or exhibition agreement between NCM and Defendants to supply preshow and cinema advertising services; (ii) the sharing of Competitively Sensitive Information between Defendants and Screenvision except as necessary to administer an exhibitor services agreement or exhibition agreement between Screenvision and Defendants to supply preshow and cinema advertising services; (iii) the sharing of Competitively Sensitive Information or otherwise serving as a conduit to share Competitively Sensitive Information between NCM and Screenvision; and (iv) Defendants from obtaining through their ownership or governance position at Screenvision or NCM any Competitively Sensitive Information of or about the business of any movie theatre exhibitor other than Defendants.

B. Defendants shall, within thirty (30) calendar days of the Court's entry of the Hold Separate Stipulation and Order, submit to the United States a document setting forth in detail the procedures implemented to effect compliance with this Section. The United States shall notify Defendants within ten (10) business days whether it approves of or rejects Defendants' compliance plan, in its sole discretion.

C. In the event Defendants' compliance plan is rejected, the reasons for the rejection shall be provided to Defendants and Defendants shall be given the opportunity to submit, within ten (10) business days of receiving the notice of rejection, a revised compliance plan. If the parties cannot agree on a compliance plan, the United States shall have the right to request that the Court rule on whether Defendants' proposed compliance plan is reasonable.

D. Defendants may at any time submit to the United States evidence relating to the actual operation of any firewall in support of a request to modify any firewall set forth in this Section. In determining whether it would be appropriate for the United States to consent to modify the firewall, the United States, in its sole discretion, shall consider the need to protect NCM, Screenvision, or movie theatre exhibitor Competitively Sensitive Information and the impact the firewall has had on Defendants' ability to efficiently support the theatrical exhibition of movies.

XIII. COMPLIANCE PROGRAM

A. Defendants shall maintain a compliance program that shall include designating, within thirty (30) days of the entry of this Final Judgment, a Compliance Officer with responsibility for achieving compliance with this Final Judgment. The Compliance Officer shall, on a continuing basis, supervise the review of current and proposed activities to ensure compliance with this Final Judgment. The Compliance Officer shall be responsible for accomplishing the following activities:

(1) Distributing, within thirty (30) days of the entry of this Final Judgment, a copy of this Final Judgment to all of Defendants' officers, directors, or any company employee or manager with management responsibility or oversight of theatrical exhibition and preshowcinema advertising services;

(2) Distributing, within thirty (30) days of succession, a copy of this Final Judgment to any Person who succeeds to a position described in Section XIII(A)(1); and

(3) Obtaining within sixty (60) days from the entry of this Final Judgment, and once within each calendar year after the year in which this Final Judgment is entered, and retaining for the term of this Final Judgment, a written certification from each Person designated in Sections XIII(A)(1) and XIII(A)(2) that he or she: (a) Has received, read, understands, and agrees to abide by the terms of this Final Judgment; (b) understands that failure to comply with this Final Judgment may result in conviction for criminal contempt of court; and (c) is not aware of any violation of the Final Judgment. Copies of such written certifications are to be promptly provided to the U.S. Department of Justice, Antitrust Division.

B. Within sixty (60) days of the entry of this Final Judgment, Defendants shall certify to the United States that they have (1) designated a Compliance Officer, specifying his or her name, business address and telephone number; and (2) distributed the Final Judgment in accordance with Section XIII(A)(1).

C. If any of Defendants' directors or officers or the Compliance Officer learns of any violation of this Final Judgment, Defendants shall within ten (10) business days provide to the U.S. Department of Justice, Antitrust Division a written detailed description of the nature of the violation with the names, titles, and company affiliation of each person involved.

XIV. AFFIDAVITS

A. Within twenty (20) calendar days of the filing of the Complaint in this matter, and every thirty (30) calendar days thereafter until the divestitures and screen transfers have been completed under Sections IV(A), IV(B), VI, VII, and XI. Defendants shall deliver to the United States an affidavit as to the fact and manner of its compliance with Sections IV (A), IV (B), VI, VII, and XI of this Final Judgment. Each such affidavit pertaining to Sections IV (A), IV (B), and VI shall include the name, address, and telephone number of each person who, during the preceding thirty (30) calendar days, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Theatre Divestiture Assets, and shall describe in detail each contact with any such person during that period. Each such affidavit pertaining to Sections IV(A), IV(B), and VI shall also include a description of the efforts Defendants have taken to solicit buyers for and complete the sale of the Theatre Divestiture Assets, and to provide required information to prospective Acquirers, including the limitations, if any, on such information. Each such affidavit shall also describe the fact and manner of Defendants' compliance with Section XI (A) and the arrangements Defendants have made to complete the required screen transfers in a timely fashion. Assuming the information set forth in the affidavit is true and complete, any objection by the United States to information provided by Defendants, including limitations on information, shall be made within fourteen (14) calendar days of receipt of each such affidavit.

B. Within twenty (20) calendar days of the filing of the Complaint in this matter, Defendants shall deliver to the United States an affidavit that describes in reasonable detail all actions taken and all steps implemented on an ongoing basis to comply with Section IX of this Final Judgment. Defendants shall deliver to the United States an affidavit describing any changes to the efforts and actions outlined in their earlier affidavits filed pursuant to this section within fifteen (15) calendar days after the change is implemented.

C. Defendants shall notify the United States no less than sixty (60) calendar days prior to the expiration of each of the deadlines for divesting the NCM Divestiture Assets identified in Section VII (A) of the arrangements Defendants have made to complete such divestitures in a timely fashion. Defendants shall no later than five (5) calendar days after each of the deadlines identified in Section VII(A) deliver to the United States an affidavit as to the fact and manner of its compliance with Section VII(A).

D. For the term of this Final Judgment, on or before each annual anniversary of the date of the filing of the Complaint in this matter, Defendants shall file with the United States a statement as to the fact and manner of its compliance with the provisions of Sections VII (B), X, and XII, including a statement of the percentage of all outstanding shares of NCM owned by Defendants and a description of any violations of Sections VII (B), X, and XII.

E. Defendants shall keep all records of all efforts made to preserve and divest the Theatre Divestiture Assets and the NCM Divestiture Assets until one year after such divestitures have been completed.

XV. COMPLIANCE INSPECTION

A. For the purposes of determining or securing compliance with this Final Judgment or of any related orders such as the Hold Separate Stipulation and Order, or of determining whether the Final Judgment should be modified or vacated, and subject to any legally recognized privilege, from time to time authorized representatives of the United States Department of Justice, including consultants and other persons retained by the United States, shall, upon written request of an authorized representative of the Assistant Attorney General in charge of the Antitrust Division, and on reasonable notice to Defendants, be permitted:

(1) access during Defendants' office hours to inspect and copy, or at the option of the United States, to require Defendants to provide hard copy or electronic copies of, all books, ledgers, accounts, records, data, and documents in the possession, custody, or control of Defendants, relating to any matters contained in this Final Judgment; and

(2) to interview, either informally or on the record, Defendants' officers, employees, or agents, who may have their individual counsel present, regarding such matters. The interviews shall be subject to the reasonable convenience of the interviewee and without restraint or interference by Defendants.

B. Upon the written request of an authorized representative of the Assistant Attorney General in charge of the Antitrust Division, Defendants shall submit written reports or responses to written interrogatories, under oath if requested, relating to any of the matters contained in this Final Judgment as may be requested.

C. No information or documents obtained by the means provided in this section shall be divulged by the United States to any person other than an authorized representative of the executive branch of the United States, except in the course of legal proceedings to which the United States is a party (including grand jury proceedings), or for the purpose of securing compliance with this Final Judgment, or as otherwise required by law.

D. If at the time information or documents are furnished by Defendants to the United States, Defendants represent and identify in writing the material in any such information or documents to which a claim of protection may be asserted under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure, and Defendants mark each pertinent page of such material, "Subject to claim of protection under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure," then the United States shall give Defendants ten (10) calendar days notice prior to divulging such material in any legal proceeding (other than a grand jury proceeding).

XVI. NO REACQUISITION

Defendants may not reacquire any part of the Theatre Divestiture Assets or the NCM Divestiture Assets during the term of this Final Judgment.

XVII. RETENTION OF JURISDICTION

This Court retains jurisdiction to enable any party to this Final Judgment to apply to this Court at any time for further orders and directions as may be necessary or appropriate to carry out or construe this Final Judgment, to modify any of its provisions, to enforce compliance, and to punish violations of its provisions.

XVIII. EXPIRATION OF FINAL JUDGMENT

Unless this Court grants an extension, this Final Judgment shall expire ten (10) years from the date of its entry.

XIX. PUBLIC INTEREST DETERMINATION

Entry of this Final Judgment is in the public interest. The parties have complied with the requirements of the Antitrust Procedures and Penalties Act, 15 U.S.C. 16, including making copies available to the public of this Final Judgment, the Competitive Impact Statement, and any comments thereon and the United States' responses to comments. Based upon the record before the Court, which includes the Competitive Impact Statement and any comments and response to comments filed with the Court, entry of this Final Judgment is in the public interest.

Date: ______, 201__

Court approval subject to procedures of Antitrust Procedures and Penalties Act, 15 U.S.C. 16.

DEPARTMENT OF JUSTICE

Antitrust Division

United States v. Clear Channel Outdoor Holdings, Inc., et al.; Proposed Final Judgment and Competitive Impact Statement

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that a proposed Final Judgment, Asset Preservation Stipulation and Order, and Competitive Impact Statement have been filed with the United States District Court for the District of Columbia in *United States of America* v. *Clear Channel Outdoor Holdings, Inc.,* Civil Action No. 1:16–cv–02497. On December 22, 2016, the United States filed a Complaint alleging that a proposed transaction between Clear Channel Outdoor Holdings, Inc. and Fairway Media Group, LLC would violate Section 7 of the Clayton Act, 15 U.S.C. 18. The proposed Final Judgment, filed at the same time as the Complaint, resolves the case by requiring Clear Channel and Fairway to divest certain billboards in Atlanta, Georgia, and Indianapolis, Indiana.

Copies of the Complaint, proposed Final Judgment, and Competitive Impact Statement are available for inspection on the Antitrust Division's Web site at *http://www.justice.gov/atr* and at the Office of the Clerk of the United States District Court for the District of Columbia. Copies of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Public comment is invited within 60 days of the date of this notice. Such comments, including the name of the submitter, and responses thereto, will be posted on the Antitrust Division's Web site, filed with the Court, and, under certain circumstances, published in the **Federal Register**. Comments should be directed to Owen M. Kendler, Acting Chief, Litigation III Section, Antitrust Division, Department of Justice, 450 Fifth Street NW., Suite 4000, Washington, DC 20530 (telephone: 202–305–8376).

Patricia A. Brink,
Director of Civil Enforcement.

United States District Court for the District of Columbia

United States of America, Department of Justice, Antitrust Division, 450 Fifth Street NW., Suite 7000, Washington, DC 20530, Plaintiff, v. *Clear Channel Outdoor Holdings, Inc., 200 East Basse Road, Suite 100, San Antonio, TX 78209,* and *Fairway Media Group, LLC, 3801 Capital City Blvd., Lansing, MI 48906,* Defendants.

Case No.: 1:16–cv–02497
Judge: Randolph D. Moss
Filed: 12/22/2016

COMPLAINT

The United States of America (''Plaintiff''), acting under the direction of the Attorney General of the United States, brings this civil action to enjoin the transaction between Defendants Clear Channel Outdoor Holdings, Inc. (''Clear Channel'') and Fairway Media Group, LLC (''Fairway'') and to obtain other equitable relief.

I. NATURE OF THE ACTION

1. Clear Channel and Fairway sell outdoor advertising on billboards to local and national customers in numerous metropolitan areas throughout the United States. Among other metropolitan areas, they compete head-to-head to sell advertising on billboards that are located in Indianapolis, Indiana and Atlanta, Georgia (collectively, the ''Metropolitan Markets''). Within each of the Metropolitan Markets, Clear Channel and Fairway own and operate billboards that are located in close proximity to each other and therefore constitute attractive competitive alternatives for advertisers that seek to advertise on billboards in those specific areas.

2. On March 3, 2016, Clear Channel and Fairway entered into an asset exchange pursuant to which Clear Channel would acquire certain Fairway billboards located in Atlanta and Fairway would acquire certain Clear Channel billboards located in Indianapolis, along with billboards in other metropolitan areas.

3. If consummated, the proposed transaction would eliminate the substantial head-to-head competition between Clear Channel and Fairway within each of the Metropolitan Markets. Head-to-head competition between Clear Channel and Fairway billboards that are located in close proximity to each other in each of the Metropolitan Markets has benefitted advertisers through lower prices and better services. The proposed transaction threatens to end that competition in these areas in violation of Section 7 of the Clayton Act, 15 U.S.C. 18, and should be enjoined.

II. JURISDICTION, VENUE, AND COMMERCE

4. The United States brings this action pursuant to Section 15 of the Clayton Act, as amended, 15 U.S.C. 25, to prevent and restrain Defendants from violating Section 7 of the Clayton Act, 15 U.S.C. 18.

5. The Court has subject matter jurisdiction over this action pursuant to Section 15 of the Clayton Act, 15 U.S.C. 25, and 28 U.S.C. 1331, 1337(a), and 1345.

6. Defendants are engaged in interstate commerce and in activities substantially affecting interstate commerce. They each own and operate billboards in various locations throughout the United States and sell outdoor advertising in the geographic areas where their billboards are located. Their sale of advertising on billboards has had a substantial effect upon interstate commerce.

7. Defendants have consented to venue and personal jurisdiction in this district. Venue is also proper in this district under Section 12 of the Clayton Act, 15 U.S.C. 22, and 28 U.S.C. 1391(c).

III. THE DEFENDANTS AND THE TRANSACTION

8. Clear Channel is a Delaware corporation, with its corporate headquarters in San Antonio, Texas. Clear Channel is one of the largest outdoor advertising companies in the United States. Clear Channel reported consolidated revenues of over $2.8 billion in 2015. As of December 31, 2015, Clear Channel owned or operated more than 650,000 outdoor advertising displays worldwide. It owns and operates billboards in each of the Metropolitan Markets.

9. Fairway is a Delaware limited liability company with its headquarters in Duncan, South Carolina. Fairway owns or operates outdoor advertising displays in fifteen states. Fairway had revenues of approximately $110 million in 2015. Fairway also owns and operates billboards in each of the Metropolitan Markets.

10. Pursuant to an Asset Purchase and Exchange Agreement dated March 3, 2016, Clear Channel and Fairway agreed to exchange billboards in a transaction valued at $150 million. Specifically, the parties agreed that Clear Channel would acquire certain Fairway billboards located in Atlanta and Fairway would acquire certain Clear Channel billboards located in Indianapolis and Sherman/Denison, Texas. Although the Asset Purchase and Exchange Agreement originally provided that Fairway would acquire certain Clear Channel billboards in Rochester, Minnesota, and that Clear Channel would acquire additional Fairway billboards in Atlanta, the parties subsequently amended their agreement to remove the Rochester assets and the additional Atlanta assets from the transaction.

IV. THE RELEVANT MARKETS

11. The relevant markets for purposes of Section 7 of the Clayton Act are the sale of outdoor advertising on billboards to advertisers targeting consumers located in areas no larger than the Metropolitan Markets, and likely smaller areas within each of the Metropolitan Markets where the parties own and operate billboards in close proximity to each other.

12. Clear Channel and Fairway generate revenue from the sale of outdoor advertising to local and national businesses that want to promote their products and services. Outdoor advertising is available in a variety of sizes and forms for advertising campaigns of differing styles and duration. Outdoor advertising sales include selling space on billboards and posters, public transportation, such as subways and buses, and other public spaces, such as bus stops, kiosks, and benches.

13. Outdoor advertising has prices and characteristics that are distinct from other advertising media platforms like radio, television, the Internet, newspapers, and magazines. Outdoor advertising is suitable for highly visual, limited-information advertising, because consumers are exposed to an outdoor advertisement for only a brief period of time as they travel through specific geographic areas. Outdoor advertisements typically are less expensive and more cost-efficient when compared to other media at reaching an advertiser's target audience. Many advertisers use outdoor advertisements when they want a large number of exposures to consumers at a low cost per exposure. Such advertisers do not view other advertising mediums or platforms as close substitutes.

14. Advertisers often choose a particular form of outdoor advertising over other outdoor advertising forms based upon the purpose of an advertising campaign, the target demographic group, and the geographic area where that campaign is to occur. For this reason, some outdoor advertising forms compete more closely with each other when compared to other outdoor advertising forms. And certain outdoor advertising forms compete more closely with each other depending upon their specific geographic locations.

15. With respect to outdoor advertising forms, billboards compete most closely with other billboards located in the same geographic area. Advertisers select billboards over other outdoor advertising forms based upon a number of factors. These include the size and demographic of the target audience (individuals most likely to purchase the advertiser's products or services), the traffic and commuting patterns of the audience, and other audience characteristics. Additionally, in certain geographic areas, other forms of outdoor advertising are not present.

16. The precise geographic location of a particular billboard is also important to advertisers. Many advertisers need to reach consumers in a particular city, part of a city, metropolitan area, or part of a metropolitan area. They also seek to reach certain demographic categories of consumers within a city or metropolitan area. Consequently, many advertisers select billboards that are located on highways, roads and streets where the vehicle and pedestrian traffic of that target audience is high, or where that traffic is close to the advertiser's commercial locations. By selecting billboards in these locations, advertisers can ensure that their target audience will frequently view billboards that contain their advertisements. If different firms own billboards that are located in close proximity to each other that would efficiently reach an advertiser's target audience, the advertiser would benefit from the competition among those billboard firms to offer better prices and services.

17. At a minimum, billboard companies could profitably impose a small but significant and non-transitory increase in price (''SSNIP'') to those advertisers who view billboards in certain geographic locations either as their sole method of advertising or as a necessary advertising complement to other media, including other outdoor advertising forms. Consequently, for many advertisers who want to advertise on billboards in each of the Metropolitan Markets or in certain smaller areas within each of the Metropolitan Markets, the imposition of a SSNIP would not cause these advertisers to switch some of their advertising to other media, other outdoor advertising forms, or to billboards located outside each area.

18. For all of the above reasons, for purposes of analyzing the competitive effects of the proposed transaction, the relevant product market is outdoor advertising on billboards and the relevant geographic markets are no larger than each of the Metropolitan Markets, and may consist of considerably smaller areas within each of those Metropolitan Markets where the parties own and operate billboards in close proximity to each other.

V. LIKELY ANTICOMPETITIVE EFFECTS

19. Market concentration is often one useful indicator of the likely competitive effects of a transaction. Concentration in each of the Metropolitan Markets and in certain smaller areas within each of the Metropolitan Markets would increase significantly as a result of the proposed transaction.

20. As articulated in the *Horizontal Merger Guidelines* issued by the Department of Justice and the Federal Trade Commission, the Herfindahl-Hirschman Index (''HHI'') is a standard measure of market concentration (defined and explained in Appendix A). The more concentrated a market, and the more a transaction would increase concentration in a market, the more likely it is that a transaction would result in a meaningful reduction in competition harming consumers. Mergers resulting in highly concentrated markets (with an HHI in excess of 2,500) that involve an increase in the HHI of more than 200 points are presumed to be likely to enhance market power under the *Horizontal Merger Guidelines.*

21. In each of the Metropolitan Markets, and in certain smaller areas within each of the Metropolitan Markets, the market for outdoor advertising on billboards is highly concentrated. The proposed transaction between Clear Channel and Fairway would result in HHIs in excess of 2,500 in each of the Metropolitan Markets and in certain areas within each Metropolitan Market. These post-transaction HHIs, which reflect

increases of more than 200 points in each Metropolitan Market and in certain areas within each Metropolitan Market, are well above the 2,500 threshold at which a transaction is presumed likely to enhance market power.

22. In addition to increasing concentration, the proposed transaction will eliminate head-to-head competition between Clear Channel and Fairway by bringing under the control of one firm billboards that are close substitutes, based on their geographic locations, in areas with limited alternatives. In some of the areas within each of the Metropolitan Markets, there are no other competing billboards that would be attractive competitive alternatives to Clear Channel's and Fairway's billboards. In other areas within each of the Metropolitan Markets, there are other competitors present, but the number of billboards or their quality is insufficient to preclude the exercise of market power by Clear Channel or Fairway post-transaction.

23. In each of the Metropolitan Markets, there are significant barriers to entry, including governmental regulations that limit new billboard construction. Therefore, it is unlikely that any new entry or repositioning from existing firms would be sufficient or timely to defeat Clear Channel or Fairway from profitably imposing a SSNIP on their billboards in the Metropolitan Markets and in certain smaller areas within the Metropolitan Markets.

VI. VIOLATION ALLEGED

24. The United States hereby repeats and realleges the allegations of paragraphs 1 through 23 as if fully set forth herein.

25. Clear Channel's proposed transaction with Fairway likely would substantially lessen competition in interstate trade and commerce in the relevant markets, in violation of Section 7 of the Clayton Act, 15 U.S.C. 18. Unless enjoined, the proposed transaction likely would have the following anticompetitive effects, among others:

a) competition in the sale of outdoor advertising on billboards in each of the Metropolitan Markets and in certain areas within each of the Metropolitan Markets would be substantially lessened;

b) actual and potential competition between Clear Channel and Fairway in the sale of outdoor advertising on billboards in each of the Metropolitan Markets and in certain areas within each of the Metropolitan Markets would be eliminated; and

c) prices for outdoor advertising on billboards in each of the Metropolitan Market and in certain areas within each of the Metropolitan Markets would likely increase, and the quality of services would likely decline.

VII. REQUEST FOR RELIEF

26. The United States requests:

a) that the Court adjudge the proposed transaction to violate Section 7 of the Clayton Act, 15 U.S.C. 18;

b) that the Court permanently enjoin and restrain Defendants from carrying out the proposed transaction, or entering into any other agreement, understanding, or plan by which Clear Channel and Fairway would exchange billboards in each of the Metropolitan Markets;

c) that the Court award the United States the costs of this action; and

d) that the Court award such other relief to the United States as the Court may deem just and proper.

Dated: December 22, 2016

Respectfully submitted,

FOR PLAINTIFF UNITED STATES:

* Attorney of Record

APPENDIX A

The term ''HHI'' means the Herfindahl-Hirschman Index, a commonly accepted measure of market concentration. The HHI is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers. For example, for a market consisting of four firms with shares of 30, 30, 20, and 20 percent, the HHI is 2,600 ($30^2 + 30^2 + 20^2 + 20^2 = 2{,}600$). The HHI takes into account the relative size distribution of the firms in a market. It approaches zero when a market is occupied by a large number of firms of relatively equal size and reaches its maximum of 10,000 points when a market is controlled by a single firm. The HHI increases both as the number of firms in the market decreases and as the disparity in size between those firms increases.

Markets in which the HHI is between 1,500 and 2,500 points are considered to be moderately concentrated, and markets in which the HHI is in excess of 2,500 points are considered to be highly concentrated. *See* U.S. Department of Justice & FTC, *Horizontal Merger Guidelines* § 5.3 (2010). Transactions that increase the HHI by more than 200 points in highly concentrated markets presumptively raise antitrust concerns under the *Horizontal Merger Guidelines* issued by the Department of Justice and the Federal Trade Commission. *See id.*

United States District Court for the District of Columbia

United States of America, Plaintiff, v. *Clear Channel Outdoor Holdings, Inc., and Fairway Media Group, LLC, Defendants.*

Case No.: 1:16–cv–02497

Judge: Randolph D. Moss

Filed: 12/22/2016

COMPETITIVE IMPACT STATEMENT

Pursuant to Section 2(b) of the Antitrust Procedures and Penalties Act (''APPA'' or ''Tunney Act''), 15 U.S.C. 16(b)–(h), Plaintiff United States of America (''United States'') files this Competitive Impact Statement relating to the proposed Final Judgment submitted for entry in this civil antitrust proceeding.

I. NATURE AND PURPOSE OF THE PROCEEDING

On March 3, 2016, Defendants Clear Channel Outdoor Holdings, Inc. (''Clear Channel'') and Fairway Media Group, LLC (''Fairway'') entered into an asset exchange pursuant to which Clear Channel would acquire certain Fairway billboards located in Atlanta, Georgia, and Fairway would acquire certain Clear Channel billboards located in Indianapolis, Indiana (collectively Atlanta and Indianapolis are the ''Metropolitan Markets''), along with billboards in other metropolitan areas.

The United States filed a civil antitrust Complaint on December 22, 2016, seeking to enjoin the proposed transaction. The Complaint alleges that the proposed transaction likely would eliminate the substantial head-to-head competition between Clear Channel and Fairway within each of the Metropolitan Markets. Head-to-head competition between Clear Channel and Fairway billboards that are located in close proximity to each other in each of the Metropolitan Markets has benefitted advertisers through lower prices and better services. These likely competitive effects would substantially lessen competition in violation of Section 7 of the Clayton Act, 15 U.S.C. 18.

At the same time the Complaint was filed, the United States also filed an Asset Preservation Stipulation and Order (''Asset Preservation Order'') and proposed Final Judgment, which are designed to eliminate the likely anticompetitive effects of the transaction. The proposed Final Judgment, which is explained more fully below, requires Defendants to divest their interests in 57 identified outdoor billboard assets in the Metropolitan Markets to acquirers approved by the United States in a manner that preserves competition in each of those markets.

The Asset Preservation Order requires Defendants to take certain steps to ensure that each of the divested assets continues to be operated as a competitive, economically viable, and ongoing outdoor advertising asset, uninfluenced by the consummation of the transaction so that competition is maintained until the required divestitures occur.

The United States and Defendants have stipulated that the proposed Final Judgment may be entered after compliance with the APPA. Entry of the proposed Final Judgment would terminate this action, except that the Court would retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof.

II. DESCRIPTION OF THE EVENTS GIVING RISE TO THE ALLEGED VIOLATION

A. The Defendants and the Transaction

Clear Channel is a Delaware corporation with its headquarters in San Antonio, Texas. Clear Channel is one of the largest outdoor advertising companies in the United States.

Fairway is a Delaware limited liability company with its headquarters in Duncan, South Carolina. Fairway owns and operates outdoor advertising displays in fifteen states.

Pursuant to an Asset Purchase and Exchange Agreement dated March 3, 2016, Clear Channel and Fairway agreed to exchange billboards in a transaction valued at $150 million. Specifically, the parties agreed that Clear Channel would acquire certain Fairway billboards located in Atlanta and Fairway would acquire certain Clear Channel billboards located in Indianapolis and Sherman/Denison, Texas. Although the Asset Purchase and Exchange Agreement originally provided that Fairway would acquire certain Clear Channel billboards in Rochester, Minnesota, and that Clear Channel would acquire additional Fairway billboards in Atlanta, the parties subsequently amended their agreement to remove the Rochester assets and additional Atlanta assets from the transaction.

The proposed transaction, as agreed to by Defendants, likely would lessen competition substantially within each of the Metropolitan Markets. This transaction is the subject of the Complaint and proposed Final Judgment filed today by the United States.

B. The Transaction's Likely Anticompetitive Effects

1. The Relevant Markets

The Complaint alleges that the sale of outdoor advertising on billboards to advertisers that seek to target consumers located in geographic areas no larger than each of the Metropolitan Markets, and likely smaller areas within each of those market where the parties own and operate billboards in close proximity to each other, constitute relevant markets under Section 7 of the Clayton Act.

Clear Channel and Fairway sell outdoor advertising to local and national businesses that seek to promote their products and services to consumers in each of the Metropolitan Markets and in certain smaller areas within each of the Metropolitan Markets.

Outdoor advertising possesses a unique combination of attributes that sets it apart from advertising using other types of media, like radio, television, the Internet, newspapers and magazines. Outdoor advertising is suitable for highly visual, limited-information advertising, because consumers are exposed to an outdoor advertisement for only a brief period of time as they travel through specific geographic areas. Outdoor advertisements typically are less expensive and more cost-efficient when compared to other media at reaching an advertiser's target audience. Many advertisers use outdoor advertisements when they want a large number of exposures to consumers at a low cost per exposure. Such advertisers do not view other advertising mediums or platforms as close substitutes.

Outdoor advertising is available in a variety of sizes and forms for advertising campaigns of differing styles and duration. Outdoor advertising sales include selling space on billboards and posters, public transportation, such as subways and buses, and other public spaces, such as bus stops, kiosks, and benches. Advertisers often choose a particular form of outdoor advertising over other outdoor advertising forms based upon the purpose of an advertising campaign, the target demographic group, and the geographic area where that campaign is to occur. For this reason, some outdoor advertising forms compete more closely with each other when compared to other outdoor advertising forms. And certain outdoor advertising forms compete more closely with each other depending upon their specific geographic locations.

With respect to outdoor advertising forms, billboards compete most closely with other billboards located in the same geographic area. Advertisers select billboards over other outdoor advertising forms based upon a number of factors. These include the size and demographic of the target audience (individuals most likely to purchase the advertiser's products or services), the traffic and commuting patterns of the audience, and other audience characteristics. Additionally, in certain geographic areas, other forms of outdoor advertising are not present.

The precise geographic location of a particular billboard is also important to advertisers. Many advertisers need to reach consumers in a particular city, part of a city, metropolitan area, or part of a metropolitan area. They also seek to reach certain demographic categories of consumers within a city or metropolitan area. Consequently, many advertisers select billboards that are located on highways, roads and streets where the vehicle and pedestrian traffic of that target audience is high, or where that traffic is close to the advertiser's commercial locations. By selecting billboards in these locations, advertisers can ensure that their target audience will frequently view billboards that contain their advertisements. If different firms own billboards that are located in close proximity to each other that would efficiently reach an advertiser's target audience, the advertiser would benefit from the competition among those billboard firms to offer better prices and services.

At a minimum, billboard companies could profitably impose a small but significant and non-transitory increase in price (''SSNIP'') to those advertisers who view billboards in certain geographic locations either as their sole method of advertising or as a necessary advertising complement to other media, including other outdoor advertising forms. Consequently, for many advertisers who want to advertise on billboards in each of the Metropolitan Markets or in certain smaller areas within each of the Metropolitan

Markets, the imposition of a SSNIP would not cause these advertisers to switch some of their advertising to other media, other outdoor advertising forms, or to billboards located outside each area.

For all of the above reasons, for purposes of analyzing the competitive effects of the proposed transaction, the relevant product market is outdoor advertising on billboards and the relevant geographic markets are no larger than each of the Metropolitan Markets, and may consist of considerably smaller areas within each of those Metropolitan Markets where the parties own and operate billboards in close proximity to each other.

2. Harm to Competition within Each of the Metropolitan Markets

The Complaint alleges that the proposed acquisition likely would substantially lessen competition in interstate trade and commerce, in violation of Section 7 of the Clayton Act, 15 U.S.C. 18, and likely would have the following effects, among others:

a) competition in the sale of outdoor advertising on billboards in each of the Metropolitan Markets and in certain smaller areas within each of the Metropolitan Markets would be substantially lessened;

b) actual and potential competition between Clear Channel and Fairway in the sale of outdoor advertising on billboards in each of the Metropolitan Markets and in certain areas within each of the Metropolitan Markets would be substantially lessened; and

c) prices for outdoor advertising on billboards in each of the Metropolitan Markets and in certain areas within each of the Metropolitan Markets would likely increase, and the quality of services would likely decline.

As alleged in the Complaint, in each of the Metropolitan Markets and in certain areas within each of the Metropolitan Markets, the market for outdoor advertising on billboards is highly concentrated and the proposed transaction would substantially increase that concentration.

Using the Herfindahl-Hirschman Index (''HHI''), a standard measure of market concentration, the proposed transaction between Clear Channel and Fairway would result in HHIs in excess of 2,500 in each of the Metropolitan Markets and in certain areas within each Metropolitan Market. These post-transaction HHIs reflect increases of more than 200 points in each Metropolitan Market and in certain areas within each Metropolitan Market. As a result, the proposed transaction in those Metropolitan Markets is presumed likely to enhance market power under the Horizontal Merger Guidelines issued by the Department of Justice and Federal Trade Commission.

Moreover, in addition to increasing concentration, the proposed transaction will eliminate head-to-head competition between Clear Channel and Fairway by bringing under the control of one firm billboards that are close substitutes, based on their geographic locations, in areas with limited alternatives. In some of the areas within each of the Metropolitan Markets, there are no other competing billboards that would be attractive competitive alternatives to Clear Channel's and Fairway's billboards. In other areas within each of the Metropolitan Markets, there are other competitors present, but the number of billboards or their quality is insufficient to preclude the exercise of market power by Clear Channel or Fairway post-transaction. Because a significant number of advertisers would likely be unable to reach their desired audiences as effectively unless they advertise on billboards that Clear Channel or Fairway would control after the proposed transaction, those advertisers' bargaining positions would be weaker, and the advertising rates they pay would likely increase.

3. Entry

The Complaint alleges that entry or expansion in outdoor advertising on billboards in each of the Metropolitan Markets would not be timely, likely, or sufficient to prevent any anticompetitive effects. In each of the Metropolitan Markets, there are significant barriers to entry including those due to governmental regulations that limit new billboard construction. Therefore, it is unlikely that any new entry or repositioning from existing firms would be sufficient or timely to defeat Clear Channel or Fairway from profitably imposing a SSNIP on their billboards in the Metropolitan Markets and certain areas within the Metropolitan Markets.

III. EXPLANATION OF THE PROPOSED FINAL JUDGMENT

The divestiture requirement of the proposed Final Judgment will eliminate the likely anticompetitive effects of the transaction in each of the Metropolitan Markets by maintaining the Divestiture Assets as independent, economically viable and competitive. The proposed Final Judgment requires Clear Channel and Fairway to divest the Divestiture Assets to the following Acquirers:

- Divestiture Assets located in the Indianapolis Metropolitan Market to Circle City Outdoor, LLC; and
- Divestiture Assets located in the Atlanta Metropolitan Market to Link Media Georgia, LLC.

The United States has approved each of these Acquirers as suitable divestiture buyers. The United States required Clear Channel and Fairway to identify each Acquirer of a Divestiture Asset in order to provide greater certainty and efficiency in the divestiture process. If, for any reason, Defendants are unable to complete the divestitures to either of these Acquirers, Defendants must divest the remaining Divestiture Assets to one or more alternative Acquirers approved by the United States in its sole discretion.

The Divestiture Assets are defined in Paragraph II.F of the proposed Final Judgment to include all assets set forth in Schedules A and B to the proposed Final Judgment, tangible or intangible, relating to each outdoor advertising display face, including all real property (owned or leased), all licenses, permits and authorizations issued by any governmental organization relating to the operation of the asset, and all contracts, agreements, leases, licenses, commitments and understandings pertaining to the sale of outdoor advertising on each asset.

To ensure that the Divestiture Assets are operated independently from Clear Channel and Fairway after the divestitures, Section XII of the proposed Final Judgment prohibits Defendants from reacquiring any part of the Divestiture Assets during the term of the Final Judgment and Section VII prohibits Defendants from financing all or any part of the Acquirers' purchase of the Divestiture Assets.

Defendants are required to take all steps reasonably necessary to accomplish the divestitures quickly and to cooperate with prospective purchasers. Pursuant to Paragraph IV.A of the proposed Final Judgment, divestiture of each of the Divestiture Assets must occur within ten calendar days after the Court's signing of the Asset Preservation Order or consummation of the Transaction, whichever is later. The United States, in its sole discretion, may agree to one or more extensions of this time period not to exceed 60 calendar days in total, and shall notify the Court in such circumstances.

In the event that Defendants do not accomplish all of the divestitures within the periods prescribed in the proposed Final Judgment, Section V of the proposed Final Judgment provides that the Court, upon application of the United States, will appoint a trustee selected by the United States to effect any remaining divestitures. If a trustee is appointed, the proposed Final Judgment provides that Clear Channel and Fairway will pay all costs and expenses of the trustee. The trustee's commission will be structured to provide an incentive for the trustee based on the price obtained and the speed with which the divestitures are accomplished. After his or her appointment becomes effective, the trustee will file monthly reports with the Court and the United States describing his or her efforts to accomplish the divestiture of any remaining stations. If the divestiture has not been accomplished after 6 months, the trustee and the United States will make recommendations to the Court, which shall enter such orders as appropriate, to carry out the purpose of the trust, including extending the trust or the term of the trustee's appointment.

Section XI of the proposed Final Judgment requires Defendants to provide advance notification of certain future proposed acquisitions not otherwise subject to the Hart-Scott-Rodino Antitrust Improvements Act of 1976, as amended, 15 U.S.C. 18a. Specifically, Fairway must provide at least thirty days advance written notice to the United States before it acquires, directly or indirectly, any interest in any outdoor advertising asset in the form of a billboard or any outdoor advertising business that owns billboards in the metropolitan statistical areas associated with Rochester, Minnesota and Indianapolis; and Clear Channel must provide at least thirty days advance written notice to the United States before it (a) acquires any assets located in the Atlanta metropolitan statistical area that were included in, but later removed from, the original transaction agreement between Clear Channel and Fairway; and (b) directly or indirectly acquires any outdoor advertising assets in the form of billboards or any interest, including any financial, security, loan, equity or management interest, in any outdoor advertising business that owns billboards in the Atlanta metropolitan statistical area where the assets or interests acquired have annual revenues for the last twelve months in excess of $5 million. Section XI then provides for waiting periods and opportunities for the United States to obtain additional information similar to the provisions of the HSR Act before acquisitions in these geographic areas may be consummated.

The geographic areas that Section XI applies to include one metropolitan area not subject to divestitures: Rochester, Minnesota. Although, as discussed above, Rochester billboard assets were ultimately excluded from the Defendants' asset swap transaction, given the highly concentrated market for outdoor advertising on billboards in Rochester and the fact that the Rochester billboard assets originally were part of the transaction, the United States sought to ensure that it would have the opportunity to review future acquisitions in that area so that it can seek effective relief, if necessary.

IV. REMEDIES AVAILABLE TO POTENTIAL PRIVATE LITIGANTS

Section 4 of the Clayton Act, 15 U.S.C. 15, provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages the person has suffered, as well as costs and reasonable attorneys' fees. Entry of the proposed Final Judgment will neither impair nor assist the bringing of any private antitrust damage action. Under the provisions of Section 5(a) of the Clayton Act, 15 U.S.C. 16(a), the proposed Final Judgment has no prima facie effect in any subsequent private lawsuit that may be brought against Defendants.

V. PROCEDURES AVAILABLE FOR MODIFICATION OF THE PROPOSED FINAL JUDGMENT

The United States and Defendants have stipulated that the proposed Final Judgment may be entered by the Court after compliance with the provisions of the APPA, provided that the United States has not withdrawn its consent. The APPA conditions entry upon the Court's determination that the proposed Final Judgment is in the public interest.

The APPA provides a period of at least sixty (60) days preceding the effective date of the proposed Final Judgment within which any person may submit to the United States written comments regarding the proposed Final Judgment. Any person who wishes to comment should do so within sixty (60) days of the date of publication of this Competitive Impact Statement in the **Federal Register**, or the last date of publication in a newspaper of the summary of this Competitive Impact Statement, whichever is later. All comments received during this period will be considered by the United States, which remains free to withdraw its consent to the proposed Final Judgment at any time prior to the Court's entry of judgment. The comments and the response of the United States, if any, will be filed with the Court. In addition, comments will be posted on the Antitrust Division's Web site and, under certain circumstances, published in the **Federal Register**.

Written comments should be submitted to:

Owen M. Kendler
Acting Chief, Litigation III Section
Antitrust Division
United States Department of Justice
450 5th Street NW., Suite 4000
Washington, DC 20530

The proposed Final Judgment provides that the Court retains jurisdiction over this action, and Defendants may apply to the Court for any order necessary or appropriate for the modification, interpretation, or enforcement of the Final Judgment.

VI. ALTERNATIVES TO THE PROPOSED FINAL JUDGMENT

The United States considered, as an alternative to the proposed Final Judgment, a full trial on the merits against Defendants. The United States could have continued the litigation and sought preliminary and permanent injunctions against the transaction between Clear Channel and Fairway. The United States is satisfied, however, that the divestiture of assets described in the proposed Final Judgment will preserve competition for the sale of outdoor advertising on billboards in each of the Metropolitan Markets and the affected smaller areas within each Metropolitan Market. Thus, the proposed Final Judgment would achieve all or substantially all of the relief the United States would have obtained through litigation, but avoids the time, expense, and uncertainty of a full trial on the merits of the Complaint.

VII. STANDARD OF REVIEW UNDER THE APPA FOR THE PROPOSED FINAL JUDGMENT

The Clayton Act, as amended by the APPA, requires that proposed consent judgments in antitrust cases brought by the United States be subject to a sixty-day comment period, after which the Court shall determine whether entry of the proposed Final Judgment ''is in the public interest.'' 15 U.S.C. 16(e)(1). In making that determination, the Court, in accordance with the statute as amended in 2004, is required to consider:

> (A) the competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, and any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and
>
> (B) the impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint

including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

15 U.S.C. 16(e)(1)(A) & (B). In considering these statutory factors, the Court's inquiry is necessarily a limited one as the government is entitled to ''broad discretion to settle with the defendant within the reaches of the public interest.'' *United States* v. *Microsoft Corp.,* 56 F.3d 1448, 1461 (D.C. Cir. 1995); *see generally United States* v. *SBC Commc'ns, Inc.,* 489 F. Supp. 2d 1 (D.D.C. 2007) (assessing public interest standard under the Tunney Act); *United States* v. *US Airways Group, Inc.,* 38 F. Supp. 3d 69, 75 (D.D.C. 2014) (explaining that the ''court's inquiry is limited'' in Tunney Act settlements); *United States* v. *InBev N.V./S.A.,* No. 08–1965 (JR), 2009–2 Trade Cas. (CCH) ¶ 76,736, 2009 U.S. Dist. LEXIS 84787, at *3, (D.D.C. Aug. 11, 2009) (noting that the court's review of a consent judgment is limited and only inquires ''into whether the government's determination that the proposed remedies will cure the antitrust violations alleged in the complaint was reasonable, and whether the mechanism to enforce the final judgment are clear and manageable.'').[1]

As the United States Court of Appeals for the District of Columbia Circuit has held, under the APPA a court considers, among other things, the relationship between the remedy secured and the specific allegations set forth in the government's complaint, whether the decree is sufficiently clear, whether enforcement mechanisms are sufficient, and whether the decree may positively harm third parties. *See Microsoft,* 56 F.3d at 1458–62. With respect to the adequacy of the relief secured by the decree, a court may not ''engage in an unrestricted evaluation of what relief would best serve the public.'' *United States* v. *BNS, Inc.,* 858 F.2d 456, 462 (9th Cir. 1988) (quoting *United States* v. *Bechtel Corp.,* 648 F.2d 660, 666 (9th Cir. 1981)); *see also Microsoft,* 56 F.3d at 1460–62; *United States* v. *Alcoa, Inc.,* 152 F. Supp. 2d 37, 40 (D.D.C. 2001); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *3. Courts have held that:

> [t]he balancing of competing social and political interests affected by a proposed antitrust consent decree must be left, in the first instance, to the discretion of the Attorney General. The court's role in protecting the public interest is one of insuring that the government has not breached its duty to the public in consenting to the decree. The court is required to determine not whether a particular decree is the one that will best serve society, but whether the settlement is ''*within the reaches of the public interest.*'' More elaborate requirements might undermine the effectiveness of antitrust enforcement by consent decree.

Bechtel, 648 F.2d at 666 (emphasis added) (citations omitted).[2] In determining whether a proposed settlement is in the public interest, a district court ''must accord deference to the government's predictions about the efficacy of its remedies, and may not require that the remedies perfectly match the alleged violations.'' *SBC Commc'ns,* 489 F. Supp. 2d at 17; *see also US Airways,* 38 F. Supp. 3d at 75 (noting that a court should not reject the proposed remedies because it believes others are preferable); *Microsoft,* 56 F.3d at 1461 (noting the need for courts to be ''deferential to the government's predictions as to the effect of the proposed remedies''); *United States* v. *Archer-Daniels-Midland Co.,* 272 F. Supp. 2d 1, 6 (D.D.C. 2003) (noting that the court should grant due respect to the United States' prediction as to the effect of proposed remedies, its perception of the market structure, and its views of the nature of the case).

Courts have greater flexibility in approving proposed consent decrees than in crafting their own decrees following a finding of liability in a litigated matter. ''[A] proposed decree must be approved even if it falls short of the remedy the court would impose on its own, as long as it falls within the range of acceptability or is 'within the reaches of public interest.' '' *United States* v. *Am. Tel. & Tel. Co.,* 552 F. Supp. 131, 151 (D.D.C. 1982) (citations omitted) (quoting *United States* v. *Gillette Co.,* 406 F. Supp. 713, 716 (D. Mass. 1975)), *aff'd sub nom. Maryland* v. *United States,* 460 U.S. 1001 (1983); *see also US Airways,* 38 F. Supp. 3d at 76 (noting that room must be made for the government to grant concessions in the negotiation process for settlements) (citing *Microsoft,* 56 F.3d at 1461); *United States* v. *Alcan Aluminum Ltd.,* 605 F. Supp. 619, 622 (W.D. Ky. 1985) (approving the consent decree even though the court would have imposed a greater remedy). To meet this standard, the United States ''need only provide a factual basis for concluding that the settlements are reasonably adequate remedies for the alleged harms.'' *SBC Commc'ns,* 489 F. Supp. 2d at 17.

Moreover, the Court's role under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its Complaint, and does not authorize the Court to ''construct [its] own hypothetical case and then evaluate the decree against that case.'' *Microsoft,* 56 F.3d at 1459; *see also US Airways,* 38 F. Supp. 3d at 75 (noting that the court must simply determine whether there is a factual foundation for the government's decisions such that its conclusions regarding the proposed settlements are reasonable); *InBev,* 2009 U.S. Dist. LEXIS 84787, at *20 (''the 'public interest' is not to be measured by comparing the violations alleged in the complaint against those the court believes could have, or even should have, been alleged''). Because the ''court's authority to review the decree depends entirely on the government's exercising its prosecutorial discretion by bringing a case in the first place,'' it follows that ''the court is only authorized to review the decree itself,'' and not to ''effectively redraft the complaint'' to inquire into other matters that the United States did not pursue. *Microsoft,* 56 F.3d at 1459–60. As this Court confirmed in *SBC Communications,* courts ''cannot look beyond the complaint in making the public interest determination unless the complaint is drafted so narrowly as to make a mockery of judicial power.'' *SBC Commc'ns,* 489 F. Supp. 2d at 15.

In its 2004 amendments, Congress made clear its intent to preserve the practical benefits of utilizing consent decrees in antitrust enforcement, adding the unambiguous instruction that ''[n]othing in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.'' 15 U.S.C. 16(e)(2); *see also US Airways,* 38 F. Supp. 3d at 76 (indicating that a court is not required to hold an evidentiary hearing or to permit intervenors as part of its review under the Tunney Act). The language wrote into the statute what Congress intended when it enacted the Tunney Act in 1974, as Senator Tunney explained: ''[t]he court is nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of

[1] The 2004 amendments substituted ''shall'' for ''may'' in directing relevant factors for court to consider and amended the list of factors to focus on competitive considerations and to address potentially ambiguous judgment terms. *Compare* 15 U.S.C. 16(e) (2004) *with* 15 U.S.C. 16(e)(1) (2006); *see also SBC Commc'ns,* 489 F. Supp. 2d at 11 (concluding that the 2004 amendments ''effected minimal changes'' to Tunney Act review).

[2] *Cf. BNS,* 858 F.2d at 464 (holding that the court's ''ultimate authority under the [APPA] is limited to approving or disapproving the consent decree''); *United States* v. *Gillette Co.,* 406 F. Supp. 713, 716 (D. Mass. 1975) (noting that, in this way, the court is constrained to ''look at the overall picture not hypercritically, nor with a microscope, but with an artist's reducing glass''). *See generally Microsoft,* 56 F.3d at 1461 (discussing whether ''the remedies [obtained in the decree are] so inconsonant with the allegations charged as to fall outside of the 'reaches of the public interest' '').

prompt and less costly settlement through the consent decree process.'' 119 Cong. Rec. 24,598 (1973) (statement of Sen. Tunney). Rather, the procedure for the public interest determination is left to the discretion of the Court, with the recognition that the Court's ''scope of review remains sharply proscribed by precedent and the nature of Tunney Act proceedings.'' *SBC Commc'ns,* 489 F. Supp. 2d at 11.[3] A court can make its public interest determination based on the competitive impact statement and response to public comments alone. *US Airways,* 38 F. Supp. 3d at 76.

VIII. DETERMINATIVE DOCUMENTS

There are no determinative materials or documents within the meaning of the APPA that were considered by the United States in formulating the proposed Final Judgment.

Dated: December 22, 2016

Respectfully submitted,

Mark A. Merva* (D.C. Bar #451743),

Mark A. Merva

United States District Court for the District of Columbia

United States of America, Plaintiff, v. *Clear Channel Outdoor Holdings, Inc., and Fairway Media Group, LLC, Defendants.*

Case No.: 1:16–cv–02497

Judge: Randolph D. Moss

Filed: 12/22/2016

PROPOSED FINAL JUDGMENT

WHEREAS, Plaintiff, the United States of America, filed its Complaint on December 22, 2016, and Defendant Clear Channel Outdoor Holdings, Inc. (''Clear Channel'') and Defendant Fairway Media Group, LLC (''Fairway''), by their respective attorneys, have consented to the entry of this Final Judgment without trial or adjudication of any issue of fact or law, and without this Final Judgment constituting any evidence against or admission by any party regarding any issue of fact or law;

AND WHEREAS, Defendants agree to be bound by the provisions of this Final Judgment pending its approval by the Court;

AND WHEREAS, the essence of this Final Judgment is the prompt and certain divestiture of certain rights or assets by the Defendants to assure that competition is not substantially lessened;

AND WHEREAS, the United States requires Defendants to make certain divestitures for the purpose of remedying the loss of competition alleged in the Complaint;

AND WHEREAS, Defendants have represented to the United States that the divestitures required below can and will be made and that Defendants will later raise no claim of hardship or difficulty as grounds for asking the Court to modify any of the divestiture provisions contained below;

NOW THEREFORE, before any testimony is taken, without trial or adjudication of any issue of fact or law, and upon consent of the parties, it is ORDERED, ADJUDGED, AND DECREED:

I. JURISDICTION

This Court has jurisdiction over the subject matter and each of the parties to this action. The Complaint states a claim upon which relief may be granted against Defendants under Section 7 of the Clayton Act, as amended, 15 U.S.C. 18.

II. DEFINITIONS

As used in this Final Judgment:

A. ''Clear Channel'' means Defendant Clear Channel Outdoor Holdings, Inc., a Delaware corporation headquartered in San Antonio, Texas, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, and their directors, officers, managers, agents, and employees.

B. ''Fairway'' means Defendant Fairway Media Group, LLC, a Delaware limited liability company headquartered in Duncan, South Carolina, its successors and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, and their directors, officers, managers, agents, and employees.

C. ''Circle City'' means Circle City Outdoor, LLC, a Washington limited liability company headquartered in Spokane, Washington, its successor and assigns, and its subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, and their directors, officers, managers, agents, and employees.

D. ''Link Media'' means Link Media Georgia, LLC, a Georgia limited liability company headquartered in Wichita, Kansas, its successor and assigns, parents, subsidiaries, divisions, groups, affiliates, partnerships, and joint ventures, including Link Media Holdings, LLC and Boston Omaha Corporation, and their directors, officers, managers, agents, and employees.

E. ''Acquirer'' means Circle City, Link Media, or another entity or entities to which Defendants divest the Divestiture Assets.

F. ''Atlanta Divestiture Assets'' means all of Defendants' interests in the assets set forth in Schedule A, including all assets, tangible or intangible, relating to each outdoor advertising display face, including all real property (owned or leased), all licenses, permits and authorizations issued by any governmental organization relating to the operation of the assets, and all contracts, agreements, leases, licenses, commitments and understandings pertaining to the sale of outdoor advertising on the assets.

[3] *See United States* v. *Enova Corp.,* 107 F. Supp. 2d 10, 17 (D.D.C. 2000) (noting that the ''Tunney Act expressly allows the court to make its public interest determination on the basis of the competitive impact statement and response to comments alone''); *United States* v. *Mid-Am. Dairymen, Inc.,* No. 73–CV–681–W–1, 1977–1 Trade Cas. (CCH) ¶ 61,508, at 71,980, *22 (W.D.Mo. 1977) (''Absent a showing of corrupt failure of the government to discharge its duty, the Court, in making its public interest finding, should . . . carefully consider the explanations of the government in the competitive impact statement and its responses to comments in order to determine whether those explanations are reasonable under the circumstances.''); S. Rep. No. 93–298, at 6 (1973) (''Where the public interest can be meaningfully evaluated simply on the basis of briefs and oral arguments, that is the approach that should be utilized.'').

G. ''Indianapolis Divestiture Assets'' means all of Defendants' interests in the assets set forth in Schedule B, including all assets, tangible or intangible, relating to each outdoor advertising display face, including all real property (owned or leased), all licenses, permits and authorizations issued by any governmental organization relating to the operation of the assets, and all contracts, agreements, leases, licenses, commitments and understandings pertaining to the sale of outdoor advertising on the assets.

H. ''Divestiture Assets'' means the Indianapolis Divestiture Assets and the Atlanta Divestiture Assets.

I. ''Transaction'' means the Asset Purchase and Exchange Agreement, dated March 3, 2016, between Clear Channel and Fairway.

III. APPLICABILITY

A. This Final Judgment applies to Clear Channel and Fairway, as defined above, and all other persons in active concert or participation with any of them who receive actual notice of this Final Judgment by personal service or otherwise.

B. If, prior to complying with Sections IV and V of this Final Judgment, Defendants sell or otherwise dispose of all or substantially all of their assets or of lesser business units that include the Divestiture Assets, they shall require the purchaser to be bound by the provisions of this Final Judgment. Defendants need not obtain such an agreement from the Acquirer(s) of the assets divested pursuant to this Final Judgment.

IV. DIVESTITURES

A. Defendants are ordered and directed, within ten (10) calendar days after (i) the Court's signing of the Asset Preservation Stipulation and Order in this matter or (ii) consummation of the Transaction, whichever is later, to divest in a manner consistent with this Final Judgment the Indianapolis Divestiture Assets to Circle City and the Atlanta Divestiture Assets to Link Media or another Acquirer(s) acceptable to the United States, in its sole discretion. The United States, in its sole discretion, may agree to one or more extensions of this time period not to exceed sixty (60) calendar days in total, and shall notify the Court in such circumstances. Defendants agree to use their best efforts to divest the Indianapolis Divestiture Assets and the Atlanta Divestiture Assets as expeditiously as possible.

B. In the event that Defendants are attempting to divest the Indianapolis Divestiture Assets to an Acquirer other than Circle City, or the Atlanta Divestiture Assets to an Acquirer other than Link Media:

(1) Defendants promptly shall make known, by usual and customary means, the availability of the Divestiture Assets to be divested; and

(2) Defendants shall inform any person making an inquiry regarding a possible purchase of the relevant Divestiture Assets that they are being divested pursuant to this Final Judgment and provide that person with a copy of this Final Judgment.

C. Defendants shall offer to furnish to all prospective Acquirers, subject to customary confidentiality assurances, all information and documents relating to the relevant Divestiture Assets customarily provided in a due diligence process except such information or documents subject to the attorney-client privilege or work-product doctrine; and Defendants shall make available such information to the United States at the same time that such information is made available to any other person.

D. Defendants shall permit prospective Acquirers of the Divestiture Assets to have reasonable access to make inspections of the Divestiture Assets; access to any and all environmental, zoning, and other permit documents and information; and access to any and all financial, operational, or other documents and information customarily provided as part of a due diligence process.

E. Defendants shall warrant to the Acquirers that each Divestiture Asset will be operational on the date of sale.

F. Defendants shall not take any action that will impede in any way the permitting, operation, or divestiture of the Divestiture Assets.

G. Defendants shall warrant to the Acquirer(s) that there are no material defects in the environmental, zoning, or other permits pertaining to the operation of each Divestiture Asset, and that, following the sale of the Divestiture Assets, Defendants will not undertake, directly or indirectly, any challenges to the environmental, zoning, or other permits relating to the operation of the Divestiture Assets.

H. Unless the United States otherwise consents in writing, the divestitures pursuant to Section IV, or by a Divestiture Trustee appointed pursuant to Section V of this Final Judgment, shall include the entire Divestiture Assets and be accomplished in such a way as to satisfy the United States, in its sole discretion, that the Divestiture Assets can and will be used by the Acquirers as part of a viable, ongoing outdoor advertising business. Divestiture of the Divestiture Assets may be made to one or more Acquirers, provided that in each instance it is demonstrated to the sole satisfaction of the United States that the Divestiture Assets will remain viable, and the divestiture of such assets will remedy the competitive harm alleged in the Complaint. The divestitures, whether pursuant to Section IV or Section V of this Final Judgment:

(1) shall be made to Acquirers that, in the United States' sole judgment, have the intent and capability (including the necessary managerial, operational, technical, and financial capability) of competing effectively in the outdoor advertising business; and

(2) shall be accomplished so as to satisfy the United States, in its sole discretion, that none of the terms of any agreement between the Acquirers and Defendants gives Defendants the ability unreasonably to raise the costs of the Acquirers, to lower the efficiency of the Acquirers, or otherwise to interfere in the ability of the Acquirers to compete effectively.

V. APPOINTMENT OF DIVESTITURE TRUSTEE

A. If Defendants have not divested the Divestiture Assets within the time period specified in Section IV(A), Defendants shall notify the United States of that fact in writing, specifically identifying the Divestiture Assets that have not been divested. Upon application of the United States, the Court shall appoint a Divestiture Trustee selected by the United States and approved by the Court to effect the divestiture of the Divestiture Assets that have not yet been divested.

B. After the appointment of a Divestiture Trustee becomes effective, only the Divestiture Trustee shall have the right to sell the relevant Divestiture Assets. The Divestiture Trustee shall have the power and authority to accomplish the divestiture to an Acquirer acceptable to the United States at such price and on such terms as are then obtainable upon reasonable effort by the Divestiture Trustee, subject to the provisions of Sections IV, V, and VI of this Final Judgment, and shall have such other powers as this Court deems appropriate. Subject to Section V(D) of this Final Judgment, the Divestiture Trustee may hire at the cost and expense of Defendants any investment bankers, attorneys, or other agents, who shall be solely accountable to the Divestiture Trustee, reasonably necessary in the Divestiture Trustee's judgment to assist in the divestiture. Any such investment bankers, attorneys, or other agents shall serve on such terms and conditions as the United States approves, including confidentiality requirements and conflict of interest certifications.

C. Defendants shall not object to a sale by the Divestiture Trustee on any ground other than the Divestiture Trustee's malfeasance. Any such objections by Defendants must be conveyed in writing to the United States and the Divestiture Trustee within ten (10) calendar days after the Divestiture Trustee has provided the notice required under Section VI.

D. The Divestiture Trustee shall serve at the cost and expense of Defendants pursuant to a written agreement, on such terms and conditions as the United States approves, including confidentiality requirements and conflict of interest certifications. The Divestiture Trustee shall account for all monies derived from the sale of the relevant Divestiture Assets and all costs and expenses so incurred. After approval by the Court of the Divestiture Trustee's accounting, including fees for its services yet unpaid and those of any professionals and agents retained by the Divestiture Trustee, all remaining money shall be paid to Defendants and the trust shall then be terminated. The compensation of the Divestiture Trustee and any professionals and agents retained by the Divestiture Trustee shall be reasonable in light of the value of the Divestiture Assets subject to sale by the Divestiture Trustee and based on a fee arrangement providing the Divestiture Trustee with an incentive based on the price and terms of the divestiture and the speed with which it is accomplished, but timeliness is paramount. If the Divestiture Trustee and Defendants are unable to reach agreement on the Divestiture Trustee's or any agents' or consultants' compensation or other terms and conditions of engagement within 14 calendar days of appointment of the Divestiture Trustee, the United States may, in its sole discretion, take appropriate action, including making a recommendation to the Court. The Divestiture Trustee shall, within three (3) business days of hiring any other professionals or agents, provide written notice of such hiring and the rate of compensation to Defendants and the United States.

E. Defendants shall use their best efforts to assist the Divestiture Trustee in accomplishing the required divestiture. The Divestiture Trustee and any consultants, accountants, attorneys, and other agents retained by the Divestiture Trustee shall have full and complete access to the personnel, books, records, and facilities of the business to be divested, and Defendants shall develop financial and other information relevant to such business as the Divestiture Trustee may reasonably request, subject to reasonable protection for trade secret or other confidential research, development, or commercial information or any applicable privileges. Defendants shall take no action to interfere with or to impede the Divestiture Trustee's accomplishment of the divestiture.

F. After its appointment, the Divestiture Trustee shall file monthly reports with the United States and, as appropriate, the Court setting forth the Divestiture Trustee's efforts to accomplish the relevant divestitures ordered under this Final Judgment. To the extent such reports contain information that the Divestiture Trustee deems confidential, such report shall not be filed in the public docket of the Court. Such report shall include the name, address, and telephone number of each person who, during the preceding month, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Divestiture Assets, and shall describe in detail each contact with any such person. The Divestiture Trustee shall maintain full records of all efforts made to divest the relevant Divestiture Assets.

G. If the Divestiture Trustee has not accomplished the divestitures ordered under this Final Judgment within six (6) months after its appointment, the Divestiture Trustee shall promptly file with the Court a report setting forth (1) the Divestiture Trustee's efforts to accomplish the required divestiture, (2) the reasons, in the Divestiture Trustee's judgment, why the required divestiture has not been accomplished, and (3) the Divestiture Trustee's recommendations. To the extent such report contains information that the Divestiture Trustee deems confidential, such report shall not be filed in the public docket of the Court. The Divestiture Trustee shall at the same time furnish such report to the United States which shall have the right to make additional recommendations consistent with the purpose of the trust. The Court thereafter shall enter such orders as it shall deem appropriate to carry out the purpose of the Final Judgment, which may, if necessary, include extending the trust and the term of the Divestiture Trustee's appointment by a period requested by the United States.

H. If the United States determines that the Divestiture Trustee has ceased to act or failed to act diligently or in a reasonably cost-effective manner, it may recommend the Court appoint a substitute Divestiture Trustee.

VI. NOTICE OF PROPOSED DIVESTITURE

A. Within two (2) business days following execution of a definitive divestiture agreement, Defendants or the Divestiture Trustee, whichever is then responsible for effecting the divestitures required herein, shall notify the United States of any proposed divestiture required by Section IV or V of this Final Judgment. If the Divestiture Trustee is responsible, it shall similarly notify Defendants. The notice shall set forth the details of the proposed divestiture and list the name, address, and telephone number of each person not previously identified who offered or expressed an interest in or desire to acquire any ownership interest in the Divestiture Assets, together with full details of the same.

B. Within fifteen (15) calendar days of receipt by the United States of such notice, the United States may request from Defendants, the proposed Acquirer, any other third party, or the Divestiture Trustee, if applicable, additional information concerning the proposed divestiture, the proposed Acquirer, and any other potential Acquirers. Defendants and the Divestiture Trustee shall furnish any additional information requested within fifteen (15) calendar days of the receipt of the request, unless the parties shall otherwise agree.

C. Within thirty (30) calendar days after receipt of the notice or within twenty (20) calendar days after the United States has been provided the additional information requested from Defendants, the proposed Acquirer, any third party, and the Divestiture Trustee, whichever is later, the United States shall provide written notice to Defendants and the Divestiture Trustee, if there is one, stating whether or not it objects to the proposed divestiture. If the United States provides written notice that it does not object, the divestiture may be consummated, subject only to Defendants' limited right to object to the sale under Section V(C) of this Final Judgment. Absent written notice that the United States does not object to the proposed Acquirer or upon objection by the United States, a divestiture proposed under Section IV or Section V shall not be consummated. Upon objection by Defendants under Section V(C), a divestiture proposed under Section V shall not be consummated unless approved by the Court.

VII. FINANCING

Defendants shall not finance all or any part of any purchase made pursuant to Section IV or V of this Final Judgment.

VIII. ASSET PRESERVATION

Until the divestitures required by this Final Judgment have been accomplished, Defendants shall take all steps necessary to comply with the Asset Preservation Stipulation and Order entered by this Court. Defendants shall take no action that would jeopardize the divestitures ordered by this Court.

IX. AFFIDAVITS

A. Within twenty (20) calendar days of the filing of the Complaint in this matter, and every thirty (30) calendar days thereafter until the divestiture has been completed under Section IV or V of this Final Judgment, Defendants shall deliver to the United States an affidavit as to the fact and manner of their compliance with Section IV or V of this Final Judgment. Each such affidavit shall include the name, address, and telephone number of each person who, during the preceding thirty (30) calendar days, made an offer to acquire, expressed an interest in acquiring, entered into negotiations to acquire, or was contacted or made an inquiry about acquiring, any interest in the Divestiture Assets, and shall describe in detail each contact with any such person during that period. Each such affidavit shall also include a description of the efforts Defendants have taken to solicit buyers for the Divestiture Assets and to provide required information to prospective Acquirers, including the limitations, if any, on such information. Assuming the information set forth in the affidavit is true and complete, any objection by the United States to information provided by Defendants, including limitations on information, shall be made within fourteen (14) calendar days of receipt of such affidavit.

B. Within twenty (20) calendar days of the filing of the Complaint in this matter, Defendants shall deliver to the United States an affidavit that describes in reasonable detail all actions Defendants have taken and all steps Defendants have implemented on an ongoing basis to comply with Section VIII of this Final Judgment. Defendants shall deliver to the United States an affidavit describing any changes to the efforts and actions outlined in Defendants' earlier affidavits filed pursuant to this section within fifteen (15) calendar days after the change is implemented.

C. Defendants shall keep all records of all efforts made to preserve and divest the Divestiture Assets until one year after such divestiture has been completed.

X. COMPLIANCE INSPECTION

A. For the purposes of determining or securing compliance with this Final Judgment, or of any related orders such as any Asset Preservation Stipulation and Order, or of determining whether the Final Judgment should be modified or vacated, and subject to any legally recognized privilege, from time to time authorized representatives of the United States Department of Justice, including consultants and other persons retained by the United States, shall, upon written request of an authorized representative of the Assistant Attorney General in charge of the Antitrust Division, and on reasonable notice to Defendants, be permitted:

(1) access during Defendants' office hours to inspect and copy, or at the option of the United States, to require Defendants to provide hard copies or electronic copies of, all books, ledgers, accounts, records, data, and documents in the possession, custody, or control of Defendants, relating to any matters contained in this Final Judgment; and

(2) to interview, either informally or on the record, Defendants' officers, employees, or agents, who may have their individual counsel present, regarding such matters. The interviews shall be subject to the reasonable convenience of the interviewee and without restraint or interference by Defendants.

B. Upon the written request of an authorized representative of the Assistant Attorney General in charge of the Antitrust Division, Defendants shall submit written reports or responses to written interrogatories, under oath if requested, relating to any of the matters contained in this Final Judgment as may be requested.

C. No information or documents obtained by the means provided in this section shall be divulged by the United States to any person other than an authorized representative of the executive branch of the United States, except in the course of legal proceedings to which the United States is a party (including grand jury proceedings), or for the purpose of securing compliance with this Final Judgment, or as otherwise required by law.

D. If at the time information or documents are furnished by Defendants to the United States, Defendants represent and identify in writing the material in any such information or documents to which a claim of protection may be asserted under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure, and Defendants mark each pertinent page of such material, ''Subject to claim of protection under Rule 26(c)(1)(G) of the Federal Rules of Civil Procedure,'' then the United States shall give Defendants ten (10) calendar days notice prior to divulging such material in any legal proceeding (other than a grand jury proceeding).

XI. NOTIFICATION

A. Unless such transaction is otherwise subject to the reporting and waiting period requirements of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, as amended, 15 U.S.C. 18a (the ''HSR Act''): (1) Fairway, without providing advance notification to DOJ, shall not directly or indirectly acquire any outdoor advertising assets in the form of billboards or any interest, including any financial, security, loan, equity or management interest, in any outdoor advertising business that owns billboards in the metropolitan statistical areas associated with Rochester, Minnesota and Indianapolis, Indiana; and (2) Clear Channel, without providing advance notification to DOJ, shall not (a) acquire any outdoor advertising assets located in the Atlanta metropolitan statistical area that were originally included in, but later removed from, the Transaction; and (b) directly or indirectly acquire any outdoor advertising assets in the form of billboards or any interest, including any financial, security, loan, equity or management interest, in any outdoor advertising business that owns billboards in the metropolitan statistical area associated with Atlanta, Georgia where the assets or interests to be acquired have annual revenues for the last twelve months in excess of $5 million.

B. Such notification shall be provided to the DOJ in the same format as, and per the instructions relating to the Notification and Report Form set forth in the Appendix to Part 803 of Title 16 of the Code of Federal Regulations as amended, except that the information requested in Items 5 through 8 of the instructions must be provided only about outdoor advertising. Notification shall be provided at least thirty (30) calendar days prior to acquiring any such interest, and shall include, beyond what may be required by the applicable instructions, the names of the principal representatives of the parties to the agreement who negotiated the agreement, and any management or strategic plans discussing the proposed transaction. If within the 30-day period after notification, representatives of the Antitrust Division make a written request for additional information, Defendants shall not consummate the proposed transaction or agreement until thirty (30) calendar days after submitting all such additional information. Early termination of the waiting periods in this paragraph may be requested and, where appropriate, granted in the same manner as is applicable under the requirements and provisions of the HSR Act and rules promulgated thereunder. This Section shall be broadly construed and any ambiguity or uncertainty regarding the filing of notice under this Section shall be resolved in favor of filing notice.

XII. NO REACQUISITION

Defendants may not reacquire any part of the Divestiture Assets during the term of this Final Judgment.

XIII. RETENTION OF JURISDICTION

This Court retains jurisdiction to enable any party to this Final Judgment to apply to this Court at any time for further orders and directions as may be necessary or appropriate to carry out or construe this Final Judgment, to modify any of its provisions, to enforce compliance, and to punish violations of its provisions.

XIV. EXPIRATION OF FINAL JUDGMENT

Unless this Court grants an extension, this Final Judgment shall expire ten years from the date of its entry.

XV. PUBLIC INTEREST DETERMINATION

Entry of this Final Judgment is in the public interest. The parties have complied with the requirements of the Antitrust Procedures and Penalties Act, 15 U.S.C § 16, including making copies available to the public of this Final Judgment, the Competitive Impact Statement, and any comments thereon, and the United States' responses to comments. Based upon the record before the Court, which includes the Competitive Impact Statement and any comments and response to comments filed with the Court, entry of this Final Judgment is in the public interest.

BILLING CODE 4410–11–P

DEPARTMENT OF JUSTICE

[OMB Number 1190–0001]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension Without Change, of a Previously Approved Collection Procedures for the Administration of Section 5 of the Voting Rights Act of 1965

AGENCY: Civil Rights Division, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Civil Rights Division, Voting Section, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** at 81 FR 69855 on October 7, 2016, allowing for a 60-day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until January 30, 2017.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Robert S. Berman, Deputy Chief, Department of Justice, Civil Rights Division, Voting Section, 950 Pennsylvania Avenue 7243 NWB, (phone: 202–514–8690).

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Civil Rights Division, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a currently approved collection.

2. *The Title of the Form/Collection:* Procedures for the Administration of Section 5 of the Voting Rights Act of 1965.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* None (Civil Rights Division).

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary respondents: State, Local, or Tribal Government. Other: None. Abstract: Jurisdictions specially covered under the Voting Rights Act are required to comply with Sections 3 or 5 of the Act before they may implement any change in a standard, practice, or procedure affecting voting. One option for such compliance is to submit that change to Attorney General for review and establish that the proposed voting changes are not racially discriminatory. The procedures facilitate the provision of information that will enable the Attorney General to make the required determination.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 1 respondent will complete each form within approximately 3.0 hours.

6. *An estimate of the total public burden (in hours) associated with the collection:* The estimated public burden associated with this collection is 3.0 total hours.

If additional information is required contact: Melody D. Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405A, Washington, DC 20530.

Dated: December 27, 2016.

Melody D. Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–13–P

DEPARTMENT OF JUSTICE

[OMB Number 1110–0057]

Agency Information Collection Activities; Proposed eCollection eComments Requested; A Newly Approved Data Collection National Use-of-Force Data Collection

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services Division (CJIS) has submitted the following Information Collection Request to the Office of Management and Budget (OMB) for review and clearance in accordance with the established review procedures of the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** on October 5, 2016, Volume 81, Number 193, Pages 69084–69087 allowing for a 60-day comment period.

DATES: Comments are encouraged and will be accepted for an additional days until January 30, 2017.

FOR FURTHER INFORMATION CONTACT: To ensure that comments on the information collection are received, OMB recommends that written comments be emailed to *useofforce publicnotice@ic.fbi.gov*.

If you have additional comments especially on the estimated public burden or associated response time, suggestions, or copy of the proposed information collection instrument with instructions or additional information, please contact Ms. Amy Blasher, Unit Chief, FBI CJIS Division, Module D–3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and/or
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* New collection.

2. *The Title of the Form/Collection:* National Use-of-Force Data Collection.

3. *The agency form number:* The form number is unnumbered. The applicable component within the DOJ is the FBI CJIS Division.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Local, state, tribal, and federal law enforcement agencies.

Other: Local, state, tribal, and federal government.

Abstract: The FBI has a long-standing tradition of providing crime statistics collected from local, state, tribal, and federal law enforcement agencies on Law Enforcement Officers Killed and Assaulted (LEOKA) and justifiable homicides which enable transparency and accountability. To provide a better understanding of the incidents of use of force by law enforcement, the Uniform Crime Reporting (UCR) Program is proposing a new data collection for law enforcement agencies to provide information on incidents where use of force by a law enforcement officer (as defined by the LEOKA Program) has led to the death or serious bodily injury of a person, as well as when a law enforcement officer discharges a firearm at or in the direction of a person.

The current LEOKA definition of a law enforcement officer is: ''All local, county, state, and federal law enforcement officers (such as municipal, county police officers, constables, state police, highway patrol, sheriffs, their deputies, federal law enforcement officers, marshals, special agents, etc.) who are sworn by their respective government authorities to uphold the law and to safeguard the rights, lives, and property of American citizens. They must have full arrest powers and be members of a public governmental law enforcement agency, paid from government funds set aside specifically for payment to sworn police law enforcement organized for the purposes of keeping order and for preventing and detecting crimes, and apprehending those responsible.''

The definition of ''serious bodily injury'' will be based, in part, on 18 United States Code (U.S.C.), Section 2246 (4), to mean ''bodily injury that involves a substantial risk of death, unconsciousness, protracted and obvious disfigurement, or protracted loss or impairment of the function of a bodily member, organ, or mental faculty.'' These actions include the use of a firearm; an electronic control weapon (*e.g.,* Taser); an explosive device; pepper or OC (oleoresin capsicum) spray or other chemical agent; a baton; an impact projectile; a blunt instrument; hands-fists-feet; or canine.

Local, state, tribal and federal law enforcement agencies will provide information on characteristics of the incident, subjects of the use of force, and the officers that applied force in the incident. Agencies will also be asked to positively affirm, on a monthly basis, whether they did or did not have any use of force that resulted in a fatality, a serious bodily injury to a person, or firearm discharges at or in the direction of a person. Enrollment information from agencies and state points of contact will be collected at the initiation of the collection and updated no less than annually to assist with the managing of this data. The process for developing a robust national collection on use of force involves a multistage, collaborative approach. With this request, the FBI proposes a pilot study. The pilot study will be conducted in two phases, each with its own focus. The pilot study design will be informed by pretesting activities conducted under the FBI's generic clearance [OMB 1110–0057] as discussed briefly here. Both pretesting and pilot efforts will rely upon effective collaboration between the FBI and the Bureau of Justice Statistics (BJS) to achieve and maintain a high level of data quality in an efficient manner.

Pretesting

Pretesting activities were conducted prior to the initiation of a pilot study and allowed for finalization of the data collection instructions and associated instructions before the pilot data collection. These activities provided the preliminary information needed to both construct the sample of targeted agencies for the pilot study and identify early problem areas that could be resolved prior to formal testing. The pretesting consisted of three parts: Cognitive testing of survey items (including those relating to the time of the incident and measures of serious bodily harm), testing of questionnaire design (to better assess respondent burden and functionality), and a canvass of state UCR program managers (to assist with developing the sample frame for the proposed pilot). Cognitive testing was conducted in a manner to capture differences in measurement by region and law enforcement agency type, should they exist. Testing of questionnaire design includes follow-up with respondents to assess any difficulty with definitions or administration. Canvassing state UCR programs indicates the means by which use-of-force statistics are reported—either through the UCR Program itself or directly from state and local law enforcement agencies.

