FEDERAL REGISTER

Vol. 81 Friday,

No. 58 March 25, 2016

Book 1 of 3 Books

Pages 16053–16284

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Memorandum of March 21, 2016

Building National Capabilities for Long-Term Drought Resilience

Memorandum for the Heads of Executive Departments and Agencies

By the authority vested in me as President by the Constitution and the laws of the United States of America, I hereby direct the following:

Section 1. *Purpose*. Our Nation must sustain and expand efforts to reduce the vulnerability of communities to the impacts of drought. Every year, drought affects millions of Americans and poses a serious and growing threat to the security and economies of communities nationwide. Drought presents challenges to the viability of agricultural production and to the quantity and quality of drinking water supplies that communities and industries depend upon. Drought jeopardizes the integrity of critical infrastructure, causes extensive economic and health impacts, harms ecosystems, and increases energy costs. In responding to and recovering from past droughts, we have learned that focused collaboration across all levels of government and the private sector is critical to enable productive and workable solutions to build regional resilience to drought.

Among other actions, this memorandum institutionalizes the National Drought Resilience Partnership (NDRP), which builds upon the National Integrated Drought Information System, an interagency program led by the Department of Commerce. The NDRP was outlined in the President's Climate Action Plan to better coordinate Federal support for drought-related efforts, help communities reduce the impact of current drought events, and prepare for future droughts. In sustaining this focused collaboration, the NDRP will provide the Federal Government with a lasting platform that enables locally and regionally driven priorities and needs to guide coordinated Federal activities.

Sec. 2. *Policy*. It is the policy of the Federal Government to coordinate and use applicable Federal investments, assets, and expertise to promote drought resilience and complement drought preparedness, planning, and implementation efforts of State, regional, tribal, and local institutions. In addition, where appropriate, the Federal Government shall seek partnerships with such institutions and the private sector in order to increase and diversify our Nation's water resources through the development and deployment of new technologies and improved access to alternative water supplies. Agencies shall also work with State, regional, tribal, and local institutions to support their efforts to maintain and enhance the long-term health and resilience of working lands and ecosystems. In carrying out this memorandum, executive departments and agencies (agencies) shall continue to recognize the primacy of States, regions, tribes, and local water users in building their resilience to drought.

Sec. 3. *Drought Resilience Goals*. (a) The heads of agencies shall, to the extent permitted by law and to the maximum extent possible, carry out the policy described in section 2 of this memorandum by implementing policies and taking actions to achieve the following drought resilience goals:

(i) *Data Collection and Integration*. Agencies shall share data and information related to drought, water use, and water availability, including data on snowpack, groundwater, stream flow, and soil moisture with State,

regional, tribal, and local officials to strengthen decisionmaking to support more adaptive responses to drought and drought risk.

(ii) *Communicating Drought Risk to Critical Infrastructure*. Agencies shall communicate with State, regional, tribal, local, and critical infrastructure officials, targeted information about drought risks, including specific risks to critical infrastructure.

(iii) *Drought Planning and Capacity Building*. Agencies shall assist State, regional, tribal, and local officials in building local planning capacity for drought preparedness and resilience.

(iv) *Coordination of Federal Drought Activity*. Agencies shall improve the coordination and integration of drought-related activities to enhance the collective benefits of Federal programs and investments.

(v) *Market-Based Approaches for Infrastructure and Efficiency*. Agencies shall support the advancement of innovative investment models and market-based approaches to increase resilience, flexibility, and efficiency of water use and water supply systems.

(vi) *Innovative Water Use, Efficiency, and Technology*. Agencies shall support efforts to conserve and make efficient use of water by carrying out relevant research, innovation, and international engagements.

(b) The NDRP, as described in section 5 of this memorandum, shall facilitate, coordinate, and monitor the implementation of the actions conducted to achieve these goals.

Sec. 4. *Drought Resilience Actions*. In furtherance of the policies and goals described in this memorandum, I hereby direct agencies to take, subject to the availability of appropriations, by December 31, 2016, the following actions:

(a) *Data Collection and Integration*.

(i) The heads of agencies participating in the NDRP shall:

(A) improve the integration of all relevant drought-related data and information, and facilitate the use of such data, in coordination with the National Integrated Drought Information System, by State, regional, tribal, and local officials in drought planning and decisionmaking; and

(B) identify and use data formats that will allow these datasets to be incorporated into existing geospatial data platforms.

(ii) The Secretaries of the Interior, Agriculture, Commerce, and the Director of the Office of Science and Technology Policy shall coordinate the implementation of the activities described in section 4(a)(i) of this memorandum.

(b) *Drought Planning and Capacity Building*.

(i) The heads of agencies participating in the NDRP shall:

(A) provide technical and scientific information to State, regional, tribal, and local officials concerning the integration of drought planning, hazard mitigation, and preparedness planning; and

(B) ensure that local and regional officials are aware of drought-related planning activities and similar initiatives occurring in their region, which will avoid duplication of effort and prompt peer-to-peer collaboration.

(ii) The Secretaries of the Interior, Agriculture, Commerce, and Homeland Security shall coordinate the implementation of the activities described in section 4(b)(i) of this memorandum.

(c) *Communicating Drought Risk to Critical Infrastructure*.

(i) The heads of agencies participating in the NDRP shall:

(A) support information gathering and analysis to assess the risk of drought to critical infrastructure; and

(B) use the assessment described in section 4(c)(ii) of this memorandum to inform agencies and to better communicate accurate, science-based information about drought, and the risks of drought to communities, critical

infrastructure owners and operators, and other drought resilience stakeholders.

(ii) The Secretaries of Commerce and Homeland Security shall coordinate the implementation of the activities described in section 4(c)(i) of this memorandum and jointly publish an assessment describing the risk that drought poses to U.S. critical infrastructure.

(d) *Coordination of Federal Drought Activity*.

(i) The heads of agencies participating in the NDRP shall:

(A) coordinate and use Federal programs and investments to better support drought resilience through improved information sharing and collaboration, building on existing place-based and program coordination efforts; and

(B) develop tools, guidance, and other relevant resources to ensure drought-related support to State, regional, tribal, and local officials occurs in an effective and efficient manner.

(ii) The Secretaries of the Interior, Agriculture, Commerce, and the Army shall coordinate the implementation of the activities described in section 4(d)(i) of this memorandum.

(e) *Market-Based Approaches for Infrastructure and Efficiency*.

(i) The heads of agencies participating in the NDRP shall:

(A) identify and share effective practices with State, regional, tribal, and local water users on the use of innovative financing opportunities to facilitate the construction, maintenance, rehabilitation, or restoration of drought-resilient infrastructure;

(B) test innovative financing opportunities, to the extent permitted by law, to attract private investment into underserved and drought-sensitive rural water infrastructure; and

(C) where appropriate, provide technical assistance to support State and local efforts to develop strategies for more flexible water management, including through market-based mechanisms.

(ii) The Secretaries of the Interior and Agriculture and the Administrator of the Environmental Protection Agency shall coordinate the implementation of the activities described in section 4(e)(i) of this memorandum.

(f) *Innovative Water Use, Efficiency, and Technology*.

(i) The heads of agencies participating in the NDRP shall:

(A) engage with foreign partners in order to establish mechanisms through which to implement relevant research, monitoring, and technical assistance to support transfer and adaptation of more water-efficient practices and technologies domestically;

(B) facilitate the development of new technologies and practices or the expansion of existing technologies and practices to mitigate the consequences of drought; and

(C) promote expanded use of technologies that allow the use of produced, reused, brackish, recycled, or other alternative water sources where possible and appropriate.

(ii) The Secretaries of State, Agriculture, Energy, the Interior, and the Environmental Protection Agency shall coordinate the implementation of the activities described in section 4(f)(i) of this memorandum.

Sec. 5. *National Drought Resilience Partnership*.

(a) *Establishment and Function*. There is established the National Drought Resilience Partnership (NDRP) as an interagency task force that is responsible for enhancing coordination of Federal drought resilience policies and monitoring the implementation of the activities and goals described in this memorandum.

(b) *Administration of the NDRP*. The NDRP administrative functions will be housed within the Department of Agriculture, which shall provide funding

and administrative support for the NDRP to the extent permitted by law and within existing appropriations.

(c) *Membership*. The NDRP shall consist of representatives, serving at the Assistant Secretary-level or higher, from the following:

(i) the Department of Defense, Office of the Secretary of Defense-Policy;

(ii) the Department of the Interior;

(iii) the Department of Agriculture;

(iv) the Department of Commerce;

(v) the Department of Energy;

(vi) the Department of Homeland Security;

(vii) the Environmental Protection Agency;

(viii) the Office of Management and Budget;

(ix) the Office of Science and Technology Policy;

(x) the National Economic Council;

(xi) the Council on Environmental Quality;

(xii) the National Security Council staff;

(xiii) the Army; and

(xiv) such other agencies or offices as the agencies set forth above, by consensus, deem appropriate.

(d) *NDRP Co-Chairs*. The NDRP shall have two Co-Chairs. The Secretary of Agriculture, or the Secretary's designated representative, shall continuously serve as the first Co-Chair of the NDRP. The Secretary of Commerce, or the Secretary's designated official, shall serve as the second Co-Chair for a period of 2 years. The NDRP members shall rotate the second Co-Chair responsibility every 2 years based on majority vote among the Departments of Defense, the Interior, Commerce, Energy, Homeland Security, and the Environmental Protection Agency. Members serving as the second Co-Chair shall not serve in that role over consecutive periods. The NDRP shall meet at minimum on a quarterly basis, with additional meetings as needed.

(e) *Charter*. Within 90 days of the date of this memorandum, the Co-Chairs of the NDRP shall, with consensus of the members, complete a charter, which shall include any administrative policies and processes necessary to ensure the NDRP can satisfy the functions and responsibilities described in this memorandum.

(f) *Reporting Requirements and Action Plan*. Within 150 days of the date of this memorandum, the Co-Chairs of the NDRP shall submit a report to the Co-Chairs of the Council on Climate Preparedness and Resilience established by Executive Order 13653 of November 1, 2013. The report shall describe the activities undertaken and progress made concerning the implementation of this memorandum and shall include, to the extent necessary and applicable, information from all NDRP participants. Thereafter, the Co-Chairs of the NDRP shall provide updates on the implementation of the goals described in section 3 of this memorandum to the Council on Climate Preparedness and Resilience following the NDRP's quarterly meetings, and annually in the National Preparedness Report, established in Presidential Policy Directive–8 or other appropriate annual reports submitted to the President.

(g) *Long-Term Drought Resilience Action Plan*. The NDRP Co-Chairs, with consensus of the NDRP agencies, shall maintain the Long-Term Drought Resilience Federal Action Plan (the ''Action Plan'') and update the Action Plan as necessary. The heads of agencies participating in the NDRP shall implement the Action Plan, or any successor plan or strategy promulgated by the NDRP to guide how agencies achieve the six drought resilience goals set forth in section 3 of this memorandum.

Sec. 6. *Regional Coordination and Implementation.*

(a) *Regional Capabilities.* The heads of agencies participating in the NDRP shall establish, and utilize through their regional and field offices, cross-agency methods to coordinate Federal assistance provided to States, regions, tribes, and localities facing drought challenges. These capabilities shall be integrated with existing regional planning and coordination initiatives, including with appropriate resiliency efforts conducted by State, regional, tribal, and local drought stakeholders.

(b) *Regional Engagement Coordination.* In regions where complementary drought resilience activities are implemented by multiple Federal agencies, those agencies shall coordinate regional outreach strategies. Further, these agencies shall collectively coordinate regional outreach and engagement efforts with the goal of reducing duplication of effort for State, regional, tribal, and local stakeholders.

Sec. 7. *Definitions.* (a) ''Agencies'' means any authority of the United States that is an ''agency'' under 44 U.S.C. 3502(1), other than those considered to be independent regulatory agencies.

(b) ''Critical infrastructure'' has the meaning provided in section 1016(e) of the USA Patriot Act of 2001 (42 U.S.C. 5195c(e)), namely, systems and assets, whether physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters.

(c) ''Drought'' has the meaning provided in section 2(1) of the National Integrated Drought Information System Act of 2006 (15 U.S.C. 313d note), namely, a deficiency in precipitation that leads to a deficiency in surface or subsurface water supplies (including rivers, streams, wetlands, groundwater, soil moisture, reservoir supplies, lake levels, and snow pack); and that causes or may cause substantial economic or social impacts or substantial physical damage or injury to individuals, property, or the environment.

(d) ''Drought resilience'' means the ability to anticipate, prepare for, and adapt to the anticipated consequences of drought conditions, particularly long-term or extreme drought.

(e) ''Resilience'' means the ability to anticipate, prepare for, and adapt to changing conditions and withstand, respond to, and recover rapidly from disruptions.

Sec. 8. *General Provisions.* (a) This memorandum shall be implemented consistent with applicable laws, including international treaties, agreements, and obligations, and subject to the availability of appropriations.

(b) Nothing in this memorandum shall be construed to impair or otherwise affect:

(i) the authority granted by law to a department, agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) The Secretary of Agriculture is hereby authorized and directed to publish this memorandum in the *Federal Register*.

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 327

RIN 3064–AE40

Assessments

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Final rule.

SUMMARY: Pursuant to the requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and the FDIC's authority under section 7 of the Federal Deposit Insurance Act (FDI Act), the FDIC is imposing a surcharge on the quarterly assessments of insured depository institutions with total consolidated assets of $10 billion or more. The surcharge will equal an annual rate of 4.5 basis points applied to the institution's assessment base (with certain adjustments). If the Deposit Insurance Fund (DIF or fund) reserve ratio reaches 1.15 percent before July 1, 2016, surcharges will begin July 1, 2016. If the reserve ratio has not reached 1.15 percent by that date, surcharges will begin the first day of the calendar quarter after the reserve ratio reaches 1.15 percent. (Lower regular quarterly deposit insurance assessment (regular assessment) rates will take effect the quarter after the reserve ratio reaches 1.15 percent.) Surcharges will continue through the quarter that the reserve ratio first reaches or exceeds 1.35 percent, but not later than December 31, 2018. The FDIC expects that surcharges will commence in the second half of 2016 and that they should be sufficient to raise the DIF reserve ratio to 1.35 percent in approximately eight quarters, *i.e.,* before the end of 2018. If the reserve ratio does not reach 1.35 percent by December 31, 2018 (provided it is at least 1.15 percent), the FDIC will impose a shortfall assessment on March 31, 2019, on insured depository institutions with total consolidated assets of $10 billion or more. The FDIC will provide assessment credits (credits) to insured depository institutions with total consolidated assets of less than $10 billion for the portion of their regular assessments that contribute to growth in the reserve ratio between 1.15 percent and 1.35 percent. The FDIC will apply the credits each quarter that the reserve ratio is at least 1.38 percent to offset the regular deposit insurance assessments of institutions with credits.

DATES: This rule will become effective on July 1, 2016.

FOR FURTHER INFORMATION CONTACT: Munsell W. St. Clair, Chief, Banking and Regulatory Policy Section, Division of Insurance and Research, (202) 898–8967; Nefretete Smith, Senior Attorney, Legal Division, (202) 898–6851; and James Watts, Senior Attorney, Legal Division (202) 898–6678.

SUPPLEMENTARY INFORMATION:

I. Notice of Proposed Rulemaking and Comments

On October 22, 2015, the FDIC's Board of Directors (Board) authorized publication of a notice of proposed rulemaking (NPR) to impose a surcharge on the quarterly assessments of insured depository institutions with total consolidated assets of $10 billion or more.

The NPR was published in the **Federal Register** on November 6, 2015.[1] The FDIC sought comment on every aspect of the proposed rule and on alternatives. The FDIC received a total of eight letters. Of these letters, four were from trade groups and four were from banks. Comments are discussed in the relevant sections below.

II. Policy Objectives

The FDIC maintains a fund in order to assure the agency's capacity to meet its obligations as insurer of deposits and receiver of failed banks.[2] The FDIC considers the adequacy of the DIF in terms of the reserve ratio, which is equal to the DIF balance divided by estimated insured deposits. A higher minimum reserve ratio reduces the risk that losses from bank failures during a downturn will exhaust the DIF and reduces the risk of large, procyclical increases in deposit insurance assessments to maintain a positive DIF balance.

The Dodd-Frank Act, enacted on July 21, 2010, contained several provisions to strengthen the DIF.[3] Among other things, it: (1) Raised the minimum reserve ratio for the DIF to 1.35 percent (from the former minimum of 1.15 percent);[4] (2) required that the reserve ratio reach 1.35 percent by September 30, 2020;[5] and (3) required that, in setting assessments, the FDIC ''offset the effect of [the increase in the minimum reserve ratio] on insured depository institutions with total consolidated assets of less than $10,000,000,000.''[6]

Both the Dodd-Frank Act and the FDI Act grant the FDIC broad authority to implement the requirement to achieve the 1.35 percent minimum reserve ratio. In particular, under the Dodd-Frank Act, the FDIC is authorized to take such steps as may be necessary for the reserve ratio to reach 1.35 percent by September 30, 2020.[7] Furthermore, under the FDIC's special assessment authority in section 7(b)(5) of the FDI Act, the FDIC may impose special assessments in an amount determined to be necessary for any purpose that the FDIC may deem necessary.[8]

In the FDIC's view, the Dodd-Frank Act requirement to raise the reserve ratio to the minimum of 1.35 percent by September 30, 2020 reflects the importance of building the DIF in a timely manner to withstand future economic shocks. Increasing the reserve ratio faster reduces the likelihood of procyclical assessments, a key policy

[1] See 80 FR 68780 (Nov. 6, 2015).

[2] As used in this final rule, the term ''bank'' has the same meaning as ''insured depository institution'' as defined in section 3 of the FDI Act, 12 U.S.C. 1813(c)(2).

[3] Public Law 111–203, 334, 124 Stat. 1376, 1539 (12 U.S.C. 1817(note)).

[4] 12 U.S.C. 1817(b)(3)(B). The Dodd-Frank Act also removed the upper limit on the designated reserve ratio (which was formerly capped at 1.5 percent).

[5] 12 U.S.C. 1817(note).

[6] 12 U.S.C. 1817(note). The Dodd-Frank Act also: (1) eliminated the requirement that the FDIC provide dividends from the fund when the reserve ratio is between 1.35 percent and 1.5 percent; (2) eliminated the requirement that the amount in the DIF in excess of the amount required to maintain the reserve ratio at 1.5 percent of estimated insured deposits be paid as dividends; and (3) granted the FDIC's authority to declare dividends when the reserve ratio at the end of a calendar year is at least 1.5 percent, but granted the FDIC sole discretion in determining whether to suspend or limit the declaration of payment or dividends, 12 U.S.C. 1817(e)(2)(A)–(B).

[7] 12 U.S.C. 1817(note).

[8] 12 U.S.C. 1817(b)(5).

goal of the FDIC that is supported in the academic literature and acknowledged by banks.[9]

The purpose of the final rule is to meet the Dodd-Frank Act requirements in a manner that appropriately balances several considerations, including the goal of reaching the minimum reserve ratio reasonably promptly in order to strengthen the fund and reduce the risk of pro-cyclical assessments, the goal of maintaining stable and predictable assessments for banks over time, and the projected effects on bank capital and earnings. The primary mechanism described below for meeting the statutory requirements—surcharges on regular assessments—will ensure that the reserve ratio reaches 1.35 percent without inordinate delay (likely in 2018) and will ensure that assessments are allocated equitably among banks responsible for the cost of reaching the minimum reserve ratio.

III. Background

The Dodd-Frank Act gave the FDIC greater discretion to manage the DIF than it had previously, including greater discretion in setting the target reserve ratio, or designated reserve ratio (DRR), which the FDIC must set annually.[10] The Board has set a 2 percent DRR for each year starting with 2011.[11] The Board views the 2 percent DRR as a long-term goal.

By statute, the FDIC also operates under a Restoration Plan while the reserve ratio remains below 1.35 percent.[12] The Restoration Plan, originally adopted in 2008 and subsequently revised, is designed to ensure that the reserve ratio will reach 1.35 percent by September 30, 2020.[13]

In February 2011, the FDIC adopted a final rule that, among other things, contained a schedule of deposit insurance assessment rates that apply to regular assessments that banks pay. The FDIC noted when it adopted these rates that, because of the requirement making banks with $10 billion or more in assets responsible for increasing the reserve ratio from 1.15 percent to 1.35 percent, ''assessment rates applicable to all insured depository institutions need only be set high enough to reach 1.15 percent'' before the statutory deadline of September 30, 2020.[14] The February 2011 final rule left to a later date the method for assessing banks with $10 billion or more in assets for the amount needed to reach 1.35 percent.[15]

In the February 2011 final rule, the FDIC also adopted a schedule of lower regular assessment rates that will go into effect once the reserve ratio of the DIF reaches 1.15 percent.[16] These lower regular assessment rates will apply to all banks' regular assessments. Regular assessments paid under the schedule of lower rates are intended to raise the reserve ratio gradually to the long-term goal of 2 percent.

The FDIC expects that, under the current assessment rate schedule, the DIF reserve ratio will reach 1.15 percent in the first half of 2016.

IV. Description of the Final Rule

A. Surcharges

Surcharge Rate and Duration

As proposed in the NPR, to implement the requirements of the Dodd-Frank Act, and pursuant to the FDIC's authority in section 7 of the FDI Act,[17] the FDIC is adding a surcharge to the regular assessments of banks with $10 billion or more in assets. Also as proposed in the NPR, the surcharge will begin the quarter after the DIF reserve ratio first reaches or exceeds 1.15 percent and will continue until the reserve ratio first reaches or exceeds 1.35 percent, but no later than the fourth quarter of 2018.[18] For each quarter, the FDIC will notify banks that will be subject to the surcharge and inform those banks of the amount of the surcharge within the timeframe that applies to notification of regular assessment amounts.[19]

As proposed in the NPR, the annual surcharge rate will be 4.5 basis points, which the FDIC expects will be sufficient to raise the reserve ratio from 1.15 percent to 1.35 percent in 8 quarters, before the end of 2018.

Comments Received

The FDIC received several comments on the surcharge rate and estimated surcharge period. In a joint comment letter, three trade groups stated that a ''strong'' majority of large banks that they surveyed favored an alternative discussed in the NPR of charging lower surcharges over a longer period and imposing a shortfall assessment only if the reserve ratio has not reached 1.35 percent by a date nearer the statutory deadline. Specifically, the trade groups proposed an annual surcharge of no more than 2.25 basis points to reach 1.35 percent in 14 quarters, and a shortfall, if needed, to be assessed in the first quarter of 2020.[20] A few other commenters supported the three trade groups' proposal.

One commenter supported an alternative discussed in the NPR of foregoing surcharges entirely and, if the reserve ratio does not reach 1.35 percent by a deadline sometime near the statutory deadline, imposing a delayed

[9] In 2011, the FDIC Board of Directors adopted a comprehensive, long-range management plan for the DIF that is designed to reduce procyclicality in the deposit insurance assessment system. Input from bank executives and industry trade group representatives favored steady, predictable assessments and found high assessment rates during crises objectionable. In addition, economic literature points to the role of regulatory policy in minimizing procyclical effects. See, for example: 75 FR 66272 and George G. Pennacchi, 2004. ''Risk-Based Capital Standards, Deposit Insurance and Procyclicality,'' FDIC Center for Financial Research Working Paper No. 2004–05.

[10] 12 U.S.C. 1817(b)(3)(A)(i).

[11] A DRR of 2 percent was based on a historical analysis as well as on the statutory factors that the FDIC must consider when setting the DRR. In its historical analysis, the FDIC analyzed historical fund losses and used simulated income data from 1950 to 2010 to determine how high the reserve ratio would have to have been before the onset of the two banking crises that occurred during this period to maintain a positive fund balance and stable assessment rates.

[12] 12 U.S.C. 1817(b)(3)(E).

[13] 75 FR 66293 (Oct. 27, 2010).

[14] See 76 FR 10673, 10683 (Feb. 25, 2011).

[15] 76 FR at 10683. The Restoration Plan originally stated that the FDIC would pursue rulemaking on the offset in 2011, 75 FR 66293 (Oct. 27, 2010), but in 2011 the Board decided to postpone rulemaking until a later date.

[16] 76 FR at 10717; see also 12 CFR 327.10(b). The FDIC adopted this schedule of lower assessment rates following its historical analysis of the long-term assessment rates that would be needed to ensure that the DIF would remain positive without raising assessment rates even during a banking crisis of the magnitude of the two banking crises of the past 30 years. On June 16, 2015, the Board adopted a notice of proposed rulemaking that would revise the risk-based pricing methodology for established small institutions. See 80 FR 40838 (July 13, 2015). On January 21, 2016, the Board adopted a second notice of proposed rulemaking that would revise parts of the proposal adopted by the Board in 2015. The revised proposal would leave the overall range of initial assessment rates and the assessment revenue expected to be generated unchanged from the current assessment system for established small institutions. See 81 FR 6108 (Feb. 4, 2016).

[17] 12 U.S.C. 1817.

[18] As discussed below, this rule will become effective on July 1, 2016. If the reserve ratio reaches 1.15 percent before that date, surcharges will begin July 1, 2016. If the reserve ratio has not reached 1.15 percent by that date, surcharges will begin the first day of the calendar quarter after the reserve ratio reaches 1.15 percent.

[19] As with regular assessments, surcharges will be paid one quarter in arrears, based on the bank's previous quarter data and will be due on the 30th day of the last month of the quarter. (If the payment date is not a business day, the collection date will be the previous business day.) Thus, for example, if the surcharge is in effect for the first quarter of 2017, the FDIC will notify banks that are subject to the surcharge of the amount of each bank's surcharge obligation no later than June 15, 2017, 15 days before the first quarter 2017 surcharge payment due date of June 30, 2017 (which is also the payment due date for first quarter 2017 regular assessments). The notice may be included in the banks' invoices for their regular assessment.

[20] The trade groups noted that leaving the current assessment rate schedule in place when the reserve ratio reaches 1.15 percent would be roughly equivalent to an annual surcharge of no more than 2.25 basis points to reach 1.35 percent in 14 quarters.

shortfall assessment at the end of the following quarter.

On the other hand, the joint comment letter submitted by the three trade groups did note that a few large banks surveyed supported the proposed surcharge rate and timeline in the NPR, while a few others favored a one-time assessment once the reserve ratio first reaches 1.15 percent (an alternative also discussed in the NPR). One bank in its comment letter also preferred a one-time assessment just after the reserve ratio first reaches or exceeds 1.15 percent in order to raise the reserve ratio closer to 1.35 percent (but not all the way to 1.35 percent) sooner than would occur under the proposal. Another trade group preferred charging surcharges over a shorter timeframe—four quarters—but found that the proposal in the NPR and a one-time assessment just after the reserve ratio first reaches or exceeds 1.15 percent were also reasonable options.

In the FDIC's view, the final rule strikes an appropriate balance among these options after considering: (1) The statutory deadline for reaching the minimum reserve ratio; (2) the importance of strengthening the fund's ability to withstand a spike in losses; (3) the goal of reducing the risk of larger assessments for the entire industry in a future period of stress; and (4) the effects on the capital and earnings of surcharged banks.

The FDIC expects that surcharges will result in the reserve ratio reaching 1.35 percent in 2018. Reaching the statutory target reasonably promptly and in advance of the statutory deadline has benefits. First, it strengthens the fund so that it can better withstand an unanticipated spike in losses from bank failures or the failure of one or more large banks.

Second, it reduces the risk of the banking industry facing unexpected, large assessment rate increases in a future period of stress. Once the reserve ratio reaches 1.35 percent, the September 30, 2020 deadline in the Dodd-Frank Act will have been met and will no longer apply. If the reserve ratio later falls below 1.35 percent, even if that occurs before September 30, 2020, the FDIC will have a minimum of eight years to return the reserve ratio to 1.35 percent, reducing the likelihood of a large increase in assessment rates.[21] In contrast, if a spike in losses occurs before the reserve ratio reaches 1.35 percent, the Dodd-Frank Act deadline will remain in place, which could require that the entire banking industry—including banks with less than $10 billion in assets, if the reserve ratio falls below 1.15 percent—pay for the increase in the reserve ratio within a relatively short time. The final rule, therefore, reduces the risk of higher assessments being imposed at a time when the industry might not be as healthy and prosperous and could less afford to pay.

In addition, large banks will account for future surcharges in the quarterly report of condition and income (Call Report) and other banking regulatory reports based on generally accepted accounting principles (GAAP) as quarterly expenses, as they do for regular assessments, effectively spreading the cost of the requirement over approximately eight quarters in a simple, predictable manner.

In contrast, a longer surcharge period or a delayed one-time assessment without surcharges would reduce the fund's ability to withstand a spike in losses and increase the risk of larger assessments for the entire industry in a future period of stress.

Five comment letters also stated that, rather than imposing a separate surcharge at a uniform rate, the FDIC should implement surcharges in a risk-based manner.[22] One commenter argued that a risk-based surcharge would provide incentives to manage risk. Some commenters suggested foregoing a surcharge and instead leaving in place the current risk-based assessment rate schedule when the reserve ratio reaches 1.15 percent, rather than the lower one that is scheduled to go into effect. One commenter also recommended that surcharges be integrated into risk-based assessments in a way that maintains banks' incentives to hold long-term unsecured debt.[23]

The final rule uses a flat-rate surcharge. As one commenter acknowledged, while the FDI Act requires that regular assessments be risk-based, no such requirement exists for special assessments.[24] In fact, the most recent special assessment, imposed in 2009, was also a flat rate assessment, and, in 1996, Congress imposed a flat-rate special assessment on banks that held deposits insured by the Savings Association Insurance Fund.[25] In addition, nothing in the Dodd-Frank Act requires a risk-based assessment to raise the minimum reserve ratio from 1.15 percent to 1.35 percent.

Banks subject to the surcharge will continue to pay risk-based regular deposit insurance assessments. As a result, they will still have the incentives they now have to prudently manage risk and to issue long-term unsecured debt.

Moreover, because banks' risk profiles change over time, aggregate assessments using a risk-based surcharge would be more prone to vary than will a flat-rate surcharge. This variance would reduce the predictability of surcharge revenue and create additional uncertainty regarding the needed rates and the time required for the reserve ratio to reach 1.35 percent. Banks themselves would have less predictable surcharge assessments.

Banks Subject to the Surcharge

As proposed in the NPR, the banks subject to the surcharge (large banks) will be determined each quarter based on whether the bank was a ''large institution'' or ''highly complex institution'' for purposes of that quarter's regular assessments.[26] Generally, this includes institutions with total assets of $10 billion or more; however, an insured branch of a foreign bank whose assets as reported in its

[21] See generally 12 U.S.C. 1817(b)(3)(E)(ii).

[22] Suggested methods for implementing a risk-based surcharge included a surcharge based on a multiple of a bank's initial base assessment rate, a variable-rate surcharge, or imposing the surcharge only on the weakest or riskiest banks.

[23] A bank's total base assessment rate can vary from its initial base assessment rate as the result of three possible adjustments. One of these adjustments, the unsecured debt adjustment, lowers a bank's assessment rate based on the bank's ratio of long-term unsecured debt to the bank's assessment base. 12 CFR 327.9(d).

[24] Compare 12 U.S.C. 1817(b)(1), requiring a risk-based deposit insurance assessment system, with 12 U.S.C. 1817(b)(5), which allows the FDIC to impose special assessments and contains no requirement that they be risk-based.

[25] See 74 FR 25639 (May 29, 2009); 61 FR 53834 (Oct. 16, 1996).

[26] In general, a ''large institution'' is an insured depository institution with assets of $10 billion or more as of December 31, 2006 (other than an insured branch of a foreign bank or a highly complex institution) or a small institution that reports assets of $10 billion or more in its quarterly reports of condition for four consecutive quarters. 12 CFR 327.8(f). If an institution classified as large reports assets of less than $10 billion in its quarterly reports of condition for four consecutive quarters, the FDIC will reclassify the institution as small beginning the following quarter. 12 CFR 327.8(e). In general, a ''highly complex institution'' is: (1) An insured depository institution (excluding a credit card bank) that has had $50 billion or more in total assets for at least four consecutive quarters that is controlled by a U.S. parent holding company that has had $500 billion or more in total assets for four consecutive quarters, or controlled by one or more intermediate U.S. parent holding companies that are controlled by a U.S. holding company that has had $500 billion or more in assets for four consecutive quarters; or (2) a processing bank or trust company. If an institution classified as highly complex fails to meet the definition of a highly complex institution for four consecutive quarters (or reports assets of less than $10 billion in its quarterly reports of condition for four consecutive quarters), the FDIC will reclassify the institution beginning the following quarter. 12 CFR 327.8(g). In general, a ''small institution'' is an insured depository institution with assets of less than $10 billion as of December 31, 2006, or an insured branch of a foreign institution. 12 CFR 327.8(e).

most recent quarterly Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks equaled or exceeded $10 billion will also be considered a large bank and will be subject to the surcharge.[27] [28]

Comments Received

The FDIC received two comments from trade groups on which banks should be subject to the surcharge. One commenter suggested that the surcharge should not apply to mid-size banks and should only apply to highly complex banks, while another commenter proposed that the surcharge be restricted to only the largest banks, those considered ''too big to fail,'' or those controlling a large share of industry assets. As an alternative to their suggestions, both commenters proposed that the FDIC increase the $10 billion deduction from large banks' assessment bases for the surcharge (discussed below), for example, to $25 billion or $50 billion, which would effectively exempt banks with total assets under these threshold amounts from surcharges.

The FDIC has identified no compelling basis to distinguish between large banks based on any particular asset size or other profile. Further, the final rule is consistent with the statutory language. The Dodd-Frank Act requires the FDIC to ''offset the effect of [the increase in the minimum reserve ratio] on insured depository institutions with total consolidated assets of less than $10,000,000,000,'' and unlike other parts of the Act, there is no indication that section 334(e) should apply only to banks of a certain size or that engage in certain activities. The apparent purpose of the Act's requirement was to insulate banks with less than $10 billion in total assets from the cost of the increase in the minimum reserve ratio. The final rule appropriately meets this requirement.

The FDIC is cognizant of the concerns of large banks near the $10 billion threshold. As a practical matter, the $10 billion deduction from large banks' assessment bases for the surcharge has the effect of shifting the burden of the surcharges towards larger banks. While, as discussed later, the purpose of the $10 billion deduction is to avoid a ''cliff effect'' for banks near the $10 billion asset threshold, it has the concomitant effect of benefitting large banks closer in size to the $10 billion asset threshold relatively more than larger banks, since the relative effect of the $10 billion deduction decreases as asset size increases. As reflected in Table 1, based on data as of December 31, 2015, the simple average effective surcharge rate (the surcharge rate if applied to a bank's regular quarterly deposit insurance assessment base) for banks with assets between $10 billion and $50 billion will be approximately half the simple average effective rate for banks with assets greater than $100 billion. In fact, with lower regular assessment rates scheduled to take effect when the reserve ratio reaches 1.15 percent, more than half (36 out of 67) of large banks with total assets between $10 billion and $50 billion and roughly one-third of all large banks are expected to pay an effective assessment rate, even with the surcharge, that is lower than their current assessment rate.

TABLE 1—EFFECTIVE ANNUAL ASSESSMENT RATES BY SIZE GROUP

[Based on data as of December 31, 2015]

Assets (in $ billions)	Number of banks	Average effective surcharge rate *
$10 to $50	67	2.11
$50 to $100	15	3.73
Over $100	26	4.23
All Large	108	2.85

* The average is a simple average.

Banks' Assessment Bases for the Surcharge

Pursuant to the broad authorities under the Dodd-Frank Act and the FDI Act, including the authority to determine the assessment amount, which includes defining an appropriate assessment base for the surcharge (the surcharge base), each large bank's surcharge base for any given quarter will equal its regular quarterly deposit insurance assessment base (regular assessment base) for that quarter with certain adjustments.[29]

The first adjustment under the final rule differs from the NPR, but is similar to an alternative method of determining the surcharge base on which the NPR requested comment. The NPR would have added the entire regular assessment bases of affiliated small banks to the surcharge bases of large bank affiliates, but sought comment on an alternative that would add only the amount of any increase in the regular assessment bases of affiliated small banks. In response to a joint comment letter from three trade groups and after balancing all the considerations expressed in the NPR, the FDIC has decided to add to a large bank's surcharge base each quarter only the cumulative net increase in the aggregate regular assessment bases of affiliated small banks above the aggregate regular assessment bases as of December 31, 2015 of affiliated small banks as of that date that is in excess of an effective annual rate of 10 percent.[30] [31]

[27] Assets for foreign banks are reported in FFIEC 002 report (Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks), Schedule RAL, line 3, column A.

[28] For purposes of the final rule, a large bank also includes a small institution if, while surcharges were in effect, the small institution was the surviving institution or resulting institution in a merger or consolidation with a large bank or if the small institution acquired all or substantially all of the assets or assumed all or substantially all of the deposits of a large bank.

[29] Public Law 111–203, 334(e), 124 Stat. 1376, 1539 (12 U.S.C. 1817(note)); 12 U.S.C. 1817(b)(5). For purposes of regular assessments, the Dodd-Frank Act defines the assessment base with respect to an insured depository institution as an amount equal to the average consolidated total assets of the insured depository institution during the assessment period; minus the sum of the average tangible equity of the insured depository institution during the assessment period, and in the case of an insured depository institution that is a custodial bank (as defined by the FDIC, based on factors including the percentage of total revenues generated by custodial businesses and the level of assets under custody) or a banker's bank (as that term is used in . . . (12 U.S.C. 24)), an amount that the FDIC determines is necessary to establish assessments consistent with the definition under section 7(b)(1) of the [Federal Deposit Insurance] Act (12 U.S.C. 1817(b)(1)) for a custodial bank or a banker's bank. 12 U.S.C. 1817(note).

[30] As used in this final rule, the term ''affiliate'' has the same meaning as defined in section 3 of the FDI Act, 12 U.S.C. 3(w)(6), which references the Bank Holding Company Act (''any company that controls, is controlled by, or is under common control with another company''). 12 U.S.C. 1841(k).

The term ''small bank'' is synonymous with the term ''small institution'' as it is defined in 12 CFR 327.8(e) and used in existing portions of 12 CFR part 327 for purposes of regular assessments, except that it excludes: (1) An insured branch of a foreign bank whose assets as reported in its most recent most recent quarterly Call Report equal or exceed $10 billion; and (2) a small institution that, while surcharges are in effect, is the surviving or resulting institution in a merger or consolidation with a large bank or that acquired of all or substantially all of the assets or assumed all or substantially all of the deposits of a large bank.

[31] The final rule measures the net increase in affiliated small banks' assessment bases from December 31, 2015, which is the latest possible date that ensures that banks do not engage in avoidance behavior between issuance of the final rule and its effective date.

The cumulative net increase in excess of an effective annual rate of 10 percent in the aggregate regular assessment bases of affiliated small banks will be calculated by compounding a quarterly rate of approximately 2.41 percent from December 31, 2015. Thus, for example, at the end of September 2016 (3 quarters after December 31, 2015), assuming that surcharges are in effect, the final rule will add to a large bank's surcharge base for that quarter any cumulative net increase in the aggregate regular assessment bases of affiliated small banks in excess of approximately 7.41 percent (approximately 2.41 percent per quarter compounded for 3 quarters). Similarly, at the end of March 2017 (5 quarters after December 31, 2015), assuming that surcharges are in effect, the final rule will add to a large bank's surcharge base for that quarter any cumulative net increase in the aggregate regular assessment bases of affiliated small banks in excess of approximately

Adding cumulative growth in excess of an effective annual rate of 10 percent in the regular assessment bases of affiliated small banks to the assessment bases of their large bank affiliates limits the ability of large banks to reduce their surcharges (and potentially shift costs to other large banks) either by transferring assets and liabilities to existing or new affiliated small banks or by growing the businesses of affiliated small banks instead of the large bank without unduly constraining the normal growth of the affiliated small banks.[32]

Including only the amount of any cumulative net increase that is in excess of an effective annual rate of 10 percent in the aggregate regular assessment bases of affiliated small banks, rather than their entire assessment bases as proposed in the NPR, will have only a very small effect on total surcharge revenue and is unlikely to increase the number of quarters that surcharges are in effect.

The second adjustment is as proposed in the NPR. It deducts $10 billion from a large bank's regular assessment base (as increased by the first adjustment) to produce the surcharge base. Deducting $10 billion from each large bank's assessment base for the surcharge avoids a ''cliff effect'' for banks near the $10 billion asset threshold, thereby ensuring equitable treatment. Otherwise, a bank with just over $10 billion in assets would pay significant surcharges, while a bank with $9.9 billion in assets would pay none. The $10 billion reduction reduces incentives for banks to limit their growth to stay below $10 billion in assets, or to reduce their size to below $10 billion in assets, solely to avoid surcharges.

In a banking organization that includes more than one large bank, both (1) the $10 billion deduction, and (2) the cumulative net increase in affiliated small banks' regular assessment bases exceeding a 10 percent effective annual rate will be apportioned among all large banks in the banking organization in proportion to each large bank's regular assessment base for that quarter.[33] Appendix 1 gives examples of the calculation of the surcharge base for a banking organization that has more than one large bank and for a banking organization that has both large and small banks.

Comments Received

The FDIC received one joint comment letter from three trade groups related to the first adjustment. As proposed in the NPR, the first adjustment would have added the entire regular assessment bases of affiliated small banks to the surcharge bases of large bank affiliates. The joint comment letter opposed adding any portion of the assessment bases of small bank affiliates to large banks, but argued that, if any addition were to occur, it should be limited to no more than any increase in the assessment bases of small bank affiliates above ''normal growth'' after surcharges begin.[34] As described above, the final rule uses the net increase in excess of a 10 percent effective annual rate in the aggregate regular assessment bases of affiliated small banks above their aggregate regular assessment bases as of December 31, 2015.

The FDIC received three comments related to the second adjustment, the deduction of $10 billion from a large bank's assessment base and apportioning the deduction among all large banks in the banking organization. Two commenters proposed a larger deduction (discussed above). A joint comment letter submitted by three trade groups proposed that bank holding companies with multiple large banks be allowed to deduct $10 billion for each large bank, arguing that limiting large banks in a bank holding company to a single $10 billion deduction ''discriminates against banking organizations with multiple affiliated large banks.''

The provisions in the final rule regarding the second deduction are unchanged from those proposed in the NPR. Allocation of the $10 billion deduction among affiliated large banks ensures that banking organizations of a similar size (in terms of large bank assessment bases) pay a similar surcharge. Thus, a banking organization with multiple large banks will not have an advantage over other similarly sized banking organizations that have only one large bank because, instead of deducting $10 billion from each large bank in the organization, the deduction will be apportioned among the multiple affiliated large banks.

Moreover, allowing each large bank in a banking organization to take a $10 billion deduction could, in effect, penalize the large majority of banking organizations that do not have more than one large bank by increasing the risk that surcharges would last longer than envisioned under the proposal.

B. Shortfall Assessment

The FDIC expects that surcharges combined with regular assessments will raise the reserve ratio to 1.35 percent before December 31, 2018. It is possible, however, that unforeseen events could result in higher DIF losses or faster insured deposit growth than expected, or that banks may take steps to reduce or avoid quarterly surcharges. While not expected, these events or actions could prevent the reserve ratio from reaching 1.35 percent by the end of 2018. In this case, provided the reserve ratio is at least 1.15 percent, the FDIC will impose a shortfall assessment on large banks.[35]

12.65 percent (approximately 2.41 percent per quarter compounded for 5 quarters).

A net increase in affiliated small banks' assessment bases includes any increase resulting from a merger or consolidation with an unaffiliated insured depository institution. A net decrease in the aggregate regular assessment bases of affiliated small banks below their aggregate regular assessment bases as of December 31, 2015 will not reduce the surcharge bases of affiliated large banks.

To prevent assessment avoidance, if a banking organization with at least one large bank but no small banks acquires or establishes a small bank after December 31, 2015, the entire assessment base of the small bank will be apportioned among the surcharge bases of large banks in the holding company in the manner discussed below. Also, if a large bank in a banking organization with multiple large bank affiliates becomes a small bank during the surcharge period, its entire assessment base will be apportioned among the surcharge bases of its large bank affiliates in the manner discussed below.

As of December 31, 2015, 19 banking organizations had both large and small banks.

[32] As noted in the NPR, however, some large banks may be able to shift the burden of the surcharge by transferring assets and liabilities to a nonbank affiliate, or by shrinking or limiting growth.

[33] As of December 31, 2015, 9 banking organizations had multiple affiliated large banks.

[34] The joint comment letter argued that the proposed addition of the entire regular assessment bases of affiliated small banks to the surcharge bases of large bank affiliates ''would abrogate the intent of [Sec.] 334 [of the Dodd-Frank Act] by imposing de facto assessment surcharges on small banks affiliated with large banks, albeit indirectly by assessing their larger affiliates,'' and, therefore, these small banks would not receive a full offset for their contribution towards raising the reserve ratio from 1.15 percent to 1.35 percent. In fact, however, small bank affiliates of large banks will not pay any surcharge assessment and will be entitled to credits on the same basis as all other small banks.

The joint comment letter also argued that Sec. 334 of the Dodd-Frank Act does not authorize the FDIC to augment large banks' assessment bases with those of their small bank affiliates. In fact, however, the Dodd-Frank Act and the FDI Act give the FDIC broad authority to determine the amount of any special assessments, including the surcharges, and thus an appropriate assessment base for the surcharge. See Public Law 111–203, 334(e), 124 Stat. 1376, 1539 (12 U.S.C. 1817(note)); 12 U.S.C. 1817(b)(5). The FDI Act contains no provisions mandating any particular assessment base for a special assessment.

[35] In the unlikely event that the reserve ratio is below 1.15 percent on December 31, 2018, the FDIC will impose a shortfall assessment at the end of the calendar quarter immediately following the first calendar quarter after December, 31, 2018, in which the reserve ratio first reaches or exceeds 1.15 percent. The aggregate amount of such a shortfall assessment will equal 0.2 percent of estimated insured deposits at the end of the calendar quarter in which the reserve ratio first reaches or exceeds 1.15 percent. If surcharges have been in effect (that

Continued

The provisions in the final rule regarding the shortfall assessment are as proposed in the NPR. If the reserve ratio has not reached 1.35 percent by the end of 2018, the FDIC will impose a shortfall assessment on large banks on March 31, 2019 and collect it on June 30, 2019.[36] The aggregate amount of the shortfall assessment will equal 1.35 percent of estimated insured deposits on December 31, 2018 minus the actual fund balance on that date.

If a shortfall assessment is needed, it will be imposed on any bank that was a large bank in any quarter during the period that surcharges are in effect (the surcharge period). Each large bank's share of any shortfall assessment will be proportional to the average of its surcharge bases (the average surcharge base) during the surcharge period. If a bank was not a large bank during a quarter of the surcharge period, its surcharge base will be deemed to equal zero for that quarter.[37]

If a bank of any size acquires—through merger or consolidation—a large bank that had paid surcharges for one or more quarters, the acquiring bank will be subject to a shortfall assessment and its average surcharge base will be increased by the average surcharge base of the acquired bank.[38]

A large bank's share of the total shortfall assessment will equal its average surcharge base divided by the sum of the average surcharge bases of all large banks subject to the shortfall assessment. Using an average of surcharge bases ensures that anomalous growth or shrinkage in a large bank's assessment base will not subject it to a disproportionately large or small share of any shortfall assessment.

Comments Received

In addition to the comments discussed above regarding the duration of the surcharge and timing of any required corresponding shortfall assessment, the FDIC received two other comments on the shortfall assessment. One commenter suggested that the shortfall assessment, in addition to the surcharges, should only be applied to ''highly complex'' banks. Another commenter stated that the shortfall assessment and surcharges should be risk-based.

For the reasons discussed previously in connection with the surcharge assessment, the shortfall assessment in the final rule is as proposed in the NPR. If a shortfall assessment is necessary, the expected revenue based on the calculation method adopted will be much more predictable than the expected revenue from a risk-based method. In previous special assessments, the FDIC used a uniform rate, rather than a risk-based rate, and large banks will continue to pay risk-based regular assessments. Moreover, as also noted above, neither the statute nor its legislative history suggest that only highly complex banks should be responsible for raising the reserve ratio from 1.15 percent to 1.35 percent. The statute requires that the FDIC offset the effect of the increase in the minimum reserve ratio on banks with less than $10 billion in consolidated assets.

C. Payment Mechanism for the Surcharge and Any Shortfall Assessment

Each large bank is required to take any actions necessary to allow the FDIC to debit its share of the surcharge from the bank's designated deposit account used for payment of its regular assessment. Similarly, each large bank subject to any shortfall assessment is required to take any actions necessary to allow the FDIC to debit its share of the shortfall assessment from the bank's designated deposit account used for payment of its regular assessment. Before the dates that payments are due, each bank must ensure that sufficient funds to pay its obligations are available in the designated account for direct debit by the FDIC. Failure to take any such action or to fund the account will constitute nonpayment of the assessment. Penalties for nonpayment will be as provided for nonpayment of a bank's regular assessment.[39]

Comments Received

The FDIC received no comments on this part of the proposal. The final rule adopts this part of the proposal without change.

D. Additional Provisions Regarding Mergers, Consolidations and Terminations of Deposit Insurance

Under existing regulations, a bank that is not the resulting or surviving bank in a merger or consolidation must file a Call Report for every assessment period prior to the assessment period in which the merger or consolidation occurs. The surviving or resulting bank is responsible for ensuring that these Call Reports are filed. The surviving or resulting bank is also responsible and liable for any unpaid assessments on behalf of the bank that is not the resulting or surviving bank.[40] Unpaid assessments also include any unpaid surcharges and shares of a shortfall assessment under the final rule.

Thus, for example, a large bank's first quarter 2017 surcharge (assuming that the surcharge is in effect then), which will be collected on June 30, 2017, will include the large bank's own first quarter 2017 surcharge plus any unpaid first quarter 2017 or earlier surcharges owed by any large bank it acquired between April 1, 2017 and June 30, 2017 by merger or through the acquisition of all or substantially all of the acquired bank's assets. The acquired bank will be required to file Call Reports through the first quarter of 2017 and the acquiring bank will be responsible for ensuring that these Call Reports were filed.

Existing regulations also provide that, for an assessment period in which a merger or consolidation occurs, total consolidated assets for the surviving or resulting bank include the total consolidated assets of all banks that are parties to the merger or consolidation as if the merger or consolidation occurred on the first day of the assessment period. Tier 1 capital (which is deducted from total consolidated assets to determine a bank's regular assessment base) is to be reported in the

is, if the reserve ratio reaches but then falls below 1.15 percent before December 31, 2018), the shortfall assessment will be imposed on the banks described in the text using average surcharge bases as described in the text. If surcharges have never been in effect: (1) The banks subject to the shortfall assessment will be the banks that were large banks as of the calendar quarter in which the reserve ratio first reached or exceeded 1.15 percent; and (2) an individual large bank's share of the shortfall assessment will be proportional to the average of what its surcharge bases would have been over the four calendar quarters ending with the calendar quarter in which the reserve ratio first reaches or exceeds 1.15 percent. The shortfall assessment will be collected on the 30th day of the last month of the quarter after the assessment was imposed. If that date is not a business day, the collection date will be the previous business day.

If the reserve ratio remains or is projected to remain below 1.15 percent for a prolonged period after 2018 (and never reaches 1.35 percent), the FDIC Board may have to consider increases to regular assessment rates on all banks (in addition to the shortfall assessment on banks with $10 billion or more in assets) in order to achieve the minimum reserve ratio of 1.35 percent by the September 30, 2020 statutory deadline.

[36] The FDIC will notify each bank subject to a shortfall assessment of its share of the shortfall assessment no later than 15 days before payment is due.

[37] Thus, for example, if a large bank were subject to a shortfall assessment because it had been subject to a surcharge for only one quarter of the surcharge period, the bank's surcharge base for seven quarters would be deemed to be zero and its average surcharge base would be its single positive surcharge base divided by eight (assuming that the surcharge period had lasted eight quarters).

[38] With respect to surcharges and shares of any shortfall assessment, a surviving or resulting bank in a merger or consolidation includes any bank that acquires all or substantially all of another bank's assets or assumes all or substantially all of another bank's deposits.

[39] See 12 CFR 308.132(c)(3)(v).

[40] 12 CFR 327.6(a).

same manner.[41] These provisions will also apply to surcharges and shares of any shortfall assessment under the final rule.

Existing regulations also provide that, when the insured status of a bank is terminated and the deposit liabilities of the bank are not assumed by another bank, the bank whose insured status is terminating must, among other things, continue to pay assessments for the assessment periods that its deposits are insured, but not thereafter.[42] These provisions will also apply to surcharges and shares of any shortfall assessment under the final rule.

Finally, in the case of one or more transactions in which one bank voluntarily terminates its deposit insurance under the FDI Act and sells certain assets and liabilities to one or more other banks, each bank must report the increase or decrease in assets and liabilities on the Call Report that is due after the transaction date and the banks will be assessed accordingly under existing FDIC assessment regulations. The bank whose insured status is terminating must, among other things, continue to pay assessments for the assessment periods that its deposits are insured. The same process will also apply to surcharges and shares of any shortfall assessment under the final rule.

Comments Received

The FDIC received no comments on this part of the proposal. The final rule adopts this part of the proposal without change.

E. Credits for Small Banks [43]

While the reserve ratio remains between 1.15 percent and 1.35 percent, some portion of the deposit insurance assessments paid by small banks will contribute to increasing the reserve ratio. To meet the Dodd-Frank Act requirement to offset the effect on small banks of raising the reserve ratio from 1.15 percent to 1.35 percent, the FDIC will provide assessment credits to these banks for the portion of their assessments that contribute to the increase from 1.15 percent to 1.35 percent.[44] The provisions in the final rule governing how credits are calculated and awarded are as proposed in the NPR. The FDIC will apply credits to reduce future regular deposit insurance assessments.

Aggregate Amount of Credits

As proposed in the NPR, to determine the aggregate amount of credits awarded small banks, the FDIC will first calculate 0.2 percent of estimated insured deposits (the difference between 1.35 percent and 1.15 percent) on the date that the reserve ratio first reaches or exceeds 1.35 percent.[45] The amount that small banks contributed to this increase in the DIF through regular assessments—and the resulting aggregate amount of credits to be awarded small banks—will equal the small banks' portion of all large and small bank regular assessments during the ''credit calculation period'' times an amount equal to the increase in the DIF calculated above less surcharges. (The ''credit calculation period'' covers the period beginning the quarter after the reserve ratio first reaches or exceeds 1.15 percent through the quarter that the reserve ratio first reaches or exceeds 1.35 percent (or December 31, 2018, if the reserve ratio has not reached 1.35 percent by then).) Surcharges will be subtracted from the increase in the DIF calculated above before determining the amount by which small banks contributed to that increase because surcharges are intended to increase the reserve ratio above 1.15 percent, not to maintain it at 1.15 percent.[46]

This method of determining the aggregate small bank credit implicitly assumes that all non-assessment revenue (for example, investment income) during the credit calculation period will be used to maintain the fund at a 1.15 percent reserve ratio and that regular assessment revenue will be used to maintain the fund at that reserve ratio only to the extent that other revenue is insufficient. Essentially, the method attributes reserve ratio growth to assessment revenue as much as possible and, with one exception, maximizes the amount of the aggregate small bank assessment credit. The exception is the assumption that all surcharge payments contribute to growth of the reserve ratio (to the extent of that growth), which is consistent with the purpose of the surcharge payments.

The FDIC projects that the aggregate amount of credits will total approximately $1 billion, but the actual amount of credits may differ.

Comments Received

The FDIC received only one comment on the proposed method of determining the aggregate amount of small bank credits. That comment, from a trade group, supported the proposal.

Individual Small Banks' Credits

As proposed in the NPR, credits will be awarded to any bank, including a small bank affiliate of a large bank, that was a small bank at some time during the credit calculation period. An individual small bank's share of the aggregate credit (a small bank's credit share) will be proportional to its credit base, defined as the average of its regular assessment bases during the credit calculation period.[47] [48] If, before the DIF reserve ratio reaches 1.35 percent, a small bank acquires another small bank through merger or consolidation, the acquiring small bank's regular assessment bases for purposes of determining its credit base will include the acquired bank's regular assessment bases for those quarters during the credit calculation period that were before the merger or consolidation. No small bank can receive more in credits than it (and any small bank acquired through merger or consolidation) paid during the credit calculation period in regular assessments while it is a small bank not subject to the surcharge.

By making a small bank's credit share proportional to its credit base rather than, for example, its actual assessments paid, the final rule reduces the chances that a riskier bank assessed at higher than average rates will receive credits for these higher rates. The final rule thus reduces the incentive for banks to take on higher risk.

[41] 12 CFR 327.6(b).

[42] 12 CFR 327.6(c).

[43] Large banks will not receive a refund or credit if surcharges bring the reserve ratio above 1.35 percent. Thus, for example, if the reserve ratio is 1.34 percent at the end of September 2018 and is 1.37 percent at the end of December 2018, large banks will not receive a refund or credit for the two basis points in the reserve ratio above 1.35 percent. Similarly, large banks will not receive a refund or credit if a shortfall assessment brings the reserve ratio above 1.35 percent.

[44] Small banks will not be entitled to any credits for the quarter in which a shortfall is assessed because large banks will be responsible for the entire remaining amount needed to raise the reserve ratio to 1.35 percent.

[45] If the reserve ratio does not reach 1.35 percent by December 31, 2018, the amount calculated will be the increase in the DIF needed to raise the DIF reserve ratio from 1.15 percent to the actual reserve ratio on December 31, 2018; that amount equals the DIF balance on December 31, 2018 minus 1.15 percent of estimated insured deposits on that date.

[46] If total assessments, including surcharges, during the credit calculation period are less than or equal to the increase in the DIF calculated above, the aggregate amount of credits to be awarded small banks will equal the aggregate amount of regular assessments paid by small banks during the credit calculation period.

[47] When determining the credit base, a small bank's assessment base is deemed to equal zero for any quarter in which it is a large bank.

[48] Call Report amendments after the payment date for the final quarter of the surcharge period do not affect a bank's credit share.

Comments Received

The FDIC received no comments on this part of the proposal.

Successors

If any bank acquires a bank with credits through merger or consolidation after the DIF reserve ratio reaches 1.35 percent, the acquiring bank will acquire the credits of the acquired small bank. Other than through merger or consolidation, credits are not transferable.[49] Also, credits held by a bank that fails or ceases being an insured depository institution will expire. These provisions are as proposed in the NPR.

Use of Credits

After the reserve ratio reaches 1.38 percent (and provided that it remains at or above 1.38 percent), the FDIC will automatically apply a small bank's credits to reduce its regular deposit insurance assessment up to the full amount of the bank's credits or assessment, whichever is less.[50] [51] [52] In response to comments, this portion of the final rule differs from the proposal in two ways. First, the final rule allows credit use as long as the reserve ratio is at or above 1.38 percent, rather than when it is at or above 1.40 percent as proposed in the NPR. Under the FDI Act, the Board is required to adopt a restoration plan if the reserve ratio falls below 1.35 percent. Allowing credit use only when the reserve ratio is at or above 1.38 percent should provide sufficient cushion for the DIF to remain above 1.35 percent in the event of rapid growth in insured deposits and ensure that credit use alone will not result in the reserve ratio falling below 1.35 percent. Allowing credit use before the reserve ratio reaches this level, however, would create a greater risk of the reserve ratio falling below 1.35 percent, triggering the need for a restoration plan.[53]

Second, the final rule provides that credits available to an institution may be used to offset the institution's entire quarterly insurance assessment, rather than limiting credit use to an annual rate of 2 basis points as proposed in the NPR.

Notices of Credits

As soon as practicable after the DIF reserve ratio reaches 1.35 percent, the FDIC will notify each small bank of the FDIC's preliminary estimate of the small bank's credit and the manner in which the credit was calculated (the notice). The estimate will be based on information derived from the FDIC's official system of records. The FDIC will provide the notice through FDICconnect or other means in accordance with existing practices for assessment invoices.[54]

After the initial notice, periodic updated notices will be provided to reflect adjustments that may be made as the result of credit use, requests for review of credit amounts, or any subsequent merger or consolidation.

Requests for Review and Appeals

The final rule includes provisions that allow a small bank that disagrees with the FDIC's computation of, or basis for, its credits to request review or appeal. These provisions are unchanged from those proposed in the NPR.

The FDIC received no comments on this part of the proposal.

V. Economic Effects

The FDIC estimates that it will collect approximately $10 billion in surcharges and award approximately $1 billion in credits to small banks, although actual amounts may vary from these estimates. The FDIC projects that a shortfall assessment will be unnecessary.

As discussed above, the benefits of the final rule will be to quickly strengthen the fund's ability to withstand an unanticipated spike in losses and reduce the risk of larger assessments for the entire industry. Under the final rule, the cost of raising the minimum reserve ratio will be spread over approximately eight quarters and calculated in a simple, predictable manner.

A. Accounting Treatment

Based on FDIC analysis, banks subject to the surcharge will not account for future surcharges or a possible shortfall assessment as a present liability or a recognized loss contingency in the Call Report and other banking regulatory reports based on GAAP because the surcharges do not relate to a current condition or event giving rise to a liability under Financial Accounting Standards Board Accounting Standards Codification Topic 450, *Contingencies.* Surcharges will become recognized loss contingencies in a then current quarter if (i) the bank is in existence during that quarter; and (ii) the bank is a large bank as of that quarter and, therefore, subject to the surcharge. Surcharges are based on the bank's regular assessment bases in future periods, and recognized in regulatory reports for those periods, just as regular assessments are now (where each assessment is accounted for as a

[49] A joint comment letter from three trade groups recommended that the FDIC allow a small bank to sell or transfer its credits. The final rule does not adopt this recommendation because of the small amount of expected credits, the short period they are expected to last, and the low number of banks that used transfer provisions in the past. The credits to be awarded pursuant to this final rule are expected to be relatively small (approximately $1 billion in credits compared to approximately $4.7 billion in credits awarded pursuant to the Federal Deposit Insurance Reform Act of 2005 (Reform Act). See 71 FR 61374 (Oct. 18, 2006) implementing one-time assessment credits awarded pursuant to the Reform Act. Credits awarded under the Reform Act also lasted considerably longer than the credits to be awarded under the final rule are expected to last. Over 50 percent of banks still had credits remaining under the Reform Act after five quarters and over 20 percent had credits remaining after eight quarters, while virtually all banks are expected to use up credits awarded under the final rule in five quarters or less. In addition, although the credits awarded under the Reform Act were transferrable, 71 FR at 61377, only one-half percent of banks (36 banks) actually transferred them (other than through merger). Similarly, although the FDIC allowed banks to transfer unused portions of approximately $45.7 billion in assessments that were prepaid at the end of 2009, 74 FR, 59056, 59060 (Nov. 17, 2009), only 20 banks actually transferred any of their prepaid assessment amounts (again, other than through merger). While credits are not transferrable under the final rule, the final rule provides that all banks may use credits to fully offset their assessments, and the final rule provides that credits may be used earlier than proposed in the NPR—when the reserve ratio reaches 1.38 percent, rather than 1.40 percent.

[50] The amount of credits applied each quarter will not be recalculated as the result of subsequent amendments to the quarterly Call Reports or the quarterly Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks. Credit amounts may not be used to pay Financing Corporation (FICO) assessments. See section 21(f) of the Federal Home Loan Bank Act, 12 U.S.C. 1441(f).

[51] A joint comment from three trade groups expressed concern that credits could be viewed as assets on a bank's balance sheet and, therefore, included in the bank's assessment base. The commenters recommended that the FDIC revise ''the assessments pricing formula'' for small institutions so that credits are not assessed. Assessment credits awarded pursuant to the Reform Act were not recognized as assets for accounting purposes. See 71 FR 61374 (Oct. 18, 2006). Even if the credits to be awarded pursuant to this final rule are recognized as assets under GAAP, the FDIC would not adopt the commenters' recommendation. Revising assessments in this manner so that credits are not assessed is equivalent to excluding credits from small institutions' assessment bases. Except as specifically authorized by statute, the FDIC does not exclude assets, even securities issued or guaranteed by the U.S. government or its agencies, from banks' assessment bases. Moreover, as discussed in a previous footnote, the credits to be awarded under the final rule are expected to be relatively small, are expected to last only two to five quarters for most small banks, and would have only a minimal effect on small institutions' assessments even if treated as assets.

[52] Any credits in excess of a bank's assessment will be used to fully offset a bank's entire deposit insurance assessments in future quarters until credits are exhausted, as long as the reserve ratio exceeds 1.38 percent.

[53] Also, allowing credit use before the reserve ratio reaches 1.35 percent, as one trade group suggested, would delay the reserve ratio's reaching 1.35 percent and would add complexity because credits would have to be estimated and later adjusted, since the actual amount of credits will not be known until the reserve ratio reaches 1.35 percent.

[54] See generally 12 CFR 327.2(b).

liability and expensed for the quarter it is assessed). A shortfall assessment will be a recognized loss contingency if (i) the reserve ratio has not reached 1.35 percent by the end of 2018; and (ii) the bank has been subject to a surcharge.

B. Capital and Earnings Analysis

Consistent with section 7(b)(2)(B) of the FDI Act, the analysis that follows estimates the effects of a 4.5 basis point surcharge on the equity capital and earnings of large banks.[55] Because small banks will not pay surcharges, surcharges will affect neither their capital nor their earnings; however, the analysis also estimates the effect of credits on small bank earnings.

The FDIC has estimated the effect of a 4.5 basis-point surcharge on large banks' earnings in two ways. First, as a percentage of *adjusted earnings,* to take into account the savings projected to result from lower assessment rates implemented in the future when the reserve ratio reaches 1.15 percent. Second, as a percentage of *current earnings.* Current earnings are assumed to equal pre-tax income before extraordinary and other items from January 1, 2015 through December 31, 2015. Adjusted earnings are current earnings plus the savings to be gained by large banks from lower future assessments that will result from the lower assessment rate schedule that will apply to regular assessments once the reserve ratio reaches 1.15 percent.

Assumptions and Data

The analysis is based on large banks as of December 31, 2015. As of that date, there were 108 large banks. Banks are merger-adjusted, except for failed bank acquisitions, for purposes of determining income.

Although the surcharge is expected to continue for 8 quarters, the analysis examines the effect of the surcharge over one year. Each large bank's surcharge base is calculated as of December 31, 2015. Data from January 1, 2015 through December 31, 2015 are used to calculate each large bank's current earnings and adjusted earnings. Capital for each large bank is the amount reported as of December 31, 2015. The analysis assumes that current earnings equal pre-tax income before extraordinary and other items from January 1, 2015 through December 31, 2015. Using this measure eliminates the potentially transitory effects of extraordinary items and taxes on profitability. In calculating the effect on capital and banks' ability to maintain a leverage ratio of at least 4 percent (the minimum capital requirement [56]), however, the analysis considers the effective after-tax cost of assessments.[57] The analysis assumes that the large banks do not transfer the surcharge to customers in the form of changes in borrowing rates, deposit rates, or service fees.

Projected Effects

For all or almost all large banks, the effective surcharge annual rate measured against large banks' regular assessment base will be less than the nominal surcharge rate of 4.5 basis points because of the $10 billion deduction. The FDIC projects that the net effect of lower assessment rates that go into effect when the reserve ratio reaches 1.15 percent and the imposition of the surcharge will result in lower assessments for approximately one-third of all large banks. Specifically, the analysis estimates that 37 of the 108 large banks will pay lower assessments in the future than they pay currently.

The analysis reveals no significant capital effects from the surcharge. All large institutions continue to maintain a 4 percent leverage ratio, at a minimum, both before and after the imposition of the surcharge.[58]

The annual surcharge also represents only a small percentage of bank earnings for most large banks. In the aggregate, the annual surcharge absorbs 2.33 percent of total large bank adjusted earnings and 2.36 percent of total large bank current earnings.

Table 2.A shows that as of December 31, 2015, for 83 percent of all large banks (86 large banks) the surcharge represents 3 percent or less of adjusted annual earnings. For 92 percent (96 large banks), the surcharge represents 5 percent or less of adjusted annual earnings. Only 8 large banks' adjusted annual earnings are affected by more than 5 percent, with the maximum effect on any single bank being 9.6 percent.

TABLE 2.A—THE EFFECT OF THE FINAL RULE ON ADJUSTED EARNINGS OF INDIVIDUAL LARGE BANKS

Large banks				
Surcharge relative to adjusted earnings	Population		Assets	
	Number	Percentage of total large banks	Total ($ in billions)	Percentage of total large banks
Equal to 0%	2	2	21	0
Between 0% and 1%	23	22	604	5
Between 1% and 2%	32	31	1,925	15
Between 2% and 3%	29	28	6,608	51
Between 3% and 4%	6	6	2,473	19
Between 4% and 5%	4	4	444	3
Over 5%	8	8	828	6
All Large Banks	104	100	12,904	100

Notes:

(1) Effect of Surcharge on Current Earnings: Mean = 2.17%; Median = 1.88%; Max = 9.61%; Min = 0.00%.

(2) Four large banks were excluded from the original population of 108. One large bank is an insured branch of a foreign bank and does not report income in its quarterly financial filings and the other three large banks reported negative income. Figures may not add to totals due to rounding.

[55] Equity capital is defined as tier 1 capital for this purpose.

[56] See 12 CFR 324.10(a).

[57] Since deposit insurance assessments are a tax-deductible operating expense, increases in assessment expenses can lower taxable income and decreases in the assessment rate can raise taxable income.

[58] Of the 108 large banks, 107 continue to maintain a leverage ratio of at least 4 percent. The other large bank is an insured branch of a foreign bank and does not report income in its quarterly financial filings, so its regulatory capital ratios cannot be calculated.

When evaluating the effect of the surcharge on current earnings (that is, excluding the gains projected from lower future regular assessments), the effect of surcharges is slightly greater, as expected, but the results are not materially different. Table 2.B shows that, for 82 percent of large banks as of December 31, 2015, (85 large banks), the surcharge represents 3 percent or less of current earnings. For 91 percent (95 large banks), the surcharge represents 5 percent or less of current earnings. Only 9 large banks' current earnings are affected by more than 5 percent, with the maximum effect on any single bank being 10.11 percent.

TABLE 2.B—THE EFFECT OF THE FINAL RULE ON CURRENT EARNINGS OF INDIVIDUAL LARGE BANKS

Large banks				
Surcharge relative to current earnings	Population		Assets	
	Number	Percentage of total large banks	Total ($ in billions)	Percentage of total large banks
Equal to 0	2	2	21	0
Between 0% and 1%	23	22	604	5
Between 1% and 2%	31	30	1,906	15
Between 2% and 3%	29	28	6,568	51
Between 3% and 4%	7	7	2,532	20
Between 4% and 5%	3	3	171	1
Over 5%	9	9	1,101	9
All Large Banks	104	100	12,904	100

Notes:
(1) Effect of Surcharge on Current Earnings: Mean = 2.23%; Median = 1.90%; Max = 10.11%; Min = 0.00%.
(2) Four large banks were excluded from the original population of 108. One large bank is an insured branch of a foreign bank and does not report income in its quarterly financial filings and the other three large banks reported negative income. Figures may not add to totals due to rounding.

Finally, credits will result in a small increase in the income of small banks. Small bank annual earnings are estimated to increase between 2.5 and 2.7 percent due to these credits.

The FDIC received five comments noting the effects of the surcharge on banks' capital and earnings, including the effects of banks' ability to pay dividends or to grow. As discussed above, however, FDIC analysis reveals no significant capital effects on large banks from the surcharge. On average, the annual surcharge would absorb about 2.4 percent of large bank annual income.

VI. Alternatives Considered

In the NPR, the FDIC solicited comments on several alternatives.

Under the first alternative presented, the FDIC would forego surcharges and instead impose a one-time assessment, similar to a shortfall assessment, at the end of the quarter after the DIF reserve ratio first reaches or exceeds 1.15 percent. As previously discussed, the FDIC received two comments supporting this alternative. These comments are discussed earlier.

The second alternative would also forego surcharges and, if the reserve ratio does not reach 1.35 percent by a date sometime near the statutory deadline, impose a shortfall assessment at the end of the following quarter, to be collected at the end of the next quarter. The FDIC received one comment supporting this alternative, and a few banks surveyed by three trade groups submitting a joint comment letter also supported this alternative. These comments are also previously discussed.

The FDIC solicited comment on additional alternatives that are essentially variations of certain aspects of the surcharge proposal, including the method of determining the surcharge base, the method of allocating credits, and the length of the surcharge period. Comments in response to these alternatives are discussed in the relevant sections.

VII. Effective Date

This rule will become effective on July 1, 2016. If the reserve ratio reaches 1.15 percent before that date, surcharges will begin July 1, 2016. If the reserve ratio has not reached 1.15 percent by that date, surcharges will begin the first day of the calendar quarter after the reserve ratio reaches 1.15 percent.

VIII. Regulatory Analysis and Procedure

A. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) requires that an agency, in connection with a notice of final rulemaking, prepare a final regulatory flexibility analysis describing the impact of the rule on small entities or certify that the final rule will not have a significant economic impact on a substantial number of small entities.[59] Certain types of rules, such as rules of particular applicability relating to rates or corporate or financial structures, or practices relating to such rates or structures, are expressly excluded from the definition of the term ''rule'' for purposes of the RFA.[60] This final rule relates directly to the rates imposed on insured depository institutions for deposit insurance. For this reason, the requirements of the RFA do not apply. Nonetheless, the FDIC is voluntarily undertaking a regulatory flexibility analysis.

As of December 31, 2015, of 6,191 FDIC-insured institutions,[61] there were 4,921 small insured depository institutions as that term is defined for purposes of the RFA (*i.e.,* those with $550 million or less in assets).[62] As described in the **SUPPLEMENTARY INFORMATION** section of the preamble, the purpose of this final rule is to meet the Dodd-Frank Act requirements to increase the DIF reserve ratio from 1.15 to 1.35 by September 30, 2020, and offset the effect of that increase on banks

[59] See 5 U.S.C. 604, 605(b).

[60] 5 U.S.C. 601.

[61] The total at December 31, 2015, includes 6,182 insured commercial banks and savings institutions and 9 insured U.S. branches of foreign banks.

[62] Throughout this RFA analysis, a ''small institution'' or ''small insured depository institution'' refers to an institution with assets of $550 million or less. As of December 31, 2015, one insured branch of a foreign bank had less than $550 million in assets and is included in the small insured depository institution total.

with less than $10 billion in total consolidated assets. The final rule meets those requirements in a manner that appropriately balances several considerations, including the goal of reaching the statutory minimum reserve ratio reasonably promptly in order to strengthen the fund and reduce the risk of pro-cyclical assessments, the goal of maintaining stable and predictable assessments for banks over time, and the projected effects on bank capital and earnings. Both the Dodd-Frank Act and the FDI Act grant the FDIC broad authority to implement the requirement to offset the effect of the increase in the minimum reserve ratio on banks with less than $10 billion in total assets.

The final rule affects small entities to the extent that they are eligible for credits in exchange for their contributions toward raising the DIF reserve ratio from 1.15 percent to 1.35 percent. The FDIC will apply these credits to future regular assessments, resulting in estimated average savings of 2.4 to 2.6 percent of annual earnings for small insured depository institutions.

The final rule does not directly impose any ''reporting'' or ''recordkeeping'' requirements, and the compliance requirements for the final rule would not exceed (and, in fact, would be the same as) existing compliance requirements for the current risk-based deposit insurance assessment system for small banks.[63] The FDIC is unaware of any duplicative, overlapping or conflicting federal rules.[64] The final rule will not have a significant economic impact on a substantial number of small entities within the meaning of those terms as used in the RFA and the FDIC so certifies.[65]

B. Small Business Regulatory Enforcement Fairness Act

The final rule has been determined to be a ''major rule'' within the meaning of the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA) (Title II, Pub. L. 104–121) by the Office of Management and Budget.

C. Riegle Community Development and Regulatory Improvement Act

The Riegle Community Development and Regulatory Improvement Act requires that the FDIC, in determining the effective date and administrative compliance requirements of new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions, consider, consistent with principles of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, including small depository institutions, and customers of depository institutions, as well as the benefits of such regulations.[66] Subject to certain exceptions, new regulations and amendments to regulations prescribed by a Federal banking agency which impose additional reporting, disclosures, or other new requirements on insured depository institutions shall take effect on the first day of a calendar quarter which begins on or after the date on which the regulations are published in final form.[67] In accordance with these provisions and as discussed above, the FDIC considered any administrative burdens, as well as benefits, that the final rule would place on depository institutions and their customers in determining the effective date and administrative compliance requirements of the final rule. Thus, the final rule will be effective no earlier than the first day of a calendar quarter that begins after publication of the rule.

D. Paperwork Reduction Act

In accordance with the requirements of the Paperwork Reduction Act (''PRA'') of 1995, 44 U.S.C. 3501–3521, the FDIC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (''OMB'') control number.

This final rule does not revise FDIC's Assessments Information Collection 3064–0057, Quarterly Certified Statement Invoice for Deposit Insurance Assessment. The FDIC will continue to obtain the information necessary to calculate the surcharge assessment and assessment credits from the Call Report. Therefore, no submission to OMB need be made.

E. The Treasury and General Government Appropriations Act, 1999—Assessment of Federal Regulations and Policies on Families

The FDIC has determined that the final rule will not affect family well-being within the meaning of section 654 of the Treasury and General Government Appropriations Act, enacted as part of the Omnibus Consolidated and Emergency Supplemental Appropriations Act of 1999 (Pub. L. 105–277, 112 Stat. 2681).

F. Solicitation of Comments on Use of Plain Language

Section 722 of the Gramm-Leach-Bliley Act, Public Law 106–102, 113 Stat. 1338, 1471 (Nov. 12, 1999), requires the Federal banking agencies to use plain language in all proposed and final rulemakings published in the **Federal Register** after January 1, 2000. The FDIC invited comments on how to make this proposal easier to understand. No comments addressing this issue were received.

List of Subjects in 12 CFR Part 327

Bank deposit insurance, Banks, Banking, Savings associations.

For the reasons set forth above, the FDIC amends part 327 as follows:

PART 327—ASSESSMENTS

■ 1. The authority citation for 12 CFR part 327 continues to read as follows:

Authority: 12 U.S.C. 1441, 1813, 1815, 1817–19, 1821.

■ 2. Revise § 327.11 to read as follows:

§ 327.11 Surcharges and assessments required to raise the reserve ratio of the DIF to 1.35 percent.

(a) *Surcharge*—(1) *Institutions subject to surcharge.* The following insured depository institutions are subject to the surcharge described in this paragraph:

(i) Large institutions, as defined in § 327.8(f);

(ii) Highly complex institutions, as defined in § 327.8(g); and

(iii) Insured branches of foreign banks whose assets are equal to or exceed $10 billion, as reported in Schedule RAL of the branch's most recent quarterly Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks.

(2) *Surcharge period.* The surcharge period shall begin the later of the first day of the assessment period following the assessment period in which the reserve ratio of the DIF first reaches or exceeds 1.15 percent, or the assessment period beginning on July 1, 2016. The surcharge period shall continue through the earlier of the assessment period ending December 31, 2018, or the end of the assessment period in which the reserve ratio of the DIF first reaches or exceeds 1.35 percent.

(3) *Notification of surcharge.* The FDIC shall notify each insured depository institution subject to the surcharge of the amount of such surcharge no later than 15 days before such surcharge is due, as described in paragraph (a)(4) of this section.

(4) *Payment of any surcharge.* Each insured depository institution subject to

[63] 5 U.S.C. 604.

[64] 5 U.S.C. 605.

[65] 5 U.S.C. 605.

[66] 12 U.S.C. 4802(a).

[67] 12 U.S.C. 4802(b).

the surcharge shall pay to the Corporation any surcharge imposed under paragraph (a) of this section in compliance with and subject to the provisions of §§ 327.3, 327.6 and 327.7. The payment date for any surcharge shall be the date provided in § 327.3(b)(2) for the institution's quarterly certified statement invoice for the assessment period in which the surcharge was imposed.

(5) *Calculation of surcharge.* An insured depository institution's surcharge for each assessment period during the surcharge period shall be determined by multiplying 1.125 basis points times the institution's surcharge base for the assessment period.

(i) *Surcharge base—Insured depository institution that has no affiliated insured depository institution subject to the surcharge.* The surcharge base for an assessment period for an insured depository institution subject to the surcharge that has no affiliated insured depository institution subject to the surcharge shall equal:

(A) The institution's deposit insurance assessment base for the assessment period, determined according to § 327.5; plus

(B) The greater of the increase amount determined according to paragraph (a)(5)(iii) of this section or zero; minus

(C) $10 billion; provided, however, that an institution's surcharge base for an assessment period cannot be negative.

(ii) *Surcharge base—insured depository institution that has one or more affiliated insured depository institutions subject to the surcharge.* The surcharge base for an assessment period for an insured depository institution subject to the surcharge that has one or more affiliated insured depository institutions subject to the surcharge shall equal:

(A) The institution's deposit insurance assessment base for the assessment period, determined according to § 327.5; plus

(B) The greater of the institution's portion, determined according to paragraph (a)(5)(v) of this section, of the increase amount determined according to paragraph (a)(5)(iii) of this section or zero; minus

(C) The institution's portion, determined according to paragraph (a)(5)(v) of this section, of $10 billion; provided, however, that an institution's surcharge base for an assessment period cannot be negative.

(iii) *Surcharge base—determination of increase amount.* The increase amount for an assessment period shall equal:

(A) The amount of the aggregate deposit insurance assessment bases for the assessment period, determined according to § 327.5, of all of the institution's affiliated insured depository institutions that are not subject to the surcharge, minus

(B) The product of the increase multiplier set out in paragraph (a)(5)(iv) of this section and the aggregate deposit insurance assessment bases, determined according to § 327.5, as of December 31, 2015, of all of the small institutions, as defined in § 327.8(e), that were the institution's affiliated insured depository institutions for the assessment period ending December 31, 2015.

(iv) *Increase multiplier for the assessment periods during the surcharge period.* During the surcharge period, the increase multiplier shall be the amount prescribed in the following schedule:

INCREASE MULTIPLIERS FOR THE ASSESSMENT PERIODS DURING THE SURCHARGE PERIOD

For the assessment period ending—	
September 30, 2016	1.0740995
December 31, 2016	1.1000000
March 31, 2017	1.1265251
June 30, 2017	1.1536897
September 30, 2017	1.1815094
December 31, 2017	1.2100000
March 31, 2018	1.2391776
June 30, 2018	1.2690587
September 30, 2018	1.2996604
December 31, 2018	1.3310000

(A) For the assessment period ending September 30, 2016, the increase multiplier shall be 1.0740995.

(B) For the assessment period ending December 31, 2016, the increase multiplier shall be 1.1000000.

(C) For the assessment period ending March 31, 2017, the increase multiplier shall be 1.1265251.

(D) For the assessment period ending June 30, 2017, the increase multiplier shall be 1.1536897.

(E) For the assessment period ending September 30, 2017, the increase multiplier shall be 1.1815094.

(F) For the assessment period ending December 31, 2017, the increase multiplier shall be 1.2100000.

(G) For the assessment period ending March 31, 2018, the increase multiplier shall be 1.2391776.

(H) For the assessment period ending June 30, 2018, the increase multiplier shall be 1.2690587.

(I) For the assessment period ending September 30, 2018, the increase multiplier shall be 1.2996604.

(J) For the assessment period ending December 31, 2018, the increase multiplier shall be 1.33100000.

(v) *Surcharge base—institution's portion.* For purposes of paragraphs (a)(5)(ii)(B) and (C) of this section, an institution's portion shall equal the ratio of the institution's deposit insurance assessment base for the assessment period, determined according to § 327.5, to the sum of the institution's deposit insurance assessment base for the assessment period, determined according to § 327.5, and the deposit insurance assessment bases for the assessment period, determined according to § 327.5, of all of the institution's affiliated insured depository institutions subject to the surcharge.

(vi) For the purposes of this section, an affiliated insured depository institution is an insured depository institution that meets the definition of ''affiliate'' in section 3 of the FDI Act, 12 U.S.C. 1813(w)(6).

(6) *Effect of mergers and consolidations on surcharge base.* (i) If an insured depository institution acquires another insured depository institution through merger or consolidation during the surcharge period, the acquirer's surcharge base will be calculated consistent with § 327.6 and § 327.11(a)(5). For the purposes of the surcharge, a merger or consolidation means any transaction in which an insured depository institution merges or consolidates with any other insured depository institution, and includes transactions in which an insured depository institution either directly or indirectly acquires all or substantially all of the assets, or assumes all or substantially all of the deposit liabilities of any other insured depository institution where there is not a legal merger or consolidation of the two insured depository institutions.

(ii) If an insured depository institution not subject to the surcharge is the surviving or resulting institution in a merger or consolidation with an insured depository institution that is subject to the surcharge or acquires all or substantially all of the assets, or assumes all or substantially all of the deposit liabilities, of an insured depository institution subject to the surcharge, then the surviving or resulting insured deposit institution or the insured depository institution that acquires such assets or assumes such deposit liabilities is subject to the surcharge.

(b) *Shortfall assessment.*—(1) *Institutions subject to shortfall assessment.* Any insured depository institution that was subject to a surcharge under paragraph (a)(1) of this section, in any assessment period during the surcharge period described

in paragraph (a)(2) of this section, shall be subject to the shortfall assessment described in this paragraph (b). If surcharges under paragraph (a) of this section have not been in effect, the insured depository institutions subject to the shortfall assessment described in this paragraph (b) will be the insured depository institutions described in paragraph (a)(1) of this section as of the assessment period in which the reserve ratio of the DIF reaches or exceeds 1.15 percent.

(2) *Notification of shortfall.* The FDIC shall notify each insured depository institution subject to the shortfall assessment of the amount of such institution's share of the shortfall assessment described in paragraph (b)(5) of this section no later than 15 days before such shortfall assessment is due, as described in paragraph (b)(3) of this section.

(3) *Payment of any shortfall assessment.* Each insured depository institution subject to the shortfall assessment shall pay to the Corporation such institution's share of any shortfall assessment as described in paragraph (b)(5) of this section in compliance with and subject to the provisions of §§ 327.3, 327.6 and 327.7. The payment date for any shortfall assessment shall be the date provided in § 327.3(b)(2) for the institution's quarterly certified statement invoice for the assessment period in which the shortfall assessment is imposed.

(4) *Amount of aggregate shortfall assessment.* (i) If the reserve ratio of the DIF is at least 1.15 percent but has not reached or exceeded 1.35 percent as of December 31, 2018, the shortfall assessment shall be imposed on March 31, 2019, and shall equal 1.35 percent of estimated insured deposits as of December 31, 2018, minus the actual DIF balance as of that date.

(ii) If the reserve ratio of the DIF is less than 1.15 percent and has not reached or exceeded 1.35 percent by December 31, 2018, the shortfall assessment shall be imposed at the end of the assessment period immediately following the assessment period that occurs after December 31, 2018, during which the reserve ratio first reaches or exceeds 1.15 percent and shall equal 0.2 percent of estimated insured deposits as of the end of the calendar quarter in which the reserve ratio first reaches or exceeds 1.15 percent.

(5) *Institutions' shares of aggregate shortfall assessment.* Each insured depository institution's share of the aggregate shortfall assessment shall be determined by apportioning the aggregate amount of the shortfall assessment among all institutions subject to the shortfall assessment in proportion to each institution's shortfall assessment base as described in this paragraph.

(i) *Shortfall assessment base if surcharges have been in effect.* If surcharges have been in effect, an institution's shortfall assessment base shall equal the average of the institution's surcharge bases during the surcharge period. For purposes of determining the average surcharge base, if an institution was not subject to the surcharge during any assessment period of the surcharge period, its surcharge base shall equal zero for that assessment period.

(ii) *Shortfall assessment base if surcharges have not been in effect.* If surcharges have not been in effect, an institution's shortfall assessment base shall equal the average of what its surcharge bases would have been over the four assessment periods ending with the assessment period in which the reserve ratio first reaches or exceeds 1.15 percent. If an institution would not have been subject to a surcharge during one of those assessment periods, its surcharge base shall equal zero for that assessment period.

(6) *Effect of mergers and consolidations on shortfall assessment.* (i) If an insured depository institution, through merger or consolidation, acquires another insured depository institution that paid surcharges for one or more assessment periods, the acquirer will be subject to a shortfall assessment and its average surcharge base will be increased by the average surcharge base of the acquired institution, consistent with paragraph (b)(5) of this section.

(ii) For the purposes of the shortfall assessment, a merger or consolidation means any transaction in which an insured depository institution merges or consolidates with any other insured depository institution, and includes transactions in which an insured depository institution either directly or indirectly acquires all or substantially all of the assets, or assumes all or substantially all of the deposit liabilities of any other insured depository institution where there is not a legal merger or consolidation of the two insured depository institutions.

(c) *Assessment credits.* (1)(i) *Eligible Institutions.* For the purposes of this paragraph (c) an insured depository institution will be considered an eligible institution, if, for at least one assessment period during the credit calculation period, the institution was a credit accruing institution.

(ii) *Credit accruing institutions.* A credit accruing institution is an institution that, for a particular assessment period, is not:

(A) A large institution, as defined in § 327.8(f);

(B) A highly complex institution, as defined in § 327.8(g); or

(C) An insured branch of a foreign bank whose assets are equal to or exceed $10 billion, as reported in Schedule RAL of the branch's most recent quarterly Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks.

(2) *Credit calculation period.* The credit calculation period shall begin the first day of the assessment period after the reserve ratio of the DIF reaches or exceeds 1.15 percent, and shall continue through the earlier of the assessment period that the reserve ratio of the DIF reaches or exceeds 1.35 percent or the assessment period that ends December 31, 2018.

(3) *Determination of aggregate assessment credit awards to all eligible institutions.* The FDIC shall award an aggregate amount of assessment credits equal to the product of the *fraction of quarterly regular deposit insurance assessments paid by credit accruing institutions* during the credit calculation period and the amount by which the *DIF increase,* as determined under paragraph (c)(3)(ii) or (iii) of this section, exceeds total surcharges imposed under paragraph (b) of this section; provided, however, that the aggregate amount of assessment credits cannot exceed the aggregate amount of quarterly deposit insurance assessments paid by credit accruing institutions during the credit calculation period.

(i) *Fraction of quarterly regular deposit insurance assessments paid by credit accruing institutions.* The fraction of assessments paid by credit accruing institutions shall equal quarterly deposit insurance assessments, as determined under § 327.9, paid by such institutions for each assessment period during the credit calculation period, divided by the total amount of quarterly deposit insurance assessments paid by all insured depository institutions during the credit calculation period, excluding the aggregate amount of surcharges imposed under paragraph (b) of this section.

(ii) *DIF increase if the DIF reserve ratio has reached 1.35 percent by December 31, 2018.* If the DIF reserve ratio has reached 1.35 percent by December 31, 2018, the DIF increase shall equal 0.2 percent of estimated insured deposits as of the date that the DIF reserve ratio first reaches or exceeds 1.35 percent.

(iii) *DIF Increase if the DIF reserve ratio has not reached 1.35 percent by*

December 31, 2018. If the DIF reserve ratio has not reached 1.35 percent by December 31, 2018, the DIF increase shall equal the DIF balance on December 31, 2018, minus 1.15 percent of estimated insured deposits on that date.

(4) *Determination of individual eligible institutions' shares of aggregate assessment Credit.*—

(i) *Assessment credit share.* To determine an eligible institution's assessment credit share, the aggregate assessment credits awarded by the FDIC shall be apportioned among all eligible institutions in proportion to their respective assessment credit bases, as described in paragraph (c)(4)(ii) of this section.

(ii) *Assessment credit base.* An eligible institution's assessment credit base shall equal the average of its quarterly deposit insurance assessment bases, as determined under § 327.5, during the credit calculation period, as defined in paragraph (c)(2) of this section. An eligible institution's credit base shall be deemed to equal zero for any assessment period during which the institution was not a credit accruing institution.

(iii) *Limitation.* The assessment credits awarded to an eligible institution shall not exceed the total amount of quarterly deposit insurance assessments paid by that institution for assessment periods during the credit calculation period in which it was a credit accruing institution.

(5) *Effect of merger or consolidation on assessment credit base.* If an eligible institution acquires another eligible institution through merger or consolidation before the reserve ratio of the DIF reaches 1.35 percent, the acquirer's quarterly deposit insurance assessment base (for purposes of calculating the acquirer's assessment credit base) shall be deemed to include the acquired institution's deposit insurance assessment base for the assessment periods during the credit calculation period that were prior to the merger or consolidation and in which the acquired institution was a credit accruing institution.

(6) *Effect of call report amendments.* Amendments to the quarterly Reports of Condition and Income or the quarterly Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks that occur subsequent to the payment date for the final assessment period of the credit calculation period shall not affect an eligible institution's credit share.

(7) *Award and notice of assessment credits*—(i) *Award of assessment credits.* As soon as practicable after the earlier of either December 31, 2018, or the date on which the reserve ratio of the DIF reaches 1.35 percent, the FDIC shall notify an eligible institution of the FDIC's preliminary estimate of such institution's assessment credits and the manner in which the FDIC calculated such credits.

(ii) *Notice of assessment credits.* The FDIC shall provide eligible institutions with periodic updated notices reflecting adjustments to the institution's assessment credits resulting from requests for review or appeals, mergers or consolidations, or the FDIC's application of credits to an institution's quarterly deposit insurance assessments.

(8) *Requests for review and appeal of assessment credits.* Any institution that disagrees with the FDIC's computation of or basis for its assessment credits, as determined under this paragraph (c), may request review of the FDIC's determination or appeal that determination. Such requests for review or appeal shall be filed pursuant to the procedures set forth in paragraph (d) of this section.

(9) *Successors.* If an insured depository institution acquires an eligible institution through merger or consolidation after the reserve ratio of the DIF reaches 1.35 percent, the acquirer is successor to any assessment credits of the acquired institution.

(10) *Mergers and consolidation include only legal mergers and consolidation.* For the purposes of this paragraph (c), a merger or consolidation does not include transactions in which an insured depository institution either directly or indirectly acquires the assets of, or assumes liability to pay any deposits made in, any other insured depository institution, but there is not a legal merger or consolidation of the two insured depository institutions.

(11) *Use of credits.* (i) The FDIC shall apply assessment credits awarded under paragraph (c) of this section to an institution's deposit insurance assessments, as calculated under § 327.9, only for assessment periods in which the reserve ratio of the DIF exceeds 1.38 percent.

(ii) The FDIC shall apply assessment credits to reduce an institution's quarterly deposit insurance assessments by each institution's remaining credits. The assessment credit applied to each institution's deposit insurance assessment for any assessment period shall not exceed the institution's total deposit insurance assessment for that assessment period.

(iii) The amount of credits applied each quarter will not be recalculated as a result of amendments to the quarterly Reports of Condition and Income or the quarterly Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks pertaining to any quarter in which credits have been applied.

(12) *Transfer or sale of credits.* Other than through merger or consolidation, credits may not be sold or transferred.

(d) *Request for review and appeals of assessment credits.* (1) An institution that disagrees with the basis for its assessment credits, or the Corporation's computation of its assessments credits under paragraph (c) of this section and seeks to change it must submit a written request for review and any supporting documentation to the FDIC's Director of the Division of Finance.

(2) *Timing.* (i) Any request for review under this paragraph must be submitted within 30 days from

(A) The initial notice provided by the FDIC to the insured depository institution under paragraph (c)(7) of this section stating the FDIC's preliminary estimate of an eligible institution's assessment credit and the manner in which the assessment credit was calculated; or

(B) Any updated notice provided by the FDIC to the insured depository institution under paragraph (c)(7) of this section.

(ii) Any requests submitted after the deadline in paragraph (d)(2)(i) of this section will be considered untimely filed and the institution will be subsequently barred from submitting a request for review of its assessment credit.

(3) *Process of review.* (i) Upon receipt of a request for review, the FDIC shall temporarily freeze the amount of the assessment credit being reviewed until a final determination is made by the Corporation.

(ii) The FDIC may request, as part of its review, additional information from the insured depository institution involved in the request and any such information must be submitted to the FDIC within 21 days of the FDIC's request;

(iii) The FDIC's Director of the Division of Finance, or his or her designee, will notify the requesting institution of his or her determination of whether a change is warranted within 60 days of receipt by the FDIC of the request for review, or if additional information had been requested from the FDIC, within 60 days of receipt of any such additional information.

(4) *Appeal.* If the requesting institution disagrees with the final determination from the Director of the Division of Finance, that institution may appeal its assessment credit

determination to the FDIC's Assessment Appeals Committee within 30 days from the date of the Director's written determination. Notice of the procedures applicable to an appeal before the Assessment Appeals Committee will be included in the Director's written determination.

(5) *Adjustments to assessment credits.* Once the Director of the Division of Finance, or the Assessment Appeals Committee, as appropriate, has notified the requesting bank of its final determination, the FDIC will make appropriate adjustments to assessment credit amounts consistent with that determination. Adjustments to an insured depository institution's assessment credit amounts will not be applied retroactively to reduce or increase the quarterly deposit insurance assessment for a prior assessment period.

■ 3. In § 327.35, revise paragraph (a) to read as follows:

§ 327.35 Application of credits.

(a) Subject to the limitations in paragraph (b) of this section, the amount of an eligible insured depository institution's one-time credit shall be applied to the maximum extent allowable by law against that institution's quarterly assessment payment under subpart A of this part, after applying assessment credits awarded under § 327.11(c), until the institution's credit is exhausted.

Note: The following appendix will not appear in the Code of Federal Regulations.

Appendix 1

Example Calculations of Surcharge Bases in Banking Organizations With Multiple Large Banks and Affiliated Small Banks

Table 1.1 gives an example of the calculation of the surcharge base for a banking organization that comprises three large banks but no affiliated small banks.

TABLE 1.1—EXAMPLE APPLICATION OF $10 BILLION DEDUCTION WITHIN A BANKING ORGANIZATION

[$ in billions]

Affiliated large banks	Assessment base	Share of $10 billion deduction		Surcharge base
		%	$	
	A	B (A/$116)	C (B * $10)	A − C
#1	$25.00	21.6	$2.16	$22.84
#2	55.00	47.4	4.74	50.26
#3	36.00	31.0	3.10	32.90
Total	116.00	100	10.00	106.00

* Some figures are rounded for simplicity of presentation.

The next tables give an example of the calculation of the surcharge base for a banking organization that comprises three large banks and two affiliated small banks. Table 1.2 shows the applicable amounts by which affiliated small banks' December 31, 2015 regular assessment bases will be multiplied to determine growth at a 10 percent effective annual rate. (The amounts in the table are calculated by compounding a quarterly rate of approximately 2.41 percent from December 31, 2015, to achieve a 10 percent effective annual rate.) Table 1.3 shows the calculation of the gross amount of the first adjustment (the net increase in affiliated small banks' assessment bases after December 31, 2015). Table 1.4 shows the apportionment of the first adjustment and the second adjustment (the $10 billion deduction) among the large banks in the banking organization.

The first adjustment calculates the cumulative net increase from December 31, 2015, in affiliated small banks' aggregate assessment bases in excess of an effective annual rate of 10 percent. In the example shown in Table 1.3, affiliated small bank X had an assessment base of $2.00 billion as of December 31, 2015, and affiliated small bank Y had an assessment base of $6.00 billion, or $8.00 billion in aggregate. On March 31, 2017, affiliated small bank X has increased its assessment base to $6.01 billion, and affiliated small bank Y has decreased its assessment base to $5.00 billion, so the affiliated small banks' aggregate assessment base is $11.01 billion. The amount of growth in excess of an effective annual rate of 10 percent is calculated by first multiplying the amount corresponding with March 31, 2017 in Table 1.2 (1.1265251) by the affiliated small banks aggregate assessment base of $8.00 billion as of December 31, 2015, and then subtracting the product from the affiliated small banks' aggregate assessment base of $11.01 billion as of March 31, 2017. The resulting amount, $2.00 billion, is the gross amount of the first adjustment.

The second adjustment deducts $10 billion from large banks' assessment bases. Both adjustments are apportioned among all large bank affiliates in a holding company in proportion to each large bank's regular assessment base. As shown in Table 1.4, each affiliated large bank's share of the banking organization's assessment base (the large bank share) is calculated by dividing the affiliated large bank's assessment base by the sum of all affiliated large bank assessment bases. Next, each large bank's share is multiplied by the gross amount ($2.0 billion) of the first adjustment, as calculated in Table 1.3, and the product is added to each large bank's surcharge base. Finally, each large bank's share is multiplied by the $10 billion deduction, and the product is subtracted from each large bank's surcharge base as increased by the first adjustment. The remaining amount constitutes each large bank's surcharge base for the quarter.

TABLE 1.2—MULTIPLIER AMOUNTS

For the assessment period ending—	
September 30, 2016	1.0740995
December 31, 2016	1.1000000
March 31, 2017	1.1265251
June 30, 2017	1.1536897
September 30, 2017	1.1815094
December 31, 2017	1.2100000
March 31, 2018	1.2391776
June 30, 2018	1.2690587
September 30, 2018	1.2996604
December 31, 2018	1.3310000

TABLE 1.3—EXAMPLE CALCULATION OF THE GROSS AMOUNT OF THE FIRST ADJUSTMENT

[Net increase in affiliated small banks' assessment bases after December 31, 2015]

[$ in billions] *

Affiliated small banks	Assessment base		Growth under a 10% effective annual rate, compounded quarterly	Growth in excess of 10% effective annual rate
	Year-end 2015	First quarter 2017		
	A	B	C = A * 1.1265	D = B − C
X	$2.00	$6.01		
Y	6.00	5.00

BUREAU OF CONSUMER FINANCIAL PROTECTION

12 CFR Part 1026

[Docket No. CFPB–2016–0013]

RIN 3170–AA59

Operations in Rural Areas Under the Truth in Lending Act (Regulation Z); Interim Final Rule

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Interim final rule with request for public comment.

SUMMARY: This interim final rule amends certain provisions of Regulation Z in light of title LXXXIX of the Fixing America's Surface Transportation Act, entitled the Helping Expand Lending Practices in Rural Communities Act, Public Law 114–94. The amendments to Regulation Z concern two matters: The eligibility of certain small creditors that operate in rural or underserved areas for special provisions that permit the origination of balloon-payment qualified mortgages and balloon-payment high cost mortgages and for an exemption from the requirement to establish an escrow account for higher-priced mortgage loans and the determination of whether an area is rural for the purposes of Regulation Z.

DATES: This final rule is effective on March 31, 2016. Comments may be submitted on or before April 25, 2016.

ADDRESSES: You may submit comments, identified by Docket No. CFPB–2016–0013 or RIN 3170–AA59, by any of the following methods:

- *Email: FederalRegisterComments@cfpb.gov.* Include Docket No. CFPB–2016–0013 or RIN 3170–AA59 in the subject line of the email.
- *Electronic: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Monica Jackson, Office of the Executive Secretary, Consumer Financial Protection Bureau, 1700 G Street NW., Washington, DC 20552.
- *Hand Delivery/Courier:* Monica Jackson, Office of the Executive Secretary, Consumer Financial Protection Bureau, 1275 First Street NE., Washington, DC 20002.

Instructions: All submissions should include the agency name and docket number or Regulatory Information Number (RIN) for this rulemaking. Because paper mail in the Washington, DC area and at the Consumer Financial Protection Bureau (Bureau) is subject to delay, commenters are encouraged to submit comments electronically. In general, all comments received will be posted without change to *http://www.regulations.gov.* In addition, comments will be available for public inspection and copying at 1275 First Street NE., Washington, DC 20002, on official business days between the hours of 10 a.m. and 5 p.m. eastern time. You can make an appointment to inspect the documents by telephoning (202) 435–7275.

All comments, including attachments and other supporting materials, will become part of the public record and subject to public disclosure. Sensitive

personal information, such as account numbers or Social Security numbers, should not be included. Comments will not be edited to remove any identifying or contact information.

FOR FURTHER INFORMATION CONTACT: Carl Owens, Terry J. Randall, or James Wylie, Counsels, Office of Regulations, Consumer Financial Protection Bureau, 1700 G Street NW., Washington, DC 20552, at (202) 435–7700.

SUPPLEMENTARY INFORMATION:

I. Summary of Interim Final Rule

The Bureau is issuing this interim final rule to amend Regulation Z to address the Helping Expand Lending Practices in Rural Communities Act of 2015 (HELP Rural Communities Act or the Act), which was enacted on December 4, 2015.[1] The Act has two substantive sections. First, the Act broadened the class of creditors that may be eligible under the Truth in Lending Act (TILA) for provisions that relieve burden for small, rural mortgage creditors.[2] Second, it requires the Bureau to establish a process under which a person may apply to have an area designated by the Bureau as a rural area for purposes of a Federal consumer financial law.[3] On March 3, 2016, the Bureau published a rule establishing the application process mandated by the Act.[4] This interim final rule addresses the Act's amendments to TILA and defines the term ''area'' for purposes of the application process.

This interim final rule is implementing Congress's intention to expand the cohort of small creditors that are eligible for a special provision of Regulation Z that permits origination of balloon-payment qualified mortgages under § 1026.43(f) and for an exemption from the requirement to establish an escrow account for higher-priced mortgages (escrow exemption) under § 1026.35(b)(2)(iii). The Act's amendments to TILA authorize the Bureau to extend the special provision and exemption to certain small creditors that operate in rural or underserved areas, and remove TILA's prior limitation that eligible creditors must operate predominantly in such areas.[5] In addition to the special provision and escrow exemption addressed in the Act, to promote consistent regulatory requirements and reduce unwarranted burdens on small creditors, the interim final rule also expands eligibility for a special provision which allows rural, small creditors to originate high cost mortgages with balloon-payment terms (balloon-payment high cost mortgages) under § 1026.32(d)(1)(ii)(C).

To expand eligibility for the special provisions and exemption, the interim final rule revises § 1026.35(b)(2)(iii)(A), which specifies the level of operations in rural or underserved areas at which a creditor is eligible for the special provisions and exemption. Under the interim final rule, a creditor satisfies the rural-or-underserved component of the eligibility criteria if the creditor originated a covered transaction secured by a property located in a rural or underserved area in the preceding calendar year or, if the application for the transaction was received before April 1 of the current calendar year, during either of the two preceding calendar years. The interim final rule also amends the current eligibility criteria for the escrow exemption to ensure that creditors that established escrow accounts solely to comply with the current rule will be eligible for the exemption if they otherwise meet its criteria under this interim final rule.

In addition to addressing the Act's amendments to TILA, this rule also amends § 1026.35(b)(2)(iv)(A), which sets forth the rule for determining whether an area is rural for the purposes of Regulation Z, by inserting a reference to any areas designated as rural through the application process mandated by the Act. This amendment also establishes that, consistent with the current definition of rural area in Regulation Z, only counties or census blocks are eligible areas for the purpose of the application process established by the Bureau pursuant to the Act. The Bureau is soliciting comments on the interim final rule's amendments to Regulation Z.

II. Background

In response to an unprecedented cycle of expansion and contraction in the mortgage market that sparked the most severe U.S. recession since the Great Depression, Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), signed into law on July 21, 2010.[6] In the Dodd-Frank Act, Congress significantly amended the statutory requirements governing mortgage practices.[7]

As part of these changes, Congress vested the Bureau with specific authority to modify certain requirements with respect to small creditors operating predominantly in rural or underserved areas. TILA sections 129C(b)(2)(E)(iv)(I) and 129D(c)(1) granted the Bureau the discretion to create a special provision allowing origination of balloon-payment qualified mortgages, even though balloon-payment mortgages are otherwise precluded from being considered qualified mortgages, and an exemption from the requirement to establish an escrow account for higher-priced mortgage loans.[8] TILA limited the cohort of creditors to which the Bureau may grant the special provision and exemption to include only small creditors that operate predominantly in rural or underserved areas.

The Bureau issued several rules in early 2013 to implement these new statutory requirements.[9] As directed by Congress, the Bureau considered the issues facing rural, small creditors and determined that it was appropriate to exercise its discretion under TILA to reduce burden on certain small creditors that operate predominantly in rural or underserved areas. Accordingly, the Bureau established a special provision allowing origination of balloon-payment qualified mortgages, even though balloon-payment mortgages are otherwise precluded from being considered qualified mortgages, and an exemption from the pre-existing requirement to establish an escrow account for higher-priced mortgage loans.[10] To synchronize the treatment of balloon-payment loans for purposes of qualified mortgages and high cost mortgages, the Bureau exercised discretionary authority under TILA section 129(p)(1) to establish a special provision allowing creditors that satisfy

the same eligibility criteria as the special provision and exemption to originate high cost mortgages with balloon-payment features.[11]

The Bureau adopted a single test to determine whether a small creditor operated predominantly in rural or underserved areas for the purposes of eligibility for the special provisions and exemption.[12] In adopting this test, the Bureau stated that it interpreted the use of ''predominantly'' in the statute to ''[indicate] a portion greater than half'' [13] and therefore conditioned eligibility on whether the small creditor extended more than 50 percent of its total first-lien covered transactions [14] on properties that are located in areas designated as either rural or underserved.[15]

In the spring of 2013, the Bureau adopted provisions establishing a two-year transition period during which small creditors that did not operate predominantly in rural or underserved areas could originate balloon-payment qualified mortgages. The Bureau explained that the transition period provided time for small creditors to make changes to their business practices, and noted the particular challenges posed by existing balloon-payment loans that would be due for renewal in the near term. The Bureau also stated that the transition period would give it time to study whether the definitions of rural or underserved should be adjusted.[16] In the fall of 2013, the Bureau extended the same two-year transition period to balloon-payment high cost mortgages for the same reasons that it established the transition period for balloon-payment qualified mortgages.[17] The Bureau did not make any changes to the escrow exemption in these rules.

In the fall of 2015, the Bureau adopted revisions that affected the special provisions and the escrow exemption.[18] As part of these revisions, the Bureau expanded eligibility for the exemption and special provisions by raising the loan origination limit for determining eligibility for small creditor status from no more than 500 applicable loans to no more than 2,000 applicable loans. In addition, the Bureau broadened the definition of ''rural'' by adding census blocks that are not in urban areas as defined by the U.S. Census Bureau to the existing county-based definition. The Bureau noted that the special provisions and exemption facilitate the ability of rural, small creditors to provide access to mortgage credit for consumers they serve. At that time, the Bureau also extended the temporary provisions that allow certain small creditors to make balloon-payment qualified mortgages and balloon-payment high cost mortgages regardless of whether they operated predominantly in rural or underserved areas for an additional three and a half months.[19] The Bureau explained that it extended the temporary provisions to provide time for small creditors to understand how the changes that the Bureau was making to the definition of rural would affect their status and to make any necessary adjustments to their business practices. The transition period expires on April 1, 2016.

Just over two months after the Bureau adopted these revisions, on December 4, 2015, the HELP Rural Communities Act was enacted into law.[20] The Act broadened the class of creditors that may be eligible under TILA for the special provision allowing origination of balloon-payment qualified mortgages and for the escrow exemption.[21] Prior to the HELP Rural Communities Act amendments, both TILA sections 129C(b)(2)(E)(iv)(I) and 129D(c)(1), the sections under which the Bureau exercised its authority to create the special provision and exemption, limited eligibility to small creditors that ''operate predominantly in rural or underserved areas.'' The Act struck the term ''predominantly'' from both sections.[22] In addition, the Act requires the Bureau to establish a temporary application process to have an area designated by the Bureau as a rural area for purposes of a Federal consumer financial law.[23]

On March 3, 2016, the Bureau published a procedural rule in the **Federal Register** to establish the application process mandated by the Act.[24] Pursuant to that process, the Bureau will begin accepting applications for areas to be designated as rural areas on March 31, 2016, and the application process will terminate on December 4, 2017.[25] The Bureau is issuing this interim final rule to amend Regulation Z to exercise the authority granted to the Bureau by the Act's amendments to TILA and to insert a reference to rural areas designated through the application process mandated by the Act.

III. Legal Authority

The Bureau is issuing this final rule pursuant to its authority under TILA and the Dodd-Frank Act. TILA, as amended by the Dodd-Frank Act and the HELP Rural Communities Act, provides specific statutory bases for the Bureau's interim final rule. TILA section 129D(c) authorizes the Bureau to exempt, by regulation, a creditor from the requirement (in section 129D(a)) that escrow accounts be established for higher-priced mortgage loans if the creditor operates in rural or underserved areas, retains its mortgage loans in portfolio, does not exceed (together with all affiliates) a total annual mortgage loan origination limit set by the Bureau, and meets any asset-size threshold, and any other criteria, the Bureau may establish. TILA section 129C(b)(2)(E) authorizes the Bureau to provide, by regulation, that certain balloon-payment mortgages originated by small creditors receive qualified mortgage status, even though qualified mortgages are otherwise prohibited from having balloon-payment features.

With respect to the high cost mortgage provisions of TILA section 129, TILA section 129(p), as amended by the Dodd-Frank Act, grants the Bureau the

[24] Application Process for Designation of Rural Area under Federal Consumer Financial Law, 81 FR 11099 (Mar. 3, 2016).

[25] The Bureau will consider any application received before April 8, 2017. The Bureau may not consider an application received on or after April 8, 2017, if it determines that it is not possible to complete the statutorily designed potential 240-day application process for that application by the sunset date, based on the time remaining, the complexity of the application, and any other relevant factors. *Id.*

authority to create exemptions to the restrictions on high cost mortgages and to expand the protections that apply to high cost mortgages. Under TILA section 129(p)(1), the Bureau may exempt specific mortgage products or categories from any or all of the prohibitions specified in TILA section 129(c) through (i), if the Bureau finds that the exemption is in the interest of the borrowing public and will apply only to products that maintain and strengthen homeownership and equity protections. Among these referenced provisions of TILA is section 129(e), the prohibition on balloon payments for high cost mortgages.

In addition, as amended by the Dodd-Frank Act, TILA section 105(a) authorizes the Bureau to prescribe regulations to carry out the purposes of TILA. Under section 105(a), such regulations may contain such additional requirements, classifications, differentiations, or other provisions, and may provide for such adjustments and exceptions for all or any class of transactions, as in the judgment of the Bureau are necessary or proper to effectuate the purposes of TILA, to prevent circumvention or evasion thereof, or to facilitate compliance therewith. Dodd-Frank Act section 1100A clarified the Bureau's TILA section 105(a) authority by amending that section to provide express authority to prescribe regulations that contain ''additional requirements'' that the Bureau finds are necessary or proper to effectuate the purposes of TILA, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

In addition, section 1061 of the Dodd-Frank Act transferred to the Bureau the ''consumer financial protection functions'' previously vested in certain other Federal agencies, including the Board of Governors of the Federal Reserve System (Board). The term ''consumer financial protection function'' is defined to include ''all authority to prescribe rules or issue orders or guidelines pursuant to any Federal consumer financial law, including performing appropriate functions to promulgate and review such rules, orders, and guidelines.'' [26] Title X of the Dodd-Frank Act, including section 1061 of the Dodd-Frank Act, along with TILA and certain subtitles and provisions of title XIV of the Dodd-Frank Act, are Federal consumer financial laws.[27] In addition, section 1022(b)(1) of the Dodd-Frank Act authorizes the Bureau to prescribe rules ''as may be necessary or appropriate to enable the Bureau to administer and carry out the purposes and objectives of the Federal consumer financial laws, and to prevent evasions thereof.'' TILA is a Federal consumer financial law. Accordingly, the Bureau is exercising its authority under Dodd-Frank Act section 1022(b) to issue rules that carry out the purposes and objectives of TILA.

IV. Administrative Procedure Act

To the extent that notice and comment would otherwise be required, the Bureau finds that there is good cause due to the exigencies created by the HELP Rural Communities Act to publish this interim final rule without notice and comment and for the rule to be effective less than 30 days after publication.[28] It is necessary to finalize the interim final rule before April 1, 2016, for the reasons discussed below. As a result, the Bureau finds that it is impracticable both to provide notice and accept comment on the amendments to Regulation Z before finalizing the rule and to provide a 30-day period between publication and when the rule is effective.[29]

A. Revisions to Effectuate the Amendments to TILA

This interim final rule revises certain provisions in Regulation Z to effectuate the HELP Rural Communities Act's amendments to TILA, which broadened the cohort of creditors that may be eligible under TILA for the special provision permitting origination of balloon-payment qualified mortgages and for the escrow exemption.[30] Prior to these amendments to TILA, eligibility was limited to creditors that operate predominantly in rural or underserved areas. Congress struck the word ''predominantly'' from the TILA sections.[31]

These amendments to TILA, which were effective upon enactment on December 4, 2015, create uncertainty and confusion for creditors that are not currently eligible for the special provisions and exemption. For example, these creditors may question how the Act changes their eligibility for the special provisions and exemption. This uncertainty may lead these creditors to change their business practices, potentially imposing burden and costs on creditors to update their policies and procedures, make changes to their technology, and train staff. This uncertainty also creates legal risks for these creditors. They may mistakenly believe that the amendments to TILA automatically broadened the regulatory exemption and may take steps that might lead them out of compliance with the requirements in Regulation Z.

With respect to the special provisions pertaining to balloon-payment features, the consequences of this confusion can be avoided if the interim final rule is effective before April 1, 2016. Currently, the rural-or-underserved aspect of the eligibility criteria for the special provisions has no practical effect because, under temporary provisions that expire on April 1, 2016, creditors that meet all of the other eligibility criteria for the special provisions may originate balloon-payment qualified mortgages and balloon-payment high cost mortgages even if they do not satisfy the rural-or-underserved component of the test.[32] If the temporary provisions expire before the Bureau resolves the uncertainty created by the amendments to TILA by revising the rural-or-underserved component of the eligibility criteria in § 1026.35(b)(2)(iii)(A), creditors face significant confusion about the status of the exemptions, which may cause the potential legal risks described above and may impose unnecessary burden and costs on newly eligible creditors. The amendment to TILA, striking ''predominantly,'' suggests that Congress intended to expand eligibility for the special provision to additional creditors that operate in rural or underserved areas, but that do not operate ''predominantly'' in rural or underserved areas, and thereby reduce burden on this expanded cohort of small creditors. To exercise the Bureau's authority consistent with that intent while avoiding imposing unnecessary burden and costs on newly eligible small creditors, the revisions to the rural-or-underserved test in § 1026.35(b)(2)(iii)(A) must take effect prior to the April 1, 2016, expiration of the temporary provisions. If new § 1026.35(b)(2)(iii)(A) is not effective

[26] Dodd-Frank Act section 1061(a)(1)(A), 12 U.S.C. 5581(a)(1)(A).

[27] Dodd-Frank Act section 1002(14), 12 U.S.C. 5481(14) (defining ''Federal consumer financial law'' to include the ''enumerated consumer laws,'' the provisions of title X of the Dodd-Frank Act, and the laws for which authorities are transferred under title X subtitles F and H of the Dodd-Frank Act); Dodd-Frank Act section 1002(12), 12 U.S.C. 5481(12) (defining ''enumerated consumer laws'' to include TILA); Dodd-Frank section 1400(b), 12 U.S.C. 5481(12) note (defining ''enumerated consumer laws'' to include certain subtitles and provisions of Dodd-Frank Act title XIV).

[28] 5 U.S.C. 553(b)(3)(B); 5 U.S.C. 553(d)(3).

[29] This finding also satisfies the requirements of 5 U.S.C. 808(2), allowing the interim final rule to become effective notwithstanding the requirements of 5 U.S.C. 801 for the same reasons discussed in this section.

[30] Public Law 114–94, section 89003 (2015).

[31] *Id.*

[32] 12 CFR 1026.43(e)(6); 1026.32(d)(1)(ii)(C).

before the temporary provisions expire, newly eligible small creditors would have to change their business practices temporarily to comply with the requirements imposed by the current rule and then, later, when the revisions to the rule were effective, would have to change their business practices again to reverse course. To avoid imposing these unnecessary burdens and costs, the amendment to the rural-or-underserved test under § 1026.35(b)(2)(iii)(A) and conforming changes to the commentary must take effect before April 1, 2016.

The need to clarify the amendment to TILA's effect on the escrow exemption is also urgent because the requirement that creditors operate predominantly in rural or underserved areas to be eligible for the escrow exemption currently applies and will continue to apply as long as the current version of § 1026.35(b)(2)(iii)(A) is still in effect. In light of the Act, creditors now face uncertainty surrounding the status of their eligibility for the exemption. As noted above, some creditors that are not eligible for the current exemption may be under the mistaken impression that the amendments to TILA automatically broadened the regulatory exemption and that they are no longer required to establish escrow accounts for higher-priced mortgage loans. This confusion creates legal risks for these creditors. In addition, some creditors may be uncertain about whether establishing an escrow account to comply with current law will disqualify them from the escrow exemption in the future, because creditors generally are not eligible for the escrow exemption if they maintain escrow accounts for any extension of consumer credit secured by real property or a dwelling that it or its affiliate currently services that were established after January 1, 2016.[33] Some creditors may be adjusting their business practices as a result of this uncertainty. To resolve this uncertainty, the interim final rule's revisions to both the rural-or-underserved test under § 1026.35(b)(2)(iii)(A), discussed above, and the ''no harm'' provision under § 1026.35(b)(2)(iii)(D)(*1*) must be effective. The ''no harm'' provision ensures that any creditors that are currently ineligible for the escrow exemption, but that would qualify under the interim final rule, do not lose eligibility for the escrow exemption because of escrow accounts they established pursuant to requirements in the current rule. The amendments to both sections must take effect urgently to resolve the uncertainty surrounding the exemption and eliminate the legal risks described above.

B. Amendments Related to the Application Process

The amendment to the definition of rural area under § 1026.35(b)(2)(iv)(A) must take effect by March 31, 2016. New § 1026.35(b)(2)(iv)(A)(*3*) amends Regulation Z to refer to the application process mandated by the Act, which requires the Bureau to establish the application process by March 3, 2016.[34] The statute's inclusion of a deadline for establishing the application process suggests that Congress intended the Bureau to begin accepting applications as promptly after March 3, 2016, as possible. Accordingly, the Bureau's procedural rule established March 31, 2016, as the date when it would begin accepting applications. To provide potential applicants with notice of the types of areas for which they may submit applications before the Bureau begins accepting applications, it is necessary for new § 1026.35(b)(2)(iv)(A)(*3*) to be effective by March 31, 2016.

V. Section-by-Section Analysis

Section 1026.35 Requirements for Higher-Priced Mortgage Loans

35(b) Escrow Accounts

35(b)(2)(iii)

35(b)(2)(iii)(A)

Section 1026.35(b)(2)(iii) currently provides that an escrow account need not be established for a higher-priced mortgage loan by small creditors if four conditions identified in § 1026.35(b)(2)(iii)(A) through (D) are satisfied at the time of consummation. Under current § 1026.35(b)(2)(iii)(A), a creditor satisfies the rural-or-underserved component of the eligibility criteria if, during the preceding calendar year or, if the application for the transaction was received before April 1 of the current calendar year, during either of the two preceding calendar years, a creditor extended more than 50 percent of its total covered transactions secured by first liens on properties that are located in rural or underserved areas. This provision is consistent with the statutory provision as adopted by the Dodd-Frank Act requiring that, in order for the Bureau to have the authority to grant the exemption, the creditor must operate predominantly in rural or underserved areas. The Bureau is revising § 1026.35(b)(2)(iii)(A) to remove the ''more than 50 percent'' aspect of the test and condition eligibility on a creditor extending one covered transaction secured by a first lien on a property located in a rural or underserved area.

The Bureau is revising § 1026.35(b)(2)(iii)(A) to reflect Congress's intent to expand the cohort of small creditors eligible for the special provision and exemptions by amending TILA sections 129C(b)(2)(E)(iv)(I) and 129D(c)(1) by removing ''predominantly'' from the statute. These sections of TILA relate to special provisions and an exemption that applies to certain small creditors operating in rural or underserved areas. Previously, TILA section 129C(b)(2)(E)(iv)(I) permitted the Bureau, by regulation, to define qualified mortgage as including a balloon loan for certain small creditors that operate predominantly in rural or underserved areas. Similarly, TILA section 129D(c)(1) permitted the Bureau, by regulation, to exempt certain small creditors that operate predominantly in rural or underserved areas from the requirement to establish an escrow account under TILA section 129D(a) in certain circumstances. The Act amended both provisions of TILA by striking the word ''predominantly'' and thereby extending the class of eligible creditors under TILA for the special provisions that permit balloon-payment qualified mortgages and for the escrow exemption.[35]

The Bureau previously issued regulations exercising its authority under TILA sections 129C(b)(2)(E)(iv)(I) and 129D(c)(1).[36] In addition, the Bureau also issued regulations using discretionary authority under TILA section 129(p)(1) to allow certain small creditors that operate predominantly in rural or underserved areas to originate balloon-payment high cost mortgages.[37] In October 2015, the Bureau finalized amendments to Regulation Z that broadened the definition of small creditor and rural area and thereby expanded the number of eligible creditors.[38]

Regulation Z uses a single test to determine whether a small creditor

[37] Section 1026.32(d)(1)(ii)(C); 2013 HOEPA Final Rule, 78 FR 6856, 6921–22 (Jan. 31, 2013) (adopting same criteria for eligibility as the 2013 ATR Final Rule to promote consistency and ''facilitate compliance'').

[38] October 2015 Small Creditor Final Rule, 80 FR 59944 (Oct. 2, 2015).

operates predominantly in rural or underserved areas for the purposes of eligibility for the two balloon-payment special provisions and the escrow exemption.[39] In adopting this test, the Bureau stated that it interpreted the use of ''predominantly'' in the statute to ''[indicate] a portion greater than half'' and therefore conditioned eligibility on whether the small creditor extended more than 50 percent of its total first-lien covered transactions on properties that are located in areas designated as either rural or underserved.[40] The Bureau is revising § 1026.35(b)(2)(iii)(A) to remove the ''more than 50 percent'' aspect of the current test for purposes of the eligibility for the escrow exemption, the eligibility to originate balloon-payment qualified mortgages, and the eligibility to originate balloon-payment high cost mortgages.[41] Under these revisions, a creditor operates in a rural or underserved area if the creditor extended at least one first-lien covered transaction on a property that is located in a rural or underserved area in the previous calendar year, or if the application for the transaction was received before April 1 of the current calendar year, during either of the two preceding calendar years. The Bureau is also making conforming revisions to comment 35(b)(2)(iii)–1.

When the Bureau adopted the ''more than 50 percent'' aspect of the test, it stated that it was implementing the use of ''predominantly'' in the statute.[42] The amendments in section 89003 of the Act, striking ''predominantly,'' suggest that Congress intended to expand eligibility for the exemption to additional creditors that operate in rural or underserved areas, but that do not operate ''predominantly'' in those areas by currently making ''more than 50 percent'' of their covered transactions in such areas, and to thereby reduce burden on this expanded cohort of small creditors.

The Bureau believes that TILA sections 129C(b)(2)(E)(iv)(I) and 129D(c)(1), as revised by the Act, are ambiguous with respect to what it means to ''operate in a rural area,'' and are subject to various possible reasonable interpretations. The Bureau believes that the one-loan test adopted by revised § 1026.35(b)(2)(iii)(A) is a reasonable interpretation of these provisions of TILA and is appropriate at this time in light of the recent regulatory context, including Congress's decision to remove the term that the Bureau had relied on to establish the ''more than 50 percent'' aspect of the test from the statute and the limited data currently available upon which to base consideration of other potentially reasonable interpretations. Furthermore, as discussed above in part IV, the Bureau believes that the amendments must take effect before April 1, 2016, to provide timely guidance for creditors who may have uncertainty about the effect of the Act on § 1026.35(b)(2)(iii)(A) and need to make prompt decisions for the near term about their business operations in light of the Act's amendments, including whether to apply for an area to be designated as rural.[43] This certainty is critical to such creditors now, for purposes of making near-term business decisions, notwithstanding the Bureau's intent to monitor and potentially to revisit this interpretation in the future, as discussed below. The Bureau requests comment concerning any information or data relevant to the revisions to § 1026.35(b)(2)(iii)(A) in addition to the information or data discussed in part VII below.

The nearer term practical effect of the revisions to § 1026.35(b)(2)(iii)(A) is that they will likely preserve, for the most part, the current status of many small creditors eligible for the special provisions. As discussed above, under temporary provisions that expire on April 1, 2016, creditors that meet all of the other eligibility criteria for the special provisions may originate balloon-payment qualified mortgages and balloon-payment high cost mortgages even if they do not satisfy the rural-or-underserved component of the test.[44] Consequently, this final rule effectively adds to the special provisions' eligibility criteria a new prerequisite that the entity issue at least one loan in a rural or underserved area.

The Bureau intends to monitor the market closely and thoroughly for negative effects on consumers or unintended effects on the mortgage market as a result of these revisions to § 1026.35(b)(2)(iii)(A). The Bureau expects to have better information available for analyzing these effects and considering other potentially reasonable interpretations of ''operates in rural or underserved areas'' in the future, including more data available from the National Survey of Mortgage Borrowers (NSMB), as well as the National Mortgage Database (NMDB).[45]

At least one year after the effective date of this rule, and further dependent on when the Bureau believes newly available information may support considering additional rulemaking related to § 1026.35(b)(2)(iii)(A), the Bureau intends to invite public comment on the effect of these revisions to § 1026.35(b)(2)(iii)(A). If better information available to the Bureau, including further information provided by the public, shows that the revisions to § 1026.35(b)(2)(iii)(A) have had unintended effects on the mortgage market or negative effects on consumers, the Bureau intends to publish a notice of proposed rulemaking to exercise its authority to implement a revised test under § 1026.35(b)(2)(iii)(A). The Bureau requests comment on the optimal scope of the exemption for these creditors that the Bureau should consider as new data becomes available, and in what timeframe the Bureau should consider undertaking additional rulemaking related to the exemption. The Bureau also requests comment, including relevant data, on whether the

[40] January 2013 Escrows Final Rule, 78 FR 4726, 4736 (Jan. 22, 2013); January 2013 ATR Final Rule, 78 FR 6408, 6543 (Jan. 30, 2013).

[41] Allowing § 1026.35(b)(2)(iii)(A), as revised by this rule, to continue to apply for purposes of eligibility to originate balloon-payment high cost mortgages promotes consistency between the Bureau's ability-to-repay requirements and the high cost mortgage requirements and facilitates compliance for creditors who operate in these areas. *See* 2013 HOEPA Final Rule, 78 FR 6856, 6921–22 (Jan. 31, 2013). The special provisions and exemptions facilitate the ability of small creditors that operate in rural or underserved areas to provide access to mortgage credit for consumers they serve.

[45] *See http://www.fhfa.gov/Homeownersbuyer/Pages/National-Survey-of-Mortgage-Borrowers.aspx. See also http://www.consumerfinance.gov/reports/technical-reports-national-survey-of-mortgage-borrowers-and-national-mortgage-database/.* The NSMB is one component of the NMDB project, a multi-year project being jointly undertaken by the Federal Housing Finance Agency and the Bureau. For the Bureau, the NMDB project will support policymaking and research efforts and help identify and understand emerging mortgage and housing market trends. The Bureau expects to use the NMDB, among other purposes, in support of the market monitoring called for by the Dodd-Frank Act, including understanding how mortgage debt affects consumers and for retrospective rule review required by the statute. The Bureau can use the NSMB to gather additional information about balloon-payment loans, escrow accounts, and creditors operating rural or underserved areas and the NMDB to provide additional data relevant to a future rulemaking involving creditors that operate in rural areas. For example, the Bureau may be able to use NSMB data to monitor the self-reported number of consumers that have a mortgage with a balloon feature. The Bureau can monitor the self-reported number of consumers that had an escrow account at origination. The Bureau can track the areas where either mortgages with balloon features or loans without escrow accounts are prevalent. The Bureau may also be able to extrapolate the number of loans that the creditor providing the loan originated, allowing the Bureau to focus on creditors operating predominantly in rural or underserved areas if necessary.

revisions will result in expanded access to credit.

35(b)(2)(iii)(D)

35(b)(2)(iii)(D)(1)

Section 1026.35(b)(1) generally requires a creditor to establish an escrow account for a higher-priced mortgage loan secured by a first lien on a consumer's principal dwelling. Section 1026.35(b)(2)(iii) provides an exemption from that requirement for certain small creditors. Section 1026.35(b)(2)(iii)(D) makes creditors that maintain existing escrow accounts ineligible for that exemption, with certain exceptions. One such exception, § 1026.35(b)(2)(iii)(D)(*1*), currently excludes escrow accounts established on or after April 1, 2010, and before January 1, 2016, from counting for purposes of the limitation in § 1026.35(b)(2)(iii)(D). The Bureau is revising § 1026.35(b)(2)(iii)(D)(*1*) to extend the excluded period to May 1, 2016. The Bureau believes that the period should be extended to accommodate creditors who established escrow accounts after January 1, 2016, to comply with the previous requirement. Some of these creditors who did not previously satisfy the rural-or-underserved test under § 1026.35(b)(2)(iii)(A) may now qualify under the newly revised rural-or-underserved test. Creditors should not be precluded from qualifying under the newly revised test based solely on their having established escrow accounts to comply with requirements that the Bureau is now revising.

35(b)(2)(iv)(A)

35(b)(2)(iv)(A)(3)

Section 1026.35(b)(2)(iv)(A) currently considers an area as rural during a calendar year if it is: A county that is neither in a metropolitan statistical area nor in a micropolitan statistical area that is adjacent to a metropolitan statistical area; or a census block that is not in an urban area, as defined by the U.S. Census Bureau using the latest decennial census of the United States. The Bureau is adding new § 1026.35(b)(2)(iv)(A)(*3*) to add to this definition an area that has been designated as rural pursuant to the application process established under section 89002 of the Act.[46]

As discussed above, on March 3, 2016, the Bureau published a procedural rule in the **Federal Register** establishing an application process through which a person may apply to have an area designated by the Bureau as a rural area for purposes of a Federal consumer financial law.[47] New § 1026.35(b)(2)(iv)(A)(*3*) defines rural area to include a county or a census block that has been designated as rural by the Bureau pursuant to the application process established under section 89002 of the Act. This amendment is necessary to incorporate areas designated as rural through that application process into the definition of rural area set forth in Regulation Z. Per the statute, designations through this process are time-limited and expire on December 4, 2017.

The Bureau interprets the term ''rural area,'' as that term is used in section 89002 of the Act, to be an area comprising counties or census blocks. For reasons set forth in the section-by-section analysis of the October 2015 amendments to § 1026.35(b)(2)(iv)(A), the Bureau adopted counties or census blocks as the appropriate units of analysis for its rural classification scheme and rejected alternative proposals.[48] Because the Act did not define the term ''rural area'' and did not revise this interpretation, the Bureau believes that Congress intended for the new designation process to be consistent with the current rural designation scheme and thus intended for the continued use of counties and census blocks as the units of analysis for defining rural areas for purposes of § 1026.35(b)(2)(iv)(A). Accordingly, only counties or census blocks are eligible for designation as rural under the application process, consistent with the interpretation of rural area already set forth in Regulation Z.

The Bureau is also making conforming changes to comments 35(b)(2)(iv)–1.i and –2.i.

Section 1026.43 Minimum Standards for Transactions Secured by a Dwelling

43(f) Balloon-Payment Qualified Mortgages Made by Certain Creditors

43(f)(1) Exemption

43(f)(1)(vi)

The Bureau is revising comment 43(f)(1)(vi)–1 to remove references to the ''more than 50 percent'' test and replace them with references to the test under revised § 1026.35(b)(2)(iii)(A) for the reasons discussed above in the section-by-section analysis of that section and to add references to new § 1026.35(b)(2)(iv)(A)(*3*) for the reasons discussed above in the section-by-section analysis of that section. The Bureau is revising the examples provided in the comment to reflect the revised test.

43(f)(2)(ii)

The Bureau is revising comment 43(f)(2)(ii)–1 to remove references to the ''more than 50 percent'' test and replace them with references to the revised test under § 1026.35(b)(2)(iii)(A) for the reasons discussed above in the section-by-section analysis of that section.

VI. Effective Date

This interim final rule is effective on March 31, 2016.

VII. Dodd-Frank Act Section 1022(b) Analysis

A. Overview

In developing the final rule, the Bureau has considered potential benefits, costs, and impacts.[49] The Bureau has consulted, or offered to consult with, the prudential regulators, the Federal Housing Finance Agency, the Federal Trade Commission, the U.S. Department of Agriculture, the U.S. Department of Housing and Urban Development, the U.S. Department of the Treasury, the U.S. Department of Veterans Affairs, and the U.S. Securities and Exchange Commission, including regarding consistency with any prudential, market, or systemic objectives administered by such agencies.

The discussion below considers the benefits, costs, and impacts of expanding eligibility of certain small creditors that operate in rural or underserved areas for special provisions that permit originations of balloon-payment qualified mortgages and for the escrow exemption for higher-priced mortgage loans (HPMLs).[50] The Bureau

[46] Public Law 114–94, title LXXXIX (2015).

[47] Application Process for Designation of Rural Area under Federal Consumer Financial Law, 81 FR 11099 (Mar. 3, 2016).

[48] October 2015 Small Creditor Final Rule, 80 FR 59943, 59955 (Oct. 2, 2015).

[49] Specifically, § 1022(b)(2)(A) of the Dodd-Frank Act calls for the Bureau to consider the potential benefits and costs of a regulation to consumers and covered persons, including the potential reduction of access by consumers to consumer financial products or services; the impact on depository institutions and credit unions with $10 billion or less in total assets as described in section 1026 of the Dodd-Frank Act; and the impact on consumers in rural areas.

[50] As explained in the section-by-section analysis above, the exception to the general prohibition on balloon-payment features for high cost mortgages in the 2013 HOEPA Final Rule is also affected by the final provisions. The Bureau estimates that there were about 1,000 high cost mortgage loans across all creditors in the U.S. in 2014. The Bureau believes that the number of high cost loans that also had a balloon feature and were originated by a small creditor that was not already qualified for this provision is negligible. The Bureau does not expect this to change in the future. Therefore, the Bureau believes that the effect of the final rule on the rural balloon-payment provision in the 2013 HOEPA Final Rule is relatively small, in terms of both the

does not possess the data to evaluate the number of creditors that would benefit from the amendment to the extension of the ''no harm provision'' [51] for the escrow exemption. This rule also applies the current definition of eligible ''areas'' (*i.e.,* counties or census blocks) used for existing rural designations to the new application process to have an area designated as rural by the Bureau. The impacts of that definition were previously considered and discussed in the October 2015 Small Creditor Final Rule. This 1022(b) analysis assumes this existing definition of area for purposes of analyzing the costs, benefits, and impacts of this rule.

The Bureau has chosen to evaluate the benefits, costs, and impacts of this rule relative to the current regulatory structure, including the October 2015 Small Creditor Final Rule.[52] The baseline considers economic attributes of the relevant market.

The Bureau has relied on a variety of data sources to consider the potential benefits, costs and impacts of this rule.[53] However, in some instances, the requisite data are not available or are quite limited. Data with which to quantify the benefits of this rule are particularly limited. As a result, portions of this analysis rely in part on general economic principles to provide a qualitative discussion of the benefits, costs, and impacts of the final rule.

The primary source of data used in this analysis is 2013 data collected under the Home Mortgage Disclosure Act (HMDA). The empirical analysis also uses data from the 4th quarter 2013 bank and thrift Call Reports [54] and the 4th quarter 2013 credit union Call Reports from the National Credit Union Administration (NCUA) to identify financial institutions and their characteristics. Appropriate projections have been made to account for gaps in the data, including, for example, institutions that do not report under HMDA. The Bureau also used data from the National Survey of Mortgage Borrowers.[55]

This rule expands the number of institutions that, under special provisions, are eligible to originate certain types of qualified mortgages and to take advantage of an exemption from the requirement to establish an escrow account for HPMLs under the January 2013 ATR Final Rule, the May 2013 ATR Final Rule, the January 2013 Escrows Final Rule, and the 2015 October Small Creditor Final Rule.[56]

These special provisions and exemption are only available to small creditors that operate in rural or underserved areas (rural small creditors). Rural small creditors can originate qualified mortgages with balloon-payment features, as long as these loans are kept in portfolio and other requirements are met. These qualified mortgages with balloon-payment features are deemed to comply with the ability-to-repay requirement as long as these loans have an APR of less than 3.5 percentage points over APOR for a comparable transaction.[57] Also, rural small creditors are generally allowed to originate higher-priced mortgage loans without setting up an escrow account for property taxes and insurance.

The Bureau discussed the benefits and costs of expanding the number of creditors eligible for the special provisions and exemption in detail in its 2015 October Small Creditor Final Rule Section 1022(b)(2) discussion.[58] Thus, the Bureau refers to that discussion for detailed explanations of effects and only provides here the numerical estimates of creditors and consumers affected.

B. Potential Benefits and Costs to Consumers and Covered Persons

Covered Persons Benefits and Costs

Based on the 2013 data, the Bureau estimated in its 2015 October Small Creditor Final Rule that about 4,100 out of the 10,400 small creditors would qualify as rural based on the revised definitions and ''predominantly'' test as it had been defined by the Bureau. Based on the same data, roughly an additional 6,000 small creditors will qualify as rural under the new provisions. Approximately 300 small creditors did not make any loans in rural or underserved areas in 2013, but may do so going forward.

The roughly 6,000 small creditors that will qualify as rural under this rule originated approximately 1.1 million loans, including 360,000 portfolio loans and 70,000 HPMLs in 2013. The Bureau is unaware of how many of these loans were balloon loans. However, estimates from the National Survey of Mortgage Borrowers indicate that about 4 percent of the loans in rural areas had a balloon feature and about 2 percent of the loans in non-rural areas had a balloon feature. The Bureau does not know and lacks a method for estimating how many creditors who are newly eligible for the escrow exemption will choose to stop providing escrow accounts when originating HPMLs.

All methods of compliance under current law remain available to covered persons when this rule becomes effective.[59] Thus, a covered person that is in compliance with current law will not need to take any additional action under the final rule; however, it might choose to do so to benefit from the special provisions and exemption.

Consumer Benefits and Costs

As the Bureau noted in its 2015 October Small Creditor Final Rule that similarly expanded the set of creditors eligible for the special provisions, consumer benefit from the final provisions of this rule is a potential expansion or avoidance of contraction in access to credit. The Bureau outlined its analysis of the available data on access to credit in its 2015 October Small Creditor Final Rule, and that analysis still applies. Prior to its 2015 October Small Creditor Final Rule, the

consumers and covered persons affected, and thus does not merit further discussion in this 1022(b) analysis.

[51] 12 CFR 1026.35(b)(2)(iii)(D)(*1*).

[52] The Bureau has discretion in future rulemakings to choose the relevant provisions to discuss and to choose the most appropriate baseline for that particular rulemaking.

[53] The quantitative estimates in this analysis are based upon data and statistical analyses performed by the Bureau. To estimate counts and properties of mortgages for entities that do not report under HMDA, the Bureau has matched HMDA data to Call Report data and National Mortgage Licensing System data and has statistically projected estimated loan counts for those depository institutions that do not report these data either under HMDA or on the NCUA Call Report. The Bureau has projected originations of higher-priced mortgage loans in a similar fashion for depositories that do not report under HMDA. These projections use Poisson regressions that estimate loan volumes as a function of an institution's total assets, employment, mortgage holdings, and geographic presence.

[54] Every national bank, State member bank, and insured nonmember bank is required by its primary Federal regulator to file consolidated Reports of Condition and Income, also known as Call Reports, for each quarter as of the close of business on the last day of each calendar quarter (the report date). The specific reporting requirements depend upon the size of the bank and whether it has any foreign offices. For more information, see *http://www2.fdic.gov/call_tfr_rpts/.*

[55] *See http://files.consumerfinance.gov/f/201508_cfpb_national-survey-of-mortgage-borrowers-technical-report-15-02.pdf.*

[56] *See,* January 2013 ATR Final Rule, 78 FR 6408 (Jan. 30, 2013); May 2013 ATR Final Rule, 78 FR 35430 (June 12, 2013); January 2013 Escrows Final Rule, 78 FR 4726 (Jan. 22, 2013); October 2015 Small Creditor Final Rule, 80 FR 59944 (Oct. 2, 2015).

[57] Note that currently, due to a temporary exemption in the May 2013 Qualified Mortgage Final Rule, all small creditors are allowed to originate qualified mortgages with balloon-payment features.

[58] October 2015 Small Creditor Final Rule, 80 FR 59944, 59961–67 (Oct. 2, 2015).

[59] This discussion takes into account the temporary provisions that expire on April 1, 2016, that allow small creditors to originate balloon-payment qualified mortgages and balloon-payment high cost mortgages regardless of their operations in rural or underserved areas.

Bureau received numerous comments suggesting that more creditors should be eligible for the special provisions and exemption above in order to expand access to credit.

As noted in the 2015 October Small Creditor Final Rule, the potential cost to consumers is the reduction of certain consumer protections as compared to the baseline established by the January 2013 ATR Final Rule, the May 2013 ATR Final Rule, and the January 2013 Escrows Final Rule. This rule would further reduce consumer protections from the 2015 October Small Creditor Final Rule. These consumer protections include a consumer's private cause of action against a creditor for violating the general ability-to-repay requirements for balloon loans and the requirement that every higher-priced mortgage loan have an associated escrow account for the payment of property taxes and insurance for five years.

The number of consumers affected is the same as the number of loans discussed above.

C. Impact on Covered Persons With No More Than $10 Billion in Assets

The only covered persons affected by this rule are those with no more than $10 billion in assets. The effect on these covered persons is described above.

D. Impact on Access to Credit

The Bureau does not believe that there will be an adverse impact on access to credit resulting from the final provisions. Moreover, it is possible that there will be an expansion of access to credit.

E. Impact on Rural Areas

Despite the Bureau's estimate that balloon loans are about twice as frequent in rural areas, this rule is not likely to disproportionately impact non-rural areas. The approximately 4,100 small creditors that operate predominantly in rural areas are already eligible for the special provisions and for the exemption due to the 2015 October Small Creditor Final Rule, and are thus unaffected by this rule.

VIII. Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the Regulatory Flexibility Act does not require an initial or final regulatory flexibility analysis.[60]

IX. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), Federal agencies are generally required to obtain Office of Management and Budget (OMB) approval for information collection requirements before implementation. The collections of information related to Regulation Z have been previously reviewed and approved by OMB in accordance with the PRA and assigned OMB Control Number 3170–0015 (Regulation Z). Under the PRA, the Bureau may not conduct or sponsor, and, notwithstanding any other provision of law, a person is not required to respond to an information collection unless the information collection displays a valid control number assigned by OMB.

Consistent with the discussion in Section 1022(b)(2), the Bureau has determined that this rule does not impose any new or revised information collection requirements (recordkeeping, reporting, or disclosure requirements) on covered entities or members of the public that would constitute collections of information requiring OMB approval under the PRA.

[60] 5 U.S.C. 603(a), 604(a).

List of Subjects in 12 CFR Part 1026

Advertising, Appraisal, Appraiser, Banking, Banks, Consumer protection, Credit, Credit unions, Mortgages, National banks, Reporting and recordkeeping requirements, Savings associations, Truth in lending.

Authority and Issuance

For the reasons set forth in the preamble, the Bureau amends Regulation Z, 12 CFR part 1026, as set forth below:

PART 1026—TRUTH IN LENDING (REGULATION Z)

■ 1. The authority citation for part 1026 continues to read as follows:

Authority: 12 U.S.C. 2601, 2603–2605, 2607, 2609, 2617, 3353, 5511, 5512, 5532, 5581; 15 U.S.C. 1601 *et seq.*

Subpart E—Special Rules for Certain Home Mortgage Transactions

■ 2. Section 1026.35 is amended by revising paragraphs (b)(2)(iii)(A), (b)(2)(iii)(D)(*1*), and (b)(2)(iv)(A) to read as follows:

§ 1026.35 Requirements for higher-priced mortgage loans.

* * * * *

(b) * * *

(2) * * *

(iii) * * *

(A) During the preceding calendar year, or, if the application for the transaction was received before April 1 of the current calendar year, during either of the two preceding calendar years, the creditor extended a covered transaction, as defined by § 1026.43(b)(1), secured by a first lien on a property that is located in an area that is either ''rural'' or ''underserved,'' as set forth in paragraph (b)(2)(iv) of this section;

* * * * *

(D) * * *

(*1*) Escrow accounts established for first-lien higher-priced mortgage loans for which applications were received on or after April 1, 2010, and before May 1, 2016; or

* * * * *

(iv) * * *

(A) An area is ''rural'' during a calendar year if it is:

(*1*) A county that is neither in a metropolitan statistical area nor in a micropolitan statistical area that is adjacent to a metropolitan statistical area, as those terms are defined by the U.S. Office of Management and Budget and as they are applied under currently applicable Urban Influence Codes (UICs), established by the United States Department of Agriculture's Economic Research Service (USDA–ERS);

(*2*) A census block that is not in an urban area, as defined by the U.S. Census Bureau using the latest decennial census of the United States; or

(*3*) A county or a census block that has been designated as rural by the Bureau pursuant to the application process established under section 89002 of the Helping Expand Lending Practices in Rural Communities Act, Public Law 114–94, title LXXXIX (2015). The provisions of this paragraph (b)(2)(iv)(A)(*3*) shall cease to have any force or effect on December 4, 2017.

* * * * *

■ 3. In Supplement I to Part 1026—Official Interpretations:

■ A. Under *Section 1026.35—Requirements for Higher-Priced Mortgage Loans:*

■ i. Under *Paragraph 35(b)(2)(iii),* paragraph 1.i is revised.

■ ii. Under *Paragraph 35(b)(2)(iii)(D)*(1*),* paragraph 1 is revised.

■ iii. Under *Paragraph 35(b)(2)(iv),* paragraphs 1.i and 2.i are revised.

■ B. Under *Section 1026.43—Minimum Standards for Transactions Secured by a Dwelling:*

■ i. Under *Paragraph 43(f)(1)(vi),* paragraph 1.i is revised.

■ ii. Under *Paragraph 43(f)(2)(ii),* paragraph 1 is revised.

The revisions read as follows:

Supplement I to Part 1026—Official Interpretations

Subpart E—Special Rules for Certain Home Mortgage Transactions

* * * * *

Section 1026.35—Requirements for Higher-Priced Mortgage Loans

* * * * *

35(b) Escrow Accounts

* * * * *

35(b)(2) Exemptions

* * * * *

Paragraph 35(b)(2)(iii)

1. * * *

i. During the preceding calendar year, or during either of the two preceding calendar years if the application for the loan was received before April 1 of the current calendar year, a creditor extended a first-lien covered transaction, as defined in § 1026.43(b)(1), secured by a property located in an area that is either ''rural'' or ''underserved,'' as set forth in § 1026.35(b)(2)(iv).

A. In general, whether the rural-or-underserved test is satisfied depends on the creditor's activity during the preceding calendar year. However, if the application for the loan in question was received before April 1 of the current calendar year, the creditor may instead meet the rural-or-underserved test based on its activity during the next-to-last calendar year. This provides creditors with a grace period if their activity meets the rural-or-underserved test (in § 1026.35(b)(2)(iii)(A)) in one calendar year but fails to meet it in the next calendar year.

B. A creditor meets the rural-or-underserved test for any higher-priced mortgage loan consummated during a calendar year if it extended a first-lien covered transaction in the preceding calendar year secured by a property located in a rural-or-underserved area. If the creditor does not meet the rural-or-underserved test in the preceding calendar year, the creditor meets this condition for a higher-priced mortgage loan consummated during the current calendar year only if the application for the loan was received before April 1 of the current calendar year and the creditor extended a first-lien covered transaction during the next-to-last calendar year that is secured by a property located in a rural or underserved area. The following examples are illustrative:

1. Assume that a creditor extended during 2016 a first-lien covered transaction that is secured by a property located in a rural or underserved area. Because the creditor extended a first-lien covered transaction during 2016 that is secured by a property located in a rural or underserved area, the creditor can meet this condition for exemption for any higher-priced mortgage loan consummated during 2017.

2. Assume that a creditor did not extend during 2016 a first-lien covered transaction secured by a property that is located in a rural or underserved area. Assume further that the same creditor extended during 2015 a first-lien covered transaction that is located in a rural or underserved area. Assume further that the creditor consummates a higher-priced mortgage loan in 2017 for which the application was received in November 2017. Because the creditor did not extend during 2016 a first-lien covered transaction secured by a property that is located in a rural or underserved area, and the application was received on or after April 1, 2017, the creditor does not meet this condition for exemption. However, assume instead that the creditor consummates a higher-priced mortgage loan in 2017 based on an application received in February 2017. The creditor meets this condition for exemption for this loan because the application was received before April 1, 2017, and the creditor extended during 2015 a first-lien covered transaction that is located in a rural or underserved area.

* * * * *

Paragraph 35(b)(2)(iii)(D)(*1*)

1. *Exception for certain accounts.* Escrow accounts established for first-lien higher-priced mortgage loans for which applications were received on or after April 1, 2010, and before May 1, 2016, are not counted for purposes of § 1026.35(b)(2)(iii)(D). For applications received on and after May 1, 2016, creditors, together with their affiliates, that establish new escrow accounts, other than those described in § 1026.35(b)(2)(iii)(D)(*2*), do not qualify for the exemption provided under § 1026.35(b)(2)(iii). Creditors, together with their affiliates, that continue to maintain escrow accounts established for first-lien higher-priced mortgage loans for which applications were received on or after April 1, 2010, and before May 1, 2016, still qualify for the exemption provided under § 1026.35(b)(2)(iii) so long as they do not establish new escrow accounts for transactions for which they received applications on or after May 1, 2016, other than those described in § 1026.35(b)(2)(iii)(D)(*2*), and they otherwise qualify under § 1026.35(b)(2)(iii).

* * * * *

Paragraph 35(b)(2)(iv)

1. * * *

i. Under § 1026.35(b)(2)(iv)(A), an area is rural during a calendar year if it is: A county that is neither in a metropolitan statistical area nor in a micropolitan statistical area that is adjacent to a metropolitan statistical area; a census block that is not in an urban area, as defined by the U.S. Census Bureau using the latest decennial census of the United States; or a county or a census block that has been designated as ''rural'' by the Bureau pursuant to the application process established in 2016. *See* Application Process for Designation of Rural Area under Federal Consumer Financial Law; Procedural Rule, 81 FR 11099 (Mar. 3, 2016). Metropolitan statistical areas and micropolitan statistical areas are defined by the Office of Management and Budget and applied under currently applicable Urban Influence Codes (UICs), established by the United States Department of Agriculture's Economic Research Service (USDA–ERS). For purposes of § 1026.35(b)(2)(iv)(A)(*1*), ''adjacent'' has the meaning applied by the USDA–ERS in determining a county's UIC; as so applied, ''adjacent'' entails a county not only being physically contiguous with a metropolitan statistical area but also meeting certain minimum population commuting patterns. A county is a ''rural'' area under § 1026.35(b)(2)(iv)(A)(*1*) if the USDA–ERS categorizes the county under UIC 4, 6, 7, 8, 9, 10, 11, or 12. Descriptions of UICs are available on the USDA–ERS Web site at *http://www.ers.usda.gov/data-products/urban-influence-codes/documentation.aspx.* A county for which there is no currently applicable UIC (because the county has been created since the USDA–ERS last categorized counties) is a rural area only if all counties from which the new county's land was taken are themselves rural under currently applicable UICs.

* * * * *

2. *Examples.* i. An area is considered ''rural'' for a given calendar year based on the most recent available UIC designations by the USDA–ERS and the most recent available delineations of urban areas by the U.S. Census Bureau that are available at the beginning of the calendar year. These designations and delineations are updated by the USDA–ERS and the U.S. Census Bureau respectively once every ten years. As an example, assume a creditor makes first-

lien covered transactions in Census Block X that is located in County Y during calendar year 2017. As of January 1, 2017, the most recent UIC designations were published in the second quarter of 2013, and the most recent delineation of urban areas was announced in the **Federal Register** in 2012, *see* U.S. Census Bureau, *Qualifying Urban Areas for the 2010 Census,* 77 FR 18652 (Mar. 27, 2012). To determine whether County Y is rural under the Bureau's definition during calendar year 2017, the creditor can use USDA–ERS's 2013 UIC designations. If County Y is not rural, the creditor can use the U.S. Census Bureau's 2012 delineation of urban areas to determine whether Census Block X is rural and is therefore a ''rural'' area for purposes of § 1026.35(b)(2)(iv)(A). In addition, an area is considered ''rural'' if it is a county or a census block that has been designated as rural by the Bureau using the application process established in 2016. *See* Application Process for Designation of Rural Area under Federal Consumer Financial Law; Procedural Rule, 81 FR 11099 (Mar. 3, 2016). Designations under this process are time-limited and expire on December 4, 2017.

* * * * *

Section 1026.43—Minimum Standards for Transactions Secured by a Dwelling

* * * * *

43(f) Balloon-Payment Qualified Mortgages Made By Certain Creditors

43(f)(1) Exemption.

* * * * *

Paragraph 43(f)(1)(vi)

1. * * *

i. During the preceding calendar year or during either of the two preceding calendar years if the application for the transaction was received before April 1 of the current calendar year, the creditor extended a first-lien covered transaction, as defined in § 1026.43(b)(1), on a property that is located in an area that is designated either ''rural'' or ''underserved,'' as defined in § 1026.35(b)(2)(iv), to satisfy the requirement of § 1026.35(b)(2)(iii)(A) (the rural-or-underserved test). Pursuant to § 1026.35(b)(2)(iv), an area is considered to be rural if it is: A county that is neither in a metropolitan statistical area, nor a micropolitan statistical area adjacent to a metropolitan statistical area, as those terms are defined by the U.S. Office of Management and Budget; a census block that is not in an urban area, as defined by the U.S. Census Bureau using the latest decennial census of the United States; or a county or a census block that has been designated as ''rural'' by the Bureau pursuant to the application process established in 2016. *See* Application Process for Designation of Rural Area under Federal Consumer Financial Law; Procedural Rule, 81 FR 11099 (Mar. 3, 2016). An area is considered to be underserved during a calendar year if, according to HMDA data for the preceding calendar year, it is a county in which no more than two creditors extended covered transactions secured by first liens on properties in the county five or more times.

A. The Bureau determines annually which counties in the United States are rural or underserved as defined by § 1026.35(b)(2)(iv)(A)(*1*) or § 1026.35(b)(2)(iv)(B) and publishes on its public Web site lists of those counties to assist creditors in determining whether they meet the criterion at § 1026.35(b)(2)(iii)(A). Creditors may also use an automated tool provided on the Bureau's public Web site to determine whether specific properties are located in areas that qualify as ''rural'' or ''underserved'' according to the definitions in § 1026.35(b)(2)(iv) for a particular calendar year. In addition, the U.S. Census Bureau may also provide on its public Web site an automated address search tool that specifically indicates if a property address is located in an urban area for purposes of the Census Bureau's most recent delineation of urban areas. For any calendar year that begins after the date on which the Census Bureau announced its most recent delineation of urban areas, a property is located in an area that qualifies as ''rural'' according to the definitions in § 1026.35(b)(2)(iv) if the search results provided for the property by any such automated address search tool available on the Census Bureau's public Web site do not identify the property as being in an urban area. A property is also located in an area that qualifies as ''rural,'' if the Bureau has designated that area as rural under § 1026.35(b)(2)(iv)(A)(*3*) and published that determination in the **Federal Register**. *See* Application Process for Designation of Rural Area under Federal Consumer Financial Law; Procedural Rule, 81 FR 11099 (Mar. 3, 2016).

B. For example, if a creditor extended during 2017 a first-lien covered transaction that is secured by a property that is located in an area that meets the definition of rural or underserved under § 1026.35(b)(2)(iv), the creditor meets this element of the exception for any transaction consummated during 2018.

C. Alternatively, if the creditor did not extend in 2017 a transaction that meets the definition of rural or underserved test under § 1026.35(b)(2)(iv), the creditor satisfies this criterion for any transaction consummated during 2018 for which it received the application before April 1, 2018, if it extended during 2016 a first-lien covered transaction that is secured by a property that is located in an area that meets the definition of rural or underserved under § 1026.35(b)(2)(iv).

* * * * *

Paragraph 43(f)(2)(ii)

1. *Transfer to another qualifying creditor.* Under § 1026.43(f)(2)(ii), a balloon-payment qualified mortgage under § 1026.43(f)(1) may be sold, assigned, or otherwise transferred at any time to another creditor that meets the requirements of § 1026.43(f)(1)(vi). That section requires that a creditor: (1) Extended a first-lien covered transaction, as defined in § 1026.43(b)(1), on a property located in a rural or underserved area; (2) together with all affiliates, extended no more than 2,000 first-lien covered transactions that were sold, assigned, or otherwise transferred by the creditor or its affiliates to another person, or that were subject at the time of consummation to a commitment to be acquired by another person; and (3) have, together with its affiliates that regularly extended covered transactions secured by first liens, total assets less than $2 billion (as adjusted for inflation). These tests are assessed based on transactions and assets from the calendar year preceding the current calendar year or from either of the two calendar years preceding the current calendar year if the application for the transaction was received before April 1 of the current calendar year. A balloon-payment qualified mortgage under § 1026.43(f)(1) transferred to a creditor that meets these criteria would retain its qualified mortgage status even if it is transferred less than three years after consummation.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, 1917, 1918, and 1926

[Docket No. OSHA–2014–0024]

RIN 1218–AC87

Updating OSHA Standards Based on National Consensus Standards; Eye and Face Protection

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Final rule.

SUMMARY: On March 13, 2015, OSHA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to revise its eye and face protection standards for general industry, shipyard employment, marine terminals, longshoring, and construction by updating the references to national consensus standards approved by the American National Standards Institute (ANSI). OSHA received no significant objections from commenters and therefore is adopting the amendments as proposed. This final rule updates the references in OSHA's eye and face standards to reflect the most recent edition of the ANSI/International Safety Equipment Association (ISEA) eye and face protection standard. It removes the oldest-referenced edition of the same ANSI standard. It also amends other provisions of the construction eye and face protection standard to bring them into alignment with OSHA's general industry and maritime standards.

DATES: This final rule becomes effective on April 25, 2016. The incorporation by reference of certain standards listed in the rule was approved by the Director of the Federal Register as of April 25, 2016.

ADDRESSES: In accordance with 28 U.S.C. 2112(a), OSHA designates Ann S. Rosenthal, Associate Solicitor of Labor for Occupational Safety and Health, Office of the Solicitor, Room S–4004, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210, to receive petitions for review of the final rule.

The address for OSHA's docket office is: Docket Office, Technical Data Center, Room N–2625, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–2350. (OSHA's TTY number is (877) 889–5627)). The hours of operation for the OSHA Docket Office are 8:15 a.m. to 4:45 p.m., e.t. In addition, addresses and phone numbers for OSHA's state and regional offices can be found at *http://www.osha.gov/about.html.*

FOR FURTHER INFORMATION CONTACT:

General information and press inquiries: Frank Meilinger, Director, OSHA Office of Communications, Room N–3647, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

Technical information: Ken Stevanus, Directorate of Standards and Guidance, Room N–3609, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–2260; fax: (202) 693–1663; email: *stevanus.ken@dol.gov.*

Copies of this Federal Register notice: Electronic copies of this **Federal Register** notice are available at *http://www.regulations.gov.* This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's Web page at *http://www.osha.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Executive Summary

This final rule updates eye and face protection requirements in OSHA's general industry, shipyard employment, marine terminals, longshoring, and construction standards. The changes involve incorporation by reference of the latest ANSI/ISEA Z87.1–2010 standard on Occupational and Educational Eye and Face Protection Devices and removal of the oldest ANSI (Z87.1–1989) version of the same standard. In addition, OSHA is modifying the language in its construction standard to make it more consistent with the general and maritime industry standards.

This new rule will allow employers to continue to follow the existing ANSI standards referenced or allow employers to follow the latest version of the same ANSI/ISEA standard. Employers are not required to update or replace protection devices solely as a result of this rule and may continue to follow their current and usual practices for their eye and face protection. Therefore, this rule has no compliance or economic burdens associated with it.

II. Background

A. Overview and Procedural Background

OSHA requires employers to ensure that their employees use eye and face protection where necessary to protect them against flying objects, splashes or droplets of hazardous chemicals, and other workplace hazards that could injure their eyes and face. OSHA's standards state that the protection employers provide must meet specified consensus standards. For operations covered by OSHA's general industry, shipyard employment, longshoring, and marine terminals standards, the protection must comply with one of the following standards: ANSI Z87.1–2003, ANSI Z87.1–1989 (R–1998), and ANSI Z87.1–1989. Alternatively, the employer may show that the devices used are at least as effective as one of these consensus standards (29 CFR 1910.133(b); 29 CFR 1915.153(b); 29 CFR 1917.91(a)(1); 29 CFR 1918.101(a)(1)). The construction standard requires that eye and face protection meet the requirements of ANSI Z87.1–1968 (29 CFR 1926.102(a)(2)).

As a part of its ongoing efforts to update its standards with the latest versions of national consensus standards, (see 69 FR 68283), OSHA last updated its eye and face protection standards in 2009 (74 FR 46350). That effort did not address the eye and face protection requirements in the construction standard, which had been revised in 1993, and during the 2009 rulemaking OSHA received several comments suggesting that the construction requirements be updated as well. After the new ANSI/ISEA 87.1–2010 standard was published, OSHA decided to again update its eye and face protection requirements.

Before publishing a proposal, OSHA consulted the Advisory Committee on Construction Safety and Health (ACCSH) on May 8, 2014, as required by 29 CFR 1911.10. OSHA presented two options to ACCSH. The first option replaced all eye and face protection provisions in the construction standard with those of the general industry and maritime standards, except those that

were unique to the construction industry standard. The second option substituted only the three most current (ANSI/ISEA and ANSI) standards for the outdated ANSI standard currently cited, or allowed the employer to show that the protection was at least as protective as one of those standards. The remaining provisions of the construction standard were unchanged except for the removal of Table E–1, which referenced the outdated ANSI standard. The Committee selected the first option and passed a motion recommending that the Agency move forward in the rulemaking process. (*See* ACCSH meeting minutes, ID: OSHA–2014–0024–0004; *see* also Options presented to ACCSH, ID: OSHA–2014–0024–0003).

On March 13, 2015, OSHA published an NPRM in the **Federal Register** to revise its eye and face protection standards. For the general industry and maritime standards, OSHA proposed updating the ANSI standard references by deleting ANSI Z87.1–1989 and replacing it with ANSI/ISEA Z87.1–2010 (80 FR 13295). In addition, in the NPRM, the Agency proposed deleting the reference to ANSI Z87.1–1968 in its construction standard at 29 CFR 1926.102, and replacing it with the references to the same three consensus standards (including Z87.1–2010) cited in the proposed general industry, shipyard employment, longshoring, and marine terminals standards. As recommended by ACCSH, OSHA also proposed other changes to the construction standard to bring it into greater alignment with OSHA's other eye and face protection requirements, while retaining requirements unique to the construction standard not covered by the ANSI standards. Thus, the NPRM allowed all employers covered by OSHA's standards to follow any of the three most recent versions of the ANSI/ISEA eye and face protection standard.

OSHA received no significant adverse comment to the proposal, and this notice finalizes the rule updates as proposed. This action will ensure consistency among the Agency's standards, and eliminate any confusion, clarify employer obligations, and provide up-to-date protection for workers exposed to eye and face hazards.

B. Incorporation by Reference Under 1 CFR Part 51

1. Summary of the Incorporated Consensus Standards

ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, provides requirements for the selection, testing, use, and maintenance of protectors intended to minimize or prevent eye and face injuries including impact, non-ionizing radiation and chemical exposures, in occupational and educational environments. ANSI Z87.1–2003 and ANSI Z87.1–1989 (R–1998) are prior versions of this standard which are also incorporated by reference as alternative means of compliance with OSHA's eye and face protection requirements.

2. Reasonable Availability of the Incorporated Consensus Standards

OSHA believes that the ANSI/ISEA and ANSI standards are reasonably available to interested parties. The ANSI/ISEA 2010 and ANSI 2003 and 1989 (R–1998) versions of the Z87.1 standard can be purchased as a package from ANSI in pdf form for $57 (*http://webstore.ansi.org/*). They are also available for purchase at either the IHS Standards (*http://global.ihs.com/*) or Techstreet (*http://www.techstreet.com/*) stores. Employers may rely on manufacturer representations that protection is compliant with the indicated standard and therefore are not obligated to incur this expense to comply with the standard. These standards are also available for review in OSHA's docket office and regional offices; see the **ADDRESSES** section of this document for details.

III . Summary and Explanation of the Final Rule

A. Revisions to OSHA's Eye and Face Protection Standards

1. Final Rule for General Industry and Maritime Industry Standards

OSHA adopted the previous revision of the general industry and maritime eye and face protection standards on September 9, 2009 (74 FR 46350). These revisions, which became effective on October 9, 2009, permit compliance with ANSI Z87.1–2003, ANSI Z87.1–1989 (R–1998), or ANSI Z87.1–1989. Since OSHA published the previous revision, ANSI/ISEA Z87.1–2010 became available. This final rule includes ANSI/ISEA Z87.1–2010 in 29 CFR 1910.133(b)(1), 29 CFR 1915.153(b)(1), 29 CFR 1917.91(a)(1)(i) and removes references to ANSI Z87.1–1989. It also updates the general incorporation by reference section for each of these standards (*i.e.,* 29 CFR 1910.6, 1915.5, 1917.3, 1918.3) to reflect the incorporation of ANSI/ISEA Z87.1–2010, ANSI Z87.1–2003, and ANSI Z87.1–1989 (R–1998).

OSHA believes that eye and face protection meeting the 2010 ANSI/ISEA standard is already on the market, and the 2010 standard is not less protective than the previous versions of the standard. Therefore it is amending its standard to allow the use of such protection in the workplace.

2. Final Rule for Construction Industry Standard

The final rule involves: (1) Changes to the ANSI standard references and (2) inclusion of language from the general industry eye and face protection standard. With respect to the consensus standards update, OSHA is amending 29 CFR 1926.6 and 1926.102, which currently incorporate by reference ANSI Z87.1–1968 to include the same three consensus standards incorporated into the general industry and maritime standards, ANSI/ISEA Z87.1–2010, ANSI Z87.1–2003, and ANSI Z87.1–1989 (R–1998). OSHA is modifying certain existing language to make it nearly identical to the language in the general industry standard's eye and face protection provisions. It is retaining provisions unique to the current construction standard that are not covered in the versions of the consensus standards incorporated by the proposal.

Specifically, OSHA is placing language from the general industry standard, sections 1910.133(a)(1) through (a)(4) and 1910.133(b), in sections 1926.102(a)(1) through (a)(3), and (a)(7). Additionally, the Agency is replacing: (1) The scope section in 1926.102(a)(1) with the scope section in 1910.133(a)(1); (2) the reference to the 1968 ANSI standard in 1926.102(a)(2) with the updated list of national consensus standards in 1910.133(b)(1); and (3) the requirements for corrective lenses in 1926.102(a)(3) with the corrective-lens requirements in 1910.133(a)(3). The final rule removes the requirements in section 1926.102(a)(4)—to keep protective equipment clean, in good repair, and free of structural and optical defects—which are addressed by requirements in each of the three versions of the Z87.1 standard. Likewise, it deletes Table E–1, Eye and Face Protector Selection Guide, which is specific to the 1968 version of ANSI Z87.1 and referenced in the current section 1926.102(a)(5), and renumbers Tables E–2 and E–3 under this paragraph as Tables E–1 and E–2, respectively.

The final rule substitutes the marking requirement specified by section 1926.102(a)(7) with the marking requirement in section 1910.133(a)(4). The final rule removes the requirement in 1926.102(a)(8) that employers must transmit information from manufacturers to users about equipment

limitations or precautions and that such limitations and precautions must be strictly observed. It also adds a provision to the construction standard that permits an employer to use eye and face protection not manufactured in accordance with one of the incorporated Z87.1 standards if the employer can demonstrate compliance with one of the incorporated Z87.1 standards (*i.e.,* the equivalent-protection provision). The final rule will redesignate section 1926.102(b) as section 1926.102(c).

OSHA believes these changes are warranted because it will make compliance easier for employers who perform work that is covered both by the construction standard and another of OSHA's standards. Further, OSHA believes that the consensus standard reference should be updated because the new ANSI standards are at least as protective as the 1968 standard, and the Agency does not believe that personal protective equipment (PPE) designed and tested to the 1968 ANSI standard is currently available for purchase.

B. Discussion of Comments

OSHA received twelve comments in response to the NPRM on eye and face protection consensus standards updating. While commenters generally supported OSHA's efforts to update its standards, some raised issues to which OSHA responds below.

Mr. Bruce Donato, a private citizen, Mr. Douglas Greenhaus of the National Automobile Dealers Association (NADA), and Ms. Julie Trembly of 3M commented on OSHA's use of consensus standards. Mr. Donato asked why OSHA uses consensus standards rather than proposing its own standards (ID: OSHA–2014–0024–0006). Mr. Greenhaus advocated for use of a performance-oriented approach and removal of all consensus standard references, believing this approach would free OSHA from the obligation to continuously review and adopt new versions of third-party standards (ID: OSHA–2014–0024–0015). Ms. Trembly mentioned that OSHA may want to allow compliance only with the 2010 ANSI/ISEA standard. She reasoned that this would ease compliance because the 2010 version is the most recent and maintains a hazard-based approach (ID: OSHA–2014–0024–0013).

OSHA disagrees with these commenters. First, the Agency is legally required to consider national consensus standards. The Occupational Safety and Health Act of 1970 (OSH Act) requires OSHA to follow them in promulgating a rule, unless OSHA explains why another requirement will better effectuate the purposes of the act (29 U.S.C. 655(b)(b)). In addition, the National Technology Transfer and Advancement Act of 1995 also requires OSHA (and other Federal agencies) to use voluntary consensus standards unless contrary to applicable law or impractical. Pub. L 104–113 § 12(d), 15 U.S.C.A. 272 note; see also OMB Circular A–119, *Federal Participation in the Development and Use of Voluntary Consensus Standards and in Conformity Assessment Activities,* 68 FR 8553. Second, voluntary consensus standards contain valuable information about how to address workplace hazards. As Ms. Patricia Ennis from the American Society of Safety Engineers pointed out, since experts with diverse backgrounds produce national consensus standards, the standards reflect their expertise and the latest developments in workplace safety (ID: OSHA–2014–0024–0008).

OSHA disagrees with the suggestion to only incorporate the latest ANSI/ISEA standard, because it believes some employers may be using eye and face protection meeting the ANSI 87.1–2003 and ANSI 87.1–1989 (R–1998) standards. OSHA is unaware of evidence that disallowing the use of PPE meeting those standards would significantly increase safety.

Relatedly, Mr. Donato and Mr. Greenhaus of NADA also expressed concern that the cost of obtaining consensus standards could be prohibitive to small businesses (IDs: OSHA–2014–0024–0006 and 0015). As noted above, all referenced consensus standards are available purchase for a modest sum and may be viewed for free in OSHA's regional offices, among other places.

Ms. Julie Weide, a private citizen, commented that she wanted more mandatory eye protection at worksites, in accordance with equipment manufacturers' warnings (ID: OSHA–2014–0024–0007). Though her suggestion falls outside of the scope of the proposal, OSHA notes that its current eye and face protection standards already require employers to ensure that affected employees use appropriate eye or face protection when exposed to hazards from flying particles, molten metal, liquid chemicals, acids or caustic liquids, chemical gases or vapors, or potentially injurious light radiation. *See* 29 CFR 1910.133(a).

Several commenters supported OSHA's decision to make eye and face protection requirements consistent across all industry standards, stating that consistency makes compliance easier for employers (IDs: OSHA–2014–0024–0009, 0011, and 0012). OSHA agrees with the commenters' assessment.

Mr. Joe Miles of the Northeastern Retail Lumber Association (NRLA) commented that the final rule should provide a transition period so that associations such as the NRLA would have time to notify members of the new standards. Members could then inform their customers of the new PPE requirements, and have sufficient time to order and integrate necessary PPE into the workplace (ID: OSHA–2014–0024–0011). Mr. Greenhaus of NADA agreed, opining that small business employers should be given greater flexibility with respect to compliance (ID: OSHA–2014–0024–0015).

Under the final rule, employers may follow any of the three latest versions of the Z87.1 standards. The new rule places no new obligations, costs, or time constraints on employers. Employers already in compliance with OSHA's eye and face requirements may continue their current usual and customary practice in providing eye and face protection to their employees. The final now allows employers to follow the newest ANSI/ISEA Z87.1–2010 standard—if they choose and at their convenience—or to continue to follow the older versions (ANSI Z87.1–2003 or Z87.1–1989 (R–1998)), which appeared in the previous version of the rule. As Mr. Daniel Shipp of the ISEA commented, the removal of the 1989 version will have no effect on the acceptability of any product because it is identical to the 1989 (R–1998) standard, which remains in the final rule (ID: OSHA–2014–0024–0012). Further, OSHA anticipates that compliance with the 2010 version of the ANSI/ISEA Z87.1 standard will not be burdensome, because as commenters noted, most manufacturers of eye and face protection devices already follow the latest ANSI/ISEA standard (IDs: OSHA–2014–0024–0012 and 0013).

While they supported the proposal, Mr. Faulkner and Ms. Fitch from the United Steelworkers (USW) and Mr. McCann, a private citizen, discussed their concerns about improperly-fitting PPE, especially for women and men of nonstandard body types. They further indicated that OSHA's standardized PPE requirement throughout various industries was insufficient. Instead, OSHA should require employers to: (1) Provide the best fitting PPE available on the market for their workers at no cost, (2) regularly evaluate which PPE is provided to employees, and (3) purchase customized PPE where special orders are needed. They also highlighted a need to protect workers who complain about inadequate PPE from retaliation (ID: OSHA–2014–0024–0016 and 0017).

OSHA thanks the commenters for raising these issues and the agency agrees that PPE must fit properly no matter who is wearing it. A correct, comfortable fit helps to ensure the worker will receive the intended protection for the duration of the exposure. Many of the commenters' concerns are addressed in the existing PPE standard. Specifically, the general industry standard requires employers to select PPE that properly fits each affected employee, at no cost to the employee. *See* 29 CFR 1910.132(d)(1)(iii) (fit); 1910.132 (h)(1) (cost). It also requires employers to conduct a hazard assessment to determine which PPE is necessary. 29 CFR 1910.132(d). Moreover, the standards require employers to ensure their employees wear ''appropriate'' or ''protective'' eye and face protection, which includes proper fit, and preclude the use of defective or damaged PPE. These requirements apply equally for workers of both sexes and all body types. With respect to the need to protect workers from retaliation, the OSH Act currently protects workers who complain to employers about workplace safety issues, including inadequate PPE, from retaliation. 29 U.S.C. 660(c); 29 CFR 1977.9(c). While the specific proposals made by USW and Mr. McCann fall outside the scope of the proposal, OSHA will continue to monitor the issues they raised.

A number of commenters noted a more general need for OSHA to revise its standards to incorporate by reference the most recent versions of consensus standards (*See, e.g.,* IDs: OSHA–2014–0024–0008, 0015, and 0016). OSHA agrees with these commenters, and as part of its mandate to provide a safe and healthful work environment to all employees, the Agency intends to continue in its efforts to adopt the latest consensus standards as soon as possible. However, incorporation by reference can, at times, be a lengthy process because OSHA must evaluate consensus standards to ensure that they are: (1) At least as effective, or meet, the current consensus standards incorporated by reference, and (2) technologically and economically feasible. As a related matter, Mr. Faulkner and Ms. Fitch from the USW suggested that OSHA coordinate with the Mine Safety and Health Administration (MSHA), so that OSHA's standards could also benefit employees in the mining industry (ID: OSHA–2014–0024–0016). OSHA agrees with the importance of interagency cooperation, and in general the Agency attempts to coordinate with other Federal agencies when there is the possibility of duplication, overlap, or conflict. However, OSHA has no jurisdiction over employers regulated by MSHA. Nonetheless, where there may be some benefit for employees in doing so, OSHA will consider working with MSHA on relevant standards updates in the future.

Mr. Shipp from ISEA noted that OSHA incorrectly referenced to the 2010 consensus standard in its NPRM. OSHA appreciates this comment and has corrected the final rule so all references to the 2010 standard reflect the official designation of the consensus standard: ANSI/ISEA Z87.1–2010 (ID: OSHA–2014–0024–0012).

IV. Agency Determinations

A. Legal Considerations

The purpose of the OSH Act is to achieve to the extent possible safe and healthful working conditions for all employees. 29 U.S.C. 651(b). To achieve this goal, Congress authorized the Secretary of Labor to promulgate and enforce occupational safety and health standards. 29 U.S.C. 654(b), 655(b). A safety or health standard is one ''which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes reasonably necessary or appropriate to provide safe or healthful employment and places of employment.'' 29 U.S.C. 652(8). A standard is reasonably necessary or appropriate within the meaning of Section 652(8) of the OSH Act when a significant risk of material harm exists in the workplace and the standard would substantially reduce or eliminate that workplace risk. *See Indus. Union Dep't, AFL–CIO* v. *Am. Petroleum Inst.,* 448 U.S. 607 (1980). OSHA already determined that requirements specified by eye and face protection standards, including design requirements, are reasonably necessary or appropriate within the meaning of Section 652(8). *See, e.g.,* 49 FR 49726, 49737 (1978); 51 FR 33251, 33251–59 (1986).

Moreover, this final rule neither reduces employee protection nor alters an employer's obligations under the existing standards. With respect to employee protection, because the final rule will allow employers to continue to provide the same eye and face protection they currently provide, employees' protection will not change. In terms of employers' obligations, the final rule will allow employers additional options for meeting the design-criteria requirements for eye and face protection. Accordingly, this final rule does not require an additional significant risk finding (*cf. Edison Elec. Inst.* v. *OSHA,* 849 F.2d 611, 620 (D.C. Cir. 1988)).

In addition, a safety standard must be technologically feasible. *See UAW* v. *OSHA,* 37 F.3d 665, 668 (D.C. Cir. 1994). A standard is technologically feasible when the protective measures it requires already exist, when available technology can bring the protective measures into existence, or when that technology is reasonably likely to develop. *See Am. Textile Mfrs. Inst.* v. *OSHA,* 452 U.S. 490, 513 (1981); *Am. Iron and Steel Inst.* v. *OSHA,* 939 F.2d 975, 980 (D.C. Cir. 1991)). The final rule is technologically feasible because: (1) Protectors are already manufactured in accordance with the 2010 ANSI/ISEA standard or the other versions permitted under the revision and (2) employers already comply with the 2003 and 1998 versions of the ANSI standard incorporated by reference into the general industry and maritime standards, which will remain in effect under the final rule.

B. Final Economic Analysis and Regulatory Flexibility Act Certification

OSHA has determined that employers can comply with the final rule by following their current usual and customary practice in providing eye and face protection to their employees. This final rule expands the options available to employers without removing any existing option and thus has no costs. Therefore, OSHA finds that the final rule is not economically significant within the context of Executive Order 12866, or a major rule under the Unfunded Mandates Reform Act or Section 801 of the Small Business Regulatory Enforcement Fairness Act. In addition, this final rule complies with Executive Order 13563 because employers are allowed increased flexibility in choosing eye and face protection for their employees and are not required to update or replace that protection solely as a result of this final rule if the employer's current practice meets the new standards. Because the final rule imposes no costs, OSHA certifies that it will not have a significant economic impact on a substantial number of private or public sector entities. Likewise, it does not meet any of the criteria for an economically significant or major rule specified by the Executive Order or relevant statutes.

C. Paperwork Reduction Act of 1995

As was the case for the NPRM, the Department has determined this rule does not establish new or revise any existing collection of information requirements subject to OMB approval

under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501. The proposed rule invited comments on this determination, and OSHA received no comments.

D. Federalism

OSHA reviewed this final rule in accordance with the Executive Order on Federalism (Executive Order 13132, 64 FR 43255, August 10, 1999), which requires that agencies, to the extent possible, refrain from limiting state policy options, consult with states prior to taking any actions that would restrict state policy options, and take such actions only when clear constitutional authority exists and the problem is national in scope. Executive Order 13132 provides for preemption of state law only with the expressed consent of Congress. Agencies must limit any such preemption to the extent possible.

Under Section 18 of the OSH Act, 29 U.S.C. 651 *et seq.,* Congress expressly provides that states may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards (29 U.S.C. 667); OSHA refers to states that obtain Federal approval for such a plan as ''State Plan states.'' Occupational safety and health standards developed by State Plan states must be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. 29 U.S.C. 667. Subject to these requirements, State Plan states are free to develop and enforce under state law their own requirements for occupational safety and health standards.

While OSHA developed the final rule to protect employees in every state, Section 18(c)(2) of the OSH Act permits State Plan states and U.S. Territories to develop and enforce their own standards for eye and face protection provided these requirements are at least as effective in providing safe and healthful employment and places of employment as the requirements specified in this final rule.

In summary, this final rule complies with Executive Order 13132. In states without OSHA-approved state plans, this rule limits state policy options in the same manner as other OSHA standards. In State Plan states, this rule does not significantly limit state policy options because, as explained in the following section, State Plan states do not have to adopt this final rule.

E. State Plan States

When Federal OSHA promulgates a new standard or amends an existing standard to be more stringent than it was previously, the 28 states or U.S. Territories with their own OSHA-approved occupational safety and health plans must revise their standards to reflect the new standard or amendment, or show OSHA why such action is unnecessary, *e.g.,* because an existing state standard covering this area is at least as effective in protecting workers as the new Federal standard or amendment. 29 CFR 1953.5(a). In this regard, the state standard must be at least as effective as the final Federal rule. State Plan states must adopt the Federal standard or complete their own standard within six months of the publication date of the final Federal rule. When OSHA promulgates a new standard or amendment that does not impose additional or more stringent requirements than the existing standard, State Plan states need not amend their standards, although OSHA may encourage them to do so. The following 21 states and 1 U.S. Territory have OSHA-approved occupational safety and health plans that apply only to private-sector employers: Alaska, Arizona, California, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Washington, and Wyoming. In addition, Connecticut, Illinois, Maine, New Jersey, New York, and the Virgin Islands have OSHA-approved State Plans that apply only to state and local government employees.

With regard to this final rule, it will not impose any additional or more stringent requirements on employers compared to existing OSHA standards. Through this rulemaking, OSHA is updating the references in its regulations to recognize recent editions of the applicable national consensus standards, and deleting a number of outdated editions of the national consensus standards referenced in its existing PPE standards. The final rule does not require employers to update or replace their PPE solely as a result of this rulemaking if the PPE currently in use meets the existing standards. Therefore, the final rule does not require action under 29 CFR 1953.5(a), and States and U.S. Territories with approved State Plans do not need to adopt this rule or show OSHA why such action is unnecessary. However, to the extent these States and Territories have the same standards as the OSHA standards affected by this final rule, OSHA encourages them to adopt the amendments.

F. Unfunded Mandates Reform Act of 1995

OSHA reviewed this final rule according to the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1501–1571, and Executive Order 12875, 58 FR 58093 (October 26, 1993). As discussed above in Section IV.B (''Final Economic Analysis and Regulatory Flexibility Act Certification'') of this preamble, OSHA determined that the final rule imposes no additional costs on any private-sector or public-sector entity. Accordingly, this final rule requires no additional expenditures by either public or private employers.

As noted above under Section IV.E (''State Plan States'') of this preamble, OSHA standards do not apply to state or local governments except in states that elected voluntarily to adopt an OSHA-approved state plan. Consequently, this final rule does not meet the definition of a ''Federal intergovernmental mandate.'' *See* 2 U.S.C. 658(5). Therefore, for the purposes of the UMRA, OSHA certifies that this final rule does not mandate that state, local, or tribal governments adopt new, unfunded regulatory obligations, or increase expenditures by the private sector of more than $100 million in any year.

G. Consultation and Coordination With Indian Tribal Governments

OSHA reviewed this final rule in accordance with Executive Order 13175, 65 FR 67249 (November 6, 2000), and determined that it does not have ''tribal implications'' as defined in that order. The final rule does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

List of Subjects in 29 CFR Parts 1910, 1915, 1917, 1918, and 1926

Incorporation by reference, Occupational Safety and Health, Personal Protective Equipment.

V. Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Ave. NW., Washington, DC 20210, authorized the preparation of this notice. OSHA is issuing this final rule pursuant to 29 U.S.C. 653, 655, and 657; 40 U.S.C. 3701 *et seq.;* 5 U.S.C. 553; Secretary of Labor's Order 1–2012, 77 FR 3912 (2012); and 29 CFR part 1911.

Signed at Washington, DC, on March 15, 2016.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

Amendments to Standards

For the reasons stated above in the preamble, the Occupational Safety and Health Administration is amending 29 CFR parts 1910, 1915, 1917, 1918, and 1926 as follows:

PART 1910—[AMENDED]

Subpart A—[Amended]

■ 1. The authority citation for subpart A of part 1910 continues to read as follows:

Authority: 29 U.S.C. 653, 655, 657; Secretary of Labor's Order Numbers 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31159), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable.

Sections 1910.6, 1910.7, 1910.8 and 1910.9 also issued under 29 CFR 1911. Section 1910.7(f) also issued under 31 U.S.C. 9701, 29 U.S.C. 9a, 5 U.S.C. 553; Public Law 106–113 (113 Stat. 1501A–222); Pub. L. 11–8 and 111–317; and OMB Circular A–25 (dated July 8, 1993) (58 FR 38142, July 15, 1993).

■ 2. Amend § 1910.6 by revising paragraphs (e)(69) through (71) to read as follows:

§ 1910.6 Incorporation by reference.

* * * * *

(e) * * *

(69) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, Approved April 13, 2010; IBR approved for § 1910.133(b). Copies are available for purchase from:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(iii) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

(70) ANSI Z87.1–2003, Occupational and Educational Eye and Face Personal Protection Devices Approved June 19, 2003; IBR approved for §§ 1910.133(b). Copies available for purchase from the:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(iii) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

(71) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, Reaffirmation approved January 4, 1999; IBR approved for § 1910.133(b). Copies are available for purchase from:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/*;

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(iii) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

* * * * *

Subpart I—[Amended]

■ 3. The authority citation for subpart I of part 1910 continues to read as follows:

Authority: Sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable, and 29 CFR part 1911; Sections 1910.132, 1910.134, and 1910.138 of 29 CFR also issued under 29 CFR 1911; Sections 1910.133, 1910.135, and 1910.136 of 29 CFR also issued under 29 CFR 1911 and 5 U.S.C. 553.

■ 4. Amend § 1910.133 by revising paragraph (b)(1) to read as follows:

§ 1910.133 Eye and face protection.

* * * * *

(b) *Criteria for protective eye and face protection.* (1) Protective eye and face protection devices must comply with any of the following consensus standards:

(i) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1910.6;

(ii) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1910.6; or

(iii) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, incorporated by reference in § 1910.6;

* * * * *

PART 1915—[AMENDED]

■ 5. The authority citation for part 1915 continues to read as follows:

Authority: Section 41, Longshore and Harbor Workers' Compensation Act (33 U.S.C. 941); Sections. 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable; 29 CFR part 1911.

Section 1915.100 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

Sections 1915.120 and 1915.152 of 29 CFR also issued under 29 CFR part 1911.

■ 6. Amend § 1915.5 by revising paragraphs (d)(1)(vi) through (viii) to read as follows:

§ 1915.5 Incorporation by reference.

* * * * *

(d)(1) * * *

(vi) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, Approved April 13, 2010; IBR approved for § 1915.153(b). Copies are available for purchase from:

(A) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(B) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(C) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

(vii) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, approved June 19, 2003; IBR approved for § 1910.153(b). Copies available for purchase from the:

(A) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(B) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(C) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

(viii) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection,

Reaffirmation approved January 4, 1999; IBR approved for § 1910.153(b). Copies are available for purchase from:

(A) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

* * * * *

Subpart I—[Amended]

■ 7. Amend § 1915.153 by revising paragraph (b)(1) to read as follows:

§ 1915.153 Eye and face protection.

* * * * *

(b) *Criteria for protective eye and face devices.* (1) Protective eye and face protection devices must comply with any of the following consensus standards:

(i) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1915.5;

(ii) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1915.5; or

(iii) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, incorporated by reference in § 1915.5;

* * * * *

Subpart E—[Amended]

■ 10. Amend § 1917.91 by revising paragraph (a)(1)(i) to read as follows:

§ 1917.91 Eye and face protection.

(a)(1)(i) The employer shall ensure that each affected employee uses protective eye and face protection devices that comply with any of the following consensus standards:

(A) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1917.3;

(B) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1917.3;

or

(C) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, incorporated by reference in § 1917.3;

* * * * *

PART 1918—[AMENDED]

■ 11. The authority citation for part 1918 is revised to read as follows:

Authority: 33 U.S.C. 941; 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 3–2000 (65 FR 50017), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable; and 29 CFR 1911.

Section 1918.90 also issued under 5 U.S.C. 553.

Section 1918.100 also issued under 49 U.S.C. 1801–1819 and 5 U.S.C. 553.

■ 12. Amend § 1918.3 by revising paragraphs (b)(6) through (8) to read as follows:

§ 1918.3 Incorporation by reference.

* * * * *

(b) * * *

(6) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, Approved April 13, 2010; IBR approved for § 1918.101(a). Copies are available for purchase from:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(iii) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

(7) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, Approved June 19, 2003; IBR approved for § 1918.101(a). Copies available for purchase from the:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(8) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, Reaffirmation approved January 4, 1999; IBR approved for § 1918.101(a). Copies are available for purchase from:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

(iii) TechStreet Store, 3916 Ranchero Dr., Ann Arbor, MI 48108; telephone: (877) 699–9277; Web site: *http://techstreet.com.*

* * * * *

Subpart J—[Amended]

■ 13. Amend § 1918.101 by revising paragraph (a)(1)(i) to read as follows:

§ 1918.101 Eye and face protection.

(a) * * *

(1)(i) Employers must ensure that each employee uses appropriate eye and/or face protection when the employee is exposed to an eye or face hazards, and that protective eye and face devices comply with any of the following consensus standards:

(A) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1918.3;

(B) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1918.3; or

(C) ANSI Z87.1–1989 (R–1998), Practice for Occupational and Educational Eye and Face Protection, incorporated by reference in § 1918.3

* * * * *

PART 1926—[AMENDED]

Subpart A—General [Amended]

■ 14. The authority citation for subpart A of part 1926 continues to read as follows:

Authority: 40 U.S.C. 3701 *et seq.;* 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable; and 29 CFR part 1911.

■ 15. Amend § 1926.6 as follows:

■ a. Revise paragraph (h)(31);

■ b. Redesignate paragraphs (h)(32) thru (34) as (h)(34) thru (36);

■ c. Add new paragraphs (h)(32) and (h)(33).

The revisions and additions read as follows:

§ 1926.6 Incorporation by reference.

* * * * *

(h) * * *

(31) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, Approved April 3, 2010; IBR approved for § 1926.102(b). Copies are available for purchase from:

(i) American National Standards Institute's e-Standards Store, 25 W 43rd Street, 4th Floor, New York, NY 10036; telephone: (212) 642–4980; Web site: *http://webstore.ansi.org/;*

(ii) IHS Standards Store, 15 Inverness Way East, Englewood, CO 80112; telephone: (877) 413–5184; Web site: *http://global.ihs.com;* or

* * * * *

Subpart E—[Amended]

■ 16. Revise the authority citation for subpart E of part 1926 to read as follows:

Authority: 40 U.S.C. 3701 *et seq.;* 29 U.S.C. 653, 655, 657; Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), 9–83 (48 FR 35736), 1–90 (55 FR 9033), 6–96 (62 FR 111), 5–2002 (67 FR 65008), 5–2007 (72 FR 31160), 4–2010 (75 FR 55355), or 1–2012 (77 FR 3912), as applicable; and 29 CFR part 1911.

■ 17. Amend § 1926.102 as follows:

■ a. Revise paragraphs (a)(1) thru (4).

■ b. Remove paragraphs (a)(5), (a)(7), (a)(8), and Tables E–1, E–2, and E–3.

■ c. Redesignate paragraph (a)(6) as (a)(5).

■ d. Revise paragraph (b).

■ e. Add paragraph (c).

The additions and revisions read as follows:

§ 1926.102 Eye and face protection.

(a) *General requirements.* (1) The employer shall ensure that each affected employee uses appropriate eye or face protection when exposed to eye or face hazards from flying particles, molten metal, liquid chemicals, acids or caustic liquids, chemical gases or vapors, or potentially injurious light radiation.

(2) The employer shall ensure that each affected employee uses eye protection that provides side protection when there is a hazard from flying objects. Detachable side protectors (*e.g.* clip-on or slide-on side shields) meeting the pertinent requirements of this section are acceptable.

(3) The employer shall ensure that each affected employee who wears prescription lenses while engaged in operations that involve eye hazards wears eye protection that incorporates the prescription in its design, or wears eye protection that can be worn over the prescription lenses without disturbing the proper position of the prescription lenses or the protective lenses.

(4) Eye and face PPE shall be distinctly marked to facilitate identification of the manufacturer.

* * * * *

(b) *Criteria for protective eye and face protection.* (1) Protective eye and face protection devices must comply with any of the following consensus standards:

(i) ANSI/ISEA Z87.1–2010, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1926.6;

(ii) ANSI Z87.1–2003, Occupational and Educational Personal Eye and Face Protection Devices, incorporated by reference in § 1926.6; or

(iii) ANSI Z87.1–1989 (R–1998), Practice for Occupational and

Educational Eye and Face Protection, incorporated by reference in § 1926.6;

(2) Protective eye and face protection devices that the employer demonstrates are at least as effective as protective eye and face protection devices that are constructed in accordance with one of the above consensus standards will be deemed to be in compliance with the requirements of this section.

(c) *Protection against radiant energy*—(1) *Selection of shade numbers for welding filter.* Table E–1 shall be used as a guide for the selection of the proper shade numbers of filter lenses or plates used in welding. Shades more dense than those listed may be used to suit the individual's needs.

TABLE E–1—FILTER LENS SHADE NUMBERS FOR PROTECTION AGAINST RADIANT ENERGY

Welding operation	Shade number
Shielded metal-arc welding 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes	10
Gas-shielded arc welding (nonferrous) 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes	11
Gas-shielded arc welding (ferrous) 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes	12
Shielded metal-arc welding 3/16-, 7/32-, 1/4-inch diameter electrodes	12
5/16-, 3/8-inch diameter electrodes	14
Atomic hydrogen welding	10–14
Carbon-arc welding	14
Soldering	2
Torch brazing	3 or 4
Light cutting, up to 1 inch	3 or 4
Medium cutting, 1 inch to 6 inches	4 or 5
Heavy cutting, over 6 inches	5 or 6
Gas welding (light), up to 1/8-inch	4 or 5
Gas welding (medium), 1/8-inch to 1/2-inch	5 or 6
Gas welding (heavy), over 1/2-inch	6 or 8

(2) *Laser protection.* (i) Employees whose occupation or assignment requires exposure to laser beams shall be furnished suitable laser safety goggles which will protect for the specific wavelength of the laser and be of optical density (O.D.) adequate for the energy involved. Table E–2 lists the maximum power or energy density for which adequate protection is afforded by glasses of optical densities from 5 through 8. Output levels falling between lines in this table shall require the higher optical density.

TABLE E–2—SELECTING LASER SAFETY GLASS

Intensity, CW maximum power density (watts/cm^2)	Attenuation	
	Optical density (O.D.)	Attenuation factor
10^{-2}	5	10^5
10^{-1}	6	10^6
1.0	7	10^7
10.0	8	10^8

(ii) All protective goggles shall bear a label identifying the following data:

(A) The laser wavelengths for which use is intended;

(B) The optical density of those wavelengths;

(C) The visible light transmission.

BILLING CODE 4510–26–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

33 CFR Part 334

Disestablishment of Danger Zone for Meteorological Rocket Launching Facility, Shemya Island Area, AK

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Direct final rule.

SUMMARY: The U.S. Air Force has requested that the U.S. Army Corps of Engineers (Corps) disestablish the existing danger zone located in the Bering Sea near Shemya Island, Alaska. The danger zone was established on September 28, 1971. The purpose of the danger zone was to protect persons and property from dangers encountered in the area associated with the launching of weather rockets. The facility has not been used for this activity since the mid-1980s. As a result of the discontinued use of this area, the Air Force has requested the danger zone be disestablished.

DATES: This rule is effective May 24, 2016 without further notice, unless the Corps receives adverse comment by April 25, 2016. If we receive such adverse comment, we will publish a timely withdrawal in the **Federal Register** informing the public that this rule will not take effect.

ADDRESSES: You may submit comments, identified by docket number COE–2016–0003, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Email: david.b.olson@usace.army.mil. Include the docket number, COE–2016–0003, in the subject line of the message.

Mail: U.S. Army Corps of Engineers, Attn: CECW–CO (David B. Olson), 441 G Street NW., Washington, DC 20314–1000.

Hand Delivery/Courier: Due to security requirements, we cannot receive comments by hand delivery or courier.

Instructions: Direct your comments to docket number COE–2016–0003. All comments received will be included in the public docket without change and may be made available on-line at *http://www.regulations.gov,* including any personal information provided, unless the commenter indicates that the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI, or otherwise protected, through regulations.gov or email. The regulations.gov Web site is an anonymous access system, which means we will not know your identity or contact information unless you provide it in the body of your comment. If you send an email directly to the Corps without going through regulations.gov, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, we recommend that you

include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If we cannot read your comment because of technical difficulties and cannot contact you for clarification, we may not be able to consider your comment. Electronic comments should avoid the use of any special characters, any form of encryption, and be free of any defects or viruses.

Docket: For access to the docket to read background documents or comments received, go to *www.regulations.gov.* All documents in the docket are listed. Although listed in the index, some information is not publicly available, such as CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form.

FOR FURTHER INFORMATION CONTACT: Mr. David Olson, Headquarters, Operations and Regulatory Community of Practice, Washington, DC at 202–761–4922 or Ms. Linda Speerstra, U.S. Army Corps of Engineers, Alaska District, Regulatory Division, at 907–747–0658.

SUPPLEMENTARY INFORMATION: By letter dated December 18, 2015, the Chief, Pacific Air Forces Weather Operations Branch, Joint Base Pearl Harbor-Hickam, Hawaii requested the disestablishment of the danger zone at Meteorological Rocket Launching Facility on Shemya Island, Alaska. This request was made because the facility has not been used since the mid-1980s. In response to this request by the Pacific Air Forces Weather Operations Branch, and pursuant to its authorities in Section 7 of the Rivers and Harbors Act of 1917 (40 Stat 266; 33 U.S.C. 1) and Chapter XIX of the Army Appropriations Act of 1919 (40 Stat 892; 33 U.S.C. 3), the Corps is amending the regulation at 33 CFR part 334 by disestablishing the danger zone in the waters of the Bering Sea, Meteorological Rocket Launching Facility on Shemya Island Area, Alaska.

The Corps is publishing this rule without prior proposal because we view this as a non-controversial amendment and anticipate no adverse comment. The Corps regulations governing restricted areas state that notice of proposed rulemaking and public procedures are not needed before publishing a final rule revoking a danger zone area (see 33 CFR 334.5(b)).

In the ''Proposed Rules'' section of today's **Federal Register**, we are publishing a separate document that will serve as the proposal to disestablish this danger zone if adverse comments are filed. This rule will be effective on May 24, 2016 without further notice unless we receive adverse comment by April 25, 2016. If we receive adverse comment, we will publish a timely withdrawal in the **Federal Register** informing the public that the direct final rule will not take effect. We will address all public comments in a subsequent final rule based on the proposed rule. We will not institute a second comment period on this action. Any parties interested in commenting must do so at this time.

Procedural Requirements

a. *Review Under Executive Order 12866.* This rule is issued with respect to a military function of the Defense Department and the provisions of Executive Order 12866 do not apply.

b. *Review Under the Regulatory Flexibility Act.* This rule has been reviewed under the Regulatory Flexibility Act (Pub. L. 96–354) which requires the preparation of a regulatory flexibility analysis for any regulation that will have a significant economic impact on a substantial number of small entities (*i.e.,* small businesses and small governments). The Corps has determined that the removal of the danger zone area will have no economic impact on the public because the area has not been used to launch weather rockets since the mid-1980s. The removal of the danger zone will decrease economic impacts on small entities because they will no longer have to comply with that regulation. The proposal will have no significant economic impact on small entities.

c. *Review Under the National Environmental Policy Act.* The Corps expects that the final rule will not have a significant impact to the quality of the human environment and, therefore, preparation of an environmental impact statement will not be required. An environmental assessment has been prepared and it may be reviewed at the District office listed at the end of the **FOR FURTHER INFORMATION CONTACT**, above. If we receive adverse comment, an environmental assessment will be prepared for the subsequent decision on the final rule.

d. *Unfunded Mandates Act.* The final rule does not impose an enforceable duty among the private sector and, therefore, are not a Federal private sector mandate and are not subject to the requirements of Section 202 or 205 of the Unfunded Mandates Reform Act (Pub. L. 104–4, 109 Stat. 48, 2 U.S.C. 1501 *et seq.*). We have also found under Section 203 of the Act, that small governments will not be significantly or uniquely affected by this rulemaking.

List of Subjects in 33 CFR Part 334

Danger zones, Navigation (water), Restricted areas, Waterways.

For the reasons set out in the preamble, the Corps amends 33 CFR part 334 as follows:

PART 334—DANGER ZONE AND RESTRICTED AREA REGULATIONS

■ 1. The authority citation for 33 CFR part 334 continues to read as follows:

Authority: 40 Stat. 266 (33 U.S.C. 1) and 40 Stat. 892 (33 U.S.C. 3).

§ 334.1290 [Removed]

■ 2. Remove § 334.1290.

Dated: March 18, 2016.

Edward E. Belk, Jr.,

Chief, Operations and Regulatory Division, Directorate of Civil Works.

[FR Doc. 2016–06860 Filed 3–24–16; 8:45 am]

BILLING CODE 3720–58–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R07–OAR–2015–0394; FRL–9944–19–Region 7]

Approval of Air Quality State Implementation Plans (SIP); State of Iowa; Infrastructure SIP Requirements for the 2008 Lead National Ambient Air Quality Standard (NAAQS); Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule; technical amendment.

SUMMARY: The Environmental Protection Agency (EPA) inadvertently approved and codified incorrect entry numbers in the part 52 instructions for the final rule action published on November 2, 2015. This technical amendment amends the part 52 codification instructions.

DATES: This action is effective March 25, 2016.

FOR FURTHER INFORMATION CONTACT: Jan Simpson at (913) 551–7089, or by email at *simpson.jan@epa.gov.*

SUPPLEMENTARY INFORMATION: On November 2, 2015 (80 FR 67335), EPA published a final rule approving a SIP revision for Iowa that approved Iowa's November 4, 2011, submission addressing the requirements of the CAA sections 110(a)(1) and (2) as applicable to the 2008 Lead NAAQS. Specifically, EPA approved the following infrastructure elements: 110(a)(2)(A),

(B), (C), (D), (E), (F), (G), (H), (J), (K), (L), and (M) which are necessary to implement, maintain, and enforce the 2008 Lead NAAQS. EPA also approved Iowa's May 11, 2015, submission to include article 1, section 2 of the Iowa Constitution, and portions of the Iowa code and the Iowa Administrative Code to codify the relevant state laws as applied to conflict of interest requirements of sections 110(a)(2)(E) and 128 of the CAA.

This technical amendment revises the erroneous part 52 instructions published in the **Federal Register** on November 2, 2015 (80 FR 67335) in the third column on page 67336 to read as follows: Amend § 52.820 by adding new entries (e) (40) and (41).

Dated: March 17, 2016.

Mark Hague,

Regional Administrator, Region 7.

Chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart Q—Iowa

■ 2. Amend § 52.820 by adding entries (e)(40) and (41) to read as follows:

§ 52.820 Identification of plan.

* * * * *

(e)* * *

[Docket No. 130312235–3658–02]

RIN 0648–XE506

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; 2016 Commercial Accountability Measure and Closure for South Atlantic Vermilion Snapper

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS implements accountability measures (AMs) for the commercial sector for vermilion snapper in the exclusive economic zone (EEZ) of the South Atlantic. NMFS projects that commercial landings for vermilion snapper will reach the commercial annual catch limit (ACL) for the January through June, 2016, fishing period by March 29, 2016. Therefore, NMFS closes the commercial sector for vermilion snapper in the South Atlantic EEZ on March 29, 2016, and it will remain closed until July 1, 2016, the start of the July through December fishing period. This closure is necessary to protect the South Atlantic vermilion snapper resource.

DATES: This rule is effective from 12:01 a.m., local time, March 29, 2016, until 12:01 a.m., local time, July 1, 2016.

FOR FURTHER INFORMATION CONTACT: Britni LaVine, NMFS Southeast Regional Office, telephone: 727–824–5305, email: *britni.lavine@noaa.gov.*

SUPPLEMENTARY INFORMATION: The snapper-grouper fishery of the South Atlantic includes vermilion snapper and is managed under the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (FMP). The FMP was prepared by the South Atlantic Fishery Management Council and is implemented by NMFS under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) by regulations at 50 CFR part 622.

The commercial ACL (equivalent to the commercial quota) for vermilion snapper in the South Atlantic is divided into separate quotas for two 6-month time periods, January through June and July through December. For the January through June, 2016, fishing season, the commercial quota is 388,703 lb (176,313 kg), gutted weight (431,460 lb (195,707 kg), round weight), as specified in 50 CFR 622.190(a)(4)(i)(D).

On February 26, 2016 (81 FR 9786), NMFS published a temporary rule in the **Federal Register** to reduce the commercial trip limit for vermilion snapper in or from the EEZ of the South Atlantic to 500 lb (227 kg), gutted weight, effective 12:01 a.m., local time, March 2, 2016, until July 1, 2016, or until the quota was reached and the commercial sector closed, whichever would occur first.

In accordance with regulations at 50 CFR 622.193(f)(1), NMFS is required to close the commercial sector for vermilion snapper when the commercial quota for that portion of the fishing year has been reached, or is projected to be reached, by filing a notification to that effect with the Office of the Federal Register. NMFS has determined that the commercial quota for South Atlantic vermilion snapper for the January through June fishing period will be reached by March 29, 2016. Accordingly, the commercial sector for South Atlantic vermilion snapper is closed effective 12:01 a.m., local time, March 29, 2016, until 12:01 a.m., local time, July 1, 2016. The commercial quota for vermilion snapper in the South Atlantic is 388,703 lb (176,313 kg), gutted weight (431,460 lb (195,707 kg), round weight), for the July 1 through December 31, 2016, fishing period, as specified in 50 CFR 622.190(a)(4)(ii)(D).

The operator of a vessel with a valid commercial vessel permit for South Atlantic snapper-grouper having vermilion snapper on board must have landed and bartered, traded, or sold such vermilion snapper prior to 12:01 a.m., local time, March 29, 2016. During the closure, the bag limit specified in 50 CFR 622.187(b)(5) and the possession limits specified in 50 CFR 622.187(c)(1), apply to all harvest or possession of vermilion snapper in or from the South Atlantic EEZ. During the closure, the sale or purchase of vermilion snapper taken from the EEZ is prohibited. As specified in 50 CFR 622.190(c)(1)(i), the prohibition on sale or purchase does not apply to the sale or purchase of vermilion snapper that were harvested, landed ashore, and sold prior to 12:01 a.m., local time, March 29, 2016, and were held in cold storage by a dealer or processor. For a person on board a vessel for which a Federal commercial or charter vessel/headboat permit for the South Atlantic snapper-grouper fishery has been issued, the bag and possession limits and the sale and purchase provisions of the commercial closure for vermilion snapper would apply regardless of whether the fish are harvested in state or Federal waters, as specified in 50 CFR 622.190(c)(1)(ii).

Classification

The Regional Administrator, Southeast Region, NMFS, has determined this temporary rule is necessary for the conservation and management of South Atlantic vermilion snapper and is consistent with the Magnuson-Stevens Act and other applicable laws.

This action is taken under 50 CFR 622.193(f)(1) and is exempt from review under Executive Order 12866.

This action responds to the best scientific information available. The Assistant Administrator for Fisheries, NOAA (AA), finds that the need to immediately implement this action to close the commercial sector for vermilion snapper constitutes good cause to waive the requirements to provide prior notice and opportunity for public comment pursuant to the authority set forth in 5 U.S.C. 553(b)(B), as such procedures would be unnecessary and contrary to the public interest. Such procedures would be unnecessary because the rule itself has been subject to notice and comment, and all that remains is to notify the public of the closure. Allowing prior notice and opportunity for public comment is contrary to the public interest because of the need to immediately implement this action to protect vermilion snapper since the capacity of the fishing fleet allows for rapid harvest of the commercial quota. Prior notice and opportunity for public comment would require time and could result in a harvest well in excess of the established commercial quota.

For the aforementioned reasons, the AA also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 21, 2016.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 679

[Docket No. 150916863–6211–02]

RIN 0648–XE532

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod in the Aleutian Islands Subarea of the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for Pacific cod, except for the Community Development Quota program (CDQ), in the Aleutian Islands subarea of the Bering Sea and Aleutian Islands management area (BSAI). This action is necessary to prevent exceeding the non-CDQ allocation of the 2016 Pacific cod total allowable catch (TAC) in the Aleutian Islands subarea of the BSAI.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), March 22, 2016, through 2400 hrs, A.l.t., December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907–586–7269.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The non-CDQ allocation of the 2016 Pacific cod TAC in the Aleutian Islands subarea of the BSAI is 11,465 metric tons (mt) as established by the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016). In accordance with § 679.20(d)(1)(i), the Administrator, Alaska Region, NMFS, has determined that the non-CDQ allocation of the 2016 Pacific cod TAC in the Aleutian Islands subarea of the BSAI will soon be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 9,000 mt, and is setting aside the remaining 2,465 mt as

incidental catch in directed fishing for other species. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for Pacific cod in the Aleutian Islands subarea of the BSAI.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the directed fishing closure of non-CDQ Pacific cod in the Aleutian Islands subarea of the BSAI. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 21, 2016.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 22, 2016.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

RIN 0648–XE518

Fisheries of the Exclusive Economic Zone Off Alaska; Reallocation of Pollock in the Bering Sea and Aleutian Islands

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule.

SUMMARY: NMFS is reallocating the projected unused amounts of the Aleut Corporation's pollock directed fishing allowance and the Community Development Quota from the Aleutian Islands subarea to the Bering Sea subarea directed fisheries. These actions are necessary to provide opportunity for harvest of the 2016 total allowable catch of pollock, consistent with the goals and objectives of the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), March 25, 2016, until 2400 hrs, A.l.t., December 31, 2016.

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council (Council) under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

In the Aleutian Islands subarea, the portion of the 2016 pollock total allowable catch (TAC) allocated to the Aleut Corporation's directed fishing allowance (DFA) is 14,700 metric tons (mt) and the Community Development Quota (CDQ) is 1,900 mt as established by the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016).

As of March 18, 2016, the Administrator, Alaska Region, NMFS, (Regional Administrator) has determined that 5,000 mt of Aleut Corporation's DFA and 1,900 mt of pollock CDQ in the Aleutian Islands subarea will not be harvested. Therefore, in accordance with § 679.20(a)(5)(iii)(B)(*4*), NMFS reallocates 5,000 mt of Aleut Corporation's DFA and 1,900 mt of pollock CDQ from the Aleutian Islands subarea to the 2016 Bering Sea subarea allocations. The 1,900 mt of pollock CDQ is added to the 2016 Bering Sea CDQ DFA. The remaining 5,000 mt of pollock is apportioned to the AFA Inshore sector (50 percent), AFA catcher/processor sector (40 percent), and the AFA mothership sector (10 percent). The 2016 pollock incidental catch allowance remains at 48,240 mt. As a result, the harvest specifications for pollock in the Aleutian Islands subarea included in the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016) are revised as follows: 9,700 mt to Aleut Corporation's DFA and 0 mt to CDQ pollock. Furthermore, pursuant to § 679.20(a)(5), Table 4 of the final 2016 and 2017 harvest specifications for groundfish in the BSAI (81 FR 14773, March 18, 2016) is revised to make 2016 pollock allocations consistent with this reallocation. This reallocation results in adjustments to the 2016 Aleut Corporation and CDQ pollock allocations established at § 679.20(a)(5).

TABLE 4—FINAL 2016 ALLOCATIONS OF POLLOCK TACS TO THE DIRECTED POLLOCK FISHERIES AND TO THE CDQ DIRECTED FISHING ALLOWANCES (DFA) [1]

[Amounts are in metric tons]

Area and sector	2016 Allocations	2016 A season [1]		2016 B season [1]
		A season DFA	SCA harvest limit [2]	B season DFA
Bering Sea subarea TAC [1]	1,346,900	n/a	n/a	n/a
CDQ DFA	135,900	54,360	38,052	81,540
ICA [1]	48,240	n/a	n/a	n/a
AFA Inshore	581,380	232,552	162,786	348,828
AFA Catcher/Processors [3]	465,104	186,042	130,229	279,062
Catch by C/Ps	425,570	170,228	n/a	255,342
Catch by CVs [3]	39,534	15,814	n/a	23,720

TABLE 4—FINAL 2016 ALLOCATIONS OF POLLOCK TACS TO THE DIRECTED POLLOCK FISHERIES AND TO THE CDQ DIRECTED FISHING ALLOWANCES (DFA) [1]—Continued

[Amounts are in metric tons]

Area and sector	2016 Allocations	2016 A season [1]		2016 B season [1]
		A season DFA	SCA harvest limit [2]	B season DFA
Unlisted C/P Limit [4]	2,326	930	n/a	1,395
AFA Motherships	116,276	46,510	32,557	69,766
Excessive Harvesting Limit [5]	203,816	n/a	n/a	n/a
Excessive Processing Limit [6]	349,398	n/a	n/a	n/a
Total Bering Sea DFA	1,162,760	465,104	325,573	697,656
Aleutian Islands subarea ABC	32,227	n/a	n/a	n/a
Aleutian Islands subarea TAC [1]	12,100	n/a	n/a	n/a
CDQ DFA	0	0	n/a	0
ICA	2,400	1,200	n/a	1,200
Aleut Corporation	9,700	9,700	n/a	0
Area harvest limit: [7]				
541	9,668	n/a	n/a	n/a
542	4,834	n/a	n/a	n/a
543	1,611	n/a	n/a	n/a
Bogoslof District ICA [8]	500	n/a	n/a	n/a

[1] Pursuant to § 679.20(a)(5)(i)(A), the BS subarea pollock, after subtracting the CDQ DFA (10 percent) and the ICA (4.0 percent), is allocated as a DFA as follows: Inshore sector—50 percent, catcher/processor sector (C/P)—40 percent, and mothership sector—10 percent. In the BS subarea, 40 percent of the DFA is allocated to the A season (January 20–June 10) and 60 percent of the DFA is allocated to the B season (June 10–November 1). Pursuant to § 679.20(a)(5)(iii)(B)(*2*)(*i*) and (*ii*), the annual AI pollock TAC, after subtracting first for the CDQ directed fishing allowance (10 percent) and second the ICA (2,400 mt), is allocated to the Aleut Corporation for a pollock directed fishery. In the AI subarea, the A season is allocated 40 percent of the ABC and the B season is allocated the remainder of the pollock directed fishery.

[2] In the BS subarea, no more than 28 percent of each sector's annual DFA may be taken from the SCA before April 1.

[3] Pursuant to § 679.20(a)(5)(i)(A)(*4*), not less than 8.5 percent of the DFA allocated to listed catcher/processors shall be available for harvest only by eligible catcher vessels delivering to listed catcher/processors.

[4] Pursuant to § 679.20(a)(5)(i)(A)(*4*)(*iii*), the AFA unlisted catcher/processors are limited to harvesting not more than 0.5 percent of the catcher/processors sector's allocation of pollock.

[5] Pursuant to § 679.20(a)(5)(i)(A)(*6*), NMFS establishes an excessive harvesting share limit equal to 17.5 percent of the sum of the non-CDQ pollock DFAs.

[6] Pursuant to § 679.20(a)(5)(i)(A)(*7*), NMFS establishes an excessive processing share limit equal to 30.0 percent of the sum of the non-CDQ pollock DFAs.

[7] Pursuant to § 679.20(a)(5)(iii)(B)(*6*), NMFS establishes harvest limits for pollock in the A season in Area 541 no more than 30 percent, in Area 542 no more than 15 percent, and in Area 543 no more than 5 percent of the Aleutian Islands pollock ABC.

[8] The Bogoslof District is closed by the final harvest specifications to directed fishing for pollock. The amounts specified are for ICA only and are not apportioned by season or sector.

Note: Seasonal or sector apportionments may not total precisely due to rounding.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the reallocation of AI pollock. Since the pollock fishery is currently open, it is important to immediately inform the industry as to the final Bering Sea subarea pollock allocations. Immediate notification is necessary to allow for the orderly conduct and efficient operation of this fishery; allow the industry to plan for the fishing season and avoid potential disruption to the fishing fleet as well as processors; and provide opportunity to harvest increased seasonal pollock allocations while value is optimum. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 15, 2016.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 22, 2016.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Identifying and Reducing Regulatory Burdens

AGENCY: Office of Budget and Program Analysis, USDA.

ACTION: Request for Information (RFI); extension of comment period.

SUMMARY: On January 26, 2016, the Office of the Secretary, USDA, published a document in the **Federal Register** in accordance with Executive Order 13563, ''Improving Regulation and Regulatory Review,'' and Executive Order 13610, ''Identifying and Reducing Regulatory Burdens'' inviting public comment on which regulations should be modified, expanded, streamlined, or repealed to make the USDA's regulatory program more effective or less burdensome in achieving the regulatory objectives. USDA's planned regulatory actions and retrospective review efforts were made available in the 2015 Fall Unified Regulatory Agenda. Written comments were to be received by March 28, 2016. USDA is extending the public comment period until April 27, 2016.

DATES: The notice published January 26, 2016, at 81 FR 4213, is extended. Comments and information are requested on or before April 27, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding this notice. All submissions must refer to ''Retrospective Review'' to ensure proper delivery.

• *Electronic Submission of Comments.* Interested persons may submit comments electronically through the Federal eRulemaking Portal: *http://www.regulations.gov.* USDA strongly encourages commenters to submit comments electronically. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, and ensures timely receipt by USDA. Commenters should follow the instructions provided on that site to submit comments electronically.

• *Submission of Comments by Mail, Hand delivery, or Courier.* Paper, disk, or CD–ROM submissions should be submitted to Michael Poe, Office of Budget and Program Analysis, USDA, Jamie L. Whitten Building, Room 101–A, 1400 Independence Ave. SW., Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Michael Poe, Telephone Number: (202) 720–3257.

SUPPLEMENTARY INFORMATION: USDA remains committed to minimizing the burdens on individuals, businesses, and communities for participation in and compliance with USDA programs that promote economic growth, create jobs, and protect the health and safety of the American people.

USDA programs are diverse and far reaching, as are the regulations and legislation that implement their delivery. The regulations range from nutrition standards for the school lunch program, natural resources and environmental measures governing national forest usage and soil conservation, emergency producer assistance as a result of natural disasters, to protection of American agriculture from the ravages of plant or animal pestilence. USDA regulations extend from farm to supermarket to ensure the safety, quality, and availability of the Nation's food supply. Regulations also specify how USDA conducts its business, including access to and eligibility for USDA programs. Finally, regulations specify the responsibilities of businesses, individuals, and State and local governments that are necessary to comply with their provisions.

I. Executive Orders 13563 and 13610

The overall intention of Executive Orders 13563 and 13610 is to create a continuing process of scrutiny of regulatory actions.

Executive Order 13563, ''Improving Regulation and Regulatory Review,'' was issued to ensure that Federal regulations use the best available tools to promote innovation that will reduce costs and burden while allowing public participation and an open exchange of ideas. These principles enhance and strengthen Federal regulations to allow them to achieve their regulatory objectives, most important among them protecting public health, welfare, safety, and the environment. In consideration of these principles, and as directed by the Executive Order, Federal agencies and departments need to periodically review existing regulations that may be outmoded, ineffective, insufficient, or excessively burdensome and to modify, streamline, expand, or repeal them in accordance with what has been learned.

In addition, Executive Order 13610, ''Identifying and Reducing Regulatory Burdens,'' directed Federal agencies to conduct retrospective analyses of existing rules to examine whether they remain justified and whether they should be modified or streamlined in light of changed circumstances, including the availability of new technologies. Executive Order 13610 directs Federal agencies to give priority, consistent with law, to those initiatives that will produce significant quantifiable monetary savings or significant quantifiable reductions in paperwork burdens while protecting public health, welfare, safety, and the environment. For the regulatory requirements imposed on small businesses, it directs Federal agencies to give special consideration to initiatives that would simplify or harmonize the regulatory requirements.

II. Request for Information

USDA is seeking public comment on our effort: To identify and reduce regulatory burdens; to remove unintended regulatory obstacles to participation in and compliance with USDA programs; and to improve current regulations to help USDA agencies advance the USDA mission. USDA is particularly interested in public comments that speak to areas in which we can reduce costs and reporting burdens on the public, through technological advances or other modernization efforts, and comments on regulatory flexibility.

III. Regulatory Flexibility

USDA is also seeking public input on measures that can be taken to reduce burdens and increase flexibility and freedom of choice for the public. Regulatory flexibility includes a variety of regulatory techniques that can help avoid unnecessary costs on regulated entities and avoid negative impacts. Regulatory flexibility techniques could include:

- Pilot projects, which can be used to test regulatory approaches;
- Safe harbors, which are streamlined modes of regulatory compliance and can serve to reduce compliance costs;
- Sunset provisions, which terminate a rule after a certain date;
- Trigger provisions, which specify one or more threshold indicators that the rule is designed to address;
- Phase-ins, which allow the rule to be phased-in for different groups at different times;
- Streamlined requirements, which provide exemptions or other streamlined requirements if a particular entity (for example, a small business) may otherwise experience disproportionate burden from a rule;
- State flexibilities, which provide greater flexibility to States or other regulatory partners, for example, giving them freedom to implement alternative regulatory approaches; and
- Exceptions, which allow exceptions to part of the rule, or the entire rule in cases where there is a potential or suspected unintended consequence.

IV. Existing USDA Regulations

In addition to retrospective review actions and other regulatory reforms identified in USDA's 2015 Fall Regulatory Agenda, we welcome comments from the public on any of USDA's existing regulations and ways to improve them to help USDA agencies advance the mission of the Department consistent with the Executive Order. USDA notes that this RFI is issued solely for information and program-planning purposes. While responses to this RFI do not bind USDA to any further actions, all submissions will be reviewed by the appropriate program office, and made publicly available on *http://www.regulations.gov.*

Michael Poe,

Office of Budget and Program Analysis, United States Department of Agriculture.

BILLING CODE 3410–90–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–5247; Directorate Identifier 2015–SW–008–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters Deutschland GmbH Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for Airbus Helicopters Deutschland GmbH (Airbus Helicopters) Model BO–105LS A–3 helicopters. This proposed AD would require inspecting the helicopter records to determine if there is a life limit for the tension-torsion (TT) straps installed in the helicopter lifting system, establishing a life limit if there is not one, and replacing each TT strap that has met or exceeded its life limit. This proposed AD is prompted by an error in the Airworthiness Limitations section of the Model BO–105LS A–3 maintenance manual. The proposed actions are intended to prevent failure of a TT strap and subsequent loss of control of a helicopter.

DATES: We must receive comments on this proposed AD by May 24, 2016.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Docket:* Go to *http://www.regulations.gov.* Follow the online instructions for sending your comments electronically.
- *Fax:* 202–493–2251.
- *Mail:* Send comments to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001.
- *Hand Delivery:* Deliver to the ''Mail'' address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–5247; or in person at the Docket Operations Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the European Aviation Safety Agency (EASA) AD, the economic evaluation, any comments received, and other information. The street address for the Docket Operations Office (telephone 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

For service information identified in this proposed rule, contact Airbus Helicopters, 2701 N. Forum Drive, Grand Prairie, TX 75052; telephone (972) 641–0000 or (800) 232–0323; fax (972) 641–3775; or at *http://www.airbushelicopters.com/techpub.* You may review the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy, Room 6N–321, Fort Worth, Texas 76177.

FOR FURTHER INFORMATION CONTACT: Matt Fuller, Senior Aviation Safety Engineer, Safety Management Group, Rotorcraft Directorate, FAA, 10101 Hillwood Pkwy, Fort Worth, Texas 76177; telephone (817) 222–5110; email *matthew.fuller@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to participate in this rulemaking by submitting written comments, data, or views. We also invite comments relating to the economic, environmental, energy, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should send only one copy of written comments, or if comments are filed electronically, commenters should submit only one time.

We will file in the docket all comments that we receive, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, we will consider all comments we receive on or before the closing date for comments. We will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. We may change this proposal in light of the comments we receive.

Discussion

EASA, which is the Technical Agent for the Member States of the European Union, issued EASA AD No. 2015–0042, dated March 9, 2015, to correct an unsafe condition for Airbus Helicopters Model BO105 LS A–3 helicopters.

EASA advises that life limits have been introduced for TT strap part number (P/N) 2604067 and P/N 117–14110 installed on the helicopter lifting system. During a revision of the Airworthiness Limitations section of the Model BO105LS A–3 maintenance manual, the life limit for the TT strap was inadvertently deleted. Accordingly, EASA issued AD No. 2015–0042 to correct this error. EASA AD No. 2015–0042 requires replacing TT straps upon reaching their life limit and entering the life limit into the aircraft maintenance manual. EASA states that failure to comply with the life limit could result in an unsafe condition.

FAA's Determination

These helicopters have been approved by the aviation authority of Germany and are approved for operation in the United States. Pursuant to our bilateral agreement with Germany, EASA, its technical representative, has notified us of the unsafe condition described in its AD. We are proposing this AD because we evaluated all known relevant information and determined that an unsafe condition is likely to exist or develop on other products of the same type design.

Related Service Information

Airbus Helicopters issued Alert Service Bulletin ASB BO105LS–10A–013, Revision 0, dated March 9, 2015 (ASB). The ASB specifies adding a life limit for the TT strap P/N 2604067 or 117–14110 of 25,000 flights or 10 years, whichever occurs first, in the list of life-limited parts and corresponding log cards. The ASB also states TT straps that have exceeded the retirement time must be replaced and that only TT straps that have not exceeded the retirement time may be installed.

Proposed AD Requirements

This proposed AD would require, within 20 hours time-in-service:

- Inspecting the Airworthiness Limitations section of the applicable maintenance manual or Instructions for Continued Airworthiness (ICA) and the component history card or equivalent record for each TT strap and determining whether those records specify a life limit of 25,000 flights or 10 years since the date of manufacture, whichever occurs first.

○ If the records do not specify a life limit for each TT strap or if they specify a different life limit than required, revising the Airworthiness Limitations section of the applicable maintenance manual or ICA by establishing a life limit of 25,000 flights or 10 years since date of manufacture, whichever occurs first.

○ Creating a component history card or equivalent record for each TT strap, if one does not exist, and recording a life limit of 25,000 flights or 10 years since date of manufacture, whichever occurs first.

- Removing from service each TT strap that has reached or exceeded its life limit.

Differences Between This Proposed AD and the EASA AD

This proposed AD would require compliance within 20 hours TIS. The EASA AD allows 2 months to calculate the flight cycles or calendar time of each TT strap.

Costs of Compliance

We estimate that this proposed AD would affect 8 helicopters of U.S. Registry. Labor costs are estimated at $85 per hour. We estimate that it would take 2 work hours to inspect and revise the Airworthiness Limitations section and to calculate and record a life limit for the TT strap for a total cost of $170 per helicopter and $1,360 for the fleet. If a TT strap is replaced, we estimate it would take 8 work hours and $16,617 for required parts for a total cost of $17,297 per helicopter per TT strap.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared an economic evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus Helicopters Deutschland GmbH Helicopters: Docket No. FAA–2016–5247; Directorate Identifier 2015–SW–008–AD.

(a) Applicability

This AD applies to Model BO–105LS A–3 helicopters with a tension torsion (TT) strap part number (P/N) 2604067 or P/N 117–14110 installed, certificated in any category.

(b) Unsafe Condition

This AD defines the unsafe condition as a TT strap remaining in service beyond its fatigue life. This condition could result in failure of a TT strap and loss of control of a helicopter.

(c) Comments Due Date

We must receive comments by May 24, 2016.

(d) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(e) Required Actions

Within 20 hours time-in-service:

(1) Inspect the Airworthiness Limitations section of the applicable maintenance manual or Instructions for Continued Airworthiness (ICA) and the component history card or equivalent record for TT strap P/N 2604067 and P/N 117–14110. Determine whether those records specify a life limit of 25,000 flights or 10 years since the date of manufacture, whichever occurs first.

(2) If the Airworthiness Limitations section of the applicable maintenance manual or ICA or the component history card or equivalent record do not specify a life limit for the TT strap, or if they specify a different life limit than in paragraph (e)(1), do the following:

(i) Revise the Airworthiness Limitations section of the applicable maintenance manual or ICA by establishing a life limit of 25,000 flights or 10 years since date of manufacture, whichever occurs first, for each TT strap P/N 2604067 and P/N 117–14110 by making pen-and-ink changes or by inserting a copy of this AD into the Airworthiness Limitations section of the maintenance manual or the ICA. For purposes of this AD, a flight would be counted anytime the helicopter lifts off into the air and then lands again regardless of the duration of the landing and regardless of whether the engine is shut down.

(ii) Create a component history card or equivalent record for each TT strap P/N 2604067 and P/N 117–14110, if one does not exist, and record a life limit of 25,000 flights or 10 years since date of manufacture, whichever occurs first.

(3) Remove from service each TT strap that has reached or exceeded its life limit.

(f) Special Flight Permit

Special flight permits are prohibited.

(g) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Safety Management Group, FAA, may approve AMOCs for this AD. Send your proposal to Matt Fuller, Senior Aviation Safety Engineer, Safety Management Group, Rotorcraft Directorate, FAA, 10101 Hillwood Pkwy, Fort Worth, Texas 76177; telephone (817) 222–5110; email *9-ASW-FTW-AMOC-Requests@faa.gov.*

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, we suggest that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office before operating any aircraft complying with this AD through an AMOC.

(h) Additional Information

(1) Airbus Helicopters Alert Service Bulletin ASB BO105LS–10A–013, Revision 0, dated March 9, 2015, which is not incorporated by reference, contains additional information about the subject of this AD. For service information identified in this AD, contact Airbus Helicopters, 2701 N. Forum Drive, Grand Prairie, TX 75052; telephone (972) 641–0000 or (800) 232–0323; fax (972) 641–3775; or at *http://www.airbushelicopters.com/techpub.* You may review the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy, Room 6N–321, Fort Worth, TX 76177.

(2) The subject of this AD is addressed in European Aviation Safety Agency (EASA) AD No. 2015–0042, dated March 9, 2015. You may view the EASA AD on the Internet at *http://www.regulations.gov* in the AD Docket.

(i) Subject

Joint Aircraft Service Component (JASC) Code: 6200 Main Rotor System.

Issued in Fort Worth, Texas, on March 16, 2016.

Scott A. Horn,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

33 CFR Part 334

Disestablishment of Danger Zone for Meteorological Rocket Launching Facility, Shemya Island Area, AK

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Proposed rule.

SUMMARY: The U.S. Air Force has requested that the U.S. Army Corps of Engineers (Corps) disestablish the existing danger zone located in the Bering Sea near Shemya Island, Alaska. The danger zone was established on September 28, 1971. The purpose of the danger zone was to protect persons and property from dangers encountered in the area associated with the launching of weather rockets. The facility has not been used for this activity since the mid-1980s. As a result of the discontinued use of this area, the Air Force has requested the danger zone be disestablished. In the ''Rules and Regulations'' section of **Federal Register**, we are publishing the restricted area disestablishment as a direct final rule without prior proposal because we view this as a non-controversial adjustment to our restricted area regulations and anticipate no adverse comment. We have explained our reasons for this approval in the preamble to the direct final rule. If we receive no adverse comment, we will not take further action on this rule and it will go into effect. If we receive adverse comment, we will withdraw the direct final rule and it will not take effect. We will address all public comments in a subsequent final rule based on this proposed rule. We will not institute a second comment period on this action. Any parties interested in commenting must do so at this time.

DATES: Written comments must be received by April 25, 2016.

SUPPLEMENTARY INFORMATION:

This document concerns the ''Disestablishment of Danger Zone for Meteorological Rocket Launching Facility, Shemya Island Area, AK.'' For further information, including instructions on how to submit comments, please see the information provided in the direct final rule that is located in the ''Rules and Regulations'' section of this **Federal Register** publication.

Dated: March 18, 2016.

Edward E. Belk, Jr.,

Chief, Operations and Regulatory Division, Directorate of Civil Works.

BILLING CODE 3720–58–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[Docket No. EPA–R02–OAR–2016–0059; FRL–9944–21–Region]

Approval of Air Quality Implementation Plans; New Jersey, Carbon Monoxide Maintenance Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a State Implementation Plan (SIP) revision submitted by the New Jersey Department of Environmental Protection. This revision will establish an updated ten-year carbon monoxide (CO) maintenance plan for the New Jersey portion of the New York-Northern New Jersey-Long Island (NYNNJLI) CO area which includes the following areas: Hudson, Essex, Bergen, and Union Counties, and the municipalities of Clifton, Passaic and Paterson in Passaic County. EPA is also proposing to approve the 2007 Attainment/Base Year CO emissions inventory. In addition, EPA proposes to approve the shutdown of 5 CO maintenance monitors in New Jersey. The New Jersey portion of the NYNNJLI CO area was redesignated to attainment of the CO National Ambient Air Quality Standard (NAAQS) on August 23, 2002 and the maintenance plan was also approved at that time. By

this action, EPA is proposing to approve the second maintenance plan for this area because it provides for continued attainment for an additional ten years of the CO NAAQS.

DATES: Comments must be received on or before April 25, 2016.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R02–OAR–2016–0059, at *http://www.regulations.gov.* Follow the on-line instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Henry Feingersh *feingersh.henry@epa.gov* for general questions, Raymond Forde *forde.raymond@epa.gov* for emissions inventory questions, or Matthew Laurita *laurita.matthew@epa.gov* for mobile source related questions at the U.S. Environmental Protection Agency, Air Programs Branch, 290 Broadway, 25th Floor, New York, NY 10007–1866, telephone number (212) 637–4249, fax number (212) 637–3901.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

Table of Contents

I. What is the nature of the EPA's action?

The EPA is proposing to approve an updated ten-year carbon monoxide (CO) maintenance plan for the New Jersey portion of the New York–Northern New Jersey–Long Island (NYNNJLI) CO area. On August 23, 2002, the EPA approved a request from New Jersey to redesignate the New Jersey portion of the NYNNJLI CO area to attainment of the CO National Ambient Air Quality Standard (NAAQS) (67 FR 54574). In addition, the EPA also approved at that time a ten-year CO maintenance plan for the area. The Clean Air Act (the Act) requires that an area redesignated to attainment of the CO NAAQS must submit a second ten-year CO maintenance plan to show how the area will continue to attain the CO standard for an additional ten years. On June 11, 2015, New Jersey submitted a second ten-year CO maintenance plan for the New Jersey portion of the NYNNJLI CO area and requested that EPA approve the plan. This plan also included a request and the justification for shutting down 4 CO maintenance monitors. On February 8, 2016, New Jersey submitted an addendum to the plan which provides additional information to justify the shutdown of one additional CO maintenance monitor. The following sections describe how the EPA made its determination proposing to approve the second ten-year maintenance plan. Additionally, the EPA is proposing to approve the 2007 Attainment/Base Year CO emissions inventory. Finally, the EPA proposes to approve the shutdown of 5 CO maintenance monitors in New Jersey. A more detailed discussion of the EPA's review and proposed action is found in the Technical Support Document (TSD) available in the Docket for this action, and by contacting the individuals in the For Further Information Section.

II. What is the Carbon Monoxide Limited Maintenance Plan for the New Jersey portion of the New York–Northern New Jersey–Long Island Carbon Monoxide area?

A maintenance plan is a SIP revision that must demonstrate continued attainment of the applicable NAAQS in the maintenance area for at least ten years. The Act requires that a second ten-year plan be submitted in order to assure that the area will continue to stay in compliance with the relevant NAAQS. For the NYNNJLI CO area, the New Jersey Department of Environmental Protection is proposing to utilize EPA's limited maintenance plan approach, as detailed in the EPA guidance memorandum, ''Limited Maintenance Plan Option for Nonclassifiable CO Nonattainment Areas'' from Joseph Paisie, Group Leader, Integrated Policy and Strategies Group, Office of Air Quality and Planning Standards, dated October 6, 1995. Pursuant to this approach, the EPA will consider the maintenance demonstration satisfied for areas if the monitoring data show the design value is at or below 7.65 parts per million (ppm), or 85 percent of the level of the 8-hour CO NAAQS. The design value must be based on eight consecutive quarters of data. For such areas, there is no requirement to project emissions of CO over the maintenance period. EPA believes if the area begins the maintenance period at, or below, 85 percent of the CO 8 hour NAAQS, the applicability of Prevention of Significant Deterioration (PSD) requirements, the control measures already in the SIP, and Federal measures, should provide adequate assurance of maintenance over the 10-year maintenance period.

III. What is included in a maintenance plan?

Section 175A of the Act sets forth the elements of maintenance plans for areas seeking redesignation from nonattainment to attainment. The initial and subsequent ten-year plans must each demonstrate continued attainment of the applicable NAAQS for at least ten years after approval. EPA is proposing action on the second ten-year maintenance plan which covers the period from 2015 through 2024. The specific elements of a maintenance plan are:

A. Attainment Inventory

EPA's October 6, 1995 Limited Maintenance Plan guidance states that for inventory purposes the state is only required to submit an attainment inventory to EPA that is based on monitoring data which shows attainment. There is no requirement to project emissions over the maintenance period. The calendar year inventory selected for the attainment inventory is 2007. This means if 2007 is a calendar year which has monitoring data which demonstrates attainment of the standard, the 2007 base year inventory can be used as the attainment year

inventory and no projection inventories are required over the years of the maintenance period. Only calendar year 2007 summary emissions data (based on a winter season day) are required. In addition, the inventory should be consistent with EPA's most recent guidance on emission inventories for nonattainment areas available at the time and should include emissions during the time period associated with the monitoring data showing attainment.

New Jersey submitted a limited maintenance plan which included a 2007 base year emissions inventory. The 2007 inventory is also classified as the attainment year inventory for the limited maintenance plan. New Jersey has elected 2007 because it is the attainment base year that will be used for the limited maintenance plan and 2007 represents one of the years of violation free monitored data in the area. The inventory included peak winter season daily emissions from stationary point, stationary area, non-road mobile, and on-road mobile sources of CO. These emission estimates were prepared in accordance with EPA guidance.

The EPA is proposing to approve the CO inventory for Hudson, Essex, Bergen, and Union Counties, and the municipalities of Clifton, Passaic and Paterson in Passaic County. Details of the inventory review are located in section IV of this action. A more detailed discussion of how the emission inventory was reviewed and the results of EPA's review are presented in the TSD.

Table 1 presents a summary of the 2007 CO peak winter season daily emissions estimates in tons per day for the NYNNJLI CO area. Again, under the Limited Maintenance Plan guidance, there is no requirement to project emissions over the maintenance period.

TABLE 1—2007 BASE YEAR/ATTAINMENT EMISSIONS INVENTORY NYNNJLI CO AREA

[Tons/Peak Winter Season Day]

County	Point sources	Area sources	Onroad mobile sources	Nonroad mobile sources	Total
Bergen	1.82	14.75	346.29	139.60	502.47
Essex	5.52	12.93	198.99	75.20	292.64
Hudson	2.46	10.05	111.77	35.70	159.97
Passaic	0.32	6.52	144.70	42.30	193.84
Union	4.18	8.31	169.18	53.60	23.27
Total	14.30	52.56	970.93	346.50	1,384.19

B. Maintenance Demonstration

New Jersey has met the Limited Maintenance Plan air quality criteria requirement by demonstrating that its highest monitored design value is less than 85 percent (7.65 parts per million) of the CO standard of 9.0 parts per million. The highest monitored design value in the NYNNJLI CO area for the 2013–2014 design year was 2.5 parts per million at two monitoring sites in New Jersey. In addition, New Jersey commits to continued implementation of all other Federal and State measures already implemented as part of its CO SIP. Thus, according to the Limited Maintenance Plan Guidance, emission projections are not required.

C. Monitoring Network

New Jersey continues to operate its CO monitoring network and will continue to work with the EPA through the air monitoring network review process as required by 40 CFR part 58 to determine the adequacy of its network.

On August 8, 2011, New Jersey submitted their ''New Jersey Ambient Air Monitoring Network Plan 2011'' to the EPA. This document described New Jersey's ambient air monitoring network and also detailed proposed changes and the rationale for them.[1] The reasoning behind the requested CO maintenance monitor shutdowns are included in that submittal. In a letter dated October 27, 2011, the EPA told New Jersey that it will make a determination on New Jersey's analysis in a revision to a CO SIP. Based on the EPA's review, the EPA is proposing approval of these CO maintenance monitor shutdowns. The EPA's review of the New Jersey analysis is included in the accompanying TSD and in Section V of this notice.

New Jersey will continue annual reviews of its data in order to verify continued attainment of the NAAQS. As mentioned earlier, all of New Jersey's 8-hour design values are well below the 9.0 ppm 8-hour NAAQS for CO with the highest monitors in the New Jersey portion of the NYNNJLI reading 2.5 ppm, as shown in Table 2.

TABLE 2—DESIGN VALUES FOR CO IN NEW JERSEY

[8-hour standard—9 parts per million]

Monitoring location	2013–2014 Design value (parts per million)
East Orange	2.5
Camden Spruce Street	1.2
Elizabeth	2.2
Elizabeth lab	1.8
Jersey City	1.8
Newark Firehouse	2.5

In its SIP revision, New Jersey submitted design values from 2006–2007 through 2012–2013. The EPA reviewed more recent data in addition to the submitted data and found the maximum 2013–2014 design value for New Jersey to be 2.5 ppm, which continues to show attainment of the NAAQS.

D. Verification of Continued Attainment

New Jersey will verify that the New Jersey portion of the NYNNJLI CO area continues to attain the CO NAAQS through an annual review of its monitoring data. If any design value exceeds 7.65 ppm, New Jersey will coordinate with EPA Region 2 to verify and evaluate the data and then, if warranted, develop a full maintenance plan for the affected maintenance area.

[1] New Jersey has submitted subsequent 2012, 2013, 2014, and 2015 Monitoring Network Plans. The EPA is only discussing the 2011 Plan because of its relevance to the CO Limited Maintenance Plan.

E. Contingency Plan

Section 175A(d) of the Act requires that a maintenance plan include a contingency plan which includes contingency measures, as necessary, to promptly correct any violation of the NAAQS that occurs after redesignation of the area. Contingency measures do not have to be fully adopted at the time of redesignation. However, the contingency plan is considered to be an enforceable part of the SIP and should ensure that the contingency measures are adopted expeditiously once they are triggered by a specified event. In addition, the contingency plan includes a requirement that the State continue to implement all control measures used to bring the area into attainment.

The triggers specified in New Jersey's previous maintenance plan are included in this Limited Maintenance Plan. If design values in any maintenance area in New Jersey exceeds 7.65 parts per million (ppm), New Jersey will coordinate with the EPA to verify the validity of the data, evaluate the data, and analyze available air quality and meteorological data and related activities in the area. If design values show noncompliance with the 9 ppm standard, New Jersey will implement the appropriate contingency measures.

1. Control Measures

New Jersey has implemented a number of measures to control motor vehicle CO emissions. Emission reductions achieved through the implementation of these control measures are enforceable. These measures include the Federal Motor Vehicle Control Program, Federal reformulated gasoline, New Jersey's pre-1990 modifications to its inspection and maintenance (I/M) program, and local control measures relied on in the SIP.

The State of New Jersey has demonstrated that actual enforceable emission reductions are responsible for the air quality improvement and that the CO emissions in the base year are not artificially low due to local economic downturn. The EPA finds that the combination of existing EPA approved-SIP and Federal measures contribute to the permanence and enforceability of reductions in ambient CO levels that have allowed the New Jersey portion of the NYNNJLI CO area to attain the NAAQS since 1995.

New Jersey commits to continue implementation of all control measures used to bring the area into attainment.

2. Contingency Measures

The State plans to continue to use the contingency measure from the original maintenance plan. The plan included implementation of an enhanced I/M program. This program is fully operational and the State commits to meet the performance standard for an enhanced I/M program in an effort to maintain the CO NAAQS. Although the plan is currently in place, EPA guidance allows for it to act as a contingency measure. We approved this measure in the previous maintenance plan and are proposing to approve it in this action. If, in the future, it becomes necessary to reduce CO levels further, New Jersey will work with the local Transportation Planning Organizations or Metropolitan Planning Organizations to identify and implement transportation control measures such as Transportation Demand Management measures, signal improvement projects, bicycle projects, and various transit related projects as necessary.

F. Conformity

Section 176(c) of the Act defines conformity as meeting the SIP's purpose of eliminating or reducing the severity and number of violations of the NAAQS and achieving expeditious attainment of such standards. The Act further defines conformity to mean that no Federal activity will: (1) Cause or contribute to any new violation of any standard in any area; (2) increase the frequency or severity of any existing violation of any standard in any area; or (3) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area.

The Federal transportation conformity rule, 40 CFR part 93 subpart A, sets forth the criteria and procedures for demonstrating and assuring conformity of transportation plans, programs and projects which are developed, funded or approved by the U.S. Department of Transportation, and by metropolitan planning organizations or other recipients of federal funds under Title 23 U.S.C. or the Federal Transit Laws (49 U.S.C. chapter 53). The transportation conformity rule applies within all nonattainment and maintenance areas. As prescribed by the Rule, once an area has an applicable SIP with motor vehicle emissions budgets, the expected emissions from planned transportation activities must be consistent with (''conform to'') such established budgets for that area.

In the case of the NYNNJLI, CO limited maintenance plan area, however, the emissions budgets may be treated as essentially not constraining for the length of this second maintenance period as long as the area continues to meet the limited maintenance criteria, because there is no reason to expect that these areas will experience so much growth in that period that a violation of the CO NAAQS would result. In other words, emissions from on-road transportation sources need not be capped for the maintenance period because it is unreasonable to believe that emissions from such sources would increase to a level that would threaten the air quality in this area for the duration of this maintenance period. Therefore, for the limited maintenance plan CO maintenance area, all Federal actions that require conformity determinations under the transportation conformity rule are not required to satisfy the regional emissions analysis requirements in 40 CFR 93.118 or 93.119 of the rule (40 CFR 93.109(e)).

Since limited maintenance plan areas are still maintenance areas, however, transportation conformity determinations are still required for transportation plans, programs and projects. Specifically, for such determinations, transportation plans, transportation improvement programs, and projects must still demonstrate that they are fiscally constrained (40 CFR part 108) and must meet the criteria for consultation and Transportation Control Measure (TCM) implementation in the conformity rule (40 CFR 93.112 and 40 CFR 93.113, respectively). In addition, projects in limited maintenance areas will still be required to meet the criteria for CO hot spot analyses to satisfy ''project-level'' conformity determinations (40 CFR 93.116 and 40 CFR 93.123) which must incorporate the latest planning assumptions and models that are available. All aspects of transportation conformity (with the exception of satisfying the emission budget test) will still be required. Approval of the limited maintenance plan does not supersede the current 2014 motor vehicle emissions budget. However, conformity determinations conducted now and in the future would not need to conduct an emission budget test.

If the area should monitor CO concentrations at or above the limited maintenance eligibility criteria or 7.65 parts per million then that maintenance area would no longer qualify for a limited maintenance plan and would revert to a full maintenance plan. In this event, the limited maintenance plan would remain applicable for conformity purposes only until the full maintenance plan is submitted and the EPA has found its motor vehicle emissions budget adequate for conformity purposes or the EPA approves the full maintenance plan SIP revision. At that time regional emissions

analyses would resume as a transportation conformity criteria.

On July 27, 2015, the EPA posted New Jersey's CO limited maintenance plan on its Adequacy Review Web site: *http://www.epa.gov/otaq/stateresources/transconf/adequacy.htm.* We did not receive any comments by the August 26, 2015, deadline. The EPA may now elect to proceed with finding the CO limited maintenance plan adequate for transportation conformity purposes either as part of the SIP's final approval or in a separate notice of adequacy. The EPA's adequacy review process is described in 40 CFR part 93.118(f).

In addition to transportation conformity, approval of the CO limited maintenance plan would have implications for general conformity (40 CFR part 93 Subpart B). Federal actions subject to general conformity would be presumed to conform under a limited maintenance plan as actions in this area will automatically satisfy the budget test of 40 CFR 93.158(a)(5)(i)(A), as described in the October 1995 EPA memo ''Limited Maintenance Plan Option for Nonclassifiable CO Nonattainment Areas'' from Joseph Paisie, Group Leader, Integrated Policy and Strategies Group, Office of Air Quality and Planning Standards.

IV. What is the New Jersey Attainment/ Base Year CO Inventory?

Section 182(a)(3) and 172(c)(3) of the Act requires the periodic submission of a base inventory for SIP planning processes to address the pollutants for the eight hour-ozone, $PM_{2.5}$ and CO national ambient air quality standard. Identifying the base year gives certainty to states that requires submission of the ozone, $PM_{2.5}$ and CO emission inventories periodically. These requirements allow the EPA, based on the states' progress in reducing emissions, to periodically reassess its policies and air quality standards and revise them as necessary. Most important, the ozone, $PM_{2.5}$ and CO inventories will be used to develop and assess new control strategies that the states will need to submit in their attainment demonstration SIPs for the new national ambient air quality standards for ozone, $PM_{2.5}$ and for CO. The base year inventory may also serve as part of statewide inventories for purposes of regional modeling in transport areas. The base year inventory plays an important role in modeling demonstrations for areas classified as nonattainment and outside transport regions. For the reasons stated above, ideally the EPA would therefore emphasize the importance and benefits of developing a comprehensive, current, and accurate emission inventory (similar to the 1990 base year inventory effort). In this case, the 2007 base year has been selected as the inventory that will be used for planning purposes for the NYNNJLI CO area.

There are specific components of an acceptable emission inventory. The emission inventory must meet certain minimum requirements for reporting each source category. Specifically, the source requirements are detailed below.

The review process, which is described in the accompanying TSD, is used to determine that all components of the base year inventory are present. This review also evaluates the level of supporting documentation provided by the state, assesses whether the emissions were developed according to current EPA guidance, and evaluates the quality of the data.

The review process is outlined here and consists of 8 points that the inventory must include. For a base year emission inventory to be acceptable, it must pass all of the following acceptance criteria:

1. Evidence that the inventory was quality assured by the state and its implementation documented.
2. The point source inventory was complete.
3. Point source emissions were prepared or calculated according to the current EPA guidance.
4. The area source inventory was complete.
5. The area source emissions were prepared or calculated according to the current EPA guidance.
6. Non-road mobile emissions were prepared according to the current EPA guidance for all of the source categories.
7. The method (*e.g.,* Highway Performance Monitoring System or a network transportation planning model) used to develop VMT estimates followed the EPA guidance.
8. On-road mobile emissions were prepared according to the current EPA guidance.

Based on the EPA's review, New Jersey satisfied all of the EPA's requirements for purposes of providing a comprehensive, accurate, and current inventory of actual emissions for CO areas. Where applicable, CO peak winter season daily emissions are provided for the CO nonattainment area. The inventory was developed in accordance with *Emission Inventory Guidance for Implementation of Ozone and Particulate Matter NAAQS and Regional Haze Regulation,* dated August 2005. *Using MOVES to Prepare Emission Inventories in State Implementation Plans and Transportation Conformity: Technical Guidance for MOVES2010, 2010a and 2010b,* April 2012, and *Example Documentation Report for 1990 Base Year for Ozone and CO SIP Emissions Inventories, March 1992.*

A summary of the EPA's review is given below:

1. The Quality Assurance (QA) plan was implemented for all portions of the inventory. The QA plan included a QA/Quality control (QC) program for assessing data completeness and standard range checking. Critical data elements relative to the inventory sources were assessed for completeness. QA checks were performed relative to data collection and analysis, and double counting of emissions from point, area and mobile sources. QA/QC checks were conducted to ensure accuracy of units, unit conversions, transposition of figures, and calculations. The inventory is well documented. New Jersey provided documentation detailing the methods used to develop emissions estimates for each category. In addition, New Jersey identified the sources of data used in developing the inventory.
2. The point source emissions are complete and in accordance with the EPA guidance.
3. The point source emissions were prepared/calculated in accordance with the EPA guidance.
4. The area source emissions are complete and in accordance with the EPA guidance.
5. Area source emissions were prepared/calculated in accordance with the EPA guidance.
6. Emission estimates for the non-road mobile source categories are correctly based on the latest non-road mobile model or other appropriate guidance and prepared in accordance with the EPA guidance.
7. The method used to develop VMT estimates is in accordance with the EPA guidance and was adequately described and documented in the inventory report.
8. The latest MOVES model was used in accordance with the EPA's guidance.

The 2007 base year inventory has been developed in accordance with EPA guidance. Therefore, EPA is proposing to approve the 2007 base year CO emission inventory. A more detailed discussion of how the emission inventory was reviewed and the results of the review are presented in the TSD. Detailed emission inventory development procedures can be found in the following document: *Emission Inventory Guidance for Implementation of Ozone and Particulate Matter NAAQS and Regional Haze Regulation,* dated August 2005; *Using MOVES to Prepare Emission Inventories in State*

Implementation Plans and Transportation Conformity: Technical Guidance for MOVES2010, 2010a and 2010b, April 2012; and *Example Documentation Report for 1990 Base Year for Ozone and CO SIP Emissions Inventories, March 1992.* See Table 1 for a summary of 2007 CO peak winter season daily emission estimates by source sector and by county for the NYNNJLI CO area.

V. Why is New Jersey shutting down 5 CO Maintenance Monitors?

In order to conserve resources, the State is seeking to discontinue monitoring in Burlington, Freehold, Morristown, Perth Amboy, and East Orange since current air quality levels do not warrant the additional expense of running CO monitors in those areas. The State has committed to continue CO monitoring in Camden and Elizabeth, and will reestablish CO monitoring in Burlington, Freehold, Morristown, Perth Amboy, and East Orange if air quality in Camden and Elizabeth degrade significantly. The Camden and Elizabeth sites have been judged to be representative of these 5 CO maintenance monitor sites and are thus acting as their surrogate sites. Starting in the early 1970's, EPA has set national standards that have considerably reduced emissions of CO and other pollutants from motor vehicles, including tailpipe emissions, new vehicle technologies, and clean fuels programs. Because of this, the EPA believes that it is unlikely that the maintenance area will exceed the CO NAAQS again. Thus, we believe that the revisions that New Jersey has made to its maintenance plan will continue to protect the citizens of New Jersey from high CO concentrations, and also conserve resources. Additional detail can be seen in the accompanying TSD to this notice.

VI. What action is the EPA proposing to take?

The EPA has evaluated New Jersey's submittals for consistency with the Act and Agency regulations and policy. The EPA is proposing to approve New Jersey's CO limited maintenance plan because it meets the requirements set forth in section 175A of the Act and continues to demonstrate that the NAAQS for CO will continue to be met for the next ten years. The EPA is also proposing to approve the 2007 Attainment/Base Year CO emissions inventory. Finally, the EPA also proposes to approve the shutdown of 5 CO maintenance monitors in New Jersey, since CO monitoring will continue at other representative locations across the State.

The EPA views the SIP revisions proposed in today's proposal as separable actions. This means that if the EPA receives adverse comments on particular portions of this notice and not on other portions, the EPA may choose not to take final action at the same time in a single notice on all of these SIP revisions. Instead, the EPA may choose to take final action on these SIP revisions in separate notices.

Interested parties may participate in the Federal rulemaking procedure by submitting written comments to the EPA Region 2 Office by the method discussed in the **ADDRESSES** section of this action.

VII. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and the EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law. Thus, Executive Order 13175 does not apply to this action.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: March 14, 2016.

Judith A. Enck,

Regional Administrator, Region 2.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 580

[Docket No. NHTSA–2016–0037]

RIN 2127–AL39

Odometer Disclosure Requirements

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice of Proposed Rulemaking (NPRM).

SUMMARY: This notice is being issued pursuant to the Moving Ahead for Progress in the 21st Century Act of 2012 requiring NHTSA to prescribe regulations permitting States to adopt schemes for electronic odometer disclosure statements. To permit States to allow electronic odometer disclosures, NHTSA is proposing to amend the existing requirements to clarify that most of those requirements apply regardless of the technology used for the disclosure. NHTSA is further

proposing to add a new section containing specific additional requirements that would apply only to electronic disclosures to ensure the secure creation and maintenance of the electronic records. Through this proposal NHTSA seeks to allow odometer disclosures in an electronic medium while maintaining and protecting the existing system(s) that ensure accurate odometer disclosures and aid law enforcement in prosecuting odometer fraud. NHTSA is also proposing to extend an existing exemption for vehicles more than 10 years old to 25 years.

DATES: You should submit comments early enough to ensure that Docket Management receives them not later than May 24, 2016.

ADDRESSES: You may submit comments to the docket number identified in the heading of this document by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., between 9 a.m. and 5 p.m. Eastern Standard Time, Monday through Friday, except Federal holidays.
- *Fax:* (202) 493–2251.

Regardless of how you submit your comments, you should mention the docket number of this document.

You may call the Docket at (202) 366–9324.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Public Participation heading of the Supplementary Information section of this document. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act discussion below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78).

Confidential Information: If you wish to submit any information under a claim of confidentiality, you should submit two copies of your complete submission, including the information you claim to be confidential business information, and one copy with the claimed confidential business information deleted from the document, to the Chief Counsel, NHTSA, at the address given below under **FOR FURTHER INFORMATION CONTACT**. In addition, you should submit two copies, from which you have deleted the claimed confidential business information, to Docket Management at the address given above under **ADDRESSES**. When you send a comment containing information claimed to be confidential business information, you should follow the procedures set forth in 49 CFR part 512 and include a cover letter setting forth the information specified in our confidential business information regulation. (49 CFR part 512.)

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* and follow the online instructions for accessing the dockets or go to the street address listed above.

FOR FURTHER INFORMATION CONTACT:

For policy and technical issues: Mr. David Sparks, Director, Office of Odometer Fraud, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Telephone: (202) 366–5953. Email: *David.Sparks@dot.gov.*

For legal issues: Ms. Arija Flowers, Trial Attorney, Office of the Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Telephone: (202) 366–5263.

SUPPLEMENTARY INFORMATION:

I. Background

A. Executive Summary

This document is being issued pursuant to the Moving Ahead for Progress in the 21st Century Act of 2012 (MAP–21, or Pub. L. 112–141), which amended Section 32705 of Title 49, United States Code, by adding the following subsection:

> (g) ELECTRONIC DISCLOSURES.—Not later than 18 months after the date of enactment of the Motor Vehicle and Highway Safety Improvement Act of 2012, in carrying out this section, the Secretary shall prescribe regulations permitting any written disclosures or notices and related matters to be provided electronically.

§ 31205, 126 Stat. 761 (2012).

To permit States to allow electronic odometer disclosures, NHTSA is proposing to amend the existing requirements to clarify that most of those requirements apply regardless of the technology used for the disclosure. NHTSA is further proposing to add a new section containing specific additional requirements that would apply only to electronic disclosures to ensure the secure creation and maintenance of the electronic records. Through this proposal NHTSA seeks to allow odometer disclosures in an electronic medium while maintaining and protecting the existing system(s) that ensure accurate odometer disclosures and aid law enforcement in prosecuting odometer fraud. The new issues addressed by the new requirements are electronic signatures, security of the hardware in an electronic odometer disclosure system, determination of official document, power of attorney and record retention. NHTSA is also proposing to modify an existing exemption for vehicles more than 10 years old to 25 years.

B. The Cost Savings Act, the Truth in Mileage Act and Subsequent Amendments

1. The Cost Savings Act

In 1972, Congress enacted the Motor Vehicle Information and Cost Savings Act (Cost Savings Act) to, among other things, protect purchasers of motor vehicles from odometer fraud. See Public Law 92–513, 86 Stat. 947, 961–63 (1972).

To assist purchasers in knowing the true mileage of a motor vehicle, Section 408 of the Cost Savings Act required the transferor of a motor vehicle to provide written disclosure to the transferee in connection with the transfer of ownership of the vehicle. See Public Law 92–513, 408, 86 Stat. 947 (1972). Section 408 required the Secretary to issue rules requiring the transferor to give a written disclosure to the transferee in connection with the transfer of the vehicle. 86 Stat. 962–63. The written disclosure was to include the cumulative mileage registered on the odometer, or disclose that the actual mileage is unknown, if the odometer reading is known to the transferor to be different from the number of miles the vehicle has actually traveled. The rules were to prescribe the manner in which information is disclosed under this section and in which such information is retained. Id. Section 408 further stated that it shall be a violation for any transferor to violate any rules under this section or to knowingly give a false statement to a transferee in making any disclosure required by such rules. Id. The Cost Savings Act also prohibited disconnecting, resetting, or altering motor vehicle odometers. Id. The statute

subjected violators to civil and criminal penalties and provided for Federal injunctive relief, State enforcement, and a private right of action.

Despite these protections, there were shortcomings in the odometer provisions of the Cost Savings Act. Among others, in some States, the odometer disclosure statement was not on the title; instead, it was a separate document that could easily be altered or discarded and did not travel with the title. Consequently, the separate disclosure statement did not effectively provide information to purchasers about the vehicle's mileage. In some States, the title was not on tamper-proof paper. The problems were compounded by title washing through States with ineffective controls. In addition, there were considerable misstatements of mileage on vehicles that had formerly been leased vehicles, as well as on used vehicles sold at wholesale auctions.

2. The Truth in Mileage Act

In 1986, Congress enacted the Truth in Mileage Act (TIMA), which added provisions to the odometer provisions of the Cost Savings Act. See Public Law 99–579, 100 Stat. 3309 (1986). The TIMA amendments expanded and strengthened Section 408 of the Cost Savings Act.

Among other requirements, TIMA precluded the licensing of vehicles, the ownership of which was transferred, in any State unless several requirements were met by the transferee and transferor. The transferee, in submitting an application for a title, is required to provide the transferor's (seller's) title, and if that title contains a space for the transferor to disclose the vehicle's mileage, that information must be included and the statement must be signed and dated by the transferor.

TIMA also precluded the licensing of vehicles, the ownership of which was transferred, in any State unless several titling requirements were met. Titles must be printed by a secure printing process or other secure process. They must indicate the mileage and contain space for the transferee to disclose the mileage in a subsequent transfer. As to lease vehicles, the Secretary was required to publish rules requiring the lessor of vehicles to advise its lessee(s) that the lessee is required by law to disclose the vehicle's mileage to the lessor upon the lessor's transfer of ownership of the vehicle. In addition, TIMA required that auction companies establish and maintain records on vehicles sold at the auction, including the name of the most recent owner of the vehicle, the name of the buyer, the vehicle identification number and the odometer reading on the date the auction took possession of the vehicle.

As amended by TIMA, Section 408(f)(1) of the Cost Savings Act provided that its provisions on mileage statements for licensing of vehicles (and rules involving leased vehicles) apply in a State, unless the State has in effect alternate motor vehicle mileage disclosure requirements approved by the Secretary. Section 408(f)(2) stated that ''[t]he Secretary shall approve alternate motor vehicle mileage disclosure requirements submitted by a State unless the Secretary determines that such requirements are not consistent with the purpose of the disclosure required by subsection (d) or (e), as the case may be.''

3. Amendments Following the Truth in Mileage Act and the 1994 Recodification of the Cost Savings Act

In 1988, Congress amended section 408(d) of the Cost Savings Act to permit the use of a secure power of attorney in circumstances where the title was held by a lienholder. The Secretary was required to publish a rule to implement the provision. See Public Law 100–561 § 40, 102 Stat. 2805, 2817 (1988), which added Section 408(d)(2)(C). In 1990, Congress amended section 408(d)(2)(C) of the Cost Savings Act. The amendment addressed retention of powers of attorneys by States and provided that the rule adopted by the Secretary not require that a vehicle be titled in the State in which the power of attorney was issued. See Public Law 101–641 § 7(a), 104 Stat. 4654, 4657 (1990).

In 1994, in the course of the 1994 recodification of various laws pertaining to the Department of Transportation, the Cost Savings Act, as amended by TIMA, was repealed. It was reenacted and recodified without substantive change. See Public Law 103–272, 108 Stat. 745, 1048–1056, 1379, 1387 (1994). The statute is now codified at 49 U.S.C. 32705 *et seq.* In particular, Section 408(a) of the Cost Savings Act was recodified at 49 U.S.C. 32705(a). Sections 408(d) and (e), which were added by TIMA (and later amended), were recodified at 49 U.S.C. 32705(b) and (c). The provisions pertaining to approval of State alternate motor vehicle mileage disclosure requirements were recodified at 49 U.S.C. 32705(d).

4. FAST Act Amendments

Section 24111 of the Fixing America's Surface Transportation Act of 2015 (FAST Act, or Public Law 114–94), signed into law on December 4, 2015, allows States to adopt electronic odometer disclosure systems without prior approval of the Secretary (''the Secretary'') of the Department of Transportation. Any such system must comply with applicable State and Federal laws regarding electronic signatures under 15 U.S.C. 7001 *et seq.,* meet the requirements of 49 U.S.C. 32705 and provide for ''appropriate authentication and security measures,'' Public Law 114–94 § 24111. States may only adopt electronic odometer systems without prior approval of the Secretary until the effective date of the rules proposed in this notice. Id.

In providing States with the opportunity to implement electronic odometer disclosure systems until the effective date of the regulations now being proposed, the FAST Act amendments do not alter existing statutory odometer disclosure requirements or modify the intent of those requirements. Effective odometer disclosure systems are essential to protecting consumers from odometer fraud and must reduce or eliminate opportunities for such fraud to the greatest practicable extent. Federal and State governments have an interest in preventing such fraud.

The agency's proposed regulations, as contained in this notice, as well as our prior responses to State petitions for approval of alternative disclosure schemes (discussed below) contain guidance on the potential strengths and weaknesses of electronic odometer disclosure schemes and may serve as a resource for States implementing electronic odometer disclosure systems under the FAST Act. NHTSA respectfully requests that States adopting electronic odometer disclosure schemes under the authority granted by the FAST Act be mindful of the persistence and ingenuity of those who would commit odometer fraud as well as their propensity to find and exploit weaknesses in the disclosure requirements of particular jurisdictions. The agency therefore suggests that the issues considered in this notice and the accompanying regulatory proposals be carefully considered in the formulation of any electronic odometer disclosure system.

C. Overview of NHTSA's Odometer Disclosure Regulations

The implementing regulations for the odometer provisions of the Cost Savings Act, as amended, are found in Part 580 of Title 49 of the Code of Federal Regulations (CFR). These regulations establish the minimum requirements for odometer disclosure, the form of certain documents employed in disclosures, and the security of title documents and power of attorney forms. The regulations also set the rules for

transactions involving leased vehicles, set recordkeeping requirements including those for auctions, and authorize the use of powers of attorney in limited circumstances. In addition, Part 580 also contains provisions exempting certain classes of vehicles from the disclosure regulations and provides a petition process by which a State may obtain approval of alternate disclosure requirements. The following paragraphs summarize some of the important aspects of the regulations.

Regulations governing disclosures are codified in 49 CFR 580.5, 580.7 and 580.13. Section 580.5(c) requires, in connection with the transfer of ownership of a motor vehicle, the odometer disclosure by the transferor to the transferee on the title. Following the initial execution
on a title, reassignment documents may be used. As provided by the regulations, in the case of a transferor in whose name the vehicle is titled, the transferor shall disclose the mileage on the title, and not on a reassignment document. Section 580.5(c) requires a transferor to sign, and to print his/her name on an odometer disclosure statement with the following information: (1) The odometer reading at the time of transfer (not to include tenths of miles); (2) the date of transfer; (3) the transferor's name and current address; (4) the transferee's name and current address; and (5) the identity of the vehicle, including its make, model, year, body type, and VIN. The transferor must also, under § 580.5(e), certify whether the odometer reading reflects the vehicle's actual mileage, disclose whether the odometer reading reflects mileage in excess of the odometers mechanical limit or, if the odometer does not reflect the actual mileage, must state that the odometer reading should not be relied on. The transferee must sign the statement. Each title, at the time it is issued to the transferee, must contain the mileage disclosed by the transferor.

To ensure that vehicles subject to leases of 4 months or more have accurate odometer readings executed on titles at the time of transfer, § 580.7(a) requires lessors to provide written notice to the lessee of the lessee's obligation to disclose the mileage of the leased vehicle and the penalties for failure to disclose the information. In connection with the transfer of ownership of a leased vehicle, lessees are required by § 580.7(b) to provide disclosures comparable to those required by §§ 580.5(c) and (e), noted above, to the lessor along with the date the lessor notified the lessee of disclosure requirements. Additionally, the lessor must state the date the lessor received the lessee's completed disclosure statement and must also sign it. Under § 580.7(d) a lessor transferring ownership of a vehicle (without obtaining possession) may indicate the mileage disclosed by the lessee on the vehicle's title unless lessor has reason to believe the lessee's disclosure is inaccurate.

If allowed by State law, the transferor may give the transferee a power of attorney to execute the mileage disclosure on the title, as provided by § 580.13(a) when the title is physically held by a lienholder or has been lost and the transferee obtains a duplicate title on behalf of a transferor. Sections 580.13(b) and (d) provide that the transferor must disclose information identical to that required by §§ 580.5(c) and (e) on part A of the secure power of attorney form. The transferee is required to sign the power of attorney form part A and print his/her name. See § 580.13(e). In turn, § 580.13(f) requires the transferee, upon receipt of the transferor's title, to make on the title exactly the mileage disclosure as disclosed by the transferor on the power of attorney.

After part A of the power of attorney form has been used, part B may be executed when a vehicle addressed on part A is resold. Part B of the secure power of attorney form, if permitted by State law, allows a subsequent transferee to give a power of attorney to his transferor to review the title and any reassignment documents for mileage discrepancies, and if no discrepancies are found, to acknowledge disclosure on the title, while maintaining the integrity of the first seller's disclosure. The disclosure required to be made by the transferor to the transferee for this transaction on part B of the power of attorney form tracks information required to be made by the transferor to the transferee on the title when ownership of a vehicle is transferred on a title under 49 CFR 580.5. Among other things, the power of attorney must contain a space for the transferor to disclose the mileage to the transferee and sign and date the form, and a space for the transferee to sign and date the form.

To ensure that disclosures made through a power of attorney are accurate, § 580.15 requires the person exercising the power of attorney to certify, on part C of the form, that the disclosures made on a title or reassignment document on behalf of the original seller are identical to those found on part A of the power of attorney. This section also requires a certification, when part B is used, that the mileage disclosed and acknowledged under part B is greater than the mileage disclosed in part A.

Odometer disclosures may only be made on certain documents. These specified documents are a vehicle title (§ 580.5(a)), a reassignment document when used by transferors other than those in whose name the vehicle is titled (§§ 580.5(b) and (c)), a disclosure statement made by a lessee (§ 580.7(b)), and a power of attorney when the title is held by a lienholder or is lost (§ 580.13(a)). When the power of attorney authorized by § 580.13(a) is used, a further power of attorney authorized by § 580.14(a) may be employed to allow a subsequent transferee to approve the seller's disclosure, per § 580.16. Both of the aforementioned powers of attorney must be on the same form.

Section 580.4 requires titles, reassignment documents, and the power of attorney form described §§ 580.13 and 580.14 to be protected against counterfeiting and tampering by a secure printing process or other secure process. These titles, reassignment documents, and powers of attorney must contain a statement referring to Federal odometer law and a warning that failure to complete the form or providing false information may result in fines or imprisonment pursuant to §§ 580.5(d), 580.13(c), and 580.14(c). For a leased vehicle, the lessor is obligated to provide the lessee with written notice of the obligation to make a mileage disclosure and that notice must contain the same warnings (§ 580.7(a)). Except in the limited context of the proper use of the power of attorney forms, no person shall sign an odometer disclosure statement as both the transferor and transferee in the same transaction (§ 580.5(h)).

Part 580 establishes minimum requirements for record retention, which ensures that adequate records exist to create a ''paper trail'' sufficient to support detection and prosecution of odometer fraud. Section 580.8(a) requires motor vehicle dealers and distributors who are required to issue an odometer disclosure to retain copies of each odometer statement they issue and receive for five years. Lessors of leased vehicles must retain the odometer statement they receive from their lessee for five years from the date they transfer ownership of the leased vehicle (§ 580.8(b)). If a power of attorney authorized by §§ 580.13 and/or 580.14 has been used, dealers must retain copies of the document for five years (§ 580.8(c)). Section 580.9 requires auction companies to retain the name of the most recent owner on the date the auction took possession of the motor

vehicle, the name of the buyer, the vehicle identification number and the odometer reading on the date the auction company took possession of the motor vehicle for five years from the date of sale. States are required, under § 580.13(f) to retain the original copy of the power of attorney authorized by § 580.13(a) or (b) and the title for a period of three years or a time period equal to the State's titling record retention period, whichever is shorter.

In addition to the recordkeeping requirements, Part 580 also requires that subsequent buyers of a vehicle that was transferred to their seller through a disclosure made with a Part A power of attorney under § 580.13(a) have access to that power of attorney if they elect not to use Part B and return to the seller to acknowledge disclosure on the title itself (§ 580.16).

Other sections of Part 580 establish a petition process by which States may seek assistance in revising their odometer laws (§ 580.10), may seek approval of alternative odometer disclosure schemes (§ 580.11), and establish exemptions from the disclosure requirements of § 580.5 and § 580.7 (§ 580.17). The exemptions in 580.17 apply to transfers or leases for: (1) Vehicles with a Gross Vehicle Weight Rating (GVWR) over 16,000 pounds; (2) vehicles that are not self-propelled; (3) vehicles manufactured in a model year beginning ten years before January 1 of the calendar year in which the transfer occurs; (4) certain vehicles sold by the manufacturer to any agency of the United States; and (5) a new vehicle prior to its first transfer for purposes other than resale.

D. Previous State Petitions for Approval of Electronic Odometer Disclosure Schemes

The Cost Savings Act, as amended by TIMA in 1986, contains a specific provision on approval of State alternative odometer disclosure programs. Subsection 408(f)(2) of the Cost Savings Act (now recodified at 49 U.S.C. 32705(d)) provides that NHTSA shall approve alternate motor vehicle mileage disclosure requirements submitted by a State unless NHTSA determines that such requirements are not consistent with the purpose of the disclosure required by subsection (d) or (e) as the case may be. (Subsections 408(d), (e) of the Costs Savings Act were recodified to 49 U.S.C. 32705(b) and (c).)

Six States—Virginia, Wisconsin, Florida, New York, Texas, and Arizona—have filed petitions with NHTSA seeking approval of electronic alternative odometer programs under 49 U.S.C. 32705(d)). NHTSA has approved, in whole or in part, five of these six petitions and has not yet taken final action on the sixth and most recent petition. A review of these petitions and the agency's responses is instructive regarding the various concerns raised by the implementation of electronic odometer disclosure systems.

1. Virginia

In December 2006, the Commonwealth of Virginia petitioned NHTSA to approve the Commonwealth's proposed electronic odometer disclosure requirements for intrastate transactions involving vehicles not subject to a lien. Virginia's proposal contemplated a paperless system where users would enter data directly into a State electronic system. To authenticate the identity of the participants, Virginia's petition stated that a unique personal identification number (PIN) and a unique customer number that would both be physically mailed to the individual would be used in conjunction with the customer's date of birth (DOB) to allow creation of an electronic odometer disclosure statement and signature. For dealers, the Virginia proposal stated that each dealer would provide the State with a list of employees authorized to make disclosures for the dealership. These individuals would be provided customer number PINS by mail and would use these identifiers in the same fashion as a private individual to verify their identity so they could complete transactions. In addition, transactions involving dealerships would require that the dealership enter a dealer number to complete the transaction.

Virginia's proposed electronic odometer disclosure would be made in the same way a paper disclosure would be made. The transferor would fill out the electronic form that contained the same entries and warnings as those found on a paper title and then sign it electronically. The transferee would then examine the odometer disclosure executed by the transferor and either accept it or reject it. The disclosure statement would be linked to the electronic title and the transferor would be instructed to mail any existing paper title to the State for destruction. The proposal also stated that the transferee could obtain a paper copy of the title upon request.

After finding that the Virginia proposal would properly verify the identity of users, would provide an equivalent level of security to the paper system, and would create an adequate system of records, NHTSA granted Virginia's request on January 7, 2009 (74 FR 643).

2. Texas

Texas filed a petition seeking approval of alternative odometer disclosure requirements in June 2008. The State proposal would transfer vehicles' titles electronically for in-state transactions between residents where there are no security interests in the vehicle. The proposal did not encompass leased vehicles, the use of a power of attorney, or interstate transactions. Texas's system would eliminate paper titles (except as requested) by creating an electronic title and require transfers of vehicle title for in-state transactions to be made using the internet. The identities of the parties, who would have to be Texas residents holding a valid State identification credential, would be verified by matching four personal data elements and two forms of identification against a State database. Odometer mileage disclosures would be made by requiring the seller and buyer to separately log into a secure Web site and each enter the odometer mileage. Upon successful completion of the transaction, the seller would mail the paper title to the State for destruction. The title would remain as an electronic record and the transferee could receive a paper title on request.

NHTSA's initial determination, published on November 18, 2009, 74 FR 59503, preliminarily granted the Texas petition on the condition that Texas amend its program to enable transferees to obtain a paper copy of the title that met the requirements of TIMA, require dealers to retain a copy of all odometer disclosures that they issue and receive, and require disclosure of the brand (the brand states whether the odometer reflects the actual mileage, reflects the mileage in excess of the designated odometer limit or differs from the actual mileage and is not reliable.) Id. at 59506. Following submission of comments by Texas clarifying features of its proposal, NHTSA granted the Texas petition in a final determination issued on April 22, 2010. 75 FR 20925. The final determination noted that the Texas petition and comments indicated that the proposed system contained sufficient safeguards and record keeping requirements to meet the purposes of TIMA. Further, the agency noted that since Texas would require persons with an electronic title to submit any paper titles to the State for destruction, the proposal would prevent potential mischief caused by duplicate titles. Id. at 20929.

3. Wisconsin

In September 2009, Wisconsin filed a petition seeking approval of an electronic odometer disclosure system limited to intrastate transactions involving motor vehicle dealers. Identity verification would be based on customers entering a minimum of three personal identifiers—name, address, date of birth, product number, Driver License/ID number, and a Federal Employer Identification Number or partial Social Security Number—in the State system. Once the user is verified under this scheme, the user could begin the title transaction. As with the earlier petitions, Wisconsin proposed that electronic odometer disclosures be linked to, and become part of, the title record in the State's database and a title transfer could not be completed unless an electronic odometer disclosure had been completed. Also, if a paper title is needed, the Wisconsin DMV would print the title on secure paper with the odometer disclosure statement in the proper location and format under existing rules.

In April 2010, NHTSA published an Initial Determination proposing to approve Wisconsin's program, subject to the resolution of certain concerns. 75 FR 20965 (Apr. 22, 2010). In particular, NHTSA raised questions about how the Wisconsin program would manage odometer disclosures for leased vehicles. In response to NHTSA's concerns, Wisconsin submitted comments stating that lessee odometer disclosures would be addressed in the future.

NHTSA published a Final determination approving a revised Wisconsin electronic odometer disclosure plan on January 10, 2011. 76 FR 1367. The Agency found the Wisconsin proposal to be consistent with the odometer disclosure requirements. The verification scheme and form of the electronic disclosure provided adequate assurances that the persons executing the disclosure were the actual transferor and transferee. Thereafter the odometer disclosure statement would reside as an electronic record in the Wisconsin database and would be linked to the vehicle's title. NHTSA also noted that the electronic title would, under Wisconsin law, be the official title and that paper titles would be issued only if needed for an interstate transaction or a transfer that could not be completed electronically.