Pilot

The purpose of the pilot study is to evaluate the quality of information collected through the use-of-force data collection tool against information collected through coding of state law enforcement records. Instructions and manuals, as well as training modules and curricula, all serve to help guide individuals at law enforcement agencies to translate their local records into a uniform manner when reporting. However, it may be difficult to communicate coding schemes based upon a common set of definitions. Therefore, after providing basic instructions to respondents, the pilot study will evaluate the accuracy of codes assigned by respondents to identify concepts with less consensus across locations and types of law enforcement agencies and thereby improve coding instructions. Potential sources of nonresponse and incomplete information will also be evaluated. Both phases of the pilot will include a set of target agencies and states that will allow for sufficient data to evaluate intercoder reliability in the application of definitions and guidance. The phases of the pilot differ by the mode of submission for incident data, the addition of site visits, and the number of sites recruited.

Phase 1

The first phase of the pilot will provide a prospective comparison of reported incidents in the use-of-force data collection through the use-of-force data collection tool to the original records voluntarily provided by the reporting agency to the FBI. Those agencies that are recruited and agree to participate in the pilot study will understand that local records will be forwarded to the FBI upon submission of statistical information to the use of force data collection tool. The local case information will be redacted of any personally identifiable information prior to being forwarded to the FBI, and all local records will be destroyed upon completion of the pilot study.

The goal of this review is to ascertain whether the agencies are applying the definitions and using the provided instructions in a uniform manner. The records review and comparison will also identify problematic areas where instructions need more detail or more training should be provided to agencies. The data will also be used in the planning of the second phase of the pilot that will involve a site visit to a subset of agencies. Finally, the FBI will work with state UCR program managers in the pilot states to identify any potential problems with local and state record-keeping that impedes the ability to provide the use-of-force information to the FBI.

Phase II

The second phase of the pilot will include the set of agencies recruited for the first phase, as well as two additional states recruited to provide their use-of-force data in a bulk data submission. These states will be nominated based upon the information gained from the canvass of state UCR program managers during pretesting. The FBI will also continue to accept agencies and states that voluntarily provide data to the data collection.

In addition to the records review and comparison begun during Phase 1, Phase II will include targeted, on-site visits with a subsample of pilot agencies. The subsample will be selected to include different geographic areas. The primary goal of the on-site visits is to ascertain the level and source of underreporting of within-scope incidents—especially those with serious bodily injury or firearm discharges. The on-site visits will also allow for an assessment of local record-keeping capabilities and changes to the data collection process.

At the conclusion of Phase II, the FBI will release a report detailing the results of its data collection, analysis, and recommendations to inform the design of a main study.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 701,486 law enforcement officers will participate in the National Use-of-Force Data Collection. The estimated burden hours per incident is 0.63 for completion.

6. *An estimate of the total public burden (in hours) associated with the collection:* Two separate burden estimates are provided for the proposed

collection—one for the pilot study and a second for the annual collection to include all law enforcement agencies. Burden estimates were based on sources from the FBI UCR Program, the BJS, and the Centers for Disease Control (CDC). The BJS has recently estimated that approximately 1,400 fatalities attributed to a law enforcement use of force occur annually (Planty, et al., 2015, *Arrest-Related Deaths Program: Data Quality Profile, http://www.bjs.gov/index.cfm?ty=pbdetail&iid=5260*). In addition, the CDC estimates the incidences of fatal and nonfatal injury—including those due to legal intervention—from emergency department data. In their piece entitled, ''The real risks during deadly police shootouts: Accuracy of the naïve shooter,'' Lewinski, *et al.* (2015) estimates law enforcement officers miss their target approximately 50 percent of the time at the firing range and was used as a simple estimate for the number of firearm discharges at or in the direction of a person, but did not strike the individual. In addition, the UCR Program collects counts of the number of law enforcement sworn and civilian employees in law enforcement agencies.

The table below uses a rate per officer to estimate the anticipated number of reports that could be received within the two pilot phases and an annual collection. Because the nonfatal injury due to legal intervention estimate from the CDC does not provide any overt measure of severity, these injuries are estimated to be as high as 82,283 or as low as 5,546. Based upon these estimates, the FBI is requesting 52,416 burden hours for an annual collection of this data.

ESTIMATED BURDEN FOR PILOT STUDY

Timeframe	Reporting group	Annual rate per officer			Estimated number of incidents		Estimated burden hours		
		Approximate number of officers	Maximum	Minimum	Maximum (3 mos)	Minimum (3 mos)	Estimated burden hours per incident	Maximum	Minimum
Pilot I (3 months)	Large agencies	178,557	0.112	0.012	5,000	536	0.63	3,150	338
	Pilot I States	54,781	0.112	0.012	1,534	165	0.63	966	104
Pilot II (3 months)	Large agencies	178,557	0.112	0.012	5,000	554	0.63	3,150	349
	Pilot I & II States	82,172	0.112	0.012	2,300	247	0.63	6,140	156
Pilot Total (6 months)	—	—	—	—	13,834	1,502	0.63	13,406	947

Estimated Burden for All Law Enforcement Agencies in Annual Collection

Timeframe	Reporting group	Approximate number of officers	Maximum	Minimum	Maximum	Minimum	Estimated burden hours per incident	Maximum	Minimum
Collection (Annual)	All agencies	701,486	0.112	0.012	83,200	8,700	0.63	52,416	5,481

If additional information is required contact: Ms. Amy Blasher, Unit Chief, United States DOJ, FBI CJIS Division, Crime Data Modernization Team, Module D–3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306.

Dated: December 27, 2016.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OMB Number 1121–NEW]

BJS Confidentiality Pledge Revision Notice

AGENCY: Bureau of Justice Statistics, Justice.

ACTION: 30-Day notice.

SUMMARY: The Bureau of Justice Statistics (BJS), a component of the Office of Justice Programs (OJP) in the U.S. Department of Justice (DOJ), is announcing revisions to the confidentiality pledge(s) it provides to its respondents. These revisions are required by the passage and implementation of provisions of the federal Cybersecurity Enhancement Act of 2015, which requires the Secretary of the Department of Homeland Security (DHS) to provide Federal civilian agencies' information technology systems with cybersecurity protection for their Internet traffic. More details on this announcement are presented in the **SUPPLEMENTARY INFORMATION** section below.

DATES: These revisions become effective on December 30, 2016.

ADDRESSES: Questions about this notice should be addressed to the Bureau of Justice Statistics, Office of Justice Programs, U.S. Department of Justice, ATTN: Allina Lee, 810 7th Street NW., Washington, DC 20151.

FOR FURTHER INFORMATION CONTACT: Allina Lee by telephone at 202–305–0765 (this is not a toll-free number); by email at *Allina.Lee@usdoj.gov;* or by mail or courier to the Bureau of Justice Statistics, Office of Justice Programs, U.S. Department of Justice, ATTN: Allina Lee, 810 7th Street NW., Washington, DC 20151. Because of delays in the receipt of regular mail related to security screening, respondents are encouraged to use electronic communications.

SUPPLEMENTARY INFORMATION: Federal statistics provide key information that the Nation uses to measure its performance and make informed choices about budgets, employment, health, investments, taxes, and a host of other significant topics. Most federal surveys are completed on a voluntary basis. Respondents, ranging from businesses to households to institutions, may choose whether or not to provide the requested information. Many of the most valuable federal statistics come from surveys that ask for highly sensitive information such as proprietary business data from companies or particularly personal information or practices from individuals. BJS protects all data collected under its authority under the confidentiality provisions of 42 U.S.C. 3789g. Strong and trusted confidentiality and exclusively statistical use pledges under Title 42 U.S.C. 3789g and similar statutes are effective and necessary in honoring the trust that businesses, individuals, and institutions, by their responses, place in statistical agencies.

Under statistical confidentiality protection statutes, federal statistical agencies make statutory pledges that the information respondents provide will be seen only by statistical agency personnel or their agents and will be used only for statistical purposes. These statutes protect such statistical information from administrative, law enforcement, taxation, regulatory, or any other non-statistical use and immunize the information submitted to statistical agencies from legal process. Moreover, many of these statutes carry monetary fines and/or criminal penalties for conviction of a knowing and willful unauthorized disclosure of covered information. Any person violating the confidentiality provisions of 42 U.S.C. 3789g may be punished by a fine of up to $10,000, in addition to any other penalties imposed by law.

As part of the Consolidated Appropriations Act for Fiscal Year 2016 (Pub. L. 114–113) signed on December 17, 2015, the Congress included the Federal Cybersecurity Enhancement Act of 2015 (codified in relevant part at 6 U.S.C. 151). This act, among other provisions, permits and requires the Secretary of Homeland Security to provide federal civilian agencies' information technology systems with cybersecurity protection for their Internet traffic. The technology currently used to provide this protection against cyber malware is known as Einstein 3A. Einstein 3A electronically searches internet traffic in and out of federal civilian agencies in real time for malware signatures.

When such a signature is found, the internet packets that contain the malware signature are shunted aside for further inspection by DHS personnel. Because it is possible that such packets entering or leaving a statistical agency's information technology system may contain a small portion of confidential statistical data, statistical agencies can no longer promise their respondents that their responses will be seen only by statistical agency personnel or their agents. However, federal statistical agencies can promise, in accordance with provisions of the Federal Cybersecurity Enhancement Act of 2015, that such monitoring can be used only to protect information and information systems from cybersecurity risks, thereby, in effect, providing stronger protection to the integrity of the respondents' submissions.

Consequently, with the passage of the Federal Cybersecurity Enhancement Act of 2015, the federal statistical community has an opportunity to welcome the further protection of its confidential data offered by DHS' Einstein 3A cybersecurity protection program. The DHS cybersecurity program's objective is to protect federal civilian information systems from malicious malware attacks. The federal statistical system's objective is to endeavor to ensure that the DHS Secretary performs those essential duties in a manner that honors the statistical agencies' statutory promises to the public to protect their confidential data. DHS and the federal statistical system have been successfully engaged in finding a way to balance both objectives and achieve these mutually reinforcing objectives.

However, pledges of confidentiality made pursuant to 42 U.S.C. 3789g and similar statutes assure respondents that their data will be seen only by statistical agency personnel or their agents. Because it is possible that DHS personnel could see some portion of those confidential data in the course of examining the suspicious Internet packets identified by Einstein 3A sensors, statistical agencies are revising their confidentiality pledges to reflect this process change.

Therefore, BJS is providing this notice to alert the public to these confidentiality pledge revisions in an efficient and coordinated fashion. Below is a listing of BJS's current Paperwork Reduction Act (PRA) OMB numbers and information collection titles and their associated revised confidentiality pledge(s) for the Information Collections whose confidentiality pledges will change to reflect the statutory implementation of DHS' Einstein 3A monitoring for cybersecurity protection purposes.

The following BJS statistical confidentiality pledge will now apply to the Information Collections conducted by BJS and protected under 42 U.S.C. 3789g, whose PRA OMB numbers and titles are listed below. The new lines added to address the new cybersecurity monitoring activities are bolded for reference only, and will not be bolded in the pledge provided to respondents:

''*The Bureau of Justice Statistics (BJS) is dedicated to maintaining the confidentiality of your personally identifiable information, and will protect it to the fullest extent under federal law. BJS, BJS employees, and BJS data collection agents will use the information you provide for statistical purposes only, and will not disclose your information in identifiable form without your consent to anyone outside of the BJS project team. All data collected under BJS's authority are protected under the confidentiality provisions of 42 U.S.C. 3789g, and any person who violates these provisions may be punished by a fine up to $10,000, in addition to any other penalties imposed by law. Further, per the Cybersecurity Enhancement Act of 2015 (codified in relevant part at 6 U.S.C. 151), federal information systems are protected from malicious activities through cybersecurity screening of transmitted data. For more information on the federal statutes, regulations, and other authorities that govern how BJS, BJS employees, and data collection agents use, handle, and protect your information, see the BJS Data Protection Guidelines.*''

OMB Control No.	Information collection title
1121–0094 ...	Deaths in Custody Reporting Program.
1121–0065 ...	National Corrections Reporting Program.

BJS has also added information about the Cybersecurity Enhancement Act and Einstein 3A to the BJS Data Protection Guidelines to provide more details to interested respondents about the new cybersecurity monitoring requirements. The following text has been added to Section V. Information System Security and Privacy Requirements:

''*The Cybersecurity Enhancement Act of 2015 (codified in relevant part at 6 U.S.C. 151) required the Department of Homeland Security (DHS) to provide cybersecurity protection for federal civilian agency information technology systems and to conduct cybersecurity screening of the Internet traffic going in and out of these systems to look for viruses, malware, and other cybersecurity threats. DHS has implemented this requirement by instituting procedures such that, if a potentially malicious malware signature were found, the Internet packets that contain the malware signature would be further inspected, pursuant to any legal required legal process, to identify and mitigate the cybersecurity threat. In accordance with the Act's provisions, DHS conducts these cybersecurity screening activities solely to protect federal information and information systems from cybersecurity risks. OJP has installed DHS's cybersecurity protection software, Einstein 3A, on its information technology systems to comply with the Act's requirements and to further safeguard the information transmitted to and from its systems, including BJS data, from cybersecurity threats and vulnerabilities.*''

The Census Bureau collects data on behalf of BJS for the below listing of PRA OMB numbers and information collection titles. These collections are protected under Title 13 U.S.C. Section 9. The Census Bureau issued a **Federal Register** notice (FRN) and submitted an emergency clearance request to OMB for revised confidentiality pledge language, with the new line to address the new cybersecurity screening requirements bolded for reference:

''*The U.S. Census Bureau is required by law to proteect your information. The Census Bureau is not permitted to publicly release your responses in a way that could identify you. Per the Federal Cybersecurity Enhancement Act of 2015, your data are protected from cybersecurity risks through screening of the systems that transmit your data.*''

OMB Control No.	Information collection title
1121–0111 ...	National Crime Victimization Survey (NCVS).
1121–0184 ...	School Crime Supplement to the NCVS.
1121–0317 ...	Identity Theft Supplement to the NCVS.
1121–0260 ...	Police Public Contact Supplement to the NCVS.
1121–0302 ...	Supplemental Victimization Survey to the NCVS.

The FRN submitted by the Census Bureau can be accessed at *https://www.federalregister.gov/documents/2016/12/14/2016-30014/confidentiality-pledge-revision-notice,* and the Census Bureau's PRA clearance request can be accessed at *https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201612-0607-001.*

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: December 27, 2016.

Melody Braswell,

Department Clearance Officer, U.S. Department of Justice.

BILLING CODE 4410–18–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52–025 and 52–026; NRC–2008–0252]

Southern Nuclear Operating Company, Inc., Vogtle Electric Generating Plant, Units 3 and 4; Tier 1 Editorial and Consistency Changes

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemption and combined license amendment; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is granting an exemption to allow a departure from the certification information of Tier 1 of the generic design control document (DCD) and is issuing License Amendment No. 56 to Combined Licenses (COL) NPF–91 and NPF–92. The COLs were issued to Southern Nuclear Operating Company, Inc., and Georgia Power Company, Oglethorpe Power Corporation, MEAG Power SPVM, LLC, MEAG Power SPVJ, LLC, MEAG Power SPVP, LLC, Authority of Georgia, and the City of Dalton, Georgia (the licensee); for construction and operation of the Vogtle Electric Generating Plant (VEGP) Units 3 and 4, located in Burke County, Georgia. The granting of the exemption allows the changes to Tier 1 information asked for in the amendment. Because the acceptability of the exemption was determined in part by the acceptability of the amendment, the exemption and amendment are being issued concurrently.

ADDRESSES: Please refer to Docket ID NRC–2008–0252 when contacting the NRC about the availability of information regarding this document. You may access information related to this document, which the NRC possesses and is publicly available, using any of the following methods:

- *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2008–0252. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''*Begin Web-based ADAMS Search.*'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document. The request for the amendment and exemption was submitted by letter dated June 3, 2016, and available in ADAMS under Accession No. ML16155A366.
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Chandu Patel, Office of New Reactors, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3025; email: *Chandu.Patel@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is granting an exemption from Paragraph B of section III, ''Scope and Contents,'' of appendix D, ''Design Certification Rule for the AP1000,'' to part 52 of title 10 of the *Code of Federal Regulations* (10 CFR), and issuing License Amendment No. 56 to COLs, NPF–91 and NPF–92, to the licensee. The exemption is required by Paragraph A.4 of Section VIII, ''Processes for Changes and Departures,'' appendix D, to 10 CFR part 52 to allow the licensee to depart from Tier 1 information. With the requested amendment, the licensee sought proposed changes that would correct editorial errors in plant-specific Tier 1 information, with corresponding changes to the associated COL Appendix C information, to promote consistency with the Updated Final Safety Analysis Report Tier 2 information. One of the proposed changes to plant-specific Tier 1 information also involves a change to Updated Final Safety Analysis Report Tier 2 information. The proposed amendment also involves a proposed editorial correction to COL Paragraph 2.D.(12)(g)1. Part of the justification for granting the exemption was provided by the review of the amendment. Because the exemption is necessary in order to issue the requested license amendment, the NRC granted the exemption and issued the amendment concurrently, rather than in sequence. This included issuing a combined safety evaluation containing the NRC's review of both the exemption request and the license amendment. The exemption met all applicable regulatory criteria set forth in 10 CFR 50.12, 10 CFR 52.7, and Section VIII.A.4 of appendix D to 10 CFR part 52. The license amendment was found to be acceptable as well. The combined safety evaluation is available in ADAMS under Accession No. ML16244A345.

Identical exemption documents (except for referenced unit numbers and license numbers) were issued to the licensee for VEGP Units 3 and 4 (COLs NPF–91 and NPF–92). The exemption documents for VEGP Units 3 and 4 can be found in ADAMS under Accession Nos. ML16244A301 and ML16244A324, respectively. The exemption is reproduced (with the exception of abbreviated titles and additional citations) in Section II of this document. The amendment documents for COLs NPF–91 and NPF–92 are available in ADAMS under Accession Nos. ML16244A270 and ML16244A283, respectively. A summary of the amendment documents is provided in Section III of this document.

II. Exemption

Reproduced below is the exemption document issued to VEGP Units 3 and Unit 4. It makes reference to the combined safety evaluation that provides the reasoning for the findings made by the NRC (and listed under Item 1) in order to grant the exemption:

1. In an application dated June 3, 2016, the licensee requested from the Commission an exemption to allow departures from Tier 1 information in the certified DCD incorporated by reference in 10 CFR part 52, appendix D, as part of license amendment request 16–008, ''Tier 1 Editorial and Consistency Changes.''

For the reasons set forth in Section 3 of the NRC's Safety Evaluation, which can be found at ADAMS Accession No. ML16244A345, the Commission finds that:

A. The exemption is authorized by law;

B. the exemption presents no undue risk to public health and safety;

C. the exemption is consistent with the common defense and security;

D. special circumstances are present in that the application of the rule in this circumstance is not necessary to serve the underlying purpose of the rule;

E. the special circumstances outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; and

F. the exemption will not result in a significant decrease in the level of safety otherwise provided by the design.

2. Accordingly, the licensee is granted an exemption from the certified DCD Tier 1 information, with corresponding information in COL Appendix C of the Facility Combined License as described in the licensee's request dated June 3, 2016. This exemption is related to, and necessary for the granting of License Amendment No. 56, which is being issued concurrently with this exemption.

3. As explained in Section 5.0 of the NRC's Safety Evaluation (ADAMS Accession No. ML16244A345), this exemption meets the eligibility criteria for categorical exclusion set forth in 10 CFR 51.22(c)(9). Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment needs to be prepared in connection with the issuance of the exemption.

4. This exemption is effective as of the date of its issuance.

III. License Amendment Request

By letter dated June 3, 2016, the licensee requested that the NRC amend the COLs for VEGP, Units 3 and 4, COLs NPF–91 and NPF–92. The proposed amendment is described in Section I of this **Federal Register** notice.

The Commission has determined for these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or COL, as applicable, proposed no significant hazards consideration determination, and opportunity for a hearing in connection with these actions, was published in the **Federal Register** on August 2, 2016 (81 FR 50729). No comments were received during the 30-day comment period.

The Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments.

IV. Conclusion

Using the reasons set forth in the combined safety evaluation, the NRC granted the exemption and issued the amendment that the licensee requested on June 3, 2016. The exemption and amendment were issued on October 12, 2016 as part of a combined package to the licensee (ADAMS Accession No. ML16308A174).

Dated at Rockville, Maryland, this 19th day of December 2016.

For the Nuclear Regulatory Commission.

Jennifer Dixon-Herrity,

Chief, Licensing Branch 4, Division of New Reactor Licensing, Office of New Reactors.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52–025 and 52–026; NRC–2008–0252]

Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 3 and 4; Consolidation of Uninterruptible Power Supply System Spare Battery Terminal Boxes

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemption and combined license amendment; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is granting an exemption to allow a departure from the certification information of Tier 1 of the generic design control document (DCD) and is issuing License Amendment No. 54 to Combined Licenses (COL), NPF–91 and NPF–92. The COLs were issued to Southern Nuclear Operating Company, Inc., and Georgia Power Company, Oglethorpe Power Corporation, MEAG Power SPVM, LLC, MEAG Power SPVJ, LLC, MEAG Power SPVP, LLC, Authority of Georgia, and the City of Dalton, Georgia (the licensee); for construction and operation of the Vogtle Electric Generating Plant (VEGP) Units 3 and 4, located in Burke County, Georgia.

The granting of the exemption allows the changes to Tier 1 information asked for in the amendment. Because the acceptability of the exemption was determined in part by the acceptability of the amendment, the exemption and amendment are being issued concurrently.

ADDRESSES: Please refer to Docket ID NRC–2008–0252 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2008–0252. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then

select "*Begin Web-based ADAMS Search.*" For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document. The request for the amendment and exemption was submitted by letter dated April 9, 2015, and available in ADAMS under Accession No. ML15099A568.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is granting an exemption from Paragraph B of Section III, "Scope and Contents," of Appendix D, "Design Certification Rule for the AP1000," to part 52 of Title 10 of the *Code of Federal Regulations* (10 CFR), and issuing License Amendment No. 54 to COLs, NPF–91 and NPF–92, to the licensee. The exemption is required by Paragraph A.4 of Section VIII, "Processes for Changes and Departures," Appendix D, to 10 CFR part 52 to allow the licensee to depart from Tier 1 information. With the requested amendment, the licensee sought proposed changes to the Class 1E direct current (DC) and Uninterruptible Power Supply System by replacing four Spare Termination Boxes with a single Spare Battery Termination Box. Part of the justification for granting the exemption was provided by the review of the amendment. Because the exemption is necessary in order to issue the requested license amendment, the NRC granted the exemption and issued the amendment concurrently, rather than in sequence. This included issuing a combined safety evaluation containing the NRC staff's review of both the exemption request and the license amendment. The exemption met all applicable regulatory criteria set forth in 10 CFR 50.12, 10 CFR 52.7, and Section VIII.A.4 of Appendix D to 10 CFR part 52. The license amendment was found to be acceptable as well. The combined safety evaluation is available in ADAMS under Accession No. ML16202A163.

Identical exemption documents (except for referenced unit numbers and license numbers) were issued to the licensee for VEGP Units 3 and 4 (COLs NPF–91 and NPF–92). The exemption documents for VEGP Units 3 and 4 can be found in ADAMS under Accession Nos. ML16202A128 and ML16202A136, respectively. The exemption is reproduced (with the exception of abbreviated titles and additional citations) in Section II of this document. The amendment documents for COLs NPF–91 and NPF–92 are available in ADAMS under Accession Nos. ML16202A112 and ML16202A118, respectively. A summary of the amendment documents is provided in Section III of this document.

II. Exemption

Reproduced below is the exemption document issued to VEGP Units 3 and Unit 4. It makes reference to the combined safety evaluation that provides the reasoning for the findings made by the NRC (and listed under Item 1) in order to grant the exemption:

1. In a letter dated April 9, 2015, the licensee requested from the Commission an exemption to allow departures from Tier 1 information in the certified DCD incorporated by reference in 10 CFR part 52, Appendix D, as part of license amendment request 15–004, "Consolidation of Uninterruptible Power System Spare Battery Termination Boxes."

For the reasons set forth in Section 3.1 of the NRC staff's Safety Evaluation that supports this license amendment, which can be found at ADAMS Accession Number ML16202A163, the Commission finds that:

A. The exemption is authorized by law;

B. the exemption presents no undue risk to public health and safety;

C. the exemption is consistent with the common defense and security;

D. special circumstances are present in that the application of the rule in this circumstance is not necessary to serve the underlying purpose of the rule;

E. the special circumstances outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; and

F. the exemption will not result in a significant decrease in the level of safety otherwise provided by the design.

2. Accordingly, the licensee is granted an exemption from the certified DCD Tier 1 information related to Class 1E DC and Uninterruptible Power Supply System, as described in the licensee's request dated April 9, 2015. This exemption is related to, and necessary for the granting of License Amendment No. 54, which is being issued concurrently with this exemption.

3. As explained in Section 5.0 of the NRC staff's Safety Evaluation that supports this license amendment (ADAMS Accession Number ML16202A163), this exemption meets the eligibility criteria for categorical exclusion set forth in 10 CFR 51.22(c)(9). Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment needs to be prepared in connection with the issuance of the exemption.

4. This exemption is effective as of the date of its issuance.

III. License Amendment Request

By letter dated April 9, 2015, the licensee requested that the NRC amend the COLs for VEGP, Units 3 and 4, COLs NPF–91 and NPF–92. The proposed amendment is described in Section I of this **Federal Register** notice.

The Commission has determined for these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or COL, as applicable, proposed no significant hazards consideration determination, and opportunity for a hearing in connection with these actions, was published in the **Federal Register** on July 21, 2015 (80 FR 43123). No comments were received during the 30-day comment period.

The Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments.

IV. Conclusion

Using the reasons set forth in the combined safety evaluation, the staff granted the exemption and issued the amendment that the licensee requested on April 9, 2015.

The exemption and amendment were issued on September 20, 2016, as part of a combined package to the licensee (ADAMS Accession No. ML16202A099).

Dated at Rockville, Maryland, this 19th day of December 2016.

For the Nuclear Regulatory Commission.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79690; File No. SR–BX–2016–073]

Self-Regulatory Organizations; NASDAQ BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend the Exchange's Transaction Fees at Rule 7019 (Market Data Distributor Fees)

December 23, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 20, 2016, NASDAQ BX, Inc. (''BX'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's transaction fees at Rule 7019 (Market Data Distributor Fees) to (i) increase the Monthly Internal Distributor Fee from $500 to $750 for BX TotalView, and (ii) increase the Monthly External Distributor Fee from $1,250 to $1,500 for BX TotalView, as described further below.

The text of the proposed rule change is available on the Exchange's Web site at *http://nasdaqbx.cchwallstreet.com/,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to increase the Monthly Internal Distributor Fee from $500 to $750 for BX TotalView, and to increase the Monthly External Distributor Fee from $1,250 to $1,500 for BX TotalView.

TotalView is a proprietary feed that provides subscribers with full depth-of-book data on BX for Nasdaq-listed securities and securities not listed on Nasdaq. TotalView allows customers to view all displayed quotes and orders attributed to specific market participants at every price level on BX, access total displayed anonymous interest at every price level on BX, and to see the total size of all displayed quotes and orders on BX. TotalView also offers trade data for BX executions that occur on BX.

Customers may access TotalView as either a Distributor, or through Direct Access. Rule 7019(b) defines a ''distributor'' of Exchange data as ''any entity that receives a feed or data file of Exchange data directly from the Exchange or indirectly through another entity and then distributes it either internally (within that entity) or externally (outside that entity).'' [3] Rule 7019(c) defines ''Direct Access'' as ''a telecommunications interface with the Exchange for receiving Exchange data, or receiving an Exchange data feed within the Exchange co-location facility, or receiving Exchange data via an Extranet access provider or other such provider that is fee-liable under 7025.'' [4]

The Exchange proposed the TotalView fees, among others, in 2009, following its acquisition by Nasdaq, Inc. and the resumption of its cash equities trading business.[5] The Exchange proposed that Distributors of TotalView would pay a $500 monthly fee to distribute the data feed internally (*i.e.,* to employees) and a $1,250 monthly fee to distribute to external customers.[6]

In support of these fees, the Exchange noted that the TotalView fee structure is similar to the structure for the TotalView data product offered by The NASDAQ Stock Market LLC (''Nasdaq''), but that the overall level of fees is lower than for Nasdaq TotalView. The lower fee levels for BX TotalView reflected the start-up nature of the Exchange's new equities trading platform, and was designed help to attract order flow to the Exchange, since, at its inception, the Exchange had zero market share and therefore set its fees, including data fees, with a view to attracting order flow. Finally, the Exchange noted that the alternatives that exist for market participants to determine market depth—such as other depth of book products that may be associated with markets with more liquidity, or order routing strategies designed to ascertain market depth—provided incentives for the Exchange to ensure that its fees for BX TotalView were set reasonably.[7]

With this proposal, BX proposes to increase the Monthly Internal Distributor Fee from $500 to $750 for BX TotalView, and increase the Monthly External Distributor Fee from

[3] *See* Rule 7019(b). The Rule also provides that all distributors shall execute an Exchange distributor agreement, and states that the Exchange itself is a vendor of its data feed(s) and has executed an Exchange distributor agreement and pays the distributor charge. *Id.*

[4] *See* Rule 7019(c).

[5] *See* Securities Exchange Act Release No. 59307 (January 28, 2009), 74 FR 6069 (February 4, 2009) (Notice of filing of SR–BX–2009–005). BX proposed, for the first year of BX's operation, to make TotalView available free of charge. *Id.*

[6] *Id.* The Exchange also proposed that Distributors pay a $1,000 monthly fee to receive the data directly from the Exchange, since the Exchange incurs costs to support the connection to each direct Distributor; indirect Distributors (*i.e.,* those receiving data from a direct Distributor) would not pay this charge.

[7] *Id.*

$1,250 to $1,500 for BX TotalView. BX is only changing the fee for the Monthly Internal and External Distributor Fees. The terms of access for TotalView, and the definition of ''Direct Access'' and ''Distributor,'' remain the same.

This fee increase is justified because BX has not increased the Distributor fees for TotalView since they were initially proposed in 2009, although the value of BX TotalView has increased since that time. Since 2009, BX's market share for quoting and trading of Nasdaq-listed securities and securities not listed on Nasdaq has increased, which has, in turn, increased the content and therefore the value of the TotalView product. In addition, various technical changes have enhanced TotalView by improving the performance and the resiliency of the BX matching engine, which, in turn, has improved outbound messaging through TotalView, especially during peak times of messaging traffic.[8] BX also notes that the proposed new TotalView fees remain consistent with fees for comparable products offered by other exchanges. This fee increase therefore reflects the increased value of the TotalView product and the comparative cost of other similar products.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[9] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[10] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, while adopting a series of steps to improve the current market model, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [11]

Likewise, in *NetCoalition* v. *Securities and Exchange Commission* [12] (''NetCoalition'') the D.C. Circuit upheld the Commission's use of a market-based approach in evaluating the fairness of market data fees against a challenge claiming that Congress mandated a cost-based approach.[13] As the court emphasized, the Commission ''intended in Regulation NMS that 'market forces, rather than regulatory requirements' play a role in determining the market data . . . to be made available to investors and at what cost.'' [14]

Further, ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .'' [15]

More specifically, the SEC recognized the importance of competition in setting fees for non-core market data products when approving the TotalView fees in 2009.[16] The SEC noted that TotalView related to the distribution of non-core, depth of book market data products, and the SEC was therefore able to use a market-based approach in analyzing the appropriateness of the fees.[17] Accordingly, the SEC recognized both BX's compelling need to attract order flow from market participants; and the availability to market participants of alternatives to purchasing BX's depth-of-book order data.[18] The SEC stated that, given the competitive landscape of trading in cash equities, BX must compete vigorously for order flow to maintain its share of trading volume.[19] This compelling need to attract order flow imposed significant pressure on BX to act reasonably in setting its fees for BX market data, particularly given that the market participants that must pay such fees often will be the same market participants from whom BX must attract order flow. The SEC also noted that, in setting the fees for its TotalView data, BX must consider the extent to which market participants would choose one or more alternatives instead of purchasing the Exchange's data.[20] The Commission stated that the availability of those alternatives, as well as the BX's compelling need to attract order flow, imposed significant competitive pressure on the BX to act equitably, fairly, and reasonably in setting the terms of its proposal.[21]

The same arguments apply with respect to the proposed fee increase here. Although BX is a more mature market than in 2009, competition for order flow remains fierce, and some of the market participants that purchase TotalView are the same market participants from whom BX must attract order flow. Additionally, market participants continue to have a range of other market data products that they could purchase as alternatives to TotalView. As with the initial TotalView fees, the significant competitive pressure with respect to order flow and market data products therefore requires BX to act equitably, fairly, and reasonably in setting the terms of its proposed TotalView fees.

The Exchange also believes that the increase in the Monthly Internal Distributor Fee from $500 to $750 and the increase in the Monthly External Distributor Fee from $1,250 to $1,500 is reasonable because these fee increases reflect the current value of the TotalView product. TotalView provides comprehensive order and trade information for Nasdaq-listed securities and securities not listed on Nasdaq, and the value of a product that offers such information increases as BX's market share increases. As noted above, when TotalView was initially proposed, BX was seeking to resume its cash equities trading business, which was reflected in the initial TotalView fees. Given that BX's market share in those securities

[8] Specifically, in 2016, BX split its matching engine into four matching engines to improve the handling and execution of orders by increasing system resiliency and reduce the impact of peaks in messaging traffic. In anticipation of this change, BX implemented a series of system upgrades in 2015, including upgrading the servers for the BX matching engine, upgrading the matching engine to the newest and most efficient version, and upgrading the necessary tools to effectively monitor the Nasdaq BX marketplace.

has increased since 2009, and given the technical enhancements to TotalView since that time, the proposed increase reasonably reflects the increased value of TotalView to market participants. The proposed fees are also fair and reasonable in that they compare favorably to fees charged by other exchanges for comparable products.

The Exchange believes that these fees are an equitable allocation and are not unfairly discriminatory because the proposed fees for subscribers are uniform for all subscribers within a particular category, *e.g.,* external Distributors will all pay the same Monthly External Distributor Fee. The proposal maintains the current distinction between internal and external Distributors in that external Distributors will continue to be charged a higher amount. Although the amount of the fee increase is proportionally greater for internal Distributors than external Distributors, the Exchange believes that this is equitable and not unfairly discriminatory because the fee increase better aligns the value of TotalView for purposes of internal distribution to the value of TotalView for purposes of external distribution. Under the proposal, the Exchange notes that internal Distributors will still pay a fee that is 50% less than external Distributors.

The Exchange also believes that it is equitable and not unfairly discriminatory to increase the fee for internal and external distribution, and not for Direct Access. Rule 7019 provides that a distributor may distribute data either internally (within that entity) or externally (outside that entity), whereas a Direct Access subscriber is not permitted to distribute TotalView data. To the extent that the value of TotalView has increased since 2009 as the BX market has grown, the fee increase for internal and external distribution reflects this increased value and the fact that Distributors, by definition, have more ways than Direct Access subscribers to benefit from this increased value, *e.g.,* through distribution.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. In terms of inter-market competition, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or fee levels available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. In sum, if the changes proposed herein are unattractive to market participants, it is likely that the Exchange will lose market share as a result. Accordingly, the Exchange does not believe that the proposed changes will impair the ability of members or competing order execution venues to maintain their competitive standing in the financial markets.

Here, the proposed changes to the charges assessed for internal and external Distributors of TotalView do not impose a burden on competition because TotalView is completely voluntary and subject to extensive competition both from other exchanges and from off-exchange venues. As is discussed in greater detail below, competition for order flow remains fierce, and some of the market participants that purchase TotalView are the same market participants from whom BX must attract order flow. Firms make decisions regarding TotalView and other proprietary data based on the total cost of interacting with the Exchange, and order flow would be harmed by the supracompetitive pricing of any proprietary data product. Additionally, market participants continue to have a range of other proprietary market data products that they could purchase as alternatives to TotalView. Third, competition among Distributors for customers will further constrain the cost of TotalView. There is therefore significant competitive pressure with respect to order flow and market data products that requires BX to act equitably, fairly, and reasonably in setting the terms of its proposed TotalView fees.

Competition for Order Flow

Fees related to TotalView are constrained by competition among exchanges and other entities seeking to attract order flow. Order flow is the ''life blood'' of the exchanges. Broker-dealers currently have numerous alternative venues for their order flow, including self-regulatory organization (''SRO'') markets, as well as internalizing broker-dealers (''BDs'') and various forms of alternative trading systems (''ATSs''), including dark pools and electronic communication networks (''ECNs''). Each SRO market competes to produce transaction reports via trade executions, and two FINRA-regulated Trade Reporting Facilities (''TRFs'') compete to attract internalized transaction reports. The existence of fierce competition for order flow implies a high degree of price sensitivity on the part of BDs, which may readily reduce costs by directing orders toward the lowest-cost trading venues.

The level of competition and contestability in the market for order flow is demonstrated by the numerous examples of entrants that swiftly grew into some of the largest electronic trading platforms and proprietary data producers: Archipelago, Bloomberg Tradebook, Island, RediBook, Attain, TracECN, BATS Trading and BATS/Direct Edge. A proliferation of dark pools and other ATSs operate profitably with fragmentary shares of consolidated market volume. For a variety of reasons, competition from new entrants, especially for order execution, has increased dramatically over the last decade.

Each SRO, TRF, ATS, and BD that competes for order flow is permitted to produce proprietary data products. Many currently do or have announced plans to do so, including NYSE, NYSE Amex, NYSE Arca, BATS, and IEX. This is because Regulation NMS deregulated the market for proprietary data. While BDs had previously published their proprietary data individually, Regulation NMS encourages market data vendors and BDs to produce proprietary products cooperatively in a manner never before possible. Order routers and market data vendors can facilitate production of proprietary data products for single or multiple BDs. The potential sources of proprietary products are virtually limitless.

The markets for order flow and proprietary data are inextricably linked: a trading platform cannot generate market information unless it receives trade orders. As a result, the competition for order flow constrains the prices that platforms can charge for proprietary data products. Firms make decisions on how much and what types of data to consume based on the total cost of interacting with BX and other exchanges. Data fees are but one factor in a total platform analysis. If the cost of the product exceeds its expected value, the broker-dealer will choose not to buy it. A supracompetitive increase in the fees charged for either transactions or proprietary data has the potential to impair revenues from both products. In this manner, the competition for order flow will constrain prices for proprietary data products.

Substitute Products

The price of depth-of-book data is constrained by the existence of competition from other exchanges, such as NYSE and BATS, which sell proprietary depth-of-book data. While a small number of highly sophisticated traders purchase depth-of-book products from multiple exchanges, most customers do not. Because most customers would not pay an excessive price for TotalView when substitute data is available from other proprietary sources, the Exchange is constrained in its pricing decisions.

Competition Among Distributors

Competition among Distributors provides another form of price discipline for proprietary data products. If the price of TotalView were set above competitive levels, Distributors purchasing TotalView would be at a disadvantage relative to their competitors, and would therefore either purchase a substitute or forego the product altogether.

In summary, market forces constrain the price of depth-of-book data such as TotalView through competition for order flow, competition from substitute products, and in the competition among vendors for customers. For these reasons, the Exchange has provided a substantial basis demonstrating that the fee is equitable, fair, reasonable, and not unreasonably discriminatory, and therefore consistent with and in furtherance of the purposes of the Exchange Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[22]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–BX–2016–073 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–BX–2016–073. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BX–2016–073, and should be submitted on or before January 20, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79682; File No. SR–FINRA–2016–048]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Eliminate Fees for Historical Trade Data Accessed Through the FINRA ADDS Web Site

December 23, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 20, 2016, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as ''establishing or changing a due, fee or other charge'' under Section 19(b)(3)(A)(ii) of the Act [3] and Rule 19b–4(f)(2) thereunder,[4] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

FINRA is proposing to amend FINRA Rules 7510, 7710 and 7730 to eliminate the fees for historical trade data accessed through the FINRA Automated Data Delivery System (''FINRA ADDS'') Web site relating to trades reported to the Alternative Display Facility (''ADF''), OTC Reporting Facility (''ORF'') and Trade Reporting and Compliance Engine (''TRACE'').

The text of the proposed rule change is available on FINRA's Web site at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

[22] 15 U.S.C. 78s(b)(3)(A)(ii).

[23] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(ii).

[4] 17 CFR 240.19b–4(f)(2).

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FINRA ADDS is a data delivery system that provides members, by market participant identifier (''MPID''), access to trade journal files containing key information regarding the member's trades reported to the ADF, ORF and TRACE. FINRA ADDS also provides member clearing firms access to data regarding their correspondents' trades reported to the ORF. Members use the trade journal files to reconcile the trade information captured by their own systems and the information captured by the FINRA trade reporting systems. Members can access FINRA ADDS data via the secure FINRA ADDS Web site and via Secure File Transfer Protocol (''SFTP'').

Pursuant to Rules 7510(d), 7710(c) and 7730(g), FINRA makes recent ADF, ORF and TRACE trade journals available for free and offers subscribers the option of receiving historical data and retrieving data automatically via SFTP for a fee.[5] Specifically, a member has access via the FINRA ADDS Web site to ADF, ORF or TRACE trade data associated with its MPID for the three prior business days (ADF and ORF) or 30 prior business days (TRACE) free of charge without having to subscribe and pay for additional optional data services.

In addition, members can subscribe to receive their data for dates older than the most recent three or 30 business days through the Data Delivery Plus service for a monthly fee. Through this service, subscribers can access up to two years of trade journal files via the FINRA ADDS Web site. The fee is charged per month to an MPID that is a subscriber for Data Delivery Plus reports (''Plus Reports''), which are provided in response to requests by the MPID. The monthly fees for ORF and TRACE data are based on the subscriber's reported volume and the number of Plus Reports the subscriber receives, and for ADF data, the fees are based on the number of Plus Reports the subscriber receives. The ORF and TRACE fees range from a low of $10 to a high of $100 a month, and the ADF fees range from a low of $60 to a high of $100 a month. Thus, subscribers' fees may vary during a calendar year, depending on the number of reports FINRA makes available to the subscriber in response to the subscriber's requests. Clearing firms that subscribe to access their correspondents' historic ORF data pay a flat fee of $150 per Clearing Number per month, irrespective of the number of reports received.

FINRA is proposing to amend Rules 7510(d), 7710(c) and 7730(g) to eliminate the fees for historical data through the FINRA ADDS Web site. As such, all trade journals (recent and historical for up to two years) through the FINRA ADDS Web site will be free of charge.[6] The proposed rule change will enable all ADF, ORF and TRACE participants to look up their historical trade data free of charge via the FINRA ADDS Web site to reconcile with transaction and clearing data captured by their own systems.

FINRA believes that the proposed rule change will assist members in meeting their trade reporting and trade management obligations and will not result in any burden on members. The overall revenue that FINRA collects from fees for Plus Reports through the FINRA ADDS Web site is de minimis, and as such, FINRA does not believe that the fees warrant the administrative burden of calculating members' fees based on reported volume and number of reports under the current fee schedule. In addition, the proposed rule change would eliminate the uncertainty of the current fee schedule for members, whose fees may vary according to the number of Plus Reports the member requests. Under the proposed rule change, members will be able to request an unlimited number of reports through the FINRA ADDS Web site at no charge.

FINRA has filed the proposed rule change for immediate effectiveness. The operative date will be January 3, 2017.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(5) of the Act,[7] which requires, among other things, that FINRA rules provide for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system that FINRA operates or controls. All similarly situated members are subject to the same fee structure and access to the ADF, ORF and TRACE is offered on fair and non-discriminatory terms. FINRA believes that the proposed rule change provides for the equitable allocation of reasonable fees in that it will eliminate a fee and enable all ADF, ORF and TRACE participants to access their trade data through the FINRA ADDS Web site at no charge. Thus, all ADF, ORF and TRACE participants will have the ability to look up their historical trade data via the FINRA ADDS Web site to reconcile with transaction and clearing data captured by their own systems. Members will continue to have the option of subscribing and paying for FINRA ADDS data delivered via SFTP, if they prefer automated retrieval of their trade data.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. FINRA believes that the proposed rule change, by eliminating the fee for historical ADF, ORF and TRACE data via the FINRA ADDS Web site and enabling all ADF, ORF and TRACE participants to access their trade data at no charge, will assist members in meeting their trade reporting and trade management obligations and will not result in any burden on members. To the extent that the fees that are being proposed to be eliminated were viewed as burdensome among market participants, those participants may choose to utilize the data accessed through the FINRA ADDS Web site to reconcile with transaction and clearing data captured by their own systems, which would permit members to mitigate any direct or indirect costs imposed by the inability to reconcile such data.

[5] FINRA notes that a member that subscribes to the optional FINRA ADDS services via the FINRA ADDS Web site or SFTP for ADF, ORF and TRACE data pays three separate fees under Rules 7510(d), 7710(c) and 7730(g).

[6] FINRA notes that the proposed rule change does not modify the fees for FINRA ADDS data delivered via SFTP under Rules 7510(d), 7710(c) and 7730(g).

[7] 15 U.S.C. 78*o*–3(b)(5).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[8] and paragraph (f)(2) of Rule 19b–4 thereunder.[9] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov.* Please include File Number SR–FINRA–2016–048 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2016–048. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2016–048, and should be submitted on or before January 20, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79686; File No. SR–ISE–2016–31]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing of Proposed Rule Change to Amend the Supplementary Material to ISE Rule 1901

December 23, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 22, 2016, the International Securities Exchange, LLC (''ISE'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Supplementary Material to ISE Rule 1901, titled ''Order Protection'' in connection with a system migration to Nasdaq INET technology.

The text of the proposed rule change is available on the Exchange's Web site at *www.ise.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this rule change is to amend the Supplementary Material to ISE Rule 1901, titled ''Order Protection'' to reflect the ISE, ISE Gemini, LLC and ISE Mercury, LLC technology migration to a Nasdaq, Inc. (''Nasdaq'') supported architecture. INET is the proprietary core technology utilized across Nasdaq's global markets and utilized on The NASDAQ Options Market LLC (''NOM''), NASDAQ PHLX LLC (''Phlx'') and NASDAQ BX, Inc. (''BX'') (collectively, ''Nasdaq Exchanges''). The migration of ISE to the Nasdaq INET architecture would result in higher performance, scalability, and more robust architecture. With this system migration, the Exchange intends to adopt certain trading functionality currently utilized at Nasdaq Exchanges. The functionality being adopted is described in this filing.

Generally

With the re-platform, the Exchange will now be built on the Nasdaq INET architecture, which allows certain trading system functionality to be performed in parallel. The Exchange believes that this architecture change will improve the member experience by reducing overall latency compared to the current ISE, ISE Gemini, LLC and ISE Mercury, LLC system because of the manner in which the system is segregated into component parts to handle processing.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

Trading Halts

Pursuant to Supplementary Material .02 to Rule 1901, when the automatic execution of an incoming order would result in an impermissible trade-through, such order is exposed at the current national best bid or offer to all members for a time period established by the Exchange not to exceed one (1) second.[3] The Exchange proposes to amend Supplementary Material .02 to Rule 1901 to provide that if a trading halt is initiated during this exposure period, the exposure period will be terminated without execution. Today, when a trading halt is triggered during the auction process described above, ISE terminates the exposure period and executes eligible interest. The proposed treatment of trading halts is based on Phlx Rule 1047(c), which provides that in the event the exchange halts trading, all trading in the affected option shall be halted. This is interpreted to restrict executions after a halt unless there is a specific rule specifying that such trades should take place. Halting the exposure period without execution is a change from current ISE behavior. However, the Exchange believes participants prefer certainty in regard to how their interest will be handled in the event of a trading halt and prefer consistency of behavior across market centers.

Implementation

The Exchange intends to begin implementation of the proposed rule change in tandem with a technology migration to Nasdaq INET architecture. The migration will be on a symbol by symbol basis, and the Exchange will issue a notice to provide Members with notification of the symbols that will migrate and the relevant dates. With respect to the amendment to Supplementary Material .02 to Rule 1901, the rule change impact not only ISE, but also ISE Gemini, LLC and ISE Mercury, LLC because Chapter 19 is incorporated by reference into those rulebooks. The Exchange proposes that the implementation of this rule change into each rulebook occur as specified herein. ISE rule changes will be implemented in Q2 2017 on a symbol by symbol basis, as noted above. ISE Gemini, LLC rule changes will be implemented in Q1 2017 on a symbol by symbol basis. ISE Mercury, LLC rule changes will be implemented in Q3 2017 on a symbol by symbol basis. The Exchange will add the following rule text to make clear the implementation date in each rulebook: ''The amended rule text will be implemented on a symbol by symbol basis for ISE Gemini, LLC in Q1 2017, for ISE in Q2 2017 and for ISE Mercury, LLC in Q3 2017, the specific dates will be announced in a separate notice.''

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[4] in general, and furthers the objectives of Section 6(b)(5) of the Act,[5] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest for the reasons stated below.

Trading Halts

The Exchange's proposal to amend Supplementary Material .02 to Rule 1901 to add a new provision to memorialize the impact of a trading halt on the exposure period is consistent with the Act because halting the exposure period without execution provides certainty to market participants with respect to how their interest will be handled in the event of a trading halt. This method will also provide consistency of behavior across market centers. Memorializing this behavior will increase transparency of the operation of the Exchange for the benefit of Members and investors.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. As explained above, the Exchange is re-platforming it's trading system onto the Nasdaq INET architecture, and is making certain other changes to its trading functionality in connection with this migration. Amending the Supplementary Material .02 to Rule 1901 will not impact the intense competition that exists in the options market. In fact, the Exchange believes that this proposal will provide clarity as to the manner in which a trading halt impacts exposure periods, thereby providing certainty to all market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–ISE–2016–31 on the subject line.

Paper Comments:

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number *SR–ISE–2016–31.* This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the

[3] During the exposure period, Exchange Members may enter responses up to the size of the order being exposed in the regular trading increment applicable to the option.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79688; File No. SR–NYSEArca–2016–170]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending NYSE Arca Equities Rules 7.11, 7.31, and 7.34

December 23, 2016.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (the ''Act''),[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on December 20, 2016, NYSE Arca, Inc. (the ''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend NYSE Arca Equities Rules 7.11, 7.31, and 7.34 to specify order behavior for orders entered via the Pillar phase II protocols. The proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend NYSE Arca Equities Rules 7.11 (Limit Up-Limit Down Plan and Trading Pauses in Individual Securities Due to Extraordinary Market Volatility) (''Rule 7.11''), 7.31 (Orders and Modifiers) (''Rule 7.31''), and 7.34 (Trading Sessions) (''Rule 7.34'') to specify order behavior for orders entered via the Pillar phase II protocols.

Background

On January 29, 2015, the Exchange announced the implementation of Pillar, which is an integrated trading technology platform designed to use a single specification for connecting to the equities and options markets operated by the Exchange and its affiliates, NYSE MKT, Inc. (''NYSE MKT'') and New York Stock Exchange LLC (''NYSE'').[4] NYSE Arca Equities, which operates the equities trading platform for the Exchange, was the first trading system to migrate to Pillar. In connection with this implementation, the Exchange filed four rule proposals relating to Pillar.[5]

ETP Holders enter orders and order instructions by using communication protocols that map to the order types and modifiers described in Exchange rules. Currently, all ETP Holders communicate with the NYSE Arca Marketplace using Pillar phase I protocols. The Exchange is introducing new technology to support how ETP Holders communicate with the NYSE Arca Marketplace (''Pillar phase II protocols''). Because Pillar phase II protocols will support new order functionality, the Exchange proposes to revise its rules to reflect these changes.

During this implementation, there will be a period when both the Pillar phase I and Pillar phase II protocols will be available to ETP Holders. Accordingly, the Exchange proposes to amend its rules to describe how an ETP Holder's orders would behave depending on the protocol an ETP Holder chooses to use.

Proposed Amendments to Rule 7.11

Currently, under Rule 7.11 any Limit Order that is priced or would trade outside of a Price Band under the Plan[6] is cancelled, unless an ETP Holder enters instructions for adjustment of the Limit Order's working price. Specifically, Rule 7.11(a)(5) specifies that a buy (sell) order that is priced or could be traded above (below) the Upper (Lower) Price Band will be cancelled, except as specified in Rule 7.11(a)(6). Rule 7.11(a)(6) further provides that ETP Holders may enter an instruction for the working price of a Limit Order to buy (sell) with a limit price above (below) the Upper (Lower) price Band to be adjusted to a price that is equal to the Upper (Lower) Price Band rather than cancel the order. Paragraphs (A)–(D) to Rule 7.11(a)(6) provide more specifics regarding how such repricing instructions operate.

[5] *See* Securities Exchange Act Release Nos. 74951 (May 13, 2015), 80 FR 28721 (May 19, 2015) (Notice) and 75494 (July 20, 2015), 80 FR 44170 (July 24, 2015) (SR–NYSEArca–2015–38) (Approval Order of NYSE Arca Pillar I Filing, adopting rules for Trading Sessions, Order Ranking and Display, and Order Execution); Securities Exchange Act Release Nos. 75497 (July 21, 2015), 80 FR 45022 (July 28, 2015) (Notice) and 76267 (October 26, 2015), 80 FR 66951 (October 30, 2015) (SR–NYSEArca–2015–56) (Approval Order of NYSE Arca Pillar II Filing, adopting rules for Orders and Modifiers and the Retail Liquidity Program); Securities Exchange Act Release Nos. 75467 (July 16, 2015), 80 FR 43515 (July 22, 2015) (Notice) and 76198 (October 20, 2015), 80 FR 65274 (October 26, 2015) (SR–NYSEArca–2015–58) (Approval Order of NYSE Arca Pillar III Filing, adopting rules for Trading Halts, Short Sales, Limit Up-Limit Down, and Odd Lots and Mixed Lots); and Securities Exchange Act Release Nos. 76085 (October 6, 2015), 80 FR 61513 (October 13, 2015) (Notice) and 76869 (January 11, 2016), 81 FR 2276 (January 15, 2016) (Approval Order of NYSE Arca Pillar IV Filing, adopting rules for Auctions).

[6] Under Rule 7.11(a)(1), the ''Plan'' is defined as the Plan to Address Extraordinary Market Volatility Submitted to the Securities and Exchange Commission Pursuant to Rule 608 of Regulation NMS under the Securities Exchange Act of 1934, Exhibit A to Securities Exchange Act Release No. 67091 (May 31, 2012), 77 FR 33498 (June 6, 2012), as it may be amended from time to time. Under Rule 7.11(a)(2), capitalized terms not otherwise defined in Rule 7.11 have the meaning set forth in the Plan.

Accordingly, under current rules, repricing instructions are discretionary and available only for specified Limit Orders.

As proposed, when using Pillar phase II protocols, the default behavior would be to reprice Limit Orders rather than cancel them if they would trade or are priced through the Price Bands. In addition, the Exchange proposes to offer a discretionary instruction to cancel such orders rather than reprice them. This proposed default behavior is similar to how Limit Orders are processed on the Nasdaq Stock Market LLC (''Nasdaq'').[7] When ETP Holders use Pillar phase II protocols, the processing of Market Orders, Limit Orders designated IOC, Day ISO, Q Orders, or Primary Only Orders under Rule 7.11 would be the same as current processing of such orders.[8]

To effect these changes, the Exchange proposes new Rule 7.11(a)(5P), which would specify order behavior for all orders under the Pillar phase II protocols. Proposed Rule 7.11(a)(5P) would thus consolidate into a single sub-section of Rule 7.11(a) all repricing and cancellation behavior for orders, rather than have this content separated into two sub-sections of Rule 7.11(a), as under the current Rule. Rules 7.11(a)(5) and (a)(6) would continue to govern order processing when an ETP Holder uses Pillar phase I protocols.

Proposed Rule 7.11(a)(5P) would provide that Exchange systems would reprice or cancel buy (sell) orders that are priced or could be traded above (below) the Upper (Lower) Price Band.

• Proposed Rule 7.11(a)(5P)(A) would govern those order types that would be cancelled if they are priced or could trade at prices outside the Price Bands. This proposed rule text would not make any substantive changes to the current rule and is based on current Rule 7.11(a)(5)(A), which describes the default behavior to cancel orders, and Rule 7.11(a)(6)(A), which specifies the order types that are not eligible for repricing instructions. The Exchange proposes a non-substantive change to restructure the rule into a single sub-paragraph that describes how these orders would be processed when an ETP Holder sends orders using Pillar Phase II protocols.

As proposed, incoming Market Orders, Limit Orders designated IOC, and Day ISOs would be traded, or if applicable, routed to an Away Market, to the fullest extent possible, subject to Rule 7.31(a)(1)(B) (Trading Collars for Market Orders) and 7.31(a)(2)(B) (price check for Limit Orders) at prices at or within the Price Bands. This list of order types is based on the list of order types not eligible for repricing instructions in current Rule 7.11(a)(6)(A).[9] Proposed Rule 7.11(a)(5P)(A)(i) would further provide that any quantity of such orders that cannot be traded or routed at prices at or within the Price Bands would be cancelled and the ETP Holder would be notified of the reason for the cancellation.

Proposed Rule 7.11(a)(5P)(A)(ii) would further provide that if Price Bands move and the working price of a resting Market Order or Day ISO to buy (sell) is above (below) the updated Upper (Lower) Price Band, such orders would be cancelled. This is new rule text designed to provide additional transparency regarding how resting Market Orders or Day ISOs would be processed if Price Bands move into the working price of such orders. Consistent with proposed Rule 7.11(a)(5P)(A)(i) that states that such orders would not be repriced if they were to trade outside of the Price Bands, such orders would also be cancelled if they were required to be repriced due to a change in Price Bands.

• Proposed Rule 7.11(a)(5P)(B) would set forth the proposed default behavior to reprice a Limit Order priced through the Price Bands, unless the Exchange receives an instruction to cancel such an order. As proposed, incoming Limit Orders would be traded, or if applicable, routed to an Away Market, to the fullest extent possible, subject to Rule 7.31(a)(2)(B) (price check for Limit Orders) at prices at or within the Price Bands. Proposed Rule 7.11(a)(5P)(B)(i) would further provide that, unless the ETP holder has entered an instruction to cancel any quantity of a Limit Order that cannot be traded or routed at prices at or within the Price Bands, such order would be assigned a working price, and if applicable, display price, at the Upper (Lower) Price Band, consistent with the terms of the order.[10] This proposed rule text therefore specifies that the default behavior would be to reprice Limit Orders and the discretionary instruction would be to cancel such orders.

Proposed Rule 7.11(a)(5P)(B)(ii) would provide that the repricing of Limit Orders would be applicable to both incoming and resting orders and if the Price Bands move and the limit price of a repriced order is at or within the Price Band, such Limit Order would be adjusted to its limit price. This proposed rule text is based on current Rule 7.11(a)(6)(B) without any substantive changes. The Exchange proposes a non-substantive change to use the term ''limit price'' instead of ''original limit price'' because under Rule 7.36(a)(2), the term ''limit price'' means the highest (lowest) specified price at which a Limit Order to buy (sell) is eligible to trade. Thus, use of the word ''original'' with the term ''limit price'' is redundant.

Proposed Rule 7.11(a)(5P)(B)(iii) would provide that Primary Until 9:45 Orders and Primary After 3:55 Orders would be priced under Rule 7.11(a)(5P)(B) only when such orders are entered on or resting on the NYSE Arca Book. This proposed rule text is based on the second sentence of Rule 7.11(a)(6)(A), without any substantive changes.

• Proposed Rule 7.11(a)(5P)(C) would specify how sell short orders would be processed and is based on current Rule 7.11(a)(6). The Exchange proposes a substantive change to the proposed rule text to reflect the proposed new default processing for Limit Orders, *i.e.,* to reprice rather than cancel such orders. As proposed, if a Limit Order does not include a cancel instruction and is also a sell short order, during a Short Sale Price Test, as set forth in Rule 7.16(f), such short sale order priced below the Lower Price Band would be repriced to the higher of the Lower Price Band or the Permitted Price, as defined in Rule 7.16(f)(5)(A). The rule would further provide that sell short orders that are not eligible to be repriced would be treated as any other order pursuant to proposed Rule 7.11(a)(5P)(A) above. The proposed substantive changes are reflected in the first clause of this proposed rule text and the last sentence of this proposed rule text. The remainder of the proposed rule text is based on current Rule 7.11(a)(6) without any changes.

• Proposed Rule 7.11(a)(5P)(D) would provide that incoming Q Orders to buy (sell) with a limit price above (below) the Upper (Lower) Price Band would be rejected. The proposed rule would further provide that if Price Bands move and the limit price of a resting Q Order to buy (sell) is above (below) the updated Upper (Lower) Price Band, the

[7] *See* Nasdaq Rule 4120(a)(12)(E)(2).

[8] Primary Only Orders are addressed in Rule 7.11(a)(7), which is not changing.

[9] The Exchange does not believe it is necessary to reference Auction-Only Orders in this proposed rule because under Rule 7.35, Auction-Only Orders are not subject to any repricing. Rather, by design, they trade at the Indicative Match Price of the auction.

[10] For example, consistent with Rule 7.31(e)(2), if the PBO is equal to the Upper Price Band and the Exchange receives an ALO to buy with a limit price above the PBO, such ALO would be assigned a working price equal to the PBO (and Upper Price Band) and a display price one minimum price variation below the PBO (and Upper Price Band).

Q Order would be cancelled. This proposed rule text is based on how Q Orders are currently processed because Q Orders are not eligible for repricing instructions.[11]

- Proposed Rule 7.11(a)(5P)(E) would provide that Limit IOC Cross Orders with a cross price above (below) the Upper (Lower) Price Band would be rejected. This proposed rule text is based on current Rule 7.11(a)(5)(B), with a non-substantive change to refer to ''Limit IOC Cross Orders'' rather than ''Cross Orders.'' Under Rule 7.31(g), the only form of Cross Order available at the Exchange is a Limit IOC Cross Order.
- Proposed Rule 7.11(a)(5P)(F) would provide that if the midpoint of the PBBO is above (below) the Upper (Lower) Price Band, an MPL Order to buy (sell) would not be repriced or rejected and would not be eligible to trade and would further provide that an MPL Order would be cancelled or rejected if the ETP Holder enters an instruction to cancel or reject such MPL Order. This proposed rule text is based in part on current Rule 7.11(a)(6)(C), which states that an MPL Order that has an instruction to reprice will not cancel, but will not be repriced or be eligible to trade if the midpoint of the PBBO is below the Lower Price Band or above the Upper Price Band. Proposed Rule 7.11(a)(5P)(F) is different than current Rule 7.11(a)(6)(C) to reflect that the new default behavior is to reprice rather than cancel Limit Orders. As applied to MPL Orders, ETP Holders using Pillar Phase II protocol would not need to include an instruction to reprice an MPL Order. The proposed default behavior for MPL Orders would be that such orders would not be repriced or rejected and would not be eligible to trade outside of the Price Bands. Consistent with the proposed discretionary instruction to cancel a Limit Order, the Exchange proposes to include a discretionary instruction to cancel (a resting) or reject (an incoming) an MPL Order to buy (sell) if the midpoint of the PBBO is above (below) the Upper (Lower) Price Band.

Finally, to provide transparency regarding which rules would govern order behavior under the different protocols, the Exchange proposes to add the following preamble to Rule 7.11:

> Rules 7.11(a)(5) and (a)(6) govern order processing when ETP Holders communicate with the NYSE Arca Marketplace using Pillar phase I protocols. Rule 7.11(a)(5P) governs order processing when ETP Holders communicate with the NYSE Arca Marketplace using Pillar phase II protocols. The Exchange will file a separate proposed rule change to delete Rules 7.11(a)(5) and (a)(6) when the Pillar phase I protocols are no longer available.

Proposed Amendment to Rule 7.31

The Exchange proposes to amend Rule 7.31 to reflect that under the Pillar phase II protocols, the Exchange would use an ETP Holder's MPID, rather than an ETP ID, to assess whether to apply Self-Trade Prevention Modifiers (''STP'') against two matching orders. To reflect this change, the Exchange proposes to add new subsection (E) to Rule 7.31(i)(2) that would provide that for purposes of STP, references to ETP ID mean an ETP ID when using Pillar phase I protocols to communicate with the NYSE Arca Marketplace or an MPID when using Pillar phase II protocols to communicate with the NYSE Arca Marketplace.

Proposed Amendments to Rule 7.34

The Exchange proposes to amend Rule 7.34 to reflect that under the Pillar phase II protocols, the Exchange would reject orders that do not include a designation for which trading session(s) the order will remain in effect. Current Rule 7.34(b)(1) provides that any order entered into the NYSE Arca Marketplace must include a designation for which trading session(s) the order will remain in effect.

However, current Rule 7.34(b)(2) further provides that an order with a day time-in-force instruction entered before or during the Early Trading Session will be deemed designated for the Early Trading Session and the Core Trading Session. Current Rule 7.34(b)(3) further provides that an order with a day time-in-force instruction entered during the Core Trading Session will be deemed designated for the Core Trading Session. Accordingly, under current rules, orders that include a day designation, but do not include a trading session designation, will be accepted and deemed designated for the specified trading sessions.

The Exchange proposes that when ETP Holders use Pillar phase II protocols to enter an order, the Exchange would reject any order that does not include a trading session designation, including day orders entered during the Early or Core Trading Sessions. To reflect this functionality, the Exchange proposes to add the following sentence to Rule 7.34(b)(1): ''For ETP Holders that communicate with the NYSE Arca Marketplace using Pillar phase II protocols, orders entered without a trading session designation will be rejected.'' To specify that the current rule processing is available only for orders entered via the Pillar phase I protocols, the Exchange proposes to add the following introductory text to Rules 7.34(b)(2) and (3): ''For ETP Holders that communicate with the NYSE Arca Marketplace using Pillar phase I protocols.''

* * * * *

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update. The Exchange anticipates implementing these changes before the end of the first quarter 2017.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934 (the ''Act''),[12] in general, and furthers the objectives of Section 6(b)(5),[13] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

Specifically, the Exchange believes that the proposed rule change to reprice Limit Orders that would trade or are priced through the Price Bands under the Plan rather than cancel them, and instead offer a discretionary instruction to cancel such orders, would remove impediments to and perfect the mechanism of a free and open market and a national market system by promoting the display of orders. In addition, the proposed changes are similar to how Nasdaq operates.[14] The Exchange further believes that the proposed non-substantive changes to consolidate in proposed Rule 7.11(a)(5P) how orders would be repriced or cancelled if they are priced through or would trade outside of the Price Bands would simplify Exchange rules, thereby

[11] The Exchange proposes a non-substantive amendment to update current Rule 7.11(a)(6) to reflect that Q Orders are not eligible to include repricing instructions. The rule filing to adopt current Rule 7.11 described that Q orders were not included in the list of orders eligible for repricing and due to a typographical error, Q Orders were not also included in the rule text. *See* Securities Exchange Act Release No. 75467 (July 16, 2016), 80 FR 43515, 43524 (July 22, 2016) (SR–NYSEArca–2015–58) (Notice of Filing of Pillar III Filing, adopting rules for Trading Halts, Short Sales, Limit Up-Limit Down, and Odd Lots and Mixed Lots).

[12] 15 U.S.C. 78f(b).

[13] 15 U.S.C. 78f(b)(5).

[14] *See supra* note 7.

promoting transparency and clarity in Exchange rules.

The Exchange believes that the proposed rule change to specify that an ETP Holder's MPID rather than ETP ID would be used for STP purposes when an ETP Holder uses Pillar phase II protocols would remove impediments to and perfect the mechanism of a free and open market and a national market system by providing notice to ETP Holders of which orders would be matched for purposes of STP, depending on the communication protocol that they use.

The Exchange believes that the proposed rule change to reject orders that do not include a trading session designation would remove impediments to and perfect the mechanism of a free and open market and a national market system because it provides transparency and uniformity of the circumstances when an order would be rejected.

The Exchange further believes that amending Exchange rules to specify order behavior depending on which Pillar protocol is used to communicate with the NYSE Arca Marketplace would remove impediments to and perfect the mechanism of a free and open market and a national market system by providing transparency to investors and the public.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rule change would not impose any burden on competition because the proposed changes to how Limit Orders would be processed if priced through the Price Bands is similar to the rules of a competing exchange, and thus is familiar behavior to market participants. The proposed change to reject orders if they do not include a trading session designation is not designed to address any competitive issues, but rather, would promote transparency and uniformity by specifying when an order would be rejected.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder.[15]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEArca–2016–170 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2016–170. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2016–170, and should be submitted on or before January 20, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 32401; 812–14690]

Northern Lights Fund Trust IV and Blue Sky Asset Management, LLC; Notice of Application

December 23, 2016.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application for an order under section 6(c) of the Investment Company Act of 1940 (the ''Act'') for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(J) for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the Act. The requested order would permit (a) index-based series of certain open-end management investment companies (''Funds'') to issue shares

[15] 17 CFR 240.19b–4(f)(6). As required under Rule 19b–4(f)(6)(iii), the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

[16] 17 CFR 200.30–3(a)(12).

redeemable in large aggregations only (''Creation Units''); (b) secondary market transactions in Fund shares to occur at negotiated market prices rather than at net asset value (''NAV''); (c) certain Funds to pay redemption proceeds, under certain circumstances, more than seven days after the tender of shares for redemption; (d) certain affiliated persons of a Fund to deposit securities into, and receive securities from, the Fund in connection with the purchase and redemption of Creation Units; (e) certain registered management investment companies and unit investment trusts outside of the same group of investment companies as the Funds (''Funds of Funds'') to acquire shares of the Funds; and (f) certain Funds (''Feeder Funds'') to create and redeem Creation Units in-kind in a master-feeder structure.

APPLICANTS: Northern Lights Fund Trust IV (the ''Trust''), a Delaware statutory trust registered under the Act as an open-end management investment company, and Blue Sky Asset Management, LLC (the ''Initial Adviser''), a Colorado limited liability company registered as an investment adviser under the Investment Advisers Act of 1940 (the ''Advisers Act'').

FILING DATES: The application was filed on August 16, 2016, and amended on November 21, 2016.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on January 17, 2017, and should be accompanied by proof of service on applicants, in the form of an affidavit, or for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090; Applicants: Northern Lights Fund Trust IV, 17605 Wright Street, Omaha, NE 68130, and Blue Sky Asset Management, LLC, 6400 S. Fiddlers Green Circle, Suite 350, Greenwood Village, CO 80111.

FOR FURTHER INFORMATION CONTACT: Deepak T. Pai, Senior Counsel, at (202) 551–6876, or Mary Kay Frech, Branch Chief, at (202) 551–6814 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Summary of the Application

1. Applicants request an order that would allow Funds to operate as index exchange traded funds (''ETFs'').[1] Fund shares will be purchased and redeemed at their NAV in Creation Units only. All orders to purchase Creation Units and all redemption requests will be placed by or through an ''Authorized Participant'', which will have signed a participant agreement with a broker-dealer that will be registered under the Securities Exchange Act of 1934 (''Exchange Act'') (the ''Distributor''). Shares will be listed and traded individually on a national securities exchange, where share prices will be based on the current bid/offer market. Certain Funds will operate as Feeder Funds in a master-feeder structure. Any order granting the requested relief would be subject to the terms and conditions stated in the application.

2. Each Fund will hold investment positions selected to correspond generally to the performance of an Underlying Index. In the case of Self-Indexing Funds, an affiliated person, as defined in section 2(a)(3) of the Act (''Affiliated Person''), or an affiliated person of an Affiliated Person (''Second-Tier Affiliate''), of the Trust or a Fund, of the Adviser, of any sub-adviser to or promoter of a Fund, or of the Distributor will compile, create, sponsor or maintain the Underlying Index.[2]

3. Shares will be purchased and redeemed in Creation Units and generally on an in-kind basis. Except where the purchase or redemption will include cash under the limited circumstances specified in the application, purchasers will be required to purchase Creation Units by depositing specified instruments (''Deposit Instruments''), and shareholders redeeming their shares will receive specified instruments (''Redemption Instruments''). The Deposit Instruments and the Redemption Instruments will each correspond pro rata to the positions in the Fund's portfolio (including cash positions) except as specified in the application.

4. Because shares will not be individually redeemable, applicants request an exemption from section 5(a)(1) and section 2(a)(32) of the Act that would permit the Funds to register as open-end management investment companies and issue shares that are redeemable in Creation Units only.

5. Applicants also request an exemption from section 22(d) of the Act and rule 22c–1 under the Act as secondary market trading in shares will take place at negotiated prices, not at a current offering price described in a Fund's prospectus, and not at a price based on NAV. Applicants state that (a) secondary market trading in shares does not involve a Fund as a party and will not result in dilution of an investment in shares, and (b) to the extent different prices exist during a given trading day, or from day to day, such variances occur as a result of third-party market forces, such as supply and demand. Therefore, applicants assert that secondary market transactions in shares will not lead to discrimination or preferential treatment among purchasers. Finally, applicants represent that share market prices will be disciplined by arbitrage opportunities, which should prevent shares from trading at a material discount or premium from NAV.

6. With respect to Funds that effect creations and redemptions of Creation Units in kind and that are based on certain Underlying Indexes that include foreign securities, applicants request relief from the requirement imposed by section 22(e) in order to allow such Funds to pay redemption proceeds within fifteen calendar days following the tender of Creation Units for redemption. Applicants assert that the requested relief would not be inconsistent with the spirit and intent of

[1] Applicants request that the order apply to the existing series of the Trust that are index ETFs and any additional series of the Trust, and any other open-end management investment company or series thereof, that may be created in the future (each, included in the term ''Fund''), each of which will operate as an ETF and will track a specified index comprised of domestic or foreign equity and/or fixed income securities (each, an ''Underlying Index''). Any Fund will (a) be advised by the Initial Adviser or an entity controlling, controlled by, or under common control with the Initial Adviser (each, an ''Adviser'') and (b) comply with the terms and conditions of the application.

[2] Each Self-Indexing Fund will post on its Web site the identities and quantities of the investment positions that will form the basis for the Fund's calculation of its NAV at the end of the day. Applicants believe that requiring Self-Indexing Funds to maintain full portfolio transparency will help address, together with other protections, conflicts of interest with respect to such Funds.

section 22(e) to prevent unreasonable, undisclosed or unforeseen delays in the actual payment of redemption proceeds.

7. Applicants request an exemption to permit Funds of Funds to acquire Fund shares beyond the limits of section 12(d)(1)(A) of the Act; and the Funds, and any principal underwriter for the Funds, and/or any broker or dealer registered under the Exchange Act, to sell shares to Funds of Funds beyond the limits of section 12(d)(1)(B) of the Act. The application's terms and conditions are designed to, among other things, help prevent any potential (i) undue influence over a Fund through control or voting power, or in connection with certain services, transactions, and underwritings, (ii) excessive layering of fees, and (iii) overly complex fund structures, which are the concerns underlying the limits in sections 12(d)(1)(A) and (B) of the Act.

8. Applicants request an exemption from sections 17(a)(1) and 17(a)(2) of the Act to permit persons that are Affiliated Persons, or Second Tier Affiliates, of the Funds, solely by virtue of certain ownership interests, to effectuate purchases and redemptions in-kind. The deposit procedures for in-kind purchases of Creation Units and the redemption procedures for in-kind redemptions of Creation Units will be the same for all purchases and redemptions and Deposit Instruments and Redemption Instruments will be valued in the same manner as those investment positions currently held by the Funds. Applicants also seek relief from the prohibitions on affiliated transactions in section 17(a) to permit a Fund to sell its shares to and redeem its shares from a Fund of Funds, and to engage in the accompanying in-kind transactions with the Fund of Funds.[3] The purchase of Creation Units by a Fund of Funds directly from a Fund will be accomplished in accordance with the policies of the Fund of Funds and will be based on the NAVs of the Funds.

9. Applicants also request relief to permit a Feeder Fund to acquire shares of another registered investment company managed by the Adviser having substantially the same investment objectives as the Feeder Fund (''Master Fund'') beyond the limitations in section 12(d)(1)(A) and permit the Master Fund, and any principal underwriter for the Master Fund, to sell shares of the Master Fund to the Feeder Fund beyond the limitations in section 12(d)(1)(B).