4. Florida

In December 2009, Florida proposed a hybrid electronic disclosure system in which the electronic transactions would be performed through authorized tag agents. Because the electronic data entries would only be made through terminals located at tag agent locations, Florida proposed that the required odometer disclosures for certain transactions would be made on physical documents that would then be delivered to tag agents who would then enter disclosure information into the State system. Under Florida's proposal a seller with a vehicle having an electronic title wishing to sell the car would visit a tag office with the buyer. After providing adequate identification to the tag agent, the buyer and seller would sign, in the presence of the tag agent, a secure reassignment form transferring ownership and disclosing the odometer reading. A title would then be issued in the buyer's name and stored electronically, or the buyer could choose to have the title printed as a physical document.

For transactions involving dealers, Florida proposed that a seller with e-title would bring the vehicle to a dealership. The seller and dealer would complete a secure reassignment form with odometer disclosure. When the dealer sold the vehicle to another buyer, the dealer and buyer would complete another secure reassignment form with odometer disclosure. The dealer would take both of the secure reassignment forms to a tag agency. The vehicle title would then be transferred to the buyer and the buyer would have the option to obtain a paper title or have Florida's Department of Transportation hold the title electronically.

Under Florida's proposal, the lessor of a leased vehicle would hold an e-title. When the lease ends, the lessee would bring the vehicle to a dealership. The lessee would sign an odometer disclosure statement on a secure physical document. The lessor would then sign a secure physical power of attorney to the dealer authorizing the dealer to execute the odometer disclosure. The dealer would then sign a physical secure reassignment form agreeing with the odometer disclosure. When the dealer sold the vehicle to another buyer, the dealer would take the various physical documents (bill of sale, reassignment document, and power of attorney) to the tag agency, where the title would be transferred to the buyer. The buyer would then have the option of obtaining a new paper title or having the Florida Department of Transportation hold the vehicle title electronically.

NHTSA's final determination granted the Florida petition in part and denied it in part. 77 FR 36935 (June 20, 2012). Florida's request was granted for electronic transactions involving transfers between private parties but was denied for transactions involving dealers and leased vehicles. Among other things, NHTSA's final determination observed that transactions involving dealers relied on a number of odometer disclosures being made on documents other than the title itself. This, in the Agency's view, was inconsistent with TIMA's command that disclosures be made on the title and not on a separate document. Further, the Florida scheme for dealer transactions would result in new registrations being issued after submission of a disclosure statement made on a physical reassignment document rather than on the title itself, thereby violating the requirement that a vehicle may only be registered if the new owner submits a title containing the odometer disclosure statement. NHTSA denied Florida's proposed requirements for leased vehicles on similar grounds. Because of the proposed system's reliance on tag agents as the only point of data entry, completion of a transaction and execution of the required disclosure statements required that the disclosures be made on a number of documents, none of which were the actual title. These documents also did not meet other content and security requirements. Moreover, the use of a power of attorney in an instance where the lessor would have access to the title, was viewed by the Agency as inconsistent with the narrow set of circumstances under which such a power of attorney could be used under TIMA.

5. New York

The State of New York filed a petition with NHTSA in November 2010, seeking approval of alternative odometer disclosure requirements. The New York petition sought to convert the State's existing paper process for dealer transactions to an electronic process in which an authorized dealership user would sign on to the State's planned system and enter the vehicle's identifying information. The vehicle's odometer reading, disclosed on the title in the case of a consumer trading in or selling a vehicle to the dealer, would be recorded in the system by the dealer. Access to the system itself would occur only at dealerships by specific dealer employees whose identity would be verified by State issued credentials.

If that dealer sold a vehicle to another licensed New York dealer, the selling dealer would sign on to the proposed electronic system and enter current vehicle information, including the current odometer reading, as well as seller and purchaser information. The

purchasing dealer would subsequently sign on to the system and review the vehicle's identifying information, including the odometer disclosure statement made by the selling dealer, and either accept or reject the transaction. If the purchasing dealer accepted the transaction it would be considered complete. The original pre-dealer title (still in the prior owner's name) would be surrendered to the purchasing dealer at the time of sale. Subsequent transfers between licensed New York dealers would be recorded in the same manner. The history of the vehicle's identifying information entered into the system at each transfer would be maintained on the system.

Under the New York proposal, when a vehicle owned by a New York dealer is sold to a retail purchaser, salvage dealer, out-of-state buyer or other non-New York dealer purchaser, the selling dealer would access the vehicle information on the system. The selling dealer would enter current vehicle information, including the current odometer reading, and would enter seller and purchaser information. A two-part sales receipt/odometer statement would be created on the system. The purchaser would then review the information, including the odometer statement, on the draft receipt displayed on the computer screen. If the purchaser agrees with the odometer statement and other information, the authorized dealer representative would save the data in the system and then print a two-part sales receipt. Both parties would then sign the odometer disclosure statement printed on each of the two parts of the receipt. The dealer would retain the dealer part of the receipt for its files, while the purchaser would be given the purchaser's copy of the receipt along with the original title acquired by the dealer when it purchased the vehicle.

NHTSA's initial determination denied the New York petition because it used a non-secure receipt for odometer disclosure in transfers between New York dealers and out-of-state buyers and was therefore inconsistent with Federal odometer law. 76 FR 65487, 65491 (Oct. 21, 2011). New York subsequently amended its proposal by replacing the non-secure document with a secure State issued paper, New York State MV–50 (Retail Certificate of Sale) form. The result of this change was that a consumer purchasing a vehicle from a dealer would then receive the original title and odometer statement executed by the owner who sold the vehicle to the dealer and the secure MV–50 form with an odometer disclosure. In addition, the mileage disclosed at the time of the sale to the dealer and the mileage disclosed at the time the dealer sold the vehicle to the subsequent retail purchaser would be recorded in New York's system and available for viewing through a web portal.

The Agency's final determination, 77 FR 50381 (Aug. 12, 2012), granted the New York petition as amended. NHTSA found that the employment of the secure State issued and numbered MV–50 form, in conjunction with the odometer disclosure on the original seller's title and the recording of these disclosures in New York's electronic system, met the purposes of TIMA.

6. Arizona

In December 2011, Arizona filed a petition with NHTSA seeking approval of alternative odometer disclosure requirements. The Arizona proposal was limited to transactions involving licensed Arizona dealers and did not encompass interstate transactions. Under this proposal, dealers would electronically scan and upload documents to the State. Dealers would scan documents using a specified format and resolution, encrypt the scanned images and transmit the images to a secure system using account codes, user/group profiles, and passwords. The State would retain electronic files in a document management system, and dealers would be required to retain hard copies of the documents. The disclosures would not be made on a title but on a form described as a Secure Odometer Disclosure. This form would be completed and signed by hand and submitted to Arizona along with other documents after being scanned. The petition appears to propose that the title would not be among the documents submitted to Arizona, and it may be that this procedure would be followed if the seller's title is an electronic title. If the dealer sells the vehicle, that dealer would again scan and electronically submit a Secure Odometer Disclosure, but not the title, to Arizona after selling the vehicle. The dealer would retain the original Secure Odometer Disclosure forms for the retention periods specified by Federal and Arizona law.

In instances where a dealer sought to sell a vehicle that had been purchased from an owner with a paper title, Arizona also proposed that the vehicle would be resold by a dealer using the paper title from the transferor. It appears, based on this description and the requirements of Arizona law that a dealer's name shall be recorded on a title certificate as transferee or purchaser and that a title include space for dealer reassignment information, that the dealer would make an odometer disclosure on the paper title at the time it resells the vehicle. However, the petition also specifies that if the dealer applies for a new title in the name of the vehicle purchaser, the dealer and purchaser would complete a Secure Odometer Disclosure form. The dealer would then scan and electronically submit a title application, the paper title, the Secure Odometer Disclosure form, and supporting documents to Arizona. The dealer would retain the original documents (including the original paper title) for the retention periods specified by Federal and Arizona law. According to the petition, a new title would be sent to the buyer if there is no lien on the vehicle. If there is a lien, both the lien and the title would be maintained as electronic records by the Arizona Department of Transportation.

NHTSA issued an initial determination denying the Arizona petition on August 20, 2012. 77 FR 50071. In this initial determination, the Agency stated that the Arizona petition did not meet 49 CFR 580.11(b), which establishes the requirements for alternative disclosure requirement petitions. The petition did not, in NHTSA's view, set forth the motor vehicle disclosure requirements in effect in the State or adequately demonstrate that the proposal was consistent with the purposes of the Motor Vehicle Information and Cost Savings Act. In regard to the latter, the agency found that making disclosures on documents other than the title, the proposed use of non-secure forms, the failure to address record keeping requirements, and the potential for alterations posed by the use of scanned documents were all inconsistent with the purposes of TIMA.

7. Ongoing Concerns Regarding Electronic Odometer Disclosures in Light of Previous State Petitions

NHTSA's experience in processing State petitions for alternative electronic odometer disclosure schemes illustrates a number of concerns that remain relevant for the purposes of this rulemaking. First and foremost, any electronic odometer disclosure system must be conceived with a full appreciation of the importance of following the command found in TIMA that odometer disclosures must be made on the title itself, or the electronic equivalent of that title, and not, except for a very limited number of exceptions, on any other document. In particular, an electronic odometer disclosure system should minimize or eliminate odometer disclosures made on physical documents instead of promoting the use of such documents as some proposals

examined by NHTSA have done. Similarly, an electronic odometer disclosure system may not rely on a method of transmitting secure paper documents if that method does not preserve the security features now present in physical titles, reassignments, and powers of attorney. A low resolution scan of such a document is not secure and such a scan may not reveal forgeries or alterations.

In addition, as addressed below, any electronic odometer disclosure system must provide adequate means for verifying the identity of transferors and transferees. In the absence of such verification, unauthorized and inaccurate disclosures could easily be entered into State systems by imposters, defeating the purposes of the Cost Savings Act and enhancements established in TIMA and the subsequent amendments. Electronic title and odometer disclosure systems must also foreclose the possibility that a seemingly valid physical paper title and an electronic title may co-exist. The presence of two such ''valid'' titles invites fraud and creates opportunities for confusion and deception. While States are under no obligation to implement electronic odometer disclosure systems that accommodate transactions involving leased vehicles, any system that proposes to do so must employ measures that meet the existing regulatory requirements without employing physical forms such as a power of attorney that are not authorized under agency regulations. Finally, all electronic odometer disclosure systems must be designed not to impede interstate vehicle sales while providing consumers with protection against odometer fraud. Unless and until electronic odometer disclosure is implemented in all States, Territories, and the District of Columbia, secure paper titles or their equivalent will be needed for the purposes of making odometer disclosures in interstate transactions.

II. e-Manifest

In developing this proposal, NHTSA reviewed the experience of the Environmental Protection Agency (EPA) during the development of its requirements for electronic manifests for hazardous waste. See 79 FR 7517 (Feb. 7, 2014). While the authority EPA was operating under is different from NHTSA's current authority, and the existing system differed from the current odometer disclosure system, NHTSA believes there are lessons to be learned from EPA's experience transitioning from a paper to electronic environment.

The EPA proposal envisioned the agency setting minimum standards for an e-manifest system and various private entities stepping forward to develop and make available such systems. The ''EPA proposed standards in 3 distinct areas: (1) Standard electronic data exchange formats for the manifest; (2) electronic signature methods that could be used to execute manifest signatures electronically; and (3) standard system security controls and work flow procedures to ensure the reliable and consistent processing of manifest data by electronic manifest systems, as well as to ensure the availability and integrity of manifest data submitted through the electronic systems.'' [1] Commenters expressed concern that this proposal could lead to numerous inconsistent approaches to e-manifest, a particular problem for companies with large numbers of inter-state transactions. Others criticized the rigor of the standards proposed which set a higher bar than existed for paper documents. Still others noted that such detailed requirements could frustrate technology in an area which was constantly changing.

The EPA's ultimate solution was to develop a centralized system controlled by the EPA and funded by user fees. This option is not available to NHTSA for odometer disclosures. Nevertheless, we are mindful of the comments EPA received. Vehicle transactions cross State boundaries and the need for various State systems to interact must be considered. Further, both traditional paper-based and electronic systems are likely to exist in neighboring States for some time and must facilitate interstate transactions while providing protection against odometer fraud. The MAP–21 mandate to permit electronic odometer disclosures could be frustrated by requirements that set an unnecessarily higher bar than currently exists for paper documents. However, NHTSA believes that achieving the objectives of the statute—to ensure that consumers receive valid representations of the actual vehicle mileage at the time of transfer and to detect, prevent, and aid in prosecuting odometer fraud—some aspects of the specific disclosure requirements may need to differ for traditional and electronic systems. It is also neither helpful to the public nor wise to create rules that NHTSA must regularly amend to adapt to technological changes. Accordingly, NHTSA has been, and remains, aware of these lessons in developing this proposal.

[1] 79 FR 7517, 7519 (Feb. 7, 2014).

III. Current Proposal

A. Purpose of Odometer Disclosure Requirements

The overall purpose of the odometer disclosure provisions of the Cost Savings Act, as amended, is to protect consumers by assuring that they receive valid representations of a vehicle's actual mileage at the time of transfer. An additional purpose is to create a system of records and a ''paper trail'' to facilitate detection and prosecution of odometer fraud. The statutory scheme and the current regulations adopted by NHTSA aim to achieve these overall purposes.

In developing the current proposal for electronic odometer disclosures pursuant to MAP–21, NHTSA desires a regulation that continues to achieve these purposes without imposing overly burdensome requirements that are not necessary to achieve these purposes in an electronic environment. That is, electronic disclosures must be made accurately by the actual parties to the transaction to protect consumers and provide assurances that a transferee receives a valid representation of a vehicle's actual mileage at the time of transfer. In addition, electronic disclosure schemes must have retention requirements to create a secure and reliable electronic trail to facilitate detection and prosecution of odometer fraud. Unique issues the agency considered were the ability of different State electronic systems to share data, and the security of that information sharing, as well as the ability to issue secure paper documents for use in States which do not choose to adopt electronic disclosure requirements.

An additional issue considered by the agency was the possibility that, if NHTSA were to adopt only minimum requirements necessary to achieve the above stated purposes, States that voluntarily chose to permit electronic odometer disclosures could do so in ways which could eventually create enough variation to hinder on-going efforts among the States to develop a national system for electronic titling of motor vehicles. However, NHTSA determined that its authority under MAP–21 was intended only to facilitate the change to electronic odometer disclosures, not to impose additional requirements for odometer disclosures. NHTSA requests comments, however, on whether it should go further than proposed in this notice in order to prevent, or limit, variation among the various State systems.

B. Odometer Disclosure Requirements

As noted earlier, NHTSA believes that meeting the objectives of the statute will require some variation in the requirements for traditional and electronic systems. To achieve this, NHTSA is proposing to restructure the requirements to accommodate both ''physical'' and ''electronic'' documents. Therefore we are proposing to amend 580.1 to add the option of electronic disclosures; 580.3 to add new definitions and amend existing definitions to accommodate physical and electronic filings; 580.4 to clarify separate requirements for the security of physical disclosures and electronic disclosures; 580.5 to clarify methods of disclosure for physical and electronic systems; 580.7 to add provisions allowing for the option of electronic disclosures for leased motor vehicles; 580.8 to include electronic copies among the forms of disclosures that must be retained and general requirements for that retention; 580.10 to update the address for NHTSA; 580.11 to add the newly created 580.6 to the sections a State may seek exemption from via petition for alternative disclosure requirements and update the address for NHTSA; 580.13 and 580.14 to revise the provisions relating to the use of a power of attorney to address the potential that transferors from an electronic title State wishing to convey a vehicle to a transferee in a physical title State may not have an opportunity to obtain a State issued secure physical title before transferring ownership of the vehicle and to correct a typographical error that would bring the disclosure requirements into conformity with the disclosure requirements under 580.5 and 580.7; 580.15 to add language clarifying that power of attorney certification is limited to physical document disclosures; and 580.17 to extend the disclosure exemption from ten years to twenty-five years and provide an updated example. NHTSA is proposing to strike the regulatory text in section 580.12 as the provision is obsolete and to reserve the section. Finally, NHTSA is proposing to create a new section 580.6 (previously reserved) which would contain unique requirements for electronic odometer disclosures.

1. Definitions

The most basic proposed change NHTSA is making is to add new definitions for the terms ''Electronic Document,'' ''Physical Document,'' and ''Sign or Signature,'' which are necessary to provide clarity in the requirements for each, taking into account the different security concerns and practical challenges that arise under the different disclosure systems. NHTSA requests comments on whether the following new definitions are appropriate and properly identify the items and actions intended.

a. Electronic Document. NHTSA proposes to add ''Electronic Document'' to the defined terms in part 580.3. This addition is necessary to provide clarity for the requirements and procedures applicable to these documents, as opposed to documents in paper format. NHTSA proposes to define ''Electronic Document'' to mean ''a title, reassignment document or power of attorney that is maintained in electronic form by a state, territory or possession that meets all the requirements of this part.''

b. Physical Document. NHTSA proposes to add ''Physical Document'' to the defined terms in part 580.3. This addition is necessary to provide clarity for the requirements and procedures applicable to these documents, as opposed to documents in electronic format. NHTSA proposes to define ''Physical Document'' to mean ''a title, reassignment document or power of attorney printed on paper that meets all the requirements of this part.''

c. Sign or Signature. NHTSA proposes to add definitions for ''Sign or Signature'' applicable to physical document disclosures and to electronic document disclosures to the terms defined in part 580.3. This addition is necessary to clarify the actions and requirements that qualify as a signature or the signing of a document in the different contexts of physical and electronic disclosures. Further, electronic records of contractual agreements are capable of verification through methods other than written words, and may include sounds, other symbols, or processes. *See* 15 U.S.C. 7006(5) (providing a definition of ''electronic signature''). NHTSA proposes to define ''Sign or Signature'' as meaning ''[f]or a paper odometer disclosure, a person's name, or a mark representing it, as hand written personally'' and ''[f]or an electronic odometer disclosure, an electronic sound, symbol, or process using an authentication system equivalent to or greater than Level 3 as described in National Institute of Standards and Technology (NIST) Special Publication 800–63–2, *Electronic Authentication Guideline,* which identifies a specific individual.''

2. Identity of Parties to a Motor Vehicle Transfer and Security of Signatures

One issue NHTSA considered was the electronic equivalent of the existing requirements for physical signatures on odometer disclosures and how to securely authenticate an electronic signature. This is particularly important because in an electronic environment documents may be ''signed'' remotely. To address this issue, NHTSA reviewed the guidance in the National Institute of Standards and Technology (NIST) Special Publication 800–63–2, *Electronic Authentication Guideline.* The publication defines four levels of assurance, Levels 1 to 4, in terms of the consequences of authentication errors and misuse of credentials, with Level 1 being the lowest assurance level, and Level 4 as the highest. Based on the level, different levels of authentication are recommended to help ensure the security of the information. NHTSA also reviewed a December 16, 2003 memorandum from the Director of the Office of Management and Budget (OMB) to the Heads of all Federal Departments and Agencies.[2] This memorandum guidance was issued by OMB under the Government Paperwork Elimination Act of 1998, 44 U.S.C. 3504 in light of the NIST publication. Attachment A to this memorandum supplements OMB Circular A–130, Management of Federal Information Resources, Appendix II, Implementation of the Government Paperwork Elimination Act (GPEA). While both the NIST publication and the OMB memorandum are directed towards Federal Departments and Agencies, NHTSA believes they provide good guidance in this instance also.

NHTSA is aware that the American Association of Motor Vehicle Administrators (AAMVA) published a report from its Electronic Odometer Task Force in December 2014 (E-Odometer Task Force Report).[3] In this report AAMVA recommends that States implement an electronic signature verification system that complies with at least NIST Level 2, however it also notes that some of the identification discussed would comply with NIST Level 3. As discussed below, NHTSA has made a preliminary determination that at least NIST Level 3 verification should be required, both to prevent the potential harm of fraudulent disclosures and to aid in their prosecution.

Attachment A to the OMB memorandum sets out six potential

[2] OMB Memorandum M–04–04, 12/16/03, *https://www.whitehouse.gov/sites/default/files/omb/assets/omb/memoranda/fy04/m04-04.pdf.*

[3] *http://www.aamva.org/e-Odometer-Task-Force/.*

impact categories, and then, depending on whether the impact is low, moderate, or high, assigns a NIST assurance level. The Attachment does not provide specific guidance for how to assign an overall assurance level if potential impact categories fall in different levels. The impact categories are:

- Inconvenience, distress or damage to standing or reputation.
- Financial loss or agency liability.
- Harm to agency programs or public interests.
- Unauthorized release of sensitive information.
- Personal Safety.
- Civil or criminal violations.

In reviewing these impact categories, NHTSA notes a definite potential for financial loss. The purpose of odometer fraud is to induce consumers to pay more for a used vehicle than they would if they knew the accurate mileage. For an individual consumer, it is important that the value of the vehicle reasonably match the price agreed to, and paid, based upon the information available to the consumer and provided by the seller. In addition, odometer fraud is often committed by the same individual(s) or entities multiple times, resulting in high dollar amounts of damages. State electronic title and odometer disclosure systems will also contain sensitive personal information that could be subject to unauthorized release if the system were not sufficiently secure. Last, odometer fraud is a criminal offense that victimizes innocent consumers. NHTSA and other enforcement agencies use odometer disclosure documents to prove these criminal violations.

Therefore, after reviewing this document, NHTSA has made a preliminary decision that a high level of assurance in the accuracy of the identity of the person making an odometer disclosure is necessary, and therefore the appropriate level of security for odometer disclosures is Level 3 according to the NIST guidelines. NHTSA is therefore proposing that any State which allows electronic odometer disclosures require security protocols at this level or higher. Under the NIST guidelines (*http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-63-2.pdf*), a Level 3 system must have certain minimum attributes. These attributes include verification of the name associated with the user, issuance of a credential to the user through a separate channel such as postal mail, text message or telephone call directed at an address or number confirmed through examination of different independent databases and use of that credential to gain access to the Level 3 system. For example, a person wishing to make odometer disclosures electronically without having to appear in person at a State motor vehicle agency would need to have a valid Government ID number and a financial institution or utility account number that could be confirmed through examining records containing those numbers. The State entity providing the e-title and odometer disclosure service would then check the information provided by the individual and confirm that the name, date of birth, and other personal information in the examined records are consistent and sufficient to identify a unique individual. The State entity would then issue a credential by postal mail or some other means that would direct the credential to the proper person. The issued credential would then be employed by the user to obtain access to the electronic odometer and title system. As outlined in the NIST guidelines, other methods may be employed to attain Level 3 authentication but the important principle, in NHTSA's view, is that Level 3 requires multi-factor identification of an individual applicant who, once their identity has been verified, is provided with a unique credential in order to access the system.

NHTSA is therefore proposing that the requirement for Level 3 authentication be incorporated in the definition of ''signature'' for electronic disclosures. However, this also will require the use of computers by all parties for all transfers in electronic title States. NHTSA requests comments on the appropriate NIST level and if specific identification verification(s) should be required, and further requests comments on how such a system should be implemented, including whether dealers should be required to provide secure computing services to transferors and transferees and what security measures should be mandatory for such services.

Next, NHTSA is proposing to require that each ''signature'' in an electronic environment apply only to a single individual, not to an organization. For example, if a dealership wished to allow multiple employees to execute odometer disclosures on behalf of the dealership, each employee would be required to have and maintain a distinct access identity or code to the electronic odometer system so that the actual individual making the disclosure, not just the dealership, is identified by the ''signature.'' The dealer or entity on whose behalf the individual is making the disclosure must also be identified in the transaction and the dealer(s) and entity on whose behalf the individual works must be recorded as part of the individual's distinct access identity or code.

NHTSA also considered the existing requirements that various parties provide copies of documents as part of the odometer disclosure process, and what would qualify as an equivalent in an electronic environment. For example, section 580.5(f) requires the transferee to return a copy of the odometer disclosure document to the transferor after it is signed. Under the current system, the transferee may apply for a new title for the vehicle, and generally, a State will not title a vehicle without an odometer disclosure statement that contains the signatures of both the transferor and the transferee. However, the State does not usually verify that a copy of the document was returned to the transferor or that the transferor retained it. For this reason, NHTSA is concerned about imposing any requirement in the electronic environment that would be more restrictive than these current requirements. NHTSA therefore proposes to specify only that the requirement to provide a document is satisfied by electronically transmitting the document, provided that the State allows the parties to the transaction access to the completed disclosure statements.

As discussed previously, one purpose of the signature requirement is to aid in the prosecution of odometer fraud. For this reason, NHTSA proposes requiring an electronic ''signature'' to identify an individual, not a business, for example. NHTSA requests comment on whether any other requirements are necessary to ensure that investigators can back trace an electronic ''signature'' to identify the individual and/or computer used in the electronic equivalent of a ''paper trail.'' Conversely, if an odometer disclosure is altered, do the proposed system requirements develop an adequate ''paper trail'' to lead investigators to the IP address or computer used to alter the disclosure, and if not, what additional system requirements are necessary?

3. Security of Title Documents

Currently, § 580.4 requires that titles, which are necessarily all physical documents except in the five jurisdictions with approved petitions for electronic systems pursuant to 49 U.S.C. 32705(d), be printed using a secure printing or other secure process. Further, currently any power of attorney forms and all documents used to reassign title must be issued by the State and be created using a secure process. It is central to the integrity and efficacy of the motor vehicle titling systems and

odometer disclosure laws that the authenticity and security of title documents, at a minimum, be maintained at their current levels in moving to electronic disclosure and titling systems. Currently, investigators are able to examine physical documents and observe indicators of tampering. Unlike paper documents, however, alterations to electronic documents are much more difficult to detect from a visual inspection. Further, while electronic documents and transactions provide opportunity to enhance security, as with physical documents, these systems are still susceptible to manipulation and attacks.

The proposed changes and additions to § 580.4 seek to clarify that the existing requirements apply to physical documents, moving the language to a new paragraph (a), and set forth requirements for electronic documents, in a new paragraph (b), to ensure comparable levels of security and authenticity in electronic documents as exist currently for paper documents. Such requirements are necessary to protect both the financial interests of motor vehicle owner's and potential buyers, as well as to aid law enforcement in preventing, detecting, and prosecuting odometer fraud. NHTSA seeks comments as to whether the proposed changes and additions to § 580.4 appropriately match the security and authenticity requirement for electronic documents to the existing requirements, which apply to paper documents.

a. Electronic Odometer Disclosure System Security

As discussed previously, § 580.4 requires the title, power of attorney or reassignment documents used for odometer disclosures to have certain security safety features to inhibit altering the disclosure and to aid in the detection of alterations.

NHTSA contemplated proposing specific minimum requirements for system security, but has preliminarily determined that it would be counter-productive, and thus inappropriate, to do so. NHTSA based this decision on the knowledge that the rulemaking process is typically slow, while developments in technology are fast and frequent. While proactive changes to enhance cyber security are constantly evolving and improving, cyber-attacks and efforts to undermine the security of electronic data systems are also changing rapidly and frequently. The rulemaking process would not be able to keep pace with these technological changes and it is foreseeable that, if NHTSA imposed specific system requirements, the specific requirements could become obsolete, yet remain the requirements while a new rulemaking is undertaken. Alternatively, to the extent that rulemaking by NHTSA would be able to keep up with the dynamic technological landscape, such constant revisions to the regulations would result in an ever-changing set of specific requirements for States to adhere to.

Further, the potential risks to property interests and commerce presented by insecure vehicle titling and odometer disclosure systems are obvious, since it is critical that the owners, buyers, and sellers of motor vehicles have certainty in their ownership status and avoid being defrauded in the fundamental details about the vehicle they own or are buying.

By NHTSA's adoption of more general minimum requirements, any State that choses to adopt an electronic disclosure system will be able to select the specific system requirements it believes are most appropriate, while ensuring information security for motor vehicle owners, buyers, and law enforcement.

While NHTSA's expectation is that any State implementing an electronic disclosure system would take these various risks into account and establish appropriate safeguards, NHTSA nonetheless requests comments on whether it should establish minimum specific security requirements in this rulemaking and, if so, what requirements would be appropriate. NHTSA requests comment on whether requirements should be included for the hardware used in an electronic odometer system to protect the system from threats which could disrupt the electronic records, either from natural or manmade sources and, if so, what requirements should be included in a final rule. For example, the Federal Information Security Management Act (FISMA) defines a framework to protect Federal government information systems from such threats. Should NHTSA, for example, require any computer or server attached to an electronic odometer system comply with FISMA?

4. Odometer Disclosures

NHTSA considered the issue of what odometer information disclosures and procedures should be required for paper and electronic disclosures, and what appropriate modifications can and should be made for electronic disclosures. In an effort to track the electronic disclosure requirements to the existing requirements, NHTSA makes the following proposals regarding the odometer disclosures and procedures.

In § 580.5 paragraph (a), NHTSA proposes to add the phrase ''whether a physical or electronic document'' to make clear that the disclosure requirements specified in § 580.5 apply to all titles issued. The requirements currently apply to all title transfers and, as a practical matter, this results in no change in the disclosure requirements whether made on a physical document or electronically.

Paragraph § 580.5(c) sets forth certain specific disclosures that must be made as part of a transaction transferring title of a vehicle, including that the odometer disclosure must be made on the title, or on a document being used to reassign the title. As currently written, this requirement necessarily implies the ability to affix information onto a document. To clarify this requirement, NHTSA proposes to add language specifying ''physical document'' in instances of paper title transfers and ''electronic form incorporated into the electronic title'' for instances of electronic title transfers. The requirement for making electronic disclosures on an electronic form incorporated into the electronic title means that paper disclosures would become the rare exception when electronic disclosure and titling is available. Further, the electronic systems would need to be designed to contain or otherwise embed the electronic odometer disclosure in the electronic title. Finally, for electronic transfers where the transferor is the individual in whose name the vehicle is titled, reassignment documents would not be necessary. NHTSA seeks comments on the proposal that disclosures be made on an electronic form incorporated into the electronic title.

NHTSA also considered the issue of how to provide the warnings currently contained in § 580.5(d) to parties conducting electronic transfers. NHTSA proposes to extend these existing requirements to electronic transfers by amending § 580.5(d), specifying that in instances of electronic transfer, the required information must be displayed on the screen, and acknowledged as understood by that party, before any signature can be applied to the transaction. This proposed requirement is intended to ensure that the information is provided in a size and location that is clearly viewable and readable to individuals making electronic transfers, and that transferors do not unintentionally bypass this information without having an opportunity to review it. NHTSA envisions that the acknowledgement would typically be a box for the party

to click acknowledging having seen and understood the information, not unlike the boxes often seen on Web sites and computer programs today acknowledging service limits or contractual rights prior to gaining access to content or services.

NHTSA considered the existing requirements of § 580.5(f), that a transferee print his or her name on the disclosure and return a copy to the transferor and believes that the requirement on a transferee to ''print'' their name is inappropriate for electronic transfers, but that any electronic system should be able to provide some record of the disclosure for the transferor and transferee. NHTSA proposes to not extend the printed name requirement to electronic disclosures because the purpose of the printed name is to provide hand writing exemplars for use in fraud investigations and prosecutions. However, at present, NHTSA is not aware of electronic systems that capture handwriting with the level of clarity and precision that exists when applying hand-writing to paper. As a result, unlike physical handwriting exemplars, NHTSA does not currently believe that electronic handwriting exemplars would provide the intended investigatory and prosecution tools to law enforcement. The requirement that the transferee print his or her name on the disclosure therefore need not be extended to electronic disclosures. In contrast, it remains important for both parties to the transaction to have access to a record showing the disclosure that was made, and it is appropriate to extend the current requirement that the transferee provide a copy of the disclosure to the transferor to electronic transfers.

In an electronic disclosure jurisdiction, the parties would not have physical control of the disclosure documents and the responsibility to provide copies of the disclosure must fall to the operator(s) of the disclosure system. Thus, NHTSA proposes to amend § 580.5(f) to require that jurisdictions with electronic disclosure systems provide a way for the transferor and transferee to obtain copies, in the form of some detailed record, of the disclosure. These records not only provide assurance to the parties of what information was relied upon in the transaction, but could also aid law enforcement in investigations and prosecutions. NHTSA requests comments on the proposal to not extend the printed name requirement to electronic disclosures, including technologies that provide comparable electronic hand-writing exemplars as paper document exemplars, and on the proposal to require that any electronic system be capable of providing the transferor and transferee with a copy or record of the disclosure made.

NHTSA has considered how to handle odometer disclosure for a vehicle that has not been titled or for which the title does not contain a space for the information required. Under the existing paper disclosure systems, in such instances the parties execute the odometer disclosure as a separate paper document. This system would not make sense in an electronic disclosure system since the first time a title was obtained for any given vehicle the odometer disclosure would be incorporated into that electronic title at the time of creation and no electronic title system would be created that did not provide space for the required information. The option relating to insufficient space on the title is a holdover from when odometer disclosures were first required on the title and jurisdictions needed time to bring titles into conformity with the new regulation. That concern is not applicable here since electronic disclosure systems will be designed and implemented using the requirements established in this rule. Similarly, no special provision is needed for providing the information in the first instance of titling in an electronic disclosure jurisdiction, since any electronic system will include the execution of an electronic disclosure that is incorporated into the electronic title upon creation. NHTSA thus proposes to amend § 580.5(g) to add language clarifying that the existing regulation allowing for disclosure on a separate document for first title and instances where the title does not contain space for the disclosure is limited to transactions conducted using physical documents while disclosures for first title issuance in an electronic disclosure system must be made in the electronic system. NHTSA requests comments on the proposal to limit the current separate document disclosures for first title issuance and when the title does not contain sufficient space for the disclosure requirements to paper title jurisdictions, and requiring disclosures for first title issuance to be conducted within the electronic title system in electronic disclosure jurisdictions.

5. Requirements for Electronic Transactions

NHTSA has considered the differences between disclosures made on physical documents and those made on electronic documents and preliminarily determined that additional requirements are necessary to ensure the accuracy and authenticity of electronic disclosures. NHTSA has also considered the complications that could arise, including competing claims of vehicle ownership, if both paper and electronic titles co-exist as an official form of title issued within a jurisdiction. To address these issues, NHTSA is proposing to add a new § 580.6 (previously reserved), to provide requirements that apply only to electronic transactions.

a. Document Integrity

First, NHTSA proposes to add § 580.6(a)(1), requiring that any electronic record be retained in a format that cannot be altered and, further, that indicates any attempts to alter it. This proposed requirement adds as an explicit condition for electronic disclosures an implicit reality of disclosures on physical documents. Disclosures on physical documents provide some method for detection of alterations or attempts to alter the document. While techniques for altering the physical documents evolve over time, they nonetheless leave an indicator, however hard to detect, of that alteration or attempt. Electronic documents thus present a different challenge since many documents are easily altered, and some of the techniques used can be difficult to trace. A system that prevents alteration is critical for consumer confidence in the disclosure system and information relating to the alteration of disclosure documents is critical to the enforcement of the odometer disclosure laws and in preventing odometer fraud. NHTSA requests comments on this proposed additional requirement for electronic disclosures and what, if any, more specific requirements would be appropriate to ensure that electronic records are not altered and indicate any attempts to alter them.

b. Individual Identity Assigned to all Unique Electronic Signatures

Currently, each person signs their own name to a physical document when completing an odometer disclosure and is uniquely identified as an individual. Or at least that is presumed for non-fraudulent transactions. Similarly, in an electronic disclosure system, each individual person will need to be uniquely identified by their own unique electronic signature. This is necessary to protect the financial interests of vehicle owners and purchasers, providing certainty that the vehicle title remains with the lawful owner and that odometer disclosures are made by the appropriate individuals, who can be located, if needed.

As a practical matter, this is particularly necessary for transactions involving individuals who complete portions of disclosures on behalf of others, like an employer. For example, when a vehicle owner seeks to trade in a car at a car dealership in an electronic disclosure jurisdiction the parties would no longer need to provide power of attorney and reassignment documents for the dealer to use in selling the vehicle at a later date, but instead would simply transfer title from the vehicle owner to the car dealer and make the odometer disclosure on the electronic form which is incorporated into the title. This will require an individual at a car dealership to enter information into the electronic disclosure system on behalf of the business or entity on whose behalf that individual is operating.

NHTSA has considered the importance of maintaining confidence that the parties are who they claim to be for ownership and law enforcement purposes. NHTSA has also considered challenges created in fraud investigation and prosecution if both the individual and business, or entity, are not identified by the code or signature associated with an individual acting in this capacity to input data into the system. Accordingly, NHTSA is proposing to add § 580.6(a)(2) requiring that any electronic signature identify an individual and, further, that if the individual is acting in a business capacity or otherwise on behalf of any other individual or entity, that the business or entity also be identified as part of that unique electronic signature. NHTSA requests comments on this proposal.

c. Availability of Documentation in Electronic Disclosure Systems

The physical document disclosure system currently established in § 580 generally requires in various places that individuals be provided with specific documentation. However, in an electronic system, in many cases there will not be any document to provide, and instead, information can be made available to the parties via the electronic system. Moreover, part of the rationale for using an electronic disclosure and titling system is to reduce the amount of paper being used. It would defeat one of the purposes of electronic disclosure to require the printing and delivery of documentation at various stages. It could also add unnecessary complications to the electronic delivery of documentation if specific electronic delivery mechanisms were required. Having considered this factors, NHTSA proposes to add § 580.6(a)(3), providing that any requirement in the regulations to disclose, issue, execute, return, notify, or otherwise provide information to another person is satisfied when a copy of the electronic disclosure or statement is electronically transmitted or otherwise electronically accessible to the party required to receive the disclosure. NHTSA requests comments on the usefulness of this proposal.

d. Physical Documents Used in Making Electronic Disclosures

The continued use of physical documents to accomplish transfer of title or odometer disclosure in an electronic disclosure jurisdiction is strongly discouraged, as each different document presents a new opportunity for fraudulent activity to occur. However, to the extent that the continued use of physical documents is necessary in an electronic system, any physical documents used must comply with all requirements of this part. NHTSA thus proposes the new § 580.6(a)(7) to require that any physical documents used to make electronic disclosures comply with the existing applicable requirements.

e. Co-Existing Physical and Electronic Disclosures and Titles

NHTSA considered the issue of which title and/or odometer disclosure is, and should be, the official document in certain situations. In a written environment it is possible to determine which document has an original signature and, therefore, to distinguish original (or official) documents from copies. This method of determining the original/official document is not available when the original document was created electronically. In addition, when a print copy is made of an electronic odometer disclosure, what should be done to specify whether the print document is now the official document or the electronic document remains the official document? This issue could arise when a vehicle titled with an electronic odometer disclosure is moved to a State which either does not participate in electronic odometer disclosures or which has an electronic odometer system that cannot communicate directly with the system in the State in which the vehicle is currently titled. It could also occur if a vehicle owner in an electronic disclosure State would like a paper copy of a title and/or odometer disclosure for record-keeping purposes.

First, NHTSA is proposing that once an odometer disclosure is incorporated in the electronic title, the electronic title containing the disclosure is the official record of ownership and mileage. The electronic disclosure does not continue as a record separate from the electronic title as that would be contrary to TIMA and would provide additional opportunity for fraud. If an electronic title (containing an odometer disclosure) must be converted to a paper document as the official document, NHTSA is proposing additional requirements. First, only a State or State-authorized entity can create the new official document. Second, the paper document must be set forth by means of a secure printing method as a physical, paper document. As a practical matter, this may present certain logistical challenges, particularly for individuals in an electronic title State who seek to buy a new car, and trade-in their old car, in another State. This issue is discussed at greater length below regarding Power of Attorney, and NHTSA requests comments on how this logistical challenge can be avoided or mitigated. Third, the electronic record must be altered to clearly indicate that an official paper document has been issued, to whom, and the date of issuance.

Second, NHTSA is proposing to allow States to authorize the issuance of some type of record of ownership document that would contain the information on a title and/or odometer disclosure but would not replace the official document. This document could be used for persons who would like a paper copy but would not like the official document to be converted to a paper document. In the proposed § 580.6(a)(5) jurisdictions with electronic title and odometer disclosure systems would be allowed to provide vehicle owners with a paper record of ownership including the odometer disclosure information so long as the document clearly indicates that it is not an official title or odometer disclosure for that vehicle. NHTSA requests comments on the benefits and drawbacks of such a record and whether the option of obtaining such a document should be required under the regulations.

Finally, in reverse situations where a vehicle titled in a State that does not participate in an electronic odometer system is moved to a State with an electronic odometer system, NHTSA is proposing a new § 580.6(a)(4) to require that the prior title and odometer disclosure be copied electronically for retention by the electronic system State and that the paper document(s) be destroyed at the time they are converted to electronic documents. NHTSA further proposes that the electronic copy of the physical document be retained for a minimum of five years, in an order that

permits systematic retrieval, and in a format that cannot be altered and that indicates any attempts to alter it. The five year retention requirement proposed in this paragraph matches the retention period of similar documentation held by dealers and distributors of motor vehicles and auction companies. Finally, NHTSA is also proposing that any paper documents scanned or copied electronically for storage in an electronic system be converted through a process providing a minimum resolution of 600 dots per inch (dpi) to ensure the preservation of security features during the conversion process.

NHTSA requests comments on what standards should be used for scanning and maintaining the documents including whether the scan must be in color, be made at a minimum resolution (and if so, what required minimum resolution should be), or preserve the security features of the original to ensure that fraud or alteration could be detected, should it occur.

C. Leased Vehicles

Section 580.7 deals with the disclosure obligations and requirements for leased vehicles. NHTSA is not aware of any reason why electronic disclosures could not be made for leased vehicles, though lessors wishing to utilize such a system for communications between themselves and lessees would need to develop an electronic system complying with the technological requirements established in § 580.4(b) of this part unless the jurisdiction where the leased vehicle is titled provides such a system. These requirements are necessary as security and authenticity of disclosure information is fundamental to all types of disclosures within the odometer disclosure system. Otherwise, disclosures regarding leased vehicles would continue on physical documents. As with all other electronic disclosures, it is appropriate and necessary that individuals making the disclosure be provided with the notice of Federal law and possible penalties for providing false information. The substantive disclosures would not change for electronic disclosure except that, as with all other electronic disclosures, the person making the disclosure need not provide their ''printed name'' for the reasons previously discussed.

Having considered the issues involved in lessor-lessee communications regarding odometer disclosure statements, NHTSA proposes to add language to § 580.7(a) specifying that legal notices given on paper odometer disclosure documents must be provided to, and acknowledged by, an individual making an electronic disclosure; add language to § 580.7(b) clarifying that a printed name need not be provided for electronic disclosures; and add a new § 580.7(e) requiring any electronic system maintained by a lessor for the purpose of complying with this section meet the requirements set forth in proposed § 580.4(b) or this part. NHTSA requests comments as to whether electronic disclosures of leased vehicles should be a required part of the electronic system established by a jurisdiction or are best left to individual companies/lessors to establish and whether the current proposal would sufficiently aid law enforcement in detecting altered documents.

D. Record Retention

Sections 580.8 and 580.9 include requirements for odometer disclosure record retention by motor vehicle dealers and distributors and by auction companies, respectively. Section 580.8(a) specifies that dealers and distributors must retain a ''Photostat, carbon copy or other facsimile copy of each odometer mileage statement which they issue and receive.'' An electronic odometer disclosure system that does not allow for dealers and distributors to maintain records in electronic format would undermine the purpose for moving to such a system. NHTSA is therefore proposing to amend this requirement to include electronic copies or electronic documents as an acceptable form of record.

Under both sections, records must be stored for five years in a manner and method so they are accessible to NHTSA investigators and other law enforcement personnel. The records must also be stored so they are difficult or impossible to modify. As previously discussed, unlike paper documents, alterations to electronic documents are much more difficult to detect from a visual inspection. Therefore, NHTSA is proposing to add a specific requirement in a new § 580.8(d) and in § 580.9 that electronic records kept by motor vehicle dealers and distributors and by auction companies must be stored in a format that cannot be altered and which indicates any attempts to alter the document, consistent with the standards set forth in proposed § 580.4(b). NHTSA requests comment on whether this requirement would be sufficient to allow law enforcement to detect altered documents.

E. Power of Attorney

NHTSA is proposing to modify the power of attorney provisions. A power of attorney generally should not be needed for transfers and disclosures within jurisdictions using electronic systems since there will not be a ''lost'' title, as the State system will hold the title record with the odometer disclosure, and any lienholder will not physically hold the title since the title will be on file in the State's electronic system. However, NHTSA proposes to amend § 580.13(a) and (b), to allow an individual with a vehicle titled in an electronic title State to use a power of attorney to sell a vehicle in a paper title State. In this way, the electronic title with the required odometer disclosure is equivalent to a lost title or a title held by a lienholder. Without this additional permitted use of power of attorney, the seller from an electronic title State cannot trade-in his old car and buy a new car in a paper title State unless the seller first remembers, and plans ahead, to obtain a printed title from the electronic title State before going car shopping. For example, assume Mr. Smith lives in an e-title State but goes to a paper title State to trade-in his old car and buy a new car. He must either get his paper title first or there must be some means for him to make his odometer disclosure without a title. Electronic title States will not likely be in a position to provide secure paper titles on demand. This means Mr. Smith cannot buy a new car unless he gets his electronic title printed as a physical title first. The agency believes this is unlikely to happen in many, if not most, instances.

While the use of power of attorney provides an additional step in the transfer process, and thus another opportunity for fraud to occur, the agency believes as a practical matter that there must be some other way for a vehicle owner from an electronic title State to sell the vehicle in a paper title State without first obtaining a converted official paper title from the electronic title State. However, power of attorney laws vary from State to State, so even with this modification there may still be States that retain paper title systems where vehicles registered in electronic title States could not be sold without the converted official paper title. NHTSA requests comments on the benefits and drawbacks of this proposal as well as other ideas to address this challenge while maintaining adequate safeguards of accurate disclosures and a paper-trail.

NHTSA also proposes to add the word ''physical'' in multiple places in § 580.13(f), § 580.14(a), (e), and (f), and in § 580.15(a). In § 580.13(f) this is necessary to make clear that the title being referenced at the two specified points is a physical title and not an electronic title, unlike the other references to ''title'' within paragraph

(f), which apply to either a physical or electronic title depending on in which format the transferor's title is currently held. The word ''physical'' is needed to clarify three documents in § 580.14(a) that must be physical documents for the purposes of using reassignment documents and power of attorney since these documents will only be utilized in transactions outside of electronic disclosure systems. Similarly, the word ''physical'' is also needed in § 580.14(e) and (f) to make clear that power of attorney forms would be physical documents, since power of attorney would not be needed or utilized in electronic title and disclosure jurisdictions. Finally, the addition of the word ''physical'' is necessary in six instances in § 580.15(a) to clarify that the disclosures made and documents reviewed involved physical documents, since the use of power of attorney, and related documents, would not be necessary to accomplish transfers within electronic title and disclosure jurisdictions.

NHTSA requests comments on whether power of attorney would be necessary in an electronic odometer system for intra-state transfers. Second, NHTSA notes that the requirements in section 580.13 permitting disclosures by power of attorney assume that the power of attorney document itself is a physical document. Therefore, NHTSA requests comments on whether odometer disclosure by power of attorney would be made on other than a paper document, *i.e.* electronically, in these situations and, if so, explanation of how that would work. Further, NHTSA has concerns that the validity of power of attorney may vary from State to State and the possible implications of that variability in interstate transactions and requests comment on this issue.

NHTSA proposes to correct a typographical error that appears in both § 580.13(b)(5) and § 580.14(b)(5) by adding a comma between ''model year,'' which would bring the disclosure requirements for power of attorney forms into conformity with standard transfer disclosures and leased vehicle disclosures. This typographical error in the regulation creates inconsistency within the reporting scheme. Accordingly, NTHSA proposes to change ''model year'' to ''model, year'' in these two reporting provisions.

F. Exemptions

Section 580.17(3) currently exempts any vehicle which is more than 10 years old from the odometer disclosure requirements. The average age of the United States vehicle fleet has been trending upward and recently reached 11.5 years.[4] Because of this, NHTSA is proposing to raise this exemption to 25 years. NHTSA also requests comments on whether this exemption should be eliminated.

G. Miscellaneous Amendments

The agency is no longer located at the address currently provided in § 580.10. Accordingly, NHTSA is proposing to amend § 580.10(b)(2) to provide the correct address for applications for assistance to, which is the Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., W41–326, Washington, DC 20590.

Section 580.11 provides States with procedures by which to petition NHTSA for approval of disclosure requirements differing from those required by 49 CFR part 580, specifically § 580.5, § 580.7, and § 580.13(f). NHTSA is proposing to amend § 580.11(a) to add the new § 580.6 to the sections for which a State may petition the agency to utilize different disclosure requirements and to add § 580.6 to the explanation of the effect of a grant or denial of a petition contained in § 580.11(c). NTHSA requests comments on whether a State should be permitted to use alternative disclosure requirements to those proposed in § 580.6.

Section 580.11 also provides the prior address for the agency, and NHTSA is proposing to amend § 580.11(b)(2) to provide the current address, which is the Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., W41–326, Washington, DC 20590.

The petition provided for in § 580.12, allowing a State to seek an extension of time beyond the April 29, 1989 deadline to bring its laws into conformity with the requirements of Part 580, was due to the agency by February 28, 1989. These dates having long ago passed and States having brought applicable laws into compliance, the provisions within § 580.12 are now obsolete. Accordingly, NHTSA proposes to strike the regulatory text of § 580.12 and replace it with ''[Remove and Reserve]'' to reserve the section.

IV. Public Participation

How do I prepare and submit comments?

Your comments must be written and in English. To ensure that your comments are correctly filed in the Docket, please include the docket number of this document in your comments.

Your comments must not be more than 15 pages long. (49 CFR 553.21). We established this limit to encourage you to write your primary comments in a concise fashion. However, you may attach necessary supporting documents to your comments. There is no limit on the length of the attachments.

Comments may be submitted to the docket electronically by logging onto the Docket Management System Web site at *http://www.regulations.gov.* Follow the online instructions for submitting comments.

You may also submit two copies of your comments, including the attachments, to Docket Management at the address given above under **ADDRESSES**.

Please note that pursuant to the Data Quality Act, in order for substantive data to be relied upon and used by the agency, it must meet the information quality standards set forth in the OMB and DOT Data Quality Act guidelines. Accordingly, we encourage you to consult the guidelines in preparing your comments. OMB's guidelines may be accessed at: *http://www.whitehouse.gov/omb/fedreg/reproducible.html.* DOT's guidelines may be accessed at: *http://www.bts.gov/programs/statistical_policy_and_research/data_quality_guidelines.*

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

How do I submit confidential business information?

If you wish to submit any information under a claim of confidentiality, you should submit three copies of your complete submission, including the information you claim to be confidential business information, to the Chief Counsel, NHTSA, at the address given above under **FOR FURTHER INFORMATION CONTACT**. In addition, you should submit two copies, from which you have deleted the claimed confidential business information, to Docket Management at the address given above under **ADDRESSES**. When you send a comment containing information claimed to be confidential business information, you should include a cover letter setting forth the information

[4] *Average age of U.S. fleet hits record 11.5 years, IHS says,* Autonews.com (July 29, 2015), *http://www.autonews.com/article/20150729/RETAIL/150729861/average-age-of-u.s.-fleet-hits-record-11.5-years-ihs-says* (last visited March 14, 2016).

specified in our confidential business information regulation. 49 CFR part 512.

Will the agency consider late comments?

We will consider all comments that Docket Management receives before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, we will also consider comments that Docket Management receives after that date. If Docket Management receives a comment too late for us to consider in developing a final rule (assuming that one is issued), we will consider that comment as an informal suggestion for future rulemaking action.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address given above under **ADDRESSES**. The hours of the Docket are indicated above in the same location. You may also see the comments on the Internet. To read the comments on the Internet, go to *http://www.regulations.gov.* Follow the online instructions for accessing the dockets.

Please note that, even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically check the Docket for new material.

V. Regulatory Notices and Analyses

A. Executive Orders 12866 and 13563 and DOT Regulatory Policies and Procedures

Executive Order 12866, Executive Order 13563, and the Department of Transportation's regulatory policies require this agency to make determinations as to whether a regulatory action is ''significant'' and therefore subject to OMB review and the requirements of the aforementioned Executive Orders. Executive Order 12866 defines a ''significant regulatory action'' as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

We have considered the potential impact of this proposal under Executive Order 12866, Executive Order 13563, and the Department of Transportation's regulatory policies and procedures, and have determined that it is not significant. This proposal amends existing requirements to allow States a new alternative means of complying with those requirements. It does not impose any new regulatory burdens. Therefore, this document was not reviewed by the Office of Management and Budget under E.O. 12866 and E.O. 13563.

B. National Environmental Policy Act

We have reviewed this rule for the purposes of the National Environmental Policy Act and determined that it would not have a significant impact on the quality of the human environment.

C. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996), whenever an agency is required to publish a notice of proposed rulemaking or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.,* small businesses, small organizations, and small governmental jurisdictions). The Small Business Administration's regulations at 13 CFR part 121 define a small business, in part, as a business entity ''which operates primarily within the United States.'' 13 CFR 121.105(a). No regulatory flexibility analysis is required if the head of an agency certifies the proposal would not have a significant economic impact on a substantial number of small entities. SBREFA amended the Regulatory Flexibility Act to require Federal agencies to provide a statement of the factual basis for certifying that a proposal would not have a significant economic impact on a substantial number of small entities.

In compliance with the Regulatory Flexibility Act, NHTSA has evaluated the effects of this proposed rule on small entities. The head of the agency has certified that the proposed rule would not have a significant economic impact on a substantial number of small entities. This proposal is only allowing States the option of an alternative means of complying with an existing requirement and therefore would not impose any new impact on any small entities.

D. Executive Order 13132 (Federalism)

NHTSA has examined today's NPRM pursuant to Executive Order 13132 (64 FR 43255, August 10, 1999). Executive Order 13132 requires agencies to determine the federalism implications of a proposed rule. The agency has determined that the proposed rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. The proposed rule merely adds another option to the way States are allowed to process and issue existing odometer disclosure requirements, and does not alter the effect on the States of existing statutory or regulatory requirements.

E. Executive Order 12988 (Civil Justice Reform)

When promulgating a regulation, Executive Order 12988 specifically requires that the agency must make every reasonable effort to ensure that the regulation, as appropriate: (1) Specifies in clear language the preemptive effect; (2) specifies in clear language the effect on existing Federal law or regulation, including all provisions repealed, circumscribed, displaced, impaired, or modified; (3) provides a clear legal standard for affected conduct rather than a general standard, while promoting simplification and burden reduction; (4) specifies in clear language the retroactive effect; (5) specifies whether administrative proceedings are to be required before parties may file suit in court; (6) explicitly or implicitly defines key terms; and (7) addresses other important issues affecting clarity and general draftsmanship of regulations.

Pursuant to this Order, NHTSA notes as follows. The preemptive effect of this proposal is discussed above in connection with Executive Order 13132. NHTSA has also considered whether this rulemaking would have any retroactive effect. This proposed rule does not have any retroactive effect. NHTSA notes further that there is no requirement that individuals submit a petition for reconsideration or pursue other administrative proceeding before they may file suit in court.

F. Executive Order 13609: Promoting International Regulatory Cooperation

The policy statement in section 1 of Executive Order 13609 provides, in part:

The regulatory approaches taken by foreign governments may differ from those taken by U.S. regulatory agencies to address similar issues. In some cases,

the differences between the regulatory approaches of U.S. agencies and those of their foreign counterparts might not be necessary and might impair the ability of American businesses to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

NHTSA requests public comment on whether (a) ''regulatory approaches taken by foreign governments'' concerning the subject matter of this rulemaking, and (b) the above policy statement, have any implications for this rulemaking.

G. National Technology Transfer and Advancement Act

Under the National Technology Transfer and Advancement Act of 1995 (NTTAA) (Pub. L. 104–113), all Federal agencies and departments shall use technical standards that are developed or adopted by voluntary consensus standards bodies, using such technical standards as a means to carry out policy objectives or activities determined by the agencies and departments, except when use of such a voluntary consensus standard would be inconsistent with the law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies, such as the SAE International. The NTTAA directs NHTSA to provide Congress, through OMB, explanations when the agency decides not to use available and applicable voluntary consensus standards. NHTSA is proposing to reference the standards provided in NIST Special Publication 800–63–2, *Electronic Authentication Guideline,* to determine the appropriate level of security to authenticate electronic signatures.

H. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 requires agencies to prepare a written assessment of the costs, benefits and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually (adjusted for inflation with base year of 1995). In 2011 dollars, this threshold is $139 million.[5]

This proposed rule would not result in the expenditure by State, local, or tribal governments, in the aggregate, or more than $139 million annually, and would not result in the expenditure of that magnitude by the private sector.

I. Paperwork Reduction Act

Under the procedures established by the Paperwork Reduction Act of 1995 (PRA), a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. Today's NPRM does not propose any new information collection requirements, it merely allows States to provide an alternative means of collecting information they already collect.

J. Plain Language

Executive Order 12866 requires each agency to write all rules in plain language. Application of the principles of plain language includes consideration of the following questions:

- Have we organized the material to suit the public's needs?
- Are the requirements in the rule clearly stated?
- Does the rule contain technical language or jargon that isn't clear?
- Would a different format (grouping and order of sections, use of headings, paragraphing) make the rule easier to understand?
- Would more (but shorter) sections be better?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rule easier to understand?

If you have any responses to these questions, please include them in your comments on this proposal.

K. Regulation Identifier Number (RIN)

The Department of Transportation assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda.

L. Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an organization, business, labor union, etc.). You may review DOT's complete Privacy Act statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) or you may visit *http://www.dot.gov/privacy.html.*

List of Subjects in 49 CFR Part 580

Consumer protection, Motor vehicles, Reporting and recordkeeping requirements.

For the reasons discussed in the preamble, NHTSA proposes to amend 49 CFR part 580 as follows:

PART 580—ODOMETER DISCLOSURE REQUIREMENTS

■ 1. Revise the authority citation to read as follows:

Authority: 49 U.S.C. 32705; Pub. L. 112–141; delegation of authority at 49 CFR 1.95.

■ 2. Revise § 580.1 to read as follows:

§ 580.1 Scope.

This part prescribes rules requiring transferors and lessees of motor vehicles to make electronic or written disclosure to transferees and lessors respectively, concerning the odometer mileage and its accuracy as directed by sections 408 (a) and (e) of the Motor Vehicle Information and Cost Savings Act as amended, 15 U.S.C. 1988 (a) and (e). In addition, this part prescribes the rules requiring the retention of odometer disclosure statements by motor vehicle dealers, distributors and lessors and the retention of certain other information by auction companies as directed by sections 408(g) and 414 of the Motor Vehicle Information and Cost Savings Act as amended, 15 U.S.C. 1990(d) and 1988(g).

■ 3. Amend § 580.3 by adding in alphabetical order, definitions for ''*Electronic Document*'', ''*Physical Document*'' and ''*Sign or Signature*'' to read as follows:

§ 580.3 Definitions.

* * * * *

Electronic Document means a title, reassignment document or power of attorney that is maintained in electronic form by a state, territory or possession that meets all the requirements of this part.

* * * * *

Physical Document means a title, reassignment document or power of attorney printed on paper that meets all the requirements of this part.

* * * * *

[5] Adjusting this amount by the implicit gross domestic product price deflator for the year 2011 results in $139 million (113.361/81.606 = 1.39).

Sign or Signature means either:

(a) For a paper odometer disclosure, a person's name, or a mark representing it, as hand written personally.

(b) For an electronic odometer disclosure, an electronic sound, symbol, or process using an authentication system equivalent to or greater than Level 3 as described in National Institute of Standards and Technology (NIST) Special Publication 800–63–2, *Electronic Authentication Guideline,* which identifies a specific individual.

* * * * *

■ 4. Revise § 580.4 to read as follows:

§ 580.4 Security of title documents and power of attorney forms.

(a) Each physical title shall be set forth by means of a secure printing process or other secure process. In addition, physical power of attorney forms issued pursuant to §§ 580.13 and 580.14 and physical documents which are used to reassign the title shall be issued by the State and shall be set forth by a secure process.

(b) Each electronic title shall be maintained in a secure environment so it is protected from unauthorized modification, alteration or disclosure. In addition, electronic power of attorney forms maintained and made available pursuant to §§ 580.13 and 580.14 and electronic documents which are used to reassign the title shall maintained by the State in a secure environment so that it is protected from unauthorized modification, alteration and disclosure. Any system employed to create, store and maintain the aforementioned electronic documents shall record the dates and times when the electronic document is created, the odometer disclosures contained within are signed and when the documents are accessed, including the date and time any attempt is made to alter or modify the electronic document and any alterations or modifications made.

■ 5. Amend § 580.5 by revising paragraphs (a), (c), (d), (f), and (g) to read as follows:

§ 580.5 Disclosure of odometer information.

(a) Each title, whether a physical or electronic document, at the time it is issued or made available to the transferee, must contain the mileage disclosed by the transferor when ownership of the vehicle was transferred and contain a space for the information required to be disclosed under paragraphs (c), (d), (e) and (f) of this section at the time of future transfer.

* * * * *

(c) In connection with the transfer of ownership of a motor vehicle using a physical document, each transferor shall disclose the mileage to the transferee on the physical title or, except as noted below, on the physical document being used to reassign the title. In connection with the transfer of ownership of a motor vehicle using an electronic document, each transferor shall disclose the mileage to the transferee on an electronic form incorporated into the electronic title. In the case of a transferor in whose name the vehicle is titled, the transferor shall disclose the mileage on an electronic form incorporated into the electronic title or on the physical title, and not on a reassignment documents. This disclosure must be signed by the transferor and if made on a physical title, must contain the transferor's printed name. In connection with the transfer of ownership of a motor vehicle in which more than one person is a transferor, only one transferor need sign the disclosure. In addition to the signature of the transferor, the disclosure must contain the following information:

* * * * *

(d) In addition to the information provided under paragraph (c) of this section, the statement shall refer to the Federal law and shall state that failure to complete or providing false information may result in fines and/or imprisonment. Reference may also be made to applicable State law. If the transaction at issue is electronic, the information specified in this paragraph shall be displayed, and acknowledged as understood by the party, prior to the execution of any electronic signatures.

* * * * *

(f) The transferee shall sign the disclosure statement, and in the case of a disclosure made on a physical title, shall print his name, and return a copy to his transferor. If the disclosure is incorporated into an electronic title, the electronic system shall provide a means for making copies of the disclosure statement available to the transferee and transferor.

(g) In jurisdictions employing paper title and odometer disclosure schemes, if the vehicle has not been titled or if the physical title does not contain a space for the information required, the written disclosure shall be executed as a separate physical document. In jurisdictions maintaining electronic title and odometer disclosure systems, the system shall provide a means for making the disclosure electronically and incorporating this disclosure into the electronic title when the title is created.

* * * * *

■ 6. Revise § 580.6 to read as follows:

§ 580.6 Requirements for Electronic Transactions.

(a) Additional Requirements for Electronic Odometer Disclosures

(1) Any electronic record shall be retained in a format which cannot be altered, and which indicates any attempts to alter it.

(2) Any signature shall identify an individual, and not solely the organization the person represents or is employed by. If the individual executing the electronic signature is acting in a business capacity or otherwise on behalf of another individual or entity, the business or other individual or entity shall also be identified when the signature is made.

(3) Any requirement in these regulations to disclose, issue, execute, return, notify or otherwise provide information to another person is satisfied when a copy of the electronic disclosure or statement is electronically transmitted or otherwise electronically accessible to the party required to receive the disclosure.

(4) Upon creation of an electronic title to replace an existing physical title, an electronic copy of the physical title shall be created and retained, for not less than five years, by the State issuing the electronic title and the physical title shall be destroyed immediately following the successful creation of the electronic record. The electronic copy of the paper record shall be retained

(i) in a format which cannot be altered, and which indicates any attempts to alter it; and

(ii) in an order that permits systematic retrieval.

(5) A State allowing electronic odometer disclosures may provide for a paper record of ownership which includes the odometer disclosure information, provided the document clearly indicates it is not an official title, nor official odometer disclosure, for the vehicle.

(6) States maintaining an electronic title and odometer disclosure system shall retain the capacity to issue physical titles meeting all the requirements of this part. Once a physical title is created by a State with an electronic title and odometer disclosure statement system, the electronic record must indicate that a physical title has been issued and the electronic title and disclosure statement have been superseded by the physical title as the official title. The State electronic title and odometer disclosure

system shall record the date on which the physical title was issued and record the identity of the recipient of the physical title as well as the owner(s) named on the physical title.

(7) Any physical documents employed by transferors and transferees to make electronic odometer disclosures shall comply with all requirements of this part.

(8) Any conversion of physical documents to electronic documents employed to comply with any of the requirements of this part must maintain and preserve the security features incorporated in the physical document so that any alterations or modifications to the physical document can be detected in the physical document's electronic counterpart. Scanning of physical documents must be made in color at a resolution of not less than 600 dots per inch (dpi).

■ 7. Amend § 580.7 by revising paragraphs (a) and (b), and add paragraph (e), to read as follows:

§ 580.7 Disclosure of odometer information for leased motor vehicles.

(a) Before executing any transfer of ownership document, each lessor of a leased motor vehicle shall notify the lessee in writing on a physical document or within an electronic document stating that the lessee is required to provide a written disclosure to the lessor regarding the mileage. This notice shall contain a reference to the Federal law and shall state that failure to complete or providing false information may result in fines and/or imprisonment. Reference may also be made to applicable State law. If the transaction at issue is electronic, the information specified in this paragraph shall be displayed, and acknowledged as understood by the party, prior to the execution of any electronic signatures.

(b) In connection with the transfer of ownership of the leased motor vehicle, the lessee shall furnish to the lessor a written statement regarding the mileage of the vehicle. This statement must be signed by the lessee. If executed using a physical document, this statement, in addition to the information required by paragraph (a) of this section, shall contain the information in paragraphs 1 through 9 as set forth below. If executed using an electronic document, this statement, in addition to the information required by paragraph (a) of this section, shall contain the name of the person making the disclosure and the information contained in paragraphs 2 through 9 as set forth below.

(1) The printed name of the person making the disclosure;

(2) The current odometer reading (not to include tenths of miles);

(3) The date of the statement;

(4) The lessee's name and current address;

(5) The lessor's name and current address;

(6) The identity of the vehicle, including its make, model, year, and body type, and its vehicle identification number;

(7) The date that the lessor notified the lessee of disclosure requirements;

(8) The date that the completed disclosure statement was received by the lessor; and

(9) The signature of the lessor if executed using a physical document or the electronic signature of the lessor if statement is made electronically.

* * * * *

(e) Any electronic system maintained by a lessor for the purpose of complying with the requirements of this section shall meet the requirements of § 580.4(b) of this part.

■ 8. Amend § 580.8 by revising paragraph (a) and to add paragraph (d) to read as follows:

§ 580.8 Odometer disclosure statement retention.

(a) Dealers and distributors of motor vehicles who are required by this part to execute an odometer disclosure statement shall retain for five years a photostat, carbon, other facsimile copy or electronic copy or document of each odometer mileage statement which they issue and receive. They shall retain all odometer disclosure statements at their primary place of business in an order that is appropriate to business requirements and that permits systematic retrieval.

* * * * *

(d) Any electronic record shall be retained in a format which cannot be altered, and which indicates any attempts to alter it.

■ 9. Amend § 580.9 by revising the introductory text to read as follows:

§ 580.9 Odometer record retention for auction companies.

Each auction company shall establish and retain in physical document form, or electronic document form that complies with the requirement of § 580.4(b), at its primary place of business in an order that is appropriate to business requirements and that permits systematic retrieval, for five years following the date of sale of each motor vehicle, the following records:

* * * * *

■ 10. Amend § 580.10 by revising paragraph (b)(2) as follows:

§ 580.10 Application for assistance.

* * * * *

(b) * * *

(2) Be submitted to the Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., W41–326, Washington, DC 20590;

* * * * *

■ 11. Amend § 580.11 by revising paragraphs (a), (b)(2), and (c) to read as follows:

§ 580.11 Petition for approval of alternate disclosure requirements.

(a) A State may petition NHTSA for approval of disclosure requirements which differ from the disclosure requirements of § 580.5, § 580.6, § 580.7, or § 580.13(f) of this part.

(b) * * *

(2) Be submitted to the Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., W41–326, Washington, DC 20590;

* * * * *

(c) Notice of the petition and an initial determination pending a 30-day comment period will be published in the **Federal Register**. Notice of final grant or denial of a petition for approval of alternate motor vehicle disclosure requirements will be published in the **Federal Register**. The effect of the grant of a petition is to relieve a State from responsibility to conform the State disclosure requirements with § 580.5, § 580.6, § 580.7, or § 580.13(f), as applicable, for as long as the approved alternate disclosure requirements remain in effect in that State. The effect of a denial is to require a State to conform to the requirements of § 580.5, § 580.6, § 580.7, or § 580.13(f), as applicable, of this part until such time as the NHTSA approves any alternate motor vehicle disclosure requirements.

■ 12. Remove and reserve § 580.12.

§ 580.12 [Removed and Reserved]

■ 13. Amend § 580.13 by revising paragraphs (a), (b), and (f) to read as follows:

§ 580.13 Disclosure of odometer information by power of attorney.

(a) If the transferor's title is physically held by a lienholder, if the transferor's title exists in electronic form and the transferee is located in a State that does not create or maintain electronic titles, or if the transferor to whom the title was issued by the State has lost his title and the transferee obtains a duplicate title on behalf of the transferor, and if otherwise permitted by State law, the transferor may give a power of attorney to his transferee for the purpose of

mileage disclosure. The power of attorney shall be on a form issued by the State to the transferee that is set forth by means of a secure printing process or other secure process, and shall contain, in part A, a space for the information required to be disclosed under paragraphs (b), (c), (d), and (e) of this section. If a State permits the use of a power of attorney in the situation described in § 580.14(a), the form must also contain, in part B, a space for the information required to be disclosed under § 580.14, and, in part C, a space for the certification required to be made under § 580.15.

(b) In connection with the transfer of ownership of a motor vehicle, each transferor to whom a title was issued by the State whose title is physically held by a lienholder, whose title exists in electronic form and the transferee is located in a State that does not create or maintain electronic titles or whose title has been lost, and who elects to give his transferee a power of attorney for the purpose of mileage disclosure, must appoint the transferee his attorney-in-fact for the purpose of mileage disclosure and disclose the mileage on the power of attorney form issued by the State. This written disclosure must be signed by the transferor, including the printed name, and contain the following information:

(1) The odometer reading at the time of transfer (not to include tenths of miles);

(2) The date of transfer;

(3) The transferor's name and current address;

(4) The transferee's name and current address; and

(5) The identity of the vehicle, including its make, model, year, body type and vehicle identification number.

* * * * *

(f) Upon receipt of the transferor's title, the transferee shall complete the space for mileage disclosure on the title exactly as the mileage was disclosed by the transferor on the power of attorney form. The transferee shall submit the original power of attorney form to the State that issued it, with a copy of the transferor's physical title or with the actual physical title when the transferee submits a new title application at the same time. The State shall retain the power of attorney form and title for three years or a period equal to the State titling record retention period, whichever is shorter. If the mileage disclosed on the power of attorney form is

lower than the mileage appearing on the title, the power of attorney is void and the dealer shall not complete the mileage disclosure on the title.

■ 14. Amend § 580.14 by revising paragraphs (a), (b), (e), and (f) to read as follows:

§ 580.14 Power of attorney to review title documents and acknowledge disclosure.

(a) In circumstances where part A of a secure power of attorney form has been used pursuant to § 580.13 of this part, and if otherwise permitted by State law, a transferee may give a power of attorney to his transferor to review the physical title and any physical reassignment documents for mileage discrepancies, and if no discrepancies are found, to acknowledge disclosure on the physical title. The power of attorney shall be on part B of the form referred to in § 580.13(a), which shall contain a space for the information required to be disclosed under paragraphs (b), (c), (d), and (e) of this section and, in part C, a space for the certification required to be made under § 580.15.

(b) The power of attorney must include a mileage disclosure from the transferor to the transferee and must be signed by the transferor, including the printed name, and contain the following information:

(1) The odometer reading at the time of transfer (not to include tenths of miles);

(2) The date of transfer;

(3) The transferor's name and current address;

(4) The transferee's name and current address; and

(5) The identity of the vehicle, including its make, model, year, body type and vehicle identification number.

* * * * *

(e) The transferee shall sign the physical power of attorney form, and print his name.

(f) The transferor shall give a copy of the physical power of attorney form to his transferee.

■ 15. Amend § 580.15 by revising paragraph (a) to read as follows:

§ 580.15 Certification by person exercising powers of attorney.

(a) A person who exercises a power of attorney under both §§ 580.13 and 580.14 must complete a certification that he has disclosed on the physical title document the mileage as it was provided to him on the physical power of attorney form, and that upon examination of the physical title and any physical reassignment documents, the mileage disclosure he has made on the physical title pursuant to the power of attorney is greater than that previously stated on the physical title and reassignment documents. This certification shall be under part C of the same form as the powers of attorney executed under §§ 580.13 and 580.14 and shall include:

* * * * *

■ 16. Amend § 580.17 by revising paragraph (a)(3) and example to paragraph (a)(3) to read as follows:

§ 580.17 Exemptions.

* * * * *

(a) * * *

(3) A vehicle that was manufactured in a model year beginning at least twenty five years before January 1 of the calendar year in which the transfer occurs; or

Example to paragraph (a)(3): For vehicle transfers occurring during calendar year 2016, model year 1991 or older vehicles are exempt.

Federal Register
Vol. 81, No. 58
Friday, March 25, 2016

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Submission for OMB Review; Comment Request

March 21, 2016.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by April 25, 2016 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), *OIRA_Submission@omb.eop.gov* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Food and Nutrition Service

Title: Supplemental Nutrition Assistance Program Requirement for National Directory of New Hires Employment Verification and Annual Program Activity Reporting

OMB Control Number: 0584–NEW.

Summary Of Collection: In an interim final rule, FNS will amend the SNAP regulations at 7 CFR 272 to require State agencies to access employment data through the National Directory of New Hires (NDNH) at the time of certification, including recertification, to determine eligibility status and appropriate benefit amount for SNAP applicants. This requirement codifies Section 4013 of the Agricultural Act of 2014 (Pub. L. 113–79).

Need And Use Of The Information: National Directory of New Hires, State agencies are required to compare identifiable information about each household member against data from the NDNH at the time of certification and recertification. This comparison will be used to determine the eligibility status of the household and determine the correct benefit amount the household should receive.

The data reported on the Program Activity Statement (FNS 366B) enables FNS to identify areas that may need improvement and to provide more effective technical assistance to State agencies. An increase in reporting frequency will allow for greater access to timely program data. It will help States, FNS, and other stakeholders identify trends, inconsistencies and inefficiencies earlier in each fiscal year. FNS uses the data to monitor State agency activity levels and performance and to target technical assistance to State agencies in need of performance improvements.

Description of Respondents: State, Local, or Tribal Government; Individual or households.

Number of Respondents: 891,125.

Frequency of Responses: Recordkeeping; Reporting: On occasion; Annually.

Total Burden Hours: 252,432.

Ruth Brown,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–30–P

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

Inviting Applications for Rural Cooperative Development Grants

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Notice.

SUMMARY: This Notice announces that the Rural Business-Cooperative Service (Agency) is accepting fiscal year (FY) 2016 applications for the Rural Cooperative Development Grant (RCDG) program as authorized by the Consolidated Appropriations Act, 2016 (Pub. L. 114–113). Approximately $5.8 million is available to be competitively awarded. The purpose of this program is to provide financial assistance to improve the economic condition of rural areas through cooperative development. Eligible applicants include a non-profit corporation or an institution of higher education. The Agency is encouraging applications that direct grants to projects based in or serving census tracts with poverty rates greater than or equal to 20 percent. This emphasis will support Rural Development's (RD) mission of improving the quality of life for Rural Americans and its commitment to directing resources to those who most need them.

DATES: Completed applications must be submitted on paper or electronically according to the following deadlines:

Paper applications must be postmarked and mailed, shipped, or sent overnight no later than June 23, 2016. You may also hand carry your application to one of our field offices, but it must be received by close of business on the deadline date. Late applications are not eligible for funding under this Notice and will not be evaluated.

Electronic applications must be received by June 20, 2016 to be eligible for grant funding. Please review the Grants.gov Web site at *http://www.grants.gov/web/grants/applicants/organization-registration.html.* For

instructions on the process of registering your organization as soon as possible to ensure you are able to meet the electronic application deadline. Late applications are not eligible for funding under this Notice and will not be evaluated.

ADDRESSES: You should contact a USDA Rural Development State Office (State Office) if you have questions. You are encouraged to contact your State Office well in advance of the application deadline to discuss your project and ask any questions about the application process. Contact information for State Offices can be found at *http://www.rd.usda.gov/contact-us/state-offices.*

Program guidance as well as application and matching funds templates may be obtained at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program.* If you want to submit an electronic application, follow the instructions for the RCDG funding announcement located at *http://www.grants.gov.* If you want to submit a paper application, send it to the State Office located in the State where you are headquartered. If you are headquartered in Washington, DC please contact the Grants Division, Cooperative Programs, Rural Business-Cooperative Service, at (202) 690–1374 for guidance on where to submit your application.

FOR FURTHER INFORMATION CONTACT: Grants Division, Cooperative Programs, Rural Business-Cooperative Service, United States Department of Agriculture, 1400 Independence Avenue SW., Mail Stop 3253, Room 4208—South, Washington, DC 20250–3253, (202) 690–1374.

SUPPLEMENTARY INFORMATION:

Overview

Federal Agency: Rural Business-Cooperative Service.

Funding Opportunity Title: Rural Cooperative Development Grants.

Announcement Type: Initial Notice.

Catalog of Federal Domestic Assistance Number: 10.771.

Date: Application Deadline. Paper applications must be postmarked, mailed, shipped, or sent overnight no later than June 23, 2016, or it will not be considered for funding. You may also hand carry your application to one of our field offices, but it must be received by close of business on the deadline date. Electronic applications must be received by *http://www.grants.gov* no later than midnight eastern time June 20, 2016, or it will not be considered for funding.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act, the paperwork burden associated with this Notice has been approved by the Office of Management and Budget (OMB) under OMB Control Number 0570–0006.

A. Program Description

The RCDG program is authorized under section 310B(e) of the Consolidated Farm and Rural Development Act (CONACT) (7 U.S.C. 1932 (e)) as amended by the Agricultural Act of 2014 (Pub. L. 113–79). You are required to comply with the regulations for this program published at 7 CFR part 4284, subparts A and F, which are incorporated by reference in this Notice. Therefore, you should become familiar with these regulations. The primary objective of the RCDG program is to improve the economic condition of rural areas through cooperative development. Grants are awarded on a competitive basis. The maximum award amount per grant is $200,000. Grants are available for non-profit corporations or higher education institutions only. Grant funds may be used to pay for up to 75 percent of the cost of establishing and operating centers for rural cooperative development. Grant funds may be used to pay for 95 percent of the cost of establishing and operating centers for rural cooperative development, when the applicant is a 1994 Institution as defined by 7 U.S.C. 301. The 1994 Institutions are commonly known as Tribal Land Grant Institutions. Centers may have the expertise on staff or they can contract out for the expertise, to assist individuals or entities in the startup, expansion or operational improvement of rural businesses, especially cooperative or mutually-owned businesses.

Definitions

The terms you need to understand are defined and published at 7 CFR 4284.3 and 7 CFR 4284.504. In addition, the terms ''rural'' and ''rural area,'' defined at section 343(a)(13) of the CONACT (7 U.S.C. 1991(a)), are incorporated by reference, and will be used for this program instead of those terms currently published at 7 CFR 4284.3. The term ''you'' referenced throughout this Notice should be understood to mean ''you'' the applicant. Finally, there has been some confusion on the Agency's meaning of the terms ''conflict of interest'' and ''mutually-owned business,'' because they are not defined in the CONACT or in the regulations used for the program. Therefore, the terms are clarified and should be understood as follows.

Conflict of interest—A situation in which a person or entity has competing personal, professional, or financial interests that make it difficult for the person or business to act impartially. Regarding use of both grant and matching funds, Federal procurement standards prohibit transactions that involve a real or apparent conflict of interest for owners, employees, officers, agents, or their immediate family members having a financial or other interest in the outcome of the project; or that restrict open and free competition for unrestrained trade. Specifically, project funds may not be used for services or goods going to, or coming from, a person or entity with a real or apparent conflict of interest, including, but not limited to, owner(s) and their immediate family members. An example of conflict of interest occurs when the grantee's employees, board of directors, or the immediate family of either, have the appearance of a professional or personal financial interest in the recipients receiving the benefits or services of the grant.

Mutually-owned business—An organization owned and governed by members who either are its consumers, producers, employees, or suppliers.

B. Federal Award Information

Type of Award: Competitive Grant.

Fiscal Year Funds: FY 2016.

Total Funding: Approximately $5.8 million.

Maximum Award: $200,000.

Anticipated Award Date: September 30, 2016.

C. Eligibility Information

Applicants must meet all of the following eligibility requirements. Applications which fail to meet any of these requirements by the application deadline will be deemed ineligible and will not be evaluated further.

1. Eligible Applicants

You must be a nonprofit corporation or an institution of higher education to apply for this program. Public bodies and individuals cannot apply for this program. See 7 CFR 4284.507. You must also meet the following requirements:

a. An applicant is ineligible if they have been debarred or suspended or otherwise excluded from or ineligible for participation in Federal assistance programs under Executive Order 12549, ''Debarment and Suspension.'' The Agency will check the System for Award Management (SAM) to determine if the applicant has been debarred or suspended. In addition, an applicant

will be considered ineligible for a grant due to an outstanding judgment obtained by the U.S. in a Federal Court (other than U.S. Tax Court), is delinquent on the payment of Federal income taxes, or is delinquent on Federal debt. See 7 CFR 4284.6. The applicant must certify as part of the application that they do not have an outstanding judgement against them. The Agency will check the Credit Alert Interactive Voice Response System (CAIVRS) to verify this.

b. Any corporation that has been convicted of a felony criminal violation under any Federal law within the past 24 months or that has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability, is not eligible for financial assistance provided with funds appropriated by the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), unless a Federal agency has considered suspension or debarment of the corporation and has made a determination that this further action is not necessary to protect the interests of the Government. Applicants will be required to complete Form AD–3030, ''Representations Regarding Felony Conviction and Tax Delinquent Status for Corporate Applicants,'' if you are a corporation.

c. Applications will be deemed ineligible if the application includes any funding restrictions identified under section D.6. a and b. Inclusion of funding restrictions outlined in section D.6.a. and b. precludes the agency from making a federal award.

d. Applications will be deemed ineligible if the application is not complete in accordance with the requirements stated in section C.3.e., and will not be reviewed.

2. Cost Sharing or Matching

Your matching funds requirement is 25 percent of the total project cost (5 percent for 1994 Institutions). See 7 CFR 4284.508. When you calculate your matching funds requirement, please round up or down to whole dollars as appropriate. An example of how to calculate your matching funds is as follows:

a. Take the amount of grant funds you are requesting and divide it by .75. This will give you your total project cost.

Example: $200,000 (grant amount)/.75 (percentage for use of grant funds) = $266,667 (total project cost)

b. Subtract the amount of grant funds you are requesting from your total project cost. This will give you your matching funds requirement.

Example: $266,667 (total project cost)—$200,000 (grant amount) = $66,667 (matching funds requirement)

c. A quick way to double check that you have the correct amount of matching funds is to take your total project cost and multiply it by .25.

Example: $266,667 (total project cost) × .25 (maximum percentage of matching funds requirement) = $66,667 (matching funds requirement)

You must verify that all matching funds are available during the grant period and provide this documentation with your application in accordance with requirements identified in section D.2.e.8. If you are awarded a grant, additional verification documentation may be required to confirm the availability of matching funds.

Other rules for matching funds that you must follow are listed below.

- They must be spent on eligible expenses during the grant period.
- They must be from eligible sources.
- They must be spent in advance or as a pro-rata portion of grant funds being spent.
- They must be provided by either the applicant or a third party in the form of cash or an in-kind contribution.
- They cannot include board/advisory council members' time.
- They cannot include other Federal grants unless provided by authorizing legislation.
- They cannot include cash or in-kind contributions donated outside the grant period.
- They cannot include over-valued, in-kind contributions.
- They cannot include any project costs that are ineligible under the RCDG program.
- They cannot include any project costs that are unallowable under the applicable grant ''Cost Principles,'' including 2 CFR part 200, subpart E, and the Federal Acquisition Regulation (for-profits) or successor regulation.
- They can include loan funds from a Federal source.
- They can include travel and incidentals for board/advisory council members if you have established written policies explaining how these costs are normally reimbursed, including rates. You must include an explanation of this policy in your application or the contributions will not be considered as eligible matching funds.
- You must be able to document and verify the number of hours worked and the value associated with any in-kind contribution being used to meet a matching funds requirement.
- In-kind contributions provided by individuals, businesses, or cooperatives which are being assisted by you cannot be provided for the direct benefit of their own projects as USDA Rural Development considers this to be a conflict of interest or the appearance of a conflict of interest.

3. Other Eligibility Requirements

a. Purpose Eligibility

Your application must propose the establishment or continuation of a cooperative development center concept. You must use project funds, including grant and matching funds for eligible purposes only (see 7 CFR 4284.508). In addition, project funds may be used for programs providing for the coordination of services and sharing of information among the centers (see 7 U.S.C 1932(e) (4) (C) (vi)).

b. Project Eligibility

All project activities must be for the benefit of a rural area.

c. Multiple Application Eligibility

Only one application can be submitted per applicant. If two applications are submitted (regardless of the applicant name) that include the same Executive Director and/or advisory boards or committees of an existing center, both applications will be determined not eligible for funding.

d. Grant Period

Your application must include a one-year grant period or it will not be considered for funding. The grant period should begin no earlier than October 1, 2016, and no later than January 1, 2017. Prior approval is needed from the Agency if you are awarded a grant and desire the grant period to begin earlier or later than previously discussed. Projects must be completed within a one-year timeframe. The Agency may approve requests to extend the grant period for up to an additional 12 months at its discretion. Further guidance on grant period extensions will be provided in the award document.

e. Completeness

Your application will not be considered for funding if it fails to meet an eligibility criterion by time of application deadline and does not provide sufficient information to determine eligibility and scoring. In particular, you must include all of the forms and proposal elements as discussed in the regulation and as clarified further in this Notice.

Incomplete applications will not be reviewed by the Agency. For more information on what is required for an application, see 7 CFR 4284.510.

f. Satisfactory Performance

If you have an existing RCDG award, you must discuss the status of your existing RCDG award at application time under the Eligibility Discussion. You must be performing satisfactorily to be considered eligible for a new award. Satisfactory performance includes being up-to-date on all financial and performance reports and being current on all tasks as approved in the work plan. The Agency will use its discretion to make this determination. In addition, if you have an existing award from the Socially-Disadvantaged Groups Grant (SDGG) program, formerly known as the Small Socially-Disadvantaged Producer Grants (SSDPG) program, you must discuss the status of your existing SSDPG award at application time under Eligibility Discussion and be performing satisfactorily to be considered for a new RCDG award.

g. Indirect Costs

Your negotiated indirect cost rate approval does not need to be included in your application, but you will be required to provide it if a grant is awarded. Approval for indirect costs that are requested in an application without an approved indirect cost rate agreement is at the discretion of the Agency.

D. Application and Submission Information

1. Address to Request Application Package

For further information, you should contact your State Office at *http://www.rd.usda.gov/contact-us/state-offices*. Program materials may also be obtained at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program*. You may also obtain a copy by calling 202–690–1374.

2. Content and Form of Application Submission

You may submit your application in paper form or electronically through Grants.gov. If you submit in paper form, any forms requiring signatures must include an original signature.

a. Electronic Submission

To submit an application electronically, you must use the Grants.gov Web site at *http://www.Grants.gov*. You may not submit an application electronically in any way other than through Grants.gov.

You can locate the Grants.gov downloadable application package for this program by using a keyword, the program name, or the Catalog of Federal Domestic Assistance Number for this program.

When you enter the Grants.gov Web site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

To use Grants.gov, you must already have a DUNS number and you must also be registered and maintain registration in SAM. We strongly recommend that you do not wait until the application deadline date to begin the application process through Grants.gov.

You must submit all of your application documents electronically through Grants.gov. Applications must include electronic signatures. Original signatures may be required if funds are awarded.

After electronically submitting an application through Grants.gov, you will receive an automatic acknowledgement from Grants.gov that contains a Grants.gov tracking number.

b. Paper Submission

If you want to submit a paper application, send it to the State Office located in the State where your project will primarily take place. You can find State Office Contact information at: *http://www.rd.usda.gov/contact-us/state-offices*. An optional-use Agency application template is available online at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program*.

c. Supplemental Information

Your application must contain all of the required forms and proposal elements described in 7 CFR 4284.510 and as otherwise clarified in this Notice. Specifically, your application must include: (1) The required forms as described in 7 CFR 4284.510(b) and (2) the required proposal elements as described in 7 CFR 4284.510(c). If your application is incomplete, it is ineligible to compete for funds. Applications lacking sufficient information to determine eligibility and scoring will be considered ineligible. Information submitted after the application deadline will not be accepted. You are encouraged, but not required to utilize the application template found at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program*.

d. Clarifications on Forms

- Standard Form (SF) 424—Your DUNS number should be identified in the ''Organizational DUNS'' field on SF 424, ''Application for Federal Assistance.'' Since there are no specific fields for a Commercial and Government Entity (CAGE) code and expiration date, you may identify them anywhere you want to on Form SF 424. In addition, you should provide the DUNS number and the CAGE code and expiration date under the applicant eligibility discussion in your proposal narrative. If you do not include the CAGE code and expiration date and the DUNS number in your application, it will not be considered for funding.
- Form AD–3030, ''Representations Regarding Felony Conviction and Tax Delinquent Status for Corporate Applicants,'' if you are a corporation. A corporation is any entity that has filed articles of incorporation in one of the 50 States, the District of Columbia, the Federated States of Micronesia, the Republic of Palau, and the Republic of the Marshall Islands, or the various territories of the United States including American Samoa, Guam, Midway Islands, the Commonwealth of the Northern Mariana Islands, Puerto Rico, or the U.S. Virgin Islands. Corporations include both for profit and non-profit entities.
- You can voluntarily fill out and submit the ''Survey on Ensuring Equal Opportunity for Applicants,'' as part of your application if you are a nonprofit organization.

e. Clarifications on Proposal Elements

1. You must include the title of the project as well as any other relevant identifying information on the Title Page.

2. You must include a Table of Contents with page numbers for each component of the application to facilitate review.

3. Your Executive Summary must include the items in 7 CFR 4284.510 (c)(3), and also discuss the percentage of work that will be performed among organizational staff, consultants, or other contractors. It should not exceed two pages.

4. Your Eligibility Discussion must not exceed two pages and cover how you meet the eligibility requirements for applicant, matching funds, other eligibility requirements and grant period. If you have an existing RCDG or the Socially-Disadvantaged Groups Grant (SDGG) program, formerly known as the Small Socially-Disadvantaged Producer Grants (SSDPG) program award or both, you must discuss the current status of those award(s) under grant period eligibility.

5. Your Proposal Narrative must not exceed 40 pages and should describe the essential aspects of the project.

i. You are only required to have one title page for the proposal.

ii. If you list the evaluation criteria on the Table of Contents and specifically and individually address each criterion in narrative form, then it is not necessary for you to include an Information Sheet. Otherwise, the Information Sheet is required under 7 CFR 4284.510(c)(ii).

iii. You should include the following under Goals of the Project:

A. A statement that substantiates that the Center will effectively serve rural areas in the United States;

B. A statement that the primary objective of the Center will be to improve the economic condition of rural areas through cooperative development;

C. A description of the contributions that the proposed activities are likely to make to the improvement of the economic conditions of the rural areas for which the Center will provide services. Expected economic impacts should be tied to tasks included in the work plan and budget; and

D. A statement that the Center, in carrying out its activities, will seek, where appropriate, the advice, participation, expertise, and assistance of representatives of business, industry, educational institutions, the Federal government, and State and local governments.

iv. The Agency has established annual performance evaluation measures to evaluate the RCDG program. You must provide estimates on the following performance evaluation measures.

- Number of groups who are not legal entities assisted.
- Number of businesses that are not cooperatives assisted.
- Number of cooperatives assisted.
- Number of businesses incorporated that are not cooperatives.
- Number of cooperatives incorporated.
- Total number of jobs created as a result of assistance.
- Total number of jobs saved as a result of assistance.
- Number of jobs created for the Center as a result of RCDG funding.
- Number of jobs saved for the Center as a result of RCDG funding.

It is permissible to have a zero in a performance element. When you calculate jobs created, estimates should be based upon actual jobs to be created by your organization as a result of the RCDG funding or actual jobs to be created by cooperative businesses or other businesses as a result of assistance from your organization. When you calculate jobs saved, estimates should be based only on actual jobs that have been lost if your organization did not receive RCDG funding or actual jobs that would have been lost without assistance from your organization.

v. You can also suggest additional performance elements for example where job creation or jobs saved may not be a relevant indicator (*e.g.* housing). These additional criteria should be specific, measurable performance elements that could be included in an award document.

vi. You must describe in the application how you will undertake to do each of the following. We would prefer if you described these undertakings within proposal evaluation criteria to reduce duplication in your application. The specific proposal evaluation criterion where you should address each undertaking is noted below.

A. Take all practicable steps to develop continuing sources of financial support for the Center, particularly from sources in the private sector (should be presented under proposal evaluation criterion j., utilizing the specific requirements of section E.1.j.);

B. Make arrangements for the Center's activities to be monitored and evaluated (should be addressed under proposal evaluation criterion number h. utilizing the specific requirements of section E.1.h.); and

C. Provide an accounting for the money received by the grantee in accordance with 7 CFR part 4284, subpart F. This should be addressed under proposal evaluation criterion number a., utilizing the specific requirements of section E.1.a.

vii. You should present the Work Plan and Budget proposal element under proposal evaluation criterion number h., utilizing the specific requirements of section E.1.h. of this Notice to reduce duplication in your application.

viii. You should present the Delivery of Cooperative development assistance proposal element under proposal evaluation criterion number b., utilizing the specific requirements of section E.1.b. of this Notice.

ix. You should present the Qualifications of Personnel proposal element under proposal evaluation criterion number i., utilizing the specific requirements of section E.1.i. of this Notice.

x. You should present the Local Support and Future Support proposal elements under proposal evaluation criterion number j., utilizing the requirements of section E.1.j. of this Notice.

xi. Your application will not be considered for funding if you do not address all of the proposal evaluation criteria. See section E.1. of this Notice for a description of the proposal evaluation criteria.

xii. Only appendices A–C will be considered when evaluating your application. You must not include resumes of staff or consultants in the application.

6. You must certify that there are no current outstanding Federal judgments against your property and that you will not use grant funds to pay for any judgment obtained by the United States. To satisfy the Certification requirement, you should include this statement in your application: ''[INSERT NAME OF APPLICANT] certifies that the United States has not obtained an unsatisfied judgment against its property and will not use grant funds to pay any judgments obtained by the United States.'' A separate signature is not required.

7. You must certify that matching funds will be available at the same time grant funds are anticipated to be spent and that expenditures of matching funds are pro-rated or spent in advance of grant funding, such that for every dollar of the total project cost, not less than the required amount of matching funds will be expended. Please note that this Certification is a separate requirement from the Verification of Matching Funds requirement. To satisfy the Certification requirement, you should include this statement in your application: ''[INSERT NAME OF APPLICANT] certifies that matching funds will be available at the same time grant funds are anticipated to be spent and that expenditures of matching funds shall be pro-rated or spent in advance of grant funding, such that for every dollar of the total project cost, at least 25 cents (5 cents for 1994 Institutions) of matching funds will be expended.'' A separate signature is not required.

8. You must provide documentation in your application to verify all of your proposed matching funds. The documentation must be included in Appendix A of your application and will not count towards the 40-page limitation. Template letters are available for each type of matching funds contribution at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program*.

a. If matching funds are to be provided in cash, you must meet the following requirements.

- You: The application must include a statement verifying (1) the amount of the cash and (2) the source of the cash. You may also provide a bank statement

dated 30 days or less from the application deadline date to verify your cash match.

• Third-party: The application must include a signed letter from the third party verifying (1) how much cash will be donated and (2) that it will be available corresponding to the proposed grant period or donated on a specific date within the grant period.

b. If matching funds are to be provided by an in-kind donation, you must meet the following requirements.

• You: The application must include a signed letter from you or your authorized representative verifying (1) the nature of the goods and/or services to be donated and how they will be used, (2) when the goods and/or services will be donated (*i.e.,* corresponding to the proposed grant period or to specific dates within the grant period), and (3) the value of the goods and/or services. Please note that most applicant contributions for the RCDG program are considered applicant cash match in accordance with this Notice. If you are unsure, please contact your State Office because identifying your matching funds improperly can affect your scoring.

• Third-Party: The application must include a signed letter from the third party verifying (1) the nature of the goods and/or services to be donated and how they will be used, (2) when the goods and/or services will be donated (*i.e.,* corresponding to the proposed grant period or to specific dates within the grant period), and (3) the value of the goods and/or services.

To ensure that you are identifying and verifying your matching funds appropriately, please note the following:

• If you are paying for goods and/or services as part of the matching funds requirement, the expenditure is considered a cash match, and you must verify it as such. Universities must verify the goods and services they are providing to the project as a cash match and the verification must be approved by the appropriate approval official (*i.e.,* sponsored programs office or equivalent).

• If you have already received cash from a third-party (*i.e.,* Foundation) before the start of your proposed grant period, you must verify this as your own cash match and not as a third-party cash match. If you are receiving cash from a third-party during the grant period, then you must be verifying the cash as a third-party cash match.

• Board resolutions for a cash match must be approved at the time of application.

• You can only consider goods or services for which no expenditure is made as an in-kind contribution.

• If a non-profit or another organization contributes the services of affiliated volunteers, they must follow the third-party, in-kind donation verification requirement for each individual volunteer.

• Expected program income may not be used to fulfill your matching funds requirement at the time you submit your application. However, if you have a contract to provide services in place at the time you submit your application, you can verify the amount of the contract as a cash match.

• The valuation process you use for in-kind contributions does not need to be included in your application, but you must be able to demonstrate how the valuation was derived if you are awarded a grant. The grant award may be withdrawn or the amount of the grant reduced if you cannot demonstrate how the valuation was derived.

Successful applicants must comply with requirements identified in Section F, Federal Award Administration.

3. Dun and Bradstreet Data Universal Numbering System (DUNS) and System for Awards Management (SAM)

In order to be eligible (unless you are excepted under 2 CFR 25.110(b), (c) or (d), you are required to:

(a) Provide a valid DUNS number in your application, which can be obtained at no cost via a toll-free request line at (866) 705–5711;

(b) Register in SAM before submitting your application. You may register in SAM at no cost at *https://www.sam.gov/portal/public/SAM/;* and

(c) Continue to maintain an active SAM registration with current information at all times during which you have an active Federal award or an application or plan under consideration by a Federal awarding agency.

The Agency may not make a Federal award to you until you have complied with all applicable DUNS and SAM requirements. If you have not fully complied with requirements, the Agency may determine that the applicant is not qualified to receive a Federal award and the Agency may use this determination as a basis for making an award to another applicant.

4. Submission Dates and Times

Application Deadline Date: June 23, 2016.

Explanation of Deadlines: Complete applications must be submitted on paper or electronically according to the following deadlines:

Paper applications must be postmarked and mailed, shipped, or sent overnight no later than June 23, 2016, to be eligible for grant funding. The Agency will determine whether your application is late based on the date shown on the postmark or shipping invoice. You may also hand carry your application to one of our field offices, but it must be received by close of business on the deadline date. If the due date falls on a Saturday, Sunday, or Federal holiday, the reporting package is due the next business day. Late applications will automatically be deemed ineligible.

Electronic applications must be received by *http://www.grants.gov* no later than midnight eastern time June 20, 2016, to be eligible for grant funding. Please review the Grants.gov Web site at *http://grants.gov/applicants/organization_registration.jsp* for instructions on the process of registering your organization as soon as possible to ensure you are able to meet the electronic application deadline. Grants.gov will not accept applications submitted after the deadline.

5. Intergovernmental Review of Applications

Executive Order (E.O.) 12372, ''Intergovernmental Review of Federal Programs,'' applies to this program. This E.O. requires that Federal agencies provide opportunities for consultation on proposed assistance with State and local governments. Many States have established a Single Point of Contact (SPOC) to facilitate this consultation. For a list of States that maintain a SPOC, please see the White House Web site: *http://www.whitehouse.gov/omb/grants_spoc*. If your State has a SPOC, you may submit a copy of the application directly for review. Any comments obtained through the SPOC must be provided to your State Office for consideration as part of your application. If your State has not established a SPOC, or if you do not want to submit a copy of the application, our State Offices will submit your application to the SPOC or other appropriate agency or agencies.

6. Funding Restrictions

a. Project funds, including grant and matching funds, cannot be used for ineligible grant purposes (see 7 CFR 4284.10). Also, you shall not use project funds for the following:

• To purchase, rent, or install laboratory equipment or processing machinery;

• To pay for the operating costs of any entity receiving assistance from the Center;

• To pay costs of the project where a conflict of interest exists;

• To fund any activities prohibited by 2 CFR part 200; or

• To fund any activities considered unallowable by 2 CFR part 200, subpart E, ''Cost Principles,'' and the Federal Acquisition Regulation (for-profits) or successor regulations.

b. In addition, your application will not be considered for funding if it does any of the following:

• Focuses assistance on only one cooperative or mutually-owned business;

• Requests more than the maximum grant amount; or

• Proposes ineligible costs that equal more than 10 percent of total project costs. The ineligible costs will NOT be removed at this stage to proceed with application processing. For purposes of this determination, the grant amount requested plus the matching funds amount constitutes the total project costs.

We will consider your application for funding if it includes ineligible costs of 10 percent or less of total project costs, as long as the remaining costs are determined eligible otherwise. However, if your application is successful, those ineligible costs must be removed and replaced with eligible costs before the Agency will make the grant award, or the amount of the grant award will be reduced accordingly. If we cannot determine the percentage of ineligible costs, your application will not be considered for funding.

7. Other Submission Requirements

a. You should not submit your application in more than one format. You must choose whether to submit your application in hard copy or electronically. Applications submitted in hard copy should be mailed or hand-delivered to the State Office located in the State where you are headquartered. You can find State Office contact information at: *http://www.rd.usda.gov/contact-us/state-offices.* To submit an application electronically, you must follow the instruction for this funding announcement at *http://www.grants.gov.* A password is not required to access the Web site.

b. National Environmental Policy Act

All recipients under this Notice are subject to the requirements of 7 CFR part 1940, subpart G and any successor regulations. However, technical assistance awards under this Notice are classified as a Categorical Exclusion according to 7 CFR 1940.310(e), and do not require any additional documentation.

c. Civil Rights Compliance Requirements

All grants made under this Notice are subject to title VI of the Civil Rights Act of 1964 as required by the USDA (7 CFR part 15, subpart A) and section 504 of the Rehabilitation Act of 1973.

E. Application Review Information

The State Offices will review applications to determine if they are eligible for assistance based on requirements in 7 CFR part 4284, subparts A and F, this Notice, and other applicable Federal regulations. If determined eligible, your application will be scored by a panel of USDA employees in accordance with the point allocation specified in this Notice. A recommendation will be submitted to the Administrator to fund applications in highest ranking order. Applications that cannot be fully funded may be offered partial funding at the Agency's discretion.

1. Scoring Criteria

Scoring criteria will follow criteria published at 7 CFR 4284.513 as supplemented below including any amendments made by the section 6013 of the Food, Conservation, and Energy Act of 2008 (Pub. L. 110–234), which is incorporated by reference in this Notice. The regulatory and statutory criteria are clarified and supplemented below. You should also include information as described in section D.2.e.5.vi. if you choose to address these items under the scoring criteria. Evaluators will base scores only on the information provided or cross-referenced by page number in each individual evaluation criterion. The maximum amount of points available is 100. Newly established or proposed Centers that do not yet have a track record on which to evaluate the following criteria should refer to the expertise and track records of staff or consultants expected to perform tasks related to the respective criteria. Proposed or newly established Centers must be organized well-enough at time of application to address its capabilities for meeting these criteria.

a. Administrative capabilities (maximum score of 10 points). A panel of USDA employees will evaluate your demonstrated track record in carrying out activities in support of development assistance to cooperatively and mutually owned businesses. At a minimum, you must discuss the following administrative capabilities:

1. Financial systems and audit controls;

2. Personnel and program administration performance measures;

3. Clear written rules of governance; and

4. Experience administering Federal grant funding no later than the last 5 years, including but not limited to past RCDGs. Please list the name of the Federal grant program(s) and the amount(s) of funding received.

You will score higher on this criterion if you can demonstrate that the Center has independent governance. For applicants that are universities or parent organizations, you should demonstrate that there is a separate board of directors for the Center.

b. Technical assistance and other services (maximum score of 10 points). A panel of USDA employees will evaluate your demonstrated expertise no later than the last 5 years in providing technical assistance and accomplishing effective outcomes in rural areas to promote and assist the development of cooperatively and mutually owned businesses. You must discuss at least:

1. Your potential for delivering effective technical assistance;

2. The types of assistance provided;

3. The expected effects of that assistance;

4. The sustainability of organizations receiving the assistance; and

5. The transferability of your cooperative development strategies and focus to other areas of the U.S.

A chart or table showing the outcomes of your demonstrated expertise based upon the performance elements listed in section D.2.e.5.iv. or as identified in your award document on previous RCDG awards. At a minimum, please provide information for FY 2012–FY 2014 awards. We prefer that you provide one chart or table separating out award years. The intention here is for you to provide actual performance numbers based upon award years even though your grant period for the award was for the next calendar or fiscal year. Please provide a narrative explanation if you have not received a RCDG award.

You will score higher on this criterion if you provide more than 3 years of outcomes and can demonstrate that the organizations you assisted within the last 5 years are sustainable. Additional outcome information should be provided on RCDG grants awarded before FY 2012. Please describe specific project(s) when addressing a–e of this paragraph.

c. Economic development (maximum score of 10 points). A panel of USDA employees will evaluate your demonstrated ability to facilitate:

1. Establishment of cooperatives or mutually owned businesses;

2. New cooperative approaches (*i.e.,* organizing cooperatives among

underserved individuals or communities; an innovative market approach; a type of cooperative currently not in your service area; a new cooperative structure; novel ways to raise member equity or community capitalization; conversion of an existing business to cooperative ownership); and

3. Retention of businesses, generation of employment opportunities or other factors, as applicable, that will otherwise improve the economic conditions of rural areas.

You will score higher on this criterion if you provide economic statistics showing the impacts of your past development projects no later than 5 years old and identify your role in the economic development outcomes.

d. Past performance in establishing legal business entities (maximum score of 10 points). A panel of USDA employees will evaluate your demonstrated past performance in establishing legal cooperative business entities and other legal business entities during January 1, 2013–December 31, 2015. Provide the name of the organization(s) established, the date of formation and your role in assisting with the incorporation(s) under this criterion. In addition, documentation verifying the establishment of legal business entities must be included in Appendix C of your application and will not count against the 40-page limit for the narrative. The documentation must include proof that organizational documents were filed with the Secretary of State's Office (*i.e.* Certificate of Incorporation or information from the State's official Web site naming the entity established and the date of establishment); or if the business entity is not required to register with the Secretary of State, a certification from the business entity that a legal business entity has been established and when. Please note that you are not required to submit articles of incorporation to receive points under this criterion. You will score higher on this criterion if you have established legal cooperative businesses.

e. Networking and regional focus (maximum score of 10 points). A panel of USDA employees will evaluate your demonstrated commitment to:

1. Networking with other cooperative development centers, and other organizations involved in rural economic development efforts, and

2. Developing multi-organization and multi-state approaches to addressing the economic development and cooperative needs of rural areas.

You will score higher on this criterion if you can demonstrate the outcomes of your multi-organizational and multi-state approaches. Please describe the project(s), partners and the outcome(s) that resulted from the approach.

f. Commitment (maximum score of 10 points). A panel of USDA employees will evaluate your commitment to providing technical assistance and other services to under-served and economically distressed areas in rural areas of the United States. You will score higher on this criterion if you define and describe the underserved and economically distressed areas within your service area, provide statistics, and identify projects within or affecting these areas, as appropriate.

g. Matching Funds (maximum score of 10 points). A panel of USDA employees will evaluate your commitment for the 25 percent (5 percent for 1994 Institutions) matching funds requirement. A chart or table should be provided to describe all matching funds being committed to the project. However, formal documentation to verify all of the matching funds must be included in Appendix A of your application. You will be scored on how you identify your matching funds.

1. If you met the 25 percent (5 percent for 1994 Institutions) matching requirement, points will be assigned as follows:

- In-kind only—1 point,
- Mix of in-kind and cash—3–4 points (maximum points will be awarded if the ratio of cash to in-kind is 30 percent and above of matching funds), or
- Cash only—5 points.

2. If you exceeded the 25 percent (5 percent for 1994 Institutions) matching requirement, points will be assigned as follows:

- In-kind only—2 points,
- Mix of in-kind and cash—6–7 points (maximum points will be awarded if the ratio of cash to in-kind is 30 percent and above of matching funds), or
- Cash only—10 points.

h. Work Plan/Budget (maximum score of 10 points). A panel of USDA employees will evaluate your work plan for detailed actions and an accompanying timetable for implementing the proposal. The budget must present a breakdown of the estimated costs associated with cooperative and business development activities as well as the operation of the Center and allocate these costs to each of the tasks to be undertaken. Matching funds as well as grant funds must be accounted for in the budget.

You must discuss at a minimum:

1. Specific tasks (whether it be by type of service or specific project) to be completed using grant and matching funds;

2. How customers will be identified;

3. Key personnel; and

4. The evaluation methods to be used to determine the success of specific tasks and overall objectives of Center operations. Please provide qualitative methods of evaluation. For example, evaluation methods should go beyond quantitative measurements of completing surveys or number of evaluations.

You will score higher on this criterion if you present a clear, logical, realistic, and efficient work plan and budget.

i. Qualifications of those Performing the Tasks (maximum score of 10 points). A panel of USDA employees will evaluate your application to determine if the personnel expected to perform key tasks have a track record of:

1. Positive solutions for complex cooperative development and/or marketing problems; or

2. A successful record of conducting accurate feasibility studies, business plans, marketing analysis, or other activities relevant to your success as determined by the tasks identified in the your work plan; and

3. Whether the personnel expected to perform the tasks are full/part-time employees of your organization or are contract personnel.

You will score higher on this criterion if you demonstrate commitment and availability of qualified personnel expected to perform the tasks.

j. Local and Future Support (maximum score of 10 points). A panel of USDA employees will evaluate your application for local and future support. Support should be discussed directly within the response to this criterion.

1. Discussion on local support should include previous and/or expected local support and plans for coordinating with other developmental organizations in the proposed service area or with state and local government institutions. You will score higher if you demonstrate strong support from potential beneficiaries and formal evidence of intent to coordinate with other developmental organizations. You may also submit a maximum of 10 letters of support or intent to coordinate with the application to verify your discussion. These letters should be included in Appendix B of your application and will not count against the 40-page limit for the narrative.

2. Discussion on future support will include your vision for funding operations in future years. You should document:

(i) New and existing funding sources that support your goals;

(ii) Alternative funding sources that reduce reliance on Federal, State, and local grants; and

(iii) The use of in-house personnel for providing services versus contracting out for that expertise. Please discuss your strategy for building in-house technical assistance capacity.

You will score higher if you can demonstrate that your future support will result in long-term sustainability of the Center.

2. Review and Selection Process

The State Offices will review applications to determine if they are eligible for assistance based on requirements in 7 CFR part 4284, subparts A and F, this Notice, and other applicable Federal regulations. If determined eligible, your application will be scored by a panel of USDA employees in accordance with the point allocation specified in this Notice. A recommendation will be submitted to the Administrator to fund applications in highest ranking order. Applications that cannot be fully funded may be offered partial funding at the Agency's discretion. If your application is evaluated, but not funded, it will not be carried forward into the next competition.

F. Federal Award Administration Information

1. Federal Award Notices

If you are selected for funding, you will receive a signed notice of Federal award by postal mail from the State Office where your application was submitted, containing instructions on requirements necessary to proceed with execution and performance of the award.

If you are not selected for funding, you will be notified in writing via postal mail and informed of any review and appeal rights. You must comply with all applicable statutes, regulations, and notice requirements before the grant award will be approved. There will be no available funds for successful appellants once all FY 15 funds are awarded and obligated. See 7 CFR part 11 for USDA National Appeals Division procedures.

2. Administrative and National Policy Requirements

Additional requirements that apply to grantees selected for this program can be found in 7 CFR part 4284, subpart F; the Grants and Agreements regulations of the Department of Agriculture codified in 2 CFR parts 180, 400, 415, 417, 418, 421; 2 CFR parts 25 and 170; and 48 CFR 31.2, and successor regulations to these parts.

In addition, all recipients of Federal financial assistance are required to report information about first-tier subawards and executive compensation (see 2 CFR part 170). You will be required to have the necessary processes and systems in place to comply with the Federal Funding Accountability and Transparency Act of 2006 (Pub. L. 109–282) reporting requirements (see 2 CFR 170.200(b), unless you are exempt under 2 CFR 170.110(b)).

The following additional requirements apply to grantees selected for this program:

- Agency-approved Grant Agreement.
- Letter of Conditions.
- Form RD 1940–1, ''Request for Obligation of Funds.''
- Form RD 1942–46, ''Letter of Intent to Meet Conditions.''
- Form AD–1047, ''Certification Regarding Debarment, Suspension, and Other Responsibility Matters-Primary Covered Transactions.''
- Form AD–1048, ''Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions.''
- Form AD–1049, ''Certification Regarding Drug-Free Workplace Requirements (Grants).''
- Form RD 400–4, ''Assurance Agreement.''
- SF LLL, ''Disclosure of Lobbying Activities,'' if applicable.
- Form AD–3031, ''Assurance Regarding Felony Conviction or Tax Delinquent Status for Corporate Applicants.'' Must be signed by corporate applicants who receive an award under this Notice.

3. Reporting

After grant approval and through grant completion, you will be required to provide the following:

A SF–425, ''Federal Financial Report,'' and a project performance report will be required on a semiannual basis (due 30 working days after end of the semiannual period). The project performance reports shall include the following: A comparison of actual accomplishments to the objectives established for that period;

a. Reasons why established objectives were not met, if applicable;

b. Reasons for any problems, delays, or adverse conditions, if any, which have affected or will affect attainment of overall project objectives, prevent meeting time schedules or objectives, or preclude the attainment of particular objectives during established time periods. This disclosure shall be accompanied by a statement of the action taken or planned to resolve the situation; and

c. Objectives and timetable established for the next reporting period.

d. Provide a final project and financial status report within 90 days after the expiration or termination of the grant.

e. Provide outcome project performance reports and final deliverables.

G. Agency Contacts

If you have questions about this Notice, please contact the appropriate State Office at *http://www.rd.usda.gov/contact-us/state-offices.* Program guidance as well as application and matching funds templates may be obtained at *http://www.rd.usda.gov/programs-services/rural-cooperative-development-grant-program.* If you want to submit an electronic application, follow the instructions for the RCDG funding announcement located at *http://www.grants.gov.* You may also contact National Office staff: Susan Horst, RCDG Program Lead, *susan.horst@wdc.usda.gov,* or call the main line at 202–690–1374.

H. Nondiscrimination Statement

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the bases of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file an employment complaint, you must contact your agency's EEO Counselor within 45 days of the date of the alleged discriminatory act, event, or in the case of a personnel action. Additional information can be found online at *http://www.ascr.usda.gov/complaint_filing_cust.html.*

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form (PDF), found online at *http://www.ascr.usda.gov/complaint_filing_cust.html,* or at any USDA office, or call (866) 632–9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence

Avenue SW., Washington, DC 20250–9410, by fax (202) 690–7442 or email at *program.intake@usda.gov.*

Individuals who are deaf, hard of hearing or have speech disabilities and you wish to file either an EEO or program complaint please contact USDA through the Federal Relay Service at (800) 877–8339 or (800) 845–6136 (in Spanish).

Persons with disabilities, who wish to file a program complaint, please see information above on how to contact us by mail directly or by email. If you require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, etc.) please contact USDA's TARGET Center at (202) 720–2600 (voice and TDD).

Dated: March 17, 2016.

Samuel H. Rikkers,

Administrator, Rural Business-Cooperative Service.

[FR Doc. 2016–06765 Filed 3–24–16; 8:45 am]

BILLING CODE 3410–XY–P

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Proposed collection; Comments requested.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Rural Business-Cooperative Service's (RBS) intention to request an extension of a currently approved information collection in support of the program 7 CFR part 4279–B, '' Guaranteed Loanmaking—Business and Industry Loans.''

DATES: Comments on this notice must be received by May 24, 2016 to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: Ginger Allen, Business and Industry Loan Processing Branch, Rural Business-Cooperative Service, U.S. Department of Agriculture, STOP 3224, 1400 Independence Ave. SW., Washington, DC 20250–3224. Telephone: (202) 690–0309. The TDD number is (800) 877–8339 or (202) 708–9300.

SUPPLEMENTARY INFORMATION:

Title: Guaranteed Loanmaking—Business and Industry Loans.

OMB Number: 0570–0017.

Expiration Date of Approval: August 31, 2016.

Type of Request: Extension of a currently approved information collection.

Abstract: The Business and Industry (B&I) Guaranteed Loan Program was legislated in 1972 under section 310B of the Consolidated Farm and Rural Development Act, as amended. The purpose of the program is to improve, develop, or finance businesses, industries, and employment and improve the economic and environmental climate in rural communities. This purpose is achieved through bolstering the existing private credit structure through the guaranteeing of quality loans made by lending institutions, thereby providing lasting community benefits.

Estimate of Burden: Public reporting for this collection of information is estimated to average 2 hours per response.

Respondents: Business or other for-profit; State, Local or Tribal; Lenders, accountants, attorneys.

Estimated Number of Respondents: 413.

Estimated Number of Responses per Respondent: 1.

Estimated Number of Responses: 5,384.

Estimated Total Annual Burden on Respondents: 13,349 hours.

Copies of this information collection can be obtained from Jeanne Jacobs, Regulations and Paperwork Management Branch, Support Services Division at (202) 692–0040.

Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of RBS, including whether the information will have practical utility; (b) the accuracy of RBS's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to Jeanne Jacobs, Regulations and Paperwork Management Branch, Support Services Division, U.S. Department of Agriculture, Rural Development, STOP 0742, 1400 Independence Ave. SW., Washington, DC 20250.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Dated: February 25, 2016.

William C. Smith,

Acting Administrator, Rural Business-Cooperative Service.

Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Proposed collection; Comments requested.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Rural Business-Cooperative Service's (RBS) intention to request an extension of a currently approved information collection in support of the program for 7 CFR part 4279–A, ''Guaranteed Loanmaking—General.

DATES: Comments on this notice must be received by May 24, 2016 to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: Ginger Allen, Business and Industry Loan Processing Branch, Rural Business-Cooperative Service, U.S. Department of Agriculture, STOP 3224, 1400 Independence Avenue SW., Washington, DC 20250–3224. Telephone: (202) 690–0309. The TDD number is (800) 877–8339 or (202) 708–9300.

SUPPLEMENTARY INFORMATION:

Title: Guaranteed Loanmaking—Business and Industry Loans.

OMB Number: 0570–0018.

Expiration Date of Approval: August 31, 2016.

Type of Request: Extension of a currently approved information collection.

Abstract: The Business and Industry (B&I) Guaranteed Loan Program was legislated in 1972 under Section 310B of the Consolidated Farm and Rural Development Act, as amended. The purpose of the program is to improve, develop, or finance businesses, industries, and employment and improve the economic and environmental climate in rural communities. This purpose is achieved through bolstering the existing private

credit structure through the guaranteeing of quality loans made by lending institutions, thereby providing lasting community benefits. The collected information is necessary to assist Agency loan officers and approval officials in determining program eligibility and program monitoring.

Estimate of Burden: Public reporting for this collection of information is estimated to average 30 minutes to 12 hours per response.

Respondents: Business or other for-profit; State, Local or Tribal; Lenders, accountants, attorneys.

Estimated Number of Respondents: 225.

Estimated Number of Responses per Respondent: 1.

Estimated Number of Responses: 462.

Estimated Total Annual Burden on Respondents: 955 hours.

Copies of this information collection can be obtained from Jeanne Jacobs, Regulations and Paperwork Management Branch, Support Services Division at (202) 692–0040.

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of RBS, including whether the information will have practical utility; (b) the accuracy of RBS's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to Jeanne Jacobs, Regulations and Paperwork Management Branch, Support Services Division, U.S. Department of Agriculture, Rural Development, STOP 0742, 1400 Independence Ave. SW., Washington, DC 20250.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Dated: February 25, 2016.

William C. Smith,

Acting Administrator, Rural Business-Cooperative Service.

BILLING CODE 3410–XY–P

UNITED STATES DEPARTMENT OF COMMERCE

Bureau of Industry and Security

In the Matter of: Nutveena Sirirojnananont, 399 Maplewood Avenue, Portmouth, NH 03801; Order Denying Export Privileges

On August 26, 2014, in the U.S. District Court for the District of New Hamsphire, Nutveena Sirirojnananont (''Sirirojnananont''), was convicted of violating Section 38 of the Arms Export Control Act (22 U.S.C. 2778 (2012)) (''AECA''). Specifically, Sirirojnananont knowingly and willfully caused to be exported from the United States to Thailand firearms which were designated as defense articles on the United States Munitions List, without having obtained from the United States Department of State a license or written approval for the export of these defense articles. Sirirojnananont was sentenced to 10 months of imprisonment, one year of supervised release, and fined a $600 assessment.

Section 766.25 of the Export Administration Regulations (''EAR'' or ''Regulations'') [1] provides, in pertinent part, that ''[t]he Director of the Office of Exporter Services, in consultation with the Director of the Office of Export Enforcement, may deny the export privileges of any person who has been convicted of a violation of the Export Administration Act (''EAA''), the EAR, or any order, license or authorization issued thereunder; any regulation, license, or order issued under the International Emergency Economic Powers Act (50 U.S.C. § 1701–1706); 18 U.S.C. §§ 793, 794 or 798; section 4(b) of the Internal Security Act of 1950 (50 U.S.C. § 783(b)), or section 38 of the Arms Export Control Act (22 U.S.C. § 2778).'' 15 CFR 766.25(a); *see also* Section 11(h) of the EAA, 50 U.S.C. 4610(h). The denial of export privileges under this provision may be for a period of up to 10 years from the date of the conviction. 15 CFR 766.25(d); *see also* 50 U.S.C. 4610(h). In addition, Section 750.8 of the Regulations states that the Bureau of Industry and Security's Office of Exporter Services may revoke any Bureau of Industry and Security (''BIS'') licenses previously issued in which the person had an interest in at the time of her conviction.

BIS has received notice of Sirirojnananont's conviction for violating the AECA, and has provided notice and an opportunity for Sirirojnananont to make a written submission to BIS, as provided in Section 766.25 of the Regulations. BIS has not received a submission from Sirirojnananont.

Based upon my review and consultations with BIS's Office of Export Enforcement, including its Director, and the facts available to BIS, I have decided to deny Sirirojnananont's export privileges under the Regulations for a period of 10 years from the date of Sirirojnananont's conviction. I have also decided to revoke all licenses issued pursuant to the Act or Regulations in which Sirirojnananont had an interest at the time of her conviction.

Accordingly, it is hereby ORDERED:

First, from the date of this Order until August 26, 2024, Nutveena Sirirojnananont, with a last known address of 399 Maplewood Avenue, Portmouth, NH 03801, and when acting for or on her behalf, her successors, assigns, employees, agents or representatives (the ''Denied Person''), may not, directly or indirectly, participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as ''item'') exported or to be exported from the United States that is subject to the Regulations, including, but not limited to:

A. Applying for, obtaining, or using any license, License Exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or in any other activity subject to the Regulations; or

C. Benefitting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or in any other activity subject to the Regulations.

Second, no person may, directly or indirectly, do any of the following:

[1] The Regulations are currently codified in the Code of Federal Regulations at 15 CFR parts 730–774 (2015). The Regulations issued pursuant to the Export Administration Act (50 U.S.C. 4601–4623 (Supp. III 2015) (available at *http://uscode.house.gov*)). Since August 21, 2001, the Act has been in lapse and the President, through Executive Order 13222 of August 17, 2001 (3 CFR, 2001 Comp. 783 (2002)), which has been extended by successive Presidential Notices, the most recent being that of August 7, 2015 (80 FR 48,233 (Aug. 11, 2015)), has continued the Regulations in effect under the International Emergency Economic Powers Act (50 U.S.C. 1701, *et seq.* (2006 & Supp. IV 2010)).

A. Export or reexport to or on behalf of the Denied Person any item subject to the Regulations;

B. Take any action that facilitates the acquisition or attempted acquisition by the Denied Person of the ownership, possession, or control of any item subject to the Regulations that has been or will be exported from the United States, including financing or other support activities related to a transaction whereby the Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from the Denied Person of any item subject to the Regulations that has been exported from the United States;

D. Obtain from the Denied Person in the United States any item subject to the Regulations with knowledge or reason to know that the item will be, or is intended to be, exported from the United States; or

E. Engage in any transaction to service any item subject to the Regulations that has been or will be exported from the United States and which is owned, possessed or controlled by the Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by the Denied Person if such service involves the use of any item subject to the Regulations that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

Third, after notice and opportunity for comment as provided in Section 766.23 of the Regulations, any other person, firm, corporation, or business organization related to Sirirojnananont by ownership, control, position of responsibility, affiliation, or other connection in the conduct of trade or business may also be made subject to the provisions of this Order in order to prevent evasion of this Order.

Fourth, in accordance with Part 756 of the Regulations, Sirirojnananont may file an appeal of this Order with the Under Secretary of Commerce for Industry and Security. The appeal must be filed within 45 days from the date of this Order and must comply with the provisions of Part 756 of the Regulations.

Fifth, a copy of this Order shall be delivered to the Sirirojnananont. This Order shall be published in the **Federal Register**.

Sixth, this Order is effective immediately and shall remain in effect until August 26, 2024.

Issued this 18th day of March, 2016.

Karen H. Nies-Vogel,

Director, Office of Exporter Services.

Notice of Final Results of Antidumping Duty Changed Circumstances Review: Drawn Stainless Steel Sinks From the People's Republic of China

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce

SUMMARY: On February 12, 2016, the Department of Commerce (the Department) published its notice of initiation and preliminary results of a changed circumstances review of the antidumping duty order on drawn stainless steel sinks (drawn sinks) from the People's Republic of China (PRC).[1] In that notice, we preliminarily determined that Ningbo Afa Kitchen and Bath Co., Ltd. (Ningbo) is the successor-in-interest to Yuyao Afa Kitchenware Co., Ltd. (Yuyao) for purposes of determining antidumping duty cash deposits and liabilities. No interested party submitted comments in opposition to the *Initiation and Preliminary Results*. For these final results, the Department continues to find that Ningbo is the successor-in-interest to Yuyao.

DATES: Effective March 25, 2016.

FOR FURTHER INFORMATION CONTACT: Ross Belliveau or Brian Smith, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–4952 or (202) 482–1766, respectively.

SUPPLEMENTARY INFORMATION:

Background

On April 11, 2013, the Department published in the **Federal Register** an AD order on drawn sinks from the PRC.[2] On November 19, 2015, Yuyao, a producer/exporter of drawn sinks covered by this order, changed its name from Yuyao to Ningbo. On December 22, 2015, Ningbo requested that the Department conduct a changed circumstances review under section 751(b) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.216.[3] In this request, Ningbo asked the Department to determine that it is the successor-in-interest to Yuyao and, accordingly, to assign it the cash deposit rate of Yuyao.[4]

On February 12, 2016, the Department published its notice of initiation and preliminary results of this changed circumstances review, determining that Ningbo is the successor-in-interest to Yuyao.[5] In the *Initiation and Preliminary Results,* we provided all interested parties with an opportunity to comment and to request a public hearing regarding our preliminary finding that Ningbo is the successor-in-interest to Yuyao. On February 26, 2016, Ningbo submitted comments in support of our preliminary finding.[6] We received no comments in opposition to our preliminary finding and no requests for a public hearing from interested parties within the time period set forth in the *Initiation and Preliminary Results*.

Scope of the Order

The products covered by the scope of this order are drawn stainless steel sinks with single or multiple drawn bowls, with or without drain boards, whether finished or unfinished, regardless of type of finish, gauge, or grade of stainless steel. Mounting clips, fasteners, seals, and sound-deadening pads are also covered by the scope of this order if they are included within the sales price of the drawn stainless steel sinks. For purposes of this scope definition, the term ''drawn'' refers to a manufacturing process using metal forming technology to produce a smooth basin with seamless, smooth, and rounded corners. Drawn stainless steel sinks are available in various shapes and configurations and may be described in a number of ways including flush mount, top mount, or undermount (to include the attachment relative to the countertop). Stainless

[2] *See Drawn Stainless Steel Sinks from the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value and Antidumping Duty Order,* 78 FR 21592 (April 11, 2013).

[3] *See* Letter from Ningbo, entitled ''Drawn Stainless Steel Sinks from the People's Republic of China: Request for Changed Circumstances Review by Yuyao Afa Kitchenware Co., Ltd. and Ningbo Afa Kitchen and Bath Co., Ltd.,'' dated December 22, 2015.

[4] *Id.*

[5] *See Initiation and Preliminary Results.*

[6] *See* Letter from Ningbo, entitled ''Drawn Stainless Steel Sinks from the People's Republic of China: Comments on Changed Circumstances Review by Yuyao Afa Kitchenware Co., Ltd. and Ningbo Afa Kitchen and Bath Co., Ltd.,'' dated February 26, 2016.

steel sinks with multiple drawn bowls that are joined through a welding operation to form one unit are covered by the scope of the order. Drawn stainless steel sinks are covered by the scope of the order whether or not they are sold in conjunction with non-subject accessories such as faucets (whether attached or unattached), strainers, strainer sets, rinsing baskets, bottom grids, or other accessories.

Excluded from the scope of the order are stainless steel sinks with fabricated bowls. Fabricated bowls do not have seamless corners, but rather are made by notching and bending the stainless steel, and then welding and finishing the vertical corners to form the bowls. Stainless steel sinks with fabricated bowls may sometimes be referred to as ''zero radius'' or ''near zero radius'' sinks.

The products covered by this order are currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under statistical reporting number 7324.10.0000 and 7324.10.0010. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope is dispositive.

Final Results of Changed Circumstances Review

For the reasons stated in the *Initiation and Preliminary Results,* and because we received no comments from interested parties to the contrary, the Department continues to find that Ningbo is the successor-in-interest to Yuyao. As a result of this determination, we find that Ningbo should receive the cash deposit rate previously assigned to Yuyao in the most recently completed review of the antidumping duty order on drawn sinks from the PRC.[7] Consequently, the Department will instruct U.S. Customs and Border Protection to suspend liquidation of all shipments of subject merchandise produced or exported by Ningbo and entered, or withdrawn from warehouse, for consumption on or after the publication date of this notice in the **Federal Register** at 4.29 percent, which is the current antidumping duty cash deposit rate for Yuyao.[8] This cash deposit requirement shall remain in effect until further notice.

We are issuing this determination and publishing these final results and notice in accordance with sections 751(b)(1) and 777(i)(1) and (2) of the Act and 19 CFR 351.216 and 351.221(c)(3).

Dated: March 21, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

[FR Doc. 2016–06847 Filed 3–24–16; 8:45 am]

[7] *See Drawn Stainless Steel Sinks From the People's Republic of China: Final Results of the Antidumping Duty Administrative Review; 2012–2014,* 80 FR 69644 (November 10, 2015) (*AR1 Final Results*).

[8] Yuyao received a 4.29 percent dumping margin in the 2012–2014 administrative review of the AD order on drawn sinks from the PRC. *See AR1 Final Results* at 69645. We note that Yuyao is also a respondent in the current 2014–2015 administrative review of this antidumping duty order. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 80 FR 30041 (May 26, 2015). Because we determined that Ningbo is the successor-in-interest to Yuyao, we will assign Ningbo an updated cash deposit rate based on the final results of that administrative review.

DEPARTMENT OF COMMERCE

International Trade Administration

United States Manufacturing Council: Meeting of the United States Manufacturing Council

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of an open meeting.

SUMMARY: The United States Manufacturing Council (Council) will hold an open meeting on Tuesday, April 12, 2016. The Council was established in April 2004 to advise the Secretary of Commerce on matters relating to the U.S. manufacturing industry. The purpose of the meeting is for Council members to review and deliberate on recommendations developed by the Workforce Development subcommittee looking at high school educational approach enhancements for consideration by the Manufacturing Council. The agenda may change to accommodate Council business. The final agenda will be posted on the Department of Commerce Web site for the Council at *http://trade.gov/manufacturingcouncil,* at least one week in advance of the meeting.

DATES: Tuesday, April 12, 2016, 9:00 a.m.–12:00 p.m. The deadline for members of the public to register, including requests to make comments during the meetings and for auxiliary aids, or to submit written comments for dissemination prior to the meeting, is 5:00 p.m. EDT on April 4, 2016.

ADDRESSES: The meeting will be held at 1211 Euclid Avenue, Cleveland, Ohio. Requests to register (including to speak or for auxiliary aids) and any written comments should be submitted to: U.S. Manufacturing Council, U.S. Department of Commerce, Room 4043, 1401 Constitution Avenue NW., Washington, DC 20230, *archana.sahgal@trade.gov.* Members of the public are encouraged to submit registration requests and written comments via email to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT: Archana Sahgal, the United States Manufacturing Council, Room 4043, 1401 Constitution Avenue NW., Washington, DC 20230, telephone: 202–482–4501, email: *archana.sahgal@trade.gov.*

SUPPLEMENTARY INFORMATION:

Background: The Council advises the Secretary of Commerce on matters relating to the U.S. manufacturing industry.

Public Participation: The meeting will be open to the public and will be accessible to people with disabilities. All guests are required to register in advance by the deadline identified under the DATES caption. Seating is limited and will be on a first come, first served basis. Requests for sign language interpretation or other auxiliary aids must be submitted by the registration deadline. Last minute requests will be accepted, but may be impossible to fill. There will be fifteen (15) minutes allotted for oral comments from members of the public. To accommodate as many speakers as possible, the time for public comments may be limited to three (3) minutes per person. Individuals wishing to reserve speaking time during the meeting must submit a request at the time of registration, as well as the name and address of the proposed speaker. If the number of registrants requesting to make statements is greater than can be reasonably accommodated during the meeting, the International Trade Administration may conduct a lottery to determine the speakers. Speakers are requested to submit a written copy of their prepared remarks by 5:00 p.m. on Monday, April 4, 2016, for inclusion in the meeting records and for circulation to the members of the Manufacturing Council. Speakers additionally are requested to bring at least 25 copies of their oral comments for distribution to the members of the Manufacturing Council and to the public at the meeting. In addition, any member of the public may submit pertinent written comments concerning the Council's affairs at any time before or after the meeting. Comments may be submitted to Archana Sahgal at the contact information indicated above. To be considered during the meeting, comments must be received no later than 5:00 p.m. EDT on April 4, 2016, to

ensure transmission to the Council prior to the meeting. Comments received after that date and time will be distributed to the members but may not be considered during the meeting. Copies of Council meeting minutes will be available within 90 days of the meeting.

Dated: March 21, 2016.

Archana Sahgal,

Executive Secretary, United States Manufacturing Council.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Small Business Innovation Research (SBIR) Request for Public Comments

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Request for public comments and ideas on NOAA SBIR subtopics which would satisfy unmet industry needs.

SUMMARY: Notice is hereby given that the U.S. Department of Commerce, National Oceanic and Atmospheric Administration (NOAA), Small Business Innovation Research (SBIR) Program Office is requesting public comments to better understand the scientific community and small business concerns associated with the environmental industry, as well as improve our SBIR solicitation process.

Of NOAA's four major topics, which was derived from NOAA's Research and Development (R&D) goals, what problem statements or subtopic ideas can you suggest where the project outcome enables commercial products/services which would satisfy current or near term unmet industry needs. Please remember all submissions must be directly relevant to NOAA's mission. NOAA's four major mission topics are as follows:

a. Climate Adaptation and Mitigation

b. Weather-Ready Nation

c. Healthy Oceans

d. Resilient Coastal Communities and Economies

Please categorize submissions based on the four topics above and include as many problem statements or subtopic ideas as you see fit per topic. Also, please provide a brief description of the potential commercialized products/services for each idea submitted.

DATES: Comments and ideas must be received on or before April 29, 2016.

ADDRESSES: Send all comments via email to *NOAA.SBIR@noaa.gov.* Subject Line shall contain ''NOAA SBIR Request for Public Comments—**Federal Register**.''

FOR FURTHER INFORMATION CONTACT: Vince Garcia, NOAA SBIR Program Manager, at: *vincent.garcia@noaa.gov.*

SUPPLEMENTARY INFORMATION: The NOAA Small Business Innovation Research (SBIR) Program Office is exploring options in streamlining and improving existing agency SBIR Phase I subtopic selection processes. The SBIR Program Office seeks to better understand unmet industry needs, which directly relate to NOAA's mission. Historically, subtopics are suggested by NOAA federally-employed scientists and engineers and are selected for publication in the annual SBIR Phase I solicitation by NOAA Line Office leadership.

Respondents shall not be obligated to provide the services described herein, if applicable, and it is understood by the United States Government that any cost estimates provided as a result of this request are ''best'' estimates only. All information submitted in response to this request for public comments is voluntary; the United States Government will not pay for information requested nor will it compensate any respondent for any cost incurred in developing information provided to the United States Government.

Dated: March 15, 2016.

Jason Donaldson,

Chief Financial Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

National Oceanic and Atmospheric Administration (NOAA)

Science Advisory Board (SAB)

AGENCY: Office of Oceanic and Atmospheric Research (OAR), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of open meeting.

SUMMARY: The Science Advisory Board (SAB) was established by a Decision Memorandum dated September 25, 1997, and is the only Federal Advisory Committee with responsibility to advise the Under Secretary of Commerce for Oceans and Atmosphere on strategies for research, education, and application of science to operations and information services. SAB activities and advice provide necessary input to ensure that National Oceanic and Atmospheric Administration (NOAA) science programs are of the highest quality and provide optimal support to resource management.

Time and Date: The meeting will be held Thursday April 28 from 9:45 a.m. EDT to 5:45 p.m. EDT and on Friday April 29, from 9:00 a.m. EDT to 1:00 p.m. EDT. These times and the agenda topics described below are subject to change. Please refer to the Web page *http://www.sab.noaa.gov/Meetings/meetings.html* for the most up-to-date meeting times and agenda.

Place: The meeting will be held at Sheraton Silver Spring Magnolia Ballroom, 8777 Georgia Avenue, Silver Spring, Maryland. Please check the SAB Web site *http://www.sab.noaa.gov/Meetings/meetings.html* for directions to the meeting location.

Status: The meeting will be open to public participation with a 15-minute public comment period on April 28 from 5:30–5:45 p.m. EDT (check Web site to confirm time). The SAB expects that public statements presented at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to a total time of two (2) minutes. Individuals or groups planning to make a verbal presentation should contact the SAB Acting Executive Director by April 21, 2016 to schedule their presentation. Written comments should be received in the SAB Executive Director's Office by April 21, 2016, to provide sufficient time for SAB review. Written comments received by the SAB Executive Director after April 21, 2016, will be distributed to the SAB, but may not be reviewed prior to the meeting date. Seating at the meeting will be available on a first-come, first-served basis.

Special Accommodations: These meetings are physically accessible to people with disabilities. Requests for special accommodations may be directed no later than 12:00 p.m. on April 21, 2016, to Dr. Elizabeth Turner, Acting SAB Executive Director, Room 146, Gregg Hall, 35 Colovos Road, Durham, NH 03824; Email: *Elizabeth.Turner@noaa.gov.*

Matters To Be Considered: The meeting will include the following topics: (1) Report on Ecosystem Services Valuation from the Ecosystem Sciences and Management Working Group; (2) Updates from the NOAA Administrator, Chief Scientist and the Chief Economist; (3)SAB Strategy Discussion and

Implications for NOAA; and (4) Discussion of Working Group Issues and Working Group Concept of Operations.

FOR FURTHER INFORMATION CONTACT: Dr. Elizabeth Turner, Acting Executive Director, Science Advisory Board, NOAA, Room 146 Gregg Hall, 35 Colovos Road, Durham, NH 03824. Email: *Elizabeth.Turner@noaa.gov;* or visit the NOAA SAB Web site at *http://www.sab.noaa.gov.*

Dated: March 15, 2016.

Fisheries of the South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Pre-Assessment Webinar for South Atlantic Red Snapper and Gray Triggerfish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 41 Post-Review Workshop Webinar.

SUMMARY: The SEDAR 41 assessments of the South Atlantic stocks of *red snapper* and *gray triggerfish* will consist of a series of workshop and webinars: Data Workshops; an Assessment Workshop and Webinars; and a Review Workshop, see **SUPPLEMENTARY INFORMATION.**

DATES: The SEDAR 41 Post-Review Workshop Webinar will be held on Friday, April 8, 2016, from 1 p.m. to 3 p.m.

ADDRESSES: The Webinar is open to members of the public. Those interested in participating should contact Julia Byrd at SEDAR (see **FOR FURTHER INFORMATION CONTACT** below) to request an invitation providing Webinar access information. Please request Webinar invitations at least 24 hours in advance of each Webinar.

SEDAR address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405. *www.sedarweb.org.*

FOR FURTHER INFORMATION CONTACT: Julia Byrd, SEDAR Coordinator, 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405; phone (843) 571–4366; email: *julia.byrd@safmc.net.*

SUPPLEMENTARY INFORMATION:

Agenda

The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions, have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a three-step process including: (1) Data Workshop; (2) Assessment Process utilizing webinars; and (3) Review Workshop. The product of the Data Workshop is a data report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The product of the Assessment Process is a stock assessment report which describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The assessment is independently peer reviewed at the Review Workshop. The product of the Review Workshop is a Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, Highly Migratory Species Management Division, and Southeast Fisheries Science Center. Participants include: Data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and non-governmental organizations (NGOs); international experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion for the Post-Review Workshop Webinar are as follows:

1. Participants will discuss any remaining assessment issues and recommendations from the Review Workshop in order to finalize the Review Workshop summary reports.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is accessible to people with disabilities. Requests for auxiliary aids should be directed to the SAFMC office (see **ADDRESSES**) at least ten working days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: March 21, 2016.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2016–06755 Filed 3–24–16; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Southeast Region Permit Family of Forms.

OMB Control Number: 0648–0205.

Form Number(s): None.

Type of Request: Regular (revision of a currently approved information collection).

Number of Respondents: 13,909.

Average Hours per Response: Vessel and dealer permit applications, 29 minutes each; wreckfish permit applications, live rock permit applications and operator card applications, 21 minutes each.

Burden Hours: 7,023.

Needs and Uses: This request is for a revision to the existing reporting requirements. The SERO Permits Office (Southeast Permits Office) administers Federal fishing permits in the Gulf of Mexico (Gulf), South Atlantic, and Caribbean Sea under the authority of the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. 1801. The Southeast Permits Office proposes to revise two parts of the collection-of-information approved under OMB Control Number 0648–0205.

The Southeast Permits Office proposes to collect additional information on five applications for economic analysis and for purposes of notifying respondents. These data include race, sex, and business type and ownership information, as well as email addresses and the option to provide cellular contact information for digital notifications. The revision will also include a small business certification section, so NMFS can determine if the respondent is a small or large business according to standards established by the Small Business Administration. These proposed revisions will not change the current cost burden but will increase the annual time burden for respondents.

Currently, NMFS requires fishermen (respondents) to display one adhesive decal on their vessel indicating that they have a Federal fishing permit in at least one of two Gulf fisheries; the applicable permits are the Charter Vessel/Headboat Permit for Gulf Reef Fish, the Charter Vessel/Headboat Permit for Gulf Coastal Migratory Pelagic fish, and their respective Historical Captain endorsements. NMFS proposes to revise OMB Control Number 0648–0205 to split the single decal covering both fisheries into two decals, with one decal administered with each specific fishery permit or endorsement. In addition, this revision also addresses a new fee of $10 per decal to cover administrative costs, as required by NOAA Finance Handbook, Exhibit 9–1. The Federal Permit Application for Vessels Fishing in the Exclusive Economic Zone would also be revised to reflect the new fee. The decal is currently issued at no cost to permit applicants. These decals allow individuals and law enforcement officials to easily identify vessels that have Federal permits.

Affected Public: Business or other for-profit organizations.

Frequency: Annually and on occasion.

Respondent's Obligation: Mandatory.

This information collection request may be viewed at reginfo.gov. Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov* or fax to (202) 395–5806.

Dated: March 22, 2016.

Sarah Brabson,

NOAA PRA Clearance Officer.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

United States Patent and Trademark Office

[Docket No.: PTO–P–2016–0006]

Patent Quality Metrics for Fiscal Year 2017 and Request for Comments on Improving Patent Quality Measurement

AGENCY: United States Patent and Trademark Office, Commerce.

ACTION: Request for comments.

SUMMARY: The United States Patent and Trademark Office (USPTO) is revising its patent quality metrics to better identify quality-related issues and more clearly communicate its quality measurements to the public. The new patent quality metrics are part of the USPTO's Enhanced Patent Quality Initiative (EPQI), which was launched in 2015 to engage patent stakeholders in enhancing patent quality. As part of the Enhanced Patent Quality Initiative, the prior patent quality metrics have been reassessed, and new patent quality metrics are now being designed for adoption for fiscal year 2017. The new patent quality metrics for use in fiscal year 2017 are planned to focus on the correctness and clarity of Office actions and will be applied through a newly unified review process using a standardized review form that will permit data from a significantly larger number of finished product quality reviews conducted at the agency to be aggregated and mined for information. The USPTO will also mine data on transactions during patent prosecution (*e.g.,* the types of actions taken by the applicant and the USPTO) to assess examination processes and identify potential quality issues requiring further study. The review process will apply the new quality metrics and standardized form to increase the accuracy, consistency, transparency, clarity, and simplicity of USPTO quality review procedures. The USPTO is seeking comment from its stakeholders on further improvements to the changes proposed herein.

DATES: *Comment Deadline Date:* To be ensured of consideration in the development of the next iteration of metrics, written comments must be received on or before May 24, 2016.

ADDRESSES: Comments should be sent by electronic mail message over the Internet addressed to: *QualityMetrics2017@uspto.gov.* Comments may also be submitted by postal mail addressed to: Mail Stop Comments—Patents, Commissioner for Patents, P.O. Box 1450, Alexandria, VA, 22313–1450, marked to the attention of Michael Cygan, Senior Legal Advisor, Office of Patent Legal Administration, Office of the Deputy Commissioner for Patent Examination Policy.

Although comments may be submitted by postal mail, the Office prefers to receive comments by electronic mail message over the Internet because sharing comments with the public is more easily accomplished. Electronic comments are preferred to be submitted in plain text, but also may be submitted in ADOBE® portable document format or MICROSOFT WORD® format. Comments not submitted electronically should be submitted on paper in a format that facilitates convenient digital scanning into ADOBE® portable document format.

Timely filed comments will be available for public inspection at the Office of the Commissioner for Patents, currently located in Madison East, Tenth Floor, 600 Dulany Street, Alexandria, Virginia 22314. Comments also will be available for viewing via the Office's Internet Web site (*http://www.uspto.gov/patent/laws-and-regulations/comments-public/comments-improving-patent-quality-measurement*). Because comments will be made available for public inspection, information that the submitter does not desire to make public, such as an address or phone number, should not be included in the comments. It would be helpful to the USPTO if comments included information about: (1) The name and affiliation of the individual responding; and (2) an indication of whether the comments represent views of the respondent's organization or are the respondent's personal views.

FOR FURTHER INFORMATION CONTACT: Michael T. Cygan, Senior Legal Advisor, at (571) 272–7700. Inquiries regarding this notice may be directed to the Office of Patent Legal Administration, by telephone at (571) 272–7701, or by electronic mail at *PatentPractice@uspto.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Prior to fiscal year 2005, the USPTO quality metric was solely directed to the correctness of the final output of the examination process that would result in a patent: An allowed application. During fiscal years 2005 through 2009, the USPTO expanded its review efforts, employing two official metrics of examination quality: (1) The correctness of the examiner's determination of allowance of an application; and (2) the quality of the actions taken during the

course of examination. In fiscal year 2010, the first metric was modified to include final Office actions, and the second metric was modified to focus on the quality of non-final Office actions during prosecution. All quality analysis was performed by random selection of actions for review by a dedicated Office of Patent Quality Assurance (OPQA) team of reviewers, which reviewed each selected action to determine whether all required claim rejections were properly made in compliance with the patent statutes.

In 2011, based on stakeholder input, the USPTO adopted a new ''Composite Quality Metric'' for fiscal years 2011–2015 to track performance of those aspects that affect quality and provide a single comprehensive metric representing the overall state of patent examination quality. The Composite Quality Metric was composed of seven total factors: (1) The final disposition review, (2) the in-process review, (3) the first action on the merits (FAOM) search review, (4) the complete FAOM review, (5) the external quality survey, (6) the internal quality survey, and (7) an aggregation of five factors from the USPTO's Quality Index Report (QIR). The first four factors continued the USPTO's focus on the statutory compliance of work product; *i.e.,* the correctness of the Office actions. The first four factors were derived from the results of reviews of randomly selected Office actions that were conducted by OPQA. These reviews continued the USPTO's focus on the statutory compliance of work product; *i.e.,* the correctness of the Office actions, with only a basic assessment of whether the examiner had sufficiently set forth his or her position for any claim rejections. The next two factors were derived from surveys that assessed both internal and external stakeholder views on USPTO quality. The final factor was based on the USPTO's QIR, which measures the degree to which actions in the prosecution of patent applications reveal trends indicative of quality concerns and uses a statistical analysis of occurrences of certain types of events (*e.g.,* reopening after final Office actions, consecutive non-final Office actions, consecutive restriction requirements) based on data available through the USPTO's Patent Application Locating and Monitoring (PALM) system. Performance in the overall Composite Quality Metric and in each of the component metric factors has been published on the USPTO dashboard Web site on a quarterly basis. The information from the Composite Quality Metric has been used to identify trends and areas of concern and to target those areas in need of increased training and/or resources.

On February 5, 2015, the USPTO launched the Enhanced Patent Quality Initiative to improve the quality of patents issued by the USPTO. This initiative began with a request for public comments on a set of six proposals outlined in a **Federal Register** Notice. See *Request for Comments on Enhancing Patent Quality,* 80 FR 6475 (Feb. 5, 2015). The USPTO also held a two-day ''Quality Summit'' on March 25 and 26, 2015, at the USPTO headquarters in Alexandria, Virginia, to discuss the quality concerns of patent stakeholders and to receive feedback on the USPTO's proposals. Following the Quality Summit, the USPTO has continued its engagement with the public through numerous roadshows, events, and stakeholder meetings to further refine the steps that may be taken to improve quality.

The Enhanced Patent Quality Initiative targets three pillars of patent quality: (1) Excellence in work products; (2) excellence in measuring patent quality; and (3) excellence in customer service. In furtherance of the second pillar of patent quality, the USPTO is focusing on improving the internal metrics used to evaluate patent examination quality and on improving the communication of its patent examination quality measurements to the public. Through this initiative, the USPTO has received numerous comments on establishing appropriate quality metrics. The USPTO has considered all of the comments received through the Summit, the **Federal Register** Notice, and numerous quality outreach events. Based on the information received to date, the USPTO has identified key aspects of quality measurement essential to developing more effective quality metrics.

First, the clarity of the examiner's determinations and the rationale underlying the decisions made in Office actions is an important part of overall patent examination quality and should be emphasized in reviews of USPTO work product. Second, individual metrics that clearly reflect individual aspects of USPTO work product would better communicate patent quality than a single quality composite number that combines scores from unrelated sources such as surveys, procedural efficiency statistics, and substantive patentability compliance reviews. Third, improving the granularity of work product quality measurement to monitor compliance with each statutory provision and enable meaningful data at the work group and art unit level is highly desirable for providing targeted training resulting in greater consistency. Fourth, monitoring the process of examination, *i.e.,* the type and number of actions taken during prosecution as reflected in the QIR, remains a high priority that is best used to spot unusual trends or occurrences that deserve further attention. Lastly, capturing a larger number of finished product quality reviews conducted at the agency and using a standardized review form will lead to a significantly greater number of data points, which will allow for greater consistency in the review of application quality within the Patents Organization. More information on the public comments received on the metrics, and how those are being used to identify improvements to the metrics, is available at *http://www.uspto.gov/patent/initiatives/quality-metrics.* In view of these guideposts, a new set of metrics is now being proposed to incorporate these and other improvements to the collection of data and reporting of metrics.

II. Improving Measurement of Patent Examination Quality

As the next step in advancing the second pillar of the Enhanced Patent Quality Initiative, the proposed fiscal year 2017 patent quality metrics refocus the USPTO's measurement of the quality of the work products produced from first Office action through final disposition. The proposed metrics continue to assess the correctness of an examiner's determinations in a given Office action with increased attention on assessing whether the examiner clearly set forth his or her reasoning in a given Office action. In addition, the Office will continue to review the transactions taken during patent prosecution through the QIR, but this information will be used to identify the need for further investigation rather than being measured against a goal. Additionally, the USPTO is changing its reporting of the quality metrics to provide simpler and clearer communication of results to the public.

A. Measurement of Statutory Compliance and Clarity in Work Products

The patent quality metrics of work product proposed here for fiscal year 2017 provide a tighter focus on measuring two foundational characteristics of patent examination: Statutory compliance and clarity of decision making in Office actions. These proposed patent quality metrics continue to measure correctness of actions in terms of their compliance

with each of the statutory requirements for issuance of a patent. To this end, a sampling of Office actions will continue to be reviewed both for improperly made rejections and for failure to make rejections where required by statute. The substantive review items will also include other items, for example, the propriety of the examiner's search, any interpretation of claim language under 35 U.S.C 112(f), any determination that an action is made final, any restriction or election of species requirement.

Furthermore, the new metrics greatly enhance the review of the clarity of the components of Office actions by including new clarity review items specifically designed for each of the substantive patentability determinations made in Office actions. For example, when reviewing an Office action containing an obviousness rejection under 35 U.S.C. 103, the review items consider not only whether the obviousness rejection was proper, but also whether the statement of the rejection mapped the elements identified in the prior art to the claim limitations, and whether the statement of the rejection explained the reasons for the rejection in a clear manner. The new clarity review items will also include, for example, items directed to the sufficiency of the recordation of any interview and the propriety of any reasons for allowance of an application.

For fiscal year 2017, the USPTO is proposing to capture the correctness and clarity review items with a single standardized review form as a repository for all of the review items, replacing the review-specific forms used in the 2011–2015 Composite Quality Metric. The review questions on such a standardized form, colloquially referred to as the ''Master Review Form,'' is planned to be used by all USPTO reviewers for finished product quality reviews of actions at every stage of prosecution. This Master Review Form will contain the above-described criteria for recording correctness for each of the substantive patentability requirements and for recording the clarity of each of those decisions and the supporting rationales set forth in the Office action under review. The full list of correctness and clarity items in the draft proposed version of the Master Review Form is available for viewing at *http://www.uspto.gov/patentquality.* The USPTO welcomes and appreciates feedback on the elements of this form through this notice, and will use the input to help finalize the Master Review Form that will be deployed throughout the USPTO in fiscal year 2017.

This draft proposed ''Master Review Form'' was developed as part of the Clarity and Correctness Data Capture program, which is part of the USPTO's Enhanced Patent Quality Initiative. The Clarity and Correctness Data Capture Program has been instituted to better capture the data produced through the different types of reviews within the Patents Organization. Historically, reviews have been performed not only by the quality assurance team, but also by other Technology Center personnel, with each reviewing area setting its own reviewing criteria. Moreover, the only work product reviews recorded for identification of trends were those undertaken by the Office of Patent Quality Assurance. The Master Review Form is designed to provide standardized reviewing criteria for quality reviews of finished work product. Through application of standardized reviewing criteria, the USPTO can better leverage the results from the many levels of review conducted at the agency. The improvements to the data capture process will enable meaningful data analysis at a more granular level than previously possible, permitting valid inferences to be drawn at the workgroup and art unit levels. Through this process, the USPTO and the stakeholders in the patent system will be able to gain a greater understanding of the state of patent prosecution and to work better together towards its improvement.

B. Measurement of Transactions During Patent Prosecution

A further aspect of the new patent quality metrics will be the leveraging of the data representing the thousands of transactions made by the USPTO during prosecution to reveal information on the quality of the patent prosecution process itself. Transactions during prosecution, such as restrictions, first Office actions, and allowances, are monitored through the USPTO's PALM system. The USPTO monitors many of these transactions through its QIR. Since 2011, the USPTO has included some of these transactions, such as the number of occurrences of consecutive non-final rejections, as part of its reported quality data. For the proposed 2017 quality metrics, transactional data from the QIR will be used to identify information that can be used to prevent reopening of prosecution, reduce rework, and improve the consistency of decision making throughout the USPTO. Key indicators of the efficiency of prosecution will be instances of reopening of prosecution and repeated non-final Office actions, as well as other instances of rework (*e.g.,* consecutive final Office actions, consecutive restrictions). These indicators do not, by themselves, provide a numerical measure of quality. Rather, these indicators will reveal trends and outlier behavior that will draw attention to potential quality concerns.

C. Clearer Reporting of the Metrics

In presenting the results of the quality data, the USPTO will seek to further improve the usefulness and transparency of our quality reporting and to communicate the results in a clear and simple manner. The 2011–2015 Composite Quality Metric, which combined seven different quality variables into a single composite number, will be discontinued. The Quality Index Report will be used to identify potential areas of concern, rather than as providing a single, reportable number. While internal and external surveys will still be performed, the results will not be part of the quality metric, but instead will serve as independent checks on the quality metrics.

D. Refinement of Proposed Quality Metrics in FY 2016

Fiscal year 2016 will represent a transitional period for the quality metrics, emphasizing the fine-tuning of the fiscal year 2017 patent quality metrics. The USPTO will test and refine its proposed Master Review Form. This Master Review Form will contain new items, such as additional clarity review items, that will require a period of data collection to create numerical baselines for these items. The Master Review Form will initially be used in targeted reviews to determine the effectiveness of each individual clarity and correctness review item. The transactional data from the QIR will also be reviewed during 2016 to optimize the data analysis therein. Stakeholder comments on the Master Review Form in response to this notice will also form an important part of the process of optimizing the components of the patent quality metrics. During this transitional period, the information gleaned during fiscal year 2016 will be used to produce a finalized set of quality metrics for fiscal year 2017 that will represent the next phase of quality measurement, analysis, tracking, and reporting at the USPTO.

III. Feedback Sought on Improving Metrics of Patent Examination Quality

The USPTO seeks input and comments from the public through this notice and through public outreach on the following:

(1) Is the USPTO moving in the right direction by choosing to focus on two

core metrics: A work product metric representing correctness of actions, and a clarity metric that more thoroughly explores the sufficiency of the examiner's reasoning in an Office action, thus moving away from the prior goal-based quality ''score'' that reflected not only quality of work product but also results of surveys, used to discover both internal and external stakeholder opinions, and QIR process indicators? Which of the proposed clarity and correctness review items in the proposed standardized ''Master Review Form,'' available at *http://www.uspto.gov/patentquality,* should be used as the key drivers of patent examination quality metrics?

(2) How can patent metrics best provide objective, rather than subjective, measurements of quality-related features in clarity and correctness reviews?

In addition to the three questions posed above, the USPTO welcomes comments on any and all areas of quality measurement. Suggestions for rephrased or additional quality metrics review items, especially clarity indicators, are welcomed. The USPTO will consider all submitted comments as it develops the next iteration of quality metrics.

For the most current information on this and other patent quality initiatives, please visit the Enhanced Patent Quality Initiative micro site at *http://www.uspto.gov/patentquality.*

Dated: March 22, 2016.

Michelle K. Lee,

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

BILLING CODE 3510–16–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: This action deletes products from the Procurement List that were previously furnished by a nonprofit agency employing persons who are blind or have other severe disabilities.

DATES: *Effective:* April 24, 2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Deletions

On 2/19/2016 (81 FR 8486), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the products listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the products to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the products deleted from the Procurement List.

End of Certification

Accordingly, the following products are deleted from the Procurement List:

Products

NSN(s)—Product Name(s):

7530–00–160–8475—Index Sheet Set, Alphabetical, 8 ½″ x 11″, Buff

7530–00–160–8477—Index Sheet Set, Alphabetical, 11″ x 8 ½″, Buff

Mandatory Source of Supply: Life'sWork of Western PA, Pittsburgh, PA

Contracting Activity: General Services Administration, New York, NY

Barry S. Lineback,

Director, Business Operations.

[FR Doc. 2016–06827 Filed 3–24–16; 8:45 am]

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Additions to and Deletions from the Procurement List.

SUMMARY: The Committee is proposing to add products to the Procurement List that will be furnished by a nonprofit agency employing persons who are blind or have other severe disabilities and, deletes services previously furnished by such agencies.

Comments Must be Received on Or Before: 4/24/2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION OR TO SUBMIT COMMENTS CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products listed below from the nonprofit agency employing persons who are blind or have other severe disabilities.

The following products are proposed for addition to the Procurement List for production by the nonprofit agency listed:

NSN(s)—Product Name(s)

7220–00–NSH–0022—Mat, Floor, Chair, 45″ x 53″ x 0.110″, w/20″ x 12″ Lip
7220–00–NSH–0023—Mat, Floor, Chair, 45″ x 53″ x 0.110″, w/25″ x 12″ Lip
7220–00–NSH–0024—Mat, Floor, Chair, 46″ x 60″ x 0.110″, w/25″ x 12″ Lip
7220–00–NSH–0025—Mat, Floor, Chair, 46″ x 60″ x 0.110″, Without Lip
7220–00–NSH–0026—Mat, Floor, Chair, 60″ x 60″ x 0.110″, Without Lip
7220–00–NSH–0030—Mat, Floor, Chair, 36″ x 48″ x 0.150″, w/20″ x 12″ Lip
7220–00–NSH–0031—Mat, Floor, Chair, 45″ x 53″ x 0.150″, w/25″ x 12″ Lip
7220–00–NSH–0032—Mat, Floor, Chair, 45″ x 53″ x 0.150″, w/20″ x 12″ Lip
7220–00–NSH–0033—Mat, Floor, Chair, 45″ x 53″ x .220″, w/20″ x 12″ Lip

7220–00–NSH–0035—Mat, Floor, Chair, 46″ x 60″ x .150″, Without Lip
7220–00–NSH–0036—Mat, Floor, Chair, 46″ x 60″ x .150″, w/25″ x 12″ Lip
7220–00–NSH–0038—Mat, Floor, Chair, 46″ x 60″ x .220″, w/25″ x 12″ Lip
7220–00–NSH–0039—Mat, Floor, Chair, 46″ x 60″ x .220″, Without Lip
7220–00–NSH–0040—Mat, Floor, Chair, 60″ x 60″ x .150″, Without Lip
Mandatory Source(s) of Supply: Northeastern Michigan Rehabilitation and Opportunity Center, Alpena, MI
Mandatory for: Total Government Requirement
Contracting Activity: General Services Administration, New York, NY
Distribution: A-List

Deletions

The following services are proposed for deletion from the Procurement List:

Services

Service Type: Switchboard Service
Service Mandatory For: Minot Air Force Base, Minot AFB, ND
Mandatory Source of Supply: MVW Services, Inc., Minot, ND
Contracting Activity: Dept of the Air Force, FA4528 5 CONS LGCP, Minot AFB, ND
Service Type: Library Service
Service Mandatory For: Minot Air Force Base, Minot AFB, ND
Mandatory Source of Supply: MVW Services, Inc., Minot, ND
Contracting Activity: Dept of the Air Force, FA7014 AFDW PK, Andrews AFB, MD
Service Type: Mess Attendant Service
Service Mandatory For: 192d FW VA Air National Guard, Sandston, VA
Mandatory Source of Supply: Richmond Area Association for Retarded Citizens, Richmond, VA
Contracting Activity: Dept of the Air Force, FA7014 AFDW PK, Andrews AFB, MD
Service Type: Switchboard Operation Service
Service Mandatory For: Ellsworth Air Force Base, Ellsworth AFB, SD
Mandatory Source of Supply: BH Services, Inc., Ellsworth AFB, SD
Contracting Activity: Dept of the Air Force, FA4690 28 CONS LGC, Ellsworth AFB, SD

BILLING CODE 6353–01–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2016–OS–0028]

Proposed Collection; Comment Request

AGENCY: Defense Finance and Accounting Service (DFAS), DoD.

ACTION: Notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Finance and Accounting Service announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by May 24, 2016.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301–9010.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information. Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at *http://www.regulations.gov* for submitting comments. Please submit comments on any given form identified by docket number, form number, and title.

FOR FURTHER INFORMATION CONTACT: To request more information on this

proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Finance and Accounting Service; Office of Financial Operations; Retired and Annuitant Pay Quality Product Assurance Division ATTN: Chuck Moss, Cleveland, OH 44199–2001, or call at (216) 204–4426.

SUPPLEMENTARY INFORMATION: *Title; Associated Form; and OMB Number:* Survivor Benefit Plan (SBP)—Automatic Coverage Fact Sheet; DD Form 2656–8; OMB Control Number 0730–TBD.

Needs and Uses: The information collection requirement is necessary to identify and determine the marital status of the retiree in order to correctly establish the retired pay account.

Affected Public: Individuals or households.

Annual Burden Hours: 60.

Number of Respondents: 240.

Responses per Respondent: 1.

Annual Responses: 240.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

If no SBP election is made at retirement time this form is mailed to the retiree. Automatic spouse coverage is established and the completion of this form provides Retired Pay with information about the spouse. In some instances, the retiree is unmarried and the coverage will be changed to reflect that.

Dated: March 21, 2016.

Aaron Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Request for Withholding State Tax; DD Form 2868; OMB Control Number 0730–TBD.

Needs and Uses: The information collection requirement is necessary to start state tax withholding from a retiree's pay account or to change the amount currently withheld. The retiree's SSN is a required entry as it is necessary to positively identify the retiree in order to send the correct payroll tax withholding information to the appropriate state taxing authority as directed by the retiree.

Affected Public: Individuals or households.

Annual Burden Hours: 50.

Number of Respondents: 200.

Responses per Respondent: 1.

Annual Responses: 200.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

The form is completed whenever a retiree determines that it is necessary for them to begin or change state tax withholding from their retired pay account.

Dated: March 21, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

One-Time Deauthorization of Water Resources Projects

AGENCY: Army Corps of Engineers, DoD.

ACTION: Notice of Final Deauthorization Report.

SUMMARY: The U.S. Army Corps of Engineers is publishing a Final Deauthorization Report of water resources development projects and separable elements that have been identified for deauthorization in accordance with section 6001(d) of the Water Resources Reform and Development Act of 2014, Public Law 113–121, 128 STAT. 1346–1347 (WRRDA 2014). The Assistant Secretary of the Army for Civil Works transmitted the Final Deauthorization Report to Congress on February 26, 2016. An electronic copy of the complete report is available at: *http://www.usace.army.mil/Portals/2/docs/civilworks/budget/final_deauth_report_23feb2016.pdf.*

FOR FURTHER INFORMATION CONTACT OR TO PROVIDE COMMENTS: Mr. Joseph W. Aldridge, Headquarters, U.S. Army Corps of Engineers, Attention: CECW–IP, Washington, DC 20314–1000. Tel. (202) 761–4130 or *joseph.w.aldridge@usace.army.mil.*

SUPPLEMENTARY INFORMATION: Final Deauthorization Report required by § 6001(d).

Section 6001(d) provides that the Secretary shall develop a Final Deauthorization Report. This report includes a list of each water resources

development project, or separable element of a project, described in Section 6001(c) and the other provisions of Section 6001(d), as well as an appendix (Appendix A) that lists any project, or separable element of a project, included as part of the Interim Deauthorization List but not included in the Final Deauthorization Report and the reasons why they are not included in the report. Appendix B of the Final Deauthorization Report (available on the U.S. Army Corps of Engineers Web site referenced below) contains copies of the comments received during the public comment period. The Final Deauthorization Report with Appendix A follows below in Table 1. An electronic copy of the Final Deauthorization Report with appendices can be found at: *http://www.usace.army.mil/Portals/2/docs/civilworks/budget/final_deauth_report_23feb2016.pdf.*

The Interim Deauthorization List was developed in accordance with Section 6001(c) of WRRDA 2014 and was published for public comment in the **Federal Register** on October 7, 2015. Per Section 6001(d), not later than 120 days following the 90-day public comment period of the Interim Deauthorization List, that ended on January 4, 2016, the Assistant Secretary of the Army for Civil Works (ASA(CW)) will transmit the Final Deauthorization Report to the Environment & Public Works Committee of the Senate and the Transportation and Infrastructure Committee of the House of Representatives. Additionally, the ASA(CW) will publish the Final Deauthorization Report in the **Federal Register**. The ASA(CW) transmitted the Final Deauthorization Report to the Committees on February 26, 2016.

Section 6001(d)(2)(A) of WRRDA 2014 requires that the Secretary shall include on the Final Deauthorization Report, projects and separable elements of projects that have, in the aggregate, an estimated Federal cost to complete that is at least $18 billion. The ASA(CW) has strived to meet the requirements of Section 6001, but was not able to identify projects that totaled $18 billion based upon the criteria provided in Section 6001. The projects and elements on the Final Deauthorization Report will be deauthorized automatically after 180 days following the date that the ASA(CW) submits the Final Deauthorization List to the Committees, unless the Congress passes a joint resolution disapproving the Final Deauthorization Report or the non-Federal interest for the project or separable element of a project provides sufficient funds to complete the construction of the project or separable element. The amount shown as the Federal Balance to complete is a working estimate generally based on the authorization and as such any non-Federal interests considering providing sufficient funds to complete a project or separable element should contact the appropriate District Commander to discuss the process necessary to develop a final cost to complete a project or separable element.

The Final Deauthorization Report identifies water resources development projects, or separable elements of a project, that meet the following criteria. Projects and separable elements eligible for deauthorization are those uncompleted construction projects and separable elements meeting all of the following criteria: (1) They were authorized for construction before November 8, 2007, or their most recent modification of the construction authorization predates November 8, 2007; (2) their construction has not been initiated, or, if construction has been initiated, there have been no obligations of Federal or non-Federal funds for construction in the current fiscal year or any of the past 6 fiscal years; and, (3) there has been no funding for a post-authorization study in the current fiscal year or any of the past 6 fiscal years. As specifically provided in section 6001(f)(1)(B) of WRRDA 2014, water resources development projects include environmental infrastructure assistance projects and programs of the U.S. Army Corps of Engineers. In accordance with section 103(f) of the Water Resources Development Act of 1986, separable elements is defined as ''a portion of a project—

(1) which is physically separable from other portions of the project; and

(2) which—

(A) achieves hydrologic effects, or

(B) produces physical or economic benefits, which are separately identifiable from those produced by other portions of the project.''

The following elements of an authorized water resources development project also qualify as separable elements: an element for which there is an executed design agreement or project partnership agreement specific to that element; an element that has received funding specified for that element; an element that was authorized separately from or as an amendment to the authorization for the remainder of the water resources development project, that was separately identified in the authorization for the water resources development project, or for which a statute specifies an authorized cost, estimated cost, or amount authorized to be appropriated; an element that has been placed in service or for which the Government or the non-Federal partner has assumed operation and maintenance; an element that has been deauthorized; or the remaining portion of the water resources development project apart from other separable elements.

Authority: This notice is required by § 6001(d) of the Water Resources Reform and Development Act of 2014, Public Law 113–121, 128 STAT 1346–1347.

Jo-Ellen Darcy,

Assistant Secretary of the Army (Civil Works).

BILLING CODE 3720–58–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0034]

Agency Information Collection Activities; Comment Request; Study of the Title III Native American and Alaska Native Children in School (NAM) Program

AGENCY: Office of Planning, Evaluation and Policy Development (OPEPD), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before May 24, 2016.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2016–ICCD–0034. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E–103, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Joanne Bogart, 202–205–7855.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Study of the Title III Native American and Alaska Native Children in School (NAM) Program.

OMB Control Number: 1875—New.

Type of Review: A new information collection.

Respondents/Affected Public: State, Local, or Tribal Governments.

Total Estimated Number of Annual Responses: 509.

Total Estimated Number of Annual Burden Hours: 510.

Abstract: The NAM Program seeks to improve academic outcomes in English for Native American and Alaska Native (NA/AN) students, providing funding for programs that support language instruction educational programs, including NA/AN language and culture revitalization. The goal of this study is to describe how 22 current grantees have use the NAM Program to support NA/AN students. Results will help the Department structure future funding rounds and better support current and future grantees.

Dated: March 22, 2016.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

DEPARTMENT OF EDUCATION

Application for New Awards; Native American and Alaska Native Children in School Program

AGENCY: Office of English Language Acquisition, Department of Education.

ACTION: Notice.

Overview Information:

Native American and Alaska Native Children in School Program Notice inviting applications for new awards for fiscal year (FY) 2016.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.365C.

DATES: Applications Available: March 25, 2016.

Deadline for Notice of Intent to Apply: April 14, 2016.

Deadline for Transmittal of Applications: May 24, 2016.

Deadline for Intergovernmental Review: July 25, 2016.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program

The purpose of the Native American and Alaska Native Children in School (NAM) program is to award grants to eligible entities to develop and enhance capacity to provide effective instruction and support to Native American students, including Native Hawaiian and Native American Pacific Islander, who are identified as English learners (ELs). The goal of this program is to support the teaching, learning, and studying of Native American languages while also increasing the English language proficiency of students served to meet challenging State academic content and achievement standards.

Background

Through previous competitions, the NAM program has funded a range of grantees that are currently implementing 25 projects across the country. As the educational needs of Native Americans and Alaska Natives continue to grow, there is also a need to increase knowledge of what practices work to effectively improve learning outcomes for Native American and Alaska Native ELs.

Congress, in the Native American Languages Act of 1990, recognized the fundamental importance of preserving Native American languages. Congress states that it is the policy of the United States to:

> Preserve, protect, and promote the rights and freedom of Native Americans to use, practice, and develop Native American languages.

25 U.S.C. 2903(1)

In addition, it is the policy of the United States to encourage and support the use of Native American languages as a medium of instruction in order to encourage and support—

> (A) Native American language survival,
> (B) educational opportunity,
> (C) increased student success and performance,
> (D) increased student awareness and knowledge of their culture and history, and
> (E) increased student and community pride.

25 U.S.C. 2903 (3)

This Federal policy is supported by growing recognition of the importance

of native language preservation in facilitating educational success for Native students. In a 2007 study by Teachers of English to Students of Other Languages (TESOL), the majority of Native youth surveyed stated that they value their native language, viewed it as integral to their sense of self, wanted to learn it, and viewed it as a means of facilitating their success in school and life.[1] Collaborative efforts between educators, families, and communities, the study suggests, may be especially promising ways to ensure that all Native students have the critical opportunity to learn their native languages.

Not only is native language instruction critical for student engagement and fostering a rich sense of self, but research has shown that students who are bilingual have certain cognitive and social benefits that their monolingual peers may lack.[2] Additionally, for students who are classified as ELs, well-implemented language instruction educational programs (as defined in this notice), including dual language approaches, may result in ELs performing equal to or better than their peers in English-only language instruction programs. These approaches have shown promise in increasing language acquisition in English and native languages, and may also promote greater achievement in the academic content areas, including English language arts and mathematics.[3]

Therefore, to facilitate high-quality language instruction and academic success for Native American students who are classified as ELs, this competition includes an absolute priority for projects that will support the preservation and revitalization of Native American languages while also increasing the English language proficiency of the children served under the project.

For this competition, the Department also seeks to support projects designed to improve early learning and development outcomes for Native American and Alaskan Native students across one or more of the essential domains of school readiness for children from birth through third grade and throughout the early elementary school years. Accordingly, this notice includes a competitive preference priority related to improving early learning and development outcomes.

In addition, the Department is interested in projects designed to improve parental, family, and community engagement. Literature suggests that educators who involve families in their students' education can strengthen their instructional effectiveness with ELs.[4] [5] Accordingly, this notice includes an invitational priority related to improving parent, family, and community engagement.

Finally, to grow the evidence available on effective ways to support Native American and Alaska Native ELs, we include a selection criterion under which applications will be evaluated on the extent to which their proposed project designs are supported by strong theory, as defined in this notice. In addition, we include a selection criterion that encourages applicants to design evaluations of their projects that would provide them with continuous, formative feedback on their progress toward their project goals.

Priorities: This notice includes one absolute priority, one competitive preference priority, and one invitational priority. The absolute priority is from section 3128 of the Elementary and Secondary Education Act of 1965 (ESEA), as amended by the No Child Left Behind Act of 2001 (NCLB) (20 U.S.C. 7801). The competitive preference priority is from the Department's notice of final supplemental priorities and definitions for discretionary grant programs (Supplemental Priorities), published in the **Federal Register** on December 10, 2014 (79 FR 73425).

Absolute Priority: For FY 2016 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3) we consider only applications that meet this priority.

This priority is:

Projects that support the teaching, learning, and studying of Native American languages while also increasing the English language proficiency of the children served.

Competitive Preference Priority: For FY 2016 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is a competitive preference priority. Under 34 CFR 75.105(c)(2)(i) we award up to an additional five points to an application, depending on how well the application meets this priority.

This priority is:

Improving Early Learning and Development Outcomes (0 to 5 points).

Projects that are designed to improve early learning and development outcomes across one or more of the essential domains of school readiness for children from birth through third grade (or for any age group within this range) through a focus on one or both of the following:

(a) Increasing access to high-quality early learning and development programs and comprehensive services, particularly for children with high needs.

(b) Improving the coordination and alignment among early learning and development systems and between such systems and elementary education systems, including coordination and alignment in engaging and supporting families and improving transitions for children along the birth-through-third-grade continuum, in accordance with applicable privacy laws.

Invitational Priority: For FY 2016 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an invitational priority. Under 34 CFR 75.105(c)(1) we do not give an application that meets this invitational priority a competitive or absolute preference over other applications.

This priority is:

Parent, Family, and Community Engagement.

Projects that will support meaningful parent, family, and community engagement (as defined in this notice) to improve student achievement.

Applicants are encouraged to design a comprehensive approach to leveraging sustained partnerships (as defined in this notice) with community-based organizations, institutions of higher education (IHEs), and other entities.

Definitions: The following definitions are from 34 CFR 77.1, 34 CFR 200.6, the Supplemental Priorities, and sections 3201 and 8101 of the ESEA, as amended by the Every Student Succeeds Act (ESSA) (20 U.S.C. 7011 and 7801), and apply to the priorities, selection criteria, and performance measures in this notice. The source of each definition is noted in parentheses following the text of the definition.

[5] Waterman, R., and Harry, B. (2008). *Building Collaboration Between Schools and Parents of English Language Learners: Transcending Barriers, Creating Opportunities.* Tempe, AZ: National Center for Culturally Responsive Educational Systems.

Ambitious means promoting continued, meaningful improvement for program participants or for other individuals or entities affected by the grant, or representing a significant advancement in the field of education research, practices, or methodologies. When used to describe a performance target, whether a performance target is ambitious depends upon the context of the relevant performance measure and the baseline for that measure. (34 CFR 77.1)

Baseline means the starting point from which performance is measured and targets are set. (34 CFR 77.1)

Children with high needs means children from birth through kindergarten entry who are from low-income families or otherwise in need of special assistance and support, including children who have disabilities or developmental delays; who are English learners; who reside on ''Indian lands'' as that term is defined by section 8013(7) of the ESEA, as amended by NCLB; who are migrant, homeless, or in foster care; and who are other children as identified by the State. (34 CFR 77.1)

Community engagement means the systematic inclusion of community organizations as partners with State educational agencies (SEAs), local educational agencies (LEAs), or other educational institutions, or their school or program staff to accomplish activities that may include developing a shared community vision, establishing a shared accountability agreement, participating in shared data-collection and analysis, or establishing community networks that are focused on shared community-level outcomes. These organizations may include faith- and community-based organizations, IHEs (including minority-serving institutions eligible to receive aid under title III or title V of the Higher Education Act of 1965 (HEA)), businesses and industries, labor organizations, State and local government entities, or Federal entities other than the Department. (Supplemental Priorities)

English learner, when used with respect to an individual, means an individual—

(A) Who is aged 3 through 21;

(B) Who is enrolled or preparing to enroll in an elementary school or secondary school;

(C)(i) Who was not born in the United States or whose native language is a language other than English;

(ii)(I) Who is a Native American or Alaska Native, or a Native resident of the outlying areas; and

(II) Who comes from an environment where a language other than English has had a significant impact on the individual's level of English language proficiency; or

(iii) Who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant; and

(D) Whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual—

(i) The ability to meet the State's challenging State academic standards;

(ii) The ability to successfully achieve in classrooms where the language of instruction is English; or

(iii) The opportunity to participate fully in society. (Section 8101 of the ESEA, as amended by ESSA)

Essential domains of school readiness means the domains of language and literacy development, cognition and general knowledge (including early mathematics and early scientific development), approaches toward learning (including the utilization of the arts), physical well-being and motor development (including adaptive skills), and social and emotional development. (Supplemental Priorities)

Language instruction educational program means an instruction course—

(A) In which an English learner is placed for the purpose of developing and attaining English proficiency, while meeting challenging State academic achievement standards; and

(B) That may make instructional use of both English and a child's native language to enable the child to develop and attain English proficiency, and may include the participation of English proficient children if such course is designed to enable all participating children to become proficient in English and a second language. (Section 3201 of the ESEA, as amended by ESSA)

Logic model (also referred to as theory of action) means a well-specified conceptual framework that identifies key components of the proposed process, product, strategy, or practice (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the relationships among the key components and outcomes, theoretically and operationally. (34 CFR 77.1)

Note: Applicants may use resources such as the Pacific Education Laboratory's Education Logic Model Application (*http://relpacific.mcrel.org/resources/elm-app*) to help design their logic models.

Native Hawaiian or Native American Pacific Islander native language educational organization means a nonprofit organization with—

(A) A majority of its governing board and employees consisting of fluent speakers of the traditional Native American languages used in the organization's educational programs; and

(B) Not less than five years successful experience in providing educational services in traditional Native American languages. (Section 3201 of the ESEA, as amended by ESSA)

Parent and family engagement means the systematic inclusion of parents and families, working in partnership with SEAs, State lead agencies (under Part C of the Individuals with Disabilities Education Act or the State's Race to the Top-Early Learning Challenge grant), LEAs, or other educational institutions, or their staff, in their child's education, which may include strengthening the ability of (A) parents and families to support their child's education; and (B) school or program staff to work with parents and families. (Supplemental Priorities)

Performance target means a level of performance that an applicant would seek to meet during the course of a project or as a result of a project. (34 CFR 77.1)

Strong theory means a rationale for the proposed process, product, strategy, or practice that includes a logic model. (34 CFR 77.1)

Student achievement means—

For grades and subjects in which assessments are required under section 1111(b)(3) of the ESEA, as amended by NCLB: (1) A student's score on such assessments; and, as appropriate (2) other measures of student learning, such as those described in the subsequent paragraph, provided that they are rigorous and comparable across schools within an LEA.

For grades and subjects in which assessments are not required under section 1111(b)(3) of the ESEA, as amended by NCLB: (1) Alternative measures of student learning and performance, such as student results on pre-tests, end-of-course tests, and objective performance-based assessments; (2) student learning objectives; (3) student performance on English language proficiency assessments; and (4) other measures of student achievement that are rigorous and comparable across schools within an LEA. (Supplemental Priorities)

Sustained partnership means a relationship that has demonstrably adequate resources and other support to continue beyond the funding period and that consist of community organizations as partners with an LEA and one or more of its schools. These organizations may include faith- and community-

based organizations, IHEs (including minority-serving institutions eligible to receive aid under title III or title V of the HEA), businesses and industries, labor organizations, State and local government entities, or Federal entities other than the Department. (Supplemental Priorities)

Program Authority: 20 U.S.C. 6822.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Government-wide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended in 2 CFR part 3474. (d) The Supplemental Priorities.

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian tribes.

Note: The regulations in 34 CFR part 86 apply to IHEs only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: $3,223,778.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2017 or later years from the list of unfunded applications from this competition.

Estimated Range of Awards: $275,000–325,000 per year.

Estimated Average Size of Awards: $300,000.

Estimated Number of Awards: 10.

Note: The Department is not bound by any estimates in this notice.

Project Period: 60 months.

III. Eligibility Information

1. *Eligible Applicants:* The following entities, when they operate elementary, secondary, or postsecondary schools primarily for Native American children (including Alaska Native children), are eligible applicants under this program:

(a) Indian tribes.

(b) Tribally sanctioned educational authorities.

(c) Native Hawaiian or Native American Pacific Islander native language educational organizations.

(d) Elementary schools or secondary schools that are operated or funded by the Department of the Interior's Bureau of Indian Affairs, or a consortium of these schools.

(e) Elementary schools or secondary schools operated under a contract with or grant from the Bureau of Indian Affairs in consortium with another such school or a tribal or community organization.

(f) Elementary schools or secondary schools operated by the Bureau of Indian Affairs and an IHE, in consortium with an elementary school or secondary school operated under a contract with or a grant from the Bureau of Indian Affairs or a tribal or community organization.

Note: Eligible applicants applying as a consortium should read and follow the regulations in 34 CFR 75.127 through 75.129.

Under section 3112(c) of the ESEA, as amended by NCLB, EL students served under NAM grants must not be included in the child count submitted by a school district under section 3114(a) for purposes of receiving funding under the English Language Acquisition State Grants program.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

3. *Equitable Participation by Public and Private School Students and Educational Personnel in a Title III Program:* An entity that receives a grant under the NAM program must provide for the equitable participation of private school children and their teachers or other educational personnel. To ensure that grant program activities address the needs of private school children, the applicant must engage in timely and meaningful consultation with appropriate private school officials during the design and development of the program. This consultation must take place before the applicant makes any decision that affects the opportunities for participation by eligible private school children, teachers, and other educational personnel. Administrative direction and control over grant funds must remain with the grantee. (See section 9501 of the ESEA, as amended by NCLB Participation by Private School Children and Teachers.)

IV. Application and Submission Information

1. *Address to Request Application Package:* You can obtain an application package via the Internet or from the Education Publications Center (ED Pubs). To obtain a copy via the Internet, use the following address: *www.ed.gov/fund/grant/apply/grantapps/index.html.* To obtain a copy from ED Pubs, write, fax, or call: ED Pubs, U.S. Department of Education, P.O. Box 22207, Alexandria, VA 22304. Telephone, toll free: 1–877–433–7827. FAX: (703) 605–6794. If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call, toll free: 1–877–576–7734.

You can contact ED Pubs at its Web site, also: *www.EDPubs.gov* or at its email address: *edpubs@inet.ed.gov.*

If you request an application package from ED Pubs, be sure to identify this program or competition as follows: CFDA 84.365C.

Individuals with disabilities can obtain a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) by contacting the person listed under *Accessible Format* in section VIII of this notice.

2. a. *Content and Form of Application Submission:* Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this competition. Deadline for Notice of Intent to Apply: April 14, 2016.

We will be able to develop a more efficient process for reviewing grant applications if we know the approximate number of applicants that intend to apply for funding under this competition. Therefore, we strongly encourage each potential applicant to notify us of the applicant's intent to submit an application by emailing *NAM2016@ed.gov* with the subject line ''Intent to Apply'' and include in the content of the email the following information: (1) The applicant organization's name and address, and (2) whether the applicant is addressing the competitive preference priority or the invitational priority. Applicants that do not provide notice of their intent to apply may still submit an application. Page Limit: The application narrative (Part III of the application) is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. Applicants must limit the application narrative to no more than 35 pages. Applicants are also strongly encouraged not to include lengthy appendices that contain information that they were unable to include within the page limits for the narrative.

Applicants must use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles,

charts, tables, headings, footnotes, quotations, references, and captions.

• Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).

• Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The page limit for the application does not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the one-page abstract, certification of eligibility, or letters of support of project partners if applied as a consortium. However, the page limit does apply to all of the application narrative section of the application.

We will reject your application if you exceed the page limit.

b. *Submission of Proprietary Information:*

Given the types of projects that may be proposed in applications for the NAM program, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Consistent with the process followed in the prior NAM competitions, we may post the project narrative section of funded NAM applications on the Department's Web site so you may wish to request confidentiality of business information. Identifying proprietary information in the submitted application will help facilitate this public disclosure process.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Submission Dates and Times:*

Deadline for Notice of Intent to Apply: April 14, 2016. Informational Meetings: We intend to hold Webinars to provide technical assistance to interested applicants. Detailed information regarding these meetings will be provided on the NAM Web site at*http://www2.ed.gov/about/offices/list/oela/index.html.*

Deadline for Transmittal of Applications: May 24, 2016.

Applications for grants under this competition must be submitted electronically using the Grants.gov application site. For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to *Other Submission Requirements* in section IV of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: July 25, 2016.

4. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and System for Award Management:* To do business with the Department of Education, you must—

a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

b. Register both your DUNS number and TIN with the System for Award Management (SAM) (formerly the Central Contractor Registry), the Government's primary registrant database;

c. Provide your DUNS number and TIN on your application; and

d. Maintain an active SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet at the following Web site: *http://fedgov.dnb.com/webform.* A DUNS number can be created within one to two business days.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow two to five weeks for your TIN to become active.

The SAM registration process can take approximately seven business days, but may take upwards of several weeks, depending on the completeness and accuracy of the data you enter into the SAM database. Thus, if you think you might want to apply for Federal financial assistance under a program administered by the Department, please allow sufficient time to obtain and register your DUNS number and TIN. We strongly recommend that you register early.

Note: Once your SAM registration is active, it may be 24 to 48 hours before you can access the information in, and submit an application through, Grants.gov.

If you are currently registered with SAM, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days.

Information about SAM is available at *www.SAM.gov.* To further assist you with obtaining and registering your DUNS number and TIN in SAM or updating your existing SAM account, we have prepared a SAM.gov Tip Sheet, which you can find at: *www2.ed.gov/fund/grant/apply/sam-faqs.html.*

In addition, if you are submitting your application via Grants.gov, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with Grants.gov as an AOR. Details on these steps are outlined at the following Grants.gov Web page: *www.grants.gov/web/grants/register.html.*

7. *Other Submission Requirements:*

Applications for grants for the NAM program must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. Electronic Submission of Applications

Applications for grants under the NAM program, CFDA number 84.365C, must be submitted electronically using the Governmentwide Grants.gov Apply site at *www.Grants.gov.* Through this

site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement *and* submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement.*

You may access the electronic grant application for the NAM program at *www.Grants.gov.* You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (*e.g.,* search for 84.365, not 84.365C).

Please note the following:

• When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

• Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.

• The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.

• You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov under News and Events on the Department's G5 system home page at *www.G5.gov.* In addition, for specific guidance and procedures for submitting an application through Grants.gov, please refer to the Grants.gov Web site at: *www.grants.gov/web/grants/applicants/apply-for-grants.html.*

• You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

• You must submit all documents electronically, including all information you typically provide on the following forms: the Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

• You must upload any narrative sections and all other attachments to your application as files in a read-only, non-modifiable Portable Document Format (PDF). Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only, non-modifiable PDF (*e.g.,* Word, Excel, WordPerfect, etc.) or submit a password-protected file, we will not review that material. Please note that this could result in your application not being considered for funding because the material in question—for example, the project narrative—is critical to a meaningful review of your proposal. For that reason it is important to allow yourself adequate time to upload all material as PDF files. The Department will not convert material from other formats to PDF.

• Your electronic application must comply with any page-limit requirements described in this notice.

• After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. This notification indicates receipt by Grants.gov only, not receipt by the Department. Grants.gov will also notify you automatically by email if your application met all the Grants.gov validation requirements or if there were any errors (such as submission of your application by someone other than a registered Authorized Organization Representative, or inclusion of an attachment with a file name that contains special characters). You will be given an opportunity to correct any errors and resubmit, but you must still meet the deadline for submission of applications.

Once your application is successfully validated by Grants.gov, the Department will retrieve your application from Grants.gov and send you an email with a unique PR/Award number for your application.

These emails do not mean that your application is without any disqualifying errors. While your application may have been successfully validated by Grants.gov, it must also meet the Department's application requirements as specified in this notice and in the application instructions. Disqualifying errors could include, for instance, failure to upload attachments in a read-only, non-modifiable PDF; failure to submit a required part of the application; or failure to meet applicant eligibility requirements. It is your responsibility to ensure that your submitted application has met all of the Department's requirements.

• We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1–800–518–4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that the problem

affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. We will contact you after we determine whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the Grants.gov system;

and

- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to:

Patrice Swann, U.S. Department of Education, 400 Maryland Avenue SW., Room 5C144, Washington, DC 20202–6510. FAX: (202) 260–5496.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. Submission of Paper Applications by Mail

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address:

U.S. Department of Education,
Application Control Center,
Attention: (CFDA Number 84.365C),
LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

(1) A private metered postmark.

(2) A mail receipt that is not dated by the U.S. Postal Service.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

We will not consider applications postmarked after the application deadline date.

c. Submission of Paper Applications by Hand Delivery

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address:

U.S. Department of Education,
Application Control Center,
Attention: (CFDA Number 84.365C),
550 12th Street SW., Room 7039, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from section 75.210 of EDGAR. The maximum score for all of these criteria is 100 points (not including competitive preference priority points). The maximum score for each criterion is indicated in parentheses.

(a) *Quality of the project design.* (up to 45 points)

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(2) The extent to which the design for implementing and evaluating the proposed project will result in information to guide possible replications of project activities or strategies including information about the effectiveness of the approach or strategies employed by the project.

(3) The extent to which the proposed project is supported by strong theory (as defined in this notice).

(b) *Quality of project personnel.* (up to 10 points)

The Secretary considers the quality of the personnel who will carry out the proposed project. In determining the quality of project personnel, the Secretary considers the following factors:

(1) The extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(2) The qualifications, including relevant training and experience, of key project personnel.

(c) *Quality of the management plan.* (up to 25 points)

The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers the following factors:

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

(2) The extent to which the time commitments of the project director and the principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project.

(d) *Quality of the project evaluation.* (up to 20 points)

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) The extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project.

(2) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes.

2. *Review and Selection Process:* The Department will screen applications that are submitted for NAM grants in accordance with the requirements in this notice and determine which applications meet the eligibility and other requirements. Peer reviewers will review all eligible applications for NAM grants that are submitted by the established deadline on the four selection criteria.

Applicants should note, however, that we may screen for eligibility at multiple points during the competition process, including before and after peer review; applicants that are determined to be ineligible will not receive a grant award regardless of peer reviewer scores or comments. If we determine that a NAM grant application does not meet a NAM requirement, the application will not be considered for funding.

We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary also requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Special Conditions:* Consistent with 2 CFR 200.205, before awarding grants under this program the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *http://www2.ed.gov/fund/grant/apply/appforms/appforms.html*.

(c) The Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

4. *Performance Measures:* Under the Government Performance and Results Act (GPRA), Federal departments and agencies must clearly describe the goals and objectives of programs, identify resources and actions needed to accomplish goals and objectives, develop a means of measuring progress made, and regularly report on achievement. One important source of program information on successes and lessons learned is the project evaluation conducted under individual grants.

(a) *Measures.* The Department has developed the following GPRA performance measures for evaluating the overall effectiveness of the NAM program:

Measure 1: The number and percentage of ELs served by the program who score proficient or above on the State reading assessment.

Measure 2: The number and percentage of ELs served by the program who are making progress in learning English as measured by the State-approved English language proficiency assessment.

Measure 3: The number and percentage of ELs served by the program who are attaining proficiency in English as measured by the State-approved English language proficiency assessment.

Note: Data from local assessments are acceptable for evaluation under a performance measure only in cases in which a grantee is in a State that is undergoing an assessment transition.

Measure 4: The number and percentage of students served by the program who are enrolled in Native American language instruction programs.

Measure 5: The number and percentage of students making progress in learning a Native American language, as determined by each grantee, including through measures such as performance tasks, portfolios, and pre- and post-tests.

Measure 6: The number and percentage of students who are attaining proficiency in a Native American language as determined by each grantee, including through measures such as performance tasks, portfolios, and pre- and post-tests.

Measure 7: For programs that received competitive preference points, the number and percentage of preschool children ages three and four enrolled in the program.

Measure 8: For programs that received competitive preference points, the number and percentage of preschool children ages three and four who are screened for developmental or cognitive delays.

Measure 9: For programs that received competitive preference points, the number and percentage of coordination contacts between elementary schools and early learning programs to improve coordination and transition of children from preschool to kindergarten.

(b) *Baseline data.* Applicants must provide baseline data for each of the GPRA performance measures listed in paragraph (a) and include why each proposed baseline (as defined in this notice) is valid; or, if the applicant has determined that there are no established baseline data for a particular performance measure, explain why there is no established baseline and explain how and when, during the project period, the applicant will establish a valid baseline for the performance measure.

(c) *Performance measure targets.* In addition, the applicant must propose in its application annual targets for the measures listed in paragraph (a). Applications must also include the following information as directed under 34 CFR 75.110(b) and (c):

(1) Why each proposed performance target (as defined in this notice) is ambitious (as defined in this notice) yet achievable compared to the baseline for the performance measure.

(2) The data collection and reporting methods the applicant would use and why those methods are likely to yield reliable, valid, and meaningful performance data.

(3) The applicant's capacity to collect and report reliable, valid, and meaningful performance data, as evidenced by high-quality data collection, analysis, and reporting in other projects or research.

Note: If the applicant does not have experience with collection and reporting of performance data through other projects or research, the applicant should provide other evidence of capacity to successfully carry out data collection and reporting for its proposed project.

(d) *Performance Reports.* All grantees must submit an annual performance report and final performance report with information that is responsive to these performance measures. The Department will consider this data in making annual continuation awards.

(e) *Department Evaluations.* Consistent with 34 CFR 75.591, grantees funded under this program must comply with the requirements of any evaluation of the program conducted by the Department or an evaluator selected by the Department.

5. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT: Francisco Javier Lopez, U.S. Department of Education, 400 Maryland Avenue SW., Room 5E112, Washington, DC 20202. Telephone: (202) 401–4300. FAX: (202) 205–1229 or by email at *NAM2016@ed.gov.*

If you use a TDD or a TTY, call the Federal Relay Service, toll free, at 1–800–877–8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or PDF. To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: March 22, 2016.

Libia S. Gil,

Assistant Deputy Secretary and Director for the Office of English Language Acquisition.

[FR Doc. 2016–06838 Filed 3–24–16; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

National Committee on Foreign Medical Education and Accreditation

AGENCY: Office of Postsecondary Education, National Committee on Foreign Medical Education and Accreditation, U.S. Department of Education.

ACTION: Announcement of a Committee meeting.

SUMMARY: The purpose of this notice is to announce the upcoming meeting of the National Committee on Foreign Medical Education and Accreditation (NCFMEA). Parts of this meeting will be open to the public, and the public is invited to attend those portions.

Meeting Date and Place: The meeting will be held on April 21–22, 2016, from 9:00 a.m. until approximately 5:00 p.m. both days, at the Hilton Alexandria Old Town, 1767 King Street, Alexandria, VA 22314. The Committee will meet in Executive Session on April 22, 2016. The entire April 22nd session will be devoted to training sessions for the Committee; and, therefore, is closed to the public.

FOR FURTHER INFORMATION CONTACT: Jennifer Hong, Executive Director for the NCFMEA, U.S. Department of Education, 400 Maryland Avenue SW., Room 6W250, Washington, DC 20202; telephone: 202–453–7805, or email: *Jennifer.Hong@ed.gov*

SUPPLEMENTARY INFORMATION:

Statutory Authority and Function: The NCFMEA was established by the Secretary of Education under § 102 of the Higher Education Act of 1965, as amended. The NCFMEA's responsibilities are to:

- Evaluate the standards of accreditation applied to foreign medical schools and,
- Determine the comparability of those standards to standards for accreditation applied to United States medical schools. A determination of comparability of accreditation standards by the NCFMEA is an eligibility requirement for foreign medical schools to participate in the William D. Ford Federal Direct Student Loan Program, 20 U.S.C. 1087a *et seq.*

Meeting Agenda: The NCFMEA will review the standards of accreditation applied to medical schools to determine

whether those standards are comparable to the standards of accreditation applied to medical schools in the United States. The NCFMEA will also review previously requested reports from accrediting entities that accredit medical schools. Discussion of the standards of accreditation will be held in sessions open to the public. Discussions resulting in specific determinations of comparability are closed to the public until proper notification of the NCFMEA's decision is provided to the country and accrediting entity by the Department.

The countries which are scheduled to be discussed are: Australia, Grenada, Pakistan, St. Kitts and Nevis, and the Dominican Republic. The meeting agenda, as well as the staff analyses pertaining to the meeting, will be posted on the Department of Education's Web site prior to the meeting at *http://www2.ed.gov/about/bdscomm/list/ncfmea.html.*

Reasonable Accommodations: The meeting site is accessible to individuals with disabilities. If you will need an auxiliary aid or service to participate in the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the contact person listed in this notice by April 1, 2016, although we will attempt to meet a request received after that date.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site. You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: § 102 of the Higher Education Act of 1965, as amended.

Lynn B. Mahaffie,

Deputy Assistant Secretary for Planning, Policy and Innovation, delegated the duties of Assistant Secretary for Postsecondary Education.

Federal Energy Regulatory Commission

Combined Notice of Filings # 1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC16–89–000.

Applicants: FirstLight Hydro Generating Company, FirstLight Power Resources Management, LLC.

Description: Application for section 203 Authorization of FirstLight Hydro Generating Company and FirstLight Power Resources Management, LLC.

Filed Date: 3/17/16.

Accession Number: 20160317–5182.

Comments Due: 5 p.m. ET 4/7/16.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER11–4625–002; ER10–2861–001; ER13–2169–001; ER10–2862–002; ER11–3634–002; ER13–1504–002; ER10–2866–001; ER10–2867–002.

Applicants: Colton Power L.P., Fountain Valley Power, LLC, Goal Line L.P., Harbor Cogeneration Company, LLC, KES Kingsburg, L.P., SWG Arapahoe, LLC, SWG Colorado, LLC, Valencia Power, LLC.

Description: Notice of Change in Status of the Southwest Generation Operating Company, LLC public utility subsidiaries.

Filed Date: 3/17/16.

Accession Number: 20160317–5207.

Comments Due: 5 p.m. ET 4/7/16.

Docket Numbers: ER12–2511–007.

Applicants: C.P. Crane LLC.

Description: Notice of Change in Status of C.P. Crane LLC.

Filed Date: 3/17/16

Accession Number: 20160317–5187.

Comments Due: 5 p.m. ET 4/7/16.

Docket Numbers: ER15–953–000.

Applicants: Arkansas Electric Cooperative Corp.

Description: Midcontinent Independent System Operator, Inc. submits tariff filing per 35.19a(b): Refund Report to be effective N/A.

Filed Date: 3/18/16.

Accession Number: 20160318–5089.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–647–001.

Applicants: Otter Tail Power Company.

Description: Compliance filing: Compliance Filing Regarding Service Agreement with CPEC Under the CASOT to be effective 1/1/2016.

Filed Date: 3/18/16.

Accession Number: 20160318–5101.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–715–001.

Applicants: DanMar Transmission, LLC.

Description: Tariff Amendment: Response to Request for Additional Information to be effective 3/13/2016.

Filed Date: 3/18/16.

Accession Number: 20160318–5051.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–1222–000.

Applicants: EnergyConnect, Inc.

Description: Tariff Cancellation: EnergyConnect, Inc. Cancellation to be effective 3/18/2016.

Filed Date: 3/17/16.

Accession Number: 20160317–5177.

Comments Due: 5 p.m. ET 4/7/16.

Docket Numbers: ER16–1223–000.

Applicants: Pacific Gas and Electric Company.

Description: Section 205(d) Rate Filing: Amendment to the San Joaquin Cogen GSFA (SA 130) to be effective 6/1/2016.

Filed Date: 3/18/16.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL16–48–000]

NextEra Energy Power Marketing, LLC Northeast Energy Associates, a Limited Partnership v. ISO New England Inc.; Notice of Complaint

Take notice that on March 18, 2016, pursuant to sections 206 and 306 of the Federal Power Act, 16 U.S.C. 824e and 825e (2012), and Rule 206 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.206 (2015), NextEra Energy Power Marketing, LLC and Northeast Energy Associates, a Limited Partnership (collectively, Complainants) filed a complaint against ISO New England Inc. (Respondent) alleging that Respondent violated its

Transmission, Markets and Services Tariff in preventing the Significant Increase at NEA's Bellingham Energy Center (Bellingham) from being added to Bellingham's summer Qualified Capacity in the tenth Forward Capacity Auction that was held on February 8, 2016, all as more fully explained in the complaint.

Complainants certify that copies of the complaint were serve on contacts for Respondent as listed on the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to intervene, and protests must be served on the Complainants.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: 5:00 p.m. Eastern Time on April 7, 2016.

Dated: March 21, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[FR Doc. 2016–06775 Filed 3–24–16; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP16–100–000]

Pike County Light & Power Company; Notice of Application

Take notice that on March 10, 2016, Pike County Light & Power Company (PCL&P), 402 Broad Street, Milford, Pennsylvania 18337, filed an application pursuant to section 7(f) of the Natural Gas Act (NGA) for a service area determination. PCL&P also requests: (1) A finding that PCL&P continues to qualify as a local distribution company (LDC) for purposes of section 311 of the Natural Gas Policy Act of 1978 (NGPA); and (2) a waiver of the Commission's accounting and reporting requirements and other regulatory requirements ordinarily applicable to natural gas companies under the NGA and NGPA, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The filing may also be viewed on the web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (866) 208–3676 or TTY, (202) 502–8659.

Specifically, PCL&P requests a service area determination to allow it to continue to own and operate a 6-inch-diameter gas distribution pipeline at the Pennsylvania/New York border to receive natural gas in New York from the facilities of Orange and Rockland Utilities, Inc. (O&R), an LDC providing utility service in New York, and re-deliver the gas to PCL&P customers in Pennsylvania. PCL&P's application is related to O&R's application for a limited jurisdiction blanket certificate of public convenience and necessity filed in Docket No. CP16–101–000 on March 10, 2016.

Any questions regarding this application should be directed to John L. Carley, Assistant General Counsel, Orange and Rockland Utilities, Inc., Room 1815–S, 4 Irving Place, New York, New York 10003, (212) 460–2097 (telephone), or by email at *carleyj@coned.com.*

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 7 copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be

placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''filing'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit original and 5 copies of the protest or intervention to the Federal Energy regulatory Commission, 888 First Street NE., Washington, DC 20426.

Comment Date: April 11, 2016.

Dated: March 21, 2016.

Description: Compliance filing Sabine Motion to Place Rates into Effect 3–16–16 to be effective 4/1/2016.

Filed Date: 3/16/16.

Accession Number: 20160316–5103.

Comments Due: 5 p.m. ET 3/28/16.

Any person desiring to protest in any of the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: March 17, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. CP16–98–000; PF15–29–000]

Dominion Carolina Gas Transmission, LLC; Notice of Application

Take notice that on March 9, 2016, Dominion Carolina Gas Transmission, LLC (Dominion Carolina), filed an application pursuant to section 7(c) of the Natural Gas Act and Part 157 of the Commission's Regulations for a certificate of public convenience and necessity to construct, install, own, operate, and maintain certain facilities located in Aiken, Charleston, Dillon, Dorchester, Greenwood, Laurens, Newberry, and Spartanburg Counties, South Carolina (Transco to Charleston Project). Dominion Carolina will provide firm transportation service of 80,000 dekatherms per day (Dth/day) to meet increasing demand for natural gas for local commercial, industrial, and power generation customers. The filing may also be viewed on the web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@gerc.gov* or call toll-free, (866) 208–3676 or TYY, (202) 502–8659.

Any questions regarding this application should be directed to Richard D. Jessee, Gas Transmission Certificates Program Manager, Dominion Carolina Gas Transmission, LLC, 220 Operations Way, Cayce, SC 29033. Telephone (803) 726–3738 and email: *Richard.Jessee@dom.com*.

Dominion Carolina proposes to construct approximately 55 miles of 12-inch diameter natural gas transmission pipeline in Spartanburg, Laurens, New Berry, and Greenwood Counties, SC (Moore to Chappells Pipeline) and approximately 5 miles of 4-inch diameter natural gas transmission pipeline in Dillion County, SC (Dillion Pipeline). Dominion Carolina also proposes to install: Two 1,400-horsepower (hp) compressor units at existing Moore Compressor Station located in Spartanburg County, SC; three 1,200 hp compressor units at new Dorchester Compressor Station located Dorchester County, SC; and appurtenances. In addition, Dominion Carolina proposes to convert one existing 1,200 hp compressor unit from standby to use the unit for service, at existing Southern Compressor Station located in Aiken County, SC. Dominion Carolina has executed binding precedent agreements with its customers for the project's capacity of 80,000 Dth/day. Dominion Carolina proposes to charge a negotiated incremental rate for firm transportation service using the proposed project. The cost of the project is $119.3 million. Dominion Carolina proposes an in-service date of November 1, 2017.

On September 2, 2015, the Commission staff granted Dominion Carolina's request to use the National Environmental Policy Act (NEPA) Pre-Filing Process and assigned Docket No. PF15–29–000 to staff activities involving the proposed facilities. Now, as of the filing of this application on March 9, 2016, the NEPA Pre-Filing Process for this project has ended. From this time forward, this proceeding will be conducted in Docket No. CP16–98–000, as noted in the caption of this Notice.

Pursuant to Section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding, or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below, file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 5 copies of filings made with the Commission and must mail a copy to the applicant and to every other party in the proceeding. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

Motions to intervene, protests and comments may be filed electronically via the internet in lieu of paper; see, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site under the ''e-Filing'' link. The Commission strongly encourages electronic filings.

Comment Date: 5:00 p.m. Eastern Time on April 11, 2016.

Dated: March 21, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: CP16–101–000.
Applicants: Orange and Rockland Utilities, Inc.
Description: Application for Limited Jurisdiction Blanket Certificate and Request for Expedited Action of Orange and Rockland Utilities, Inc.
Filed Date: 3/10/16.
Accession Number: 20160310–5104.
Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: RP16–727–000.
Applicants: Eastern Shore Natural Gas Company.
Description: § 4(d) Rate Filing: Filling of Negotiated Rate Agreement to be effective 3/18/2016.
Filed Date: 3/17/16.
Accession Number: 20160317–5073.
Comments Due: 5 p.m. ET 3/29/16.

Docket Numbers: RP16–728–000.
Applicants: Midcontinent Express Pipeline LLC.
Description: Penalty Revenue Crediting Report of Midcontinent Express Pipeline LLC.
Filed Date: 3/17/16.
Accession Number: 20160317–5202.
Comments Due: 5 p.m. ET 3/29/16.

Docket Numbers: RP16–729–000.
Applicants: Transcontinental Gas Pipe Line Company.
Description: § 4(d) Rate Filing: GT&C Section 49—Available Firm Capacity Posting Procedure to be effective 4/18/2016.
Filed Date: 3/18/16.
Accession Number: 20160318–5129.
Comments Due: 5 p.m. ET 3/30/16.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). Federal Energy Regulatory Commission

[Docket No. IC16–5–000]

Commission Information Collection Activities (FERC–714 and FERC–730); Comment Request

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Comment request.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, 44 U.S.C. 3507(a)(1)(D), the Federal Energy Regulatory Commission (Commission or FERC) is submitting its information collections FERC–714 (Annual Electric Balancing Authority Area and Planning Area Report) and FERC–730 (Report of Transmission Investment Activity) to the Office of Management and Budget (OMB) for review of the information collection requirements. Any interested person may file comments directly with OMB and should address a copy of those comments to the Commission as explained below. The Commission previously issued a Notice in the **Federal Register** (80 FR 80355, 12/24/2015) requesting public comments. The Commission received no comments on the FERC–714 or FERC–730 and is making this notation in its submittal to OMB.

DATES: Comments on the collections of information are due by April 25, 2016.

ADDRESSES: Comments filed with OMB, identified by the OMB Control No. 1902–0140 (FERC–714) and 1902–0239 (FERC–730) should be sent via email to the Office of Information and Regulatory Affairs: *oira_submission@omb.gov.* Attention: Federal Energy Regulatory Commission Desk Officer. The Desk Officer may also be reached via telephone at 202–395–0710.

A copy of the comments should also be sent to the Commission, in Docket No. IC16–5–000, by either of the following methods:

- *eFiling at Commission's Web site*: *http://www.ferc.gov/docs-filing/efiling.asp.*
- *Mail/Hand Delivery/Courier*: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: *http://www.ferc.gov/help/submission-guide.asp.* For user assistance contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at: (866) 208–3676 (toll-free), or (202) 502–8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *http://www.ferc.gov/docs-filing/docs-filing.asp.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov,* by telephone at (202) 502–8663, and by fax at (202) 273–0873.

SUPPLEMENTARY INFORMATION:

Type of Request: Three-year extension of the information collection requirements for all collections described below with no changes to the current reporting requirements. Please note that each collection is distinct from the next.

Comments: Comments are invited on: (1) Whether the collections of information are necessary for the proper performance of the functions of the Commission including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collections of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collections; and (4) ways to minimize the burden of the collections of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FERC–714 [Annual Electric Balancing Authority Area and Planning Area Report] [1]

OMB Control No.: 1902–0140.

Abstract: The Commission uses the FERC–714 data to analyze power system operations. These analyses estimate the effect of changes in power system operations resulting from the installation of a new generating unit or plant, transmission facilities, energy transfers between systems, and/or new points of interconnections. The FERC–714 data assists in providing a broad picture of interconnected balancing authority area operations including comprehensive information of balancing authority area generation, actual and scheduled inter-balancing authority area power transfers, and net energy for load, summer and winter generation peaks and system lambda. The Commission also uses the data to prepare status reports on the electric utility industry including a review of inter-balancing authority area bulk power trade information.

The Commission uses the collected data from planning areas to monitor forecasted demands by electric utilities with fundamental demand responsibilities and to develop hourly demand characteristics.

Type of Respondent: Electric utility balancing authorities and planning areas in the United States.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden and cost[2] (rounded) for the information collection as follows:

FERC–714 (Annual Electric Balancing Authority Area and Planning Area Report)

Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden & cost per response [3]	Total annual burden hours & total annual cost	Cost per respondent ($)
(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
177	1	177	87 $5,973	15,399 $1,057,295	$5,973

FERC–730 [Report of Transmission Investment Activity]

OMB Control No.: 1902–0239.

Abstract: Pursuant to Section 219 [4] of the Federal Power Act, the Commission issued FERC Order No. 679,[5] Promoting Transmission Investment Through Pricing Reform. In Order No. 679 FERC amended its regulations in 18 CFR 35.35 to establish incentive-based (including performance-based) rate treatments for the transmission of electric energy in interstate commerce by public utilities. The Commission intended the order to benefit consumers by ensuring reliability and to reduce the cost of delivered power by reducing transmission congestion. Order No. 679 also adopted an annual reporting requirement (FERC–730) for utilities that receive incentive rate treatment for specific transmission projects. The FERC–730 provides annual data on transmission capital expenditures as well as project status detail. The Commission requires that filers specify which projects are currently receiving incentives in the project detail table and that they group together those facilities receiving the same incentive. Specifically, in accordance with the statute, public utilities with incentive rates must file:

- Actual transmission investment for the most recent calendar year, and projected, incremental investments for the next five calendar years (in dollar terms); and
- a project by project listing that specifies for each project the most up to date, expected completion date, percentage completion as of the date of filing, and reasons for delays for all current and projected investments over the next five calendar years. Projects with projected costs less than $20 million are excluded from this listing.

To ensure that Commission rules are successfully meeting the objectives of Section 219, the Commission collects

[1] The renewal request in this IC docket is for the current FERC–714, with no change to the reporting requirements. The FERC–714 is also part of the Forms Refresh effort (started in Docket No. AD15–11), which is a separate activity.

[2] The hourly cost (wages plus benefits), is based on the Bureau of Labor Statistics May 2014 National Industry-Specific Occupational Employment and Wage Estimates (at *http://www.bls.gov/oes/current/naics2_22.htm*). The average hourly cost (wages plus benefits) of $68.66/hour is the average of the following:

- Management (Code 11–0000), $78.04/hr.
- Computer and mathematical (Code 15–0000), $58.25/hr.
- Electrical Engineers (Code 17–2071), $66.45/hr.
- Economist (Code 19–3011), $73.04/hr.
- Computer and Information Systems Managers (Code 11–3021), $94.55/hr.
- Accountants and Auditors (Code 13–2011), $51.11/hr.
- Transportation, Storage, and Distribution Managers (Code 11–3071), $73.65/hr.
- Power Distributors and Dispatchers (Code 51–8012), $54.16/hr.

[3] The estimates for cost per response are derived using the following formula: Average Burden Hours per Response * $72.00 per Hour = Average Cost per Response. The hourly cost figure comes from the FERC average salary plus benefits ($149,489/year). Commission staff believes the FERC average salary plus benefits to be representative wage (plus benefits) for industry respondents.

[4] Energy Policy Act of 2005, Pub. L. 109–58, 119 Stat. 594, 315 and 1283 (2005).

[5] RM06–4–000 (issued 7/20/2006), published at 71 FR 43294.

industry data, projections and related information that detail the level of investment. FERC–730 information regarding projected investments as well as information about completed projects allows the Commission to monitor the success of the transmission pricing reforms and to determine the status of critical projects and reasons for delay.

Type of Respondent: Public utilities that have been granted incentives based rate treatment for specific transmission projects under the provisions of 18 CFR 35.35(h) must file the FERC–730.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden for the information collection as:

FERC–730 (REPORT OF TRANSMISSION INVESTMENT ACTIVITY)

Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden & cost per response [3]	Total annual burden hours & total annual cost	Cost per respondent ($)
(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
63	1	63	30 $2,160	1,890 $136,080	$2,160

Dated: March 21, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. IC16–3–000]

Commission Information Collection Activities; (FERC–556, FERC–606, and FERC–607); Comment Request

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Comment request.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, 44 U.S.C. 3507(a)(1)(D), the Federal Energy Regulatory Commission (Commission or FERC) is submitting its information collections FERC–556 (Certification of Qualifying Facility Status for a Small Power Production or Cogeneration Facility), FERC–606 (Notification of Request for Federal Authorization and Requests for Further Information), and FERC–607 (Report on Decision or Action on Request for Federal Authorization) to the Office of Management and Budget (OMB) for review of the information collection requirements. Any interested person may file comments directly with OMB and should address a copy of those comments to the Commission as explained below. The Commission previously issued a Notice in the **Federal Register** (80 FR 74101, 11/27/2015) requesting public comments. The Commission received no comments on the FERC–556, FERC–606, or FERC–607 and is making this notation in its submittal to OMB.

DATES: Comments on the collections of information are due by April 25, 2016.

ADDRESSES: Comments filed with OMB, identified by the OMB Control Nos. 1902–0075 (FERC–556) and 1902–0241 (FERC–606 and FERC–607) should be sent via email to the Office of Information and Regulatory Affairs: *oira_submission@omb.gov.* Attention: Federal Energy Regulatory Commission Desk Officer. The Desk Officer may also be reached via telephone at 202–395–0710.

A copy of the comments should also be sent to the Commission, in Docket No. IC16–3–000, by either of the following methods:

- *eFiling at Commission's Web site: http://www.ferc.gov/docs-filing/efiling.asp.*
- *Mail/Hand Delivery/Courier:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov,* by telephone at (202) 502–8663, and by fax at (202) 273–0873.

SUPPLEMENTARY INFORMATION:

Type of Request: Three-year extension of the information collection requirements for all collections described below with no changes to the current reporting requirements. Please note that each collection is distinct from the next.

Comments: Comments are invited on: (1) Whether the collections of information are necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collections of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collections; and (4) ways to minimize the burden of the collections of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FERC–556, Certification of Qualifying Facility Status for a Small Power Production or Cogeneration Facility

OMB Control No.: 1902–0075.

Abstract: Form No. 556 is required to implement sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978 [1] (PURPA). FERC is authorized, under those sections, to encourage cogeneration and small power production and to prescribe such rules as necessary in order to carry out the statutory directives.

A primary statutory objective is efficient use of energy resources and facilities by electric utilities. One means of achieving this goal is to encourage production of electric power by cogeneration facilities which make use of reject heat associated with commercial or industrial processes, and by small power production facilities which use other wastes and renewable resources. PURPA encourages the development of small power production facilities and cogeneration facilities that meet certain technical and corporate

[1] 16 U.S.C. 796, 824a–3.

criteria through establishment of various regulatory benefits. Facilities that meet these criteria are called Qualifying Facilities (QFs).

FERC's regulations in 18 CFR part 292, as relevant here, specify: (a) The certification procedures which must be followed by owners or operators of small power production and cogeneration facilities; (b) the criteria which must be met; (c) the information which must be submitted to FERC in order to obtain qualifying status; and (d) the PURPA benefits which are available to QFs to encourage small power production and cogeneration.

18 CFR part 292 also exempts QFs from certain corporate, accounting, reporting, and rate regulation requirements of the Federal Power Act,[2] certain state laws and the Public Utility Holding Company Act of 2005.[3]

Type of Respondent: Facilities that are self-certifying their status as a cogenerator or small power producer or that are submitting an application for FERC certification of their status as a cogenerator or small power producer.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden for the information collection as:

FERC–556—Certification of Qualifying Facility Status for a Small Power Production or Cogeneration Facility

Facility type	Filing type	Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden hours and cost per response [4] (4)	Total annual burden hours and total annual cost (3) * (4) = (5)	Cost per respondent ($) (5) ÷ (1)
Cogeneration Facility >1 MW [5]	Self-certification	54	1.25	67.5	1.5 hrs; $108	101.25 hrs; $7,290	$135
Cogeneration Facility >1 MW	Application for FERC certification.	1	1.25	1.25	50 hrs; $3,600	62.5 hrs; $4,500	4,500
Small Power Production Facility >1 MW.	Self-certification	1,787	1.25	2,234	1.5 hrs; $108	3,351hrs; $241,272	135
Small Power Production Facility >1 MW.	Application for FERC certification.	0	1.25	0	50 hrs; $3,600	0 hrs; $0	0
Cogeneration and Small Power Production Facility ≤1 MW (Self-Certification) [6].	Self-certification	312	1.25	390	1.5 hrs; $108 [7]	585 hrs; $42,120	135
Total		2,154		2,693		4,100 hrs; $295,182	

FERC–606, Notification of Request for Federal Authorization and Requests for Further Information; FERC–607, Report on Decision or Action on Request for Federal Authorization

OMB Control No.: 1902–0241.

Abstract: FERC–606 requires agencies and officials responsible for issuing, conditioning, or denying requests for federal authorizations necessary for a proposed natural gas project to report to the Commission regarding the status of an authorization request. This reporting requirement is intended to allow agencies to assist the Commission to make better informed decisions in establishing due dates for agencies' decisions.

FERC–607 requires agencies or officials to submit to the Commission a copy of a decision or action on a request for federal authorization and an accompanying index to the documents and materials relied on in reaching a conclusion.

The information collections can neither be discontinued nor collected less frequently because of statutory requirements. The consequences of not collecting this information are that the Commission would be unable to fulfill its statutory mandate under the Energy Policy Act of 2005 to:

- Establish a schedule for agencies to review requests for federal authorizations required for a project, and
- Compile a record of each agency's decision, together with the record of the Commission's decision, to serve as a consolidated record for the purpose of appeal or review, including judicial review.

Type of Respondent: Agencies with federal authorization responsibilities.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden and cost [8] (rounded) for the information collection as follows:

FERC–606—(Notification of Request for Federal Authorization and Requests for Further Information), and FERC–607 (Report on Decision or Action on Request for Federal Authorization)

	Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden hours and cost per response (4)	Total annual burden hours and total annual cost (3) * (4) = (5)	Cost per respondent ($) (5) ÷ (1)
FERC–606	6	1	6	4 hrs; $288	24 hrs; $1,728	$288

[2] 16 U.S.C. 791, *et seq.*

[3] 42 U.S.C. 16, 451–63.

[4] The burden costs are based on an FERC's 2015 average annual wage (and benefits) figure for a full-time employee of $149,489 ($72/hour). The Commission staff believes that industry is similarly situated in terms of staff costs and skill sets.

[5] MW = megawatt.

[6] Not required to file.

[7] The ''Cost per Response'' for the Cogeneration and Small Power Production Facility ≤ 1MW (Self-Certification) respondent category was incorrectly presented as $3,600 in the 60-day notice for the FERC–556 information collection (Docket No. IC16–3; 80 FR 74101, 11/27/2015). The figure is corrected to $108 in this notice.

[8] The cost is based on FERC's average cost (salary plus benefits) of $72/hour for 2015. The Commission staff believes that the level and skill set (as a reporting agency official, *e.g.,* Environmental Program Manager or Reviewer) is comparable to FERC staff.

FERC–606—(NOTIFICATION OF REQUEST FOR FEDERAL AUTHORIZATION AND REQUESTS FOR FURTHER INFORMATION), AND FERC–607 (REPORT ON DECISION OR ACTION ON REQUEST FOR FEDERAL AUTHORIZATION)—Continued

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER16–13–002.

Applicants: Southwest Power Pool, Inc.

Description: Compliance filing: Compliance Filing in ER16–13—Revisions to Att AE re Annual ARR Allocation to be effective 1/28/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5085.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–628–001.

Applicants: Florida Power & Light Company.

Description: Tariff Amendment: Florida Power & Light Response to Deficiency Letter to be effective 5/21/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5150.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1234–000.

Applicants: New York State Electric & Gas Corporation.

Description: Tariff Cancellation: Cancellation of Services Agreement with FirstEnergy Service Company to be effective 3/19/2016.

Filed Date: 3/18/16.

Accession Number: 20160318–5154.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–1235–000.

Applicants: UNS Electric, Inc.

Description: Section 205(d) Rate Filing: Parker-Bagdad Interconnection Agreement to be effective 3/17/2016.

Filed Date: 3/18/16.

Accession Number: 20160318–5157.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–1236–000.

Applicants: Northern States Power Company, a Wisconsin corporation.

Description: Tariff Cancellation: 20160318_Cancellation to be effective 3/31/2016.

Filed Date: 3/18/16.

Accession Number: 20160318–5159.

Comments Due: 5 p.m. ET 4/8/16.

Docket Numbers: ER16–1237–000.

Applicants: Birdsboro Power LLC.

Description: Petition of Birdsboro Power LLC for Limited Waiver of PJM Open Access Transmission Tariff Competitive Entry Exemption Deadline and Request for Expedited Action.

Filed Date: 3/18/16.

Accession Number: 20160318–5175.

Comments Due: 5 p.m. ET 3/28/16.

Docket Numbers: ER16–1238–000.

Applicants: Avangrid Arizona Renewables, LLC.

Description: Section 205(d) Rate Filing: Avangrid Name change normal filing to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5068.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1239–000.

Applicants: Avangrid Renewables, LLC.

Description: Section 205(d) Rate Filing: Avangrid Renewables Name change normal to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5069.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1240–000.

Applicants: Alabama Electric Marketing, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5105.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1241–000.

Applicants: California Electric Marketing, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5106.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1242–000.

Applicants: Kiowa Power Partners, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5108.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1243–000.

Applicants: New Mexico Electric Marketing, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5110.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1244–000.

Applicants: Tenaska Frontier Partners, Ltd.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5112.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1245–000.

Applicants: Tenaska Gateway Partners, Ltd.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5113.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1246–000.

Applicants: Tenaska Power Management, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5115.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1247–000.

Applicants: Texas Electric Marketing, LLC.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5117.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1248–000.

Applicants: Tenaska Power Services Co.

Description: Section 205(d) Rate Filing: Market-Based Rate Tariff Revisions to be effective 3/22/2016.

Filed Date: 3/21/16.

Accession Number: 20160321–5171.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: ER16–1249–000.

Applicants: PJM Interconnection, L.L.C.

Description: Section 205(d) Rate Filing: Amendment to ISA No. 2631, Queue No. V2–019 to be effective 7/28/2010.

Filed Date: 3/21/16.

Accession Number: 20160321–5189.

Comments Due: 5 p.m. ET 4/11/16.

Take notice that the Commission received the following qualifying facility filings:

Docket Numbers: QF16–546–000.

Applicants: UE–00212NJ.

Description: Form 556 of UE–00212NJ.

Filed Date: 3/16/16.

Accession Number: 20160316–5065.

Comments Due: None Applicable.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: March 21, 2016.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9944–23–OLEM]

FY2016 Supplemental Funding for Brownfields Revolving Loan Fund (RLF) Grantees

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of the Availability of Funds.

SUMMARY: The Environmental Protection Agency (EPA) plans to make available approximately $8 million to provide supplemental funds to Revolving Loan Fund (RLF) capitalization grants previously awarded competitively under section 104(k)(3) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Brownfields Cleanup Revolving Loan Fund pilots awarded under section 104(d)(1) of CERCLA that have not transitioned to section 104(k)(3) grants are not eligible to apply for these funds. EPA will consider awarding supplemental funding only to RLF grantees who have demonstrated an ability to deliver programmatic results by making at least one loan or subgrant. The award of these funds is based on the criteria described at CERCLA 104(k)(4)(A)(ii).

The Agency is now accepting requests for supplemental funding from RLF grantees. Requests for funding must be submitted to the appropriate EPA Regional Brownfields Coordinator (listed below) by April 25, 2016. Funding requests for hazardous substances and/or petroleum funding will be accepted. Specific information on submitting a request for RLF supplemental funding is described below and additional information may be obtained by contacting the EPA Regional Brownfields Coordinator.

DATES: This action is effective March 25, 2016.

ADDRESSES: A request for supplemental funding must be in the form of a letter addressed to the appropriate Regional Brownfields Coordinator (see listing below) with a copy to Debi Morey, *morey.debi@epa.gov.*

FOR FURTHER INFORMATION CONTACT: Debi Morey, U.S. EPA, (202) 566–2735 or the appropriate Brownfields Regional Coordinator.

SUPPLEMENTARY INFORMATION:

Background

The Small Business Liability Relief and Brownfields Revitalization Act added section 104(k) to CERCLA to authorize federal financial assistance for brownfields revitalization, including grants for assessment, cleanup and job training. Section 104(k) includes a provision for EPA to, among other things, award grants to eligible entities to capitalize Revolving Loan Funds and to provide loans and subgrants for brownfields cleanup. Section 104(k)(4)(A)(ii) authorizes EPA to make additional grant funds available to RLF grantees for any year after the year for which the initial grant is made (noncompetitive RLF supplemental funding) taking into consideration:

(I) The number of sites and number of communities that are addressed by the revolving loan fund;

(II) the demand for funding by eligible entities that have not previously received a grant under this subsection;

(III) the demonstrated ability of the eligible entity to use the revolving loan fund to enhance remediation and provide funds on a continuing basis; and

(IV) such other similar factors as the [Agency] considers appropriate to carry out this subsection.

Eligibility

In order to be considered for supplemental funding, grantees must demonstrate that they have expended existing funds and that they have a clear plan for quickly expending requested additional funds. Grantees must demonstrate that they have made at least one loan or subgrant prior to applying for this supplemental funding and have significantly depleted existing available funds. For FY2016, EPA defines ''significantly depleted funds'' as any grant where $400,000 or less remains uncommitted. Additionally, the RLF recipient must have demonstrated a need for supplemental funding based on, among other factors, the number of sites that will be addressed; demonstrated the ability to make loans and subgrants for cleanups that can be started and completed expeditiously (*i.e.,* ''shovel-ready'' projects) and will lead to redevelopment; demonstrated the existence of additional leveraged funds to complete the project in a timely manner and move quickly from cleanup to redevelopment, including the use of tax incentives such as new market tax credits, direct funding or other resources to advance the project to completion; demonstrated the ability to administer and revolve the capitalization funding in the RLF grant; demonstrated an ability to use the RLF grant to address funding gaps for cleanup; and demonstrated that they have provided a community benefit from past and potential loan(s) and/or subgrant(s). Special consideration may

be given to those communities affected by plant closures or other economic disruptions; can demonstrate projects that have a clear prospect of aiding the in-sourcing of manufacturing capacity and keeping and/or adding jobs, or otherwise creating jobs, in the affected area; or will benefit a community that has been identified as part of EPA's Cross Agency Strategy on Working to Make a Visible Difference in Communities. EPA encourages innovative approaches to maximizing revolving and leveraging with other funds, including use of grants funds as a loan loss guarantee, combining with other government or private sector lending resources. Applicants for supplemental funding must contact the appropriate Regional Brownfields Coordinator below to obtain information on the format for supplemental funding applications for their region. When requesting supplemental funding, applicants must specify whether they are seeking funding for sites contaminated by hazardous substances or petroleum. Applicants may request both types of funding.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPA–2007–0042; FRL—9944–24–OLEM]

Proposed Information Collection Request; Comment Request; The National Oil and Hazardous Substance Pollution Contingency Plan Regulation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit an information collection request (ICR), ''The National Oil and Hazardous Substance Pollution Contingency Plan Regulation, Subpart J (40 CFR 300.900)'' (EPA ICR No. 1664.11, OMB Control No. 2050–0141) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through October 31, 2016. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information, unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before May 24, 2016.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OPA–2007–0042 online using *www.regulations.gov* (our preferred method), by email to *Docket.rcra@epa.gov* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Leigh DeHaven, Office of Emergency Management, Regulations Implementation Division (5104A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone number: (202) 564–1974; fax number: email address: *DeHaven.Leigh@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the

burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: This Information Collection Request (ICR) renewal supports activities to implement the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), Subpart J (40 CFR 300.900, ''Use of Dispersants and Other Chemicals'').

The use of bioremediation agents, dispersants, surface washing agents, surface collecting agents and miscellaneous oil spill control agents in response to oil spills in U.S. waters or adjoining shorelines is governed by Subpart J of the NCP regulation (40 CFR 300.900). Subpart J requirements include criteria for listing oil spill mitigating agents on the NCP Product Schedule, hereafter referred to as the Schedule. EPA's regulation, which is codified at 40 CFR 300.00, requires that EPA prepare a schedule of ''dispersants, other chemicals, and other spill mitigating devices and substances, if any, that may be used in carrying out the NCP.'' The Schedule is required by section 311(d)(2)(G) of the Clean Water Act (CWA), as amended by the Oil Pollution Act of 1990. The Schedule is used by Federal On-Scene Coordinators (FOSCs), Regional Response Teams (RRTs), and Area Planners to identify spill mitigating agents in preparation for and response to oil spills.

Under Subpart J, respondents who want to add a product to the Schedule must submit technical product data to the U.S. Environmental Protection Agency (EPA or Agency) as stipulated in 40 CFR 300.915. Specifically, Subpart J requires the manufacturer to conduct specific toxicity and effectiveness tests and submit the corresponding technical product data along with other detailed information to the EPA Office of Emergency Management, Office of Land and Emergency Management. For example, a dispersant must exceed the 50-percent (±5 percent) efficacy threshold in order to be listed on the Schedule. EPA places oil spill mitigating agents on the Schedule if all the required data are submitted and the product satisfies all requirements and meets or exceeds testing thresholds. The Product Schedule is available to FOSCs, RRTs, and Area Committees for determining the most appropriate products to use in various spill scenarios.

Products currently listed on the Schedule are divided into five basic categories: Dispersants, surface washing agents, surface collecting agents, bioremediation agents, and miscellaneous oil spill control agents. As of March 2016, 118 products are listed on the Schedule. It is estimated that 11 products per year will be submitted to EPA for listing on the Schedule. Over the three-year period covered by this ICR, an estimated 33 products may be listed. Additionally, EPA estimates that approximately 10 manufacturers will submit information to obtain sorbent certifications. The annual public reporting burden will be 315 hours. The total annual cost (including labor and non-labor) to manufacturers under Subpart J is estimated to be $89,590.

At 40 CFR 300.920(c), respondents are allowed to assert that certain information in the technical product data submissions is confidential business information. EPA will handle such claims pursuant to the provisions in 40 CFR part 2, subpart B. Such information must be submitted separately from non-confidential information, clearly identified, and clearly marked ''Confidential Business Information.'' If the applicant fails to make such a claim at the time of submittal, EPA may make the information available to the public without further notice.

Form Numbers: None.

Respondents/affected entities: Respondents include, but are not limited to, manufacturers of bioremediation agents, dispersants, surface collecting agents, surface washing agents, miscellaneous oil spill control agents, and other chemical agents and biological additives used as countermeasures against oil spills. Affected private industries can be expected to fall within the following industrial classifications:

- Manufacturers of industrial inorganic chemicals (SIC 281/NAICS 325188),
- Manufacturers of industrial organic chemicals (SIC 286/NAICS 325199), and
- Manufacturers of miscellaneous chemical products (SIC 289/NAICS 325988).

Respondent's obligation to respond: An oil spill mitigating agent does not have to be listed on the Product Schedule unless a manufacturer wants the product to be applied as part of an emergency response to an oil spill. If so, then certain mandatory product testing and information is required to be considered for listing on the Schedule. (The Schedule is required by section 311(d)(2)(G) of the Clean Water Act (CWA), as amended by the Oil Pollution Act of 1990).

Estimated number of respondents: Eleven per year. There are 100 manufacturers and 118 products (27 bioremediation agents, 19 dispersants, 15 miscellaneous oil spill control agents, and 55 surface washing agents, 2 surface collecting agents) currently listed on the January, 2016 Schedule. EPA estimates that manufacturers will apply to list 11 products on the Schedule each year, including 2 bioremediation agents, 3 dispersants, 2 miscellaneous oil spill control agents, 1 surface collecting agent, and 3 surface washing agents. Over a three-year period, EPA anticipates that manufacturers will apply to list a total of 6 bioremediation agents, 9 dispersants, 6 miscellaneous oil spill control agents, 3 surface collecting agent, and 9 surface washing agents on the Schedule.

Frequency of response: Each manufacturer responds one time per product submittal.

Total estimated burden: 315 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $72,450 (per year)

Changes in Estimates: There is a minor increase in burden hours and cost. All regulatory requirements are the same as in the 2010 and 2013 ICRs.

Dated: March 21, 2016.

Reggie Cheatham,

Director, Office of Emergency Management.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

Privacy Act System of Records

AGENCY: Federal Communications Commission (FCC, Commission, or the Agency).

ACTION: Notice; one altered Privacy Act system of records; eight new routine uses.

SUMMARY: Pursuant to subsection (e)(4) of the *Privacy Act of 1974,* as amended (''Privacy Act''), 5 U.S.C. 552a, the FCC proposes to change the name and alter one system of records, FCC/OMD–7, ''FCC Transit Benefit and Parking Permit Programs'' (formerly FCC/OMD–7, ''FCC Employee Transit Benefit and Parking Permit Programs''). The FCC will alter the security classification; the system location; the categories of individuals; the categories of records; the authority for maintenance of the system; the purposes for which the information is maintained; five routine uses (1), (2), (4), (5), and (6) (and add eight new routine uses (8–15); the policies and practices for the storage, retrivability, accessibility, safeguards, and retention and disposal of the records in the system; the system manager(s) and address; the notification, record access, and contesting record procedures; the record source categories; and make other administrative edits and revisions as necessary to update the information and comply with the requirements of the Privacy Act of 1974, as amended (5 U.S.C. 552a), and the regulations and requirements of the Office of Management and Budget (OMB) and the National Archives and Records Administration (NARA).

DATES: In accordance with subsections (e)(4) and (e)(11) of the Privacy Act, any interested person may submit written comments concerning the alteration of this system of records on or before April 25, 2016. The Office of Information and Regulatory Affairs (OIRA), Office of Management and Budget (OMB), which has oversight responsibility under the Privacy Act to review the system of records, and Congress may submit comments on or before May 4, 2016. The proposed new system of records will become effective on May 4, 2016 unless the FCC receives comments that require a contrary determination. The Commission will publish a document in the **Federal Register** notifying the public if any changes are necessary. As required by 5 U.S.C. 552a(r) of the Privacy Act, the FCC is submitting reports on this proposed altered system to OMB and Congress.

ADDRESSES: Address comments to Leslie F. Smith, Privacy Manager, Information Technology (IT), Room 1–C216, Federal Communications Commission (FCC), 445 12th Street SW., Washington, DC 20554, (202) 418–0217, or via the Internet at *Leslie.Smith@fcc.gov*.

FOR FURTHER INFORMATION CONTACT: Contact Leslie F. Smith, Privacy Manager, Information Technology (IT), 1–C216, Federal Communications Commission, 445 12th Street SW., Washington, DC 20554, (202) 418–0217 or via the Internet at *Leslie.Smith@fcc.gov*.

SUPPLEMENTARY INFORMATION: As required by the *Privacy Act of 1974,* as amended, 5 U.S.C. 552a(e)(4) and (e)(11), this document sets forth notice of the alteration of one system of records maintained by the FCC, the revision of six routine uses: (1), (2), (4), (5), and (6), and the addition of eight new routine uses ((8)–(15)). The FCC previously gave complete notice of the system of records (FCC/OMD–7, ''FCC Employee Transit Benefit and Parking Permit Programs'') covered under this Notice by publication in the **Federal Register** on April 5, 2006 (71 FR 17234, 17252). This notice is a summary of the more detailed information about the proposed altered system of records, which may be obtained or viewed pursuant to the contact and location information given above in the **ADDRESSES** section. The purposes for altering FCC/OMD–7, ''FCC Transit Benefit and Parking Permit Programs'' (formerly FCC/OMD–7, ''FCC Employee Transit Benefit and Parking Programs'') are to revise: The system name to reflect the expansion of the categories of individuals who are covered by this system; the security classification; the system location; the categories of individuals; the categories of records; the authority for maintenance of the system; the purposes for which the information is maintained; routine uses (1), (2), (4), (5), and (6), and add eight new routine uses ((8)–(15)); the policies and practices for the storage, retrievability, accessibility, safeguards, and retention and disposal of the records in the system; the system manager(s) and address; the notification, record access, and contesting record procedures; the record source categories; and make other administrative edits and revisions as necessary to update the information and comply with the requirements of the Privacy Act, as amended (5 U.S.C. 552a), and the regulations and requirements of OMD and NARA.

The FCC will achieve these purposes by altering this system of records with these changes:

Revision of language regarding the Security Classification, for clarity and to note that the FCC has in place a process to provide an appropriate security classification for this system, such that: The FCC's CIO team will provide a security classification to this system based on NIST FIPS–199 standards.

Revision of the language regarding the System Location, to note the changes to the system's address: Administrative Services Center (ASC), Office of the Managing Director (OMD), Federal Communications Commission (FCC), 445 12th Street SW., Washington, DC 20554. Information related to those employees who participate in the Smartrip portion of the benefits program is also stored in a database administered by the Washington Metropolitan Area Transit Authority (WMATA), headquartered at 600 Fifth Street NW., Washington, DC 20001.

Revision of the language regarding the Categories of Individuals Covered by the System, for clarity and to note the expansion of the categories of individuals covered by this system to include FCC employees and their spouses, paid interns/co-op students, FCC contractors, and non-FCC Federal employees, such that: The categories of individuals in this system include those individuals who voluntarily apply for and/or participate in one of the FCC Transit Benefit and Parking Permit Programs, which include, but are not limited to:

1. FCC employees who have applied for and received monthly transit fare subsidies;

2. FCC employees and contractors who hold monthly FCC garage parking permits;

3. FCC employees, employee spouses, paid interns and co-op students, contractors, and non-FCC Federal agency employees who are members of carpools and vanpools that park in the FCC parking garage;

4. FCC employees who have applied for and received handicap status for FCC garage parking assignments as a ''reasonable accommodation''; and

5. FCC employees who participate in ridesharing, including the Capital Bikeshare Program.

Revision of the language in the Categories of Records in the System, for clarity and to note the expansion in and various changes made to the categories of records covered by this system, including the list of FCC forms and the information requested in each form, as follows:

The FCC uses the records in this system to administer the Transit Benefit and Parking Permit Programs. These records include, but are not limited to, the information that is required to be submitted on the following forms and any related documentation that pertains to transit benefit subsidies, parking permits, ride-sharing, bike-sharing, and other, related transit and commuting programs available to FCC employees, contractors, and other individuals, which are sponsored and/or hosted by the FCC:

1. Form A–27, ''FCC Pre-Tax Parking Benefit Form,'' including, but not limited to: Employee Information: FCC employee's name; effective date; pay period; parking location; and monthly/daily fee; Benefit: Carpool/vanpool), metro parking, commercial lot, privately-owned lot, parking garage, or parking meter; and requested amount; whether the application is new, a cancellation, or a change; and effective date; and Certification: Employee signature; date; and attachments;

2. Form A–30, ''FCC Parking Application,'' including, but not limited to: Applicant's name, FCC bureau/office/division; address (required for carpool); FCC badge number; FCC telephone number; FCC employee/contractor/paid intern/co-op student; vehicle year, make, model, state, and license plate; handicap perm (yes/no); FCC title (executives only); transit benefit participant (yes/no); van pool/car pool riders (FCC and Non-FCC employees): Name, address, bureau/office or agency, telephone number, FCC ID number, and signature; applicant's signature and date; and attachments, *e.g.,* handicap certification, etc.;

3. Form A–75, ''FCC Headquarters Employee Transit Benefit Application,'' including, but not limited to:

A. Applicant Information: Applicant's name, home address, bureau/office, office room number, telephone number, FCC badge number, and WMATA Smartrip Card serial number;

B. Employment Status: Full time, part time, paid intern/co-op student; and bargaining/non-bargaining unit status;

C. Mode(s) of Transportation (costs): Metro (rail only) and station name; metro (rail and bus) and station name; Metro (bus only); one-way transit user; commuter bus; commuter rail; and/or vanpool;

D. Telework: Approved telework agreement (yes/no); and telework days (Monday–Friday);

E. Employee certification: Employee signature and date; and

F. Transit benefit office action: Approved (yes and amount/no), disapproved (reason), signature and data; and attachments;

4. Form A–75–A, ''FCC Employee Transit Benefit Change Request Form,'' including, but not limited to:

A. Applicant Information: Applicant's name, home address, bureau/office, office room number, office telephone number, and FCC badge number;

B. Employment Status: Full time, part time, paid intern, or co-op student;

C. Change(s) Requested:

1. Mode(s) of transportation: Metro rail, metro bus, commuter rail, commuter bus, one-way transit user, vanpool, other, and transit provider name;

2. Monthly commuting cost: Old and new;

3. Badge number: Old and new;

4. Address change: Home address;

5. Name change: From/to; and

6. Smartrip Card serial number: Old and new; and

D. Employee Certification: Signature; date; and attachments.

Revision to the Authority for Maintenance of the System, to add several rule sections and delete several rule sections so that the statutory authorities more closely align with the system's current requirements, such that the authorities now include, as follows:

5 U.S.C. 301; 5 U.S.C. 5701–5733; 5 U.S.C. 7905; 26 U.S.C. 132(f); 40 U.S.C. 101 and 121; 44 U.S.C. 2104; 41 CFR 101–20.104–2, 102–74.205–210 (Ridesharing), and 102–74.265–310 (Parking Facilities); Executive Order 9397, as amended by Executive Order 13478; Executive Order 13150; Pub. L. 103–172; and the *Federal Property and Administrative Services Act of 1949,* as amended.

Revision of the language regarding the Purposes for which the information in this system is maintained, for clarity, and to expand the system's purposes, to include cross-checking information and matching activity to eliminate fraud and a security check on participants to safeguard against possible criminal or terrorist activity, as follows:

The FCC will use information in this system, including the PII, to administer the Transit Benefit and Parking Permit Programs. This information enables the FCC to facilitate the timely processing of requests for parking permits, transit benefit subsidies, ride-sharing and bike-sharing programs and similar commuting arrangements, and other, related program, policies, and activities, which include, but are not limited to:

1. Managing the FCC's transit benefits program that provides transportation subsidies for public transit, including but not limited to WMATA Metro train and bus fares; Commuter rail services—Maryland Area Rail Commuters (MARC) and Virginia Railway Express (VRE) fares; Commuter bus services—DASH fares, etc.; One-way transit users; Vanpool fares; and other parking and

transit subsidies to Federal employees as allowed under 5 U.S.C. 7905, 5 U.S.C. 301, and Executive Order 13150 employee's request to participate in the transit subsidy or FCC garage parking program;

2. Managing the FCC's employee parking, executive parking, handicapped parking, and ridesharing programs (vanpools/carpools) for FCC employees, contractors, and non-FCC agency employees;

3. Conducting audits, reviews, oversight, and/or investigations of the transit benefits, parking, ridesharing programs (vanpools and carpools) to ensure their accuracy and integrity of the Transit Benefits and Parking Program, which includes but is not limited to cross-checking the Commission's data on parking assignees and transit benefit recipients to ensure that they are not participating in both programs, unless authorized; and, when appropriate, matching this information with the lists of other Federal agencies to ensure that the Commission's participants are not registered for a drive-alone, carpool, or other parking assignments with any other Federal agency, and to identify and locate former employees;

4. Administering, qualifying, and/or certifying the beneficiaries of the Transit Benefits and Parking Program, which includes but is not limited to ensure the eligibility of transit subsidy participants and to prevent misuse of the funds involved;

5. Preparing and administering listings and reports for use by the FCC and the other Federal, state, and local agencies charged with management and oversight of and/or contribution to the Transit Benefits and Parking Program subsidies, etc.; and

6. Ensuring that those non-FCC individuals who are participating in the ride-sharing and bike-sharing programs do not pose a security threat to FCC Headquarter garage facilities.

Revision of the language in Routine Use (1) ''Financial Obligations as required by the National Finance Center *et al.''* to add ''pre-tax benefit(s)'' as another category of information concerning a record from this system that may be disclosed:

When the National Finance Center (the FCC's designated payroll office), the Department of the Treasury Debt Management Services, and/or a current employer to effect a salary, IRS tax refund, pre-tax benefit(s), or administrative offset to satisfy an indebtedness; and to Federal agencies to identify and locate former employees for the purposes of collecting such indebtedness, including through administrative, salary, or tax refund offsets. Identifying and locating former employees, and the subsequent referral to such agencies for offset purposes, may be accomplished through authorized computer matching programs. Disclosures will be made only when all procedural steps established by the Debt Collection Act of 1982 and the Debt Collection Improvement Act of 1996 or the Computer Matching and Privacy Protection Act of 1988, as appropriate, have been taken;

Revision of the language in Routine Use (2) ''Program Partner'' to expand the categories of transit information to include other applicable public transportations (in addition to WMATA), to note that these benefits are for FCC employees, and that the benefits relate to public transportation fare (*e.g.,* Smartrip program) as these relate to records from this system that may be disclosed:

To WMATA and other applicable public transportations in connection with FCC employees participating in this public transportation fare, *e.g.,* Smartrip program at: *http://www.wmata.com/riding/smartrip.cfm;*

Routine Use (3) ''Adjudication and Litigation'' is unchanged.

Revision of the language in Routine Use (4) ''Law Enforcement and Investigation'' to expand the categories to include government agencies and officials, the purposes that include but are not limited to sharing records in this system, and the reasons for disclosure, and to note that records may be referred for investigation, enforcement, or prosecution by the Commission (or another agency), regarding why a record from this system that may be disclosed:

Where there is a real or suspected indication of a violation or potential violation of a statute, regulation, rule, or order, records from this system may be shared with appropriate Federal, State, and/or local agencies, authorities, and officials for purposes that include but are not limited to obtaining additional information relevant to a FCC decision, referring the record for investigation, enforcement, or prosecution by the Commission or another agency;

Revision of the language in Routine Use (5) ''Congressional Investigations and Inquiries'' to change the title of the routine use and expand the categories of information to include investigations and inquiries, regarding a record from this system that may be disclosed:

To Congress, or, to the extent of matter within its jurisdiction, any committee or subcommittee thereof, for the purposes of an official Congressional investigation, including but not limited to, a request by a Congressional office in response to an inquiry made by an individual to the Congressional office for the individual's own records;

Revision of the language in Routine Use (6) ''Government-wide Program Management and Oversight'' to expand the number of Federal agencies and categories of information concerning a record from this system that may be disclosed, as follows:

To the General Services Administration (GSA), the National Archives and Records Administration (NARA), the Office of Personnel Management (OPM), and/or the Government Accountability Office (GAO) for the purpose of records management studies conducted under authority of 44 U.S.C. 2904 and 2906; to the Department of Justice (DOJ) in order to obtain that department's advice regarding disclosure obligations under the Freedom of Information Act (FOIA); or to the Office of Management and Budget (OMB) in order to obtain that office's advice regarding obligations under the Privacy Act. Such a disclosure shall not be used to make a determination about individuals;

Routine Use (7) ''Labor Relations'' is unchanged.

Addition of Routine Use (8) ''Breach Notification,'' as follows:

A record from this system may be disclosed to appropriate agencies, entities, and persons when: (1) The Commission suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) the Commission has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Commission or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Commission's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm;

Addition of Routine Use (9) ''Vanpool, Carpool, and Ridesharing,'' as follows:

Vanpool, Carpool, and Ridesharing—Vanpool, carpool, and rideshare information, *i.e.,* names and residential information (home address and personal home and cell phone number(s)) of FCC and non-FCC Federal employees and FCC contractors in the ridesharing database, who wish to participate in in a vanpool, carpool, and/or other ridesharing arrangements for daily

commuting to the FCC Headquarters. This information is provided to the ridesharing coordinator for the purposes of scheduling ride-sharing arrangements;

Addition of Routine Use (10) ''Statistical Reports on Commuting,'' as follows:

Statistical Reports on Commuting—To Federal, state, local, and related organizations, Metropolitan Washington Council of Governments, that are studying local traffic commuting patterns (*i.e.,* compiling commuting statistics and reports) by those who use metrorail (WMATA), commuter bus, commuter rail (*e.g.,* VRS and MARC), vanpools, carpools, and/or ridesharing in their commute to and from work;

Addition of Routine Use (11) ''Department of Justice (DOJ),'' as follows:

To DOJ or in a proceeding before a court or adjudicative body when:

(a) The United States, the Commission, a component of the Commission, or, when represented by the government, an employee of the Commission is a party to litigation or anticipated litigation or has an interest in such litigation, and

(b) The Commission determines that the disclosure is relevant or necessary to the litigation;

Addition of Routine Use (12) ''Medical Certification,'' as follows:

To a physician who is making a determination on a person's eligibility for a handicapped parking permit.

Addition of Routine Use (13) ''Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by the Agency,'' as follows:

To a Federal, State, local, foreign, tribal, or other public agency or authority maintaining civil, criminal, or other relevant enforcement records, or other pertinent records, or to another public authority or professional organization, if necessary to obtain information relevant to an investigation concerning the retention of an employee or other personnel action, the retention of a security clearance, the letting of a contract, or the issuance or retention of a grant or other benefit;

Addition of Routine Use (11) ''Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by Other than the Agency,'' as follows:

To a Federal, State, local, foreign, tribal, or other public agency or authority of the fact that this system of records contains information relevant to the retention of an employee, the retention of a security clearance, the letting of a contract, or the issuance or retention of a license, grant, or other benefit. The other agency or licensing organization may then make a request supported by the written consent of the individual for the entire records if it so chooses. No disclosure will be made unless the information has been determined to be sufficiently reliable to support a referral to another office within the agency or to another Federal agency for criminal, civil, administrative, personnel, or regulatory action; and

Addition of Routine Use (15) ''Parking Garage Contractors,'' as follows:

To the owners, managers, and staff who manage the garage parking for their use in assigning or checking the parking permits, checking credentials, assigning spaces, assisting with accidents, or other parking issues to ensure that the parking program functions properly and that parking privileges are not abused.

In each of these cases, the FCC will determine whether disclosure of the records is compatible with the purpose(s) for which the records were collected.

Revision of the language in the policies and practices regarding Storage of the information in this system, for clarity, to specify that the information in this system includes both paper and electronic records, to describe the Administrative Services Center's (ASC) current storage procedures, and to note that:

Paper records, files, and documents, which pertain to the information concerning the transit benefits and parking program that are maintained at the FCC, are stored in file folders in the ASC office suite.

The electronic records, files, and data are housed in the FCC's computer network databases, which are reserved for the transit benefit and parking permit program, and in the WMATA database that is associated with the Smartrip program.

Revision of the language in the policies and practices regarding the Retrievability of the information in this system, for clarity, and to specify that both paper and electronic records are retrievable, as follows:

Both the paper documents and electronic records and data are retrieved by the employer's name, or by the FCC Badge identification number, tag, and/or parking permit number.

Revision of the language in the policies and practices regarding the Safeguards for protecting the information in this system, for clarity, and to comply with the FCC's current safety and security protocols and procedures, including information noting that these FCC standards adhere to the requirements of the National Institutes of Standards and Technology (NIST) and the Federal Information Security Management Act (FISMA), as follows:

The safeguards for the information pertaining to the transit benefit and parking permit programs, which is maintained by the FCC, are as follows:

1. The paper documents, files, and records are kept in a locked cash box contained in a (cylinder lock) drawer. At the close of the business day, the cash box is secured in a government issued safe with a combination lock. Only authorized ASC supervisors, staff, and contractors may have access to these file cabinets. The ASC office suite is protected by a card-coded main door to limit access to the suite.

2. The electronic records, files, and data that are stored in the FCC computer network databases are secured by limited access card readers. Access to the electronic files is restricted to authorized ASC supervisors, staff, and contractors, and to the Information Technology (IT) staff and contractors, who maintain the FCC's computer network. Other FCC employees and contractors may be granted access only on a ''need-to-know'' basis. The FCC's computer network databases are protected by the FCC's security protocols, which include controlled access, passwords, and other IT security features and requirements as required under the IT guidelines issued by the National Institutes of Standards and Technology (NIST) and the Federal Information Security Management Act (FISMA) regulations. A *PRIVACY ACT WARNING NOTICE* appears on the monitor screen when records containing information on individuals are first displayed. Information resident on the Transit Benefits and Parking Program database servers is backed-up routinely onto magnetic media. Back-up tapes are stored at secured locations.

3. Safeguards in place adhere to Federal standards, including the NIST, FISMA, and FCC standards.

Revision of the language in the policies and practices regarding the Retention and Disposal of the information in this system, for clarity, and to specify that they comply with the current NARA requirements for both paper and electronic records, as follows:

Records under the control of the FCC are retained for three years in accordance with the General Records Schedule 6 (GRS 6) established by NARA at *http://www.archives.gov/records-mgmt/ardor/grs06.html.* Paper records are then shredded. Electronic records are destroyed physically (electronic storage media) or by electronic erasure.

Revision of the language regarding the System Manager(s) and Address, for clarity, and to note the current address of the system managers where they may be contacted, as follows:

Administrative Services Center (ASC), Office of the Managing Director (OMD), Federal Communications Commission (FCC), 445 12th Street SW., Washington, DC 20554.

Revision of the language regarding the Notification, Record Access, and Contesting Procedures concerning information in this system, for clarity, and to comply with the Commission's current policies and practices for notifying individuals under the requirements of the Privacy Act, 5 U.S.C. 552a(d), as follows:

Notification Procedures: Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554; (202) 418–0217 or *Leslie.Smith@fcc.gov.*

Record Access Procedures: Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554; (202) 418–0217 or *Leslie.Smith@fcc.gov.*

Contesting Records Procedures: Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554; (202) 418–0217 or *Leslie.Smith@fcc.gov.*

Revision of the language in the Record Source Categories, for clarity, and to expand the sources of and details concerning the information in this system, as follows:

Information in the system is obtained from:

1. One or more FCC Forms, including, but not limited to FCC Forms A–27, A–30, A–75, and/or A–75–A, which are submitted by individuals who apply to participate in the FCC Transit Benefit and Parking Permit Programs, including but not limited to metrorail, bus, commuter rail, vanpools, carpools, and/or ridesharing arrangements.

2. WMATA and other agencies concerning individuals (including both FCC and non-FCC individuals) who have applied for and/or participate in the FCC's transit benefits program and/or the carpool/vanpool programs; and

3. Ride-Share Bike Program information.

This notice meets the requirement documenting the changes to the system of records that the FCC maintains, and provides the public, OMB, and Congress an opportunity to comment.

FCC/OMD–7

SYSTEM NAME:

FCC Transit Benefit and Parking Permit Programs.

SECURITY CLASSIFICATION:

The FCC's CIO team will provide a security classification to this system based on NIST FIPS–199 standards.

SYSTEM LOCATION:

Administrative Services Center (ASC), Office of the Managing Director (OMD), Federal Communications Commission (FCC), 445 12th Street SW., Washington, DC 20554.

Information related to those employees who participate in the Smartrip portion of the benefits program is also stored in a database administered by the Washington Metropolitan Area Transit Authority WMATA, headquartered at 600 Fifth Street NW., Washington, DC 20001.

CATEGORIES OF INDIVIDUALS COVERED BY THIS SYSTEM:

The categories of individuals in this system include those individuals who voluntarily apply for and/or participate in one of the FCC Transit Benefit and Parking Permit Programs, which include, but are not limited to:

1. FCC employees who have applied for and received monthly transit fare subsidies;

2. FCC employees and contractors who hold monthly FCC garage parking permits;

3. FCC employees, employee spouses, paid interns and co-op students, contractors, and non-FCC Federal agency employees who are members of carpools and vanpools that park in the FCC parking garage;

4. FCC employees who have applied for and received handicap status for FCC garage parking assignments as a ''reasonable accommodation'';[1] and

5. FCC employees who participate in ridesharing, including the Capital Bikeshare Program.

CATEGORIES OF RECORDS IN THE SYSTEM:

The FCC uses the records in this system to administer the Transit Benefit and Parking Permit Programs. These records include, but are not limited to, the information that is required to be submitted on the following forms and any related documentation that pertains to transit benefit subsidies, parking permits, ride-sharing, bike-sharing, and other, related transit and commuting programs available to FCC employees, contractors, and other individuals, which are sponsored and/or hosted by the FCC:

1. Form A–27, ''FCC Pre-Tax Parking Benefit Form,'' including, but not limited to:

Employee Information: FCC employee's name; effective date; pay period; parking location; and monthly/daily fee; Benefit: carpool/vanpool), metro parking, commercial lot, privately-owned lot, parking garage, or parking meter; and requested amount; whether the application is new, a cancellation, or a change; and effective date; and Certification: employee signature; date; and attachments;

2. Form A–30, ''FCC Parking Application,'' including, but not limited to: Applicant's name, FCC bureau/office/division; address (required for carpool); FCC badge number; FCC telephone number; FCC employee/contractor/paid intern; vehicle year, make, model, state, and license plate; handicap perm (yes/no); FCC title (executives only); transit benefit participant (yes/no); van pool/car pool riders (FCC and Non-FCC employees): name, address, bureau/office or agency, telephone number, FCC ID number, and signature; applicant's signature and date; and attachments, *e.g.,* handicap certification, etc.;

3. Form A–75, ''FCC Headquarters Employee Transit Benefit Application,'' including, but not limited to:

A. Applicant Information: applicant's name, home address, bureau/office, office room number, telephone number, FCC badge number, and WMATA Smartrip Card serial number;

B. Employment Status: full time, part time, paid intern/co-op student; and bargaining/non-bargaining unit status;

C. Mode(s) of Transportation (costs): metro (rail only) and station name; metro (rail and bus) and station name; metro (bus only); one-way transit user; commuter bus; commuter rail; and/or vanpool;

D. Telework: approved telework agreement (yes/no); and telework days (Monday–Friday);

E. Employee certification: employee signature and date; and

F. Transit benefit office action: approved (yes and amount/no), disapproved (reason), signature and data; and attachments;

4. Form A–75–A, ''FCC Employee Transit Benefit Change Request Form,'' including, but not limited to:

A. Applicant Information: applicant's name, home address, bureau/office, office room number, office telephone number, and FCC badge number;

B. Employment Status: full time, part time, paid intern, or co-op student;

C. Change(s) Requested:

1. Mode(s) of transportation: metro rail, metro bus, commuter rail,

[1] FCC/OWD–1, ''Reasonable Accommodation Requests under the Rehabilitation Act of 1973,'' may also cover individuals who request a special parking arrangement as a ''reasonable accommodation.''

commuter bus, one-way transit user, vanpool, other, and transit provider name;

2. Monthly commuting cost: old and new;

3. Badge number: old and new;

4. Address change: home address;

5. Name change: from/to; and

6. Smartrip Card serial number: old and new; and

D. Employee Certification: signature; date; and attachments.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 5 U.S.C. 5701–5733; 5 U.S.C. 7905; 26 U.S.C. 132(f); 40 U.S.C. 101 and 121; 44 U.S.C. 2104 41 CFR 101–20.104–2, 102–74.205–210 (Ridesharing), and 102–74.265–310 (Parking Facilities); Executive Order 9397, as amended by Executive Order 13478; Executive Order 13150; Pub. L. 103–172; and the *Federal Property and Administrative Services Act of 1949,* as amended.

PURPOSE(S):

The FCC will use information in this system, including the PII, to administer the Transit Benefit and Parking Permit Programs. This information enables the FCC to facilitate the timely processing of requests for parking permits, transit benefit subsidies, ride-sharing and bike-sharing programs and similar commuting arrangements, and other, related program, policies, and activities, which include, but are not limited to:

1. Managing the FCC's transit benefits program that provides transportation subsidies for public transit, including but not limited to, WMATA Metro train and bus fares; Commuter rail services—Maryland Area Rail Commuters MARC and Virginia Railway Express VRE fares; Commuter bus services—DASH fares, etc.; One-way transit users; Vanpool fares; and other parking and transit subsidies to Federal employees as allowed under 5 U.S.C. 7905, 5 U.S.C. 301, and Executive Order 13150 employee's request to participate in the transit subsidy or FCC garage parking program;

2. Managing the FCC's employee parking, executive parking, handicapped parking, and ridesharing programs (vanpools/carpools) for FCC employees, contractors, and non-FCC agency employees;

3. Conducting audits, reviews, oversight, and/or investigations of the transit benefits, parking, ridesharing programs (vanpools and carpools) to ensure their accuracy and integrity of the Transit Benefits and Parking Program, which includes but is not limited to cross-checking the Commission's data on parking assignees and transit benefit recipients to ensure that they are not participating in both programs, unless authorized; and, when appropriate, matching this information with the lists of other Federal agencies to ensure that the Commission's participants are not registered for a drive-alone, carpool, or other parking assignments with any other Federal agency, and to identify and locate former employees;

4. Administering, qualifying, and/or certifying the beneficiaries of the Transit Benefits and Parking Program, which includes but is not limited to ensure the eligibility of transit subsidy participants and to prevent misuse of the funds involved;

5. Preparing and administering listings and reports for use by the FCC and the other Federal, state, and local agencies charged with management and oversight of and/or contribution to the Transit Benefits and Parking Program subsidies, etc.; and

6. Ensuring that those non-FCC individuals who are participating in the ride-sharing and bike-sharing programs do not pose a security threat to FCC Headquarter garage facilities

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Information about individuals in this system of records may routinely be disclosed under the following conditions:

1. Financial Obligations as required by the National Finance Center *et al.*—When the National Finance Center (the FCC's designated payroll office), the Department of the Treasury Debt Management Services, and/or a current employer to effect a salary, IRS tax refund, pre-tax benefit(s), or administrative offset to satisfy an indebtedness; and to Federal agencies to identify and locate former employees for the purposes of collecting such indebtedness, including through administrative, salary, or tax refund offsets. Identifying and locating former employees, and the subsequent referral to such agencies for offset purposes, may be accomplished through authorized computer matching programs. Disclosures will be made only when all procedural steps established by the Debt Collection Act of 1982 and the Debt Collection Improvement Act of 1996 or the Computer Matching and Privacy Protection Act of 1988, as appropriate, have been taken;

2. Program Partner—To WMATA and other applicable public transportations in connection with FCC employees participating in this public transportation fare, *e.g.,* Smartrip program at: *http://www.wmata.com/riding/smartrip.cfm;*

3. Adjudication and Litigation—Where by careful review, the agency determines that the records are both relevant and necessary to litigation and the use of such records is deemed by the agency to be for a purpose that is compatible with the purpose for which the agency collected the records, these records may be used by a court or adjudicative body in a proceeding when: (a) The agency or any component thereof; or (b) any employee of the agency in his or her official capacity; or (c) any employee of the agency in his or her individual capacity where the agency has agreed to represent the employee; or (d) the United States Government is a party to litigation or has an interest in such litigation;

4. Law Enforcement and Investigation—Where there is a real or suspected indication of a violation or potential violation of a statute, regulation, rule, or order, records from this system may be shared with appropriate Federal, State, and/or local agencies, authorities, and officials for purposes that include but are not limited to obtaining additional information relevant to a FCC decision, referring the record for investigation, enforcement, or prosecution by the Commission or another agency;

5. Congressional Investigations and Inquiries—To Congress, or, to the extent of matter within its jurisdiction, any committee or subcommittee thereof, for the purposes of an official Congressional investigation, including but not limited to, a request by a Congressional office in response to an inquiry made by an individual to the Congressional office for the individual's own records;

6. Government-wide Program Management and Oversight—To the General Services Administration (GSA), the National Archives and Records Administration (NARA), the Office of Personnel Management (OPM), and/or the Government Accountability Office (GAO) for the purpose of records management studies conducted under authority of 44 U.S.C. 2904 and 2906; to the Department of Justice (DOJ) in order to obtain that department's advice regarding disclosure obligations under the Freedom of Information Act (FOIA); or to the Office of Management and Budget (OMB) in order to obtain that office's advice regarding obligations under the Privacy Act. Such a disclosure shall not be used to make a determination about individuals;

7. Labor Relations—To officials of labor organizations recognized under 5 U.S.C. Chapter 71 upon receipt of a formal request and in accord with the

conditions of 5 U.S.C. 7114 when relevant and necessary to their duties of exclusive representation concerning personnel policies, practices, and matters affecting working conditions;

8. Breach Notification–To appropriate agencies, entities, and persons when: (1) The Commission suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) the Commission has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Commission or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Commission's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm;

9. Vanpool, Carpool, and Ridesharing—Vanpool, carpool, and rideshare information, *i.e.,* names and residential information (home address and personal home and cell phone number(s)) of FCC and non-FCC Federal employees and FCC contractors in the ridesharing database, who wish to participate in in a vanpool, carpool, and/or other ridesharing arrangements for daily commuting to the FCC Headquarters. This information is provided to the ridesharing coordinator for the purposes of scheduling ride-sharing arrangements;

10. Statistical Reports on Commuting—To Federal, state, local, and related organizations, Metropolitan Washington Council of Governments, that are studying local traffic commuting patterns (*i.e.,* compiling commuting statistics and reports) by those who use metrorail (WMATA), commuter bus, commuter rail (*e.g.,* VRS and MARC), vanpools, carpools, and/or ridesharing in their commute to and from work;

11. Department of Justice (DOJ)—To DOJ or in a proceeding before a court or adjudicative body when:

(a) The United States, the Commission, a component of the Commission, or, when represented by the government, an employee of the Commission is a party to litigation or anticipated litigation or has an interest in such litigation, and

(b) The Commission determines that the disclosure is relevant or necessary to the litigation; and

12. Medical Certification—To a physician who is making a determination on a person's eligibility for a handicapped parking permit;

13. Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by the Agency—To a Federal, State, local, foreign, tribal, or other public agency or authority maintaining civil, criminal, or other relevant enforcement records, or other pertinent records, or to another public authority or professional organization, if necessary to obtain information relevant to an investigation concerning the retention of an employee or other personnel action, the retention of a security clearance, the letting of a contract, or the issuance or retention of a grant or other benefit;

14. Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by Other than the Agency—To a Federal, State, local, foreign, tribal, or other public agency or authority of the fact that this system of records contains information relevant to the retention of an employee, the retention of a security clearance, the letting of a contract, or the issuance or retention of a license, grant, or other benefit. The other agency or licensing organization may then make a request supported by the written consent of the individual for the entire records if it so chooses. No disclosure will be made unless the information has been determined to be sufficiently reliable to support a referral to another office within the agency or to another Federal agency for criminal, civil, administrative, personnel, or regulatory action; and

15. Parking Garage Contractors—To the owners, managers, and staff who manage the garage parking for their use in assigning or checking the parking permits, checking credentials, assigning spaces, assisting with accidents, or other parking issues to ensure that the parking program functions properly and that parking privileges are not abused.

In each of these cases, the FCC will determine whether disclosure of the records is compatible with the purpose(s) for which the records were collected.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

None.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper records, files, and documents, which pertain to the information concerning the transit benefits and parking program that are maintained at the FCC, are stored in file folders in the ASC office suite.

The electronic records, files, and data are housed in the FCC's computer network databases, which are reserved for the transit benefit and parking permit program, and in the WMATA database that is associated with the Smartrip program.

RETRIEVABILITY:

Both the paper documents and the electronic records and data are retrieved by the employee's name, or by the FCC Badge identification number, tag, and/or permit number.

SAFEGUARDS:

The safeguards for the information pertaining to the transit benefit and parking permit program, which is maintained by the FCC, are as follows:

1. The paper documents, files, and records are kept in a locked cash box contained in a (cylinder lock) drawer. At the close of the business day, the cash box is secured in a government issued safe with a combination lock. Only authorized ASC supervisors, staff, and contractors may have access to these file cabinets. The ASC office suite is protected by a card-coded main door to limit access to the suite.

2. The electronic records, files, and data that are stored in the FCC computer network databases are secured by limited access card readers. Access to the electronic files is restricted to authorized ASC supervisors, staff, and contractors, and to the Information Technology (IT) staff and contractors, who maintain the FCC's computer network. Other FCC employees and contractors may be granted access only on a ''need-to-know'' basis. The FCC's computer network databases are protected by the FCC's security protocols, which include controlled access, passwords, and other IT security features and requirements as required under the IT guidelines issued by the National Institutes of Standards and Technology (NIST) and the Federal Information Security Management Act (FISMA) regulations. A *PRIVACY ACT WARNING NOTICE* appears on the monitor screen when records containing information on individuals are first displayed. Information resident on the Transit Benefits and Parking Program database servers is backed-up routinely onto magnetic media. Back-up tapes are stored at secured locations.

3. Safeguards in place adhere to Federal standards, including the NIST, FISMA, and FCC standards.

RETENTION AND DISPOSAL:

Records under the control of the FCC are retained for three years in accordance with the General Records Schedule 6 (GRS 6) established by NARA at *http://www.archives.gov/records-mgmt/ardor/grs06.html.* Paper records are then shredded. Electronic records are destroyed physically (electronic storage media) or by electronic erasure.

SYSTEM MANAGER(S) AND ADDRESS:

Administrative Services Center (ASC), Office of the Managing Director (OMD), Federal Communications Commission (FCC), 445 12th Street SW., Washington, DC 20554.

NOTIFICATION PROCEDURE:

Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554.

RECORD ACCESS PROCEDURES:

Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554.

CONTESTING RECORD PROCEDURES:

Privacy Manager, Federal Communications Commission (FCC), 445 12th Street SW., Room 1–A804, Washington, DC 20554.

RECORD SOURCE CATEGORIES:

Information in the system is obtained from:

1. One or more FCC Forms, including but not limited to FCC Forms A–27, A–30, A–75, and/or A–75–A, which are submitted by individuals who apply to participate in the FCC Transit Benefit and Parking Permit Programs, including but not limited to metrorail, bus, commuter rail, vanpools, carpools, and/or ridesharing arrangements.

2. WMATA and other agencies concerning individuals (including both FCC and non-FCC individuals) who have applied for and/or participate in the FCC's transit benefits program and/or the carpool/vanpool programs; and

3. Ride-Share Bike Program information.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Federal Communications Commission.

Gloria J. Miles,

Federal Register Liaison Officer, Office of the Secretary.

BILLING CODE 6712–01–P

GENERAL SERVICES ADMINISTRATION

[Notice–CSE–2016–02; Docket No. 2016–0002; Sequence No. 7]

Notice of the General Services Administration's Labor-Management Relations Council Meeting

AGENCY: Office of Human Resources Management (OHRM), General Services Administration (GSA).

ACTION: Notice of meeting.

SUMMARY: The General Services Administration's Labor-Management Relations Council (GLMRC), a Federal Advisory Committee established in accordance with the Federal Advisory Committee Act (FACA), 5 U.S.C., App., and Executive Order 13522, plans to hold a one and one-half day meeting that is open to the public.

DATES: The meeting will be held on Tuesday, April 12, 2016 from 9:30 a.m. to 4:30 p.m. and reconvene Wednesday, April 13, 2016 from 9:30 a.m. to 12:00 noon, Eastern Standard Time.

ADDRESSES: The meeting will be held in Room 1459, in the Conference Center located on the first floor of the General Services Administration's Headquarters Building located at 1800 F Street NW., Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: Ms. Paula D. Lucak, GLMRC Designated Federal Officer (DFO), OHRM, General Services Administration, at telephone 202–739–1730, or email at *gmlrc@gsa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The GLMRC is a forum for managers and the exclusive national labor Union representatives of the U.S. General Services Administration (GSA) employees. In this forum, managers and the Unions discuss Government operations to promote satisfactory labor relations and improve the productivity and effectiveness of GSA. The GLMRC serves as a complement to the existing collective bargaining process and allows managers and the Unions to collaborate in continuing to deliver the highest quality services to the public. The Council discusses workplace challenges and problems and recommends solutions that foster a more productive and cost-effective service to the taxpayer, through improving job satisfaction and employees' working conditions.

Agenda

The purpose of the meeting is for the GLMRC to build its collaborative labor-management relationship, discuss the Council's activities and direction ahead for the year, and to consider Agency initiatives. The topics to be discussed include Council metrics & GSA EVS results, employee engagement activities, and human resource initiative updates.

Meeting Access

This site is accessible to individuals with disabilities. In order to gain entry into the Federal building where the meeting is being held, public attendees who are Federal employees should bring their Federal employee identification cards. Members of the general public should bring their driver's license or another form of government-issued identification.

Availability of Materials for the Meeting

Please see the GLRMC Web site: *http://www.gsa.gov/portal/content/225831* for any materials available in advance of the meeting and for meeting minutes that will be made available after the meeting. Detailed meeting minutes will be posted within 90 days of the meeting.

Procedures for Providing Public Comments

The public is invited to submit written comments for the meeting until 5:00 p.m. Eastern Time on the Monday prior to the meeting on April 11, 2016, by either of the following methods: *Electronic or Paper Statements:* Submit electronic statements to Ms. Paula Lucak, Designated Federal Officer, at *paula.lucak@gsa.gov;* or send paper statements in triplicate to Ms. Lucak at 1800 F Street NW., Suite 7003A, Washington, DC 20405. In general, public comments will be posted on the GLMRC Web site. All comments, including attachments and other supporting materials received, are part of the public record and subject to public disclosure.

Any comments submitted in connection with the GLMRC meeting will be made available to the public under the provisions of the Federal Advisory Committee Act.

Dated: March 21, 2016.

Wade Hannum,

Office of Human Resources Management, OHRM Director, Office of HR Strategy and Services, Center for Talent Engagement (COE4), General Services Administration.

BILLING CODE 6820–34–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10316]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are require; to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by *May 24, 2016.*

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number _____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995.*

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov.*

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT: Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10316 Implementation of the Medicare Prescription Drug Plan (PDP) and Medicare Advantage (MA) Plan Disenrollment Reasons Survey

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Implementation of the Medicare Prescription Drug Plan (PDP) and Medicare Advantage (MA) Plan Disenrollment Reasons Survey; *Use:* This data collection complements the satisfaction data collected through the Medicare Consumer Assessment of Healthcare Providers and Systems survey by providing dissatisfaction data in the form of reasons for disenrollment from a Prescription Drug Plan. The data collected in this survey can be used to improve the operation of Medicare Advantage (MA) (both MA and MA–PD) contracts and standalone prescription drug plans (PDPs) through the identification of beneficiary disenrollment reasons. Plans can use the information to guide quality improvement efforts. The data can also be used by beneficiaries who need to choose among the different MA and PDP options. To the extent that these data identify areas for improvement at the contract level they can be used for contract oversight. *Form Number:* CMS–10316 (OMB control number: 0938–1113); *Frequency:* Yearly; *Affected Public:* Individuals or households; *Number of Respondents:* 56,972; *Total Annual Responses:* 56,972; *Total Annual Hours:* 15,032. (For policy questions regarding this collection contact Beth Simon at 415–744–3780.)

Dated: March 22, 2016.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers: CMS–855O, CMS–10438, CMS–10439 and CMS–10440]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to

enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by *April 25, 2016.*

ADDRESSES: When commenting on the proposed information collections, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be received by the OMB desk officer via one of the following transmissions: OMB, Office of Information and Regulatory Affairs, Attention: CMS Desk Officer, Fax Number: (202) 395–5806, or Email: *OIRA_submission@omb.eop.gov.*

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995.*

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov.*

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT: Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Revision of a currently approved information collection; *Title of Information Collection:* Medicare Registration Application; *Use:* The primary function of the CMS–855O is to gather information from a physician or other eligible professional to help CMS determine whether he or she meets certain qualifications to be enrolled in the Medicare program for the sole purpose of ordering or certifying certain Medicare items or services and/or prescribing Medicare Part D drugs for Medicare beneficiaries. The application allows a physician or other eligible professional to enroll in Medicare without being approved for billing privileges. The required information is submitted when the applicant requests enrollment in Medicare for the sole purpose of ordering and certifying certain Medicare items and services or for prescribing Medicare Part D drugs. The application is used by Medicare contractors to collect data to help ensure that the applicant has the necessary credentials to order and certify certain Medicare items and services or to prescribe Medicare Part D drugs. This includes ensuring that the physician is not excluded debarred from the Medicare program. *Form Number:* CMS–855O (OMB control number: 0938–1135); *Frequency:* Occasionally; *Affected Public:* Private Sector (Business or other for-profits), State, Local, or Tribal Governments; *Number of Respondents:* 448,000; *Number of Responses:* 24,000; *Total Annual Hours:* 243,600. (For questions regarding this collection contact Kimberly McPhillips (410) 786–8438.)

2. *Type of Information Collection Request:* Revision of a currently approved information collection; *Title of Information Collection:* Data Collection to Support Eligibility Determinations and Enrollment for Employers in the Small Business Health Options Program; *Use:* Section 1311(b)(1)(B) of the Affordable Care Act directs that the SHOP assist qualified small employers in facilitating the enrollment of their employees in QHPs offered in the small group market. Section 1311(c)(1)(F) of the Affordable Care Act directs HHS to establish criteria for certification of health plans as QHPs and plans to utilize a uniform enrollment form for qualified employers. Further, section 1311(c)(5)(B) directs HHS to develop a Web site that assists employers in determining if they are eligible to participate in SHOP.

This proposed information collection was previously published in the **Federal Register** on December 11, 2015 (80 FR 76994) and allowed 60 days for public comment. No comments were received. *Form Number:* CMS–10439 (OMB control number 0938–1194); *Frequency:* Annually; *Affected Public:* Private Sector; *Number of Respondents:* 6,000; *Number of Responses:* 6,000; *Total Annual Hours:* 12,000. (For questions regarding this collection contact Christelle Jang at (410) 786–8438.)

3. *Type of Information Collection Request:* Revision of a currently approved information collection; *Title of Information Collection:* Data Collection to Support Eligibility Determinations and Enrollment for Employers in the Small Business Health Options Program; *Use:* Section 1311(b)(1)(B) of the Affordable Care Act directs that the SHOP assist qualified small employers in facilitating the enrollment of their employees in QHPs offered in the small group market. Section 1311(c)(1)(F) of the Affordable Care Act directs HHS to establish criteria for certification of health plans as QHPs and plans to utilize a uniform enrollment form for qualified employers. Further, section 1311(c)(5)(B) directs HHS to develop a Web site that assists employers in determining if they are eligible to participate in SHOP.