10. Section 6(c) of the Act permits the Commission to exempt any persons or transactions from any provision of the Act if such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Section 12(d)(1)(J) of the Act provides that the Commission may exempt any person, security, or transaction, or any class or classes of persons, securities, or transactions, from any provision of section 12(d)(1) if the exemption is consistent with the public interest and the protection of investors. Section 17(b) of the Act authorizes the Commission to grant an order permitting a transaction otherwise prohibited by section 17(a) if it finds that (a) the terms of the proposed transaction are fair and reasonable and do not involve overreaching on the part of any person concerned; (b) the proposed transaction is consistent with the policies of each registered investment company involved; and (c) the proposed transaction is consistent with the general purposes of the Act.

For the Commission, by the Division of Investment Management, under delegated authority.

Brent J. Fields,

Secretary.

[FR Doc. 2016–31684 Filed 12–29–16; 8:45 am]

BILLING CODE 8011–01–P

[3] The requested relief would apply to direct sales of shares in Creation Units by a Fund to a Fund of Funds and redemptions of those shares. Applicants, moreover, are not seeking relief from section 17(a) for, and the requested relief will not apply to, transactions where a Fund could be deemed an Affiliated Person, or a Second-Tier Affiliate, of a Fund of Funds because an Adviser or an entity controlling, controlled by or under common control with an Adviser provides investment advisory services to that Fund of Funds.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79683; File No. SR–NYSEArca–2016–82]

Self-Regulatory Organizations; NYSE Arca, Inc.; Order Granting Approval of a Proposed Rule Change, as Modified by Amendment Nos. 1, 2, and 3 Thereto, To List and Trade Shares of the JPMorgan Diversified Event Driven ETF Under NYSE Arca Equities Rule 8.600

December 23, 2016.

I. Introduction

On June 20, 2016, NYSE Arca, Inc. (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''Exchange Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares (''Shares'') of the JPMorgan Diversified Event Driven ETF (''Fund'') under NYSE Arca Equities Rule 8.600. The proposed rule change was published for comment in the **Federal Register** on July 7, 2016.[3] On August 18, 2016, the Exchange filed Amendment No. 1 to the proposed rule change.[4] On the same day, pursuant to Section 19(b)(2) of the Act,[5] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[6] On September 1, 2016, the Exchange filed Amendment No. 2 to the proposed rule change.[7] On

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 78218 (Jul. 1, 2016), 81 FR 44339 (''Notice'').

[4] In Amendment No. 1, which amended and replaced the proposed rule change in its entirety, the Exchange clarified: (a) Certain aspects relating to the Fund's investment strategy, including descriptions of (i) certain return factors that the Fund seeks to utilize to achieve its investment objective, (ii) the Fund's total net long market exposure, (iii) the Fund's use of derivative instruments and its market exposure to such instruments, and (iv) the Fund's investments in mutual funds; (b) that *the common stock into which convertible securities held by the Fund can be converted will be exchange-traded;* (c) that the Fund may invest no more than 5% of its assets*, in the aggregate,* in over-the-counter (''OTC'') common stocks, preferred stocks, warrants, rights, and contingent value rights (''CVRs'') of U.S. and foreign corporations (including emerging market securities); (d) the redemption order submission cut-off time; (e) that no more than 10% of the net assets of the Fund will be invested in *Depositary Receipts (as defined herein)* that are not exchange-listed; and (f) the use of certain defined terms. Amendment No. 1 to the proposed rule change is available at: *https://www.sec.gov/comments/sr-nysearca-2016-82/nysearca201682-1.pdf.* Because Amendment No. 1 to the proposed rule change does not materially alter the substance of the proposed rule change or raise unique or novel regulatory issues, Amendment No. 1 is not subject to notice and comment.

[5] 15 U.S.C. 78s(b)(2).

[6] *See* Securities Exchange Act Release No. 78610, 81 FR 57960 (Aug. 24, 2016). The Commission designated October 5, 2016, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change.

[7] In Amendment No. 2, which partially amended the proposed rule change, as modified by Amendment No. 1 thereto, the Exchange clarified (a) the Fund's holdings in mutual fund shares as the only non-exchange-traded investment company securities the Fund may hold, and (b) that Depositary Receipts (as defined herein) are included as equity securities subject to the 10% limitation on equity securities whose principal market is not a member of the Intermarket Surveillance Group (''ISG'') or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement. Amendment No. 2 to the proposed rule change is available at: *https://www.sec.gov/comments/sr-nysearca-2016-82/nysearca201682-2.pdf.* Because Amendment No. 2 to the proposed rule change does not materially alter the substance of the proposed rule change or

Continued

September 2, 2016, the Exchange filed Amendment No. 3 to the proposed rule change.[8] On October 5, 2016, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act[9] to determine whether to approve or disapprove the proposed rule change, as modified by Amendment Nos. 1, 2, and 3 thereto.[10] The Commission has received no comments on the proposal. This order grants approval of the proposed rule change, as modified by Amendment Nos. 1, 2, and 3 thereto.

II. Exchange's Description of the Proposal

The Exchange proposes to list and trade Shares of the Fund under NYSE Arca Equities Rule 8.600, which governs the listing and trading of Managed Fund Shares. The Fund is a series of J.P. Morgan Exchange-Traded Fund Trust (''Trust''), a Delaware statutory trust.[11] J.P. Morgan Investment Management Inc. (''Adviser'') will be the investment adviser to the Fund. The Adviser will also provide administrative services for, and will oversee the other service providers of, the Fund. SEI Investments Distribution Co. will be the distributor of the Fund's Shares. The Exchange represents that the Adviser is not registered as a broker-dealer, but is affiliated with a broker-dealer and has implemented and will maintain a fire wall with respect to such broker-dealer affiliate regarding access to information concerning the composition of, and changes to, the portfolio.[12]

The Fund will seek to provide long-term total return and will seek to achieve its investment objective by employing an event-driven investment strategy, primarily investing in companies that the Adviser believes will be impacted by pending or anticipated corporate or special situation events. Under normal market conditions,[13] the Fund will seek to achieve its investment objective by employing its investment strategy to access certain ''return factors.'' The Fund will invest its assets globally to gain exposure to equity securities (across market capitalizations) in developed markets. The Fund may use both long and short positions (achieved primarily through the use of derivative instruments as described below). The Fund generally will maintain a total net long market exposure, meaning that the Fund's aggregate exposure will be greater to instruments that the Adviser expects to outperform. However, the Fund may have net long or net short exposure to one or more industry sectors, individual markets, and/or currencies based on the return factors.

The Adviser will make use of derivatives (as described below) in implementing its strategies. Under normal market conditions, the Adviser currently expects that a significant portion of the Fund's exposure will be attained through the use of derivatives in addition to its exposure through direct investments. Derivatives will primarily be used as an efficient means of implementing a particular strategy in order to gain exposure to a desired return factor. For example, the Fund may use a total return swap to establish both long and short positions in order to gain the desired exposure rather than physically purchasing and selling short each instrument. Derivatives may also be used to increase gain, to effectively gain targeted exposure from its cash positions, to hedge various investments, and/or for risk management. As a result of the Fund's use of derivatives and to serve as collateral, the Fund may hold significant amounts of U.S. Treasury obligations, including Treasury bills, bonds and notes and other obligations issued or guaranteed by the U.S. Treasury, other short-term investments, including money market funds, and foreign currencies, in which certain derivatives are denominated.

The amount that may be invested in any one instrument will vary and generally depend on the return factors employed by the Adviser at that time. However, with the exception of specified investment limitations for certain assets described below, there are no stated percentage limitations on the amount that can be invested in any one type of instrument, and the Adviser may, at times, focus on a smaller number of instruments. Moreover, the Fund will generally be unconstrained by any particular capitalization, style, or sector, and may invest in any developed region or country. The Adviser will make use of quantitative models and information and data supplied by third parties to, among other things, help determine the portfolio's weightings among various investments and construct sets of transactions and investments.

In addition to its main return factors, the Fund may utilize return factors that use debt securities. The Fund may invest, either directly or through financial derivative instruments, debt securities that are subject to a downgrade from investment grade to non-investment grade (also known as high yield/junk bond) status. For example, the Fund may invest in the bonds that have been downgraded while hedging credit risk more broadly by using credit default swaps indices in order to attempt to keep the Fund's exposure market neutral.

The Exchange has made the following representations and statements in describing the Fund.[14]

raise unique or novel regulatory issues, Amendment No. 2 is not subject to notice and comment.

[8] In Amendment No. 3, which partially amended the proposed rule change, as modified by Amendment Nos. 1 and 2 thereto, the Exchange (a) made conforming changes to the Statutory Basis section of the filing to reflect the same changes made by Amendment No. 2 to the proposed rule change, and (b) clarified a reference to the term ''advisor'' to mean ''Adviser.'' Amendment No. 3 to the proposed rule change is available at: *https://www.sec.gov/comments/sr-nysearca-2016-82/nysearca201682-3.pdf.* Because Amendment No. 3 to the proposed rule change does not materially alter the substance of the proposed rule change or raise unique or novel regulatory issues, Amendment No. 3 is not subject to notice and comment.

[9] 15 U.S.C. 78s(b)(2)(B).

[10] *See* Securities Exchange Act Release No. 79052, 81 FR 70455 (Oct. 12, 2016). Specifically, the Commission instituted proceedings to allow for additional analysis of the proposed rule change's consistency with Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be ''designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade,'' and ''to protect investors and the public interest.'' *See id.,* 81 FR at 70459.

[11] The Trust is registered under the Investment Company Act of 1940 (''1940 Act''). The Exchange states that, on April 22, 2016, the Trust filed with the Commission an amendment to its registration statement on Form N–1A under the Securities Act of 1933 (''Securities Act'') and the 1940 Act relating to the Fund (File Nos. 333–191837 and 811–22903) (''Registration Statement''). The Exchange also notes that an exemptive order (''Exemptive Order'') was issued under the 1940 Act on February 19, 2016. The Exchange represents that investments made by the Fund will comply with the conditions set forth in the Exemptive Order.

[12] The Exchange further represents that, in the event (a) the Adviser becomes registered as a broker-dealer or newly affiliated with one or more broker-dealers, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement and maintain a fire wall with respect to its relevant personnel or its broker-dealer affiliate regarding access to information concerning the composition of, and changes to, the portfolio, and will be subject to procedures designed to prevent the use and dissemination of material, non-public information regarding such portfolio.

[13] The term ''under normal market conditions'' includes, but is not limited to, the absence of extreme volatility or trading halts in the securities markets or the financial markets generally; circumstances under which the Fund's investments are made for temporary defensive purposes; operational issues (*e.g.,* systems failure) causing dissemination of inaccurate market information; or force majeure type events such as cyber-attacks, natural or man-made disaster, act of God, armed conflict, act of terrorism, riot or labor disruption, or any similar intervening circumstance.

[14] The Commission notes that additional information regarding the Trust, the Fund, and the Shares, including investment strategies, risks, creation and redemption procedures, calculation of net asset value (''NAV''), fees, distributions, and taxes, among other things, can be found in the Notice, Amendment Nos. 1, 2, and 3, and the Registration Statement, as applicable. *See supra* notes 3, 4, 7, 8, and 11, respectively, and accompanying text.

A. Exchange's Description of the Fund's Principal Investments

Under normal market conditions, the Fund will invest principally (*i.e.,* more than 50% of the Fund's assets) in the securities and financial instruments described below, which may be represented by derivatives, as discussed below.

The Fund may invest in exchange-listed and traded common stocks, preferred stocks, warrants and rights of U.S. and foreign corporations (including emerging market securities), and U.S. and non-U.S. real estate investment trusts (''REITs''). Exchange-listed and traded common stocks, preferred stocks, warrants and rights of U.S. corporations, and U.S. REITs will be traded on U.S. national securities exchanges.

The Fund may invest in exchange-listed and OTC ''Depositary Receipts'' [15] as described below.

The Fund may invest in the following cash and cash equivalents: Investments in money market funds (for which the Adviser and/or its affiliates serve as investment adviser or administrator), bank obligations,[16] commercial paper, repurchase agreements, and short-term funding agreements.[17]

The Fund may invest in corporate debt.[18]

In addition to money market funds referenced above, the Fund may invest in shares of non-exchange-traded investment company securities, that is, mutual fund shares, including mutual fund shares for which the Adviser and/or its affiliates may serve as investment adviser or administrator, to the extent permitted by Section 12(d)(1)[19] of the 1940 Act and the rules thereunder.

In addition, the Fund may invest in exchange traded funds (''ETFs''),[20] purchase and sell futures contracts on indexes of securities, invest in swaps (credit default swaps (''CDSs''), CDS indices, and total return swaps on equity securities, equity indexes, fixed income securities, and fixed income futures), invest in forward and spot currency transactions [21] (such investments consist of non-deliverable forwards (''NDFs''), foreign forward currency contracts, and spot currency transactions), and invest in OTC and exchange-traded call and put options on equities, fixed income securities, and currencies or options on indexes of equities, fixed income securities, and currencies.

The Fund may invest in U.S. Government obligations, which may include direct obligations of the U.S. Treasury, including Treasury bills, notes and bonds, all of which are backed as to principal and interest payments by the full faith and credit of the United States, and separately traded principal and interest component parts of such obligations that are transferable through the Federal book-entry system known as Separate Trading of Registered Interest and Principal of Securities and Coupons Under Book Entry Safekeeping.

B. Exchange's Description of the Fund's Other Investments

While the Fund, under normal market conditions, will invest at least fifty percent (50%) of its assets in the securities and financial instruments described above, the Fund may invest its remaining assets in other assets and financial instruments, as described below.

The Fund may invest in U.S. and non-U.S. convertible securities, which are bonds or preferred stock that can convert to common stock. The common stock into which convertible securities can be converted will be exchange-traded.

The Fund may invest in reverse repurchase agreements.

The Fund may invest in sovereign obligations, which are investments in debt obligations issued or guaranteed by a foreign sovereign government or its agencies, authorities, or political subdivisions.

The Fund may invest no more than 5% of its assets in equity and debt securities that are restricted securities (Rule 144A securities), in addition to Rule 144A securities deemed illiquid by the Adviser, as referenced below.

Under normal market conditions, the Fund may invest no more than 5% of its assets, in the aggregate, in OTC common stocks, preferred stocks, warrants, rights, and CVRs of U.S. and foreign corporations (including emerging market securities).[22]

C. Exchange's Description of the Fund's Investment Restrictions

The Fund may hold up to an aggregate amount of 15% of its net assets in illiquid assets (calculated at the time of investment), including Rule 144A securities deemed illiquid by the Adviser, consistent with Commission guidance. The Fund will monitor its portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of liquidity is being maintained, and will consider taking appropriate steps in order to maintain adequate liquidity if, through a change in values, net assets, or other circumstances, more than 15% of the Fund's net assets are held in illiquid assets. Illiquid assets include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets as determined in accordance with Commission staff guidance.

The Fund may invest in other investment companies to the extent permitted by Section 12(d)(1) of the 1940 Act and rules thereunder and/or any applicable exemption or exemptive order under the 1940 Act with respect to such investments.

The Fund may invest in securities denominated in U.S. dollars, major reserve currencies, and currencies of other countries in which the Fund may invest.

The Fund may invest in both investment grade and high yield debt securities.

The Fund intends to qualify for and to elect treatment as a separate regulated investment company under Subchapter M of the Internal Revenue Code. Furthermore, the Fund may not concentrate investments in a particular industry or group of industries, as concentration is defined under the 1940 Act, the rules or regulations thereunder,

[15] Depositary Receipts include American Depositary Receipts (''ADRs''), Global Depositary Receipts (''GDRs'') and European Depositary Receipts (''EDRs''). No more than 10% of the net assets of the Fund will be invested in Depositary Receipts that are not exchange-listed.

[16] Bank obligations include the following: Bankers' acceptances, certificates of deposit, and time deposits.

[17] Short-term funding agreements are agreements issued by banks and highly rated U.S. insurance companies such as Guaranteed Investment Contracts and Bank Investment Contracts.

[18] The Adviser expects that, under normal market conditions, the Fund will invest at least 75% of its corporate debt securities in issuances that have at least $100,000,000 par amount outstanding in developed countries, or at least $200,000,000 par amount outstanding in emerging market countries.

[19] 15 U.S.C. 80a–12(d)(1).

[20] The ETFs in which the Fund may invest will be registered under the 1940 Act and include Investment Company Units (as described in NYSE Arca Equities Rule 5.2(j)(3)); Portfolio Depositary Receipts (as described in NYSE Arca Equities Rule 8.100); and Managed Fund Shares (as described in NYSE Arca Equities Rule 8.600). Such ETFs all will be listed and traded in the U.S. on registered exchanges. While the Fund may invest in inverse ETFs, the Fund will not invest in leveraged or inverse leveraged (*e.g.,* 2X, –2X, 3X, or –3X) ETFs.

[21] The Fund will limit its investments in currencies to those currencies with a minimum average daily foreign exchange turnover of USD $1 billion as determined by the Bank for International Settlements (''BIS'') Triennial Central Bank Survey.

[22] The Exchange further represents that not more than 10% of the net assets of the Fund, in the aggregate, invested in equity securities (other than mutual fund shares) shall consist of equity securities, including common stock into which convertible securities can be converted and Depositary Receipts, whose principal market is not a member of the ISG or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement. *See* Amendment No. 2 to the proposed rule change, *supra* note 7.

or any exemption therefrom, as such statute, rules, or regulations may be amended or interpreted from time to time.

The Fund is a diversified series of the Trust. The Fund intends to meet the diversification requirements of the 1940 Act.

The Fund's investments, including derivatives, will be consistent with the Fund's investment objective and will not be used to enhance leverage (although certain derivatives may result in leverage). That is, while the Fund will be permitted to borrow as permitted under the 1940 Act, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*i.e.,* 2Xs and 3Xs) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).[23]

D. Exchange's Description of the Fund's Use of Derivatives

The Fund proposes to seek certain exposures through transactions in the specific derivative instruments described above. The derivatives to be used are futures, swaps, NDFs, foreign forward currency contracts, and call and put options. Derivatives, which are instruments that have a value based on another instrument, exchange rate, or index, may also be used as substitutes for securities in which the Fund can invest. The Fund may use these derivative instruments to increase gain, to effectively gain targeted exposure from its cash positions, to hedge various investments, and/or for risk management.

Investments in derivative instruments will be made in accordance with the 1940 Act and consistent with the Fund's investment objective and policies. To limit the potential risk associated with such transactions, the Fund will segregate or ''earmark'' assets determined to be liquid by the Adviser in accordance with procedures established by the Trust's Board of Trustees and in accordance with the 1940 Act (or, as permitted by applicable regulation, enter into certain offsetting positions) to cover its obligations under derivative instruments. These procedures have been adopted consistent with Section 18 of the 1940 Act and related Commission guidance. In addition, the Fund will include appropriate risk disclosure in its offering documents, including leveraging risk. Leveraging risk is the risk that certain transactions of the Fund, including the Fund's use of derivatives, may give rise to leverage, causing the Fund to be more volatile than if it had not been leveraged.[24] Because the markets for certain assets, or the assets themselves, may be unavailable or cost prohibitive as compared to derivative instruments, suitable derivative transactions may be an efficient alternative for the Fund to obtain the desired asset exposure.

E. Exchange's Description of the Impact on the Arbitrage Mechanism

The Exchange states that, according to the Adviser, there will be minimal impact to the arbitrage mechanism as a result of the use of derivatives. Market makers and participants should be able to value derivatives as long as the positions are disclosed with relevant information. The price at which Shares trade will continue to be disciplined by arbitrage opportunities created by the ability to purchase or redeem creation Shares at their NAV, which should ensure that Shares will not trade at a material discount or premium in relation to their NAV.

In addition, the Exchange states that, according to the Adviser, there will not be any significant impacts to the settlement or operational aspects of the Fund's arbitrage mechanism due to the use of derivatives. Because derivatives generally are not eligible for in-kind transfer, they will typically be substituted with a ''cash in lieu'' amount when the Fund processes purchases or redemptions of creation units in-kind.

III. Discussion and Commission Findings

After careful review, the Commission finds that the Exchange's proposal to list and trade the Shares is consistent with the Act and the rules and regulations thereunder applicable to a national securities exchange.[25] In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,[26] which requires, among other things, that the Exchange's rules be designed to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Commission also finds that the proposal to list and trade the Shares on the Exchange is consistent with Section 11A(a)(1)(C)(iii) of the Act,[27] which sets forth Congress' finding that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for, and transactions in, securities. Quotation and last-sale information for the Shares and for portfolio holdings of the Fund that are U.S. exchange listed, including common stocks, preferred stocks, warrants, rights, ETFs, REITs, and U.S. exchange-traded ADRs will be available via the Consolidated Tape Association (''CTA'') high speed line. Quotation and last-sale information for such U.S. exchange-listed securities, as well as futures, also will be available from the exchange on which they are listed. Quotation and last-sale information for exchange-listed options cleared via the Options Clearing Corporation will be available via the Options Price Reporting Authority, and quotation and last-sale information for non-U.S. equity securities (including GDRs and EDRs) will be available from the exchanges on which they trade and from major market data vendors, as applicable.

In addition, the Intra-day Indicative Value (''IIV''), which is the Portfolio Indicative Value, as defined in NYSE Arca Equities Rule 8.600(c)(3), will be widely disseminated by one or more major market data vendors at least every 15 seconds during the Core Trading Session.[28] According to the Exchange, a third party market data provider will calculate the IIV for the Fund. The third party market data provider may use market quotes if available or may fair value securities against proxies (such as swap or yield curves).

With respect to specific derivatives:

• NDFs and foreign forward currency contracts may be valued intraday using market quotes, or another proxy as determined to be appropriate by the third party market data provider.

• Futures may be valued intraday using the relevant futures exchange data, or another proxy as determined to be appropriate by the third party market data provider.

• CDS and CDS indices swaps may be valued using intraday data from market

[23] The Fund's broad-based securities benchmark index will be identified in a future amendment to the Registration Statement following the Fund's first full calendar year of performance.

[24] To mitigate leveraging risk, the Adviser will segregate or ''earmark'' liquid assets or otherwise cover the transactions that may give rise to such risk.

[25] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[26] 15 U.S.C. 78f(b)(5).

[27] 15 U.S.C. 78k–1(a)(1)(C)(iii).

[28] According to the Exchange, several major market data vendors display and/or make widely available IIVs taken from the CTA or other data feeds.

vendors, or based on underlying asset price, or another proxy as determined to be appropriate by the third party market data provider.

- Total return swaps may be valued intraday using the underlying asset price, or another proxy as determined to be appropriate by the third party market data provider.
- Exchange-listed options may be valued intraday using the relevant exchange data, or another proxy as determined to be appropriate by the third party market data provider.
- OTC options may be valued intraday through option valuation models (*e.g.,* Black-Scholes) or using exchange traded options as a proxy, or another proxy as determined to be appropriate by the third party market data provider.

On each business day, before commencement of trading in Shares in the Core Trading Session (normally, 9:30 a.m. to 4:00 p.m., Eastern Time or ''E.T.'') on the Exchange, the Adviser will disclose on the Fund's Web site the Disclosed Portfolio for the Fund as defined in NYSE Arca Equities Rule 8.600(c)(2) that will form the basis for the Fund's calculation of NAV at the end of the business day.[29] According to the Exchange, the Fund's disclosure of derivative positions in the Disclosed Portfolio will include information that market participants can use to value these positions intraday. On a daily basis, the Adviser will disclose on the Fund's Web site the following information regarding each portfolio holding, as applicable to the type of holding: Ticker symbol, CUSIP number or other identifier, if any; a description of the holding (including the type of holding, such as the type of swap); the identity of the security, index, or other asset or instrument underlying the holding, if any; for options, the option strike price; quantity held (as measured by, for example, par value, notional value, or number of shares, contracts, or units); maturity date, if any; coupon rate, if any; effective date, if any; market value of the holding; and the percentage weighting of the holding in the Fund's portfolio. The Web site information will be publicly available at no charge.

The NAV of Shares, under normal market conditions, will be calculated each business day as of the close of the Exchange, which is typically 4:00 p.m. E.T. On occasion, the Exchange will close before 4:00 p.m. E.T. When that happens, NAV will be calculated as of the time the Exchange closes.[30]

Price information for OTC common stocks (including certain OTC ADRs), preferred stocks, warrants, rights, and CVRs will be available from one or more major market data vendors or broker-dealers in the securities. Quotation information for OTC options, cash equivalents, swaps, money market funds, non-exchange-listed investment company securities (other than money market funds), Rule 144A securities, U.S. Government obligations, U.S. Government agency obligations, sovereign obligations, corporate debt, and reverse repurchase agreements may be obtained from brokers and dealers who make markets in such securities or through nationally recognized pricing services through subscription agreements. The U.S. dollar value of foreign securities, instruments, and currencies can be derived by using foreign currency exchange rate quotations obtained from nationally recognized pricing services. Forwards and spot currency price information will be available from major market data vendors. The Fund's Web site will include a form of the prospectus for the Fund and additional data relating to NAV and other applicable quantitative information.

The Commission believes that the proposal to list and trade the Shares is reasonably designed to promote fair disclosure of information that may be necessary to price the Shares appropriately and to prevent trading when a reasonable degree of transparency cannot be assured. The Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time. Trading in Shares of the Fund will be halted if the circuit breaker parameters in NYSE Arca Equities Rule 7.12 have been reached or because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable,[31] and trading in the Shares will be subject to NYSE Arca Equities Rule 8.600(d)(2)(D), which sets forth additional circumstances under which Shares of the Fund may be halted.

The Exchange represents that it has a general policy prohibiting the distribution of material, non-public information by its employees. In addition, Commentary .06 to NYSE Arca Equities Rule 8.600 further requires that personnel who make decisions on the open-end fund's portfolio composition must be subject to procedures designed to prevent the use and dissemination of material, non-public information regarding the open-end fund's portfolio. The Exchange represents that the Adviser is not registered as a broker-dealer, but is affiliated with a broker-dealer and has implemented and will maintain a fire wall with respect to such broker-dealer affiliate regarding access to information concerning the composition of, and changes to, the portfolio.[32] The Commission also notes that, pursuant to NYSE Arca Equities Rule 8.600(d)(2)(B)(ii), the ''Reporting Authority'' that provides the Disclosed Portfolio must implement and maintain, or be subject to, procedures designed to

[29] Under accounting procedures to be followed by the Fund, trades made on the prior business day (''T'') will be booked and reflected in NAV on the current business day (''T+1''). Accordingly, the Fund will be able to disclose at the beginning of the business day the portfolio that will form the basis for the NAV calculation at the end of the business day.

[30] Securities for which market quotations are readily available will generally be valued at their current market value. Other securities and assets, including securities for which market quotations are not readily available or market quotations are determined not to be reliable; or, if their value has been materially affected by events occurring after the close of trading on the exchange or market on which the security is principally traded but before the Fund's NAV is calculated, may be valued at fair value in accordance with policies and procedures adopted by the Trust's Board of Trustees. Fair value represents a good faith determination of the value of a security or other asset based upon specifically applied procedures. Fair valuation may require subjective determinations. *See* Notice, *supra* note 3, 81 FR at 44344 (describing additional details with respect to the Fund's NAV valuation methodology).

[31] These reasons may include: (1) The extent to which trading is not occurring in the securities or financial instruments comprising the Disclosed Portfolio of the Fund; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. With Respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund.

[32] *See supra* note 12. The Exchange further notes that an investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 (''Advisers Act''). As a result, the Adviser and its related personnel are subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violation, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above.

prevent the use and dissemination of material, non-public information regarding the actual components of the portfolio.[33]

Prior to the commencement of trading, the Exchange will inform its Equity Trading Permit Holders in an Information Bulletin (''Bulletin'') of the special characteristics and risks associated with trading the Shares. The Exchange represents that that trading in the Shares will be subject to the existing trading surveillances administered by the Exchange as well as cross-market surveillances administered by the Financial Industry Regulatory Authority (''FINRA'') on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.[34]

The Exchange represents that it deems the Shares to be equity securities, thus rendering the trading of the Shares subject to the Exchange's existing rules governing the trading of equity securities.

In support of this proposal, the Exchange has made the following additional representations:

(1) The Shares will conform to the initial and continued listing criteria under NYSE Arca Equities Rule 8.600.

(2) The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions.

(3) The Exchange's surveillance procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws.

(4) The Exchange, or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares, certain exchange-listed equity securities (including Depositary Receipts, ETFs, REITs, common and preferred stocks, common stock into which convertible securities can be converted, warrants, rights, certain futures, and certain exchange-traded options with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading such securities and financial instruments from such markets and other entities. In addition, the Exchange may obtain information regarding trading in such securities and financial instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.[35] FINRA, on behalf of the Exchange, is able to access, as needed, trade information for certain fixed income securities held by the Fund reported to FINRA's Trade Reporting and Compliance Engine.

(5) Not more than 10% of the net assets of the Fund, in the aggregate, invested in equity securities (other than mutual fund shares) shall consist of equity securities, including common stock into which convertible securities can be converted and Depositary Receipts, whose principal market is not a member of the ISG or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement. In addition, not more than 10% of the net assets of the Fund in the aggregate invested in futures contracts or exchange-traded options shall consist of futures contracts or options whose principal market is not a member of ISG or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement.

(6) Prior to the commencement of trading, the Exchange will inform its Equity Trading Permit Holders in a Bulletin of the special characteristics and risks associated with trading the Shares. Specifically, the Bulletin will discuss the following: (a) the procedures for purchases and redemptions of Shares in Creation Unit aggregations (and that Shares are not individually redeemable); (b) NYSE Arca Equities Rule 9.2(a), which imposes a duty of due diligence on its Equity Trading Permit Holders to learn the essential facts relating to every customer prior to trading the Shares; (c) the risks involved in trading the Shares during the Opening and Late Trading Sessions when an updated IIV will not be calculated or publicly disseminated; (d) how information regarding the IIV and the Disclosed Portfolio is disseminated; (e) the requirement that Equity Trading Permit Holders deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (f) trading information. The Bulletin will also discuss any exemptive, no-action, and interpretive relief granted by the Commission from any rules under the Act.

(7) For initial and continued listing, the Fund must be in compliance with Rule 10A–3 under the Act.[36]

(8) Exchange-listed and traded common stocks, preferred stocks, warrants and rights of U.S. corporations, and U.S. REITs will be traded on U.S. national securities exchanges. In addition, no more than 10% of the net assets of the Fund will be invested in Depositary Receipts that are not exchange-listed, and the common stock into which convertible securities holdings can be converted will be exchange-traded.

(9) The ETFs in which the Fund may invest will be registered under the 1940 Act and include Investment Company Units (as described in NYSE Arca Equities Rule 5.2(j)(3)); Portfolio Depositary Receipts (as described in NYSE Arca Equities Rule 8.100); and Managed Fund Shares (as described in NYSE Arca Equities Rule 8.600). Such ETFs all will be listed and traded in the U.S. on registered exchanges. While the Fund may invest in inverse ETFs, the Fund will not invest in leveraged or inverse leveraged (*e.g.,* 2X, –2X, 3X, or –3X) ETFs.

(10) The Adviser expects that, under normal market conditions, the Fund will invest at least 75% of its corporate debt securities in issuances that have at least $100,000,000 par amount outstanding in developed countries, or at least $200,000,000 par amount outstanding in emerging market countries.

(11) The Fund will limit its investments in currencies to those currencies with a minimum average daily foreign exchange turnover of USD $1 billion as determined by the BIS Triennial Central Bank Survey.

(12) The Fund may invest no more than 5% of its assets in equity and debt securities that are restricted securities (Rule 144A securities), in addition to Rule 144A securities deemed illiquid by the Adviser. In addition, under normal market conditions, the Fund may invest no more than 5% of its assets, in the aggregate, in OTC common stocks, preferred stocks, warrants, rights, and CVRs of U.S. and foreign corporations (including emerging market securities).

(13) The Fund may hold up to an aggregate amount of 15% of its net assets in illiquid assets (calculated at the time of investment), including Rule 144A securities deemed illiquid by the Adviser, consistent with Commission guidance. The Fund will monitor its portfolio liquidity on an ongoing basis to determine whether, in light of current circumstances, an adequate level of

[33] ''Reporting Authority'' is defined in NYSE Arca Equites Rule (c)(4).

[34] The Exchange represents that FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement, and the Exchange is responsible for FINRA's performance under this regulatory services agreement.

[35] For a list of the current members of ISG, *see www.isgportal.org.* The Exchange notes that not all components of the Disclosed Portfolio for the Fund may trade on markets that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

[36] *See* 17 CFR 240.10A–3.

liquidity is being maintained, and will consider taking appropriate steps in order to maintain adequate liquidity if, through a change in values, net assets, or other circumstances, more than 15% of the Fund's net assets are held in illiquid assets. Illiquid assets include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets as determined in accordance with Commission staff guidance.

(14) The Fund's investments, including derivatives, will be consistent with the Fund's investment objective and will not be used to enhance leverage (although certain derivatives may result in leverage). That is, while the Fund will be permitted to borrow as permitted under the 1940 Act, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*i.e.,* 2Xs and 3Xs) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).

(15) Investments in derivative instruments will be made in accordance with the 1940 Act and consistent with the Fund's investment objective and policies. To limit the potential risk associated with such transactions, the Fund will segregate or ''earmark'' assets determined to be liquid by the Adviser in accordance with procedures established by the Trust's Board of Trustees and in accordance with the 1940 Act (or, as permitted by applicable regulation, enter into certain offsetting positions) to cover its obligations under derivative instruments. These procedures have been adopted consistent with Section 18 of the 1940 Act and related Commission guidance. In addition, the Fund will include appropriate risk disclosure in its offering documents, including leveraging risk. Leveraging risk is the risk that certain transactions of the Fund, including the Fund's use of derivatives, may give rise to leverage, causing the Fund to be more volatile than if it had not been leveraged.[37]

The Exchange also represents that all statements and representations made in this filing regarding (a) the description of the portfolio, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange rules and surveillance procedures shall constitute continued listing requirements for listing the Shares of the Fund on the Exchange.

[37] To mitigate leveraging risk, the Adviser will segregate or ''earmark'' liquid assets or otherwise cover the transactions that may give rise to such risk.

The issuer has represented to the Exchange that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements.[38] If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Equities Rule 5.5(m).

This approval order is based on all of the Exchange's representations, including those set forth above and in the Notice,[39] Amendment Nos. 1, 2 and 3 to the proposed rule change,[40] and the Exchange's description of the Fund. The Commission notes that the Fund and the Shares must comply with the requirements of NYSE Arca Equities Rule 8.600 to be listed and traded on the Exchange on an initial and continued basis.

For the foregoing reasons, the Commission finds that the proposed rule change, as modified by Amendment Nos. 1, 2, and 3 thereto, is consistent with Section 6(b)(5) of the Act[41] and the rules and regulations thereunder applicable to a national securities exchange.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[42] that the proposed rule change (SR–NYSEArca–2016–82), as modified by Amendment Nos. 1, 2, and 3 thereto, be, and it hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[43]

Robert W. Errett,

Deputy Secretary.

[FR Doc. 2016–31683 Filed 12–29–16; 8:45 am]

BILLING CODE 8011–01–P

[38] The Commission notes that certain other proposals for the listing and trading of Managed Fund Shares include a representation that the exchange will ''surveil'' for compliance with the continued listing requirements. *See, e.g.,* Securities Exchange Act Release No. 78005 (Jun. 7, 2016), 81 FR 38247 (Jun. 13, 2016) (SR–BATS–2015–100). In the context of this representation, it is the Commission's view that ''monitor'' and ''surveil'' both mean ongoing oversight of a fund's compliance with the continued listing requirements. Therefore, the Commission does not view ''monitor'' as a more or less stringent obligation than ''surveil'' with respect to the continued listing requirements.

[39] *See supra* note 3.

[40] *See supra* notes 4, 7, and 8.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79687; File No. SR–NASDAQ–2016–183]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Notice of Filing of Proposed Rule Change To Shorten the Settlement Cycle From T+3 to T+2

December 23, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 22, 2016, The NASDAQ Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Nasdaq Rules 11140 (Transactions in Securities ''Ex-Dividend,'' ''Ex-Rights'' or ''Ex-Warrants''), 11150 (Transactions ''Ex-Interest'' in Bonds Which Are Dealt in ''Flat''), 11210 (Sent by Each Party), 11320 (Dates of Delivery), 11620 (Computation of Interest), and IM–11810 (Sample Buy-In Forms), to conform to the Commission's proposed amendment to SEA Rule 15c6–1(a) to shorten the standard settlement cycle for most broker-dealer transactions from three business days after the trade date (''T+3'') to two business days after the trade date (''T+2'') and the industry-led initiative to shorten the settlement cycle from T+3 to T+2.[3]

The text of the proposed rule change is available on the Exchange's Web site at *http://nasdaq.cchwallstreet.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 78962 (September 28, 2016), 81 FR 69240 (October 5, 2016) (Amendment to Securities Transaction Settlement Cycle) (File No. S7–22–16) (''SEC Proposing Release'').

concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

SEC Proposing Release

On September 28, 2016, the Commission proposed amending SEA Rule 15c6–1(a) to shorten the standard settlement cycle for most broker-dealer transactions from T+3 to T+2 on the basis that the shorter settlement cycle would reduce the risks that arise from the value and number of unsettled securities transactions prior to the completion of settlement, including credit, market, and liquidity risk directly faced by U.S. market participants.[4] The proposed rule amendment was published for comment in the **Federal Register** on October 5, 2016.[5]

Background

In 1995, the standard U.S. trade settlement cycle for equities, municipal and corporate bonds, and unit investment trusts, and financial instruments composed of these products was shortened from five business days after the trade date (''T+5'') to T+3.[6] Accordingly, Nasdaq and other self-regulatory organizations (''SROs'') amended their respective rules to conform to the T+3 settlement cycle.[7] Since that time, the SEC and the financial services industry have continued to explore the idea of shortening the settlement cycle even further.[8]

In April 2014, the Depository Trust & Clearing Corporation (''DTCC'') published its formal recommendation to shorten the standard U.S. trade settlement cycle to T+2 and announced that it would partner with market participants and industry organizations to devise the necessary approach and timelines to achieve T+2.[9]

In an effort to improve the overall efficiency of the U.S. settlement system by reducing the attendant risks in T+3 settlement of securities transactions, and to align U.S. markets with other major global markets that have already moved to T+2, DTCC, in collaboration with the financial services industry, formed an Industry Steering Committee (''ISC'') and an industry working group and sub-working groups to facilitate the move to T+2.[10] In June 2015, the ISC published a White Paper outlining the activities and proposed time frames that would be required to move to T+2 in the U.S.[11] Concurrently, the Securities Industry and Financial Markets Association (''SIFMA'') and the Investment Company Institute (''ICI'') jointly submitted a letter to SEC Chair White, expressing support of the financial services industry's efforts to shorten the settlement cycle and identifying SEA Rule 15c6–1(a) and several SRO rules that they believed would require amendments for an effective transition to T+2.[12] In March 2016, the ISC announced the industry target date of September 5, 2017 for the transition to a T+2 settlement cycle to occur.[13]

Proposed Rule Change

In light of the SEC Proposing Release that would amend SEA Rule 15c6–1(a) to require standard settlement no later than T+2 and similar proposals from other SROs,[14] Nasdaq is proposing changes to its rules pertaining to securities settlement by, among other things, amending the definition of ''standard'' settlement as occurring on T+2. SEA Rule 15c6–1(a) currently establishes ''standard'' settlement as occurring no later than T+3 for all securities, other than an exempt security, government security, municipal security, commercial paper, bankers' acceptances, or commercial bills.[15] Nasdaq is proposing changes to rules pertaining to securities settlement to support the industry-led initiative to shorten the standard settlement cycle to two business days. Most of the rules that Nasdaq has identified for these changes are successors to provisions under the legacy NASD Rules of Fair Practice and NASD Uniform Practice Code (''UPC'') that were amended when the Commission adopted SEA Rule 15c6–1(a), which established T+3 as the standard settlement cycle.[16] As such, Nasdaq is proposing to amend Nasdaq Rules 11140 (Transactions in Securities ''Ex-Dividend,'' ''Ex-Rights'' or ''Ex-Warrants''), 11150 (Transactions ''Ex-Interest'' in Bonds Which Are Dealt in ''Flat''), 11320 (Dates of Delivery), and 11620 (Computation of Interest). In addition, Nasdaq is proposing to amend

[4] *See* Securities and Exchange Commission Press Release 2016–200: ''SEC Proposes Rule Amendment to Expedite Process for Settling Securities Transactions'' (September 28, 2016).

[5] *See supra* note 3.

[6] In 1993, the Commission adopted SEA Rule 15c6–1 which became effective in 1995. *See* Securities Exchange Act Release Nos. 33023 (October 6, 1993), 58 FR 52891 (October 13, 1993) and 34952 (November 9, 1994), 59 FR 59137 (November 16, 1994). SEA Rule 15c6–1(a) provides, in relevant part, that ''a broker or dealer shall not effect or enter into a contract for the purchase or sale of a security (other than an exempted security, government security, municipal security, commercial paper, bankers' acceptances, or commercial bills) that provides for payment of funds and delivery of securities later than the third business day after the date of the contract unless otherwise expressly agreed to by the parties at the time of the transaction.'' 17 CFR 240.15c6–1(a). Although not covered by SEA Rule 15c6–1, in 1995, the Commission approved the Municipal Securities Rulemaking Board's rule change requiring transactions in municipal securities to settle by T+3. *See* Securities Exchange Act Release No. 35427 (February 28, 1995), 60 FR 12798 (March 8, 1995) (Order Approving File No. SR–MSRB–94–10).

[15] *See supra* note 7.

[16] The legacy NASD rules that were changed to conform to the move from T+5 to T+3 included Section 26 (Investment Companies) of the Rules of Fair Practice, and Section 5 (Transactions in Securities ''Ex-Dividend,'' ''Ex-Rights'' or ''Ex-Warrants''), Section 6 (Transactions ''Ex-Interest'' in Bonds Which Are Dealt in ''Flat''), Section 12 (Dates of Delivery), Section 46 (Computation of Interest) and Section 64 (Acceptance and Settlement of COD Orders) of the UPC. *See* Securities Exchange Act Release No. 35507 (March 17, 1995), 60 FR 15616 (March 24, 1995) (Order Approving File No. SR–NASD–94–56). *See also* Notice to Members 95–36 (May 1995) (enumerating the various sections under the NASD Rules of Fair Practice and UPC that were amended to implement T+3 settlement for securities transactions).

Nasdaq Rules 11210 (Sent by Each Party) and IM–11810 (Sample Buy-In Forms) to conform provisions, where appropriate, to the T+2 settlement cycle.[17]

The details of the proposed rule change are described below.

(1) Nasdaq Rule 11140 (Transactions in Securities ''Ex-Dividend,'' ''Ex- Rights'' or ''Ex-Warrants'')

Rule 11140(b)(1) provides that for dividends or distributions, and the issuance or distribution of warrants, that are less than 25 percent of the value of the subject security, if definitive information is received sufficiently in advance of the record date, the date designated as the ''ex-dividend date'' shall be the second business day preceding the record date if the record date falls on a business day, or the third business day preceding the record date if the record date falls on a day designated by Nasdaq Regulation as a non-delivery date. Nasdaq is proposing to shorten the time frames in Rule 11140(b)(1) by one business day.

(2) Nasdaq Rule 11150 (''Ex-Interest'' in Bonds Which Are Dealt in ''Flat'')

Rule 11150(a) prescribes the manner for establishing ''ex-interest dates'' for transactions in bonds or other similar evidences of indebtedness which are traded ''flat.'' Such transactions are ''ex-interest'' on the second business day preceding the record date if the record date falls on a business day, on the third business day preceding the record date if the record date falls on a day other than a business day, or on the third business day preceding the date on which an interest payment is to be made if no record date has been fixed. Nasdaq is proposing to shorten the time frames in Rule 11150(a) by one business day.

(3) Nasdaq Rule 11210 (Sent by Each Party)

Paragraphs (c) and (d) of Rule 11210 set forth the ''Don't Know'' (''DK'') voluntary procedures for using ''DK Notices'' or other forms of notices, respectively. Depending upon the notice used, a confirming member may follow the ''DK'' procedures when it sends a comparison or confirmation of a trade (other than one that clears through the National Securities Clearing Corporation (''NSCC'') or other registered clearing agency), but does not receive a comparison or confirmation or a signed ''DK'' from the contra-member by the close of four business days following the trade date of the transaction (''T+4''). The procedures generally provide that after T+4, the confirming member shall send a ''DK Notice'' (or similar notice) to the contra-member. The contra-member then has four business days after receipt of the confirming member's notice to either confirm or ''DK'' the transaction.

Nasdaq is proposing to amend paragraphs (c) and (d) of Rule 11210 to provide that the ''DK'' procedures may be used by the confirming member if it does not receive a comparison or confirmation or signed ''DK'' from the contra-member by the close of one business day following the trade date of the transaction, rather than the current T+4.[18] In addition, Nasdaq is proposing amendments to paragraphs (c)(2)(A), (c)(3), and (d)(5) of Rule 11210 to adjust the time in which a contra-member has to respond to a ''DK Notice'' (or similar notice) from four business days after the contra-member's receipt of the notice to two business days.

(4) Nasdaq Rule 11320 (Dates of Delivery)

Rule 11320 prescribes delivery dates for various transactions. Paragraph (b) states that for a ''regular way'' transaction, delivery must be made on, but not before, the third business day after the date of the transaction. Nasdaq is proposing to amend Rule 11320(b) to change the reference to third business day to second business day. Paragraph (c) provides that in a ''seller's option'' transaction, delivery may be made by the seller on any business day after the third business day following the date of the transaction. Nasdaq is proposing to amend Rule 11320(c) to change the reference to third business day to second business day.

(5) Nasdaq Rule 11620 (Computation of Interest)

In the settlement of contracts in interest-paying securities other than for cash, Rule 11620(a) requires the calculation of interest at the rate specified in the security up to, but not including, the third business day after the date of the transaction. The proposed amendment would shorten the time frame to the second business day. In addition, the proposed amendment would make non-substantive technical changes to the title of paragraph (a).

(6) Nasdaq Rule IM–11810 (Sample Buy-In Forms)

Rule IM–11810(i)(1)(A) sets forth the fail-to-deliver and liability notice procedures where a securities contract is for warrants, rights, convertible securities or other securities which have been called for redemption; are due to expire by their terms; are the subject of a tender or exchange offer; or are subject to other expiring events such as a record date for the underlying security and the last day on which the securities must be delivered or surrendered is the settlement date of the contract or later.[19]

Under Rule IM–11810(i)(1)(A), the receiving member delivers a liability notice to the owing counterparty. The liability notice sets a cutoff date for the delivery of the securities by the counterparty and provides notice to the counterparty of the liability attendant to its failure to deliver the securities in time. If the owing counterparty, or delivering member, delivers the securities in response to the liability notice, it has met its delivery obligation. If the delivering member fails to deliver the securities on the expiration date, it will be liable for any damages that may accrue thereby.

Rule IM–11810(i)(1)(A) further provides that when both parties to a contract are participants in a registered clearing agency that has an automated liability notification service, transmission of the liability notice must be accomplished through such system.[20] When the parties to a contract are not both participants in a registered clearing agency that has an automated liability notification service, such notice must be issued using written or comparable

[17] Nasdaq Rules 11210 and IM–11810 are successors to legacy NASD UPC Section 9 (Sent by Each Party) and 59 (''Buying-in''), respectively, which remained unchanged during the transition from T+5 to T+3. *See supra* note 17 [sic].

[18] As stated above, the time frames in Rule 11210 remained unchanged during the transition from T+5 to T+3. In light of the industry-led initiative to shorten the standard settlement cycle and the SEC Proposing Release to amend SEA Rule 15c6–1(a) to establish T+2 as the standard settlement for most broker dealer transactions, the Exchange believes that the current time frames in Rule 11210 are more protracted than necessary even in a T+3 environment and as such, the Exchange is proposing to amend these time frames to reflect more current industry practices.

[19] Rule IM–11810(i) is the successor to legacy NASD UPC Section 59(i) (Failure to Deliver and Liability Notice Procedures). When this provision was added to NASD's existing close-out procedures in 1984, it was drafted to be similar to the liability notice provisions adopted by the NSCC so that members that were also participants in NSCC could use the same procedures for both ex-clearing and NSCC cleared transactions, thereby simplifying members' back office procedures.

[20] In 2007, NYSE Rule 180 was amended to require that when the parties to a failed contract were both participants in a registered clearing agency that had an automated service for notifying a failing party of the liability that will be attendant to a failure to deliver and the contract was to be settled through the facilities of that registered clearing agency, the transmission of the liability notification must be accomplished through the use of the registered clearing agency's automated liability notification system. *See* Securities Exchange Act Release No. 55132 (January 19, 2007), 72 FR 3896 (January 26, 2007) (Order Approving File No. SR–NYSE–2006–57).

electronic media having immediate receipt capabilities not later than one business day prior to the latest time and the date of the offer or other event in order to obtain the protection provided by the Rule.[21]

Given the proposed shortened settlement cycle, Nasdaq is proposing to amend Rule IM–11810(i)(1)(A) in situations where both parties to a contract are not participants of a registered clearing agency with an automated notification service, by extending the time frame for delivery of the liability notice. Rule IM–11810(i)(1)(A) would be amended to provide that in such cases, the receiving member must send the liability notice to the delivering member as soon as practicable but not later than two hours prior to the cutoff time set forth in the instructions on a specific offer or other event to obtain the protection provided by the Rule. Nasdaq believes that extending the time given to the receiving member to transmit liability notifications will maintain the efficiency of the notification process while mitigating the possible overuse of such notifications.

Currently, Nasdaq understands that the identity of the counterparty, or delivering member, becomes known to the receiving member by mid-day on the business day after trade date (''T+1''), and by that time, the receiving member will generally also know which transactions are subject to an event identified in Rule IM–11810(i)(1)(A) that would prompt the receiving member to issue a liability notice to the delivering member. Nasdaq believes that the receiving member regularly issues liability notices to the seller or other parties from which the securities involved are due when the security is subject to an event identified in Rule IM–11810(i)(1)(A) during the settlement cycle as a way to mitigate the risk of a potential fail-to-deliver. In the current T+3 settlement environment, the one business day time frame gives the receiving member the requisite time needed to identify the parties involved and undertake the liability notification process.

However, Nasdaq believes that the move to a T+2 settlement environment will create inefficiencies in the liability notification process under Rule IM–11810(i)(1)(A) when both parties to a contract are not participants in a registered clearing agency with an automated notification service. The shorter settlement cycle, with the loss of one business day, would not afford the receiving member sufficient time to: (1) ascertain that the securities are subject to an event listed in Rule IM–11810(i)(1)(A) during the settlement cycle; (2) identify the delivering member and other parties from which the securities involved are due; and (3) determine the likelihood that such parties may fail to deliver. Where the receiving member has sufficient time (*e.g.,* one business day after), it can transmit liability notices as needed to the right parties. However, as a consequence of the shortened settlement cycle, the receiving member would be compelled to issue liability notices proactively to all potentially failing parties as a matter of course to preserve its rights against such parties without the benefit of knowing which transactions would actually necessitate the delivery of such notice. This would create a significant increase in the volume of liability notices members send and receive, many of which may be unnecessary. Members would then have to manage this overabundance of liability notices, increasing the possibility of errors, which would adversely impact the efficiency of the process. Therefore, Nasdaq believes its proposal to extend the time for the receiving member to deliver a liability notice when the parties to a contract are not both participants in a registered clearing agency with an automated notification service would help alleviate the potential burden on the liability notification process in a T+2 settlement environment.

Implementation

Nasdaq will announce the effective date of the proposed rule change in an Equity Regulatory Alert, which date would correspond with the industry-led transition to a T+2 standard settlement, and the effective date of the Commission's proposed amendment to SEA Rule 15c6–1(a) to require standard settlement no later than T+2.[22]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[23] in general, and furthers the objectives of Section 6(b)(5) of the Act,[24] in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, and, in general, to protect investors and the public interest. The Exchange believes that the proposed rule change supports the supports [sic] the industry-led initiative to shorten the settlement cycle to two business days. Moreover, the proposed rule change is consistent with the SEC's proposed amendment to SEA Rule 15c6–1(a) to require standard settlement no later than T+2. Nasdaq believes that the proposed rule change will provide the regulatory certainty to facilitate the industry-led move to a T+2 settlement cycle. As noted herein, upon approval, Nasdaq will announce the effective date of the proposed rule change in an Equity Regulatory Alert, which date would correspond with the industry-led transition to a T+2 standard settlement, and the effective date of the Commission's proposed amendment to SEA Rule 15c6–1(a) to require standard settlement no later than T+2.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change makes changes to rules pertaining to securities settlement and is intended to facilitate the implementation of the industry-led transition to a T+2 settlement cycle. Moreover, the proposed rule changes are consistent with the SEC's proposed amendment to SEA Rule 15c6–1(a) to require standard settlement no later than T+2. Accordingly, Nasdaq believes that the proposed changes do not impose any burdens on the industry in addition to those necessary to implement amendments to SEA Rule 15c6–1(a) as described and enumerated in the SEC Proposing Release.[25]

These conforming changes include changes to rules that specifically establish the settlement cycle as well as rules that establish time frames based on settlement dates, including for certain post-settlement rights and obligations. Nasdaq believes that the proposed changes set forth in the filing are necessary to support a standard settlement cycle across the U.S. for secondary market transactions in equities, corporate and municipal bonds, unit investment trusts, and financial instruments composed of these

[21] While Rule IM–11810 has undergone amendments over the years, the one-day time frame in paragraph (j) has remained unchanged. The one-day time frame also appears in comparable provisions of other SROs. *See, e.g.,* NSCC Rules & Procedures, Procedure X (Execution of Buy-Ins) (Effective August 10, 2016); NYSE Rule 282.65 (Fail to Deliver and Liability Notice Procedures). *See* also infra note 28 and accompanying text.

[22] *See supra* note 3.

[23] 15 U.S.C. 78f(b).

[24] 15 U.S.C. 78f(b)(5).

[25] *See supra* note 3.

products, among other things.[26] A standard U.S. settlement cycle for such products is critical for the operation of fair and orderly markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

A previous version of the proposed rule change was published for comment in Equity Regulatory Alert 2016–4 on May 18, 2016. Two comments were received in response to the Regulatory Alert.[27] A copy of the Regulatory Alert is attached as Exhibit 2a. A list of comments is attached as Exhibit 2b [sic] and copies of the comment letters received in response to the Regulatory Notice are attached as Exhibits 2c [sic].

Both of the letters received expressed support for the industry led move to T+2 stating, among other benefits, that the move will align U.S. markets with international markets that already work in the T+2 environment, improve the overall efficiency and liquidity of the securities markets, and the stability of the financial system by reducing counterparty risk and pro-cyclical and liquidity demands, and decreasing clearing capital requirements. SIFMA also provided their view on the proposed amendments to two rules under the Nasdaq Rule 11800 Series (Buying In).

Nasdaq Rule IM–11810(i)—Sample Buy-In Forms

In its comment letter, SIFMA raised a concern with the one-day time frame in Rule IM–11810(i)(1)(A), asserting that the requirement for the delivering member to deliver a liability notice to the receiving member no later than one business day prior to the latest time and the date of the offer or other event in order to obtain the protection provided by the Rule may no longer be appropriate in a T+2 environment in some situations such as where the delivery obligation is transferred to another party as a result of continuous net settlement, settlements outside of the NSCC, and settlements involving a third party that is not a Nasdaq member firm. SIFMA noted that NYSE Rule 180 (Failure to Deliver) includes a similar requirement for NYSE member firms that are participants in a registered clearing agency to transmit liability notification through an automated notification service and proposed amending Rule IM–11810(i)(1)(A) to omit the reference to a notification time frame, which would align with NYSE Rule 180.[28] In the alternative, SIFMA proposed amending Rule IM–11810(i)(1)(A) to require that the liability notice be delivered in a ''reasonable amount of time'' ahead of the settlement obligation in light of facts and circumstances. SIFMA maintained that under either proposed amendment to paragraph (j), the delivering member would be liable for any damages caused by its failure to deliver in a timely fashion.

While Nasdaq did not initially propose amendments to Rule IM–11810 for the T+2 initiative,[29] in light of SIFMA's concern regarding Rule IM–11810(i)(1)(A), Nasdaq is proposing to amend the Rule to provide that, where both parties to a contract are not participants of a registered clearing agency with an automated notification service, the receiving member must send the liability notice to the delivering member as soon as practicable but not later than two hours prior to the cutoff time set forth in the instructions on a specific offer or other event to obtain the protection provided by the Rule.[30]

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) by order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NASDAQ–2016–183 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NASDAQ–2016–183. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–

[26] *See supra* note 3.

[27] *See* Letter from Martin A. Burns, Chief Industry Operations Officer, Investment Company Institute to John Zecca, Senior Vice President, Marketwatch dated June 8, 2016 (''ICI''); letter from Thomas F. Price, Managing Director, Operations, Securities Industry and Financial Markets Association, to John Zecca, Senior Vice President Market Watch dated June 8, 2016 (''SIFMA'').

[28] See NYSE Rule 180 (Failure to Deliver) providing in part that ''[w]hen the parties to a contract are both participants in a registered clearing agency which has an automated service for notifying a failing party of the liability that will be attendant to a failure to deliver and that contract was to be settled through the facilities of said registered clearing agency, the transmission of the liability notification must be accomplished through use of said automated notification service.'' Nasdaq notes that NYSE Rule 180 does not address the transmission of the liability notification for parties to a contract that are not both participants in a registered clearing agency (or non-participants). The transmission of the liability notification for non-participants is addressed under NYSE Rule 282.65 (Failure to Deliver and Liability Notice Procedures). *See supra* note 22.

[29] *See* Equity Regulatory Alert 2016–4.

[30] Nasdaq expects similar amendments to other comparable SRO provisions in NYSE Rule 282.65 (Fail to Deliver and Liability Notice Procedures) and FINRA Rule 11810 (Buying-in), and NSCC Rules & Procedures, Procedure X (Execution of Buy-Ins) to address SIFMA's concern about the one-day notification time frame.

NASDAQ–2016–183 and should be submitted on or before January 20, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[31]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79685; File No. SR–MIAX–2016–48]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fee Schedule To Modify the Exchange's Other Market Participant Transaction Fees

December 23, 2016.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 15, 2016, Miami International Securities Exchange LLC (''MIAX Options'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Options Fee Schedule (the ''Fee Schedule'').

The text of the proposed rule change is available on the Exchange's Web site at *http://www.miaxoptions.com/filter/wotitle/rule_filing,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Fee Schedule to increase the fees charged to Exchange Members [3] for simple and complex order executions in standard options classes in the Penny Pilot Program [4] (''Penny Pilot'') for Firms.[5] Specifically, the Exchange proposes to increase the fees charged to Members for simple and complex order executions in standard options in the Penny Pilot for Firms from $0.45 to $0.47 per contract executed. The Exchange believes that this proposed fee increase is reasonable, equitable and not unfairly discriminatory because it makes the transaction fee consistent among the Exchange's market participants who are not Priority Customers [6] or MIAX Options Market Makers [7] by charging all such participants the same rate for transactions for simple and complex order executions in standard options in the Penny Pilot. The Exchange has historically kept the Firm transaction fee at a lower rate than the transaction fee for other market participants who are not Priority Customers or MIAX Options Market Makers, primarily as a competitive measure to attract Firm order flow. The Exchange believes that this measure is no longer necessary, and thus believes it is appropriate to increase the Firm transaction fee rate to the same rate charged for other market participants who are not Priority Customers or MIAX Options Market Makers. This proposed change brings the Exchange's Firm transaction fee in line and comparable with similar fees of other competing options exchanges.[8]

In addition, the Exchange proposes to continue to offer Members the opportunity to reduce their Firm transaction fees by $0.02 per executed contract resulting from simple order executions in standard options in the Penny Pilot.[9] In order to accomplish this reduction, any Member, including any Affiliate [10] of the Member, that qualifies for the Priority Customer Rebate Program (''PCRP'') volume tiers 3 or higher,[11] will be assessed a reduced Firm transaction fee of $0.45 per contract resulting from simple order executions in standard options in the Penny Pilot. The Exchange believes that this continuing incentive will encourage Members to send their Firm order flow to the Exchange.

The Exchange proposes to implement the proposed change to the Fee Schedule effective as of January 1, 2017.

2. Statutory Basis

The Exchange proposes to amend its Fee Schedule to increase the fees charged to Exchange Members [12] for simple and complex order executions in standard options classes in the Penny Pilot Program [13] (''Penny Pilot'') for

[10] For purposes of the MIAX Options Fee Schedule, the term ''Affiliate'' means an affiliate of a Member of at least 75% common ownership between the firms as reflected on each firm's Form BD, Schedule A (''Affiliate''). *See* Fee Schedule note 1.

[11] Under the PCRP, a Member receives certain transaction fee discounts provided the Member meets certain percentage thresholds in a month as described in the PCRP table. *See* Fee Schedule, Section (1)(a)(iii).

[12] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[13] *See* Securities Exchange Act Release Nos. 78080 (June 15, 2016), 81 FR 40377 (June 21, 2016)

Firms.[14] Specifically, the Exchange proposes to increase the fees charged to Members for simple and complex order executions in standard options in the Penny Pilot for Firms from $0.45 to $0.47 per contract executed. The Exchange believes that this proposed fee increase is reasonable, equitable and not unfairly discriminatory because it makes the transaction fee consistent among the Exchange's market participants who are not Priority Customers [15] or MIAX Options Market Makers [16] by charging all such participants the same rate for transactions for simple and complex order executions in standard options in the Penny Pilot. The Exchange has historically kept the Firm transaction fee at a lower rate than the transaction fee for other market participants who are not Priority Customers or MIAX Options Market Makers, primarily as a competitive measure to attract Firm order flow. The Exchange believes that this measure is no longer necessary, and thus believes it is appropriate to increase the Firm transaction fee rate to the same rate charged for other market participants who are not Priority Customers or MIAX Options Market Makers. This proposed change brings the Exchange's Firm transaction fee in line and comparable with similar fees of other competing options exchanges.[17]

In addition, the Exchange proposes to continue to offer Members the opportunity to reduce their Firm transaction fees by $0.02 per executed contract resulting from simple order executions in standard options in the Penny Pilot.[18] In order to accomplish this reduction, any Member, including any Affiliate [19] of the Member, that qualifies for the Priority Customer Rebate Program (''PCRP'') volume tiers 3 or higher,[20] will be assessed a reduced Firm transaction fee of $0.45 per contract resulting from simple order executions in standard options in the Penny Pilot. The Exchange believes that this continuing incentive will encourage Members to send their Firm order flow to the Exchange.

The Exchange proposes to implement the proposed change to the Fee Schedule effective as of January 1, 2017.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposal is similar to the transaction fees found on other options exchanges; therefore, the Exchange believes the proposal is consistent with robust competition by increasing the intermarket competition for order flow from market participants. The proposal aligns the fees of market participants who are not Priority Customers or MIAX Options Market Makers on the Exchange, as well as aligns such fees assessable to Members to those charged by other exchanges for the same market participant type. Enhanced market quality and increased transaction volume that results from the anticipated increase in order flow directed to the Exchange will benefit all market participants and improve competition on the Exchange.

The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive. In such an environment, the Exchange must continually adjust its fees to remain competitive with other exchanges and to attract order flow. The Exchange believes that the proposal reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[21] and Rule 19b–4(f)(2) [22] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MIAX–2016–48 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–MIAX–2016–48. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule

(SR–MIAX–2016–16); 79432 (November 30, 2016), 81 FR 87990 (December 6, 2016) (SR–MIAX–2016–45).

[14] A ''Firm'' transaction fee is assessed on a MIAX Options Electronic Exchange Member ''EEM'' that enters an order that is executed for an account identified by the EEM for clearing in the Options Clearing Corporation (''OCC'') ''Firm'' range. *See* Fee Schedule, Section 1)a)ii.

[15] The term ''Priority Customer'' means a person or entity that (i) is not a broker or dealer in securities, and (ii) does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). A ''Priority Customer Order'' means an order for the account of a Priority Customer. *See* Exchange Rule 100.

[16] The term ''Market Makers'' refers to Lead Market Makers (''LMMs''), Primary Lead Market Makers (''PLMMs''), and Registered Market Makers (''RMMs'') collectively. *See* Exchange Rule 100. A Directed Order Lead Market Maker (''DLMM'') and Directed Primary Lead Market Maker (''DPLMM'') is a party to a transaction being allocated to the LMM or PLMM and is the result of an order that has been directed to the LMM or PLMM. *See* Fee Schedule note 2.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–79684; File No. SR–NSX–2016–16]

Self-Regulatory Organizations; National Stock Exchange, Inc.; Notice of Filing of Proposed Rule Change in Connection With the Proposed Acquisition of the Exchange by NYSE Group, Inc.

December 23, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Exchange Act'' or ''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on December 22, 2016, National Stock Exchange, Inc. (''NSX®'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[23] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Exchange Act'') [3] and Rule 19b–4 thereunder,[4] National Stock Exchange, Inc. (''NSX'' or the ''Exchange'') proposes, in connection with the proposed acquisition of the Exchange by NYSE Group, Inc. (''NYSE Group''), to: (1) Amend the Amended and Restated Certificate of Incorporation of National Stock Exchange, Inc. (''Certificate of Incorporation''), and the Third Amended and Restated Bylaws of National Stock Exchange, Inc. (''Bylaws'') and make certain conforming amendments to the cover page, Table of Contents and first page of the Exchange's rulebook as well as Rules 2.10, 5.7, and the Schedule of Fees and Rebates; and (2) amend certain organizational documents of NYSE Group, NYSE Holdings LLC (''NYSE Holdings''), Intercontinental Exchange Holdings, Inc. (''ICE Holdings''), and Intercontinental Exchange, Inc. (''ICE'').

The text of the proposed rule change is available on the Exchange's Web site at *www.nsx.com,* at the Exchange's principal office, and at the Commission's public reference room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On December 14, 2016, ICE entered into an agreement with the Exchange pursuant to which its wholly-owned subsidiary NYSE Group would acquire all of the outstanding capital stock of the Exchange (the ''Acquisition''). As a result of the Acquisition, the Exchange would be renamed NYSE National, Inc. (''NYSE National'') and would be operated as a wholly-owned subsidiary of NYSE Group. NYSE Group is a wholly-owned subsidiary of NYSE Holdings, which is in turn 100% owned by ICE Holdings. ICE, a public company listed on the New York Stock Exchange LLC (the ''NYSE''), owns 100% of ICE Holdings.

[3] 15 U.S.C. 78s(b)(1).

[4] 17 CFR 240.19b–4.

Following the Acquisition, the Exchange would continue to be registered as a national securities exchange and as a separate self-regulatory organization (''SRO''). As such, the Exchange would continue to have separate rules, membership rosters, and listings that would be distinct from the rules, membership rosters, and listings of the three other registered national securities exchanges and SROs owned by NYSE Group, namely, the NYSE, NYSE MKT LLC (''NYSE MKT''), and NYSE Arca, Inc. (''NYSE Arca'') (together, the ''NYSE Exchanges'').

In connection with the Acquisition and as discussed more fully below, the Exchange proposes to amend its Certificate of Incorporation and Bylaws and make certain conforming amendments to the headings on the cover page, Table of Contents and first page of the Exchange's rulebook as well as Rules 2.10, 5.7, and the Schedule of Fees and Rebates. Generally, the amendments would reflect the Exchange's proposed new ownership and, in certain cases, align the Exchange's governance provisions to those of other NYSE Exchanges that the Commission has already approved, as described in greater detail below.

The Exchange also proposes amendments to the following organizational documents of NYSE Group and its intermediary and ultimate parent entities:

- ICE bylaws and director independence policy,
- ICE Holdings bylaws and certificate of incorporation,
- NYSE Holdings operating agreement, and
- NYSE Group bylaws and certificate of incorporation.

These proposed changes would reflect the proposed new ownership of the Exchange by the NYSE Group, and, indirectly, ICE.[5]

The Exchange would effect the changes described herein following approval of this rule filing no later than February 28, 2017, on a date determined by its Board.

[5] The NYSE Exchanges describe these proposed revisions in the NYSE, NYSE MKT and NYSE Arca companion rule filings related to the Acquisition. *See* SR–NYSE–2016–90; SR–NYSEMKT–2016–122; SR–NYSEArca–2016–167.

Amendments to Exchange Certificate of Incorporation and Bylaws

In connection with the Acquisition, the Exchange proposes to make various revisions to its Certificate of Incorporation and Bylaws. Following consummation of the transaction, the Exchange would become part of a corporate family that would include four separate exchanges. Accordingly, the Exchange believes that it is important for each of the four exchanges to have a consistent approach to corporate governance. Therefore, to simplify and create greater consistency with the organizational documents and governance practices of the NYSE Exchanges, the Exchange proposes to revise certain provisions of its Certificate of Incorporation and Bylaws.[6]

The Exchange believes that the proposed changes to the Certificate of Incorporation and Bylaws are consistent with the requirements of the Exchange Act. Finally, in proposing these revisions to the Certificate of Incorporation and Bylaws, the Exchange emphasizes that it also believes that the proposed rule change is not inconsistent with the Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 19(h) and 21C of the Securities Exchange Act of 1934, Making Findings, and Imposing Remedial Sanctions and Cease-and-Desist Order, entered by the Commission on May 19, 2005 (the ''2005 Order'').[7]

Set forth below are the specific proposed changes to the Certificate of Incorporation and Bylaws.

Certificate of Incorporation

The Exchange proposes to make the following amendments to its Certificate of Incorporation.

- To reflect the Exchange's name change, it proposes to replace ''National Stock Exchange'' with ''NYSE National'' before the word ''Inc.'' in the heading, the preamble, Article First and in the signature block.
- In the preamble, the Exchange proposes to add (a) '', and February 18, 2015'' following ''December 30, 2011'' to reflect the last time the Certificate of Incorporation was restated, (b) a reference to Section 228 of the General Corporation Law of the State of Delaware.

The Exchange proposes to restructure and augment Article Third to conform the ''Purpose'' section to Article 3 of the certificate of incorporation of NYSE Arca.[8] Accordingly, under the ''Purpose'' heading following the word ''Third,'' the phrase ''purpose or'' before ''purposes'' would be replaced with ''nature of the business or'' and the phrase ''of the Corporation is'' would be replaced with ''to be conducted or promoted are:''. New sections (a) through (d), based on Article 3(a)–(d) of the certificate of incorporation of NYSE Arca, would also be added to the ''Purpose'' section to reflect the nature of the Exchange's business to be conducted or promoted.

Proposed subsection (a) would describe the first purpose of the Corporation as being to conduct and carry on the functions of an ''exchange,'' as that term is defined in the Exchange Act, and state that, in connection with managing the business and affairs of the Exchange, the Exchange Board shall consider applicable requirements for registration as a national securities exchange under Section 6(b) of the Exchange Act, including, without limitation, the requirements that (i) the rules of the Exchange shall be designed to protect investors and the public interest, and (ii) the Exchange shall be so organized and have the capacity to carry out the purposes of the Exchange Act and to enforce compliance by its members, as that term is defined in Section 3 of the Exchange Act (such statutory members being hereinafter referred to as the ''ETP Holders''), and persons associated with its ETP Holders, with the provisions of the Exchange Act, the rules and regulations thereunder, and the rules of the Exchange. In addition, proposed subsection (a) would state that the rules of the Exchange may set forth provisions for the regulation of the conduct of ETP Holders, the dues and assessments payable by ETP Holders, the grounds for and the method of expulsion from the status as an ETP Holder and other termination of trading permits held by ETP Holders, the limitations upon or qualifications of the voting power of ETP Holders and such other matters pertaining to the ETP Holders, including the transfer of trading permits, as the Board shall from time to time determine.

Proposed subsection (b) would describe the second purpose as to maintain high standards of commercial honor and integrity among the Exchange's ETP Holders.

Proposed subsection (c) would describe the third purpose as to promote and inculcate just and equitable principles of trade and business.

Finally, proposed subsection (d) would reflect the current text of the ''Purpose'' section except that the ''t'' in ''to'' would be capitalized. Proposed subsection (d) would describe the fourth purpose as to engage in any lawful act or activity for which corporations may be organized under the General Corporation Law of Delaware.

- The Exchange proposes to amend the ''Authorized Stock'' section of the Certificate of Incorporation to indicate that NYSE Group would be the shareholder. Accordingly, the Exchange would delete the phrase ''At all times, a'' in the second sentence and begin the sentence with ''All.'' The Exchange would add ''issued and'' before ''outstanding'' and ''shares of'' after ''outstanding'' and before ''stock'' and replace the phrase ''owned by National Stock Exchange Holdings, Inc., a Delaware corporation.'' with ''held by NYSE Group, Inc., a corporation organized and existing under the Delaware General Corporation Law (''NYSE Group'').''
- The Exchange proposes to amend the ''Board of Directors'' section of the Certificate of Incorporation to replace ''ETP Holder Director'' with ''Non-Affiliated Director'' to reflect changes proposed in Section 3.2 of the Bylaws, which are described below.
- The Exchange proposes to amend the ''Bylaws'' section of the Certificate of Incorporation. In describing the effectiveness of changes to the Bylaws that require a rule filing, the Exchange proposes to replace the current formulation ''approved by or filed with'' with ''filed with or filed with and approved by,'' to reflect the fact that, while all changes to the Bylaws must be filed with the Commission, not all rule filings are approved by the Commission. Because ''Exchange Act'' would be defined in the new text in Article Third, the Exchange proposes to remove the definition in Article Seventh by deleting ''Securities'' before ''Exchange [sic] and the phrase ''Act of 1934, as amended (the 'Act').''

Bylaws

The Exchange proposes to make the following amendments to the Bylaws.

General

''Third'' would be changed to ''Fourth'' and ''National Stock Exchange'' would be replaced with ''NYSE National'' on the cover page

[6] Because NYSE Arca, a non-stock corporation organized under Delaware law, is the most similar to the Exchange in corporate organization and in its use of ''permit holders,'' as opposed to ''members,'' the Exchange has primarily relied on NYSE Arca as a precedent. The New York Stock Exchange and NYSE MKT are limited liability companies.

[7] *See* Securities Exchange Act Release No. 51714 (May 19, 2005).

[8] *See* Certificate of Incorporation of NYSE Arca, Article 3.

heading, the Table of Contents, and on the first page of the Bylaws.

Section 1.1 (Definitions)

The Exchange proposes to add and remove certain definitions. Most of the changes to the definitions relate to the proposed amendments to the composition of the Exchange Board in proposed Section 3.2, discussed below, to make the composition of the Board consistent with the make-up of the board of directors of NYSE Arca.[9] As part of these changes, the definitions of ''ETP Permit Holder Director,'' ''Independent Director,'' ''Industry Director'' and ''Non-Industry Director'' would be deleted, and definitions of ''Public Directors'' and ''Non-Affiliated Directors'' would be added to Section 1.1.

Currently, subsections F–H and J–M are marked ''reserved.'' Because under the proposed revision subsection (I) would be reserved, the Exchange proposes to amend the list of reserved subsections to read ''F.–M. Reserved.''. In current Section 1.1(E)(4), which defines ''Exchange'', ''NYSE National'' would replace ''National Stock Exchange.''

Article III (Board of Directors)

The Exchange proposes to restructure and amend Article III of the Bylaws governing the powers, composition, nomination and election of its Board to more closely align the Bylaws with those of the other NYSE Exchanges. To effect these changes, the Exchange proposes to restructure Article III, Section 3.2 (General Composition) of the Bylaws, as follows.

The Bylaws currently provide that the Board is composed of between 7 and 25 directors, the exact number of which is determined by the Board. The Exchange proposes to amend Section 3.2 so that the number of directors would be determined from time to time by the stockholders, provided that the Board must meet the composition requirements in the Bylaws. This change would be consistent with the operating agreements of the NYSE and NYSE MKT, which both provide that the number of directors is determined by the member, provided that the boards of directors meet the composition requirements set out in the operating agreement.[10]

In addition, the Exchange proposes to make the composition of the Board consistent with the make-up of the board of directors of NYSE Arca and its subsidiary NYSE Arca Equities, Inc. (''NYSE Arca Equities'').[11] Accordingly, the Exchange proposes to replace Section 3.2(a), (b) and (c) with new subsections (a)–(d), which are substantially similar to Section 3.02(a)–(c) and (f) of the NYSE Arca Bylaws.

New paragraph (a) would require that the Board be made up as follows:

(1) At least fifty percent (50%) of the directors would be persons from the public and would not be, or be affiliated with, a broker-dealer in securities or employed by, or involved in any material business relationship with, the Exchange or its affiliates (''Public Directors''); and

(2) at least twenty percent (20%) of the directors would consist of individuals nominated by the ETP Holders of the Exchange (''Non-Affiliated Directors'').

The Exchange proposes that subsection (a) retain the provision from current subsection (b) that the term of office of a director shall not be affected by any decrease in the authorized number of directors.