This proposed information collection was previously published in the **Federal Register** on December 11, 2015 (80 FR 76994) and allowed 60 days for public comment. No comments were received. *Form Number:* CMS–10439 (OMB control number 0938–1194); *Frequency:* Annually; *Affected Public:* Private Sector; *Number of Respondents:* 6,000; *Number of Responses:* 6,000; *Total Annual Hours:* 12,000. (For questions regarding this collection contact Christelle Jang at (410) 786–8438.)

4. *Type of Information Collection Request:* Revision of a currently approved information collection; *Title of Information Collection:* Data Collection to Support Eligibility Determinations for Insurance Affordability Programs and Enrollment through Health Benefits Exchanges, Medicaid and Children's Health Insurance Program Agencies; *Use:* Section 1413 of the Affordable Care Act directs the Secretary of Health and Human Services to develop and provide to each State a single, streamlined form that may be used to apply for coverage through the Exchange and Insurance Affordability Programs, including Medicaid, the Children's Health Insurance Program (CHIP), and the Basic Health Program, as applicable. The application must be structured to maximize an applicant's ability to complete the form satisfactorily, taking into account the characteristics of individuals who qualify for the programs. A State may develop and use its own single streamlined application if

approved by the Secretary in accordance with section 1413 and if it meets the standards established by the Secretary.

Section 155.405(a) of the Exchange Final Rule (77 FR 18310) provides more detail about the application that must be used by the Exchange to determine eligibility and to collect information necessary for enrollment. The regulations in § 435.907 and § 457.330 establish the requirements for State Medicaid and CHIP agencies related to the use of the single streamlined application. CMS is designing the single streamlined application to be a dynamic electronic application that will tailor the amount of data required from an applicant based on the applicant's circumstances and responses to particular questions. The paper version of the application will not be able to be tailored in the same way but is being designed to collect only the data required to determine eligibility. Individuals will be able to submit an application electronically, through the mail, over the phone through a call center, or in person, per § 155.405(c)(2) of the Exchange Final Rule, as well as through other commonly available electronic means as noted in § 435.907(a) and § 457.330 of the Medicaid Final Rule. The application may be submitted to an Exchange, Medicaid or CHIP agency. The electronic application process will vary depending on each applicant's circumstances, their experience with health insurance applications and online capabilities. The goal is to solicit sufficient information so that in most cases no further inquiry will be needed. *Form Number:* CMS–10440 (OMB control number: 0938–1191); *Frequency:* Annually; *Affected Public:* Individuals and Households; *Number of Respondents:* 7,200,000; *Total Annual Responses:* 7,200,000; *Total Annual Hours:* 2,410,767. (For policy questions regarding this collection contact Beth Liu at 301–492–4135.)

Dated: March 22, 2016.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–D–0785]

General Principles for Evaluating the Abuse Deterrence of Generic Solid Oral Opioid Drugs Products; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance for industry entitled ''General Principles for Evaluating the Abuse Deterrence of Generic Solid Oral Opioid Drug Products.'' This draft guidance recommends studies, including comparative in vitro studies, which should be conducted to demonstrate that a proposed generic solid oral opioid drug product is no less abuse-deterrent than its reference listed drug.

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115(g)(5)), to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit either electronic or written comments on the draft guidance by May 24, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2016–D–0785 for ''General Principles for Evaluating the Abuse-Deterrence of Generic Solid Oral Opioid Drugs.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Gail Schmerfeld, Office of Generic Drugs, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–9291, email: *gail.schmerfeld@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled ''General Principles for Evaluating the Abuse Deterrence of Generic Solid Oral Opioid Drug Products.'' Prescription opioid analgesics are an important component of modern pain management. However, abuse and misuse of these drug products have created a serious and growing public health problem. One important step toward the goal of creating safer opioid analgesics has been the development of opioid drug products that are formulated to deter abuse. FDA considers the development of these products a high public health priority. It is important that generic versions of opioids that reference listed drugs whose labeling describes abuse-deterrent properties are available to help ensure availability of analgesics for patients who need them.

For FDA to approve an abbreviated new drug application (ANDA), the Agency must find, among other things, that the generic drug product has the same active ingredient(s), dosage form, route of administration, strength, and, with limited exceptions, labeling as the reference listed drug (RLD); is bioequivalent to its RLD; that the methods used in, or the facilities and controls used for, the manufacture, processing, and packing of the drug are adequate to assure and preserve its identity, strength, quality, and purity; and that the inactive ingredients and composition of the generic drug are not unsafe for use under the conditions prescribed, recommended, or suggested in the labeling (see, *e.g.,* the Federal Food, Drug, and Cosmetic Act (the FD&C Act) 505(j)(2)(A) and (j)(4) (21 U.S.C. 355(j)(2)(A) and (j)(4))). FDA classifies as ''therapeutically equivalent'' those products that meet the following general criteria: (1) They are approved as safe and effective; (2) they are pharmaceutical equivalents in that they: (a) Contain identical amounts of the same active ingredient in the same dosage form and route of administration, and (b) meet compendial or other applicable standards of strength, quality, purity, and identity; (3) they are bioequivalent; (4) they are adequately labeled; and (5) they are manufactured in compliance with current good manufacturing practices regulations. (See preface of Approved Drug Products with Therapeutic Equivalence Evaluations (commonly referred to as the Orange Book).) FDA believes that a product classified as therapeutically equivalent can be substituted with the full expectation that the substituted product will produce the same clinical effect and safety profile as the reference product.

Accordingly, if the RLD's labeling describes abuse-deterrent properties, the ANDA applicant should evaluate its product to show that it is no less abuse-deterrent than the RLD with respect to all potential routes of abuse. Marketing a generic opioid drug product that is less abuse-deterrent than the RLD could lead opioid abusers to preferentially seek out and abuse generics.

This draft guidance describes FDA's current thinking about the studies that should be conducted by a potential ANDA applicant and submitted to FDA in an ANDA to demonstrate that a generic solid oral opioid drug product is no less abuse-deterrent than its RLD with respect to all potential routes of abuse.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on the principles for evaluating the abuse-deterrence of generic solid oral opioid drug products. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

FDA intends to hold a public meeting following the close of the comment period to discuss further the evaluation of the abuse deterrence of generic opioid drug products and related issues, as appropriate. Further details will follow in a notice of public meeting published in the **Federal Register**.

II. Electronic Access

Persons with access to the Internet may obtain the document at either *http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm* or *http://www.regulations.gov.*

Dated: March 21, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the President's Council on Fitness, Sports, and Nutrition

AGENCY: President's Council on Fitness, Sports, and Nutrition, Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice of meeting.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the U.S. Department of Health and Human Services (HHS) is hereby giving notice that the President's Council on Fitness, Sports, and Nutrition (PCFSN) will hold its annual meeting. The meeting will be open to the public.

DATES: The meeting will be held on May 16, 2016, from 9:00 a.m. to 12:00 p.m.

ADDRESSES: Hubert H. Humphrey Building, 200 Independence Avenue SW., Great Hall, Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: Ms. Shellie Pfohl, Executive Director, Office of the President's Council on Fitness, Sports, and Nutrition, Tower Building, 1101 Wootton Parkway, Suite 560, Rockville, MD 20852, (240) 276–9567. Information about PCFSN, including details about the upcoming meeting, can be obtained at *www.fitness.gov.*

SUPPLEMENTARY INFORMATION: The primary functions of the PCFSN include (1) advising the President, through the Secretary, concerning progress made in carrying out the provisions of Executive Order 13545 and recommending to the President, through the Secretary, actions to accelerate progress; (2) advising the Secretary on ways to promote regular physical activity, fitness, sports

participation, and good nutrition. Recommendations may address, but are not necessarily limited to, public awareness campaigns; federal, state, and local physical activity; fitness, sports participation, and nutrition initiatives; and partnership opportunities between public- and private-sector health promotion entities; (3) functioning as a liaison to relevant state, local, and private entities in order to advise the Secretary regarding opportunities to extend and improve physical activity, fitness, sports, and nutrition programs and services at the local, state, and national levels; and (4) monitoring the need to enhance programs and educational and promotional materials sponsored, overseen, or disseminated by the Council, and shall advise the Secretary, as necessary, concerning such need. In performing its functions, the Council shall take into account the Federal Dietary Guidelines for Americans and the Physical Activity Guidelines for Americans.

The PCFSN will hold, at a minimum, one meeting per fiscal year. The meeting will be held to (1) assess ongoing Council activities; and, (2) discuss and plan future projects and programs. The agenda for the planned meeting is being developed and will be posted at *www.fitness.gov* when it has been finalized.

The meeting that is scheduled to be held on May 16, 2016, is open to the public. Every effort will be made to provide reasonable accommodations for persons with disabilities and/or special needs who wish to attend the meeting. Persons with disabilities and/or special needs should call (240) 276–9567 no later than close of business on May 2, 2016, to request accommodations. Members of the public who wish to attend the meeting are asked to pre-register by sending an email to *rsvp.fitness@hhs.gov* or by calling (240) 276–9567. Registration for public attendance must be completed before close of business on May 9, 2016.

Dated: March 11, 2016.

Tasha Bradley,

Director of Communications, Office of the President's Council on Fitness, Sports, and Nutrition, U.S. Department of Health and Human Services.

[FR Doc. 2016–06810 Filed 3–24–16; 8:45 am]

BILLING CODE 4150–35–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the Advisory Committee on Minority Health

AGENCY: Office of Minority Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice of meeting.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the Department of Health and Human Services (HHS) is hereby giving notice that the Advisory Committee on Minority Health (ACMH) will hold a meeting conducted as a telephone conference call. This call will be open to the public. Preregistration is required for both public participation and comment. Any individual who wishes to participate in the call should email *OMH-ACMH@hhs.gov* by April 12, 2016. Instructions regarding participating in the call and how to provide verbal public comments will be given at the time of preregistration.

Information about the meeting is available from the designated contact and will be posted on the Web site for the Office of Minority Health (OMH), *www.minorityhealth.hhs.gov.* Information about ACMH activities can be found on the OMH Web site under the heading *About OMH.*

DATES: The conference call will be held on April 14, 2016, 11:00 a.m.–1:00 p.m. ET

ADDRESSES: Instructions regarding participating in the call will be given at the time of preregistration.

FOR FURTHER INFORMATION CONTACT: Dr. Minh Wendt, Designated Federal Officer, ACMH, Tower Building, 1101 Wootton Parkway, Suite 600, Rockville, Maryland 20852. Phone: 240–453–8222; fax: 240–453–8223; email *OMH-ACMH@hhs.gov.*

SUPPLEMENTARY INFORMATION: In accordance with Public Law 105–392, the ACMH was established to provide advice to the Deputy Assistant Secretary for Minority Health on improving the health of each racial and ethnic minority group and on the development of goals and specific program activities of the OMH.

Topics to be discussed during this conference call include planning for upcoming in-person meetings and finalizing the charge and the formation of the data workgroup.

This call will be limited to 125 participants. The OMH will make every effort to accommodate persons with special needs. Individuals who have special needs for which special accommodations may be required should contact Professional and Scientific Associates at (703) 234–1700 and reference this meeting. Requests for special accommodations should be made at least ten (10) business days prior to the meeting.

Members of the public will have an opportunity to provide comments at the meeting. Public comments will be limited to two minutes per speaker during the time allotted. Individuals who would like to submit written statements should email, mail, or fax their comments to the designated contact at least seven (7) business days prior to the meeting.

Any members of the public who wish to have electronic or printed material distributed to ACMH members should email *OMH-ACMH@hhs.gov* or mail their materials to the Designated Federal Officer, ACMH, Tower Building, 1101 Wootton Parkway, Suite 600, Rockville, Maryland 20852, prior to close of business on April 8, 2016.

Dated: March 2, 2016.

Minh Wendt,

Designated Federal Officer, Office of Minority Health, U.S. Department of Health and Human Services.

BILLING CODE 4150–29–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Final Effect of Designation of a Class of Employees for Addition to the Special Exposure Cohort

AGENCY: National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention, Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: HHS gives notice concerning the final effect of the HHS decision to designate a class of employees from the Battelle Laboratories-King Avenue in Columbus, Ohio, as an addition to the Special Exposure Cohort (SEC) under the Energy Employees Occupational Illness Compensation Program Act of 2000.

FOR FURTHER INFORMATION CONTACT: Stuart L. Hinnefeld, Director, Division of Compensation Analysis and Support, NIOSH, 1090 Tusculum Avenue, MS C–46, Cincinnati, OH 45226–1938, Telephone 877–222–7570. Information requests can also be submitted by email to *DCAS@CDC.GOV*.

SUPPLEMENTARY INFORMATION:

Authority: 42 U.S.C. 7384q(b). 42 U.S.C. 7384*l*(14)(C).

On February 18, 2016, as provided for under 42 U.S.C. 7384l(14)(C), the Secretary of HHS designated the following class of employees as an addition to the SEC:

All Atomic Weapons Employees who worked at the facility owned by the Battelle Laboratories at the King Avenue site in Columbus, Ohio, during the period from July 1, 1956, through December 31, 1970, for a number of work days aggregating at least 250 work days, occurring either solely under this employment, or in combination with work days within the parameters established for one or more other classes of employees included in the Special Exposure Cohort.

This designation became effective on March 19, 2016. Therefore, beginning on March 19, 2016, members of this class of employees, defined as reported in this notice, became members of the SEC.

John Howard,

Director, National Institute for Occupational Safety and Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute on Aging; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of a meeting of the National Advisory Council on Aging.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council on Aging.

Date: May 10–11, 2016.

Closed: May 10, 2016, 3:00 p.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Building 31, C Wing, 6th Floor Conference Room 10, 9000 Rockville Pike, Bethesda, MD 20892.

Open: May 11, 2016, 8:00 a.m. to 12:15 p.m.

Agenda: Call to order and report from the Director; discussion of future meeting dates; consideration of minutes of last meeting; reports from Task Force on Minority Aging Research, Working Group on Program; Program Highlights.

Place: National Institutes of Health, Building 31, C Wing, 6th Floor Conference Room 10, 9000 Rockville Pike, Bethesda, MD 20892.

Contact Person: Robin Barr, Ph.D., Director, National Institute on Aging, Office of Extramural Activities, Gateway Building, 7201 Wisconsin Avenue, Bethesda, MD 20814, (301) 496–9322, *barrr@nia.nih.gov*.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NIH campus. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *www.nih.gov/nia/naca/,* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-Day Comment Request: Request for Human Embryonic Stem Cell Line To Be Approved for Use in NIH Funded Research (OD)

SUMMARY: In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the Office of Extramural Research (OER), the National Institutes of Health (NIH) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

Written comments and/or suggestions from the public and affected agencies are invited to address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) The quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

To Submit Comments and For Further Information: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact: Dr. Ellen Gadbois, Office of Science Policy, Office of the Director, NIH, Building 1, Room 218, MSC 0166, 9000 Rockville Pike, Bethesda, MD 20892, or call non-toll-free number (301) 496–9838 or Email your request, including your address to: *gadboisel@od.nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

DATES: *Comment Due Date:* Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

Proposed Collection: Request for Human Embryonic Stem Cell Line to be approved for Use in NIH Funded Research. OMB No. 0925–0601—Expiration Date 5/31/2016—Extension-Office of Extramural Research (OER), National Institutes of Health (NIH).

Need and Use of Information Collection: The form is used by applicants to request that human embryonic stem cell lines be approved for use in NIH funded research. Applicants may submit applications at any time.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 2,550.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Number of respondents	Number of responses per respondent	Average time per response (in hours)	Total annual burden hour
NIH grantees and others with hESC lines	50	3	17	2,550
Total	50	150	.....	2,550

Dated: March 18, 2016.

Lawrence A. Tabak,

Deputy Director, National Institutes of Health.

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of

proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: 2017 National Survey on Drug Use and Health

(OMB No. 0930–0110)—Revision

The National Survey on Drug Use and Health (NSDUH) is a survey of the U.S. civilian, non-institutionalized population aged 12 years old or older. The data are used to determine the prevalence of use of tobacco products, alcohol, illicit substances, and illicit use of prescription drugs. The results are used by SAMHSA, the Office of National Drug Control Policy (ONDCP), Federal government agencies, and other organizations and researchers to establish policy, direct program activities, and better allocate resources.

While NSDUH must be updated periodically to reflect changing substance use and mental health issues and to continue producing current data, for the 2017 NSDUH only the following minor changes are planned: (1) Updated questions so respondents who report no use of alcohol are not asked about misuse of prescription drugs with alcohol; and (2) included other minor wording changes to improve the flow of the interview, increase respondent comprehension or to be consistent with text in other questions.

As with all NSDUH/NHSDA [1] surveys conducted since 1999, the sample size of the survey for 2017 will be sufficient to permit prevalence estimates for each of the fifty States and the District of Columbia. The total annual burden estimate is shown below in Table 1.

TABLE 1—ANNUALIZED ESTIMATED BURDEN FOR 2017 NSDUH

Instrument	Number of respondents	Responses per respondent	Total number of responses	Hours per response	Total burden hours
Household Screening	131,983	1	131,983	0.083	10,955
Interview	67,507	1	67,507	1.000	67,507
Screening Verification	3,755	1	3,755	0.067	252
Interview Verification	10,126	1	10,126	0.067	678
Total	131,983		213,371		79,932

Send comments to Summer King, SAMHSA Reports Clearance Officer, Room 15E57B, 5600 Fishers Lane, Rockville, MD 20857 *OR* email a copy at *summer.king@samhsa.hhs.gov.*

Written comments should be received by May 24, 2016.

Summer King,

Statistician.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2016–0142]

Towing Safety Advisory Committee

AGENCY: Coast Guard, Department of Homeland Security.

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The Towing Safety Advisory Committee and its subcommittees will meet to discuss matters relating to shallow-draft inland and coastal waterway navigation and towing safety. The meetings will be open to the public.

DATES: Subcommittees are scheduled to meet on April 13, 2016, from 8 a.m. to 5:30 p.m., and the full Committee is scheduled to meet on April 14, 2016, from 8 a.m. to 5:30 p.m. Please note that these meetings may adjourn early if the Committee has completed its business.

ADDRESSES: The meetings will be held at the OMNI Riverfront Hotel, 701 Convention Center Boulevard, New Orleans, LA 70130. The telephone number for the hotel is 504–524–8200 and the Web site is: *http://www.omnihotels.com/hotels/new-orleans-riverfront.*

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact the Alternate Designated Federal Officer as soon as possible.

To facilitate public participation, we are inviting public comment on the issues to be considered by the Committee as listed in the ''Agenda'' section below. Written comments for distribution to Committee members must be submitted no later than April 2, 2016, if you want the Committee members to be able to review your comments before the meeting, and must be identified by Docket No. USCG–2016–0142. Written comments may be submitted using the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the Alternate Designated Federal Officer for alternate instructions.

Instructions: All submissions received must include the words ''Department of Homeland Security'' and the docket number for this action. All comments will be posted without alteration at *http://www.regulations.gov* including any personal information provided. You may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Docket: For access to the docket to read documents or comments related to this notice, go to *http://www.regulations.gov,* type USCG–2016–0142 in the Search box, press Enter, and then click on the item you wish to view.

[1] Prior to 2002, the NSDUH was referred to as the National Household Survey on Drug Abuse (NHSDA).

FOR FURTHER INFORMATION CONTACT: Mr. William J. Abernathy, Alternate Designated Federal Officer of the Towing Safety Advisory Committee; Commandant (CG–OES–2), U.S. Coast Guard, 2703 Martin Luther King Jr. Avenue SE., Stop 7509, Washington, DC 20593–7509; telephone 202–372–1363, fax 202–372–8382; or email *William.J.Abernathy@uscg.mil.*

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the *Federal Advisory Committee Act,* Title 5 U.S.C. Appendix. This Committee is established in accordance with, and operates under the provisions of the *Federal Advisory Committee Act.* As stated in 33 U.S.C. 1231a, the Towing Safety Advisory Committee provides advice and recommendations to the Secretary of the Department of Homeland Security on matters relating to shallow-draft inland and coastal waterway navigation and towing safety.

Agenda

Day 1

The subcommittees will meet on April 13, 2016, from 8 a.m. to 5:30 p.m., to work on their specific task assignments:

(1) Recommendations regarding Automation Equipment, Testing, Assessment, and Trial Periods on Towing Vessels.

(2) Recommendations for the Maintenance, Repair, and Utilization of Towing Equipment, Lines, and Couplings.

(3) Recommendations concerning the MODU KULLUK Report of Investigation.

(4) Recommendations regarding Articulated Tug/Barge Manning and Operations.

(5) Recommendations for Electronic Charting Systems.

Day 2

On April 14, 2016, from 8 a.m. to 5:30 p.m., the Towing Safety Advisory Committee will meet and receive reports concerning the following:

(1) Recommendations regarding Automation Equipment, Testing, Assessment, and Trial Periods on Towing Vessels, progress report,

(2) Recommendations for the Maintenance, Repair and Utilization of Towing Equipment, Lines and Couplings, final report,

(3) Recommendations concerning the MODU KULLUK Report of Investigation, final report,

(4) Recommendations regarding Articulated Tug/Barge Manning and Operations, progress report, and,

(5) Recommendations for Electronic Charting Systems, progress report.

In addition, the Committee will hear a presentation from the U.S. Coast Guard, District 8.

There will be a comment period for Towing Safety Advisory Committee members and a comment period for the public after each report presentation, but before each is voted on by the Committee. The Committee will review the information presented on each issue, deliberate on any recommendations presented in the Subcommittees' reports, and formulate recommendations for the Secretary's consideration.

A copy of all meeting documentation will be available at: *https://homeport.uscg.mil/tsac* no later than April 2, 2016. Alternatively, you may contact Mr. William Abernathy as noted in the **FOR FURTHER INFORMATION CONTACT** section above.

An opportunity for oral comments by the public will be provided during the meeting on April 14, 2016. Speakers are requested to limit their comments to 3 minutes. Please note the public oral comment period may end before 5:30 p.m. if the Committee has finished its business earlier than scheduled. Please contact Mr. William J. Abernathy, listed above in the **FOR FURTHER INFORMATION CONTACT** section to register as a speaker.

Minutes

Minutes from the meeting will be available for public review and copying within 90 days following the close of the meeting and can be accessed from the Coast Guard Homeport Web site *http://homeport.uscg.mil/tsac.*

Notice of Future 2016 Towing Safety Advisory Committee Meetings

To receive automatic email notices of any future Towing Safety Advisory Committee meetings in 2016, go to the online docket, USCG–2016–0142 (*http://www.regulations.gov/#!docketDetail;D=USCG-2016-0142*), and select the sign-up-for-email-alerts option. We plan to use the same docket number for all Towing Safety Advisory Committee meeting notices in 2016, so if another 2016 meeting notice is published you will receive an email alert from *www.regulations.gov* when the notice appears in this docket.

Dated: March 22, 2016.

F.J. Sturm,

Acting Director of Commercial Regulations and Standards, United States Coast Guard.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2016–0031]

Chemical Transportation Advisory Committee; Vacancies

AGENCY: Coast Guard, DHS.

ACTION: Request for applications.

SUMMARY: The Coast Guard seeks applications for membership on the Chemical Transportation Advisory Committee. The Chemical Transportation Advisory Committee provides advice and makes recommendations reflecting its independent judgment to the Commandant of the United States Coast Guard on matters concerning the safe and secure marine transportation of hazardous materials, including industry outreach approaches.

DATES: Completed applications should reach the Coast Guard on or before May 24, 2016.

ADDRESSES: Applicants should send a cover letter expressing interest in an appointment to the Chemical Transportation Advisory Committee that identifies which membership category the applicant is applying under, along with a resume detailing the applicant's experience via one of the following methods:

- *By Email*: *Patrick.a.Keffler@uscg.mil.*
- *By Mail*: Mr. Patrick Keffler, Alternate Designated Federal Official of the Chemical Transportation Advisory Committee, Commandant, Hazardous Materials Division (CG–ENG–5), U.S. Coast Guard, 2703 Martin Luther King Jr. Avenue SE., Stop 7509, Washington, DC 20593–7509.

FOR FURTHER INFORMATION CONTACT: Mr. Patrick Keffler, Alternate Designated Federal Official of the Chemical Transportation Advisory Committee; telephone (202) 372–1424, email *Patrick.a.Keffler@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Chemical Transportation Advisory Committee is established under the authority of Section 871 of the Homeland Security Act of 2002, 6 U.S.C. 451. The Chemical Transportation Advisory Committee is an advisory committee established in accordance with and operating under the provisions of the Federal Advisory Committee Act (Title 5 U.S.C. Appendix).

The Committee provides advice and makes recommendations reflecting its independent judgment to the

Commandant of the United States Coast Guard on matters concerning the safe and secure marine transportation of hazardous materials, including industry outreach approaches.

The Chemical Transportation Advisory Committee meets at least twice per year, typically every six months. It may also meet for extraordinary purposes. Its subcommittees may meet to consider specific tasks as required.

The Coast Guard will consider applications for seven positions that will be vacant on September 17, 2016.

The membership categories are: Marine Handling and Transportation, Marine Environmental Protection, Safety and Security, Vessel Design and Construction, and Chemical Manufacturing.

To be eligible, applicants should have experience in chemical manufacturing, marine handling or transportation of chemicals, vessel design and construction, marine safety or security, or marine environmental protection. Each member serves for a term of three years. Committee members are limited to serving no more than two consecutive three-year terms. A member appointed to fill an unexpired term may serve the remainder of that term. All members serve at their own expense and receive no salary, reimbursement of travel expenses, or other compensation from the Federal Government.

Registered lobbyists are not eligible to serve on federal advisory committees in an individual capacity. See ''Revised Guidance on Appointment of Lobbyists to Federal Advisory Committees, Boards and Commissions'' (79 FR 47482, August 13, 2014). Registered lobbyists are lobbyists required to comply with provisions contained in 2 U.S.C. 1605.

The Department of Homeland Security does not discriminate in selection of Committee members on the basis of race, color, religion, sex, national origin, political affiliation, sexual orientation, gender identity, marital status, disabilities and genetic information, age, membership in an employee organization, or any other non-merit factor. The Department of Homeland Security strives to achieve a widely diverse candidate pool for all of its recruitment actions.

If you are interested in applying to become a member of the Committee, send your cover letter and resume to Mr. Patrick Keffler, Alternate Designated Federal Officer of the Chemical Transportation Advisory Committee, via one of the transmittal methods in the **ADDRESSES** section by the deadline in the **DATES** section of this notice.

All email submittals will receive email receipt confirmation.

Dated: March 21, 2016.

F.J. Sturm,

Acting Director of Commercial Regulations and Standards, U.S. Coast Guard.

[FR Doc. 2016–06749 Filed 3–24–16; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5907–N–13]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B–17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.,* acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: COAST GUARD: Commandant, United States Coast Guard, Attn: Jennifer Stomber, 2703 Martin Luther King Jr. Avenue SE., Stop 7741, Washington, DC 20593–7714; (202) 475–5609; NASA: Mr. Frank T. Bellinger, Facilities Engineering Division, National Aeronautics & Space Administration, Code JX, Washington, DC 20546, (202) 358–1124; NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685–9426; (These are not toll-free numbers).

Dated: March 17, 2016.

Tonya Proctor,

Deputy Director, Office of Special Needs Assistance Programs.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5910–N–03]

60-Day Notice of Proposed Information Collection: Surveys of Community Development Marketplace Project Inventory and Recipients and Providers of HUD Technical Assistance and Training

AGENCY: Office of Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* May 24, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410–5000; telephone 202–402–3400 (this is not a toll-free number) or email at *Colette.Pollard@hud.gov* for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

FOR FURTHER INFORMATION CONTACT: Evan Gross, Office of the Deputy Assistant Secretary for Economic Development, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Evan Gross at *CDM@hud.gov* or telephone 202–402–4889. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Mr. Gross.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Survey of Community Development Marketplace Project Inventory and Survey of Recipients and Providers of Direct and Remote Technical Assistance and Training.

OMB Approval Number: 2506-new.

Type of Request: New collection of information.

Form Number: Pending Assignment.

Description of the need for the information and proposed use: This Notice covers three types of information HUD is proposing to collect in order to improve the effectiveness of technical assistance programs and operations:

a. Survey of Community Development Marketplace Project Inventory

The Community Development Marketplace Project Inventory survey (''CDM Survey'') will serve as a vehicle to target cohort learning using remote tools and technical assistance products, as well as provide information in a useful, sortable way to foundations and investors who are seeking community development investment opportunities and researching trends. An example of how the CDM Survey information could

be presented to interested stakeholders and the public can be viewed via *https://www.hudexchange.info/resource/4479/promise-zones-community-development-marketplace,* and questions can be addressed to *cdm@hud.gov.*

If HUD decides to proceed with the CDM survey after public comment, HUD may embed the survey in max.gov, or the HUD Exchange Web site, or another online platform. HUD may also continue to ask for user feedback through online suggestions and surveys on HUD Exchange or similar Web sites that HUD may use in the future.

b. Survey of Recipients and Providers of HUD Technical Assistance

HUD proposes to survey the recipients and providers of technical assistance, including city and state grantees of HUD funds, public housing authorities, tribes, owners and operators of multifamily housing, Continuums of Care and other non-profit recipients of HUD funding. Technical assistance is provided by third-party organizations awarded funding through cooperative agreements or contracts with HUD. The survey responses will allow HUD and its providers to improve the way it delivers technical assistance HUD proposes to survey one representative from the recipient TA organization and one representative from each TA provider organization for either all or the majority of the TA engagements in a year. The number of engagements varies based on demand for TA and available funding to provide it, but based on past years' trends, HUD expects to survey approximately 200 representatives each from recipient organizations and TA providers, for a total of 400 respondents annually.

The survey will ask respondents to rate quality of the TA they received, their progress toward intended goals, and provide other feedback about the TA engagement including any challenges faced. At least annually, HUD will analyze the survey data to identify program strengths and opportunities for program improvements. HUD may follow up on surveys to secure additional qualitative information through interviews and focus groups.

c. Survey of HUD Training Participants

HUD proposes to survey training participants in order to assess satisfaction with the course content and delivery. Participants include city and state HUD grantees, public housing authorities, tribes, owners and operators of multifamily housing, Continuums of Care (CoCs), and other non-profit recipients of HUD funding. Training is provided by third-party organizations awarded funding through cooperative agreements or contracts with HUD. The survey responses will allow HUD and its providers to improve the content and delivery of its training. All training participants will be offered the opportunity to provide feedback via a brief survey following the training. HUD estimates, based on past years' data, that about 7,000 training participants will be offered the opportunity to complete a feedback survey annually. The survey will ask respondents to rate their satisfaction with the training, including the relevance of the content to their job responsibilities, perceived knowledge gained, and quality of training delivery, and will provide space for comments regarding the training and suggestions to improve future training. At least annually, HUD will analyze the survey data to identify program strengths and opportunities for program improvements.

HUD may follow up on all of the surveys listed above to secure additional qualitative information through interviews and focus groups. HUD may also survey users of online tools and products to assess the usefulness and quality of these offerings.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
CDM project intake survey and follow up feedback	332	4	1328	2.25	2988	$40	$119,520
Survey of Recipients and Providers of HUD Technical Assistance	400	[1]1.1	440	.33	145.2	$15 (rcpnts) $38 (prvdrs) = average of $26.50	3,847.80
Survey of HUD Training Participants	7,000	[2]1.3	9,100	.25	2275	15	34,125
Total	7732	6.4	10868	2.83	5408.20	<40	157,492.80

[1] HUD anticipates that a small percentage of TA recipients will complete a follow-up survey on progress toward intended outcomes, and therefore be asked to complete two surveys.

[2] HUD anticipates that a small percentage of trainees will complete multiple trainings, and therefore be asked to complete more than one survey.

A. Paperwork Burden

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

B. CDM Survey

For potential users, including foundations, investors, researchers, other stakeholders:

(5) What kind of potential user are you? HUD has heard from foundations, investors, communities, researchers and national intermediaries and stakeholder networks, but there may be others who can use this data.

(6) Does the Project Intake Survey template capture information that would be useful to you? If yes, how is this information useful to you? If the information captured by the CDM Survey is not useful to you, how could

we adjust this survey to better suit your information needs?

(7) Please review the list of policy codes, financing types, funding source types, asset classes, and types of project sponsors that respondents are asked to select to categorize their project details. Would these options assist you in filtering and searching for information you would like to have? Are there any codes or options that would help you that missing? Are there any codes or options that are redundant?

(8) Does the project intake survey capture the information useful to organizations working in your community? Please elaborate on what is useful or what could be done to make it more useful.

(9) What are the typical information gaps that interfere with your organization's ability to target suitable funding opportunities? How can the project intake survey be enhanced to yield relevant information for your purposes?

(10) With regard to geography filters, projects in the draft database would be searchable by city, state, zip code, and census tract (where known by the respondent). Do these filters allow for geographic searches that would be useful to you?

(11) How can HUD better engage foundation, philanthropic, and impact investor community?

For potential respondents:

(12) Please review the questions in the proposed Project Intake Survey at [link]. If you are managing a local community development project or intervention, would you be willing and able to respond to the survey questions and to make your responses public for purposes of potentially connecting you to federal and private partners and/or peers that could facilitate your work? If not, why not?

(13) Do you perceive the benefits of responding to the CDM Survey as adequate and sufficiently motivating for you to respond? If not, what additional benefits would motivate you to respond?

(14) With regard to your and your partners' community revitalization efforts, please explain what particular types of information, peer exchange, introductions or other non-competitive assistance would be helpful to you as you move your work forward?

(15) With regard to geography filters, projects in the draft database would be searchable by city, state, zip code, and census tract (where known by the respondent). Do these filters allow for geographic searches that would be useful to you?

C. Surveys of Recipients and Providers of HUD Technical Assistance and Training (Available Upon Request)

The goal of HUD's technical assistance and training is to help customers navigate challenges associated with HUD funding and programs and points them in the right direction to best serve their communities. HUD provides TA and training across its portfolio of programs, including public housing, Native American housing, community development, rental housing, and fair housing. HUD does not currently have a mechanism to systematically solicit TA or training recipient feedback.

The goal of the proposed survey(s) are to systematically collect information across TA and training engagements to learn how effectively they achieved the desired outcomes identified at the start of the engagement. From the information collected, HUD will be able to understand which types of TA and training are preferred by recipients and which seem to be most effective in achieving specific outcomes, and hold TA providers accountable for the quality of TA and training provided. It will provide information that will help HUD continuously improve the way it provides TA and training.

HUD is particularly interested in comments that address the following questions:

For survey of recipients and providers of HUD technical assistance:

(16) Is an online survey sent after the TA engagement a practical way to capture feedback about the TA?

(17) Is a rating system (*e.g.* rank the TA on a scale of 1–4) an appropriate way to assess customer satisfaction with the TA?

(18) What type(s) of survey question(s) would best measure customer satisfaction with the quality of TA provided?

(19) What other methods besides a survey could be employed to assess the quality of TA provided?

For survey of HUD training participants:

(20) How can HUD most accurately measure customer satisfaction and outcomes of training?

(21) Should the survey of online or virtual training participants be different from the survey for in-person training participants?

(22) Are there any other questions that the survey should ask of HUD training recipients to measure the effectiveness of HUD training?

HUD encourages interested parties to submit comment in response to these questions. Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: March 21, 2016.

Harriet Tregoning,

Principal Deputy Assistant Secretary for Community Planning and Development.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5909–N–19]

30-Day Notice of Proposed Information Collection: Information Resource Center Customer Satisfaction Survey

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* April 25, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding

this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QMAC, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on December 7, 2015 at 80 FR 76029.

A. Overview of Information Collection

Title of Information Collection: Information Resource Center Customer Satisfaction Survey.

OMB Approval Number: 2577–New.

Type of Request: New Collection.

Form Number: None.

Description of the need for the information and proposed use: The information will be used by Public and Indian Housing to rate the customer satisfaction of the users of the Information Resource Center (IRC). Collection of this information is needed to ensure that the customers using the IRC are receiving the correct and useful information that addresses their concerns when they call in for information. The Information Resource Center provides technical assistance, primarily in the form of general information, to provide access to resources of federal, public, Indian and assisted housing programs of the Department of Housing and Urban Development. This service is provided through a multi-channel contact center with inquires received and responded to via phone, email, mail and fax.

Respondents: Individuals or households, State, Tribal or local governments.

Estimated Number of Respondents: 10,800.

Estimated Number of Responses: 10,800.

Frequency of Response: 1.

Average Hours per Response: 1 minute.

Total Estimated Burdens: 10,800.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: *March 22, 2016.*

Colette Pollard,

Department Reports Management Officer, Office of the Chief Information Officer.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2016–0053][FXIA16710900000–156–FF09A30000]

Endangered Species; Receipt of Applications for Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications for permit.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications to conduct certain activities with endangered species. With some exceptions, the Endangered Species Act (ESA) prohibits activities with listed species unless Federal authorization is acquired that allows such activities.

DATES: We must receive comments or requests for documents on or before April 25, 2016.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments on Docket No. FWS–HQ–IA–2016–0053.
- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2016–0053; U.S. Fish and Wildlife Service Headquarters, MS: BPHC; 5275 Leesburg Pike, Falls Church, VA 22041–3803.

When submitting comments, please indicate the name of the applicant and the PRT# you are commenting on. We will post all comments on *http://www.regulations.gov*. This generally means that we will post any personal information you provide us (see the Public Comments section below for more information). *Viewing Comments:* Comments and materials we receive will be available for public inspection on *http://www.regulations.gov,* or by appointment, between 8 a.m. and 4 p.m., Monday through Friday, except Federal holidays, at the U.S. Fish and Wildlife Service, Division of Management Authority, 5275 Leesburg Pike, Falls Church, VA 22041–3803; telephone 703–358–2095.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2281 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I request copies of applications or comment on submitted applications?

Send your request for copies of applications or comments and materials concerning any of the applications to the contact listed under **ADDRESSES**. Please include the **Federal Register** notice publication date, the PRT-number, and the name of the applicant in your request or submission. We will not consider requests or comments sent to an email or address not listed under **ADDRESSES**. If you provide an email address in your request for copies of applications, we will attempt to respond to your request electronically.

Please make your requests or comments as specific as possible. Please confine your comments to issues for which we seek comments in this notice, and explain the basis for your comments. Include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) Those that include citations to, and analyses of, the applicable laws and regulations. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**) or comments delivered to an address other than those listed above (see **ADDRESSES**).

B. May I review comments submitted by others?

Comments, including names and street addresses of respondents, will be available for public review at the street address listed under **ADDRESSES**. The public may review documents and other information applicants have sent in support of the application unless our allowing viewing would violate the Privacy Act or Freedom of Information Act. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), along with Executive Order 13576, ''Delivering an Efficient, Effective, and Accountable Government,'' and the President's Memorandum for the Heads of Executive Departments and Agencies of January 21, 2009—Transparency and Open Government (74 FR 4685; January 26, 2009), which call on all Federal agencies to promote openness and transparency in Government by disclosing information to the public, we invite public comment on these permit applications before final action is taken.

III. Permit Applications

Endangered Species

Applicant: Mountain Gorilla Veterinary Project, Inc., Baltimore, MD; PRT–73578B

The applicant requests a permit to re-export biological samples from wild mountain gorilla (*Gorilla beringei*) to the United Kingdom for the purpose of scientific research.

Applicant: Wildlife Conservation Society, Bronx, NY; PRT–77252B

The applicant requests a permit to re-export biological samples from wild Amur tigers (*Panthera tigris altaica*) to the United Kingdom for the purpose of scientific research.

Applicant: Veterinary Initiative for Endangered Wildlife, Bozeman, MT; PRT–75654B

The applicant requests a permit to import biological samples from Bengal tigers (*Panthera tigris tigris*) and Indian rhinoceros (*Rhinoceros unicornis*) from National Trust for Nature Conservation, Sauraha, Nepal, for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Creation Kingdom Zoo Inc., Gate City, VA; PRT–84452B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species to enhance species propagation or survival: Ring-tailed lemur (*Lemur catta*), black and white ruffed lemur (*Varecia variegata*), red ruffed lemur (*Varecia rubra*), white-fronted lemur (*Eulemur albifrons*), cotton-headed tamarin (*Saguinus oedipus*), mandrill (*Mandrillus sphinx*), Lar gibbon (*Hylobates lar*), and leopard (*Panthera pardus*). This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Clara Geissler, San Diego, CA; PRT–74736B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species to enhance species propagation or survival: Radiated tortoise (*Astrochelys radiata*) and Galapagos tortoise (*Chelonoidis nigra*). This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Evan Rosenoff, Cary, NC; PRT–51920A

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species to enhance species propagation or survival: Radiated tortoise (*Astrochelys radiata*). This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: University of California, Davis, CA; PRT–84562B

The applicant requests a permit to import egg samples from wild leatherback sea turtle (*Dermochelys coriacea*) from St. Ketts and Nevis, for the purpose of scientific research. This notification coverts activities to be conducted by the applicant over a 5-year period.

Multiple Applicants

The following applicants each request a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Arthur Webber, Glenside, PA; PRT–88754B

Applicant: Douglas Wyatt, Amarillo, TX; PRT–88758B

Applicant: Armour Mellon, Ligonier, PA; PRT–88822B

Applicant: Matthew Saulsbury, Odessa, TX; PRT–88755B

Applicant: Roger Turner, Midland, TX; PRT–88670B

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

Deer Flat National Wildlife Refuge, Canyon, Payette, Owyhee, and Washington Counties, ID, and Malheur County, OR; Comprehensive Conservation Plan and Record of Decision for Final Environmental Impact Statement

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the availability of the Deer Flat National Wildlife Refuge (Refuge) comprehensive conservation plan (CCP) and record of decision (ROD) for the final environmental impact statement (EIS). The CCP describes the Refuge's management direction for the next 15 years, and includes the ROD, which explains our selection of Alternative 2 as the Refuge's management direction.

DATES: The Regional Director, Pacific Region, U.S. Fish and Wildlife Service, signed the ROD on April 3, 2015.

ADDRESSES: The libraries providing public viewing of the CCP/ROD are listed under **SUPPLEMENTARY**

INFORMATION. You may view or download a copy of the CCP/ROD at the Refuge's Web site at *http://www.fws.gov/deerflat/refugeplanning.html,* or request a CD–ROM copy of the CCP/ROD by one of the following methods:

Email: deerflat@fws.gov. Include ''Deer Flat Refuge draft CCP/EIS'' in the subject line of the message.

Fax: Attn: Refuge Manager, 208–467–1019.

U.S. Mail: Deer Flat National Wildlife Refuge, 13751 Upper Embankment Road, Nampa, ID 83686.

In-Person Viewing or Pickup: Call 208–467–9278 to make an appointment during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Refuge Manager, 208–467–9278 (phone).

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we finalize the CCP process for Deer Flat Refuge. We started this process by publishing a notice of intent in the **Federal Register** on July 15, 2010 (75 FR 41232). We requested public comments on the draft CCP/EIS in a notice of availability published in the **Federal Register** on March 15, 2013 (78 FR 16526). For more information about the history and purposes of the Refuge, see that notice.

We completed a thorough analysis of impacts on the human environment and responded to public comments in the final CCP/EIS released to the public through a **Federal Register** notice published on February 20, 2015 (80 FR 9279).

We announce our decision and the availability of the CCP and ROD in accordance with National Environmental Policy Act (NEPA) (40 CFR 1506.6(b)) requirements. Alternative 2, as we described it in the final CCP/EIS, was selected for implementation at the Refuge. The CCP will guide Refuge management for 15 years.

Background

The National Wildlife Refuge System Administration Act of 1966, 16 U.S.C. 668dd–668ee (Refuge Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to complete a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Refuge Administration Act.

CCP/ROD

Based on our comprehensive review and analysis of Deer Flat Refuge's resources and issues, the Service selected Alternative 2, our preferred alternative, for implementation, as it is described in the final CCP/EIS, with two modifications described below. In reaching our decision to implement Alternative 2, we identified and analyzed its impacts to the Refuge environment in the Draft and Final CCPs/EISs. Issues, comments, concerns, and opportunities identified by all stakeholders throughout the planning process were considered and addressed. A summary of public comments and our responses is available in the CCP, in Appendix H.

Changes Made to the Selected Alternative

The following changes were made to wildlife-dependent public uses in the Lake Lowell Unit in Alternative 2 after the final CCP/EIS was released:

▪ Noncompetitive jogging, bicycling, and horseback riding groups of 10 or fewer people are allowed without a special use permit (SUP). An SUP is still required for groups larger than 10, and competitive events are still prohibited.

▪ Boats using wake-generating devices (wake-boats) are compatible with stipulations, including requiring wake-boats to use ballast filtering systems to prevent invasive species introductions. Wakes that impact grebe nests are a concern; however, the new no-wake zones will provide some additional protection, and we will continue to evaluate effects on wildlife to ensure the use remains compatible.

Other CCP Actions

We will protect Lake Lowell's shoreline feeding and nesting sites for wintering and migratory birds by closing the lake October 1–April 14, establishing a 200-yard no-wake zone on the south side and in the Narrows, and expanding the southeast no-wake zone to Gotts Point.

Fishing and wildlife interpretation will be emphasized, and with increased law enforcement, Gotts Point will open to vehicles. We will increase wildlife inventory and monitoring, invasive species control, and restoration on the Snake River Islands Unit, and we will adjust closures to protect nesting and wading birds. Wildlife observation and hunting for deer, upland species, and waterfowl will be allowed on the unit, and most islands will be open for shoreline fishing and free-roam activities June 15–January 31; and heron- and gull-nesting islands will be open July 1–January 31. For additional details, the CCP/ROD is available on the Refuge's Web site: *www.fws.gov/deerflat/refugeplanning.html.* Implementing some of the CCP actions will be subject to the availability of funding and any additional compliance requirements.

Public Availability of Documents

Review the CCP/ROD at the following libraries and sources under **ADDRESSES**.

▪ Caldwell Public Library, 1010 Dearborn St., Caldwell, ID 83605.

▪ Homedale Public Library, 125 W Owyhee Ave., Homedale, ID 83628.

▪ Lizard Butte District Library, 111 3rd Ave. W, Marsing, ID 83639.

▪ Nampa Public Library, 101 11th Ave. S, Nampa, ID 83651.

▪ Payette Public Library, 24 S 10th St., Payette, ID 83661.

▪ Ada County District Library, 10664 W Victory Rd., Boise, ID 83709.

Richard Hannan,

Acting Regional Director, Pacific Region, Portland, Oregon.

Information Collection Request Sent to the Office of Management and Budget (OMB) for Approval; Annual Certification of Hunting and Sport Fishing Licenses Issued

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (U.S. Fish and Wildlife Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This information collection is scheduled to expire on March 31, 2016.

We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before April 25, 2016.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior at OMB–OIRA at (202) 395–5806 (fax) or *OIRA_Submission@omb.eop.gov* (email). Please provide a copy of your comments to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS BPHC, 5275 Leesburg Pike, Falls Church, VA 22041–3803 (mail), or *hope_grey@fws.gov (*email). Please include ''1018–0007'' in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Hope Grey at *hope_grey@fws.gov* (email) or 703–358–2482 (telephone). You may review the ICR online at *http://www.reginfo.gov.* Follow the instructions to review Department of the Interior collections under review by OMB.

SUPPLEMENTARY INFORMATION:

Information Collection Request

OMB Control Number: 1018–0007.

Title: Annual Certification of Hunting and Sport Fishing Licenses Issued, 50 CFR 80, subpart D.

Service Form Numbers: 3–154a and 3–154b.

Type of Request: Extension of a currently approved collection.

Estimated Number of Respondents: 56.

Description of Respondents: States, territories (Commonwealth of Puerto Rico, Commonwealth of the Northern Mariana Islands, Guam, U.S. Virgin Islands, and American Samoa), and District of Columbia.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: Annually.

Activity	Number of responses	Completion time per response (hours)	Total annual burden hours
FWS Form 3–154a	56	12	672
FWS Form 3–154b	56	20	1,120
Totals	112	.....	1,792

Estimated Annual Nonhour Burden Cost: None.

Abstract: The Pittman-Robertson Wildlife Restoration Act (16 U.S.C. 669 *et seq.*) and the Dingell-Johnson Sport Fish Restoration Act (16 U.S.C. 777 *et seq.,* except 777e–1) provide authority for Federal assistance to the States for management and restoration of fish and wildlife. These Acts and our regulations in the Code of Federal Regulations (CFR) at 50 CFR 80, subpart D, require that States, territories, and the District of Columbia annually certify their hunting and fishing license sales. States, territories, and the District of Columbia that receive grants under these Acts use FWS Forms 3–154a (Part I–Certification) and 3–154b (Part II–Summary of Hunting and Sport Fishing Licenses Issued) to certify the number of hunting and fishing licenses sold and the amount of sales. We use the information collected to apportion and distribute funds according to the formula specified in each Act.

Comments Received and Our Responses

Comments: On December 23, 2015, we published in the **Federal Register** (80 FR 79924) a notice of our intent to request that OMB renew approval for this information collection. In that notice, we solicited comments for 60 days, ending on February 22, 2016. We received one comment in response to this notice. The respondent objected to the Wildlife Restoration Act, but did not address the information collection requirements. We did not make any changes to our requirements.

Request for Public Comments

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB and us in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: March 21, 2016.

Tina A. Campbell,

Chief, Division of Policy, Performance, and Management Programs, U.S. Fish and Wildlife Service.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R4–ES–2016–N037]; [40120–1112–0000–F2]

Draft Environmental Impact Statement; Eastern Collier Multi-Species Habitat Conservation Plan; Collier County, Florida

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of intent; announcement of public meeting.

SUMMARY: Under the National Environmental Policy Act (NEPA), we, the Fish and Wildlife Service (Service), advise the public that we intend to gather information necessary to prepare a draft environmental impact statement (dEIS) related to an anticipated permit application from nine Collier County, Florida, landowners (prospective applicants) for the incidental take of federally listed species. The permit application would include an Eastern Collier Multiple Species Habitat Conservation Plan (ECMSHCP) prepared

in accordance with the Endangered Species Act of 1973, as amended (Act). We provide this notice to (1) describe the anticipated action; (2) advise other Federal and State agencies, affected Tribes, and the public of our intent to prepare a dEIS; (3) announce the initiation of a public scoping period; and (4) obtain suggestions and information on the scope of issues and alternatives to be included in the dEIS as well as any other written data, views, or arguments with respect to the anticipated permit application.

DATES: *Comments:* We must receive any written comments at our Field Office (see **ADDRESSES**) on or before April 25, 2016.

Public Meetings: One public scoping meeting will be held on April 12, 2016: From 5 to 7 p.m.

ADDRESSES: *Public Meeting:* University of Florida/Institute of Food and Agricultural Sciences Collier County Extension, 14700 Immokalee Road, Naples, Florida. *Document Availability:* Documents will be available for public inspection by appointment during normal business hours at the South Florida Ecological Services Office, 1339 20th Street, Vero Beach, FL 32960. Documents are also available at: *www.easterncollierHCPEIS.com*.

Comments: For how and where to submit comments, see Public Comments under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Kenneth McDonald, (*Kenneth_mcdonald@fws.gov*) Project Manager, at the South Florida Ecological Services Office (see **ADDRESSES**), telephone: 772/469–4284.

SUPPLEMENTARY INFORMATION: Under NEPA (42 U.S.C. 4321 *et seq.*), we announce our intention to gather information necessary to prepare a dEIS on the anticipated permit application under the Act (16 U.S.C. 1531 *et seq.*). The Department of the Army, through its bureau the U.S. Army Corps of Engineers, will be a cooperating agency in the development of the dEIS.

Background

Section 9 of the Act and the Service's implementing regulations in the Code of Federal Regulations (CFR) at 50 CFR Part 17 prohibit the ''take'' of federally listed ''endangered'' and ''threatened'' species (16 U.S.C. 1538). The Act defines the term ''take'' as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect listed species or to attempt to engage in such conduct (16 U.S.C. 1532). ''Harm'' includes an act that actually kills or injures a listed species and may include significant habitat modification or degradation that actually kills or injures a species by significantly impairing essential behavioral patterns, including breeding, feeding, and sheltering (50 CFR 17.3). Under section 10(a)(1)(B) (16 U.S.C. 1539) of the Act, the Service may issue permits authorizing ''incidental take'' of listed species. ''Incidental take'' is defined as take otherwise prohibited but incidental to, and not the purpose of, carrying out an otherwise lawful activity (50 CFR 17.3). Regulations governing incidental take permits for endangered species and threatened species, respectively, are found in 50 CFR 17.22 and 50 CFR 17.32.

Eastern Collier Multiple Species Habitat Conservation Plan (ECMSHCP)

The prospective applicants intend to seek an incidental take permit (ITP) that would authorize take resulting from the residential and commercial development and earth mining activities described in the ECMSHCP on certain lands (''covered lands''). The ECMSHCP would include measures to avoid, minimize, and mitigate for incidental take with an emphasis on preserving some of the lands to maintain the viability and continued existence of populations of federally- listed threatened and endangered species.

The ECMSHCP also would include a funding mechanism for the avoidance, minimization, and mitigation measures, such as land acquisition, habitat mitigation, establishment of wildlife crossings, ecological restoration, land management, and actions to assist in the conservation of species through research. The proposed term of the ITP would be 50 years.

The prospective applicants are expected to seek incidental take authorization for the following federally listed species: The Florida scrub-jay (*Aphelocoma coerulescens*), Audubon's crested caracara (*Polyborus plancus*) (alternatively identified as the northern crested caracara (*Caracara cheriway*)), wood stork (*Mycteria americana*), red-cockaded woodpecker (*Picoides borealis*), Everglade snail kite (*Rostrhamus sociabilis plumbeus*), eastern indigo snake (*Drymarchon corais couperi*), Florida bonneted bat (*Eumops floridanus*), and Florida panther (*Puma concolor coryi*) (''covered species''). The gopher tortoise (*Gopherus polyphemus*), which is a candidate species, would also be included as a covered species for which the prospective applicants would seek incidental take authorization. The prospective applicants' ECMSHCP would also cover the following State listed and unlisted species: The burrowing owl (*Athene cunicularia*), eastern diamondback rattlesnake (*Crotalus adamanteus*), Florida sandhill crane (*Grus canadensis pratensis*), little blue heron (*Egretta caerulea*), Southeastern American kestrel (*Falco sparverius paulus*), tricolored heron (*Egretta tricolor*), and the Big Cypress fox squirrel (*Sciurus niger avicennia*).

The covered lands of the ECMSHCP encompass approximately 152,124 acres in northeastern Collier County, Florida, that surround the town of Immokalee. The covered lands are bordered to the south by the Florida Panther National Wildlife Refuge and Big Cypress National Preserve, to the north and east by the Okaloacoochee Slough State Forest, and to the northwest by the Audubon Corkscrew Swamp Sanctuary. The prospective applicants are expected to propose a conservation strategy in the ECMSHCP that would preserve a large portion of the covered lands as habitat for the covered species while conducting activities on smaller, clustered portions of the covered lands.

Biologically, the ECMSHCP would focus on maintaining areas of high-value habitat for the covered species while engaging in residential and commercial development and earth mining on 45,000 acres of the lands. The prospective applicants also would maintain suitable habitat within the impacted areas to ensure the availability of corridors for dispersal of the covered species.

Draft Environmental Impact Statement

The dEIS will consider a range of alternatives, including the proposed action (*i.e.*, the issuance of an ITP to the prospective applicants, no action (non-issuance of an ITP), variations in the scope and location of the covered activities or a combination of both. It will also provide a detailed description of the proposed action and alternatives, as well as identify and analyze the potential significance of direct and indirect impacts from the proposed action and alternatives to biological resources, land use, air quality, water quality, water resources, economics, and other environmental resources. We also will consider different strategies for avoiding, minimizing, and mitigating the impacts of incidental take from the proposed action. The primary purpose of the scoping process is to allow the public to identify important issues associated with the proposed action.

Public Comments

Outside of the public scoping meeting, we will accept comments in written form only. To assist us in identifying the full range of issues related to the prospective permit

application, we invite written comments from interested parties. Any comments submitted to us after the public meeting must be in writing. Please reference the ECMSHCP in such comments.

Comments may be submitted by any one of the following methods:

U.S. mail: South Florida Ecological Services Office (see **ADDRESSES**).

Email: comments-eastcollierhcp@fws.gov. Please include your name and return mailing address in your email message. If you do not receive a confirmation from us that we received your email, contact us directly at either of the telephone numbers listed (see **FOR FURTHER INFORMATION CONTACT**).

Hand delivery: To the South Florida Ecological Services Office (**ADDRESSES**).

Availability of Public Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, there is no guarantee that we will be able to do so.

Reasonable Accommodation

Persons needing reasonable accommodations in order to attend and participate in the public meeting should contact Vickie Scott at 813/675–6546 by no later than one week before the public meeting. Information regarding this proposed action is available in alternative formats upon request.

Authority

We provide this notice under section 10 of the Act (16 U.S.C. 1531 *et seq.*) and NEPA regulations (40 CFR 1506.6).

Dated: March 2, 2016.

Mike Oetker,

Acting Regional Director, Southeast Region.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2016–0054; FXIA16710900000–156–FF09A30000]

Endangered Species; Marine Mammals; Issuance of Permits

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of issuance of permits.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), have issued the following permits to conduct certain activities with endangered species, marine mammals, or both. We issue these permits under the Endangered Species Act (ESA) and Marine Mammal Protection Act (MMPA).

ADDRESSES: Brenda Tapia, U.S. Fish and Wildlife Service, Division of Management Authority, Branch of Permits, MS: IA, 5275 Leesburg Pike, Falls Church, VA 22041; fax (703) 358–2281.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2281 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION: On the dates below, as authorized by the provisions of the ESA (16 U.S.C. 1531 *et seq.*), as amended, and/or the MMPA, as amended (16 U.S.C. 1361 *et seq.*), we issued requested permits subject to certain conditions set forth therein. For each permit for an endangered species, we found that (1) The application was filed in good faith, (2) The granted permit would not operate to the disadvantage of the endangered species, and (3) The granted permit would be consistent with the purposes and policy set forth in section 2 of the ESA.

Contract Support Costs

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of tribal consultation.

SUMMARY: This notice announces that the Office of the Assistant Secretary—Indian Affairs (AS–IA) will be hosting tribal consultation sessions on a streamlined draft policy that will address contract support costs (CSC) incurred by Tribes under Indian Self-Determination and Education Assistance Act (ISDEAA) self-determination contracts and Self-Governance funding agreements.

DATES: Written comments on the draft policy must be received the Department of the Interior (Department) by July 29, 2016. Please see the **SUPPLEMENTARY INFORMATION** section of this notice for dates of the tribal consultation sessions.

ADDRESSES: A copy of the draft policy is available for review at: *http://www.bia.gov/WhoWeAre/AS–IA/Consultation/index.htm.* Submit comments by email to: *consultation@bia.gov* or by U.S. mail to: Office of the Assistant Secretary—Indian Affairs, attn.: CSC Comments, 1849 C Street NW., MS–3071–MIB, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Ms. Hankie Ortiz, Deputy Bureau Director—Indian Services, Bureau of Indian Affairs, at (202) 513–7640 or via email: *hankie.ortiz@bia.gov.*

SUPPLEMENTARY INFORMATION: Indian Affairs has conducted several tribal consultations and listening sessions over the past two years regarding funding to tribes for CSC and is now presenting a draft policy to provide full funding for CSC incurred by tribes under ISDEAA self-determination contracts and Self-Governance funding agreements. The draft policy provides a streamlined approach to calculating CSC that reflects the Department's commitment to paying all Tribes full CSC.

We will be hosting the following consultation sessions to discuss this draft CSC policy and invites Tribes' participation:

Date	Time (Local time zone)	Location
Wednesday, April 27, 2016	2:00 pm–4:00 pm	Buena Vista Palace and Resort, 1900 E Buena Vista Drive, Lake Buena Vista, FL 32830. Meeting Room: Great Hall North (in conjunction with the 2016 Annual Tribal Self-Governance Consultation Conference).
Tuesday, May 17, 2016	9:00 am–1:00 pm	DOI University—National Indian Programs Training Center, 1011 Indian School Road NW., Albuquerque, NM 87104. Meeting Room: 231–233.
Thursday, May 19, 2016	9:00 am–1:00 pm	Hilton San Francisco Union Square, 333 O'Farrell Street, San Francisco, CA 94102. Meeting Room: Taylor AB.

Date	Time (Local time zone)	Location
Friday, June 10, 2016	9:00 am–1:00 pm	The Skirvin Hilton Oklahoma City, One Park Avenue, Oklahoma City, OK 73102. Meeting Room: Continental Room.

Dated: March 22, 2016.

Lawrence S. Roberts,

Acting Assistant Secretary—Indian Affairs.

Yavapai-Apache Nation of the Camp Verde Indian Reservation Liquor Code

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: This notice publishes the liquor code of the Yavapai-Apache Nation of the Camp Verde Indian Reservation. The liquor code allows the Nation to govern, control and regulate liquor possession, distribution, sales, and service within the Nation's reservation to serve the best interests of the Nation.

DATES: This code shall become effective March 25, 2016.

FOR FURTHER INFORMATION CONTACT: Ms. Sharlot Johnson, Tribal Government Services Officer, Western Regional Office, Bureau of Indian Affairs, 2600 North Central Avenue, Phoenix, Arizona 85004, Telephone: (602) 379–6786, Fax: (602) 379–4100; or Laurel Iron Cloud, Chief, Division of Tribal Government Services, Office of Indian Services, Bureau of Indian Affairs, 1849 C Street NW., MS–4513–MIB, Washington, DC 20240, Telephone: (202) 513–7641.

SUPPLEMENTARY INFORMATION: Pursuant to the Act of August 15, 1953, Public Law 83–277, 67 Stat. 586, 18 U.S.C. 1161, as interpreted by the Supreme Court in *Rice* v. *Rehner,* 463 U.S. 713 (1983), the Secretary of the Interior shall certify and publish in the **Federal Register** notice of adopted liquor ordinances for the purpose of regulating liquor transactions in Indian country. The Yavapai-Apache Nation of the Camp Verde Indian Reservation duly adopted Resolution 147–15 on August, 27, 2015.

This notice is published in accordance with the authority delegated by the Secretary of the Interior to the Assistant Secretary-Indian Affairs. I certify that the Yavapai-Apache Nation of the Camp Verde Indian Reservation Tribal Council duly adopted the Yavapai-Apache Nation Liquor Cody by Resolution No. 147–15 on August 27, 2015.

Dated: March 21, 2016.

Lawrence S. Roberts,

Acting Assistant Secretary–Indian Affairs.

YAVAPAI-APACHE NATION LIQUOR CODE

SECTION 101: TITLE

This Liquor Code is adopted by the Yavapai-Apache Nation (''YAN'' or ''Nation'') and shall be known as the Yavapai-Apache Nation Liquor Code (referred to herein as ''Liquor Code'' or ''Code'').

SECTION 102: FINDINGS

The Tribal Council finds as follows:

A. The introduction, possession, and sale of liquor in Indian Country is a matter of particular concern to Indian tribes and the United States. Consistent with the laws of the United States, the control of liquor on the Yavapai-Apache Nation Reservation remains subject to the legislative enactments of the Nation in the exercise of its governmental powers over the Reservation.

B. Federal law prohibits the introduction of liquor into Indian Country (18 U.S.C. § 1154), and authorizes tribal governments to decide when and to what extent liquor possession, sales, and service shall be permitted within their reservations (18 U.S.C. § 1161) in a manner deemed consistent with state liquor laws.

C. The Tribal Council, as the governing body of the Nation under Article IV, Section 1 of the Constitution of the Yavapai-Apache Nation (hereinafter ''Tribal Council''), has approved the issuance of liquor licenses in accordance with the liquor control laws of the state of Arizona. The limitation and regulation of liquor sales as provided in this Code will increase the Nation's ability to control possession and distribution of liquor within the Nation's Reservation.

SECTION 103: AUTHORITY AND PURPOSE

A. This Code is enacted under authority of the Act of August 15, 1953, 67 Stat. 586, (18 U.S.C. Section 1161) and under authority of the Constitution of the Yavapai-Apache Nation (''YAN Constitution''), which authorizes the Tribal Council to exercise the following powers relevant to the adoption of this Liquor Code:

1. YAN Constitution, Article V(a), ''To represent the Tribe and act in all matters that concern the health and welfare of the Tribe, and to make decisions not inconsistent with or contrary to this constitution.''

2. YAN Constitution, Article V (o), to enact codes and ordinances governing law enforcement on lands within the jurisdiction of the Tribe.''

3. YAN Constitution, Article V (u), ''To exercise civil jurisdiction over all tribal members and any non-member of the Tribe to the extent permitted by federal law.''

4. YAN Constitution, Article V (v), ''To enact laws, ordinances and resolutions necessary or incidental to the exercise of its legislative powers.''

B. This Liquor Code is adopted for the purpose of governing, controlling and regulating liquor possession, distribution, sales and service within the Nation's reservation.

SECTION 104: DEFINITIONS

A. Unless otherwise required by the context in which it is used, the following words and phrases shall have the following meanings.

1. ''Alcohol'' means the substance known as ethyl alcohol, hydrated oxide of ethyl, ethanol, or spirits of wine, from whatever source or by whatever process produced, and includes ''spirituous Liquor'' as defined below under Section 104(A)(7).

2. ''Alcoholic Beverage'' is synonymous with the term ''liquor'' as defined in this Section 104. (4) below.

3. ''Beer'' means any beverage obtained by the alcoholic fermentation, infusion, or decoction of barley malt, hops, or other ingredients not drinkable, or any combination thereof.

4. ''Liquor'' or ''Liquor Products'' includes the four varieties of liquor herein defined (alcohol, spirituous liquor, wine, and beer) and means all fermented, spirituous, vinous, or malt liquor, or a combination thereof, and mixed liquor, a part of which is fermented, spirituous, vinous, or malt liquor or otherwise intoxicating in every liquid or solid or semi-solid or other substance patented or not containing alcohol, spirits, wine, or beer, and all

drinks of potable liquids and all preparations or mixtures capable of human consumption, and any liquid, semi-solid, solid, or other substance, which contains more than one-half of one percent (.5%) of alcohol by volume.

5. ''Liquor License'' means the Liquor License approved by the Tribal Council and issued by the state of Arizona upon application by the Nation to such Subordinate Economic Organization or Enterprise of the Nation as the Council may authorize by resolution to hold such license and exercise the rights and privileges thereunder.

6. ''Sale'' and ''Sell'' means any transaction that includes any exchange, barter, sale and traffic; and also includes the selling, supplying or distributing, by any means whatsoever, of liquor by any person to any other person.

7. ''Spirituous Liquor'', ''Spirits'', or ''Distilled Spirits'' includes alcohol, brandy, whiskey, rum, tequila, mescal, gin, wine, porter, ale, beer, any malt liquor or malt beverage, absinthe, a compound or mixture of any of them or of any of them with any vegetable or other substance, alcohol bitters, bitters containing alcohol, any liquid mixture or preparation, whether patented or otherwise, which, when consumed in sufficient quantities, produces intoxication to any degree, fruits preserved in ardent spirits, and beverages containing more than one-half of one percent of alcohol by volume, and including wines exceeding twenty-four percent (24%) of alcohol by volume.

8. ''Wine'' means the product obtained by the fermentation of grapes or other agricultural products containing natural or added sugar or any such alcoholic beverage fortified with grape brandy and containing not more than twenty-four percent (24%) of alcohol by volume, including sweet wines fortified with wine spirits, such as port, sherry, muscatel, and angelica, not exceeding twenty-four percent (24%) of alcohol by volume.

SECTION 105: JURISDICTION

In accordance with the law of the United States as set out at 18 U.S.C. 1161, the Nation asserts its jurisdiction to control and regulate liquor sales and service within the boundaries of the Yavapai-Apache Nation Reservation. For purposes of this Liquor Code ''Reservation'' or ''Jurisdiction'' means those lands within the exterior boundaries of the Yavapai-Apache Nation, any lands that are held in trust by the United States of America for the benefit of the Yavapai-Apache Nation or any of its members, both now and in the future, any other Yavapai-Apache Nation land constituting ''Indian Country'' within the meaning of 18 U.S.C. 1151 or any successor provision, and all lands falling within the Nation's Jurisdiction as provided under Article I of the Constitution of the Yavapai-Apache Nation as approved by the United states Secretary of Interior on April 13, 1992.

SECTION 106: CONFORMITY WITH STATE LAW

A. Authorized liquor sales and service within the Nation's Reservation and Jurisdiction shall comply with the State of Arizona's liquor laws to the extent required by 18 U.S.C. 1161 and other applicable law of the United States.

B. The Nation's Attorney General shall ensure that all liquor license requirements under this Code and under the laws of the State of Arizona are satisfied, that the license(s) authorized by the Tribal Council under this Code are renewed on an annual basis, and that all sales and service of liquor as authorized under this Code are carried out in a manner consistent with this Code and applicable laws of the Nation, and under Arizona law to the extent required by applicable law of the United States.

SECTION 107: REPEAL OF PRIOR LAWS

All prior codes, ordinances and resolutions of the Yavapai-Apache Nation regulating, authorizing, prohibiting, or in any way dealing with the sale or service of liquor, including, but not limited to the ''Ordinance Legalizing the Introduction, Sale or Possession of Intoxicants'', as adopted under Tribal Council Resolution 91–85 on October 19, 1985, are hereby repealed and are declared to be of no further force or effect.

SECTION 108: AUTHORIZED SALES AND SERVICE OF LIQUOR

A. Liquor License Required. Liquor may be offered for sale and served on the Yavapai-Apache Nation Reservation only under a Liquor License as expressly authorized by the Tribal Council in accordance with this Code and applicable federal law.

B. The Council, through the adoption of Council resolutions consistent with this Code, may authorize liquor sales at such additional locations as the Council deems appropriate.

C. Sales for Personal Consumption Only. All liquor sales shall be for the personal use and consumption of the purchaser and not for the purchaser's resale. Any resale of any alcoholic beverage within the Jurisdiction of the Nation is prohibited. Any person or entity that is not licensed under this Code who purchases or possesses an alcoholic beverage within the Nation's Jurisdiction and sells it, whether in the original container or not, shall be guilty of a violation of this Code and shall be subject to such penalties as are prescribed by this Code.

D. License Not Transferable. Except as may be permitted under this Code, Liquor Licenses may not be transferred and said License may only be utilized by the entity holding the License under Section 108 A. above.

E. Inspections. All businesses and their premises holding a Liquor License under this Code shall be open for inspection by the Nation, acting through its officials, agents, employees or other designated representatives, at all reasonable times for the purpose of determining whether said business is complying with this Code.

SECTION 109: ENFORCEMENT

A. In enforcing this Code, the Tribal Council, acting on behalf of the Nation, may take the following actions:

1. Publish and enforce such rules and regulations as deemed necessary by the Council to govern the manufacture, distribution, sale, and possession of liquor within the Nation's Jurisdiction.

2. Revoke any Liquor License approved by the Council under this Code, following a determination by the Council that the holder of said License has violated any provision of this Code or that the License is no longer in the best interest of the Nation. The holder of the License shall be provided notice and an opportunity to be heard in any such revocation action.

3. Bring suit in the Nation's Tribal Court, or any other court of competent jurisdiction, to enforce this Code.

4. Hold such hearings as the Council deems necessary to administer and enforce this Code.

5. Delegate to the Nation's Tribal Court such authority as may be necessary to enforce the civil penalties arising under this Code. Except as may otherwise be provided by applicable federal law, the Nation's Tribal Court shall have exclusive jurisdiction to enforce this Code.

6. Take all such actions as are within the Council's authority under the laws and Constitution of the Yavapai-Apache Nation in the enforcement of this Code.

SECTION 110: PROHIBITIONS AND VIOLATIONS

A. General Prohibition. Except as authorized under a Liquor License issued under Section 107 of this Code, the introduction or possession of Liquor for sales, distribution or service is

prohibited within the Yavapai-Apache Nation's Jurisdiction, and any such possession, sale, distribution or service without such License shall be a violation under this Code. Any person who, without a Liquor License authorized under this Code, introduces or possesses liquor within the Nation's jurisdiction with the intent to sell the same shall be in violation of this Code. In any proceeding under this Code, the conviction of any person in a criminal matter of one unlawful sale, possession or distribution of liquor under any law of the Nation, or a determination by the Tribal Court in a civil matter that said person has engaged in one unlawful sale, possession or distribution under this Code, shall establish prima facie intent of said person to unlawfully keep liquor for sale, selling liquor or distributing liquor in violation of this Code. Federal liquor laws applicable to Indian Country shall remain applicable to any person, act, or transaction which is not authorized by this Code and violators of this Code shall be subject to federal prosecution as well as to legal action in accordance with this Code and the laws of the Nation.

B. Any person who shall sell or offer for sale or distribute or transport in any manner, liquor in violation of this Code, or who shall have liquor for sale in his possession without a Liquor License, shall be in violation of this Code.

C. Any person who, within the Nation's Jurisdiction, buys liquor from any person other than a properly licensed business under Section 108.A. of this Code shall be in violation of this Code.

D. Any person who knowingly keeps or possesses liquor upon his person or in any place or upon any premises conducted or maintained by his employer or principal or agent with the intent to sell or distribute the same contrary to the requirements of this Code, shall be in violation of this Code.

E. No person shall be authorized to sell or serve liquor within the Reservation unless they are at least 21 years of age, except as may be authorized under Arizona liquor control laws. No person may be sold or served liquor unless they are 21 years of age. Any person acting contrary to this prohibition shall be in violation of this Code.

F. No person under the age of 21 years shall consume, acquire or have in his/her possession any liquor. No person shall knowingly permit any other person under the age of 21 years to consume liquor on his/her premises or any premises under his/her control. Any person acting contrary to these prohibitions shall be in violation of this Code, with a separate violation accruing for every drink so consumed by the person under the age of 21 years.

G. Any person who shall sell or provide any liquor to any person under the age of 21 years shall be in violation of this Code for each such drink so provided.

H. Any person who lends, gives or in any way transfers in any manner an identification card or other representation of age to a person under the age of 21 years for the purpose of permitting such person to purchase or otherwise obtain liquor shall be in violation of this Code; provided that corroborative evidence from a source other than the underage person shall be a requirement for finding such violation.

I. Any person who purchases or attempts to purchase liquor through the use of false or altered identification, which falsely purports to show the person to be over the age of 21 years shall be in violation of this Code.

J. When requested by any business or entity holding a liquor license under this Code, any person shall be required to present, and shall present official documentation of the person's age, signature and photograph. This requirement may be satisfied by presentation of one of the following:

i. An unexpired driver license issued by any state, the District of Columbia, any territory of the United States or Canada if the license includes a picture of the licensee and the person's date of birth. A driver license issued to a person who is under twenty-one years of age is no longer an acceptable type of identification under this paragraph thirty days after the person turns twenty-one years of age.

ii. An unexpired non-operating identification license issued by any state, the District of Columbia, any territory of the United States or Canada if the license includes a picture of the person and the person's date of birth. An unexpired non-operating license issued to a person who is under twenty-one years of age is no longer an acceptable type of identification under this paragraph thirty days after the person turns twenty-one years of age.

iii. An unexpired armed forces identification card that includes the person's picture and date of birth.

iv. A valid unexpired passport or a valid unexpired resident alien card that contains a photograph of the person and the person's date of birth.

K. Off Premises Consumption of Liquor—Cliff Castle Casino. All liquor sales and service authorized by this Code at the Cliff Castle Casino and Hotel shall be fully consumed within the premises of the Cliff Castle Casino and Hotel. At the Cliff Castle Casino and Hotel, no open containers of liquor, or unopened containers of liquor in bottles, cans, cups or other containers, or otherwise shall be permitted outside of the above-described premises, except as provided in accordance with the liquor license(s) maintained by the Nation for the Cliff Castle Casino and Hotel, or under such special event license or permit as may be obtained consistent with said license(s). Any person acting contrary to these prohibitions shall be in violation of this Code.

L. No Credit Liquor Sales. The sales and service of liquor authorized by this Code shall be made upon a cash basis only. For purposes of this Code, payment for liquor on a cash basis shall include payment by cash, credit card, or check, including but not limited to any such cash sale of liquor for consumption on a retail licensed premises where the sale is included on bills provided to registered guest in hotels and motels. Any person making liquor sales contrary to this prohibition shall be in violation of this Code.

M. All Liquor which is possessed, including for any distribution, consumption or sale, in violation of the requirements of this Code is hereby declared to be contraband. Any officer of the Yavapai-Apache Nation Police Department shall seize all such contraband and preserve it in accordance with such provisions as apply to the preservation of evidence and impounded property. Upon being found to be in violation of this Code, the person from whom the contraband was seized shall forfeit all right, title and interest in the contraband seized and the same shall become the property of the Nation to be disposed of as it chooses.

SECTION 111: JUDICIAL ENFORCEMENT, REMEDIES AND CIVIL PENALTIES

A. The Nation's Tribal Court is hereby vested with exclusive jurisdiction to hear and determine all violations arising under Section 110 of this Code, including the determination of any violation by any person of the provisions of this Code and the imposition of any penalties arising from said violations.

B. Any person or entity found by the Tribal Court to have violated any provision of this Code shall be liable to pay to the Nation a civil penalty in an amount not less than $250.00 or greater than $500.00 for each such violation. The Tribal Court shall issue such further orders as are within its powers to ensure collection of said penalties by the

Nation. Persons who are not enrolled members of the Nation and who are determined to have violated this Code shall be subject to exclusion from the Yavapai-Apache Nation Reservation under such procedure as is provided under the Nation's Exclusion Ordinance. In addition, persons or entities subject to the criminal jurisdiction of the Nation who violate this Code shall be subject to such criminal punishment as may be provided in the Nation's Criminal Code and nothing in this Liquor Code shall be construed to deprive the Tribal Court of its criminal jurisdiction over such matters in any respect.

C. DECLARATORY AND INJUNCTIVE RELIEF

In addition to all other remedies, whether at law or in equity, available to the Nation's Tribal Court under the Constitution and Laws of the Yavapai-Apache Nation in the enforcement of this Code, the Tribal Court may employ such declaratory and/or injunctive relief as may be necessary to determine the rights and liabilities arising under this Code and to otherwise provide for enforcement of this Code to the fullest extent possible under the Nation's laws.

SECTION 112: SOVEREIGN IMMUNITY PRESERVED

A. Nothing in this Liquor Code is intended or shall be construed as a waiver of the sovereign immunity of the Yavapai-Apache Nation. No official or employee of the Nation or any of the Subordinate Economic Organizations and Enterprises of the Nation shall be authorized, nor shall they attempt, to waive the sovereign immunity of the Nation in any manner under this Code.

SECTION 113: SEVERABILITY

A. If any provision or provisions in this Code are held invalid by a court of competent jurisdiction, this Code shall continue in effect as if the invalid provision(s) were not a part hereof.

SECTION 114: EFFECTIVE DATE

A. This Code shall be effective immediately upon its approval by the Yavapai-Apache Nation Tribal Council, subject only to the certification of the United States Secretary of the Interior, or his/her designee, and its publication in the **Federal Register** as provided by federal law at 18 U.S.C § 1161.

BILLING CODE 4337–15–P

DEPARTMENT OF THE INTERIOR

Office of the Secretary

[167D0102R2 DR2000000.IMD000 DS63605000]

Privacy Act of 1974, as Amended; Notice To Amend an Existing System of Records

AGENCY: Office of the Secretary, Interior.

ACTION: Notice of an amendment to an existing system of records.

SUMMARY: Pursuant to the provisions of the Privacy Act of 1974, as amended, the Department of the Interior is issuing a public notice of its intent to amend the Privacy Act system of records, ''Mineral Lease and Royalty Accounting Files—Interior, MMS–1'', to update the system name, system location, categories of individuals covered by the system, categories of records in the system, authority for maintenance of the system, routine uses, storage, safeguards, retention and disposal, system manager and address, notification procedures, records access and contesting procedures, and records source categories. The system name will be updated to ''Minerals Revenue Management Support System (MRMSS), OS–30'' to reflect new organizational management. The purpose of the system is to facilitate billing, accounts receivable, general ledger, compliance management, and collection of revenues.

DATES: Comments must be received by April 25, 2016. The amendments to the system will be effective April 25, 2016.

ADDRESSES: Any person interested in commenting on this notice may do so by: Submitting comments in writing to Teri Barnett, Departmental Privacy Officer, U.S. Department of the Interior, 1849 C Street NW., Mail Stop 5547 MIB, Washington, DC 20240; hand-delivering comments to Teri Barnett, Departmental Privacy Officer, U.S. Department of the Interior, 1849 C Street NW., Mail Stop 5547 MIB, Washington, DC 20240; or emailing comments to *Privacy@ios.doi.gov.*

FOR FURTHER INFORMATION CONTACT: Minerals Revenue Management Support System Program Manager, Information Management Center (IMC), Office of Natural Resources Revenue, U.S. Department of the Interior, P.O. Box 25165, Lakewood, CO 80225, or by telephone at 303–231–3177.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of the Interior (DOI) Office of Natural Resources Revenue (ONRR), within the Office of the Secretary, is responsible for the management of revenue associated with both Federal offshore and onshore mineral leases, and revenue management services for mineral leases on Indian lands in partnership with the Bureau of Indian Affairs. ONRR maintains the ''Mineral Lease and Royalty Accounting Files—Interior, MMS–1,'' system of records to manage these responsibilities in support of ONRR's mission to collect, disburse, and verify Federal and Indian energy and other natural resource revenues on behalf of Americans. Due to the restructuring of the Minerals Management Service and ONRR within the Office of the Secretary, DOI is proposing to revise the system name to ''Minerals Revenue Management Support System (MRMSS), OS–30'' to reflect the new organizational management. Other proposed amendments to the system include updating the system location, categories of individuals covered by the system, categories of records in the system, authority for maintenance of the system, routine uses, storage, safeguards, retention and disposal, system manager and address, notification procedures, record access and contesting record procedures, and records source categories. The Mineral Lease and Royalty Accounting Files—Interior, MMS–1 system notice was last published in the **Federal Register** on March 17, 1986 (51 FR 9121).

The MRMSS system facilitates mineral lease revenue management including billing, accounts receivable, rents, royalty payments, general ledger activity, compliance management, reporting, and the collection of revenues. The system also supports ONRR Outreach program activities for Indian mineral owners, to foster communication and enhance ONNR's trust responsibilities, and resolve royalty-related problems in partnership with the Bureau of Indian Affairs, Bureau of Land Management, and Office of the Special Trustee for American Indians. The MRMSS system helps ONRR meet its fiduciary responsibilities to manage revenues from energy and mineral leases for the use of public natural resources. The records in the MRMSS are related to both business entities and individuals, though records concerning corporations and other business entities are not subject to the Privacy Act.

The amendments to the system notice will be effective as proposed at the end of the comment period (the comment period will end 30 days after the publication of this notice in the **Federal**

Register), unless comments are received which would require a contrary determination. DOI will publish a revised notice if changes are made based upon a review of the comments received.

II. Privacy Act

The Privacy Act of 1974, as amended (5 U.S.C. 552a), embodies fair information practice principles in a statutory framework governing the means by which Federal agencies collect, maintain, use, and disseminate individuals' personal information. The Privacy Act applies to records about individuals that are maintained in a ''system of records.'' A ''system of records'' is a group of any records under the control of an agency for which information about an individual is retrieved by the name or by some identifying number, symbol, or other identifier assigned to the individual. The Privacy Act defines an individual as a U.S. citizen or lawful permanent resident. As a matter of policy, DOI extends administrative Privacy Act protections to all individuals. Individuals may request access to their own records that are maintained in a system of records in the possession or under the control of DOI by complying with DOI Privacy Act regulations at 43 CFR part 2, subpart K.

The Privacy Act requires each agency to publish in the **Federal Register** a description denoting the type and character of each system of records that the agency maintains, the routine uses of each system to make agency record keeping practices transparent, to notify individuals regarding the uses of their records, and to assist individuals to more easily find such records within the agency. The amended Minerals Revenue Management Support System (MRMSS), OS–30 system of records notice is published in its entirety below.

In accordance with 5 U.S.C. 552a(r), DOI has provided a report of this system of records to the Office of Management and Budget and to Congress.

III. Public Disclosure

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: March 22, 2016.

Teri Barnett,

Departmental Privacy Officer.

System Name:

Minerals Revenue Management Support System (MRMSS), OS–30.

SYSTEM CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Records in this system are located at the Office of Natural Resources Revenue Center, Denver Federal Center, P.O. Box 25165, MS6055A, Denver, Colorado 80225, and at Office of Natural Resources Revenue contractor facilities that process electronic Minerals Revenue Management Support System records.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals covered by the system include lease and permit holders, current and former landowners and lessees, royalty payors and production operators, individuals who have reported rents, royalties, and bonuses from oil or other minerals or gas from producing or nonproducing Federal or Indian leases, current and former Federal employees and contractors, state and local government employees, and Tribal government officials. The system also contains records concerning corporations and other business entities that are not subject to the Privacy Act. However, records pertaining to individuals acting on behalf of corporations and other business entities may reflect personal information.

CATEGORIES OF RECORDS IN THE SYSTEM:

This system contains records relating to the general administration of the MRMSS, and records relating to minerals revenue asset management, compliance management, and financial management. These records are related to business entities and individuals and includes leases, permits, correspondence, forms, disbursements, reports, and other documents which may contain first and last names, addresses, telephone numbers, fax numbers, email addresses, other contact information, lease numbers, revenues collected, outreach information of individual Indian owners, dates due, customer identification number, owner identification number, location of land, type of lease, lessee and/or payor information, allottee production volume, commodity, reported revenues, sales value, royalty amounts, tax identification number, rate billed, amount charged, interest and penalty, collection actions, bank account number, check number, amount paid, contract number, agreement number, allotment number, well number, and other information that may be generated or maintained during the processing and administration of minerals revenue management responsibilities. The records concerning corporations and other business entities are compliance activities and are not subject to the Privacy Act. However, records pertaining to individuals acting on behalf of corporations and other business entities may reflect personal information.

ONRR Outreach program activities include phone calls, email, and correspondence, as well as meetings with individual Indian owners that have ownership in revenues that come from mineral leases. These records may include first and last name, email address, phone number, individual owner identification, allocated ownership percentage, estimated revenues from leases, and other information that may be contained in correspondence with or requests from individuals generated through outreach activities to support and provide a response to customer inquiries.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

The Federal Oil and Gas Royalty Management Act of 1982, 30 U.S.C. 1701–1759; Chapter 12 of Title 25 of the U.S. Code, addressing the lease, sale, or surrender of allotted or unallotted lands, found at 25 U.S.C. 391–416j; Chapter 3A of Title 30 of the U.S. Code, addressing leases and prospecting permits, found at 30 U.S.C. 181–196; and the Outer Continental Shelf Lands Act, 43 U.S.C. 1331–1356b.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

The purposes of the system are to collect royalties and rents; control revenues; distribute funds collected; maintain records of royalty accounts and associated sales and production information; provide data to facilitate comparative auditing of mineral production, royalties due, revenues collected, and funds distributed; gather statistics for managing the mineral leasing program; provide informational access to external users including states, Indian tribes or agencies, and Federal agencies; and provide outreach services to the Indian community.

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be

disclosed outside DOI as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

(1) (a) To any of the following entities or individuals, when the circumstances set forth in paragraph (b) are met:

(i) The U.S. Department of Justice (DOJ);

(ii) A court or an adjudicative or other administrative body;

(iii) A party in litigation before a court or an adjudicative or other administrative body; or

(iv) Any DOI employee acting in his or her individual capacity if DOI or DOJ has agreed to represent that employee or pay for private representation of the employee;

(b) When:

(i) One of the following is a party to the proceeding or has an interest in the proceeding:

(A) DOI or any component of DOI;

(B) Any other Federal agency appearing before the U.S. Department of the Interior's Office of Hearings and Appeals;

(C) Any DOI employee acting in his or her official capacity;

(D) Any DOI employee acting in his or her individual capacity if DOI or DOJ has agreed to represent that employee or pay for private representation of the employee;

(E) The United States, when DOJ determines that DOI is likely to be affected by the proceeding; and

(ii) DOI deems the disclosure to be:

(A) Relevant and necessary to the proceeding; and

(B) Compatible with the purpose for which the records were compiled.

(2) To a congressional office in response to a written inquiry that an individual covered by the system, or the heir of such individual if the covered individual is deceased, has made to the office.

(3) To any criminal, civil, or regulatory law enforcement authority (whether Federal, state, local, tribal or foreign) when a record, either alone or in conjunction with other information, indicates a violation or potential violation of law—criminal, civil, or regulatory in nature, and the disclosure is compatible with the purpose for which the records were compiled.

(4) To an official of another Federal agency to provide information needed in the performance of official duties related to reconciling or reconstructing data files or to enable that agency to respond to an inquiry by the individual to whom the record pertains.

(5) To Federal, state, local, tribal, or foreign agencies that have requested information relevant or necessary to the hiring, firing or retention of an employee or contractor, or the issuance of a security clearance, license, contract, grant or other benefit, when the disclosure is compatible with the purpose for which the records were compiled.

(6) To representatives of the National Archives and Records Administration (NARA) to conduct records management inspections under the authority of 44 U.S.C. 2904 and 2906.

(7) To state, territorial and local governments and tribal organizations to provide information needed in response to court order and/or discovery purposes related to litigation, when the disclosure is compatible with the purpose for which the records were compiled.

(8) To an expert, consultant, or contractor (including employees of the contractor) of DOI that performs services requiring access to these records on DOI's behalf to carry out the purposes of the system.

(9) To appropriate agencies, entities, and persons when:

(a) It is suspected or confirmed that the security or confidentiality of information in the system of records has been compromised; and

(b) DOI has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interest, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by DOI or another agency or entity) that rely upon the compromised information; and

(c) The disclosure is made to such agencies, entities and persons who are reasonably necessary to assist in connection with DOI's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

(10) To the Office of Management and Budget (OMB) during the coordination and clearance process in connection with legislative affairs as mandated by OMB Circular A–19.

(11) To the Department of the Treasury to recover debts owed to the United States.

(12) To the news media and the public, with the approval of the Public Affairs Officer in consultation with counsel and the Senior Agency Official for Privacy, where there exists a legitimate public interest in the disclosure of the information, except to the extent it is determined that release of the specific information in the context of a particular case would constitute an unwarranted invasion of personal privacy.

(13) To other Federal agencies for the purpose of submitting reports, data and information related to the production of minerals such as oil, gas and solids associated with the management of revenues.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Pursuant to 5 U.S.C. 552a(b)(12), disclosures may be made to a consumer reporting agency as defined in the Fair Credit Reporting Act (15 U.S.C. 1681a(f)) or the Federal Claims Collection Act of 1996 (31 U.S.C. 3701(a)(3)).

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records are maintained in paper form in file folders stored in file cabinets, and electronic media such as computers, magnetic disk, diskette, compact discs and computer tapes. The electronic records are maintained in removable drives, computer servers, email and electronic databases.

RETRIEVABILITY:

Customer records are retrieved by name or customer identification number, owner name, or owner identification number; land information is retrieved by location and whether or not the lease is an Indian lease or a Federal onshore or offshore lease. Records are indexed by lease or contract number; lessee and/or payor; permittee; production reporter; and/or commodity.

SAFEGUARDS:

The records contained in this system are safeguarded in accordance with 43 CFR 2.226 and other applicable security and privacy rules and policies. During normal hours of operation, paper records are maintained in locked filed cabinets under the control of authorized personnel. Computerized records systems follow the National Institute of Standards and Technology standards as developed to comply with the Privacy Act of 1974, 5 U.S.C. 552a; Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3521; Federal Information Security Modernization Act of 2014, 44 U.S.C. 3551–3558; and the Federal Information Processing Standards 199: Standards for Security Categorization of Federal Information and Information Systems. Computer servers in which electronic records are stored are located in secured contractor facilities with physical, technical and administrative levels of security to prevent unauthorized access to the DOI network and information assets. Security controls include

encryption, firewalls, audit logs, and network system security monitoring.

Electronic data is protected through user identification, passwords, database permissions and software controls. Access to records in the system is limited to authorized personnel who have a need to access the records in the performance of their official duties, and each user's access is restricted to only the functions and data necessary to perform that person's job responsibilities. System administrators and authorized users are trained and required to follow established internal security protocols and must complete all security, privacy, and records management training and sign the DOI Rules of Behavior. A privacy impact assessment was conducted to ensure appropriate controls and safeguards are in place to protect the information within the system.

RETENTION AND DISPOSAL:

Records in this system are maintained under the Minerals Management Service (MMS) Comprehensive Schedule approved by NARA (NC1–057–84–07), which include both permanent and temporary dispositions. These records are subject to litigation holds and permanent retention. Administrative records and general correspondence files have temporary dispositions and are maintained in accordance their respective records schedules dependent on the specific subject matter or function and retention requirements. Temporary mission files related to mineral resource, lease and royalty management activities are cut off at the close of the fiscal year then transferred to a Federal records center, one year after cutoff, and destroyed 7 years after cutoff. Approved disposition methods include shredding or pulping paper records, and degaussing or erasing electronic records in accordance with 384 Department Manual 1 and NARA guidelines.

SYSTEM MANAGER AND ADDRESS:

MRMSS Program Manager, Information Management Center (IMC), Office of Natural Resources Revenue, U.S. Department of the Interior, P.O. Box 25165, Lakewood, Colorado 80225.

NOTIFICATION PROCEDURES:

An individual requesting notification of the existence of records on himself or herself should send a signed, written inquiry to the System Manager identified above. The request envelope and letter should both be clearly marked ''PRIVACY ACT INQUIRY.'' A request for notification must meet the requirements of 43 CFR 2.235.

RECORDS ACCESS PROCEDURES:

An individual requesting records on himself or herself should send a signed, written inquiry to the System Manager identified above. The signed request should describe the records sought as specifically as possible. The request envelope and letter should both be clearly marked ''PRIVACY ACT REQUEST FOR ACCESS.'' A request for access must meet the content requirements of 43 CFR 2.238.

CONTESTING RECORDS PROCEDURES:

An individual requesting corrections or the removal of material from his or her records should send a signed, written request to the System Manager identified above. A request for corrections or removal must meet the requirements of 43 CFR 2.246.

RECORD SOURCE CATEGORIES:

Information in the system is obtained directly from lease and permit holders, current and former landowners and lessees, royalty payors and production operators, individuals who have reported rents, royalties, and bonuses from oil or other minerals or gas from producing or nonproducing Federal or Indian leases, current and former Federal employees and contractors, state and local government employees, and Tribal government officials. Information may also be obtained from DOI bureau and office records supporting revenue management and outreach activities including the Bureau of Ocean Energy Management, Bureau of Safety and Environmental Enforcement, Bureau of Land Management, Bureau of Indian Affairs, Office of the Special Trustee for American Indians, other offices or programs providing support or data for this system, and other Federal, state, tribal or local agencies.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

BILLING CODE 4334–03–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLORC01000.L63100000.HD0000. 16XL1116AF; HAG 16–0098]

Notice of Public Meeting for the Coastal Oregon Resource Advisory Council

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act and the Federal Advisory Committee Act of 1972, and the U.S. Department of the Interior, Bureau of Land Management (BLM), the Coastal Oregon Resource Advisory Council (RAC) will meet as indicated below:

DATES: The Coastal Oregon RAC will hold a public meeting Thursday, April 7th, 2016, from 12:30 p.m. to 5:00 p.m. and Friday, April 8th, 2016, from 8:00 a.m. to 2:30 p.m.

ADDRESSES: The Coastal Oregon RAC will meet at the Coos Bay District Office, 1300 Airport Lane, North Bend, Oregon 97459.

FOR FURTHER INFORMATION CONTACT: Megan Harper, Public Affairs Specialist, BLM Coos Bay District Office, 1300 Airport Lane, North Bend, Oregon 97459, (541) 751–4353, or email *m1harper@blm.gov*. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1 (800) 877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Coastal Oregon RAC consists of 15 members chartered and appointed by the Secretary of the Interior. Their diverse perspectives are represented in commodity, conservation, and general interests. They provide advice to BLM resource managers regarding management plans and proposed resource actions on public land in coastal Oregon. Tentative agenda items for the April 7th and 8th, 2016, meeting include review and recommendation of projects to fund under Title II of the Secure Rural Schools and Community Self Determination Act, as reauthorized. Any other matters that may reasonably come before the Coastal Oregon RAC may also be addressed. This meeting is open to the public in its entirety.

A public comment period will be available on April 7th, 2016 at 3:45 p.m. Unless otherwise approved by the Coastal Oregon RAC Chair, the public comment period will last no longer than 30 minutes, and each speaker may address the Coastal Oregon RAC for a maximum of 5 minutes. Meeting times and the duration scheduled for public comment periods may be extended or altered when the authorized representative considers it necessary to accommodate necessary business and all who seek to be heard regarding matters before the Coastal Oregon RAC.

Before including your address, phone number, email address, or other personal identifying information in your

comments, please be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Patricia Burke,

Coos Bay District Manager.

The committee may also consider the following historic trail:

REVISION OF FEASIBILITY STUDIES OF OREGON, CALIFORNIA, MORMON PIONEER AND PONY EXPRESS NATIONAL HISTORIC TRAILS, CA, CO, ID, IA, KS, MO, NE., NV, OK, OR, UT, WA, AND WY

FOR FURTHER INFORMATION CONTACT: Patricia Henry, Historian, National Historic Landmarks Program, National Park Service, 1849 C Street NW., Washington, DC 20240, email: (202) 354–2216 or email: *Patty_Henry@nps.gov.*

SUPPLEMENTARY INFORMATION: The purpose of the meeting of the National Historic Landmarks Committee of the National Park System Advisory Board is to evaluate nominations of historic properties in order to advise the National Park System Advisory Board of the qualifications of each property being proposed for National Historic Landmark designation, and to make recommendations regarding the possible designation of those properties as National Historic Landmarks to the National Park System Advisory Board at a subsequent meeting at a place and time to be determined. The Committee also makes recommendations to the National Park System Advisory Board regarding amendments to existing designations and proposals for withdrawal of designation. The members of the National Historic Landmarks Committee are:

Dr. Stephen Pitti, Chair
Dr. James M. Allan
Dr. Cary Carson
Dr. Yong Chen
Mr. Douglas Harris
Ms. Mary Hopkins
Mr. Luis Hoyos, AIA
Dr. Sarah A. Leavitt
Dr. Barbara J. Mills
Dr. Michael E. Stevens
Dr. Amber Wiley
Dr. David Young

The meeting will be open to the public. Pursuant to 36 CFR part 65, any member of the public may file, for consideration by the National Historic Landmarks Committee of the National Park System Advisory Board, written comments concerning the National Historic Landmarks nominations, amendments to existing designations, or proposals for withdrawal of designation.

Comments should be submitted to J. Paul Loether, Chief, National Historic Landmarks Program and National Register of Historic Places, National Park Service, 1849 C Street NW., Washington, DC 20240, email: *Paul_Loether@nps.gov.*

Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: March 21, 2016.

Notice of 2016 Meeting Schedule for Gettysburg National Military Park Advisory Commission

AGENCY: National Park Service, Interior.

ACTION: Notice of meetings.

SUMMARY: This notice announces a schedule of upcoming meetings for the Gettysburg National Military Park Advisory Commission.

DATES: The Gettysburg National Military Park Advisory Commission will host two meetings on Thursday, April 28, 2016, and Thursday, September 15, 2016. Both scheduled meetings will begin at 7:00 p.m. and end at 9:00 p.m. (EASTERN). Efforts have been made locally to ensure that the interested public is aware of the meeting dates.

Locations: Both meetings will be held at the Gettysburg National Military Park Museum and Visitor Center in the Ford Education Center, 1195 Baltimore Pike, Suite 100, Gettysburg, Pennsylvania 17325.

FOR FURTHER INFORMATION CONTACT: Ed Clark, Superintendent and Designated Federal Official, Gettysburg National Military Park, 1195 Baltimore Pike, Suite 100, Gettysburg, Pennsylvania 17325, or telephone (717) 334–1124 or email *ed_w_clark@nps.gov.*

SUPPLEMENTARY INFORMATION: The Gettysburg National Military Park Advisory Commission was established by Public Law 101–377. The scheduled meetings will be open to the public. Each scheduled meeting will include presentations on the Gettysburg National Military Park Operational Update, and subcommittee reports. The April 28, 2016, meeting will also have the nomination of new officers. Any member of the public may file with the committee a written statement with

issues or concerns. The statement should be addressed to Gettysburg National Military Park Advisory Commission, 1195 Baltimore Pike, Gettysburg, PA 17325.

Before including your address, telephone number, email address, or other personal identifying information in your comments—you should be aware that your entire comment—including your personal identifying information may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public view, we cannot guarantee that we will be able to do so.

Dated: March 21, 2016.

Notice of April 20–21, 2016, Meeting of the Preservation Technology and Training Board

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. Appendix 1–16), that the Preservation Technology and Training Board (PTT Board) of the National Center for Preservation Technology and Training (NCPTT), National Park Service, will meet on April 20, 2016, and April 21, 2016, at Ball State University in Muncie, Indiana.

The PTT Board's meeting agenda will include: Review and comment on the NCPTT FY 2015 accomplishments, and operational priorities for FY 2016; FY 2015 and FY 2016 NCPTT budget and initiatives; recent research; and training programs.

DATES: Wednesday, April 20, 2016, 9:00 a.m. to 5:00 p.m. (CDT) and Thursday, April 21, 2016, 9:00 a.m. to 12:00 p.m. (CDT) in Muncie, Indiana.

ADDRESSES: The meeting location on Wednesday, April 20, 2016: Ball State University, L.A. Pittenger Student Center, Forum Room, 2nd Floor, Muncie, Indiana 47306. The meeting location on Thursday, April 21, 2016: Ball State University, Bracken Library, Room 215, 2nd Floor, Muncie, Indiana 47306.

FOR FURTHER INFORMATION CONTACT: Persons wishing more information concerning this meeting, or who wish to submit written statements, may contact: Kirk A. Cordell, Executive Director, National Center for Preservation Technology and Training, National Park Service, U.S. Department of the Interior, 645 University Parkway, Natchitoches, LA 71457, telephone (318) 356–7444 or via email *kirk_cordell@nps.gov.* In addition to U.S. mail or commercial delivery, written comments may be sent by fax to Mr. Cordell at (318) 356–9119.

SUPPLEMENTARY INFORMATION: The PTT Board was established by Congress to provide leadership, policy advice, and professional oversight to the NCPTT in compliance with Section 404 of the National Historic Preservation Act of 1966, as amended, (54 U.S.C. 305303).

The PTT Board meeting is open to the public. Facilities and space for accommodating members of the public are limited; however, visitors will be accommodated on a first-come, first-served basis. Any member of the public may file a written statement concerning any of the matters to be discussed by the PTT Board.

Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Minutes of the meeting will be available for public inspection no later than 90 days after the meeting at the office of the Executive Director, National Center for Preservation Technology and Training, National Park Service, U.S. Department of the Interior, 645 University Parkway, Natchitoches, LA 71457, telephone (318) 356–7444.

Dated: March 21, 2016.

Alma Ripps,

Chief, Office of Policy.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–NERO–GETT–20397; PPMPSPD1Z.YM0000] [PPNEGETTS1]

Request for Nominations for the Gettysburg National Military Park Advisory Commission

AGENCY: National Park Service, Interior.

ACTION: Request for nominations.

SUMMARY: The National Park Service (NPS), U.S. Department of the Interior, proposed to appoint new member to the Gettysburg National Military Park Advisory Commission (Commission). The NPS is requesting nominations for qualified persons to serve as members of the Commission.

DATES: Written nominations must be received by April 25, 2016.

ADDRESSES: Nominations or requests for further information should be sent to Catherine Lawhon, Management Assistant, Gettysburg National Military Park/Eisenhower National Historic Site, 1195 Baltimore Pike, Suite 100, Gettysburg, Pennsylvania, 17325, telephone at (717) 338–4402.

FOR FURTHER INFORMATION CONTACT: Catherine Lawhon, Management Assistant, Gettysburg National Military Park/Eisenhower National Historic Site, 1195 Baltimore Pike, Suite 100, Gettysburg, Pennsylvania, 17325, telephone at (717) 338–4402, email *katie_lawhon@nps.gov.*

SUPPLEMENTARY INFORMATION: The Commission was established by Public Law 101–377 (16 U.S.C. 430g–8), to advise the Secretary of the Interior on the coordination of the management of the Gettysburg National Military Park and Gettysburg Battlefield Historic District with local governmental jurisdictions.

The Commission is composed of 11 members, 10 of whom are appointed by the Secretary of the Interior, as follows: (a) One member representing each of the four townships surrounding the park (Cumberland, Mount Joy, Mount Pleasant, Straban Townships) and the Borough of Gettysburg; (b) one member representing the Adams County, Pennsylvania government; (c) one member representing the Pennsylvania State Historic Preservation Office; (d) two members who are residents of Adams County and are knowledgeable about the park and its resources, one of whom owns land or interests in land within the park boundary; and (e) one member with expertise in local historic preservation. The Director of the National Park Service or a designee, is an ex officio, non-voting member.

Each member shall be appointed for a term of three years. A member may serve after the expiration of that member's term until a successor has taken office. The Chairperson of the Commission shall be elected by the members.

We are currently seeking members representing Mount Joy Township, Straban Township, and the State Historic Preservation Office of the Commonwealth of Pennsylvania.

Nominations should be typed and should include a resume providing an adequate description of the nominee's qualifications, including information that would enable the Department of the Interior to make an informed decision regarding meeting the membership requirements of the Commission and permit the Department of the Interior to contact a potential member.

Members of the Commission serve without compensation. However, while away from their homes or regular places of business in the performance of services for the Commission as approved by the Designated Federal Officer, members may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in Government service are allowed such expenses under Section 5703 of Title 5 of the United States Code.

Individuals who are Federally registered lobbyists are ineligible to serve on all FACA and non-FACA boards, committees, councils in an individual capacity. The term ''individual capacity'' refers to individuals who are appointed to exercise their own individual best judgment on behalf of the government, such as when they are designated Special Government Employees, rather than being appointed to represent a particular interest.

Dated: March 15, 2016.

Alma Ripps,

Chief, Office of Policy.

BILLING CODE 4310–EE–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Motorized Self-Balancing Vehicles, DN 3129;* the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing under section 210.8(b) of the Commission's Rules of Practice and Procedure (19 CFR 210.8(b)).

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at EDIS,[1] and will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000.

General information concerning the Commission may also be obtained by accessing its Internet server at United States International Trade Commission (USITC) at USITC.[2] The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at EDIS.[3] Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to section 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Razor USA LLC, Inventist, Inc. and Shane Chen on March 22, 2016. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain motorized self-balancing vehicles. The complaint names as respondents Alibaba Group Holding Ltd. of Hong Kong; Alibaba Group Holding Ltd. (U.S.) of San Mateo, CA; Alibaba.com Ltd. of China; Alibaba Global Shipping Inc. a.k.a Alibaba Logistics, Inc. of Oakland, CA; Hangzhou Chic Intelligent Technology Co., Ltd. of China; Contixo of Ontario, CA; ZTO Store a.k.a. ZTO Trading, Inc. of Monterey Park, CA; CyBoard LLC a.k.a. Shark Empire Inc. of Glendale, CA; Genius Technologies a.k.a. Prime Capital of Hastings, MN; GyroGlyder.com of Stockton, CA; HoverTech of Hebron, KY; InMotion Entertainment Group LLC of Jacksonville, FL; Soibatian Corporation dba IO Hawk and dba Smart Wheels of Glendale, CA; Jetson Electric Bikes LLC of New York, NY; Joy Hoverboard, a.k.a. Huizhou Aoge Enterprize Co. Ltd. of China; Shenzhen Kebe Technology Co., Ltd. of China; Leray Group of China; Modell's Sporting Goods, Inc. of New York, NY; Newegg.com Inc. of City of Industry, CA; PhunkeeDuck, Inc. of Floral Park, NY; Powerboard a.k.a. Optimum Trading Co. of Hebron, KY; Shareconn International, Inc. of China; Shenzhen Chenduoxing Electronic Technology Ltd. of China; Shenzhen Jomo Technology Co., Ltd. of China ; Shenzhen R.M.T. Technology Co., Ltd. of China; Shenzhen Supersun Technology Co. Ltd., a.k.a. Aottom of China; Skque Products of Irwindale, CA; Spaceboard USA of Norcross, GA; Swagway LLC of Southbend, IN; Twizzle Hoverboard of La Puente, CA; and Uwheels of Santa Ana, CA. The complainant requests that the Commission issue a general exclusion order, or in the alternative, a limited exclusion order, and a cease and desist order.

Proposed respondents, other interested parties, and members of the public are invited to file comments, not to exceed five (5) pages in length, inclusive of attachments, on any public interest issues raised by the complaint or section 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third

[2] United States International Trade Commission (USITC): *http://edis.usitc.gov.*

[3] Electronic Document Information System (EDIS): *http://edis.usitc.gov.*

party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to section 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the docket number (''Docket No. 3129'') in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, Electronic Filing Procedures [4]). Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[5]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of sections 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: March 22, 2016.

Lisa R. Barton,

Secretary to the Commission.

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–970]

Certain Height Adjustable Desk Platforms and Components Thereof Commission Determination Not To Review an Initial Determination Granting a Joint Motion To Terminate the Investigation on the Basis of Settlement; Termination of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review the presiding administrative law judge's (''ALJ'') initial determination (''ID'') (Order No. 14) granting the joint motion of complainant Varidesk LLC of Coppell, Texas (''Varidesk'') and respondent Brunswick Corp. of Lake Forest, Illinois (''Brunswick'') to terminate the above-referenced investigation on the basis of a patent license, and settlement and release agreement. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Megan M. Valentine, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708–2301. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on November 6, 2015, based on a Complaint filed by Varidesk, as supplemented and amended. 80 *FR* 68877–78 (Nov. 6, 2015). The Complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 (''section 337''), in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain height adjustable desk platforms and components thereof by reason of infringement of certain claims of U.S. Patent No. 9,113,703. The Complaint further alleges the existence of a domestic industry. The Commission's Notice of Investigation named Brunswick as the only respondent. The Office of Unfair Import Investigations (''OUII'') was also named as a party to the investigation.

On February 17, 2016, Varidesk and Brunswick filed a joint motion to terminate this investigation based on a patent license, and settlement and release agreement. On February 25, 2016, OUII filed a response supporting the motion.

On February 25, 2016, the ALJ issued the subject ID, granting the joint motion for termination of the investigation. The ALJ found that the joint motion complied with the requirements of Commission Rule 210.21(b)(1) and that granting the motion would not be contrary to the public interest.

No petitions for review of the subject ID were filed.

The Commission has determined not to review the ID.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: March 22, 2016.

Lisa R. Barton,

Secretary to the Commission.

[FR Doc. 2016–06808 Filed 3–24–16; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

[OMB Number 1117–0031]

Agency Information Collection Activities; Proposed eCollection, eComments Requested; Extension Without Change of a Previously Approved Collection Application for Registration Under Domestic Chemical Diversion Control Act of 1993, Renewal Application for Registration Under Domestic Chemical Diversion Control Act of 1993; DEA Forms 510, 510A

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Drug Enforcement Administration (DEA), will be submitting the following information

collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** at 81 FR 2240, January 15, 2016, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until April 25, 2016.

FOR FURTHER INFORMATION CONTACT: If you have comments on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Barbara J. Boockholdt, Office of Diversion Control, Drug Enforcement Administration; Mailing Address: 8701 Morrissette Drive, Springfield, Virginia 22152; Telephone: (202) 598–6812.

Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Evaluate whether and if so how the quality, utility, and clarity of the information proposed to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a currently approved collection.

2. *Title of the Form/Collection:* Application for Registration under Domestic Chemical Diversion Control Act of 1993; Renewal Application for Registration under Domestic Chemical Diversion Control Act of 1993.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* DEA Forms: 510, 510A. The applicable component within the Department of Justice is the Drug Enforcement Administration, Office of Diversion Control.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Affected public (Primary): Business or other for-profit.

Affected public (Other): None.

Abstract: The DEA implements the Controlled Substances Act (CSA) which requires that every person who manufactures or distributes a list I chemical shall annually obtain a registration for that purpose.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:*

	Number of annual respondents	Average time per response	Total annual burden hours
DEA–510 (paper)	14	0.20 hours (12 minutes)	2.80
DEA–510 (electronic)	116	0.17 hours (8 minutes)	15.47
DEA–510A (paper)	97	0.2 hours (10 minutes)	16.17
DEA–510A (electronic)	827	0.07 hours (4 minutes)	55.13
Total	1,054		89.57

6. *An estimate of the total public burden (in hours) associated with the proposed collection:* The DEA estimates that this collection takes 89.57 annual burden hours.

If additional information is required please contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Suite 3E.405B, Washington, DC 20530.

Dated: March 22, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Notice Lodging of Proposed Consent Decree Under the Oil Pollution Act

On March 21, 2016, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the District of Puerto Rico in the lawsuit entitled *United States et al.* v. *GMR Progress LLC et al.,* Civil Action No. 3:16–cv–01507.

The Consent Decree resolves the United States' and the Commonwealth of Puerto Rico's claims set forth in the complaint against Defendants GMR Progress LLC and General Maritime Management (Portugal) Lda for natural resource damages caused by an oil spill from the vessel Genmar Progress on August 29, 2007. Under the Consent Decree, the Defendants will pay a total of $2,750,000, including $83,090 in assessment costs and $2,666,910 to restore the injury to natural resources resulting from the Spill.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division and should refer to *United States et al.* v. *GMR Progress et al.,* D.J. Ref. No. 90–5–1–1–11218. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*

To submit comments:	Send them to:
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, D.C. 20044–7611.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department Web site: *https://www.justice.gov/enrd/consent-decrees.* We will provide a paper copy of the Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $13.75 (25 cents per page reproduction cost) payable to the United States Treasury. For a paper copy without the exhibits and signature pages, the cost is $5.25.

Robert E. Maher,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

DEPARTMENT OF JUSTICE

National Institute of Corrections

Advisory Board; Notice of Meeting

This notice announces a forthcoming meeting of the National Institute of Corrections (NIC) Advisory Board. The meeting will be open to the public.

Name of the Committee: NIC Advisory Board.

General Function of the Committee: To aid the National Institute of Corrections in developing long-range plans, advise on program development, and to support NIC's efforts in the areas of training, technical assistance, information services, and policy/program development assistance to Federal, state, and local corrections agencies.

Date and Time: 8:00 a.m.–4:30 p.m. on Thursday, May 5, 2016. 8:00 a.m.–12:00 p.m. on Friday, May 6, 2016.

Location: National Institute of Corrections, 500 First Street NW., 2nd Floor, Washington, DC 20534, (202) 514–4222.

Contact Person: Shaina Vanek, Executive Assistant, National Institute of Corrections, 320 First Street NW., Room 5002, Washington, DC 20534. To contact Ms. Vanek, please call (202) 514–4222.

Agenda: On May 5–6, 2016, the Advisory Board will hear updates on the following topics: (1) Agency Report from the NIC Director, (2) a briefing from NIC Jails Division on current activities and future goals, (3) submission and discussion of the final report from the Staff Wellness Subcommittee, and (4) partner agency updates.

Procedure: On May 5–6, 2016, the meetings are open to the public. Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Oral presentations from the public will be scheduled between approximately 11:15 a.m. to 11:30 a.m. and 4:00 p.m. and 4:15 p.m. on May 5, 2016 and between 11:15 a.m. and 11:30 a.m. on May 6, 2016. Time allotted for each presentation may be limited. Those desiring to make formal oral presentations should notify the contact person and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before April 27, 2016.

General Information: NIC welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Shaina Vanek at least 7 days in advance of the meeting. Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Jim Cosby,

Director, National Institute of Corrections.

[FR Doc. 2016–06625 Filed 3–24–16; 8:45 am]

BILLING CODE 4410–36–M

DEPARTMENT OF LABOR

Employment and Training Administration

Workforce Innovation and Opportunity Act (WIOA) 2014; Lower Living Standard Income Level (LLSIL)

AGENCY: Employment and Training Administration (ETA), Labor.

ACTION: Notice.

SUMMARY: Title I of WIOA (Pub. L.113–128) requires the U.S. Secretary of Labor (Secretary) to update and publish the LLSIL tables annually, for uses described in the law (including determining eligibility for youth). WIOA defines the term ''low income individual'' as one who qualifies under various criteria, including an individual in a family with total family income for a six-month period that does not exceed the higher level of the poverty line or 70 percent of the LLSIL. This issuance provides the Secretary's annual LLSIL for 2016 and references the current 2016 Health and Human Services ''Poverty Guidelines.''

DATES: This notice is effective March 25, 2016.

FOR FURTHER INFORMATION OR QUESTIONS ON LLSIL: Please contact Samuel Wright, Department of Labor, Employment and Training Administration, 200 Constitution Avenue NW., Room C–4526, Washington, DC 20210; Telephone: 202–693–2870; Fax: 202–693–3015 (these are not toll-free numbers); Email address: *wright.samuel.e@dol.gov.* Individuals with hearing or speech impairments may access the telephone number above via Text Telephone (TTY/TDD) by calling the toll-free Federal Information Relay Service at 1–877–889–5627 (TTY/TDD).

FOR FURTHER INFORMATION OR QUESTIONS ON FEDERAL YOUTH EMPLOYMENT PROGRAMS: Please contact Jennifer Kemp, Department of Labor, Employment and Training Administration, 200 Constitution Avenue NW., Room N–4464, Washington, DC 20210; Telephone: 202–693–3377; Fax: 202–693–3113 (these are not toll-free numbers); Email: *kemp.jennifer.n@dol.gov.* Individuals with hearing or speech impairments may access the telephone number above via TTY by calling the toll-free Federal Information Relay Service at 1–877–889–5627 (TTY/TDD).

SUPPLEMENTARY INFORMATION: The purpose of WIOA is to provide workforce investment activities through statewide and local workforce investment systems that increase the employment, retention, and earnings of participants. WIOA programs are intended to increase the occupational skill attainment by participants and the quality of the workforce, thereby reducing welfare dependency and enhancing the productivity and competitiveness of the Nation.

LLSIL is used for several purposes under the WIOA. Specifically, WIOA SEC.3(36) (A)(B)defines the term ''low income individual'' for eligibility purposes, and SEC.127(b)(2)(c), SEC.132(b)(1)(B)(IV),(V)(bb) define the terms ''disadvantaged youth'' and ''disadvantaged adult'' in terms of the poverty line or LLSIL for State formula allotments. The governor and state/local

workforce development boards (WDs) use the LLSIL for determining eligibility for youth and adults for certain services. ETA encourages governors and State/local boards to consult the WIOA regulations and the preamble to the WIOA Final Rule for more specific guidance in applying LLSIL to program requirements. The U.S. Department of Health and Human Services (HHS) published the most current poverty-level guidelines in the **Federal Register** on January 25, 2016 (Volume 81, Number 15), pp. 4036–4037. The HHS 2016 Poverty guidelines may also be found on the Internet at *https://aspe.hhs.gov/poverty-guidelines.* ETA plans to have the 2016 LLSIL available on its Web site at *http://www.doleta.gov/llsil.*

WIOA Section 3(36)(B) defines LLSIL as ''that income level (adjusted for regional, metropolitan, urban and rural differences and family size) determined annually by the Secretary [of Labor] based on the most recent lower living family budget issued by the Secretary.'' The most recent lower living family budget was issued by the Secretary in fall 1981. The four-person urban family budget estimates, previously published by the U.S. Bureau of Labor Statistics (BLS), provided the basis for the Secretary to determine the LLSIL. BLS terminated the four-person family budget series in 1982, after publication of the fall 1981 estimates. Currently, BLS provides data to ETA, which ETA then uses to develop the LLSIL tables, as provided in the Appendices to this **Federal Register** notice.

ETA published the 2015 updates to the LLSIL in the **Federal Register** of March 27, 2015, at Vol. 80, No.59 pp. 16450–16456. Last year, ETA also published a correction to three Regions in the **Federal Register** of July 16, 2015 at Vol. 80, No. 136 pp. 42123–42124. These notices again update the LLSIL to reflect cost of living increases for 2015, by calculating the percentage change in the most recent 2014 Consumer Price Index for All Urban Consumers (CPI–U) for an area to the 2015 CPI–U, and then applying this calculation to each of the March 27, 2015 LLSIL figures. This year, a Region and several metro areas had a negative CPI–U due mostly to the decline in gas prices.

The updated figures for a four-person family are listed in Appendix A, Table 1, by region for both metropolitan and non-metropolitan areas. Numbers in all of the Appendix tables are rounded up to the nearest dollar. Since program eligibility for low-income individuals, ''disadvantaged adults'' and ''disadvantaged youth'' may be determined by family income at 70 percent of the LLSIL, pursuant to WIOA Section 3 (36)(A)(ii) and Section 3(36)(B), respectively, those figures are listed as well.

I. Jurisdictions

Jurisdictions included in the various regions, based generally on the Census Regions of the U.S. Department of Commerce, are as follows:

A. Northeast

Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island,Vermont, Virgin Islands

B. Midwest

Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin,

C. South

Alabama, American Samoa, Arkansas, Delaware, District of Columbia, Florida, Georgia, Northern Marianas, Oklahoma, Palau, Puerto Rico, South Carolina, Kentucky, Louisiana, Marshall Islands, Maryland, Micronesia, Mississippi, North Carolina, Tennessee, Texas, Virginia, West Virginia

D. West

Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming

Additionally, separate figures have been provided for Alaska, Hawaii, and Guam as indicated in Appendix B, Table 2.

For Alaska, Hawaii, and Guam, the year 2016 figures were updated from the 2015 ''State Index'' based on the ratio of the urban change in the state (using Anchorage for Alaska and Honolulu for Hawaii and Guam) compared to the West regional metropolitan change, and then applying that index to the West regional metropolitan change.

Data on 23 selected Metropolitan Statistical Areas (MSAs) are also available. These are based on annual and semiannual CPI–U changes for a 12-month period ending in December 2015. The updated LLSIL figures for these MSAs and 70 percent of LLSIL are reported in Appendix C, Table 3.

Appendix D, Table 4 lists each of the various figures at 70 percent of the updated 2015 LLSIL for family sizes of one to six persons. Because Tables 1–3 only list the LLSIL for a family of four, Table 4 can be used to separately determine the LLSIL for families of between one and six persons. For families larger than six persons, an amount equal to the difference between the six-person and the five-person family income levels should be added to the six-person family income level for each additional person in the family. Where the poverty level for a particular family size is greater than the corresponding 70 percent of the LLSIL figure, the figure is shaded. A modified Microsoft Excel version of Appendix D, Table 4, with the area names, will be available on the ETA LLSIL Web site at *http://www.doleta.gov/llsil.* Appendix E, Table 5, indicates 100 percent of LLSIL for family sizes of one to six, and is used to determine self-sufficiency as noted at Section 3 (36)(a)(ii) and Section 3 (36)(B),(C)(ii) in WIOA.

II. Use of These Data

Governors should designate the appropriate LLSILs for use within the State from Appendices A, B, and C, containing Tables 1 through 3. Appendices D and E, which contain Tables 4 and 5, which adjust a family of four figure for larger and smaller families, may be used with any LLSIL designated area. The governor's designation may be provided by disseminating information on MSAs and metropolitan and non-metropolitan areas within the state or it may involve further calculations. For example, the State of New Jersey may have four or more LLSIL figures for Northeast metropolitan, Northeast non-metropolitan, portions of the state in the New York City MSA, and those in the Philadelphia MSA. If a workforce investment area includes areas that would be covered by more than one LLSIL figure, the governor may determine which is to be used.

A state's policies and measures for the workforce investment system shall be accepted by the Secretary to the extent that they are consistent with WIOA and WIOA regulations.

III. Disclaimer on Statistical Uses

It should be noted that publication of these figures is only for the purpose of meeting the requirements specified by WIOA as defined in the law and regulations. BLS has not revised the lower living family budget since 1981, and has no plans to do so. The four-person urban family budget estimates series has been terminated. The CPI–U adjustments used to update LLSIL for this publication are not precisely comparable, most notably because certain tax items were included in the 1981 LLSIL, but are not in the CPI–U. Thus, these figures should not be used for any statistical purposes, and are valid only for those purposes under WIOA as defined in the law and regulations.

Appendix A

TABLE 1—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS) BY REGION [1]

Region [2]	2015 adjusted LLSIL	70 percent LLSIL
Northeast:		
Metro	$ 42,164	$ 29,514
Non-Metro [3]	41,826	29,279
Midwest:		
Metro	36,977	25,884
Non-Metro	35,740	25,018
South:		
* Metro	35,803	25,062
Non-Metro	35,568	24,898
* West:		
Metro	41,048	28,734
Non-Metro [4]	40,580	28,406

* The South Metro Region and the West Metro and Non-Metro Regions 2015 LLSIL were adjusted.
[1] For ease of use, these figures are rounded to the next highest dollar.
[2] Metropolitan area measures were calculated from the weighted average CPI–U's for city size classes A and B/C. Non-metropolitan area measures were calculated from the CPI–U's for city size class D.
[3] Non-metropolitan area percent changes for the Northeast region are no longer available. The Non-metropolitan percent change was calculated using the U.S. average CPI–U for city size class D.
[4] Non-metropolitan area percent changes for the West region are based on unpublished BLS data.

Appendix B

TABLE 2—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS), FOR ALASKA, HAWAII AND GUAM [1]

Region [1]	2015 adjusted LLSIL	70 percent LLSIL
Alaska:		
Metro [2]	$ 47,899	$ 33,529
Non-Metro [3]	52,482	36,737
Hawaii, Guam:		
Metro	52,587	36,811
Non-Metro [3]	56,028	39,220

[1] For ease of use, these figures are rounded to the next highest dollar.
[2] The CPI–U change was negative.
[3] Non-Metropolitan percent changes for Alaska, Hawaii and Guam were calculated from the CPI–U's for all urban consumers for city size class D in the Western Region. Generally the non-metro areas LLSIL is lower than the LLSIL in metro areas. This year the non-metro area LLSIL incomes were larger because the change in CPI–U was smaller in the metro areas compared to the change in CPI–U in the non-metro areas of Alaska, Hawaii and Guam.

Appendix C

TABLE 3—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS), FOR 23 SELECTED MSAS [1]

Metropolitan statistical areas (MSAs) [1]	2016 adjusted LLSIL	70 percent LLSIL
Anchorage, AK [2]	$49,096	$34,367
Atlanta, GA [2]	34,370	24,059
Boston—Brockton—Nashua, MA/NH/ME/CT	45,346	31,742
Chicago—Gary—Kenosha, IL/IN/WI	38,019	26,613
Cincinnati—Hamilton, OH/KY/IN	36,435	25,505
Cleveland—Akron, OH	37,800	26,460
Dallas—Ft. Worth, TX	34,141	23,899
Denver—Boulder—Greeley, CO	38,913	27,239
Detroit—Ann Arbor—Flint, MI [2]	35,202	24,641
Honolulu, HI	53,532	37,473
Houston—Galveston—Brazoria, TX	34,842	24,389
Kansas City, MO/KS	35,159	24,612
Los Angeles—Riverside—Orange County, CA [2]	42,146	29,502
Milwaukee—Racine, WI	36,705	25,694
Minneapolis—St. Paul, MN/WI	36,942	25,859
New York—Northern NJ—Long Island, NY/NJ/CT/PA [2]	45,008	31,506
Philadelphia—Wilmington—Atlantic City, PA/NJ/DE/MD	40,855	28,599
Pittsburgh, PA	44,940	31,458

TABLE 3—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS), FOR 23 SELECTED MSAS [1]—Continued

Metropolitan statistical areas (MSAs) [1]	2016 adjusted LLSIL	70 percent LLSIL
St. Louis, MO/IL	34,557	24,190
San Diego, CA	46,922	32,846
San Francisco—Oakland—San Jose, CA	45,389	31,772
Seattle—Tacoma—Bremerton, WA	45,018	31,512
Washington—Baltimore, DC/MD/VA/WV [2]	45,551	31,885

[1] For ease of use, these figures are rounded to the next highest dollar.
[2] The CPI–U change was negative.
[2] Baltimore and Washington are calculated as a single metropolitan statistical area.

Appendix D

Table 4: 70 Percent of Updated 2015 Lower Living Standard Income Level (LLSIL), by Family Size

To use the 70 percent LLSIL value, where it is stipulated for the WIOA programs, begin by locating the region or metropolitan area where the program applicant resides. These are listed in Tables 1, 2 and 3. After locating the appropriate region or metropolitan statistical area, find the 70 percent LLSIL amount for that location. The 70 percent LLSIL figures are listed in the last column to the right on each of the three tables. These figures apply to a family of four. Larger and smaller family eligibility is based on a percentage of the family of four. To determine eligibility for other size families consult Table 4 and the instructions below.

To use Table 4, locate the 70 percent LLSIL value that applies to the individual's region or metropolitan area from Tables 1, 2 or 3. Find the same number in the ''family of four'' column of Table 4. Move left or right across that row to the size that corresponds to the individual's family unit. That figure is the maximum household income the individual is permitted in order to qualify as economically disadvantaged under the WIOA.

Where the HHS poverty level for a particular family size is greater than the corresponding LLSIL figure, the LLSIL figure appears in a shaded block. Individuals from these size families may consult the 2016 HHS poverty guidelines found on the Health and Human Services Web site at *https://aspe.hhs.gov/poverty-guidelines* to find the higher eligibility standard. Individuals from Alaska and Hawaii should consult the HHS guidelines for the generally higher poverty levels that apply in their States.

Family Of One	Family of Two	Family of Three	Family of Four	Family of Five	Family of Six
8,609	14,107	19,363	23,899	28,207	32,985
8,663	14,197	19,495	24,059	28,393	33,203
8,715	14,278	19,598	24,190	28,548	33,383
8,787	14,396	19,759	24,389	28,783	33,661
8,860	14,524	19,942	24,612	29,045	33,969
8,874	14,539	19,963	24,641	29,078	34,004
8,970	14,695	20,169	24,898	29,382	34,361
9,015	14,761	20,267	25,018	29,530	34,533
9,027	14,790	20,300	25,062	29,579	34,595
9,184	15,054	20,665	25,505	30,100	35,200
9,250	15,162	20,815	25,694	30,322	35,460
9,313	15,261	20,951	25,859	30,520	35,692
9,319	15,276	20,967	25,884	30,544	35,727
9,528	15,619	21,436	26,460	31,228	36,516
9,581	15,708	21,556	26,613	31,408	36,733
9,810	16,076	22,069	27,239	32,144	37,594
10,228	16,762	23,014	28,406	33,526	39,209
10,301	16,878	23,168	28,599	33,754	39,469
10,345	16,953	23,276	28,734	33,906	39,658
10,542	17,281	23,723	29,279	34,555	40,404

10,629	17,421	23,909	29,514	34,833	40,733
11,331	18,568	25,487	31,458	37,127	43,418
11,344	18,593	25,520	31,506	37,177	43,485
11,352	18,594	25,529	31,512	37,189	43,490
11,429	18,731	25,718	31,742	37,461	43,806

Family Of One	Family of Two	Family of Three	Family of Four	Family of Five	Family of Six
11,444	18,752	25,737	31,772	37,495	43,852
11,484	18,819	25,832	31,885	37,632	44,010
11,831	19,380	26,609	32,846	38,762	45,333
12,076	19,784	27,164	33,529	39,568	46,278
12,378	20,284	27,841	34,367	40,560	47,428
13,231	21,676	29,761	36,737	43,352	50,698
13,259	21,721	29,822	36,811	43,440	50,806
13,495	22,111	30,353	37,473	44,220	51,720
14,124	23,146	31,771	39,220	46,282	54,125

Appendix E

Table 5: Updated 2015 LLSIL (100 Percent), by Family Size

To use the LLSIL to determine the minimum level for establishing self-sufficiency criteria at the State or local level, begin by locating the metropolitan area or region from Table 1, 2 or 3. Then locate the appropriate region or metropolitan statistical area and then find the 2015 adjusted LLSIL amount for that location. These figures apply to a family of four. Locate the corresponding number in the family of four in the column below. Move left or right across that row to the size that corresponds to the individual's family unit. That figure is the minimum figure that States must set for determining whether employment leads to self-sufficiency under WIOA programs.

Family of one	Family of two	Family of three	Family of four	Family of five	Family of six
12,298	20,153	27,662	34,141	40,296	47,121
12,375	20,281	27,850	34,370	40,561	47,433
12,450	20,397	27,997	34,557	40,783	47,691
12,554	20,566	28,227	34,842	41,119	48,087
12,657	20,748	28,488	35,159	41,493	48,527
12,677	20,770	28,518	35,202	41,540	48,577
12,815	20,993	28,813	35,568	41,974	49,087
12,879	21,087	28,953	35,740	42,186	49,333
12,895	21,129	29,000	35,803	42,256	49,421
13,120	21,505	29,522	36,435	43,000	50,285
13,214	21,659	29,735	36,705	43,318	50,658
13,304	21,801	29,931	36,942	43,600	50,989
13,313	21,823	29,953	36,977	43,634	51,039
13,611	22,312	30,622	37,800	44,611	52,166
13,687	22,440	30,794	38,019	44,869	52,476
14,015	22,966	31,528	38,913	45,920	53,705
14,611	23,946	32,877	40,580	47,894	56,013
14,716	24,111	33,098	40,855	48,219	56,385
14,778	24,219	33,252	41,048	48,438	56,654
15,061	24,687	33,890	41,826	49,364	57,720
15,174	24,866	34,140	42,146	49,734	58,170
15,185	24,886	34,156	42,164	49,762	58,190
16,187	26,525	36,410	44,940	53,039	62,025
16,206	26,561	36,458	45,008	53,110	62,122
16,217	26,563	36,470	45,018	53,127	62,128
16,328	26,758	36,741	45,346	53,516	62,580
16,349	26,789	36,767	45,389	53,564	62,646

BILLING CODE 4510–FT–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2016–0009]

Advisory Committee on Construction Safety and Health (ACCSH)

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Announcement of special meeting of the ACCSH.

SUMMARY: ACCSH will hold a special meeting April 25–26, 2016, in Washington, DC, to draft a construction version of OSHA's planned Safety and Health Program Management Guidelines.

DATES: *ACCSH meeting:* ACCSH will meet from 1 to 5:00 p.m., Monday, April 25, 2016, and from 9:00 a.m. to 5:00 p.m., Tuesday, April 26, 2016.

Submit (postmark, send, transmit) comments, requests to address the ACCSH meeting, speaker presentations (written or electronic), and requests for special accommodations for the ACCSH meeting, by April 15, 2016.

ADDRESSES:

Submission of comments, requests to speak, and speaker presentations for the ACCSH meeting: Submit comments, requests to speak, and speaker presentations for the ACCSH meeting, using one of the following methods:

Electronically: Submit materials, including attachments, electronically at: *http://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the on-line instructions for submissions.

Facsimile (Fax): If the submission, including attachments, does not exceed 10 pages, you may fax it to the OSHA Docket Office at (202) 693–1648.

Regular mail, express mail, hand delivery, or messenger (courier) service: Submit materials to the OSHA Docket Office, Docket No. OSHA–2016–0009, Room N–2625, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–2350 (TTY (877) 889–5627). OSHA's Docket Office accepts deliveries (hand deliveries, express mail, and messenger service) during normal business hours, 8:15 a.m.–4:45 p.m., e.t., weekdays.

Instructions: Submissions must include the agency name and docket number for this **Federal Register** notice (Docket No. OSHA–2016–0009). Due to security-related procedures, submissions by regular mail may experience significant delays. Please contact the OSHA Docket Office for information about security procedures for making submissions. For additional information on submitting comments, requests to speak, and speaker presentations, see the **SUPPLEMENTARY INFORMATION** section of this notice.

OSHA will post comments, requests to speak, and speaker presentations, including any personal information provided, without change, at: *http://www.regulations.gov.* Therefore, OSHA cautions you about submitting personal information such as Social Security numbers and birthdates.

Location of the ACCSH meeting: ACCSH will meet in Room N–3437 A–C, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210.

Requests for special accommodations: Please submit requests for special accommodations to attend the ACCSH meeting to Ms. Gretta Jameson, OSHA, Office of Communications, Room N–3647, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–1999; email: *jameson.grettah@dol.gov.*

FOR FURTHER INFORMATION CONTACT:

For press inquiries: Mr. Frank Meilinger, Director, OSHA Office of Communications, Room N–3647, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

For general information about ACCSH and ACCSH meetings: Mr. Damon Bonneau, OSHA, Directorate of Construction, Room N–3468, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–2020; email: *bonneau.damon@dol.gov*.

Copies of this ***Federal Register*** *notice:* Electronic copies of this **Federal Register** notice are available at: *http://www.regulations.gov.* This notice, as well as news releases and other relevant information, also are available on the OSHA Web page at: *http://www.osha.gov.*

SUPPLEMENTARY INFORMATION:

ACCSH Meeting

Background: ACCSH will meet April 25–26, 2016, in Washington, DC. The meeting is open to the public. OSHA transcribes ACCSH meetings and prepares detailed minutes of meetings. OSHA places the transcript and minutes in the public docket for the meeting. The docket also includes speaker presentations, comments, and other materials submitted to ACCSH.

ACCSH advises the Secretary of Labor and the Assistant Secretary of Labor for Occupational Safety and Health (Assistant Secretary) in the formulation of standards affecting the construction industry, and on policy matters arising in the administration of the safety and health provisions under the Contract Work Hours and Safety Standards Act (Construction Safety Act (CSA)) (40 U.S.C. 3701 *et seq.*) and the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) (see also 29 CFR 1911.10 and 1912.3). In addition, the OSH Act and CSA require that the Assistant Secretary consult with ACCSH before the Agency proposes any occupational safety and health standard affecting construction activities (29 CFR 1911.10; 40 U.S.C. 3704).

Meeting agenda: The tentative agenda for this meeting includes:

- Assistant Secretary's remarks;
- Drafting of the construction version of the OSHA Safety and Health Program Management Guidelines; and,
- Public Comment Period.

Attending the meeting: Individuals attending the meeting at the U.S. Department of Labor must enter the building at the visitors' entrance, 3rd and C Streets, NW., and pass through building security. Attendees must have valid government-issued photo identification (such as a driver's license) to enter the building. For additional information about building-security measures for attending ACCSH meetings, please contact Ms. Jameson (see ''*Requests for special accommodations''* in the **ADDRESSES** section of this notice).

Requests to speak and speaker presentations: Attendees who want to address ACCSH at the meeting must submit a request to speak, as well as any written or electronic presentation, by

April 15, 2016, using one of the methods listed in the **ADDRESSES** section. The request must state:

- The amount of time requested to speak;
- The interest you represent (*e.g.,* business, organization, affiliation), if any; and
- A brief outline of your presentation.

PowerPoint presentations and other electronic materials must be compatible with PowerPoint 2010 and other Microsoft Office 2010 formats.

Alternately, at the ACCSH meeting, you may request to address ACCSH briefly by signing the public-comment request sheet and listing the topic(s) you will address. You also must provide 20 hard copies of any materials, written or electronic, you want to present to ACCSH.

The ACCSH Chair may grant requests to address ACCSH as time and circumstances permit.

Public docket of the ACCSH meeting: OSHA will place comments, requests to speak, and speaker presentations, including any personal information you provide, in the public docket of this ACCSH meeting without change, and those documents will be available online at: *http://www.regulations.gov.* OSHA also places in the public docket the meeting transcript, meeting minutes, documents presented at the ACCSH meeting, and other documents pertaining to the ACCSH meeting. These documents are available online at: *http://www.regulations.gov.*

Access to the public record of the ACCSH meeting: To read or download documents in the public docket of this ACCSH meeting, go to Docket No. OSHA–2016–0009 at: *http://www.regulations.gov.* The *http://www.regulations.gov* index also lists all documents in the public record for this meeting; however, some documents (*e.g.,* copyrighted materials) are not publicly available through that Web page. All documents in the public record, including materials not available through *http://www.regulations.gov,* are available for inspection in the OSHA Docket Office (see **ADDRESSES** section). Contact the OSHA Docket Office for assistance in making submissions to, or obtaining materials from, the public docket.

Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice under the authority granted by 29 U.S.C. 656; 40 U.S.C. 3704; 5 U.S.C. App. 2; 29 CFR parts 1911 and 1912; 41 CFR 102–3; and Secretary of Labor's Order No. 1–2012 (77 FR 3912, Jan. 25, 2012).

Signed at Washington, DC, on March 21, 2016.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510–26–P

NATIONAL CAPITAL PLANNING COMMISSION

Final Adoption of Updated Federal Elements of the Comprehensive Plan for the National Capital

AGENCY: National Capital Planning Commission.

ACTION: Notice of final adoption of updated *Federal Elements of the Comprehensive Plan for the National Capital.*

SUMMARY: The National Capital Planning Commission (NCPC) adopted updates to the Federal Elements of the *Comprehensive Plan for the National Capital* (Comprehensive Plan) on February 4, 2016. The updated elements will become effective on Tuesday, April 5, 2016.

NCPC is the central planning agency for the federal government in the National Capital Region and prepares and adopts a ''comprehensive, consistent, and coordinated plan for the National Capital.'' The Federal Elements guide planning and development, and address matters related to Federal properties and interests in the National Capital Region, which include the District of Columbia; Montgomery and Prince George's Counties in Maryland; Arlington, Fairfax, Loudoun, and Prince William Counties in Virginia; and all cities within the boundaries of these counties. The Federal Elements provide the policy framework for Commission actions on plans and proposals submitted for its review. The eight Federal Elements in the Comprehensive Plan include Urban Design, Federal Workplace, Foreign Missions & International Organizations, Transportation, Parks & Open Space, Federal Environment, Historic Preservation, and Visitors & Commemoration.

Dates and Time: The 2016 Federal Elements were adopted on February 4, 2016 and will become effective on Tuesday, April 5, 2016.

ADDRESSES: The updated Federal Elements of the *Comprehensive Plan for the National Capital* may be viewed at the National Capital Planning Commission, 401 9th Street NW., Suite 500N, Washington, DC 20004.