Proposed new subsection (b) would provide that nominees for a director position shall provide such information as is reasonably necessary to serve as the basis for a determination of the nominee's qualifications as a director, and that the Secretary shall make such determination concerning the nominee's qualifications.

Proposed subsection (c) would provide that at the first annual meeting and at each subsequent annual meeting of the stockholders, except as otherwise provided by the Bylaws, the stockholders would elect directors to serve until the next annual meeting or until their successors are elected and qualified.

Proposed new subsection (d) would specify that, except as otherwise provided in the Bylaws or its Rules, the stockholders shall nominate directors for election at the annual meeting of the stockholders and that such nominations shall comply with the Rules and the Bylaws.

Current subsection (d) would become new proposed subsection (e).[12]

Second, the Exchange proposes to replace current Article III, Section 3.4 with text from Section 3.02(e) of the NYSE Arca Bylaws. The proposed provision would be renumbered as Section 3.3, which is currently marked ''Reserved.'' Proposed Section 3.3 would provide that each director shall hold office for a term that expires at the annual meeting of the stockholders next following his or her election, provided that if he or she is not re-elected and his or her successor is not elected and qualified at the meeting and there remains a vacancy on the Board, he or she shall continue to serve until his or her successor is elected and qualified or until his or her earlier death, resignation or removal. Proposed Section 3.3 would also provide that a director may serve for any number of terms, consecutive or otherwise. It would replace the current Section 3.4, which breaks out the term provision by category of director.

Third, current Article III, Section 3.5 (Nomination and Election) would become new Section 3.4, and would incorporate the NYSE Arca process for nominating Non-Affiliate Directors.[13]

The Exchange proposes to retain current subsection (a), but because it proposes to consolidate the ETP Holder Director Nominating Committee and Governance and Nominating Committee into one committee, the ''Nominating Committee,'' it would accordingly delete ''Governance and'' from proposed Article III, Section 3.4(a).

The Exchange proposes to delete the remaining subsections (b) through (f) of current Article III, Section 3.5. In their place, the Exchange proposes two new subsections (b) and (c), based on NYSE Arca Rule 3.2(b)(2)(C)(i) and (ii).

Proposed Article III, Section 3.4(b) would provide that the Nominating Committee shall publish the name(s) of one or more ETP Holders or Persons Associated with an ETP Holder (in any combination) as its nominee(s) for Non-Affiliated Directors of the Board of Directors of the Exchange. The Nominating Committee would name sufficient nominees so that at least twenty percent of the directors consist of Non-Affiliated Directors. The proposal would further provide that the names of the nominees shall be published on a date in each year sufficient to accommodate the process described. The date would be known as the ''Announcement Date.''

[9] *See* Section 3.02(a) the NYSE Arca Bylaws.

[10] *See* Section 2.03(a) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC and Section 2.03(a) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC. *See also* Securities Exchange Act Release Nos. 79115 (October 18, 2016), 81 FR 73187 (October 24, 2016) (SR–NYSE–2016–66) and 79114 (October 18, 2016), 81 FR 73177 (October 24, 2016) (SR–NYSEMKT–2016–93).

[11] *See* Section 3.02(a) the NYSE Arca Bylaws and Section 3.02(a) of the NYSE Arca Equities Bylaws.

[12] The Exchange notes that it did not incorporate text from Section 3.02(d) of the NYSE Arca Bylaws, as the appointment of the chair of the Board is addressed in current Section 3.5.

[13] *See* NYSE Arca Rule 3.2(b)(2)(C)(i) and (ii). The Exchange notes that because it only has one category of permit holder, it did not incorporate the NYSE Arca provisions for electing Non-Affiliated Directors from the two categories of NYSE Arca permit holders, ETP Holders and OTP Holders. *See also* NYSE Arca Equities Rule 3.2(b)(2)(C).

Further, proposed Section 3.4(b) would provide that, after the name of proposed nominee(s) is published, ETP Holders in good standing may submit a petition to the Exchange in writing to nominate additional eligible candidate(s) to fill Non-Affiliated Director position(s) during the next term. Further, if a written petition of at least 10 percent of ETP Holders in good standing were submitted to the Nominating Committee within two weeks after the Announcement Date, such person(s) would also be nominated by the Nominating Committee, provided, however, that no ETP Holder, either alone or together with other ETP Holders that are deemed its affiliates, may account for more than 50% of the signatories to the petition endorsing a particular petition nominee for the Non-Affiliated Director position(s) on the Board.[14] The proposed Section would further stipulate that each petition for a petition candidate must include a completed questionnaire used to gather information concerning director candidates, which form of questionnaire would be provided by the Exchange upon the request of any ETP Holder. Finally, proposed Section 3.4(b) would provide that, notwithstanding anything to the contrary, the Nominating Committee shall determine whether any petition candidate is eligible to serve on the Board (including whether such person is free of any statutory disqualification (as defined in section 3(a)(39) of the Exchange Act)), and such determination shall be final and conclusive.

Proposed Article III, Section 3.5(c) would set forth the petition election process, providing that, in the event that the number of nominees exceeds the number of available seats, the Nominating Committee shall submit the contested nomination to the ETP Holders for selection. The proposed Section contemplates that ETP Holders shall be afforded a confidential voting procedure and shall be given no less than 20 calendar days to submit their votes. Under the proposed Section, each ETP Holder in good standing may select one nominee for the contested seat on the Board of Directors; provided, however that no ETP Holder, either alone or together with other ETP Holders who are deemed its affiliates, may account for more than 20% of the votes cast for a particular nominee for the Non-Affiliated Director position(s) on the Board of Directors of the Exchange. With respect to the contested position, the proposed Section would provide that the nominee for the Board receiving the most votes of ETP Holders shall be submitted by the Nominating Committee to the Board and that the Nominating Committee shall also submit uncontested nominees to the Board. Under the proposed Section, tie votes shall be decided by the Board of Directors at its first meeting following the election.

Current Section 3.6 describes the election and role of the Board Chairman. The Exchange proposes to renumber Section 3.6 as new Section 3.5. The Exchange would delete the second sentence of the current Section 3.6 in its entirety, which currently provides that the Chairman may also serve as the CEO and/or President of the Exchange, but may hold no other offices in the Exchange and that unless the Chairman of the Board also serves as the Exchange CEO, the Board shall elect the Chairman from among the Non-Industry Directors. The proposed Section 3.5 would be consistent with the Bylaws of NYSE Arca, which provide that the board of directors appoints the Chairman by majority vote.[15] None of the three NYSE Exchanges limits which category of director can serve as Chairman, and so the Exchange proposes to remove the limitation in its Bylaws.

Current Section 3.7 describes the process for filling Board vacancies. The Exchange proposes to renumber Section 3.7 as new Section 3.6, and to make changes to the text to be consistent with Section 3.03 of the NYSE Arca Bylaws.

Current Section 3.7(a)(i) provides that, notwithstanding any provision in the Bylaws to the contrary, any vacancy in the Board, however occurring, including a vacancy resulting from an increase in the number of the directors, may be filled by vote of a majority of the directors then in office, although less than a quorum, or by a sole remaining director, provided such new director qualifies for the category in which the vacancy exists. The Exchange proposes to provide that vacancies would be filled by the Chairman of the Board, subject to approval by a vote of a majority of directors, as is provided in Section 3.03 of the NYSE Arca Bylaws. To effect this change, the phrase ''the Chairman of the Board, subject to approval by'' would be added after ''filled by'' and ''vote of'' immediately following the proposed insertion and before ''a majority'' would be deleted. The Exchange also proposes to add a new second sentence that would provide that any vacancy will be filled with a person who satisfies the classification (*e.g.,* public) associated with the vacant seat. Finally, the Exchange would add a sentence to the end of the proposed Section providing that, in the case of a vacancy in the office of the Chairman of the Board, the Board of Directors may designate an Acting Chairman among the directors then in office, in accordance with Section 3.03 of the NYSE Arca Bylaws.

Current Section 3.7(a)(ii) governs the filling of a vacancy resulting from an ETP Holder Director position becoming vacant prior to the expiration of such ETP Holder Director's term, or resulting from the creation of an additional ETP Holder Director position. The Exchange proposes conforming changes to replace ''ETP Holder'' Director with ''Non-Affiliated'' Director throughout proposed Section 3.6(a)(ii) and to delete ''ETP Holder Director'' in two instances before ''Nominating Committee.'' The Exchange would also delete the parenthetical in current Section 3.7(b) referring to subsection (c), which as noted below would be deleted. References to Section 3.7 throughout the section would be updated with references to proposed Section 3.6.

The Exchange proposes to delete the remaining subsections of current Article III, Section 3.7. Subsection (c) allows the Board in its discretion to provide a director with a grace period for re-qualification, and subsection (d) would allow an ETP Holder Director not to lose his or her qualification as a director by reason of a suspension. The governing documents of the NYSE Exchanges do not have similar provisions, and so the Exchange proposes to remove them from the Bylaws.

Current Article III, Section 3.8 governs the removal of directors. The Exchange proposes to renumber it Section 3.7 and replace one reference to ''ETP Holder Director'' with ''Non-Affiliated Director.''

Current Article III, Sections 3.9 through 3.15 would be renumbered Section 3.8 through 3.14, respectively. No further changes to these Sections are proposed.

Current Article III, Section 3.16, governing compensation of directors, would be amended to provide that the shareholders, rather than the Board, would have authority to fix compensation of all directors. The change would be consistent with the operating agreements of the New York Stock Exchange and NYSE MKT, which

[14] The Exchange notes that NYSE Arca Rule 3.2(b)(2)(C)(ii) and (iii) imposes voting limits on OTP Holders from the same OTP Firm. Because NYSE Arca Equities, like the Exchange, does not have ''ETP Firms,'' the Exchange has followed the model of NYSE Arca Equities and referred to ''ETP Holders who are deemed its affiliates,'' instead. *See* NYSE Arca Rule 3.2(b)(2)(C); NYSE Arca Equities Rule 3.2(b)(2)(C).

[15] *See* Article III, Section 3.02(d) of the NYSE Arca Bylaws.

provide that the member sets director compensation.[16] In connection with this change, the Exchange would also delete the clause ''irrespective of any personal interest of any of its members,'' from proposed new Section 3.15.

Current Article III, Section 3.17, governing the Board's power to interpret the Bylaws, would be deleted in its entirety. The governing documents of the NYSE Exchanges do not have similar provisions, and so the Exchange proposes to remove them from the Bylaws.

Article V (Committees) [17]

The Exchange proposes to reduce the number of Board committees following the Acquisition. The Exchange would retain the disciplinary committees (*i.e.,* the Business Conduct Committee and Appeals Committee) and the Regulatory Oversight Committee (''ROC''). Rather than have two nominating committees, the Exchange proposes to have one Nominating Committee, whose role would be as set forth in proposed Section 3.4. The Exchange proposes to eliminate the Executive Compensation Committee, Executive Committee, and Audit Committee, none of which the NYSE Exchanges have. To effectuate these changes, the Exchange proposes to update the list of committees in the first sentence of Article V, Section 5.1 and delete current Sections 5.8, 5.9 and 5.10, relating to the Executive Compensation Committee, Audit Committee, and Governance & Nominating Committee, respectively.

Article V, Section 5.2 governs appointment, vacancies, and removal of Board committee members. Currently, these functions are undertaken by the Chairman of the Board with Board approval. The Exchange proposes that, consistent with the NYSE Exchanges,[18] the Board shall appoint the members of all committees of the Board. Present Section 5.2 provides that the chairman may, at any time, with or without cause, remove any member of a committee, with the approval of the Board. The Exchange proposes to amend the statement to provide that the Board may, at any time, with or without cause, remove any member of a committee so appointed, unless the Bylaws otherwise provide. To effect this change, the Exchange proposes to make the first sentence of Article V, Section 5.2 governing appointments and removal of committee members new subsection (a); delete the following text: ''Chairman of the Board, with the approval of the''; a comma after ''Board'' and before ''shall''; ''Chairman'' before ''Board may'' and the clause ''with the approval of the Board''; and add ''unless otherwise provided herein'' after ''so appointed,''.

The Exchange proposes that the Exchange CEO, rather than the Chairman of the Board, would fill any committee vacancies, consistent with NYSE Arca Rule 3.2(a)(5). To effect this change, the remaining current text of Section 5.2 governing vacancies would form new subsection (b), and the Exchange would replace ''Chairman of the Board'' in the existing text with ''Chief Executive Officer of the Exchange'' after ''filled by the.''

Proposed new Article V, Section 5.3 would set forth general provisions applicable to Board committees. The Exchange proposes that the last two sentences of current Section 5.2 would become new Section 5.3(a). The existing text would be amended to reflect that, in appointing new members to Board committees, the Board and not the Chairman of the Board would be responsible for determining that any such committee meets the composition requirements of Article V.

The Exchange also proposes to add subsections (b) through (e) of Section 5.3, which are substantially the same as NYSE Arca Rules 3.2(a)(2)–(4) and (10).

Proposed Section 5.3(b) would provide that the presence of a majority of the members of a committee shall be necessary to constitute a quorum for the transaction of business at a meeting of a committee.

Proposed Section 5.3(c) would provide that the act of a majority of the members present at any meeting at which there is a quorum shall be the act of such committee, except as may be otherwise specifically required by the Bylaws, Exchange Rules, or applicable law.

Proposed Section 5.3(d) would provide that, unless otherwise restricted by the Bylaws, the Rules, applicable law, or rules of the particular committee, members of a committee or of any subcommittee thereof may participate in meetings by means of conference call or similar communications equipped [sic] by means of which all persons participating in the meeting can hear each other, and such participation shall constitute presence in person at the meeting.

Finally, proposed subsection (e) of Section 5.3 would provide that no member of a committee shall participate in the adjudication of any matter in which he or she is personally interested, although his or her presence at a meeting at which such matter is considered shall count toward the quorum requirements for the meeting.

The Exchange proposes to change current Section 5.3 (Powers and Duties of Committees) to Section 5.4. Current Section 5.4 (Conduct of Proceedings) would be renumbered Section 5.5.

The Exchange proposes to recast current Section 5.6 governing the ROC to make it more consistent with the ROCs established by the NYSE Exchanges, as follows.[19] Currently, Section 5.6 of the Bylaws provides that the ROC shall be responsible to oversee all of the Exchange's regulatory functions and responsibilities and to advise regularly the Board about the Exchange's regulatory matters. The ROC shall at all times be comprised entirely of Non-Industry Directors.

The Exchange proposes a new subsection (a) that would provide that the Board shall, on an annual basis, appoint the ROC. The existing text of current Section 5.6, with certain minor exceptions, would be deleted.

The Exchange proposes two new subsections (b) and (c) to proposed Section 5.6. First, proposed Section 5.6(b) would describe the ROC composition as consisting of at least three members, each of whom shall be a Public Director of the Exchange.[20] Further, proposed subsection (b) would provide that the Board, on affirmative vote of a majority of directors, may, at any time remove a member of the ROC for cause. Similar authority is found in the rules and bylaws governing the ROCs of the NYSE Exchanges and other SROs.[21] In addition, proposed Section

[16] *See* Section 2.03(b) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC and Section 2.03(b) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC. The NYSE Arca bylaws are silent regarding director compensation.

[17] The Exchange is not proposing any changes to current Article IV (Stockholders).

[18] *See* NYSE Arca Rules 3.2(a)(1) and 3.3, Section 2.03(h) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC; and Section 2.03(h) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC.

[19] *See* NYSE Arca Rule 3.3(a)(1); Section 2.03(h)(ii) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC; and Section 2.03(h)(ii) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC.

[20] *See e.g.,* NYSE Arca Rule 3.3(a)(1)(B).

[21] *See e.g.,* NYSE Arca Rule 3.3(a)(1)(B) (''The Board, on affirmative vote of a majority of directors, may, at any time remove a member of the ROC for cause.''); Section 2.03(h)(ii) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC (''The Board may, on affirmative vote of a majority of directors, at any time remove a member of the ROC for cause.''); Section 2.03(h)(ii) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC (same); BATS Bylaws, Article V, Section 2(a) (''the Chairman may, at any time, with or without cause, remove any member of a committee so appointed, with the approval of the Board.'').

5.6(b) would provide that a failure of the member to qualify as a Public Director shall constitute a basis to remove a member of the ROC for cause. Finally, proposed Section 5.6(b) would provide that if the term of office of a ROC committee member terminates under this section, and the remaining term of office of such committee member at the time of termination is not more than three months, during the period of vacancy the relevant committee shall not be deemed to be in violation of the compositional requirements by virtue the such vacancy. Once again, this is consistent with the rules and bylaws of the NYSE Exchanges and other SROs.[22]

Second, proposed Section 5.6(c) would set forth the proposed ROC's responsibilities, which would be to:

• oversee the Exchange's regulatory and self-regulatory organization responsibilities;

• evaluate the adequacy and effectiveness of the Exchange's regulatory and self-regulatory organization responsibilities;

• assess the Exchange's regulatory performance; and

• advise and make recommendations to the Board or other committees of the Board about the Exchange's regulatory compliance, effectiveness and plans.

These three [sic] core responsibilities of the proposed ROC would be substantially similar to those of the ROCs of other SROs.[23]

In furtherance of these functions, proposed new subsection (c) of Section 5.6 would provide the ROC with the authority and obligation to review the regulatory budget of the Exchange and specifically inquire into the adequacy of resources available in the budget for regulatory activities. Under the proposed amendment, the ROC would be charged with meeting regularly with the Chief Regulatory Officer (''CRO'') in executive session and, in consultation with the Exchange's CEO, establish the goals, assess the performance, and recommend the CRO's compensation. Finally, under the proposed rule, the ROC would be responsible for keeping the Board informed with respect to the foregoing matters.[24]

The Exchange believes that the proposed rule change governing the ROC's authority and responsibility to oversee the adequacy and effectiveness of the Exchange's performance of its self-regulatory responsibilities is consistent with previously approved rule changes for other SROs and would enable the Exchange to discharge its regulatory responsibilities under a corporate governance structure that is consistent with its affiliates and industry peers.[25] Moreover, the Exchange believes that the proposed changes would ensure the continued independence of the Exchange's regulatory process. In particular, integral to the proposal is that the oversight of the Exchange's self-regulatory responsibilities and regulatory performance, including review of the regulatory plan, programs, budget and staffing would be by a ROC composed of individuals independent of Exchange management and a CRO having general supervision of the regulatory operations of the Exchange that meets regularly with the ROC.[26]

Section 5.7 describes the current ETP Holder Director Nominating Committee. Consistent with the Exchange's proposal to have only one Nominating Committee to nominate Non-Affiliated Directors, as described above, ''ETP Holder Director'' would be deleted before ''Nominating Committee'' and ''Non-Affiliated'' substituted for ''ETP Holder'' before ''Directors'' in proposed Section 5.7.

Current Section 5.11 governing the Appeals Committee would be retained and renumbered Section 5.8. The proposed amendments to Section 5.8 would reflect the proposed changes in the makeup of the Board. Specifically, it would provide that the Appeals Committee shall consist of at least one Public Director and at least one Non-Affiliated Director.[27] Further, the proposed Section would provide that if the Public Director recuses himself or herself from an appeal, such Public Director may be replaced by a Non-Affiliated Director for purposes of the applicable appeal if no other Public Director [sic] able to serve as the replacement. To effectuate these changes, the Exchange proposes to add ''at least'' before ''one'' in two places; replace ''Independent'' with ''Public'' before ''Director'' in three places; replace ''ETP Holder'' with ''Non-Affiliated'' and ''Non-Industry'' with ''Non-Affiliated'' before ''Director''; and delete ''one Industry Director'' from the sentence describing the composition of the Appeals Committee. Finally, current Section 5.12, which describes the Business Conduct Committee, would also be retained, and renumbered Section 5.9. Consistent with the changes in proposed Section 5.2(a), the Exchange would delete ''Chairman with the approval of the'' before ''Board'' in the last sentence to specify that the Board shall appoint the Business Conduct Committee members.

Article VI (Officers)

Article VI, Section 6.1 describes the officers of the Exchange. The Exchange proposes that, rather than require that certain officers be appointed, the Board shall elect officers of the Exchange as it deems appropriate, which may include a CEO, President, CRO, Secretary, Treasurer, and such other officers as the Board may determine. The proposed change would be consistent with Section 5.01 of the NYSE Arca Bylaws. To effect this change, the Exchange proposes to add ''Board shall elect'' before ''officers'' in the first sentence and add ''as it deems appropriate, which may include'' in place of ''shall consist of.''

The Exchange would delete the text of current Section 6.2 governing compensation and the next heading such that current Section 6.3 regarding tenure and appointment would become proposed Section 6.2. Current Section 6.2 provides that the Board or a Board committee shall fix the compensation of

[22] *See e.g.,* NYSE Arca Rule 3.3(a)(1)(B); Section 2.03(h)(ii) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC; Section 2.03(h)(ii) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC; NASDAQ Bylaws, Article III, Section 2(b).

[23] *See* Securities Exchange Act Release Nos. 75991 (September 28, 2015), 80 FR 59837 (October 2, 2015) (SR–NYSE–2015–27) (order approving establishment of NYSE ROC) (''NYSE ROC Approval Order''); 75148 (June 11, 2015), 80 FR 34751 (June 17, 2015) (SR–NYSEMKT–2015–27) (order approving establishment of NYSE MKT ROC); 75155 (June 11, 2015), 80 FR 34744 (June 17, 2015) (SR–NYSEArca–2015–29) (order approving establishment of NYSE Arca ROC); Securities Exchange Act Release No. 58375 (August 18, 2008), 73 FR 49498, 49502 (August 21, 2008) (File No. 10–182) (approving application of BATS Exchange, Inc. (''BATS'') seeking registration as a national securities exchange); Securities Exchange Act Release No. 61698 (March 10 [sic], 2010), 75 FR 13151, 13161 (March 12 [sic], 2010) (approving application of EDGX Exchange, Inc. and EDGA Exchange, Inc., seeking registration as a national securities exchange); and Amended and Restated Bylaws of Miami International Securities Exchange, LLC, Article IV, Section 4.5(c).

[24] The obligations of the proposed ROC would be substantially similar to those of other SROs' ROCs. *See, e.g.,* NYSE Arca 3.3(a)(1)(C); Section 2.03(h)(ii) of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC; Section 2.03(h)(ii) of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC; NASDAQ Bylaws, Article III, Section 5; Bylaws of NASDAQ OMX PHLX LLC, Article V, Section 5–2; Third Amended and Restated Bylaws of BATS-Exchange, Inc., Article V, Section 6(c).

[25] *See* NYSE, NYSE MKT and NYSE Arca approval orders in note 23, *supra. See also* NASDAQ Bylaws, Article III, Section 5(c); BATS Bylaws, Article V, Section 6(c).

[26] *See, e.g.,* NYSE ROC Approval Order, 80 FR at 59838–39.

[27] *See* NYSE Arca Rule 3.3(a)(2) (providing that the Committee for Review, the appeals committee of NYSE Arca, will be composed of the non-affiliated directors (the OTP Directors and ETP Directors) and public directors of NYSE Arca and NYSE Arca Equities). The Bylaws would retain the current requirement that all committees, including the Appeals Committee, be comprised of at least three people and may include persons that are not members of the Board. *See* Article V, Section 5.3.

all the officers of the Exchange. The Exchange does not propose to retain the current provision. Indeed, none of the NYSE Exchanges has provisions requiring that the Board determine the compensation of the relevant exchange's officers.

Current Section 6.3 governing removal and vacancies would become new Section 6.4.

Current Section 6.5 governing powers and duties would become new Section 6.4.

Current Section 6.6 governing appointment of an arbitration director would be deleted, as there is no similar provision in the governing documents of the NYSE Exchanges.

Article VII (Indemnification)

The Exchange proposes to restructure its indemnification policies to align with those of its affiliates. Accordingly, the Exchange has amended Article VII to be substantially the same as Article VII of the NYSE Arca bylaws.[28]

Current Section 7.1 would be renamed ''Indemnification'' and ''Extent of'' in the heading deleted.

Subsection (a) of Article VII, Section 7.1 would be amended to remove the reference to maximum not prohibited by the Delaware General Corporation Law and clarify that the Exchange will indemnify employees and agents, and not solely directors or officers in actions other than those by or in the right of the Exchange. These proposed changes would conform the formulations in current subsection (a) to those in Article VII of the NYSE Arca bylaws.

To effect these changes, the Exchange would delete ''shall, to the maximum extent not prohibited by the General Corporation Law of Delaware or any other applicable laws as'' and ''from time to time be in effect'' in the first sentence and the reference to ''hold harmless'' after ''indemnify''. References to ''director'' would be replaced by ''an employee'' and references to ''officer'' would be replaced by ''agent'' throughout. The parenthetical clause ''other than an action by or in the right of the Exchange'' would also be added in the place of a comma after ''investigative.'' Additional text would be added to the penultimate sentence, to provide that a person indemnified under Section 7.1(a) would be indemnified if he or she acted in good faith and in a manner he or she reasonably believed to be in or not opposed to the best interests of the Exchange and, with respect to any criminal action or proceeding, had no reasonable cause to believe his or her conduct was unlawful. Further, the paragraph would provide that the termination of any action, suit or proceeding by judgment, order, settlement, conviction, or upon a plea of nolo contendere or its equivalent shall not, of itself, create a presumption that such person did not act in good faith and in a manner which they reasonably believed to be in or not opposed to the best interests of the Exchange, and, with respect to any criminal action or proceeding, had reasonable cause to believe that their conduct was unlawful. The last sentence of the first full paragraph of subsection (a) providing that the Exchange shall be required to indemnify an Indemnified Person in connection with an action, suit or proceeding initiated by such person only if such action, suit or proceeding was authorized by the Board, would be deleted.

The Exchange also proposes the following non-substantive changes to Section 7.1(a): replacing a reference to ''corporation'' with ''Exchange''; deleting ''all'' before ''expenses'' and adding ''and expenses'' after ''attorneys' fees''; and replacing ''such Indemnified Person'' with ''him or her.''

The Exchange also proposes to delete the entire second full paragraph of current Section 7.1(a).

The following Sections would be deleted in their entirety: Section 7.2. (Expenses), Section 7.3 (Contract), Section 7.4 (Discretionary Indemnification Coverage), Section 7.5 (Continuity of Indemnification and Non-Exclusivity), Section 7.6 (Insurance), and Section 7.7 (Exchange Not Liable).

The Exchange proposes to add new subsections (b) through (j) to Section 7.1, as follows, to align the Exchange's indemnification policy with Article VII of the NYSE Arca bylaws.

Proposed subsection (b) would specify that the Exchange may indemnify any person who was or is a party or is threatened to be made a party to any threatened, pending or completed action or suit by or in the right of the Exchange to procure a judgment in its favor by reason of the fact that he or she is or was an employee or agent of the Exchange, or is or was serving at the request of the Exchange as an employee or agent of another Exchange, partnership, joint venture, trust or other enterprise against expenses (including attorneys' fees and expenses) actually or reasonably incurred by him or her in connection with the defense or settlement of such action or suit if he or she acted in good faith and in a manner he or she reasonably believed to be in or not opposed to the best interests of the Exchange. The proposed subsection would also specify that no indemnification shall be made in respect of any claim, issue or matter as to which such person shall have been adjudged to be liable to the Exchange unless the Court of Chancery of the State of Delaware or the court in which such action or suit was brought shall determine, despite the adjudication of liability but in view of all the circumstances of the case, that such person is fairly and reasonably entitled to indemnity for such expenses the court deems proper.

Proposed subsection (c) would provide that, to the extent that an employee or agent of the Exchange has been successful on the merits or otherwise in defense of any action, suit or proceeding referred to in proposed subsections (a) and (b), or in defense of any claim, issue or matter therein, they shall be indemnified by the Exchange against expenses (including attorneys' fees and expenses) actually and reasonably incurred by them in connection therewith.

Proposed subsection (d) would specify that any indemnification under proposed subsections (a) and (b) (unless ordered by a court) shall be made by the Exchange only as authorized in the specific case upon a determination that indemnification of the employee or agent is proper in the circumstances because he or she has met the applicable standard of conduct set forth in proposed subsections (a) and (b) and under applicable law. Proposed subsection (d) would further provide that such determination shall be made, with respect to a person who is a director or officer at the time of such determination (1) by a majority vote of the directors who are not parties to such action, suit or proceeding, even though less than a quorum, or (2) by a committee of such directors designated by majority vote of such directors, even though less than a quorum, or (3) if there are no such directors, or, if such directors so direct, by independent legal counsel in a written opinion, or (4) by the stockholders.

Proposed subsection (e) would provide that the Exchange shall indemnify, to the fullest extent permitted by applicable law as such may be amended from time to time, any person who was or is a party or is threatened to be made a party to any threatened, pending or completed action, suit or proceeding, whether civil,

[28] References in Article VII of the NYSE Arca bylaws to ''Holding Member'' and ''Permit Holder Committee member'' are revised to ''stockholders'' and ''ETP Holder committee member'' in proposed Section 7.1. Because the Exchange does not have a separate category of committee called ''Permit Holder Committee,'' a reference to such committees has been deleted.

criminal, administrative or investigative by reason of the fact that he or she is or was an officer, a floor official or a member of the Board of Directors or any committee thereof, or is or was serving at the request of the Exchange as an officer or member of the board of directors or any committee thereof of another Exchange, partnership, joint venture, trust or other enterprise, against expenses (including attorneys' fees and expenses), judgments, fines and amounts paid in settlement actually and reasonably incurred by him or her in connection with such action, suit or proceeding. Proposed subsection (d) would further provide that the Exchange is not authorized to provide indemnification of any officer, floor official, director, or ETP Holder committee member for any acts or omissions or transactions from which a director may not be relieved of liability as set forth in Section 102(b)(7) of the General Corporation Law of the State of Delaware.

Proposed subsection (f) would provide that the indemnification provided by Section 7.1 as proposed shall not be deemed exclusive of any other rights to which those seeking indemnification may be entitled under any Bylaw, agreement, vote of the stockholders or disinterested directors or otherwise.

Proposed subsection (h) would clarify that for purposes of proposed Section 7.1, references to ''the Exchange'' shall include, in addition to the resulting Exchange, any constituent Exchange (including any constituent of a constituent) absorbed in a consolidation or merger which, if its separate existence had continued, would have had power and authority to indemnify its officers, floor officials, directors, ETP Holder committee members and employees or agents.

Proposed subsection (i) would clarify that for purposes of proposed Section 7.1, references to ''other enterprises'' shall include employee benefit plans; references to ''fines'' shall include any excise taxes assessed on a person with respect to an employee benefit plan; and references to ''serving at the request of the Exchange'' shall include any service as a director, officer, employee or agent of the Exchange which imposes duties on, or involves services by, such director, officer, employee or agent with respect to an employee benefit plan, its participants or beneficiaries; and a person who acted in good faith and in a manner he reasonably believed to be in the interest of the participants and beneficiaries of an employee benefit plan shall be deemed to have acted in a manner ''not opposed to the best interests of the Exchange'' as referred to in proposed Section 7.1.

Finally, proposed subsection (j) would provide that if any provision or provisions of proposed Section 7.1 shall be held to be invalid, illegal or unenforceable for any reason whatsoever, the validity, legality and enforceability of the remaining provisions shall not be affected or impaired and that, to the fullest extent possible, shall be construed so as to give effect to the intent manifested by the provision held invalid, illegal or unenforceable.

Article VIII (Amendments)

Article VIII, Section 8.1 describes the Board's power to adopt, amend or repeal the Bylaws. The Exchange proposes to update the cross references to Sections 3.1 through 3.8, Section 3.12, and Section 4.5, to reflect the proposed changes to Article III discussed above. Accordingly, the cross references would be updated to read ''Sections 3.1 through 3.7, Section 3.11, or Section 4.5 of these By-Laws.''

In addition, the Exchange proposes to delete the last three sentences of current Section 8.2, which governs amendment or repeal of Exchange Rules. Such sentences provide that all proposals to adopt, alter or amend any rule shall be presented in writing to the Board by the Chairman of the Board, and that the Board shall act on the proposal. The Exchange proposes to align its processes to adopt, alter or amend any rule with those of the NYSE Exchanges, which provide that senior management may approve proposed rule changes pursuant to authority delegated to it by the relevant board of directors.

Article X (Self-Regulatory Function of the Exchange) [29]

Article X, Section 8.1 describes certain considerations relevant to the Exchange's SRO function.

The Exchanges proposes to revise current Section 10.2 governing participation in Board and committee meetings. The Section would be amended to require that all Board and committee meetings relating to the structure of the market which the Exchange regulates (in addition to meetings pertaining to the Exchange's SRO function) shall also be closed to all persons other than members of the Board and officers, staff, counsel or other advisors. To effect this change, the Exchange would add ''or relating to the structure of the market which the Exchange regulates'' in two places. The Exchange would also replace a reference to ''National Stock Exchange Holdings'' with ''NYSE Group.'' The changes will make Section 10.2 consistent with Section 3.13 of the NYSE Arca bylaws.

The current text of Section 10.4, which governs Exchange use of regulatory fees and penalties would also be deleted and replaced with a statement that any regulatory assets or any regulatory fees, fines or penalties collected by the Exchange's regulatory staff will be applied to fund the legal, regulatory and surveillance operations of the Exchange, and the Exchange shall not distribute such assets, fees fines or penalties to pay dividends or be distributed to any other entity. This language is substantially similar to the formulation recently approved for the NYSE and NYSE MKT.[30]

Rule Amendments

The Exchange proposes to make the following conforming amendments to Rules 2.10 and 5.7 and to the Schedule of Fees and Rebates:

- The Exchange proposes to amend the cover page of the Rules, the Table of Contents and the first page of the Rules above the heading ''CHAPTER I. Adoption, Interpretation and Application of Rules, and Definitions'' to replace ''National Stock Exchange'' with ''NYSE National,'' before the word ''Inc.'' The cover page would also be amended to replace ''November 8'' following ''Updated through'' and the number 6 in ''2016'' with placeholders for the effective date of the new rules.
- Rule 2.10 (No Affiliation between Exchange and any ETP Holder) prohibits the Exchange or any affiliated entity from acquiring or maintaining an ownership interest in an ETP Holder but does not prohibit any ETP Holder from being or becoming an affiliate of the Exchange, or an affiliate of any affiliate of the Exchange, solely by reason of such ETP Holder or any officer, director, manager, managing member, partner or affiliate of such ETP Holder being or becoming either (a) an ETP Holder Director or an At-Large Director pursuant to the bylaws, or (b) a member

[29] The Exchange is not proposing any changes to current Article IX (Certificates of Stock and their Transfer) or Article XI (General Provisions).

[30] *See* Section 4.05 of the Eleventh Amended and Restated Operating Agreement of New York Stock Exchange LLC and Section 4.05 of the Tenth Amended and Restated Operating Agreement of NYSE MKT LLC. Reflecting the Exchange's status as a stock corporation rather than a limited liability corporation, the proposed text replaces ''to the Member or any other entity'' with ''pay dividends or be distributed to any other entity.'' The proposed text also replaces ''Company'' with ''Exchange'' throughout. *See also* Securities Exchange Act Release Nos. 79115 (October 18, 2016), 81 FR 73187 (October 24, 2016) (SR–NYSE–2016–66); and 79114 (October 18, 2016), 81 FR 73177 (October 24, 2016) (SR–NYSEMKT–2016–93).

of the Board of Directors of NSX Holdings, Inc.

To reflect the proposed amendment to Section 3.2 of the Bylaws as discussed above, the Exchange proposes to replace the phrase ''ETP Holder Director or an At-Large Director'' with ''Non-Affiliated Director.'' [31] In the immediately following parenthetical, the Exchange proposes to delete ''such terms are'' to reflect that the term ''Non-Affiliated Director'' would be the only term defined in the Bylaws. Finally, the Exchange proposes to replace three references to ''NSX Holdings'' with ''ICE'' before the word ''Inc.''

- Rule 5.7 (Annual Certification of Compliance and Supervisory Processes) requires the chief executive officer of each ETP Holder to provide an annual certification regarding certain of its processes. The Exchange proposes to replace two references in the Rule to ''National Stock Exchange'' with ''NYSE National'' before the word ''Inc.'' The Exchange proposes to replace two references in the Rule to ''National Stock Exchange'' with ''NYSE National'' before the word ''Inc.''
- The Exchange proposes to amend the heading and first sentence of the Schedule of Fees and Rebates to add ''NYSE'' before ''National'' and to delete ''Stock Exchange'' and the defined term ''NSX.'' The Exchange would also replace ''NSX'' before ''Depth of Book feed'' in the Market Data section of the price list with ''NYSE National''.

Amendment of ICE, ICE Holdings and NYSE Group Governing Documents

The Exchange proposes that, in connection with the Acquisition, the Commission approve the organizational documents of ICE and its wholly-owned subsidiaries ICE Holdings and NYSE Group and the Independence Policy of the Board of Directors of Intercontinental Exchange, Inc. (''ICE Independence Policy''), all of which are to be amended concurrently with the Acquisition to reflect ownership of the Exchange.

The current organizational documents of ICE and its wholly-owned subsidiaries provide certain protections to the NYSE Exchanges that are designed to protect and facilitate their self-regulatory functions, including certain restrictions on the ability to vote and own shares of ICE.[32] In general, the organizational documents of ICE and its wholly-owned subsidiaries are being amended to provide similar protections to the Exchange as are currently provided to the NYSE Exchanges under those documents.

In addition, obsolete references to NYSE Market (DE), Inc. (formerly NYSE Market, Inc.) (''NYSE Market (DE)''), and NYSE Regulation, Inc. (''NYSE Regulation'') found in various documents are proposed to be deleted.[33]

Proposed Seventh Amended and Restated Bylaws of Intercontinental Exchange, Inc. (''ICE Bylaws'')

The ICE Bylaws would be amended to reflect the Acquisition and incorporate the Exchange in the ICE Bylaws' existing voting and ownership restrictions, provisions relating to the qualifications of directors and officers and their submission to jurisdiction, compliance with the federal securities laws, access to books and records, and other matters related to its control of the U.S. Regulated Subsidiaries.

Specifically, the ICE Bylaws would be amended as follows:

- The definition of ''U.S. Regulated Subsidiaries'' in Article III, Section 3.15, which currently includes the New York Stock Exchange, NYSE Market (DE), NYSE Regulation, NYSE Arca, LLC, NYSE Arca, NYSE Arca Equities, and NYSE MKT, would be amended to include the Exchange. The obsolete references to NYSE Market (DE) and NYSE Regulation would also be deleted.
- Article VIII (Confidential Information), Section 8.1, would be amended to extend to the Exchange the same protection regarding confidential information provided to the NYSE Exchanges and NYSE Arca Equities, and to remove the obsolete references to NYSE Market (DE) and NYSE Regulation.
- Article XI, Section 11.3, provides that, for so long as ICE controls any of the U.S. Regulated Subsidiaries, any amendment to or repeal of the ICE Bylaws must either be (i) filed with or filed with and approved by the Commission under Section 19 of the Exchange Act and the rules promulgated thereunder, or (ii) submitted to the boards of directors of the U.S. Regulated Subsidiaries or the boards of directors of their successors, in each case only to the extent that such entity continues to be controlled directly or indirectly by ICE. Section 11.3 would be amended to include the Exchange, and to delete the obsolete references to NYSE Market (DE) and NYSE Regulation.

The ICE Bylaws would be further amended to add a new Article XII (Voting and Ownership Limitations). New Section 12.1.a of Article XII would provide that, subject to its fiduciary obligations under applicable law, for so long as ICE directly or indirectly controls the Exchange (or its successor), the board of directors of ICE shall not adopt any resolution pursuant to clause (b) of Section A.2 of Article V of the certificate of incorporation of ICE (which relates to ICE board of directors approval of ownership of ICE capital stock by a person together with its related persons in excess of 20%), unless the board of directors of ICE shall have determined that:

- In the case of a resolution to approve the exercise of voting rights in excess of 20% of the then outstanding votes entitled to be cast on such matter, neither such person nor any of its related persons is an ETP Holder of the Exchange;
- in the case of a resolution to approve the entering into of an agreement, plan or other arrangement under circumstances that would result in shares of stock of ICE that would be subject to such agreement, plan or other arrangement not being voted on any matter, or the withholding of any proxy relating thereto, where the effect of such agreement, plan or other arrangement would be to enable any person, but for Article V of the Certificate of Incorporation of ICE, either alone or together with its related persons, to vote, possess the right to vote or cause the voting of shares of stock of ICE that would exceed 20% of the then outstanding votes entitled to be cast on such matter neither such person nor any of its related persons is, with respect to the Exchange, an ETP Holder.

New Section 12.1.b would provide that, subject to its fiduciary obligations under applicable law, for so long as ICE directly or indirectly controls the Exchange (or its successor), the Board of Directors of ICE shall not adopt any resolution pursuant to clause (b) of Section B(2) of Article V of ICE's Certificate of Incorporation, unless the Board of Directors shall have determined that neither such person nor any of its related persons is an ETP Holder.

New Section 12.2 would provide that, for so long as ICE shall control, directly

[31] The Exchange notes that the term ''At-Large Director'' is not used in the Bylaws, Certificate of Incorporation or rules of the Exchange.

[32] *See* Securities Exchange Release No. 70210 (August 15, 2013), 78 FR 51758 (August 21, 2013) (approving rule changes related to NYSE Euronext becoming a wholly owned subsidiary of ICE (then called IntercontinentalExchange Group, Inc.)).

[33] NYSE Market (DE) and NYSE Regulation were previously parties to a Delegation Agreement whereby the NYSE delegated certain regulatory functions to NYSE Regulation and certain market functions to NYSE Market (DE). The Delegation Agreement was terminated when the NYSE re-integrated its regulatory and market functions. As a result, the two entities ceased being regulated subsidiaries. *See* Securities Exchange Act Release No. 75991 (September 28, 2015), 80 FR 59837 (October 2, 2015). NYSE Regulation has since been merged out of existence.

or indirectly, the Exchange (or its successor), the ICE board of directors shall not adopt any resolution to repeal or amend any provision of the certificate of incorporation of ICE unless such amendment or repeal shall either be (a) filed with or filed with and approved by the SEC under Section 19 of the Exchange Act and the rules promulgated thereunder or (b) submitted to the board of directors of the Exchange (or the board of directors of its successor), and if such board of directors determines that such amendment or repeal must be filed with or filed with and approved by the Commission under Section 19 of the Exchange Act and the rules promulgated thereunder before such amendment or repeal may be effectuated, then such amendment or repeal shall not be effectuated until filed with or filed with and approved by the Commission, as the case may be.

Proposed Eighth Amended and Restated Certificate of Incorporation of Intercontinental Exchange Holdings, Inc. (''ICE Holdings Certificate of Incorporation'')

The ICE Holdings Certificate of Incorporation is being amended as follows:

- On the first page, add ''Eighth'' and delete ''Seventh'' before ''Amended and Restated Certificate of Incorporation'' in the heading and update items (2)–(5) accordingly to reflect that this would be the eighth amendment and restatement, including replacing an incorrect reference to ''Sixth'' before ''Amended'' in item (3). The date would also be updated in the preamble on the first page.
- To distinguish between the ETP Holders of NYSE Arca Equities and those of the Exchange, subsection A.3.c.ii of Article V (Limitations on Voting and Ownership) would be amended to define an ETP Holder of NYSE Arca Equities as ''NYSE Arca Equities ETP Holder.'' Obsolete references to NYSE Market (DE) and NYSE Regulation, would also be deleted.[34]

Subsection A.3.c of Article V would be amended to add a new subsection (v), similar to those in place for the other NYSE Exchanges, which would provide that, for so long as the ICE Holdings directly or indirectly controls NYSE National (or its successor), no person nor any of its related persons (as those terms are defined therein) is an ETP Holder (as proposed to be defined in the bylaws of NYSE National, discussed above) of NYSE National.

- Subsection A.3.d of Article V would be amended to add ''NYSE Arca'' before ''ETP Holder'' in one place to distinguish between the NYSE Arca Equities ETP Holders of and those of the Exchange.

Subsection A.3.d would be further amended to add a new subsection (v) similar to those in place for the other NYSE Exchanges. The new subsection would incorporate NYSE National into the existing restriction, such that the ICE Holdings Board of Directors would be restricted from adopting a resolution to approve the exercise of voting rights that would exceed 20% of the then outstanding votes entitled to be cast on such matter, where neither such person nor any of its related persons is, with respect to NYSE National, an NYSE National ETP Holder.

- Subsection B.3 of Article V would be amended to add a new subsection (g) similar to those in place for the other NYSE Exchanges, incorporating NYSE National into the restriction on the ICE Holdings board of directors adopting any resolution pursuant to clause (b) of Section B.2 of Article V of the ICE Holdings Certificate of Incorporation (which relates to ICE board of directors approval of ownership of ICE capital stock by a person together with its related persons in excess of 20%) unless the NYSE Holdings board of directors determines that, for so long as ICE Holdings controls NYSE National, neither such person nor any of its related persons is an NYSE National ETP Holder.

Proposed Fifth Amended and Restated Bylaws of Intercontinental Exchange Holdings, Inc. (''ICE Holdings Bylaws'')

The ICE Holdings Bylaws are being amended as follows:

- The cover page and heading on the first page would be amended to add ''Fifth'' and delete ''Fourth'' before ''Amended and Restated Bylaws'' to reflect that this would be the fifth amendment and restatement. The effective date on the cover page would also be updated.
- Similar to the ICE Bylaws discussed above, the ICE Holdings Bylaws would be amended to include ''NYSE National, Inc.'' in:
  - The definition of ''U.S. Regulated Subsidiaries'' in Article III, Section 3.15, which currently includes the NYSE, NYSE Market (DE), NYSE Regulation, NYSE Arca, LLC, NYSE Arca, NYSE Arca Equities, and NYSE MKT LLC, and to provide that the term ''U.S. Regulated Subsidiaries'' includes those entities listed or their successors, but only so long as they continue to be controlled, directly or indirectly, by ICE Holdings. Obsolete references to NYSE Market (DE) and NYSE Regulation in that section would also be deleted;[35]
  - Article VIII (Confidential Information), Section 8.1, which would be amended to extend the same protection to confidential information relating to the self-regulatory function of the Exchange or its successor;[36] and
  - Article XI (Amendment to the Bylaws), Section 11.3, which provides that, for so long as ICE controls any of the U.S. Regulated Subsidiaries, any amendment to or repeal of the ICE Bylaws must either be (i) filed with or filed with and approved by the Commission under section 19 of the Exchange Act and the rules promulgated thereunder, or (ii) submitted to the boards of directors of the U.S. Regulated Subsidiaries or the boards of directors of their successors, in each case only to the extent that such entity continues to be controlled directly or indirectly by ICE Holdings. Obsolete references to NYSE Market (DE) and NYSE Regulation would also be deleted from Article VXI, Section 11.3.[37]

Proposed Independence Policy of the Board of Directors of Intercontinental Exchange, Inc. (''ICE Director Independence Policy'')

The ICE Director Independence Policy would be amended to add NYSE National to the section describing ''Independence Qualifications.'' In particular, NYSE National would be added to categories (1)(b) and (c) that refer to ''members,'' as defined in section 3(a)(3)(A)(i), 3(a)(3)(A)(ii), 3(a)(3)(A)(iii) and 3(a)(3)(A)(iv) of the Exchange Act.[38] The clause ''and 'Person Associated with an ETP Holder' (as defined in Rule 1.5 of NYSE National, Inc.)'' would also be added to category (1)(b) in reference to ''allied persons.'' NYSE National would also be added to subsections (4) and (5) of the ''Independence Qualifications'' section.[39] Obsolete references to NYSE Market (DE) and NYSE Regulation would also be deleted.[40]

[34] *See* note 33, *supra.*

[35] *See* note 33, *supra.*

[36] Article VIII, Section 8.1 would also be amended to delete obsolete references to NYSE Market (DE) and NYSE Regulation.

[37] *See* note 33, *supra.* Conforming changes to delete and replace connectors would also be made throughout.

[38] *See* 15 U.S.C. 78c(a)(3)(a).

[39] Conforming changes would also be made to delete and replace connectors. The link in footnote 2 to the NYSE Listed Company Manual and commentary would also be updated.

[40] *See* note 33, *supra.*

Proposed Eighth Amended and Restated Limited Liability Company Agreement of NYSE Holdings LLC (''NYSE Holdings LLC Operating Agreement'')

The NYSE Holdings LLC Operating Agreement would be amended as follows:

• The heading and preamble would be amended to add ''Eighth'' and delete ''Seventh'' before ''Amended and Restated Limited Liability Agreement'' to reflect that this would be the eighth amendment and restatement. The effective date would also be updated. After ''This Agreement amends and restates in its entirety that'' in the second full sentence would be added the clause ''certain Seventh Amended and Restated Limited Liability Company Agreement, dated as of May 22, 2015, which amended and restated in its entirety that.''

• The current penultimate whereas clause would be amended by adding ''in May 2015'' before ''the Company'' and ''now desires to amend and restate'' immediately following would be replaced with ''amended and restated.'' ''Have'' and ''are'' would be changed to the past tense ''had'' and ''were'' in the final sentence.

• The following new whereas clause would be added immediately above the current last whereas clause: ''WHEREAS, the Company now desires to amend and restate the Seventh Amended and Restated Agreement to reflect the acquisition of NYSE National, Inc. by the Company's wholly-owned subsidiary NYSE Group, Inc.;''.

• The definition of ETP Holder in Article I (Interpretation), Section 1.1 would be deleted and new definitions of an NYSE Arca ETP Holder and NYSE National ETP Holder would be added. The obsolete definition of NYSE Market (DE) would be deleted.[41]

• Article IX (Voting and Ownership Limitations), Section 9.1(a)(3)(C) would be amended to add ''NYSE Arca'' before ''ETP Holder'' and the defined term ''NYSE Arca ETP Holder'' to distinguish between the ETP Holders of NYSE Arca Equities and those of the Exchange. An obsolete reference to NYSE Market (DE) would also be deleted from Section 9.1(a)(3)(C).[42]

Section 9.1(a)(3)(C) would be amended to add a new subsection (v) similar to those in place for the other NYSE Exchanges. The new subsection (v) would incorporate NYSE National into the existing restriction, such that the ICE Holdings board of directors would be restricted from adopting a resolution pursuant to clause (b) of Section 9.1(a)(2) unless the NYSE Holdings board of directors determines that, for so long as NYSE Holdings directly or indirectly controls NYSE National, Inc. (or its successor), neither such person nor any of its related persons is an ETP Holder (as defined in the bylaws of NYSE National, as such bylaws may be in effect from time to time) of NYSE National (''NYSE National ETP Holder''). The clause would also provide that any such person that is a related person of an ETP Holder shall hereinafter also be deemed to be an ''NYSE National ETP Holder'' for purposes of the agreement, as the context may require.

• Article IX, Section 9.1(a)(3)(D) would be amended to add ''NYSE Arca'' before ''ETP Holder.'' An outdated reference to NYSE Market (DE) would also be deleted.

Further, a new clause (v) would be added to Section 9.1(a)(3)(D) to incorporate NYSE National into the existing restriction on the NYSE Holdings Board of Directors, such that it would be restricted from adopting a resolution to approve the exercise of voting rights that would exceed 20% of the then outstanding votes entitled to be cast on such matter for so long as NYSE Holdings controls NYSE National. The clause would provide that ''for so long as the Corporation directly or indirectly controls NYSE National, neither such person nor any of its Related Persons is an NYSE National ETP Holder.''

• Article IX, Section 9.1(b)(3) would be amended to add a new subpart (G) to incorporate NYSE National into the existing restriction on the NYSE Holdings Board of Directors, so that it would provide that, subject to its fiduciary obligations under applicable law, for so long as NYSE Holdings directly or indirectly controls NYSE National (or its successor), the board of directors of NYSE Holdings shall not adopt any resolution pursuant to (b) of Section 9.1(b)(2) of the NYSE Holdings LLC Operating Agreement, unless the board of directors of NYSE Holdings shall have determined that neither such person nor any of its related persons is an NYSE National ETP Holder.

Proposed Fifth Amended and Restated Certificate of Incorporation of NYSE Group, Inc. (''NYSE Group Certificate of Incorporation'')

The NYSE Group Certificate of Incorporation is being amended as follows:

• On the first page, add ''Fifth'' and delete ''Fourth'' before ''Amended and Restated Certificate of Incorporation'' in the heading. The Recitations would be amended to reflect that this would be the fifth amendment and restatement. First, the Fifth Recitation would be updated to reflect that a Fourth Amended and Restated Certificate of Incorporation was filed with the Secretary of State of the State of Delaware on December 29, 2014. A new Sixth Recitation would be updated to reflect that the Fifth Amended and Restated Certificate of Incorporation has been duly adopted. The current Sixth Recitation would become the Seventh and would reflect that the Fourth Amended and Restated Certificate of Incorporation is amended and restated in its entirety.

• The Exchange would be added to the list of ''Regulated Subsidiaries'' in Article 4 (Stock), Section 4(b)(1), which currently includes the NYSE, NYSE Market (DE), NYSE Regulation, NYSE Arca, LLC, NYSE Arca Equities, and NYSE MKT, and the obsolete references to NYSE Market (DE) and NYSE Regulation would be deleted.

• To distinguish between the ETP Holders of NYSE Arca Equities and those of the Exchange, Section 4(b)(1)(y) of Article IV would be amended to define an ETP Holder of NYSE Arca Equities as an ''NYSE Arca Equities ETP Holder.'' An outdated reference to NYSE Market (DE) would also be deleted.

Section 4(b)(1)(y) would also be amended to add a provision to similar to those in place for the other NYSE Exchanges providing that, for so long as NYSE Group directly or indirectly controls NYSE National (or its successor), neither such Person nor any of its related persons is an ETP Holder (as defined in the rules of NYSE National, as such rules may be in effect from time to time) of NYSE National (defined as an ''NYSE National NYSE National ETP Holder'') and that any such person that is a related person of an NYSE National ETP Holder shall hereinafter also be deemed to be an ''NYSE National ETP Holder'' for purposes of the certificate of incorporation, as the context may require.

• Further, subsection 4(b)(1)(z) of Article IV would be amended to define an ETP Holder of NYSE Arca Equities as an ''NYSE Arca Equities ETP Holder'' and delete an outdated reference to NYSE Market (DE).

Subsection 4(b)(1)(z) would also be amended to incorporate NYSE National into the existing restriction on the ICE Holdings Board of Directors, such that it would be restricted from adopting a resolution to approve the exercise of voting rights that would exceed 20% of the then outstanding votes entitled to be

[41] *See* note 33, *supra.*

[42] *See* note 33, *supra.* Conforming changes to delete and replace connectors would also be made throughout.

cast on such matter, where neither such person nor any of its related persons is, with respect to NYSE National, an NYSE National ETP Holder.

• A new subpart (vii) would be added to subsection 4(b)(2)(C) of Article IV to incorporate NYSE National into the existing restriction on the NYSE Group Board of Directors, such that it would be restricted from adopting a resolution to approve the exercise of voting rights that would exceed 20% of the then outstanding votes entitled to be cast on such matter, where neither such person nor any of its related persons is, with respect to NYSE National, an NYSE National ETP Holder.[43]

• Article X (Confidential Information) would be amended to extend the same protection to confidential information relating to the self-regulatory function of the Exchange or its successor and delete obsolete references to NYSE Market (DE) and NYSE Regulation.

• Article XII (Amendments to Certificate of Incorporation) provides that, for so long as NYSE Group controls the Regulated Subsidiaries, before any amendment or repeal of any provision of the Certificate of Incorporation shall be effective, such amendment or repeal shall either (a) be filed with or filed with and approved by the SEC under Section 19 of the Exchange Act and the rules promulgated thereunder or (b) be submitted to the boards of directors of NYSE, NYSE Market (DE), NYSE Regulation, NYSE Arca, NYSE Arca Equities, and NYSE MKT or the boards of directors of their successors. Article XII would be amended to add NYSE National to subsection (b) and delete references to NYSE Market (DE) and NYSE Regulation.

Proposed Third Amended and Restated Bylaws of NYSE Group, Inc. (''NYSE Group Bylaws'')

The NYSE Group Bylaws are being amended as follows:

• Add ''Third'' and delete ''Second'' before ''Amended and Restated Bylaws'' in the heading to reflect that this would be the third amendment and restatement.

• Article VII (Miscellaneous), Section 7.9(A)(b) currently provides that, for so long as NYSE Group controls any of the NYSE Exchanges, any amendment to or repeal of the ICE Bylaws must either be (i) filed with or filed with and approved by the Commission under section 19 of the Exchange Act and the rules promulgated thereunder, or (ii) submitted to the boards of directors of the NYSE, NYSE Market (DE), NYSE Regulation, NYSE Arca, NYSE Arca Equities, and NYSE Alternext US LLC or the boards of directors of their successors, in each case only to the extent that such entity continues to be controlled directly or indirectly by ICE. Section 7.9(A)(b) would be amended to delete obsolete references to NYSE Market (DE) and NYSE Regulation, replace the outdated reference to ''NYSE Alternext US LLC'' with ''NYSE MKT LLC,'' and add NYSE National.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Exchange Act[44] in general, and with Section 6(b)(1)[45] in particular, in that it enables the Exchange to be so organized as to have the capacity to be able to carry out the purposes of the Exchange Act and to comply, and to enforce compliance by its exchange members and persons associated with its exchange members, with the provisions of the Exchange Act, the rules and regulations thereunder, and the rules of the Exchange. Following the Acquisition, the Commission will continue to have the same plenary regulatory authority over NYSE National as it currently has over the Exchange. NYSE National would continue to be registered as a national securities exchange and would continue to be a separate SRO with separate rules, membership rosters, and listings distinct from its affiliates. The proposed rule change is consistent with and will facilitate an ownership structure that will provide the Commission with appropriate oversight tools to ensure that the Commission will have the ability to enforce the Exchange Act with respect to NYSE National and its directors, officers, employees and agents to the extent they are involved in its activities.

The proposed change would continue the requirement in the Bylaws that an independent board committee oversee the adequacy and effectiveness of the performance of the Exchange's self-regulatory responsibilities. As proposed, the ROC would be similar in composition and functions to the approved ROCs of other SROs, would be similarly designed to ensure the adequacy and effectiveness of the Exchange's regulatory and self-regulatory organization responsibilities; to assess the Exchange's regulatory performance; and to assist the Board and any other committees of the Board in reviewing the regulatory plan and the overall effectiveness of the Exchange's regulatory functions. Accordingly, the Exchange believes that the proposed amendment would contribute to the orderly operation of the Exchange and would enable the Exchange to be so organized as to have the capacity to carry out the purposes of the Exchange Act and comply and enforce compliance with the provisions of the Exchange Act by its members and persons associated with its members. The Exchange therefore believes that approval of the amendment to the Bylaws is consistent with Section 6(b)(1) and not inconsistent with the 2005 Order.[46]

The Exchange also believes that this filing furthers the objectives of Section 6(b)(5) of the Exchange Act[47] in that it would create a governance and regulatory structure of NYSE National that is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to, and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest. As described above, following the Acquisition, NYSE National would continue to be registered as a national securities exchange and as a separate SRO and, as such, would continue to have separate rules, membership rosters, and listings. Further, NYSE National's regulatory functions would be carried out by the NYSE's regulatory department under the oversight of the proposed ROC. The proposed changes are intended to protect and maintain the self-regulatory functions of NYSE National and to allow it to carry out its regulatory responsibilities under the Act. The Exchange also believes that the proposed rule change provides transparency and clarity, and promotes efficiency, with respect to the governance and corporate structure of NYSE National. In so doing, the proposed rule change promotes the maintenance of a fair and orderly market, the protection of investors and the protection of the public interest.

As discussed above, the Exchange believes that its proposal that the ROC be comprised of independent directors would align the Exchange's corporate governance practices with other SROs that have adopted a ROC to monitor the adequacy and effectiveness of the

[43] An obsolete reference to NYSE Market (DE) would also be deleted from Article IV, 4(b)(2)(C)(v).

[44] 15 U.S.C. 78f(b).

[45] 15 U.S.C. 78f(b)(1).

[46] *See* Securities Exchange Act Release No. 51714 (May 19, 2005).

[47] 15 U.S.C. 78f(b)(5).

regulatory program, assessing regulatory performance, and assisting the board of directors in reviewing the regulatory plan and the overall effectiveness of the regulatory function. Moreover, the Exchange believes that the proposed ROC structure would also sufficiently insulate the regulatory functions from the Exchange's market and other commercial interests in order for the Exchange to carry out its regulatory obligations. The Exchange believes that the proposed rule change is therefore consistent with and facilitates a governance and regulatory structure that furthers the objectives of Section 6(b)(5) of the Exchange Act. The independent oversight of the Exchange's regulatory functions by the proposed ROC is also designed to protect investors as well as the public interest.

The Exchange further believes that making non-substantive technical and conforming changes throughout its Certificate of Incorporation and Bylaws to reflect the Exchange's proposed new ownership, including updating corporate names, as well as the replacement of outdated or obsolete references in the corporate documents of the NYSE Group and its intermediary and ultimate parent entities, including the ICE bylaws and director independence policy, ICE Holdings bylaws and certificate of incorporation, NYSE Holdings operating agreement, and the NYSE Group bylaws and certificate of incorporation, removes impediments to and perfects the mechanism of a free and open market by removing confusion that may result from having these references in the governing documents following the Acquisition. The Exchange further believes that the proposal removes impediments to and perfects the mechanism of a free and open market by ensuring that persons subject to the Exchange's jurisdiction, regulators, and the investing public can more easily navigate and understand the governing documents. The Exchange further believes that eliminating obsolete references would not be inconsistent with the public interest and the protection of investors because investors will not be harmed and in fact would benefit from increased transparency, thereby reducing potential confusion. Removing such obsolete references will also further the goal of transparency and add clarity to the Exchange's rules.

Finally, the proposal to retain, as modified, an Appeals Committee which, among other things, would be charged with hearing appeals of disciplinary determinations, complies with Section 6(b)(7) of the Exchange Act,[48] which, among other things, requires that the rules of a national securities exchange provide a fair procedure for the disciplining of members and persons associated with members. The Exchange proposes that the Appeals Committee shall be made up of at least one Public Director and at least one Non-Affiliated Director. The Exchange believes that continued member participation on the proposed Appeals Committee would be sufficient to provide for the fair representation of members in the administration of the affairs of the Exchange, including rulemaking and the disciplinary process, consistent with Section 6(b)(3) of the Exchange Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act. The proposed rule change is not intended to address competitive issues but rather is concerned solely with the Acquisition. Indeed, the Exchange believes that providing a new corporate and governance structure, the Exchange will be in a better position to improve its technology and engage in value-enhancing transactions that will enable the Exchange to more effectively participate and compete in the marketplace.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

[48] *See* 15 U.S.C. 78f(b)(7).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov. Please include File Number SR–NSX–2016–16 on the subject line.*

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NSX–2016–16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NSX–2016–16 and should be submitted on or before January 20, 2017.

[49] 17 CFR 200.30–3(a)(12).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[49]

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011–01–P

DEPARTMENT OF STATE

[Public Notice: 9835]

In the Matter of the Amendment of the Designation of Lashkar-e-Tayyiba (and Other Aliases) as a Foreign Terrorist Organization Pursuant to Section 219 of the Immigration and Nationality Act

Based upon a review of the administrative record assembled in this matter pursuant to Section 219 of the Immigration and Nationality Act, as amended (8 U.S.C. 1189 (''INA''), and in consultation with the Attorney General and the Secretary of the Treasury, I have concluded that there is a sufficient factual basis to find that Lashkar-e-Tayyiba uses the additional aliases Al-Muhammadia Students, AMS, and Al-Muhammadia Students Pakistan. Therefore, pursuant to Section 219(b) of the INA, as amended (8 U.S.C. 1189(b)), I hereby amend the designation of Lashkar-e-Tayyiba as a Foreign Terrorist Organization to include Al-Muhammadia Students, AMS, and Al-Muhammadia Students Pakistan as aliases.

This determination shall be published in the **Federal Register**.

Dated: November 28, 2016.

John F. Kerry,

Secretary of State.

BILLING CODE 4710–AD–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2016–0293]

Agency Information Collection Activities; Renewal of an Approved Information Collection: Financial Responsibility—Motor Carriers, Freight Forwarders, and Brokers

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FMCSA announces its plan to submit the Information Collection Request (ICR) described below to the Office of Management and Budget (OMB) for its review and approval and invites public comment. The FMCSA requests approval to extend an ICR titled, ''Financial Responsibility—Motor Carriers, Freight Forwarders, and Brokers,'' which is used to provide registered motor carriers, property brokers, and freight forwarders a means of meeting financial responsibility filing requirements. This ICR sets forth the financial responsibility documentation requirements for motor carriers, freight forwarders, and brokers that arise as a result of the Agency's jurisdictional statutes at 49 U.S.C. 13501 and 13531. The Agency is revising this ICR due to the implementation of a Final Rule entitled ''Unified Registration System'' (78 FR 52608, August 23, 2013) that extended the financial responsibility filing requirement to exempt for-hire motor carriers and private interstate motor carriers of hazardous materials.

DATES: We must receive your comments on or before February 28, 2017.

ADDRESSES: You may submit comments identified by Federal Docket Management System (FDMS) Docket Number FMCSA–2016–0293 using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building, Ground Floor, Room W12–140, Washington, DC, 20590–0001 between 9 a.m. and 5 p.m. e.t., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the Agency name and docket number. For detailed instructions on submitting comments, see the Public Participation heading below. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act heading below.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov,* and follow the online instructions for accessing the dockets, or go to the street address listed above.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement for the Federal Docket Management System published in the **Federal Register** on January 17, 2008 (73 FR 3316), or you may visit *http://edocket.access.gpo.gov/2008/pdfE8-794.pdf.*

Public Participation: The Federal eRulemaking Portal is available 24 hours each day, 365 days each year. You can obtain electronic submission and retrieval help and guidelines under the ''help'' section of the Federal eRulemaking Portal Web site. If you want us to notify you that we received your comments, please include a self-addressed, stamped envelope or postcard, or print the acknowledgement page that appears after submitting comments online. Comments received after the comment closing date will be included in the docket and will be considered to the extent practicable.

FOR FURTHER INFORMATION CONTACT: Ms. Tura Gatling, Office of Registration and Safety Information, Department of Transportation, Federal Motor Carrier Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590–0001. Telephone Number: (202) 385–2412; Email Address: *tura.gatling@dot.gov.* Office hours are from 8:00 a.m. to 5:00 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: The Secretary of Transportation (Secretary) is authorized to register for-hire motor carriers of property and passengers under the provisions of 49 U.S.C. 13902, surface freight forwarders under the provisions of 49 U.S.C. 13903, and property brokers under the provisions of 49 U.S.C. 13904. These persons may conduct transportation services only if they are registered pursuant to 49 U.S.C. 13901. The Secretary has delegated authority pertaining to these registration requirements to the FMCSA. The registration remains valid only as long as these transportation entities maintain, on file with the FMCSA, evidence of the required levels of financial responsibility pursuant to 49 U.S.C. 13906. FMCSA regulations governing the financial responsibility requirements for these entities are found at 49 CFR part 387. The information collected from these forms are summarized and displayed in the Licensing and Information system.

Forms for Endorsements, Certificates of Insurance and Other Evidence of Bodily Injury and Property Damage (BI&PD) Liability and Cargo Liability Financial Responsibility

Forms BMC–91 and BMC–91X, entitled ''Motor Carrier Automobile Bodily Injury and Property Damage Liability Certificate of Insurance,'' and Form BMC–82, entitled ''Motor Carrier Bodily Injury Liability and Property Damage Liability Surety Bond Under 49 U.S.C. 13906,'' provide evidence of the required coverage for bodily injury and property damage (BI & PD) liability. A Form BMC–91X filing is required when a carrier's insurance is provided by multiple companies instead of just one. Form BMC–34, entitled ''Household Goods Motor Carrier Cargo Liability Certificate of Insurance,'' and Form BMC–83, entitled ''Household Goods Motor Carrier Cargo Liability Surety Bond Under 49 U.S.C. 13906,'' establish a carrier's compliance with the Agency's cargo liability requirements. Only household goods (HHG) motor carriers are required to file evidence of cargo insurance with FMCSA. 49 CFR 387.303(c). Form BMC–90, entitled ''Endorsement for Motor Carrier Policies of Insurance for Automobile Bodily Injury and Property Damage Liability Under Section 13906, Title 49 of the United States Code,'' and Form BMC–32, entitled ''Endorsement for Motor Common Carrier Policies of Insurance for Cargo Liability Under 49 U.S.C. 13906,'' are executed by the insurance company, attached to BI & PD or cargo liability insurance policy, respectively, and forwarded to the motor carrier or freight forwarder.

Requirement To Obtain Surety Bond or Trust Fund Agreement

Form BMC–84, entitled ''Broker's or Freight Forwarder's Surety Bond Under 49 U.S.C. 13906,'' and Form BMC–85, entitled ''Broker's or Freight Forwarder's Trust Fund Agreement Under 49 U.S.C. 13906 or Notice of Cancellation of the Agreement,'' are filed by brokers or freight forwarders to comply with the requirement that they must have a $75,000 surety bond or trust fund agreement in effect before FMCSA will issue property broker or freight forwarder operating authority registration.

Cancellation of Prior Filings

Form BMC–35, entitled ''Notice of Cancellation Motor Carrier Insurance under 49 U.S.C. 13906,'' Form BMC–36, entitled ''Motor Carrier and Broker's Surety Bonds under 49 U.S.C. 13906 Notice of Cancellation,'' and Form BMC–85, entitled ''Broker's or Freight Forwarder's Trust Fund Agreement Under 49 U.S.C. 13906 or Notice of Cancellation of the Agreement,'' can be used to cancel prior filings.

Self-Insurance

Motor carriers can also apply to FMCSA to self-insure BI & PD and/or cargo liability in lieu of filing certificates of insurance with the FMCSA, as long as the carrier maintains a satisfactory safety rating (see 49 CFR 387.309.) Form BMC–40 is the application used by carriers to apply for self-insurance authority.

Title: Financial Responsibility—Motor Carriers, Freight Forwarders, and Brokers.

OMB Control Number: 2126–0017.

Type of Request: Renewal of a currently approved information collection.

Respondents: Motor carriers, freight forwarders, and brokers.

Estimated Number of Respondents: 183,340.

Estimated Time per Response: The estimated average burden per response for Form BMC–40 is 40 hours. The estimated average burden per response for the remaining insurance forms (BMC–34, 35, 36, 82, 83, 84, 85, 91, and 91X) is 10 minutes per form.

Expiration Date: February 28, 2017.

Frequency of Response: Certificates of insurance, surety bonds, and trust fund agreements are required when the transportation entity first registers with FMCSA and then when such coverages are changed or replaced by these entities. Notices of cancellation are required only when such certificates of insurance, surety bonds, and trust fund agreements are cancelled. The BMC–40 is filed only when a carrier seeks approval from FMCSA to self-insure its bodily injury and property damage (BI & PD) and/or cargo liability coverage.

Estimated Total Annual Burden: 45,168 hours [2 BMC–40 filings per year × 40 hours to complete + 270,525 filings per year for all the other forms × 10 minutes/60 minutes to complete = 45,168].

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the performance of FMCSA's functions; (2) the accuracy of the estimated burden; (3) ways for FMCSA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize or include your comments in the request for OMB's clearance of this information collection.

Issued on: December 23, 2016.

G. Kelly Regal,

Associate Administrator for Office of Research and Information Technology.

[FR Doc. 2016–31701 Filed 12–29–16; 8:45 am]

BILLING CODE 4910–EX–P

DEPARTMENT OF THE TREASURY

Proposed Collection; Comment Request

AGENCY: Departmental Offices, Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork burdens, invites the general public and other Federal agencies to comment on revisions for 2017 of a currently approved information collection that is proposed for approval by the Office of Management and Budget. The Office of International Affairs within the Department of the Treasury is soliciting comments concerning the revision of the Treasury International Capital (TIC) Form SHL/SHLA.

DATES: Written comments should be received on or before February 28, 2017 to be assured of consideration.

ADDRESSES: Direct all written comments to Dwight Wolkow, International Portfolio Investment Data Systems, Department of the Treasury, Room 5422 MT, 1500 Pennsylvania Avenue NW., Washington, DC 20220. In view of possible delays in mail delivery, you may also wish to send a copy to Mr. Wolkow by email (*comments2TIC@do.treas.gov*) or FAX (202–622–2009). Mr. Wolkow can also be reached by telephone (202–622–1276).

FOR FURTHER INFORMATION CONTACT: Copies of the proposed form and instructions are available at Part II of the Treasury International Capital (TIC) Forms Web page ''Forms SHL/SHLA & SHC/SHCA'', at: *http://www.treasury.gov/resource-center/data-chart-center/tic/Pages/forms-sh.aspx.* Requests for additional information should be directed to Mr. Wolkow.

SUPPLEMENTARY INFORMATION:

Title: Treasury International Capital (TIC) Form SHL/SHLA, ''Foreign-Residents' Holdings of U.S. Securities, including Selected Money Market Instruments''.

OMB Control Number: 1505–0123.

Abstract: This form collects foreign-residents' holdings of U.S. securities.

These data are used by the U.S. Government in the formulation of international financial and monetary policies, and for the computation of the U.S. balance of payments accounts and of the U.S. international investment position. These data are also used to provide information to the public and to meet international reporting commitments. The data collection includes large benchmark surveys conducted every five years, and smaller annual surveys conducted in the non-benchmark years. The data collected under an annual survey are used in conjunction with the results of the preceding benchmark survey to make economy-wide estimates for that non-benchmark year. Currently, the determination of who must report in the annual surveys is based primarily on the data submitted during the preceding benchmark survey. The data requested in the annual survey will generally be the same as requested in the preceding benchmark report. Form SHL is used for the benchmark survey of all significant U.S.-resident custodians and U.S.-resident issuers of securities regarding foreign-residents' holdings of U.S. securities. In non-benchmark years, Form SHLA is used for the annual surveys of primarily the largest U.S.-resident custodians and issuers.

Current Actions: No changes in the forms/schedules will be made from the previous survey that was conducted as of June 30, 2016. The proposed changes in the instructions are:

(1) In ''Consolidation Rules'' (section II.B in the instructions) the first sentence is expanded to list out separately ''Intermediate Holding Companies'' (IHCs), which are defined by Regulation YY, 12 CFR 252, to clarify that IHCs should follow the same consolidation rules that are applicable to Bank Holding Companies (BHCs), Financial Holding Companies (FHCs), and Savings and Loan Holding Companies.

(2) In ''Funds and Related Equity Ownership'' (section III.E in the instructions) the illustrative list of fund types in the second paragraph is expanded to list out separately ''private funds'', where ''private funds'' refers to the same class of financial entities that must report to the Securities and Exchange Commission as private funds on Form PF.

(3) In ''Funds and Related Equity Ownership'' (section III.E in the instructions) the last section, ''Direct Investment exception for private funds'', is new, to explain that in TIC reports as of 01 January 2017 and afterwards, investments in private funds, or between the entities of a private fund, are included in TIC surveys regardless of ownership share if they meet BOTH of the following two criteria: (i) The private fund does not own, directly or indirectly through another business enterprise, an ''operating company''—*i.e.,* a business enterprise that is not a private fund or a holding company—in which the foreign parent owns at least 10 percent of the voting interest; and (ii) If the private fund is owned indirectly (through one or more other U.S. business enterprises), so there are no ''operating companies'' between the foreign parent and the indirectly owned private fund.

(4) In ''Stripped Securities'' (section III.G in the instructions) the next to last sentence in the second paragraph is revised and reads ''In addition, all 'teddy bears' (TBRs), 'tigers' (TIGRs), 'cats' (CATS) and 'cougars' (COUGRs) should also be classified as U.S. Treasury securities.''

(5) In ''DIRECT INVESTMENT'' (section III.I in the instructions) the next to last sentence is new, refers to proposed change (3) above, and reads ''Also, certain cross-border investments by or into private funds where these investments do not involve operating companies (companies that are not other private funds or holding companies) should be reported as portfolio investment on TIC reports rather than on BEA reports as direct Investment (see section III.F).''

(6) In the ''Line-by-Line Instructions for Schedule 1'' (section IV in the instructions), the reporter type 5 in line 8 is expanded, refers to proposed change (1) above, and reads ''5 = Other Financial Organizations (including BHC, FHC & IHC)''.

(7) In the ''Line-by-Line Instructions for Schedule 1'' (section IV in the instructions), the phrase in parentheses in line 20 is clarified and reads ''(records with Schedule 2, Item 18 = security types 1, 2, 3, or 4)''.

(8) In the ''Line-by-Line Instructions for Schedule 1'' (section IV in the instructions), the phrase in parentheses in line 21 is clarified and reads ''(records with Schedule 2, Item 19 = security types 5, 6, 7, 8, 9, 10, or 11)''.

(9) In the ''Line-by-Line Instructions for Schedule 1'' (section IV in the instructions), the phrase in parentheses in line 22 is clarified and reads ''(records with Schedule 2, Item 19 = security type 5, 6, 7, 8, 9, 10, or 11)''.

(10) In the ''Line-by-Line Instructions for Schedule 1'' (section IV in the instructions), the phrase in parentheses in line 23 is clarified and reads ''(records with Schedule 2, Item 20 = security type 12)''.

(11) In the ''Line-by-Line Instructions for Schedule 2'' (section V in the instructions), the fifth type of issuer in line 11 is expanded, refers to proposed change (1) above, and reads ''Enter ''5'' if the security was issued by all other financial organizations (including BHC, FHC and IHC).''.

(12) In the ''Line-by-Line Instructions for Schedule 2'' (section V in the instructions), the note for ''Type 11'' in line 12 is expanded, refers to proposed change (4) above, and reads ''Type 11 should include all debt other than asset-backed securities that is not covered in types 5–10, including U.S. Treasury bills, TBRs, TIGRs, CATS and COUGRs.''

(13) In ''Appendix E: List of Currency Codes'', some names and/or symbols have been changed/updated, for example Romania, Serbia, Sudan, Turkey, Turkmenistan, Venezuela, and Zambia.

(14) In ''Funds and Related Equity Ownership'' (section III.E in the instructions), under the subsection ''Reporting guidelines for Hedge Funds and other alternative investments'', the list of legal entities is expanded to include fund ''administrators''.

(15) The exemption level (the threshold for reporting) for filing schedules 2 and 3 for a benchmark survey is increased from $100 million to $200 million.

(16) Some clarifications may be made in other parts of the instructions.

The changes will improve overall survey reporting.

Type of Review: Revision of a currently approved data collections.

Affected Public: Business/Financial Institutions.

Form: TIC SHL/SHLA, Schedules 1 and 2 (1505–0123).

Estimated Number of Respondents: An annual average (over five years) of 206, but this varies widely from about 590 in benchmark years (once every five years) to about 110 in other years (four out of every five years).

Estimated Average Time per Respondent: An annual average (over five years) of about 168 hours, but this will vary widely from respondent to respondent. (a) In the year of a benchmark survey, which is conducted once every five years, it is estimated that exempt respondents will require an average of 17 hours; for custodians of securities, the estimate is a total of 321 hours on average, but this figure will vary widely for individual custodians; and for issuers of securities that have data to report and are not custodians, the estimate is 61 hours on average. (b) In a non-benchmark year, which occurs four years out of every five years, it is estimated that the largest custodians of securities will require a total of 486 hours on average; and for the largest issuers of securities that have data to report and are not custodians, the estimate is 110 hours on average. The exemption level for custodians and for end-investors is the holding of less than $200 million in reportable U.S. securities owned by foreign residents. The exemption level applies only in benchmark years.

Estimated Total Annual Burden Hours: An annual average (over five years) of 33,720 hours.

Frequency of Response: Annual.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval. All comments will become a matter of public record. The public is invited to submit written comments concerning: (a) Whether the Survey is necessary for the proper performance of the functions of the Office of International Affairs within the Department of the Treasury, including whether the information collected will have practical uses; (b) the accuracy of the above estimate of the burdens; (c) ways to enhance the quality, usefulness and clarity of the information to be collected; (d) ways to minimize the reporting and/or record keeping burdens on respondents, including the use of information technologies to automate the collection of the data requested; and (e) estimates of capital or start-up costs of operation, maintenance and purchase of services to provide the information requested.

Dwight Wolkow,

Administrator, International Portfolio Investment Data Systems.

BILLING CODE 4810–25–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

December 27, 2016.

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before January 30, 2017 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collections, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.gov* and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8142, Washington, DC 20220, or email at *PRA@treasury.gov.*

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained by emailing *PRA@treasury.gov,* calling (202) 622–0934, or viewing the entire information collection request at *www.reginfo.gov.*

Internal Revenue Service (IRS)

OMB Control Number: 1545–0008.

Type of Review: Revision of a currently approved collection.

Title: Wage and Tax Statements W–2/W–3 Series.

Abstract: Section 6051 of the Internal Revenue Code requires employers to furnish income and withholding statements to employees and to the IRS. Employers report income and withholding information on Form W–2. Forms W–2AS, W–2GU, and W–2VI are variations of the W–2 for use in U.S. possessions. The W–3 series forms transmit W–2 series forms to SSA for processing. The W–2C and W–3C series are used to correct previously filed forms.

Forms: W–2VI, W–3, W–3C, W–3CPR, W–3PR, W–2GU, W–2, W–2C, W–2AS, W–3SS.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 1.

OMB Control Number: 1545–0754.

Type of Review: Extension without change of a currently approved collection.

Title: Form Substantiation of Charitable Contributions- TD 8002.

Abstract: Congress intended that the IRS prescribe rules and requirements to assure substantiation and verification of charitable contributions. The regulations serve these purposes.

Affected Public: Individuals or Households.

Estimated Total Annual Burden Hours: 2,158,000.

OMB Control Number: 1545–1212.

Type of Review: Extension without change of a currently approved collection.

Title: Form 706–QDT—U.S. Estate Tax Return for Qualified Domestic Trusts.

Form: 706–QDT.

Abstract: Form 706–QDT is used by the trustee or the designated filer to compute and report the Federal estate tax imposed on qualified domestic trusts by C section 2056A. IRS uses the information to enforce this tax and to verify that the tax has been properly computed.

Affected Public: Individuals or Households.

Estimated Total Annual Burden Hours: 357.

OMB Control Number: 1545–1578.

Type of Review: Extension without change of a currently approved collection.

Title: REG–106542–98 (TD 9032) (Final), Election to Treat Trust as Part of an Estate.

Abstract: REG–106542–98 (TD 9032) and Rev. Proc. 98–13 relate to an election to have certain revocable trusts treated and taxed as part of an estate, and provides the procedures and requirements for making the section 645 election.

Affected Public: Individual or Households.

Estimated Total Annual Burden Hours: 5,000.

OMB Control Number: 1545–1748.

Type of Review: Extension without a change of a currently approved collection.

Title: Changes in Accounting Periods—REG–106917–99 (TD 8669/Final).

Abstract: Section 1.441–2(b)(1) requires certain taxpayers to file statements on their federal income tax returns to notify the Commissioner of the taxpayers' election to adopt a 52–53 week taxable year. Section 1.442–1(b)(4) provides that certain taxpayers must establish books and records that clearly reflect income for the short period involved when changing their taxable year to a fiscal taxable year. Section 1.442–1(d) requires a newly married husband or wife to file a statement with their short period return when changing to the other spouse's taxable year.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 500.

OMB Control Number: 1545–1877.

Type of Review: Extension without change of a currently approved collection.

Title: Average Area Purchase Price Safe Harbors and Nationwide Purchase Prices under section 143—Revenue Procedure 2004–18.

Abstract: Revenue Procedure 2004–18 provides issuers of qualified mortgage bonds, as defined in section 143(a) of the Internal Revenue Code, and issuers of mortgage credit certificates, as defined in section 25(c), with (1) nationwide average purchase prices for residences located in the United States, and (2) average area purchase price safe harbors for residences located in statistical areas in each state, the District of Columbia, Puerto Rico, the Northern Mariana Islands, American Samoa, the Virgin Islands, and Guam.

Affected Public: State, Local, and Tribal Governments.

Estimated Total Annual Burden Hours: 15.

OMB Control Number: 1545–1979.

Type of Review: Extension without change of a currently approved collection.

Title: Form 8908—Energy Efficient Home Credit.

Form: 8908.

Abstract: Eligible contractors will use Form 8908 to claim the credit for new energy efficient homes that are acquired by sale or lease by an individual from that contractor during the tax year for use as a residence.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 512,820.

OMB Control Number: 1545–2050.

Type of Review: Extension without change of a currently approved collection.

Title: Notice 2006–109—Interim Guidance Regarding Supporting Organizations and Donor Advised Funds.

Abstract: Notice 2006–109 provides interim guidance regarding application of new or revised requirements under sections 1231 and 1241–1244 of the Pension Protection Act of 2006. It also provides interim relief from application of new excise taxes on private foundation grants to supporting organizations and on sponsoring organizations of donor advised funds.

Affected Public: Not-for-profit institutions.

Estimated Total Annual Burden Hours: 612,294.

OMB Control Number: 1545–2147.

Type of Review: Extension without change of a currently approved collection.

Title: Internal Revenue Code Section 108(i) Election.

Abstract: Public Law 111–5 (American Recovery and Reinvestment Act), Section 1231 requires taxpayers to attach an election statement to the taxpayer's tax return to obtain a tax benefit. Information on how to make the election and what the statement must include must be published as early as possible to allow taxpayers sufficient time to determine whether to make the election and timely prepare and file their tax returns.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 300,000.

Bob Faber,

Treasury PRA Clearance Officer.

Revision of Airworthiness Standards for Normal, Utility, Acrobatic, and Commuter Category Airplanes; Final Rule

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Parts 21, 23, 35, 43, 91, 121, and 135

[Docket No.: FAA–2015–1621; Amdt. Nos. 21–100, 23–64, 35–10, 43–49, 91–346, 121–378, and 135–136]

RIN 2120–AK65

Revision of Airworthiness Standards for Normal, Utility, Acrobatic, and Commuter Category Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA amends its airworthiness standards for normal, utility, acrobatic, and commuter category airplanes by replacing current prescriptive design requirements with performance-based airworthiness standards. These standards also replace the current weight and propulsion divisions in small airplane regulations with performance- and risk-based divisions for airplanes with a maximum seating capacity of 19 passengers or less and a maximum takeoff weight of 19,000 pounds or less. These airworthiness standards are based on, and will maintain, the level of safety of the current small airplane regulations, except for areas addressing loss of control and icing, for which the safety level has been increased. The FAA adopts additional airworthiness standards to address certification for flight in icing conditions, enhanced stall characteristics, and minimum control speed to prevent departure from controlled flight for multiengine airplanes. This rulemaking is in response to the Congressional mandate set forth in the Small Airplane Revitalization Act of 2013.

DATES: Effective August 30, 2017.

ADDRESSES: For information on where to obtain copies of rulemaking documents and other information related to this final rule, see ''How To Obtain Additional Information'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: For technical questions concerning this action, contact Lowell Foster, Regulations and Policy, ACE–111, Federal Aviation Administration, 901 Locust St., Kansas City, MO 64106; telephone (816) 329–4125; email *lowell.foster@faa.gov*.

SUPPLEMENTARY INFORMATION: All sections of part 23 contain revisions, except the FAA did not make any changes to the following sections: 23.1457, Cockpit Voice Recorders, 23.1459, Flight Data Recorders, and 23.1529, Instructions for Continued Airworthiness. Sections 23.1459 and 23.1529 were changed to align the cross references with the rest of part 23. The three sections otherwise remain unchanged relative to the former regulations.

Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart III, Section 44701. Under that section, the FAA is charged with promoting safe flight of civil airplanes in air commerce by prescribing minimum standards required in the interest of safety for the design and performance of airplanes. This regulation is within the scope of that authority because it prescribes new performance-based safety standards for the design of normal, utility, acrobatic, and commuter category airplanes.

Additionally, this rulemaking addresses the Congressional mandate set forth in the Small Airplane Revitalization Act of 2013 (Pub. L. 113–53; 49 U.S.C. 44704 note) (SARA). Section 3 of SARA requires the Administrator to issue a final rule to advance the safety and continued development of small airplanes by reorganizing the certification requirements for such airplanes under part 23 to streamline the approval of safety advancements. SARA directs that the rule address specific recommendations of the 2013 Part 23 Reorganization Aviation Rulemaking Committee (Part 23 ARC).

Table of Contents

I. Overview of Final Rule

This rule amends Title 14, Code of Federal Regulations (14 CFR) part 23 by replacing current prescriptive design requirements with performance-based airworthiness standards. It maintains the level of safety associated with current part 23 except for areas addressing loss of control and icing where a higher level of safety is established, provides greater flexibility to applicants seeking certification of their airplane designs, and facilitates faster adoption of safety enhancing technology in type-certificated products while reducing regulatory time and cost burdens for the aviation industry and FAA. This final rule also reflects the FAA's safety continuum philosophy,[1] which balances an acceptable level of safety with the societal burden of achieving that level of safety, across the broad range of airplane types certificated under part 23.

This final rule allows the use of consensus standards accepted by the Administrator as a means of compliance to part 23's performance-based regulations. The use of these FAA-accepted consensus standards as a means of compliance will streamline the certification process. However, consensus standards are one means, but not the only means, of showing compliance to the performance-based standards of part 23. Applicants, individuals, or organizations also have the option to propose their own means of compliance as they do today.

In this final rule, the FAA adopts additional airworthiness standards to address certification for flight in icing conditions and enhanced stall characteristics to prevent inadvertent departure from controlled flight. Manufacturers that choose to certify an airplane for flight in Supercooled Large Drops (SLD)[2] must demonstrate safe operations in SLD conditions. For those manufacturers who choose instead to certify an airplane with a prohibition against flight in SLD conditions, this final rule will require a means for detecting SLD conditions and showing the airplane can safely avoid or exit such conditions.

This final rule adopts additional airworthiness standards to address enhanced stall characteristics to prevent loss of control (LOC). This final rule requires applicants to use new design approaches and technologies to improve airplane stall characteristics and pilot situational awareness to prevent LOC accidents.

Additionally, this final rule also streamlines the process for design approval holders applying for a type design change, or for a third party modifier applying for a supplemental type certificate (STC), to incorporate new and improved equipment in part 23 airplanes. The revised part 23 standards are much less prescriptive; therefore, the certification process for modifications is simplified. Certification of an amended type certificate (TC) or STC under this final rule requires fewer special conditions or exemptions, lowering costs and causing fewer project delays.

This final rule also revises 14 CFR part 21, ''Certification Procedures for Products and Articles,'' to simplify the approval process for low-risk articles. Specifically, it amends § 21.9 to allow FAA-approved production of replacement and modification articles for airplanes certificated under part 23, using methods not listed in § 21.9(a). This will reduce constraints on the use of non-required, low-risk articles, such as carbon monoxide detectors and weather display systems.

Lastly, this final rule removes Special Federal Regulation No. 23 (SFAR No. 23) and contains conforming amendments to 14 CFR parts 21, 35, 43, 91, and 135. These conforming amendments align part 23 references to the part 23 rules contained in this final rule.

The FAA has analyzed the benefits and costs associated with this rule. This rule responds to the Small Airplane Revitalization Act of 2013 (SARA) and to industry recommendations for performance-based standards. This rule reduces new certification processing by streamlining new certification processing. In addition, this rule improves safety by adding stall characteristic, stall warnings, and icing requirements. The following table summarizes the benefit and cost analysis, showing the estimated cost is substantially less than the benefits resulting from the combined value of the safety benefits and the cost savings. The following table shows these results.

ESTIMATED BENEFITS AND COSTS

[2015 $ Millions]

	Stall & spin + other costs	Safety benefits + cost savings = total benefits
Total	$0.8 + $3.1 = $3.9	$17.9 + $9.9 = $27.8.
Present value at 7%	$0.8 + $3.1 = $3.9	$6.1 + $4.9 = $11.0.
Present value at 3%	$0.8 + $3.1 = $3.9	$11.1 + $7.1 = $18.3.

* These numbers are subject to rounding error.

Accordingly, the FAA has determined that the rule will be cost beneficial.

II. Background

A. Statement of the Problem

The range of airplanes certificated under part 23 is diverse in terms of performance capability, number of passengers, design complexity, technology, and intended use. Currently, certification requirements of part 23 airplanes are determined by reference to a combination of factors, including weight, number of passengers, and propulsion type. The resulting divisions (*i.e.,* normal, utility, acrobatic, and commuter categories) historically were appropriate because there was a clear relationship between the propulsion and weight of the airplane and its associated performance and complexity.

Technological developments have altered the dynamics of that relationship. For example, high-performance and complex airplanes now exist within the weight range that historically was occupied only by light and simple airplanes. The introduction of high-performance, lightweight airplanes required subsequent amendments of part 23 to include more stringent and demanding standards—often based on the part 25 requirements for larger transport category airplanes—to ensure an adequate level of safety for airplanes under part 23. The unintended result is that some of the more stringent and demanding standards for high-performance airplanes now apply to the certification of simple and low-performance airplanes. Because of this increased complexity, it takes excessive time and resources to certify new part 23 airplanes.

B. History

In 2008, the FAA initiated the Part 23 Certification Process Study (CPS)[3] to review part 23. Collaborating with industry, the CPS team's challenge was

[1] The FAA's safety continuum philosophy is that one level of safety is not appropriate for all aviation.

[2] SLD conditions include freezing drizzle and freezing rain, which contain drops larger than those specified in appendix C to part 25, and can accrete aft of leading edge ice protection systems.

[3] See docket number FAA–2015–1621.

to determine the future of part 23, given products at the time and anticipated future products. The team identified opportunities for improvements by examining the entire life cycle of a part 23 airplane, including operations and maintenance. The CPS recommended reorganizing part 23 using criteria focused on performance and design complexity. The CPS also recommended the FAA implement general airworthiness requirements, with the means of compliance defined in industry consensus standards.

In 2010, following the publication of the CPS, the FAA held a series of public meetings to seek feedback concerning the findings and recommendations. Overall, the feedback was supportive of, and in some cases augmented, the CPS recommendations.

One notable difference between the CPS findings and the public feedback was the public's request that the FAA revise part 23 certification requirements for simple, entry-level airplanes. Over the past two decades, part 23 standards have become more complex as industry has generally shifted towards correspondingly complex, high-performance airplanes. This transition has placed an increased burden on applicants seeking to certificate smaller, simpler airplanes. Public comments requested that the FAA focus on reducing the costs and time burden associated with certificating small airplanes by restructuring the requirements based on risk. The risk exposure for most simple airplane designs is typically low, because of the small number of occupants.

On August 15, 2011, the Administrator chartered the Part 23 ARC to consider the following CPS recommendations:

- Recommendation 1.1.1—Reorganize part 23 based on airplane performance and complexity, rather than the existing weight and propulsion divisions.
- Recommendation 1.1.2—Certification requirements for part 23 airplanes should be written on a broad, general, and progressive level, segmented into tiers based on complexity and performance.

The ARC's recommendations took into account the Federal Aviation Modernization and Reform Act of 2012 (Pub. L. 112–95) (FAMRA), which requires the Administrator, in consultation with the aviation industry, to assess the airplane certification and approval process. The purpose of the ARC's assessment was to develop recommendations for streamlining and reengineering the certification process to improve efficiency, reduce costs, and ensure the Administrator can conduct certifications and approvals in a manner that supports and enables the development of new products and technologies and the global competitiveness of the United States aviation industry.[4] FAMRA also directed the Administrator to consider the recommendations from the CPS.[5]

ARC membership represented a broad range of stakeholder perspectives, including U.S. and international manufacturers, trade associations, and foreign civil aviation authorities (FCAAs).

The ARC noted the prevailing view within industry was that the only way to reduce the program risk, or business risk, associated with the certification of new airplane designs was to avoid novel design approaches and testing methodologies. Under existing part 23, the certification of new and innovative products frequently requires the FAA's use of equivalent level of safety (ELOS) findings, special conditions, and exemptions. These take time, resulting in uncertainty and high project costs. The ARC emphasized that although industry needs to develop new airplanes designed to use new technology, current certification costs inhibit the introduction of new technology. The ARC identified prescriptive certification requirements as a major barrier to installing safety-enhancing modifications in the existing fleet and to producing newer, safer airplanes.

The ARC also examined the harmonization of certification requirements between the FAA and FCAAs, and the potential for such harmonization to improve safety while reducing costs. Adopting performance-based safety regulations that facilitate international harmonization, coupled with internationally accepted means of compliance, could result in both significant cost savings and the enabling of safety-enhancing equipment installations. The ARC recommended that internationally accepted means of compliance should be reviewed and voluntarily accepted by the appropriate aviation authorities, in accordance with a process established by those authorities. Although each FCAA would be capable of rejecting all or part of any particular means of compliance, the intent would be to have FCAA participation in the creation of the means of compliance to ease acceptance of the means of compliance.

Based on the ARC recommendations and in response to FAMRA, the FAA initiated rulemaking on September 24, 2013. Subsequently, on November 27, 2013, Congress passed the SARA, which requires the FAA to issue a final rule revising the certification requirements for small airplanes by—

- Creating a regulatory regime that will improve safety and decrease certification costs;
- Setting safety objectives that will spur innovation and technology adoption;
- Replacing prescriptive rules with performance-based regulations; and
- Using consensus standards to clarify how safety objectives may be met by specific designs and technologies.

The FAA has determined that the performance-based-standards component of this final rule complies with the FAMRA and the SARA because it will improve safety, reduce regulatory compliance costs, and spur innovation and the adoption of new technology. This final rule will replace the weight- and propulsion-based prescriptive airworthiness standards in part 23 with performance- and risk-based airworthiness standards for airplanes with a maximum seating capacity of 19 passengers or less and a maximum takeoff weight of 19,000 pounds or less. The standards will maintain or increase the level of safety associated with the current part 23, while also facilitating the adoption of new and innovative technology in general aviation (GA) airplanes.

C. Summary of the NPRM

On March 7, 2016, the FAA issued a notice of proposed rulemaking (NPRM) proposing to revise part 23 in response to the SARA.[6] In the NPRM, the FAA proposed to—

- Establish a performance-based regulatory regime; and
- Add new certification standards for LOC and icing.

On May 3–4, 2016, the FAA held a public meeting to discuss the NPRM, hear the public's questions, address any confusion, and obtain information relevant to the final rule under consideration.[7] The meeting notice and the transcripts are both in the docket. The FAA considered comments made at the public meeting along with comments submitted by the public to docket number FAA–2015–1621.

The comment period closed on May 13, 2016.

III. Discussion of the Public Comments and Final Rule

A. Delayed Effective Date

The FAA has decided it is necessary to delay the effective date of this final

[4] Public Law 112–95, section 312(c).

[5] Public Law 112–95, section 312(b)(6).

[6] *See* 81 FR 13452.

[7] *See* 81 FR 20264.

rule for 8 months, until August 30, 2017.

This final rule establishes a new performance-based system that will require additional training for both FAA and industry engineers, as noted in the NPRM regulatory evaluation summary. Several commenters expressed concern with the need for additional training and guidance in order to implement the new performance-based standards. The FAA finds that a delayed effective date will alleviate these concerns.

Delaying the effective date will provide the FAA time to conduct the training necessary to implement this rule in a consistent manner. Additionally, the delayed effective date provides the FAA with sufficient time to develop guidance materials to ensure the FAA and industry have sufficient information to implement the new performance-based standards consistently and correctly. Furthermore, while compliance with part 23, amendment 23–62 will remain a means of compliance with this final rule, a delayed effective date will allow industry time to develop new means of compliance and will facilitate the development of harmonized means of compliance among the FAA, industry, FCAAs.

B. Overview of Comments

The FAA received 692 comments. Of the 692 comments, individuals submitted approximately 30 comments and industry and other foreign authorities submitted the remaining comments. The General Aviation Manufacturers Association (GAMA); Aircraft Electronics Association (AEA); Experimental Aircraft Association (EAA); and Aircraft Owners & Pilots Association (AOPA) (hereafter ‘‘the Associations’’) collected comments from their membership and presented these jointly. The vast majority of commenters overwhelmingly supported the proposed changes and provided constructive feedback so the FAA could clarify the safety intent in various sections of this rule.

The FAA did not receive comments on the proposed changes to the following sections. These sections are adopted as proposed, and the explanations for the changes from the former regulations are contained in the NPRM.

- § 23.1515, ‘‘Instructions for continued airworthiness’’
- § 35.1, ‘‘Applicability’’
- § 35.37, ‘‘Fatigue limits and evaluation’’
- § 91.205, ‘‘Powered civil aircraft with standard category U.S. airworthiness certificates: Instrument and equipment requirements’’
- § 91.313, ‘‘Restricted category civil aircraft: Operating limitations’’
- § 91.531, ‘‘Second in command requirements’’
- § 121.310, ‘‘Additional Emergency equipment’’
- § 135.169, ‘‘Additional airworthiness requirements’’

C. General Public Comments

1. Rule Organization and Numbering

In the NPRM, the FAA proposed a new organization and numbering scheme for part 23. Appendix 1 to the NPRM preamble contains a cross-reference table detailing how the current regulations are addressed in the proposed part 23 regulations.

The FAA received several comments suggesting the FAA change the regulation numbering scheme for proposed part 23. Commenters expressed concern that confusion or undue complexity would result because the proposed part 23 regulations do not correlate by section number to the former part 23 regulations. Commenters also noted that certain sections of the proposed rule would have shared the same section numbers as former part 23 regulations but would have contained completely different content.

To avoid confusion, EASA proposed a new numbering system for Certification Specification 23 (CS 23) [8] and part 23, where the new regulations would not share numbers with the former regulations to emphasize the difference in content between these two sets of regulations. EASA suggested the numbering for subpart A begin at § 23.2000, for subpart B at § 23.2100, and so on, with the regulations numbers increasing by incremental steps of 5, *i.e.,* §§ 23.2005, 23.2010, and so on.

The FAA agrees that the proposed numbering scheme would have caused confusion and undue complexity. The FAA has considered EASA's recommended new numbering scheme for part 23 and adopts it in the final rule. This recommendation harmonizes the numbering of part 23 and CS 23 and provides new part 23 with a unique numbering scheme to avoid any confusion with former part 23. The FAA has determined the new numbering scheme also alleviates concerns about situations in which a certification basis would contain a former part 23 rule and a new part 23 rule sharing the same section number, but different subject-matter.

The FAA did not propose to change or renumber §§ 23.1457, 23.1459, and 23.1529; therefore, these sections remain as legacy rules in the new part 23.[9]

Air Tractor, Inc. (Air Tractor) suggested that the FAA retain former part 23, amendment 23–62, and create a new part (*e.g.,* part 22) for the proposed performance-based regulations. It also suggested that proposed appendix A should remain appendix G to avoid over-writing existing appendix A.

The FAA notes Air Tractor's recommendation to retain former part 23 and to create a new 14 CFR part for the proposed regulations. However, this regulation is a rewrite of part 23 by replacing the prescriptive design requirements with performance-based airworthiness requirements, and the creation of an additional part would result in unnecessary confusion and overlap. However, the FAA will accept the use of the prescriptive means of compliance contained in former part 23 as one way to show compliance with new part 23. This will not apply to the sections containing new requirements, such as §§ 23.2135, 23.2150, and 23.2165 (proposed in the NPRM as §§ 23.200, 23.215, and 23.230). In addition, the FAA is issuing a policy statement identifying the means by which the FAA has addressed errors, findings of ELOS to various provisions of former part 23, and special conditions. This policy should be considered in defining means of compliance based on former part 23.

The FAA also considered Air Tractor's recommendation to not rename appendix G. As proposed in the NPRM, the FAA removed appendixes A through F. However, the FAA is renaming former appendix G to part 23, as appendix A to part 23—Instructions for Continued Airworthiness, because this final rule is a complete rewrite and beginning the appendices at G instead of A may cause confusion.

The following table identifies each requirement, its previously-proposed section in the NPRM, and its corresponding section in this final rule.

[8] EASA published an Advance Notice of Proposed Amendment (A–NPA) 2015–06 on March 27, 2015, which set forth EASA's concept for its proposed reorganization of Certification Specification 23 (CS–23). EASA also published a Notice of Proposed Amendment (NPA) 2016–05 on June 27, 2016.

[9] The prescriptive requirements of §§ 23.1457, 23.1459, and 23.1529 are consistent in substance and numbering across parts 23, 25, 27, and 29.

2. Level of Safety

In the NPRM, the FAA proposed amendments to part 23 to create an adaptive regulatory environment that could quickly embrace new safety-enhancing technologies and potentially increase the level of safety.

Wipaire, Inc. (Wipaire) viewed the proposal as allowing new and emerging technologies an effective means of certification, but one which offered little economic and certification relief to currently-established methods and technologies.

An individual commenter noted that the proposal would allow industry to push new techniques, materials, procedures, and targets without being hindered by the prescriptive requirements of former part 23. However, the commenter stated that the proposal could allow subpar designs to exist before the data suggests a failure in compliance.

The National Transportation Safety Board (NTSB), while recognizing consensus standards provide ''a collaborative framework for standards development,'' commented on a situation where, in its view, consensus standards did not provide adequate protection from catastrophic aerodynamic flutter. The NTSB expressed concern that design standards important for safety consideration may be overlooked, and it encouraged the FAA to refine its methodology.

The FAA understands the concerns over the level of safety required by the performance standards. However, by leveraging the expertise of consensus standards organizations and FAA specialists in determining whether those standards are acceptable, those means of compliance should provide at least the same level of safety as under the former process.

The FAA will continue to be responsible for determining that proposed airplane designs meet the applicable standards and ensuring that the proposed standards provide at least the same level of safety as did the former standards. Under new part 23, the first time an applicant presents a new proposal for a means of compliance, the FAA will require sufficient time and resources to determine whether it does, in fact, meet the objectives of those standards. This is the same process as under the former prescriptive standards. However, once the proposed means of compliance is determined to meet these standards, the approval process becomes more efficient. The FAA will no longer be required to issue special conditions (or other formal processes) to approve the means of compliance each time it is proposed, but can accept those means of compliance immediately as it is proposed.

3. Accommodating Hybrid and Electric Propulsion

In the NPRM, the FAA recognized that historical general design and performance assumptions may not be valid today. The FAA noted that former part 23 did not account for airplanes equipped with new technologies, such as electric propulsion systems, which may have features entirely different from piston and turbine engines. The FAA therefore proposed new regulations based on airplane performance and potential risk.

With respect to allowing new technologies, the Associations and Zee.Aero Inc. (Zee) were particularly concerned with the accommodation of alternative engines. The Associations stated that hybrid and electric propulsion is one of the near-term significant technological developments which absolutely must be accommodated into the new part 23 regulations structure.

Zee also commented on the advancements in hybrid and electric propulsion. Zee noted that new hybrid propulsion, control, and airframe configurations are already beginning to blur the lines between the traditional airplane categories. Zee questioned whether the FAA intends to continue to maintain strict airplane categories and create a new ''category'' every time a new unique category configuration emerges. Lastly, Zee noted that § 21.17(b) currently captures such airplane and wondered whether that section would become the norm for those cases.

The regulations adopted in this final rule do allow for alternative types of propulsion. The FAA does not intend to continue to use § 21.17(b) for unique category airplanes. The FAA plans to shift these unique airplanes from § 21.17(b) to part 23. Unique airplane that more closely resemble rotorcraft may be treated differently.

4. Impact of Rule on FAA Engineers and Designated Engineering Representatives (DERs)

In the NPRM, the FAA proposed changes to part 23 that would eliminate the workload of exemptions, special conditions, and ELOS findings necessary to certificate new part 23 airplanes. The NPRM did not specifically address the role of Designated Engineering Representatives (DERs) in the proposed process.

Several commenters addressed the impacts of the proposed rule changes on FAA engineers and DERs.

NetJets Association of Shared Aircraft Pilots (NJASAP) and Kestrel Aircraft Company (Kestrel) expressed concern that the process intended to streamline technological adoption may significantly increase the FAA's workload. Kestrel contended the increased workload for FAA engineers will create certification bottlenecks at the Aircraft Certification Offices (ACOs) as their staff work to understand and implement the changes.

The FAA recognizes workload during the transition to the new system may increase temporarily for industry and the FAA. Under the former part 23, the FAA had a workload of exemptions, special conditions, and ELOS findings necessary to certificate new part 23 airplanes. However, the FAA has determined in the long term, the workload for industry and the FAA will be less than the workload under former part 23. As estimated in the NPRM's regulatory evaluation summary, there will be savings resulting from streamlining the certification process by reducing the issuance special conditions, exemptions, and ELOS findings. The NPRM and final rule regulatory evaluation provides details for these cost savings and the methodology the FAA employed to estimate the cost savings.

Other commenters expressed concerns about how the DER process will fit in with the new regulations. Air Tractor questioned whether DERs will find compliance with accepted means of compliance. The National Air Traffic Controls Association (NATCA) asked whether DERs will issue acceptance statements or approvals. NATCA asked how the FAA will change the designee policy and asked whether the FAA intends to accept or approve the standards. Textron Aviation (Textron) requested clarification of the FAA's transition plan regarding Organization Designation Authorization (ODA) and DER delegations, in particular regarding continuity of authority from the old amendments to the new.

In response to concerns regarding the role of the DERs and ODA engineers, the FAA is developing transition training for the FAA engineers, ODA engineers, and the DERs. The FAA is also reviewing the relevant orders and policies for needed changes, but does not expect changes to the basic certification process as the FAA engineers and industry designees will still be responsible for finding compliance to the requirements in part 23. Furthermore, the FAA is developing a change management plan that will include formal training for both FAA engineers and staff and industry designees. Under existing policies and processes, designees must demonstrate the capability to make correct determinations of compliance with particular regulations before they are authorized to do so. This is unchanged by this rule. To the extent an applicant uses previously-accepted methods of compliance for which the designee has demonstrated such capability, the FAA may delegate compliance findings. If an applicant is proposing a new method of compliance, the designee's authority may be limited to only recommending a finding of compliance.

Kestrel contended standardization among ACOs would likely decrease due to lack of clearly-defined criteria and that divergent certification expectations would exacerbate existing issues of inconsistent application and interpretation of requirements.

While this final rule adopts high-level performance standards, the FAA intends to ensure consistent application through the process for determining the acceptability of their means of compliance. The FAA's certification standards staff will determine whether proposed consensus standards are acceptable and, if so, will publish a notice of availability of those standards in the **Federal Register**. The FAA will also maintain a publicly-available list of consensus standards that have been found to be acceptable as methods of compliance.[10] For methods of compliance submitted by individual applicants, the FAA will continue to use the existing issue paper process, which includes full coordination with the standards staff to ensure standardization. The FAA recognizes the importance of having an internationally accepted means of compliance for part 23 airplanes. The FAA believes once there are internationally accepted means of compliance available, manufacturers may be reluctant to bypass these harmonized means to develop their own, unless they have an innovative process or new technology not already addressed. In either case, the FAA's processes should ensure flexibility and transparency to the extent permitted without violating proprietary interests of entities developing methods of compliance. Allowing for innovation and new technology is a major goal of this rule.

In response to NTSB's concerns about new technology, the FAA finds that shifting compliance emphasis to industry consensus standards is critical to ensuring the safety of new

[10] As discussed in the NPRM, the FAA will have a similar process for determining whether a previous acceptance of a method of compliance should be rescinded, based on new information or service experience.

technology. This shift will allow the FAA to leverage technical experts from across the aerospace industry and from outside the traditional aerospace industry to develop standards for new technologies.[11]

5. Necessity of Training

In the NPRM's regulatory evaluation, the FAA assumed that FAA and industry part 23 certification engineers would require additional training as a result of this rule.

Some commenters expressed concern with training needs required by a new system. Kestrel noted the proposed rule would increase the workload of DERs, primarily because they will require additional training and FAA coordination to ensure proper understanding and implementation of the new certification process. NATCA noted the significant changes to part 23 will necessitate training of all FAA engineers, DERs, and ODA engineers. In particular, NATCA said designees and ODAs cannot be authorized to find compliance to part 23 until trained or demonstrated competence. NATCA recommended the FAA amend its delegation and ODA policy documents to reflect the changes to part 23 and implement training as soon as possible.

The NTSB expressed concern about increased demand on FAA engineers to evaluate new technologies as a result of the proposed changes to part 23. It suggested the FAA may face challenges similar to those encountered with the certification of the lithium-ion batteries in the Boeing 787, including insufficient guidance and education to ensure compliance with applicable requirements. The NTSB pointed to several safety recommendations it issued to the FAA in the wake of a lithium-ion battery incident in a Boeing 787 in 2013, which centered around developing and providing adequate written guidance and training to certification engineers.

The FAA agrees guidance and training are necessary and has delayed the effective date of this rule in order to complete the training development and implementation for ACOs, DERs, and industry. The FAA will continue to review orders and policies for needed changes.

6. Need for Revised or New Agency Guidance and Directives

The FAA proposed Advisory Circular (AC) 23.10,[12] Accepted Means of Compliance, to provide applicants guidance on the process of submitting proposed means of compliance to the FAA for consideration by the Administrator. The FAA also indicated in the NPRM that it would provide guidance as it determines what satisfies the performance-based standards.

NATCA requested the FAA publish new or revised Orders and policy documents for public review and comment prior to the issuance of the final rule. For example, how would a certification engineer recognize what is a ''good compliance showing'' to a new part 23 requirement and how would that engineer explain the compliance showing to an authorized representative of the Administrator. Also, how would a certification engineer minimize or avoid allegations from an applicant that the engineer is being inequitable in the application of the new part 23 requirement compared to how the requirements have been applied to other applicants.

NATCA noted applicants often use legal processes for approval of type design changes to obtain less expensive or extensive certification requirements for a design proposal, and that the ''number of seats'' has been used previously to finesse operating requirements applicability. NATCA questioned whether the FAA will permit this under new part 23 as established by the airplane certification levels and whether there will be any check or limitation or safety judgment made on this potential use of new part 23. NATCA requested the FAA publish an Order or policy addressing this issue.

One commenter was concerned the FAA will eventually leave the task of developing ACs for means of compliance to consensus bodies and individual applicants and opposed a system where public domain guidance must be purchased from a private entity. The commenter suggested that even if the FAA decides to discontinue updating its guidance, it should retain control and continue to permit the use of its existing guidance as well as provide a list of guidance with its status.

The FAA agrees with NATCA that updated guidance is needed and is in the process of reviewing current orders and policies and will use existing processes to implement those changes. The FAA also recognizes the potential that some applicants will attempt to ''finesse'' the applicability of requirements for higher airplane certification levels by limiting the maximum passenger capacity of their proposed designs. This potential is inherent in any attempt to establish different levels of safety based on the concept of the ''safety continuum.'' The disincentive for such finessing is the reduction of functionality, and therefore profitability, of the resulting design.

The FAA will continue to use all applicable ACs associated with part 23. Applicants will need to use the cross-reference table in this final rule preamble because the ACs will continue to reference the former section numbers. The FAA will expand the guidance in these ACs to better address the range of part 23 airplanes identified in industry consensus standard documents. The FAA has no plans to cancel the current ACs because they are still needed for older airplane modifications; therefore, the applicable ACs will still be available to applicants. Consensus standards bodies will develop means of compliance with the new regulations. The FAA will continue to develop ACs, as needed, to provide guidance to the public on what means of compliance would be acceptable. These functions are distinct, but complementary.

7. Inconsistent Language

In the NPRM, the FAA proposed to remove prescriptive design requirements and replace them with performance-based airworthiness standards.

Some commenters expressed concern with the lack of concreteness in the proposed regulations. Transport Canada stated the standards required the definition of a safety objective to clarify the meaning of some terms. The National Agricultural Aircraft Association (NAAA) was concerned the proposed regulations could result in inconsistent interpretations. NATCA viewed the rules as too ''stripped down'' for non-experienced people and commented that the use of ''vague'' terms would make it difficult to apply the new rules. Air Tractor contended the proposed rules consolidated existing requirements into fewer ''general'' or ''vaguely'' worded rules.

Other commenters addressed perceived inconsistencies in the language of the proposed revisions to part 23. The Associations noted some of the proposed rules focused on the applicant while others focused on the airplane.[13] These commenters observed

[11] National Transportation Safety Board, *Auxiliary Power Unit Battery Fire, Japan Airlines Boeing 787–8, JA829J, Boston, Massachusetts, January 7, 2013,* AIR–14/01 (Washington, DC: NTSB, 2014).

[12] See docket number FAA–2015–1621.

[13] For example, some of the proposed rules stated ''the applicant must show'' or ''the applicant must

Continued

it is important that the language of part 23 does not contradict part 21, which establishes the procedures for obtaining design approvals. The commenters recommended the FAA adopt the regulatory language used elsewhere in the airworthiness standards, which impose requirements on the airplane design.

The FAA recognizes the final rule uses high-level performance standards, and in some cases, the requirements are not tightly specified. However, the FAA finds that tight specification is not needed as this final rule is consistent with the safety objectives of the former prescriptive standards. The cross-reference table in this final rule identifies what sections of this final rule are intended to meet the safety objectives of the former regulations. Because this final rule is intended to achieve at least the same level of safety as the former regulations, this comparison may be used as a guide to the various levels of acceptable risk associated with each section.

In response to the comment raised by GAMA and others, part 21 imposes obligations on applicants for design approvals; therefore, the references to the applicant in this final rule are consistent.

8. Need for Additional Provisions in Part 23

NATCA recommended the FAA add several provisions to part 23, including a requirement about loss of propeller or propeller control, provisions defining the levels of software certification needed, requirements that address impact protection from unmanned aircraft systems (UAS), and provisions about the introduction of new technologies.

The FAA considered NATCA's comments; however, the FAA declines to adopt NATCA's recommendations at this time. The FAA is not adding requirements about loss of propeller or propeller control and provisions defining the levels of software needed because these are more appropriately addressed in means of compliance. The FAA also finds it unnecessary to include specific provisions about the introduction of new technologies because all the regulations in new part 23 are intended to allow the introduction of new technologies. Furthermore, it would be outside the scope of this rulemaking to add requirements addressing impact protection from UAS.

demonstrate,'' while others stated ''the airplane must.''

9. Development of Standards

In the NPRM, the FAA described how industry groups associated with the Part 23 ARC discussed the development of consensus standards and how the ARC selected ASTM as the appropriate organization to initiate this effort.

NATCA expressed concerns the FAA was relinquishing standardization and stated the FAA needed to articulate an expected minimum technology maturity level.

The FAA's process for reviewing applicant's submissions to verify compliance with the safety standards will address NATCA's concern regarding technology. This review process will not change from the way the FAA currently reviews an applicant's regulatory compliance. One of the purposes of this rule is to provide greater flexibility to applicants in showing they meet the objectives of the safety standards, and thus ''standardization'' in the strictest sense goes against this purpose. Similarly, with respect to minimum technology level, another purpose of this rule is to spur innovation and technology adoption. Therefore, requiring a certain technology maturity level would contradict that purpose.

10. Restricted Category Agricultural Airplanes

In the NPRM, the FAA did not specifically address single-engine agricultural airplanes.

The NAAA commented that AC 21.25–1, Issuance of Type Certificate: Restricted Category Agricultural Airplanes, is currently used by the FAA to determine which part 23 certification requirements should not be part of an airplane's TC under § 21.25. NAAA questioned how the requirements found inappropriate for single-engine agricultural airplanes in AC 21.25–1 will influence the certification process.

The FAA notes the cross reference table located in this final rule correlates the sections referenced in AC 21.25–1 with the new regulations and associated means of compliance. Long term, the FAA recommends NAAA work with the FAA to develop means of compliance specific to restricted category agricultural airplanes.

11. International Cooperation Efforts

In the NPRM, the FAA indicated the part 23 rulemaking was a harmonization project between the FAA and EASA. EASA published an Advance Notice of Proposed Amendment (A–NPA) 2015–06 on March 27, 2015, which set forth EASA's concept for its proposed reorganization of CS 23. The FAA received several comments on harmonization.

Garmin International (Garmin) and Agencia Nacional De Aviacao Civil Brazil (ANAC) commented on the significant differences between the NPRM and EASA's A–NPA. Garmin encouraged the FAA and EASA to resolve all differences before publishing their final regulations. Textron stressed the importance of harmonizing rule language with other major global certification authorities because a lack of harmonization would call into question whether one set of consensus standards would be adequate to achieve certifications worldwide. Textron expressed disappointment that the FAA's NPRM and EASA's A–NPA were not better aligned prior to publication. Textron explained the goal should be 100 percent harmonization with no exceptions. Garmin and Textron both commented on the significant costs that non-harmonized regulations would have on the industry.

EASA commented on the importance of using, as much as possible, the same text in CS 23 and part 23. EASA explained, however, that CS 23 was more of a technical standard, while proposed part 23 addressed the applicant's responsibility. To better align with CS 23, EASA suggested that the FAA require ''the applicant's design'' to meet certain requirements rather than ''the applicant.''

Optimal Aerodynamics Ltd (Optimal) recognized the harmonization efforts that have taken place, but sought reassurance from the FAA that revisions to part 23 would not lead to greater differences with other CAA's certification standards. Assuming CS 23 aligns with part 23, Optimal asked if it would be possible to base compliance on EASA's revised CS 23 when applying to the FAA for certification under new part 23.

The FAA agrees that harmonization with EASA's standards is important. While identical language is not the goal, the FAA has worked closely with EASA to ensure the same basic requirements for part 23 and CS 23 in order that both authorities can accept the same set of industry means of compliance. For example, as discussed previously, references to the applicant's obligations (''the applicant must'') are consistent with part 21 and with EASA's counterpart requirement that applicants ''show'' compliance. To further this effort, the FAA has met with EASA,[14] received comments from EASA, and submitted comments on EASA's A–NPA. EASA incorporated many of the

[14] See docket number FAA–2015–1621–0062.

FAA's comments on its A–NPA into its Notice of Proposed Amendment (NPA), published on June 23, 2016. In addition, the FAA incorporated many of EASA's comments to the NPRM into this final rule, such as including two new sections in Subpart G.

12. Part 23 ARC Recommendations and the Existing Fleet

As previously discussed in more detail, the FAA chartered the Part 23 ARC in 2011 to consider the reorganization of part 23 based on airplane performance and complexity and to investigate the use of consensus standards. The Part 23 ARC's recommendations were published in 2013 and are available in the docket.

Textron, Garmin, and several individuals commented on those ARC recommendations that were not proposed in the NPRM. In particular, these commenters requested the FAA adopt changes to 14 CFR part 21, ''Certification Procedures for Products and Articles''; part 43, ''Maintenance, Preventive Maintenance, Rebuilding, and Alteration''; and part 91, ''General Operating and Flight Rules''; as recommended by the ARC. These comments related to type certification procedures and airplane maintenance and operations. Similarly, several commenters requested the FAA adopt the ARC's recommendation to establish a ''Primary Non-Commercial Category'' (PNC), which also would have required revisions to part 21.

Several individual commenters noted that regulations applicable to existing airplanes make it difficult and expensive to implement safety improvements on those airplanes. These commenters questioned whether this rulemaking will address those issues.

While the FAA recognizes the commenters' concerns regarding the need to minimize the certification process burden, the FAA is not making additional changes to parts 21 or 43 because they are outside the scope of this rulemaking. The intent of this rulemaking is to remove the prescriptive design requirements from part 23 and replace them with performance-based airworthiness requirements. The FAA is, however, contemplating a future rulemaking that would make additional changes to part 21.[15]

The FAA also considers the commenters' recommendations to create a PNC category for aging General Aviation (GA) airplanes to be outside the scope of the NPRM. The FAA did not propose to create a PNC category for aging GA airplanes, as the ARC recommended, because it is also out of scope of this rulemaking. However, the FAA is working to address the ARC recommendations that focused on the existing fleet and part 21 processes.

With respect to the existing fleet, the FAA does not expect the revisions to part 23 to provide immediate benefits to older airplanes. However, when an owner of an older airplane applies for a change to the airplane's TC in accordance with § 21.101, the applicant may choose to use the more flexible performance-based standards. In addition, as discussed later, the revision to § 21.9 will enable expedited approval of certain parts that will benefit the existing fleet.

13. Impacts of the Proposed Rule on the Existing Fleet and on Open/Active Projects

The FAA received several comments on impacts to the existing fleet and on open/active projects.

Kestrel and Garmin asked how, under the proposed rule, the FAA will address active projects, derivative airplanes and changes to existing models. Kestrel noted § 21.101 requires regulatory compliance with the latest amendment while permitting certification on a case-by-case basis to an earlier amendment for changes to existing models and derivative airplanes. Kestrel noted it is common for applicants to receive significant compliance credit on the basis of ''similarity/identicality.'' Kestrel asked how the FAA would grant permission for an applicant for a derivative airplane to certify entirely to a previous amendment.

As discussed in the NPRM, the applicant has the option of using former part 23, amendment 23–62, as a means of compliance with new part 23 (except in the areas where this final rule raises the level of safety, as discussed previously). Since the new rule, combined with this accepted means of compliance, is identical to the former part 23 requirements (with exceptions noted in this preamble), methods of showing compliance—including ''similarity/identicality''—are not affected for changes to existing airplane models. Furthermore, § 21.101 only requires regulatory compliance with the latest amendment for airplanes weighing more than 6,000 pounds. Section 21.101 also provides relief for airplanes weighing more than 6,000 pounds when the change is not significant or when compliance with a later amendment would not contribute materially to the level of safety or would be impractical

Garmin requested more details on the changes the FAA believes would streamline the process for design approval and lower costs and project delays. Garmin also asked the FAA to clarify how existing special conditions, ELOS findings, and exemptions would be handled if an applicant wants to ''step up'' to the new amendment.

The FAA has determined the cost and time savings will result from the greater flexibility afforded by this final rule to both applicants and the FAA to find compliance for innovative new technologies. For traditional designs, the FAA expects applicants will be able to use the new part 23 in the same way older Civil Air Regulation, part 3 (CAR 3) airplanes are modified using former part 23 regulations. The FAA will still find compliance with the regulations, and since the new regulations allow greater flexibility by relying on accepted means of compliance, there should be little need for special conditions, ELOS findings, or exemptions, all of which require additional cost and time.

An individual and Air Tractor expressed concern over third-party modifiers of airplanes who were not part of the original certification process. The commenters suggested a third-party modifier could propose its own means of compliance and regard it as proprietary, which may conflict with the means of compliance used in the original basis of certification. The commenters were concerned an STC or field approval could become more difficult and create more work for the FAA.

The FAA notes the situation raised by the commenters currently exists with proprietary means of compliance, and this will not change with the new performance-based regulations. As under the former regulations, STC applicants will continue to be required to demonstrate that their changes, and areas affected by the changes, comply with the applicable regulations. The FAA anticipates no increased potential for conflict with the original design.

NATCA recommended the FAA make changes to the general definitions of 14 CFR 1.1 concurrently with the part 23 rewrite, including revising the definition of ''consensus standard'' because it applies to more than Light-Sport Aircraft (LSA), adding the definition of ''proprietary standard,'' and reconciling the differences between the International Civil Aviation Organization (ICAO) airplane categories and the new definitions in part 23.

The FAA has determined there is no need to define the terms, ''consensus

[15] The Part 21 SMS ARC published its recommendation reports (appendix A–G and appendix H–P) on January 14, 2015. Copies can be downloaded from the FAA Advisory and Committee site at *http://www.faa.gov/regulations_policies/rulemaking/committees/documents/.*

standard'' and ''proprietary standard'' in this final rule. The current definition of ''consensus standard,'' by its terms, applies only to LSA. For purposes of this final rule, ''consensus standard'' has the meaning established in SARA, as discussed previously. The FAA does not use the term ''proprietary standard'' in the regulations adopted by this final rule. Finally, the FAA notes the definitions of the categories need to remain the same because this final rule does not change their applicability to the existing fleet of airplanes. Also, the difference between the ICAO airplane standards and part 23 categories is based on weight and this rule does not affect that difference.

While NJASAP supported the LOC In-Flight and SLD safety enhancements, it stated runway excursions are another significant risk. NJASAP supported requiring secondary or emergency braking systems and recommended a requirement for powerplant reversing systems to be installed on all level 3 and 4 high-speed airplanes to help reduce the top three accident types. For the goal of reducing loss-of-control accidents, NJASAP supported—along with other aerodynamic improvements—the FAA requiring a device that gives a trained pilot immediate feedback on the status of the airplane's wing. NJASAP recommended level 3 high-speed airplanes be included in the safety enhancements required for level 4 airplanes because they will be flying similar missions, and Original Equipment Manufacturers (OEMs) will target the level 3 certification category and stop certifying as many level 4 airplanes.

The FAA finds that requiring emergency braking systems and powerplant reversing systems is beyond the scope of this rulemaking and would add additional costs. Requiring a device that gives a trained pilot immediate feedback on the status of the wing is also beyond the scope of this rulemaking, but a device like this could be used (and the FAA encourages its use) as part of the low-speed stall protection. Furthermore, the design specific nature of these recommendations is inconsistent with the FAA's goal of performance-based requirements in this rule revision. The new rule structure will allow for these alternative devices.

The FAA considered NJASAP's recommendation that level 3 airplanes be included in the level 4 safety enhancements because of levels 3 and 4 airplanes' similar missions. In this final rulemaking, the FAA retains the traditional approach of drawing safety distinctions based on airplane capacity and operational risk.

The NTSB commented on the proposed rule's focus on qualitative design methodologies, but recommends the use of both quantitative and qualitative design methodologies as the FAA has done historically. The NTSB pointed to proposed §§ 23.305 and 23.1315 and the continued reliance on the requirements of former § 23.1309, which only addresses the effects of single failures. The NTSB contended that the consideration of multiple failures should be required in the revised part 23 when active systems may potentially be used in commercial operations and the airplane may be more complex.

The FAA's intent in this rule is to maintain the current level of safety. The FAA is currently engaged in rulemaking for transport airplanes to address the NTSB's concerns. Depending on the outcome of that rulemaking, the FAA may consider similar rulemaking for part 23 in the future.

14. Legal Issues

In the NPRM, the FAA proposed to accept consensus standards as a means of compliance with the new part 23 performance-based regulations. Abbott Aerospace SEZC, Ltd. (Abbott) and Kestrel questioned the legality of using ASTM as a means of compliance.

Abbott stated the proposed change is illegal as the new ASTM standards constitute de facto law despite being labelled ''advisory'' and are the only realistic path to certify an airplane. Abbott claimed this mislabeling will lead to confusion and cause industry to incur the cost of purchasing the ASTM standards under the belief that they constitute law and that compliance is mandatory.

Kestrel also questioned the legality of relinquishing FAA guidance to a private entity and of using ASTM as the single standards body. Kestrel opposed handing over public domain guidance to a private entity for creation of its own standards, which will be provided back to the industry for a fee. Kestrel suggested the FAA retain control and continue to permit the use of its existing guidance.

In light of the comments, the FAA reviewed its approach to use consensus standards as means of compliance with this rule. On November 27, 2013, the President of the United States signed SARA whereby Congress mandated the FAA use consensus standards to clarify how safety objectives may be met by specific designs and technologies. SARA also requires the FAA to comply with the ''National Technology Transfer and Advancement Act of 1995'' (NTTAA), which directs Federal agencies to use voluntary consensus standards in lieu of government-mandated standards when practicable. This rulemaking also complies with the Office of Management and Budget (OMB) Circular A–119, ''Voluntary Consensus Standards,'' which provides guidance on how to comply with NTTAA. OMB Circular A–119 specifically addresses the issues raised by the commenters and establishes the policy that agencies should consider cost to regulated entities of using consensus standards as one factor in determining whether those standards are ''reasonably available.'' The FAA has considered the cost of ASTM standards and determined, for purposes of this rulemaking, ASTM standards are reasonably available because the interested parties have access to them through their normal course of business and the price is low enough that interested parties can easily purchase them.

In addition, ASTM will not create de facto law nor be the single standard-setting body, or custodian of public domain documents. The FAA expects to accept means of compliance from individuals, companies, and other standards bodies, including ASTM. While the use of a previously accepted means of compliance will likely expedite the certification process, no applicant will be required to use ASTM or any other means of compliance. Instead, an applicant may propose its own means of compliance for acceptance, or demonstrate compliance to the new rule by using the prescriptive provisions in former part 23 and supporting guidance—all of which will remain publically available. As discussed in the NPRM, the long-term benefit and cost reduction provided by this rule is that it will allow the introduction of new technologies without the formal processes that currently increase certification costs and inhibit innovation.

The American Association of Justice (AAJ) commented that the new part 23 performance standards should not preempt state tort law because state tort law functions as a necessary adjunct to federal regulations that impose only minimum standards of care. AAJ urged the FAA to avoid any language that could allow the new standards to be construed as preempting state law for defectively designed or produced airplane, or characterizing the standards beyond what is authorized by the Federal Aviation Act.

AAJ's comment regarding preemption of state tort law in aviation cases was not a topic of this rulemaking. Rather, it is the subject of current litigation in federal court regarding interpretation of the FAA's enabling legislation. The outcome of that litigation is neither the subject of this rulemaking, nor will this rulemaking affect that outcome. However, as noted by the Supreme Court in previous litigation, it is the applicant's obligation to comply with airworthiness standards; the FAA cannot guarantee such compliance.

15. Regulatory Evaluation

The FAA received comments from five commenters (four companies and one individual) on the summary of the regulatory evaluation published as part of the NPRM. In the NPRM regulatory evaluation, the FAA requested that commenters include data supporting their comments, but no commenter submitted any cost or benefit data with its comments.

a. General

Kestrel stated that all applicants will benefit from decreased certification costs and hopes the cost savings are tangible and can be realized in a short time frame; however, Kestrel anticipates an increased workload after the rule is adopted to train its personnel on the new standards. Abbott, Air Tractor, and one individual commenter characterized the cost benefit analysis as incomplete.

In the NPRM, the FAA stated that if the proposed rule saves only one human life—for example, by improving stall characteristics and stall warning—that alone would result in the benefits outweighing the costs of the rule change. Air Tractor characterized this statement as ''vacuous.'' Air Tractor went on to comment that its industry places a high value on protecting human life and expends enormous energy, talent, and resources to protect it.

The FAA intended this statement as a simplified break-even analysis of the likely benefits of the proposed rule. It was not intended to replace the costs and benefits detailed in the regulatory evaluation. The complete regulatory evaluation, located in the docket, is more comprehensive than the summary that appears in the NPRM preamble and contains the estimates provided to the agency by industry.[16]

Abbott stated there was no clear indication of how the proposed change would reduce net cost or expedite the certification process. Abbott concluded there were ''potential significant additional'' costs created by the proposed rule, but no obvious or defined cost reduction. Abbott characterized the proposed regulations as having an unknown cost impact and stated these unknown costs represent a yet-unassessed and unavoidable cost for airplane developers. Abbott also stated that any additional cost the proposed rule places on industry that is not offset by cost reduction elsewhere does harm to the industry.

The FAA notes that under the proposed rule, applicants may choose to use an industry consensus standard, the former part 23 standards (available at no cost), or its own means of compliance accepted by the Administrator. The FAA presumes an applicant will use these options to make the best economic choices given the circumstances of design and development for its product. Such choices are an inherent strength of a performance-based standard, but cannot effectively be analyzed for costs or benefits, especially if a design encompasses new technology that was never subject to the former regulation. Similarly, the FAA cannot predict the viability of the products or the financial health of an unknown start-up company under a regulation that allows for, but does not require, its products be used in any airplane design.

b. Impact on Small Entities

Air Tractor commented the FAA's analysis of the proposed rule impact on small entities did not include Air Tractor and Thrush Aircraft (Thrush).

Air Tractor was concerned that data from only 5 entities was used in the regulatory flexibility analysis. It noted the FAA should have included every company that has active manufacturing activities and the data used were non-representative of the overall industry. Air Tractor also indicated the inclusion of Thrush and itself would have doubled the number of employees and annual revenues represented in the analysis. Additionally, Air Tractor believed the FAA should have also included the TC holders of small airplanes that are no longer being manufactured but require TC support and STC holders that certificate products to the part 23 standards.

Finally, Air Tractor concluded that the omission of non U.S.-owned entities that ''operate'' in the United States presented a ''distorted view of the true impact'' of the proposed rule on the general aviation industry in the United States.

The FAA conducted its analysis in accordance with the ''Small Business Regulatory Flexibility Act.'' For each regulatory flexibility analysis, an agency is required to provide a description of and, where feasible, an estimate of the number of small entities to which its proposed rule would apply. Many, if not most, small entities do not provide publically available information such as employment data that would allow an agency to determine if a business qualifies as a small entity under the guidelines of the Small Business Administration (SBA). Nor is there publicly available revenue data for these entities that make it possible to determine the burden of a proposed or final rule on these entities. The FAA does not have the authority or the means to require any entity to report its employment or revenue data. Accordingly, the FAA does not have the requisite knowledge of every company that still has active manufacturing activities that might be subject to the proposed rule.

The small business entities the FAA used in its analysis had provided data on their employment and revenue either through the regulations of U.S. DOT Form 41, the Securities and Exchange Commission, or through news releases that the entities made public. Neither Air Tractor nor Thrush have such data on record, and Air Tractor did not provide employment or revenue data for itself as part of its comment.

The five entities examined as part of the FAA's analysis qualified as small entities under the SBA criteria and were either actively manufacturing airplane or were under new ownership and had publically announced they were working toward setting up an airplane manufacturing line that would be subject to part 23. Airplanes previously certificated under part 23 will not be affected by the regulations affecting new certifications, so TC holders of operating airplanes who are not actively seeking some certification are not appropriately excluded from the analysis. The same holds true for STC holders that used the part 23 standards in effect at the time of these airplane original certifications.

The regulatory flexibility analysis conducted for the proposed rule did not include any non-U.S. entities because, similar to the domestic firms referenced above, the employment and revenue information required for the analysis was not publicly available.

c. Icing

Textron stated that although the FAA identified a need for improved certification standards for operation in severe icing conditions, it did not provide a cost benefit analysis to show that part 23 airplanes would benefit from them.

The FAA did conduct a cost benefit analysis of the icing requirement. Flying into icing is risky and the ARC identified part 23 airplane icing

[16] See Docket Number FAA–2015–1621.

accidents. The FAA contacted industry, and some Part 23 ARC members indicated to the FAA that the new rule and standards reflect current industry practices for detecting and exiting icing conditions. Additionally, the rule to certify that the airplane can operate safely in SLD is voluntary. When compliance is voluntary, or no change in industry practice will occur from a new regulation, the FAA determines the rule to be minimal cost. This determination was made in the initial regulatory impact analysis and is made in the final regulatory impact analysis.

In the NPRM, the FAA proposed that for a part 23 airplane to be certificated to fly in known icing conditions, an applicant would have to demonstrate operation in the icing conditions defined in part 25 appendix C. This requirement did not change from the former part 23 requirements. As a safety matter, for many years airplanes currently certificated under part 23 have demonstrated the ability to detect and safely exit from freezing rain and freezing drizzle conditions.

The standards and requirements for the various icing certification levels were discussed extensively with the Part 23 Icing ARC (Icing ARC) and the Part 23 ARC. The new rule and standards for detecting and exiting freezing drizzle and freezing rain are consistent with and include significant parts of the Icing ARC's recommendations.

d. Part 23 Limitation

Textron recommended the FAA change the limitation on part 23 airplanes from its proposed gross takeoff weight limit of 19,000 pounds (maintaining the current part 23 limit) to a maximum payload limitation of 6,000 pounds. Textron stated the change would have a dramatic positive impact on the potential costs and benefits of the proposed change.

This change is beyond the scope of this rulemaking for the FAA to consider. This change was not proposed by the FAA and would be a fundamental change to part 23 that could potentially affect certification of airplanes under part 25.

e. Reporting and Recordkeeping Requirements

The FAA stated it expected minimal new reporting and recordkeeping requirements would result from the proposed rule and requested comments on this finding. The FAA received no comments on reporting or recordkeeping requirements.

Therefore, the FAA adopts the regulations as proposed, and will make no change to the regulatory evaluation regarding the reporting and recordkeeping requirements.

16. Out of Scope Statement

Several commenters requested changes to regulations or to existing FAA processes and guidance materials that are not directly related to this rulemaking. The FAA is not addressing these comments specifically because they are beyond the scope of this rulemaking.

D. Part 23, Airworthiness Standards

1. Legacy Rules

a. Cockpit Voice Recorders (§ 23.1457)/ Flight Data Recorders (§ 23.1459)

In the NPRM, the FAA proposed to use the same cockpit voice recorder (CVR) and flight data recorder (FDR) standards that exist in former §§ 23.1457 and 23.1459. The proposed rule included revised references to other sections of proposed part 23, but no substantive changes to those standards.

The NTSB stated it is pleased the NPRM retained the needed prescriptive design standards in proposed §§ 23.1457 and 23.1459. The NTSB added it would be appropriate for the FAA to include a requirement for image recorders, which it described in its Safety Recommendation A–13–12, dated May 6, 2013.

The FAA considered the NTSB's request to add requirements for image recorders. No functional or operational requirements to record images has ever been proposed or evaluated for costs and benefits. Any such requirements would constitute significant rulemaking and require public participation, and therefore exceeds the scope of this rule.

EASA and the Associations stated the CVR and FDR requirements stem from ICAO annex 6 requirements, which are already based upon EUROCAE industry standards ED–155; ED–112A, ''MOPS for Crash Protected Airborne Recorder System;'' and ED–155, ''MOPS Lightweight Flight Recording Systems.'' They suggested the FAA redraft the regulations to be more performance-based and number the regulations in accordance with any new numbering scheme, and change the references from the operating regulations as soon as practical.

The interplay between operation and certification regulations remains the reason for carrying the current standards unchanged into the new part 23. Redrafting them to objective standards, as suggested by EASA and the Associations could result in varying data sets between operators without any discernible benefit for such variation. Changing the standards only for part 23 airplanes certificated after a particular date would also require significant changes to the regulations under which the airplanes operate, adding complication without any noted benefit.

NJASAP supported the FAA's decision to maintain the current standards for cockpit voice recorders (§ 23.1457), noting that removing the current prescriptive requirements could hinder the conduct of future accident investigations. NJASAP did not comment on § 23.1459, ''Flight data recorders''.

Commenters opposed to retaining the standards generally characterized them as too prescriptive. While accepting the need to maintain the numbering system to align with other regulations, EASA found the unchanged content to be detailed, design specific, and not providing the safety intent. The EASA-suggested language referenced recorder systems with more generalized statements regarding installation and technical specifications. BendixKing stated that it ''seems binary'' that the ''specifics are invoked'' only ''if recording is required.'' It also noted that the standards use approximately 1,000 words when 100 would be adequate in stating the safety intent. It concluded the requirement as written will hurt safety in the future by either retarding the technology or creating an environment where manufacturers will avoid recording. BendixKing included the identical comment for both recorder sections.

The primary use of both CVRs and FDRs is for accident investigation. Over the past 30 years, the FAA has worked with the NTSB to adopt and refine the specific requirements that document both flightcrew communication and the functions of airplane that form the basis for airplane accident and incident investigation. The FAA adopted the first significant flight data recorder upgrades in 1997 and made a concerted effort to standardize the operational and certification requirements across the operating and certification parts. The primary requirements for recording voice and data are not contained in the certification regulations, but in the operating regulations. When an airplane is required by an operating rule to record voice or flight data, the operating rule references back to the standards for the equipment in the certification part that applies to the airplane. This is true for large and small airplanes and for helicopters.

Airplane certification requirements do not align perfectly with operating regulations. A part 23 airplane may be operated under part 91 or 135; therefore, the requirement to have and use CVRs and FDRs may differ depending on how the airplane is operated. But the standards for the equipment—when required—do not differ, and are intended to function the same way regardless of the airplane's certification basis. This consistency is central to the needs of the NTSB and all investigative bodies. It makes the design, certification, and function of the equipment standard for the industry as a whole. The FAA last amended the recorder regulations in 2008 to reflect investigative experience with the functions of newer recorder and flight management tools.

Therefore, the FAA finds it appropriate to retain these well-known requirements. The current integration of the operating and certification regulations is well established and functioning as intended. The need for investigative data following accidents and incidents is not forecasted to change. The commenters did not specify which of the current requirements were inappropriate or unnecessary, but merely expressed general concerns that the standards might inhibit safety in future designs. The FAA has long acknowledged the safety intent of flight recorders in providing investigators with the tools to recognize trends and malfunctions following accident and incidents. Consistency in the equipment and data that come from the equipment remains the goal.

BendixKing's observation that the certification rules are invoked only when ''recording is required'' is accurate. As explained, the certification requirements for installation and use of this equipment are only effective when required by an operating rule. Once required, all the equipment must function to the same standards. The fact that recording is required under different operating regulations, and the certification regulations referenced in those operating regulations, is the reason for not changing them for one certification part. If an airplane is not required by operational rule to record voice or data, then the specificity of the certification regulations is not an issue. The commenters did not include proposed design or functional changes for new airplane that might affect the requirements as stated. If a novel design is proposed in the future that affects recorder function, before approval, the FAA would coordinate with the applicant to ensure such design features meet the needs of accident and incident investigation.

Textron commented on proposed § 23.1457(c), which retains the current language requiring each CVR to be installed so that specified communications are recorded on a separate channel. The regulation currently and as proposed specifies four separate channels—the first channel for the first pilot, the second channel for the second pilot, the third channel at the cockpit-mounted area microphone, and the fourth channel for the third and fourth crewmembers. Textron commented that these CVR channel assignments are a ''legacy'' from magnetic tape recorders and there is no physical effect of such assignment on current solid-state recorders. Textron stated the current channel assignments are different and, therefore, paragraph (c) language should be revised to allow for flexibility in channel assignment or be aligned with the assignments manufacturers currently use. In addition, Textron noted that a proposed rule of EASA does not specify channels, but instead references the more detailed requirement of an ASTM standard.

Textron's comment—that the requirement for separate channels does not reflect the reality of currently-manufactured equipment—is limited in its view. While the regulation does require separated recording of different voice communication channels, the rule is flexible enough to avoid the issue raised by Textron. Regardless of an applicant's CVR channel numbering scheme, the regulation is satisfied if the CVR is designed to record audio sources on dedicated channels. This remains the FAA's policy on this regulation, which includes Textron's products already installed in airplanes that meet the former regulation.

An individual commenter noted the proposed rule seemed to anticipate an onboard storage system that must withstand a crash.[17] The commenter suggested that because recordings may not be stored onboard in the future, but rather wirelessly transmitted to the ground or a satellite, the FAA should revise the provision to reflect this possibility rather than ''locking in old technology.''

The FAA is aware that, at some point in the future, recordings may no longer need to be stored on board airplane. The FAA participates in international working groups that monitor these technology trends. There are many technical and legal issues attached to wireless transmission of voice and data communications. A change to allow such transmission and storage would affect several parts of the CFR and the functions of the NTSB, which were not proposed or discussed as part of this rulemaking.

[17] See docket number FAA–2015–1621–0083. The comment was referenced as ''23.1457 Flight Data recorder.'' Section 23.1457 covers cockpit voice recorders, while 23.1459 addresses flight data recorders. It is unclear if the comment addressed one or both sections, but the FAA's response would not change since both require crash protected recording devices.

b. Instructions for Continued Airworthiness (§ 23.1529)

In the NPRM, the FAA proposed to relocate the requirements for Instructions for Continued Airworthiness from § 23.1529 to proposed § 23.1515. The FAA also proposed to remove appendixes A through F, and rename Appendix G to Part 23—Instructions for Continued Airworthiness, as Appendix A to Part 23—Instructions for Continued Airworthiness.

Upon further consideration, the FAA has decided to retain the requirements for Instructions for Continued Airworthiness in § 23.1529. A change to § 23.1529 would affect many other parts and guidance documents, which reference the section. Because of the new numbering scheme in part 23, § 23.1529 is located in the ''Legacy Regulations'' section of the final rule. The appendix for Instructions for Continued Airworthiness is now located in Appendix A to Part 23, as proposed.

2. Subpart A—General

a. Applicability and Definitions (Proposed § 23.1/Now § 23.2000)

In the NPRM, proposed § 23.1 (now § 23.2000) would have prescribed airworthiness standards for issuance of type certificates, and changes to those certificates, for airplanes in the normal category. It also would have deleted references to utility, acrobatic, commuter category airplanes. Proposed § 23.1 also would have included definitions for the following terms specific to part 23: Continued safe flight and landing, designated fire zone, and empty weight.

Air Tractor asked why it was necessary to use the term ''category'' if there is only one ''normal'' category.

The FAA notes that there is a need to retain the concept of different categories because other parts of the FAA's regulations, including the certification and operating rules, set certain requirements based on an airplane's category.

An individual commenter opposed the elimination of the utility category as related to spin training for existing airplanes. The commenter would support elimination of the utility category if there would be a reevaluation of the airplanes allowed to be used for spin training. This commenter also questioned whether the proposed change would result in a revision and reformatting of the current Type Certificate Data Sheet (TCDS) and whether the airplane would be considered not airworthy until re-placarded to conform to the new standards.

This rule does not affect the category of existing airplanes, nor does it require the TCDS be revised or reformatted. Airplanes currently certified in the utility category for spin training retain that capability under this new rule. Furthermore, the airworthiness of the existing fleet will not be affected by this rule.

An individual commenter recommended the FAA clarify whether the term ''continued safe flight and landing'' would not consider weather, environmental, or surface conditions in the event of a forced landing.

The FAA agrees that it should clarify that in the event of a forced landing, the definition of ''continued safe flight and landing'' does not include consideration of weather, environmental, or surface conditions beyond those already taken into account by the FAA's operating rules. The FAA expects that a pilot will conduct his or her flight within the FAA's operating rules and the airplane's normal operating envelope, and finds doing so will help ensure the pilot has safe landing options. The FAA's intent was to maintain the existing level of safety for small airplanes. Historically, single-engine and light twin-engine airplanes have been required to have characteristics that minimized the resulting hazards when a loss of engine forced an off-airport landing. The requirements for larger, multiengine part 23 airplanes are based on the requirement to continue flight back to an airport after the loss of an engine. This rule retains this requirement as it applies to part 23 airplanes that cannot maintain altitude after a critical loss of thrust. The FAA will provide additional clarification in guidance. It is not appropriate for the FAA to establish airworthiness standards for ''continued safe flight and landing'' that would require all airplane designs to account for extreme conditions—such as mountainous terrain—and extreme weather, because pilots who decide to fly over dangerous terrain or in weather have chosen to greatly reduce their options for safe landing.

The FAA proposed including a definition of ''designated fire zone'' that was flexible enough to capture both the historical understanding of fire zones and those areas in airplanes that incorporate novel design concepts that merit the increased safety measures. However, the FAA finds including a definition of ''designated fire zone'' will cause confusion and result in less flexibility. Rather than include a definition, the FAA will maintain the same understanding as the historical use of the term ''fire zone,'' a well-understood term that has been in use for decades and generally includes the areas of an airplane in which a powerplant, or some portion thereof, resides. Accordingly, the FAA will remove the definition from the rule and will determine which areas are designated fire zones in the specific means of compliance. Furthermore, specific sections of the new rule have added the term ''fire zone'' back into the rule so there is a clear link to means of compliance.

EASA commented the proposed definition of ''empty weight'' is too design specific and should be eliminated. EASA noted future technological developments would necessitate changes and future rulemakings, which is at odds with the objective to make objective rules change resistant for the next 20 years.

The FAA agrees the definition of ''empty weight'' is too design specific because the list of traditional features included may not apply to all airplanes in the future. Accordingly, the FAA deletes the definition from the final rule and will rely on means of compliance to address the requirements for each airplane. This will allow the FAA to capture the appropriate features for new propulsion systems and configurations without losing the means of compliance for traditional airplanes.

Air Tractor recommended the FAA provide a definition for ''minimum flying weight'' that would include the weight of the necessary crew and the minimum fuel required for legal operation for the lightest equipped airplane that complies with type design requirements. It asserted there is no point in the FAA certifying an airplane as safe for operation below the minimum weight at which the airplane can be operated.

The FAA finds Air Tractor's recommended definition of ''minimum flying weight'' is not an appropriate substitute for empty weight. Empty weight is used to provide a baseline for an airplane; establishing a ''minimum flying weight'' would not work for that purpose.

Embraer suggested the FAA include definitions for ''Aircraft Power Unit,'' ''Fuel,'' ''Critical lightning strike,'' and ''Fuel system'' in proposed § 23.1(b).

The FAA notes Embraer's suggestion to add definitions to proposed § 23.1(b); however, these definitions are addressed in their respective subparts. The terms ''Aircraft Power Unit,'' ''Fuel,'' and ''Fuel System'' are addressed in subpart E, and the term ''Critical lightning strike'' is addressed in subpart D. Furthermore, adding these definitions could lead to more confusion than clarification.

b. Certification of Normal Category Airplanes (Proposed § 23.5/Now § 23.2005)

In the NPRM, proposed § 23.5 (now § 23.2005) would have applied certification in the normal category to airplanes with a passenger-seating configuration of 19 or less and a maximum certificated takeoff weight of 19,000 pounds or less. Proposed § 23.5 would have also established certification levels based on the passenger seating configuration and airplane performance levels based on speed. Proposed § 23.5 also would have established a ''simple'' airplane classification.