FOR FURTHER INFORMATION CONTACT: Angela Dupont at *compplan@ncpc.gov.*

SUPPLEMENTARY INFORMATION: The updated Federal Elements of the *Comprehensive Plan for the National Capital* may be viewed electronically at: *http://www.ncpc.gov/compplan.*

Authority: 40 U.S.C. 8721(a).

Dated: March 17, 2016.

Anne R. Schuyler,

General Counsel.

[FR Doc. 2016–06800 Filed 3–24–16; 8:45 am]

BILLING CODE 7520–01–P

OFFICE OF PERSONNEL MANAGEMENT

Notice of Submission for Approval: Information Collection 3206–0258; Questionnaire for Public Trust Positions (SF 85P) and Supplemental Questionnaire for Selected Positions (SF 85P–S)

AGENCY: U.S. Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: Federal Investigative Services (FIS), U.S. Office of Personnel Management (OPM) is notifying the general public and other federal agencies that OPM is seeking Office of Management and Budget (OMB) approval of a revised information collection control number 3206–0258, Questionnaire for Public Trust Positions, Standard Form 85P (SF 85P) and Supplemental Questionnaire for Selected Positions, Standard Form SF 85P–S (SF 85P–S). OPM is soliciting comments for this collection as required by the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 35) as amended by the Clinger-Cohen Act (Pub. L. 104–106). The Office of Management and Budget is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who

are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

DATES: Comments are encouraged and will be accepted until May 24, 2016. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Federal Investigative Services, U.S. Office of Personnel Management, 1900 E Street NW., Washington, DC 20415, Attention: Donna McLeod or by electronic mail at *FISFormsComments@opm.gov.*

FOR FURTHER INFORMATION CONTACT: A copy of this information collection, with applicable supporting documentation, may be obtained by contacting the Federal Investigative Services, U.S. Office of Personnel Management, 1900 E Street NW., Washington, DC 20415, Attention: Donna McLeod or by electronic mail at *FISFormsComments@opm.gov.*

SUPPLEMENTARY INFORMATION: Questionnaire for Public Trust Positions, SF 85P and Supplemental Questionnaire for Selected Positions, SF 85P–S, including accompanying releases, housed in a system named e-QIP (Electronic Questionnaires for Investigative Processing), are information collections completed by applicants for, or incumbents of, Federal Government civilian positions, or positions in private entities performing work for the Federal Government under contract (SF 85P only). The collections are used as the basis of information for background investigations to establish that such persons are:

- Suitable for employment or retention in Federal employment in a public trust position or fit for employment or retention in Federal employment in the excepted service when the duties to be performed are equivalent in degree of trust reposed in the incumbent to a public trust position;
- Fit to perform work on behalf of the Federal Government pursuant to the Government contract, when the duties to be performed are equivalent in degree of trust reposed in the individual to a public trust position;
- Eligible for physical and logical access to federally controlled facilities or information systems, when the duties to be performed by the individual are equivalent to the duties performed by an employee in a public trust position.

The SF 85P and SF 85P–S are completed by applicants for, or incumbents of, Federal Government civilian positions, or positions in private entities performing work for the Federal Government under contract. For applicants, the SF 85P and SF 85P–S are to be used only after a conditional offer of employment has been made. The SF 85P–S is supplemental to the SF 85P and is used only as approved by OPM, for certain positions such as those requiring carrying of a firearm. e-QIP (Electronic Questionnaires for Investigations Processing) is a web-based system application that houses the SF 85P and SF 85P–S. A variable in assessing burden hours is the nature of the electronic application. The electronic application includes branching questions and instructions which provide for a tailored collection from the respondent based on varying factors in the respondent's personal history. The burden on the respondent is reduced when the respondent's personal history is not relevant to particular question, since the question branches, or expands for additional details, only for those persons who have pertinent information to provide regarding that line of questioning. Accordingly, the burden on the respondent will vary depending on whether the information collection relates to the respondent's personal history.

OPM proposes new changes to the SF 85P. The proposed changes identified in this notice represent modifications to the last approved version of this collection which were published in a 60-day notice in the **Federal Register** on December 29, 2010 (**Federal Register** Notices/Volume 75, Number 249, pages 82095–82097) and in a 30-day notice in the **Federal Register** on August 20, 2012, (**Federal Register** Notices/Volume 77, Number 161, pages 50175–50184). A copy of the latest approved version of this collection and the new proposed changes is available upon request, as noted above. The instructional portion of the form will be modified to provide additional explanatory information regarding the collection of the spouse or cohabitant's social security number. OPM will remove instructions that were needed only for persons completing a paper form, as the form is only collected by OPM through electronic means. OPM will request, in section 7, ''Your Contact Information'' that the respondent provide three contact numbers to facilitate contact between investigative personnel and the respondent; however respondents will be advised that only one number is required. Section 9, ''Citizenship'' will be expanded to collect additional information to assist in verifying derived citizenship of respondents born outside of the U.S. Section 18, ''Relatives'' will include additional categories of relatives about which information will be collected, namely ''Half-brother, Half-sister, Father-in-law, Mother-in-law, and Guardian'' to align the collection with the information required per investigative standards for public trust positions. Section 19, ''Foreign Countries You Have Visited'' will be amended to clarify that travel solely for U.S. Government business is travel ''on official Government orders.'' Section 21, ''Illegal Use of Drugs and Drug Activity'' will include instruction to clarify that drug use or activity illegal under Federal laws must be reported, even if that use or activity is legal under state or local law(s). Changes are proposed in section 26, ''Involvement in Non-Criminal Court Actions to collect information regarding the respondent's participation in non-criminal court actions whereas the previous collection was limited to the respondent's participation in such court actions when he or she was the defendant. The general ''Authorization for Release of Information'' includes clarifying language noting that ''other sources of information'' from which information is gathered during the investigation may include publically available electronic information, including public posts on social media. The ''Fair Credit Reporting Disclosure and Authorization'' includes an updated reference to the noted Executive Order.

OPM proposes changes to the SF 85P–S. Question 3, 'Your Use of Illegal Drugs and Drug Activity'' will also include clarifying instruction that drug use or activity illegal under Federal laws must be reported, even if that use or activity is legal under state or local law(s). It is possible that there will be additional changes to conform language on the SF 85P–S to language in similar forms.

This ICR also requests categorizing these forms as common forms. OPM will continue to estimate the burden based on all Federal agencies that submit the SF 85P and SF 85P–S to OPM for investigation. If and when approves the use of common forms, all Federal agencies using these forms not in connection with an OPM investigation may request the use of these common forms without additional 60 or 30 day notice and comment requirements. At that point, each such agency will account for its number of respondents and the burden associated with the agency's use.

Analysis

Agency: Federal Investigative Services, U.S. Office of Personnel Management.

Title: Questionnaire for Public Trust Positions (SF 85P) and Supplemental Questionnaire for Selected Positions (SF 85P–S).

OMB Number: 3206–0258.

Affected Public: The SF 85P and SF 85P–S are information collections completed by applicants for, or incumbents of, Federal Government civilian positions, or positions in private entities performing work for the Federal Government under contract. The SF 85P will be used by the Federal Government in conducting background investigations and reinvestigations of persons under consideration for, or retention of, public trust positions. The form may also be used by agencies in determining whether a subject performing work for, or on behalf of, the Government under a contract, should be deemed eligible for logical or physical access. For applicants, the SF 85P and SF 85P–S are to be used only after a conditional offer of employment has been made. The SF 85P–S is supplemental to the SF 85P and is used only as approved by OPM, for certain positions such as those requiring carrying of a firearm.

Number of Respondents: 112,894 (SF 85P); 11,717 (SF 85P–S).

Estimated Time per Respondent: 155 minutes (SF 85P); 10 minutes (SF 85P–S).

Total Burden Hours: 282,235 (SF 85P); 1,953 (SF 85P–S).

U.S. Office of Personnel Management.

Beth F. Cobert,

Acting Director.

BILLING CODE 6325–53–P

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2016–99 and CP2016–127; Order No. 3171]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the addition of Priority Mail Contract 198 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* March 28, 2016.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30–.35, the Postal Service filed a formal request and associated supporting information to add Priority Mail Contract 198 to the competitive product list.[1]

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. Request, Attachment B.

To support its Request, the Postal Service filed a copy of the contract, a copy of the Governors' Decision authorizing the product, proposed changes to the Mail Classification Schedule, a Statement of Supporting Justification, a certification of compliance with 39 U.S.C. 3633(a), and an application for non-public treatment of certain materials. It also filed supporting financial workpapers.

II. Notice of Commission Action

The Commission establishes Docket Nos. MC2016–99 and CP2016–127 to consider the Request pertaining to the proposed Priority Mail Contract 198 product and the related contract, respectively.

The Commission invites comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comments are due no later than March 28, 2016. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Curtis E. Kidd to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2016–99 and CP2016–127 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Curtis E. Kidd is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. Comments are due no later than March 28, 2016.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Stacy L. Ruble,

Secretary.

The Commission invites comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comments are due no later than March 28, 2016. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Jennaca D. Upperman to serve as Public Representative in these dockets.

III. Request for Supplemental Information

The version of the contract provided to the Commission under seal appears to redact information in Section F. The Postal Service is requested to provide an explanation and, if necessary, file an errata. The Postal Service response is due no later than March 23, 2016.

IV. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2016–98 and CP2016–126 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Jennaca D. Upperman is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. The Postal Service's response to the request for supplemental information is due no later than March 23, 2016.

4. Comments are due no later than March 28, 2016.

5. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Stacy L. Ruble,

Secretary.

BILLING CODE 7710–12–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 32033; 812–14555]

Premise Capital, LLC, et al.; Notice of Application

March 21, 2016.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application for an order under section 6(c) of the Investment Company Act of 1940, as amended (the ''Act'') for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(J) for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the Act.

SUMMARY OF APPLICATION: Applicants request an order that would permit (a) series of certain open-end management investment companies to issue shares (''Shares'') redeemable in large aggregations only (''Creation Units''); (b) secondary market transactions in Shares to be effected at negotiated market prices rather than at net asset value (''NAV''); (c) certain series to pay redemption proceeds, under certain circumstances, more than seven days after the tender of Shares for redemption; (d) certain affiliated persons of the series to deposit securities into, and receive securities from, the series in connection with the purchase and redemption of Creation Units; (e) certain registered management investment companies and unit investment trusts outside of the same group of investment companies as the series to acquire Shares beyond the limits of Section 12(d)(1)(A) and (B) the Act.

APPLICANTS: Premise Capital, LLC (the ''Initial Adviser''), ETF Series Solutions (the ''Trust'') and Quasar Distributors, LLC (''Quasar'').

FILING DATES: The application was filed on September 30, 2015, and amended on January 22, 2016.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission

orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on April 15, 2016, and should be accompanied by proof of service on applicants, in the form of an affidavit, or for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: Premise Capital, LLC, 300 E. 5th Ave. Suite 265, Naperville, IL, 60563; The Trust and Quasar, 615 East Michigan Street, 4th Floor, Milwaukee, Wisconsin 53202, c/o W. John McGuire, Esq., Morgan Lewis & Bockius LLP, 1111 Pennsylvania Avenue NW., Washington, DC 20004–2541 and Michael D. Barolsky, Esq., U.S. Bancorp Fund Services, LLC, 615 Michigan Street Milwaukee, WI 53202.

FOR FURTHER INFORMATION CONTACT: Rachel Loko, Senior Counsel, at (202) 551–6883, or Holly Hunter-Ceci, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Applicants' Representations

1. The Trust is a Delaware statutory trust and is registered under the Act as an open-end management investment company with multiple series. Each series will operate as an exchange traded fund (''ETF'').

2. The Initial Adviser will be the investment adviser to the new series of the Trust (''Initial Fund''). The Initial Adviser is, and any other Adviser (as defined below) will be, registered as an investment adviser under the Investment Advisers Act of 1940 (''Advisers Act''). The Adviser may enter into sub-advisory agreements with one or more investment advisers to act as sub-advisers to particular Funds (each, a ''Sub-Adviser''). Any Sub-Adviser will either be registered under the Advisers Act or will not be required to register thereunder.

3. The Trust will enter into a distribution agreement with one or more distributors. Each distributor for a Fund will be a broker-dealer (''Broker'') registered under the Securities Exchange Act of 1934 (''Exchange Act'') and will act as distributor and principal underwriter (''Distributor'') for one or more of the Funds. No Distributor is or will be affiliated with any national securities exchange, as defined in Section 2(a)(26) of the Act (''Exchange''). The Distributor for each Fund will comply with the terms and conditions of the requested order. Quasar, a Delaware limited liability company and broker-dealer registered under the Exchange Act, will act as the initial Distributor of the Funds.

4. Applicants request that the order apply to the Initial Fund and any additional series of the Trust, and any other open-end management investment company or series thereof, that may be created in the future (''Future Funds'' and together with the Initial Fund, ''Funds''), each of which will operate as an ETF and will track a specified index comprised of domestic or foreign equity and/or fixed income securities (each, an ''Underlying Index''). Any Future Fund will (a) be advised by the Initial Adviser or an entity controlling, controlled by, or under common control with the Initial Adviser (each, an ''Adviser'') and (b) comply with the terms and conditions of the application.[1]

5. Each Fund will hold certain securities, currencies, other assets, and other investment positions (''Portfolio Holdings'') selected to correspond closely to the performance of its Underlying Index. Certain Underlying Indexes will be comprised of equity and/or fixed income securities issued by one or more of the following categories of issuers: (i) Domestic issuers and (ii) non-domestic issuers meeting the requirements for trading in U.S. markets. Other Funds will be based on Underlying Indexes that will be comprised of foreign and domestic, or solely foreign, equity and/or fixed income securities (''Foreign Funds'').

6. Applicants represent that each Fund will invest at least 80% of its assets (excluding collateral held from securities lending) in the component securities of its respective Underlying Index (''Component Securities'') and TBA Transactions,[2] and in the case of Foreign Funds, Component Securities and Depositary Receipts [3] representing Component Securities. Each Fund may also invest up to 20% of its assets in certain index futures, options, options on index futures, swap contracts or other derivatives, as related to its respective Underlying Index and its Component Securities, cash and cash equivalents, other investment companies, as well as in securities and other instruments not included in its Underlying Index but which the Adviser believes will help the Fund track its Underlying Index. A Fund may also engage in short sales in accordance with its investment objective.

7. Each Trust may issue Funds that seek to track Underlying Indexes constructed using 130/30 investment strategies (''130/30 Funds'') or other long/short investment strategies (''Long/Short Funds''). Each Long/Short Fund will establish (i) exposures equal to approximately 100% of the long positions specified by the Long/Short Index [4] and (ii) exposures equal to approximately 100% of the short positions specified by the Long/Short Index. Each 130/30 Fund will include strategies that: (i) Establish long positions in securities so that total long exposure represents approximately 130% of a Fund's net assets; and (ii) simultaneously establish short positions in other securities so that total short exposure represents approximately 30% of such Fund's net assets. Each Business Day, for each Long/Short Fund and 130/30 Fund, the Adviser will provide full portfolio transparency on the Fund's publicly available Web site (''Web site'') by making available the Fund's Portfolio

[1] All existing entities that intend to rely on the requested order have been named as applicants. Any other existing or future entity that subsequently relies on the order will comply with the terms and conditions of the order. A Fund of Funds (as defined below) may rely on the order only to invest in Funds and not in any other registered investment company.

[2] A ''to-be-announced transaction'' or ''TBA Transaction'' is a method of trading mortgage-backed securities. In a TBA Transaction, the buyer and seller agree upon general trade parameters such as agency, settlement date, par amount and price. The actual pools delivered generally are determined two days prior to settlement date.

[3] Depositary receipts representing foreign securities (''Depositary Receipts'') include American Depositary Receipts and Global Depositary Receipts. The Funds may invest in Depositary Receipts representing foreign securities in which they seek to invest. Depositary Receipts are typically issued by a financial institution (a ''depositary bank'') and evidence ownership interests in a security or a pool of securities that have been deposited with the depositary bank. A Fund will not invest in any Depositary Receipts that the Adviser or any Sub-Adviser deems to be illiquid or for which pricing information is not readily available. No affiliated person of a Fund, the Adviser or any Sub-Adviser will serve as the depositary bank for any Depositary Receipts held by a Fund.

[4] Underlying Indexes that include both long and short positions in securities are referred to as ''Long/Short Indexes.''

Holdings (defined below) before the commencement of trading of Shares on the Listing Exchange (defined below).[5] The information provided on the Web site will be formatted to be reader-friendly.

8. A Fund will utilize either a replication or representative sampling strategy to track its Underlying Index. A Fund using a replication strategy will invest in the Component Securities of its Underlying Index in the same approximate proportions as in such Underlying Index. A Fund using a representative sampling strategy will hold some, but not necessarily all of the Component Securities of its Underlying Index. Applicants state that a Fund using a representative sampling strategy will not be expected to track the performance of its Underlying Index with the same degree of accuracy as would an investment vehicle that invested in every Component Security of the Underlying Index with the same weighting as the Underlying Index. Applicants expect that the returns of each Fund will have an annual tracking error of less than 5% relative to its Underlying Index.

9. Each Fund will be entitled to use its Underlying Index pursuant to either a licensing agreement with the entity that compiles, creates, sponsors or maintains the Underlying Index (each, an ''Index Provider'') or a sub-licensing arrangement with the Adviser, which will have a licensing agreement with such Index Provider.[6] A ''Self-Indexing Fund'' is a Fund for which an affiliated person, as defined in section 2(a)(3) of the Act (''Affiliated Person''), or an affiliated person of an Affiliated Person (''Second-Tier Affiliate''), of the Trust or a Fund, of the Adviser, of any Sub-Adviser to or promoter of a Fund, or of the Distributor (each, an ''Affiliated Index Provider'') will serve as the Index Provider. In the case of Self-Indexing Funds, an Affiliated Index Provider will create a proprietary, rules-based methodology to create Underlying Indexes (each an ''Affiliated Index'').[7] Except with respect to the Self-Indexing Funds, no Index Provider is or will be an Affiliated Person, or a Second-Tier Affiliate, of a Trust or a Fund, of the Adviser, of any Sub-Adviser to or promoter of a Fund, or of the Distributor.

10. Applicants recognize that Self-Indexing Funds could raise concerns regarding the ability of the Affiliated Index Provider to manipulate the Underlying Index to the benefit or detriment of the Self-Indexing Fund. Applicants further recognize the potential for conflicts that may arise with respect to the personal trading activity of personnel of the Affiliated Index Provider who have access to or knowledge of changes to an Underlying Index's composition methodology or the constituent securities in an Underlying Index prior to the time that information is publicly disseminated.

11. Applicants propose that each Self-Indexing Fund will post on its Web site, on each day the Fund is open, including any day when it satisfies redemption requests as required by Section 22(e) of the Act (a ''Business Day''), before commencement of trading of Shares on the Listing Exchange, the identities and quantities of the Portfolio Holdings that will form the basis for the Fund's calculation of its NAV at the end of the Business Day. Applicants believe that requiring Self-Indexing Funds to maintain full portfolio transparency will also provide an effective additional mechanism for addressing any such potential conflicts of interest.

12. In addition, Applicants do not believe the potential for conflicts of interest raised by the Adviser's use of the Underlying Indexes in connection with the management of the Self Indexing Funds and the Affiliated Accounts will be substantially different from the potential conflicts presented by an adviser managing two or more registered funds. Both the Act and the Advisers Act contain various protections to address conflicts of interest where an adviser is managing two or more registered funds and these protections will also help address these conflicts with respect to the Self-Indexing Funds.[8]

13. Each Adviser and any Sub-Adviser has adopted or will adopt, pursuant to Rule 206(4)–7 under the Advisers Act, written policies and procedures designed to prevent violations of the Advisers Act and the rules thereunder. These include policies and procedures designed to minimize potential conflicts of interest among the Self-Indexing Funds and the Affiliated Accounts, such as cross trading policies, as well as those designed to ensure the equitable allocation of portfolio transactions and brokerage commissions. In addition, the Initial Adviser will adopt policies and procedures as required under section 204A of the Advisers Act, which are reasonably designed in light of the nature of its business to prevent the misuse, in violation of the Advisers Act or the Exchange Act or the rules thereunder, of material non-public information by the Initial Adviser or an associated person (''Inside Information Policy''). Any other Adviser or Sub-Adviser will be required to adopt and maintain a similar Inside Information Policy. In accordance with the Code of Ethics [9] and Inside Information Policy of the Adviser and any Sub-Adviser, personnel of those entities with knowledge about the composition of the Portfolio Deposit [10] will be prohibited from disclosing such information to any other person, except as authorized in the course of their employment, until such information is made public. In addition, an Index Provider will not provide any information relating to changes to an Underlying Index's methodology for the inclusion of component securities, the inclusion or exclusion of specific component securities, or methodology for the calculation or the return of component securities, in advance of a public announcement of such changes by the Index Provider.[11] The Adviser will also

[5] Under accounting procedures followed by each Fund, trades made on the prior Business Day (''T'') will be booked and reflected in NAV on the current Business Day (T+1). Accordingly, the Funds will be able to disclose at the beginning of the Business Day the portfolio that will form the basis for the NAV calculation at the end of the Business Day.

[6] The licenses for the Self-Indexing Funds will specifically state that the applicable Affiliated Index Provider (as defined below), or in case of a sub-licensing agreement, the applicable Adviser, must provide the use of the Affiliated Indexes (as defined below) and related intellectual property at no cost to the Trust and the Self-Indexing Funds.

[7] The Affiliated Indexes may be made available to registered investment companies, as well as separately managed accounts of institutional investors and privately offered funds that are not deemed to be ''investment companies'' in reliance on section 3(c)(1) or 3(c)(7) of the Act of which the Adviser acts as adviser or subadviser (''Affiliated Accounts'') as well as other such registered investment companies, separately managed accounts and privately offered funds for which it does not act either as adviser or subadviser (''Unaffiliated Accounts''). The Affiliated Accounts and the Unaffiliated Accounts, like the Funds, would seek to track the performance of one or more Underlying Index(es) by investing in the constituents of such Underlying Indexes or a representative sample of such constituents of the Underlying Index. Consistent with the relief requested from section 17(a), the Affiliated Accounts will not engage in Creation Unit transactions with a Fund.

[8] *See, e.g.,* Rule 17j–1 under the Act and Section 204A of the Advisers Act and Rules 204A–1 and 206(4)–7 under the Advisers Act.

[9] The Adviser has also adopted or will adopt a code of ethics pursuant to Rule 17j–1 under the Act and Rule 204A–1 under the Advisers Act, which contains provisions reasonably necessary to prevent Access Persons (as defined in Rule 17j–1) from engaging in any conduct prohibited in Rule 17j–1 (''Code of Ethics'').

[10] The instruments and cash that the purchaser is required to deliver in exchange for the Creation Units it is purchasing are referred to as the ''Portfolio Deposit.''

[11] In the event that an Adviser or Sub-Adviser serves as the Affiliated Index Provider for a Self-Indexing Fund, the terms ''Affiliated Index Provider'' or ''Index Provider,'' with respect to that

Continued

include under Item 10.C of Part 2 of its Form ADV a discussion of its relationship to any Affiliated Index Provider and any material conflicts of interest resulting therefrom, regardless of whether the Affiliated Index Provider is a type of affiliate specified in Item 10.

14. To the extent the Self-Indexing Funds transact with an Affiliated Person of the Adviser or Sub-Adviser, such transactions will comply with the Act, the rules thereunder and the terms and conditions of the requested order. In this regard, each Self-Indexing Fund's board of directors or trustees (''Board'') will periodically review the Self-Indexing Fund's use of an Affiliated Index Provider. Subject to the approval of the Self-Indexing Fund's Board, the Adviser, Affiliated Persons of the Adviser (''Adviser Affiliates'') and Affiliated Persons of any Sub-Adviser (''Sub-Adviser Affiliates'') may be authorized to provide custody, fund accounting and administration and transfer agency services to the Self-Indexing Funds. Any services provided by the Adviser, Adviser Affiliates, Sub-Adviser and Sub-Adviser Affiliates will be performed in accordance with the provisions of the Act, the rules under the Act and any relevant guidelines from the staff of the Commission. Applications for prior orders granted to Self-Indexing Funds have received relief to operate such funds on the basis discussed above.[12]

15. The Shares of each Fund will be purchased and redeemed in Creation Units and generally on an in-kind basis. Except where the purchase or redemption will include cash under the limited circumstances specified below, purchasers will be required to purchase Creation Units by making an in-kind deposit of specified instruments (''Deposit Instruments''), and shareholders redeeming their Shares will receive an in-kind transfer of specified instruments (''Redemption Instruments'').[13] On any given Business Day, the names and quantities of the instruments that constitute the Deposit Instruments and the names and quantities of the instruments that constitute the Redemption Instruments will be identical, unless the Fund is Rebalancing (as defined below). In addition, the Deposit Instruments and the Redemption Instruments will each correspond pro rata to the positions in the Fund's portfolio (including cash positions)[14] except: (a) In the case of bonds, for minor differences when it is impossible to break up bonds beyond certain minimum sizes needed for transfer and settlement; (b) for minor differences when rounding is necessary to eliminate fractional shares or lots that are not tradeable round lots;[15] (c) TBA Transactions, short positions, derivatives and other positions that cannot be transferred in kind[16] will be excluded from the Deposit Instruments and the Redemption Instruments;[17] (d) to the extent the Fund determines, on a given Business Day, to use a representative sampling of the Fund's portfolio;[18] or (e) for temporary periods, to effect changes in the Fund's portfolio as a result of the rebalancing of its Underlying Index (any such change, a ''Rebalancing''). If there is a difference between the NAV attributable to a Creation Unit and the aggregate market value of the Deposit Instruments or Redemption Instruments exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference (the ''Cash Amount'').

16. Purchases and redemptions of Creation Units may be made in whole or in part on a cash basis, rather than in kind, solely under the following circumstances: (a) To the extent there is a Cash Amount; (b) if, on a given Business Day, the Fund announces before the open of trading that all purchases, all redemptions or all purchases and redemptions on that day will be made entirely in cash; (c) if, upon receiving a purchase or redemption order from an Authorized Participant, the Fund determines to require the purchase or redemption, as applicable, to be made entirely in cash;[19] (d) if, on a given Business Day, the Fund requires all Authorized Participants purchasing or redeeming Shares on that day to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments or Redemption Instruments, respectively, solely because: (i) Such instruments are not eligible for transfer through either the NSCC or DTC (defined below); or (ii) in the case of Foreign Funds holding non-U.S. investments, such instruments are not eligible for trading due to local trading restrictions, local restrictions on securities transfers or other similar circumstances; or (e) if the Fund permits an Authorized Participant to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments or Redemption Instruments, respectively, solely because: (i) Such instruments are, in the case of the purchase of a Creation Unit, not available in sufficient quantity; (ii) such instruments are not eligible for trading by an Authorized Participant or the investor on whose behalf the Authorized Participant is acting; or (iii) a holder of Shares of a Foreign Fund holding non-U.S. investments would be subject to unfavorable income tax treatment if the holder receives redemption proceeds in kind.[20]

17. Creation Units will consist of specified large aggregations of Shares (*e.g.,* 25,000 Shares) as determined by the Adviser, and it is expected that the initial price of a Creation Unit will range from $1 million to $10 million.

Self-Indexing Fund, will be limited to the employees of the applicable Adviser or Sub-Adviser that are responsible for creating, compiling and maintaining the relevant Underlying Index.

[12] *See, e.g.,* FFI Advisors, LLC, et al., Investment Company Act Release No. 31669 (June 15, 2015) (notice) and 31713 (July 13, 2015) (order); Diamond Hill Capital Management, Inc., et al., Investment Company Act Release No. 31433 (Jan. 28, 2015) (notice) and 31472 (Feb. 24, 2015) (order); ETF Securities Advisors LLC, et al., Investment Company Act Release No. 31346 (Nov. 24, 2014) (notice) and 31395 (Dec. 22, 2014) (order) (collectively, ''Prior Orders'').

[13] The Funds must comply with the federal securities laws in accepting Deposit Instruments and satisfying redemptions with Redemption Instruments, including that the Deposit Instruments and Redemption Instruments are sold in transactions that would be exempt from registration under the Securities Act of 1933 (''Securities Act''). In accepting Deposit Instruments and satisfying redemptions with Redemption Instruments that are restricted securities eligible for resale pursuant to rule 144A under the Securities Act, the Funds will comply with the conditions of rule 144A.

[14] The portfolio used for this purpose will be the same portfolio used to calculate the Fund's NAV for the Business Day.

[15] A tradeable round lot for a security will be the standard unit of trading in that particular type of security in its primary market.

[16] This includes instruments that can be transferred in kind only with the consent of the original counterparty to the extent the Fund does not intend to seek such consents.

[17] Because these instruments will be excluded from the Deposit Instruments and the Redemption Instruments, their value will be reflected in the determination of the Cash Amount (as defined below).

[18] A Fund may only use sampling for this purpose if the sample: (i) Is designed to generate performance that is highly correlated to the performance of the Fund's portfolio; (ii) consists entirely of instruments that are already included in the Fund's portfolio; and (iii) is the same for all Authorized Participants on a given Business Day.

[19] In determining whether a particular Fund will sell or redeem Creation Units entirely on a cash or in-kind basis (whether for a given day or a given order), the key consideration will be the benefit that would accrue to the Fund and its investors. For instance, in bond transactions, the Adviser may be able to obtain better execution than Share purchasers because of the Adviser's size, experience and potentially stronger relationships in the fixed income markets. Purchases of Creation Units either on an all cash basis or in-kind are expected to be neutral to the Funds from a tax perspective. In contrast, cash redemptions typically require selling portfolio holdings, which may result in adverse tax consequences for the remaining Fund shareholders that would not occur with an in-kind redemption. As a result, tax consideration may warrant in-kind redemptions.

[20] A ''custom order'' is any purchase or redemption of Shares made in whole or in part on a cash basis in reliance on clause (e)(i) or (e)(ii).

All orders to purchase Creation Units must be placed with the Distributor by or through an ''Authorized Participant'' which is either (1) a ''Participating Party,'' *i.e.,* a Broker or other participant in the Continuous Net Settlement System of the NSCC, a clearing agency registered with the Commission, or (2) a participant in The Depository Trust Company (''DTC'') (''DTC Participant''), which, in either case, has signed a participant agreement with the Distributor. The Distributor will be responsible for transmitting the orders to the Funds and will furnish to those placing such orders confirmation that the orders have been accepted, but applicants state that the Distributor may reject any order which is not submitted in proper form.

18. Each Business Day, before the open of trading on the Exchange on which Shares are primarily listed (''Listing Exchange''), each Fund will cause to be published through the NSCC the names and quantities of the instruments comprising the Deposit Instruments and the Redemption Instruments, as well as the estimated Cash Amount (if any), for that day. The list of Deposit Instruments and Redemption Instruments will apply until a new list is announced on the following Business Day, and there will be no intra-day changes to the list except to correct errors in the published list. Each Listing Exchange will disseminate, every 15 seconds during regular Exchange trading hours, through the facilities of the Consolidated Tape Association, an amount for each Fund stated on a per individual Share basis representing the sum of (i) the estimated Cash Amount and (ii) the current value of the Deposit Instruments.

19. Transaction expenses, including operational processing and brokerage costs, will be incurred by a Fund when investors purchase or redeem Creation Units in-kind and such costs have the potential to dilute the interests of the Fund's existing shareholders. Each Fund will impose purchase or redemption transaction fees (''Transaction Fees'') in connection with effecting such purchases or redemptions of Creation Units. In all cases, such Transaction Fees will be limited in accordance with requirements of the Commission applicable to management investment companies offering redeemable securities. Since the Transaction Fees are intended to defray the transaction expenses as well as to prevent possible shareholder dilution resulting from the purchase or redemption of Creation Units, the Transaction Fees will be borne only by such purchasers or redeemers.[21] The Distributor will be responsible for delivering the Fund's prospectus to those persons acquiring Shares in Creation Units and for maintaining records of both the orders placed with it and the confirmations of acceptance furnished by it. In addition, the Distributor will maintain a record of the instructions given to the applicable Fund to implement the delivery of its Shares.

20. Shares of each Fund will be listed and traded individually on an Exchange. It is expected that one or more member firms of an Exchange will be designated to act as a market maker (each, a ''Market Maker'') and maintain a market for Shares trading on the Exchange. Prices of Shares trading on an Exchange will be based on the current bid/offer market. Transactions involving the sale of Shares on an Exchange will be subject to customary brokerage commissions and charges.

21. Applicants expect that purchasers of Creation Units will include institutional investors and arbitrageurs. Market Makers, acting in their roles to provide a fair and orderly secondary market for the Shares, may from time to time find it appropriate to purchase or redeem Creation Units. Applicants expect that secondary market purchasers of Shares will include both institutional and retail investors.[22] The price at which Shares trade will be disciplined by arbitrage opportunities created by the option continually to purchase or redeem Shares in Creation Units, which should help prevent Shares from trading at a material discount or premium in relation to their NAV.

22. Shares will not be individually redeemable, and owners of Shares may acquire those Shares from the Fund, or tender such Shares for redemption to the Fund, in Creation Units only. To redeem, an investor must accumulate enough Shares to constitute a Creation Unit. Redemption requests must be placed through an Authorized Participant. A redeeming investor may pay a Transaction Fee, calculated in the same manner as a Transaction Fee payable in connection with purchases of Creation Units.

23. Neither the Trust nor any Fund will be advertised or marketed or otherwise held out as a traditional open-end investment company or a ''mutual fund.'' Instead, each such Fund will be marketed as an ''ETF.'' All marketing materials that describe the features or method of obtaining, buying or selling Creation Units, or Shares traded on an Exchange, or refer to redeemability, will prominently disclose that Shares are not individually redeemable and will disclose that the owners of Shares may acquire those Shares from the Fund or tender such Shares for redemption to the Fund in Creation Units only. The Funds will provide copies of their annual and semi-annual shareholder reports to DTC Participants for distribution to beneficial owners of Shares.

Applicants' Legal Analysis

1. Applicants request an order under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, under section 12(d)(1)(J) of the Act for an exemption from sections 12(d)(1)(A) and (B) of the Act, and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act.

2. Section 6(c) of the Act provides that the Commission may exempt any person, security or transaction, or any class of persons, securities or transactions, from any provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Section 17(b) of the Act authorizes the Commission to exempt a proposed transaction from section 17(a) of the Act if evidence establishes that the terms of the transaction, including the consideration to be paid or received, are reasonable and fair and do not involve overreaching on the part of any person concerned, and the proposed transaction is consistent with the policies of the registered investment company and the general provisions of the Act. Section 12(d)(1)(J) of the Act provides that the Commission may exempt any person, security, or transaction, or any class or classes of persons, securities or transactions, from any provisions of section 12(d)(1) if the exemption is consistent with the public interest and the protection of investors.

Sections 5(a)(1) and 2(a)(32) of the Act

3. Section 5(a)(1) of the Act defines an ''open-end company'' as a management company that is offering for sale or has outstanding any redeemable security of which it is the issuer. Section 2(a)(32)

[21] Where a Fund permits an in-kind purchaser to substitute cash-in-lieu of depositing one or more of the requisite Deposit Instruments, the purchaser may be assessed a higher Transaction Fee to cover the cost of purchasing such Deposit Instruments.

[22] Shares will be registered in book-entry form only. DTC or its nominee will be the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or the DTC Participants.

of the Act defines a redeemable security as any security, other than short-term paper, under the terms of which the holder, upon its presentation to the issuer, is entitled to receive approximately a proportionate share of the issuer's current net assets, or the cash equivalent. Because Shares will not be individually redeemable, applicants request an order that would permit the Funds to register as open-end management investment companies and issue individual Shares that are redeemable in Creation Units only. Applicants state that investors may purchase Shares in Creation Units and redeem Creation Units from each Fund. Applicants further state that because Creation Units may always be purchased and redeemed at NAV, the price of Shares on the secondary market should not vary materially from NAV of Creation Units.

Section 22(d) of the Act and Rule 22c–1 Under the Act

4. Section 22(d) of the Act, among other things, prohibits a dealer from selling a redeemable security that is currently being offered to the public by or through an underwriter, except at a current public offering price described in the prospectus. Rule 22c–1 under the Act generally requires that a dealer selling, redeeming or repurchasing a redeemable security do so only at a price based on its NAV. Applicants state that secondary market trading in Shares will take place at negotiated prices, not at a current offering price described in a Fund's prospectus, and not at a price based on NAV. Thus, purchases and sales of Shares in the secondary market will not comply with section 22(d) of the Act and rule 22c–1 under the Act. Applicants request an exemption under section 6(c) from these provisions.

5. Applicants assert that the concerns sought to be addressed by section 22(d) of the Act and rule 22c–1 under the Act with respect to pricing are equally satisfied by the proposed method of pricing Shares. Applicants maintain that while there is little legislative history regarding section 22(d), its provisions, as well as those of rule 22c–1, appear to have been intended to (a) prevent dilution caused by certain riskless-trading schemes by principal underwriters and contract dealers, (b) prevent unjust discrimination or preferential treatment among buyers, and (c) ensure an orderly distribution of investment company shares by contract dealers by eliminating price competition from non-contract dealers offering shares at less than the published sales price and repurchasing shares at more than the published redemption price.

6. Applicants believe that none of these purposes will be thwarted by permitting Shares to trade in the secondary market at negotiated prices. Applicants state that (a) secondary market trading in Shares does not involve a Fund as a party and will not result in dilution of an investment in Shares, and (b) to the extent different prices exist during a given trading day, or from day to day, such variances occur as a result of third-party market forces, such as supply and demand. Therefore, applicants assert that secondary market transactions in Shares will not lead to discrimination or preferential treatment among purchasers. Finally, applicants contend that the price at which Shares trade will be disciplined by arbitrage opportunities created by the option continually to purchase or redeem Shares in Creation Units, which should help prevent Shares from trading at a material discount or premium in relation to their NAV.

Section 22(e) of the Act

7. Section 22(e) of the Act generally prohibits a registered investment company from suspending the right of redemption or postponing the date of payment of redemption proceeds for more than seven days after the tender of a security for redemption. Applicants state that settlement of redemptions for Foreign Funds will be contingent not only on the settlement cycle of the United States market, but also on current delivery cycles in local markets for underlying foreign securities held by a Foreign Fund. Applicants state that the delivery cycles currently practicable for transferring Redemption Instruments to redeeming investors, coupled with local market holiday schedules, may require a delivery process of up to fourteen (14) calendar days. Accordingly, with respect to Foreign Funds only, applicants hereby request relief under section 6(c) from the requirement imposed by section 22(e) to allow Foreign Funds to pay redemption proceeds within fourteen calendar days following the tender of Creation Units for redemption.[23]

8. Applicants believe that Congress adopted section 22(e) to prevent unreasonable, undisclosed or unforeseen delays in the actual payment of redemption proceeds. Applicants propose that allowing redemption payments for Creation Units of a Foreign Fund to be made within fourteen calendar days would not be inconsistent with the spirit and intent of section 22(e). Applicants suggest that a redemption payment occurring within fourteen calendar days following a redemption request would adequately afford investor protection.

9. Applicants are not seeking relief from section 22(e) with respect to Foreign Funds that do not effect creations and redemptions of Creation Units in-kind.

Section 12(d)(1) of the Act

10. Section 12(d)(1)(A) of the Act prohibits a registered investment company from acquiring securities of an investment company if such securities represent more than 3% of the total outstanding voting stock of the acquired company, more than 5% of the total assets of the acquiring company, or, together with the securities of any other investment companies, more than 10% of the total assets of the acquiring company. Section 12(d)(1)(B) of the Act prohibits a registered open-end investment company, its principal underwriter and any other broker-dealer from knowingly selling the investment company's shares to another investment company if the sale will cause the acquiring company to own more than 3% of the acquired company's voting stock, or if the sale will cause more than 10% of the acquired company's voting stock to be owned by investment companies generally.

11. Applicants request an exemption to permit registered management investment companies and unit investment trusts (''UITs'') that are not advised or sponsored by the Adviser, and not part of the same ''group of investment companies,'' as defined in section 12(d)(1)(G)(ii) of the Act as the Funds (such management investment companies are referred to as ''Investing Management Companies,'' such UITs are referred to as ''Investing Trusts,'' and Investing Management Companies and Investing Trusts are collectively referred to as ''Funds of Funds''), to acquire Shares beyond the limits of section 12(d)(1)(A) of the Act; and the Funds, and any principal underwriter for the Funds, and/or any Broker registered under the Exchange Act, to sell Shares to Funds of Funds beyond the limits of section 12(d)(1)(B) of the Act.

12. Each Investing Management Company will be advised by an investment adviser within the meaning of section 2(a)(20)(A) of the Act (the ''Fund of Funds Adviser'') and may be sub-advised by investment advisers within the meaning of section 2(a)(20)(B) of the Act (each, a ''Fund of

[23] Applicants acknowledge that no relief obtained from the requirements of section 22(e) will affect any obligations Applicants may otherwise have under rule 15c6–1 under the Exchange Act requiring that most securities transactions be settled within three business days of the trade date.

Funds Sub-Adviser''). Any investment adviser to an Investing Management Company will be registered under the Advisers Act. Each Investing Trust will be sponsored by a sponsor (''Sponsor'').

13. Applicants submit that the proposed conditions to the requested relief adequately address the concerns underlying the limits in sections 12(d)(1)(A) and (B), which include concerns about undue influence by a fund of funds over underlying funds, excessive layering of fees and overly complex fund structures. Applicants believe that the requested exemption is consistent with the public interest and the protection of investors.

14. Applicants believe that neither a Fund of Funds nor a Fund of Funds Affiliate would be able to exert undue influence over a Fund.[24] To limit the control that a Fund of Funds may have over a Fund, applicants propose a condition prohibiting a Fund of Funds Adviser or Sponsor, any person controlling, controlled by, or under common control with a Fund of Funds Adviser or Sponsor, and any investment company and any issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act that is advised or sponsored by a Fund of Funds Adviser or Sponsor, or any person controlling, controlled by, or under common control with a Fund of Funds Adviser or Sponsor (''Fund of Funds Advisory Group'') from controlling (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of the Act. The same prohibition would apply to any Fund of Funds Sub-Adviser, any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser, and any investment company or issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act (or portion of such investment company or issuer) advised or sponsored by the Fund of Funds Sub-Adviser or any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser (''Fund of Funds Sub-Advisory Group'').

15. Applicants propose other conditions to limit the potential for undue influence over the Funds, including that no Fund of Funds or Fund of Funds Affiliate (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund to purchase a security in an offering of securities during the existence of an underwriting or selling syndicate of which a principal underwriter is an Underwriting Affiliate (''Affiliated Underwriting''). An ''Underwriting Affiliate'' is a principal underwriter in any underwriting or selling syndicate that is an officer, director, member of an advisory board, Fund of Funds Adviser, Fund of Funds Sub-Adviser, employee or Sponsor of the Fund of Funds, or a person of which any such officer, director, member of an advisory board, Fund of Funds Adviser or Fund of Funds Sub-Adviser, employee or Sponsor is an affiliated person (except that any person whose relationship to the Fund is covered by section 10(f) of the Act is not an Underwriting Affiliate).

16. Applicants do not believe that the proposed arrangement will involve excessive layering of fees. The board of directors or trustees of any Investing Management Company, including a majority of the directors or trustees who are not ''interested persons'' within the meaning of section 2(a)(19) of the Act (''disinterested directors or trustees''), will find that the advisory fees charged under the contract are based on services provided that will be in addition to, rather than duplicative of, services provided under the advisory contract of any Fund in which the Investing Management Company may invest. In addition, under condition B.5., a Fund of Funds Adviser, or a Fund of Funds' trustee or Sponsor, as applicable, will waive fees otherwise payable to it by the Fund of Funds in an amount at least equal to any compensation (including fees received pursuant to any plan adopted by a Fund under rule 12b–1 under the Act) received from a Fund by the Fund of Funds Adviser, trustee or Sponsor or an affiliated person of the Fund of Funds Adviser, trustee or Sponsor, other than any advisory fees paid to the Fund of Funds Adviser, trustee or Sponsor or its affiliated person by a Fund, in connection with the investment by the Fund of Funds in the Fund. Applicants state that any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.[25]

17. Applicants submit that the proposed arrangement will not create an overly complex fund structure. Applicants note that no Fund will acquire securities of any investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the Act, except to the extent permitted by exemptive relief from the Commission permitting the Fund to purchase shares of other investment companies for short-term cash management purposes. To ensure a Fund of Funds is aware of the terms and conditions of the requested order, the Fund of Funds will enter into an agreement with the Fund (''FOF Participation Agreement''). The FOF Participation Agreement will include an acknowledgement from the Fund of Funds that it may rely on the order only to invest in the Funds and not in any other investment company.

18. Applicants also note that a Fund may choose to reject a direct purchase of Shares in Creation Units by a Fund of Funds. To the extent that a Fund of Funds purchases Shares in the secondary market, a Fund would still retain its ability to reject any initial investment by a Fund of Funds in excess of the limits of section 12(d)(1)(A) by declining to enter into a FOF Participation Agreement with the Fund of Funds.

Sections 17(a)(1) and (2) of the Act

19. Sections 17(a)(1) and (2) of the Act generally prohibit an affiliated person of a registered investment company, or an affiliated person of such a person, from selling any security to or purchasing any security from the company. Section 2(a)(3) of the Act defines ''affiliated person'' of another person to include (a) any person directly or indirectly owning, controlling or holding with power to vote 5% or more of the outstanding voting securities of the other person, (b) any person 5% or more of whose outstanding voting securities are directly or indirectly owned, controlled or held with the power to vote by the other person, and (c) any person directly or indirectly controlling, controlled by or under common control with the other person. Section 2(a)(9) of the Act defines ''control'' as the power to exercise a controlling influence over the management or policies of a company, and provides that a control relationship will be presumed where one person owns more than 25% of a company's voting securities. The Funds may be deemed to be controlled by the Adviser or an entity controlling, controlled by or under common control with the Adviser and hence affiliated persons of each other. In addition, the Funds may be deemed to be under common control with any other

[24] A ''Fund of Funds Affiliate'' is a Fund of Funds Adviser, Fund of Funds Sub-Adviser, Sponsor, promoter, and principal underwriter of a Fund of Funds, and any person controlling, controlled by, or under common control with any of those entities. A ''Fund Affiliate'' is an investment adviser, promoter, or principal underwriter of a Fund and any person controlling, controlled by or under common control with any of these entities.

[25] Any references to NASD Conduct Rule 2830 include any successor or replacement FINRA rule to NASD Conduct Rule 2830.

registered investment company (or series thereof) advised by an Adviser or an entity controlling, controlled by or under common control with an Adviser (an ''Affiliated Fund''). Any investor, including Market Makers, owning 5% or holding in excess of 25% of the Trust or such Funds, may be deemed affiliated persons of the Trust or such Funds. In addition, an investor could own 5% or more, or in excess of 25% of the outstanding shares of one or more Affiliated Funds making that investor a Second-Tier Affiliate of the Funds.

20. Applicants request an exemption from sections 17(a)(1) and 17(a)(2) of the Act pursuant to sections 6(c) and 17(b) of the Act to permit persons that are Affiliated Persons of the Funds, or Second-Tier Affiliates of the Funds, solely by virtue of one or more of the following: (a) Holding 5% or more, or in excess of 25%, of the outstanding Shares of one or more Funds; (b) an affiliation with a person with an ownership interest described in (a); or (c) holding 5% or more, or more than 25%, of the shares of one or more Affiliated Funds, to effectuate purchases and redemptions ''in-kind.''

21. Applicants assert that no useful purpose would be served by prohibiting such affiliated persons from making ''in-kind'' purchases or ''in-kind'' redemptions of Shares of a Fund in Creation Units. Both the deposit procedures for ''in-kind'' purchases of Creation Units and the redemption procedures for ''in-kind'' redemptions of Creation Units will be effected in exactly the same manner for all purchases and redemptions, regardless of size or number. There will be no discrimination between purchasers or redeemers. Deposit Instruments and Redemption Instruments for each Fund will be valued in the identical manner as those Portfolio Holdings currently held by such Fund and the valuation of the Deposit Instruments and Redemption Instruments will be made in an identical manner regardless of the identity of the purchaser or redeemer. Applicants do not believe that ''in-kind'' purchases and redemptions will result in abusive self-dealing or overreaching, but rather assert that such procedures will be implemented consistently with each Fund's objectives and with the general purposes of the Act. Applicants believe that ''in-kind'' purchases and redemptions will be made on terms reasonable to Applicants and any affiliated persons because they will be valued pursuant to verifiable objective standards. The method of valuing Portfolio Holdings held by a Fund is identical to that used for calculating ''in-kind'' purchase or redemption values and therefore creates no opportunity for affiliated persons or Second-Tier Affiliates of applicants to effect a transaction detrimental to the other holders of Shares of that Fund. Similarly, applicants submit that, by using the same standards for valuing Portfolio Holdings held by a Fund as are used for calculating ''in-kind'' redemptions or purchases, the Fund will ensure that its NAV will not be adversely affected by such securities transactions. Applicants also note that the ability to take deposits and make redemptions ''in-kind'' will help each Fund to track closely its Underlying Index and therefore aid in achieving the Fund's objectives.

22. Applicants also seek relief under sections 6(c) and 17(b) from section 17(a) to permit a Fund that is an affiliated person, or an affiliated person of an affiliated person, of a Fund of Funds to sell its Shares to and redeem its Shares from a Fund of Funds, and to engage in the accompanying in-kind transactions with the Fund of Funds.[26] Applicants state that the terms of the transactions are fair and reasonable and do not involve overreaching. Applicants note that any consideration paid by a Fund of Funds for the purchase or redemption of Shares directly from a Fund will be based on the NAV of the Fund.[27] Applicants believe that any proposed transactions directly between the Funds and Funds of Funds will be consistent with the policies of each Fund of Funds. The purchase of Creation Units by a Fund of Funds directly from a Fund will be accomplished in accordance with the investment restrictions of any such Fund of Funds and will be consistent with the investment policies set forth in the Fund of Funds' registration statement. Applicants also state that the proposed transactions are consistent with the general purposes of the Act and are appropriate in the public interest.

Applicants' Conditions

Applicants agree that any order of the Commission granting the requested relief will be subject to the following conditions:

A. ETF Relief

1. The requested relief to permit ETF operations will expire on the effective date of any Commission rule under the Act that provides relief permitting the operation of index-based ETFs.

2. As long as a Fund operates in reliance on the requested order, the Shares of such Fund will be listed on an Exchange.

3. Neither the Trust nor any Fund will be advertised or marketed as an open-end investment company or a mutual fund. Any advertising material that describes the purchase or sale of Creation Units or refers to redeemability will prominently disclose that Shares are not individually redeemable and that owners of Shares may acquire those Shares from the Fund and tender those Shares for redemption to a Fund in Creation Units only.

4. The Web site, which is and will be publicly accessible at no charge, will contain, on a per Share basis for each Fund, the prior Business Day's NAV and the market closing price or the midpoint of the bid/ask spread at the time of the calculation of such NAV (''Bid/Ask Price''), and a calculation of the premium or discount of the market closing price or Bid/Ask Price against such NAV.

5. Each Self-Indexing Fund, Long/Short Fund and 130/30 Fund will post on the Web site on each Business Day, before commencement of trading of Shares on the Exchange, the Fund's Portfolio Holdings.

6. No Adviser or any Sub-Adviser to a Self-Indexing Fund, directly or indirectly, will cause any Authorized Participant (or any investor on whose behalf an Authorized Participant may transact with the Self-Indexing Fund) to acquire any Deposit Instrument for the Self-Indexing Fund through a transaction in which the Self-Indexing Fund could not engage directly.

B. Fund of Funds Relief

1. The members of a Fund of Funds' Advisory Group will not control (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of

[26] Although applicants believe that most Funds of Funds will purchase Shares in the secondary market and will not purchase Creation Units directly from a Fund, a Fund of Funds might seek to transact in Creation Units directly with a Fund that is an affiliated person of a Fund of Funds. To the extent that purchases and sales of Shares occur in the secondary market and not through principal transactions directly between a Fund of Funds and a Fund, relief from Section 17(a) would not be necessary. However, the requested relief would apply to direct sales of Shares in Creation Units by a Fund to a Fund of Funds and redemptions of those Shares. Applicants are not seeking relief from Section 17(a) for, and the requested relief will not apply to, transactions where a Fund could be deemed an affiliated person, or an affiliated person of an affiliated person of a Fund of Funds because an Adviser or an entity controlling, controlled by or under common control with an Adviser provides investment advisory services to that Fund of Funds.

[27] Applicants acknowledge that the receipt of compensation by (a) an affiliated person of a Fund of Funds, or an affiliated person of such person, for the purchase by the Fund of Funds of Shares of a Fund or (b) an affiliated person of a Fund, or an affiliated person of such person, for the sale by the Fund of its Shares to a Fund of Funds, may be prohibited by Section 17(e)(1) of the Act. The FOF Participation Agreement also will include this acknowledgment.

the Act. The members of a Fund of Funds' Sub-Advisory Group will not control (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of the Act. If, as a result of a decrease in the outstanding voting securities of a Fund, the Fund of Funds' Advisory Group or the Fund of Funds' Sub-Advisory Group, each in the aggregate, becomes a holder of more than 25 percent of the outstanding voting securities of a Fund, it will vote its Shares of the Fund in the same proportion as the vote of all other holders of the Fund's Shares. This condition does not apply to the Fund of Funds' Sub-Advisory Group with respect to a Fund for which the Fund of Funds' Sub-Adviser or a person controlling, controlled by or under common control with the Fund of Funds' Sub-Adviser acts as the investment adviser within the meaning of section 2(a)(20)(A) of the Act.

2. No Fund of Funds or Fund of Funds Affiliate will cause any existing or potential investment by the Fund of Funds in a Fund to influence the terms of any services or transactions between the Fund of Funds or Fund of Funds Affiliate and the Fund or a Fund Affiliate.

3. The board of directors or trustees of an Investing Management Company, including a majority of the disinterested directors or trustees, will adopt procedures reasonably designed to ensure that the Fund of Funds Adviser and Fund of Funds Sub-Adviser are conducting the investment program of the Investing Management Company without taking into account any consideration received by the Investing Management Company or a Fund of Funds Affiliate from a Fund or Fund Affiliate in connection with any services or transactions.

4. Once an investment by a Fund of Funds in the securities of a Fund exceeds the limits in section 12(d)(1)(A)(i) of the Act, the Board of the Fund, including a majority of the directors or trustees who are not ''interested persons'' within the meaning of Section 2(a)(19) of the Act (''non-interested Board members''), will determine that any consideration paid by the Fund to the Fund of Funds or a Fund of Funds Affiliate in connection with any services or transactions: (i) Is fair and reasonable in relation to the nature and quality of the services and benefits received by the Fund; (ii) is within the range of consideration that the Fund would be required to pay to another unaffiliated entity in connection with the same services or transactions; and (iii) does not involve overreaching on the part of any person concerned. This condition does not apply with respect to any services or transactions between a Fund and its investment adviser(s), or any person controlling, controlled by or under common control with such investment adviser(s).

5. The Fund of Funds Adviser, or trustee or Sponsor of an Investing Trust, as applicable, will waive fees otherwise payable to it by the Fund of Funds in an amount at least equal to any compensation (including fees received pursuant to any plan adopted by a Fund under rule 12b–l under the Act) received from a Fund by the Fund of Funds Adviser, or trustee or Sponsor of the Investing Trust, or an affiliated person of the Fund of Funds Adviser, or trustee or Sponsor of the Investing Trust, other than any advisory fees paid to the Fund of Funds Adviser, or trustee or Sponsor of an Investing Trust, or its affiliated person by the Fund, in connection with the investment by the Fund of Funds in the Fund. Any Fund of Funds Sub-Adviser will waive fees otherwise payable to the Fund of Funds Sub-Adviser, directly or indirectly, by the Investing Management Company in an amount at least equal to any compensation received from a Fund by the Fund of Funds Sub-Adviser, or an affiliated person of the Fund of Funds Sub-Adviser, other than any advisory fees paid to the Fund of Funds Sub-Adviser or its affiliated person by the Fund, in connection with the investment by the Investing Management Company in the Fund made at the direction of the Fund of Funds Sub-Adviser. In the event that the Fund of Funds Sub-Adviser waives fees, the benefit of the waiver will be passed through to the Investing Management Company.

6. No Fund of Funds or Fund of Funds Affiliate (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund to purchase a security in any Affiliated Underwriting.

7. The Board of a Fund, including a majority of the non-interested Board members, will adopt procedures reasonably designed to monitor any purchases of securities by the Fund in an Affiliated Underwriting, once an investment by a Fund of Funds in the securities of the Fund exceeds the limit of section 12(d)(1)(A)(i) of the Act, including any purchases made directly from an Underwriting Affiliate. The Board will review these purchases periodically, but no less frequently than annually, to determine whether the purchases were influenced by the investment by the Fund of Funds in the Fund. The Board will consider, among other things: (i) Whether the purchases were consistent with the investment objectives and policies of the Fund; (ii) how the performance of securities purchased in an Affiliated Underwriting compares to the performance of comparable securities purchased during a comparable period of time in underwritings other than Affiliated Underwritings or to a benchmark such as a comparable market index; and (iii) whether the amount of securities purchased by the Fund in Affiliated Underwritings and the amount purchased directly from an Underwriting Affiliate have changed significantly from prior years. The Board will take any appropriate actions based on its review, including, if appropriate, the institution of procedures designed to ensure that purchases of securities in Affiliated Underwritings are in the best interest of shareholders of the Fund.

8. Each Fund will maintain and preserve permanently in an easily accessible place a written copy of the procedures described in the preceding condition, and any modifications to such procedures, and will maintain and preserve for a period of not less than six years from the end of the fiscal year in which any purchase in an Affiliated Underwriting occurred, the first two years in an easily accessible place, a written record of each purchase of securities in Affiliated Underwritings once an investment by a Fund of Funds in the securities of the Fund exceeds the limit of section 12(d)(1)(A)(i) of the Act, setting forth from whom the securities were acquired, the identity of the underwriting syndicate's members, the terms of the purchase, and the information or materials upon which the Board's determinations were made.

9. Before investing in a Fund in excess of the limit in section 12(d)(1)(A), a Fund of Funds and the Trust will execute a FOF Participation Agreement stating, without limitation, that their respective boards of directors or trustees and their investment advisers, or trustee and Sponsor, as applicable, understand the terms and conditions of the order, and agree to fulfill their responsibilities under the order. At the time of its investment in Shares of a Fund in excess of the limit in section 12(d)(1)(A)(i), a Fund of Funds will notify the Fund of the investment. At such time, the Fund of Funds will also transmit to the Fund a list of the names of each Fund of Funds Affiliate and Underwriting Affiliate. The Fund of Funds will notify the Fund of any changes to the list of the names as soon as reasonably practicable after a change occurs. The Fund and the Fund of Funds will maintain and preserve a

copy of the order, the FOF Participation Agreement, and the list with any updated information for the duration of the investment and for a period of not less than six years thereafter, the first two years in an easily accessible place.

10. Before approving any advisory contract under section 15 of the Act, the board of directors or trustees of each Investing Management Company including a majority of the disinterested directors or trustees, will find that the advisory fees charged under such contract are based on services provided that will be in addition to, rather than duplicative of, the services provided under the advisory contract(s) of any Fund in which the Investing Management Company may invest. These findings and their basis will be fully recorded in the minute books of the appropriate Investing Management Company.

11. Any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.

12. No Fund will acquire securities of an investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the Act, except to the extent the Fund acquires securities of another investment company pursuant to exemptive relief from the Commission permitting the Fund to acquire securities of one or more investment companies for short-term cash management purposes.

For the Commission, by the Division of Investment Management, under delegated authority.

Brent J. Fields,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77412; File No. SR–ISEMercury–2016–06]

Self-Regulatory Organizations; ISE Mercury, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Schedule of Fees

March 21, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on March 10, 2016, ISE Mercury, LLC (the ''Exchange'' or ''ISE Mercury'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change, as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

ISE Mercury proposes to amend its Schedule of Fees to count 100% of eligible traded volume preferenced to a Market Maker towards that member's volume tiers. The text of the proposed rule change is available on the Exchange's Internet Web site at *http://www.ise.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On March 10, 2016, ISE Mercury filed a proposed rule change to introduce fee and rebate tiers for Market Maker[3] and Priority Customer[4] orders based on the average daily volume (''ADV'') that a member executes in Priority Customer orders.[5] Pursuant to that proposed rule change, the Exchange will assess fees and rebates for Market Maker and Priority Customer orders based on five tiers of Total Affiliated Priority Customer ADV:[6] 0–19,999 contracts (''Tier 1''), 20,000–39,999 contracts (''Tier 2''), 40,000–59,999 contracts (''Tier 3''), 60,000–79,999 contracts (''Tier 4''), and 80,000 or more contracts (''Tier 5'').[7] As is the case on ISE Mercury's affiliated exchanges—the International Securities Exchange, LLC (''ISE'') and ISE Gemini, LLC (''ISE Gemini'')—the Exchange's ADV calculation will also include volume executed by affiliated members. In particular, the Exchange will aggregate all eligible volume from affiliated members in determining applicable tiers, provided that there is at least 75% common ownership between the members as reflected on the member's Form BD, Schedule A. While this method of aggregating volume is beneficial to large firms with multiple affiliated members, the Exchange believes that it is important to give smaller firms the ability to compete for more favorable fees and rebates. The Exchange therefore proposes to adopt ADV tiers that are based on preferenced volume—*i.e.,* volume directed to a specific Market Maker as provided in Supplementary Material .03 to Rule 713.[8] In particular, the Exchange proposes to give Market Makers volume credit for 100% of eligible traded volume preferenced to that member,[9] regardless of the actual allocation that the Market Maker receives. For example, assume Market Maker ABC is quoting at the national best bid or offer (''NBBO'') and receives a Preferenced Order for 10 contracts from an unaffiliated firm for the account of a Priority Customer. If there are other Market Makers quoting at the NBBO, Market Maker ABC may receive an allocation of 4 contracts—*i.e.,* 40% of the order. Rather than counting only the 4 contracts executed towards

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The term Market Makers refers to ''Competitive Market Makers'' and ''Primary Market Makers'' collectively.

[4] A ''Priority Customer'' is a person or entity that is not a broker/dealer in securities, and does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s), as defined in ISE Mercury Rule 100(a)(37A).

[5] *See* ISE Mercury–2016–05.

[6] The Total Affiliated Priority Customer ADV category includes all Priority Customer volume executed on the Exchange in all symbols and order types, including volume executed in the PIM, Facilitation, and QCC mechanisms.

[7] The highest tier threshold attained applies retroactively in a given month to all eligible traded contracts and applies to all eligible market participants. Any day that the market is not open for the entire trading day or the Exchange instructs members in writing to route their orders to other markets may be excluded from the ADV calculation; provided that the Exchange will only remove the day for members that would have a lower ADV with the day included.

[8] An Electronic Access Member (''EAM'') may designate a ''Preferred Market Maker'' on orders it enters into the System (''Preferenced Orders''). Supplementary Material .03 to Rule 713 describes the Exchange's rules concerning Preferenced Orders.

[9] ''Eligible volume'' refers to volume that would otherwise count towards to applicable volume tier. In the case of ADV thresholds based on Total Affiliated Priority Customer ADV, as currently implemented on ISE Mercury, all Priority Customer volume would be ''eligible.'' *See* note 6 supra.

the Market Maker's volume total, the Exchange now proposes to give that Market Maker credit for the full 10 contracts preferenced to it. This is the same credit the member would receive if the 10 contracts were sent to the exchange by an affiliated member, and the Exchange believes that this will put smaller Market Makers on more equal footing with large firms that benefit from affiliated volume.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[10] in general, and Section 6(b)(4) of the Act,[11] in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and other persons using its facilities. The Exchange believes that the proposed fee change is reasonable and equitable as it provides an additional way for members to increase volume used to qualify for lower fees and higher rebates. The Exchange has adopted volume based fees and rebates in another proposed rule change filed with the Commission. While volume based fees and rebates based on affiliated volume benefit Market Makers that have affiliated order routers, the Exchange believes that smaller Market Makers that attract order flow from non-affiliated firms should similarly be able to compete for more favorable fees and rebates. Preferred Market Makers attract order flow by establishing appropriate relationships with one or more EAMs that send Preferenced Orders to the Exchange. Although Preferred Market Makers may not be allocated the full volume orders preferenced to them, the Exchange believes that it is reasonable and equitable to give these Market Makers full credit for the volume of orders that they have attracted to ISE Mercury. This will put smaller Market Makers that are not affiliated with an order routing firm on more equal footing with large firms that benefit from affiliated volume today. In addition, the Exchange does not believe that it is unfairly discriminatory to provide this incentive specifically to Preferred Market Makers. As explained above, Preferred Market Makers attract order flow to the Exchange by establishing relationships with EAMs that direct Preferenced Orders to them. Moreover, all Market Makers are eligible to become Preferred Market Makers provided that they meet the quoting obligations expected of such firms.[12]

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[13] the Exchange does not believe that the proposed rule change will impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposed rule change will increase competition by allowing smaller Market Makers to compete for more favorable fees and rebates. As currently implemented, Market Makers that are affiliated with an order router are advantaged relative to other firms in achieving volume based fees and rebates. Although the Exchange continues to believe that counting volume across affiliated members is appropriate,[14] the Exchange also believes that Market Makers whose relationships attract Preference Orders should also receive similar benefits. As explained above, these Market Makers attract significant volume to the Exchange but currently only receive volume credit for a portion of that volume. The proposed rule change is designed to level the playing field between these members and their competitors that already benefit from affiliated volume. The Exchange operates in a highly competitive market in which market participants can readily direct their order flow to competing venues. For the reasons described above, the Exchange believes that the proposed fee change reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[15] and subparagraph (f)(2) of Rule 19b–4 thereunder,[16] because it establishes a due, fee, or other charge imposed by ISE Mercury.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–ISEMercury–2016–06 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISEMercury–2016–06. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of

[10] 15 U.S.C. 78f.

[11] 15 U.S.C. 78f(b)(4).

[12] Preferred Competitive Market Makers have quoting obligations that mirror those for Primary Market Makers. *See* Supplementary Material .03(d) to Rule 713 and Rule 804(e)(2)(iii).

[13] 15 U.S.C. 78f(b)(8).

[14] *See* note 5 supra.

[15] 15 U.S.C. 78s(b)(3)(A)(ii).

[16] 17 CFR 240.19b–4(f)(2).

10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISEMercury–2016–06, and should be submitted on or before April 15, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Brent J. Fields,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77409; File No. SR–ISEMercury–2016–05]

Self-Regulatory Organizations; ISE Mercury, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Schedule of Fees

March 21, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on March 10, 2016, ISE Mercury, LLC (the ''Exchange'' or ''ISE Mercury'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change, as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

ISE Mercury proposes to amend its Schedule of Fees by adopting volume-based tiered rebates and fees. These tiers are determined by a member's average daily volume of Priority Customer orders traded on the Exchange. The text of the proposed rule change is available on the Exchange's Internet Web site at *http://www.ise.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

ISE Mercury is proposing to amend its Schedule of Fees to establish volume-based tiered rebates and fees (the ''Member Volume Program'' or ''MVP''). The MVP tiers are determined by a member's average daily volume (''ADV'') of Priority Customer [3] Regular Orders,[4] in Penny and Non-Penny Pilot Symbols,[5] traded on the Exchange. The Exchange will also aggregate the trading activity of affiliated members in determining this ADV.[6] ISE Mercury believes the proposed fee and rebate tiers will incentivize firms to increase Priority Customer order flow to the Exchange. The Exchange is also proposing Penny and Non-Penny Symbol fees for both Crossing Orders and Responses to Crossing Orders. Finally, the Exchange proposes to offer Market Makers [7] a per contract discount when trading against Non-Priority Customer orders.

The Member Volume Program

Currently, the fees and rebates assessed for Regular Orders in standard options that are in the Penny Pilot are: (1) $0.20 per contract for Market Maker orders,[8] (2) $0.47 per contract for Non-ISE Mercury Market Maker,[9] Firm Proprietary [10]/Broker-Dealer,[11] and Professional Customer [12] orders; and (3) ($0.18) per contract for Priority Customer orders. The transaction fees and rebates assessed for Regular Orders that are not in the Penny Pilot are: (1) $0.20 per contract for Market Maker orders; (2) $0.90 per contract for Non-ISE Mercury Market Maker, Firm Proprietary/Broker-Dealer, and Professional Customer orders; and (3) ($0.18) per contract for Priority Customer orders.

The Exchange proposes to amend the above fees and rebates so that they will be based on a member's ADV of Priority Customer orders traded in a given month and the highest tier threshold attained applies retroactively in a given month to all eligible traded contracts and applies to all eligible market participants. This Priority Customer ADV includes all Priority Customer volume executed on the Exchange in all symbols and order types, including volume executed in the Price Improvement Mechanism (''PIM'') and the Facilitation and Qualified Contingent Cross mechanisms.

Further, the Exchange will aggregate the trading activity of separate members in calculating Priority Customer ADV provided there is at least 75% common ownership between the firms as reflected on each firm's Form BD, Schedule A. The Exchange believes that aggregating this volume across members that share at least 75% common ownership will allow members to continue to execute trades on the Exchange through separate broker-dealer entities for different types of

[17] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] A Priority Customer is a person or entity that is not a broker/dealer in securities, and does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s).

[4] A Regular Order is an order that consists of only a single option series and is not submitted with a stock leg.

[5] Under the Penny Pilot, the minimum price variation for all participating options classes, except for the Nasdaq-100 Index Tracking Stock (''QQQ''), the SPDR S&P 500 Exchange Traded Fund (''SPY'') and the iShares Russell 2000 Index Fund (''IWM''), is $0.01 for all quotations in options series that are quoted at less than $3 per contract and $0.05 for all quotations in options series that are quoted at $3 per contract or greater. The proposed fees and rebates for Penny Pilot symbols apply to all classes in the Penny Pilot, *i.e.,* to series that are quoted at less than $3 that have a minimum price variation of $0.01 and to series that are quoted at $3 or more that have an minimum price variation of $0.05. QQQ, SPY, and IWM are quoted in $0.01 increments for all options series.

[6] Aggregation is necessary and appropriate because certain members conduct customer and market maker trading activity through separate but related broker-dealers.

[7] The term Market Makers refers to ''Competitive Market Makers'' and ''Primary Market Makers'' collectively. Market Maker orders sent to the Exchange by an Electronic Access Member are assessed fees at the same level as Market Maker orders.

[8] This fee applies to ISE Mercury Market Maker orders sent to the Exchange by Electronic Access Members.

[9] A Non-ISE Mercury Market Maker, or Far Away Market Maker (''FARMM''), is a market maker as defined in Section 3(a)(38) of the Securities Exchange Act of 1934, as amended (''Exchange Act''), registered in the same options class on another options exchange.

[10] A Firm Proprietary order is an order submitted by a member for its own proprietary account.

[11] A Broker-Dealer order is an order submitted by a member for a non-member broker-dealer account.

[12] A Professional Customer is a person who is not a broker/dealer and is not a Priority Customer.

volume, while receiving rebates based on the aggregate volume being executed across such entities.

The Exchange now proposes fees and rebates based on five volume tier levels as described in the table below. These fees and rebates will be based on the highest tier that a member reaches in a given month, and these tiered rates will apply retroactively to all eligible traded contracts for all client categories.

QUALIFYING TIER THRESHOLDS

Tier	Total affiliated priority customer ADV
Tier 1	0–19,999
Tier 2	20,000–39,999
Tier 3	40,000–59,999
Tier 4	60,000–79,999
Tier 5	80,000+

Additionally, the Exchange proposes to amend the Schedule of Fees to include language related to excluding days from the ADV calculations used to determine applicable fee and rebate tiers. Specifically, the Exchange proposes to (1) exclude from its ADV calculations any trading day on which the Exchange is closed early for holiday observance; (2) exclude days where the Exchange declares a trading halt in all securities or honors a market-wide trading halt declared by another market; and (3) permit days to be excluded from its ADV calculations where the Exchange is technically open for the entire trading day, but has instructed members to route away due to a systems or other error that ultimately does not impact trading on the Exchange. The Exchange also notes, however, that if it has a systems issue in the morning before the market opens, it may instruct members to route away to other markets. If the systems issue continues into trading hours, the Exchange is permitted to exclude the day for all members that would have a lower ADV with the day included. If, however, the systems issue is resolved prior to the opening of trading, the Exchange is not permitted to exclude the day from its ADV calculations. This is the case regardless of the fact that many members would have already made arrangements to route away in accordance with the Exchange's instructions. To prevent this undesirable result, and preserve the Exchange's intent behind adopting volume-based pricing, the Exchange proposes to allow days to be excluded from its ADV calculation whenever all members are instructed, in writing, to route their orders to other markets.

Because the days the Exchange proposes to exclude from its ADV calculation generally have artificially lower trading volume, the Exchange believes that it is reasonable and equitable to not include such days in determining fee and rebate tiers. If the Exchange did not have the ability to exclude aberrant low volume days when calculating ADV for the month, as a result of the decreased trading volume, the numerator for the calculation (*e.g.,* trading volume) would be correspondingly lower, but the denominator for the threshold calculations (*e.g.,* the number of trading days) would not be decreased. This could result in an unintended cost increase. Absent the authority to exclude days that the market is not open for the entire trading day, members will experience an effective decrease in rebates. The artificially low volumes of trading on such days could reduce the trading activity of members both daily and monthly. Accordingly, excluding such days from the monthly calculation will diminish the likelihood of an effective increase in the cost of trading on the Exchange, a result that is unintended and undesirable to the Exchange and its members.

The Exchange notes that the fees charged to Non-ISE Mercury Market Maker, Firm Proprietary/Broker Dealer and Professional Customer in Penny and Non-Penny Symbols are the same as the current fees charged, regardless of the tier level reached. However, the tiered fees and rebates for both Priority Customers and Market Makers have changed. The proposed fees and rebates for each tier and participant type are as follows:

PENNY SYMBOL FEES AND REBATES

[Per contract]

Tier	Priority customer	Market maker	Firm proprietary, B/D, FarMM & professional customer
Tier 1	($0.05)	$0.25	$0.47
Tier 2	($0.10)	$0.22	$0.47
Tier 3	($0.15)	$0.18	$0.47
Tier 4	($0.21)	$0.15	$0.47
Tier 5	($0.24)	$0.10	$0.47

NON-PENNY SYMBOL FEES AND REBATES

[Per contract]

Tier	Priority customer	Market maker	Firm proprietary, B/D, FarMM & professional customer
Tier 1	($0.05)	$0.25	$0.90
Tier 2	($0.10)	$0.22	$0.90
Tier 3	($0.15)	$0.18	$0.90
Tier 4	($0.21)	$0.15	$0.90
Tier 5	($0.24)	$0.10	$0.90

Crossing Orders

The Exchange proposes Penny and Non-Penny Symbol fees for Crossing Orders. The Exchange currently charges a fee of $0.20 per contract for Crossing Orders [13] in all symbols traded on the Exchange for all market participants, except Priority Customers who are charged $0.00 per contract for Crossing Orders. A Crossing Order is an order executed in the Exchange's Facilitation Mechanism, Solicited Order Mechanism, PIM, or submitted as a Qualified Contingent Cross order. Orders executed in the Block Order Mechanism are also considered Crossing Orders. The fees for Crossing Orders, except for PIM Orders of 500 or Fewer Contracts, in both Penny and Non-Penny Symbols have not changed from current levels.

As an exception to the fees charged for Crossing Orders, the Exchange charges a fee of $0.05 per contract for PIM Orders of 500 or Fewer Contracts in all symbols traded on the Exchange for all market participants, except that Priority Customer orders on the originating side of a PIM auction receive a rebate of ($0.13) per contract. Priority Customer orders on the contra-side of a PIM auction pay no fee and receive no rebate. PIM orders greater than 500 contracts pay the Crossing Order fee, described above. The Exchange now proposes to offer tiered fees and rebates based on Priority Customer volume, as described above, for PIM Orders of 500 or Fewer Contracts. The Exchange notes that the fees for Non-Priority Customer orders have not changed from current levels, but the fees for Priority Customer orders have changed as described in the table, below.

ALL SYMBOLS FEE/REBATE FOR PIM ORDERS OF 500 OR FEWER CONTRACTS

Tier	Priority customer	Market maker	Firm proprietary, B/D, FarMM & professional customer
Tier 1	($0.11)	$0.05	$0.05
Tier 2	($0.11)	$0.05	$0.05
Tier 3	($0.13)	$0.05	$0.05
Tier 4	($0.13)	$0.05	$0.05
Tier 5	($0.13)	$0.05	$0.05

Responses to Crossing Orders

The Exchange proposes Penny and Non-Penny Symbol fees for Responses to Crossing Orders. A Response to a Crossing Order is any contra-side interest (*i.e.,* orders and quotes) submitted after the commencement of an auction in the Exchange's Facilitation Mechanism, Solicited Order Mechanism, Block Order Mechanism, or PIM. Currently, the Exchange charges a fee of (1) $0.20 per contract for Market Maker orders and (2) $0.50 per contract for Non-ISE Mercury Market Maker, Firm Proprietary/Broker-Dealer, Professional Customer, and Priority Customer orders in all symbols. For Responses to Crossing Orders in Penny Symbols, the Exchange proposes to charge Market Makers the corresponding tiered fees in the chart titled Penny Symbol Fees and Rebates, above. For Non-ISE Mercury Market Maker, Firm Proprietary/Broker-Dealer, Professional Customer, and Priority Customer orders in Penny Symbols, the fees have not changed from current levels. For Responses to Crossing Orders in Non-Penny Symbols, the Exchange proposes to charge Market Makers the corresponding tiered fees in the chart titled Non-Penny Symbol Fees and Rebates, above. For Non-ISE Mercury Market Maker, Firm Proprietary/Broker-Dealer, Professional Customer, and Priority Customer orders in Non-Penny Symbols, the Exchange proposes to charge a fee of $0.95 per contract.

With respect to the proposed MVP, described above, the Exchange notes that the fees and rebates currently being paid on ISE Mercury are in the range of fees and rebates in the new structure. During the initial rollout of symbols on ISE Mercury, the Exchange did not adopt the proposed tiered structure due to the difficulty of calculating appropriate ADV thresholds for each tier when symbols were being listed on the Exchange each week. The Exchange, therefore, opted to provide attractive introductory rates and Priority Customer order rebates in order to attract Priority Customer orders to the Exchange during the initial rollout phase. By adopting the proposed tiered structure now, the Exchange seeks to incentivize members to send additional order flow to the Exchange in order to qualify for lower fees and higher rebates.

Market Maker Discount

The Exchange is also proposing a $0.05 per contract discount to Market Maker fees when the Market Maker trades against Non-Priority Customer orders. We believe this will incentivize Market Makers to provide competitive markets. This discount does not apply to Crossing Orders.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[14] in general, and Section 6(b)(4) of the Act,[15] in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other charges among its members and other persons using its facilities.

The Exchange believes the fees proposed for transactions on ISE Mercury are reasonable. ISE Mercury will operate within a highly competitive market in which market participants can readily send order flow to any of the thirteen other competing venues if they deem fees at a particular venue to be excessive. The proposed MVP is intended to attract order flow to ISE Mercury by offering certain market participants incentives to submit their orders to ISE Mercury.

Member Volume Program

The Exchange believes the proposed fees and rebates in the MVP are reasonable and equitably allocated because ISE Mercury has already established fees for members trading on the Exchange, and is merely proposing to adopt volume-based tiers designed to incentivize members to send additional Priority Customer order flow to the Exchange. Further, the language permitting aggregation of volume amongst corporate affiliates for purposes

[13] These fees apply to both originating and contra orders.

[14] 15 U.S.C. 78f.

[15] 15 U.S.C. 78f(b)(4).

of the ADV calculation is intended to avoid disparate treatment of firms that have divided their various business activities between separate corporate entities as compared to firms that operate those business activities within a single corporate entity. For example, many firms that are members of the Exchange operate several different business lines within the same corporate entity. In contrast, other firms may be part of a corporate structure that separates those business lines into different corporate affiliates, either for business, compliance, or historical reasons. Those corporate affiliates, in turn, are required to maintain separate memberships with the Exchange in order to access the Exchange. The Exchange believes that corporate affiliates should continue to be aggregated and is clarifying when members will be considered affiliated. The Exchange notes that the proposed definition of ''affiliate'' to be used to aggregate affiliated member ADV is consistent with definitions used by other options exchanges, including MIAX.[16]

The Exchange believes that it is equitable and reasonable to permit the Exchange to eliminate from the calculation days on which the market is not open the entire trading day, either due to a holiday or trading halt, because it preserves the Exchange's intent behind adopting volume-based pricing. The proposed change is non-discriminatory because it applies equally to all members and to all volume tiers. Additionally, the Exchange believes that it is reasonable and equitable to exclude a day from its ADV calculations when members are instructed to route their orders to other markets as this preserves the Exchange's intent behind adopting volume-based pricing, and avoids penalizing members that follow this instruction. Without this change, members that route away in accordance with the Exchange's instructions may be negatively impacted, resulting in an effective cost increase for those members. The Exchange further believes that the proposed rule change is not unfairly discriminatory because it applies equally to all members and ADV calculations. As is the Exchange's current practice, the Exchange will inform members of any day to be excluded from its ADV calculations by sending members a notice and posting such notice on the Exchange's Web site.

The Exchange further believes that its proposal to provide rebates for Priority Customer orders is reasonable and equitable because the proposed rebates are competitive with the rebates offered by other exchanges employing similar tiered rebate structures based on Priority Customer volume. For example, MIAX Options Exchange (''MIAX'') and NASDAQ OMX PHLX (''PHLX'') have Priority Customer, tiered rebate programs.[17] MIAX offers a per contract rebate of $0.00 for its base tier and a per contract rebate of $0.24 for its highest rebate tier in select symbols. Similarly, PHLX offers a per contract rebate of $0.00 for its base tier and a per contract rebate of $0.21 for its highest tier in customer simple orders.[18] As proposed, ISE Mercury's Priority Customer order rebates are not unfairly discriminatory because they would apply uniformly to all similarly situated market participants and they are competitive with the rebates offered by MIAX's and PHLX's Priority Customer rebate programs.

The Exchange believes that providing higher rebates for Priority Customer orders, and creating ADV thresholds specifically for members that send such orders to ISE Mercury, attracts that order flow to the Exchange and thereby creates liquidity to the benefit of all market participants who trade on the Exchange. Further, the Exchange believes that it is equitable and not unfairly discriminatory to provide higher rebates to Priority Customer orders than to Professional Customer orders. A Priority Customer is by definition not a broker or dealer in securities, and does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). This limitation does not apply to participants on the Exchange whose behavior is substantially similar to that of market professionals, including Professional Customers, who will generally submit a higher number of orders (many of which do not result in executions) than Priority Customers. Further, Professional Customers engage in trading activity similar to that conducted by Market Makers and proprietary traders.

The Exchange believes that its proposal to assess a per contract fee for Market Maker orders is reasonable and equitable because the proposed fees are within the range of fees assessed by other exchanges employing similar tiered rebate structures such as MIAX, which offers tiered fees for Market Makers. In Penny Symbols, MIAX generally charges Market Makers a per contract fee as high as $0.25 for its base tier and a per contract fee of $0.05 for its highest tier.[19] In Non-Penny Symbols, MIAX charges a per contract fee of $0.29 for its base tier and a per contract fee of $0.09 for its highest tier.[20] Thus, MIAX's tiered Market Maker fees are competitive with ISE Mercury's fees. The Exchange believes that the price differentiation between Market Makers and other Non-Priority Customers is appropriate and not unfairly discriminatory because Market Makers have different requirements and obligations to the Exchange that other market participants do not (such as quoting requirements). The Exchange believes that it is equitable and not unfairly discriminatory to provide lower fees to Market Makers because they would apply uniformly to similarly situated market participants.

Crossing Orders

The Exchange believes the proposed rebates for PIM Orders of 500 or Fewer Contracts[21] are reasonable and equitably allocated because the proposed fees are within the range of fees assessed by other exchanges such as MIAX, which offers a rebate for PRIME Agency orders.[22] For example, MIAX offers a per contract rebate of $0.10 for each Priority Customer order and also offers an additional per contract rebate of $0.02 for members that qualify for MIAX's Priority Customer Rebate Program's volume tiers 3 and 4.[23] While ISE Mercury's tiered rebate is specifically targeted towards Priority Customer orders, the Exchange does not believe that this is unfairly discriminatory. As discussed above,

[16] *See* MIAX Fee Schedule, (1) Transaction Fees, (a) Exchange Fees, (iii) Priority Customer Rebate Program at *https://www.miaxoptions.com/sites/default/files/MIAX_Options_Fee_Schedule_02012016B.pdf.*

[17] *See* MIAX Fee Schedule, (1) Transaction Fees, (a) Exchange Fees, (iii) Priority Customer Rebate Program at *https://www.miaxoptions.com/sites/default/files/MIAX_Options_Fee_Schedule_03012016.pdf* and PHLX Fee Schedule, B. Customer Rebate Program at *http://www.nasdaqtrader.com/Micro.aspx?id=phlxpricing.*

[18] PHLX Fee Schedule, B. Customer Rebate Program, Category A at *http://www.nasdaqtrader.com/Micro.aspx?id=phlxpricing.*

[19] *See* MIAX Fee Schedule, (1) Transaction Fees, (a) Exchange Fees, (i) Market Maker Transaction Fees, Market Maker Sliding Scale at *https://www.miaxoptions.com/sites/default/files/MIAX_Options_Fee_Schedule_03012016.pdf.*

[20] *Id.*

[21] The level is set at 500 or fewer contracts because Priority Customer orders are typically less than 500 contracts.

[22] *See* MIAX Fee Schedule, (1) Transaction Fees, (a) Exchange Fees, (iii) Priority Customer Rebate Program at *https://www.miaxoptions.com/sites/default/files/MIAX_Options_Fee_Schedule_03012016.pdf.*

[23] *Id.*

Priority Customer orders on the Exchange are generally entitled to lower fees and higher rebates, and the Exchange believes that attracting more liquidity from Priority Customers will benefit all market participants that trade on ISE Mercury. Further, the Exchange believes that it is equitable and not unfairly discriminatory to provide lower fees to Priority Customers because they would apply uniformly to similarly situated market participants.

Responses to Crossing Orders

The Exchange's proposal to assess Penny and Non-Penny Symbol fees for Responses to Crossing Orders is reasonable and equitably allocated because they are within the range of fees assessed by other exchanges. Specifically, the Exchange proposes to keep fees for Responses to Crossing Orders in Penny Symbols the same and to increase fees for Responses to Crossing Orders in Non-Penny Symbols so that these fees are competitive with similar fees charged on other exchanges. For example, ISE Gemini's Fees for Responses to Crossing Orders [24] in both Penny and Non-Penny Symbols are competitive with those proposed by ISE Mercury. Further, the Exchange believes the proposed Fees for Responses to Crossing Orders are not unfairly discriminatory because they would uniformly apply to all similarly situated market participants.

With respect to the Responses to Crossing Orders' tiered fees for Market Maker orders, the Exchange believes that the proposed fees are fair, equitable, and not unfairly discriminatory because the proposed fees are consistent with the fees charged at other exchanges. For example, ISE Gemini charges Market Makers a Fee for Responses to Crossing Orders of $0.49 per contract in Penny Symbols and $0.89 per contract in Non-Penny Symbols. Similarly, ISE Mercury's proposal would charge per contract fees ranging from $0.50 (Tier 1 fee plus Marketing Fee) to $0.35 (Tier 5 fee plus Marketing Fee) in Penny Symbols and per contract fees ranging from $0.95 (Tier 1 fee plus Marketing Fee) to $0.80 (Tier 5 fee plus marketing fee) in Non-Penny Symbols. As discussed above, the Exchange believes that the price differentiation between Market Makers and the other market participants is appropriate and not unfairly discriminatory because they have requirements and obligations to the Exchange that the other market participants do not. Market Makers also incur Marketing Fees, which the other market participants do not. Thus, the Exchange believes that it is equitable and not unfairly discriminatory to assess a higher fee to certain market participants that do not have such requirements and obligations that Exchange Market Makers do.

Market Maker Discount

The Exchange believes the proposed Market Maker discount is reasonable, equitable, and not unfairly discriminatory because Market Makers have different requirements and obligations to the Exchange that other market participants do not and they incur Marketing Fees. The Exchange notes that when trading against a Priority Customer the exchange pays a rebate for Priority Customer orders, but the Exchange charges a fee for executions of Non-Priority Customer orders. The Exchange believes that offering a discount on the fees charged to Market Makers will encourage Market Maker to make better markets and execute more trades. Furthermore, charging Market Makers lower fees for trading against a Non-Priority Customer order is not a new concept in the industry. For example, BOX Options Exchange, in Non-Penny Pilot Symbols, charges Market Makers a maker fee of $0.85 per contract for trading against a Priority Customer order and a maker fee of $0.00 for trading against a Professional Customer/Broker Dealer order.[25] Finally, [sic]

The Exchange notes that the proposed rule filing is intended to further establish ISE Mercury as an attractive venue for market participants to direct their order flow as the proposed fees and rebates are competitive with those established by other exchanges. The Exchange operates in a highly competitive market in which market participants can readily direct order flow to another exchange if they deem rebates at a particular exchange to be too low. For the reasons noted above, the Exchange believes that the proposed rebates are fair, equitable and not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[26] the Exchange does not believe that the proposed rule change will impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The tiered rebate structure that the Exchange proposes to adopt is similar to those currently in effect on other options exchanges such as MIAX and PHLX, and will increase competition between ISE Mercury and these markets.

In establishing the MVP, the Exchange is not imposing any burden on competition. The established volume tiers are transparent and offer members a simple way to reach different levels of fees and rebates on the exchange, similar to levels and differentials these same participants are familiar with on several other exchanges. Volume tiers are not new to the options industry and generally reward members for submitting additional volume to the Exchange, with ISE Mercury now seeking to introduce a similar structure. The Exchange also notes that other exchanges have substantially similar requirements for aggregating affiliated member ADV in determining applicable tiered rebates.

Finally, in establishing a Market Maker discount for Market Makers trading against Non-Priority Customer orders, the Exchange is not imposing any burden on competition not necessary or appropriate in furtherance of the purposes of the Act because other exchanges offer lower fees to Market Makers trading against Non-Priority Customers. Additionally, the Exchange notes that when trading against a Priority Customer the exchange pays a rebate for Priority Customer orders, but the Exchange charges a fee for executions of Non-Priority Customer orders. The Exchange believes that offering a discount on the fees charged to Market Makers will encourage Market Maker to make better markets and execute more trades.

The Exchange operates in a highly competitive market in which market participants can readily direct their order flow to competing venues. In such an environment, the Exchange must continually review, and consider adjusting, its fees and rebates to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed fee changes reflect this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any

[26] 15 U.S.C. 78f(b)(8).

unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[27] and subparagraph (f)(2) of Rule 19b–4 thereunder,[28] because it establishes a due, fee, or other charge imposed by ISE Mercury.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ISEMercury–2016–05 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISEMercury–2016–05. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISEMercury–2016–05, and should be submitted on or before April 15, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[29]

Brent J. Fields,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77413; File No. SR–ICC–2016–003]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change To Revise the ICC Operational Risk Management Framework

March 21, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder[2] notice is hereby given that on March 10, 2016, ICE Clear Credit LLC (''ICC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared primarily by ICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The principal purpose of the proposed rule change is to update ICC's Operational Risk Management Framework. These revisions do not require any changes to the ICC Clearing Rules.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of these statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

ICC proposes updates to the ICC Operational Risk Management Framework. ICC believes such revisions will facilitate the prompt and accurate clearance and settlement of securities transactions and derivative agreements, contracts, and transactions for which it is responsible. The proposed revisions are described in detail as follows.

The ICC Operational Risk Management Framework details ICC's dynamic and independent program of risk assessment and oversight, managed by the Operational Risk Manager (''ORM''), which aims to reduce operational incidents, encourage process and control improvement, bring transparency to operational performance standard monitoring, and fulfill regulatory obligations. ICC proposes organizational changes to its Operational Risk Management Framework related to its operational risk management processes.

ICC has revised the Operational Risk Management Framework to frame its existing operational risk program and processes around an operational risk lifecycle, designed to highlight certain aspects of the processes and present the processes in a more efficient manner. The operational risk lifecycle utilized by ICC has five components: Identify, assess, monitor, mitigate and report. Each of these lifecycle components are first defined generally in the document then applied to each of ICC's two operational risk processes: Risk assessment; and performance objectives setting and monitoring. Specifically, the content for each risk process has been reorganized to fall into each of the operational risk lifecycle components (*i.e.,* identify, assess, monitor, mitigate, and report). For completion purposes,

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

ICC added information regarding the 'assess' and 'report' component of the risk assessment process. Specifically, ICC assesses each of its risk scenarios to determine the inherent risk rating associated with the occurrence of an event or incident, as well as assess the effectiveness of any relevant risk controls. Further, in the 'report' component, ICC clarified that the ORM presents operational risk reporting to an internal committee which includes members of senior management. The responsibilities of the ORM, which were previously listed out in the document, were incorporated into the risk lifecycles. The ORM will continue to provide management and staff with advice and guidance related to the development of controls designed to increase performance and reduce processing risk, as part of the 'mitigate' risk lifecycle component. Similarly, the responsibilities of senior management, which were previously listed out in the document, were incorporated into the risk lifecycles.

ICC has categorized those aspects of the operational risk management program which do not fall within this lifecycle as ''Operational Risk Focus Areas.'' These risk focus areas include: Business continuity planning and disaster recovery; vendor assessment; new products and initiatives; information security; and technology control functions. ICC has reorganized the order of these risk focus areas to better distinguish which functions may, with oversight by the ORM, be outsourced to Intercontinental Exchange, Inc. (''ICE, Inc.'') or performed by departments dedicated to that particular risk area.

ICC has made several clarifying and organizational enhancements to the various risk focus area descriptions. Further, specific details contained within other ICC policies and procedures were removed and described more generally within the Operational Risk Management Framework, in an effort to reduce redundancy amongst ICC policies and procedures. ICC continues to maintain business continuity planning and disaster recovery as two separate programs with separate and distinct components; however, ICC has grouped the description of these programs together for purposes of the Operational Risk Management Framework. ICC enhanced the ''Vendor Assessment'' risk focus area description to note that the ORM is responsible for conducting a service provider risk assessment for critical vendors, and to list the specific steps taken as part of such risk assessment. ICC also enhanced the ''Information Security'' risk focus area description to note that the ICE, Inc. Information Security Department conducts its own risk assessments related to information security and physical security/environmental controls, pursuant to internal policies which are maintained by an ICE, Inc. internal committee. Information regarding the Firm Wide Incident Management Program was included in the new 'Technology Controls Section.' ICC enhanced the 'Technology Control Functions' risk focus area description to note that the ICC Systems Operations team is responsible for executing daily clearing functions within established service expectations and performing incident management. ICC described this incident management process generally within the framework, and removed more detailed aspects of the program which are contained in specific program documentation.

General information regarding the development and enforcement of a firm-wide operational risk framework was removed, as the revised framework more clearly lays out in each particular section who is responsible for the development and enforcement of that component of the operational risk management framework. Information regarding the human resource reporting line of the ORM and specific references to titles of documents utilized as part of the risk assessment process were removed. As the Vendor Risk Management policy was retired and encompassed within the Operational Risk Management Framework, reference to the policy was removed from the document. ICC removed internal audit responsibilities from the Operational Risk Management Framework as such responsibilities are contained within internal audit documentation.

The overall governance of the Operational Risk Framework has been updated to reflect current practices. Specifically, material amendments are reviewed by the Risk Committee, and approved by the Board. The Board reviews the Operational Risk Management Framework at least annually.

Other non-material changes were made to the framework to enhance readability. Previously, ICC included regulatory requirements and industry guidance information within the framework; this information has been moved to a separate appendix to the framework. Further, information regarding Regulation Systems, Compliance, and Integrity has been added for completeness. Certain information regarding governance and governing committees has been resituated to the reporting section of the relevant operational risk lifecycle. Similarly, information regarding the roles and responsibilities of the ORM and senior management has been resituated to the appropriate section the operational risk lifecycle.

Section 17A(b)(3)(F) of the Act [3] requires, among other things, that the rules of a clearing agency be designed to protect investors and the public interest and to comply with the provisions of the Act and the rules and regulations thereunder. ICC believes that the proposed rule changes are consistent with the requirements of the Act and the rules and regulations thereunder applicable to ICC, in particular, to Section 17(A)(b)(3)(F),[4] because ICC believes that the proposed rule changes will protect investors and the public interest, as the reorganization of ICC's existing operational risk processes around the operational risk lifecycle promotes readability and efficiency, and alleviates potential confusion throughout the Operational Risk Management Framework. In addition, the proposed revisions are consistent with the relevant requirements of Rule 17Ad–22.[5] The changes to the ICC Operational Risk Management Framework further ensure that ICC, through its operational risk program, is able to identify sources of operational risk and minimize them through the development of appropriate systems, control, and procedures. Thus, the changes are reasonably designed to meet the operational risk requirements of Rule 17Ad–22(d)(4).[6] As such, the proposed changes are designed to promote the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions within the meaning of Section 17A(b)(3)(F) [7] of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

ICC does not believe the proposed rule changes would have any impact, or impose any burden, on competition. The ICC Operational Risk Management Framework applies uniformly across all market participants. Therefore, ICC does not believe the proposed rule changes impose any burden on competition that is inappropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not been solicited or received. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ICC–2016–003 on the subject line.

Paper Comments

Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number *SR–ICC–2016–003*. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filings will also be available for inspection and copying at the principal office of ICE Clear Credit and on ICE Clear Credit's Web site at *https://www.theice.com/clear-credit/regulation*.

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ICC–2016–003 and should be submitted on or before April 15, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[8]

Brent J. Fields,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 32032; 812–14285]

Northern Lights Fund Trust and Princeton Fund Advisors, LLC; Notice of Application

March 21, 2016.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application under Section 6(c) of the Investment Company Act of 1940 (''Act'') for an exemption from Section 15(a) of the Act and Rule 18f–2 under the Act, as well as from certain disclosure requirements in Rule 20a–1 under the Act, Item 19(a)(3) of Form N–1A, Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8) and 22(c)(9) of Schedule 14A under the Securities Exchange Act of 1934, and Sections 6–07(2)(a), (b), and (c) of Regulation S–X (''Disclosure Requirements''). The requested exemption would permit an investment adviser to hire and replace certain sub-advisers without shareholder approval and grant relief from the Disclosure Requirements as they relate to fees paid to the sub-advisers.

APPLICANTS: Northern Lights Fund Trust (the ''Trust''), a Delaware statutory trust registered under the Act as an open-end management investment company with multiple series, and Princeton Fund Advisors LLC, a Delaware limited liability company registered as an investment adviser under the Investment Advisers Act of 1940 (''the ''Adviser,'' and, collectively with the Trust, the ''Applicants'').

FILING DATES: The application was filed March 6, 2014, and amended on August 21, 2014, November 10, 2014, November 25, 2015, February 19, 2016, February 22, 2016, and March 16, 2016.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on April 18, 2016, and should be accompanied by proof of service on the applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to Rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: Trust: James P. Ash, Esq., Gemini Fund Services LLC, 80 Arkay Drive, Suite 110, Hauppage, NY 11788 and Adviser: Princeton Fund Advisors, LLC, 1125 17th Street, Suite 1400, Denver, CO 80202.

FOR FURTHER INFORMATION CONTACT: Jean E. Minarick, Senior Counsel, at (202) 551–6811, or Daniele Marchesani, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Summary of the Application

1. The Adviser will serve as the investment adviser to the Funds pursuant to an investment advisory agreement with the Trust (the ''Advisory

Agreement'').[1] The Adviser will provide the Funds with continuous and comprehensive investment management services subject to the supervision of, and policies established by, each Fund's board of trustees (''Board''). The Advisory Agreement permits the Adviser, subject to the approval of the Board, to delegate to one or more sub-advisers (each, a ''Sub-Adviser'' and collectively, the ''Sub-Advisers'') the responsibility to provide the day-to-day portfolio investment management of each Fund, subject to the supervision and direction of the Adviser. The primary responsibility for managing the Funds will remain vested in the Adviser. The Adviser will hire, evaluate, allocate assets to and oversee the Sub-Advisers, including determining whether a Sub-Adviser should be terminated, at all times subject to the authority of the Board.

2. Applicants request an exemption to permit the Adviser, subject to Board approval, to hire certain Sub-Advisers pursuant to Sub-Advisory Agreements and materially amend existing Sub-Advisory Agreements without obtaining the shareholder approval required under Section 15(a) of the Act and Rule 18f–2 under the Act.[2] Applicants also seek an exemption from the Disclosure Requirements to permit a Fund to disclose (as both a dollar amount and a percentage of the Fund's net assets): (a) The aggregate fees paid to the Adviser; and (b) the aggregate fees paid to Sub-Advisers other than Affiliated Sub-Advisers; and (c) the fee paid to each Affiliated Sub-Adviser (collectively, ''Aggregate Fee Disclosure'').

3. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the Application. Such terms and conditions provide for, among other safeguards, appropriate disclosure to Fund shareholders and notification about sub-advisory changes and enhanced Board oversight to protect the interests of the Funds' shareholders.

4. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or any rule thereunder, if such relief is necessary or appropriate in the public interest and consistent with the protection of investors and purposes fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard because, as further explained in the Application, the Advisory Agreements will remain subject to shareholder approval, while the role of the Sub-Advisers is substantially similar to that of individual portfolio managers, so that requiring shareholder approval of Sub-Advisory Agreements would impose unnecessary delays and expenses on the Funds. Applicants believe that the requested relief from the Disclosure Requirements meets this standard because it will improve the Adviser's ability to negotiate fees paid to the Sub-Advisers that are more advantageous for the Funds.

For the Commission, by the Division of Investment Management, under delegated authority.

Brent J. Fields,

Secretary.

[FR Doc. 2016–06748 Filed 3–24–16; 8:45 am]

BILLING CODE 8011–01–P

[1] Applicants request relief with respect to any existing and any future series of the Trust and any other registered open-end management company or series thereof that: (a) Is advised by the Adviser or its successor or by a person controlling, controlled by, or under common control with the Adviser or its successor (each, also an ''Adviser''); (b) uses the manager of managers structure described in the application; and (c) complies with the terms and conditions of the application (any such series, a ''Fund'' and collectively, the ''Funds''). For purposes of the requested order, ''successor'' is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization.

[2] The requested relief will not extend to any Sub-Adviser that is an affiliated person, as defined in Section 2(a)(3) of the Act, of a Fund or the Adviser, other than by reason of serving as a sub-adviser to one or more of the Funds, or as an investment adviser or subadviser to any fund of the Trust other than a Fund (''Affiliated Sub-Adviser'').

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77410; File No. SR–ISE–2016–07]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Eliminate the Strict Concentration Limits on Primary Market Makers

March 21, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on March 15, 2016, the International Securities Exchange, LLC (the ''Exchange'' or the ''ISE'') filed with the Securities and Exchange Commission the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

ISE proposes to eliminate the 30% strict cap on the number of Primary Market Maker (''PMM'') memberships that the ISE's Board of Directors (the ''Board'') can approve for an ISE member to operate. The text of the proposed rule change is available on the Exchange's Web site at *www.ise.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposal is to eliminate the 30% strict cap on the number of PMM memberships that the Board can approve for an ISE member to operate.[3] ISE Rule 303(b) currently requires the Board show ''good cause'' to approve any PMM membership that would result in the PMM operating trading privileges associated with more than one PMM membership. The Board may waive the limitations contained in this rule if it determines that good cause has been shown and such action is, in its judgment, in the best interests of the Exchange.[4] The Board is not permitted,

[3] A PMM serves a function similar to that of a specialist on other exchanges. Among other things, a PMM must provide continuous quotations in all assigned options classes. *See* Rule 804(e)(1); Supplementary Material .01 to Rule 804. There are currently 10 outstanding PMM memberships authorized and issued by the Exchange under its Third Amended and Restated LLC Agreement (the ''LLC Agreement''). *See* LLC Agreement, Section 6.1(a).

[4] When making its determination whether good cause has been shown to waive the limitations contained in this rule, the Board must consider whether an operational, business or regulatory need

however, to grant this approval if the member and its affiliates would, as a result, be approved to exercise trading privileges associated with more than 30% of all outstanding PMM memberships.[5] Section 6.5(b) of ISE's Third Amended and Restated Limited Liability Company Agreement (the ''LLC Agreement'') contains the same 30% strict cap as Rule 303(b). This limitation on exercising PMM trading privileges is in addition to ownership and voting limitations in the LLC Agreement and in the Exchange's rules that prohibit any member from owning (or voting the shares representing) more than 20% of any class of membership.[6]

Due to the continued concentration and specialization in the options market making community, and the decreasing number of market makers available to operate these memberships, the Exchange is proposing to eliminate the 30% cap on the number of PMM memberships that the Board can approve for a member to operate.

As the number of market makers decreases, the Exchange is concerned that there may not be a sufficient number of members qualified to be PMMs if the Exchange retains the current 30% cap (thus limiting a member to operating three PMM memberships). The options markets are highly competitive, and each exchange actively seeks to attract order flow by disseminating tight and liquid markets and by providing a high level of customer satisfaction. Ensuring that the Exchange has high quality PMMs is critical in this competitive battle.

The Exchange believes that the proposed approach is consistent with treatment on other markets that do not have strict market maker concentration limits, and will enable the Board to approve members to operate multiple PMM memberships after the Board determines that good cause has been shown and if doing so would be in the best interest of the Exchange.

The Commission has previously approved rule changes that eliminated mandatory caps on the number of issues that may be allocated to market makers on other markets, such as on Pacific Exchange, Inc. (''PCX'') (n/k/a ''NYSE Arca''), where the Commission approved a rule change by PCX to eliminate its Lead Market Maker (''LMM'') concentration limit of 15% of the issues traded on the PCX options floor.[7] There, the Commission noted that PCX's concentration limits served the purpose of minimizing the disturbance to a fair and orderly market that may otherwise result from the failure of an LMM. However, the Commission also noted that other exchanges did not impose specified mandatory limits on the number of options that may be allocated to specialists, citing to the rules of the Chicago Board Options Exchange (''CBOE'').[8] In addition, the Commission has previously granted registration to new exchanges that do not have similar concentration limits.[9]

The Exchange recognizes that increasing the number of PMM memberships a member can operate could raise issues regarding concentration of market making expertise. In this regard, the proposed rule change is only an enabling rule. With the proposed change, the Board will still be required to show good cause to approve any member to operate more than one PMM membership, and could consider the number of memberships already by the member in determining whether or not there is good cause shown. Thus, the Board will need to weigh each potential application on its own merits, balancing the potential benefits of allowing a member to exercise more than one PMM membership against any potential concentration concerns. The Board would not be prohibited under the rules and under the LLC Agreement, however, from approving PMMs to operate more than a specified percentage of outstanding memberships.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[10] In particular, the proposal is consistent with Section 6(b)(5) of the Act,[11] because it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest.

The options industry continues to experience a consolidation and decrease in the number of market makers and therefore, the Exchange is proposing a rule change that would eliminate the 30% PMM cap and would allow the Board the flexibility to approve or deny each potential PMM application based upon its determination of whether good cause had been shown and if doing so would be in the best interest of the Exchange. Also as noted above, the Commission has previously approved rule changes eliminating mandatory caps on the number of issues that may be allocated to market makers on other markets, and has granted registration to new exchanges that do not have similar concentration limits. The Exchange therefore believes that the proposed rule change is designed to remove impediments to and perfect the mechanisms of a free and open market and a national market system. Furthermore, this proposed rule change would not amend the current prohibitions in the LLC Agreement and in the Exchange's rules against a member owning or voting more than 20% of any class of membership. Thus, the only way a member could operate more than 30% of all outstanding PMM memberships would be to lease such membership, with the lease providing that the lessor retains all voting rights.[12]

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[13] the Exchange does not believe that the proposed rule change will impose any burden on intermarket or intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposed rule change will increase competition among market makers to be approved as a PMM on the Exchange, thus allowing the Exchange to choose the most qualified PMM that will provide the Exchange with strong market making capabilities. Also as noted above, other markets do not have

to exceed the limits has been demonstrated, and in those cases where such a need is demonstrated, the Board must also consider any operational, business or regulatory concerns may be raised if such a waiver were granted. *See* Supplementary Material .01 to Rule 303.

[5] In 2006, the Commission approved an ISE proposal to increase the maximum number of PMM memberships that an ISE member may operate from two to three PMM memberships. *See* Securities Exchange Act Release No. 53271 (February 10, 2006), 71 FR 8625 (February 17, 2006) (SR–ISE–2005–46) (Approval Order).

[6] *See* LLC Agreement, Section 6.5(a); Supplementary Material .02 to Rule 303. The Exchange is not proposing any changes to the ownership and voting limitations.

[7] *See* Securities Exchange Act Release Nos. 47795 (May 5, 2003), 68 FR 25074 (May 9, 2003) (Notice); 48029 (June 13, 2003), 68 FR 37187 (June 23, 2003) (SR–PCX–2002–25) (Approval Order).

[8] *See* CBOE Rule 8.84 (Rule 8.84 does not impose a mandatory cap on the number of issues that may be allocated to a Designated Primary Market-Maker (''DPM'').

[9] *See* MIAX Options Exchange (''MIAX'') Rules.

[10] 15 U.S.C. 78f(b).

[11] 15 U.S.C. 78f(b)(5).

[12] *See* ISE Second A&R Constitution, Section 12.4; Supplementary Material .02 to Rule 303.

[13] 15 U.S.C. 78f(b)(8).

comparable mandatory caps or concentration limits, so eliminating the 30% PMM cap will bring the Exchange's rules in line with its competitors.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [14] and Rule 19b–4(f)(6) thereunder.[15]

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.[16] As noted above, the Exchange states that waiver of this requirement will allow the Exchange to immediately remove the 30% cap and align its rules with other competing options markets that do not have comparable restrictions. The Exchange also notes that the proposed rule change preserves existing ownership and voting limitations in the LLC Agreement.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ISE–2016–07 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2016–07. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2016–07 and should be submitted on or before April 15, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

Brent J. Fields,

Secretary.

DEPARTMENT OF STATE

Public Notice; 30-Day Notice of Proposed Information Collection: Smart Traveler Enrollment Program

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to April 25, 2016.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email: oira_submission@omb.eop.gov.* You must include the DS form number, information collection title, and the OMB control number in the subject line of your message.
- *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Derek Rivers, Bureau of Consular Affairs, Overseas Citizens Services (CA/OCS/PMO), who may be reached on 202–485–6332 or at *RiversDA@state.gov.*

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Smart Traveler Enrollment Program
- *OMB Control Number:* 1405–0152
- *Type of Request:* Revision of a Currently Approved Collection
- *Originating Office:* Bureau of Consular Affairs, CA/OCS/PMO

- *Form Number:* DS–4024, DS–4024e
- *Respondents:* United States Citizens and Nationals
- *Estimated Number of Respondents:* 1,010,389
- *Estimated Number of Responses:* 1,010,389
- *Average Time per Response:* 20 minutes
- *Total Estimated Burden Time:* 336,796 hours
- *Frequency:* On Occasion
- *Obligation To Respond:* Voluntary

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The Smart Traveler Enrollment Program (STEP) makes it possible for U.S. nationals to register on-line from anywhere in the world. In the event of a family emergency, natural disaster or international crisis, U.S. embassies and consulates rely on this registration information to provide critical information and assistance to them. 22 U.S.C. 2715 is one of the main legal authorities that deem the usage of this form necessary.

Methodology

99% of responses are received via electronic submission on the Internet. The service is available on the Department of State, Bureau of Consular Affairs Web site *http://travel.state.gov* at *https://step.state.gov/step/.* The paper version of the collection permits respondents who do not have Internet access to provide the information to the U.S. embassy or consulate by fax, mail or in person.

Dated: March 11, 2016.

Michelle Bernier-Toth,

Managing Director, Bureau of Consular Affairs, Overseas Citizen Services, Department of State.

[FR Doc. 2016–06693 Filed 3–24–16; 8:45 am]

BILLING CODE 4710–06–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36009]

Gulf & Ohio Railways, Inc., H. Peter Claussen and Linda C. Claussen—Continuance in Control Exemption—North Carolina & Atlantic Railroad Co., Inc.

Gulf & Ohio Railways, Inc. (G&O), and H. Peter Claussen and Linda C. Claussen (the Claussens) (collectively, Applicants) have jointly filed a verified notice of exemption pursuant to 49 CFR 1180.2(d)(2) to continue in control of North Carolina & Atlantic Railroad Co., Inc. (NCAR), upon NCAR's becoming a Class III rail carrier.

This transaction is related to a concurrently filed verified notice of exemption in *North Carolina & Atlantic Railroad Co., Inc.—Lease & Operation Exemption—North Carolina Department of Transportation,* Docket No. FD 36008, wherein NCAR seeks Board approval under 49 CFR 1150.31 to lease from the North Carolina Department of Transportation, and to operate, approximately 5.7 miles of rail line, referred to as the Global Transpark rail corridor, between milepost GTP–0.0 (connection to the North Carolina Railroad Company track) and milepost GTP–5.7 (at the NC Global Transpark) at Kinston, in Lenoir County, NC.

Applicants expect to consummate the proposed transaction on or after April 8, 2016, the effective date of the exemption (30 days after the verified notice of exemption was filed).

According to Applicants, the Claussens own a controlling share of voting stock of G&O. G&O, in turn, wholly owns four Class III rail carriers operating in three states: (a) Knoxville & Holston River Railroad Co., Inc., operating in Tennessee; (b) Lancaster & Chester Railroad, LLC, operating in South Carolina; (c) Laurinburg & Southern Railroad Co., Inc., operating in North Carolina; and (d) Piedmont & Atlantic Railroad Co., Inc., d/b/a Yadkin Valley Railroad, operating in North Carolina.

Applicants certify that: (1) The rail lines to be operated by NCAR do not connect with any other railroads operated by the carriers in the Applicants' corporate family; (2) the continuance in control is not part of a series of anticipated transactions that would connect the rail lines to be operated by NCAR with any other railroad in Applicants' corporate family; and (3) the transaction does not involve a Class I rail carrier. Therefore, the transaction is exempt from the prior approval requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Section 11326(c), however, does not provide for labor protection for transactions under 11324 and 11325 that involve only Class III rail carriers. Accordingly, the Board may not impose labor protective conditions here, because all of the carriers involved are Class III carriers.

If the notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Stay petitions must be filed no later than April 1, 2016 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36009, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Applicants' representative, Rose-Michele Nardi, Transport Counsel PC, 1701 Pennsylvania Ave. NW., Suite 300, Washington, DC 20006.

Board decisions and notices are available on our Web site at ''*WWW.STB.DOT.GOV.*''

Decided: March 21, 2016.

By the Board, Joseph H. Dettmar, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

[FR Doc. 2016–06782 Filed 3–24–16; 8:45 am]

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36008]

North Carolina & Atlantic Railroad Co., Inc.—Lease and Operation Exemption—North Carolina Department of Transportation

North Carolina & Atlantic Railroad Co., Inc. (NCAR), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to lease from the North

Carolina Department of Transportation (NCDOT), and to operate, approximately 5.7 miles of rail line, referred to as the Global Transpark rail corridor, between milepost GTP–0.0 (connection to the North Carolina Railroad Company track) and milepost GTP–5.7 (at the NC Global Transpark) at Kinston, in Lenoir County, N.C., pursuant to an executed lease and operating agreement.

This transaction is related to a concurrently filed verified notice of exemption in *Gulf & Ohio Railways, Inc.—Continuance in Control Exemption—North Carolina & Atlantic Railroad Co., Inc.,* Docket No. FD 36009, in which Gulf & Ohio Railways, Inc., H. Peter Claussen and Linda C. Claussen seek Board approval to continue in control of NCAR under 49 CFR 1180.2(d)(2), upon NCAR's becoming a Class III rail carrier.

NCAR certifies that the projected annual revenues as a result of this transaction will not exceed those that would qualify it as a Class II rail carrier and states that its projected annual revenue is expected not to exceed $5 million. NCAR states that the agreement regarding the subject line does not involve an interchange commitment.

The transaction may be consummated on April 8, 2016, the effective date of the exemption (30 days after the verified notice of exemption was filed). If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed by April 1, 2016 (at least seven days prior to the date the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36008 must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on applicant's representative, Rose-Michele Nardi, Transport Counsel PC, 1701 Pennsylvania Ave. NW., Suite 300, Washington, DC 20006.

According to NCAR, this action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Board decisions and notices are available on our Web site at ''*WWW.STB.DOT.GOV*.''

Decided: March 21, 2016.

By the Board, Joseph H. Dettmar, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

[Docket No. FD 36001]

BNSF Railway Company—Trackage Rights Exemption—State of Washington, Department of Transportation

The State of Washington, Department of Transportation (WDOT), pursuant to a trackage rights agreement being negotiated between WDOT and BNSF Railway Company (BNSF),[1] has agreed to grant BNSF restricted local trackage rights over approximately 5.3 miles of rail line between milepost 1.0 at Cheney, Wa., and milepost 6.30 near Four Lakes, Wa. (the Line). The trackage rights are intended to permit BNSF to move unit trains of 75 to 120 cars of grain or grain products or empty cars originating or terminating at the Highline Grain facility at milepost 6.30, and to perform overhead movements over the Line.

The transaction may be consummated on or after April 10, 2016, the effective date of the exemption (30 days after the verified notice of exemption was filed).

As a condition to this exemption, any employees affected by the trackage rights will be protected by the conditions imposed in *Norfolk & Western Railway—Trackage Rights—Burlington Northern, Inc.,* 354 I.C.C. 605 (1978), as modified in *Mendocino Coast Railway—Lease & Operate—California Western Railroad,* 360 I.C.C. 653 (1980).

This notice is filed under 49 CFR 1180.2(d)(7). If the notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed by April 1, 2016 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36001, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on Karl Morell, Karl Morell & Associates, 655 15th Street NW., Suite 225, Washington, DC 20005.

Board decisions and notices are available on our Web site at *WWW.STB.DOT.GOV.*

Decided: March 21, 2016.

By the Board, Joseph H. Dettmar, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE 4915–01–P

[1] WDOT and BNSF state that a copy of the agreement will be filed with the Board within 10 days of the agreement's execution. Also, WDOT states that Eastern Washington Gateway Railroad Company, which leases the Line for which BNSF seeks restricted local trackage rights, will be a party to the trackage rights agreement.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 35996]

San Jacinto Transportation Company, Inc.—Operation Exemption—SJRE-Railroad Series

San Jacinto Transportation Company, Inc. (SJTC), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to operate approximately 6.0 miles of rail line owned by SJRE-Railroad Series (SJRE), pursuant to an operating agreement with SJRE,[1] in Harris County, Tex. (the Line). The Line is located within the San Jacinto River and Rail Park and will connect with Union Pacific Railroad Company (UP) and BNSF Railway Company (BNSF) near mileposts 344–346 on the Lafayette Subdivision.

The transaction may be consummated on or after April 9, 2016, the effective date of the exemption (30 days after the exemption was filed).

SJTC certifies that, as a result of this transaction, its projected revenues will not result in the creation of a Class II or Class I rail carrier and will not exceed $5 million.

SJTC states that the operating agreement does not involve a provision or agreement which may limit future interchange with a third party connecting carrier. SJTC further states that, once the exemption becomes effective, it anticipates that UP and BNSF will enter into an interchange or switching agreement for SJTC to serve customers on the Line.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be

[1] SJRE is an entity within San Jacinto Real Estate, a series of LLCs' formed under the laws of Texas.

filed no later than April 1, 2016 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35996, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, a copy must be served on John K. Fiorilla, Capehart & Scatchard, P.A., 8000 Midlantic Drive, Suite 300S, Mount Laurel, NJ 08054.

Federal Aviation Administration

Aviation Rulemaking Advisory Committee Meeting on Transport Airplane and Engine Issues

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of public meeting.

SUMMARY: This notice announces a public meeting of the FAA's Aviation Rulemaking Advisory Committee (ARAC) Transport Airplane and Engine (TAE) Subcommittee to discuss TAE issues.

DATES: The meeting is scheduled for Wednesday, June 22, 2016, starting at 9:00 a.m. Eastern Time. Arrange for oral presentations by June 1, 2016.

ADDRESSES: Aerospace Industries Association, 1000 Wilson Blvd., Suite 1700, Arlington, VA 22209.

FOR FURTHER INFORMATION CONTACT: Ralen Gao, Office of Rulemaking, ARM–209, FAA, 800 Independence Avenue SW., Washington, DC 20591, Telephone (202) 267–3168, Fax (202) 267–5075, or email at *ralen.gao@faa.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463; 5 U.S.C. app. III), notice is given of an ARAC meeting to be held on June 22, 2016.

The agenda for the meeting is as follows:

- Opening Remarks, Review Agenda and Minutes
- FAA Report
- ARAC Report
- Transport Canada Report
- EASA Report
- Engine HWG Report
- Airworthiness Assurance HWG Report
- Flight Test HWG Report
- Metallic and Composite Structures WG Report
- Crashworthiness and Ditching WG Report
- Any Other Business
- Action Item Review

Participation is open to the public, but will be limited to the availability of teleconference lines.

To participate, please contact the person listed in **FOR FURTHER INFORMATION CONTACT** by email or phone for the teleconference call-in number and passcode. Please provide the following information: Full legal name, country of citizenship, and name of your industry association, or applicable affiliation. If you are participating as a public citizen, please indicate so. Participants are responsible for any telephone, data usage or other similar expenses related to this meeting.

The public must make arrangements by June 1, 2016, to present oral or written statements at the meeting. Written statements may be presented to the Subcommittee by providing a copy to the person listed in the **FOR FURTHER INFORMATION CONTACT** section. Copies of the documents to be presented to the Subcommittee may be made available by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

If you need assistance or require a reasonable accommodation for the meeting or meeting documents, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Issued in Washington, DC, on March 10, 2016.

Lirio Liu,

Designated Fedral Officer, Aviation Rulemaking Advisory Committee.

Federal Aviation Administration

[Summary Notice No. 2016–40]

Petition for Exemption; Summary of Petition Received; Wittman Regional Airport

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Title 14 of the Code of Federal Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before April 14, 2016.

ADDRESSES: Send comments identified by docket number FAA–2016–4042 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *http://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *http://www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Taiya Carter (202) 267–2979, Office of Rulemaking, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591.

This notice is published pursuant to 14 CFR 11.85.

Issued in Washington, DC, on March 18, 2016.

Lirio Liu,

Director, Office of Rulemaking.

Petition for Exemption

Docket No.: FAA–2016–4042.
Petitioner: Wittman Regional Airport.
Section(s) of 14 CFR Affected: § 139.101.
Description of Relief Sought: Wittman Regional Airport is requesting an exemption to allow certain unscheduled Air Carrier operations at Wittman Regional Airport (KOSH) at limited times during Experimental Aircraft Association (EAA) Airventure 2016.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[FHWA Docket No. FHWA–2016–0003]

Surface Transportation Project Delivery Program; TxDOT Audit Report

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Notice, request for comment.

SUMMARY: The Surface Transportation Project Delivery Program (23 U.S.C. 327) allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for Federal-aid highway projects. When a State assumes these Federal responsibilities, the State becomes solely responsible and liable for carrying out the responsibilities it has assumed, in lieu of FHWA. Prior to the Fixing America's Surface Transportation (FAST) Act of 2015, the program required semiannual audits during each of the first 2 years of State participation to ensure compliance by each State participating in the program. This notice announces and solicits comments on the second audit report for the Texas Department of Transportation's (TxDOT) participation in accordance to these pre-FAST Act requirements.

DATES: Comments must be received on or before April 25, 2016.

ADDRESSES: Mail or hand deliver comments to Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE., Room W12–140, Washington, DC 20590. You may also submit comments electronically at *www.regulations.gov.* All comments should include the docket number that appears in the heading of this document. All comments received will be available for examination and copying at the above address from 9 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard or you may print the acknowledgment page that appears after submitting comments electronically. Anyone is able to search the electronic form of all comments in any one of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, or labor union). The DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

FOR FURTHER INFORMATION CONTACT: Dr. Owen Lindauer, Office of Project Development and Environmental Review, (202) 366–2655, *owen.lindauer@dot.gov,* or Mr. Jomar Maldonado, Office of the Chief Counsel, (202) 366–1373, *jomar.maldonado@dot.gov,* Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590. Office hours are from 8:00 a.m. to 4:30 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access

An electronic copy of this notice may be downloaded from the specific docket page at *www.regulations.gov.*

Background

The Surface Transportation Project Delivery Program (or NEPA Assignment Program) allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for Federal-aid highway projects. This provision has been codified at 23 U.S.C. 327. When a State assumes these Federal responsibilities, the State becomes solely responsible and liable for carrying out the responsibilities it has assumed, in lieu of FHWA. The TxDOT published its application for assumption under the National Environmental Policy Act (NEPA) Assignment Program on March 14, 2014, at Texas Register 39(11): 1992, and made it available for public comment for 30 days. After considering public comments, TxDOT submitted its application to FHWA on May 29, 2014. The application served as the basis for developing the Memorandum of Understanding (MOU) that identifies the responsibilities and obligations TxDOT would assume. The FHWA published a notice of the draft of the MOU in the **Federal Register** on October 10, 2014, at 79 FR 61370 with a 30-day comment period to solicit the views of the public and Federal agencies. After the close of the comment period FHWA and TxDOT considered comments and proceeded to execute the MOU. Since December 16, 2014, TxDOT has assumed FHWA's responsibilities under NEPA, and the responsibilities for the NEPA-related Federal environmental laws.

Prior to December 4, 2015, 23 U.S.C. 327(g) required the Secretary to conduct semiannual audits during each of the first 2 years of State participation, and annual audits during each subsequent year of State participation to ensure compliance by each State participating in the program. The results of each audit were required to be presented in the form of an audit report and be made available for public comment. On December 4, 2015, the President signed into law the FAST Act (Pub. L. 114–94, 129 Stat. 1312 (2015)). Section 1308 of the FAST Act amended the audit provisions by limiting the number of audits to one audit each year during the first 4 years of a State's participation. However, FHWA had already conducted the second audit for TxDOT's participation. This notice announces the availability of the report for second audit for TxDOT conducted prior to the FAST Act and solicits public comment on same.

Authority: Section 1313 of Public Law 112–141; Section 6005 of Public Law 109–59; 23 U.S.C. 327; 49 CFR 1.48.

Issued on: March 18, 2016

Gregory G. Nadeau,

Administrator, Federal Highway Administration.

Draft

Surface Transportation Project Delivery Program FHWA Audit #2 of the Texas Department of Transportation June 16, 2015 Through December 16, 2015

Executive Summary

This report summarizes the results of Audit #2 of the performance by the Texas Department of Transportation (TxDOT) regarding its assumption of responsibilities and obligations, as assigned by Federal Highway Administration (FHWA) under a memorandum of understanding (MOU) whose term began on December 16, 2014. From that date, TxDOT assumed FHWA National Environmental Policy Act (NEPA) responsibilities and liabilities for the environmental review and compliance for highway projects

that require a Federal action in Texas (NEPA Assignment Program). The FHWA's role in the NEPA Assignment Program in Texas includes program review through audits, as specified in 23 U.S.C. 327 and in the MOU. The status of the Audit #1 observations (including any implemented corrective actions) is detailed at the end of this report.

The FHWA Audit #2 team (team) was formed in June 2015 and met regularly to prepare for the on-site portion of the audit. Prior to the on-site visit, the team: (1) Performed reviews of TxDOT project file NEPA documentation in TxDOT's Environmental Compliance Oversight System (ECOS), (2) examined the TxDOT pre-Audit #2 information request responses, and (3) developed interview questions. The on-site portion of this audit, comprised of TxDOT and other agency interviews, was conducted September 8–9, 2015, and September 20–25, 2015.

The TxDOT continues to make progress developing, revising, and implementing procedures and processes required to implement the NEPA Assignment Program. Overall, the team found evidence that TxDOT is committed to establishing a successful program. This report summarizes the team's assessment of the current status of several aspects of the NEPA Assignment Program, including successful practices and 17 total observations that represent opportunities for TxDOT to improve its program. The team identified three non-compliance observations that TxDOT will need to address as corrective actions in its next self-assessment and subsequent report.

While TxDOT has continued to make progress toward meeting all the responsibilities it has assumed in accordance with the MOU, the recurring non-compliance observations require TxDOT corrective action. By taking corrective action and considering changes based on the observations in this report, TxDOT will continue to move the program toward success.

Background

The Surface Transportation Project Delivery Program allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for Federal highway projects. This program is codified at 23 U.S.C. 327. When a State assumes these Federal responsibilities, the State becomes solely responsible and liable for carrying out the obligations it has assumed, in lieu of FHWA.

The State of Texas was assigned the responsibility for making project NEPA and other related environmental decisions for highway projects on December 16, 2014. In enacting Texas Transportation Code, § 201.6035, the State has waived its sovereign immunity under the 11th Amendment of the U.S. Constitution and consents to defend any actions brought by its citizens for NEPA decisions it has made in Federal court.

The FHWA responsibilities assigned to TxDOT are varied and tied to project level decisionmaking. These laws include, but are not limited to, the Endangered Species Act (ESA), Section 7 consultations with the U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration National Marine Fisheries Service, and Section 106 consultations regarding impacts to historic properties. Two Federal responsibilities were not assigned to TxDOT and remain with FHWA: (1) Making project-level conformity determinations under the Federal Clean Air Act and (2) conducting government-to-government consultation with federally recognized Indian tribes.

Prior to December 4, 2015, FHWA was required to conduct semiannual audits during each of the first 2 years of State participation in the program and audits annually for 2 subsequent years as part of FHWA's oversight responsibility for the NEPA Assignment Program. The reviews assess a State's compliance with the provisions of the MOU and all applicable Federal laws and policies. They also are used to evaluate a State's progress toward achieving its performance measures as specified in the MOU; to evaluate the success of the NEPA Assignment Program; and to inform the administration of the NEPA Assignment Program. On December 4, 2015, the President signed into law the Fixing America's Surface Transportation (FAST) Act of 2015, which amended the audit provisions of the program by changing the frequency to one audit per year during the first 4 years of the State's participation. However, this audit was conducted prior to the passage of the FAST Act, and this report is being prepared and made available under the audit provisions as they existed prior to the passage of the FAST Act. This report summarizes the results of the second audit, and updates the reader on the status or corrective actions for the results of the first audit.

Scope and Methodology

The overall scope of this audit review is defined both in statute (23 U.S.C. 327) and the MOU (Part 11). An audit generally is defined as an official and careful examination and verification of accounts and records, especially of financial accounts, by an independent unbiased body. With regard to accounts or financial records, audits may follow a prescribed process or methodology, and be conducted by ''auditors'' who have special training in those processes or methods. The FHWA considers this review to meet the definition of an audit because it is an unbiased, independent, official, and careful examination and verification of records and information about TxDOT's assumption of environmental responsibilities. The team that conducted this audit has completed special training in audit processes and methods.

The diverse composition of the team, the process of developing the review report, and publishing it in the **Federal Register** help maintain an unbiased audit and establish the audit as an official action taken by FHWA. The team for Audit #2 included NEPA subject matter experts from the FHWA Texas Division Office and FHWA offices in Washington, DC, Atlanta, GA, Columbus, OH, and Salt Lake City, UT. In addition to the NEPA experts, the team included an FHWA Professional Development Program trainee from the Texas Division office and one individual from FHWA's Program Management Improvement Team who provided technical assistance in conducting reviews.

Audits, as stated in the MOU (Parts 11.1.1 and 11.1.5), are the primary mechanism used by FHWA to oversee TxDOT's compliance with the MOU, ensure compliance with applicable Federal laws and policies, evaluate TxDOT's progress toward achieving the performance measures identified in the MOU (Part 10.2), and collect information needed for the Secretary's annual report to Congress. These audits also must be designed and conducted to evaluate TxDOT's technical competency and organizational capacity, adequacy of the financial resources committed by TxDOT to administer the responsibilities assumed, quality assurance/quality control (QA/QC) process, attainment of performance measures, compliance with the MOU requirements, and compliance with applicable laws and policies in administering the responsibilities assumed. The four performance measures identified in the MOU are: (1) Compliance with NEPA and other Federal environmental statutes and regulations, (2) quality control and QA for NEPA decisions, (3) relationships with agencies and the general public, and (4) increased efficiency, timeliness, and completion of the NEPA process.

The scope of this audit included reviewing the processes and procedures used by TxDOT to reach and document

project decisions. The team conducted a careful examination of highway project files and verified information on the TxDOT NEPA Assignment Program through inspection of other records and through interviews of TxDOT and other staff. The team gathered information that served as the basis for this audit from three primary sources: (1) TxDOT's response to a pre-Audit #2 information request, (2) a review of a random sample of project files with approval dates subsequent to the execution of the MOU, and (3) interviews with TxDOT, the U.S. Army Corps of Engineers (USACE), and the U.S. Coast Guard (USCG) staff. The TxDOT provided information in response to FHWA questions and requests for all relevant reference material. That material covered the following six topics: (1) Program management, (2) documentation and records management, (3) QA/QC, (4) legal sufficiency review, (5) performance measurement, and (6) training. The team subdivided into working groups that focused on each of the six topics.

The intent of the review was to check that TxDOT has the proper procedures in place to implement the MOU responsibilities assumed, ensure that the staff is aware of those procedures, and that staff implement the procedures appropriately to achieve NEPA compliance. The review is not intended to evaluate project-specific decisions, or to second guess those decisions, as these decisions are the sole responsibility of TxDOT.

The team defined the timeframe for highway project environmental approvals subject to this second audit to be between March 2015 and June 2015. The focus on the second review included the 3 to 4 months after FHWAs audit #1 highway project file review concluded. The second audit intended to: (1) Evaluate whether TxDOT's NEPA decisionmaking and other actions comply with all the responsibilities it assumed in the MOU, and (2) determine the current status of observations in the Audit #1 report and required corrective actions (see summary at end of this report). The team established a population of 598 projects subject to review based on lists of NEPA approvals (certified compliant by TxDOT as required in MOU Part 8.7.1) reported monthly by TxDOT. The NEPA approvals included categorical exclusion (CE) determinations, 47 other types of environmental approvals including approvals to circulate an environmental assessment (EA), findings of no significant impacts (FONSI), re-evaluations of EAs, Section 4(f) decisions, approvals of a draft environmental impact statement (EIS), and a record of decision (ROD). In order to attain a sample with a 95 percent confidence interval, the team randomly selected 83 CE projects. In addition, the team reviewed project files for all 47 approvals that were not CEs. The sample reviewed by the team was 130 approval actions.

The interviews conducted by the team focused on TxDOT's leadership and staff at Environmental Affairs Division (ENV) Headquarters in Austin and nine TxDOT Districts. To complete the interviews of District staff, the team divided into three groups of four to conduct face-to-face interviews at TxDOT Districts in Dallas, Paris, Tyler, Lubbock, Childress, Amarillo, Houston, Beaumont, and Bryan. With these interviews completed, FHWA has interviewed staff from 60 percent (15 of 25) of the TxDOT District offices. The FHWA anticipates interviewing staff from the remaining TxDOT District offices over the next year.

Overall Audit Opinion

The team recognizes that TxDOT is still implementing changes to address and improve its NEPA Assignment Program and that its programs, policies, and procedures may need revision. The TxDOT's efforts are appropriately focused on establishing and refining policies and procedures (especially in regards to the non-compliance observations made by FHWA), training staff, assigning and clarifying changed roles and responsibilities, and monitoring its compliance with assumed responsibilities. The team has determined that TxDOT continues to make reasonable progress despite some noted delays (pending ECOS upgrades) as the program matures beyond the start-up phase of NEPA Assignment operations. In addition, the team believes TxDOT is committed to establishing a successful program. The team's analysis of project file documentation and interview information identified several non-compliance observations, and several other observations including evidence of good practice. One non-compliance observation is recurrent from Audit#1, relating to ''conditional clearances,'' that appears to reflect a misunderstanding on the part of TxDOT on when and whether information at hand is sufficient to support a NEPA decision that complies with the requirements of the MOU. This is a point of concern for FHWA and if necessary, this issue will be a focus of future audits.

The TxDOT staff and management have engaged FHWA and have received constructive feedback from the team to revise TxDOT's standard operating procedures. By considering and acting upon the observations contained in this report, TxDOT should continue to improve upon carrying out its assigned responsibilities and ensure the success of its NEPA Assignment Program.

Non-Compliance Observations

AUDIT #2

Non-compliance observations are instances where the team found the State was out of compliance or deficient with regard to a Federal regulation, statute, guidance, policy, or the terms of the MOU (including State procedures for compliance with the NEPA process). Such observations may also include instances where the State has failed to maintain adequate personnel and/or financial resources to carry out the responsibilities assumed. Other observations that suggest a persistent failure to adequately consult, coordinate, or take into account the concerns of other Federal, State, tribal, or local agencies with oversight, consultation, or coordination responsibilities could be non-compliant. The FHWA expects TxDOT to develop and implement corrective actions to address all non-compliance observations as soon as possible. The TxDOT has already informed the team it is implementing some recommendations made by FHWA to address non-compliance and other observations. The FHWA will conduct follow up reviews of the non-compliance observations as part of Audit #3, and if necessary, future audits.

The MOU (Part 3.1.1) states ''pursuant to 23 U.S.C. 327(a)(2)(A), on the Effective Date, FHWA assigns, and TxDOT assumes, subject to the terms and conditions set forth in 23 U.S.C. 327 and this MOU, all of the USDOT Secretary's responsibilities for compliance with the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 *et seq.* with respect to the highway projects specified under subpart 3.3. This includes statutory provisions, regulations, policies, and guidance related to the implementation of NEPA for Federal highway projects such as 23 U.S.C. 139, 40 CFR parts 1500–1508, DOT Order 5610.1C, and 23 CFR part 771 as applicable.'' Also, the performance measure in MOU Part 10.2.1(A) for compliance with NEPA and other Federal environmental statutes and regulations commits TxDOT to maintaining *documented compliance* with requirements of all

applicable statutes, regulations, procedures, and processes set forth in the MOU. The following non-compliance observations were found by the team based on documentation (or lack thereof) in project files and other documentation.

Audit #2 Non-Compliance Observation #1

Non-compliance Observation #1 is an instance (1 out of 130 actions reviewed) where TxDOT made a CE determination for a project before all regulatory criteria for CE determination were met. The TxDOT followed a State procedure relating to the NEPA approval subject to ''conditional clearances'' that allowed the project to proceed to construction. Audit #1 Non-compliance Observation #2 also was an instance where a CE determination was made by TxDOT staff before all environmental requirements had been satisfied (*i.e.,* project level air quality conformity and listing in the Statewide Transportation Improvement Program (STIP)) following the same TxDOT procedure. Discovery of this second instance of non-compliance tied to conditional clearance approvals triggered additional requests for information by the team and gathering information through informal interviews.

The Non-compliance Observation was that an ECOS project record showed that a TxDOT decisionmaker made a CE determination decision before the consultation for the project was completed. The completion of the consultation would have confirmed that a required constraint for the CE was met. This instance involved the determination of whether a project qualified for CE (c)(26). The FHWA's regulation at 23 CFR 771.117(c)(26) restricts the use of the CE to projects that meet all the constraints in 23 CFR 771.117(e). The constraint in 23 CFR 771.117(e)(3) prohibits the use of the CE if it involves a finding of ''adverse effect'' to a historic property or the use of a resource protected under Section 4(f), except for actions resulting in de minimis impacts. The ECOS record shows that at the time of the CE determination, these impacts were presumed, but consultation was not yet initiated in writing nor documented as completed such that the application of that CE could be justified. Later in time, after the CE determination was used to allow the project to proceed to a point where TxDOT made a request to FHWA to proceed to construction with Federal funding, the project record contained Texas Historical Commission (THC) concurrence that the effect was not adverse, and that a de minimis impact determination was supported. The TxDOT should not have applied a CE to a project before confirming that all conditions and constraints for use of that CE were met. By proceeding in this manner, TxDOT has not complied with the requirements for use of that CE, as specified in regulation. Also, the actions taken by TxDOT that lead to the ''conditional clearance'' do not comply with FHWA's Section 4(f) regulation, 23 CFR 774, where the CE determination was made when outcome of the Section 4(f) impact was not determined.

At the team's request for additional information on projects processed with ''conditional clearances,'' TxDOT provided a list of 18 projects that included the non-compliant project identified in Audit #1 and described above. Eight project files showed documentation that a CE determination was made before the period for tribal consultation was complete. The TxDOT, FHWA, and Indian Tribes with an interest in Texas have executed programmatic agreements that define for which projects TxDOT would consult and manner of consultation. Those agreements commit TxDOT to send information to a Tribe and allow for a 30-day period for the Tribe to respond. If the Tribe does not respond after the 30 days, TxDOT may proceed to the next step of the process. These agreements commit TxDOT and FHWA to a manner of consultation that was not followed for eight projects. The TxDOT's assumption of FHWA's NEPA responsibilities does not permit TxDOT to disregard commitments it has made (along with FHWA) to complete tribal consultation before moving to the next step (making a CE determination). These actions are a violation of MOU Part 5.1.1 where TxDOT is subject to the same procedural and substantive requirements in interagency agreements such as programmatic agreements. Additionally, TxDOT's completion of NEPA decisionmaking prior to completing tribal consultation violates MOU Part 7.2.1 where TxDOT has committed to ensure that it has processes and procedures in place that provide for proactive and timely consultation to carry out responsibilities assumed under the MOU.

The TxDOT has a Standard Operating Procedure (SOP) for issuing a Letter of Authority (LOA) dated April 1, 2015, that enables the project to proceed to the next step in project development after a decisionmaker has made a NEPA decision based on incomplete information. Issuance of a LOA allows a project to proceed to the bidding process. For the 18 projects in the list provided, TxDOT certified to FHWA that the project's NEPA requirements were satisfied. The TxDOT has noted in the project record that the project was ''conditionally cleared'' for letting. Upon review, the team identified 11 projects of the 18 reviewed that did violate MOU Part 8.7.1 because the NEPA certification included projects that either did not conform to required conditions to apply CEs or did not complete required consultation requirements. Also, TxDOT's SOP for issuing a LOA does not comply with MOU Part 5.2.1 in that TxDOT's procedures did not result in compliance with Federal regulations. The remaining seven projects on the list of 18 ''conditional clearance'' projects advanced by TxDOT did not indicate an instance of an unjustified NEPA approval, but rather were for actions that occured post-NEPA approval (*e.g.,* 404 permit issuance, Interstate Access Justification and right-of-way (ROW) purchase).