Normal Category

Air Tractor and Textron questioned the imposition of a weight-based limitation for certification in the ''normal'' category in proposed § 23.5(a). Both commenters indicated that tying the applicability of part 23 to a maximum takeoff weight of 19,000 pounds would not meet the FAA's objective of replacing the current weight and propulsion divisions in small airplane regulations with performance- and risk-based divisions. Air Tractor also commented there was no basis for weight differentiation between normal and transport category airplanes on the FAA's safety continuum and suggested it would be more consistent to only use certification levels and speed categories. Air Tractor further suggested that applicants should be free to decide between certification under part 23 and certification under ''the greater rigor'' of part 25. Textron recommended the FAA replace the 19,000-pound maximum takeoff weight limit with a 6,000-pound maximum payload limit.

The FAA notes Air Tractor's and Textron's comments to extend the scope of the normal category. However, these comments are beyond the scope of this rulemaking. The NPRM proposed to replace the prescriptive airworthiness standards of part 23 with performance-based standards, not to change the scope of applicability of part 23.

Textron recommended the FAA include considerations for airplane functional or system complexity as a determining factor in certification requirements.

The FAA notes this rule already considers system complexity during certification. The requirements applicable to an airplane depend on reliable indicators of complexity—the airplane's designed cruising speed or maximum operating limit speed, and the maximum number of passengers. The airworthiness standards accommodate all degrees of complexity, which will specifically be addressed in accepted means of compliance.

Airplane Certification and Performance Levels

NATCA opposed the FAA's proposal to create certification and performance levels based on passenger capacity and airspeed in proposed § 23.5(b) and (c). NATCA noted that this approach was not consistent with how some foreign authorities with whom the United States has bilateral agreements ''bucket'' airplane classifications, including EASA, which classifies certification levels based on weight.

The FAA is not required to use the same metrics to classify airplanes as its bilateral partners. For example, Article 15 of the Agreement between the United States of America and the European Union on Cooperation in the Regulation of Civil Aviation Safety expressly reserves the authority for the United States to determine the level of protection it considers appropriate for civil aviation safety and to make changes to its regulations, procedures, and standards. Additionally, foreign authorities, including EASA, have been involved in the FAA's part 23 rulemaking effort since its inception with the Part 23 ARC. All foreign authorities involved in the part 23 reorganization effort agreed on the need to eliminate the divisions in part 23 based on weight and propulsion. Furthermore, the FAA's actions are consistent with EASA's actions.

NATCA also contended the FAA should retain a weight criterion because it relates to crash energy.

The FAA notes the risk associated with operating a 19,000-pound, level 1, low-speed airplane is accounted for in this rule by directly addressing the technologies installed on the airplane. For example, an airplane approved for instrument flight rules (IFR) has to meet the reliability requirements for IFR, regardless of level. Also, the FAA's operating rules mitigate the airplane's operational risk.

NATCA also asked the FAA to clarify that an applicant would not qualify for a lower certification level simply by removing seats and to publish guidance on determining certification levels.

The FAA notes, as set forth in § 23.5 (now § 23.2005), an airplane's certification level depends only on its maximum passenger seating configuration. This number does not include flightcrew. The maximum passenger seating capacity is known during the certification process; therefore, the airplane must comply with the standards applicable to that certification level. An airplane operator's decision to remove a passenger seat after certification does not affect the standards applicable to that airplane.

NATCA also recommended the FAA review the proposed part 23 certification levels to incorporate LSA and primary category airplane and create equivalent regulations as necessary.

The FAA notes that NATCA's suggestion is beyond the scope of this rulemaking. This rulemaking's purpose is to replace prescriptive design requirements of part 23 with performance-based standards, not expand the scope of part 23's applicability. The LSA and primary category certification processes exist as separate certification paths for airplane that qualify as either a LSA or primary airplane.

NATCA further commented by asking—

• Whether the intent is for airplane models with multiple configurations to have each configuration listed on the TCDS;
• Whether there can be dual or more categories on one TC; and
• Whether an airplane can be moved between levels and speed definitions during operational usage and, if so, whether this needs to be captured as different options on the TCDS.

In response to NATCA's question regarding multiple configurations, the FAA notes that if an airplane model has multiple configurations, the applicant will have to accept as the certification basis the requirements of the most stringent certification and performance levels available in the configuration list. If the applicant chooses not to comply with the most stringent requirements applicable to the configurations, the applicant will have to address each model individually on the TCDS. With respect to the number of categories on a TC, the FAA is eliminating the commuter, utility, and acrobatic airplane categories in part 23 for the reasons explained in the NPRM. Therefore, airplanes certified under new part 23 have only one category: normal.

Lastly, with respect to NATCA's question regarding airplanes moving between certification levels and speed definitions, an applicant either accepts the most stringent certification basis or addresses each model individually on the TCDS or by an STC. In order to move to a higher level, it will be necessary to recertify the airplane to the higher-level standard.

NJASAP supported the proposal to use passenger capacity and airspeed to establish airplane certification and performance levels, but expressed concerns the methodology may go too far in generalizing a very diverse group of airplanes.

The FAA understands NJASAP's concern, but notes the certification and performance levels are used to replace the weight and propulsion divisions in the former requirements. The levels are general to allow the accepted means of compliance to more accurately address the various technical differences.

Kestrel supported the FAA's proposed airplane certification levels, but expressed concern with the impact of migrating the Airplane Classes in former § 23.1309 (I, II, III, IV) [18] to the proposed combined airplane certification and performance levels. Kestrel noted that Airplane Classes were currently used in the System Safety Analysis process to establish allowable quantitative probabilities. Kestrel asked the FAA to specify what the expected allowable quantitative probabilities would be for each of the eight possible combinations of certification and performance levels (*i.e.,* low-speed levels 1–4 and high-speed levels 1–4).

The FAA notes that there is no direct connection between the systems-based airplane classes from AC 23.1309–1E [19] and the airplane certification and performance levels in § 23.2005, which apply to all subparts. The airplane classes reflect the safety continuum concept in that it may be acceptable for simpler airplanes or airplanes at lower certification levels to have a higher probability of failure for equipment. The airplane's certification level is strictly based on the number of passenger seats. The different means of compliance will address the safety continuum.

Air Tractor commented generally that it does not see a big difference in the certification effort required by the different certification and performance levels. Air Tractor suggested there could be a difference in required levels of safety for equipment, but indicated it was impossible to tell because the FAA had not yet defined the levels of

[18] These Classes are described in AC 23.1309–1E, paragraph 15.

[19] The Airplane Class Levels from former § 23.1309 are still addressed in subpart F of this rule.

safety.[20] Air Tractor suggested the FAA codify the required levels of safety because the rule preamble would not be given the weight of law.

The FAA acknowledges that Air Tractor is correct in that there could be a difference in the required levels of safety between two airplanes based on the FAA's safety continuum philosophy. Differences in products and their associated risks justifies using different levels of safety. While the high-level performance requirements are the same for all products, the required level of safety is best addressed using means of compliance so that each project is assigned the appropriate level of safety. Although language in the preamble does not supersede the language of the regulation itself, the preamble is evidence of the FAA's contemporaneous understanding of its proposed rules, and may serve as a source of evidence concerning contemporaneous agency intent.[21]

Several commenters questioned the meaning of ''passengers'' as used in the descriptions of certification levels in proposed § 23.5(b), particularly for airplanes that may require 1 or 2 crew depending on operating regulations.

The FAA elects to use the term ''passenger'' to align with the operating rules, and because passenger count has historically correlated to risk tolerance. The term ''passenger'' excludes ''flightcrew'' members. The FAA recognizes the concerns over confusion because the ARC discussed this issue at length and it was again discussed within the FAA. Based on these discussions, the FAA finds ''passenger'' is the most appropriate term. As one of the commenters noted, the ''crew'' could include one or more ''occupants.'' Part 23 airplanes can include special use airplanes that may require multiple flightcrew members, but have no provisions for passengers. Part 23 is also used for airplanes that carry no ''flightcrew'' or ''passengers'' today (*i.e.,* unmanned aircraft systems), and may also address airplanes with passengers and no flightcrew in the future. For airplanes that require different numbers of flightcrew for different operations, the applicant must use the smallest number of flightcrew required for any operation, which is typically one, the most conservative number. The FAA finds the approach proposed § 23.5 (now § 23.2005) will allow the most flexibility, least confusion, and focus on risk tolerance, which aligns part 23 with the operating rules.

[20] Air Tractor pointed out proposed § 23.1300.

[21] *Wyoming Outdoor Council* v. *U.S. Forest Service,* 165 F.3d 43, 53 (D.C. Cir. 1999).

Several organizations commented specifically on the proposed airspeed limits for the low-speed and high-speed performance levels established in proposed § 23.5(c). NATCA suggested the use of design cruising speed (V_C) and maximum operating limit speed (V_{MO}/M_{MO}) may not be appropriate for untrained persons, and recommended the FAA either define those terms or use more common measurements. NATCA also commented that the FAA needs to clarify what ''speed'' means (*i.e.,* cruise speed versus some other speed standard). NATCA expressed concerns over the use of ''common'' terms versus speeds used for certification, which are also used in operations.

The FAA notes both V_C and V_{MO} are defined in 14 CFR 1.2. V_C means design cruising speed and V_{MO}/M_{MO} means maximum operating limit speed. The FAA finds that V_C, V_{MO}, and M_{MO} are appropriate for engineering determinations as they relate to structural speeds as well as flight-testing speeds. Furthermore, the FAA clearly states these are calibrated speeds, which typically are used in certification.

Transport Canada commented specifically on the parameters for the low-speed performance level in proposed § 23.5(c)(1). In particular, Transport Canada said V_C and V_{MO} should both be less than 250 Knots Calibrated Airspeed (KCAS) for an airplane to qualify as low speed. Therefore, Transport Canada concluded the phrase ''V_C or V_{MO}'' in this provision should actually read ''V_C *and* V_{MO}''.

The FAA agrees with Transport Canada concerning the use of ''and'' versus ''or'' and revises the rule accordingly.

Air Tractor contended that the parenthetical references to M_{MO} limits in proposed § 23.5(c)(1) and (c)(2) are confusing because they are not clear if these values represent either new absolute constraints, or if they are intended to provide an approximate context for what 250 KCAS might mean at some higher altitude. Air Tractor noted that Mach 0.6 corresponds to 250 KCAS at about 23,400 feet in a standard atmosphere, but wondered what performance level would be assigned to an airplane with a V_C of 250 KCAS and an M_{MO} of 0.65.

Garmin commented that some airplanes do not have a M_{MO}, but have a maximum speed of more than Mach 0.6. For example, Garmin noted an airplane with a V_{MO} of 240 KCAS up to its certified ceiling of 35,000 feet and no M_{MO} would be classified as a low-speed airplane but will actually be going Mach 0.71 at 35,000 feet. Garmin recommended the FAA revise the low-speed and high-speed performance levels to remove M_{MO} from parentheticals, clarify that a low-speed airplane must have a V_C or V_{MO} equal to or less than 250 KCAS and a M_{MO} less than or equal to Mach 0.6, and that a high-speed airplane is anything that does not qualify as low speed.

The FAA agrees that the proposed rule was unclear and revises the final rule to clarify that M_{MO} is one of the criteria, not an approximation of the KCAS cutoff. Accordingly, an airplane must satisfy all of the V_C, V_{MO}, and M_{MO} requirements to qualify as low speed. If an airplane does not satisfy all three, then it is considered a high-speed airplane. After further review, the FAA determined that V_C and V_{MO} are not directly parallel because V_C is a structural speed and V_{MO} is a performance speed. For this reason, the FAA replaces V_C with V_{NO}. V_{MO} historically was a performance value used by turbine-powered airplanes while V_{NO} historically was a performance value used by piston-powered airplanes. By replacing V_C with V_{NO}, the values now reflect parallel operational speeds.

ANAC commented that the FAA should use stall speed instead of V_{MO} and M_{MO} to define performance levels because it would help address loss of control and prevent an applicant from arbitrarily limiting an airplane's V_{MO} and M_{MO} below the airplane's capabilities to avoid more stringent certification standards. ANAC asked the FAA to elaborate on the connection between an airplane's V_{MO} and M_{MO} and takeoff risk.

The FAA does not agree that stall speed is the best parameter to use for determining performance levels. Although an airplane's top speed generally has been aerodynamically limited to a multiple of stall speed that varied depending on propulsion, this is not true for all airplanes and does not provide the necessary flexibility to address airplanes that incorporate new technology. For example, there are airplanes in development that have very low-stall speeds—the airplane can land and takeoff in very little space, or even vertically—but may have V_{NO} or V_{MO} greater than 250 KCAS, making them a high-performance airplane.

Simple Airplane Classification

The FAA proposed to define ''simple'' airplanes to recognize the entry-level airplane. Simple airplanes would have been limited to airplane designs that allow no more than one passenger, are limited to VFR operations, and have a low top speed and a low stall speed.

The FAA asked for comments concerning the value of creating a simple airplane sublevel given that a simple airplane would have characteristics very similar to a certification level 1, low-speed airplane.

ICON, Transport Canada, BendixKing, NATCA, and two individual commenters supported the inclusion of a separate ''simple'' airplane classification. However, Zee and the Associations commented that the FAA should not create a ''simple'' airplane classification, and that each of the proposed certification and performance levels should stand on its own based solely on performance and complexity of operations. The commenters against inclusion of a ''simple'' category contended that it was more appropriate to address this sort of classification in the means of compliance.

The FAA has decided not to adopt a ''simple'' airplane classification. The FAA finds the addition of a simple category does not produce benefits over those already provided by the new rule. The FAA finds it is more appropriate to address the requirements for a level 1, low-speed airplanes. Additionally, in the NPRM, the FAA proposed allowing simple airplanes to use non-type-certificated engines and propellers to allow those airplanes to use electric propulsion. The FAA can achieve the same flexibility by approving electronic propulsion as part of an airframe for a level 1, low-speed airplane; therefore, the FAA revises the propulsion requirements in this rule to provide that flexibility.

Airplanes Certified for Aerobatics

The FAA proposed to eliminate the acrobatic airplane category in part 23, but still allow a normal category airplane to be approved for aerobatics provided the airplane was certified to address the factors affecting safety for the defined limits for that kind of operation.

Velica S.A.S. (Velica) recommended the FAA define ''aerobatic category'' in proposed § 23.5 to include airplanes without any maneuver restrictions, other than those shown to be necessary as a result of required flight tests.

For the reasons explained in the NPRM, the FAA removed the acrobatic category from part 23. The FAA agrees with Velica that the limitations for an airplane certified for aerobatics should be based on flight tests, but believes more specificity is warranted. Therefore, the FAA will require airplanes certified for aerobatics to comply with the limitations established under subpart G of part 23 in this rule.

c. Accepted Means of Compliance (Proposed § 23.10/Now § 23.2010)

In the NPRM, proposed § 23.10 (now § 23.2010) would have required an applicant to show the FAA how it would demonstrate compliance with this part using a means of compliance, which may include consensus standards accepted by the Administrator. Proposed § 23.10 would have also required a person requesting acceptance of a means of compliance to provide the means of compliance to the FAA in a form and manner specified by the Administrator. Proposed § 23.10 would have created flexibility for applicants in developing means of compliance and also specifically identify consensus standards as a means of compliance the Administrator may find acceptable.

General Comments

The Associations recommended the FAA revise paragraph (a) to require an applicant to ''comply'' with part 23, rather than ''show the FAA how it will demonstrate compliance'' with part 23, using a means of compliance. The Associations also recommended revising paragraph (b) to require an acceptable means of compliance to be in a form and manner specified by the Administrator.

The Associations also argued that, without these changes, the proposed rule could have been interpreted as requiring each applicant to come to agreement with the FAA on acceptable means of compliance for each certification project, when it appears the FAA intends to issue acceptance of methods of compliance in, for example, standards that are already deemed acceptable. The commenters also noted that part 21 does not currently require a showing of compliance in all cases. The commenters stated that today, and potentially more so in the future, the FAA may accept compliance through demonstration or even a statement of compliance. The commenters contended the above-referenced revisions to proposed § 23.10 are necessary to ensure the designs meeting part 23 can continue to fully utilize part 21.

The FAA agrees with the commenters that proposed § 23.10(a) (now § 23.2010(a)) may have had the unintended result of requiring applicants to get approval from the FAA for each means of compliance even when the FAA had already accepted a means of compliance. This would have been counter to the FAA's intention that a means of compliance, once accepted by the FAA, may be used for future applications for certification unless formally rescinded. The FAA adopts the commenters' recommendation for paragraph (a).

The FAA does not adopt recommendation for paragraph (b) however, because it would not meet the intent of the requirement. Paragraph (b) addresses the situation in which an applicant proposes its own means of compliance, either as an alternative to an accepted means of compliance or as a new means of compliance for new technology. The FAA intended paragraph (b) to require applicants requesting acceptance of a means of compliance to do so in a form and manner specified by the FAA, not to require already-accepted means of compliance to be documented in a form and manner specified by the FAA. In light of the comment, the FAA revises the proposed rule language to clarify that paragraph (b) applies to applicants who are requesting FAA review and acceptance of a proposed means of compliance.

Air Tractor questioned the need for a new rule specifying that all means of compliance must be accepted by the FAA and asked whether an applicant would need to obtain FAA approval for each means of compliance at the beginning of the process or any time prior to showing compliance.

This final rule is necessary because Congress directed the FAA to issue a rule that replaces the prescriptive requirements of part 23 with performance-based regulations.[22] This change means that applicants for a TC may use any number of unique design elements to attempt to comply with the performance-based requirements but only the FAA can accept these as means of compliance because the FAA is responsible for finding that an airplane satisfies the performance-based requirements in part 23 before issuing a TC. Although the means of compliance process is not new, the FAA adopts § 23.2010 to make the process clear to all applicants and to highlight that applicants have the opportunity to develop alternative approaches to complying with the part 23 performance-based requirements. While an applicant is not required to obtain FAA acceptance of means of compliance at the beginning of the certification process, it is advisable to seek acceptance as soon as possible, or preferably before, to mitigate the risk of having to redesign the airplane should the FAA not accept the means of compliance.

NATCA commented the FAA should require the accepted means of

[22] Small Airplane Revitalization Act of 2013 (Pub. L. 113–53, 49 U.S.C. 44704 note).

compliance be included on the published certification basis so products can be standardized and post-TC modifiers can know the certification basis used for the underlying product. NATCA also commented that maintenance personnel returning an airplane back to service will need access to adequate documentation on how an airplane is compliant with the rule so they can verify the airplane remains compliant. Assuming the standards are listed, NATCA asked the FAA to clarify how they would be listed in the airplane certification basis.

The FAA partially agrees with NATCA's concerns. Because many of the detailed requirements are no longer in part 23 and will move to means of compliance, it may be hard to know how an applicant showed compliance. That said, many means of compliance today are proprietary, and modifiers and maintenance personnel have no way of knowing what the original manufacturer did to show compliance. The FAA is working with its project support personnel to determine how much of the means of compliance information needs to be listed on the FAA TCDS to address concerns relating to post-TC modifiers and maintenance personnel. This information will be included in the training currently being developed for the ACO engineers and industry designees.

NATCA also recommended the FAA permit design change applicants to use their own alternate means of compliance to gain approval rather than relying on the original means of compliance used for the underlying TC. NATCA suggested this would be in line with the FAA's statements that it is open to a means of compliance without preferring one over the other.

This option is currently permitted and will continue to be permitted under the new part 23. Applicants requesting a change to type design may propose their own means of compliance rather than using the original means of compliance. However, the FAA will review the request depending on the complexity of the design change or the alternative means of compliance. While this is the current process, AC 23.2010 provides guidance on how to submit a proposed means of compliance to part 23 for FAA acceptance.

NATCA asked the FAA to clarify how the certification basis would be handled for industry consensus standards. NATCA also asked whether an applicant must at least partially use industry consensus standards, or whether an applicant may choose not to use consensus standards at all. Finally, NATCA asked if an applicant could get a part 23 TC by only using the standards in ACs. Air Tractor suggested the FAA revise proposed § 23.10 to mention that the standards included in ACs are an accepted means of compliance.

The FAA notes that the certification basis will be the same as it is today: Applicants must show compliance with part 23. An applicant may choose not to use any consensus standards, or a combination of consensus standards and other means of compliance, as long as the applicant's proposed means of compliance complies with part 23 and is accepted by the Administrator. The FAA finds it unnecessary to revise the proposed rule language as Air Tractor suggested. An applicant may already use ACs as means of compliance to part 23, where applicable, under § 23.2010.

Use of Applicant-Proposed Means of Compliance

Air Tractor contended the use of applicant-proposed means of compliance standards would lead to a significant loss in transparency of the certification process, as individual applicants may choose to make both the results and the process of showing compliance a matter of proprietary intellectual property. ANAC commented that the FAA should establish a method to publicize information about approved means of compliance that are not part of a consensus standard. To preserve proprietary information, ANAC recommended the FAA only publish summaries as it currently does for exemptions, special conditions, and ELOS findings. NATCA questioned how the FAA will handle proprietary specifications within a certification basis, arguing it is not in the public interest to have ''secret'' certification requirements. NATCA recommended the certification basis be published in the **Federal Register** for public comment. NATCA also recommended the certification basis for proprietary information be ''explicitly identified'' on the TCDS or STC. Finally, NATCA asked the FAA to clarify whether the FAA will publish FAA issue papers when an applicant uses an applicant-proposed means of compliance and, if so, noted that several FAA orders and policies would need to be revised.

The FAA has a responsibility to protect an applicant's proprietary information, including a proprietary means of compliance. As such, the FAA will not make the proprietary portions of applicant-proposed means of compliance publicly available. The FAA plans to address applicant-proposed means of compliance as it does today, by summarizing the information. The FAA will identify the certification basis (*i.e.,* the applicable airworthiness standards) on the TCDS or STC as is done today. The FAA has not published, and does not plan to publish, the certification basis or FAA issue papers in the **Federal Register** for public comment. Each applicant's certification basis is based on part 23 and is agreed to between the applicant and the FAA. The FAA is not required to elicit public comment on proposed means of compliance.

Garmin asked whether the FAA will accept portions of a previously accepted means of compliance, or whether an applicant must use that entire means of compliance. Garmin recommended the FAA revise proposed § 23.10 (now § 23.2010) to permit whole or partial implementation of a previously-accepted means of compliance or, alternatively, ensure AC 23.10 permits this.

The FAA agrees with Garmin and points out that this is acceptable today. The FAA can be flexible in accepting mixed, partial, or entire means of compliance from industry consensus standards as applicable to the specific product. The FAA recognizes that new product innovations will make this flexibility more important in the future. An industry consensus standard can state that, for credit in meeting that standard, the applicant has to meet the entire set of requirements. But the FAA may tailor acceptable consensus standards based on what is appropriate for the intended function.

Use of Current Part 23 as Means of Compliance

Embraer recommended the FAA revise proposed § 23.10(a) (now § 23.2010(a)) to acknowledge that an applicant may use the prescriptive requirements in former part 23 as an alternate means of compliance. Kestrel asked whether the FAA will require issue papers to permit the use of these former prescriptive requirements.

In the NPRM, the FAA noted it will accept the use of the prescriptive means of compliance contained in former part 23 as alternate means of compliance, except for those sections where the level of safety has increased specifically for stall characteristics and icing protection. The FAA does not need to codify this decision to retain this flexibility and is therefore not revising the proposed language for § 23.10. For applicants relying on satisfaction of the prescriptive requirements in former part 23, amendment 23–62, as a means of compliance, the FAA will only require the G–1 certification basis issue paper to list the means of compliance as ''amendment 23–62''.

NATCA asked whether the FAA will permit an applicant to use older prescriptive regulations, such as Aeronautics Bulletin, amendment 7a, ''Airworthiness Requirements for Aircraft''; CAR 3; and previous versions of part 23, as a means of compliance. If not, NATCA asked the FAA to clarify why those regulations are not appropriate and acceptable for the proposed design.

The FAA will consider the use of the older, prescriptive regulations in cases where it is appropriate for the airplane in question. There have been instances where applicants have approached the FAA with projects to ''remake'' new versions of vintage airplanes. The FAA has allowed and will continue to allow the use of appropriately-selected design standards on vintage airplanes. However, applicants wanting to use this approach should expect to use newer industry practices where the old standards and practices have, over time, not proven to meet the minimum acceptable safety standard for that class of airplane in part 23.

Manner in Which Applicant Must Present Means of Compliance

Textron asked how the FAA will document the acceptance of a non-industry standard means of compliance and whether acceptance of a Project-Specific Certification Plan (PSCP) is adequate proof of the FAA's acceptance of the means of compliance.

The FAA plans to include information on the acceptance of non-consensus standards on its Small Airplane Directorate Web site. The G–1 issue paper and agreement on the certification basis and compliance checklist will suffice. PSCP acceptance is adequate proof of FAA acceptance of a means of compliance if a G–1 issue paper is not used.

Textron also asked whether there would be a system set-up similar to repair specifications where an applicant could have pre-defined methods for making certain changes to its products, and whether there would be a method for the FAA to accept deviations to the accepted standards.

The Part 23 ARC did not consider and the NPRM did not propose repair specification; therefore, it is beyond the scope of this rulemaking effort.

Air Tractor and Kestrel contended the process proposed by draft AC 23.10—which states that an applicant should list the means of compliance and consensus standards they intend to use to show compliance with part 23 in a certification plan or compliance checklist—is premature and would slow the certification process. The details of an airplane's design are often incomplete when an application is submitted and it can take years to obtain FAA acceptance of a PSCP. Air Tractor suggested that establishing a means of compliance during the process of negotiating the PSCP should be limited to picking one or more of the following: Analysis, tests, design review, physical inspection, etc. Air Tractor also commented that a requirement for the FAA to review and approve of particular methods before the analysis can be presented would be new for most regulations. It would also require a new level of required response from the FAA that would drastically slow the process of either establishing the certification plan or showing compliance. Air Tractor also questioned how this requirement compares with the FAA and Industry Guide to Product Certification.

The FAA finds that including the means of compliance in the PSCP or the compliance checklist will not alter the current practice for new technology because some of the compliance requirements may not be known at the time of application. This initial uncertainty means the agreed compliance may remain as a draft during the development and certification process until the specific means of compliance are determined and agreed upon. This may be a common issue with new technology during the first few years after the new part 23 is implemented. It will take some time to get accepted means of compliance into consensus standards, resulting in these means of compliance being developed during the project. In the long term, the new approach should shorten the time needed for an applicant to get FAA agreement on its means of compliance.

Finally, the FAA clarified the intent of the form and manner of the means of compliance. The FAA does not intend to ''specify'' the form and manner of means of compliance; the form and manner only need to be ''acceptable.''

3. Subpart B—Flight

a. Weight and Center of Gravity (Proposed § 23.100/Now § 23.2100)

In the NPRM, proposed § 23.100 (now § 23.2100) would have required an applicant to determine weights and centers of gravity that provide limits for the safe operation of the airplane. Additionally, it would have required an applicant to show compliance with each requirement of this subpart at each combination of weight and center of gravity within the airplane's range of loading conditions using tolerances acceptable to the Administrator. Proposed § 23.100 would have also required the condition of the airplane at the time of determining its empty weight and center of gravity be well defined and easily repeatable.

The Associations recommended a clarifying change to proposed § 23.100(a) that would require the applicant to determine limits for weights and centers of gravity that provide for the safe operation of the airplane, rather than determine weights and centers of gravity that provide limits.

The FAA adopts the Associations clarifying change. Accordingly, § 23.2100(a) now requires the applicant to determine limits for weights and centers of gravity that provide for the safe operation of the airplane.

Additionally, the Associations recommended changing proposed § 23.100(b) to require the applicant to comply with each requirement of subpart B at critical combinations of weight and center of gravity. The commenters explained that it is appropriate to demonstrate compliance at critical combinations of weight and center of gravity, but showing compliance at each combination ''would present an infinite matrix of test points.''

The FAA also adopts the Associations recommended change to proposed § 23.100(b) (now § 23.2100(b)). While proposed § 23.100(b) could have been interpreted to require an infinite matrix of test points, this was not the FAA's intent. Accordingly, § 23.2100(b) now requires the applicant to comply with each requirement of subpart B at critical combinations of weight and center of gravity within the airplane's range of loading conditions using tolerances acceptable to the Administrator.

The Associations also stated that the determination of empty weight and center of gravity in proposed § 23.100(c) is ''somewhat confusing and potentially unnecessary.'' The commenters suggested clarifying changes that would replace ''empty weight'' with ''weight'' and delete ''well'' and ''easily repeatable,'' thereby requiring the condition of the airplane at the time of determining its weight and center of gravity to be defined. Similarly, Textron recommended deleting the terms ''well'' and ''easily'' from proposed § 23.100(c) because they are vague and subject to interpretation.

The FAA is retaining the terms ''well defined'' and ''easily repeatable'' in § 23.2100(c). In the NPRM, the FAA explained proposed § 23.100 would capture the safety intent of § 23.29. Section 23.29 has contained the terms ''well defined'' and ''easily repeated'' since it was published in amendment 23–0 [23] with no challenges. Furthermore, ''easily'' is an important modifier for ''repeatable'' because it ensures that the condition of the airplane at the time of determining its empty weight and center of gravity is not hard for a mechanic to reproduce.

The FAA also retains the term ''empty weight'' in § 23.2100(c). Determining empty weight is fundamental to baselining an airplane. Removing this term would leave the weight value for baseline open to any weight between empty to gross weight. The ambiguity of not defining the baseline weight would create confusion and problems.

b. Performance Data (Proposed § 23.105/ Now § 23.2105)

In the NPRM, proposed § 23.105 (now § 23.2105) would have required—

- An airplane to meet the performance requirements of this subpart in various conditions based on the airplane's certification and performance levels for which certification is requested;
- An applicant to develop the performance data required by this subpart at various altitudes and at high temperatures, while also accounting for losses due to atmospheric conditions, cooling needs, and other demands on power sources; and
- The procedures used for determining takeoff and landing distances to be executed consistently by pilots of average skill in atmospheric conditions expected to be encountered in service.

EASA and the Associations stated that some designs may have performance limitations at low temperatures rather than high temperatures, such as batteries in electric propulsion systems. The commenters recommended revising the proposed language to require performance data for low temperatures that can be expected during operation, if those low temperatures could have a negative effect on performance.

The FAA agrees proposed § 23.105(b) (now § 23.2105(b)) should account for possible performance degradation due to the effect of cold temperatures on electric propulsion systems. Proposed § 23.105 was intended to capture the safety intent of former § 23.45, which required the determination of performance data in various conditions that could negatively affect performance. Historically, propulsion systems were gas powered and negatively affected by high temperatures, which resulted in a corresponding negative effect on performance. This explains why former § 23.45 required the determination of performance data at a temperature from standard to 30 degrees Celsius above standard, as performance degradations historically resulted from operation at high temperatures.

As stated in the NPRM, the FAA intended the proposal to account for airplanes equipped with new technologies, such as electric propulsion systems. Additionally, the FAA intended proposed § 23.105(b) to account for various conditions that could affect airplane performance. However, proposed § 23.105(b) would only have accounted for performance degradations that could result from the operation of systems at high temperatures, as the proposed language reflected former § 23.45. Because cold temperatures, rather than high temperatures, may have a negative performance effect on an electric propulsion system or a hybrid system, the FAA revises the proposed language to account for performance degradations at low temperatures. The FAA also removes the prescriptive language that would have required the determination of performance data at a temperature from standard to 30 degrees Celsius.

Section 23.2105(b)(2) now requires the applicant to develop performance data at temperatures above and below standard day temperature that are within the range of operating limitations, if those temperatures could have a negative effect on performance. This requirement is consistent with the NPRM as it replaces the prescriptive design requirements from the regulation with performance-based airworthiness standards that accommodate new technologies, such as electric and hybrid propulsion systems. Additionally, § 23.2105(b)(2) more accurately reflects the safety intent of former § 23.45 because it requires the development of performance data in conditions that could negatively affect performance, including conditions that account for new technologies.

As a general matter, under § 23.2105(b)(2), an applicant seeking certification of a gas-powered propulsion system must develop performance data at temperatures above standard that are within the airplane's operating limitations, because high temperatures could have a negative effect on the airplane's performance. Alternatively, an applicant seeking certification of an electric or hybrid propulsion system must develop performance data at temperatures both above and below standard that are within the airplane's operating limitations, if these temperatures could have a negative effect on performance.

Garmin pointed out that limited airflow in a climb configuration may cause non-propulsion systems to overheat during long hot climbs, requiring a different climb speed or configuration for system cooling than addressed in proposed § 23.105(b). Garmin recommended the FAA include the phrase ''other essential equipment'' in addition to propulsion cooling in paragraph (b)(2).

The Associations similarly suggested that there may be some cases where the performance of equipment other than the propulsion system may drive cooling requirements for hot conditions. The commenters recommended revising the proposed language to include cooling requirements for these equipment, in situations other than climb.

The FAA understands the concerns of Garmin and the Associations, for paragraph (b)(2) to address cooling requirements for more than the propulsion system. However, subpart B—including § 23.2105—is intended to address airplane performance. Therefore, § 23.2105 should only address systems that affect airplane performance. For example, § 23.2105 may apply to avionics that also control propulsion, or flight controls and lift systems needed to develop repeatable airplane performance. Traditional avionics that do not affect performance are addressed in subpart F, which contains requirements for equipment. Therefore, the FAA is not adopting the phrase ''other essential equipment'' because it may be interpreted to include systems that do not affect performance, such as oxygen or navigation systems. This would be a new requirement that has not been identified as a safety need, increasing the scope and possibly the cost of this rule. For the same reasons, the FAA is not expanding the scope of the rule to include cooling requirements for equipment other than propulsion systems, in situations other than climb.

Nevertheless, in light of the comments, the FAA acknowledges there may be systems associated with propulsion that are necessary for consistent performance, such as batteries or engine controllers, that could be affected by temperature. Section 23.2105 should address these types of systems. Therefore, § 23.2105(b)(2) will apply to systems associated with electric or other propulsion systems if those systems could negatively affect performance at temperatures above or below standard.

[23] 29 FR 17955, December 18, 1964.

c. Stall Speed (Proposed § 23.110/Now § 23.2110)

In the NPRM, proposed § 23.110 (now § 23.2110) would have required an applicant to determine the airplane stall speed or the minimum steady flight speed for each flight configuration used in normal operations, accounting for the most adverse conditions for each flight configuration, with power set at idle or zero thrust.

The Associations recommended removing the proposed requirement for power to be set at idle or zero thrust for each determination to enable the introduction of new technologies such as distributed propulsion with reliable electric power. The commenters explained that proposed § 23.110 must account for distributed lift systems because the concept of distributed lift along a wing may be used to facilitate low-speed handling, and reliable systems of this type may dictate operational stall speeds. The commenters asserted their recommended change would ensure that distributed propulsion, with an appropriate reliability level, could be used in a landing condition accounting for a lower stall speed based upon the effects of this equipment.

The FAA agrees that proposed § 23.110 (now § 23.2110) should account for distributed propulsion systems used for thrust, flight controls, and high lift systems. However, the rule must define a thrust level for standardization because stall speeds are important to the development of the performance-based speeds. The FAA finds it appropriate to require traditional designs to determine stall speeds and minimum steady flight speeds with power set at idle or zero thrust. Accordingly, § 23.2110(a) now requires the power to be set at idle or zero thrust for propulsion systems used primarily for thrust. To accommodate distributed propulsion systems, the FAA is adding new § 23.2110(b), which requires a nominal thrust for propulsion systems used for thrust, flight control, and/or high-lift systems. These changes will allow § 23.2110 to accommodate the new technologies identified by the commenters.

Additionally, the FAA revises the proposed rule language to clarify the ''stall speed or minimum steady flight speed determination'' must account for the most adverse conditions for each flight configuration. This change is consistent with the proposed rule, which would have required ''each determination'' to account for the most adverse conditions for each flight configuration, because ''each determination'' referred to the ''stall speed or minimum steady flight speed determination.''

d. Takeoff Performance (Proposed § 23.115/Now § 23.2115)

In the NPRM, proposed § 23.115 (now § 23.2115) would have required an applicant to determine airplane takeoff performance, which would have included the determination of ground roll and initial climb distance to 50 feet, accounting for stall speed safety margins, minimum control speeds, and climb gradients. Proposed § 23.115 would have also required the takeoff performance determination to include accelerate-stop, ground roll and initial climb to 50 feet, and net takeoff flight path, after a sudden critical loss of thrust for levels 1, 2, and 3 high-speed multiengine airplanes, multiengine airplanes with a maximum takeoff weight greater than 12,500 pounds, and level 4 multiengine airplanes.

The Associations suggested the FAA revise proposed § 23.115 to capture the performance-based standards at a ''higher objective based level'' because the proposed section was too detailed and prescriptive. Textron recommended the FAA adopt language similar to EASA's A–NPA 2015–06, which leaves determination of detailed standards appropriate to airplanes with different certification and performance levels to the means of compliance standards.

The FAA disagrees with the comment, because it is important to ensure the consistency of takeoff performance data across part 23 airplanes. This consistency aids private pilots, who often operate a variety of part 23 airplanes, in determining the airports from which they may operate.

Several commenters recommended the FAA remove the 12,500-pound cutoff in proposed § 23.115(c).

The FAA agrees and removes the weight discriminator from the rule language. Although the FAA proposed to remove the commuter category, along with weight- and propulsion-based certification divisions, and to replace them with divisions based on risk and performance, the FAA also proposed to require multiengine airplanes with a maximum takeoff weight of more than 12,500 pounds to comply with the increased takeoff performance requirements in paragraph (c). Proposed paragraph (c) was intended to ensure that larger business jets carrying fewer than 10 passengers, which would have been considered commuter category under the former rule, were captured under the takeoff performance requirements because these airplanes would not necessarily fall under level 4. The FAA recognizes that applying paragraph (c) to multiengine airplanes with a maximum takeoff weight of more than 12,500 pounds is redundant. Those airplanes, which are equivalent to airplanes under the former commuter category, are captured by applying paragraph (c) to levels 1, 2, and 3 high-speed multiengine airplanes and to all level 4, multiengine airplanes. Furthermore, while paragraph (c) does not apply to levels 1, 2 and 3 low-speed multiengine airplanes, the FAA may issue special conditions if there is a configuration that presents a higher-than-anticipated risk.

Several commenters objected to requiring the determination of takeoff performance for all airplanes to include the determination of initial climb distance to 50 feet above the takeoff surface. The commenters noted that under the former rule, takeoff distance for commuter category airplanes and multiengine jets weighing more than 6,000 pounds required the initial climb distance be calculated using 35 feet above the takeoff surface. Textron recommended the FAA revise proposed § 23.115(b) to apply the 50-feet-above-takeoff-surface requirement only to single-engine airplanes and levels 1, 2, and 3 low-speed multiengine airplanes rather than to all airplanes. Textron also recommended revising proposed § 23.115(c)(2) from ''50 feet'' to ''35 feet'' above the takeoff surface, noting the 35-foot standard has been demonstrated as safe for the classes of airplane to which it has been applied.

The FAA agrees with the commenters and revises proposed § 23.115(b) (now § 23.2115(b)) to require only single-engine airplanes and levels 1, 2, and 3 low-speed, multiengine airplanes to include the distance required to climb to a height above 50 feet when calculating takeoff performance. The FAA is also changing the altitude for the initial climb in § 23.2115(c)(2) to 35 feet. The service history of airplanes that would be classified as levels 1, 2, and 3 high-speed multiengine airplanes and level 4 multiengine airplanes under this rule, which were certified using a 35-feet-initial-climb requirement, has been sufficiently safe to support the proposition that the 35-feet requirement provides an adequate level of safety for high-speed multiengine airplanes and level 4 airplanes.

The Associations suggested revising proposed § 23.115(b) and (c) to require takeoff performance to include the determination of ''ground roll distance required to takeoff,'' rather than ''ground roll.''

The FAA notes using ''ground roll distance required to takeoff'' is not necessary for clarity. The term ''ground roll'' in the context of takeoff is well-understood.

Several commenters recommended revising proposed § 23.115(b) to include two subparagraphs in what the FAA interprets as an effort to clarify that the applicant must provide two distances, one for ground roll and another for the distance required for the initial climb to 50 feet.

The FAA finds it unnecessary to reorganize paragraph (b) as the commenters proposed. The format, as proposed and adopted, is sufficiently clear.

The Associations suggested the FAA revise the proposed rule language in proposed § 23.115(c)(1) to require the takeoff performance determination to include the distance determination of ''an aborted take-off at critical speed,'' rather than ''accelerate-stop.''

The FAA agrees that ''accelerate-stop'' is not as clear a description of the objective of the maneuver as ''aborted take-off at critical speed''. Therefore, the FAA revises paragraph § 23.2115(c)(1) to reflect the commenters' recommendation.

Embraer recommended the FAA provide special consideration—including freezing the certification bases—for previously-approved light jets with certification bases that include special conditions measuring the takeoff distance as the distance required to takeoff and climb to a height of 35 feet above the takeoff surface. Embraer feared the potential cost associated with an upgrade or modification.

The FAA finds a special consideration unnecessary. There is already a process, prescribed by § 21.101(b), that allows applicants for a change to a TC to show that the change complies with an earlier amendment of a regulation if the newer requirement would not contribute materially to the level of safety of the product or would be impractical.

ANAC recommended the FAA make it clear that takeoff airspeed and procedures must be determined. The FAA disagrees with ANAC's comment as such a change would be redundant with what we proposed for § 23.105 (now § 23.2105).

e. Climb Requirements (Proposed § 23.120/Now § 23.2120)

In the NPRM, proposed § 23.120 (now § 23.2120) would have required an applicant to demonstrate various minimum climb performances out of ground effect, depending on the airplane's certification level and performance capability.

In light of comments received, the FAA revises proposed § 23.120 (now § 23.2120) by withdrawing paragraphs (b)(4), (b)(5), and (c)(1), and renumbering paragraphs (c)(2) and (c)(3) as (c)(1) and (c)(2) respectively. This section discusses these changes in more detail.

Textron commented that regulations have historically applied to the airplane, not to the applicant, with demonstration of compliance through flight testing. Textron recommended the FAA offer alternative rule language that reflected its comment. The Associations similarly recommended the FAA change the opening of proposed § 23.120 to focus on the design rather than the applicant. These commenters also recommended re-designating the opening as paragraph (a).

The FAA notes that, historically, the airplane-specific requirements focused on the airplane, and the part 21 certification requirements were targeted more to the applicant. Many sections in this rulemaking effort tried to include applicant accountability, which was why the proposed rule focused on the ''applicant.'' However, based on the comments received, the FAA revises the proposed language throughout this rule by removing ''applicant'' where the requirement is more logically based on the airplane.

Textron commented on the proposal to apply discriminators based on weight divisions and detailed quantitative climb criteria conflicted with the stated intent of the rulemaking to remove weight-based divisions and develop standards reflecting the diversity of future airplane designs. Textron recommended the FAA adopt language similar to proposed CS 23.120, which leaves determination of detailed standards appropriate to airplanes with different certification and performance levels to means of compliance. The Associations recommended the FAA make the calculation of performances more general, to facilitate the use of standard means of compliance, which may exist in consensus-based standards. An individual commenter similarly stated the prescriptiveness of proposed § 23.120 was contrary to the stated objective of the proposal. The commenter stated the text of proposed § 23.120 would be more appropriate as a standard rather than a rule. The commenter recommended that the FAA use the language of proposed § 23.125, which would have required the determination of climb performance in certain conditions and configuration, in proposed § 23.120. The commenter also noted the current version of the ASTM standard for climb requirements already fully covers the language of proposed § 23.120.

In response to Textron's comment, the FAA revises proposed § 23.120 so it no longer contains weight divisions. Instead, the requirements of this section are based on certification levels, performance levels, and number of engines. Section 23.2120 does, however, contain quantitative climb criteria. On this topic, the FAA did not adopt the EASA proposed CS 23.120 language as recommended by Textron. While the idea of removing all climb gradient requirements was discussed in the Part 23 ARC, the FAA finds it is not in the best interest of safety to eliminate all required climb gradients. Therefore, the FAA is including the minimum climb gradients in this performance-based rule. But, the FAA consolidated the climb gradient requirements of former part 23 to simplify the requirement. The FAA finds doing so will maintain the former level of safety while reducing the certification burden. The FAA acknowledges the ASTM means of compliance contain the climb gradients in more detail than required from the requirements of this section. However, the ASTM means of compliance has not been accepted by the FAA as of the publication of this rule.

The FAA finds that, while removing as many prescriptive requirements as possible is important for creating a performance-based rule, some requirements should remain because they have been proven over decades of service and are already based on performance. The FAA finds the climb requirements are one such case.

In response to the comment that the FAA should use the language of proposed § 23.125 (now § 23.2125) in proposed § 23.120 (now § 23.2120), the FAA notes that § 23.2125 only requires the performance information be determined for the airplane flight manual (AFM). There is no minimum climb gradient in § 23.2125 as with § 23.2120. The Part 23 ARC discussed this issue at length with the objective of defining a clear, minimum performance-based metric that would allow the prescriptive climb gradients to move to means of compliance. The climb gradients in former §§ 23.65 through 23.77 came from early CAR 3 and have been in place for more than half a century, with the exception of some commuter category requirements, which came from early part 25. Since the FAA has established measureable gradients, any alternative approach would need to maintain the same gradients to provide an equivalent level of safety as the former climb requirements. The ARC considered numerous options, but in every case the proposed metric was subjective such that the FAA may be required to evaluate various other climb gradient schemes against the former climb gradients, when the intent was to maintain the former climb gradients. Finally, the FAA determined keeping the prescriptive climb gradients from the former rules remains the best approach. Furthermore, supporting this position, the FAA could not envision new and novel configurations that could not meet these climb gradients, but would offer the same level of safety. All the new and novel configurations that have been shared with the FAA have performance that will meet or exceed the minimum gradients proposed in the NPRM. For these reasons the FAA is retaining the proposed language.

Furthermore, it may not have been clear in the NPRM that the FAA intended proposed § 23.120 to address the required minimum climb gradients in former §§ 23.63, 23.65, 23.67, and 23.77, and proposed § 23.125 (now § 23.2125) to address the required publication of the measured performance in former §§ 23.66, 23.69, and 23.71. Therefore, the FAA is not including language similar to proposed § 23.125 (now § 23.2125) in § 23.2120, because § 23.2120 includes required climb gradients, not information requirements.

Textron stated that proposed § 23.120(a) would have applied to the all engines operating (AEO) takeoff climb and that a common terminology should be used. Textron recommended the FAA replace the undefined phrase ''initial climb configuration'' in proposed paragraph (a) with the unambiguous phrase ''takeoff configuration'', and remove the phrase ''at takeoff'' from proposed paragraph (a)(2). Textron also recommended the FAA remove the phrase ''at sea level'' from proposed paragraph (a)(1) because the FAA already proposed § 23.105 to require an airplane, unless otherwise prescribed, to meet the performance requirements of this subpart in still air and standard atmospheric conditions at sea level for all airplanes.

The FAA notes that replacing ''initial climb configuration'' with ''takeoff configuration'' would require the design to comply with the required minimum climb performance out of ground effect, with all engines operating and in the ''takeoff configuration''. The FAA finds that this change would be more stringent than the former regulations. Former § 23.65(a) allowed for the climb to be demonstrated with the landing gear retracted, and former § 23.65(b) allowed for the climb to be demonstrated with the landing gear retracted if it could be retracted in 7 seconds. While normalizing both former regulations might appear relieving for airplanes certified as complying with former § 23.65(b),[24] the FAA finds that most airplanes designed in the past 2 decades incorporated landing gear that retracted in less than seven seconds. Therefore, the FAA is retaining the phrase ''initial climb configuration'' in paragraph (a).

The FAA agrees with Textron's recommendation to delete ''at sea level'' from proposed § 23.120(a)(1). The FAA proposed the term because it was part of former § 23.65(a). As Textron noted, however, proposed § 23.105(a) (now § 23.2105(a)) would have already required an airplane to meet the performance data of subpart B, including § 23.2120, in still air and atmospheric conditions at sea level for all airplanes. It is therefore unnecessary for paragraph (a)(1) to require a climb gradient ''at sea level'' of 8.3 percent for landplanes and 6.7 percent for seaplanes and amphibians. However, the FAA is not deleting ''at takeoff'' as recommended by Textron. The agency is aligning the new rule with former § 23.65 by using ''after takeoff'' instead of ''at takeoff.'' This requirement is indirectly addressed in § 23.2105(b); however, as proposed, the language was not clear as to intent. By including the term ''after takeoff'', this requirement reinforces the meaning of ''ambient atmospheric conditions'' in § 23.2105(b).

The Associations and Transport Canada noted that proposed § 23.120(a) did not address climb performance for level 4 airplanes. Transport Canada stated the FAA should specify all engine operating climb gradient requirements for level 4 airplanes. The Associations stated the climb gradient requirements for level 4 airplanes should be the same as the requirement for high-speed level 1 and 2 airplanes and level 3 airplanes.

The FAA considered the comments and in response, revises proposed § 23.120(a) to include an all engines operating climb requirement for level 4 single-engine airplanes. The former climb requirements required all airplanes with 10 or more passengers to have multiple engines and meet the commuter category climb requirements, which were focused on the ability to climb after an engine failure. These one-engine-inoperative climb requirements were extensive. The philosophy was that if the airplane could meet the climb requirements after one engine failed, it would have more-than-adequate performance with all engines operating. This is why there were no all engine operating climb requirements for commuter category airplanes. The FAA agrees with and continues this philosophy in the new rule for multiengine airplanes designed for 10 or more passengers, which are level 4 airplanes under this rule. However, because the new rule eliminates the commuter category and allows for single-engine airplanes to carry 10 or more passengers, there is now a need for single-engine level 4 airplanes to have an all engines operating climb requirement.

The FAA agrees with the Associations that the climb gradient requirements for level 4 single-engines airplanes should be the same as the requirement for levels 1 and 2 high-speed airplanes and level 3 airplanes. This was an oversight in the NPRM and the FAA is correcting it in this final rule. Accordingly, § 23.2120(a)(2) now requires levels 1 and 2 high-speed airplanes, all level 3 airplanes, and level 4 single-engine airplanes to demonstrate, with all engines operating and in the initial climb configuration, a climb gradient at takeoff of 4 percent. This revision is a logical outgrowth of the notice because, as noted by the commenters, there is no basis for distinguishing between level 3 and level 4 airplanes for this requirement.

Transport Canada commented that the FAA should consider and validate whether a 4 percent climb gradient for high-performance airplanes with all engines operating is sufficient. For example, an airplane climbing at 100 knots (approximately 400 feet per minute) may be acceptable for a level 1 airplane, but not for anything larger. Transport Canada noted that proposed paragraph (a)(2) may govern more frequently, because the all-engine climb capability driven by the one-engine-inoperative requirements has been reduced in proposed paragraph (b)(3). Transport Canada also noted that, given the increasing probability of airplanes with more than 4 engines, it may be more effective to increase the all-engine climb gradient in proposed paragraph (a)(2).

The FAA considered Transport Canada's comments, but notes the intent with this section was to maintain the level of safety in former part 23. Section 23.2120(b) requires the same climb gradient—4 percent—as was required for similar airplanes by former part 23. The FAA notes that requiring more stringent climb requirements is beyond the scope of this rulemaking.

[24] Former § 23.65(b) applied to normal, utility, and acrobatic category reciprocating engine-powered airplane of more than 6,000 pounds maximum weight, single-engine turbine, and multiengine turbine airplanes of 6,000 pounds or less maximum weight in the normal, utility, and acrobatic category.

Textron made several comments to proposed § 23.120(b). Textron stated the word ''the'' should replace the word ''a'' when referring to critical loss of thrust. For proposed § 23.120(b)(1), Textron suggested referring to climb gradient the same way as in proposed § 23.120(a)(2). Textron also recommended changing ''configuration'' to ''configurations'' in proposed paragraph (b)(1) because one airplane may have multiple takeoff and approach configurations. Textron and Kestrel requested clarification regarding the single-engine crashworthiness requirements referred to in proposed § 23.120(b)(1). Kestrel asked whether those requirements will be established in the rule or based on an associated standard.

Regarding Textron's comment on the use of the word ''the'' in the phrase ''the critical loss of thrust,'' the term ''the'' would assume that everyone knows what that critical loss of thrust is. While that may be true for traditional configurations, it may not be true for future configurations. Therefore, the FAA is keeping the proposed phrase ''a critical loss of thrust.'' However, the FAA agrees with Textron concerning multiple configurations and revises the rule to align the reference to the climb gradient in §§ 23.2120(a)(2) and 23.2120(b)(1) for clarity.

In response to Kestrel and Textron, § 23.2120(b)(1) contains a requirement addressing airplanes that do not meet the single-engine crashworthiness requirements of proposed § 23.600, ''Emergency conditions'' (now § 23.2270). Section 23.2120(b)(1) is intended to capture the intent of former § 23.67(a)(1), which required airplanes with V_{SO} of more than 61 knots to maintain a steady climb gradient of at least 1.5 percent. Sixty-one knots was a historic stall speed limit for single-engine airplanes and for that reason, it was used as a division between multiengine airplanes that could climb after the loss of one engine and other multiengine airplanes that could not maintain altitude after the loss of one engine. These former requirements assumed that the airplane only had two engines. The FAA is not using the 61 knot stall speed division in this new rule the way it was used in former § 23.562, ''Emergency landing dynamic conditions'', for crashworthiness requirements. Instead, the FAA is basing these new regulations on actual stall speed. The new regulations should, over time, allow several alternatives to address occupant protection. For this reason, and because the FAA did not intend to increase the level of safety over the former requirements, the FAA is using the phrase ''single-engine crashworthiness.''

Textron asserted that to obtain the best takeoff performance in high and hot conditions, it can be advantageous to use lesser flap settings to improve climb capability after takeoff. However, the proposed climb requirements—defined only in terms of the approach configuration—would have eliminated this capability, and would not have reflected the former part 23 standards. Textron suggested the FAA revise the proposed rule language in paragraph (b)(3) to require multiengine level 3 high-speed airplanes and level 4 airplanes to determine the climb gradients for weight, altitude, and temperature combinations appropriate for takeoff in the takeoff configuration.

The FAA notes that the reason for using the ''approach configuration'' was not that it reflected an actual configuration, but that it was more conservative than using the ''takeoff configuration.'' The FAA elected to consolidate the climb requirements from four configurations into one configuration. To do so, the FAA had to make some assumptions. The major assumption used in consolidating the climb requirements was that if the airplane could meet the second segment climb gradient at 400 feet, then it should meet the other traditional requirements and would provide an acceptable level of safety. However, to provide a margin of safety in case one of the other conditions was slightly more critical, the FAA elected to apply the discontinued approach flap configuration, which is ''approach'' flaps, for this requirement.

Transport Canada commented it would be more conservative to require the four-engine climb gradient of 2.6 percent in proposed § 23.120(b)(3), rather than the two-engine climb gradient of 2 percent.

The FAA explained in the NPRM that the climb gradient associated with the loss of one engine for a two-engine airplane has provided an acceptable safety history for this class of airplane. The historical three- and four-engine climb gradients were based on part 25 regulations regarding gas engine technology, and may not be appropriate for distributed electric propulsion configurations or designs. For this reason, using those historical values may end up with a more conservative approach than intended. This would increase the requirements from the former part 23 regulations, which is outside the scope of this rulemaking.

Several commenters recommended the FAA either delete, clarify, or re-write proposed § 23.120(b)(4) and (5) because the intent of those paragraphs is unclear.

The FAA agrees that proposed § 23.120(b)(4) and (b)(5) are confusing. The FAA intended the conditions in paragraphs (b)(4) and (b)(5) to apply to the determinations required by paragraph (b). However, because § 23.2105(a) requires an airplane to meet the performance data of subpart B for these 2 conditions, paragraphs (b)(4) and (b)(5) are redundant and confusing. For this reason, the FAA withdraws paragraphs (b)(4) and (b)(5).

An individual commented that all multiengine airplanes should be able to climb after an engine failure. The commenter stated this performance is affordable and the FAA should not permit poor performance because a manufacturer wants to refurbish a decades-old design and produce it.

The FAA notes that adding the requirement for all-multiengine airplanes to be able to climb after an engine failure is beyond the scope of this rulemaking. The FAA finds that the current level of safety in former part 23 regarding climb performance for multiengine airplanes following an engine failure is adequate.

The Associations recommended the FAA revise the proposed rule language to require the applicant to demonstrate a climb gradient of 3 percent during balked landing ''without creating undue pilot workload.'' The commenters also recommended the FAA rewrite proposed § 23.120(c) to include a general requirement for the applicant to determine, as applicable, climb and descent performance for all engines operating; following a critical loss of thrust on take-off; and after a critical loss of thrust during the enroute phase of flight.

The FAA originally determined that adding the phrase ''without creating undue pilot workload'' in this requirement was redundant with proposed § 23.105(c); however, proposed § 23.105(c) only addressed takeoff and landing distances. The FAA also recognizes that many of the part 23 fatal accidents happen on go-arounds or balked landings and are attributable, at least in part, to high-pilot workload. For this reason, the FAA is adding ''without creating undue pilot workload'' to § 23.2120(c).

The FAA also addresses the commenters' recommendation to include a general requirement for the applicant to determine, as applicable, climb and descent performance for all engines operating; following a critical loss of thrust on take-off; and after a critical loss of thrust during the enroute phase of flight in § 23.2125(a)(2) and (a)(3).

Textron and Transport Canada also commented on proposed § 23.120(c). Textron stated that it is unclear why takeoff power is specified for the balked landing, but not for any other minimum climb performance requirements. Textron recommended changing the word ''configuration'' to ''configurations'' in proposed § 23.120(c)(3) because an airplane might have multiple landing configurations.

The FAA agrees with Textron that the reference to takeoff power was not needed. Therefore, the FAA deletes the reference from proposed § 23.120(c) (now § 23.2120(c)). The FAA also agrees with Textron's recommendation to change ''configuration'' to ''configurations'' and makes this change in § 23.2120(c).

Transport Canada asked that the FAA justify the reduction in the required landing climb gradients from 3.3 percent to 3 percent.

The FAA notes that former § 23.77, which governed balked landings, required a 3.3 percent gradient for piston airplanes weighing less than 6,000 pounds; a 2.5 percent gradient for piston engine and single-engine turbine-powered airplanes over 6,000 pounds and for multiengine turbine-powered airplanes weighing 6,000 pounds or less; and a 3.2 percent gradient for multiengine turbine-powered airplanes weighing over 6,000 pounds and commuter category airplanes. The FAA is simplifying the former requirement by taking the average of the three climb gradients. The FAA did not receive any negative comments concerning the decrease or increase in climb gradient requirements, so the FAA adopts the language as proposed.

f. Climb Information (Proposed § 23.125/Now § 23.2125)

In the NPRM, proposed § 23.125 (now § 23.2125) would have required an applicant to determine the climb performance for—

- All single-engine airplanes;
- Level 3 multiengine airplanes, after a critical loss of thrust on takeoff in the initial climb configuration; and
- All multiengine airplanes, during the enroute phase of flight with all engines operating and after a critical loss of thrust in the cruise configuration.

Proposed § 23.125 would have also required an applicant to determine the glide performance of the airplane after a complete loss of thrust for single-engine airplanes.

Transport Canada commented that proposed § 23.125(a) appears to lack the concept of determining climb performance at each approved weight, altitude, and temperature. Additionally, Transport Canada stated it is unclear why proposed § 23.125(a)(2) applies only to level 3 multiengine airplane. Transport Canada recommended the FAA require the determination of climb performance following a critical loss of thrust on take-off in the initial climb configuration for all multiengine airplanes at each weight, altitude, and temperature.

The FAA agrees with Transport Canada that proposed § 23.125(a) would not have expressly required the determination of climb performance at each approved weight, altitude, and temperature. The FAA intended proposed § 23.105(a)—which would have required levels 1 and 2 high-speed airplanes and level 3 airplanes to provide performance data in ambient atmospheric conditions within the operating envelope—to capture this requirement. To comply with the requirement in proposed § 23.105(a) to ''meet the performance requirements'' of subpart B, an applicant would have had to make these determinations anyway. However, after considering Transport Canada's comment, the FAA revises the proposed language to make clear that § 23.125(a)(2) (now § 23.2125(a)(2)) requires the determination of climb performance at each weight, altitude, and ambient temperature within the operating limitations. This change is consistent with the NPRM, which explained that proposed § 23.125 was intended to capture the safety intent of former §§ 23.66 and 23.69. Both of these sections required the determination to be made at each weight, altitude, and ambient temperature within the airplane operating limitations.

The FAA agrees that § 23.2125(a)(2) should apply to more than level 3 multiengine airplanes; however, it should not apply to all multiengine airplanes. Section 23.2125(a)(2) captures the safety intent of former § 23.66, which applied only to reciprocating engine-powered airplanes of more than 6,000 pounds maximum weight and turbine engine-powered airplanes. Under the new performance-based regulations, the equivalent airplanes—considering the intent of former § 23.66—are levels 1 and 2 high-speed multiengine airplanes and all level 3 airplanes. Therefore, the FAA revises the proposed rule language to include levels 1 and 2 high-speed multiengine airplanes in addition to level 3 multiengine airplanes, to maintain the same level of safety as former § 23.66. However, because former § 23.66 did not apply to commuter-category airplanes—which were considered the equivalent of level 4 multiengine airplanes—§ 23.2125(a)(2) should not apply to all multiengine airplanes as doing so would make the rule more stringent than former § 23.66.

Textron noted the continuous reference to ''a critical loss of thrust'' in proposed § 23.125 and recommended the FAA refer to it as ''the critical loss of thrust.'' The FAA understands Textron's comment; however, the term ''the critical loss of thrust'' assumes there is a critical loss of thrust and that it is a known, finite condition for all multiengine airplanes. This may not be the case. The phrase ''a critical loss of thrust'' allows for the possibility that there is no critical loss of thrust or that different airplane configurations would have different critical loss of thrust conditions based on a specific configuration.

Textron recommended deleting the undefined phrase ''initial climb configuration'' from proposed § 23.125. Textron also recommended the FAA not require multiengine airplanes to be in the cruise configuration during the determination of climb performance in the enroute phase of flight. Textron explained that while the enroute phase of flight is typically associated with a ''clean'' airplane configuration, the applicant should be free to define this configuration.

The FAA agrees with Textron's intent, but does not accept Textron's recommendations. The FAA is requiring the airplane to be in the ''initial climb configuration'' in § 23.2125(a)(2) and the ''cruise configuration'' in § 23.2125(a)(3). However, the FAA is not defining ''initial climb configuration'' because a definition would be prescriptive and inflexible for new configurations, which would be contrary to this performance-based regulation. Paragraphs (a)(2) and (a)(3) capture the safety intent of former §§ 23.66 and 23.69, respectively. Former §§ 23.66 and 23.69 contained prescriptive requirements pertaining to the takeoff and enroute configurations, which were based on airplane designs over the past half-century. The FAA finds the new rules should include traditional configurations, but be flexible enough for new configurations in the future. These new configurations may be different from what was traditionally required in part 23 due to a unique propulsion, high lift, and/or flight control configuration. Therefore, § 23.2125(a)(2) and (a)(3) specify the configuration conditions in a performance-based manner that allows flexibility for the applicant to define what the configuration is in means of compliance.

Furthermore, based on another comment from Textron, the FAA deletes unnecessary text in paragraph (b) and moves the phrase ''single engine airplanes'' in the same paragraph to make the rule language of § 23.2125(b) read consistently with § 23.2125(a).

g. Landing (Proposed § 23.130/Now § 23.2130)

In the NPRM, proposed § 23.130 (now § 23.2130) would have required an applicant to determine the landing distance for standard temperatures at each weight and altitude within the operational limits for landing. The landing distance determination would start from a height of 50 feet (15 meters) above the landing surface, require the airplane to land and come to a stop (or for water operations, reach a speed of 3 knots) using approach and landing speeds, configurations, and procedures which allow a pilot of average skill to meet the landing distance consistently and without causing damage or injury. Proposed § 23.130 would have required these determinations for standard temperatures at each weight and altitude within the operational limits for landing.

Transport Canada stated proposed § 23.130 should require the landing performance to account for stall speed safety margins and minimum control speeds to maintain consistency with the take-off requirements in proposed § 23.115 (now § 23.2115) and to ensure the same level of safety as former part 23.

The FAA agrees the landing requirements of proposed § 23.130 (now § 23.2130) should expressly account for stall speed safety margins and minimum control speeds consistent with the takeoff performance requirements of proposed § 23.115 (now § 23.2115). Proposed § 23.130(b) would have generally required the determination of approach and landing speeds. As explained in the NPRM, the FAA intended proposed § 23.130 to capture the safety intent of former § 23.73, which required the reference landing approach speed to account for minimum control speed (V_{MC}) and V_{S1}. The FAA's intention to account for stall speed safety margins and minimum control speed, which would ensure the same level of safety as former § 23.73, was not clear in the proposed rule language. Accordingly, the FAA is adding language to paragraph § 23.2115(b) to clarify that an applicant must account for stall speed safety margins and minimum control speeds when determining the approach and landing speeds, configurations, and procedures.

Several commenters recommended clarifying changes to proposed § 23.130. The Associations recommended deleting the phrases ''the following'' and ''for landing'' in the introductory paragraph. Textron recommended various changes to proposed § 23.130(b), such as replacing ''meet'' with ''achieve,'' specifying that the landing distance is determined in proposed paragraph (a), and replacing ''causing damage or injury'' with ''endangering the airplane and its occupants.''

The FAA deletes the phrase ''for landing'' from the introductory paragraph of § 23.2130. This phrase is unnecessary because the section is about landing distance. However, the FAA retains the phrase ''the following'' for clarity. For § 23.2130(b), the FAA agrees that requiring a pilot of average skill ''to meet the landing distance'' is unclear, but will not replace the term ''meet'' because changing one word would not make the regulation any clearer. Instead, the FAA revises the language in § 23.2130(b) to require a pilot of average skill ''to land within the published landing distance'' and finds it unnecessary to specify in § 23.2130(b) that the landing distance is determined in § 23.2130(a). Lastly, the FAA retains the proposed language ''causing damage or injury'' because the commenter's recommended change is vague and could cause the regulations to be interpreted more stringently.

BendixKing suggested adding language to proposed § 23.130(a) that would require the speed of 3 knots for water operations to be relative to the surface in calm atmospheric conditions. Alternatively, the Associations recommended removing entirely the requirement for water operations to reach a speed of 3 knots. The commenters agreed that the term ''stop'' would differ for water and land operations, but asserted that the difference is not as simple as stating 3 knots. The commenters stated the appropriate method of compliance for determining a stop for seaplanes or amphibians should be contained in accepted standards.

The FAA agrees with the commenters and removes from the proposed rule language the requirement for water operations to reach a speed of 3 knots. The speed of 3 knots originated from AC 23–8C, which addresses water operations. Former § 23.75, the predecessor to § 23.130, required the airplane to come to a complete stop, and left the surface type undefined. The FAA intended to clarify rule language by specifying the speed of 3 knots to differentiate between land and water operations. However, in light of the comments, the proposed language added confusion and failed to allow the flexibility necessary for water operations. The FAA agrees with the commenters that the 3-knot reference is more appropriate as guidance. Accordingly, § 23.2130(a) now requires the applicant to determine the distance required to land and come to a stop, starting at a height of 50 feet above the landing surface. This change removes the need to address whether the speed of 3 knots must be relative to the surface in calm atmospheric conditions. The information necessary to comply with § 23.2130(a) will be addressed in means of compliance.

NJASAP said that wet runway data, as well as contaminated runway data, should be available for airplane certified to land under the conditions set forth in proposed § 23.130(a). NJASAP also suggested the FAA adopt concepts from the Takeoff and Landing Performance Assessment (TALPA) ARC. NJASAP pointed out that airplanes certified under part 135 fly in all weather conditions. Finally, NJASAP stated that runway excursions are a documented risk for these airplanes and this opportunity offers an additional enhancement.

While the FAA supports the NJASAP recommendation to make wet runway data available, doing so should not be a requirement. The TALPA ARC was primarily a part 25 effort targeting transport operations, not small airplane operations. The FAA is not adopting the TALPA ARC recommendations because they exceed former part 23 requirements and are therefore outside the scope of this rulemaking. The FAA recommends that NJASAP work with industry to add wet runway conditions to the industry consensus standards as possible means of compliance for airplanes used in part 135 operations.

ANAC recommended the FAA require the landing procedures to allow for a safe landing, or a transition to a balked landing configuration, as this would cover the intent of former § 23.75.

The FAA agrees that proposed § 23.130 (now § 23.2130) should address the safe transition to the balked landing conditions. The FAA intended proposed § 23.130 to capture the safety intent of former §§ 23.73 and 23.75. Former § 23.75 required a safe transition to the balked landing conditions of former § 23.77 from the conditions that existed at the 50-foot height. The balked landing conditions are now contained in § 23.2120(c), which captures the safety intent of former § 23.77. To ensure § 23.2130 contains the same level of safety as former § 23.75, the FAA revises the proposed rule language to require an applicant to determine the approach and landing speeds, configurations, and procedures that allow for a safe transition to the balked landing conditions specified in part 23.

The Associations also recommended the FAA clarify the introductory sentence of proposed § 23.130 by deleting ''each.'' The FAA agrees with this comment. Requiring determinations to be made at ''each'' combination of weight and altitude within the operational limits could be interpreted as requiring an infinite matrix of test points, which was not the FAA's intent. Rather than requiring the applicant to determine landing performance at ''each'' combination of weight and altitude within the operational limits, the FAA is requiring the determinations to be made at ''critical combinations'' of weight and altitude. This change is consistent with the change the FAA made to § 23.2100(b).

h. Controllability (Proposed § 23.200/ Now § 23.2135)

In the NPRM, proposed § 23.200 (now § 23.2135) would have required—

- The airplane to be controllable and maneuverable, without requiring exceptional piloting skill, alertness, or strength, within the operating envelope, at all loading conditions for which certification is requested. This would have included during low-speed operations, including stalls, with any probable flight control or propulsion system failure, and during configuration changes;
- The airplane to be able to complete a landing without causing damage or serious injury, in the landing configuration at a speed of V_{REF} minus 5 knots using the approach gradient equal to the steepest used in the landing distance determination;
- V_{MC} not to exceed V_{S1} or V_{S0} for all practical weights and configurations within the operating envelope of the airplane for levels 1 and 2 multiengine airplanes that cannot climb after a critical loss of thrust; and
- An applicant to demonstrate those aerobatic maneuvers for which certification is requested and determine entry speeds.

Kestrel questioned whether proposed § 23.200, which is intended to capture the requirements of former § 23.145, would be interpreted to include the former requirement to show the airplane can pitch nose downward when approaching stall, thus avoiding or recovering from stall, or, alternatively, whether the FAA found that requirement to be too prescriptive, representing only one possible means of compliance with the proposed controllability requirements.

The FAA intended proposed § 23.200 (now § 23.2135) to capture the safety intent of the former controllability §§ 23.141 through 23.157 and allow for other possible means of compliance appropriate to new or innovative designs. Therefore, proposed § 23.200 was not related only to former § 23.145 and was not intended to capture the specific requirements of former § 23.145, but did intend to capture its broader safety intent. The former requirement referenced by the commenter is prescriptive and provides a means of compliance for traditional configuration airplanes. Because it is possible for novel configurations and control schemes in the future to need different means of compliance, the FAA finds that the prescriptive language from former § 23.145 is more appropriate as means of compliance.

Textron commented on proposed § 23.200(a)(2). Textron pointed out that former § 23.143(a) and the proposal from the Part 23 ARC referenced ''all flight phases,'' which better captures the general intent of former § 23.143(a). Additionally, Textron stated that proposed § 23.215 addresses stall characteristics, making the stall aspect of proposed § 23.200(a)(2) redundant. Textron recommended the FAA maintain language similar to former part 23 by replacing the phrase ''low-speed operations, including stalls,'' with ''all flight phases.''

The FAA agrees with Textron. The FAA's intent in proposed § 23.200(a) (now § 23.2135(a)) was to capture the safety intent of former § 23.143, which required the airplane to be safely controllable and maneuverable during all phases of flight. The FAA agrees that the phrase ''all flight phases'' better captures the safety intent of former § 23.143(a). Additionally, upon further review, the language of proposed § 23.200(a)(2) is confusing because, while the FAA proposed to add requirements to essentially avoid the stall maneuver in proposed § 23.215, proposed § 23.200(a)(2) would have required controllability in the stall. While this is a desirable and recommended condition, the FAA does not want to add confusion. The stall requirements belong in proposed § 23.215 (now § 23.2150). For these reasons, the FAA adopts Textron's recommendation.

Textron also commented on proposed § 23.200(a)(3). Textron noted that former § 23.143 and the proposal from the Part 23 ARC did not address failures other than a response to a sudden engine failure. Textron also noted that proposed § 23.1315 already covers general airplane system or equipment failures. Textron claimed the requirements of proposed § 23.200(a)(3) could be interpreted as requiring demonstration of all probable flight control and propulsion failures in a flight-test environment, which the commenter said would not be practical or safe. Textron recommended maintaining the traditional scope of former subpart B controllability requirements, which included normal operations and, for multiengine airplanes, the response to critical loss of thrust, and using the methods employed for proposed § 23.1315 to evaluate responses to other failures.

In light of Textron's comment, the FAA finds it necessary to clarify that § 23.2135(a)(3) applies to ''reversible,'' which were traditionally mechanical flight controls, not ''irreversible'' flight controls. The FAA's intent in proposed § 23.200(a) was to capture the safety intent of former §§ 23.145(e) and 23.147(c), which required applicants to address mechanical control system failures. Historically, these requirements targeted control cable failures or push-pull tube disconnects. Former subpart F, which contained requirements on equipment, addressed powered- and computer-controlled flight control systems. Under this final rule, subpart F continues to address equipment, such as powered- and computer-controlled flight control systems, and § 23.2135 addresses mechanical control system failures, which is consistent with former §§ 23.145(e) and 23.147(c).

The Associations and EASA also addressed proposed § 23.200(a)(3).[25] The Associations recommended the FAA delete the word ''any'' from the phrase ''any probable flight control or propulsion system failure.'' EASA recommended the FAA replace the word ''probable'' with ''likely,'' to avoid creating ambiguity with probability definitions.

The FAA agrees the term ''any'' does not add value compared to the potential for confusion coming from an absolute qualifier. The FAA therefore deletes the word ''any'' in § 23.2135(a)(3).

The FAA also agrees the term ''probable'' has specific meaning relative to systems. Furthermore, the FAA expects a transition from mechanical flight controls to computer-controlled flight control systems, which are covered under the requirements in subpart F. Because the term ''probable''

[25] EASA actually referred to proposed § 23.200(a)(4) in its comment, but the FAA assumes EASA meant to refer to proposed § 23.200(a)(3), which is where the term ''probable'' is used.

has the potential to create confusion between the flight test requirements of subpart B and the systems requirements of subpart F, the FAA is using the term ''likely,'' rather than ''probable,'' which will reduce the potential for confusion while maintaining the intent of the requirement. For more detailed discussion on the use of ''likely'', please refer to the discussion on proposed § 23.205 (now § 23.2140).

The Associations commented on proposed § 23.200(b), stating that it does not account for preferred technologies, such as angle of attack indicators, for executing safe approach and landing procedures. The commenters recommended proposed paragraph (b) require the airplane to complete a safe landing when following the landing procedures; providing a safe margin below V_{ref} or above angle of attack. EASA recommended removing the configuration details and specific speed margin from proposed § 23.200(b) because future designs would not be able to comply with them.

The FAA agrees with these comments. The FAA intended proposed § 23.200(b) (now § 23.2135(b)) to capture the safety intent of former § 23.153 for control during landings. The FAA agrees that specifying a prescriptive speed of V_{ref} minus 5 knots, which former § 23.153 required, may not be appropriate for entry-level airplanes with very-low landing speeds and may not even apply to new configurations. The FAA therefore removes this prescriptive speed. Instead, the FAA is requiring a reasonable margin below V_{ref} or above approach angle of attack, as recommended by the Associations. This change from what was proposed is consistent with the safety intent of former § 23.153 as it requires a safe speed margin and it accounts for entry-level airplanes and new technology. The FAA also deletes the phrase ''equal to the steepest used in the landing distance determination'' and replaces it with ''steepest approved'' approach gradient procedures as this is clarifying.

Textron recommended proposed § 23.200(b) be modified to require the airplane to land without ''endangering the airplane and its occupants,'' rather than to land without ''causing damage or serious injury.''