As a result, FHWA has asked that TxDOT immediately refrain from issuing LOAs based on ''conditional clearances.'' The TxDOT has begun the process of revising the subject SOP. The FHWA will review the SOP to ensure that it satisfactorily complies with FHWA policy and the MOU. In addition, FHWA has requested that TxDOT report any projects that use the revised SOP to FHWA in advance of FHWA project authorization until further notice.

Audit #2 Non-Compliance Observation #2

Two projects reviewed by the team were in error regarding NEPA decision reporting. The MOU Part 8.2.6 requires the listing of any approvals and decisions made. One CE determination was reported to FHWA as an action that would utilize less than $5 million of Federal funds (CE (c)(23)) where the project file listed the CE determination for an action that would take place entirely within the existing operational ROW (CE (c)(22)). A second project was correctly reported on the monthly list, but a review of the project file lacked documentation for this determination. Even though these may result from data entry errors, TxDOT should make every effort to ensure the decisions it reports monthly are accurate and project files are complete.

Audit #2 Non-Compliance Observation #3

Twelve project file records were missing information that appeared to be out of compliance with TxDOT's procedures or documentation policy. One project's CE Determination Form

did not identify the approver's title. Another project file lacked the Public Involvement summary. Nine project files lacked records, or included forms that lacked signatures where TxDOT procedures indicated that signatures were required. These included signatures on a Biological Evaluation form, Project Coordination Request form, and a Public Hearing Certification. One project file where a public involvement event lacked documentation on what was presented. The implication of the TxDOT procedure is that the signature or information on the form is part of the review and approval of the report or form. Project files with missing information may suggest that a NEPA decision was based on incomplete or ambiguous information. The TxDOT has informed FHWA that it will review the files for these projects and take corrective action.

Observations and Successful Practices

This section summarizes the team's observations about issues or practices that TxDOT may want to consider as areas to improve and practices the team believes are successful that TxDOT may want to continue or expand in some manner. Further information on these observations and practices is contained in the following subsections that address the six topic areas identified in FHWA's team charter and work plan to perform this audit.

Throughout the following subsections, the team lists 14 remaining observations that FHWA urges TxDOT to act upon in order to make improvements. The FHWA's suggested methods of action include: corrective action, targeted training, revising procedures, continued self-assessment, or some other means. The team acknowledges that, by sharing this draft audit report with TxDOT, TxDOT has the opportunity to begin the process of implementing actions to address the observations to improve its program prior to the publication of this report. The FHWA will consider the status of these observations as part of the scope of Audit #3. The team will also include a summary discussion that describes progress since the last audit in the Audit #3 report.

1. Program Management

The team recognized four successful program management practices. First, it was evident through interviews that TxDOT has employed many highly qualified staff for its program. Second, the team saw evidence of strong communication between TxDOT's ENV and District staff with regard to explaining roles and responsibilities associated with implementation of the MOU for NEPA Assignment. Third, based on the response to the pre-Audit #2 information request and interview questions, the team recognized TxDOT ENV's efforts to develop and update procedures, guidance, and tools as necessary or required to assist Districts in meeting requirements of the MOU. Finally, District staff understands and takes pride in and ownership of their CE determinations. The ENV likewise takes pride in the responsibility for EA and EIS decisionmaking and oversight for the NEPA Assignment Program.

In addition, the team found evidence of six successful program management practices through information provided by TxDOT and through interviews. The team recognizes the TxDOT project Core Team concept, which provides joint ENV and District peer reviews for EAs and EISs as a good example of TxDOT utilizing its existing staff to analyze NEPA documents and correct compliance issues on higher level of NEPA documentation and procedures before project approval. Many Districts appreciate the efforts of and results from the project Core Team and credit them for assuring their projects are compliant.

The ''NEPA Chat'' continues to be a notable example of TxDOT's effort to achieve a compliant NEPA Assignment Program with enhanced communication among TxDOT environmental staff statewide. The NEPA Chat, led by ENV, provides a platform for complex issues to be discussed openly, and for Districts to learn about statewide NEPA Assignment Program issues, and new policies and procedures. To date, the NEPA Chat has proven to be an effective vehicle to disseminate relevant NEPA information quickly and selectively to the TxDOT District Environmental Coordinators.

Also, based on interviews and the response to the pre-audit information request, almost all of the ENV and District staff feel there is sufficient staff to deliver a successful NEPA Assignment Program at the ENV and District level. This is further supported by ENV's willingness to shift responsibilities to better align with the needs of the NEPA Assignment Program. After interviewing the various Districts, they indicated that ENV is available to assist the Districts whenever they need help.

The ENV Self-Assessment Branch (SAB) fosters regular and productive communication with District staff after environmental decisions are made. The SAB staff prepares and transmits a summary of the results of their reviews of project documentation, both positive and negative, and follows up with the District Environmental Coordinator responsible for the project via telephone. They provided this feedback within 2 weeks of their review, which resulted in early awareness of issues and corrective action, where necessary, and positive feedback.

The refinement of the pilot ''Risk Assessment'' tool (a ''smart pdf form'') for environmental documents is a successful, but optional, procedure that may become part of ECOS during the scheduled upgrades. Based on the team's interviews, when District staff use the form, they are better able to understand the resources to be considered, what resources should receive further analysis, and the resulting output serves as documentation for District decisions. Even though this tool is not yet currently integrated within ECOS, it can be uploaded when used.

The TxDOT noted that it had recently developed a QA/QC Procedures for Environmental Documents Handbook (March 2015), and it is used by the project Core Team to develop EA and EIS documents. Through TxDOT's response to pre-Audit #2 questions and through interviews with various staff, TxDOT has continued to demonstrate that it has provided a good base of tools, guidance, and procedures with associated and timely updates to assist in meeting the terms of the MOU and still takes pride in exercising its assumed responsibilities.

The team considers three observations sufficiently important to note below. The FHWA urges TxDOT to consider ongoing and/or additional improvements or corrective actions to project management in its NEPA Assignment Program to address these observations.

AUDIT #2 Observations

Audit #2 Observation #1

Based on interviews with the USACE and USCG, FHWA would like to draw TxDOT's attention to several items. The team found that USCG had multiple ENV and District points of contact and preferred to deal with only one ENV point of contact at TxDOT. A single point of contact was the practice prior to the NEPA Assignment Program when issues needed to be elevated. The TxDOT has indicated that it identified a point of contact for USCG in August of this year, but will follow up in writing. The USACE noted that with the final rule the USACE opinion may change with regard to how it conducts its own regulatory process. This may prove to be problematic for applicants

like TxDOT. Furthermore, interviews with TxDOT staff noted that the relationship with THC may warrant additional attention due to changes in the coordination process for a Section 404 nationwide permit and preconstruction notification for Federal projects. Generally, it is important for TxDOT to maintain and strengthen relationships with Federal agencies including the State Historic Preservation Officer that processes Section 106 actions. This may be considered critical under NEPA Assignment as TxDOT is acting as a Federal agency.

Audit #2 Observation #2

The team found in a legacy project (*i.e.,* a project that began with FHWA as the lead agency and was transferred to be TxDOT-led after NEPA Program Assignment) that an ESA ''no effect'' determination was made by TxDOT to support a FONSI. Previously, when acting as the lead agency, FHWA had requested that TxDOT resolve issues identified in the USFWS correspondence for the project. In this instance, the project record initially reflects a ''may affect'' determination by FHWA that later changed to a ''no effect'' determination by TxDOT. The team was unable to find documentation in the project file to justify why such a change occurred. The team is currently working with TxDOT to review the process by which TxDOT makes ''no effect'' determinations for ESA. If concerns remain after this collaboration, FHWA may invite our USFWS liaison to review this issue in more depth as part of Audit #3.

Audit #2 Observation #3

One project file contained information about an 8-mile detour categorized as not a ''major traffic disruption.'' An interviewee at a different District identified what they considered a different standard (*i.e.,* 2-mile detour) for a ''major traffic disruption.'' These observations suggest TxDOT's approach to defining 23 CFR 771.117(e)(4) for major traffic disruption may be inconsistent. The FHWA recognizes that the context of when a disruption is considered to be ''major'' is important and may depend on local conditions. The FHWA urges TxDOT to develop guidance and a set of examples for rural, urban, and metropolitan Districts to align when major traffic disruption occurs.

2. Documentation and Records Management

The team relied on information in ECOS, TxDOT's official file of record, to evaluate project documentation and records management. The ECOS is a tool for information records, management, and disclosure within TxDOT District Offices, between Districts and ENV, and between TxDOT and the public. The strength of ECOS is its potential for adaptability and flexibility. The challenge for TxDOT is to maintain and update the ECOS operating protocols (for consistency of use and document/data location) and to educate its users on updates in a timely manner.

Successful Practices

A number of best practices demonstrated by TxDOT were evident as a result of the documentation and records management review. The ECOS has demonstrated system-wide improvements in usage by Districts since Audit #1, most notably in the areas of download speed and interface. The ECOS has improved in areas of connectivity and speed, and technical support for ECOS is rated as being very high and responsive. The team recognizes the need for continuous update and maintenance for the ECOS system and ENV's upcoming plans for additional NEPA compliance and documentation related improvements in five phases. The team also recognized that TxDOT Districts are making good use of the Project Risk Assessment Forms to Develop Project Scope and help guide the environmental process.

Based on examination of the 130 sample files reviewed, the team identified five general observations that are mostly issues where record keeping and documentation could be improved or clarified. The team used a documentation checklist to verify the presence of information required by regulation and review the files of the 130 sampled projects.

Audit #2 Observation #4

One project shows a NEPA clearance date that occurs after the LOA clearance date. The TxDOT has indicated that this was a data entry error that was preserved ''in order to understand the progression of project development.'' The NEPA clearance must occur before a date of LOA clearance according to TxDOT process.

During the interviews, the team learned that ECOS files may be deleted by their author and leave no trace of that deletion in ECOS. In addition, the team learned through interviews that deleted files may not be recovered. The FHWA is concerned and urges TxDOT to consider that if decisional information can be deleted, especially if the deletion occurs after the NEPA decision document is signed, the project record would not support the decisions made.

Audit #2 Observation #5

The team reviewed files for one project where the NEPA decision may be an example of a potential inconsistency in NEPA document content for a single project. The scope in the EA document described both a road widening with bridge replacement and widening without bridge replacement. The FONSI document project scope was described as roadway widening, the file documentation was unclear as to the status of the intent to replace the bridge. The team urges TxDOT to carefully compare the project description in an EA and any resulting FONSI and to explain in the FONSI any project description changes from the EA.

The team found there were 15 out of 83 project files where criteria for a specific CE category remained either undocumented or unclear for certain CEs (c(26)–(28)). Examples included a project that may not conform to 23 CFR 771.117(e)(4) due to major traffic disruption, a c(22) operational ROW project stated both ''rehab lanes'' and ''widen lanes,'' and c(23) projects not to exceed $5 million in Federal funds.

Audit #2 Observation #6

The FHWA is generally interested in how TxDOT fulfills its environmental commitments, which TxDOT records through an Environmental Permits, Issues and Commitments (EPIC) sheet. Such sheets become part of both the project record and often, the project bid package. In reviewing project files, the ECOS commitment tab defaults to the following note ''No EPICs exist for this project'' while the same file contained uploaded EPIC sheets in the ECOS documentation tab. Since the EPIC sheet is the way TxDOT implements its environmental commitments, the team would like to draw TxDOT's attention to occasional contradictory information on EPICs in its project files. The team acknowledges that TxDOT has recognized this issue and created a joint District and ENV team to address this issue to address this problem.

Audit #2 Observation #7

The team found two examples of a single project that had multiple CE approvals. Each decision document had a different approval date, however the project was unchanged. The approval documents (with different dates) otherwise appeared to be identical, with the exception of minor editorial changes, such as adding a position title or utilizing an updated form. After interviews with SAB staff, the team learned that this practice was used to

correct editorial mistakes or when new forms were released. The team could not determine the appropriate NEPA approval date. If a decision document (CE, FONSI, or ROD) needs to be revisited, FHWA regulations require a re-evaluation. A re-evaluation does not create a new NEPA approval date, it just analyzes if the original decision remains valid in light of the new information. The TxDOT might clarify its project files by including a journal entry in ECOS to explain the correction of errors on forms.

Audit #2 Observation #8

One type of decision reviewed by the team was a sequence of re-evaluations on the same project change that occurred after a NEPA approval has been made. The team found one project that had three partial re-evaluations in succession for the same design change (a sidewalk relocation) for adjacent parcels and a construction easement in each separate re-evaluation consultation checklist. The TxDOT indicated in its comment on this observation that the project was proceeding under a design-build contract that led to a number of changes. The FHWA is concerned that this TxDOT activity could possibly lead to segmenting the review of new impacts if this practice were to continue.

Audit #2 Observation #9

In general the team views the continuing delay in implementing needed substantive ECOS upgrades (*i.e.,* outdated CE terminology and EPIC documentation contradiction, since CE MOU approval on February 12, 2014) and the current schedule to implement upgrades over 5 years to be too long a timeframe as recurring errors may result. The team urges TxDOT to implement the upgrades with the timeframe of FHWA audits, as it has continued to make recurring observations on project recordkeeping during audits.

3. Quality Assurance/Quality Control

The team considers the QA/QC program to be generally in compliance with the provisions of TxDOT's QA/QC Plan. The team was pleased to see that many of the positive items mentioned and observed in Audit #1 appear to be continuing to occur.

Successful Practices

The team observed four areas of successful practices currently in place that align with TxDOT's QA/QC Control Procedures for Environmental Documents. First, during the team site visits to the TxDOT Districts it learned that one District (Houston) has one person dedicated to reviewing the NEPA documents in order to review documentation for quality and completeness (QC as it occurs before the decision is made), and heard in an interview from another District (Dallas) they are planning to do the same.

Second, the team learned that the Core Team concept (QC) appears to be working and is well received by the District offices visited during the audit. The opportunity of District Environmental Coordinators to work with an ENV person early in the process to identify potential issues should result in efficient document preparation, an expectation of a quality document, complete project file, and improved project delivery.

Third, the team received a lot of positive comments from the Districts visited regarding the SAB of TxDOT. The District staffs stated that the SAB feedback (QA that occurs after the decision is made) was quick and resulted in a great training tool to improve documentation on future projects. The team urges TxDOT to continue this practice and encourages TxDOT to consider more focused and timely input at the pre-decision stage of project development process during QC. It is possible that the non-compliance observations cited in this report could have been identified and corrected if an enhanced pre-decisional (QC) process related check were implemented.

Fourth, since the beginning of 2015, TxDOT has created over 31 tool kits, guidance, forms, handbooks, and procedures to improve consistency and compliance of its NEPA documents and decisions. Feedback during interviews indicated that the TxDOT staff appreciated the effort from ENV to create user friendly forms and procedures to ensure compliance and reduce errors in their documentation.

As a result of the team's file reviews and interviews, it considers three observations as sufficiently important to urge TxDOT to consider improvements or corrective actions in its approach to QA/QC.

Audit #2 Observation #10

During the audit file reviews, the team occasionally found difficulty locating information in project files and could not determine whether environmental requirements were addressed but not documented. Based on what the team found in ECOS records, TxDOT appears to lack a statewide standard or guidance on ECOS naming conventions or ECOS file management. The FHWA reviewers found file names that were not intuitive for conducting efficient or comprehensive reviews. During interviews with the Districts visited, TxDOT staff at times also had trouble locating information in ECOS and was uncertain of the details of projects when questioned. This lack of consistency statewide is an issue that TxDOT acknowledged in a closeout meeting with the team and stated that it was working toward resolving the issue internally. The team will continue to monitor this issue in Audit #3.

Audit #2 Observation #11

Based on the recurring non-compliance observations from Audits #1 and #2, the team urges TxDOT to focus effort on its QA/QC actions. In a few instances, the team found documentation in the project files that was the result of QC, especially when a form was in error and had to be redone. But generally, the team found no entries in project files that showed projects had been reviewed for QC. The team could not determine for the project files reviewed for this audit whether TxDOT's actions effectively implemented QA/QC actions that were agreed to in MOU Part 8.2.4. The FHWA will focus efforts in Audit #3 on how TxDOT applies QC and implementing QA strategies to individual projects.

4. Legal Sufficiency Review

From interviews the team learned there are two attorneys in TxDOT's Office of General Counsel (OGC) who provide legal services on environmental issues. The OGC has an ongoing process to fill the third environmental attorney position in OGC. In addition, OGC has had an outside contract attorney providing legal assistance on environmental issues for a number of years. The OGC recently completed its biannual procurement of outside legal services for environmental issues, and has now obtained legal services from a total of three law firms. Legal counsel (both OGC staff and outside counsel) are primarily dedicated to serve as a resource providing legal assistance in project development, review of environment documents, and legal sufficiency reviews.

Assistance from OGC (who assisted in developing the sections) is guided by ENVs Project Delivery Manual Sections 303.080 through 303.086. These sections provide guidance on requesting legal sufficiency, legal sufficiency review of FHWA projects, and review of publishing a Notice of Intent (NOI) to prepare an EIS and Notice of Availability in the **Federal Register**. Per the guidance, legal sufficiency is required prior to approval of:

(1) NOI to prepare an EIS

(2) Final Environmental Impact Statement (FEIS)
(3) Individual 4(f) Statement (programmatic or de minimis 4(f) evaluations do not require legal sufficiency review)
(4) Notice that a permit, license, or approval is final under 34 U.S.C. 139(1).

The OGC is available as a resource to ENV and the Districts to answer questions on NEPA issues and specific questions on projects. Requests for assistance are made through ENV and the vehicle for communication is primarily email. The guidance states that communications between OGC and ENV for the purpose of rendering legal services or advice are protected by the attorney-client privilege.

Based on a report provided by OGC, since January 1, 2015, it has reviewed or has been involved in providing legal review for 15 project actions. These included five 139(l) notices, an FEIS/ROD, three RODs, one NOI, an EA, a public hearing and response report, an FEIS, and an FEIS errata sheet. The OGC provided legal sufficiency reviews for all 139(l) reviews, the FEIS errata sheet, and the FEIS.

Currently, ENV project managers request the review of documents and/or materials by OGC. The lead attorney in OGC assigns the project to staff based on workload and issues. He works with the project managers to agree upon an acceptable review timeframe. Per OGC, reviews are only done after the technical reports have been reviewed and approved by ENV. Comments from the attorney are provided in the usual comment/response matrix to ENV, which incorporates them into the overall comment/response matrix that is sent to the project Core Team to address. Once any comments are adequately addressed, the attorney will issue a legal sufficiency statement. The OGC does not maintain a separate project file as it completes review of a project.

In reviewing the document for legal sufficiency the OGC attorneys rely on Federal regulations and guidance, TxDOT toolkits and manuals, and discussions with project delivery managers. The OGC relies on the subject matter experts to ensure the technical reports are adequate, and only does an in-depth review of a technical report if warranted. In general, the attorneys are looking for consistent, well written documents that are reader friendly and clearly document the NEPA decision. After reviewing the document, there is a consultation between the lead attorney and staff attorney concerning the review results before a legal sufficiency finding is issued. Copies of emails providing comments on Federal and State register notices, the legal sufficiency reviews of several Section 139(l) notices, and an FEIS were provided to the team.

The lead attorney for OGC has 11 years of transportation experience with TxDOT but until NEPA assignment process began, only limited NEPA experience. The other OGC attorney's NEPA experience also began with the NEPA Assignment process. The contract attorney has had approximately 12 years of experience working NEPA issues and lawsuits in Texas. The OGC may hire outside law firms to provide assistance on an as-needed basis. All such firms have extensive transportation and NEPA experience.

The OGC indicated that there has been some early involvement in project familiarization and information gathering so that it is aware of potential issues, impacts, and timeframes during project initiation and scoping. The OGC is making a concerted effort also to attend public hearings and other project meetings as the project development process progresses. The OGC wants to be considered a resource for the ENV and TxDOT Districts from early on in project development as opposed to only being contacted when there are major issues.

Based on the team interviews and review of documentation, the requirements for legal sufficiency under the MOU are being adequately fulfilled. In FHWA's experience, legal staff can expand their role by inserting themselves into the project development process and promoting their availability as a resource to TxDOT staff.

Audit #2 Observation #12

Neither in the project delivery manual nor elsewhere does OGC provide an expectation for the time frame necessary for a legal review. The team urges TxDOT to establish a review time frame for legal sufficiency, develop some education and outreach to the TxDOT Districts regarding the OGC role, especially as a resource, and suggested additions to the legal sufficiency documentation.

5. Performance Measurement

Part 10 of the MOU identifies performance measures to be reported by TxDOT that FHWA would consider in conducting audits. The FHWA did not independently verify the measures reported by TxDOT. The TxDOT's first Self-Assessment Summary Report (since implementing NEPA Assignment) discusses progress made toward meeting the four performance measures. These measures provide an overall indication of TxDOT's discharge of its MOU responsibilities. In addition, in collecting data related to the reporting on the performance measures, TxDOT monitors its overall progress in meeting the targets of those measures and includes this data in self-assessments provided under the MOU (Part 8.2.5). The four performance measures are: (1) Compliance with NEPA and other Federal environmental statutes and regulations, (2) QA/QC for NEPA decisions, (3) relationships with agencies and the general public, and (4) increased efficiency and timeliness in completion of the NEPA process.

The TxDOT reports three measures of compliance with NEPA and other Federal laws and regulations: (1) Percent of complete NEPA Assignment Program Compliance Review Reports submitted to FHWA on schedule, (2) percent of identified corrective actions that are implemented, and (3) percent of final environmental documents that contain evidence of compliance with requirements of Section 7, Section 106, and Section 4(f). The measured results range between 97 percent and 100 percent complete.

The TxDOT considered QA/QC for NEPA decisions with three measures: (1) Percent of FEISs and individual Section 4(f) determinations with legal sufficiency determinations that pre-date environment document approval, (2) percent of EAs and EISs with completed environmental review checklists in the file, and (3) percent of sampled environmental project files determined to be complete and adequate for each self-assessment period. These measured results range between 94.3 percent and 100 percent.

The TxDOT is still in the process of assessing its measure of relationships with agencies and the general public. Since the completion of Audit #1, TxDOT has prepared and distributed a survey to agencies it interacts with as part of NEPA. The survey asked agency staff to respond to TxDOT's capabilities, responsiveness, efficiency, communications, and quality. The TxDOT proposes to poll agencies each year and report comparisons in future self-assessments. The TxDOT's measure of its relationship with the public is to compare the number of complaints received year to year. The TxDOT reports no complaints from the public received since assuming NEPA Assignment. A second measure for public relationship is the percent of signed final EA or EIS projects where a public meeting or hearing was conducted and the associated documentation was in the file. The TX DOT reports a measure of 92.3 percent because one EA file had a missing signed public hearing certification page. A third measure of relationships

considered by TxDOT is the time between beginning a formal conflict resolution process and the date of resolution. The TxDOT reports there was no conflict resolution process initiated during the team's review period.

The TxDOT provided its initial measures of increased efficiency and timeliness in completion of the NEPA process in the Self-Assessment Summary Report. Its first of three measures is to compare the median time to complete CEs, EAs, and EISs before and after assignment. The TxDOT reports that it needs more time to compile post-NEPA assignment data. The TxDOT reports that the pre-NEPA assignment median time frame to complete an EA is 1060 days (35.33 months) and 3,351 days (111.7 months) to complete an EIS. The second measure is the median time frame from submittal of biological assessment to receipt of biological opinion. The TxDOT reports that the pre-NEPA Assignment median time frame for completing a biological opinion is 43 days, and 16 days to complete informal consultation. The TxDOT reported a time frame of 65 days for a single biological opinion since NEPA Assignment. The 10 informal consultations since assignment had a median time frame of 28 days (12 days longer).

In interviews, the team learned of several best practices from the TxDOT CE Self-Assessment Report. The TxDOT's QA/QC process generates measures of error rates that provide useful information to improve the overall program management and efficiency. The TxDOT has used performance measures to evaluate the effectiveness of the SAB Feedback Program, and has demonstrated reduced error rates over its limited review time frames. Also, some of the measures closely correlated with follow up training which demonstrated its utility. One individual stated in an interview that the initial rate was initially in the high single digit percentiles (c.f., if CE determinations were signed or not). The team then considered three periods of data corresponding to rough quarter yearly time frames. In the initial quarter, people who made mistakes and were then mentored through a phone call showed a drop in number of errors over time. The same people were, for the most part, no longer making the same errors after the third quarter.

Another practice the team learned about through interviews was that TxDOT had collected and considered many measures of its performance in addition to the ones in the Self-Assessment Report Summary. The team requested more information about these additional measures from TxDOT and has received some details (TxDOT's CE Self-Assessment Report). The team hopes to see more. The team encourages TxDOT to generate performance measures in addition to the ones reported and to share those measures with the team as part of FHWA's overall review of NEPA assignment.

Audit #2 Observation #13

The team continues to be concerned that the measure for the TxDOT relationship with the public may be too limited by focusing on the number of complaints, and urges TxDOT to continue thoughtful consideration of the development of this measure. The team learned through interviews that the CSTAR database is where complaints get recorded and distributed to different parts of TxDOT, but that it apparently was not consulted to compute a baseline measure to use for comparison. Also, public complaints, according to District staff, come into individual District offices which may not be tabulated in CSTAR. The team urges TxDOT to consider the measure of public relationship in more refined detail than agency-wide scale to distinguish concerns that are tied to a particular project and those tied to program management and decisionmaking. The FHWA acknowledges that public comments and complaints were and will continue to be an important consideration in project level decisionmaking. The performance measure for public relationship should address TxDOT's consideration of project specific concerns (not just the number of complaints) and concerns about the environmental program.

6. Training Program

The team recognizes the following successful practices. The team learned of resource sharing within the Houston District of Subject Matter Resource (SMR) staff who serve as in-house sources of knowledge and expertise. The SMR staff also commit to attend formal training and perform self-study in their resource areas, which allows them to provide training and mentor other staff on subjects within or related to the resource area.

A second best practice described to the team was that TxDOT conducted a survey of its staff in the summer of 2015 to determine needs and issues related to training. The TxDOT provided the survey results, and the team found these data to be both detailed and informative. The TxDOT reported during the pre-Audit #2 that this information was used to identify training needed by ENV staff to professionally develop Division staff and maintain expertise in their respective subject areas. The survey results from District staff identified training needed for District environmental staff to perform job duties. The team looks forward to reviewing TxDOT's progressive training plan and the updated training plan based on the new data.

A third best practice the team learned through interviews is that the TxDOT tool kit (available to consultants, local government staff, and the public) provides training opportunities for documentation and record keeping. When a consultant raises a question or concern in response to a TxDOT document review comment, staff can refer to the tool kit in order to support the TxDOT position. Finally, the ENV Director said in his interview that the tool kits contribute to increased consistency throughout the process (*e.g.,* comments on documents, format, and content), resulting in a more predictable project development process. That consistency is appreciated across the board in Districts and LPAs.

Audit #2 Observation #14

The FHWA recognizes that TxDOT's annual environmental conference is its primary outreach to LPAs and consultants to address a wide array of environmental topics that reinforce existing and new environmental policies and procedures. However, the 2015 conference was not well attended by LPA staff, a fact acknowledged by the Director of ENV in his interview. He also indicated that he was thinking of reaching out to large metropolitan planning organizations and the Association of Texas Metropolitan Planning Organizations in a meaningful way in coordination with TxDOT's training coordinator. The team also learned through interviews that some, especially rural District local government staff, were uninformed of the changes with TxDOT NEPA Assignment. The team encourages the Director of ENV and the training coordinator to implement ways to train local government staff.

Status of Observations since the Last Audit (December 2015)

Non-Compliant Observations

Audit #1 identified two non-compliance observations. One was related to the application of a CE action that related to a program that TxDOT did not have. The TxDOT acknowledges this non-compliance observation and has taken corrective action to prevent future non-compliance. Accordingly, a

stand-alone noise wall project using 23 CFR 771.117(c)(6) is no longer a possible selection of CE actions that any TxDOT District can make. The other was an instance where a CE determination was made (called a conditional NEPA approval or ''conditional clearance'') before all environmental requirements had been satisfied. Since Audit #1, TxDOT has continued to make NEPA approvals ''conditionally,'' and those actions have been identified as non-compliant in this report. The TxDOT drafted an update of an SOP to address this issue. The FHWA expects TxDOT to prepare a corrective action so that its program would comply with the MOU. The FHWA will review the corrective action and indicate to TxDOT whether it satisfactorily addresses this concern. Also, FHWA requested that TxDOT take additional steps to prevent any future non-compliance in this regard.

Observations

1. Updates to ECOS, the TxDOT File of Record

The TxDOT ran into further delays in implementing its ECOS upgrade contract. The TxDOT has a plan in place that outlines five phases of work to be performed to upgrade ECOS over many years. Substantive ECOS upgrades are still pending as of the development of this draft report. This is leading to continued observations by FHWA, and inconsistencies within ECOS by TxDOT users. A lack of mandatory filing and naming conventions by ENV contributes to this issue. Of concern to FHWA is the ability for TxDOT users to potentially delete files and approvals in ECOS without an archive of such actions. This could be problematic as it differs from the FHWA's previous understanding of ECOS security measures in place from Audit #1.

2. Addressing Conflicts and Disputes

Since Audit #1, TxDOT has implemented conflict resolution training for its ENV and District staff. This training has been well received and should help prepare staff to recognize when conflicts may occur and to take steps to address issues before they develop into disputes. Interviews conducted for Audit #2 suggest that TxDOT and resource agency staff may need to focus on improving communication in order to foster and nurture relationships.

3. Local Public Agency Project Reviews

This observation continues as is. The Local Public Agencys (LPA) were invited to the TxDOT Environmental Coordinators Conference (ECC), but TxDOT ENV confirmed that few LPAs attended. It was further noted by TxDOT that perhaps the ECC may not be the best training venue for LPAs that need more than introductory information or refreshers on NEPA related topics. Furthermore, some rural Districts indicated that they remain Department Delegate on local projects when LPAs can or should be project sponsors, because LPAs in the rural areas are sometimes unaware of what to do to develop their projects. The situation seems to be different in metropolitan areas where LPAs are more sophisticated and can perform well as project sponsors.

4. Recording and Implementing Environmental Commitments

The team continued to find issues with the EPIC sheet and commitments in Audit #2. A total of 21 instances were found where inconsistencies in EPIC reporting were noted. Primarily, there was the fundamental problem of EPICs being required (and sometimes uploaded under the documentation tab) for a project but a notice stating ''No EPICs Exist for this project'' under the EPIC tab in ECOS was frequently found. The TxDOT has formed an internal team to address this issue.

5. Inadequate Project Description

The TxDOT has begun to address the issue of inadequate project descriptions by providing training on expectations for what should be in a project description in its 2015 environmental conference. The training instructors included individuals from FHWA and TxDOT. The team continued to find project descriptions that were unclear or may not have supported the decisions made in project files. The team suggests that TxDOT apply QA/QC to this issue. The TxDOT acknowledges this is a continuing issue and has indicated that it will continue to address it in NEPA chats and training.

6. Project File Organization and Completeness Issues

The team continued to find outdated terms in project files (*e.g.,* BCE/PCE) and occasional difficulty in finding information in project files with no consistent file labeling protocol or expectations for where to find specific information. For example, resource agency coordination letters were sometimes found as individual documents in a file and other times they were appended to a NEPA document. The TxDOT indicated that it formed a workgroup in the summer of 2015 that meets to address inconsistencies regarding filing and naming conventions.

7. Public Disclosure of ECOS Project Records

The TxDOT has not taken any actions on this item other than to make information available upon request or at public meetings/hearings for a project.

8. No EAs or EIS Being Reviewed by the SAB Team

The team learned that SAB only performs post decision (QA) reviews and provides feedback to both the Districts directly and the Corrective Action Team at ENV to consider if any process or procedural changes are needed. The FHWA believes there is a function that SAB or others could serve before the decision is made that would add value to the upfront QC process for both document content and procedural compliance. The FHWA understands the expected benefits of Core Team reviews but believes something more is needed and would be helpful to Districts.

9. Sampling Approach for QA/QC

The team learned in Audit #2 that there is a risk-based sampling method applied to choosing projects types that are selected for more detailed reviews, and that the number of staff available for the reviews dictates the number of reviews that are completed. The review sample is based on a computer generated model that chooses some of the projects randomly. There is no established sampling methodology for self-assessing the effectiveness of TxDOT's standards or guidance. The FHWA would like to see more clarification from TxDOT on the effectiveness of its current practice and be provided data to verify TxDOT claims of compliance.

10. Confusion in Understanding Quality Control, Quality Assurance, and Self-Assessment

Most of the confusion within TxDOT regarding these terms has been cleared up. The FHWA believes that additional internal (QC) review (beyond the Core Team concept for project documentation) for NEPA process related checks by TxDOT before the decisions were made would add value to the process, help ensure NEPA compliance, and assist with FHWA's requirement to make informed and fully compliant project authorization decisions.

11. Narrow Definition of the QA/QC Performance Measure

The team's Observation #11 was that the QA/QC measure for NEPA decisions focused only on EA and EIS projects. The team urges TxDOT to consider evaluating a broader range of NEPA related decisions (including, but not limited to CEs, re-evaluations, Section 4(f), and STIP/Transportation Improvement Program (TIP) consistency). Note that the recurring non-compliance observations occurred on CEs with either STIP/TIP or Section 4(f) items that were not ready for a decision to be made. In recent interviews with TxDOT staff, the team learned that TxDOT will examine other measures on an ongoing basis for internal use. The team believes that if the QA/QC refocuses attention not only on the documentation, but also on the required sequential NEPA process related items, that improved efficiencies related to TxDOT's NEPA decision and FHWA project authorization could result. The team believes that a more relevant focus on process could potentially help avoid non-compliance actions by TxDOT under the MOU and FHWA non-compliance observations in future audits.

12. Performance Measure Utility

Observation #12 was that the utility of several of the performance measures was difficult to determine. Also, the team was concerned that the measure for the TxDOT relationship with the public may be too limited by focusing on the number of complaints. Through recent interviews, the team learned that TxDOT staff agree with FHWA's concerns about utility. Quantifying changes in relationships with the public or agencies is possible, but the number is hard to interpret. Regarding the survey of agencies, TxDOT staff indicated that they did not know if agencies have higher expectations of TxDOT compared with other agencies. Considering the TxDOT relationship with the public, staff told the team that, during the preparation of their application, they considered various sorts of surveys and social media outreach. Given the cost of these approaches, TxDOT was not convinced of their utility and so decided not to use any of them. This leaves the performance measure difficult to address for TxDOT and may be a recurring FHWA observation until it is resolved.

13. TxDOT Reliance on the California Department of Transportation (Caltrans) Training Plan

The team's Observation #13 was that the Caltrans training plan, which served as a basis for the TxDOT training plan, may not adequately meet the needs of TxDOT. The team urged TxDOT to consider other State DOT approaches to training. The TxDOT staff said in a recent interview that they had reviewed training plans from Virginia, Ohio, Alaska, and Florida. They also indicated that prior to Audit #2, TxDOT had completed a survey of staff in District offices and at ENV to assess training needs. The team was told that the surveys would be used to update the training plan in the spring of 2016.

14. Adequacy of Training for Non-TxDOT Staff

Observation #14 urged TxDOT to assess whether the proposed training approach for non-TxDOT staff (relying heavily upon the annual ECC) is adequate and responsive enough to address a need to quickly disseminate newly developed procedures and policy. Through interviews, the team learned that TxDOT does not prioritize training classes specifically for non-TxDOT staff. The Director of ENV acknowledged that the training session at the recent ENV conference for LPA staff was not well attended and was thinking of reaching out to large planning organizations. The TxDOT concluded that its priority for training is first for TxDOT staff internally (ENV and District staff), second for consultants that TxDOT hires for environmental work, and third for LPAs. In years three and beyond of the TxDOT NEPA Assignment, the training plan may start to focus on the second, and eventually third, priority groups of individuals.

15. What Training is Mandatory

Observation #15 resulted in a team suggestion that the progressive training plan clearly identify the training required for each job classification. The TxDOT training coordinator told the team that the progressive training plan will address training required to meet State law (16 hours of training) and job task certification. This plan will be developed at the end of 2015.

16. Training Plan, Consideration of Resource Agency Recommendations

The team learned in a recent interview that in the fall of 2015 (as in the fall of 2014), TxDOT subject matter experts planned to reach out to resource agencies to ask what training they would like to see conducted for TxDOT staff. Previously, USACE staff said that TxDOT needed 404 training. The TxDOT scheduled and completed Section 404 training in two different locations during October 2015. The TxDOT will continue to schedule Section 404 training.

Next Steps

The FHWA provided this draft audit report to TxDOT for a 14-day review and comment period. The team has considered TxDOT comments in developing this draft audit report. As the next step, FHWA will publish a notice in the **Federal Register** to make it available to the public and for a 30-day comment period review (23 U.S.C. 327(g)). No later than 60 days after the close of the comment period, FHWA will respond to all comments submitted in finalizing this draft audit report, pursuant to 23 U.S.C. 327(g)(B). Once finalized, the audit report will be published in the **Federal Register**.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

Notice of Unsafe Condition Involving Commercial Motor Vehicles Affected by Volvo Trucks North America's Safety Recall and Out-of-Service Declaration

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice.

SUMMARY: FMCSA has determined that commercial motor vehicles manufactured by Volvo Trucks North America (Volvo Trucks) and affected by the National Highway Traffic Safety Administration (NHTSA) Part 573 Safety Recall Report No. 16V–097000, that have not already received the interim or permanent recall remedy repair specified by Volvo in the recall, are likely to cause an accident or breakdown because of a defective steering shaft which may disconnect from the junction block without warning, causing the vehicle to be in an unsafe condition. FMCSA is notifying commercial motor vehicle operators that vehicles subject to the recall without the interim or permanent repair will be subject to an immediate out-of-service order under 49 CFR 396.9 or compatible state regulations.

DATES: This Notice is effective March 23, 2016.

FOR FURTHER INFORMATION CONTACT: Charles J. Fromm, Deputy Chief

Counsel, Federal Motor Carrier Safety Administration, 1200 New Jersey Ave. SE., Washington, DC 20590, by telephone at 202–366–3551 or via email at *charles.fromm@dot.gov*. FMCSA office hours are from 9 a.m. to 5 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: On February 16, 2016, Volvo Trucks initiated a safety recall affecting nearly 16,000 Class 8 motor vehicles in the United States. According to Volvo, a condition exists which could lead to separation of the steering shaft from the junction block. Also, the bolt connecting the upper steering shaft to the lower steering shaft may not have been properly tightened. Volvo's report to NHTSA states that either condition can lead to separation of the steering shaft and immediate loss of steering ability and control, which could lead to a crash. Volvo Trucks issued a Safety Recall Alert on March 10, which directed all owners of the affected vehicles to take the vehicles out of operation as soon as possible and cautioned that the separation can occur without warning and amended its safety recall on March 15, alerting NHTSA of the more serious hazard. Volvo Trucks strongly recommends that these vehicles remain out of service until repairs are made. NHTSA is overseeing Volvo Truck's recall efforts to ensure prompt notification of the defect to vehicle owners and that vehicles are not operated in a defective condition. Volvo's Safety Recall Report is available on its Web site at: *http://www-odi.nhtsa.dot.gov/owners/SearchDetails?searchCriteria.prod_ids=1991310&searchCriteria.model_yr=2016&searchCriteria.make=VOLVO&searchCriteria.model=VNL&activeTab=0&searchType=PROD&prodType=V&targetCategory=A&cmplCount=1&rclCount=3&invCount=1&tsbCount=0*.

Additionally, to assist with notification efforts, on March 18, 2016, FMCSA posted an Inspection Bulletin on its Web site. *https://www.fmcsa.dot.gov/newsroom/urgent-inspection-bulletin-safety-recall-issued-volvo-trucks*. The Inspection Bulletin advised FMCSA inspectors and state partners under the Motor Carrier Safety Assistance Program (MCSAP) of the condition of the affected vehicles and requested inspectors to direct the operators of such vehicles to contact Volvo Customer Service before continuing in operation. The Inspection Bulletin also noted that continued operation of the affected vehicles could be considered a violation of 49 CFR 396.7, which prohibits operation of a vehicle in a condition likely to cause an accident or a breakdown. Today's notice formalizes that determination and clarifies that FMCSA and its state partners under the MCSAP program will place a vehicle out-of-service if the necessary repair or replacement has not been made, based on the identified out-of-service defect under 49 CFR 393.209(c), which requires that a steering column to be securely fastened.

The Secretary of Transportation has statutory authority to set minimum standards for commercial motor vehicle safety, including ensuring that commercial motor vehicles ''are maintained, equipped, loaded, and operated safely'' and to prescribe requirements for the ''safety of operation and equipment of, a motor carrier.'' (49 U.S.C. 31136(a)(1) and 49 U.S.C. 31502(b)). The Secretary also has broad power in carrying out motor carrier safety statutes and regulations to, among other things, ''inspect the equipment of a carrier or lessor'' and ''perform other acts the Secretary considers appropriate.'' (49 U.S.C. 504(c)(1) and 49 U.S.C. 31133(a)(10)). The Administrator of FMCSA has been delegated authority under 49 CFR 1.87(f), (i) and (j) to carry out the functions vested in the Secretary of Transportation by 49 U.S.C. chapter 311, subchapter III, 49 U.S.C. chapter 315, and 49 U.S.C. 504. This delegation of authority includes the authority to declare unsafe vehicles out-of-service under 49 CFR 396.9. Under 49 U.S.C. 31102, MCSAP State partners agree to conduct roadside inspections. In 49 CFR part 350, MCSAP state partners agree to adopt state safety laws and regulations that are compatible with 49 CFR parts 390–397.

Out-of-Service Determination

FMCSA has determined that commercial motor vehicles subject to Volvo Trucks' Safety Recall (NHTSA Part 573 Safety Recall Report No. 16V–097000), that have not already received the interim or permanent recall remedy repair specified by Volvo in the above-referenced recall, are likely to cause an accident or breakdown and are therefore in an unsafe condition. The condition of the steering column is also a violation of 49 CFR 393.209(c) which requires the steering column to be securely fastened. Because of the potential consequences associated with continued operation of these vehicles, through this notice FMCSA is declaring unsafe the operation of any unrepaired vehicle affected by the Volvo Trucks recall under NHTSA Campaign No. 16V097000 and declaring such vehicles to be in an out-of-service condition. The affected vehicles should not be operated, and the operation of an unrepaired affected vehicle will therefore subject the operator to an out-of-service order under federal or compatible state regulations.

FMCSA is directing its investigators and state partners conducting roadside inspections to perform a Level IV inspection on any unrepaired affected vehicles and to place the vehicle out of service based on the violation of 49 CFR 393.209(c). Level IV inspections, which are typically performed on a one-time basis on a particular item as a special inspection, are not included in FMCSA's Safety Measurement System (SMS), and therefore the out-of-service declaration will not affect a motor carrier's SMS score.

Placing the vehicle out-of-service under this Notice is not intended to provide a basis for further enforcement action and seeks only the immediate cessation of the operation of vehicles that have been deemed to be in an unsafe condition. Operators of vehicles declared out-of-service, however, must comply with an out-of-service order. Motor carrier operators who violate an out-of-service order will be subject to civil penalties and other enforcement as provided in the Federal Motor Carrier Safety Regulations.

Issued under the authority delegated in 49 CFR 1.87 on: March 22, 2016.

T. F. Scott Darling, III,

Acting Administrator.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2015–0072]

Qualification of Drivers; Exemption Applications; Vision

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of final disposition.

SUMMARY: FMCSA announces its decision to exempt 40 individuals from the vision requirement in the Federal Motor Carrier Safety Regulations (FMCSRs). They are unable to meet the vision requirement in one eye for various reasons. The exemptions will enable these individuals to operate commercial motor vehicles (CMVs) in interstate commerce without meeting the prescribed vision requirement in one eye. The Agency has concluded that granting these exemptions will provide a level of safety that is equivalent to or

greater than the level of safety maintained without the exemptions for these CMV drivers.

DATES: The exemptions were granted December 15, 2015. The exemptions expire on December 15, 2017.

FOR FURTHER INFORMATION CONTACT: Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, *fmcsamedical@dot.gov,* FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–113, Washington, DC 20590–0001. Office hours are 8:30 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Electronic Access

You may see all the comments online through the Federal Document Management System (FDMS) at *http://www.regulations.gov.*

Docket: For access to the docket to read background documents or comments, go to *http://www.regulations.gov* and/or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

II. Background

On November 12, 2015, FMCSA published a notice of receipt of exemption applications from certain individuals, and requested comments from the public (80 FR 70060). That notice listed 40 applicants' case histories. The 40 individuals applied for exemptions from the vision requirement in 49 CFR 391.41(b)(10), for drivers who operate CMVs in interstate commerce.

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption for a 2-year period if it finds ''such exemption would likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption.'' The statute also allows the Agency to renew exemptions at the end of the 2-year period. Accordingly, FMCSA has evaluated the 40 applications on their merits and made a determination to grant exemptions to each of them.

III. Vision and Driving Experience of the Applicants

The vision requirement in the FMCSRs provides:

A person is physically qualified to drive a commercial motor vehicle if that person has distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses or visual acuity separately corrected to 20/40 (Snellen) or better with corrective lenses, distant binocular acuity of a least 20/40 (Snellen) in both eyes with or without corrective lenses, field of vision of at least 70° in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing red, green, and amber (49 CFR 391.41(b)(10)).

FMCSA recognizes that some drivers do not meet the vision requirement but have adapted their driving to accommodate their vision limitation and demonstrated their ability to drive safely. The 40 exemption applicants listed in this notice are in this category. They are unable to meet the vision requirement in one eye for various reasons, including amblyopia, aphakia, chronic optic neuropathy, complete loss of vision, corneal scar, macular scar, macular toxoplasmosis, optic atrophy, optic nerve atrophy, phthisical cornea, prosthetic eye, refractive amblyopia, retinal detachment, and strabismic amblyopia. In most cases, their eye conditions were not recently developed. Thirty of the applicants were either born with their vision impairments or have had them since childhood.

The 10 individuals that sustained their vision conditions as adults have had it for a range of 6 to 41 years.

Although each applicant has one eye which does not meet the vision requirement in 49 CFR 391.41(b)(10), each has at least 20/40 corrected vision in the other eye, and in a doctor's opinion, has sufficient vision to perform all the tasks necessary to operate a CMV. Doctors' opinions are supported by the applicants' possession of valid commercial driver's licenses (CDLs) or non-CDLs to operate CMVs. Before issuing CDLs, States subject drivers to knowledge and skills tests designed to evaluate their qualifications to operate a CMV.

All of these applicants satisfied the testing requirements for their State of residence. By meeting State licensing requirements, the applicants demonstrated their ability to operate a CMV, with their limited vision, to the satisfaction of the State.

While possessing a valid CDL or non-CDL, these 40 drivers have been authorized to drive a CMV in intrastate commerce, even though their vision disqualified them from driving in interstate commerce. They have driven CMVs with their limited vision in careers ranging for 3 to 51 years. In the past three years, 1 driver was involved in a crash, and 1 driver was convicted of a moving violation in a CMV.

The qualifications, experience, and medical condition of each applicant were stated and discussed in detail in the November 12, 2015 notice (80 FR 70060).

IV. Basis for Exemption Determination

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption from the vision requirement in 49 CFR 391.41(b)(10) if the exemption is likely to achieve an equivalent or greater level of safety than would be achieved without the exemption. Without the exemption, applicants will continue to be restricted to intrastate driving. With the exemption, applicants can drive in interstate commerce. Thus, our analysis focuses on whether an equal or greater level of safety is likely to be achieved by permitting each of these drivers to drive in interstate commerce as opposed to restricting him or her to driving in intrastate commerce.

To evaluate the effect of these exemptions on safety, FMCSA considered the medical reports about the applicants' vision as well as their driving records and experience with the vision deficiency.

To qualify for an exemption from the vision requirement, FMCSA requires a person to present verifiable evidence that he/she has driven a commercial vehicle safely with the vision deficiency for the past 3 years. Recent driving performance is especially important in evaluating future safety, according to several research studies designed to correlate past and future driving performance. Results of these studies support the principle that the best predictor of future performance by a driver is his/her past record of crashes and traffic violations. Copies of the studies may be found at Docket Number FMCSA–1998–3637.

FMCSA believes it can properly apply the principle to monocular drivers, because data from the Federal Highway Administration's (FHWA) former waiver study program clearly demonstrate the driving performance of experienced monocular drivers in the program is better than that of all CMV drivers collectively (See 61 FR 13338, 13345, March 26, 1996). The fact that experienced monocular drivers

demonstrated safe driving records in the waiver program supports a conclusion that other monocular drivers, meeting the same qualifying conditions as those required by the waiver program, are also likely to have adapted to their vision deficiency and will continue to operate safely.

The first major research correlating past and future performance was done in England by Greenwood and Yule in 1920. Subsequent studies, building on that model, concluded that crash rates for the same individual exposed to certain risks for two different time periods vary only slightly (See Bates and Neyman, University of California Publications in Statistics, April 1952). Other studies demonstrated theories of predicting crash proneness from crash history coupled with other factors. These factors—such as age, sex, geographic location, mileage driven and conviction history—are used every day by insurance companies and motor vehicle bureaus to predict the probability of an individual experiencing future crashes (See Weber, Donald C., ''Accident Rate Potential: An Application of Multiple Regression Analysis of a Poisson Process,'' Journal of American Statistical Association, June 1971). A 1964 California Driver Record Study prepared by the California Department of Motor Vehicles concluded that the best overall crash predictor for both concurrent and nonconcurrent events is the number of single convictions. This study used 3 consecutive years of data, comparing the experiences of drivers in the first 2 years with their experiences in the final year.

Applying principles from these studies to the past 3-year record of the 40 applicants, 1 driver was involved in a crash, and 1 driver was convicted of a moving violation in a CMV. All the applicants achieved a record of safety while driving with their vision impairment, demonstrating the likelihood that they have adapted their driving skills to accommodate their condition. As the applicants' ample driving histories with their vision deficiencies are good predictors of future performance, FMCSA concludes their ability to drive safely can be projected into the future.

We believe that the applicants' intrastate driving experience and history provide an adequate basis for predicting their ability to drive safely in interstate commerce. Intrastate driving, like interstate operations, involves substantial driving on highways on the interstate system and on other roads built to interstate standards. Moreover, driving in congested urban areas exposes the driver to more pedestrian and vehicular traffic than exists on interstate highways. Faster reaction to traffic and traffic signals is generally required because distances between them are more compact. These conditions tax visual capacity and driver response just as intensely as interstate driving conditions. The veteran drivers in this proceeding have operated CMVs safely under those conditions for at least 3 years, most for much longer. Their experience and driving records lead us to believe that each applicant is capable of operating in interstate commerce as safely as he/she has been performing in intrastate commerce. Consequently, FMCSA finds that exempting these applicants from the vision requirement in 49 CFR 391.41(b)(10) is likely to achieve a level of safety equal to that existing without the exemption. For this reason, the Agency is granting the exemptions for the 2-year period allowed by 49 U.S.C. 31136(e) and 31315 to the 40 applicants listed in the notice of November 12, 2015 (80 FR 70060).

We recognize that the vision of an applicant may change and affect his/her ability to operate a CMV as safely as in the past. As a condition of the exemption, therefore, FMCSA will impose requirements on the 40 individuals consistent with the grandfathering provisions applied to drivers who participated in the Agency's vision waiver program.

Those requirements are found at 49 CFR 391.64(b) and include the following: (1) That each individual be physically examined every year (a) by an ophthalmologist or optometrist who attests that the vision in the better eye continues to meet the requirement in 49 CFR 391.41(b)(10) and (b) by a medical examiner who attests that the individual is otherwise physically qualified under 49 CFR 391.41; (2) that each individual provide a copy of the ophthalmologist's or optometrist's report to the medical examiner at the time of the annual medical examination; and (3) that each individual provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy in his/her driver's qualification file if he/she is self-employed. The driver must have a copy of the certification when driving, for presentation to a duly authorized Federal, State, or local enforcement official.

V. Discussion of Comments

FMCSA received no comments in this proceeding.

IV. Conclusion

Based upon its evaluation of the 40 exemption applications, FMCSA exempts the following drivers from the vision requirement in 49 CFR 391.41(b)(10):

John W. Adams (TN)
David R. Alford (UT)
Randy S. Asher (NE)
Steven W. Barrows (OR)
Steven A. Blinco (MT)
Charles W. Bradley (SC)
Ricky A. Bray (AR)
Ryan M. Coelho (RI)
Travis R. Cook (KS)
Larry P. Davis (MO)
Donald S. Fries (PA)
Kerrie K. Furbish (ME)
Jerry W. Gibson (TX)
Trevor H. Hilton (IL)
Michael D. Judy (KS)
Karen L. Kelly (DE)
Joel H. Kohagen (IA)
Kelly K. Kremer (OR)
Edward R. Lockhart (MS)
Joshua L. Marasek (TX)
Rodolfo Martinez, Jr. (TX)
Arthur J. McClintic (MI)
Dale A. McCoy (ME)
Gregory G. Miller (OH)
Zack E. Minielly (GA)
Tobias G. Olsen (NY)
Elroy Perkins (MS)
Roy C. Rogers (WV)
Michael P. Rydzinski (MI)
Dale L. Schneider (IA)
Keith R. Seabaugh (MO)
Robert G. Seils (NY)
Randall C. Stephens (TN)
Dale L. Stewart (MI)
Warren S. Supulski (NC)
Paul J. Vines (AL)
Hany A. Wagieh (NJ)
Charles W. Williamson (OK)
Gregory A. Woodward (OR)
Alton R. Young III (MS)

In accordance with 49 U.S.C. 31136(e) and 31315, each exemption will be valid for 2 years unless revoked earlier by FMCSA. The exemption will be revoked if: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136 and 31315.

If the exemption is still effective at the end of the 2-year period, the person may apply to FMCSA for a renewal under procedures in effect at that time.

Issued on: March 16, 2016.

Larry W. Minor,

Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2016–0002; Notice 1]

Cooper Tire & Rubber Company, Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: Cooper Tire & Rubber Company (Cooper), has determined that certain Cooper tires do not fully comply with paragraph S5.5.1(b) of Federal Motor Vehicle Safety Standard (FMVSS) No. 139, *New pneumatic radial tires for light vehicles.* Cooper filed a report dated January 8, 2016, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* Cooper then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

DATES: The closing date for comments on the petition is April 25, 2016.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited in the title of this notice and be submitted by any of the following methods:

- *Mail:* Send comments by mail addressed to: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Deliver:* Deliver comments by hand to U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except Federal Holidays.
- *Electronically:* Submit comments electronically by logging onto the Federal Docket Management System (FDMS) Web site at *http://www.regulations.gov/.* Follow the online instructions for submitting comments. Comments may also be faxed to (202) 493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

The petition, supporting materials, and all comments received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All documents submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the Internet at *http://www.regulations.gov* by following the online instructions for accessing the dockets. The docket ID number for this petition is shown at the heading of this notice.

DOT's complete Privacy Act Statement is available for review in the **Federal Register** published on April 11, 2000, (65 FR 19477–78).

SUPPLEMENTARY INFORMATION:

I. Overview: Pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556), Cooper submitted a petition for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

This notice of receipt of Cooper's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

II. Tires Involved: Affected are approximately 338 Cooper Discoverer A/T3 size 265/70R18 Standard Load Tubeless Radial tires that were manufactured between September 27, 2015 and October 3, 2015.

III. Noncompliance: Cooper explains that the DOT serial week and year appears upside down and backwards in the tire identification number (TIN) molded into the outboard sidewalls of the subject tires and those tires therefore do not meet the requirements specified in paragraph S5.5.1 of FMVSS No. 139.

IV. Rule Text: Paragraph S5.5.1 of FMVSS No. 139 requires in pertinent part:

S5.5.1 *Tire Identification Number.*

. . .

(b) *Tires manufactured on or after September 1, 2009.* Each tire must be labeled with the tire identification number required by 49 CFR part 574 on the intended outboard sidewall of the tire. Except for retreaded tires, either the tire identification number or a partial tire identification number, containing all characters in the tire identification number, except for the date code and, at the discretion of the manufacturer, any optional code, must be labeled on the other sidewall of the tire. Except for retreaded tires, if a tire does not have an intended outboard sidewall, the tire must be labeled with the tire identification number required by 49 CFR part 574 on one sidewall and with either the tire identification number or a partial tire identification number, containing all characters in the tire identification number except for the date code and, at the discretion of the manufacturer, any optional code, on the other side wall.

V. Summary of Cooper's Petition: Cooper believes that this noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, Cooper submitted the following information and analysis of the subject noncompliance:

1. Cooper cited paragraph S5.5.1(b) of FMVSS No. 139, which requires tires manufactured on or after September 1, 2009 to be labeled with the TIN required by 49 CFR part 574 on the intended outboard sidewall of the tire.

2. Cooper also noted that 49 CFR 574.5 states that ''[e]ach tire manufacturer shall conspicuously label on one sidewall of each tire it manufactures . . . a tire identification number containing the information set forth in paragraphs (a) through (d) of this section.'' The company further noted that 49 CFR 574.5(d) specifies that ''[t]he fourth grouping, consisting of four numerical symbols, must identify the week and year of manufacture,'' with the first two symbols identifying the week and the last two identifying the year.

3. Cooper stated that the subject tires, on the outboard side only, were molded with an upside down and backwards DOT serial week and year. The serial number stamping should read: ''DOT UPH4 1A6 3915.'' The outboard side, which includes the date code, was molded with the date code information oriented incorrectly upside down and backwards, which resulted in the characters being out of proper sequence.

4. Cooper explained that the existence of the stamping error was determined by visual examination of a subject tire on October 21, 2015 by warehouse personnel in Grand Prairie, TX. Upon further investigation, it was determined that only tires cured in one press

location (E10L) during one production week (3915) were affected. Tires with the same SKU code were also curing in another press (Z11L), but these tires were stamped correctly. Cooper stated that sorting of its internal inventories revealed that for curing press E10L, during DOT serial week 3915, there was a total net cure of 518 tires, of which 180 tires have been accounted for in its warehouse. There were 338 tires distributed. Cooper made the final determination that a noncompliance exists as to those 338 tires on January 6, 2015.

5. Cooper states that the 338 subject tires do meet and/or exceed all performance requirements and all other labeling and marking requirements of FMVSS No. 139.

Furthermore, Cooper is not aware of any crashes, injuries, customer complaints, or field reports associated with the subject tires.

Cooper has informed NHTSA that the subject tires located in its inventory count reconciliation have been returned to the company's Findlay, OH plant, where they will be corrected prior to being released for sale.

In summation, Cooper believes that the described noncompliance is inconsequential to motor vehicle safety, and that its petition, to exempt Cooper from providing recall notification of the noncompliance, as required by 49 U.S.C. 30118, and remedying the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject tires that Cooper no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve equipment distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant tires under their control after Cooper notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120: delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,

Director, Office of Vehicle Safety Compliance.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2016–0003; Notice 1]

Continental Tire the Americas, LLC, Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: Continental Tire the Americas, LLC (CTA), has determined that certain CTA tires do not fully comply with paragraph S5.5(f) of Federal Motor Vehicle Safety Standard (FMVSS) No. 139 *New Pneumatic Radial Tires for Light Vehicles.* CTA filed a report dated December 11, 2015, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports.* CTA then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

DATES: The closing date for comments on the petition is April 25, 2016.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments regarding this petition. Comments must refer to the docket and notice number cited in the title of this notice and be submitted by any of the following methods:

- *Mail:* Send comments by mail addressed to U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Deliver:* Deliver comments by hand to U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except Federal Holidays.
- *Electronically:* Submit comments electronically by logging onto the Federal Docket Management System (FDMS) Web site at *http://www.regulations.gov/.* Follow the online instructions for submitting comments. Comments may also be faxed to (202) 493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

The petition, supporting materials, and all comments received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All documents submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the Internet at *http://www.regulations.gov* by following the online instructions for accessing the dockets. The docket ID number for this petition is shown in the heading of this notice.

DOT's complete Privacy Act Statement is available for review in the **Federal Register** published on April 11, 2000, (65 FR 19477–78).

SUPPLEMENTARY INFORMATION:

I. Overview: Pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing regulations at 49 CFR part 556), CTA submitted a petition for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

This notice of receipt of CTA's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

II. Tires Involved: Affected are approximately 1,800 General Tire brand Grabber size LT265/75R16 112/109 Q LRC tires that were manufactured between December 10, 2010 and September 9, 2013.

III. Noncompliance: CTA explains that due to a mold error, the number of tread plies indicated on the sidewall of the subject tires does not match the actual number of plies in the tire construction. The tires are marked ''PLIES: TREAD: 2 POLYESTER + 2 STEEL + 2 POLYAMIDE'' whereas the correct marking should be: ''PLIES: TREAD: 2 POLYESTER + 2 STEEL + 1 POLYAMIDE.'' As a consequence, these tires do not meet requirements specified in paragraph S5.5(f) of FMVSS No. 139.

IV. Rule Text: Paragraph S5.5(f) of FMVSS No. 139 states, in pertinent part:

S5.5 *Tire Markings.* Except as specified in paragraph (a) through (i) of S5.5, each tire must be marked on each sidewall with the information specified in S5.5(a) through (d) and on one sidewall with the information specified in S5.5(e) through (i) according to the phase-in schedule specified in S7 of this standard. . .

(f) The actual number of plies in the sidewall, and the actual number of plies in the tread area, if different.

V. Summary of CTA's Petition: CTA described the subject noncompliance and stated its belief that the noncompliance is inconsequential to motor vehicle safety.

In support of its petition, CTA submitted the following information pertaining to the subject noncompliance:

(a) CTA stated that the tires covered by this petition are labeled with incorrect information regarding the number of tread plies. The company noted that while the number of polyester and steel plies indicated on the sidewall is accurate, the number of polyamide plies indicated is incorrect. The company contended, however, that this mislabeling has no impact on the operational performance of these tires or on the safety of vehicles on which these tires are mounted. The company asserted that the tires meet or exceed all of the performance requirements of FMVSS No. 139.

(b) CTA noted that NHTSA has concluded in response to numerous other petitions that this type of noncompliance is inconsequential to motor vehicle safety. CTA referenced notices that NHTSA has published in the **Federal Register** granting the following inconsequentiality petitions:

- Petition of Hankook Tire America Corp., 79 FR 30688 (May 28, 2014);
- Petition of Bridgestone Americas Tire Operations, LLC, 78 FR 47049 (August 2, 2013);
- Petition of Cooper Tire & Rubber Company, 78 FR 47050 (August 2, 2013).

(C) CTA states that all tires covered by its petition meet or exceed the performance requirements of FMVSS No. 139, as well as the other labeling requirements of the standard.

(d) CTA also states that it is not aware of any crashes, injuries, customer complaints, or field reports associated with the subject noncompliance.

CTA additionally informed NHTSA that it has quarantined all existing inventory of the tires that contain the noncompliant tire sidewall labeling and has corrected the molds at the manufacturing plant so that no additional tires will be manufactured with the noncompliance.

In summation, CTA believes that the described noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and to remedy the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject tires that CTA no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve equipment distributors and dealers from the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant tires under their control after CTA notified them that the subject noncompliance exists.

Authority: 49 U.S.C. 30118, 30120: Delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,

Director, Office of Vehicle Safety Compliance.

National Highway Traffic Safety Administration

[Docket No. NHTSA–2016–0039]

NHTSA Enforcement Guidance Bulletin 2016–01; Guidance on Submission and Treatment of Manufacturer Communications to Dealers, Owners, or Purchasers About a Defect or Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: Notice.

SUMMARY: The National Highway Traffic Safety Administration (NHTSA) is issuing this notice to make manufacturers aware of the statutory requirement to index their communications to dealers, owners, or purchasers about a defect or noncompliance, and to provide recommendations for complying with the index requirement. Additionally, a change in the law requires NHTSA to publicly post all such communications on its Web site and it is therefore providing notice of its intention to do so. NHTSA will also publicly post on its Web site the manufacturers' indexes to their communications as they are received.

FOR FURTHER INFORMATION CONTACT: For legal issues: Kerry Kolodziej, Office of the Chief Counsel, NCC–100, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590 (telephone: 202–366–5263).

For submission of documents pursuant to 49 CFR 579.5: *tsb@dot.gov.*

For submission of documents pursuant to 49 CFR 573.6(c)(10): Recalls Portal Help Desk, 1–888–719–9220; *recalls.helpdesk@dot.gov.*

SUPPLEMENTARY INFORMATION: The National Highway Traffic Safety Administration (NHTSA or Agency) is issuing this notice of its intent to enforce and implement the requirements of 49 U.S.C. 30166(f), as amended by the Moving Ahead for Progress in the 21st Century Act (MAP–21).

I. Legal and Policy Background

A. Manufacturers Are Required To Submit Copies to NHTSA of Communications to Their Dealers, Owners, or Purchasers About a Defect or Noncompliance

The National Traffic and Motor Vehicle Safety Act (Safety Act), as amended, requires motor vehicle and

motor vehicle equipment manufacturers to provide NHTSA with copies of communications they send to their dealers, owners, or purchasers. Specifically, the Safety Act requires manufacturers to submit ''a true or representative copy of each communication to the manufacturer's dealers or to owners or purchasers of a motor vehicle or replacement equipment produced by the manufacturer about a defect or noncompliance with a motor vehicle safety standard prescribed under this chapter in a vehicle or equipment that is sold or serviced.'' 49 U.S.C. 30166(f). This is a long-standing requirement. *See* Motor Vehicle and Schoolbus Safety Amendments of 1974, Public Law 93–492, 158(a)(1), 88 Stat. 1470, 1475 (1974).

1. Scope of Submission Requirement

The requirement for manufacturers to submit copies of their communications to the Agency is broad and requires not only submission of manufacturers' communications to dealers,[1] owners, or purchasers about vehicle and equipment recalls, but all communications ''about a defect or noncompliance.'' 49 U.S.C. 30166(f)(1). With regard to defects, the statutory submission requirement is not limited to communications about safety-related defects. ''Defect'' is a statutorily defined term meaning ''any defect in performance, construction, a component, or material of a motor vehicle or motor vehicle equipment.'' 49 U.S.C. 30102(a)(2). The plain language of the provision requiring submission of copies of manufacturer communications to the Agency does not condition use of the word ''defect'' to ''defect related to motor vehicle safety,'' as is the case with other provisions of the Safety Act. *Compare* 49 U.S.C. 30166(f), *with* 49 U.S.C. 30112(a)(3), 30118(a).

Moreover, the Agency has long interpreted the requirement that manufacturers submit copies of their communications to dealers, owners, or purchasers as capturing all defect-related communications. *See* 49 CFR 579.5. In 1975, the Agency explained that the statute ''specifically authorizes the agency to require the submission'' of communications about a defect, whether or not safety related. Proposed Amendment, 49 FR 43227, 43228 (Sept. 19, 1975). The Agency explained that this was important because ''[i]t is the responsibility of the NHTSA, not the manufacturers, to make a final determination as to whether or not a given defect is safety-related.'' *Id.* In 1978, the Agency reiterated that the law ''specifically grants the agency [ ] authority'' to collect all communications about a defect and rejected the call from some commenters to limit the submissions to only manufacturer communications about ''safety-related defects.'' Final Rule, 43 FR 60165, 60168–69 (Dec. 28, 1978).

2. Implementing Regulations

NHTSA implements the statutory requirement that manufacturers submit representative copies of their communications to dealers, owners, or purchasers through two regulations: One specifically addressing recall communications, 49 CFR 573.6(c)(10), and the other addressing manufacturer communications more broadly, 49 CFR 579.5.

Many communications about a defect or noncompliance are communications manufacturers make to their dealers, owners, or purchasers about recalls. Some examples of these communications are letters to dealers and vehicle owners informing them about a recall and service bulletins (also known as technical service bulletins or TSBs) that provide repair instructions for trained technicians performing the recall remedy. NHTSA requires manufacturers to submit a representative copy to NHTSA of recall communications ''not later than 5 days after they are initially sent to manufacturers, distributors, dealers, or purchasers.'' 49 CFR 573.6(c)(10). This applies to ''all notices, bulletins, and other communications that relate directly to the defect or noncompliance [that is the subject of a recall] and are sent to more than one manufacturer, distributor, dealer or purchaser.'' *Id.*

The second regulation that implements the requirement for manufacturers to submit communications about a defect or noncompliance to the Agency is 49 CFR 579.5. That requires manufacturers to submit ''a copy of all notices, bulletins, and other communications (including those transmitted by computer, telefax, or other electronic means and including warranty and policy extension communiqués and product improvement bulletins) other than those required to be submitted pursuant to § 573.6(c)(10) of this chapter, sent to more than one manufacturer, distributor, dealer, lessor, lessee, owner, or purchaser, in the United States, regarding any defect in its vehicles or items of equipment (including any failure or malfunction beyond normal deterioration in use, or any failure of performance, or any flaw or unintended deviation from design specifications), whether or not such defect is safety-related.'' 49 CFR 579.5(a). It also requires that ''[e]ach manufacturer shall furnish to NHTSA a copy of each communication relating to a customer satisfaction campaign, consumer advisory, recall, or other safety activity involving the repair or replacement of motor vehicles or equipment, that the manufacturer issued to, or made available to, more than one dealer, distributor, lessor, lessee, other manufacturer, owner, or purchaser, in the United States.'' 49 CFR 579.5(b). Manufacturer communications required by 49 CFR 579.5 are due to the Agency ''not later than five working days after the end of the month'' in which they were issued. 49 CFR 579.5(d).

B. NHTSA's Current Treatment of Manufacturer Communications Submitted to the Agency

It is important that manufacturers fully comply with the requirement to submit copies of communications to their dealers, owners, or purchasers about a defect or noncompliance so that the Agency can effectively carry out its mission. Among other things, the Agency reviews these communications to evaluate whether a safety issue is involved, to engage in proactive communications with manufacturers where there may be a misunderstanding or misidentification of the risk of a particular issue that a manufacturer has decided to control and remedy via a field action that is less than a recall, and to ensure that recalls are carried out effectively.

NHTSA posts a great deal of information on its Web site, *www.safercar.gov*, including copies of many manufacturer communications. NHTSA's Web site has a search tool that allows a user to search for available documents and information by make, model, and model year of a vehicle, or by brand name and other identifying information for motor vehicle equipment.[2] When a user performs a search, NHTSA's Web site currently displays available documents and information in four categories: (1) Recalls, (2) Defect Investigations, (3)

[1] The Safety Act defines ''dealer'' as ''a person selling and distributing new motor vehicles or motor vehicle equipment primarily to purchasers that in good faith purchase the vehicles or equipment other the for resale.'' 49 U.S.C. 30102(a)(1). Therefore the requirement to submit communications to the Agency captures communications including both those between a motor vehicle manufacturer and its dealers and equipment suppliers and their motor vehicle manufacturer customers. *See* 49 CFR 579.5.

[2] The search tool is currently available at *http://www-odi.nhtsa.dot.gov/owners/SearchSafetyIssues.*

Complaints, and (4) Service Bulletins.[3] NHTSA plans to rename the ''Service Bulletins'' category as ''Manufacturer Communications'' to more fully reflect the available content. Each of these four categories except ''Complaints,'' which are complaints submitted to the Agency primarily by vehicle owners, may contain copies of manufacturer communications submitted to the Agency.

Where manufacturer communications involve a recall (*i.e.,* concern a safety-related defect or noncompliance), the Agency makes them available along with other recall-related documents under the ''Recalls'' section of its Web site. Other manufacturer communications that relate to an Agency defect investigation (*i.e.,* concern a potential safety-related defect) are also available under the ''Defect Investigations'' section of the Web site. Additionally, NHTSA posts manufacturer communications about customer satisfaction campaigns (*i.e.,* concerning defects that have not been determined to pose an unreasonable risk to motor vehicle safety) on the currently named ''Service Bulletins'' portion of its Web site. NHTSA also posts information about service bulletins (*i.e.,* repair instructions for trained technicians) for issues that have not been determined to be a safety-related defect or noncompliance on its Web site under the currently named ''Service Bulletin'' section of its Web site. NHTSA summarizes service bulletins and makes the summary available, along with an option to request a copy of the documents.[4]

II. New MAP–21 Requirements Regarding Manufacturer Communications Submitted to the Agency

MAP–21 amended the Safety Act to require manufacturers to submit additional information to the Agency along with copies of their communications and to require the Agency to make that additional information and the communications themselves available on the Agency's Web site.

MAP–21 required manufacturers to accompany their submissions of communications to the Agency with an index to each communication. MAP–21, Public Law 112–141, § 31303(a)(2), 126 Stat. 405, 764 (2012) (codified at 49 U.S.C. 30166(f)(2)). Specifically, communications manufacturers are required to submit to NHTSA under 49 U.S.C. 30166(f) ''shall be accompanied by an index to each communication, that—(A) identifies the make, model, and model year of the affected vehicles; [and] (B) includes a concise summary of the subject matter of the communication.'' *Id.*

While NHTSA already proactively made a substantial number of manufacturer communications available to the public on its Web site, MAP–21 also changed the law to make it mandatory for the Agency to post all manufacturer communications to dealers, owners, or purchasers about a defect or noncompliance on its Web site. *See* 49 U.S.C. 30166(f)(1). Additionally, NHTSA must post the manufacturers' indexes to their communications on its Web site in a searchable format. 49 U.S.C. 30166(f)(2).

To implement these changes in the law, NHTSA is providing guidance to manufacturers on the index requirement. This guidance is warranted because manufacturers have not been submitting compliant indexes to the Agency since the MAP–21 changes became effective on October 1, 2012. *See* MAP–21, Public Law 112–141, § 3, 126 Stat. 405, 413 (2012). In addition to putting manufacturers on notice of this index requirement and the Agency's intention to enforce it, providing guidance will also help to ensure consistency in the format and content of manufacturer indexes, thereby enabling the Agency to readily make the indexes publicly available in a searchable format on its Web site.

NHTSA is also providing notice of its intention to publicly post all manufacturer communications submitted to the Agency pursuant to 49 U.S.C. 30166(f) on its Web site. MAP–21 requires NHTSA to post all manufacturer communications to dealers, owners, or purchasers about a defect or noncompliance. Prior to MAP–21, the Agency did not post certain manufacturer communications (specifically, certain service bulletins) on its Web site, which some manufacturers claimed to be copyrighted documents. Congress in MAP–21's explicit requirement that the Agency post ''each communication to the manufacturer's dealers or to owners'' about a defect or noncompliance, has now made clear that copyright law is not a restriction on NHTSA action.

III. Guidance Regarding Index Requirement

The law now requires manufacturers to submit to NHTSA copies of their communications to dealers, owners, or purchasers about a defect or noncompliance and requires that such communications ''shall be accompanied by an index to each communication.'' 49 U.S.C. 30166(f). The index must identify the make, model, and model year of the affected vehicles and include a concise summary of the subject matter of the communication. 49 U.S.C. 30166(f)(2). This requirement has been in effect since October 1, 2012. *See* MAP–21, Public Law 112–141, 3, 126 Stat. 405, 413 (2012).

Most manufacturers comply with the long-standing requirement to submit copies to the Agency of their communications to dealers, owners, or purchasers about a defect or noncompliance.[5] However, manufacturers have not complied with the change in law requiring them to accompany their communications to the Agency with indexes to those communications.

We are providing this guidance to make manufacturers aware of their legal obligation to index their communications. The Agency expects all manufacturers to expeditiously come into full compliance with the law and will take additional action to enforce the index requirement as necessary. The index requirement is subject to daily civil penalties. *See* 49 U.S.C. 30165(a)(3).

We are also providing this guidance to communicate to manufacturers the content requirements for the index. We are providing recommendations for preparing and submitting the index to help ensure consistency across manufacturers and to enable the Agency to readily make the indexes publicly available in a searchable format on its Web site.

A. Which manufacturers must submit indexed communications to the Agency?

Every manufacturer of motor vehicles or motor vehicle equipment is responsible both for submitting copies of communications to dealers, owners, or purchasers and to provide an

[3] NHTSA presently provides summary information, but does not post copies of service bulletins under the currently named ''Service Bulletin'' portion of its Web site.

[4] NHTSA's Web site does not currently include summary information on all service bulletins generated by a manufacturer. Service bulletins for safety recalls in general are not included, and also service bulletins which do not pertain to a safety issue may not be included in the summaries provided.

[5] Where manufacturers have failed to comply with this requirement, the Agency has taken enforcement action. *See* August 28, 2015 Consent Order, In re: AQ15–001, Triumph Motorcycles (America), Ltd.; July 8, 2015 Consent Order, In re: AQ14–001, Forest River, Inc.; July 8, 2015 Consent Order, In re: TQ14–003, Spartan Motors, Inc. The Agency has also has and continues to take steps to educate the industry about the communication submission requirement so that the Agency receives this critical information.

accompanying index of those communications to the Agency. 49 U.S.C. 30166(f). The Safety Act defines ''manufacturer'' broadly to mean ''a person—(A) manufacturing or assembling motor vehicles or motor vehicle equipment; or (B) importing motor vehicles or motor vehicle equipment for resale.'' 49 U.S.C. 30102(a)(5).

B. What types of communications must a manufacturer index going forward?

As discussed in this notice, NHTSA implemented the requirement to submit copies of communications to dealers, owners, or purchasers about a defect or noncompliance through regulations at 49 CFR 573.6(c)(10) and 49 CFR 579.5. Therefore, a manufacturer must accompany its future submissions of all communications pursuant to these provisions with an index that meets the statutory requirements.

C. How does a manufacturer come into compliance with the index requirement for prior submissions?

The index requirement became effective as of October 1, 2012. *See* MAP–21, Public Law 112–141, 3, 126 Stat. 405, 413 (2012). No manufacturer to date has submitted compliant indexes. Some manufacturers have submitted incomplete indexes to their communications that do not satisfy the statutory requirements. To come into full compliance with the law, a manufacturer must submit complete indexes to the communications it previously submitted to the Agency pursuant to 49 CFR 579.5 between October 1, 2012 and the present, along with copies of all communications listed in the index.

A compliant submission requires both a complete index and copies of the indexed communications. *See* 49 U.S.C. 30166(f). A manufacturer may not supplement its earlier submission of communications pursuant to 49 CFR 579.5 by providing an index only. While we understand that this may necessitate, in many cases, manufacturers to resubmit a large quantity of communications to the Agency, this is what the law requires. The Agency must receive a full and complete submission of communications accompanied by an index so that it may fulfill its statutory obligation to make the communications and index available on its Web site.[6]

While a manufacturer must accompany future submissions of communications pursuant to 49 CFR 573.6(c)(10) (*i.e.,* recall communications) with an index, we are exercising our enforcement discretion to deem prior submissions of these communications compliant with this requirement. These are recall communications, such as letters to owners or dealers informing them of the recall and service bulletins regarding the recall repair. Manufacturers need not resubmit copies of recall communications or an accompanying index.[7]

The Agency has long had a practice of posting recall communications on its Web site along with a great deal of information about the recall. As safety critical information, the Agency wants to avoid any disruption that could occur by making changes to the recall portion of its Web site. Moreover, changes are unnecessary. Recall communications are already indexed and available on the Agency's Web site. Recall communications are readily accessible through a searchable interface that is familiar to public users of the Agency's Web site.

D. When are indexed communications due to the Agency?

The law requires that communications submitted to the Agency ''shall be accompanied by an index.'' 49 U.S.C. 30166(f)(2). Therefore, manufacturers should submit an index at the same time as they submit communications to the Agency. As discussed above, 49 CFR 573.6(c)(10) requires submission of recall communications ''not later than 5 days after they are initially sent to manufacturers, distributors, dealers, or purchasers.'' Manufacturer communications required by 49 CFR 579.5 are due to the Agency ''not later than five working days after the end of the month'' in which they were issued. 49 CFR 579.5(d).

1. Current and Prospective Submissions of Communications

The Agency expects manufacturers to make a good faith effort to expeditiously comply with the requirement to provide an index to accompany the communications they submit to the Agency. However, the Agency recognizes that manufacturers will need to educate staff and may need to change internal policies and procedures to begin complying with this requirement. While the Agency is not excusing noncompliance with the law, the Agency recognizes that the entire industry has been out of compliance with the index requirement and intends to exercise its enforcement discretion to allow manufacturers a reasonable period of time from the date of this notice to come into compliance with the index requirement on a going forward basis. However, manufacturers should not delay providing communications to the Agency.

2. Retroactive Resubmissions of Indexed Communications

The Agency will not excuse manufacturers from providing indexes for communications submitted to the Agency pursuant to 49 CFR 579.5 on or after October 1, 2012. For any communications previously submitted to the Agency pursuant to 49 CFR 579.5 that were not accompanied by a fully compliant index at the time of submission, manufacturers must submit indexed communications to the Agency. As discussed above, this requires an index along with resubmission of all communications listed in the index. This is necessary to allow the Agency to fulfill its statutory obligations.

The Agency intends to exercise enforcement discretion to allow manufacturers a reasonable period of time to resubmit indexed communications required by 49 CFR 579.5. The Agency recognizes that, in many cases, the volume of communications submitted to the Agency since October 1, 2012 is significant. The Agency will take the volume of communications into account in considering what constitutes a reasonable period of time for a given manufacturer. In general, we expect that a manufacturer will resubmit indexed communications on a rolling basis until it achieves full compliance.

In sum, the Agency is not specifying a deadline for compliance with the index requirement before it expects to take enforcement action. All manufacturers must begin immediately making a reasonable good faith effort to take steps to comply expeditiously for both retroactive and future submissions. The Agency will take any such actions into account in evaluating whether a given manufacturer came into compliance with the law within a reasonable period of time.

E. What are the penalties for not complying with the index requirement?

Indexes are required by 49 U.S.C. 30166(f), therefore, failure to provide indexes, or failure to provide timely or complete indexes, is subject to civil

[6] An index must enable a user to locate the indexed communications. NHTSA will provide each communication with a unique identifier, linked to the manufacturer-provided index. NHTSA will provide instructions on its Web site for using the unique identifier to search for and retrieve the communication.

[7] This is not intended to limit the Agency's authority to make future requests for documents or information. *See* 49 CFR 30166(b), (e), (g).

penalties under current law of up to $21,000 per violation per day and up to a maximum penalty of $105 million for a related series of daily violations. 49 U.S.C. 30165(a)(3); *see* Civil Penalty Factors, 81 FR 10520 (Mar. 1, 2016) (issuing final rule).

F. What information must the index contain?

At a minimum, an index must identify the make, model, and model year of the affected vehicles and must include a concise summary of the subject matter of the communication. These are statutory requirements. 49 U.S.C. 30166(f)(2). This is mandatory information when applicable.

However, the Agency recognizes that for communications submitted by motor vehicle equipment manufacturers, in many cases, there are no specific affected vehicles. This is also true for a limited number of generalized communications by motor vehicle manufacturers. In such cases, the manufacturer should include other identifying information for the affected motor vehicles or motor vehicle equipment in lieu of make, model, and model year information for specific affected vehicles.[8]

To help ensure consistency across manufacturers, the Agency is also providing recommendations on the specific format and content of the indexes. In addition to the recommendations provided in this notice, the Agency may provide more detailed recommendations on a forthcoming Web page at *http://www-odi.nhtsa.dot.gov/mc/*. The Agency will make available a template index for download and will provide examples of completed index entries on its Web site. The Agency encourages manufacturers to continue to visit this Web page as the Agency may refine its recommendations over time as it evaluates manufacturers' index submissions. While we are providing guidance and recommendations at this time, the Agency will evaluate the content and consistency of index submissions across manufacturers to determine whether a future rulemaking is warranted.

1. Recommended Format for Index

NHTSA strongly recommends that manufacturers submit their indexes as word searchable electronic files. While the Agency is not requiring use of any particular software, to ensure compatibility, the Agency requests that manufacturers submit indexes as searchable Microsoft Excel files.

The Agency recommends that a manufacturer list each communication on a separate row in its index and include separate columns for each item of discrete information included. For example, the index should include separate columns for make, of the affected vehicles, model of the affected vehicles, and model year of the affected vehicles. We recommend including a separate row for each make, model, or model year of vehicle affected by a single communication. In other words, a single communication may populate multiple rows on an index. We also recommend including a column for manufacturer communication identifier number, if one is used.

The Agency's Web site and template index available for download will provide more specific recommendations and information on the Agency's preferred format for manufacturer indexes. *See http://www-odi.nhtsa.dot.gov/mc/* (forthcoming).

2. Recommendations for Preparing the Concise Summary

At a minimum, NHTSA recommends that a concise summary of the subject matter of a manufacturer's communication should identify the defect or noncompliance, describe the effect of the defect or noncompliance, and describe the purpose or type of the communication. In many cases, simply repeating the subject line or title of a communication will be insufficient. Likewise, a generic description that does not actually summarize the communication or describes multiple communications with minimal changes, such as ''service bulletin number 123'' does not meet the statutory requirements. The Agency will post examples of concise summaries on its Web site.

G. Recommended Method of Submitting the Indexed Communications to the Agency

NHTSA requests that manufacturers submit their indexed communications to the Agency electronically. Electronic submission will best enable the Agency to make the manufacturer communications and searchable index available to the public on the Internet as the law requires.

As discussed above, manufacturers must index recall communications that they submit to the Agency pursuant to 49 CFR 573.6(c)(10) and communications that they submit pursuant to 49 CFR 579.5. Manufacturers are required to submit recall communications through NHTSA's recalls portal and should also submit their recall communication indexes through the portal. *See* 49 CFR 573.9. For communications required by 49 CFR 579.5, NHTSA strongly recommends that manufacturers submit their indexed communications electronically to *tsb@dot.gov*. *See* 49 CFR 579.6(a).

We note that some manufacturers have had a past practice of submitting multiple communications under 49 CFR 579.5 in a consolidated format, such as a single large .pdf file. We strongly recommend that manufacturers discontinue this practice, in order to ensure that each communication listed in the manufacturer's index is a readily identifiable separate document. The Agency would prefer to receive each communication as a separate .pdf file.

IV. Notice of Intention to Publicly Post All Manufacturer Communications About a Defect or Noncompliance on NHTSA's Web Site

NHTSA has reevaluated the information that the law permits it to make publicly available on its Web site in light of the changes made by MAP–21. As a result, NHTSA is providing this notice of its intent to publicly post all manufacturer communications submitted to it pursuant to 49 U.S.C. 30166(f).

The law now affirmatively requires NHTSA to ''make available on a publicly accessible Internet Web site'' copies of communications to manufacturers' dealers, owners, or purchasers about a defect or noncompliance that manufacturers submit to the Agency.

Prior to enactment of MAP–21, the Agency did not publicly post copies of all service bulletins that it received.[9] Some manufacturers copyright their service bulletins. Service bulletins are a manufacturer's repair instructions, and repair shops or other interested individuals may purchase them from a commercial source.

Pursuant to the fair use limitation on copyright, to date NHTSA has posted on its Web site copies of service bulletins for recall repairs and service bulletins related to its defect investigations. *See* 17 U.S.C. 107; *see also* 49 U.S.C. 30167(b). NHTSA also has made a paper copy of other service bulletins available

[8] This does not excuse a motor vehicle manufacturer from providing make, model, and model year information for affected vehicles when that information is reasonably available. For example, it is not sufficient for a motor vehicle manufacturer to include vehicle platform information in its index instead of make and model.

[9] Although the law also limits the Agency's ability to disclose confidential information, 49 U.S.C. 30167, manufacturers do not treat these documents as confidential and, in the case of service bulletins, make them available to the public through commercial providers. *See* 49 CFR part 512.

to the public pursuant to the library provision of copyright law. *See* 17 U.S.C. 108.

Congress necessarily made the decision in enacting MAP–21, that copyright law does not restrict NHTSA from publicly posting copies of all manufacturer communications received by the Agency pursuant to 49 U.S.C. 30166(f) on its Web site. Indeed, 49 U.S.C. 30166(f) expressly requires the Agency to do so.

MAP–21 trumps the limited waiver of sovereign immunity for copyright infringement claims. *See* 28 U.S.C. 1498(b). Congress could not have intended to allow manufacturers to assert copyright infringement against the federal government based on the Agency's publication of service bulletins and other manufacturer communications on its Web site in light of the express statutory requirement that the Agency do so. *See Food & Drug Admin.* v. *Brown & Williamson Tobacco Corp.,* 529 U.S. 120, 143 (2000) (''The classic judicial task of reconciling many laws enacted over time, and getting them to 'make sense' in combination, necessarily assumes that the implications of a statute may be altered by the implications of a later statute. This is particularly so where the scope of the earlier statute is broad but the subsequent statutes more specifically address the topic at hand . . . . [A] specific policy embodied in a later federal statute should control our construction of the earlier statute, even though it has not been expressly amended.'') (internal quotation marks, brackets, and citations omitted).

Because the law directs the Agency to make manufacturer communications publicly available on its Web site, the Agency is acting to effectuate the law. The Agency will post on its Web site those manufacturer communications submitted to the Agency on or after the October 1, 2012 effective date of MAP–21 that are not already available on the Agency's Web site. Going forward, the Agency intends to post to its public Web site all manufacturer communications submitted pursuant to 49 U.S.C. 30166(f), including documents submitted pursuant to 49 CFR 573.6(c)(10) or 579.5. The Agency will also post manufacturer indexes for communications submitted to the Agency on or after October 1, 2012 on a rolling basis as compliant indexes are received. The Agency intends to make manufacturer indexes available in a searchable format.

Applicability/Legal Statement: This Enforcement Guidance Bulletin sets forth NHTSA's current interpretation and thinking on this topic and guiding principles and best practices to be utilized in complying with the legal requirements of 49 U.S.C. 30166(f). This Bulletin is not a final agency action and is intended as guidance only. This Bulletin is not intended, nor can it be relied upon, to create any rights enforceable by any party against NHTSA, the Department of Transportation, or the United States. Moreover, these recommended practices to not establish any defense to any violations of the statutes and regulations that NHTSA administers. This Bulletin may be revised without notice to reflect changes in NHTSA's evaluation and analysis, or to clarify and update text.

Authority: 49 U.S.C. 30101, *et seq.;* 49 U.S.C. 30165(a)(3), 30166(f); delegations of authority at 49 CFR 1.95(a), 501.2(a)(1), 501.5.

Issued on: March 21, 2016.

Paul A. Hemmersbaugh,

Chief Counsel.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

Hazardous Materials: Notice of Applications for Special Permits

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of applications for special permits.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations (49 CFR part 107, subpart B), notice is hereby given that the Office of Hazardous Materials Safety has received the application described herein. Each mode of transportation for which a particular special permit is requested is indicated by a number in the ''Nature of Application'' portion of the table below as follows: 1—Motor vehicle, 2—Rail freight, 3—Cargo vessel, 4—Cargo aircraft only, 5—Passenger-carrying aircraft.

DATES: Comments must be received on or before April 25, 2016.

Address comments to: Record Center, Pipeline and Hazardous Materials Safety Administration U.S. Department of Transportation Washington, DC 20590.

Comments should refer to the application number and be submitted in triplicate. If confirmation of receipt of comments is desired, include a self-addressed stamped postcard showing the special permit number.

FOR FURTHER INFORMATION CONTACT: Ryan Paquet, Director, Office of Hazardous Materials Approvals and Permits Division, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington, DC 20590–0001, (202) 366–4535.

SUPPLEMENTARY INFORMATION: Copies of the applications are available for inspection in the Records Center, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington, DC or at *http://regulations.gov.*

This notice of receipt of applications for special permit is published in accordance with Part 107 of the Federal hazardous materials transportation law (49 U.S.C. 5117(b); 49 CFR 1.53(b)).

Issued in Washington, DC, on March 10, 2016.

Donald Burger,

Chief, Office of the Special Permits and Approvals.

BILLING CODE 4909–60–M

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities: Information Collection Renewal; Comment Request; Minimum Security Devices and Procedures, Reports of Suspicious Activities, and Bank Secrecy Act Compliance Program

AGENCY: Office of the Comptroller of the Currency (OCC), Department of the Treasury.

ACTION: Notice and request for comments.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on information collections, as required by the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

The OCC is soliciting comment concerning renewal of its information collection titled, ''Minimum Security Devices and Procedures, Reports of Suspicious Activities, and Bank Secrecy Act Compliance Program.''

DATES: Written comments should be received on or before May 24, 2016.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0180, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *prainfo@occ.treas.gov*. You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, OCC Clearance Officer, (202) 649–5490 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Office of the Comptroller of the Currency, Washington, DC 20219.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) to include agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the OCC is publishing notice of the proposed collection of information set forth in this document.

Title: Minimum Security Devices and Procedures, Reports of Suspicious Activities, and Bank Secrecy Act Compliance Program.

OMB Control No.: 1557–0180.

Form Numbers: 8010–1/8010–9.

Abstract:

Minimum Security Devices and Procedures

Under §§ 21.2 and 21.4; and §§ 568.2 and 568.4, national banks and savings associations are required to designate a security officer who must develop and administer a written security program. The security officer shall report at least annually to the institution's board of directors on the effectiveness of the security program. The substance of the report shall be reflected in the board's minutes. These requirements ensure that the security officer is responsible for the security program and that institution management and the board of directors are aware of the content and effectiveness of the program. These requirements ensure prudent institution management and institution safety and soundness.

Suspicious Activity Report (SAR)

The Financial Crimes Enforcement Network (FinCEN) and Federal financial institution supervisory agencies [1] (bank regulators) adopted the SAR in 1996 to simplify the process through which depository institutions inform their regulators and law enforcement about suspected criminal activity. The SAR was updated in 1999, 2002, 2006, 2009 and 2013.

In 1992, the Department of the Treasury was granted broad authority to require suspicious transaction reporting under the Bank Secrecy Act (BSA). *See* 31 U.S.C. 5318(g). FinCEN, which has been delegated authority to administer the BSA, joined with the bank regulators in 1996 in requiring, on a consolidated form (the SAR form), reports of suspicious transactions. *See* 31 CFR 1020.320(a) (formerly 31 CFR 103.18(a)). The filing of SARs is necessary to prevent and detect crimes involving depository institution funds, institution insiders, criminal transactions, and money laundering. These requirements are necessary to ensure institution safety and soundness.

Banks and savings associations are required to maintain a copy of any SAR filed and the original or business record equivalent of any supporting documentation for a period of five years. The documents are necessary for criminal investigations and prosecutions.

[1] The Federal financial institution supervisory agencies are the Office of the Comptroller of the Currency (OCC), Board of Governors of the Federal Reserve System (Board), Federal Deposit Insurance Corporation (FDIC), and National Credit Union Administration (NCUA).

Procedures for Monitoring Bank Secrecy Act Compliance

Under 12 CFR 21.21, national banks and savings associations are required to develop and provide for the continued administration of a program reasonably designed to assure and monitor their compliance with the BSA and applicable Treasury regulations. The compliance program shall be in writing, approved by the board of directors and noted in the minutes. These requirements are necessary to ensure institution compliance with the BSA and applicable Treasury regulations.

Type of Review: Regular.

Affected Public: Business, for-profit institutions, and non-profit.

Estimated Number of Respondents: 1,485.

Estimated Total Annual Burden: 714,205 hours.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information shall have practical utility;

(b) The accuracy of the OCC's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology, and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: March 21, 2016.

Mary H. Gottlieb,

Regulatory Specialist, Legislative and Regulatory Activities Division.

[FR Doc. 2016–06758 Filed 3–24–16; 8:45 am]

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Proposed Collection of Information: FHA New Account Request, Transition Request, and Transfer Request

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the collections of information required to comply with the terms and conditions of FHA New Account Request, Transition Request, and Transfer Request.

DATES: Written comments should be received on or before May 24, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments and requests for further information to Bureau of the Fiscal Service, Bruce A. Sharp, 200 Third Street, A4–A, Parkersburg, WV 26106–1328, or *bruce.sharp@fiscal.treasury.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form(s) and instructions should be directed to Dwayne Boothe, Branch Manager, Special Investments Branch; 200 Third Street, Room 119, Parkersburg, WV 26106–1328, or *dwayne.boothe@fiscal.treasury.gov.*

SUPPLEMENTARY INFORMATION:

Form Numbers and Titles:

FS Form 5354—FHA Transaction Request

FS Form 5366—FHA New Account Request

FS Form 5367—FHA Debenture Transfer Request

OMB Number: 1530–0054 (Previously approved as 1535–0120 as a collection conducted by Department of the Treasury/Bureau of the Public Debt.)

Transfer of OMB Control Number: The Bureau of Public Debt (BPD) and the Financial Management Service (FMS) have consolidated to become the Bureau of the Fiscal Service (Fiscal Service). Information collection requests previously held separately by BPD and FMS will now be identified by a 1530 prefix, designating Fiscal Service.

Abstract: The information is used to (1) establish a book-entry account; (2) change information on a book-entry account; and (3) transfer ownership of a book-entry account on the HUD system, maintained by the Federal Reserve Bank of Philadelphia.

Current Actions: Extension of a currently approved collection.

Type of Review: Regular.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 300.

Estimated Time per Respondent: 10 minutes.

Estimated Total Annual Burden Hours: 50.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: March 11, 2016.

Bruce A. Sharp,

Bureau Clearance Officer.

BILLING CODE 4810–AS–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant to Executive Orders 13469 and 13224

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control (OFAC) is publishing updated identifying information for one individual whose property and interests in property are blocked pursuant to Executive Order (E.O.) 13469, ''Blocking Property of Additional Persons Undermining Democratic Processes or Institutions in Zimbabwe,'' and one entity whose property and interests in property are blocked pursuant to E.O. 13224, ''Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten to Commit, or Support Terrorism,'' both of which have previously been designated and added to OFAC's Specially Designated Nationals and Blocked Persons (SDN) List.

DATES: OFAC's actions described in this notice were effective on March 22, 2016, as further specified below.

FOR FURTHER INFORMATION CONTACT: The Department of the Treasury's Office of Foreign Assets Control: Assistant Director for Licensing, tel.: 202/622–2480, Assistant Director for Regulatory Affairs, tel.: 202–622–4855, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490, or the Department of the Treasury's Office of the Chief Counsel (Foreign Assets Control), Office of the General Counsel, tel.: 202–622–2410.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's Web site (*www.treasury.gov/ofac*). Certain general information pertaining to OFAC's sanctions programs is also available via facsimile through a 24-hour fax-on-demand service, tel.: 202–622–0077.

Notice of OFAC Actions

On March 22, 2016, OFAC updated the identifying information for one previously designated individual whose property and interests in property are blocked pursuant to E.O. 13469 and one previously designated entity whose property and interests in property are blocked pursuant to E.O. 13224. The updated identifying information for the individual and entity is as follows:

Individual:

AL-SHANFARI, Thamer Bin Said Ahmed (a.k.a. AL SHANFARI, SHEIKH THAMER; a.k.a. AL SHANFARI, Thamer; a.k.a. AL SHANFARI, Thamer Said Ahmed; a.k.a. AL-SHANFARI, Thamer Bin Saeed; a.k.a. BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Financial Research Advisory Committee

AGENCY: Office of Financial Research, Treasury.

ACTION: Financial Research Advisory Committee-Solicitation of Applications for Committee Membership.

SUMMARY: The Office of Financial Research is soliciting applications for membership on its Financial Research Advisory Committee.

FOR FURTHER INFORMATION CONTACT: Susan Stiehm, Designated Federal Officer, Office of Financial Research, Department of the Treasury, (212) 376–9808.

SUPPLEMENTARY INFORMATION: Pursuant to the Federal Advisory Committee Act, (Pub. L. 92–463, 5 U.S.C. App. 2 § 1–16, as amended), the Treasury Department established a Financial Research Advisory Committee (Committee) to provide advice and recommendations to the Office of Financial Research (OFR) and to assist the OFR in carrying out its duties and authorities.

(I) Authorities of the OFR

Background

The OFR was established under Title I of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111–203, July 21, 2010). The purpose of the OFR is to support the Financial Stability Oversight Council (Council) in fulfilling the purposes and duties of the Council and to support the Council's member agencies by:

—Collecting data on behalf of the Council, and providing such data to the Council and member agencies;
—Standardizing the types and formats of data reported and collected;
—Performing applied research and essential long-term research;
—Developing tools for risk measurement and monitoring;
—Performing other related services;
—Making the results of the activities of the OFR available to financial regulatory agencies; and
—Assisting such member agencies in determining the types and formats of data authorized by the Dodd-Frank Act to be collected by such member agencies.

(II) Scope and Membership of the Financial Research Advisory Committee

The Financial Research Advisory Committee was established to advise the OFR on issues related to the responsibilities of the office. It may provide its advice, recommendations, analysis, and information directly to the OFR and the OFR may share the Committee's advice and recommendations with the Secretary of the Treasury or other Treasury officials. The OFR will share information with the Committee as the Director determines will be helpful in allowing the Committee to carry out its role.

The Financial Research Advisory Committee is an advisory committee that was established on April 6, 2012 and renewed its charter on March 8, 2016. The OFR is currently soliciting applications for membership in order to provide for rotation of membership, as provided in its original and renewed charter, as well as to provide for a diverse and balanced body with a variety of interests, backgrounds, and viewpoints represented. Providing for such diversity enhances the views and advice offered by the Committee.

(II) Application for Advisory Committee Appointment

Treasury seeks applications from individuals representative of a constituency within the fields of economics, financial institutions and markets, statistical analysis, financial markets analysis, econometrics, applied sciences, risk management, data management, information standards, technology, or other areas related to OFR's duties and authorities. The terms of members chosen to serve may vary. Membership on the Committee is limited to the individuals appointed and is non-transferrable. Regular attendance is essential to the effective operation of the Committee. Some members of the Committee may be required to adhere to the conflict of interest rules applicable to Special Government Employees, as such employees are defined in 18 U.S.C. 202(a). These rules include relevant provisions in 18 U.S.C. related to criminal activity, Standards of Ethical Conduct for Employees of the Executive Branch (5 CFR part 2635), and Executive Order 12674 (as modified by Executive Order 12731).

To apply, an applicant must submit an appropriately-detailed resume and a cover letter describing their interest, reasons for application, and qualifications. In accordance with Department of Treasury Directive 21–03, a clearance process includes fingerprints, tax checks, and a Federal Bureau of Investigation criminal check. Applicants must state in their application that they agree to submit to these pre-appointment checks.

The application period for interested candidates will extend to April 22, 2016. Applications should be submitted in sufficient time to be received by the close of business on the closing date and should be sent to *OFR_FRAC@ofr.treasury.gov* or by mail to: Office of Financial Research, Department of the Treasury, Attention: Susan Stiehm, 1500 Pennsylvania Avenue NW., MT–1330, Washington, DC 20220.

Dated: March 21, 2016.

Barbara Shycoff,

Chief of External Affairs.

DEPARTMENT OF THE TREASURY

2016 Report on the Terrorism Risk Insurance Program

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice and request for comment.

SUMMARY: The Terrorism Risk Insurance Act of 2002, as amended (TRIA), requires participating insurers to make insurance available for losses resulting from acts of terrorism, and provides a federal government backstop for the insurers' resulting financial exposure. TRIA established, in the U.S. Department of the Treasury, the Terrorism Risk Insurance Program (TRIP), which is administered by the Secretary of the Treasury (Secretary), with the assistance of the Federal Insurance Office (FIO). The Terrorism Risk Insurance Program Reauthorization Act of 2015 (Reauthorization Act), which extended and amended certain provisions of TRIP, requires the Secretary to submit a report to Congress concerning, among other things, the overall effectiveness of TRIP. To assist the Secretary in formulating the report, FIO is seeking comment on the statutory factors that the report must analyze and other related matters.

DATES: Comments must be submitted not later than April 15, 2016.

ADDRESSES: Interested persons may submit comments electronically through the Federal eRulemaking Portal at *http://www.regulations.gov,* in accordance with the instructions on that site. In general, the Department will post all comments to *www.regulations.gov* without change, including any business or personal information provided such as names, addresses, email addresses, or telephone numbers. The Department will also make such comments available for public inspection and copying in the Treasury's Library, 1500 Pennsylvania Avenue NW., Washington, DC 20220, on official business days between the hours of 10:00 a.m. and 5:00 p.m. Eastern Time. You can make an appointment to inspect comments by telephoning (202) 622–0990. All comments, including attachments and other supporting materials, are part of the public record and subject to public disclosure. You should submit only information that you wish to make available publicly.

Electronic submissions are encouraged.

Comments may also be mailed to the Department of the Treasury, Federal Insurance Office, MT 1410, 1500 Pennsylvania Avenue NW., Washington, DC 20220.

FOR FURTHER INFORMATION CONTACT: Richard A. Ifft, Senior Insurance Regulatory Policy Analyst, Federal Insurance Office, (202) 622–2922 (this is not a toll-free number) or Kevin Meehan, Policy Advisor, Federal Insurance Office, (202) 622–7009 (not a toll free number). Persons who have difficulty hearing or speaking may access this number via TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

SUPPLEMENTARY INFORMATION:

I. Background

Section 111 of the Reauthorization Act (Pub. L. 114–1) requires the Secretary to submit a report to the Committee on Financial Services of the House of Representatives and the Committee on Banking, Housing, and Urban Affairs of the Senate on, among other things, the impact and effectiveness of TRIP. The report must also include an evaluation of information that is being separately collected by Treasury, including certain data appropriate for analyzing the effectiveness of TRIP.

II. Solicitation for Comments

Collecting additional information and views on the matters that must be addressed in the report to Congress will assist the Secretary in the formulation of the report and enhance the report's accuracy and value. Treasury seeks comment from interested parties on all Section 111 elements that must be covered in the report, including comments on:

1. The overall effectiveness of the TRIP;

2. Observed changes or trends relating to matters that Treasury is collecting data about under Section 111 of the Reauthorization Act;

3. Whether any aspects of TRIP have the effect of discouraging or impeding insurers from providing commercial property casualty insurance coverage or coverage for acts of terrorism; and

4. The impact of TRIP on workers' compensation insurers.

In addition to comments on the above, Treasury also seeks comment from interested parties on:

5. The availability and affordability of terrorism risk insurance coverage, both nationally and in particular geographic areas; and

6. Other issues relating to TRIP or terrorism insurance or reinsurance more broadly that may be relevant to Treasury's assessment of the effectiveness of TRIP.

Michael T. McRaith,

Director, Federal Insurance Office.

BILLING CODE 4810–25–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

March 22, 2016

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before April 25, 2016 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collections, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.gov* and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8117, Washington, DC 20220, or email at *PRA@treasury.gov.*

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained by emailing *PRA@treasury.gov,* calling (202) 622–1295, or viewing the entire information collection request at *www.reginfo.gov.*

Internal Revenue Service (IRS)

OMB Control Number: 1545–0233.

Type of Review: Reinstatement with change of a previously approved collection.

Title: Application for Automatic Extension of Time to File Certain Business Income Tax, Information, and Other Returns.

Abstract: Form 7004 is used by corporations and certain non-profit institutions to request an automatic 5-month or 6-month extension of time to file their income tax returns. The information is needed by IRS to determine whether Form 7004 was timely filed so as not to impose a late filing penalty in error and also to insure that the proper amount of tax was computed and deposited.

Estimated Total Annual Burden Hours: 44,324,250.

OMB Control Number: 1545–1834.

Type of Review: Extension without change of a currently approved collection.

Title: Revenue Procedure 2003–39, Section 1031 LKE (Like-Kind Exchanges) Auto Leasing Programs.

Abstract: Revenue Procedure 2003–39 provides safe harbors for certain aspects of the qualification under Sec. 1031 of certain exchanges of property pursuant to Like-Kind Exchange (LKE) Programs for federal income tax purposes.

Estimated Total Annual Burden Hours: 8,600.

OMB Control Number: 1545–2018.

Type of Review: Extension without change of a currently approved collection.

Title: Revenue Procedure 2006–31, Revocation of Election filed under I.R.C. 83(b).

Abstract: This revenue procedure sets forth the procedures to be followed by individuals who wish to request permission to revoke the election they made under Internal Revenue Code section 83(b).

Estimated Total Annual Burden Hours: 400.

OMB Control Number: 1545–2240.

Type of Review: Extension without change of a currently approved collection.

Title: Form 14145—IRS Applicant Contact Information.

Abstract: Form 14145 is used by the IRS Recruitment Office to collect contact information from individuals who may be interested in working for the IRS now, or at any time in the future (potential applicants).

Estimated Total Annual Burden Hours: 66,085.

Brenda Simms,

Treasury PRA Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–NEW]

Proposed Information Collection (Alternate Signer Certification (VA Form 21–0972)); Activity: Comment Request

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including new collections, and allow 60 days for public comment in response to the notice.

VA Form 21–0972 will be used to collect the alternate signer information necessary for VA to accept benefit application forms signed by individuals on behalf of Veterans and claimants. The information collected will be used to contact the alternate signer for verification purposes.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before May 24, 2016.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420 or email to *nancy.kessinger@va.gov.* Please refer to ''OMB Control No. 2900—NEW (Alternate Signer Certification)'' in any correspondence. During the comment period, comments may be viewed online through the FDMS.

FOR FURTHER INFORMATION CONTACT: Nancy J. Kessinger at (202) 632–8924 or FAX (202) 632–8925.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104–13; 44 U.S.C. 3501–21), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Alternate Signer Certification (VA Form 21–0972).

OMB Control Number: 2900—NEW.

Type of Review: New collection.

Abstract: VA Form 21–0972 will be used to collect the alternate signer information necessary for VA to accept benefit application forms signed by individuals on behalf of Veterans and

claimants. The information collected will be used to contact the alternate signer for verification purposes.

Affected Public: Individuals or households.

Estimated Annual Burden: 1,250 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 5,000.

By direction of the Secretary.

Kathleen M. Manwell,

Program Analyst, VA Privacy Service, Office of Privacy and Records Management, Department of Veterans Affairs.

FOR FURTHER INFORMATION CONTACT: Nancy J. Kessinger at (202) 632–8924 or FAX (202) 632–8925.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104–13; 44 U.S.C. 3501–21), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Marital Status Questionnaire, VA Form 21P–0537.

OMB Control Number: 2900–0495.

Type of Review: Revision of an approved collection.

Abstract: VA Form 21P–0537 is used to verify a surviving spouse's current marital status to determine his or her continuing entitlement to Dependency and Indemnity Compensation (DIC) benefits. The form letter is automatically generated and mailed to DIC beneficiaries. Agency action depends on the information provided by the beneficiary. If the information provided supports the beneficiary's continued entitlement to benefits, no action is taken. If the information provided by the beneficiary does not support continued entitlement to benefits, VA will take action to terminate benefit payments, based on the facts found.

Affected Public: Individuals or households.

Estimated Annual Burden: 1,484 hours.

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 17,808.

By direction of the Secretary.

Occupational Exposure to Respirable Crystalline Silica; Final Rule

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Parts 1910, 1915, and 1926

[Docket No. OSHA–2010–0034]

RIN 1218–AB70

Occupational Exposure to Respirable Crystalline Silica

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Final rule.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is amending its existing standards for occupational exposure to respirable crystalline silica. OSHA has determined that employees exposed to respirable crystalline silica at the previous permissible exposure limits face a significant risk of material impairment to their health. The evidence in the record for this rulemaking indicates that workers exposed to respirable crystalline silica are at increased risk of developing silicosis and other non-malignant respiratory diseases, lung cancer, and kidney disease. This final rule establishes a new permissible exposure limit of 50 micrograms of respirable crystalline silica per cubic meter of air (50 μg/m^3) as an 8-hour time-weighted average in all industries covered by the rule. It also includes other provisions to protect employees, such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, medical surveillance, hazard communication, and recordkeeping.

OSHA is issuing two separate standards—one for general industry and maritime, and the other for construction—in order to tailor requirements to the circumstances found in these sectors.

DATES: The final rule is effective on June 23, 2016. Start-up dates for specific provisions are set in § 1910.1053(l) for general industry and maritime and in § 1926.1153(k) for construction.

Collections of Information

There are a number of collections of information contained in this final rule (see Section VIII, Paperwork Reduction Act). Notwithstanding the general date of applicability that applies to all other requirements contained in the final rule, affected parties do not have to comply with the collections of information until the Department of Labor publishes a separate notice in the **Federal Register** announcing the Office of Management and Budget has approved them under the Paperwork Reduction Act.

ADDRESSES: In accordance with 28 U.S.C. 2112(a), the Agency designates Ann Rosenthal, Associate Solicitor of Labor for Occupational Safety and Health, Office of the Solicitor of Labor, Room S–4004, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210, to receive petitions for review of the final rule.

FOR FURTHER INFORMATION CONTACT: For general information and press inquiries, contact Frank Meilinger, Director, Office of Communications, Room N–3647, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–1999; email *meilinger.francis2@dol.gov.*

For technical inquiries, contact William Perry or David O'Connor, Directorate of Standards and Guidance, Room N–3718, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693–1950.

SUPPLEMENTARY INFORMATION: The preamble to the rule on occupational exposure to respirable crystalline silica follows this outline:

Citation Method

In the docket for the respirable crystalline silica rulemaking, found at *http://www.regulations.gov*, every submission was assigned a document identification (ID) number that consists of the docket number (OSHA–2010–0034) followed by an additional four-digit number. For example, the document ID number for OSHA's Preliminary Economic Analysis and Initial Regulatory Flexibility Analysis is OSHA–2010–0034–1720. Some document ID numbers include one or more attachments, such as the National Institute for Occupational Safety and Health (NIOSH) prehearing submission (*see* Document ID OSHA 2010–0034–2177).

When citing exhibits in the docket, OSHA includes the term ''Document ID'' followed by the last four digits of the document ID number, the attachment number or other attachment identifier, if applicable, page numbers (designated ''p.'' or ''Tr.'' for pages from a hearing transcript), and in a limited number of cases a footnote number (designated ''Fn''). In a citation that contains two or more document ID numbers, the document ID numbers are separated by semi-colons. For example, a citation referring to the NIOSH prehearing comments and NIOSH testimony obtained from the hearing transcript would be indicated as follows: (Document ID 2177, Attachment B, pp. 2–3; 3579, Tr. 132). In some sections, such as Section V, Health Effects, author names and year of study publication are included before the document ID number in a citation, for example: (Hughes *et al.*, 2001, Document ID 1060; McDonald et al., 2001, 1091; McDonald *et al.*, 2005, 1092; Rando *et al.*, 2001, 0415).

I. Executive Summary

This final rule establishes a permissible exposure limit (PEL) for respirable crystalline silica of 50 μg/m^3 as an 8-hour time-weighted average (TWA) in all industries covered by the rule. In addition to the PEL, the rule includes provisions to protect employees such as requirements for exposure assessment, methods for controlling exposure, respiratory protection, medical surveillance, hazard communication, and recordkeeping. OSHA is issuing two separate standards—one for general industry and maritime, and the other for construction—in order to tailor requirements to the circumstances found in these sectors. There are, however, numerous common elements in the two standards.

The final rule is based on the requirements of the Occupational Safety and Health Act (OSH Act) and court interpretations of the Act. For health standards issued under section 6(b)(5) of the OSH Act, OSHA is required to promulgate a standard that reduces significant risk to the extent that it is technologically and economically feasible to do so. *See* Section II, Pertinent Legal Authority, for a full discussion of OSH Act legal requirements.

OSHA has conducted an extensive review of the literature on adverse health effects associated with exposure to respirable crystalline silica. OSHA has also developed estimates of the risk of silica-related diseases, assuming exposure over a working lifetime, at the preceding PELs as well as at the revised PEL and action level. Comments received on OSHA's preliminary analysis, and the Agency's final findings, are discussed in Section V, Health Effects, and Section VI, Final Quantitative Risk Assessment and Significance of Risk. OSHA finds that employees exposed to respirable crystalline silica at the preceding PELs are at an increased risk of lung cancer mortality and silicosis mortality and morbidity. Occupational exposures to respirable crystalline silica also result in increased risk of death from other nonmalignant respiratory diseases including chronic obstructive pulmonary disease (COPD), and from kidney disease. OSHA further concludes that exposure to respirable crystalline silica constitutes a significant risk of material impairment to health and that the final rule will substantially lower that risk. The Agency considers the level of risk remaining at the new PEL to be significant. However, based on the evidence evaluated during the rulemaking process, OSHA has determined a PEL of 50 μg/m^3 is appropriate because it is the lowest level feasible for all affected industries.

OSHA's examination of the technological and economic feasibility of the rule is presented in the Final Economic Analysis and Final Regulatory Flexibility Analysis (FEA), and is summarized in Section VII of this preamble. OSHA concludes that the PEL of 50 μg/m^3 is technologically feasible for most operations in all affected industries, although it will be a technological challenge for several affected sectors and will require the use of respirators for a limited number of job categories and tasks.

OSHA developed quantitative estimates of the compliance costs of the rule for each of the affected industry sectors. The estimated compliance costs were compared with industry revenues and profits to provide a screening analysis of the economic feasibility of complying with the rule and an evaluation of the economic impacts. Industries with unusually high costs as a percentage of revenues or profits were further analyzed for possible economic feasibility issues. After performing these analyses, OSHA finds that compliance with the requirements of the rule is economically feasible in every affected industry sector.

The final rule includes several major changes from the proposed rule as a result of OSHA's analysis of comments and evidence received during the comment periods and public hearings. The major changes are summarized below and are fully discussed in Section XV, Summary and Explanation of the Standards.

Scope. As proposed, the standards covered all occupational exposures to respirable crystalline silica with the exception of agricultural operations covered under 29 CFR part 1928. OSHA has made a final determination to exclude exposures in general industry and maritime where the employer has objective data demonstrating that employee exposure to respirable crystalline silica will remain below 25 μg/m^3 as an 8-hour TWA under any foreseeable conditions. OSHA is also excluding exposures in construction where employee exposure to respirable crystalline silica will remain below 25 μg/m^3 as an 8-hour TWA under any foreseeable conditions. In addition, OSHA is excluding exposures that result from the processing of sorptive clays from the scope of the rule. The standard for general industry and maritime also allows employers to comply with the standard for construction in certain circumstances.

Specified Exposure Control Methods. OSHA has revised the structure of the standard for construction to emphasize the specified exposure control methods for construction tasks that are presented in Table 1 of the standard. Unlike in the proposed rule, employers who fully and properly implement the controls listed on Table 1 are not separately required to comply with the PEL, and are not subject to provisions for exposure assessment and methods of compliance. The entries on Table 1 have also been revised extensively.

Protective Clothing. The proposed rule would have required use of protective clothing in certain limited situations. The final rule does not include requirements for use of protective clothing to address exposure to respirable crystalline silica.

Housekeeping. The proposed rule would have prohibited use of compressed air, dry sweeping, and dry brushing to clean clothing or surfaces contaminated with crystalline silica where such activities could contribute to employee exposure to respirable crystalline silica that exceeds the PEL. The final rule allows for use of compressed air, dry sweeping, and dry brushing in certain limited situations.

Written Exposure Control Plan. OSHA did not propose a requirement for employers to develop a written exposure control plan. The final rule includes a requirement for employers covered by the rule to develop a written exposure control plan, and the standard for construction includes a provision for a competent person (*i.e.*, a designated individual who is capable of identifying crystalline silica hazards in the workplace and who possesses the authority to take corrective measures to address them) to implement the written exposure control plan.

Regulated Areas. OSHA proposed to provide employers covered by the rule with the alternative of either establishing a regulated area or an access control plan to limit access to areas where exposure to respirable crystalline silica exceeds the PEL. The final standard for general industry and maritime requires employers to establish a regulated area in such circumstances. The final standard for construction does not include a provision for regulated areas, but includes a requirement that the written exposure control plan include procedures used to restrict access to work areas, when necessary, to minimize the numbers of employees exposed to respirable crystalline silica and their level of exposure. The access control plan alternative is not included in the final rule.

Medical Surveillance. The proposed rule would have required employers to make medical surveillance available to employees exposed to respirable crystalline silica above the PEL for 30 or more days per year. The final standard for general industry and maritime requires that medical surveillance be made available to employees exposed to respirable crystalline silica at or above the action level of 25 μg/m^3 as an 8-hour TWA for 30 or more days per year. The final standard for construction requires that medical surveillance be made available to employees who are required by the standard to use respirators for 30 or more days per year.

The rule requires the employer to obtain a written medical opinion from physicians or other licensed health care professionals (PLHCPs) for medical

examinations provided under the rule but limits the information provided to the employer to the date of the examination, a statement that the examination has met the requirements of the standard, and any recommended limitations on the employee's use of respirators. The proposed rule would have required that such opinions contain additional information, without requiring employee authorization, such as any recommended limitations upon the employee's exposure to respirable crystalline silica, and any referral to a specialist. In the final rule, the written opinion provided to the employer will only include recommended limitations on the employee's exposure to respirable crystalline silica and referral to a specialist if the employee provides written authorization. The final rule requires a separate written medical report provided to the employee to include this additional information, as well as detailed information related to the employee's health.

Dates. OSHA proposed identical requirements for both standards: an effective date 60 days after publication of the rule; a date for compliance with all provisions except engineering controls and laboratory requirements of 180 days after the effective date; a date for compliance with engineering controls requirements, which was one year after the effective date; and a date for compliance with laboratory requirements of two years after the effective date.

OSHA has revised the proposed compliance dates in both standards. The final rule is effective 90 days after publication. For general industry and maritime, all obligations for compliance commence two years after the effective date, with two exceptions: The obligation for engineering controls commences five years after the effective date for hydraulic fracturing operations in the oil and gas industry; and the obligation for employers in general industry and maritime to offer medical surveillance commences two years after the effective date for employees exposed above the PEL, and four years after the effective date for employees exposed at or above the action level. For construction, all obligations for compliance commence one year after the effective date, with the exception that certain requirements for laboratory analysis commence two years after the effective date.

Under the OSH Act's legal standard directing OSHA to set health standards based on findings of significant risk of material impairment and technological and economic feasibility, OSHA does not use cost-benefit analysis to determine the PEL or other aspects of the rule. It does, however, determine and analyze costs and benefits for its own informational purposes and to meet certain Executive Order requirements, as discussed in Section VII. Summary of the Final Economic Analysis and Final Regulatory Flexibility Analysis and in the FEA. Table I–1—which is derived from material presented in Section VII of this preamble—provides a summary of OSHA's best estimate of the costs and benefits of the rule using a discount rate of 3 percent. As shown, the rule is estimated to prevent 642 fatalities and 918 moderate-to-severe silicosis cases annually once it is fully effective, and the estimated cost of the rule is $1,030 million annually. Also as shown in Table I–1, the discounted monetized benefits of the rule are estimated to be $8.7 billion annually, and the rule is estimated to generate net benefits of approximately $7.7 billion annually.

Table I-1: Annualized Benefits, Costs and Net Benefits of OSHA's Final Silica Rule

Discount Rate		**3%**
Annualized Costs		
Engineering Controls (includes Abrasive Blasting)		$661,457,000
Respirators		$32,884,000
Exposure Assessment		$96,241,000
Medical Surveillance		$96,354,000
Familiarization and Training		$95,936,000
Regulated Area		$2,637,000
Written Exposure Control Plan		$44,273,000
Total Annualized Costs (point estimate)		**$1,029,782,000**
Annual Benefits: Number of Cases Prevented*		
Fatal Lung Cancers (midpoint estimate)	124	
Fatal Silicosis & other Non-Malignant Respiratory Diseases	325	
Fatal Renal Disease	193	
Silica-Related Mortality	642	$6,398,160,000
Silicosis Morbidity	918	$2,288,753,000
Monetized Annual Benefits (midpoint estimate)*		**$8,686,913,000**
Net Benefits*		**$7,657,131,000**

*Results are estimates based on assumptions outlined in in Section VII.G, Benefits and Net Benefits.

II. Pertinent Legal Authority

The purpose of the Occupational Safety and Health Act (29 U.S.C. 651 et seq.) (''the Act'' or ''the OSH Act''), is ''to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources'' (29 U.S.C. 651(b)). To achieve this goal Congress authorized the Secretary of Labor (''the Secretary'') ''to set mandatory occupational safety and health standards applicable to businesses affecting interstate commerce'' (29 U.S.C. 651(b)(3); *see* 29 U.S.C. 654(a) (requiring employers to comply with OSHA standards), 655(a) (authorizing summary adoption of existing consensus and federal standards within two years of the Act's enactment), and 655(b) (authorizing promulgation, modification or revocation of standards pursuant to notice and comment)). The primary statutory provision relied upon by the Agency in promulgating health standards is section 6(b)(5) of the Act; other sections of the OSH Act, however, authorize the Occupational Safety and Health Administration (OSHA) to require labeling and other appropriate forms of warning, exposure assessment, medical examinations, and recordkeeping in its standards (29 U.S.C. 655(b)(5), 655(b)(7), 657(c)).

The Act provides that in promulgating standards dealing with toxic materials or harmful physical agents, such as respirable crystalline silica, the Secretary shall set the standard which ''most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health . . . even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life'' (29 U.S.C. 655(b)(5)). Thus, ''[w]hen Congress passed the Occupational Safety and Health Act in 1970, it chose to place pre-eminent value on assuring employees a safe and healthful working environment, limited only by the feasibility of achieving such an environment'' (*American Textile Mfrs. Institute, Inc.* v. *Donovan,* 452 US 490, 541 (1981) (*''Cotton Dust''*)).

OSHA proposed this new standard for respirable crystalline silica and conducted its rulemaking pursuant to

section 6(b)(5) of the Act ((29 U.S.C. 655(b)(5)). The preceding silica standard, however, was adopted under the Secretary's authority in section 6(a) of the OSH Act (29 U.S.C. 655(a)), to adopt national consensus and established Federal standards within two years of the Act's enactment (see 29 CFR 1910.1000 Table Z–1). Any rule that ''differs substantially from an existing national consensus standard'' must ''better effectuate the purposes of this Act than the national consensus standard'' (29 U.S.C. 655(b)(8)). Several additional legal requirements arise from the statutory language in sections 3(8) and 6(b)(5) of the Act (29 U.S.C. 652(8), 655(b)(5)). The remainder of this section discusses these requirements, which OSHA must consider and meet before it may promulgate this occupational health standard regulating exposure to respirable crystalline silica.

Material Impairment of Health

Subject to the limitations discussed below, when setting standards regulating exposure to toxic materials or harmful physical agents, the Secretary is required to set health standards that ensure that ''no employee will suffer material impairment of health or functional capacity . . .'' (29 U.S.C. 655(b)(5)). OSHA has, under this section, considered medical conditions such as irritation of the skin, eyes, and respiratory system, asthma, and cancer to be material impairments of health. What constitutes material impairment in any given case is a policy determination on which OSHA is given substantial leeway. ''OSHA is not required to state with scientific certainty or precision the exact point at which each type of [harm] becomes a material impairment'' (*AFL–CIO* v. *OSHA,* 965 F.2d 962, 975 (11th Cir. 1992)). Courts have also noted that OSHA should consider all forms and degrees of material impairment—not just death or serious physical harm (*AFL–CIO,* 965 F.2d at 975). Thus the Agency has taken the position that ''subclinical'' health effects, which may be precursors to more serious disease, can be material impairments of health that OSHA should address when feasible (43 FR 52952, 52954 (11/14/78) (Preamble to the Lead Standard)).

Significant Risk

Section 3(8) of the Act requires that workplace safety and health standards be ''reasonably necessary or appropriate to provide safe or healthful employment'' (29 U.S.C. 652(8)). The Supreme Court, in its decision on OSHA's benzene standard, interpreted section 3(8) to mean that ''before promulgating any standard, the Secretary must make a finding that the workplaces in question are not safe'' (*Indus. Union Dep't, AFL–CIO* v. *Am. Petroleum Inst.*, 448 U.S. 607, 642 (1980) (plurality opinion) (*''Benzene''*)). The Court further described OSHA's obligation as requiring it to evaluate ''whether significant risks are present and can be eliminated or lessened by a change in practices'' (*Benzene,* 448 U.S. at 642). The Court's holding is consistent with evidence in the legislative record, with regard to section 6(b)(5) of the Act (29 U.S.C. 655(b)(5)), that Congress intended the Agency to regulate unacceptably severe occupational hazards, and not ''to establish a utopia free from any hazards'' or to address risks comparable to those that exist in virtually any occupation or workplace (116 Cong. Rec. 37614 (1970), Leg. Hist. 480–82). It is also consistent with Section 6(g) of the OSH Act, which states that, in determining regulatory priorities, ''the Secretary shall give due regard to the urgency of the need for mandatory safety and health standards for particular industries, trades, crafts, occupations, businesses, workplaces or work environments'' (29 U.S.C. 655(g)).

The Supreme Court in *Benzene* clarified that OSHA has considerable latitude in defining significant risk and in determining the significance of any particular risk. The Court did not specify a means to distinguish significant from insignificant risks, but rather instructed OSHA to develop a reasonable approach to making its significant risk determination. The Court stated that ''[i]t is the Agency's responsibility to determine, in the first instance, what it considers to be a 'significant' risk'' (*Benzene*, 448 U.S. at 655), and it did not ''express any opinion on the . . . difficult question of what factual determinations would warrant a conclusion that significant risks are present which make promulgation of a new standard reasonably necessary or appropriate'' (*Benzene*, 448 U.S. at 659). The Court stated, however, that the section 6(f) (29 U.S.C. 655(b)(f)) substantial evidence standard applicable to OSHA's significant risk determination does not require the Agency ''to support its finding that a significant risk exists with anything approaching scientific certainty'' (*Benzene*, 448 U.S. at 656). Rather, OSHA may rely on ''a body of reputable scientific thought'' to which ''conservative assumptions in interpreting the data . . . '' may be applied, ''risking error on the side of overprotection'' (*Benzene*, 448 U.S. at 656; *see also United Steelworkers of Am., AFL–CIO–CLC* v. *Marshall*, 647 F.2d 1189, 1248 (D.C. Cir. 1980) (''*Lead I*'') (noting the *Benzene* Court's application of this principle to carcinogens and applying it to the lead standard, which was not based on carcinogenic effects)). OSHA may thus act with a ''pronounced bias towards worker safety'' in making its risk determinations (*Bldg & Constr. Trades Dep't* v. *Brock*, 838 F.2d 1258, 1266 (D.C. Cir. 1988) (''*Asbestos II*'').

The Supreme Court further recognized that what constitutes ''significant risk'' is ''not a mathematical straitjacket'' (*Benzene*, 448 U.S. at 655) and will be ''based largely on policy considerations'' (*Benzene*, 448 U.S. at 655 n.62). The Court gave the following example:

> If . . . the odds are one in a billion that a person will die from cancer by taking a drink of chlorinated water, the risk clearly could not be considered significant. On the other hand, if the odds are one in a thousand that regular inhalation of gasoline vapors that are 2% benzene will be fatal, a reasonable person might well consider the risk significant . . . (*Benzene*, 448 U.S. at 655).

Following *Benzene*, OSHA has, in many of its health standards, considered the one-in-a-thousand metric when determining whether a significant risk exists. Moreover, as ''a prerequisite to more stringent regulation'' in all subsequent health standards, OSHA has, consistent with the *Benzene* plurality decision, based each standard on a finding of significant risk at the ''then prevailing standard'' of exposure to the relevant hazardous substance (*Asbestos II*, 838 F.2d at 1263). Once a significant risk of material impairment of health is demonstrated, it is of no import that the incidence of the illness may be declining (*see Nat'l Min. Assoc.* v. *Sec'y, U.S. Dep't of Labor*, Nos. 14–11942, 14–12163, slip op. at 80 (11th Cir. Jan. 25, 2016) (interpreting the Mine Act, 30 U.S.C. 811(a)(6)(A), which contains the same language as section 6(b)(5) of the OSH Act requiring the Secretary to set standards that assure no employee will suffer material impairment of health)).

The Agency's final risk assessment is derived from existing scientific and enforcement data and its final conclusions are made only after considering all evidence in the rulemaking record. Courts reviewing the validity of these standards have uniformly held the Secretary to the significant risk standard first articulated by the *Benzene* plurality and have generally upheld the Secretary's significant risk determinations as supported by substantial evidence and ''a reasoned explanation for his policy

assumptions and conclusions'' (*Asbestos II*, 838 F.2d at 1266).

Once OSHA makes its significant risk finding, the ''more stringent regulation'' (*Asbestos II*, 838 F.2d at 1263) it promulgates must be ''reasonably necessary or appropriate'' to reduce or eliminate that risk, within the meaning of section 3(8) of the Act (29 U.S.C. 652(8)) and *Benzene* (448 U.S. at 642) (*see Asbestos II*, 838 F.2d at 1269). The courts have interpreted section 6(b)(5) of the OSH Act as requiring OSHA to set the standard that eliminates or reduces risk to the lowest feasible level; as discussed below, the limits of technological and economic feasibility usually determine where the new standard is set (*see UAW* v. *Pendergrass*, 878 F.2d 389, 390 (D.C. Cir. 1989)). In choosing among regulatory alternatives, however, ''[t]he determination that [one standard] is appropriate, as opposed to a marginally [more or less protective] standard, is a technical decision entrusted to the expertise of the agency. . . '' (*Nat'l Mining Ass'n* v. *Mine Safety and Health Admin.*, 116 F.3d 520, 528 (D.C. Cir. 1997)) (analyzing a Mine Safety and Health Administration (''MSHA'') standard under the *Benzene* significant risk standard). In making its choice, OSHA may incorporate a margin of safety even if it theoretically regulates below the lower limit of significant risk (*Nat'l Mining Ass'n*, 116 F.3d at 528 (citing *American Petroleum Inst.* v. *Costle*, 665 F.2d 1176, 1186 (D.C. Cir. 1982))).

Working Life Assumption

The OSH Act requires OSHA to set the standard that most adequately protects employees against harmful workplace exposures for the period of their ''working life'' (29 U.S.C. 655(b)(5)). OSHA's longstanding policy is to define ''working life'' as constituting 45 years; thus, it assumes 45 years of exposure when evaluating the risk of material impairment to health caused by a toxic or hazardous substance. This policy is not based on empirical data that most employees are exposed to a particular hazard for 45 years. Instead, OSHA has adopted the practice to be consistent with the statutory directive that ''no employee'' suffer material impairment of health ''even if'' such employee is exposed to the hazard for the period of his or her working life (*see* 74 FR 44796 (8/31/09)). OSHA's policy was given judicial approval in a challenge to an OSHA standard that lowered the permissible exposure limit (PEL) for asbestos (*Asbestos II,* 838 F.2d at 1264–1265). In that case, the petitioners claimed that the median duration of employment in the affected industry sectors was only five years. Therefore, according to petitioners, OSHA erred in assuming a 45-year working life in calculating the risk of health effects caused by asbestos exposure. The D.C. Circuit disagreed, stating,

> Even if it is only the rare worker who stays with asbestos-related tasks for 45 years, that worker would face a 64/1000 excess risk of contracting cancer; Congress clearly authorized OSHA to protect such a worker (Asbestos II, 838 F.2d at 1264–1265).

OSHA might calculate the health risks of exposure, and the related benefits of lowering the exposure limit, based on an assumption of a shorter working life, such as 25 years, but such estimates are for informational purposes only.

Best Available Evidence

Section 6(b)(5) of the Act requires OSHA to set standards ''on the basis of the best available evidence'' and to consider the ''latest available scientific data in the field'' (29 U.S.C. 655(b)(5)). As noted above, the Supreme Court, in its Benzene decision, explained that OSHA must look to ''a body of reputable scientific thought'' in making its material harm and significant risk determinations, while noting that a reviewing court must ''give OSHA some leeway where its findings must be made on the frontiers of scientific knowledge'' (*Benzene,* 448 U.S. at 656). The courts of appeals have afforded OSHA similar latitude to issue health standards in the face of scientific uncertainty. The Second Circuit, in upholding the vinyl chloride standard, stated:

> . . . the ultimate facts here in dispute are 'on the frontiers of scientific knowledge', and, though the factual finger points, it does not conclude. Under the command of OSHA, it remains the duty of the Secretary to act to protect the workingman, and to act even in circumstances where existing methodology or research is deficient (*Society of the Plastics Industry, Inc.* v. *OSHA,* 509 F.2d 1301, 1308 (2d Cir. 1975) (quoting *Indus. Union Dep't, AFL–CIO* v. *Hodgson,* 499 F.2d 467, 474 (D.C. Cir. 1974) (''*Asbestos I*'')).

The D.C. Circuit, in upholding the cotton dust standard, stated: ''OSHA's mandate necessarily requires it to act even if information is incomplete when the best available evidence indicates a serious threat to the health of workers'' (*Am. Fed'n of Labor & Cong. of Indus. Orgs.* v. *Marshall,* 617 F.2d 636, 651 (D.C. Cir. 1979), *aff'd in part and vacated in part on other grounds, American Textile Mfrs. Inst., Inc.* v. *Donovan,* 452 U.S. 490 (1981)).

When there is disputed scientific evidence, OSHA must review the evidence on both sides and ''reasonably resolve'' the dispute (*Pub. Citizen Health Research Grp.* v. *Tyson,* 796 F.2d 1479, 1500 (D.C. Cir. 1986)). In *Public Citizen,* there was disputed scientific evidence regarding whether there was a threshold exposure level for the health effects of ethylene oxide. The Court noted that, where ''OSHA has the expertise we lack and it has exercised that expertise by carefully reviewing the scientific data,'' a dispute within the scientific community is not occasion for it to take sides about which view is correct (*Pub. Citizen Health Research Grp.,* 796 F.2d at 1500). ''Indeed, Congress did 'not [intend] that the Secretary be paralyzed by debate surrounding diverse medical opinions' '' (*Pub. Citizen Health Research Grp.,* 796 F.2d at 1497 (quoting H.R.Rep. No. 91–1291, 91st Cong., 2d Sess. 18 (1970), reprinted in Legislative History of the Occupational Safety and Health Act of 1970 at 848 (1971))).

A recent decision by the Eleventh Circuit Court of Appeals upholding a coal dust standard promulgated by MSHA emphasized that courts should give ''an extreme degree of deference to the agency when it is evaluating scientific data within its technical expertise'' (*Nat'l Min. Assoc.* v. *Sec'y, U.S. Dep't of Labor,* Nos. 14–11942, 14–12163, slip op. at 43 (11th Cir. Jan. 25, 2016) (quoting *Kennecott Greens Creek Min.* Co. v. *MSHA,* 476 F.3d 946, 954–955 (D.C. Cir. 2007) (internal quotation marks omitted)). The Court emphasized that because the Mine Act, like the OSH Act, ''evinces a clear bias in favor of [ ] health and safety,'' the agency's responsibility to use the best evidence and consider feasibility should not be used as a counterweight to the agency's duty to protect the lives and health of workers (*Nat'l Min. Assoc.,* Nos. 14–11942, 14–12163, slip op. at 43 (11th Cir. Jan. 25, 2016)).

Feasibility

The OSH Act requires that, in setting a standard, OSHA must eliminate the risk of material health impairment ''to the extent feasible'' (29 U.S.C. 655(b)(5)). The statutory mandate to consider the feasibility of the standard encompasses both technological and economic feasibility; these analyses have been done primarily on an industry-by-industry basis (*Lead I,* 647 F.2d at 1264, 1301) in general industry. The Agency has also used application groups, defined by common tasks, as the structure for its feasibility analyses in construction (*Pub. Citizen Health Research Grp.* v. *OSHA,* 557 F.3d 165, 177–179 (3d Cir. 2009) (''*Chromium (VI)*''). The Supreme Court has broadly defined feasible as ''capable of being

done'' (*Cotton Dust,* 452 U.S. at 509–510).

Although OSHA must set the most protective PEL that the Agency finds to be technologically and economically feasible, it retains discretion to set a uniform PEL even when the evidence demonstrates that certain industries or operations could reasonably be expected to meet a lower PEL. OSHA health standards generally set a single PEL for all affected employers; OSHA exercised this discretion most recently in its final rule on occupational exposure to chromium (VI) (71 FR 10100, 10337–10338 (2/28/2006); *see also* 62 FR 1494, 1575 (1/10/97) (methylene chloride)). In its decision upholding the chromium (VI) standard, including the uniform PEL, the Court of Appeals for the Third Circuit addressed this issue as one of deference, stating ''OSHA's decision to select a uniform exposure limit is a legislative policy decision that we will uphold as long as it was reasonably drawn from the record'' (*Chromium (VI),* 557 F.3d at 183 (3d Cir. 2009)); *see also Am. Iron & Steel Inst.* v. *OSHA,* 577 F.2d 825, 833 (3d Cir. 1978)). OSHA's reasons for choosing one chromium (VI) PEL, rather than imposing different PELs on different application groups or industries, included: Multiple PELs would create enforcement and compliance problems because many workplaces, and even workers, were affected by multiple categories of chromium (VI) exposure; discerning individual PELs for different groups of establishments would impose a huge evidentiary burden on the Agency and unnecessarily delay implementation of the standard; and a uniform PEL would, by eliminating confusion and simplifying compliance, enhance worker protection (*Chromium (VI),* 557 F.3d at 173, 183–184). The Court held that OSHA's rationale for choosing a uniform PEL, despite evidence that some application groups or industries could meet a lower PEL, was reasonably drawn from the record and that the Agency's decision was within its discretion and supported by past practice (*Chromium (VI),* 557 F.3d at 183–184).

Technological Feasibility

A standard is technologically feasible if the protective measures it requires already exist, can be brought into existence with available technology, or can be created with technology that can reasonably be expected to be developed (*Lead I,* 647 F.2d at 1272; *Amer. Iron & Steel Inst.* v. *OSHA,* 939 F.2d 975, 980 (D.C. Cir. 1991) (''*Lead II*'')). While the test for technological feasibility is normally articulated in terms of the ability of employers to decrease exposures to the PEL, provisions such as exposure measurement requirements must also be technologically feasible (*Forging Indus. Ass'n* v. *Sec'y of Labor,* 773 F.2d 1436, 1453 (4th Cir. 1985)).