The FAA finds that Textron's recommendation does not capture the safety intent of former § 23.153, which required safe completion of a landing. However, in light of Textron's comment, the FAA is clarifying the term ''damage.'' As proposed in the NPRM, the rule would not have allowed any damage, no matter how trivial. This was not the intent of former § 23.153. The FAA intended to capture the safety intent of former § 23.153 in proposed § 23.200(b) (now § 23.2135(b)); therefore, the FAA revises the proposed rule language by defining the damage that could be accepted during demonstration. Section 23.2135(b) now requires the airplane to be able to complete a landing without causing ''substantial'' damage or serious injury. Substantial damage is defined in 49 CFR part 830 as requiring major repairs and effectively preclude the use of the airplane for its intended purpose.

Textron also noted that proposed § 23.200 would not have required V_{MC} to be determined. ANAC and Textron recommended the FAA require V_{MC} to be determined, because it must be accounted for in the determination of takeoff performance. Textron recommended adding a new paragraph to proposed § 23.200. Textron recommended the new paragraph state V_{MC} is the calibrated airspeed at which, following the sudden critical loss of thrust, it is possible to maintain control of the airplane. For multiengine airplanes, the applicant must determine V_{MC} for each flight configuration used in takeoff and landing operations.

The FAA agrees the rule should require V_{MC} to be determined. Proposed § 23.200 was intended to capture the safety intent of former § 23.149, which defined and required the determination of V_{MC}. The FAA is adding language to § 23.2135(c) that is consistent with former § 23.149, but removes the prescriptive requirements of former § 23.149, such as the specific configuration requirements. Section 23.2135(c) now states that V_{MC} is the calibrated airspeed at which, following the sudden critical loss of thrust, it is possible to maintain control of the airplane. Section 23.2135(c) also requires the applicant to determine V_{MC}, if applicable, for the most critical configurations used in the takeoff and landing operations. The FAA is requiring the applicant to determine V_{MC} in the most ''critical'' configurations rather than in ''each'' configuration because requiring the determination at each configuration would present an infinite number of test points. Additionally, the FAA added the phrase ''if applicable'' to the rule language because there are multiengine airplanes that do not have a V_{MC}.

ANAC recommended proposed § 23.200(c) be written in a less prescriptive manner to allow for different technology solutions. ANAC stated that proposed § 23.200(c) should contain only the safety objective stated in the NPRM. For example, proposed § 23.200 should have stated that an airplane should not depart controlled flight at low speeds above stall as a result of asymmetric thrust.

The Associations stated that while proposed § 23.200(c) represented a potential solution to the typical accident scenario involving loss of control in multiengine airplanes, which are unable to climb on a single engine, there are other solutions that may be better depending on the design of the airplane. The commenters noted that instead of assuring V_{MC} is below the stall speed, solutions might include envelope protection, increased awareness of the loss of control condition, or automatic-power response. To ensure the rule allows the best solution for a particular design, the commenters recommended the FAA not adopt proposed § 23.200(c). Instead, the commenters recommended the section on loss of control, proposed § 23.215, require multi-engine airplanes, not certified for aerobatics, not have a tendency to suffer a loss of control after a likely critical loss of thrust. Several other commenters also expressed concerns about proposed § 23.200(c) and made similar recommendations.

As explained in the NPRM, the critical safety issue that the FAA intended proposed § 23.200(c) to address was the loss of control caused by asymmetric thrust. The FAA recognized in the NPRM concerns regarding the effectiveness of the proposed requirement in addressing loss of control caused by asymmetric thrust and requested comments on the proposal. In light of the comments received, the FAA is not adopting proposed § 23.200(c). The FAA agrees with ANAC and the Associations that the rule should allow for different technologies as design solutions to the identified safety issue. The FAA also agrees that § 23.2150 should include the requirement to address this loss of control issue. Therefore, the FAA adopts less prescriptive language similar to that recommended by the commenters, which is consistent with the intent of proposed § 23.200(c). This will allow for alternative design solutions. Section 23.2150(c) now requires levels 1 and 2 multiengine airplanes, not certified for aerobatics, to not have a tendency to inadvertently depart controlled flight from thrust asymmetry after a critical loss of thrust.

The Associations and EASA recommended the FAA apply this requirement to all multiengine airplanes, rather than only levels 1 and 2. The FAA is not adopting this recommendation. As explained in the NPRM, the FAA does not have the accident history data to support it. The FAA encourages manufacturers of levels

3 and 4 multiengine airplanes to incorporate safety features that prevent inadvertent departure as with levels 1 and 2 multiengine airplanes.

ICON commented an airplane designed in accordance with proposed § 23.200(c) would require less skill and presence of mind during an emergency, resulting in better safety.

While the FAA is not adopting proposed § 23.200(c), new § 23.2150(c) achieves the safety objective of proposed § 23.200(c).

Transport Canada noted the reason for requiring V_{MC} to be less than the stall speed is to avoid loss of control following an engine failure. Transport Canada suggested an airplane designed with a large enough rudder to meet this requirement may be more prone to inadvertent spin entries. Transport Canada recommended requiring all multiengine airplane to have a positive climb gradient following an engine failure.

As explained in the NPRM, while the Part 23 ARC discussed the option that all multiengine airplanes have guaranteed climb performance after a critical loss of thrust, the FAA ultimately rejected this option because it could impose a significant cost on the production of training airplanes.

i. Trim (Proposed § 23.205/Now § 23.2140)

In the NPRM, proposed § 23.205 (now § 23.2140) would have required the airplane to maintain longitudinal, lateral, and directional trim under various conditions, depending on the airplane's certification level, without allowing residual forces to fatigue or distract the pilot during likely emergency operations, including a critical loss of thrust on multiengine airplanes.

EASA commented the text of proposed § 23.205 failed to take into account residual forces for lateral and directional control for those level 1, 2, and 3 airplanes with ground-adjustable trim tabs.

The FAA agrees with EASA that while the FAA addressed ground-adjustable trim tabs for level 1, 2, and 3 airplanes, the proposed rule failed to account for residual forces in lateral and directional axes. The FAA intended for proposed § 23.205 to maintain the level of safety found in former § 23.161. Former § 23.161(a), which applied generally to all airplanes and to lateral, directional, and longitudinal trim, stated that it must be possible to ensure the pilot will not be unduly fatigued or distracted by the need to apply residual control forces exceeding those for prolonged application of former § 23.143(c) in normal operations of the airplane. In light of EASA's comment, the FAA recognizes that proposed § 23.205 (now § 23.2140) would only have prohibited residual control forces from fatiguing or distracting the pilot during likely emergency conditions. The FAA agrees with EASA that the rule should account for residual control forces in lateral and directional axes for levels 1, 2, and 3 airplanes. However, to maintain the same level of safety as former § 23.161, the rule should also account for residual control forces in longitudinal axes and should apply generally to levels 1, 2, 3, and 4 airplanes. Accordingly, the FAA is adding the requirement for residual control forces not to fatigue or distract the pilot during normal operations of the airplane to § 23.2140(c). This requirement is consistent with former § 23.161(a).

Textron noted that the reference ''normal operations'' would require all level 4 airplanes to be able to trim in all three axes from obstacle height to obstacle height. Textron contended that would seem to increase the burden from the former requirements in § 23.161, at least regarding lateral and directional trim.

The FAA considered Textron's comment, but is retaining the reference to ''normal operations'' in proposed § 23.205(a)(2) (now § 23.2140(a)(2)). While § 23.2140(a)(2) could be interpreted more stringently than former § 23.161(b)(2), the FAA never intended the proposed language to increase the burden from the previous requirements. Former § 23.161 required lateral and directional trim for commuter category airplanes, which are the equivalent of level 4 airplanes, at all speeds from $1.4V_{S1}$ to the lesser of V_H or V_{MO}/M_{MO}. The objective of the proposed rule was to allow the prescriptive requirements of former § 23.161 to be addressed in means of compliance. While specific speeds such as $1.4V_{S1}$ are appropriate as the lower speed limit for defining ''normal operations'' for traditional configurations of level 4 airplanes, it may not fit new airplanes with novel propulsion, high lift, and flight control system configurations. For this reason, the FAA finds the proposed language of ''normal operations'' best addresses the top-level safety requirement of former § 23.161(b)(2) while allowing the appropriate speed range to be addressed in means of compliance.

In reference not only to this section, but also to its use throughout the proposed rule, ANAC commented that the term ''likely'' is not precise and should be clarified or replaced with more precise terms such as ''probable'', ''remote'', or ''not extremely improbable.''

The FAA infers that ANAC recommended using a quantitative term, such as ''probable,'' because it is defined in guidance material. While the FAA agrees with ANAC's comment that the term ''likely'' is not precise, the FAA intends to allow some imprecision for the objective of providing performance-based standards that are sufficiently flexible to accommodate new technologies. The term ''likely'' was chosen to mean a reasonable expectation based on the existing conditions. This is consistent with the former usage of the term throughout part 23. Clarification of what should or should not be considered likely for a particular rule will be provided in the means of compliance.

Textron recommended deleting the qualifying term ''likely'' from proposed § 23.205(c) because it would be subject to interpretation. Textron also recommended adding abnormal operations to those operations during which residual control forces must not fatigue or distract the pilot. Lastly, Textron recommended a few editorial changes, including adding the term ''control'' to residual forces.

While Textron took exception to the word ''likely'' to describe emergency operations, the FAA finds the term to be appropriate in this case. Deleting the qualifier ''likely'' could actually lead to more stringent interpretations of the requirement. The term ''likely'' bounds the requirement within rational and probable emergencies. Simply using the term ''emergency'' could be construed as requiring an applicant to address any possible emergency regardless of how improbable it is.

The FAA agrees with Textron concerning the addition of abnormal operations. Former § 23.161 referenced the specific condition of an engine failure, which would have been based on traditional engine configuration on the wing. Looking ahead, that failure condition could be considered an abnormal and/or an emergency operation depending on the number of engines, location, and control of the engines. Furthermore, there may be other types of failures where trim would be important. For these reasons, the FAA finds that addressing the situation using the performance-based terms of ''abnormal'' and ''emergency'' is appropriate and consistent with the objective of providing performance-based standards that are sufficiently flexible to accommodate new technologies.

The FAA also agrees with Textron's recommendation to add ''control'' to residual forces. The FAA notes that former § 23.161 referenced ''residual control forces,'' not ''residual forces.'' This was an oversight in the NPRM. Accordingly, § 23.2140(c) now prohibits residual control forces from fatiguing or distracting the pilot during likely abnormal or emergency operations.

The Associations and Textron recommended streamlining the proposed rule language by moving a phrase that appeared twice in proposed § 23.205(a)(1) and (2) to a single, earlier reference in proposed § 23.205(a).

The FAA agrees with the commenters and has adopted their recommendation. Section 23.2140(a) now requires the airplane to maintain lateral and directional trim without further force upon, or movement of, the primary flight controls or corresponding trim controls by the pilot, or the flight control system, under the conditions specified in paragraphs (a)(1) and (a)(2). This marks a change from what was proposed in the NPRM in that paragraph (a) no longer addresses longitudinal trim. The FAA removed the reference to longitudinal trim in paragraph (a) because longitudinal trim is addressed by paragraph (b).

Furthermore, the FAA is adding language to paragraph (b) that requires the longitudinal trim to be maintained without further force upon, or movement of, the primary flight controls or corresponding trim controls by the pilot, or the flight control system, under the conditions specified in paragraphs (b)(1) through (b)(4). This requirement, which is consistent with the intent of the NPRM, ensures § 23.2140(b) maintains the same level of safety as former § 23.161. Former § 23.161(a) required each airplane to meet the trim requirements of former § 23.161 after being trimmed and without further pressure upon, or movement of, the primary flight controls or their corresponding trim controls by the pilot or the automatic pilot. This requirement applied generally to lateral, directional, and longitudinal trim.

j. Stability (Proposed § 23.210/Now § 23.2145)

In the NPRM, proposed § 23.210 (now § 23.2145) would have required airplanes not certified for aerobatics to have the following in normal operations: (1) Static longitudinal, lateral, and directional stability, and (2) dynamic short period and combined lateral directional stability. Proposed § 23.210 would have also required airplanes not certified for aerobatics to provide stable control force feedback throughout the operating envelope. Additionally, proposed § 23.210 would have precluded any airplane from exhibiting any divergent stability characteristic so unstable as to increase the pilot's workload or otherwise endanger the airplane and its occupants.

Kestrel suggested removing the phrase ''in normal operations'' from proposed § 23.210(a)(1) because it could be interpreted to mean that static stability is not required in abnormal operations.

The FAA understands Kestrel's concern with the phrase ''in normal operations'' in the proposed language. However, the FAA intended proposed § 23.210(a) (now § 23.2145(a)) to capture the safety intent of the stability sections in former part 23, which did not require demonstrations in abnormal or emergency conditions. Former § 23.171 required an airplane to show static stability in ''any condition normally encountered in service,'' which the FAA considers to be normal operations. The former requirements have provided an acceptable level of safety. The FAA adopts the proposed language in § 23.2145(a)(1) as proposed.

Optimal stated that proposed § 23.210(a)(2) appears to require that all lateral modes be stable, implying that airplane need to be spirally stable. This commenter indicated that most airplane have divergent spiral modes and therefore could not meet this requirement as proposed.

The FAA agrees with Optimal that the proposed requirement could be interpreted as including spiral mode. The FAA intended proposed § 23.210(a)(2) to capture the short period and Dutch-roll stability that former part 23 required. ''Combined lateral-directional oscillations'' means ''Dutch roll.'' The FAA revises the language in § 23.2145(a)(2) to replace ''combined lateral-directional stability'' with ''Dutch roll'' stability.

ANAC suggested including the terms ''adequate'' or ''appropriate'' to qualify dynamic stability in proposed § 23.210(a)(2).[26] ANAC stated that requiring only a showing of stability may allow for the interpretation that ''marginally stable'' is acceptable, while current part 23 has minimum damping factors prescribed.

The FAA agrees with ANAC that requiring only stability without a qualifier could allow for interpretations outside of the prescriptive standards of former part 23. However, the FAA does not agree with qualifying stability in § 23.2145(a)(2). Under the new part 23, applicants will have to propose a means of compliance. While this is a significant change from the former part 23, the language in § 23.2145(a)(2) will enable the FAA to accept the current prescriptive limits as a means of compliance. Alternatively, if a new technology requires something different, the FAA can accept what is appropriate.

[26] ANAC actually addressed this comment to § 23.205(a)(2), but it appears it was supposed to address § 23.210(a)(2).

NJASAP suggested the ''Dutch roll'' characteristic on the EMB505 airplane is close to the language used in proposed § 23.210(b). NJASAP sought to ensure any stability system used to comply with this section is not so dependent on Global Positioning System (GPS) technology that its loss or interruption could cause the electronic augmentation system to fail.

NJASAP's comment is outside the scope of this section as the FAA proposed § 23.210 (now § 23.2145) to include requirements for flight controls, not for their underlying systems. The FAA notes, however, that flight control systems used to comply with this section must also meet the system requirements of subpart F, which adequately address the commenter's concern.

k. Stall Characteristics, Stall Warning, and Spins (Proposed § 23.215/Now § 23.2150)

In the NPRM, proposed § 23.215 (now § 23.2150) would have required an airplane to have controllable stall characteristics in straight flight, turning flight, and accelerated turning flight with a clear and distinctive stall warning that provides sufficient margin to prevent inadvertent stalling. Proposed § 23.215 would have allowed for alternative approaches to meeting this requirement for levels 1 and 2 airplanes and level 3 single-engine airplanes, not certified for aerobatics, in order to avoid a tendency to inadvertently depart controlled flight. Proposed § 23.215 would have also required airplanes certified for aerobatics to have controllable stall characteristics and the ability to recover within one and one-half additional turns after initiation of the first control action from any point in a spin, not exceeding six turns or any greater number of turns for which certification is requested while remaining within the operating limitations of the airplane. Proposed § 23.215 would have also precluded airplanes certified for aerobatics from having spin characteristics that would result in unrecoverable spins due to pilot disorientation or incapacitation or any use of the flight or engine power controls.

Garmin commented that while the proposal contained a lengthy discussion about requirements to improve the airplane's resistance to departing controlled flight, proposed § 23.215(a) would only have required the airplane to have controllable stall characteristics in straight, turning and accelerated flight. Garmin stated there was no mention of flight characteristics related to control usage at the stall that does not precisely and correctly control the stall. As an example, Garmin noted an applicant can comply with the rule and have an airplane that is controllable through a stall if flown correctly, but if not flown correctly, can enter an uncontrollable spin if the airplane is allowed to stall while not precisely coordinated. Garmin recommended the FAA change either the rule or the preamble to be consistent with each other.

The FAA acknowledges the NPRM preamble discussion may have been unclear. The FAA only intended proposed § 23.215(b) (now § 23.2150(b) to improve an airplane's resistance to departing controlled flight. This increase in level of safety applied only to the smaller part 23 airplanes, not all part 23 airplanes. Furthermore, the FAA intended for proposed § 23.215(a) to capture the safety intent of former §§ 23.201 and 23.203. Garmin's example will continue to be true for airplanes not required to meet § 23.2150(b). The FAA notes that § 23.2150(a) will not include requirements related to conditions and control usage at the stall. While former §§ 23.201 and 23.203 included these requirements, the FAA finds they are better addressed in means of compliance.

The FAA notes the details from these former rules will be addressed in the means of compliance and will remain essentially unchanged, especially for larger, higher-performance airplanes. The reason is that the accident history of the larger airplanes does not warrant the change. The means of compliance for the level 1 and 2 airplanes and level 3 single-engine airplanes is expected to allow for more alternative approaches from what is acceptable today to meet the higher level of safety in this rule.

Textron and the Associations commented that § 23.215(b) should not require multiengine airplanes to not have a tendency to inadvertently depart controlled flight. The commenters explained that loss of control accidents involving multiengine airplanes result mostly from pilots failing to maintain directional control following a critical loss of thrust. Textron noted that this concern is being addressed by proposed § 23.200(c), which proposes new requirements for airplanes that cannot climb after a critical loss of thrust. Textron also noted former § 23.221 was not a requirement for multiengine airplanes and that proposed § 23.215(b) would have represented a significant new burden with no safety justification.

The Associations stated it believed loss of control accidents predominately involve single-engine airplanes, or multiengine airplanes during a critical loss of thrust event. The Associations recommended that the FAA revise proposed § 23.215 to ensure the loss of control requirements are applied in a manner that will maximize safety while being applied in an efficient manner. The Associations specifically recommended the FAA revise proposed § 23.215 to require multiengine airplanes, not certified for aerobatics, to not have a tendency to suffer a loss of control after a likely critical loss of thrust. This would be an alternative to adopting proposed § 23.200(c). The Associations also recommended the FAA revise the proposed § 23.215(b) to require single-engine airplanes, not certified for aerobatics, to not have a tendency to inadvertently depart controlled flight.

The FAA agrees that proposed § 23.215(b) (now § 23.2150(b)) should apply only to single-engine airplanes. The FAA proposed to apply paragraph (b) to level 1 and 2 multiengine airplanes in an attempt to address the loss of control accidents in light multiengine airplanes that can occur after an engine failure if the pilot does not maintain a safe single-engine speed. However, as noted by Textron, the FAA proposed § 23.200(c) to address this safety issue by requiring that V_{mc} not exceed V_{s1} or V_{so}. In light of the comments, the FAA recognizes it is more appropriate to address the loss of control issue for light multiengine airplanes in § 23.2150 rather than § 23.2135 because it is redundant to address the issue in both sections. The FAA revises § 23.2150(b) in this final rule to reflect that it only applies to single-engine airplanes in all certification levels to be consistent with former § 23.221. While the FAA did not propose in the NPRM that level 4 single-engine airplanes would be subject to this requirement, extending this requirement to such airplanes is a logical outgrowth from the proposal because the same safety benefit applies regardless of certification level. Also, the FAA finds no valid technical basis for excluding level 4 airplanes from this requirement. The airplane categories in former part 23 did not provide for certification of single-engine airplanes with passenger capacities greater than nine; however, it is possible that applicants may seek approval for such an airplane in the future. In such cases, these airplanes will have the same level of safety as smaller single-engine airplanes.

As discussed in the preamble discussion of § 23.2135, the FAA is withdrawing proposed § 23.200(c) and adding a new § 23.2150(c). Paragraph (c) requires levels 1 and 2 multiengine airplanes, not certified for aerobatics, to not have a tendency to inadvertently depart controlled flight from thrust asymmetry after a critical loss of thrust. The FAA finds that paragraphs (b) and (c), as revised, more accurately reflect the FAA's intent regarding the prevention of loss of control accidents in both single and multi-engine airplanes.

EASA commented that proposed § 23.215(b) would not have provided the flexibility needed for future designs. EASA recommended the FAA allow levels 1 and 2 airplanes and level 3 single-engine airplanes not certified for aerobatics to meet one of three alternatives: (1) Not to have the tendency to inadvertently depart controlled flight; (2) have a benign behavior when departing controlled flight; or (3) have a system preventing departure from controlled flight.

While the FAA understands EASA's recommended approach, § 23.2150(b) and (c) contain the most significant safety improvements in this rulemaking effort. Any departure from controlled flight is likely to result in a fatal accident unless an experienced pilot demonstrating spins in an aerobatic airplane intentionally does it. Allowing levels 1 or 2 airplanes or level 3 single-engine airplanes to have a benign behavior when departing controlled flight would not meet the FAA's safety objective for airplanes that are not certified for aerobatics. The FAA notes that an airplane that can depart controlled flight with benign behavior can inadvertently depart controlled flight. Furthermore, having a system that prevents departure from controlled flight may be a means of compliance for § 23.2150(b). Therefore, the FAA finds it inappropriate to offer it as an alternative in the regulation.

The FAA did not intend § 23.2150(b) to be absolute in that ''spin resistance'' is the only way to meet the rule. An airplane using enhanced stall warnings and envelope protection could be very difficult to depart from controlled flight and comply with § 23.2150(b). That same airplane, with some effort, could be made to spin (depart controlled flight) and have good recovery capability and still—because of the stall characteristics and the enhanced warning and systems protection—comply with the new requirement. The

FAA is working on means of compliance that will allow numerous combinations of airframe and systems approaches to complying with the new requirement so that applicants have alternative ways to comply with the regulation. Furthermore, this approach will encourage the development of new innovative technology that targets resistance to departure from controlled flight.

Several commenters took issue with the proposed requirement in § 23.215(b) that certain airplanes must not have a tendency to inadvertently depart controlled flight. Air Tractor, Optimal, and an individual commenter noted the proposal does not define this phrase. The individual commenter asked whether this phrase includes proper use of flight controls, improper use of flight controls, conditions beyond and per former § 23.221(a)(2) for spin resistance. Air Tractor stated it would be difficult to prove an airplane meets this requirement.

The FAA purposely used language that would allow flexibility in showing compliance. The FAA recognizes the lack of clear, detailed requirements may increase the difficulty of proving that the airplane meets this requirement. However, the FAA finds providing clear, detailed requirements would prevent the acceptance of alternative approaches to this safety problem. It could also prevent the use of new technology, which would discourage the development of even newer technology. As explained in the NPRM, the FAA envisions numerous alternative approaches to meeting this requirement, ranging from a stick pusher to full spin resistance. The FAA is relying on industry to develop acceptable means of compliance beyond these two acceptable approaches for this requirement, should industry fully leverage the flexibility the FAA built into the rule. The FAA is also relying on industry to incorporate new technologies into the airplane to address stall-based accidents. Currently, the ASTM committee is maturing an innovative approach that incorporates many of the variables associated with stall characteristics to prevent inadvertent departures from controlled flights.

Air Tractor expressed concern that it may not be able to comply with the intent of the proposed requirement because its airplanes are designed to operate close to the ground and sometimes close to a stall. According to Air Tractor, if it were to add some kind of substantial departure resistance to prevent inadvertent stalls resulting in a departure from controlled flight, as described in the NPRM, this modification could potentially increase pilot fatigue significantly.

The FAA notes that Air Tractor's airplanes are certified in restricted category and have the latitude to modify the part 23 requirements where necessary. For example, as Air Tractor pointed out, its airplanes are designed to operate close to the ground and sometimes close to a stall. For this reason, Air Tractor did not have to meet the one-turn spin requirement from former part 23 as specified on TCDS Number A19SW. However, because Air Tractor's airplanes are operated close to the ground and sometimes close to a stall, characteristics or features that prevent inadvertent departure would be desirable, unless these characteristics or features add control forces that fatigue the pilot or reduce maneuverability. The FAA finds these issues apply only to a small subset of airplanes and can be addressed most efficiently and effectively in the certification context, rather than by revising the regulatory text. Optimal expressed concern with unintended consequences that may result from imposing departure from controlled flight resistance requirements. Specifically, it questioned whether proposed § 23.215(b) can be satisfied without compromising other aspects of the airplane's performance and handling.

The FAA notes that, historically, when only using traditional mechanical controls, there are performance and handling tradeoffs that can come from imposing departure resistance requirements. This is one reason the FAA has been reluctant to push for departure resistant characteristics in the past. However, the development, availability, and cost of new technology to address departure resistance have matured such that the FAA believes it is time to introduce this requirement to reduce loss of control accidents. Aerodynamics and systems combined can address departure resistance without compromising performance and handling. The FAA will not accept a means of compliance that has a detrimental effect on safety.

Transport Canada questioned whether proposed § 23.215(b) would result in designs that have a significant effect on the loss of control accident rate and asked what the flight test requirements would be for demonstrating compliance with paragraph (b). American Champion Aircraft Corporation (American Champion) stated the regulation should provide a means to determine acceptable departure resistance, or a description of an acceptable means of compliance.

The FAA recognizes that the means of compliance will be very important in the success of this requirement to improve safety. The FAA adopts a general performance-based requirement in § 23.2150(b) to enable numerous alternative approaches to meet the requirement. For this reason, it is impossible to specify a single set of flight test requirements. The flight test requirements will depend on the applicant's approach to complying with this rule and the means of compliance it uses. It would have been impossible to adopt requirements for all combinations of safety features and characteristics that reduce the tendency to inadvertently depart controlled flight in the requirements themselves. However, applicants can still use the spin resistance requirements from former § 23.221 for spins, and a stick pusher compliant with former § 23.691 for artificial stall barrier systems. Additionally, ASTM is developing an expandable matrix concept that will allow credit for combinations of stall warning, stall/envelope protection, and flight characteristics. This matrix should result in not only encouraging manufacturers to install more safety enhancing equipment, but more importantly, it will also encourage the development of innovative approaches to preventing inadvertent departure because of the speed at which new technology can be incorporated into the certification process. To address the wide range of airplane characteristics and solutions, the FAA is adopting a standard that the airplane may not have tendency to inadvertently depart controlled flight.

American Champion noted inconsistencies with the required degree of departure resistance throughout the NPRM. For example, the commenter noted proposed § 23.215(b) stated ''must not have a tendency to inadvertently depart controlled flight.'' Section V of the NPRM referred to departure resistant as ''stall characteristics that make it very difficult for the airplane to depart controlled flight,'' and section VI states certification levels would have required ''substantial departure resistance.'' American Champion recommended the FAA clarify the degree of departure resistance intended by proposed § 23.215(b).

The FAA notes § 23.2150(b) states that single-engine airplanes, not certified for aerobatics, ''must not have a tendency'' to inadvertently depart controlled flight. Therefore, ''must not have a tendency'' is the standard. The FAA acknowledges, however, that the NPRM discussions should have been more consistent when discussing the proposed rule language.

Optimal expressed concern about removing the requirement for single-engine airplanes not certified for aerobatics to recover from a one-turn/three-second spin at this time because pilots have been adept at finding unanticipated ways to get spin resistant airplanes to depart from controlled flight and because airplanes that are the most reluctant to spin tend to be the most reluctant to recover. Optimal recommended the FAA retain the requirement to recover from an incipient spin until sufficient certification and operational experience has been acquired with departure resistant airplanes.

The FAA removes the requirement for the one-turn/three-second spin for normal category single-engine airplanes. Historically, airplanes that were reluctant to spin tended to be reluctant to recover. This history is based on airplanes with inherent stability and reversible controls, which to date are all small airplanes. The FAA intentionally focused on the prevention of the conditions that lead to an inadvertent spin (departing controlled flight) versus the historical focus on spin recovery. For decades, the FAA has focused on spin recovery in certification programs only to have those same certified airplanes depart controlled flight at altitudes so low that even experienced pilots could not recover. For decades, this scenario has accounted for a large percentage of fatal accidents. The FAA has to change the approach to certification in order to reduce the number of departure from controlled flight fatal accidents.

Kestrel expressed concern that demonstrating compliance to proposed § 23.215(d) would be prohibitively expensive and potentially impossible. Kestrel suggested the FAA modify the proposed rule language to read ''with any typical use of the flight or engine power controls.''

The FAA agrees that proposed § 23.215(d)(1) (now § 23.2150(e)(1)) could have been interpreted as imposing an unbounded requirement, which was not the FAA's intent. The FAA revises the proposed rule language as Kestrel suggested.

EASA commented that proposed § 23.215(d)(2) (now § 23.2150(e)(2)) would have contained a flightcrew interface requirement that does not belong in the airworthiness (design) requirements. EASA recommended the FAA move this requirement to subpart G, which addresses flightcrew interface requirements.

The FAA is retaining the requirement in subpart B because it originated from former subpart B, § 23.221(c). The FAA finds that keeping it in the same subpart, in this instance, will avoid confusion.

American Champion commented that it is unnecessary to restrict certification of dual-purpose airplanes by requiring a mechanical or electronic change, as described in the NPRM, because airplanes can both meet the enhanced stall characteristics and also be suitable for some aerobatic maneuvers. The commenter noted that departure resistance, proposed § 23.215(b), does not preclude an airplane from aerobatic maneuvering, although it may affect the ability of the airplane to enter a spin.

The FAA proposed to restrict certification of new airplanes for dual use to prevent inadvertent stalls, which was one of the proposal's objectives. If an airplane can spin for spin training, then the airplane can inadvertently stall and depart into a spin during normal operations. In light of American Champion's comment, however, the FAA acknowledges there may be airplanes in the future that are approved for limited aerobatics that do not include spins. This would be similar to military fighter airplane. The military approach has historically been to explore thoroughly the post stall regime including spins and departures from controlled flight that do not result in traditional spins. This is done in the military and for civilian aerobatic airplanes to address the situation where a mistake during a planned maneuver results in departing controlled flight. The FAA can envision a flight control system that could prevent departures from all approved maneuvers. To the FAA's knowledge, the F–16 flight control system has been very successful in preventing inadvertent departures from controlled flight even though these airplane are frequently flown ''acrobatically.'' For these reasons, the FAA may allow certification of a new airplane for dual use even if the airplane is not approved for spins. However, an applicant proposing a system, such as a flight control system that could prevent departure from controlled flight during normal operations, should expect to work with the FAA to thoroughly address FAA concerns for safe margins from inadvertent departure from controlled flight.

Proposed § 23.215(d) would have precluded airplanes certified for aerobatics from having spin characteristics that would result in unrecoverable spins due to pilot disorientation or incapacitation or any use of the flight or engine power controls. Upon further reflection, the FAA revises the proposed rule language to require spin characteristics in airplanes certified for aerobatics to recover ''without exceeding limitations.'' The FAA inadvertently omitted this clause from proposed § 23.215(d) (now§ 23.2150(e)), which was intended to capture the safety intent of former § 23.221(c). Former § 23.221(c) required the applicable airspeed limits and limit maneuvering load factors not to be exceeded. Additionally, including this clause in the requirement will better align the FAA language with EASA's NPA language.

The NTSB commented that while it supports reducing the rate of loss of control accidents in general aviation, it is unclear how proposed §§ 23.200 and 23.215 would have accomplished this. The NTSB explained that the only link it sees to reducing loss of control accidents is the change to V_{MC} and asked the FAA to clarify exactly how the revisions will reduce loss of control accidents.

The FAA notes that the NPRM included a substantial discussion explaining how the FAA envisions the rule reducing loss of control accidents. The new rules allow alternative approaches that an applicant may use, ranging from a stick pusher to full spin resistance. Adding flexibility to the rule will allow alternate approaches to address inadvertent departure by using combinations of new technology not addressed in the former requirements. These alternatives will be addressed in means of compliance. There is no ''exact'' approach to meet the new rule because the objective is to encourage new approaches to loss of control that are more effective than the ones that are failing us today.

Additionally, the NTSB submitted detailed comments on the stall departure characteristic exception in the ASTM standard. The FAA will address these comments in the AC because these comments are on the acceptability of an ASTM standard as a means of compliance rather than on the proposed rule.

l. Ground and Watering Handling Characteristics (Proposed § 23.220/Now § 23.2155)

In the NPRM, proposed § 23.220 (now § 23.2155) would have required airplanes intended for operation on land or water to have controllable longitudinal, and directional handling characteristics during taxi, takeoff, and landing operations. Proposed § 23.220 would have also required an applicant to establish a maximum wave height shown to provide for controllable longitudinal, and directional handling characteristics and any necessary water handling procedures for those airplanes intended for operation on water.

Textron and the Associations noted that the FAA proposed to remove the prescriptive requirements related to establishing demonstrated crosswind capability from former § 23.233, but proposed to retain similar requirements for water operations to establish wave height criteria. These commenters stated that operational specificity related to water landings should be addressed in means of compliance standards and recommended that the FAA not adopt proposed § 23.220(b).

The FAA agrees with the commenters that proposed § 23.220(b) would have been overly prescriptive for water operations and that it would be more appropriate as a means of compliance. While proposed § 23.220(a) would have included the top-level safety requirements for both land and water operations, proposed § 23.220(b) would have been inconsistent with the approach taken for land airplanes as it would have contained prescriptive requirements only for airplanes intended for operation on water. Accordingly, the FAA is not adopting proposed § 23.220(b). The information necessary to comply with proposed § 23.220(a) (now § 23.2155 in its entirety) and the method to communicate that information to the pilot will be addressed in means of compliance with this section.

EASA also recommended that the FAA not adopt proposed § 23.220(b). EASA explained that the AFM requirements in subpart G should cover ''how-to'' information and how that information is provided to the pilot, as proposed in the NPRM. Therefore, proposed § 23.220(b) should not require what must be included in the AFM.

The FAA agrees with EASA that the information is more appropriately addressed in the AFM means of compliance. The AFM requirements are located in subpart G.

m. Vibration, Buffeting, and High-Speed Characteristics (Proposed § 23.225/Now § 23.2160)

In the NPRM, proposed § 23.225 (now § 23.2160) would have—

- Precluded vibration and buffeting from interfering with the control of the airplane or causing fatigue to the flightcrew, for operations up to V_D/M_D;
- Allowed stall warning buffet within these limits;
- Precluded perceptible buffeting in cruise configuration at 1g and at any speed up to V_{MO}/M_{MO}, except stall buffeting for high-speed airplanes and all airplanes with a maximum operating altitude greater than 25,000 feet (7,620 meters) pressure altitude;
- Required an applicant seeking certification of a high-speed airplane to determine the positive maneuvering load factors at which the onset of perceptible buffet occurs in the cruise configuration within the operational envelope and preclude likely inadvertent excursions beyond this boundary from resulting in structural damage; and
- Required high-speed airplanes to have recovery characteristics that do not result in structural damage or loss of control, beginning at any likely speed up to V_{MO}/M_{MO}, following an inadvertent speed increase and a high-speed trim upset.

Textron and the Associations noted that the language from which proposed § 23.220(a) originated (former § 23.251) included the term ''excessive fatigue,'' rather than ''fatigue.'' These commenters recommended that the FAA use the term ''excessive fatigue'' in proposed § 23.220(a). Textron explained that by omitting the term ''excessive,'' any perceptible level of fatigue could be considered unacceptable and the proposal would result in an unwarranted change in standards for vibration.

The FAA agrees with the commenters and is adding the term ''excessive'' to § 23.2160(a).

ICON contended that proposed § 23.225(b) would have been fine for landplanes, but not for seaplanes because seaplanes, with their hull step, will always have some buffet in cruise. Additionally, ICON noted that airplane with windows removed will have perceptible buffeting at all speeds.

The FAA agrees with ICON that seaplanes and floatplanes routinely operate with a limited amount of buffet during normal operation. The FAA did not intend for proposed § 23.225(b) to increase the level of safety over former § 23.251, which allowed for the limited buffeting normal to seaplanes and floatplanes. Historically, this level of buffeting has not interfered with the control of the airplane or caused excessive fatigue to the pilot. Because the proposed rule language originated from former § 23.251, the FAA finds that it does not create a new certification burden on applicants with seaplanes or floatplanes. Accordingly, the FAA adopts the language as proposed. Furthermore, airplanes approved for operations without doors or windows, or those that allow the windows to open in flight, were not intended to be addressed under this rule.

Textron and the Associations noted that the former requirement for a high-speed trim upset (former § 23.255) applied to designs with adjustable horizontal stabilizers. However, the FAA did not specify whether proposed § 23.220(d)(2) would have been limited to airplanes with adjustable horizontal stabilizers. Textron explained that, as proposed, § 23.220(d)(2) would have contained an additional requirement for high-speed airplanes that did not have trimmable horizontal stabilizers. The commenters recommended the FAA limit the application of proposed § 23.220(d)(2) to airplanes that incorporate a flight adjustable horizontal stabilizer.

The FAA intended to keep this requirement as general as possible, not to propose a new requirement on high-speed airplanes that lacked trimmable horizontal stabilizer. As stated in the NPRM, the FAA intended proposed § 23.220(d)(2) (now § 23.2160(d)(2)) to address the current safety intent of former § 23.255, which applied only to airplanes that included trimmable horizontal stabilizers. The FAA adopts language in § 23.2160(d)(2) to clarify that the requirement applies only to airplanes that incorporate trimmable horizontal stabilizers.

n. Performance and Flight Characteristics Requirements for Flight in Icing Conditions (Proposed § 23.230/Now § 23.2165)

In the NPRM, proposed § 23.230 (now § 23.2165) would have required—

- An applicant requesting certification for flight in icing conditions to demonstrate compliance with each requirement of this subpart. Exceptions to this rule would have been requirements applicable to spins and any requirement that would have to be demonstrated at speeds in excess of 250 KCAS, V_{MO} or M_{MO}, or a speed at which an applicant demonstrates the airframe would be free of ice accretion;
- The stall warning for flight in icing conditions and non-icing conditions to be the same.
- An applicant requesting certification for flight in icing conditions to provide a means to detect any icing conditions for which certification is not requested and demonstrate the airplane's ability to avoid or exit those conditions; and
- An applicant to develop an operating limitation to prohibit intentional flight, including takeoff and landing, into icing conditions for which the airplane is not certified to operate.

Proposed § 23.230 would have also added optional icing conditions where a manufacturer may demonstrate its airplane can either safely operate in, detect and safely exit, or avoid. Finally, proposed § 23.230 would have only applied to applicants seeking certification for flight in icing.

NJASAP stated it viewed proposed § 23.230 as a safety enhancement and noted that several accidents have demonstrated a benefit to having one stall standard—meaning the airplane should be able to remain largely free of ice in conditions within which it is certified to operate. The NTSB stated that adopting proposed §§ 23.230 and 23.1405 will likely result in Safety Recommendation A–96–54 being classified as ''Closed—Acceptable Action.''

Textron and the Associations asked the FAA to clarify that proposed § 23.230(a) applies to the airplane's ice protection system when it is operating normally, not when it is in a failed or degraded mode. Therefore, rather than requiring the applicant to demonstrate the requirements of proposed paragraphs (a)(1) and (a)(2), the Associations recommended that the FAA require the normally-operating airplane ice protection systems to include the requirements of proposed paragraphs (a)(1) and (a)(2).

The FAA agrees with the comments made by the Associations and Textron, and the FAA adopts language to clarify that § 23.2165(a) applies to the normal operation of an ice protection system. Accordingly, § 23.2165(a) now requires the applicant to demonstrate the requirements of paragraphs (a)(1) and (a)(2) under the normal operation of the ice protection system.

The FAA is also changing the language in § 23.2165(a) to clarify that § 23.2165 applies to an applicant who requests certification for flight in icing conditions defined in part 1 of appendix C to part 25, or to an applicant who requests certification for flight in these icing conditions and any additional atmospheric icing conditions. This change better reflects the FAA's intent.[27]

Additionally, the FAA is using the phrase ''must show'' rather than ''must demonstrate'' in § 23.2165(a), because ''must demonstrate'' may be interpreted as requiring a flight test, as Textron suggested in its comment on proposed § 23.230(b) (discussed later). This change is consistent with the NPRM, which explained that demonstration, as a means of compliance, may include design review and/or analysis and does not mean flight tests are required.[28]

The FAA is also adding the never-exceed speed (V_{NE}) to the exception in § 23.2165(a), under paragraph (a)(1)(ii), to correct an inadvertent omission in the proposal. Because proposed § 23.230(a)(1)(ii) was intended to apply to both piston and turbine airplanes, the addition of V_{NE} is necessary as the proposed V_{MO}/M_{MO} would only have applied to turbine airplanes. This change from what was proposed is consistent with the current guidance in AC 23.1419–2D.

BendixKing, Daher,[29] the Associations, Kestrel, and Textron all requested clarification of the wording of proposed § 23.230(a)(2), which proposed that the applicant must demonstrate that the stall warning for flight in the icing conditions and non-icing conditions is ''the same.'' Several of the commenters explained that the stall warning in icing conditions needs to provide a similar notification as the stall warning in non-icing conditions, but it does not need to occur in the same way.

Textron similarly stated that proposed § 23.230(a)(2) could be interpreted as indicating that the stall warning must be the same in all of its aspects, which should not be the intent. Textron explained that the stall warning system in icing conditions cannot be the same as in non-icing conditions because some designs require a different angle of attack schedule in icing to obtain the same airspeed margin between stall warning and stall. Textron recommended requiring ''the means by which stall warning is provided to the pilot'' to be the same in icing and non-icing conditions.

In response to the comments on proposed § 23.230(a)(2), the FAA did not intend to require the stall warning to be the same in all material aspects for flight in icing conditions and non-icing conditions. Rather, the FAA intended proposed § 23.230(a)(2) to require the same type of stall warning, such as an artificial stall warning system or an aerodynamic buffet. Therefore, the FAA adopts Textron's recommendation. Accordingly, § 23.2165(a)(2) now requires the means by which the stall warning is provided to the pilot to be the same in both icing and non-icing conditions. This change from the proposal addresses the other commenters' concerns by clarifying that the type of stall warning provided to the pilot, rather than the design of the stall warning system, must be the same.

Textron recommended replacing the words ''must demonstrate'' with the words ''must show'' in proposed § 23.230(b), because the former typically implies compliance by flight testing, whereas the latter allows more than one means of compliance. Similarly, the Associations commented that proposed § 23.230(b) should ensure the design includes a means to safely avoid and exit icing conditions. However, the FAA should not require the applicant to ''demonstrate the airplane's ability'' to avoid or exit icing conditions because the means by which the airplane safely avoids or exits icing conditions may not have to be demonstrated under part 21. The commenters noted that amended designs, for example, may use similarity to a previously approved design to show compliance.

The FAA agrees that ''must demonstrate'' in proposed § 23.230(b) may be interpreted as requiring a flight test. Because the FAA did not intend to preclude other means of compliance, the FAA adopts the phrase ''must show,'' as recommended by Textron. Accordingly, § 23.2165(b) now requires an applicant requesting certification for flight in icing conditions to show the airplane's capability to avoid or exit icing conditions for which certification is not requested.

Kestrel supports categorizing SLD as an icing condition, but noted that guidance in AC 23.1419–2D is currently used on part 23 icing certification programs to establish SLD detection cues and exit procedures. Kestrel asked the FAA to clarify whether this guidance will continue to be an acceptable means of compliance for the ice detection requirement.

The NPRM stated ''many manufacturers already have equipped recent airplanes with technology to meet the standards for detecting and exiting SLD conditions in accordance with current FAA guidance.'' Although systems to detect SLD are being developed, none have been certified. Inclusion of the pilot cues as listed in AC 23.1419–2D into the AFM have been an acceptable means to detect SLD, and will continue to be an acceptable means of compliance to § 23.2165(b).

ANAC questioned whether proposed § 23.230(c) was intended to prohibit flight into known icing conditions or forecast icing conditions. ANAC recommended including the term ''known'' before ''icing conditions.''

The FAA agrees with ANAC's position that only ''known'' icing conditions should be prohibited. However, § 23.2165(c) prohibits intentional flight into icing conditions. Because the term ''intentional'' implies that the icing conditions are known, the FAA finds it unnecessary to include the term ''known'' before ''icing conditions.'' Accordingly, the FAA

[27] 81 FR 13452, 13462

[28] 81 FR 13452, 13493

[29] In its comment, Daher quoted 23.230(a)(2) but attributed that quote to 23.300

adopts the language in § 23.2165(c) as proposed.

An individual commenter appeared to criticize the FAA for not requiring de-icing to work and suggested that ''[a] wind tunnel at the far North or South may be enough for a conclusive test.'' In response to the individual commenter, an icing tunnel is a standard means of compliance to test ice protection systems on new airplane designs. Any resulting intercycle, residual, or runback ice has to be accounted for when showing compliance with the subpart B regulations in icing. No changes are made as a result of this comment.

4. Subpart C—Structures

a. Structural Design Envelope (Proposed § 23.300/Now § 23.2200)

In the NPRM, proposed § 23.300 (now § 23.2200) would have required the applicant to determine the structural design envelope, which describes the range and limits of airplane design and operational parameters for which the applicant would show compliance with the requirements of subpart C. Proposed § 23.300 would have required the applicant to account for all airplane design and operational parameters that affect structural loads, strength, durability, and aeroelasticity, including structural design airspeeds and Mach numbers.

Several commenters identified concerns with the detailed definitions of airspeeds for which applicants would be required to account. They pointed out that, for some types of airplanes, these airspeeds may not be appropriate in particular circumstances. EASA recommended removal of the speed definitions for a more generic proposal in its proposed CS 23.320.

The FAA recognizes the commenters' concerns on the various issues in proposed § 23.300(a). The FAA believes the best way to address these comments is to adopt regulatory text similar to the text in EASA's section CS 23.320, which removes the need to define individual design airspeeds in the regulation. Some comments on proposed § 23.300(a) recommended retaining certain methods of compliance language, such as defining V_C in terms of V_H, which is in former part 23. In keeping with the intent of this rulemaking, however, the FAA believes these types of prescriptive standards are best moved to means of compliance.

Air Tractor commented on proposed § 23.300(b), which addressed design maneuvering load factors for the structural design envelope. Air Tractor raised concerns that obtaining consensus compliance from the FAA without the prescriptive formula established by former § 23.337(a) would be a protracted battle—worse than the existing issue paper process for non-standard design.

Regarding Air Tractor's concerns, the FAA has decided to move the prescriptive formula for determining the design maneuvering load factors to means of compliance. The FAA also reiterates that the phrase ''service history'' is intended to mean the design maneuvering load factors should be based on those load factors used for airplanes with successful service histories that have similar design, operational capabilities, and intended use. If there are no existing similar designs, the FAA will work with the applicant to identify the most appropriate means of compliance. In general, the FAA does not expect applicants to measure and record maneuvering load factors on new designs.

EASA asserted that the language in proposed § 23.300(c) was too design specific and could be replaced with the text from its proposed CS 23.305.

The FAA finds that proposed § 23.300(c) is not overly design specific, because each of the enumerated items must be taken into account, regardless of the applicant's design. The FAA therefore adopts paragraph (c) as proposed.

Air Tractor recommended the FAA change ''empty weight to the maximum weight'' to ''minimum flying weight to maximum weight,'' in proposed § 23.300(c)(1). Air Tractor stated this language applies to all airplanes and is appropriate for certification; while ''empty weight'' applies only to certain airplanes' operational requirements.

The FAA notes Air Tractor's recommendation that ''empty weight'' in § 23.2200(c)(1) should be replaced with ''minimum flying weight.'' However, the FAA believes that establishing a design empty weight is necessary so that variations in the mass of properties such as fuel, payloads, and occupants, when added to the airplane, can be accounted for.

The Associations recommended deleting the term ''All'' from the beginning of proposed § 23.300(c)(1) and (e) for simplification. Textron recommended changing ''All'' in proposed § 23.300(c)(1) to ''Each.'' Textron stated the change would be consistent with former part 23, which uses ''each weight'' throughout the subparts, whereas ''all'' implies an applicant would have to evaluate an infinite number of weights rather than those that are relevant. Textron also recommended replacing ''All'' in proposed § 23.300(e) with ''Each critical altitude,'' because ''all'' is too encompassing.

The FAA agrees with the recommendation to replace ''All'' with ''Each'' in proposed § 23.300(c) and (e) and revises the language in both paragraphs accordingly. The FAA also adds the word ''critical'' so the subsection text reads ''Each critical. . .''. In this context, ''critical'' refers to a weight or altitude that results in a maximum or minimum structural loading condition. A ''critical weight'' will, for example, be the weight of the airplane at its highest possible value with no fuel in the wing. This condition will reduce the effects of inertia in the wing and result in maximum structural loads. A ''critical altitude'' will be the altitude where the maximum pressure differential occurs in a pressurized cabin, or an altitude where the effects of atmospheric compressibility cause changes to the airplane aerodynamic coefficients, resulting in maximum structural loads.

EASA commented that proposed § 23.300(d) was too design specific and should cover loads resulting from controls.

The FAA interprets EASA's comment to mean the FAA should consider non-traditional methods of control, such as vectored thrust. The FAA agrees and revises paragraph (d) to include non-traditional control systems.

EASA also commented on proposed § 23.300(e), stating it would create a requirement that is not applicable to very-light aircraft (VLA) today. EASA asserted that the intent can be covered by the new proposal for flight loads in proposed § 23.310 (now § 23.2210).

While the FAA notes EASA's concern with proposed § 23.300(e), the FAA finds that paragraph (e), as proposed, would place only an insignificant burden on an applicant using the VLA standard. The FAA finds a simple method of compliance, such as for a maximum altitude of 14,000 feet, could be incorporated into an industry consensus standard to meet this requirement.

b. Interaction of Systems and Structures (Proposed § 23.305/Now § 23.2205)

In the NPRM, proposed § 23.305 (now § 23.2205) would have provided a regulatory framework for the evaluation of systems intended to modify an airplane's structural design envelope or structural performance, and other systems whose normal operating state or failed states may affect structural performance. Compliance with proposed § 23.305 would have provided acceptable mitigation of structural hazards identified in the functional hazard assessments required by proposed § 23.1315.

Textron recommended removing proposed § 23.305 because the NPRM makes clear that, with or without proposed § 23.305, the safety intent of proposed § 23.1315 covers the interaction of systems and structures. Textron also objected to the use of, or reference to, non-part 23 data. As an example, Textron cited the reference in the preamble to FAA special condition number 25–390–SC,[30] which the FAA said would be an acceptable means of compliance with proposed § 23.305. Textron questioned whether there was justification for this requirement if part 23 data was not available.

In response to Textron's comment regarding the necessity of proposed § 23.305, the FAA notes the intent stated in the NPRM was erroneous in its description of the relationship between proposed § 23.305 and proposed § 23.1315 (now § 23.2510). The correct intent of proposed § 23.305 is to provide a requirement for those systems intended to directly affect structural performance. An example of this type of system is a structural load alleviation system. Former § 23.1309 and § 23.2510 do not envision these types of systems and the FAA has previously issued special conditions to address these unique and novel systems. Therefore, the FAA retains proposed § 23.305 as § 23.2205 in this final rule because it provides a way for applicants to address failures in systems intended to directly affect structural performance by accounting for the probability of such failures and the likely pilot reactions to them.

Also, regarding Textron's comment that the NPRM preamble referenced a part 25 special condition that did not contain part 23 data, the FAA notes the reference was used as an example because the wording of the special condition was typical of others relating to Interaction of Systems and Structure, which establish an acceptable method of compliance with this section. The FAA has issued a part 23 special condition (23–258A–SC).[31] However, the FAA did not use the part 23 special condition as an example because, while it is an acceptable method of compliance with this section, the approach used in it is not typical of other special conditions addressing these issues.

Textron also stated the phrase ''affect structural performance'' was too vague and should be better defined for clarity. Textron noted every trim system, flight control system, and high lift system affects structural performance at some level. Textron recommended either eliminating this phrase or using the preamble to define ''structural performance.'' Textron recommended proposed § 23.305 be revised to provide that, for airplanes equipped with systems intended to alleviate the impact of the requirements of this subpart and affect the structural design envelope, either directly or as a result of failure or malfunction, the applicant must account for the influence and failure conditions of these systems when showing compliance with the requirements of this subpart.

The Associations commented that proposed § 23.305 was intended to address systems, which may use aerodynamic or other means to alleviate loads in certain conditions and to ensure structural integrity remains in the event these systems were to fail. The commenters requested the FAA change the language to ensure the intent of this section is clear and there are no unintended consequences, such as creating a requirement to perform systems safety assessments on all systems and structure interactions. The commenters asserted that this would create a tremendous burden with no measurable benefit. The commenters proposed § 23.305 be revised to provide that, for airplanes equipped with systems that are intended to alleviate structural loads, the applicant must account for the influence and failure conditions of these systems when showing compliance with the requirements of this subpart.

The FAA agrees with Textron and the Associations that § 23.2205 should address only those systems intended to affect structural performance. In the NPRM, the FAA referred to these types of systems as ''structural systems''. The FAA referred to other types of systems as ''non-structural systems''. The FAA agrees that these non-structural systems are adequately addressed by § 23.2510. The FAA is using the NPRM description of structural systems in rewording § 23.2205 to ensure that any airplane equipped with a system intended to affect structural performance would be provided the same level of safety as an airplane not equipped with such a system.

c. Structural Design Loads (Proposed § 23.310/Now § 23.2210)

In the NPRM, proposed § 23.310 (now § 23.2210) would have required—

- An applicant to determine structural design loads resulting from an externally or internally applied pressure, force, or moment that may occur in flight, ground and water operations, ground and water handling, and while the airplane is parked or moored.
- An applicant to determine structural design loads at all combinations of parameters on and within the boundaries of the structural design envelope that would result in the most severe loading conditions; and
- The magnitude and distribution of these loads be based on physical principles and be no less than service history has shown can occur within the structural design envelope.

The Associations recommended adding the phrase ''as applicable'' to proposed § 23.310(a) to address the varying bases to determine load calculations. These commenters also recommended replacing the term ''any'' with the word ''likely,'' because the calculation of any externally or internally applied pressure, force, or moment would result in boundless design and calculation. Textron recommended the same revisions. Textron noted that the rule implies that all airplanes will be required to determine both ground and water loads, but not all airplanes are amphibious.

The FAA agrees with Textron and the Associations concerning the comments on adding the phrase ''as applicable'' and removing the word ''any'' in proposed § 23.310(a). The FAA also agrees with limiting the scope of proposed § 23.310(a) by adding the word ''likely'' to the description of the loading conditions the applicant must consider. As explained in the discussion of proposed § 23.205, ''likely'' means reasonably expected based on the conditions that may exist. Accordingly, the FAA revises § 23.2210(a) to capture these changes.

Air Tractor recommended the FAA delete the ''service history'' clause from proposed § 23.310(c) because there is no ''service history'' for most new airplanes and there is danger that the FAA will require that service history be collected before certification is granted for a new design. EASA also noted that a ''service history'' will not always be available for innovative designs.

The FAA partially agrees with Air Tractor regarding the meaning of ''service history'' in proposed § 23.310(c). Service history, in this sense, refers to the service history and experience gained throughout aviation history. In Air Tractor's case, service history would be the service history of other restricted category agricultural airplanes of similar design. The FAA finds § 23.2200(b) adequately covers the intent of the ''service history''

[30] *http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgSC.nsf/MainFrame?OpenFrameset.*

[31] 78 FR 10055, February 13, 2013.

requirement and therefore removes it from § 23.2210(c).

d. Flight Load Conditions (Proposed § 23.315/Now § 23.2215)

In the NPRM, proposed § 23.315 (now § 23.2215) would have required an applicant to determine the loads resulting from vertical and horizontal atmospheric gusts, symmetric and asymmetric maneuvers, and, for multiengine airplanes, failure of the powerplant unit which results in the most severe structural loads.

EASA noted the proposed rule did not cover the objective that loads should be considered for the operational envelope, but instead based the requirement on measured gust statistics. EASA proposed using its CS 23.315 language because it is more objective and does not include design details.

The FAA finds the requirement to consider loads throughout the operational envelope is addressed by proposed § 23.310(b) (now § 23.2210(a)(2)). However, the FAA agrees with EASA's comment that the proposed rule language is too design specific. Therefore, FAA revises the rule language to remove design specifics. In particular, the FAA removes proposed § 23.215(c), which addressed canted lifting surfaces. The FAA finds § 23.2210(c) adequately addresses this requirement. The FAA also changes the wording of proposed § 23.215(d) (now 23.2215(c)) to account for the possibility that a single powerplant, operating two separate propellers, could develop asymmetric thrust if one propeller system experienced a failure. This would result in a condition similar to an engine failure in a multiengine airplane, described in the former regulations. Although no applicant has submitted such a design for approval to date, given the increased flexibility this rule provides, future applicants may propose such a design. In that case, this design will be subject to the same safety concern and the same need to address it, as applicants for approval of multiengine airplanes.

Air Tractor commented on proposed § 23.315(a) and questioned whether the gust velocities in former part 23 or CAR 3 were based on ''measured gust statistics.'' Air Tractor noted it has never seen a technical report to that effect. Air Tractor also questioned whether the FAA would deem the CAR 3 and current part 23 values sufficient, and raised concerns that making up its own requirements to meet FAA approval would be difficult.

The FAA changed the gust load formula in former § 23.341, amendment 23–7 [32] to incorporate the mass parameter approach to calculating gust loads. The mass parameter approach was developed and calibrated against measured gust data on transport category airplanes. The FAA does not intend for applicants for a new TC to measure gust loadings. The former gust formula remains an acceptable method of compliance with this regulation. The FAA developed this regulation so certain airplanes could take advantage of alternate analysis methods, including the power spectral density approach. Examples of these types of airplanes include high altitude and endurance airplanes, where dynamic response of the airplane structure must be considered in the gust load analysis.

e. Ground and Water Load Conditions (Proposed § 23.320/Now § 23.2220)

In the NPRM, proposed § 23.320 (now § 23.2220) would have required an applicant to determine the loads resulting from taxi, take-off, landing, and ground handling conditions occurring in normal and adverse attitudes and configurations.

EASA proposed using its A–NPA CS 23.325 language because it is more objective and covers more situations, such as landing on snow or other surfaces not covered in proposed § 23.320. BendixKing asked that the FAA delete ''sea,'' stating the word is neither required nor accurate.

The FAA agrees with EASA's comments and revises the text in § 23.2220 to include all operating surfaces, which includes, at a minimum, snow or ice covered land and water. EASA referred to snow and other surfaces not covered in the proposed text, presumably meaning EASA does not consider operations on ''snow or other surfaces'' to be operations on the ground. While the FAA is using EASA's CS A–NPA 23.325 language, the FAA finds EASA's language citing weight and velocity to be unnecessary. These parameters are addressed in § 23.2200.

Air Tractor asked whether the ''ground handling conditions'' in proposed § 23.320(a) would be different from the ''jacking and towing conditions'' in proposed § 23.320(c). If so, the commenter asked what ''ground handling conditions'' meant. Air Tractor also asked whether this dealt with protection from ''hangar rash.'' Finally, Air Tractor sought clarification on whether it would now need to define the structural loads associated with docking an airplane, or from wave motion causing scuffing when a seaplane is moored against a dock.

[32] 34 FR 13078, August 13, 1969.

The FAA notes the ''ground handling conditions'' referenced in proposed § 23.320(a) (now § 23.2220) are different than the ''jacking and towing conditions'' referenced in § 23.320(c) (now § 23.2220). The reference to ''handling conditions'' is intended to cover both ground handling conditions and jacking and towing conditions. The FAA revises § 23.2220 to cover ''taxi, takeoff, landing, and handling conditions.''

f. Component Loading Conditions (Proposed § 23.325/Now § 23.2225)

In the NPRM, proposed § 23.325 (now § 23.2225) would have required an applicant to determine the loads acting on each engine mount, flight control, high lift surface, and the loads acting on pressurized cabins.

EASA commented that proposed § 23.325(b) covered the loads on components subject to earlier defined loads in proposed §§ 23.305 through 23.320. EASA recommended the FAA simplify the requirement to avoid different interpretations by reflecting the relation to the previous requirements as follows:

- Interaction of systems and structures
- Structural design loads
- Flight Load Conditions
- Ground and water load conditions

The FAA finds that a separate rule for component loading conditions is necessary to address structural loading conditions that do not fall under the requirements for flight and ground loads. Examples of these loading conditions include control surface jamming and pressurized cabin loads. The FAA revises § 23.2225 to clarify the types of loads applicants must account for.

Textron and the Associations asked the FAA to revise the ''relief valve'' language in proposed § 23.325(c), which was a design-specific solution, in favor of more performance-based language. Textron suggested language such as ''from zero to the maximum relief pressure combined with gust and maneuver loads.'' The Associations recommended replacing ''valve'' with ''pressure.''

The FAA agrees with Textron and the Associations on the use of the term ''relief valve.'' The FAA revises § 23.2225(c)(1), (2), and (3) by replacing the term ''relief valve'' with ''relief pressure.''

The FAA agrees with a comment made at the public meeting by the Associations that proposed § 23.325 should cover sudden engine stoppage loads for turbine engines, as did former part 23. A requirement for the design of engine mounts for turbine engines to be able to withstand a sudden engine stoppage has been in former part 23 since 1980.[33] Former § 23.361(b)(1) required, in pertinent part, that for turbine engine installations, the engine mounts and supporting structure be designed to withstand an engine torque load imposed by a sudden engine stoppage. The requirement applied only to turbine engines because reciprocating engines typically do not have significant rotational moments of inertia. As in former part 23, reciprocating powerplants, with their lower moments of inertia, are not included in this section of the rule. The requirement applies only to turbines and other types of powerplants that have significant rotational moments of inertia created by rotating powerplant components (*e.g.,* electric motor powerplants). Therefore, the FAA adds protection of powerplant mounts and supporting structure from sudden powerplant stoppage for all non-reciprocating powerplants to § 23.2225(a)(2). This change is consistent with the goal of capturing the safety intent of former part 23, including § 23.361, as stated in the NPRM preamble, and with the performance-based nature of this rule and its goal of more easily accommodating future designs and technologies.

Finally, the FAA revises § 23.2225(b) to clarify the gust loads that must be accounted for and the meaning of ''ground operations,'' making this section consistent with the changes discussed previously for § 23.2220.

g. Limit and Ultimate Loads (Proposed § 23.330/Now § 23.2230)

In the NPRM, proposed § 23.330 (now § 23.2230) would have described how the applicant must determine the limit and ultimate loads associated with the structural design loads. Proposed § 23.330 retained the current 1.5 safety factor for ultimate loads.

The Associations recommended the FAA revise proposed § 23.330 by deleting the phrase ''special or other factors of safety are necessary to meet the requirements of'' and replacing it with ''ultimate loads are specified in.'' These commenters noted the section, as written, would not require the establishment of limit loads if a special factor of safety is used to meet the requirement. Textron recommended the same revision, explaining that proposed § 23.330 need not address ''special or other factors of safety,'' other than in some cases when an ultimate load is specified, because proposed § 23.515(c) specified that limit and ultimate loads are multiplied by special factors of safety.

The FAA agrees with the comments regarding cases where loads are expressed only as ultimate loads. The FAA deletes the introductory phrase ''unless special or other factors of safety are necessary to meet the requirements of this subpart,'' in proposed § 23.330. The FAA notes § 23.2265(c) specifies that limit and ultimate loads are multiplied by special factors of safety. Furthermore, the FAA revises § 23.2230 by inserting the phrase ''unless otherwise specified elsewhere in this part,'' which captures the intent of former § 23.303.

EASA recommended the FAA should also address the former requirement for redistribution of loads due to deflections under loads. EASA also recommended the regulation cover the specific case where strength specifications are expressed only in ultimate loads and permanent deformation is accepted.

The FAA notes § 23.2210(b) addresses the issue of redistribution of loads. Specifically, 23.2210(b) requires the distribution of loads be based on physical principles. The FAA finds redistribution of load due to deflection is an expression of physical principles and is retaining this requirement in § 23.2210(b) of this rule.

An individual commenter asked the FAA to remove the ''arbitrarily prescriptive'' 1.5 factor of safety and substitute a more performance-based approach. The commenter explained that advances in probabilistic analysis have increased understanding of actual variables like load predictions, material properties, and airplane operations. The commenter proposed defining the value for structural failure more explicitly and allowing the applicant to account for the variations to achieve the value, allowing for more efficient designs. The commenter suggested retaining the 1.5 factor of safety as a possible approval approach to establish the means of compliance.

The FAA notes the 1.5 factor of safety has been used for many years and has provided an acceptable level of safety. Probabilistic analysis methods and the data necessary to support them are not sufficiently mature to provide the same level of assurance of safety. As probabilistic methods mature, the FAA will consider their use if applicants can show they provide an equivalent level of safety.

h. Structural Strength (Proposed § 23.400/Now § 23.2235)

In the NPRM, proposed § 23.400 (now § 23.2235) would have required an applicant to demonstrate the structure will support limit and ultimate loads. The NPRM explained that in this context, ''demonstrate'' means the applicant must conduct structural tests to show compliance with the structural performance requirements unless the applicant shows that a structural analysis is reliable and applicable to the structure.

The Associations recommended adding ''unsafe'' at the beginning of proposed § 23.400(a)(1) to clarify the intent of the requirement and ensure it is not viewed as including expected or non-critical types of interference, such as thrust reverser buckets making normal contact with each other. Similarly, Textron recommended inserting the word ''safe'' before ''operation'' in proposed paragraph (a)(1) to ensure that ''interference'' in the regulation will always be interpreted to mean interference that would cause an unsafe condition.

The FAA agrees that inserting the word ''safe'' in the text of proposed § 23.400(a)(1) will clarify that the structure must support limit loads without interference with the ''safe'' operation of the airplane. This suggested change is consistent with the corresponding requirements in former part 23, and will resolve the Associations' concern as well. Accordingly, the FAA revises § 23.2235(a)(1) to capture this change.

NJASAP asked why the FAA proposed removing time requirements (the capability of the airplane structure to support ultimate loads without failure for at least three seconds) in proposed § 23.400.

As discussed in the NPRM preamble, the FAA considers the ''3-second'' rule a statement of physical principles and sound testing practices that does not need to be stated in the requirements for structural strength. It is more appropriate for inclusion in a means of compliance. The FAA makes no change to the regulatory text based on NJASAP's comment.

i. Structural Durability (Proposed § 23.405/Now § 23.2240)

In the NPRM, proposed § 23.405 (now § 23.2240) would have required an applicant to develop and implement procedures to prevent structural failures due to foreseeable causes of strength degradation, and to prevent rapid decompression in airplanes with a maximum operating altitude greater than 41,000 feet. Proposed § 23.405 would have also required an airplane to be capable of continued safe flight and landing with foreseeable structural damage caused by high-energy

[33] 45 FR 60171, September 11, 1980.

fragments from an uncontained engine or rotating machinery failure.

The Associations said proposed § 23.405 remains ''far too prescriptive and design oriented.'' The commenters recommended language that they believed addresses the objectives of the rule without being so design focused. Specifically the Associations suggested the phrase ''serious or fatal injuries, loss of the airplane, or extended periods of operation with reduced safety margins'' in § 23.2240(a) be replaced with ''unsafe conditions.''

Textron suggested that the proposed rule is too prescriptive regarding the number of compartments for compartment floor depressurization, as well as in prescribing the ''design'' structure rather than specifying the required capability of the structure. Textron suggested revising proposed § 23.405 similar to that suggested by the Associations.

An individual commenter recommended the FAA delete the phrase ''loss of the airplane'' from proposed § 23.405(a). The commenter stated this would address the long-understood interpretation that part 23 does not include certain structures for required evaluation on the effects of fatigue failure, such as landing gear and engine support (or hull loss, as discussed in the NPRM preamble). Without this revision, the commenter noted the intent of the rule not to increase the burden on certification would be nullified. In effect, the commenter found the proposed rule would require the same structure as is currently evaluated in part 25, which is inconsistent with former part 23. The commenter favored incorporating a comprehensive fatigue evaluation of structure as is currently in part 25.

The FAA agrees with the suggestion to delete the phrase ''loss of the airplane'' in paragraph (a). The FAA finds the prevention of serious or fatal injuries and the prevention of extended periods of operation with reduced safety margins is the objective of § 23.2240. The FAA will not adopt the Associations' recommended change to replace the phrase ''serious or fatal injuries, loss of the airplane, or extended periods of operation with reduced safety margins'' with ''unsafe conditions.'' The term ''unsafe condition'' is the threshold for the FAA issuing airworthiness directives under 14 CFR part 39, and is not an accurate term to be used in this section.

The FAA also revises paragraph (a) to reflect more completely the requirements of the former part 23 regulations this section is replacing.[34] Because proposed § 23.405(a) did not refer specifically to the Airworthiness Limitations section (ALS) of the Instructions for Continued Airworthiness (ICA) (as did former § 23.575), it could be interpreted as allowing the procedures to be placed in another part of the ICA. Therefore, the FAA revises the text in paragraph (a) to clarify that these procedures must be in the ALS. The FAA also clarifies that ''inspections'' developed under this section must be included in the ALS in addition to the ''procedures'' developed under the section, because former § 23.575 required both to be in the ALS. Appendix G to former part 23, now appendix A to this final rule, requires the FAA to approve the ALS. Finally, the FAA notes that compliance with the ALS is mandatory under §§ 43.16 and 91.403(c).

EASA suggested replacing the design-specific requirements in proposed § 23.405(b) with more objective requirements from EASA's CS 23.340(b) to allow proportionality for different airplane levels. In particular, EASA said more objective requirements should replace the proposed requirements related to pressurized airplanes and uncontained engine failure.

The FAA notes the language in EASA's proposed CS 23.340 could be interpreted as expanding the scope of the former regulations by requiring evaluation of discrete source damage for all airplanes certificated under part 23. As stated in the NPRM, the FAA intended proposed § 23.405(b) and (c) to capture the intent of former §§ 23.365(e) and 23.571(d), which only addressed airplanes with pressurized compartments. Sudden release of pressure and operating above 41,000 feet altitude present the same hazards to the airplane occupants regardless of airplane category or size.

The FAA moves the content of proposed § 23.405(b) and (c) to § 23.2240(c)(1) and (c)(2) in the final rule. The final rule also adds new § 23.2240(b), which addresses the requirement for level 4 airplanes. This requirement is similar to the former § 23.574 requirement for damage tolerance evaluations of commuter category airplanes. The FAA inadvertently left this requirement out of the NPRM.

The FAA agrees with the comments that proposed § 23.405(b) was overly prescriptive. The FAA deletes the detailed description of the pressurized compartment and emphasizes the sudden release of pressure in § 23.2240(c)(1) and (c)(2). The FAA retains reference to door and window failures as examples of the types of failures that could result in sudden release of pressure.

EASA stated that proposed § 23.405(d) is too specific to engine rotorburst; however, other risks could be expected from new technologies that should also be considered.

The FAA agrees with EASA's comment that paragraph (d) should address all high-energy fragments, not just fragments from an engine rotorburst. The FAA revises § 23.2240(d) to include all high-energy fragments. The FAA also includes turbine engines and rotating machinery as sources of high-energy fragments.

Several other commenters also commented on proposed § 23.405(d), noting that former part 23 required ''minimizing'' hazards associated with damage from uncontained engine or rotating machinery failures, but the NPRM would require the airplane be able to ''continue safe flight and landing'' following such damage. The commenters asserted that there is no way to eliminate all the risks that will prevent the ''continued safe flight and landing,'' and asked the FAA maintain the requirement to ''minimize'' these hazards as in former § 23.903(b)(1).

The FAA agrees that proposed § 23.405(d) is inconsistent with the description in the NPRM preamble. Therefore, the FAA agrees with the commenters' recommendation to adopt the term ''minimize'' in § 23.2240(d). The FAA does not intend for applicants to incorporate all possible design precautions against rotorburst hazards, especially those that are resource prohibitive or have a negligible impact on safety. The FAA expects an applicant's compliance with § 23.2240(d) to incorporate all practical design precautions to minimize the hazards due to high-energy fragments.

j. Aeroelasticity (Proposed § 23.410/ Now § 23.2245)

In the NPRM, proposed § 23.410 (now § 23.2245) would have required an airplane to be free from flutter, control reversal, and divergence at all speeds within and sufficiently beyond the structural design envelope, for any configuration and condition of operation, accounting for critical

[34] §§ 23.365(e), Pressurized cabin loads; 23.571, Metallic pressurized cabin structures; 23.572, Metallic wing, empennage, and associated structures; 23.573, Damage tolerance and fatigue evaluation of structure; 23.574, Metallic damage tolerance and fatigue evaluation of commuter category airplanes; 23.575, Inspections and other procedures; and 23.627, Fatigue strength. (81 FR 13476, March 14, 2016).

degrees of freedom, and any critical failures or malfunctions. Proposed § 23.410 would have also required an applicant to establish tolerances for all quantities that affect flutter.

Air Tractor and Transport Canada raised concerns about the phrase ''sufficiently beyond the structural design envelope'' in proposed § 23.410(a)(1). Transport Canada said the wording is subjective and does not convey a performance requirement and suggested complementing the phrase ''sufficiently beyond'' with safety objective requirements. Air Tractor noted the existing regulations do not extend beyond the design envelope. Air Tractor asked for clarification on what is considered ''sufficiently beyond.''

Regarding Air Tractor's assertion that the former regulations did not extend beyond the design envelope, the FAA intended proposed § 23.410 to capture the safety intent of former §§ 23.629, 23.677, and 23.687 without introducing the inflexibility created by the former regulations. Former § 23.629(c) required that flutter analysis show freedom from flutter, control reversal, and divergence up to 20 percent above dive speed. Existing part 25 rule language requires flutter analysis to show this up to 15 percent above dive speed. This is to account for uncertainties inherent in analytical techniques. Part 25 requires a smaller margin above dive speed due to its more rigorous analytical requirements. Additionally, former § 23.629(b)(4) precluded any large or rapid reduction in damping as dive speed is approached in flight tests.

As for Air Tractor's comment requesting clarification on what is considered ''sufficiently beyond'' in proposed § 23.410(a)(1), the former part 23 requirements for margins on analyses and flight tests worked together to ensure a momentary inadvertent excursion above dive speed in operation, or combined variations in quantities that may affect flutter, did not result in a catastrophic flutter event. Thus, the FAA required a sufficient margin above dive speed in former part 23 for many years. The phrase ''sufficiently beyond the structural design envelope'' is intended to require a sufficient margin consistent with the requirements of former part 23. However, as technology and analytical techniques evolve and improve, the new language will allow room for the methods of compliance to adapt and possibly change the appropriate margin needed for safe operations. This language is also harmonized with EASA's proposed rule language.

Several commenters raised concerns about the use of the term ''any'' in proposed § 23.410(a). The Associations asked the FAA to revise proposed § 23.410(a)(2) to require the airplane to be free from flutter, control reversal, and divergence for ''approved'' configurations and conditions of operation, rather than for ''any'' configuration and condition of operation. Textron recommended the FAA require the airplane to be free from flutter, control reversal, and divergence for ''any likely'' configuration and condition of operation. Similarly, the Associations suggested removing the term ''any'' from proposed § 23.410(a)(4).

The FAA notes the commenters concerns about the term ''any'' in § 23.2245(a)(2) and (a)(4). In the NPRM, the FAA explained that § 23.2245 would capture the safety intent of former § 23.629. Former § 23.629(a) has required the airplane to be free from flutter, control reversal, and divergence for ''any condition of operation'' since 1978. This terminology originated from CAR 3.311, the predecessor to former § 23.629, was adopted in 1947 and required the wings, tail, and control surfaces to be free from flutter, divergence, and control reversal for ''all conditions of operation.'' The FAA recognizes it is impossible to evaluate an infinite number of data points, but that is not the intent of § 23.2245 nor was it the intent of its predecessor regulations. Rather, the FAA interprets the term ''any'' in § 23.2245(a)(2) as requiring the applicant to exercise due diligence by accounting for a sufficient number of data points that would enable the applicant to state the entire envelope has been evaluated and is safe. This interpretation is consistent with the way the FAA has interpreted CAR 3.311 and former § 23.629. Because the FAA has used the terms ''any'' and ''all'' in its flutter requirements for decades, the FAA is retaining the term ''any'' in § 23.2245(a)(2) and (a)(4). This maintains harmonization with EASA's proposed rule language.

Several commenters raised concerns with terminology in proposed § 23.410(b). Textron and the Associations suggested the FAA require the applicant to establish and account for ''sensitivities'' rather than ''tolerances'' because the term ''tolerances'' has a very specific meaning and a proper flutter analysis is a collection of flutter sensitivity analyses.[35] The Astronautics Corporation of America (Astronautics) sought clarification of the term ''quantities'' in proposed § 23.410(b) and offered alternative regulatory language in an attempt to clarify its meaning. Textron proposed replacing ''quantities'' with ''parameters.''

Regarding Textron, the Associations and Astronautics' comments on the use of ''tolerances'' and ''quantities'' in proposed § 23.410(b), the FAA is retaining the terms ''tolerances'' and ''quantities'' in § 23.2245(b). The FAA intends § 23.2245 to capture the safety intent of former § 23.629, which has contained the terms ''tolerances'' and ''quantities'' since 1978.[36] The FAA has interpreted them consistently from that time, and will continue to do so in § 23.2245. This language is also harmonized with EASA's proposed rule language.

Textron recommended removing the word ''establish'' from the proposed language. The commenter noted that you cannot account for something without establishing it first.

The FAA agrees with Textron that it would be redundant to require an applicant to establish and account for tolerances. For that reason, the FAA retains the word ''establish'' and deletes the words ''and account for'' from § 23.2245(b) in the final rule. This change emphasizes the necessity of fully analyzing these tolerances and harmonizes with EASA's proposed rule language.

k. Design and Construction Principles (Proposed § 23.500/Now § 23.2250)

In the NPRM, proposed § 23.500 (now § 23.2250) would have required—

• An applicant to design each part, article, and assembly for the expected operating conditions of the airplane;

• The design data to adequately define the part, article, or assembly configuration, its design features, and any materials and processes used;

• An applicant to determine the suitability of each design detail and part having an important bearing on safety in operations; and

• The control system to be free from jamming, excessive friction, and excessive deflection when the control system and its supporting structure are subjected to loads corresponding to the limit airloads when the primary controls are subjected to the lesser of the limit airloads or limit pilot forces, and when the secondary controls are subjected to loads not less than those corresponding to maximum pilot effort.

[35] Textron specifically noted that proposed § 23.2245(b) ''would require the applicant to specify a +/−X% tolerance on things such as cross sectional properties (torsional GJ), cross sectional moments of inertia, or other qualities that affect flutter but aren't intended to have a +/−X% tolerance.''

[36] *See* 43 FR 50592, October 30, 1978.

The Associations recommended the FAA change the title of proposed § 23.500 from ''Structural design'' to ''Design and construction principles.''

The FAA concurs with the recommendation by the Associations to change the title of § 23.2250 to ''Design and construction principles.'' The FAA agrees the suggested title is a better descriptor and will harmonize with EASA's proposed title for this section, and adopts it for this rule.

Several comments addressed proposed § 23.500(d). Air Tractor recommended that the FAA revise the wording of proposed § 23.500(d) to specify that it applies to flight controls. Air Tractor further noted that it appears that the definition of ''maximum pilot effort'' has been untethered from former §§ 23.397(b) and 23.143(c), making it necessary for every applicant ''to re-invent the wheel.''

Regarding Air Tractor's comment proposing to add the term ''flight'' to further define ''control system'', the term ''control system'' has been used consistently for many years in this context in the former regulations, and is understood to refer to ''flight'' controls. This text also harmonizes with EASA's proposed rule language. Therefore, the FAA adopts the language as proposed in the NPRM.

As for Air Tractor's concern that maximum pilot effort has been untethered from former §§ 23.397(b) and 23.143(c), the FAA notes that under the new performance-based regulations, applicants will be free to use former part 23 or other accepted means, such as industry consensus standards, as a means of compliance. These accepted means of compliance will detail how the airplane will meet the performance-based requirements.

The Associations stated that it is appropriate for means of compliance to specify how airframe and control system interactions will be tested up to limit loads and that, depending on the nature of the control system, it may be more or less appropriate to perform such a test. These tests ensure the appropriate level of testing is always applied to traditional flight controls and also to future systems, which may include fans or thrusters. The commenters suggested the level of detail be contained in accepted standards. Additionally, the commenters recommended the FAA consider revising proposed § 23.500(d) by deleting paragraphs (1), (2), and (3) and adding the phrase ''the airplane is subjected to expected limit airloads'' to the end of paragraph (d). EASA also recommended the FAA remove details in proposed § 23.500(d) that describe what parts of the system should be subject to which loads because this is design specific and should be covered in the means of compliance.

The FAA agrees with EASA and the Associations to revise proposed § 23.500(d)(1), (d)(2), and (d)(3) and adds the phrase ''the airplane is subjected to expected limit airloads'' to the end of § 23.2250(d). This change aligns with EASA's recommendation and assists in harmonization with EASA's proposed rule. The FAA considers these suggestions to be more in line with the original intent of the performance standards. Therefore, the FAA adopts the changes proposed by the commenters.

Textron suggested the FAA remove the § 23.500(d)(1) requirement that the supporting structure is loaded with limit airloads while the control system is loaded, which the commenter noted has historically never been a part 23 requirement. Textron further suggested the FAA change the phrase ''controls are'' in both subparagraphs (2) and (3) to ''control system is'' to further specify that this is a control system test. Textron commented that the word ''controls'' could imply something other than the entire system is the intent.

As noted above in this section, the FAA removes paragraphs paragraph (d)(1), (d)(2) and (d)(3). The FAA adopts the terminology ''control system'' in the revised proposed § 23.500(d).

EASA also suggested the FAA consider moving the general principle for doors, canopies, hatches, and access panels from proposed § 23.750(f) to a new § 23.2250(e).

The FAA concurs with EASA's recommendation to move the general principle for doors, canopies, hatches, and access panels from proposed § 23.750(f) to a new § 23.2250(e). The requirement is more appropriate in this section because it states a general design principle rather than a requirement relating to emergency evacuation. The FAA also notes that making this change further helps to harmonize FAA and EASA regulations.

l. Protection of Structure (Proposed § 23.505/Now § 23.2255)

In the NPRM, proposed § 23.505 (now § 23.2255) would have required an applicant to protect each part of the airplane, including small parts such as fasteners, against deterioration or loss of strength due to any cause likely to occur in the expected operational environment. Proposed § 23.505 would have also required each part of the airplane to have adequate provisions for ventilation and drainage and would require an applicant to incorporate a means into the airplane design to allow for required maintenance, preventive maintenance, and servicing.

Textron recommended clarifying the intent of proposed § 23.505(a) by including a reference to specific sources of damage because it is unclear whether the proposed rule would be an increase from what was previously required.

The FAA considered Textron's comment. However, as far back as 1949 (§ 3.295, ''Protection''), the regulations required all members of the structure to be ''suitably protected against deterioration or loss of strength in service due to weathering, corrosion, abrasion, or other causes. . . .'' The CAR 3 requirement was included in the 1965 recodification as former § 23.609, which included a non-exhaustive list of possible causes of deterioration. In the NPRM, the FAA removed the listed examples, but maintained the requirement to account for deterioration or loss of strength due to ''any cause likely to occur.''

Textron further stated that it is unclear whether the phrase ''expected operational environment'' is intended to include any environment that might occur during failure conditions, or just the environment during normal operating conditions. Textron recommended replacing the phrase ''expected operational environment'' with ''intended operational environment'' or ''normal operational environment.''

The FAA considered Textron's recommendation to change ''expected operational environment'' to ''intended operational environment'' or ''normal operational environment.'' The FAA did not intend to limit this requirement only to the normal operational environment because, if the failure conditions are an expected environment, then an applicant should consider those conditions and protect the structure. Deterioration or loss of strength due to corrosion, weathering, and abrasion are all examples of failure conditions because capability has been degraded. For many years, the rule has expressly required consideration of these causes. It was an expected environment for items to be corroded, weathered, and abraded, but applicants had to consider any other causes too.

m. Materials and Processes (Proposed § 23.510/Now § 23.2260)

In the NPRM, proposed § 23.510 (now § 23.2260) would have required—

- An applicant to determine the suitability and durability of materials used for parts, articles, and assemblies, the failure of which could prevent continued safe flight and landing, while accounting for the effects of likely environmental conditions expected in service; and

• The methods and processes of fabrication and assembly used to produce consistently sound structures and, if a fabrication process requires close control to reach this objective, an applicant would have to perform the process under an approved process specification.

Additionally, proposed § 23.510 would have required an applicant to justify the selected design values to ensure material strength with probabilities, accounting for—

• The criticality of the structural element; and

• The structural failure due to material variability, unless each individual item is tested before use to determine that the actual strength properties of that particular item would equal or exceed those used in the design, or the design values are accepted by the Administrator.

Proposed § 23.510 would have required a determination of required material strength properties to be based on sufficient tests of material meeting specifications to establish design values on a statistical basis. Proposed § 23.510 would have also required an applicant to determine the effects on allowable stresses used for design if thermal effects were significant on an essential component or structure under normal operating conditions.

Textron commented that, as proposed, the regulatory text in paragraph (a) was unclear as to whether an applicant must account for the effects of likely environmental conditions expected in service on parts, articles, and assemblies. Textron proposed combining the two sentences in paragraph (a) to clarify the FAA's intent for the effect of specific environmental conditions on parts, articles, and assemblies to be considered in determining the suitability and durability of materials.

The FAA concurs with Textron's comment regarding the lack of clarity in paragraph (a), and revises the regulation accordingly. Although the revision creates a slight disharmony with EASA's proposed rule language, the intent of the two regulations remains the same, and the change helps to clarify the FAA's intent.

Textron also requested the FAA to replace the word ''essential'' with the word ''critical''. The commenter stated the word ''essential'' has not been used or defined historically in part 23 structural compliance, whereas the word ''critical'' is used more frequently and is better defined.

Based on Textron's comment for clarity, the FAA revises § 23.2260(e) to replace the word ''essential'' with the word ''critical'', since ''critical'' is a more common and widely used term of art amongst structural engineers than ''essential.'' Specifically, the failure of a critical component or structure is potentially catastrophic.

In the public meeting, Aspen Avionics asked the FAA to clarify whether the requirement in proposed paragraph (b) to perform the process under an ''approved process specification'' refers to an FAA-approved process specification or an accepted industry standard or some other approved process specification. Aspen Avionics also commented on proposed paragraph (d), which stipulates that if material strength properties are required, a determination of those properties must be based on sufficient tests of material meeting the specifications. Aspen Avionics questioned whether this requirement applies to the applicant or whether the applicant can rely on statements from a manufacturer—*i.e.,* Aspen asked the FAA to clarify who has to do what testing for the materials. Aspen also asked whether the testing requirement applies to primary, secondary, or tertiary structure.

Regarding Aspen Avionics' request for clarification of what constitutes an approved process specification for paragraph (b), the FAA does not intend any change from current practices under former regulation § 23.605(a), where nearly identical language was used. The process specification is ''approved'' by the FAA, and the FAA expects to have access to the specification in order to review and determine whether it contains sufficient control to substantiate compliance with the regulation. The specification may be proprietary to the OEM or sub-contractor, but should have formal document approval and control procedures like other engineering reports, documents and drawings necessary for the type design.

As for Aspen Avionics' question regarding the test requirements and whether the requirement is for primary, secondary, or tertiary structure, the FAA does not intend any change from current practices under former regulation § 23.613(a), where nearly identical language was used. The TC holder is responsible for data used to substantiate its type design. Whether the required testing is performed by the OEM or a sub-contractor does not matter as the FAA holds the OEM responsible, and expects the data to be available for FAA review to ensure compliance with the regulation. This requirement for statistically based material properties applies to any airplane primary structure. Existing published FAA guidance and widely used industry practices should be consulted for the finer divisions of structure, such as secondary and tertiary, and the material properties typically used.

n. Special Factors of Safety (Proposed § 23.515/now § 23.2265)

In the NPRM, proposed § 23.515 (now § 23.2265) would have required an applicant—

• To determine a special factor of safety for any critical design value that was uncertain, used for a part, article, or assembly likely to deteriorate in service before normal replacement, or subject to appreciable variability because of uncertainties in manufacturing processes or inspection methods;

• To determine a special factor of safety using quality controls and specifications that accounted for each structural application, inspection method, structural test requirement, sampling percentage, and process and material control; and

• To apply any special factor of safety in the design for each part of the structure by multiplying each limit load and ultimate load by the special factor of safety.

The Associations recommended changing § 23.515(a) by requiring special factors of safety be ''established and applied'', rather than determined, by the applicant. Additionally, they suggested the language of the regulation focus on critical design values ''affecting strength.''

The FAA has used ''determine'' in numerous other places in the NPRM. The commenters' suggested change would not imply a different meaning. As for the commenters' suggestion that the term ''critical design value'' should be limited to those values ''affecting strength,'' there may be other critical design values aside from strength that warrant the use of special factors of safety. For example, former part 23 specified bearing factors for certain applications. These were intended to account for not only strength, but also for durability and consideration of possible dynamic loading. In a performance-based standard where these factors are not specified, it is necessary to make sure that future designs, materials, and applications, not yet envisioned, account for any critical ''design values,'' in the same way the former regulations account for known critical values in those applications today. The FAA adopts § 23.2265(a) with minor modifications.

Air Tractor commented that proposed § 23.515(b) added unwarranted specificity and is worded such that the special factor must account for each inspection method, whether or not it is critical. Air Tractor further commented that certain conditions, such as structural test requirements, sampling percentages, and process and material controls, would be defined in a quality system approved under a production certificate (PC), not as part of a type design. Air Tractor contended that a type design should be approved independently of any quality system or production system requirements.

The FAA agrees with Air Tractor that conditions, such as structural test requirements, sampling percentages, and process and material controls, would be defined in a quality system that is approved under a PC. However, there are instances where those items are defined by type design or inspection methods in an approved type design. As with the former § 23.621, ''Casting factors,'' special casting factors of safety are to be applied to any structural casting, not just critical ones. The specific casting factor used in all those cases is inseparably tied to the applicable tests and inspections, both of which include sampling percentages specified for the part being produced. Former § 23.621(a) required these factors to be defined in the type design, and they are in addition to whatever tests and inspections are required for foundry quality control. Therefore, proposed § 23.515(b) is not substantively different from the former regulations.

The FAA generally agrees with Air Tractor's comment that approval of a type design is independent of any quality system or production system requirements. However, as explained previously in this section, the special factor of safety used to substantiate the type design is approved for use based completely on the part criticality, inspections, tests, and sampling percentages specified for a particular part.

Additionally, the Associations recommended changing proposed § 23.515(b)(1) by replacing ''structural'' application with ''kind of'' application. The commenters contended it would ensure that special factors of safety continue to be applied in the same manner as they are applied in the former rule, while also providing for more flexibility for new materials and construction techniques.

The FAA agrees with the Associations that the term ''structural'' in proposed § 23.515(b)(1) should be revised. However, the FAA believes the words ''type of'' is more accurate than ''kind of'' in this application, and revises the text of § 23.2265(b) accordingly.

The Associations recommended changing proposed § 23.515(c) to require a factor of safety established under proposed § 23.330(b) to be multiplied by the highest pertinent factor of safety established under proposed § 23.515(b). The commenters explained that this change would ensure special factors of safety are applied in the same manner as they are applied in the former rule, while also providing for more flexibility for new materials and construction techniques.

The FAA disagrees with the Associations as such a change has led to convoluted regulations in the past. Further, the limit and ultimate loads are clearly defined in this subpart, so this cross-reference is unnecessary.

Additionally, EASA noted that although the strict wording in former part 23 and CS 23 did not require special factors to be applied to ultimate loads that do not have corresponding limit loads (*e.g.,* emergency landing conditions), this is not reflected in the NPRM. Referring to proposed § 23.515(c), EASA noted that former part 23 and CS 23 use the highest pertinent special factor, instead of any special factor as proposed in the NPRM. EASA suggested that coordination is necessary for harmonization.

The FAA does not agree with EASA's assertion that a narrow interpretation of former part 23 would not require special factors of safety to be applied to ultimate loads that do not have corresponding limit loads. Former § 23.625(d) required the attachments of seats, berths, and safety belts and harnesses to multiply the inertia loads in the emergency landing conditions in former § 23.561 by a special factor of safety (*i.e.,* fitting factor) of 1.33. However, the FAA concurs with EASA that new part 23 should require the use of the ''highest pertinent'' special factor of safety, and not ''any'' special factor of safety. Therefore, the FAA revises § 23.2265(c) accordingly.

Additionally, upon further review, the FAA finds that the proposed wording in § 23.515(c) appears to require an applicant to multiply not only each ultimate load by the special factor of safety, but also each limit load by the same factor even though sometimes there is no corresponding limit load. Therefore, the FAA also revises § 23.2265(c) to state that the special factor of safety is applied regardless of whether there is a limit load condition corresponding to the ultimate load condition. Although the FAA's language may not be harmonized with EASA's NPA, the intent is the same.

o. Emergency Conditions (Proposed § 23.600/Now § 23.2270)

In the NPRM, proposed § 23.600 (now § 23.2270) would have required—

- The airplane, even if damaged in emergency landing conditions, to provide protection to each occupant against injury that would preclude egress;
- The airplane to have seating and restraints for all occupants, consisting of a seat, a method to restrain the occupant's pelvis and torso, and a single action restraint release, which meets its intended function and does not create a hazard that could cause a secondary injury to an occupant;
- The airplane seating, restraints, and cabin interior to accommodate likely flight and emergency landing conditions and should not prevent occupant egress or interfere with the operation of the airplane when not in use;
- Each baggage and cargo compartment be designed for its maximum weight of contents and for the critical load distributions at the maximum load factors corresponding to the determined flight and ground load conditions; and
- Each baggage and cargo compartment to have a means to prevent the contents of the compartment from becoming a hazard by impacting occupants or shifting, and to protect any controls, wiring, lines, equipment, or accessories whose damage or failure would affect operations.

Air Tractor, commenting on proposed § 23.600(a), said the NPRM preamble suggested that future certification endeavors will require more effort (*e.g.,* possibly full-scale crash testing of the fuselage) to meet necessary requirements. Air Tractor also noted that inertial loads likely to occur in an emergency landing were not defined. Additionally, Air Tractor presumed the conditions defined in former § 23.561 would be accepted, but doing so would not make things under the proposed rule any easier, faster, or less expensive. Air Tractor also claimed that should some other inertial loads likely to occur in an emergency landing be proposed, the applicant should expect a protracted discussion with the FAA to defend any differences.

The FAA disagrees that future certification endeavors will require more effort and possibly full-scale crash testing of the fuselage to meet the requirements. Existing conditions of current static and dynamic testing would remain as a means of compliance. Proposed § 23.600(a) would not have required full-scale crash testing of the fuselage. The FAA's intent was to allow for an evaluation of a ''crash landing'' considering the performance of the entire airframe, safety equipment, and occupant. The former requirements only required evaluation of the seat from the floor up, and the restraints, using generic floor impulses independent of airframe reaction. Additionally, the FAA did not define inertial loads because one of the goals of creating performance-based standards was to move away from mandated prescriptive standards, which inhibit innovation and safety enhancing technology adoption. The inertial loads likely to be encountered will be contained in the means of compliance. An applicant may propose inertial loads other than those contained in industry standards already accepted by the Administrator, and substantiate why they are adequate, representative, and equally safe as accepted loads. This rule will allow applicants to evaluate crash landing conditions considering the entire airplane and its performance, instead of limiting applicants to just these tests.

The NTSB noted the NPRM stated that proposed § 23.600 would capture the safety intent of former §§ 23.561 and 23.562, which the FAA described as containing prescriptive design standards. The NTSB disagreed that former §§ 23.561 and 23.562 are prescriptive design standards, and stated former §§ 23.561 and 23.562 were performance-based standards that do not specify any elements of the design, but instead prescribed a test and measureable levels of performance needed to ensure safety.

The NTSB shared the FAA's concern regarding consideration of occupiable space in a post-crash situation, and agreed former standards do not address these issues. However, the NTSB disagreed with the FAA's suggestion that analysis techniques available in the automotive industry are transferable to new airplane designs. The NTSB said it is likely that differences between airframe and automotive structures will require a significant number of full-scale aircraft crash tests before analytical techniques have been validated to the point they can be used as means of compliance. Pointing to NTSB Safety Recommendation A–11–3, which it issued in 2011 after conducting a study of the performance of airbags in general aviation airplane, the NTSB recommended the FAA consider the variation in the sizes and anthropometry of airplane occupants when evaluating a proposed means of compliance.

The FAA understands the NTSB's comments, but does not agree. Former §§ 23.561 and 23.562 assessed only the seat, attachment, restraints, and head strike. The generic floor impulse used did not take into account the variables inherent to the airplane, such as the ability to protect the survivable volume, crushable airplane structure, or features that absorb impact energy or offer the ability to evaluate how all of these variables can work together to enhance crashworthiness. This rule will allow a more holistic approach to crashworthiness. Not prescribing a specific seat test opens the door for future technology and advances in analytical techniques to demonstrate equivalent and even enhanced safety, utilizing all advances available to the engineer. At the same time, until these enhanced techniques become available and proven, the existing seat test methods are still acceptable for showing compliance with this rule and will be contained in a means of compliance.

Additionally, the FAA will accept the former regulations as an acceptable method of compliance, despite their limitations. Testing in accordance with the former regulations has provided a certain level of safety for many years; therefore, continuing to accept them for future designs will maintain that level of safety. However, the FAA contends that having a prescriptive set of tests in the rule has prevented the industry from moving beyond this one standard of protecting occupants. This is because the former regulations required a very specific seat sled test; detailing seat mounting misalignment, impulse force peak and rise times, and maximum forces allowed to be experienced by the restraint system, and the occupant's lumbar spine among other things. Due to the rule specifying all these details, it is nearly impossible for the FAA to find equivalency in applicants proposed alternatives. By changing the requirement from a prescriptive test to the safety intent behind the test, the FAA will only need to evaluate whether new methods meet the safety intent, and not have to evaluate their relative safety against the former requirements. The determination that likely crash scenarios do not generate loads on the occupants that exceed the limits of human injury was the basis of the former rule language, and how the test and crash impulse was derived. It was a combination of various scenarios, represented by one specific set of tests. The new rule will allow a holistic approach to enable designs to achieve occupant protection more effectively.

While the automotive industry generally has a more-developed crashworthiness analysis capability than that used in the aviation industry, the FAA wants to allow for incorporation of holistic crashworthiness in addition to conventional compliance. The FAA notes the NTSB's concern that automotive technology will not directly transfer to aerospace applications because it requires significant numbers of full-scale aircraft crash tests for validation to yield the confidence in the analytical techniques. However, the FAA disagrees. The FAA has not yet determined how much and what type of validation will be required for a given crash scenario. This determination will depend on the particular design and what the validation is attempting to demonstrate. The automotive and other industries have gained a lot of knowledge on what is needed to demonstrate valid models using dynamic transient analysis. The FAA believes that the knowledge from these industries can be leveraged to reduce or eliminate the need for full-scale aircraft crashes for validation. For example, there may be scenarios where only a small part needs validation for demonstration of its energy absorption. This rule will provide an applicant with the option to examine the performance of more than just the seat and restraints, and avoids defining methods of restraint. This will allow consideration of a myriad of ways to protect an occupant in an emergency landing, such as using airbags.

Also, the FAA notes the NTSB's recommendation that the FAA consider the variation in the sizes and anthropometry of airplane occupants when evaluating a proposed means of compliance. This would be an increase in the burden to the manufacturers, and this burden has not been justified.

Several organizations commented on proposed § 23.600(b). Kestrel noted that proposed § 23.600(b)(1) referred to impact at stall speed, but did not specify the configuration and atmospheric conditions associated with this stall speed. Kestrel also requested clarification on whether applicants must design for stall speed in icing conditions.

The FAA revises the proposed rule language. The configuration and atmospheric conditions will be located in the means of compliance based on a determination of the conditions that are likely to occur.

In discussing proposed § 23.600(b)(1), ICON questioned whether industry can deliver on this ''new requirement.'' Textron noted that proposed § 23.600(b) referred to the emergency landing conditions specified in paragraph (a), which would mean the items of mass specified in paragraph (a) must meet the dynamic conditions specified in paragraph (b). Textron noted this is a significant departure from the former rule and assumed it was not the FAA's intent to require dynamic conditions for items of mass. Similarly, the Associations commented that § 23.600(b) would be a new requirement without foundation. They believed the FAA intended to apply the requirement only to occupant restraint systems.

The FAA agrees with Textron and others that an unintentional new requirement would have been imposed by the proposed wording of paragraph (b)(1). The FAA did not intend to apply dynamic loading requirements to items of mass that previously required accounting only for static loads. The FAA modifies the text of paragraph (b) to refer only to subparagraphs (a)(1) and (a)(2) instead of all of paragraph (a), thereby eliminating reference to items of mass.

EASA said the ''dynamic'' condition specified in paragraph (b)(1) should be in the means of compliance, not in the rule. ICON noted that proposed § 23.600(b)(1) would require a very long list of variables be considered in an impact, which seems prohibitively difficult to achieve with any degree of confidence.

The FAA agrees with ICON and EASA. The long list of variables is reduced to simply ''emergency landing'' conditions, which can then be further detailed as part of the means of compliance.

Transport Canada said the requirement in proposed § 23.600(b)(2) appeared inaccurate. It noted that what must not exceed established injury criteria for human tolerance are the loads experienced by the occupant, not the emergency landing conditions. Transport Canada recommended a rewrite of paragraph (b)(2) that would state that the occupants would not experience loads which exceed established injury criteria for human tolerance due to restraint or contact with objects in the airplane.

The FAA agrees with Transport Canada. The FAA adopts the recommended language and revises the rule to clarify it is the loads experienced by the occupant, not the emergency landing conditions that should not exceed the established injury criteria for human tolerance.

BendixKing suggested replacing the word ''restraints'' with ''protection'' in the two instances the word occurs in proposed § 23.600(c). BendixKing suggested this change is appropriate because the intent of the rule is to ensure crash protection for the occupant, which may or may not be what is understood to be restraint. BendixKing also stated it is important not to assume a particular solution, but to focus on the safety intent or occupant protection from harmful motion during an impact. Therefore, it suggested words used in proposed § 23.600(d) like ''restraint,'' ''pelvis,'' ''torso,'' be replaced with language like ''protection'' or ''securing the occupant from harm.'' EASA commented that proposed §§ 23.600(c) and (d) should be an accepted means of compliance, not regulatory requirements. The Associations commented that the language in proposed § 23.600(d) should be aligned with current DOT practices related to automobile safety. The commenters noted the proposed language may preclude some better methods of safety in crashworthiness and might unnecessarily restrict design capabilities.

The FAA agrees with BendixKing that using design-specific solution terminology such as ''restraints'' is not appropriate for a performance-based regulation. While the occupant needs to be restrained, restraints should be considered on a broader basis. The FAA also agrees with EASA that the portions of §§ 23.600(c) and (d) that use design-specific terminology should be in the means of compliance. As such, the FAA will use more generic terms like ''protection'' or ''occupant protection system'' in lieu of the design-specific terms proposed in paragraphs (c) and (d), to allow for other methods of compliance to meet the safety intent of the rule. Finally, due to these word changes, the FAA moved the consideration of ''ground loads'' from paragraph (d) to paragraph (c).

Transport Canada noted the reference to water loads is missing in paragraphs (d) and (e)(1). Transport Canada recommended those paragraphs be modified by adding the word ''water'' in the phrase ''For all flights and ground loads.''

The FAA considered Transport Canada's comment, but one of the goals of adopting performance-based regulations is to remove some of the specificity, to enable the flexibility to adapt to changing technologies and environments. Specifying every possible landing surface would not align with this goal. Therefore, the FAA is not incorporating Transport Canada's changes into the final rule.

Transport Canada also commented that proposed § 23.600(e) should provide a performance-based standard for the requirements in former § 23.787(b) for baggage or cargo sharing the same compartment as passengers.

The FAA agrees baggage and cargo sharing the same compartment with passengers should be restrained. However, a change to the proposed rule is not necessary to address this. Section 23.2270(a) of this rule requires restraint of items of mass within the cabin utilizing static inertial loads, including baggage or cargo that is in the cabin.

The Associations and Textron addressed the requirement in proposed § 23.600(e)(3) that baggage and cargo compartments must protect controls, wiring, lines, equipment, or accessories whose damage or failure would ''affect operations.'' Textron noted that any kind of damage or failure would arguably ''affect operations,'' making it difficult to comply with the rule. Textron recommended the FAA qualify the requirement by adding the word ''safe'' in front of ''operations.'' The Associations recommended the FAA delete the word ''any'' in front of ''controls,'' delete the word ''affect,'' and add the words ''limit safe'' in front of ''operations.''

The FAA agrees with the comments from Textron and the Associations and is adding ''safe'' to modify ''operations.'' Adopting this change will harmonize the text with EASA's proposed rule language. The FAA will not adopt the other recommended changes as they would not have a substantive effect on the rule.

Daher commented generally on § 23.600, indicating the phrase ''rolling and pitching'' would be more appropriate than ''pitching and yawing.'' Daher did not indicate where these phrases were, but the FAA believes it is referring to a statement made in the NPRM preamble discussion of proposed § 23.600 that stated dynamic seat testing requirements address the ability of seat assemblies to remain attached to the floor, even when the floor shifts during impact. Pitching and yawing of the seat tracks during dynamic seat tests demonstrates the gimbaling and flexibility of the seat.

Furthermore, the FAA believes Daher was specifically inferring that ''rolling and pitching'' would be more appropriate in § 23.2270(b)(1) because the rule language in former § 23.562 required the seat rails to be misaligned by 10 degrees in the ''pitch'' and ''roll'' axis, not the ''pitch'' and ''yaw'' axis. The FAA's intent was not simply to mimic the original § 23.562 misalignment requirements, but to identify static airplane orientation at impact in order to assess the level of airframe crushing and energy absorption. However, based on other comments on proposed § 23.600, the FAA has removed specific references to the terms ''flight path angle,'' ''flight pitch angle,'' ''yaw,'' and ''airplane configuration.'' These parameters will be included in the means of compliance.

An individual commenter in the seatbelt manufacturing industry suggested putting a life limit of 10 years on seatbelts, because the webbing loses its strength due to exposure to UV lights and heat. The FAA notes that a seat belt life limit is not within the scope of this rulemaking. The details of seat belts and seat belt webbing materials are controlled by industry standards and Technical Standard Orders (TSOs). Additionally, specifying those types of design-specific solutions is counter to performance-based regulations.

5. Subpart D—Design and Construction

a. Flight Control Systems (Proposed § 23.700/Now § 23.2300)

In the NPRM, proposed § 23.700 (now § 23.2300) would have required an applicant to design airplane flight control systems to prevent major, hazardous, and catastrophic hazards. Proposed § 23.700 would have required an applicant to design trim systems to prevent inadvertent, incorrect, or abrupt trim operation. In addition, proposed § 23.700 would have required an applicant to design trim systems to provide a means to indicate—

- The direction of trim control movement relative to airplane motion;
- The trim position with respect to the trim range;
- The neutral position for lateral and directional trim; and
- For all airplanes except simple airplanes, the range for takeoff for all applicant requested center of gravity ranges and configurations.

Proposed § 23.700 would have also required an applicant to design trim systems to provide control for continued safe flight and landing when any one connecting or transmitting element in the primary flight control system failed, except for simple airplanes. Additionally, proposed § 23.700 would have required an applicant to design trim systems to limit the range of travel to allow safe flight and landing, if an adjustable stabilizer is used.

Furthermore, proposed § 23.700 would have required the system for an airplane equipped with an artificial stall barrier system to prevent uncommanded control or thrust action and provide for a preflight check. The FAA also proposed requiring an applicant seeking certification of a level 3 high-speed or level 4 airplane to install a takeoff warning system on the airplane, unless the applicant demonstrates that the airplane, for each configuration, could takeoff at the limits of its trim and flap ranges.

In light of comments received, the FAA revises proposed § 23.700 to withdraw paragraphs (a)(1) and all its subparagraphs, rename proposed paragraph (a)(2) as (a)(1), add new paragraph (a)(2), withdraw proposed paragraphs (b)(3), (b)(4), and paragraphs (c) and (d) and all their subparagraphs. This section discusses these changes in more detail.

Textron and Kestrel questioned how the term ''prevent'' was intended to be used with the system safety analysis terms ''major,'' ''hazardous,'' and ''catastrophic.''

The FAA acknowledges the term ''prevent'' caused confusion in proposed § 23.700(a)(1), and replaces ''prevent'' with ''protect against'' in § 23.2300(a)(2). The FAA did not intend to require additional safety analysis in this section, as suggested by these comments.

The Associations, Kestrel, Air Tractor, and Textron expressed concern that proposed § 23.700 appears to require that applicants perform System Safety Assessments (SSAs) for traditional mechanical flight control systems that have never been subject to this requirement in the past. They note this would impose substantial new costs on applicants. The commenters acknowledge that SSAs would be appropriate for unconventional designs, such as fly-by-wire systems.

The FAA did not intend to imply that a safety analysis would be required for all flight control systems, including simple mechanical flight control systems in proposed § 23.700(a). The FAA deletes the terms that could have been associated with safety analysis and revises § 23.2300(a)(2) to require the applicant to design airplane flight control systems to protect against likely hazards. The FAA intends ''protect against likely hazards'' to be a high-level requirement to consider potential hazards to the flight control system, and incorporate features in the design to protect against these hazards. One way for a traditional flight control system to satisfy this would be to use the former part 23 regulations, which addressed hazards such as jamming, chafing, interference, incorrect assembly, asymmetric flaps, control system lock inadvertent engagement in flight, etc.

The FAA agrees with the comments stating that safety analysis is necessary, as required by § 23.2510 (proposed as § 23.1315), for fly-by-wire flight control systems, powered flight control systems, and automatic flight control systems. The FAA withdraws the safety analysis requirement in § 23.2300 because § 23.2510 adequately addresses the requirement for safety analysis. The FAA notes the applicability of the § 23.2510 safety analysis requirements will be addressed as a means of compliance, similar to the current practice in AC 23.1309–1E.

The Associations and Textron recommended the FAA eliminate proposed paragraph § 23.700(a)(1)(iii), which lists ''flutter'' as one of the possible major, hazardous or catastrophic hazards, because it is redundant and unnecessary as the safety intent of flutter is covered in the aeroelastic section, proposed § 23.410 (now § 23.2245). The FAA agrees because § 23.2245 ''Aeroelasticity'' adequately addresses flutter for normal operation, exceedances and failure conditions. The FAA also withdrew the other examples of hazards in proposed § 23.700(a)(1) so that they can be addressed more completely in means of compliance.

The Associations and Textron also questioned the use of the term ''misconfiguration'' in proposed § 23.700(a)(1)(v). Textron asked the FAA to clarify whether the term refers to items like rigging and installation or items like wing configurations (*e.g.,* flaps, speed brakes) and trim. The Associations recommended ''misconfiguration'' be replaced with ''misrigging'' for clarity and anticipated the traditional misrigging practices would continue to apply. Proposed § 23.700(a)(1)(v) was intended to address the requirement from former § 23.685(d) that each element of the flight control system must have design features, or must be distinctively and permanently marked, to minimize the possibility of incorrect assembly that could result in malfunctioning of the control system. The FAA agrees that ''misrigging'' incorporates the intent of this requirement more clearly than ''misconfiguration.'' However, the FAA has decided to remove proposed § 23.700(a)(1)(v) from the final rule as discussed.

With the withdrawal of the list in proposed § 23.700(a)(1), the FAA renumbers proposed § 23.700(a)(2) as § 23.2300(a)(1) and adds a new paragraph (a)(2).

Textron commented that proposed § 23.700(a)(2) could seem reasonable for all systems and recommended moving the paragraph to proposed § 23.1305 (now § 23.2505).

The FAA disagrees with applying proposed § 23.700(a)(2) to all systems and equipment because the requirement to ''operate easily, smoothly and positively enough to allow normal operation'' does not apply to all systems. For example, evaluating a flight data recorder for ''smoothness'' would not make sense. The FAA revises § 23.2300(a)(1) to be consistent with former § 23.671(a) because it states the intent of the requirement more clearly.

The Associations proposed revising § 23.700(b) to state ''the trim systems must . . .'' instead of ''[t]he applicant must design trim systems to.'' They made a similar comment on proposed § 23.700(a).

The FAA used ''the applicant must design . . .'' throughout the NPRM. The FAA retains this wording because it's consistent with part 21 to impose the obligation on the applicant.

Textron noted that proposed § 23.700(b)(1) was a general concept that should actually apply to all systems, and therefore recommended changing the word ''trim'' to ''system,'' and moving proposed § 23.700(b)(1) to proposed § 23.1305. Textron also questioned whether the term ''prevent'' in proposed § 23.700(b)(1) meant ''meet the associated requirements of a system safety assessment.'' Textron recommended rewriting proposed paragraph (b)(1) to provide that the applicant must design trim systems to meet system safety requirements, according to the assessment mandated by proposed § 23.1310, and that the evaluation of the system shall include hazards caused by inadvertent (uncommanded) trim operation and incorrect (motion in the opposite direction than commanded) trim operations.

The FAA notes the requirement to ''prevent inadvertent, incorrect, or abrupt system operation'' would not be appropriate for some systems. For example, evaluating a flight data recorder for ''abrupt system operation'' would not make sense. Therefore, the FAA did not incorporate Textron's recommendation in this rule. The FAA also declines to move the regulation to proposed § 23.1305 (now § 23.2505) because that section applies to all systems, while this requirement is only intended for flight control trim systems. In light of Textron's comment, the FAA has changed ''prevent'' to ''protect against'' for consistency with § 23.2300(a)(2). However, the FAA did not incorporate Textron's recommendation to change proposed § 23.700(b)(1) because this section does not require safety analysis. This section applies to all trim systems while § 23.2510 does not apply to trim systems that are considered ''flight control surfaces and their simple systems'' as discussed in AC 23.1309–1E.

Several organizations commented on proposed § 23.700(b)(3). The Associations recommended deleting proposed paragraph (b)(3). They stated that addressing the loss of any single flight control link with traditional mechanical flight controls has provided a substantial level of safety and as new stability and fly-by-wire systems are discussed, it will be increasingly important to develop adequate means of compliance in acceptable documents.

EASA asserted the proposed requirement to have a trim system as a means of control in case of failure of a connecting or transmitting element was too prescriptive and should be captured by the intent that a flight control system must prevent major, hazardous, and catastrophic hazards for likely failure conditions.

The FAA agrees that proposed § 23.700(b)(3) was too prescriptive because means other than trim could be used to safely control the airplane when any one connecting or transmitting element in the primary flight control system fails. The requirement to protect the airplane from loss of control when any one connecting or transmitting element in the primary flight control system fails is captured in § 23.2300(a)(2) at a high level. Therefore, the FAA withdraws proposed § 23.700(b)(3). In addition, the FAA adds ''if installed'' to § 23.2300(b) in light of the comments that future designs may not use trim systems.

Transport Canada observed that VLA rules permit trim systems that do not provide safe flight and landing following failure of the primary control system. Transport Canada said it did not believe this alleviation should be carried into the part 23 revisions, even for small airplanes. Transport Canada recommended the level of safety for trim system failures be raised for simple airplanes.

As discussed elsewhere, the FAA has decided to withdraw the simple category, proposed in § 23.5(d), and also to withdraw proposed § 23.700(b)(3) because § 23.2300(a)(2) captures the requirement. The FAA has determined that the level of safety for trim system failures should not be raised for entry-level airplanes. One of the goals of the NPRM was to provide appropriate standards for ''entry-level airplanes'', and the FAA finds § 23.2300(a)(2) meets that goal. As discussed in this section, § 23.2300(a)(2) requires the applicant to design airplane flight control systems to protect against likely hazards. While the FAA's intent is that flight control systems that meet the former part 23 requirements adequately protect against the likely hazard of failures in any one connecting or transmitting element in the primary flight control system, those airplanes certified under EASA's Certification Specification—Very Light Aeroplanes (CS–VLA), were not certified under part 23. Rather, they were imported to the U.S. and certificated as special class airplanes in accordance with § 21.17(b). Under § 23.2300(a)(2), these airplanes could be certified under part 23, using the CS–VLA to meet the requirements.

Upon further consideration of proposed § 23.700(b)(4), the FAA decided the safety intent of the requirement to limit the range of travel to allow safe flight and landing, if an adjustable stabilizer is used, is already incorporated in the regulations through the requirement for the applicant to design airplane flight control systems to protect against likely hazards. The proposed requirement was prescriptive and may not be appropriate for non-traditional airplane designs. Therefore, the FAA withdraws proposed § 23.700(b)(4).

The Associations asserted including specific information for the verification of stall barrier systems in proposed § 23.700(c) is not beneficial because the issue being addressed is already covered by ''flight control reliability aspects.'' The commenters also noted the simple checks being specified may not be appropriate for all stall barrier systems and that addressing stall barrier flight controls would be better detailed in means of compliance. The commenters recommended deleting proposed § 23.700(c).

The FAA agrees that there is no benefit to including § 23.700(c) because § 23.2510 adequately addresses stall barrier system failure conditions and checks for latent failures. Therefore, the FAA withdraws § 23.700(c).

Textron, ANAC, and Air Tractor commented that proposed § 23.700(d) would require a takeoff warning system without explanation of what it would be, and this could increase complexity.

The FAA withdraws proposed § 23.700(d) because the safety requirement of warning a pilot who is attempting to takeoff with the trim or flaps in an unsafe configuration is adequately addressed in § 23.2605(c).

b. Landing Gear Systems (Proposed § 23.705/Now § 23.2305)

In the NPRM, proposed § 23.705 (now § 23.2305) would have required—

- The landing gear and retracting mechanism be able to withstand operational and flight loads;
- An airplane with retractable landing gear to have a positive means to keep the landing gear extended and a secondary means for extending the

landing gear that could not be extended using the primary means;

• A means to inform the pilot that each landing gear is secured in the extended and retracted positions; and

• Airplanes, with retractable landing gear, except for airplanes intended for operation on water, to also have a warning to the pilot if the thrust and configuration is selected for landing and yet the landing gear is not fully extended and locked.

Furthermore, if the landing gear bay is used as the location for equipment other than the landing gear, proposed § 23.705 would have required that equipment be designed and installed to avoid damage from tire burst and from items that may enter the landing gear bay. Proposed § 23.705 would have also required the design of each landing gear wheel, tire, and ski account for critical loads and would require a reliable means of stopping the airplane with kinetic energy absorption within the airplane's design specifications for landing. For level 3 high-speed multiengine and level 4 multiengine airplanes, proposed § 23.705 would have required the braking system to provide kinetic energy absorption within the design of the airplane specifications for rejected takeoff as the current rules do for multiengine jets over 6,000 pounds and commuter category airplanes.

Several commenters argued that proposed § 23.705 was too design specific and recommended the FAA replace specific design elements such as brakes, wheels, and tires with objectives that would work for a wide array of technologies.

In light of comments received, the FAA revises proposed § 23.705 to withdraw proposed paragraphs (a)(1) through (d), to be replaced with new paragraphs (a)(1), (a)(2), (b), (c)(1) and (c)(2). This section discusses these changes in more detail.

The FAA reassessed the need for the language of proposed § 23.705(a)(1) and (b) and decided not to adopt the proposed paragraphs. The FAA has determined these requirements are adequately addressed by proposed §§ 23.310 (now § 23.2210), 23.320 (now § 23.2220), and 23.400 (now § 23.2235). Section 23.2210 requires structural design loads to be determined that result from likely externally or internally applied pressures, forces or moments, that may occur in flight, ground and water operations, ground and water handling, and while the airplane is parked or moored. This includes operational and flight loads on the landing gear and retracting mechanism, including the wheel well doors specified in the FAA's proposed § 23.705(a)(1). Section 23.2235 requires the structure to support these loads. Section 23.2220 requires the applicant to determine the structural design loads resulting from taxi, takeoff, landing, and ground handling conditions occurring in normal and adverse attitudes and configurations. This includes the critical loads on wheels, tires, and skis specified in proposed § 23.705(b). Section 23.2235 requires the structure to support these loads.

Commenters noted proposed § 23.705 diverged from EASA's proposed CS 23.425, and recommended the FAA work with EASA to achieve harmonization. Several commenters recommended the FAA reject the language originally proposed for § 23.705 and replace it with the language from EASA's proposed CS 23.2325.

The FAA agrees that it should harmonize § 23.2305 as much as possible with CS 23.2325, and has done so where appropriate.

The Associations recommended the FAA revise proposed paragraph (a), which would define landing gear. Textron recommended the FAA add a requirement to provide stable support and control to the airplane during ground operation. The commenters noted the change to paragraph (a) would harmonize with EASA.

The FAA finds the recommended language for paragraph (a) unnecessary. The FAA also finds the accepted means of compliance will describe what is considered landing gear for a particular airplane design. The FAA notes the recommended language is overly broad and can be read to encompass rudder systems and other systems that do not directly interact with the ground, but are necessary to control the airplane during surface operation. The FAA notes rudder systems and other systems are adequately addressed elsewhere.

The FAA revises § 23.2305(a)(1) to adopt CS 23.2325(b)(1) by requiring the landing gear to be designed to provide stable support and control during surface operation. Although the NPRM did not specifically address this requirement, the FAA intended for the revised regulations to capture the safety intent of the former part 23 regulations. This also harmonizes with EASA.

The FAA will not adopt the landing gear loads and energy absorption requirements in CS 23.2325(b)(2) and (b)(3) because these requirements are adequately addressed in §§ 23.2210, 23.2220, and 23.2235. The FAA notes the airplane has to be designed for the anticipated loads, and energy absorbed by the landing gear affects the airframe loads, which are addressed in these sections. Additionally, proper function of any systems related to absorption of energy in the landing gear is addressed in § 23.2505.

The FAA adopts CS 23.2325(b)(4) as § 23.2305(a)(2), requiring the landing gear to be designed to account for likely system failures and likely operation environment, including anticipated limitation exceedances and emergency procedures. As a result of this revision, the FAA withdraws proposed § 23.705(a)(3).

Although the NTSB supported proposed § 23.705(a)(3), the FAA notes proposed § 23.705(a)(3) only addressed tire failures on airplanes with retractable landing gear based on the assumption that tire burst and foreign object risk is greater on airplanes with retractable landing gear. This is generally true for traditional airplane designs. The risk is generally more severe on airplanes with large numbers of passengers, flight critical systems near the landing gear, complex systems, and high-speed operation on the ground. These factors generally exist on airplanes with retractable landing gear, but they could exist on airplanes with fixed landing gear. Conversely, the risk is generally less severe on airplanes with no passengers, no flight critical systems near the landing gear, simple systems and low-speed operation on the ground. These factors generally exist on airplanes with fixed landing gear, but they could exist on airplanes with retractable landing gear (*e.g.,* powered gliders). Therefore, the proposed § 23.705(a)(3) assumption that airplanes with retractable landing gear should be protected from the risks of tire failures and foreign objects, but airplanes with fixed landing gear should not be protected, may not be correct for future designs.

Section 23.2305(a)(2) applies to all landing gear and requires landing gear failures to be considered more generally. The FAA finds § 23.2305(a)(2) will allow traditional designs to comply using current practices as means of compliance, with the flexibility to develop new means of compliance more appropriate for potential future designs. This furthers the goal of moving to performance-based requirements.

The FAA notes § 23.2305(a)(2) captures the intent of former §§ 23.721, 23.729, 23.735, and 23.1309, which required that applicants account for likely landing gear failures. It also captures the intent of former §§ 23.603, 23.721, 23.729, 23.735, 23.1301, and 23.1309, which required that applicants account for likely operation environments, and/or anticipated limitation exceedances and emergency procedures.

The commenters recommended that the FAA move the substance of proposed § 23.705(a) for airplanes with retractable landing gear to proposed § 23.705(c) and replace the proposed language with CS 23.2325(d), which deals with airplanes that have a system that actuates the landing gear.

The FAA has considered the comments and has decided to adopt CS 23.2325(d)(1) and (4) as § 23.2305(c)(1) and (2). CS 23.2325(d)(1) and (4) require a positive means to keep the landing gear in the landing position and an alternative means available to bring the landing gear in the landing position when a non-deployed system position would be hazardous. The FAA adopts § 23.2305(c)(1) because it is less prescriptive than proposed § 23.705(a)(2)(i). The FAA notes the recommended phrase ''in the landing position'' is less prescriptive than ''extended'' and better expresses the intent of the requirement. Moreover, § 23.2305(c)(1) does not increase the burden on traditional designs; provides flexibility to allow new designs to be certified because it applies to all landing gear actuated by a system, not just retractable landing gear; and assists in harmonization.

The FAA adopts the language of CS 23.2325(d)(4) as § 23.2305(c)(2), with one minor change. The FAA is using the phrase ''a hazard'' instead of ''hazardous'' to avoid confusion with former § 23.1309's use of the phrase ''hazardous failure condition.'' The language of CS 23.2325(d)(4) better captures the safety intent of former § 23.729(c), which did not require a secondary means for landing gear that could be extended manually, and is less prescriptive because it only requires an alternative means to bring the landing gear to the landing position if a non-deployed position would be a hazard. Additionally, moving the location of this requirement has no technical impact and harmonizes with CS 23.2325.

The FAA does not adopt proposed § 23.705(a)(2)(iii) or the language from CS 23.2325(d)(2) and (d)(3) because the FAA considers both proposals to be adequately addressed by proposed § 23.1500(b) (now § 23.2600(b)). Section 23.2600(b) requires the applicant to install flight, navigation, surveillance, and powerplant controls and displays so qualified flightcrew can monitor and perform defined tasks associated with the intended functions of systems and equipment. The systems and equipment design must minimize flightcrew errors which could create additional hazards. Section 23.2600(b) incorporates the safety intent of previous requirements for landing gear indications and effectively requires the pilot to be informed of the landing gear position (secured in extended or retracted position) should the pilot need that information.

Textron recommended the FAA remove the requirement for a secondary means of extending the landing gear in proposed § 23.705 and rely instead on the requirements of proposed § 23.1315.

The FAA disagrees as Textron's recommendation does not capture the intent of the former regulation, which was a specific requirement for a secondary means of deploying landing gear. Furthermore, this requirement in proposed § 23.705 was not covered by the general systems failure requirements of proposed § 23.1315.

Several commenters recommended deleting proposed § 23.705(a)(2)(iv), in part, because it was too prescriptive. One commenter recommended rewriting the rule as a performance-based regulation to encourage alternate—and perhaps better—means of detecting wrong configurations for landing.

The FAA agrees that proposed § 23.705(a)(2)(iv) is too prescriptive, and finds it is adequately addressed by the requirements of new § 23.2605(c), which requires information concerning an unsafe system operating condition must be provided in a timely manner to the crewmember responsible for taking corrective action. Accordingly, the FAA withdraws proposed § 23.705(a)(2)(iv).

Textron recommended the FAA add the word ''essential'' before ''equipment'' in proposed § 23.705(a)(3),[37] asserting that non-essential equipment is not important to protect in the landing gear bay.

The FAA disagrees with Textron's recommendation as it is possible that failures of non-essential equipment like a fuel line for a combustion heater may result in hazards more severe than the loss of the non-essential function. Therefore, the FAA is not adopting this change in the final rule.

Textron recommended rewording proposed §§ 23.705(c) and (d) to limit their applicability to airplanes with wheels, asserting these paragraphs required airplanes without wheels to have brakes. Alternatively, Textron suggested moving the requirement to proposed § 23.1300(a) (now § 23.2500(a)) because an airplane with wheels will need a braking system to meet proposed § 23.1300(a), making § 23.705(c) redundant. Other commenters recommended the FAA replace proposed § 23.705(c) and (d) with the CS 23.2325(c), which addresses kinetic energy absorption.

The FAA concurs with the recommendation to replace proposed § 23.705(c) and (d) with CS 23.2325(c). The FAA notes CS 23.2325(c) has the same meaning as proposed § 23.705(c) and (d), but harmonizes with EASA's NPA 2016–05. The FAA has determined the removal of the phrase ''within the airplane's design specifications for landing'' and replacement with ''sufficient . . . to account for landing'' has no technical impact. The FAA adopts the change as § 23.2305(b).

The FAA disagrees with Textron's recommendation to reword § 23.705(c) and (d) to limit their applicability to airplanes with wheels. The FAA notes proposed paragraphs (c) and (d) would not require brakes. While the FAA has considered Textron's alternative recommendation, the specific energy absorption requirement of proposed § 23.705(c) is not adequately addressed by the general system performance requirements of proposed § 23.1300(a). Therefore, the FAA is not adopting this change in the final rule.

Textron suggested the FAA should harmonize its proposed regulations on this topic with CS 23.600 by removing language related to brakes as a subset of meeting the requirements of proposed § 23.1300(a).

The FAA agrees with harmonizing with EASA wherever possible. However, specifically requiring a reliable means of stopping the airplane is not excessively prescriptive and provides clarity to the regulation. Furthermore, Textron's suggested text would not harmonize with CS 23.2325.

EASA recommended eliminating the reference to level 3 and 4 airplanes in proposed § 23.705(d), and replacing it with a reference to airplanes ''required to demonstrate aborted take-off capacity,'' which links the requirement to takeoff performance. Similarly, all of the comments on this section recommended making proposed § 23.705(d) applicable to the same airplanes covered by proposed § 23.115(c)(1) (now § 23.2115(c)(1)).[38] Textron also suggested directly referencing proposed § 23.115 to prevent the link between the two

[37] Textron referenced ''the 2nd line of the 2nd paragraph,'' but the FAA infers they intended to reference proposed § 23.705(a)(3) because this is the provision that would require protection of equipment.

[38] Proposed § 23.115(c)(1) would have applied to ''levels 1, 2, and 3 high-speed multiengine airplanes, multiengine airplanes with a maximum takeoff weight greater than 12,500 pounds and level 4 multiengine airplanes.''

requirements from being inadvertently broken.

The FAA agrees with the recommendation to make § 23.2305(b) applicable to the same airplanes as § 23.2115(c)(1) for several reasons. First, in order to comply with § 23.2115(c)(1), applicants must design airplanes with a means to decelerate the airplane after a rejected takeoff, regardless of the requirements in § 23.2305(b), so adopting the recommended change would not increase the burden on applicants. Second, making the applicability of § 23.2305(b) different from § 23.2115(c)(1) could cause confusion, especially because the proposed applicability would have included airplanes excluded from § 23.2115(c)(1). In former §§ 23.55 and 23.735(e), the FAA applied the requirement to determine the distance for an aborted takeoff at critical speed to the same airplanes required to provide kinetic energy absorption in the brakes for a rejected takeoff, and there is no reason to discontinue this practice. Additionally, adopting this recommendation harmonizes the FAA requirement with CS 23.2325(c).

c. Buoyancy for Seaplanes and Amphibians (Proposed § 23.710/Now § 23.2310)

In the NPRM, proposed § 23.710 (now § 23.2310) would have required airplanes intended for operations on water to provide buoyancy of 80 percent in excess of the buoyancy required to support the maximum weight of the airplane in fresh water. Proposed § 23.710 would have also required airplanes intended for operations on water to have sufficient watertight compartments so the airplane will stay afloat at rest in calm water without capsizing if any two compartments of any main float or hull are flooded.

The FAA noted in the NPRM that it was proposing to remove the requirement that each main float must contain at least four watertight compartments of approximately equal volume because it was a specific design requirement that would be addressed by the proposed performance-based standard.

All of the comments on this section noted a problem with the prescriptive design specificity of proposed § 23.710(b); in particular, the requirement to have watertight compartments. The commenters noted an erroneous assumption that all airplanes intended for operations on water would have watertight compartments. The commenters noted that manufacturers could employ a different solution—such as foam-filled floats—eliminating the need for compartments, and still meet the buoyancy intent. BendixKing commented that the buoyancy requirement needs to be ''more generic to address the core safety intent, which is adequate floatation in the event of a failure.'' The Associations and Textron offered alternative regulatory language that would remove the requirement to have watertight compartments and provide a general performance-based standard for demonstrating buoyancy.

The FAA agrees that proposed § 23.710(b) is excessively prescriptive. The FAA recognizes there are other ways to meet the safety goal of protecting the airplane from capsizing. Therefore, the FAA revises proposed § 23.710(b) to establish a more performance-based standard for demonstrating buoyancy.

ICON noted that hull type and float seaplanes were treated differently in former part 23, and recommended that they be treated differently in the new part 23 as well, because they deal with a loss of buoyancy in different ways. In particular, ICON noted differences in the rate of capsizing, the ability to detect an intrusion of water, and the pilot's ability to remove the water while operating the airplane. ICON asked the FAA to eliminate the separate compartment requirements for hull-type seaplanes.

The FAA agrees that, as proposed, the combination of hulls and floats into one regulation would have imposed a requirement on hulls that is more stringent than the requirements in former part 23. The FAA revises the proposed language to remove the prescriptive requirement for watertight compartments. As such, § 23.2310 contains a more general standard for buoyancy that is appropriate for both floats and hulls.

d. Means of Egress and Emergency Exits (Proposed § 23.750/Now § 23.2315)

In the NPRM, proposed § 23.750 (now § 23.2315) would have required—

- The airplane cabin exit be designed to provide for evacuation of the airplane within 90 seconds in conditions likely to occur, excluding ditching, following an emergency landing. For ditching, proposed § 23.750 would have required the cabin exit for all certification levels 3 and 4 multiengine airplanes be designed to allow evacuation in 90 seconds;
- Each exit to have a simple and obvious means, marked inside and outside the airplane, to be opened from both inside and outside the airplane, when the internal locking mechanism is in the locked position; and
- Airplane evacuation paths to protect occupants from serious injury from the propulsion system, and require that doors, canopies, and exits be protected from opening inadvertently in flight.

Proposed § 23.750 would have precluded each exit from being obstructed by a seat or seat back, unless the seat or seat back could be easily moved in one action to clear the exit. Proposed § 23.750 would have also required airplanes certified for aerobatics to have a means to exit the airplane in flight.

The Associations, BendixKing, Textron, and EASA recommended the FAA remove the 90-second evacuation requirement in proposed § 23.750(a) and replace it with less prescriptive language. EASA stated that the 90-second evacuation time was not contained in the former part 23 regulations and would not be reasonable for all airplanes. EASA stated that leaving the acceptable design solutions to an acceptable means of compliance would be better. As alternatives to the proposed language, BendixKing suggested a requirement for ''adequate and timely'' evacuation, Textron suggested a requirement for ''rapid'' evacuation, and the Associations suggested a requirement for ''rapid and safe'' evacuation.

The FAA agrees and removes the airplane 90-second evacuation requirement because specifying the time limit in the regulation is unnecessarily prescriptive. The FAA replaces the evacuation requirement with the requirement to ''facilitate rapid and safe evacuation of the airplane in conditions likely to occur following an emergency landing, excluding ditching for level 1, level 2, and single-engine level 3 airplanes.'' This harmonizes more closely with EASA's proposed CS 23.2335.

The Associations specifically proposed revisions to the regulatory text, which appeared to align with EASA's proposed regulation. In accordance with their recommendation, the FAA revises the beginning of proposed § 23.750(a) to move a portion of its content into § 23.2315(a)(1). Section 23.2315(a) is revised to read: ''With the cabin configured for take-off or landing, the airplane is designed to,'' followed by more detailed requirements in the subparagraphs. The FAA believes this change more clearly preserves the intent of former regulations. It also harmonizes with EASA's proposed regulation.

Textron also commented that the FAA should either replace the word ''likely'' in proposed § 23.750(a) or ensure the ''likely conditions'' referred to in paragraph (a) are clearly defined in the ASTM standards. The FAA intends the term ''likely'' to be nonprecise or within a mathematical certainty. As explained in the discussion of proposed § 23.205, the FAA finds the most appropriate location for defining ''likely conditions'' is in a means of compliance, because these conditions may vary for different airplanes; therefore, the FAA retains the word ''likely'' in paragraph (a).

Textron also noted that proposed § 23.750(a) specifies ''likely conditions,'' but excludes ditching for all but levels 3 and 4 multiengine airplanes. However, Textron stated that ditching as a likely condition associated with emergency evacuation had not been required previously. It recommended the FAA add a requirement to proposed § 23.750, to require a means on levels 3 and 4 multiengine airplanes to evacuate the airplane safely following a ditching event.

The FAA notes the requirement to safely evacuate the airplane during ditching is already addressed generally in § 23.2315(a)(1). The methods for meeting this requirement will be in a means of compliance.

Textron further commented on using former § 23.807(e) as a means of compliance to show that occupants have a means available to safely evacuate the airplane. Textron stated that former § 23.807(e) only prescribes one exit on each side of the airplane to be above the waterline or alternative methods must be employed.

The FAA agrees that providing one exit on each side of the airplane above the waterline is an acceptable means of compliance. While this may be one means of compliance that is acceptable for traditional designs, the FAA's goal in this rule is to use means of compliance, developed by industry or individuals, to allow for non-traditional designs.

Transport Canada commented on proposed § 23.750(a), noting that cabin exit design is just one of several elements that affect evacuation performance. Transport Canada also noted that the expectation to meet the evacuation performance with the airplane's maximum certified occupancy should be made explicit. Transport Canada suggested a revision to proposed paragraph (a) stating that the airplane design, including the cabin exit design, must provide for evacuation of the airplane of the maximum number of occupants within 90 seconds in conditions likely to occur following an emergency landing.

The FAA agrees that cabin exit design is just one of several elements that affect evacuation performance and that rapid evacuation with the airplane's maximum certified occupancy is required, but the regulation does not have to explicitly include this requirement. Section 23.2315 addresses generally all the likely conditions that affect emergency evacuation, which would include an airplane with maximum certificated occupancy. Therefore, the FAA is not adopting the language proposed by Transport Canada.

The Associations recommended the following revisions to proposed § 23.750(a), which deleted or combined portions of proposed paragraphs (a), (b), (c), (d) and (f) into a new paragraph (a), and renumbered paragraph (e) as paragraph (b). Their proposed paragraph (a)(1) appears to correlate with proposed § 23.750(a). They proposed a revision to proposed paragraph (a)(1) stating that, with the cabin configured for take-off or landing, the airplane is designed to facilitate rapid and safe evacuation of the ''aeroplane'' in conditions likely to occur following an emergency landing, excluding ditching for level 1, level 2, and single-engine level 3 airplanes.

The FAA adopts this language as § 23.2315(a)(1), except for spelling ''aeroplane'' as ''airplane.'' This is better organized and more understandable than the proposed language, while still retaining the intent of former regulations and harmonizes the regulations between FAA and EASA.

Textron commented that the phrase ''when the internal locking mechanism is in the locked and unlocked position'' in proposed § 23.750(b) is not necessary and should be deleted. The FAA agrees and removes the phrase because this is a detailed design consideration, which is more appropriately addressed in means of compliance.

Textron also recommended the FAA add a requirement similar to the requirement for auxiliary locking devices in former § 23.783(c)(6), which would provide, in pertinent part, that auxiliary locking devices that are actuated externally to the airplane may be used but such devices must be overridden by the normal internal opening means. Textron's view was that auxiliary locking devices used to secure the airplane would likely be needed to prevent unauthorized entry into the airplane when it is left unattended.

The FAA disagrees with Textron's recommendation as the suggested text because it is more appropriate for a means of compliance.

The Associations proposed revisions to proposed § 23.750(a)(2) that coincidently address Textron's comment on internal locking mechanisms. They suggested adding language stating that, with the cabin configured for take-off or landing, the airplane is designed to have means of egress (openings, exits or emergency exits), that can be readily located and opened from the inside and outside. The means of opening must be simple and obvious.

The FAA adopts this language as § 23.2315(a)(2), except the proposed marking requirement is retained. This revision captures the safety intent of the former regulations more clearly and harmonizes regulations between the FAA and EASA.

The Associations recommended deleting proposed § 23.750(c). The FAA agrees because paragraph (a)(1), as revised, already addresses similar requirements, rendering paragraph (c) redundant.

Textron commented on proposed § 23.750(d) by recommending the FAA address obstructions more generally (*i.e.,* not just seat backs), and offered the language stating that each exit must not be obstructed unless the obstruction can be easily moved in one action to clear the exit.

Transport Canada similarly suggested the requirement should more generally address that any component of the interior should be considered as a potential obstruction, and also address temporary obstructions during flight. Transport Canada proposed a revision to proposed paragraph (d) stating that each exit must not be obstructed by any interior component during taxi, take-off or landing. In addition, a seat or seat back may obstruct an exit if the seat or seat back can [be] easily moved in one action to clear the exit.

The FAA considered Transport Canada's proposed wording, but moving a seat back easily in one motion to reach an emergency exit is more appropriate as a means of compliance. The FAA agrees with Textron's and Transport Canada's comments on proposed § 23.750(d) that obstructions that could potentially block exits should be addressed more generally and not limited to seat backs, because other items could block exits and impair evacuation. The FAA revises the regulation accordingly as § 23.2315(a)(3).

The Associations proposed a revision to proposed § 23.750(a)(3) stating that, with the cabin configured for take-off or landing, the airplane is designed to have easy access to emergency exits when present.

The FAA is incorporating this suggestion in § 23.2315(a)(3). The new language captures the safety intent of the former regulations more generally and harmonizes the FAA language with the EASA NPA language.

The Associations recommended to renumber proposed § 23.750(e) as proposed § 23.750(b) (now § 23.2315(b)). The FAA agrees and adopts the proposed renumbering. This relocation will not change the substantive content of the paragraph, but matches with EASA's numbering and will lessen confusion.

The Associations recommended deleting proposed § 23.750(f). EASA commented that the requirement in proposed § 23.750(f) for doors, etc. is too design-specific and can be covered by generic principles covered in § 23.2250 (proposed as § 23.500).

The FAA understands EASA's comment, but requiring doors, canopies, and exits to be protected from opening inadvertently in flight is a general requirement that does not limit possible design solutions. However, the FAA moves this requirement to § 23.2250(e) to harmonize the location of the requirement with EASA's rule.

Upon further review, the FAA is replacing the word ''approved'' in proposed § 23.750(e) (now § 23.2315(b)) with the word ''certified''. This change does not affect the original intent of paragraph (e), but harmonizes the language with EASA.

e. Occupant Physical Environment (Proposed § 23.755/Now § 23.2320)

In the NPRM, proposed § 23.755 (now § 23.2320) would have required an applicant to design the airplane to allow clear communication between the flightcrew and passengers and provide a clear, sufficiently undistorted external view to enable the flightcrew to perform any maneuvers within the operating limitations of the airplane. Proposed § 23.755 would have also required an applicant to design the airplane to protect the pilot from serious injury due to high-energy rotating failures in systems and equipment, and protect the occupants from serious injury due to damage to windshields, windows, and canopies.

Additionally, proposed § 23.755 would have required, for level 4 airplanes, each windshield and its supporting structure directly in front of the pilot to withstand the impact equivalent of a two-pound bird at maximum approach flap airspeed and allow for continued safe flight and landing after the loss of vision through any one panel.

Furthermore, proposed § 23.755 would have required any installed oxygen system to include a means to determine whether oxygen is being delivered and a means for the flightcrew to turn on and shut off the oxygen supply, and the ability for the flightcrew to determine the quantity of oxygen available. Proposed § 23.755 would have also required any installed pressurization system to include a pressurization system test and a warning if an unsafe condition exists.

EASA commented the requirement in proposed § 23.755(a)(2) for the airplane design to provide a clear, sufficiently undistorted external view should be covered in the ''crew interface'' paragraph.

The FAA agrees with EASA that the § 23.755(a)(2) flightcrew visibility requirement is more directly related to flightcrew interface than occupant environment. The FAA is including the words ''including pilot view'' in § 23.2600(a). This change harmonizes § 23.2600(a) more closely with proposed CS 23.2600(a).

Similarly, the FAA relocates the proposed § 23.755(b)(2) requirement to § 23.2600(c), because this change harmonizes § 23.2600(c) more closely with EASA's proposed CS 23.2600(d). Additionally, the FAA adopts the language in EASA's proposed CS 23.2600(d), except for the spelling of ''aeroplanes'' versus ''airplanes'' for improved clarity and harmonization.

The Associations suggested the FAA delete the word ''any'' from the phrase ''any maneuvers within the operating limitations of the airplane,'' in proposed § 23.755(a)(2). The commenters did not provide a rationale for this suggestion.

The FAA disagrees as removing the word ''any'' could unduly restrict the scope of the rule. The FAA's intent is that adequate visibility must be provided to perform any maneuvers within the operating limitations of the airplane. Therefore, the FAA adopts § 23.2600(a) as proposed in the NPRM.

The Associations, Transport Canada, EASA, and ANAC questioned proposed § 23.755(a)(3), which would require the airplane design to protect the pilot from serious injury due to high-energy rotating failures. The Associations stated there may be new systems which may include high amounts of energy that is not the result of rotating equipment. The commenters suggested proposed § 23.755(a)(3) be broadened to include the new systems, such as high voltage systems. EASA similarly suggested amending the protection of pilots against serious injury due to high-energy rotating failures to include any high-energy risks.

The FAA has considered the commenters' suggestion to change proposed § 23.755(a)(3) as recommended. However, the FAA has concluded that the safety requirements contained in § 23.2510, ''Equipment, systems and installations,'' (proposed as § 23.1315) of this rule adequately address hazards from high-energy sources. Therefore, no change is being made to the final rule based on the commenters' suggestion.

ANAC referenced former § 23.1461(d) and asked the FAA to explain why proposed § 23.755(a)(3) excluded protection for airplane occupants other than the pilot from certain hazards. Additionally, Transport Canada commented the proposed language requires protecting the pilot from high-energy rotating failures, which suggests a lower level of safety for the other airplane occupants. It recommended replacing the word ''pilot'' with ''occupants''.

The FAA agrees with ANAC and Transport Canada that proposed § 23.755(a)(3) would effectively lower the level of safety because it did not protect all occupants from high-energy rotor failures. It also did not protect the airplane from high-energy rotor failures, and allowed the pilot and pilot controls to be in the inboard propellers' plane of rotation. The FAA intended to incorporate the safety intent of former §§ 23.771(c) and 23.1461.

Therefore, the FAA adopts § 23.2550 to better capture the safety intent of former § 23.1461. Section 23.2550 requires equipment containing high-energy rotors to be designed or installed to protect the occupants and airplane from uncontained fragments. The FAA also revises § 23.2320(a)(2) (proposed as § 23.755(a)(3)) to capture the safety intent of former § 23.771(c). Section 23.2320(a)(2) will require the pilot and flight controls be protected from propellers.

Textron and NJASAP commented on the requirement in proposed § 23.755(b)(1) for level 4 airplanes to ensure that the windshield and its supporting structure directly in front of the pilot can withstand the impact equivalent of a two-pound bird. Textron noted the 14 CFR part 33 engine requirement for medium bird ingestion is based on a 2.5-pound bird and questioned why the FAA did not use 2.5-pounds in proposed § 23.755(b)(1). Textron also recommended the FAA consider language from CS 23.440(a) with weight/type specifics being defined in the industry standards.

The FAA notes NJASAP's and Textron's comment on the weight of the bird in proposed § 23.755(b)(1). Former § 23.775(h)(1) required windshield panes directly in front of pilots in the normal conduct of their duties, and the supporting structure for these panes, to withstand, without penetration, the impact of a two-pound bird when the velocity of the airplane (relative to the bird along the airplane's flight path) is equal to the airplane's maximum approach flap speed for commuter category airplanes. The FAA codified this requirement in part 23, amendment 23–49.[39] The preamble of the NPRM[40] for amendment 23–49 explains that the two-pound bird requirement was based on ICAO bird strike data that occurred on airplanes of 19,000 pounds or less from 1981 through 1989. Also, this requirement is well established in the former regulations and has provided an acceptable level of safety. Therefore, the FAA retains the two-pound bird requirement.

NJASAP commented the methodology used to discriminate between level 3 and 4 airplanes will motivate OEMs to certify more airplanes within level 3. The commenter also noted that airplanes in this category have experienced fatal accidents due to bird strikes. NJASAP recommended the FAA apply the requirements of proposed § 23.755(b)(1) to level 3 high-speed airplanes.

The FAA acknowledges the requirement in former § 23.775(h)(1) applied to commuter category airplanes, while the proposed requirement would have applied only to level 4 airplanes. Under the former regulations, a commuter category airplane was limited to multiengine airplanes with a seating configuration, excluding pilot seats, of 19 or less and a maximum certificated weight of 19,000 pounds or less.[41] Additionally, a normal category airplane was limited to those airplanes that had a seating configuration, excluding pilot seats, of nine or less, a maximum certificated takeoff weight of 12,500 pounds or less, and intended for nonacrobatic operation.[42] Under the proposal, level 4 airplanes would be airplanes with a maximum seating configuration of 10 to 19 passengers. Thus, the proposal would have the effect of providing relief to a percentage of part 23 airplanes with a maximum certified takeoff weight more than 12,500 pounds, but have fewer than 10 passengers seating configuration.

Under NJASAP's proposal, this requirement would apply to airplanes with 7 to 9 passengers and a maximum certified takeoff weight of 12,500 pounds or less, which would increase the certification requirements of former § 23.775(h)(1). This regulation has proven to be an acceptable level of safety. Additionally, adding level 3 airplanes would increase the cost for a number of these airplanes that weigh less than 12,500 pounds.

Transport Canada and ANAC noted that former § 23.831 addresses smoke, which was not included in proposed § 23.755(c). Transport Canada recommended the FAA add the phrase ''and solid or liquid particulates'' after the word ''vapors'' in proposed paragraph § 23.755(c) because smoke is a collection of airborne solid and liquid particulates and gases.

The FAA agrees with Transport Canada and ANAC and revises § 23.2320(c) to require the air provided to each occupant be free of hazardous concentrations of smoke during normal operations and likely failures. The FAA intended proposed § 23.755(c) to incorporate the safety intent of former § 23.831(b), which requires the ventilating air in the flightcrew and passenger compartments to be free of harmful or hazardous concentrations of gases and vapors in normal operations and in the event of reasonably probable failures or malfunctioning of the ventilating, heating, pressurization, or other systems and equipment. It also requires smoke evacuation be accomplished quickly if accumulation of hazardous quantities of smoke in the cockpit area is reasonably probable.

The FAA chose the term ''smoke'' instead of ''solid or liquid particulates'' because it is a more common term. Section 23.2320(c) requires air at a breathable pressure, free of hazardous concentrations of gases, vapors, and smoke, to be provided to each occupant during normal operations and likely failures.

ANAC questioned whether general rules (like proposed § 23.1315) would address the concern of smoke evacuation capability and requested the FAA clarify how airplane manufacturers would be driven to develop a smoke evacuation system in case there is no explicit requirement, just general ones.

The FAA considers § 23.2320(c) to be an explicit requirement for cockpit smoke evacuation but general regulations may also require smoke evacuation to be considered. A pressurized airplane design that cannot evacuate smoke from the cockpit sufficiently to allow the flightcrew to safely perform their duties, does not provide each occupant with air at a breathable pressure, free of hazardous concentrations of gases, vapors and smoke, during normal operations and probable failures. Therefore, an effective smoke evacuation system is necessary to comply with § 23.2320(c) of this rule.

The Associations recommended reordering proposed § 23.755(d) and (e) to place the oxygen requirements after the pressurization requirements. The FAA agrees with the recommendation and notes this change harmonizes with EASA's regulation. In EASA's regulation, pressurization system requirements precede the oxygen systems requirements.

Textron commented that the FAA should remove proposed § 23.755(e)(1), as it covers the same subject area as proposed § 23.1305(c). Proposed § 23.1305(c) would have required information concerning an unsafe system operating condition to be provided in a timely manner to the crewmember responsible for taking corrective action. Presentation of this information must be clear enough to avoid likely crewmember errors.

The FAA agrees with Textron's comment, as both sections would require the crewmembers to be made aware of unsafe conditions. Therefore, the FAA adopts § 23.2605(c) as proposed and withdraws proposed § 23.755(e)(1).

Proposed § 23.755(e)(2) would have required pressurization systems, if installed, to include a pressurization system test. The FAA intended to capture the safety intent of former § 23.843, ''Pressurization system tests,'' which required specific tests for demonstrating compliance with safety requirements. Upon further review, the FAA finds that proposed § 23.755(e)(2) contains prescriptive requirements, which is inconsistent with the FAA's goal of establishing performance-based requirements as was set forth in the NPRM. Therefore, the FAA withdraws proposed § 23.755(e)(2).

The FAA reviewed the former regulations related to proposed § 23.755 to determine if it inadvertently omitted any safety requirements for pressurization systems. As a result of this review, the FAA has identified the following omissions, which are addressed in this rule.