OSHA's standards may be ''technology forcing,'' *i.e.,* where the Agency gives an industry a reasonable amount of time to develop new technologies, OSHA is not bound by the ''technological status quo'' (*Lead I,* 647 F.2d at 1264); *see also Kennecott Greens Creek Min. Co.* v. *MSHA,* 476 F.3d 946, 957 (D.C. Cir. 2007) (MSHA standards, like OSHA standards, may be technology-forcing); *Nat'l Petrochemical & Refiners Ass'n* v. *EPA,* 287 F.3d 1130, 1136 (D.C. Cir. 2002) (agency is ''not obliged to provide detailed solutions to every engineering problem,'' but only to ''identify the major steps for improvement and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining.'').

In its *Lead* decisions, the D.C. Circuit described OSHA's obligation to demonstrate the technological feasibility of reducing occupational exposure to a hazardous substance.

> [W]ithin the limits of the best available evidence . . . OSHA must prove a reasonable possibility that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations . . . The effect of such proof is to establish a presumption that industry can meet the PEL without relying on respirators . . . Insufficient proof of technological feasibility for a few isolated operations within an industry, or even OSHA's concession that respirators will be necessary in a few such operations, will not undermine this general presumption in favor of feasibility. Rather, in such operations firms will remain responsible for installing engineering and work practice controls to the extent feasible, and for using them to reduce . . . exposure as far as these controls can do so (*Lead I,* 647 F.2d at 1272).

Additionally, the D.C. Circuit explained that ''[f]easibility of compliance turns on whether exposure levels at or below [the PEL] can be met in most operations most of the time . . .'' (*Lead II,* 939 F.2d at 990).

Courts have given OSHA significant deference in reviewing its technological feasibility findings.

> So long as we require OSHA to show that any required means of compliance, even if it carries no guarantee of meeting the PEL, will substantially lower . . . exposure, we can uphold OSHA's determination that every firm must exploit all possible means to meet the standard (*Lead I,* 647 F.2d at 1273).

Even in the face of significant uncertainty about technological feasibility in a given industry, OSHA has been granted broad discretion in making its findings (*Lead I,* 647 F.2d at 1285).

> OSHA cannot let workers suffer while it awaits . . . scientific certainty. It can and must make reasonable [technological feasibility] predictions on the basis of 'credible sources of information,' whether data from existing plants or expert testimony (*Lead I,* 647 F.2d at 1266 (quoting *Am. Fed'n of Labor & Cong. of Indus. Orgs.,* 617 F.2d at 658)).

For example, in *Lead I,* the D.C. Circuit allowed OSHA to use, as best available evidence, information about new and expensive industrial smelting processes that had not yet been adopted in the U.S. and would require the rebuilding of plants (*Lead I,* 647 F.2d at 1283–1284). Even under circumstances where OSHA's feasibility findings were less certain and the Agency was relying on its ''legitimate policy of technology forcing,'' the D.C. Circuit approved of OSHA's feasibility findings when the Agency granted lengthy phase-in periods to allow particular industries time to comply (*Lead I,* 647 F.2d at 1279–1281, 1285).

OSHA is permitted to adopt a standard that some employers will not be able to meet some of the time, with employers limited to challenging feasibility at the enforcement stage (*Lead I,* 647 F.2d at 1273 & n. 125; *Asbestos II,* 838 F.2d at 1268). Even when the Agency recognized that it might have to balance its general feasibility findings with flexible enforcement of the standard in individual cases, the courts of appeals have generally upheld OSHA's technological feasibility findings (*Lead II,* 939 F.2d at 980; *see Lead I,* 647 F.2d at 1266–1273; *Asbestos II,* 838 F.2d at 1268). Flexible enforcement policies have been approved where there is variability in measurement of the regulated hazardous substance or where exposures can fluctuate uncontrollably (*Asbestos II,* 838 F.2d at 1267–1268; *Lead II,* 939 F.2d at 991). A common means of dealing with the measurement variability inherent in sampling and analysis is for the Agency to add the standard sampling error to its exposure measurements before determining whether to issue a citation (*e.g.,* 51 FR 22612, 22654 (06/20/86) (Preamble to the Asbestos Standard)).

Economic Feasibility

In addition to technological feasibility, OSHA is required to demonstrate that its standards are economically feasible. A reviewing court will examine the cost of compliance with an OSHA standard ''in relation to the financial health and

profitability of the industry and the likely effect of such costs on unit consumer prices . . .'' (*Lead I,* 647 F.2d at 1265 (omitting citation)). As articulated by the D.C. Circuit in *Lead I,*

> OSHA must construct a reasonable estimate of compliance costs and demonstrate a reasonable likelihood that these costs will not threaten the existence or competitive structure of an industry, even if it does portend disaster for some marginal firms (*Lead I,* 647 F.2d at 1272).

A reasonable estimate entails assessing ''the likely range of costs and the likely effects of those costs on the industry'' (*Lead I,* 647 F.2d at 1266). As with OSHA's consideration of scientific data and control technology, however, the estimates need not be precise (*Cotton Dust,* 452 U.S. at 528–29 & n.54) as long as they are adequately explained. Thus, as the D.C. Circuit further explained:

> Standards may be economically feasible even though, from the standpoint of employers, they are financially burdensome and affect profit margins adversely. Nor does the concept of economic feasibility necessarily guarantee the continued existence of individual employers. It would appear to be consistent with the purposes of the Act to envisage the economic demise of an employer who has lagged behind the rest of the industry in protecting the health and safety of employees and is consequently financially unable to comply with new standards as quickly as other employers. As the effect becomes more widespread within an industry, the problem of economic feasibility becomes more pressing (*Asbestos I,* 499 F.2d. at 478).

OSHA standards therefore satisfy the economic feasibility criterion even if they impose significant costs on regulated industries so long as they do not cause massive economic dislocations within a particular industry or imperil the very existence of the industry (*Lead II,* 939 F.2d at 980; *Lead I,* 647 F.2d at 1272; *Asbestos I,* 499 F.2d. at 478). As with its other legal findings, OSHA ''is not required to prove economic feasibility with certainty, but is required to use the best available evidence and to support its conclusions with substantial evidence'' (*Lead II,* 939 F.2d at 980–981) (citing *Lead I,* 647 F.2d at 1267)). Granting industries additional time to comply with new PELs may enhance the economic, as well as technological, feasibility of a standard (*Lead I,* 647 F.2d at 1265).

Because section 6(b)(5) of the Act explicitly imposes the ''to the extent feasible'' limitation on the setting of health standards, OSHA is not permitted to use cost-benefit analysis to make its standards-setting decisions (29 U.S.C. 655(b)(5)).

> Congress itself defined the basic relationship between costs and benefits, by placing the ''benefit'' of worker health above all other considerations save those making attainment of this ''benefit'' unachievable. Any standard based on a balancing of costs and benefits by the Secretary that strikes a different balance than that struck by Congress would be inconsistent with the command set forth in § 6(b)(5) (*Cotton Dust,* 452 U.S. at 509).

Thus, while OSHA estimates the costs and benefits of its proposed and final rules, these calculations do not form the basis for the Agency's regulatory decisions; rather, they are performed in acknowledgement of requirements such as those in Executive Orders 12866 and 13563.

Structure of OSHA Health Standards

OSHA's health standards traditionally incorporate a comprehensive approach to reducing occupational disease. OSHA substance-specific health standards generally include the ''hierarchy of controls,'' which, as a matter of OSHA's preferred policy, mandates that employers install and implement all feasible engineering and work practice controls before respirators may be used. The Agency's adherence to the hierarchy of controls has been upheld by the courts (*ASARCO, Inc.* v. *OSHA,* 746 F.2d 483, 496–498 (9th Cir. 1984); *Am. Iron & Steel Inst.* v. *OSHA,* 182 F.3d 1261, 1271 (11th Cir. 1999)). In fact, courts view the legal standard for proving technological feasibility as incorporating the hierarchy:

> OSHA must prove a reasonable possibility that the typical firm will be able to develop and install engineering and work practice controls that can meet the PEL in most of its operations. . . . The effect of such proof is to establish a presumption that industry can meet the PEL without relying on respirators (*Lead I,* 647 F.2d at 1272).

The hierarchy of controls focuses on removing harmful materials at their source. OSHA allows employers to rely on respiratory protection to protect their employees only when engineering and work practice controls are insufficient or infeasible. In fact, in the control of ''those occupational diseases caused by breathing air contaminated with harmful dusts, fogs, fumes, mists, gases, smokes, sprays, or vapors,'' the employers' primary objective ''shall be to prevent atmospheric contamination. This shall be accomplished as far as feasible by accepted engineering control measures (for example, enclosure or confinement of the operation, general and local ventilation, and substitution of less toxic materials). When effective engineering controls are not feasible, or while they are being instituted, appropriate respirators shall be used pursuant to this section'' (29 CFR 1910.134).

The reasons supporting OSHA's continued reliance on the hierarchy of controls, as well as its reasons for limiting the use of respirators, are numerous and grounded in good industrial hygiene principles (see Section XV, Summary and Explanation of the Standards, Methods of Compliance). Courts have upheld OSHA's emphasis on engineering and work practice controls over personal protective equipment in challenges to previous health standards, such as chromium (VI): ''Nothing in . . . any case reviewing an airborne toxin standard, can be read to support a technological feasibility rule that would effectively encourage the routine and widespread use of respirators to comply with a PEL'' (*Chromium (VI),* 557 F.3d at 179; *see Am. Fed'n of Labor & Cong. of Indus. Orgs.* v. *Marshall,* 617 F.2d 636, 653 (D.C. Cir. 1979) *cert. granted, judgment vacated sub nom. Cotton Warehouse Ass'n* v. *Marshall,* 449 U.S. 809 (1980) and aff'd in part, vacated in part sub nom. *Am. Textile Mfrs. Inst., Inc.* v. *Donovan,* 452 U.S. 490 (1981) (finding ''uncontradicted testimony in the record that respirators can cause severe physical discomfort and create safety problems of their own'')).

In health standards such as this one, the hierarchy of controls is augmented by ancillary provisions. These provisions work with the hierarchy of controls and personal protective equipment requirements to provide comprehensive protection to employees in affected workplaces. Such provisions typically include exposure assessment, medical surveillance, hazard communication, and recordkeeping. This approach is recognized as effective in dealing with air contaminants such as respirable crystalline silica; for example, the industry standards for respirable crystalline silica, ASTM E 1132–06, Standard Practice for Health Requirements Relating to Occupational Exposure to Respirable Crystalline Silica, and ASTM E 2626–09, Standard Practice for Controlling Occupational Exposure to Respirable Crystalline Silica for Construction and Demolition Activities, take a similar comprehensive approach (Document ID 1466; 1504).

The OSH Act compels OSHA to require all feasible measures for reducing significant health risks (29 U.S.C. 655(b)(5); *Pub. Citizen Health Research Grp.,* 796 F.2d at 1505 (''if in fact a STEL [short-term exposure limit] would further reduce a significant

health risk and is feasible to implement, then the OSH Act compels the agency to adopt it (barring alternative avenues to the same result)''). When there is significant risk below the PEL, as is the case with respirable crystalline silica, the DC Circuit indicated that OSHA should use its regulatory authority to impose additional requirements on employers when those requirements will result in a greater than de minimis incremental benefit to workers' health (*Asbestos II,* 838 F.2d at 1274). The Supreme Court alluded to a similar issue in *Benzene,* pointing out that ''in setting a permissible exposure level in reliance on less-than-perfect methods, OSHA would have the benefit of a backstop in the form of monitoring and medical testing'' (*Benzene,* 448 U.S. at 657). OSHA believes that the ancillary provisions in this final standard provide significant benefits to worker health by providing additional layers and types of protection to employees exposed to respirable crystalline silica.

Finally, while OSHA is bound by evidence in the rulemaking record, and generally looks to its prior standards for guidance on how to structure and specify requirements in a new standard, it is not limited to past approaches to regulation. In promulgating health standards, ''[w]henever practicable, the standard promulgated shall be expressed in terms of objective criteria and of the performance desired'' (29 U.S.C. 655(b)(5)). In cases of industries or tasks presenting unique challenges in terms of assessing and controlling exposures, it may be more practicable and provide greater certainty to require specific controls with a demonstrated track record of efficacy in reducing exposures and, therefore, risk (especially when supplemented by appropriate respirator usage). Such an approach could more effectively protect workers than the traditional exposure assessment-and-control approach when exposures may vary because of factors such as changing environmental conditions or materials, and an assessment may not reflect typical exposures associated with a task or operation. As discussed at length in Section XV, Summary and Explanation of the Standards, the specified exposure control measures option in the construction standard (*i.e.,* Table 1, in paragraph (c)(1)) for respirable crystalline silica represents the type of innovative, objective approach available to the Secretary when fashioning a rule under these circumstances.

III. Events Leading to the Final Standards

The Occupational Safety and Health Administration's (OSHA's) previous standards for workplace exposure to respirable crystalline silica were adopted in 1971, pursuant to section 6(a) of the Occupational Safety and Health Act (29 U.S.C. 651 et seq.) (''the Act'' or ''the OSH Act'') (36 FR 10466 (5/29/71)). Section 6(a) (29 U.S.C. 655(a)) authorized OSHA, in the first two years after the effective date of the Act, to promulgate ''start-up'' standards, on an expedited basis and without public hearing or comment, based on national consensus or established Federal standards that improved employee safety or health. Pursuant to that authority, OSHA in 1971 promulgated approximately 425 permissible exposure limits (PELs) for air contaminants, including crystalline silica, which were derived principally from Federal standards applicable to government contractors under the Walsh-Healey Public Contracts Act, 41 U.S.C. 35, and the Contract Work Hours and Safety Standards Act (commonly known as the Construction Safety Act), 40 U.S.C. 333. The Walsh-Healey Act and Construction Safety Act standards had been adopted primarily from recommendations of the American Conference of Governmental Industrial Hygienists (ACGIH).

For general industry (*see* 29 CFR 1910.1000, Table Z–3), the PEL for crystalline silica in the form of respirable quartz was based on two alternative formulas: (1) A particle-count formula, $PEL_{mppcf}=250/(\%\ quartz + 5)$ as respirable dust; and (2) a mass formula proposed by ACGIH in 1968, $PEL=(10\ mg/m^3)/(\%\ quartz + 2)$ as respirable dust. The general industry PELs for crystalline silica in the form of cristobalite and tridymite were one-half of the value calculated from either of the above two formulas for quartz. For construction (*see* 29 CFR 1926.55, Appendix A) and shipyards (see 29 CFR 1915.1000, Table Z), the formula for the PEL for crystalline silica in the form of quartz ($PEL_{mppcf}=250/(\%\ quartz + 5)$ as respirable dust), which requires particle counting, was derived from the 1970 ACGIH threshold limit value (TLV).[1] Based on the formulas, the PELs for quartz, expressed as time-weighted averages (TWAs), were approximately equivalent to 100 $\mu g/m^3$ for general industry and 250 $\mu g/m^3$ for construction and shipyards. The PELs were not supplemented by additional protective provisions—such as medical surveillance requirements—as are included in other OSHA standards. OSHA believes that the formula based on particle-counting technology used in the general industry, construction, and shipyard PELs has been rendered obsolete by respirable mass (gravimetric) sampling.

In 1974, the National Institute for Occupational Safety and Health (NIOSH), an agency within the Department of Health and Human Services created by the OSH Act and designed to carry out research and recommend standards for occupational safety and health hazards, evaluated crystalline silica as a workplace hazard and issued criteria for a recommended standard (29 U.S.C. 669, 671; Document ID 0388). NIOSH recommended that occupational exposure to crystalline silica be controlled so that no worker is exposed to a TWA of free (respirable crystalline) silica greater than 50 $\mu g/m^3$ as determined by a full-shift sample for up to a 10-hour workday over a 40-hour workweek. The document also recommended a number of ancillary provisions for a standard, such as exposure monitoring and medical surveillance.

In December 1974, OSHA published an Advance Notice of Proposed Rulemaking (ANPRM) based on the recommendations in the NIOSH criteria document (39 FR 44771 (12/27/74)). In the ANPRM, OSHA solicited ''public participation on the issues of whether a new standard for crystalline silica should be issued on the basis of the [NIOSH] criteria or any other information, and, if so, what should be the contents of a proposed standard for crystalline silica'' (39 FR at 44771). OSHA also set forth the particular issues of concern on which comments were requested. The Agency did not issue a proposed rule or pursue a final rule for crystalline silica at that time.

As information on the health effects of silica exposure developed during the 1980s and 1990s, national and international classification organizations came to recognize crystalline silica as a human carcinogen. In June 1986, the International Agency for Research on Cancer (IARC), which is the specialized cancer agency within the World Health Organization, evaluated the available evidence regarding crystalline silica carcinogenicity and concluded, in 1987, that crystalline silica is probably carcinogenic to

[1] The Mineral Dusts tables that contain the silica PELs for construction and shipyards do not clearly express PELs for cristobalite and tridymite. 29 CFR 1926.55; 29 CFR 1915.1000. This lack of textual clarity likely results from a transcription error in the Code of Federal Regulations. OSHA's final rule provides the same PEL for quartz, cristobalite, and tridymite in general industry, maritime, and construction.

humans (*http://monographs.iarc.fr/ENG/Monographs/suppl7/Suppl7.pdf*). An IARC working group met again in October 1996 to evaluate the complete body of research, including research that had been conducted since the initial 1986 evaluation. IARC concluded, more decisively this time, that ''crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans'' (Document ID 2258, Attachment 8, p. 211). In 2012, IARC reaffirmed that ''Crystalline silica in the form of quartz or cristobalite dust is carcinogenic to humans'' (Document ID 1473, p. 396).

In 1991, in the Sixth Annual Report on Carcinogens, the U.S. National Toxicology Program (NTP), within the U.S. Department of Health and Human Services, concluded that respirable crystalline silica was ''reasonably anticipated to be a human carcinogen'' (as referenced in Document ID 1417, p. 1). NTP reevaluated the available evidence and concluded, in the Ninth Report on Carcinogens, that ''respirable crystalline silica (RCS), primarily quartz dust occurring in industrial and occupational settings, is known to be a human carcinogen, based on sufficient evidence of carcinogenicity from studies in humans indicating a causal relationship between exposure to RCS and increased lung cancer rates in workers exposed to crystalline silica dust'' (Document ID 1417, p. 1). ACGIH listed respirable crystalline silica (in the form of quartz) as a suspected human carcinogen in 2000, while lowering the TLV to 0.05 mg/m_3 (50 $\mu g/m_3$) (Document ID 1503, p. 15). ACGIH subsequently lowered the TLV for crystalline silica to 0.025 mg/m_3 (25 $\mu g/m_3$) in 2006, which is ACGIH's current recommended exposure limit (Document ID 1503, pp. 1, 15).

In 1989, OSHA established 8-hour TWA PELs of 0.1 mg/m_3 (100 $\mu g/m_3$) for quartz and 0.05 mg/m_3 (50 $\mu g/m_3$) for cristobalite and tridymite, as part of the Air Contaminants final rule for general industry (54 FR 2332 (1/19/89)). OSHA stated that these limits presented no substantial change from the Agency's former formula limits, but would simplify sampling procedures. In providing comments on the proposed rule, NIOSH recommended that crystalline silica be considered a potential carcinogen.

In 1992, OSHA, as part of the Air Contaminants proposed rule for maritime, construction, and agriculture, proposed the same PELs as for general industry, to make the PELs consistent across all the OSHA-regulated sectors (57 FR 26002 (6/12/92)). However, the U.S. Court of Appeals for the Eleventh Circuit vacated the 1989 Air Contaminants final rule for general industry (*Am. Fed'n of Labor and Cong. of Indus. Orgs.* v. *OSHA,* 965 F.2d 962 (1992)), and also mooted the proposed rule for maritime, construction, and agriculture. The Court's decision to vacate the rule forced the Agency to return to the original 1971 PELs for all compounds, including silica, adopted as section 6(a) standards.

In 1994, OSHA initiated a process to determine which safety and health hazards in the U.S. needed the most attention. A priority planning committee included safety and health experts from OSHA, NIOSH, and the Mine Safety and Health Administration (MSHA). The committee reviewed available information on occupational deaths, injuries, and illnesses and communicated extensively with representatives of labor, industry, professional and academic organizations, the States, voluntary standards organizations, and the public. The OSHA National Advisory Committee on Occupational Safety and Health and the Advisory Committee on Construction Safety and Health (ACCSH) also made recommendations. Rulemaking for crystalline silica exposure was one of the priorities designated by this process. OSHA indicated that crystalline silica would be added to the Agency's regulatory agenda as other standards were completed and resources became available.

In 1996, OSHA instituted a Special Emphasis Program (SEP) to step up enforcement of the crystalline silica standards. The SEP was intended to reduce worker silica dust exposures that can cause silicosis and lung cancer. It included extensive outreach designed to educate and train employers and employees about the hazards of silica and how to control them, as well as inspections to enforce the standards. Among the outreach materials available were slides presenting information on hazard recognition and crystalline silica control technology, a video on crystalline silica and silicosis, and informational cards for workers explaining crystalline silica, health effects related to exposure, and methods of control. The SEP provided guidance for targeting inspections of worksites that had employees at risk of developing silicosis. The inspections resulted in the collection of exposure data from the various worksites visited by OSHA's compliance officers.

As a follow-up to the SEP, OSHA undertook numerous non-regulatory actions to address silica exposures. For example, in October of 1996, OSHA launched a joint silicosis prevention effort with MSHA, NIOSH, and the American Lung Association (*see https://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=NEWS_RELEASES&p_id=14110*). This public education campaign involved distribution of materials on how to prevent silicosis, including a guide for working safely with silica and stickers for hard hats to remind workers of crystalline silica hazards. Spanish language versions of these materials were also made available. OSHA and MSHA inspectors distributed materials at mines, construction sites, and other affected workplaces. The joint silicosis prevention effort included a National Conference to Eliminate Silicosis in Washington, DC, in March of 1997, which brought together approximately 650 participants from labor, business, government, and the health and safety professions to exchange ideas and share solutions regarding the goal of eliminating silicosis (*see https://industrydocuments.library.ucsf.edu/documentstore/s/h/d/p//shdp0052/shdp0052.pdf*).

In 1997, OSHA announced in its Unified Agenda under Long-Term Actions that it planned to publish a proposed rule on crystalline silica

> . . . because the agency has concluded that there will be no significant progress in the prevention of silica-related diseases without the adoption of a full and comprehensive silica standard, including provisions for product substitution, engineering controls, training and education, respiratory protection and medical screening and surveillance. A full standard will improve worker protection, ensure adequate prevention programs, and further reduce silica-related diseases (62 FR 57755, 57758 (10/29/97)).

In November 1998, OSHA moved ''Occupational Exposure to Crystalline Silica'' to the pre-rule stage in the Regulatory Plan (63 FR 61284, 61303–61304 (11/9/98)). OSHA held a series of stakeholder meetings in 1999 and 2000 to get input on the rulemaking. Stakeholder meetings for all industry sectors were held in Washington, Chicago, and San Francisco. A separate stakeholder meeting for the construction sector was held in Atlanta.

OSHA initiated Small Business Regulatory Enforcement Fairness Act (SBREFA) proceedings in 2003, seeking the advice of small business representatives on the proposed rule (68 FR 30583, 30584 (5/27/03)). The SBREFA panel, including representatives from OSHA, the Small Business Administration's Office of Advocacy, and the Office of Management and Budget (OMB), was

convened on October 20, 2003. The panel conferred with small entity representatives (SERs) from general industry, maritime, and construction on November 10 and 12, 2003, and delivered its final report, which included comments from the SERs and recommendations to OSHA for the proposed rule, to OSHA's Assistant Secretary on December 19, 2003 (Document ID 0937).

In 2003, OSHA examined enforcement data for the years 1997 to 2002 and identified high rates of noncompliance with the OSHA respirable crystalline silica PELs, particularly in construction. This period covers the first five years of the SEP. These enforcement data, presented in Table III–1, indicate that 24 percent of silica samples from the construction industry and 13 percent from general industry were at least three times the then-existing OSHA PELs. The data indicate that 66 percent of the silica samples obtained during inspections in general industry were in compliance with the PEL, while only 58 percent of the samples collected in construction were in compliance.

Table III-1 Time-Weighted Average (TWA) Exposures to Respirable Crystalline Silica Samples for Construction and General Industry (January 1, 1997 –December 31, 2002)

Exposure (severity relative to the PEL)	Construction		Other than construction	
	No. of samples	Percent	No. of samples	Percent
<1 PEL	424	58%	2226	66%
1 x PEL to < 2 x PEL	86	12%	469	14%
2 x PEL to < 3 x PEL	48	6%	215	6%
≥ 3 x PEL and higher(3+)	180	24%	453	13%
Total # of samples	738		3363

In an effort to expand the 1996 SEP, on January 24, 2008, OSHA implemented a National Emphasis Program (NEP) to identify and reduce or eliminate the health hazards associated with occupational exposure to crystalline silica (CPL–03–007 (1/24/08)). The NEP targeted worksites with elevated exposures to crystalline silica and included new program evaluation procedures designed to ensure that the goals of the NEP were measured as accurately as possible, detailed procedures for conducting inspections, updated information for selecting sites for inspection, development of outreach programs by each Regional and Area Office emphasizing the formation of voluntary partnerships to share information, and guidance on calculating PELs in construction and shipyards. In each OSHA Region, at least two percent of inspections every year are silica-related inspections. Additionally, the silica-related inspections are conducted at a range of facilities reasonably representing the distribution of general industry and construction work sites in that region.

A more recent analysis of OSHA enforcement data from January 2003 to December 2009 (covering the period of continued implementation of the SEP and the first two years of the NEP) shows that considerable noncompliance with the then-existing PELs continued to occur. These enforcement data, presented in Table III–2, indicate that 14 percent of silica samples from the construction industry and 19 percent for general industry were at least three times the OSHA PEL during this period. The data indicate that 70 percent of the silica samples obtained during inspections in general industry were in compliance with the PEL, and 75 percent of the samples collected in construction were in compliance.

Table III-2 Time-Weighted Average (TWA) Exposures to Respirable Crystalline Silica Samples for Construction and General Industry (January 1, 2003 –December 31, 2009)

Exposure (severity relative to the PEL)	Construction		Other than construction	
	No. of samples	Percent	No. of samples	Percent
<1 PEL	548	75%	948	70%
1 x PEL to < 2 x PEL	49	7%	107	8%
2 x PEL to < 3 x PEL	32	4%	46	3%
≥ 3 x PEL and higher(3+)	103	14%	254	19%

Source: OSHA Integrated Management Information System

Both industry and worker groups have recognized that a comprehensive standard is needed to protect workers exposed to respirable crystalline silica. For example, ASTM International (originally known as the American Society for Testing and Materials) has published voluntary consensus standards for addressing the hazards of crystalline silica, and the Building and Construction Trades Department, AFL–CIO also has recommended a comprehensive program standard. These recommended standards include provisions for methods of compliance, exposure monitoring, training, and medical surveillance. The National Industrial Sand Association has also developed an occupational exposure program for crystalline silica that addresses exposure assessment and medical surveillance.

Throughout the crystalline silica rulemaking process, OSHA has presented information to, and consulted with, ACCSH and the Maritime Advisory Committee on Occupational Safety and Health. In December of 2009, OSHA representatives met with ACCSH to discuss the rulemaking and receive their comments and recommendations. On December 11, 2009, ACCSH passed motions supporting the concept of Table 1 in the draft proposed construction rule, recognizing that the controls listed in Table 1 are effective. As discussed with regard to paragraph (f) of the proposed standard for construction (paragraph (c) of the final standard for construction), Table 1 presents specified control measures for selected construction tasks. ACCSH also recommended that OSHA maintain the protective clothing provision found in the SBREFA panel draft regulatory text and restore the ''competent person'' requirement and responsibilities to the proposed rule. Additionally, the group recommended that OSHA move forward expeditiously with the rulemaking process.

In January 2010, OSHA completed a peer review of the draft Health Effects Analysis and Preliminary Quantitative Risk Assessment following procedures set forth by OMB in the Final Information Quality Bulletin for Peer Review, published on the OMB Web site on December 16, 2004 (*see* 70 FR 2664 (1/14/05)). Each peer reviewer submitted a written report to OSHA. The Agency revised its draft documents as appropriate and made the revised documents available to the public as part of its Notice of Proposed Rulemaking (NPRM). OSHA also made the written charge to the peer reviewers, the peer reviewers' names, the peer reviewers' reports, and the Agency's response to the peer reviewers' reports publicly available with publication of the proposed rule (Document ID 1711; 1716). Five of the seven original peer reviewers submitted post-hearing reports, commenting on OSHA's disposition of their original peer review comments in the proposed rule, as well as commenting on written and oral testimony presented at the silica hearing (Document ID 3574).

On August 23, 2013, OSHA posted its NPRM for respirable crystalline silica on its Web site and requested comments on the proposed rule. On September 12, 2013, OSHA published the NPRM in the **Federal Register** (78 FR 56273 (9/12/13)). In the NPRM, the Agency made a preliminary determination that employees exposed to respirable crystalline silica at the current PELs face a significant risk to their health and that promulgating the proposed standards would substantially reduce that risk. The NPRM required commenters to submit their comments by December 11, 2013. In response to stakeholder requests, OSHA extended the comment period until January 27, 2014 (78 FR 65242 (10/31/13)). On January 14, 2014, OSHA held a web chat to provide small businesses and other stakeholders an additional opportunity to obtain information from the Agency about the proposed rule. Subsequently, OSHA further extended the comment period to February 11, 2014 (79 FR 4641 (1/29/14)).

As part of the instructions for submitting comments, OSHA requested (but did not require) that parties submitting technical or scientific studies or research results and those submitting comments or testimony on the Agency's analyses disclose the nature of financial relationships with (*e.g.,* consulting agreement), and extent of review by, parties interested in or

affected by the rulemaking (78 FR 56274). Parties submitting studies or research results were also asked to disclose sources of funding and sponsorship for their research. OSHA intended for the disclosure of such information to promote the transparency and scientific integrity of evidence submitted to the record and stated that the request was consistent with Executive Order 13563.

The Agency received several comments related to this request. For example, an industrial hygiene engineer supported the disclosure of potential conflict of interest information (Document ID 2278, p. 5). Other commenters, such as congressional representatives and industry associations, opposed the request, asserting that it could lead to prejudgment or questioning of integrity, in addition to dissuading participation in the rulemaking; some also questioned the legality of such a request or OSHA's interpretation of Executive Order 13563 (*e.g.,* Document ID 1811, p. 2; 2101, pp. 2–3). A number of stakeholders from academia and industry submitted information related to the request for funding, sponsorships, and review by interested parties (*e.g.,* Document ID 1766, p. 1; 2004, p. 2; 2211, p. 2; 2195, p. 17). OSHA emphasizes that it reviewed and considered all evidence submitted to the record.

An informal public hearing on the proposed standards was held in Washington, DC from March 18 through April 4, 2014. Administrative Law Judges Daniel F. Solomon and Stephen L. Purcell presided over the hearing. The Agency heard testimony from over 200 stakeholders representing more than 70 organizations, such as public health groups, trade associations, and labor unions. Chief Administrative Law Judge Stephen L. Purcell closed the public hearing on April 4, 2014, allowing 45 days—until May 19, 2014—for participants who filed a notice of intention to appear at the hearings to submit additional evidence and data, and an additional 45 days—until July 3, 2014—to submit final briefs, arguments, and summations (Document ID 3589, Tr. 4415–4416). After the hearing concluded, OSHA extended the deadline to give those participants who filed a notice of intention to appear at the hearings until June 3, 2014 to submit additional information and data to the record, and until July 18, 2014 to submit final briefs and arguments (Document ID 3569). Based upon requests from stakeholders, the second deadline was extended, and parties who filed a notice of intention to appear at the hearing were given until August 18, 2014, to submit their final briefs and arguments (Document ID 4192).

OSHA provided the public with multiple opportunities to participate in the rulemaking process, including stakeholder meetings, the SBREFA panel, two comment periods (pre- and post-hearing), and a 14-day public hearing. Commenters were provided more than five months to comment on the rule before the hearing, and nearly as long to submit additional information, final briefs, and arguments after the hearing. OSHA received more than 2,000 comments on the silica NPRM during the entire pre-and post-hearing public participation period. In OSHA's view, therefore, the public was given sufficient opportunities and ample time to fully participate in this rulemaking.

The final rule on occupational exposure to respirable crystalline silica is based on consideration of the entire record of this rulemaking proceeding, including materials discussed or relied upon in the proposal, the record of the hearing, and all written comments and exhibits timely received. Thus, in promulgating this final rule, OSHA considered all comments in the record, including those that suggested that OSHA withdraw its proposal and merely enforce the existing silica standards, as well as those that argued the proposed rule was not protective enough. Based on this comprehensive record, OSHA concludes that employees exposed to respirable crystalline silica are at significant risk of developing silicosis and other non-malignant respiratory disease, lung cancer, kidney effects, and immune system effects. The Agency concludes that the PEL of 50 $\mu g/m^3$ reduces the significant risks of material impairments of health posed to workers by occupational exposure to respirable crystalline silica to the maximum extent that is technologically and economically feasible. OSHA's substantive determinations with regard to the comments, testimony, and other information in the record, the legal standards governing the decision-making process, and the Agency's analysis of the data resulting in its assessments of risks, benefits, technological and economic feasibility, and compliance costs are discussed elsewhere in this preamble.

IV. Chemical Properties and Industrial Uses

Silica is a compound composed of the elements silicon and oxygen (chemical formula SiO_2). Silica has a molecular weight of 60.08, and exists in crystalline and amorphous states, both in the natural environment and as produced during manufacturing or other processes. These substances are odorless solids, have no vapor pressure, and create non-explosive dusts when particles are suspended in air (Document ID 3637, pp. 1–3).

Silica is classified as part of the ''silicate'' class of minerals, which includes compounds that are composed of silicon and oxygen and which may also be bonded to metal ions or their oxides. The basic structural units of silicates are silicon tetrahedrons (SiO_4), pyramidal structures with four triangular sides where a silicon atom is located in the center of the structure and an oxygen atom is located at each of the four corners. When silica tetrahedrons bond exclusively with other silica tetrahedrons, each oxygen atom is bonded to the silicon atom of its original ion, as well as to the silicon atom from another silica ion. This results in a ratio of one atom of silicon to two atoms of oxygen, expressed as SiO_2. The silicon-oxygen bonds within the tetrahedrons use only one-half of each oxygen's total bonding energy. This leaves negatively charged oxygen ions available to bond with available positively charged ions. When they bond with metal and metal oxides, commonly of iron, magnesium, aluminum, sodium, potassium, and calcium, they form the silicate minerals commonly found in nature (Document ID 1334, p. 7).

In crystalline silica, the silicon and oxygen atoms are arranged in a three-dimensional repeating pattern. Silica is said to be polymorphic, as different forms are created when the silica tetrahedrons combine in different crystalline structures. The primary forms of crystalline silica are quartz, cristobalite, and tridymite. In an amorphous state, silicon and oxygen atoms are present in the same proportions but are not organized in a repeating pattern. Amorphous silica includes natural and manufactured glasses (vitreous and fused silica, quartz glass), biogenic silica, and opals, which are amorphous silica hydrates (Document ID 2258, Attachment 8, pp. 45–50).

Quartz is the most common form of crystalline silica and accounts for almost 12% by volume of the earth's crust. Alpha quartz, the quartz form that is stable below 573 °C, is the most prevalent form of crystalline silica found in the workplace. It accounts for the overwhelming majority of naturally found silica and is present in varying amounts in almost every type of mineral. Alpha quartz is found in igneous, sedimentary, and metamorphic rock, and all soils contain at least a trace amount of quartz (Document ID 1334, p.

9). Alpha quartz is used in many products throughout various industries and is a common component of building materials (Document ID 1334, pp. 11–15). Common trade names for commercially available quartz include: CSQZ, DQ 12, Min-U-Sil, Sil-Co-Sil, Snowit, Sykron F300, and Sykron F600 (Document ID 2258, Attachment 8, p. 43).

Cristobalite is a form of crystalline silica that is formed at high temperatures (≤1470 °C). Although naturally occurring cristobalite is relatively rare, volcanic eruptions, such as Mount St. Helens, can release cristobalite dust into the air. Cristobalite can also be created during some processes conducted in the workplace. For example, flux-calcined diatomaceous earth is a material used as a filtering aid and as a filler in other products (Document ID 2258, Attachment 8, p. 44). It is produced when diatomaceous earth (diatomite), a geological product of decayed unicellular organisms called diatoms, is heated with flux. The finished product can contain between 40 and 60 percent cristobalite. Also, high temperature furnaces are often lined with bricks that contain quartz. When subjected to prolonged high temperatures, this quartz can convert to cristobalite.

Tridymite is another material formed at high temperatures (≤870 °C) that is associated with volcanic activity. The creation of tridymite requires the presence of a flux such as sodium oxide. Tridymite is rarely found in nature and rarely reported in the workplace (Document ID 1424 pp. 5, 14).

When heated or cooled sufficiently, crystalline silica can transition between the polymorphic forms, with specific transitions occurring at different temperatures. At higher temperatures the linkages between the silica tetrahedrons break and reform, resulting in new crystalline structures. Quartz converts to cristobalite at 1470 °C, and at 1723 °C cristobalite loses its crystalline structure and becomes amorphous fused silica. These high temperature transitions reverse themselves at extremely slow rates, with different forms co-existing for a long time after the crystal cools (Document ID 2258, Attachment 8, p. 47).

Other types of transitions occur at lower temperatures when the silica-oxygen bonds in the silica tetrahedron rotate or stretch, resulting in a new crystalline structure. These low-temperature, or alpha to beta, transitions are readily and rapidly reversed as the crystal cools. At temperatures encountered by workers, only the alpha form of crystalline silica exists (Document ID 2258, Attachment 8, pp. 46–48).

Crystalline silica minerals produce distinct X-ray diffraction patterns, specific to their crystalline structure. The patterns can be used to distinguish the crystalline polymorphs from each other and from amorphous silica (Document ID 2258, Attachment 8, p. 45).

The specific gravity and melting point of silica vary between polymorphs. Silica is insoluble in water at 20 °C and in most acids, but its solubility increases with higher temperatures and pH, and it dissolves readily in hydrofluoric acid. Solubility is also affected by the presence of trace metals and by particle size. Under humid conditions water vapor in the air reacts with the surface of silica particles to form an external layer of silinols (SiOH). When these silinols are present the crystalline silica becomes more hydrophilic. Heating or acid washing reduces the amount of silinols on the surface area of crystalline silica particles. There is an external amorphous layer found in aged quartz, called the Beilby layer, which is not found on freshly cut quartz. This amorphous layer is more water soluble than the underlying crystalline core. Etching with hydrofluoric acid removes the Beilby layer as well as the principal metal impurities on quartz (Document ID 2258, Attachment 8, pp. 44–49).

Crystalline silica has limited chemical reactivity. It reacts with alkaline aqueous solutions, but does not readily react with most acids, with the exception of hydrofluoric acid. In contrast, amorphous silica and most silicates react with most mineral acids and alkaline solutions. Analytical chemists relied on this difference in acid reactivity to develop the silica point count analytical method that was widely used prior to the current X-ray diffraction and infrared methods (Document ID 2258, Attachment 8, pp. 48–51; 1355, p. 994).

Crystalline silica is used in industry in a wide variety of applications. Sand and gravel are used in road building and concrete construction. Sand with greater than 98% silica is used in the manufacture of glass and ceramics. Silica sand is used to form molds for metal castings in foundries, and in abrasive blasting operations. Silica is also used as a filler in plastics, rubber, and paint, and as an abrasive in soaps and scouring cleansers. Silica sand is used to filter impurities from municipal water and sewage treatment plants, and in hydraulic fracturing for oil and gas recovery (Document ID 1334, p. 11). Silica is also used to manufacture artificial stone products used as bathroom and kitchen countertops, and the silica content in those products can exceed 85 percent (Document ID 1477, pp. 3 and 11; 2178, Attachment 5, p. 420).

There are over 30 major industries and operations where exposures to crystalline silica can occur. They include such diverse workplaces as foundries, dental laboratories, concrete products and paint and coating manufacture, as well as construction activities including masonry cutting, drilling, grinding and tuckpointing, and use of heavy equipment during demolition activities involving silica-containing materials. A more detailed discussion of the industries affected by the proposed standard is presented in Section VII, Summary of the Final Economic Analysis and Final Regulatory Flexibility Analysis. Crystalline silica exposures can also occur in mining (which is under the jurisdiction of the Mine Safety and Health Administration), and in agriculture during plowing and harvesting.

V. Health Effects

A. Introduction

As discussed more thoroughly in Section II of this preamble, Pertinent Legal Authority, section 6(b)(5) of the Occupational Safety and Health Act (OSH Act or Act) requires the Secretary of Labor, in promulgating standards dealing with toxic materials or harmful physical agents, to ''set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer material impairment of health or functional capacity even if such employee has regular exposure to the hazard dealt with by such standard for the period of his working life'' (29 U.S.C. 655). Thus, in order to set a new health standard, the Secretary must determine that there is a significant risk of material impairment of health at the existing PEL and that issuance of a new standard will significantly reduce or eliminate that risk.

The Secretary's significant risk and material impairment determinations must be made ''on the basis of the best available evidence'' (29 U.S.C. 655(b)(5)). Although the Supreme Court, in its decision on OSHA's Benzene standard, explained that OSHA must look to ''a body of reputable scientific thought'' in making its material harm and significant risk determinations, the Court added that a reviewing court must ''give OSHA some leeway where its findings must be made on the frontiers

of scientific knowledge'' (*Indus. Union Dep't, AFL–CIO* v. *Am. Petroleum Inst.,* 448 U.S. 607, 656 (1980) (plurality opinion) (''*Benzene*'')). Thus, while OSHA's significant risk determination must be supported by substantial evidence, the Agency ''is not required to support the finding that a significant risk exists with anything approaching scientific certainty'' (*Benzene*, 448 U.S. at 656).

This section provides an overview of OSHA's material harm and significant risk determinations: (1) Summarizing OSHA's preliminary methods and findings from the proposal; (2) addressing public comments dealing with OSHA's evaluation of the scientific literature and methods used to estimate quantitative risk; and (3) presenting OSHA's final conclusions, with consideration of the rulemaking record, on the health effects and quantitative risk estimates associated with worker exposure to respirable crystalline silica. The quantitative risk estimates and significance of those risks are then discussed in detail in Section VI, Final Quantitative Risk Assessment and Significance of Risk.

B. Summary of Health and Risk Findings

As discussed in detail throughout this section and in Section VI, Final Quantitative Risk Assessment and Significance of Risk, OSHA finds, based upon the best available evidence in the published, peer-reviewed scientific literature, that exposure to respirable crystalline silica increases the risk of silicosis, lung cancer, other non-malignant respiratory disease (NMRD), and renal and autoimmune effects. In its Preliminary Quantitative Risk Assessment (QRA), OSHA used the best available exposure-response data from epidemiological studies to estimate quantitative risks. After carefully reviewing stakeholder comments on the Preliminary QRA and new information provided to the rulemaking record, OSHA finds there to be a clearly significant risk at the previous PELs for respirable crystalline silica (equivalent to approximately 100 μg/m^3 for general industry and between 250 and 500 μg/m^3 for construction/shipyards), with excess lifetime risk estimates for lung cancer mortality, silicosis mortality, and NMRD mortality each being much greater than 1 death per 1,000 workers exposed for a working life of 45 years. Cumulative risk estimates for silicosis morbidity are also well above 1 case per 1,000 workers exposed at the previous PELs. At the revised PEL of 50 μg/m^3 respirable crystalline silica, these estimated risks are substantially reduced. Thus, OSHA concludes that the new PEL of 50 μg/m^3 provides a large reduction in the lifetime and cumulative risk posed to workers exposed to respirable crystalline silica.

These findings and conclusions are consistent with those of the World Health Organization's International Agency for Research on Cancer (IARC), the U.S. Department of Health and Human Services' (HHS) National Toxicology Program (NTP), the National Institute for Occupational Safety and Health (NIOSH), and many other organizations and individuals, as evidenced in the rulemaking record and further discussed below. Many other scientific organizations and governments have recognized the strong body of scientific evidence pointing to the health risks of respirable crystalline silica and have deemed it necessary to take action to reduce those risks. As far back as 1974, NIOSH recommended that the exposure limit for crystalline silica be reduced to 50 μg/m^3 (Document ID 2177b, p. 2). In 2000, the American Conference of Governmental Industrial Hygienists (ACGIH), a professional society that has recommended workplace exposure limits for six decades, revised their Threshold Limit Value (TLV) for respirable crystalline silica to 50 μg/m^3 and has since further lowered its TLV for respirable crystalline silica to 25 μg/m^3. OSHA is setting its revised PEL at 50 μg/m^3 based on consideration of the body of evidence describing the health risks of crystalline silica as well as on technological feasibility considerations, as discussed in Section VII of this preamble and Chapter IV of the Final Economic Analysis and Final Regulatory Flexibility Analysis (FEA).

To reach these conclusions, OSHA performed an extensive search and review of the peer-reviewed scientific literature on the health effects of inhalation exposure to crystalline silica, particularly silicosis, lung cancer, other NMRD, and renal and autoimmune effects (Document ID 1711, pp. 7–265). Based upon this review, OSHA preliminarily determined that there was substantial evidence that exposure to respirable crystalline silica increases the risk of silicosis, lung cancer, NMRD, and renal and autoimmune effects (Document ID 1711, pp. 164, 181–208, 229). OSHA also found there to be suitable exposure-response data from many well-conducted epidemiological studies that permitted the Agency to estimate quantitative risks for lung cancer mortality, silicosis and NMRD mortality, renal disease mortality, and silicosis morbidity (Document ID 1711, p. 266).

As part of the preliminary quantitative risk assessment, OSHA calculated estimates of the risk of silica-related diseases assuming exposure over a working life (45 years) to 25, 50, 100, 250, and 500 μg/m^3 respirable crystalline silica (corresponding to cumulative exposures over 45 years to 1.125, 2.25, 4.5, 11.25, and 22.5 mg/m^3-yrs) (*see Bldg & Constr. Trades Dep't* v. *Brock*, 838 F.2d 1258, 1264–65 (D.C. Cir. 1988) approving OSHA's policy of using 45 years for the working life of an employee in setting a toxic substance standard). To estimate lifetime excess mortality risks at these exposure levels, OSHA used, for each key study, the exposure-response risk model(s) and regression coefficient from the model(s) in a life table analysis that accounted for competing causes of death due to background causes and cumulated risk through age 85 (Document ID 1711, pp. 360–378). For these analyses, OSHA used lung cancer, NMRD, or renal disease mortality and all-cause mortality rates to account for background risks and competing risks (U.S. 2006 data for lung cancer and NMRD mortality in all males, 1998 data for renal disease mortality, obtained from cause-specific death rate tables published by the National Center for Health Statistics (2009, Document ID 1104)). The mortality risk estimates were presented in terms of lifetime excess risk per 1,000 workers for exposure over an 8-hour working day, 250 days per year, and a 45-year working lifetime. For silicosis morbidity, OSHA based its risk estimates on the cumulative risk model(s) used in each study to develop quantitative exposure-response relationships. These models characterized the risk of developing silicosis, as detected by chest radiography, up to the time that cohort members, including both active and retired workers, were last examined (78 FR 56273, 56312 (9/12/13)).

OSHA then combined its review of the health effects literature and preliminary quantitative risk assessment into a draft document, entitled ''Occupational Exposure to Respirable Crystalline Silica—Review of Health Effects Literature and Preliminary Quantitative Risk Assessment,'' and submitted it to a panel of scientific experts [2] for independent peer review,

[2] OSHA's contractor, Eastern Research Group, Inc. (ERG), conducted a search for nationally recognized experts in occupational epidemiology, biostatistics and risk assessment, animal and cellular toxicology, and occupational medicine who had no actual or apparent conflict of interest. ERG chose seven of the applicants to be peer reviewers based on their qualifications and the necessity of ensuring a broad and diverse panel in terms of scientific and

in accordance with the Office of Management and Budget's (OMB) ''Final Information Quality Bulletin for Peer Review'' (Document ID 1336). The peer reviewers reviewed OSHA's draft Review of Health Effects Literature and Preliminary QRA. The peer-review panel responded to nearly 20 charge questions from OSHA and commented on various aspects of OSHA's analysis (Document ID 1716).

Overall, the peer reviewers found that OSHA was very thorough in its review of the literature and was reasonable in its interpretation of the studies with regards to the various endpoints examined, such that the Agency's conclusions on health effects were generally well founded (Document ID 1711, p. 381). The reviewers had various comments on OSHA's draft Preliminary QRA (Document ID 1716, pp. 107–218). OSHA provided a response to each comment in the Review of Health Effects Literature and Preliminary QRA and, where appropriate, made revisions (Document ID 1711, pp. 381–399). The Agency then placed the Review of Health Effects Literature and Preliminary QRA into the rulemaking docket as a background document (Document ID 1711). With the publication of the Notice of Proposed Rulemaking (78 FR 56723 on 9/12/13), all aspects of the Review of Health Effects Literature and Preliminary QRA were open for public comment.

Following the publication of the proposed rule (78 FR 56273 (9/12/13)) and accompanying revised Review of Health Effects Literature and Preliminary QRA (Document ID 1711), the peer reviewers were invited to review the revised analysis, examine the written comments in the docket, and attend the public hearing to listen to oral testimony as it applied to the health effects and quantitative risk assessment. Five peer reviewers were available and attended. In their final comments, provided to OSHA following the hearings, all five peer reviewers indicated that OSHA had adequately addressed their original comments (Document ID 3574). The peer reviewers also offered additional comments on concerns raised during the hearing. Many of the reviewers commented on the difficulty of evaluating exposure-response thresholds, and responded to public comments regarding causation and other specific issues (Document ID 3574). OSHA has incorporated many of the peer reviewers' additional comments into its risk assessment discussion in the preamble. Thus, OSHA believes that the external, independent peer-review process supports and lends legitimacy to its risk assessment methods and findings.

OSHA also received substantial public comment and testimony from a wide variety of stakeholders supporting its Review of Health Effects Literature and Preliminary QRA. In general, supportive comments and testimony were received from NIOSH (Document ID 2177; 3998; 4233), the public health and medical community, labor unions, affected workers, private citizens, and others.

Regarding health effects, NIOSH commented that the adverse health effects of exposure to respirable crystalline silica are ''well-known, long lasting, and preventable'' (Document ID 2177b, p. 2). Darius Sivin, Ph.D., of the UAW, commented, ''[o]ccupational exposure to silica has been recognized for centuries as a serious workplace hazard'' (Document ID 2282, Attachment 3, p. 4). Similarly, David Goldsmith, Ph.D., testified:

> There have been literally thousands of research studies on exposure to crystalline silica in the past 30 years. Almost every study tells the occupational research community that workers need better protection to prevent severe chronic respiratory diseases, including lung cancer and other diseases in the future. What OSHA is proposing to do in revising the workplace standard for silica seems to be a rational response to the accumulation of published evidence (Document ID 3577, Tr. 865–866).

Franklin Mirer, Ph.D., CIH, Professor of Environmental and Occupational Health at CUNY School of Public Health, on behalf of the American Federation of Labor and Congress of Industrial Organizations (AFL–CIO), reiterated that silica ''is a clear and present danger to workers health at exposure levels prevailing now in a large number of industries. Workers are at significant risk for mortality and illnesses including lung cancer and non-malignant respiratory disease including COPD, and silicosis'' (Document ID 2256, Attachment 3, p. 3). The AFL–CIO also noted that there is ''overwhelming evidence in the record that exposure to respirable crystalline silica poses a significant health risk to workers'' (Document ID 4204, p. 11). The Building and Construction Trades Department, AFL–CIO, further commented that the rulemaking record ''clearly supports OSHA's risk determination'' (Document ID 4223, p. 2). Likewise, the Sorptive Minerals Institute, a national trade association, commented, ''It is beyond dispute that OSHA has correctly determined that industrial exposure to certain types of silica can cause extremely serious, sometimes even fatal disease. In the massive rulemaking docket being compiled by the Agency, credible claims to the contrary are sparse to non-existent'' (Document ID 4230, p. 8). OSHA also received numerous comments supportive of the revised standard from affected workers and citizens (*e.g.,* Document ID 1724, 1726, 1731, 1752, 1756, 1759, 1762, 1764, 1787, 1798, 1800, 1802).

Regarding OSHA's literature review for its quantitative risk assessment, the American Public Health Association (APHA) and the National Consumers League (NCL) commented, ''OSHA has thoroughly reviewed and evaluated the peer-reviewed literature on the health effects associated with exposure to respirable crystalline silica. OSHA's quantitative risk assessment is sound. The agency has relied on the best available evidence and acted appropriately in giving greater weight to those studies with the most robust designs and statistical analyses'' (Document ID 2178, Attachment 1, p. 1; 2373, p. 1).

Dr. Mirer, who has served on several National Academy of Sciences committees setting risk assessment guidelines, further commented that OSHA's risk analysis is ''scientifically correct, and consistent with the latest thinking on risk assessment,'' (Document ID 2256, Attachment 3, p. 3), citing the National Academies' National Research Council's *Science and Decisions: Advancing Risk Assessment* (Document ID 4052), which makes technical recommendations on risk assessment and risk-based decision making (Document ID 3578, Tr. 935–936). In post-hearing comments expanding on this testimony, the AFL–CIO also noted that OSHA's risk assessment methodologies are transparent and consistent with practices recommended by the National Research Council in its publication, *Risk Assessment in the Federal Government: Managing the Process,* and with the Environmental Protection Agency's *Guidelines for Carcinogenic Risk Assessment* (Document ID 4204, p. 20). Similarly, Kyle Steenland, Ph.D., Professor in the Department of Environmental Health at Rollins School of Public Health, Emory University, one of the researchers on whose studies OSHA relied, testified that ''OSHA has

technical expertise (*see* Document ID 1711, pp. 379–381). The seven peer reviewers were: Bruce Allen, Bruce Allen Consulting; Kenneth Crump, Ph.D., Louisiana Tech University Foundation; Murray Finkelstein, MD, Ph.D., McMaster University, Ontario; Gary Ginsberg, Ph.D., Connecticut Department of Public Health; Brian Miller, Ph.D., Institute of Occupational Medicine (IOM) Consulting Ltd., Scotland; Andrew Salmon, Ph.D., private consultant; and Noah Seixas, Ph.D., University of Washington, Seattle (Document ID 1711, p. 380).

done a very capable job in conducting the summary of the literature and doing its own risk assessment'' (Document ID 3580, Tr. 1235). Collectively, these comments and testimony support OSHA's use of the best available evidence and methods to estimate quantitative risks of lung cancer mortality, silicosis and NMRD mortality, renal disease mortality, and silicosis morbidity from exposure to respirable crystalline silica.

Based on OSHA's Preliminary QRA, many commenters recognized that reducing the permissible exposure limit is necessary to reduce significant risks presented by exposure to respirable crystalline silica (Document ID 4204, pp. 11–12; 2080, p. 1; 2339, p. 2). For example, the AFL–CIO stated that ''OSHA based its proposal on more than adequate evidence, but more recent publications have described further the risk posed by silica exposure, and further justify the need for new silica standards'' (Document ID 4204, pp. 11–12). Similarly, the American Society of Safety Engineers (ASSE) remarked that ''[w]hile some may debate the science underlying the findings set forth in the proposed rule, overexposure to crystalline silica has been linked to occupational illness since the time of the ancient Greeks, and reduction of the current permissible exposure limit (PEL) to that recommended for years by the National Institute for Occupational Safety and Health (NIOSH) is long overdue'' (Document ID 2339, p. 2).

Not every commenter agreed, however, as OSHA also received critical comments and testimony from various employers and their representatives, as well as some organizations representing affected industries. In general, these comments were critical of the underlying studies on which OSHA relied for its quantitative risk assessment, or with the methods used by OSHA to estimate quantitative risks. Some commenters also presented additional studies for OSHA to consider. OSHA thoroughly reviewed these and did not find them adequate to alter OSHA's overall conclusions of health risk, as discussed in great detail in the sections that follow.

After considering the evidence and testimony in the record, as discussed below, OSHA affirms its approach to quantify health risks related to exposure to respirable crystalline silica and the Agency's preliminary conclusions. In the final risk assessment that is now presented as part of this final rule in Section VI, Final Quantitative Risk Assessment and Significance of Risk, OSHA concludes that there is a clearly significant risk at the previous PELs for respirable crystalline silica, with excess lifetime risk estimates for lung cancer mortality, silicosis mortality, and NMRD mortality each being much greater than 1 death per 1,000 workers as a result of exposure for 45 working years (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk). At the revised PEL of 50 $\mu g/m^3$ respirable crystalline silica, OSHA finds the estimated risks to be substantially reduced. Cumulative risk estimates for silicosis morbidity are also well above 1 case per 1,000 workers at the previous PELs, with a substantial reduction at the revised PEL (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1).

The health effects associated with silica exposure are well-established and supported by the record. Based on the record evidence, OSHA concludes that exposure to respirable crystalline silica causes silicosis and is the only known cause of silicosis. This causal relationship has long been accepted in the scientific and medical communities. In fact, the Department of Labor produced a video in 1938 featuring then Secretary of Labor Frances Perkins discussing the occurrence of silicosis among workers exposed to silica (*see https://www.osha.gov/silica/index.html*). Silicosis is a progressive disease induced by the inflammatory effects of respirable crystalline silica in the lung, which leads to lung damage and scarring and, in some cases, progresses to complications resulting in disability and death (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk). OSHA used a weight-of-evidence approach to evaluate the scientific studies in the literature to determine their overall quality and whether there is substantial evidence that exposure to respirable crystalline silica increases the risk of a particular health effect.

For lung cancer, OSHA reviewed the published, peer-reviewed scientific literature, including 60 epidemiological studies covering more than 30 occupational groups in over a dozen industrial sectors (*see* Document ID 1711, pp. 77–170). Based on this comprehensive review, and after considering the rulemaking record as a whole, OSHA concludes that the data provide ample evidence that exposure to respirable crystalline silica increases the risk of lung cancer among workers (*see* Document ID 1711, p. 164). OSHA's conclusion is consistent with that of IARC, which is the specialized cancer agency that is part of the World Health Organization and utilizes interdisciplinary (*e.g.,* biostatistics, epidemiology, and laboratory sciences) experts to comprehensively identify the causes of cancer. In 1997, IARC classified respirable crystalline silica dust, in the form of quartz or cristobalite, as Group 1, *i.e.,* ''carcinogenic to humans,'' following a thorough expert committee review of the peer-reviewed scientific literature (Document ID 2258, Attachment 8, p. 211). OSHA notes that IARC classifications and accompanying monographs are well recognized in the scientific community, having been described as ''the most comprehensive and respected collection of systematically evaluated agents in the field of cancer epidemiology'' (Demetriou *et al.,* 2012, Document ID 4131, p. 1273). For silica, IARC's overall finding was based on studies of nine occupational cohorts that it considered to be the least influenced by confounding factors (*see* Document ID 1711, p. 76). OSHA included these studies in its review, in addition to several other studies (Document ID 1711, pp. 77–170).

Since IARC's 1997 determination that respirable crystalline silica is a Group 1 carcinogen, the scientific community has reaffirmed the soundness of this finding. In March of 2009, 27 scientists from eight countries participated in an additional IARC review of the scientific literature and reaffirmed that respirable crystalline silica dust is a Group 1 human carcinogen (Document ID 1473, p. 396). Additionally, in 2000, the NTP, which is a widely-respected interagency program under HHS that evaluates chemicals for possible toxic effects on public health, also concluded that respirable crystalline silica is a known human carcinogen (Document ID 1164, p. 1).

For NMRD other than silicosis, based on its review of several studies and all subsequent record evidence, OSHA concludes that exposure to respirable crystalline silica increases the risk of emphysema, chronic bronchitis, and pulmonary function impairment (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, pp. 181–208). For renal disease, OSHA reviewed the epidemiological literature and finds that a number of epidemiological studies reported statistically significant associations between occupational exposure to silica dust and chronic renal disease, subclinical renal changes, end-stage renal disease morbidity, chronic renal disease mortality, and granulomatosis with polyangitis (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 228). For autoimmune effects, OSHA reviewed

epidemiological information in the record suggesting an association between respirable crystalline silica exposure and increased risk of systemic autoimmune diseases, including scleroderma, rheumatoid arthritis, and systemic lupus erythematosus (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 229). Therefore, OSHA concludes that there is substantial evidence that silica exposure increases the risks of renal and of autoimmune disease (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 229).

OSHA also finds there to be suitable exposure-response data from many well-conducted studies that permit the Agency to estimate quantitative risks for lung cancer mortality, silicosis and NMRD mortality, renal disease mortality, and silicosis morbidity (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 266). OSHA believes the exposure-response data in these studies collectively represent the best available evidence for use in estimating the quantitative risks related to silica exposure. For lung cancer mortality, OSHA relies upon a number of published studies that analyzed exposure-response relationships between respirable crystalline silica and lung cancer. These included studies of cohorts from several industry sectors: Diatomaceous earth workers (Rice *et al.,* 2001, Document ID 1118), Vermont granite workers (Attfield and Costello, 2004, Document ID 0285), North American industrial sand workers (Hughes *et al.,* 2001, Document ID 1060), and British coal miners (Miller and MacCalman, 2009, Document ID 1306). These studies are scientifically sound due to their sufficient size and adequate years of follow-up, sufficient quantitative exposure data, lack of serious confounding by exposure to other occupational carcinogens, consideration (for the most part) of potential confounding by smoking, and absence of any apparent selection bias (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 165). They all demonstrated positive, statistically significant exposure-response relationships between exposure to crystalline silica and lung cancer mortality. Also compelling was a pooled analysis (Steenland *et al.,* 2001a, Document ID 0452) of 10 occupational cohorts (with a total of 65,980 workers and 1,072 lung cancer deaths), which was also used as a basis for IARC's 2009 reaffirmation of respirable crystalline silica as a human carcinogen. This analysis by Steenland *et al.* found an overall positive exposure-response relationship between cumulative exposure to crystalline silica and lung cancer mortality (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, pp. 269–292). Based on these studies, OSHA estimates that the lifetime lung cancer mortality excess risk associated with 45 years of exposure to respirable crystalline silica ranges from 11 to 54 deaths per 1,000 workers at the previous general industry PEL of 100 μg/m^3 respirable crystalline silica, and 5 to 23 deaths per 1,000 workers at the revised PEL of 50 μg/m^3 respirable crystalline silica (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1). These estimates exceed by a substantial margin the one in a thousand benchmark that OSHA has generally applied to its health standards following the Supreme Court's *Benzene* decision (448 U.S. 607, 655 (1980)).

For silicosis and NMRD mortality, OSHA relies upon two published, peer-reviewed studies: A pooled analysis of silicosis mortality data from six epidemiological studies (Mannetje *et al.,* 2002b, Document ID 1089), and an exposure-response analysis of NMRD mortality among diatomaceous earth workers (Park *et al,* 2002, Document ID 0405) (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 292). The pooled analysis had a total of 18,634 subjects, 150 silicosis deaths, and 20 deaths from unspecified pneumoconiosis, and demonstrated an increasing mortality rate with silica exposure (Mannetje *et al.,* 2002b, Document ID 1089; *see also* 1711, pp. 292–295). To estimate the risks of silicosis mortality, OSHA used the model described by Mannetje *et al.* but used rate ratios that were estimated from a sensitivity analysis conducted by ToxaChemica, Inc. that was expected to better control for age and exposure measurement uncertainty (2004, Document ID 0469; 1711, p. 295). OSHA's estimate of lifetime silicosis mortality risk is 11 deaths per 1,000 workers at the previous general industry PEL, and 7 deaths per 1,000 workers at the revised PEL (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1).

The NMRD analysis by Park *et al.* (2002, Document 0405) included pneumoconiosis (including silicosis), chronic bronchitis, and emphysema, since silicosis is a cause of death that is often misclassified as emphysema or chronic bronchitis (*see* Document ID 1711, p. 295). Positive exposure-response relationships were found between exposure to crystalline silica and excess risk for NMRD mortality (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, pp. 204–206, 295–297). OSHA's estimate of excess lifetime NMRD mortality risk, calculated using the results from Park *et al.,* is 85 deaths per 1,000 workers at the previous general industry PEL of 100 μg/m^3 respirable crystalline silica, and 44 deaths per 1,000 workers at the revised PEL (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1).[3]

For renal disease mortality, Steenland *et al.* (2002a, Document ID 0448) conducted a pooled analysis of three cohorts (with a total of 13,382 workers) that found a positive exposure-response relationship for both multiple-cause mortality (*i.e.,* any mention of renal disease on the death certificate) and underlying cause mortality. OSHA used the Steenland *et al.* (2002a, Document ID 0448) pooled analysis to estimate risks, given its large number of workers from cohorts with sufficient exposure data (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, pp. 314–315). OSHA's analysis for renal disease mortality shows estimated lifetime excess risk of 39 deaths per 1,000 workers at the previous general industry PEL of 100 μg/m^3 respirable crystalline silica, and 32 deaths per 1,000 workers exposed at the revised PEL of 50 μg/m^3 (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1). OSHA acknowledges, however, that there are considerably less data for renal disease mortality, and thus the findings based on them are less robust than those for silicosis, lung cancer, and NMRD mortality (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 229). For autoimmune disease, there were no quantitative exposure-response data available for a quantitative risk assessment (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 229).

[3] The risk estimates for silicosis and NMRD are not directly comparable, as the endpoint for the NMRD analysis (Park *et al.,* 2002, Document ID 0405) was death from all non-cancer lung diseases, including silicosis, pneumoconiosis, emphysema, and chronic bronchitis, whereas the endpoint for the silicosis analysis (Mannetje *et al.,* 2002b, Document ID 1089) was deaths coded as silicosis or other pneumoconiosis only (Document ID 1711, pp. 297–298).

For silicosis morbidity, OSHA reviewed the principal studies available in the scientific literature that have characterized the risk to exposed workers of acquiring silicosis, as detected by the appearance of opacities on chest radiographs (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, p. 357). The most reliable estimates of silicosis morbidity came from five studies that evaluated radiographs over time, including after workers left employment: The U.S. gold miner cohort studied by Steenland and Brown (1995b, Document ID 0451); the Scottish coal miner cohort studied by Buchanan *et al.* (2003, Document ID 0306); the Chinese tin mining cohort studied by Chen *et al.* (2001, Document ID 0332); the Chinese tin, tungsten, and pottery worker cohorts studied by Chen *et al.* (2005, Document ID 0985); and the South African gold miner cohort studied by Hnizdo and Sluis-Cremer (1993, Document ID 1052) (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk; Document ID 1711, pp. 316–343). These studies demonstrated positive exposure-response relationships between exposure to crystalline silica and silicosis risk. Based on the results of these studies, OSHA estimates a cumulative risk for silicosis morbidity of between 60 and 773 cases per 1,000 workers for a 45-year exposure to the previous general industry PEL of 100 μg/m^3 respirable crystalline silica depending upon the study used, and between 20 and 170 cases per 1,000 workers exposed at the new PEL of 50 μg/m^3 depending upon the study used (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk, Table VI–1). Thus, like OSHA's risk estimates for other health endpoints, the risk is substantially lower, though still significant, at the revised PEL.

In conclusion, OSHA finds, based on the best available evidence and methods to estimate quantitative risks of disease resulting from exposure to respirable crystalline silica, that there are significant risks of material health impairment at the former PELs for respirable crystalline silica, which would be substantially reduced (but not entirely eliminated) at the new PEL of 50 μg/m^3. In meeting its legal burden to estimate the health risks posed by respirable crystalline silica, OSHA has used the best available evidence and methods to estimate quantitative risks of disease resulting from exposure to respirable crystalline silica. As a result, the Agency finds that the lifetime excess mortality risks (for lung cancer, NMRD and silicosis, and renal disease) and cumulative risk (silicosis morbidity) posed to workers exposed to respirable crystalline silica over a working life represent significant risks that warrant mitigation, and that these risks will be substantially reduced at the revised PEL of 50 μg/m^3 respirable crystalline silica.

C. Summary of the Review of Health Effects Literature and Preliminary QRA

As noted above, a wide variety of stakeholders offered comments and testimony in this rulemaking on issues related to health and risk. Many of these comments were submitted in response to OSHA's preliminary risk and material impairment determinations, which were presented in two background documents, entitled ''Occupational Exposure to Respirable Crystalline Silica—Review of Health Effects Literature and Preliminary Quantitative Risk Assessment'' (Document ID 1711) and ''Supplemental Literature Review of Epidemiological Studies on Lung Cancer Associated with Exposure to Respirable Crystalline Silica'' (Document ID 1711, Attachment 1), and summarized in the proposal in Section V, Health Effects Summary, and Section VI, Summary of OSHA's Preliminary Quantitative Risk Assessment.

In this subsection, OSHA summarizes the major findings of the two background documents. The Agency intends for this subsection to provide the detailed background necessary to fully understand stakeholders' comments and OSHA's responses.

1. Background

As noted above, OSHA's Review and Supplemental Review of Health Effects Literature and Preliminary Quantitative Risk Assessment (Document ID 1711; 1711, Attachment 1) were the result of the Agency's extensive search and review of the peer-reviewed scientific literature on the health effects of inhalation exposure to crystalline silica, particularly silicosis, lung cancer and cancer at other sites, non-malignant respiratory diseases (NMRD) other than silicosis, and renal and autoimmune effects. The purposes of this detailed search and scientific review were to determine the nature of the hazards presented by exposure to respirable crystalline silica, and to evaluate whether there was an adequate basis, with suitable data availability, for quantitative risk assessment.

Much of the scientific evidence that describes the health effects and risks associated with exposure to crystalline silica consisted of epidemiological studies of worker populations; OSHA also reviewed animal and in vitro studies. OSHA used a weight-of-evidence approach in evaluating this evidence. Under this approach, OSHA evaluated the relevant studies to determine their overall quality. Factors considered in assessing the quality of studies included: (1) The size of the cohort studied and the power of the study to detect a sufficiently low level of disease risk; (2) the duration of follow-up of the study population; (3) the potential for study bias (*e.g.,* selection bias in case-control studies or survivor effects in cross-sectional studies); and (4) the adequacy of underlying exposure information for examining exposure-response relationships. Studies were deemed suitable for inclusion in OSHA's Preliminary Quantitative Risk Assessment (QRA) where there was adequate quantitative information on exposure and disease risks and the study was judged to be sufficiently high quality according to these criteria.

Based upon this weight-of-evidence approach, OSHA preliminarily determined that there is substantial evidence in the peer-reviewed scientific literature that exposure to respirable crystalline silica increases the risk of silicosis, lung cancer, other NMRD, and renal and autoimmune effects. The Preliminary QRA indicated that, for silicosis and NMRD mortality, lung cancer mortality, and renal disease mortality, there is a significant risk at the previous PELs for respirable crystalline silica, with excess lifetime risk estimates substantially greater than 1 death per 1,000 workers as a result of exposure over a working life (45 years, from age 20 to age 65). At the revised PEL of 50 μg/m^3 respirable crystalline silica, OSHA estimated that these risks would be substantially reduced. Cumulative risk estimates for silicosis morbidity were also well above 1 case per 1,000 workers at the previous PELs, with a substantial reduction at the revised PEL.

2. Summary of the Review of Health Effects Literature

In its Review of Health Effects Literature, OSHA identified the adverse health effects associated with the inhalation of respirable crystalline silica (Document ID 1711). OSHA covered the following topics: Silicosis (including relevant data from U.S. disease surveillance efforts), lung cancer and cancer at other sites, non-malignant respiratory diseases (NMRD) other than silicosis, renal and autoimmune effects, and physical factors affecting the toxicity of crystalline silica. Most of the evidence that described the health risks associated with exposure to silica

consisted of epidemiological studies of worker populations; animal and in vitro studies on mode of action and molecular toxicology were also described. OSHA focused solely on those studies associated with airborne exposure to respirable crystalline silica due to the lack of evidence of health hazards from dermal or oral exposure. The review was further confined to issues related to the inhalation of respirable dust, which is generally defined as particles that are capable of reaching the pulmonary region of the lung (*i.e.,* particles less than 10 microns (μm) in aerodynamic diameter), in the form of either quartz or cristobalite, the two forms of crystalline silica most often encountered in the workplace.

a. Silicosis

i. Types

Silicosis is an irreversible, progressive disease induced by the inflammatory effects of respirable crystalline silica in the lung, leading to lung damage and scarring and, in some cases, progressing to complications resulting in disability and death. Exposure to respirable crystalline silica is the only known cause of silicosis. Three types of silicosis have been described: An acute form following intense exposure to respirable dust of high crystalline silica content for a relatively short period (*i.e.,* a few months or years); an accelerated form, resulting from about 5 to 15 years of heavy exposure to respirable dusts of high crystalline silica content; and, most commonly, a chronic form that typically follows less intense exposure of more than 20 years (Becklake, 1994, Document ID 0294; Balaan and Banks, 1992, 0289). In both the accelerated and chronic forms of the disease, lung inflammation leads to the formation of excess connective tissue, or fibrosis, in the lung. The hallmark of the chronic form of silicosis is the silicotic islet or nodule, one of the few agent-specific lesions in pathology (Balaan and Banks, 1992, Document ID 0289). As the disease progresses, these nodules, or fibrotic lesions, increase in density and can develop into large fibrotic masses, resulting in progressive massive fibrosis (PMF). Once established, the fibrotic process of chronic silicosis is thought to be irreversible (Becklake, 1994, Document ID 0294). There is no specific treatment for silicosis (Davis, 1996, Document ID 0998; Banks, 2005, 0291).

Chronic silicosis is the most frequently observed type of silicosis in the U.S. today. Affected workers may have a dry chronic cough, sputum production, shortness of breath, and reduced pulmonary function. These symptoms result from airway restriction and/or obstruction caused by the development of fibrotic scarring in the alveolar sacs and lower region of the lung. Prospective studies that follow the exposed cohort over a long period of time with periodic examinations can provide the best information on factors affecting the development and progression of silicosis, which has a latency period (the interval between beginning of exposure to silica and the onset of disease) from 10 to 30 years after first exposure (Weissman and Wagner, 2005; Document ID 0481).

ii. Diagnosis

The scarring caused by silicosis can be detected by chest x-ray or computerized tomography (CT) when the lesions become large enough to appear as visible opacities. The clinical diagnosis of silicosis has three requirements: Recognition by the physician that exposure to crystalline silica has occurred; the presence of chest radiographic abnormalities consistent with silicosis; the absence of other illnesses that could resemble silicosis on a chest radiograph (*e.g.,* pulmonary fungal infection or tuberculosis) (Balaan and Banks, 1992, Document ID 0289; Banks, 2005, 0291). A standardized system to classify opacities seen in chest radiographs was developed by the International Labour Organization (ILO) to describe the presence and severity of silicosis on the basis of size, shape, and density of opacities, which together indicate the severity and extent of lung involvement (ILO, 1980, Document ID 1063; ILO, 2002, 1064; ILO, 2011, 1475; Merchant and Schwartz, 1998, 1096; NIOSH, 2011, 1513). The density of opacities seen on chest radiographs is classified on a 4-point category scale (0, 1, 2, or 3), with each category divided into three, giving a 12-subcategory scale between 0/0 and 3/+. For each subcategory, the top number indicates the major category that the profusion most closely resembles, and the bottom number indicates the major category that was given secondary consideration. Category 0 indicates the absence of visible opacities and categories 1 to 3 reflect increasing profusion of opacities and a concomitant increase in severity of disease. The bottom number can deviate from the top number by 1. At the extremes of the scale, a designation of 0/− or 3/+ may be used. Subcategory 0/− represents a radiograph that is obviously absent of small opacities. Subcategory 3/+ represents a radiograph that shows much greater profusion than depicted on a standard 3/3 radiograph.

To address the low sensitivity of chest x-rays for detecting silicosis, Hnizdo *et al.* (1993, Document ID 1050) recommended that radiographs consistent with an ILO category of 0/1 or greater be considered indicative of silicosis among workers exposed to a high concentration of silica-containing dust. In like manner, to maintain high specificity, chest x-rays classified as category 1/0 or 1/1 should be considered as a positive diagnosis of silicosis. A biopsy is not necessary to make a diagnosis and a diagnosis does not require that chest x-ray films or digital radiographic images be rated using the ILO system (NIOSH, 2002, Document ID 1110).

iii. Review of Occupation-Based Epidemiological Studies

The causal relationship between exposure to crystalline silica and silicosis has long been accepted in the scientific and medical communities. OSHA reviewed a large number of cross-sectional and retrospective studies conducted to estimate the quantitative relationship between exposure to crystalline silica and the development of silicosis (*e.g.,* Kreiss and Zhen, 1996, Document ID 1080; Love *et al.,* 1999, 0369; Ng and Chan, 1994, 0382; Rosenman *et al.,* 1996, 0423; Churchyard *et al.,* 2003, 1295; Churchyard *et al.,* 2004, 0986; Hughes *et al.,* 1998, 1059; Muir *et al.,* 1989a, 1102; Muir *et al.,* 1989b, 1101; Park *et al.,* 2002, 0405; Chen *et al.,* 2001, 0332; Chen *et al.,* 2005, 0985; Hnizdo and Sluis-Cremer, 1993, 1052; Miller *et al.,* 1998, 0374; Buchanan *et al.,* 2003, 0306; Steenland and Brown, 1995b, 0451). In general, these studies, particularly those that included retirees, found a risk of radiological silicosis (usually defined as x-ray films classified as ILO major category 1 or greater) among workers exposed near the range of cumulative exposures permitted by current exposure limits. The studies' methods and findings are presented in detail in the Preliminary QRA (Document ID 1711, pp. 316–340); those studies on which OSHA relied for its risk estimates are also discussed in the Summary of the Preliminary QRA, below.

OSHA's review of the silicosis literature also focused on specific issues associated with the factors that affect the progression of the disease and the relationship between the appearance of radiological abnormalities indicative of silicosis and pulmonary function decline. From its review of the health literature, OSHA made a number of preliminary findings. First, the size of opacities apparent on initial x-ray films is a determinant of future disease

progression, with subjects exhibiting large opacities more likely to experience progression than those having smaller opacities (Hughes *et al.,* 1982, Document ID 0362; Lee *et al.,* 2001, 1086; Ogawa *et al.,* 2003, 0398). Second, continued exposure to respirable crystalline silica following diagnosis of radiological silicosis increases the probability of disease progression compared to those who are not further exposed (Hessel *et al.,* 1988, Document ID 1042), although there remains a likelihood of progression even absent continued exposure (Hessel *et al.,* 1988, Document ID 1042; Miller *et al.,* 1998, 0374; Ogawa *et al.,* 2003, 0398; Yang *et al.,* 2006, 1134).

With respect to the relationship between radiological silicosis and pulmonary function declines, literature findings are mixed. A number of studies have reported pulmonary function declines among workers exhibiting a degree of small-opacity profusion consistent with ILO categories 2 and 3 (*e.g.,* Ng and Chan, 1992, Document ID 1107). However, although some studies have not found pulmonary function declines associated with silicosis scored as ILO category 1, a number of other studies have documented declines in pulmonary function in persons exposed to silica and whose radiograph readings are in the major ILO category 1 (*i.e.,* 1/0, 1/1, 1/2), or even before changes were seen on chest x-ray (Cowie, 1998, 0993; Cowie and Mabena, 1991, 0342; Ng *et al.,* 1987(a), 1108; Wang *et al.,* 1997, 0478). Thus, OSHA preliminarily concluded that at least some individuals will develop pulmonary function declines absent radiological changes indicative of silicosis. The Agency posited that this may reflect the relatively poor sensitivity of x-ray films in detecting silicosis or may be due to pulmonary function declines related to silica-induced chronic obstructive pulmonary disease (see Document ID 1711, pp. 49–75).

iv. Surveillance

Unlike most occupational diseases, surveillance statistics are available on silicosis mortality and morbidity in the U.S. The most comprehensive and current source of surveillance data in the U.S. related to occupational lung diseases, including silicosis, is the National Institute for Occupational Safety and Health (NIOSH) Work-Related Lung Disease (WoRLD) Surveillance System (NIOSH, 2008c, Document ID 1308). Other sources are detailed in the Review of Health Effects Literature (Document ID 1711). Mortality data are compiled from death certificates reported to state vital statistics offices, which are collected by the National Center for Health Statistics (NCHS), an agency within the Centers for Disease Control and Prevention (*e.g.,* CDC, 2005, Document ID 0319).

Silicosis-related mortality has declined in the U.S. over the time period for which these data have been collected. From 1968 to 2005, the annual number of silicosis deaths decreased from 1,157 to 161 (NIOSH, 2008c, Document ID 1308; *http://wwwn.cdc.gov/eworld*). The CDC cited two main factors that were likely responsible for the declining trend in silicosis mortality since 1968 (CDC, 2005, Document ID 0319). First, many deaths during the early part of the study period were among workers whose main exposure to respirable crystalline silica probably occurred before introduction of national silica standards established by OSHA and the Mine Safety and Health Administration (MSHA) (*i.e.,* permissible exposure limits (PELs)); these standards likely led to reduced silica dust exposure beginning in the 1970s. Second, employment has declined in heavy industries (*e.g.,* foundries) where silica exposure was prevalent (CDC, 2005, Document ID 0319).

Despite this decline, silicosis deaths among workers of all ages result in significant premature mortality; between 1996 and 2005, a total of 1,746 deaths resulted in a total of 20,234 years of life lost from life expectancy, with an average of 11.6 years of life lost. For the same period, among 307 decedents who died before age 65 (the end of a working life), there were 3,045 years of life lost up to age 65, with an average of 9.9 years of life lost from a working life (NIOSH, 2008c, Document ID 1308).

Surveillance data on silicosis morbidity, primarily from hospital discharge records, are available only from the few states that have administered disease surveillance programs for silicosis. For the reporting period 1993–2002, these states recorded 879 cases of silicosis (NIOSH 2008c, Document ID 1308). Nationwide hospital discharge data compiled by NIOSH (2008c, Document ID 1308) and the Council of State and Territorial Epidemiologists (CSTE, 2005, Document ID 0996) indicate that, for the years 1970 to 2004, there were at least 1,000 hospitalizations that were coded for silicosis each year, except one.

Relying exclusively on such passive case-based disease surveillance systems that depend on the health care community to generate records is likely to understate the prevalence of diseases associated with respirable crystalline silica (Froines *et al.,* 1989, Document ID 0385). In order to diagnose occupational diseases, health care professionals must have information about occupational histories and must be able to recognize occupational diseases (Goldman and Peters, 1981, Document ID 1027; Rutstein *et al.,* 1983, 0425). The first criterion to be met in diagnosing silicosis is knowing a patient's history of exposure to crystalline silica. In addition to the lack of information about exposure histories, difficulty in recognizing occupational illnesses like silicosis, that manifest themselves long after initial exposure, contributes to under-recognition and underreporting by health care providers. Based on an analysis of data from Michigan's silicosis surveillance activities, Rosenman *et al.* (2003, Document ID 0420) estimated that silicosis mortality and morbidity were understated by a factor of between 2.5 and 5, and estimated that between 3,600 and 7,300 new cases of silicosis likely occurred in the U.S. annually between 1987 and 1996.

b. Lung Cancer

i. International Agency for Research on Cancer (IARC) Classification

In 1997, the IARC determined that there was sufficient evidence to regard crystalline silica as a human carcinogen (IARC, 1997, Document ID 1062). This finding was based largely on nine studies of cohorts in four industry sectors that IARC considered to be the least influenced by confounding factors (sectors included quarries and granite works, gold mining, ceramic/pottery/refractory brick industries, and the diatomaceous earth industry). NIOSH also determined that crystalline silica is a human carcinogen after evaluating updated literature (2002, Document ID 1110).

ii. Review of Occupation-Based Epidemiological Studies

OSHA conducted an independent review of the epidemiological literature on exposure to respirable crystalline silica and lung cancer, covering more than 30 occupational groups in over a dozen industrial sectors. OSHA's review included approximately 60 primary epidemiological studies. Based on this review, OSHA preliminarily concluded that the human data provides ample evidence that exposure to respirable crystalline silica increases the risk of lung cancer among workers.

The strongest evidence for carcinogenicity came from studies in five industry sectors:

- Diatomaceous Earth Workers (Checkoway *et al.,* 1993, Document ID 0324; Checkoway *et al.,* 1996, 0325; Checkoway *et al.,* 1997, 0326;

Checkoway *et al.,* 1999, 0327; Seixas *et al.,* 1997, 0431);

- British Pottery Workers (Cherry *et al.,* 1998, Document ID 0335; McDonald *et al.,* 1995, 0371);
- Vermont Granite Workers (Attfield and Costello, 2004, Document ID 0285; Graham *et al.,* 2004, 1031; Costello and Graham, 1988, 0991; Davis *et al.,* 1983, 0999);
- North American Industrial Sand Workers (Hughes *et al.,* 2001, Document ID 1060; McDonald *et al.,* 2001, 1091; McDonald *et al.,* 2005, 1092; Rando *et al.,* 2001, 0415; Sanderson *et al.,* 2000, 0429; Steenland and Sanderson, 2001, 0455); and
- British Coal Miners (Miller *et al.,* 2007, Document ID 1305; Miller and MacCalman, 2009, 1306).

OSHA considered these studies as providing the strongest evidence for several reasons. They were all retrospective cohort or case-control studies that demonstrated positive, statistically significant exposure-response relationships between exposure to crystalline silica and lung cancer mortality. Except for the British pottery studies, where exposure-response trends were noted for average exposure only, lung cancer risk was found to be related to cumulative exposure. In general, these studies were of sufficient size and had adequate years of follow up, and had sufficient quantitative exposure data to reliably estimate exposures of cohort members. As part of their analyses, the authors of these studies also found positive exposure-response relationships for silicosis, indicating that underlying estimates of worker exposures were not likely to be substantially misclassified. Furthermore, the authors of these studies addressed potential confounding due to other carcinogenic exposures through study design or data analysis.

In the diatomaceous earth industry, Checkoway *et al.* developed a ''semi-quantitative'' cumulative exposure estimate that demonstrated a statistically significant positive exposure-response trend between duration of employment or cumulative exposure and lung cancer mortality (1993, Document ID 0324). The quartile analysis with a 15-year lag showed an increasing trend in relative risks (RR) of lung cancer mortality, with the highest exposure quartile having a RR of 2.74 for lung cancer mortality. Checkoway *et al.* conducted a re-analysis to address criticisms of potential confounding due to asbestos and again demonstrated a positive exposure-response risk gradient when controlling for asbestos exposure and other variables (1996, Document ID 0325). Rice *et al.* (2001, Document ID 1118) conducted a re-analysis and quantitative risk assessment of the Checkoway *et al.* (1997, Document ID 0326) study, finding that exposure to crystalline silica was a significant predictor of lung cancer mortality. OSHA included this re-analysis in its Preliminary QRA (Document ID 1711).

In the British pottery industry, excess lung cancer risk was found to be associated with crystalline silica exposure among workers in a proportionate mortality ratio (PMR) study [4] (McDonald *et al.,* 1995, Document ID 0371) and in a cohort and nested case-control study [5] (Cherry *et al.,* 1998, Document ID 0335). In the former, elevated PMRs for lung cancer were found after adjusting for potential confounding by asbestos exposure. In the study by Cherry *et al.,* odds ratios for lung cancer mortality were statistically significantly elevated after adjusting for smoking. Odds ratios were related to average, but not cumulative, exposure to crystalline silica.

In the Vermont granite cohort, Costello and Graham (1988, Document ID 0991) and Graham *et al.* (2004, Document ID 1031) in a follow-up study found that workers employed prior to 1930 had an excess risk of lung cancer. Lung cancer mortality among granite workers hired after 1940 (post-implementation of controls), however, was not elevated in the Costello and Graham study and was only somewhat elevated (not statistically significant) in the Graham *et al.* study. Graham *et al.* (2004, Document ID 1031) concluded that their results did not support a causal relationship between granite dust exposure and lung cancer mortality.

Looking at the same population, Attfield and Costello (2004, Document ID 0285) developed a quantitative estimate of cumulative exposure (8 exposure categories) adapted from a job exposure matrix developed by Davis *et al.* (1983, Document ID 0999). They found a statistically significant trend between lung cancer mortality and log-transformed cumulative exposure to crystalline silica. Lung cancer mortality rose reasonably consistently through the first seven increasing exposure groups, but fell in the highest cumulative exposure group. With the highest exposure group omitted, a strong positive dose-response trend was found for both untransformed and log-transformed cumulative exposures. The authors explained that the highest exposure group would have included the most unreliable exposure estimates being reconstructed from exposures 20 years prior to study initiation when exposure estimation was less precise. OSHA expressed its belief that the study by Attfield and Costello (2004, Document ID 0285) was of superior design in that it used quantitative estimates of exposure and evaluated lung cancer mortality rates by exposure group. In contrast, the findings by Graham *et al.* (2004, Document ID 1031) were based on a dichotomous comparison of risk among high- versus low-exposure groups, where date-of-hire before and after implementation of ventilation controls was used as a surrogate for exposure. Consequently, OSHA used the Attfield and Costello study in its Preliminary QRA (Document ID 1711). In its Supplemental Literature Review of Epidemiological Studies on Lung Cancer Associated with Exposure to Respirable Crystalline Silica, OSHA also discussed a more recent study of Vermont granite workers by Vacek *et al.* (2011, Document ID 1486) that did not find an association between silica exposure and lung cancer mortality (Document ID 1711, Attachment 1, pp. 2–5). (OSHA examines this study in great length in Section V.F, Comments and Responses Concerning Lung Cancer Mortality.)

In the North American industrial sand industry, studies of two overlapping cohorts found a statistically significant increased risk of lung cancer mortality with increased cumulative exposure in both categorical and continuous analyses (Hughes *et al.*, 2001, Document ID 1060; McDonald *et al.*, 2001, 1091; McDonald *et al.*, 2005, 1092; Rando *et al.*, 2001, 0415; Sanderson *et al.*, 2000, 0429; Steenland and Sanderson, 2001, 0455). McDonald *et al.* (2001, Document ID 1091) examined a cohort that entered the workforce, on average, a decade earlier than the cohorts that Steenland and Sanderson (2001, Document ID 0455) examined. The McDonald cohort, drawn from eight plants, had more years of exposure in the industry (19 versus 8.8 years). The Steenland and Sanderson (2001, Document ID 0455) cohort worked in 16 plants, 7 of which overlapped with the McDonald, *et al.*

[4] A PMR is the number of deaths within a population due to a specific disease (*e.g.,* lung cancer) divided by the total number of deaths in the population during some time period.

[5] A cohort study is a study in which the occurrence of disease (*e.g.,* lung cancer) is measured in a cohort of workers with potential for a common exposure (*e.g.,* silica). A nested case-control study is a study in which workers with disease are identified in an occupational cohort, and a control group consisting of workers without disease is selected (independently of exposure status) from the same cohort to determine whether there is a difference in exposure between cases and controls. A number of controls are matched to each case to control for potentially confounding factors, such as age, gender, etc.

(2001, Document ID 1091) cohort. McDonald *et al.* (2001, Document ID 1091), Hughes *et al.* (2001, Document ID 1060), and Rando *et al.* (2001, Document ID 0415) had access to smoking histories, plant records, and exposure measurements that allowed for historical reconstruction and the development of a job exposure matrix. The McDonald *et al.* (2005, Document ID 1092) study was a later update, with follow-up through 2000, of both the cohort and nested case-control studies. Steenland and Sanderson (2001, Document ID 0455) had limited access to plant facilities, less detailed historic exposure data, and used MSHA enforcement records for estimates of recent exposure. These studies (Hughes *et al.*, 2001, Document ID 1060; McDonald *et al.*, 2005, 1092; Steenland and Sanderson, 2001, 0455) showed very similar exposure-response patterns of increased lung cancer mortality with increased exposure. OSHA included the quantitative exposure-response analysis from the Hughes *et al.* (2001, Document ID 1060) study in its Preliminary QRA, as it allowed for individual job, exposure, and smoking histories to be taken into account.

OSHA noted that Brown and Rushton (2005a, Document ID 0303; 2005b, 0304) found no association between risk of lung cancer mortality and exposure to respirable crystalline silica among British industrial sand workers. However, a large portion of the cohort had relatively short service times in the industry, with over one-half the cohort deaths and almost three-fourths of the lung cancer mortalities having had less than 10 years of service. Considering the apparent high turnover in this industry and the absence of prior occupational histories, exposures from work experience other than in the industrial sand industry could be a significant confounder (Document ID 1711, p. 131). Additionally, as Steenland noted in a letter review (2005a, Document ID 1313), the cumulative exposures of workers in the Brown and Ruston (2005b, Document ID 0304) study were over 10 times lower than the cumulative exposures experienced by the cohorts in the pooled analysis that Steenland *et al.* (2001a, Document ID 0452) performed. The low exposures experienced by this cohort would have made detecting a positive association with lung cancer mortality even more difficult.

In British coal miners, excess lung cancer mortality was reported in a large cohort study, which examined the mortality experience of 17,800 miners through the end of 2005 (Miller *et al.*, 2007, Document ID 1305; Miller and MacCalman, 2009, 1306). By that time, the cohort had accumulated 516,431 person years of observation (an average of 29 years per miner), with 10,698 deaths from all causes. Overall lung cancer mortality was elevated (SMR = 115.7, 95% C.I. 104.8–127.7), and a positive exposure-response relationship with crystalline silica exposure was determined from Cox regression after adjusting for smoking history. Three of the strengths of this study were the detailed time-exposure measurements of both quartz and total mine dust, detailed individual work histories, and individual smoking histories. For lung cancer, analyses based on Cox regression provided strong evidence that, for these coal miners, although quartz exposures were associated with increased lung cancer risk, simultaneous exposures to coal dust did not cause increased lung cancer risk. Because of these strengths, OSHA included this study in its Preliminary QRA (Document ID 1711).

In addition to the studies in these cohorts, OSHA also reviewed studies of lung cancer mortality in metal ore mining populations. Many of these mining studies, which showed mixed results, were subject to confounding due to exposure to other potential carcinogens such as radon and arsenic. IARC noted that only a few ore mining studies accounted for confounding from other occupational carcinogens and that, when confounding was absent or accounted for, an association between silica exposure and lung cancer was absent (1997, Document ID 1062). Many of the studies conducted since IARC's review, however, more strongly implicate crystalline silica as a human carcinogen (1997, Document ID 1062). Pelucchi *et al.* (2006, Document ID 0408), in a meta-analysis of studies conducted since IARC's (1997, Document ID 1062) review, reported statistically significantly elevated relative risks of lung cancer mortality in underground and surface miners in three cohort and four case-control studies. Cassidy *et al.*, in a pooled case-control analysis, showed a statistically significant increased risk of lung cancer mortality among miners (OR = 1.48), and demonstrated a linear trend of increasing odds ratios with increasing exposures (2007, Document ID 0313).

OSHA also preliminarily determined that the results of the studies conducted in three industry sectors (foundry, silicon carbide, and construction sectors) were confounded by the presence of exposures to other carcinogens. Exposure data from these studies were not sufficient to distinguish between exposure to silica dust and exposure to other occupational carcinogens. IARC previously made a similar determination in reference to the foundry industry. However, with respect to the construction industry, Cassidy *et al.* (2007, Document ID 0313), in a large European community-based case-control study, reported finding a clear linear trend of increasing odds ratios with increasing cumulative exposure to crystalline silica (estimated semi-quantitatively) after adjusting for smoking and exposure to insulation and wood dusts.

In addition, an analysis of 4.8 million death certificates from 27 states within the U.S. for the years 1982 to 1995 showed statistically significant excesses in lung cancer mortality, silicosis mortality, tuberculosis, and NMRD among persons with occupations involving medium and high exposure to respirable crystalline silica (Calvert *et al.*, 2003, Document ID 0309). A national records and death certificate study was also conducted in Finland by Pukkala *et al.*, who found a statistically significant excess of lung cancer incidence among men and women with estimated medium and heavy exposures (2005, Document ID 0412).

One of the more compelling studies OSHA evaluated and used in the Preliminary QRA (Document ID 1711) was Steenland *et al.*'s (2001a, Document ID 0452) pooled analysis of 10 occupational cohorts (5 mines and 5 industrial facilities), which demonstrated an overall positive exposure-response relationship between cumulative exposure to crystalline silica and lung cancer mortality. These 10 cohorts included 65,980 workers and 1,072 lung cancer deaths, and were selected because of the availability of raw data on exposure to crystalline silica and health outcomes. The investigators found lung cancer risk increased with increasing cumulative exposure, log cumulative exposure, and average exposure. Exposure-response trends were similar between mining and non-mining cohorts.

iii. Confounding

Smoking is known to be a major risk factor for lung cancer. However, OSHA maintained in the Preliminary QRA that it is unlikely that smoking explained the observed exposure-response trends in the studies described above (Document ID 1711). Studies by Hnizdo *et al.* (1997, Document ID 1049), McLaughlin *et al.* (1992, Document ID 0372), Hughes *et al.* (2001, Document ID 1060), McDonald *et al.* (2001, Document ID 1091; 2005, 1092), Miller and MacCalman (2009, Document ID 1306), and Cassidy *et al.* (2007, Document ID 0313) had detailed smoking histories with sufficiently large

populations and a sufficient number of years of follow-up time to quantify the interaction between crystalline silica exposure and cigarette smoking. In a cohort of white South African gold miners (Hnizdo and Sluis-Cremer, 1991, Document ID 1051) and in the follow-up nested case-control study (Hnizdo *et al.*, 1997, Document ID 1049), the combined effect of exposure to respirable crystalline silica and smoking was greater than additive, suggesting a multiplicative effect. This effect appeared to be greatest for miners with greater than 35 pack-years of smoking and higher cumulative exposure to silica. In the Chinese nested case-control studies (McLaughlin *et al.*, 1992, Document ID 0372), cigarette smoking was associated with lung cancer, but control for smoking did not influence the association between silica and lung cancer in the mining and pottery cohorts studied. The studies of industrial sand workers (Hughes *et al.*, 2001, Document ID 1060) and British coal workers (Miller and MacCalman, 2009, Document ID 1306) found positive exposure-response trends after adjusting for smoking histories, as did Cassidy *et al.* (2007, Document ID 0313) in their community-based case-control study of exposed European workers.

Given these findings of investigators who have accounted for the impact of smoking, OSHA preliminarily determined that the weight of the evidence reviewed identified respirable crystalline silica as an independent risk factor for lung cancer mortality. OSHA also determined that its finding was further supported by animal studies demonstrating that exposure to silica alone can cause lung cancer (*e.g.,* Muhle *et al.*, 1995, Document ID 0378).

iv. Lung Cancer and Silicosis

Animal and in vitro studies have demonstrated that the early steps in the proposed mechanistic pathways that lead to silicosis and lung cancer seem to share some common features (*see* Document ID 1711, pp. 171–172). This has led some researchers to suggest that silicosis is a prerequisite to lung cancer. Some have suggested that any increased lung cancer risk associated with silica may be a consequence of inflammation (and concomitant oxidative stress) and increased epithelial cell proliferation associated with the development of silicosis. However, other researchers have noted additional genotoxic and non-genotoxic mechanisms that may also be involved in carcinogenesis induced by silica (*see* Section V.H, Mechanisms of Silica-Induced Adverse Health Effects, and Document ID 1711, pp. 230–239). IARC also noted that a direct genotoxic mechanism from silica to induce a carcinogenic effect cannot be ruled out (2012, Document ID 1473). Thus, OSHA preliminarily concluded that available animal and in vitro studies do not support the hypothesis that development of silicosis is necessary for silica exposure to cause lung cancer.

In general, studies of workers with silicosis, as well as meta-analyses that include these studies, have shown that workers with radiologic evidence of silicosis have higher lung cancer risk than those without radiologic abnormalities or mixed cohorts. Three meta-analyses attempted to look at the association of increasing ILO radiographic categories of silicosis with increasing lung cancer mortality. Two of these analyses (Kurihara and Wada, 2004, Document ID 1084; Tsuda *et al.*, 1997, 1127) showed no association with increasing lung cancer mortality, while Lacasse *et al.* (2005, Document ID 0365) demonstrated a positive dose-response for lung cancer with increasing ILO radiographic category. A number of other studies found increased lung cancer risk among exposed workers absent radiological evidence of silicosis (Cassidy *et al.*, 2007, Document ID 0313; Checkoway *et al.*, 1999, 0327; Cherry *et al.*, 1998, 0335; Hnizdo *et al.*, 1997, 1049; McLaughlin *et al.*, 1992, 0372). For example, the diatomaceous earth study by Checkoway *et al.* showed a statistically significant exposure-response relationship for lung cancer among persons without silicosis (1999, Document ID 0327). Checkoway and Franzblau, reviewing the international literature, found that all epidemiological studies conducted to that date were insufficient to conclusively determine the role of silicosis in the etiology of lung cancer (2000, Document ID 0323). OSHA preliminarily concluded that the more recent pooled and meta-analyses do not provide compelling evidence that silicosis is a necessary precursor to lung cancer.

c. Non-Malignant Respiratory Diseases (Other Than Silicosis)

In addition to causing silicosis, exposure to crystalline silica has been associated with increased risks of other non-malignant respiratory diseases (NMRD), primarily chronic obstructive pulmonary disease (COPD), chronic bronchitis, and emphysema. COPD is a disease state characterized by airflow limitation that is usually progressive and not fully reversible. In patients with COPD, either chronic bronchitis or emphysema may be present or both conditions may be present together.

As detailed in the Review of Health Effects Literature, OSHA reviewed several studies of NMRD morbidity and preliminarily concluded that exposure to respirable crystalline silica may increase the risk of emphysema, chronic bronchitis, and pulmonary function impairment, regardless of whether signs of silicosis are present (Document ID 1711). Smokers may be at an increased risk relative to nonsmokers.

OSHA also reviewed studies of NMRD mortality that focused on causes of death other than silicosis. Wyndham *et al.* found a significant excess mortality for chronic respiratory diseases in a cohort of white South African gold miners (1986, Document ID 0490). A case-referent analysis found that, although the major risk factor for chronic respiratory disease was smoking, there was a statistically significant additional effect of cumulative exposure to silica-containing dust. A multiplicative effect of smoking and cumulative dust exposure on mortality from COPD was found in another study of white South African gold miners (Hnizdo, 1990, Document ID 1045). Analysis of various combinations of dust exposure and smoking found a trend in odds ratios that indicated this synergism. There was a statistically significant increasing trend for dust particle-years and for cigarette-years of smoking.

Park *et al.* (2002, Document ID 0405) analyzed the California diatomaceous earth cohort data originally studied by Checkoway *et al.* (1997, Document ID 0326), consisting of 2,570 diatomaceous earth workers employed for 12 months or more from 1942 to 1994, to quantify the relationship between exposure to cristobalite and mortality from chronic lung disease other than cancer (LDOC). Diseases in this category included pneumoconiosis (which included silicosis), chronic bronchitis, and emphysema, but excluded pneumonia and other infectious diseases. Smoking information was available for about 50 percent of the cohort and for 22 of the 67 LDOC deaths available for analysis, permitting at least partial adjustment for smoking. Using the exposure estimates developed for the cohort by Rice *et al.* (2001, Document ID 1118) in their exposure-response study of lung cancer risks, Park *et al.* (2002, Document 0405) evaluated the quantitative exposure-response relationship for LDOC mortality and found a strong positive relationship with exposure to respirable crystalline silica. OSHA found this study particularly compelling because of the strengths of the study design and availability of smoking history data on part of the cohort, as well as the high-

quality exposure and job history data. The study authors noted:

> Data on smoking, collected since the 1960s in the company's radiographic screening programme, were available for 1171 of the subjects (50%). However, smoking habits were unknown for 45 of the 67 workers that died from LDOC (67%). Our Poisson regression analyses for LDOC, stratified on smoking, have partially rectified the confounding by smoking issue. Furthermore, analyses performed without control for smoking produced slightly smaller and less precise estimates of the effects of silica, suggesting that smoking is a negative confounder. In their analysis of this cohort, Checkoway *et al.* applied the method of Axelson concluding that it was very unlikely that cigarette smoking could account for the association found between mortality from LDOC and cumulative exposure to silica (Document ID 0405, p. 41).

Consequently, OSHA used this study in its Preliminary QRA (Document ID 1711, pp. 295–298).

Based on this evidence, and the other studies discussed in the Review of Health Effects Literature, OSHA preliminarily concluded that respirable crystalline silica increases the risk for mortality from non-malignant respiratory disease (not including silicosis) in an exposure-related manner. The Agency also preliminarily concluded that the risk is strongly influenced by smoking, and opined that the effects of smoking and silica exposure may be synergistic.

d. Renal Disease and Autoimmune Diseases

In its Review of Health Effects Literature, OSHA described the available experimental and epidemiological data evaluating respirable crystalline silica exposure and renal and/or autoimmune effects (Document ID 1711). In addition to a number of case reports, epidemiological studies have found statistically significant associations between occupational exposure to silica dust and chronic renal disease (Calvert *et al.*, 1997, Document ID 0976), subclinical renal changes (Ng *et al.*, 1992c, Document ID 0386), end-stage renal disease morbidity (Steenland *et al.*, 1990, Document ID 1125), chronic renal disease mortality (Steenland *et al.*, 2001b, Document ID 0456; 2002a, 0448), and granulomatosis with polyangitis, a condition that can affect the kidneys (Nuyts *et al.*, 1995, Document ID 0397). In other findings, silica-exposed individuals, both with and without silicosis, had an increased prevalence of abnormal renal function (Hotz *et al.*, 1995, Document ID 0361), and renal effects have been reported to persist after cessation of silica exposure (Ng *et al.*, 1992c, Document ID 0386). Possible mechanisms suggested for silica-induced renal disease include a direct toxic effect on the kidney, deposition of immune complexes (IgA) in the kidney following silica related pulmonary inflammation, and an autoimmune mechanism (Calvert *et al.*, 1997, Document ID 0976; Gregorini *et al.*, 1993, 1032).

In a pooled cohort analysis, Steenland *et al.* (2002a, Document ID 0448) combined the industrial sand cohort from Steenland *et al.* (2001b, Document ID 0456), the gold mining cohort from Steenland and Brown (1995a, Document ID 0450), and the Vermont granite cohort studies by Costello and Graham (1988, Document ID 0991). In all, the combined cohort consisted of 13,382 workers with exposure information available for 12,783. The analysis demonstrated statistically significant exposure-response trends for acute and chronic renal disease mortality with quartiles of cumulative exposure to respirable crystalline silica. In a nested case-control study design, a positive exposure-response relationship was found across the three cohorts for both multiple-cause mortality (*i.e.*, any mention of renal disease on the death certificate) and underlying cause mortality. Renal disease risk was most prevalent among workers with cumulative exposures of 500 $\mu g/m^3$ or more (Steenland *et al.*, 2002a, Document ID 0448).

OSHA noted that other studies failed to find an excess renal disease risk among silica-exposed workers. Davis *et al.* (1983, Document ID 0999) found elevated, but not statistically significant, mortality from diseases of the genitourinary system among Vermont granite shed workers. There was no observed relationship between mortality from this cause and cumulative exposure. A similar finding was reported by Koskela *et al.* (1987, Document ID 0363) among Finnish granite workers, where there were 4 deaths due to urinary tract disease compared to 1.8 expected. Both Carta *et al.* (1994, Document ID 0312) and Cocco *et al.* (1994, Document ID 0988) reported finding no increased mortality from urinary tract disease among workers in an Italian lead mine and zinc mine. However, Cocco *et al.* (1994, Document ID 0988) commented that exposures to respirable crystalline silica were low, averaging 7 and 90 $\mu g/m^3$ in the two mines, respectively, and that their study in particular had low statistical power to detect excess mortality.

OSHA expressed its belief that there is substantial evidence, particularly the 3-cohort pooled analysis conducted by Steenland *et al.* (2002a, Document ID 0448), on which to base a finding that exposure to respirable crystalline silica increases the risk of renal disease mortality and morbidity. The pooled analysis by Steenland *et al.* involved a large number of workers from three cohorts with well-documented, validated job-exposure matrices; it found a positive, monotonic increase in renal disease risk with increasing exposure for both underlying and multiple cause data (2002a, Document ID 0448). However, there are considerably less data available for renal disease than there are for silicosis mortality and lung cancer mortality. The findings based on these data are, therefore, less robust. Nevertheless, OSHA preliminarily concluded that the underlying data are sufficient to provide useful estimates of risk and included the Steenland *et al.* (2002a, Document ID 0448) analysis in its Preliminary QRA.

For autoimmune effects, OSHA reviewed epidemiological information suggesting an association between respirable silica exposure and autoimmune diseases, including scleroderma (Sluis-Cremer *et al.*, 1985, Document ID 0439), rheumatoid arthritis (Klockars et al., 1987, Document ID 1075; Rosenman and Zhu, 1995, 0424), and systemic lupus erythematosus (Brown *et al.*, 1997, Document ID 0974). However, there were no quantitative exposure-response data available on which to base a quantitative risk assessment for autoimmune diseases.

e. Physical Factors Affecting Toxicity of Crystalline Silica

OSHA also examined evidence on the comparative toxicity of the silica polymorphs (quartz, cristobalite, and tridymite). A number of animal studies appear to suggest that cristobalite and tridymite are more toxic to the lung than quartz and more tumorigenic (*e.g.*, King *et al.*, 1953, Document ID 1072; Wagner *et al.*, 1980, 0476). However, in contrast to these findings, several authors have reviewed the studies done in this area and concluded that cristobalite and tridymite are not more toxic than quartz (*e.g.*, Bolsaitis and Wallace, 1996, Document ID 0298; Guthrie and Heaney, 1995, 1035). Furthermore, a difference in toxicity between cristobalite and quartz has not been observed in epidemiological studies (tridymite has not been studied) (NIOSH, 2002, Document ID 1110). In an analysis of exposure-response for lung cancer, Steenland *et al.* found similar exposure-response trends between cristobalite-exposed workers and other cohorts

exposed to quartz (2001a, Document ID 0452).

OSHA also discussed other physical factors that may influence the toxicologic potency of crystalline silica. A number of animal studies compared the toxicity of freshly fractured silica to that of aged silica (Porter *et al.*, 2002, Document ID 1114; Shoemaker *et al.*, 1995, 0437; Vallyathan *et al.*, 1995, 1128). These studies have demonstrated that although freshly fractured silica is more toxic than aged silica, aged silica still retains significant toxicity. There have been no studies comparing workers exposed to freshly fractured silica to those exposed to aged silica. However, similarities between the results of animal and human studies involving freshly fractured silica suggest that the animal studies involving aged silica may also apply to humans. For example, studies of workers exposed to freshly fractured silica have demonstrated that these workers exhibit the same cellular effects as seen in animals exposed to freshly fractured silica (Castranova *et al.*, 1998, Document ID 1294; Goodman *et al.*, 1992, 1029). Animal studies also suggest that pulmonary reactions of rats to short-duration exposure to freshly fractured silica mimic those seen in acute silicosis in humans (Vallyathan *et al.*, 1995, Document ID 1128).

Surface impurities, particularly metals, have been shown to alter silica toxicity. Iron, depending on its state and quantity, has been shown to either increase or decrease toxicity (*see* Document ID 1711, pp. 247–258). Aluminum has been shown to decrease toxicity (Castranova *et al.*, 1997, Document ID 0978; Donaldson and Borm, 1998, 1004; Fubini, 1998, 1016). Silica coated with aluminosilicate clay exhibits lower toxicity, possibly as a result of reduced bioavailability of the silica particle surface (Donaldson and Borm, 1998, Document ID 1004; Fubini, 1998, 1016). Aluminum as well as other metal ions are thought to modify silanol groups on the silica surface, thus decreasing the membranolytic and cytotoxic potency and resulting in enhanced particle clearance from the lung before damage can take place (Fubini, 1998, Document ID 1016). An epidemiological study found that the risk of silicosis was less in pottery workers than in tin and tungsten miners (Chen *et al.*, 2005, Document ID 0985; Harrison *et al.*, 2005, 1036), possibly reflecting that pottery workers were exposed to silica particles having less biologically-available, non-clay-occluded surface area than was the case for miners.

Although it is evident that a number of factors can act to mediate the toxicological potency of crystalline silica, it is not clear how such considerations should be taken into account to evaluate lung cancer and silicosis risks to exposed workers. After evaluating many in vitro studies that investigated the surface characteristics of crystalline silica particles and their influence on fibrogenic activity, NIOSH concluded that further research is needed to associate specific surface characteristics that can affect toxicity with specific occupational exposure situations and consequent health risks to workers (2002, Document ID 1110). Thus, OSHA preliminarily concluded that while there was considerable evidence that several environmental influences can modify surface activity to either enhance or diminish the toxicity of silica, the available information was insufficient to determine in any quantitative way how these influences may affect disease risk to workers in any particular workplace setting.

3. Summary of the Preliminary QRA

OSHA presented in the Preliminary QRA estimates of the risk of silica-related diseases assuming exposure over a working life (45 years, from age 20 to age 65) to the revised 8-hour time-weighted average (TWA) PEL of 50 μg/m^3 respirable crystalline silica, the new action level of 25 μg/m^3, and the previous PELs. OSHA's previous general industry PEL for respirable quartz was expressed both in terms of a particle count formula and a gravimetric concentration formula; the previous construction and shipyard employment PELs for respirable quartz were only expressed in terms of a particle count formula. For general industry, as the quartz content increases, the gravimetric PEL approached a limit of 100 μg/m^3 respirable quartz. For construction and shipyard employment, OSHA's previous PELs used a formula that limits exposure to respirable dust, depending upon the quartz content, expressed as a respirable particle count concentration. There was no single mass concentration equivalent for the construction and shipyard employment PELs; OSHA reviewed several studies that suggest that the previous construction/shipyard PEL likely was between 250 and 500 μg/m^3 respirable quartz. In general industry, for both the gravimetric and particle count PELs, OSHA's previous PELs for cristobalite and tridymite were half the value for quartz. Based upon these previous PELs and the new action level, OSHA presented risk estimates associated with exposure over a working life to 25, 50, 100, 250, and 500 μg/m^3 respirable silica (corresponding to cumulative exposures over 45 years to 1.125, 2.25, 4.5, 11.25, and 22.5 mg/m^3-yrs).

To estimate lifetime excess mortality risks at these exposure levels, OSHA implemented each of the risk models in a life table analysis that accounted for competing causes of death due to background causes and cumulated risk through age 85. For these analyses, OSHA used lung cancer, NMRD, or renal disease mortality and all-cause mortality rates to account for background risks and competing risks (U.S. 2006 data for lung cancer and NMRD mortality in all males, 1998 data for renal disease mortality, obtained from cause-specific death rate tables published by the National Center for Health Statistics (2009, Document ID 1104)). OSHA calculated these risk estimates assuming occupational exposure from age 20 to age 65. The mortality risk estimates were presented in terms of lifetime excess risk per 1,000 workers for exposure over an 8-hour working day, 250 days per year, and a 45-year working life.

For silicosis morbidity, OSHA based its risk estimates on cumulative risk models used by various investigators to develop quantitative exposure-response relationships. These models characterized the risk of developing silicosis (as detected by chest radiography) up to the time that cohort members (including both active and retired workers) were last examined. Thus, risk estimates derived from these studies represented less-than-lifetime risks of developing radiographic silicosis. OSHA did not attempt to estimate lifetime risk (*i.e.,* up to age 85) for silicosis morbidity because the relationships between age, time, and disease onset post-exposure have not been well characterized.

a. Silicosis and NMRD Mortality

i. Exposure-Response Studies

In the Preliminary QRA, OSHA relied upon two published quantitative risk studies of silicosis and NMRD mortality (Document ID 1711). The first, Mannetje *et al.* (2002b, Document ID 1089) conducted a pooled analysis of silicosis mortality in which there were 18,634 subjects, 150 silicosis deaths, and 20 deaths from unspecified pneumoconiosis. Rates for silicosis adjusted for age, calendar time, and study were estimated by Poisson regression and increased nearly monotonically with deciles of cumulative exposure, from a mortality rate of 5/100,000 person-years in the lowest exposure category (0–0.99

mg/m³-yrs) to 299/100,000 person-years in the highest category (>28.10 mg/m³-yrs).

As previously discussed, the second, Park *et al.* (2002, Document ID 0405) analyzed the California diatomaceous earth cohort data from Checkoway *et al.* (1997, Document ID 0326), and examined mortality from chronic lung disease other than cancer (LDOC; also known as non-malignant respiratory disease (NMRD)). Smoking information was available for about 50 percent of the cohort and for 22 of the 67 LDOC deaths available for analysis, permitting Park *et al.* (2002, Document ID 0405) to partially adjust for smoking. Estimates of LDOC mortality risks were derived via Poisson and Cox proportional hazards models; a variety of relative rate model forms were fit to the data, with a linear relative rate model selected for estimating risks.

ii. Risk Estimates

As silicosis is only caused by exposure to respirable crystalline silica (*i.e.,* there is no background rate of silicosis in the unexposed population), absolute risks of silicosis mortality rather than excess risks were calculated for the Mannetje *et al.* pooled analysis (2002b, Document ID 1089). These risk estimates were derived from the rate ratios incorporating simulated measurement error reported by ToxaChemica (Document ID 0469). OSHA's estimate of lifetime risk of silicosis mortality, for 45 years of exposure to the previous general industry PEL, was 11 deaths per 1,000 workers for the pooled analysis (Document ID 1711). At the revised PEL, the risk estimate was 7 deaths per 1,000.

OSHA also calculated preliminary risk estimates for NMRD mortality. These estimates were derived from Park *et al.* (2002, Document ID 0405). For 45 years of exposure to the previous general industry PEL, OSHA preliminarily estimated lifetime excess risk at 83 deaths per 1,000 workers. At the revised PEL, OSHA estimated 43 deaths per 1,000 workers.

OSHA noted that, for exposures up to 250 μg/m³, the mortality risk estimates based on Park *et al.* (2002, Document ID 0405) are about 5 to 11 times as great as those calculated for the pooled analysis of silicosis mortality (Mannetje *et al.,* 2002b, Document ID 1089). These two sets of risk estimates, however, are not directly comparable, as the endpoint for the Park *et al.* (2002, Document ID 0405) analysis was death from all non-cancer lung diseases, including pneumoconiosis, emphysema, and chronic bronchitis, whereas the pooled analysis by Mannetje *et al.* (2002b, Document ID 1089) included only deaths coded as silicosis or other pneumoconiosis. Less than 25 percent of the LDOC deaths in the Park *et al.* analysis were coded as silicosis or other pneumoconiosis (15 of 67), suggesting that silicosis as a cause of death may be misclassified as emphysema or chronic bronchitis. Thus, Mannetje *et al.*'s (2002b, Document ID 1089) selection of deaths may tend to underestimate the true risk of silicosis mortality, and Park *et al.'s* (2002, Document ID 0405) analysis may more completely capture the total respiratory mortality risk from all non-malignant causes.

Since the time of OSHA's analysis, NCHS has released updated all-cause mortality and NMRD mortality background rates from 2011 (*http://wonder.cdc.gov/ucd-icd10.html*); OSHA's final risk estimates for NMRD mortality, which incorporate these updated rates (ICD10 codes J40–J47, chronic lower respiratory diseases; J60–J66, J68, pneumoconiosis and chemical effects), are available in Section VI, Final Quantitative Risk Assessment and Significance of Risk.

b. Lung Cancer Mortality

i. Exposure-Response Studies

In 1997, when IARC determined that there was sufficient evidence to regard crystalline silica as a human carcinogen, it also noted that some epidemiological studies did not demonstrate an excess risk of lung cancer and that exposure-response trends were not always consistent among studies that were able to describe such trends (Document ID 1062). These findings led Steenland et al. (2001a, Document ID 0452) to conduct a comprehensive exposure-response analysis—the IARC multi-center study—of the risk of lung cancer associated with exposure to crystalline silica. This study relied on all available cohort data from previously-published epidemiological studies for which there were adequate quantitative data on worker silica exposures to derive pooled estimates of disease risk. In addition, as discussed previously, OSHA identified four more recent studies suitable for quantitative risk assessment: (1) An exposure-response analysis by Rice *et al.* (2001, Document ID 1118) of a cohort of diatomaceous earth workers primarily exposed to cristobalite; (2) an analysis by Attfield and Costello (2004, Document ID 0285) of U.S. granite workers; (3) an exposure-response analysis by Hughes *et al.* (2001, Document ID 1060) of U.S. industrial sand workers; and (4) a risk analysis by Miller *et al.* (2007, Document ID 1305) and Miller and MacCalman (2009, Document ID 1306) of British coal miners. OSHA thoroughly described each of these studies in its Preliminary QRA (Document ID 1711); a brief summary of the exposure-response models used in each study is provided here.

The Steenland *et al.* pooled exposure-response analysis was based on data obtained from ten cohorts of silica-exposed workers (65,980 workers, 1,072 lung cancer deaths) (2001a, Document ID 0452). The pooled analysis cohorts included U.S. gold miners (Steenland and Brown, 1995a, Document ID 0450), U.S. diatomaceous earth workers (Checkoway *et al.,* 1997, Document ID 0326), Australian gold miners (de Klerk and Musk, 1998, Document ID 0345), Finnish granite workers (Koskela *et al.,* 1994, Document ID 1078), U.S. industrial sand employees (Steenland and Sanderson, 2001, Document ID 0455), Vermont granite workers (Costello and Graham, 1988, Document ID 0991), South African gold miners (Hnizdo and Sluis-Cremer, 1991, Document ID 1051; Hnizdo *et al.,*1997, 1049), and Chinese pottery workers, tin miners, and tungsten miners (Chen *et al.,* 1992, Document ID 0329).

Steenland *et al.* (2001a, Document ID 0452) performed a nested case-control analysis via Cox regression. There were 100 controls chosen for each case randomly from among cohort members who survived past the age at which the case died; controls were matched on age (the time variable in Cox regression), study, race/ethnicity, sex, and date of birth within 5 years. Steenland et al. found that the use of any of the following continuous exposure variables in a log linear relative risk model resulted in positive statistically significant ($p \leq 0.05$) exposure-response coefficients: (1) Cumulative exposure with a 15-year lag; (2) the log of cumulative exposure with a 15-year lag; and (3) average exposure (2001a, Document ID 0452). The models that provided the best fit to the data used cumulative exposure and log-transformed cumulative exposure. Models that used log-transformed cumulative exposure also showed no statistically significant heterogeneity among cohorts ($p = 0.36$), possibly because they are less influenced by very high exposures. At OSHA's request, Steenland (2010, Document ID 1312) also conducted a categorical analysis of the pooled data set and additional analyses using linear relative risk models (with and without the log transformation of cumulative exposure) as well as a two-piece spline model (see Document ID 1711, pp. 276–278).

Rice *et al.* (2001, Document ID 1118) applied a variety of exposure-response models to the California diatomaceous earth cohort data originally studied by Checkoway *et al.* (1993, Document ID 0324; 1996, 0325; 1997, 0326) and included in the Steenland *et al.* (2001a, Document ID 0452) pooled analysis. The cohort consisted of 2,342 white males employed for at least one year between 1942 and 1987 in a California diatomaceous earth mining and processing plant. The cohort was followed until 1994, and included 77 lung cancer deaths. Rice et al. reported that exposure to crystalline silica was a significant predictor of lung cancer mortality for nearly all of the models employed, with the linear relative risk model providing the best fit to the data in the Poisson regression analysis (2001, Document ID 1118).

Attfield and Costello (2004, Document ID 0285) analyzed the U.S. granite cohort originally studied by Costello and Graham (1988, Document ID 0991) and Davis *et al.* (1983, Document ID 0999) and included in the Steenland *et al.* (2001a, Document ID 0452) pooled analysis. The cohort consisted of 5,414 male granite workers who were employed in the Vermont granite industry between 1950 and 1982 and who had received at least one chest x-ray from the surveillance program of the Vermont Department of Industrial Hygiene. The 2004 report by Attfield and Costello extended follow-up from 1982 to 1994, and found 201 deaths (Document ID 0285). Using Poisson regression models, the results of a categorical analysis showed a generally increasing trend of lung cancer rate ratios with increasing cumulative exposure.

As mentioned previously, however, the rate ratio for the highest exposure group in the Attfield and Costello analysis (cumulative exposures of 6.0 mg/m^3-yrs or higher) was substantially lower than that for other exposure groups (2004, Document ID 0285). The authors reported that the best-fitting model had a 15-year lag, untransformed cumulative exposure, and the omission of this highest exposure group. The authors argued that it was appropriate to omit the highest exposure group for several reasons, including that the exposure estimates for the highest exposure group were less reliable, and there was a greater likelihood of cohort selection effects, competing causes of death, and misdiagnosis (Document ID 0285, p. 136).

McDonald *et al.* (2001, Document ID 1091), Hughes *et al.* (2001, Document ID 1060) and McDonald *et al.* (2005, Document ID 1092) followed up on a cohort study of North American industrial sand workers included in the Steenland *et al.* (2001a, Document ID 0452) pooled analysis. The McDonald *et al.* cohort included 2,670 men employed before 1980 for three years or more in one of nine North American (8 U.S. and 1 Canadian) sand-producing plants, including 1 large associated office complex (2001, Document ID 1091). A nested case-control study based on 90 lung cancer deaths (through 1994) from this cohort was conducted by Hughes *et al.* (2001, Document ID 1060). A subsequent update (through 2000, 105 lung cancer deaths) eliminated the Canadian plant, following 2,452 men from the eight U.S. plants (McDonald *et al.,* 2005, Document ID 1092). These nested case-control studies, Hughes *et al.* (2001, Document ID 1060) and McDonald *et al.* (2005, Document ID 1092), allowed for individual job, exposure, and smoking histories to be taken into account in the exposure-response analysis. Hughes *et al.* (2001, Document ID 1060) found statistically significant positive exposure-response trends for lung cancer for both cumulative exposure (lagged 15 years) and average exposure concentration, but not for duration of employment. With exposure lagged 15 years and after adjusting for smoking, increasing quartiles of cumulative silica exposure were also associated with lung cancer mortality (p-value for trend = 0.04). McDonald *et al.* (2005, Document ID 1092) found very similar results, with increasing quartiles of cumulative silica exposure (lagged 15 years) associated with lung cancer mortality (p-value for trend = 0.006). Because McDonald *et al.* (2005, Document ID 1092) did not report the medians of the exposure categories, and given the similar results of both case-control studies, OSHA chose to base its risk estimates on the Hughes *et al.* (2001, Document ID 1060) study.

Miller *et al.* (2007, Document ID 1305) and Miller and MacCalman (2009, Document ID 1306) continued a follow-up mortality study, begun in 1970, of coal miners from 10 British coal mines initially followed through the end of 1992 (Miller *et al.,* 1997, Document ID 1304) and extended it to 2005. In the analysis using internal controls and Cox regression methods, the relative risk of lung cancer mortality, adjusted for concurrent dust exposure and smoking status, at a cumulative quartz exposure (lagged 15 years) equivalent of approximately 55 μg/m^3 for 45 years was 1.14 (95% C.I., 1.04 to 1.25).

ii. Risk Estimates

In the Preliminary QRA, OSHA presented estimates of excess lung cancer mortality risk from occupational exposure to crystalline silica, based on data from the five epidemiology studies discussed above (Document ID 1711). In its preliminary analysis, OSHA used background all-cause mortality and lung cancer mortality rates from 2006, as reported by the National Center for Health Statistics (NCHS) (Document ID 1104). These rates were used in life table analyses to estimate lifetime risks at the exposure levels of interest, ranging from 25 to 500 μg/m^3 respirable crystalline silica.

OSHA's preliminary estimates of lifetime excess lung cancer risk associated with 45 years of exposure to crystalline silica at 100 μg/m^3 (approximately the previous general industry PEL) ranged between 13 and 60 deaths per 1,000 workers, depending upon the study used. For exposure to the revised PEL of 50 μg/m^3, the lifetime risk estimates were in the range of between 6 and 26 deaths per 1,000 workers, depending upon the study used. For a 45 year exposure at the new action level of 25 μg/m^3, OSHA estimated the risk to range between 3 and 23 deaths per 1,000 workers. The Agency found that the results from these preliminary assessments were reasonably consistent despite the use of data from different cohorts and the reliance on different analytical techniques for evaluating dose-response relationships.

OSHA also estimated the lung cancer risk associated with 45 years of exposure to the previous construction/shipyard PEL (in the range of 250 μg/m^3 to 500 μg/m^3) to range between 37 and 653 deaths per 1,000 workers, depending upon the study used. OSHA acknowledges that the 653 deaths is the upper limit for 45 years of exposure to 500 μg/m^3, and recognizes that actual risk, to the extent that workers are exposed for less than 45 years or intermittently, is likely to be lower. In addition, exposure to 250 or 500 μg/m^3 over 45 years represents cumulative exposures of 11.25 and 22.5 mg/m^3-yrs, respectively. This range of cumulative exposure is well above the median cumulative exposure for most of the cohorts used in the preliminary risk assessment. Thus, OSHA explained that estimating lung cancer excess risks over this higher range of cumulative exposures of interest to OSHA required some degree of upward extrapolation of the exposure-response function to model these high exposures, thus adding uncertainty to the estimates.

Since the time of that original analysis, NCHS has released updated all-cause mortality and lung cancer mortality background rates from 2011.

OSHA's final risk estimates, which incorporate these updated rates, are available in this preamble at Section VI, Final Quantitative Risk Assessment and Significance of Risk.

c. Uncertainty Analysis of Pooled Studies of Lung Cancer Mortality and Silicosis Mortality

In the Preliminary QRA, OSHA recognized that risk estimates can be inherently uncertain and can be affected by confounding, selection bias, and measurement error (Document ID 1711). OSHA presented several reasons as to why it does not believe that confounding or selection bias had a substantial impact on the risk estimates for lung cancer or silicosis mortality (Document ID 1711, pp. 299–302). However, because it was more difficult to assess the importance of exposure measurement error, OSHA's contractor, ToxaChemica, Inc., commissioned Drs. Kyle Steenland and Scott Bartell to perform an uncertainty analysis to examine the effect of uncertainty due to measurement error in the pooled studies (Steenland *et al.,* 2001a, Document ID 0452; Mannetje 2002b, 1089) on the lung cancer and silicosis mortality risk estimates (ToxaChemica, Inc., 2004, Document ID 0469).

There are two main sources of error in the silica exposure measurements. The first arises from the assignment of individual workers' exposures based on either exposure measurements for a sample of workers in the same job or estimated exposure levels for specific jobs in the past when no measurements were available, via a job-exposure matrix (JEM) (Mannetje *et al.,* 2002a, Document ID 1090). The second arises from the conversion of historically-available dust measurements, typically particle count concentrations, to gravimetric respirable silica concentrations. ToxaChemica, Inc. conducted an uncertainty analysis using the raw data from the IARC multi-centric study to address these sources of error (2004, Document ID 0469).

i. Lung Cancer Mortality

To examine the effect of error in the assignment of individual exposure values in the cohorts studied by Steenland *et al.* (2001a, Document ID 0452), ToxaChemica, Inc. used a Monte Carlo analysis (a type of simulation analysis that varies the values of an uncertain input to an analysis—in this case, exposure estimates—to explore the effects of different values on the outcome of the analysis) to randomly sample new values for each worker's job-specific exposure levels from a distribution that they believed characterized the variability in exposures of individual workers in each job (see Document ID 1711, pp. 303–305). That is, ToxaChemica created a distribution of values for each member of each cohort where the mean exposure for each member was equal to the original exposure value and the distribution of exposure values was based on a log-normal distribution having a standard deviation that was based on the exposure variation observed in industrial sand plants observed by Steenland and Sanderson (2001, Document ID 0455). From this distribution, new sets of exposure values from each cohort member were randomly drawn for 50 trials. This simulation was designed to test whether sets of exposure values that were plausibly different from the original estimates would lead to substantially different results of the exposure-response analysis. Except for the simulated exposure values and the correction of a few minor errors in the original data sets, the simulation analysis used the same data as the original analyses conducted by Steenland *et al.* (2001a, Document ID 0452).

When an entire set of cumulative exposure values was assembled for all workers based on these randomly sampled values, the set was used in a conditional logistic regression to fit a new exposure-response model. The extent to which altering the exposure values led to changes in the results indicated how sensitive the previously presented risk estimates may have been to error in the exposure estimates. Among the individual cohorts, most of the mean regression coefficients resulting from the simulation analysis were consistent with the coefficients from the exposure-response analyses reported in Steenland *et al.* (2001, Document ID 0455) and ToxaChemica, Inc. (2004, Document ID 0469) (following correction for minor data entry and rounding errors). An exception was the mean of the simulation coefficients based on the South Africa gold cohort (0.26), which was lower than the previously calculated exposure coefficient (0.582). ToxaChemica, Inc. (2004, Document ID 0469) concluded that this error source probably did not appreciably change the estimated exposure-response coefficient for the pooled data set.

To examine the effect of error in estimating gravimetric respirable crystalline silica exposures from historical dust concentration data (*i.e.,* particle count data), ToxaChemica, Inc. (2004, Document ID 0469) used a procedure similar to that used to assess uncertainties in individual exposure value assignments. ToxaChemica, Inc. assumed that, for each job in the dataset, a specific conversion factor existed that related workers' exposures measured as particle concentrations to gravimetric respirable silica exposures, and that this conversion factor came from a normal distribution with a standard deviation $\sigma = \frac{1}{2}$ its mean μ. The use of a normal distribution was a reasonable choice in that it allowed the sampled conversion factors to fall above or below the original values with equal probability, as the authors had no information to suggest that error in either direction was more likely. The normal distribution also assigned higher probability to conversion values closer to the original values. The choice of the normal distribution therefore reflected the study authors' judgment that their original conversion factors were more likely to be approximately correct than not, while allowing for the possibility of significant error in the original values.

A new conversion factor was then sampled for each job from the appropriate distribution, and the complete set of sampled conversion factors was then used to re-run the risk analysis used by Steenland *et al.* (2001a, Document ID 0452). The results were similar to the coefficients originally derived from each cohort; the only coefficient substantially affected by the procedure was that for the South African cohort, with an average value of 0.350 across ten runs compared to the original value of 0.582 (*see* Table II–5, Document ID 1711, p. 307). This suggests that the results of exposure-response analyses conducted using the South African cohort are sensitive to error in exposure estimates; therefore, there is greater uncertainty due to potential exposure estimation error in an exposure-response model based on this cohort than is the case for the other nine cohorts in Steenland *et al*'s analysis.

To explore the potential effects of both kinds of random uncertainty described above, ToxaChemica, Inc. (2004, Document ID 0469) used the distributions representing the error in job-specific exposure assignment and the error in converting exposure metrics to generate 50 new exposure simulations for each cohort. A study-specific coefficient and a pooled coefficient were fit for each new simulation, with the assumption that the two sources of uncertainty were independent. The results indicated that the only cohort for which the mean of the exposure coefficients derived from the 50 simulations differed substantially from the previously calculated exposure

coefficient was the South African gold cohort (simulation mean of 0.181 vs. original coefficient of 0.582). For the pooled analysis, the mean coefficient estimate from the simulations was 0.057, just slightly lower than the previous estimate of 0.060. Based on these results, OSHA concludes that random error in the underlying exposure estimates in the Steenland *et al.* (2001a, Document ID 0452) pooled cohort study of lung cancer is not likely to have substantially influenced the original risk estimates derived from the pooled data set, although the model coefficient for one of the ten cohorts (the South African gold miner cohort) appeared to be sensitive to measurement errors (*see* Table II–5, Document ID 1711, p. 307).

Drs. Steenland and Bartell also examined the effects of systematic bias in conversion factors, considering the possibility that these may have been consistently under-estimated or over-estimated for any given cohort. They addressed possible biases in either direction, conducting simulations where the true silica content was assumed to be either half or double the estimated silica content of measured exposures. For the conditional logistic regression model using log cumulative exposure with a 15-year lag, doubling or halving the exposure for a specific study resulted in virtually no change in the exposure-response coefficient for that study or for the pooled analysis overall. This is due to the use of log-transformed exposure metrics, which ensured that any multiplicative bias in exposure would have virtually no effect on conditional logistic regression coefficients (Document ID 0469, p. 17). That is, for this model, a systematic error in exposure estimation for any study had little effect on the lung cancer response rate for either the specific study or the pooled analysis overall.

ii. Silicosis Mortality

Following the procedures described above for the lung cancer analysis, Toxachemica, Inc. (2004, Document ID 0469) combined both sources of random measurement error in a Monte Carlo analysis of the silicosis mortality data from Mannetje *et al.* (2002b, Document ID 1089). Categorical analyses were performed with a nested case control model, in contrast to the Poisson model used previously by Mannetje *et al.* (2002b, Document ID 1089). The nested case control model was expected to control more effectively for age. This model yielded categorical rate ratio results using the original data (prior to simulation of measurement error) which were approximately 20–25 percent lower than those reported by Mannetje *et al.* (2002b, Document ID 1089). The silicosis mortality dataset thus appeared to be more sensitive to possible error in exposure measurement than the lung cancer dataset, for which the mean of the simulation coefficients was virtually identical to the original. OSHA notes that its risk estimates derived from the pooled analysis (Mannetje *et al.,* 2002b, Document ID 1089), incorporated ToxaChemica, Inc.'s simulated measurement error (2004, Document ID 0469). More information is provided in the Preliminary QRA (Document ID 1711, pp. 310–314).

d. Renal Disease Mortality

i. Exposure-Response Studies

Steenland *et al.* (2002a, Document ID 0448) examined renal disease mortality in a pooled analysis of three cohorts, as discussed previously. These cohorts were chosen because data were available for both underlying cause mortality and multiple cause mortality. The combined cohort for the pooled analysis (Steenland *et al.,* 2002a, Document ID 0448) consisted of 13,382 workers with exposure information available for 12,783 (95 percent). SMRs (compared to the U.S. population) for renal disease (acute and chronic glomerulonephritis, nephrotic syndrome, acute and chronic renal failure, renal sclerosis, and nephritis/nephropathy) were statistically significantly elevated using multiple cause data (SMR 1.29, 95% CI 1.10–1.47, 193 deaths) and underlying cause data (SMR 1.41, 95% CI 1.05–1.85, 51 observed deaths).

ii. Risk Estimates

As detailed in the Preliminary QRA, OSHA estimated that exposure to the previous (100 μg/m^3) and revised (50 μg/m^3) general industry PELs, over a 45-year working life, would result in a lifetime excess renal disease mortality risk of 39 and 32 deaths per 1,000 workers, respectively. For exposure to the previous construction/shipyard PELs, OSHA estimated the lifetime excess risk to range from 52 to 63 deaths per 1,000 workers at exposures of 250 and 500 μg/m^3, respectively. These risks reflect the 1998 background all-cause mortality and renal mortality rates for U.S. males. Background rates were not adjusted for the renal disease risk estimates because the CDC significantly changed the classification of renal diseases after 1998; they are now inconsistent with those used by Steenland *et al.* (2002a, Document ID 0448) to ascertain the cause of death of workers in their study.

e. Silicosis Morbidity

i. Exposure-Response Studies

OSHA summarized, in its Preliminary QRA, the principal cross-sectional and cohort studies that quantitatively characterized relationships between exposure to crystalline silica and the development of radiographic evidence of silicosis (Document ID 1711). Each of these studies relied on estimates of cumulative exposure to evaluate the relationship between exposure and silicosis prevalence. The health endpoint of interest in these studies was the appearance of opacities on chest radiographs indicative of pulmonary fibrosis. Most of the studies reviewed by OSHA considered a finding consistent with an ILO classification of 1/1 to be a positive diagnosis of silicosis, although some also considered an x-ray classification of 1/0 or 0/1 to be positive. OSHA noted its belief, in the Preliminary QRA, that the most reliable estimates of silicosis morbidity, as detected by chest radiographs, come from the studies that evaluated radiographs over time, included radiographic evaluation of workers after they left employment, and derived cumulative or lifetime estimates of silicosis disease risk. OSHA also pointed out that the low sensitivity of chest radiography in detecting silicosis suggests that risk estimates derived from radiographic evidence likely underestimate the true risk.

Hnizdo and Sluis-Cremer (1993, Document ID 1052) described the results of a retrospective cohort study of 2,235 white gold miners in South Africa. A total of 313 miners had developed silicosis (x-ray with ILO 1/1 or greater) and had been exposed for an average of 27 years at the time of diagnosis. The average latency for the cohort was 35 years (range of 18–50 years) from the start of exposure to diagnosis. The average respirable dust exposure for the cohort overall was 290 μg/m^3 (range 110–470), corresponding to an estimated average respirable silica concentration of 90 μg/m^3 (range 33–140). The average cumulative dust exposure for the overall cohort was 6.6 mg/m^3-yrs (range 1.2–18.7). Silicosis risk increased exponentially with cumulative exposure to respirable dust in models using log-logistic regression. Using the exposure-response relationship developed by Hnizdo and Sluis-Cremer (1993, Document ID 1052), and assuming a quartz content of 30 percent in respirable dust, Rice and Stayner (1995, Document ID 0418) estimated the risk of silicosis to be 13 percent for a 45-year exposure to 50 μg/m^3 respirable crystalline silica.

Steenland and Brown (1995b, Document ID 0451) studied 3,330 South Dakota gold miners who had worked at least a year underground between 1940 and 1965. Chest x-rays were obtained in cross-sectional surveys in 1960 and 1976 and used along with death certificates to ascertain cases of silicosis; 128 cases were found via death certificate, 29 were found by x-ray (defined as ILO 1/1 or greater), and 13 were found by both. OSHA notes that the inclusion of death certificate diagnoses complicates interpretation of the risk estimate from this study since, as noted by Finkelstein (2000, Document ID 1015), it is not known how well such diagnoses correlate with ILO radiographic interpretations; as such, the risk estimates derived from this study may not be directly comparable to others that rely exclusively on radiographic findings to evaluate silicosis morbidity risk. The mean exposure concentration was 50 μg/m^3 for the overall cohort, with those hired before 1930 exposed to an average of 150 μg/m^3. The average duration of exposure for workers with silicosis was 20 years (s.d. = 8.7) compared to 8.2 years (s.d. = 7.9) for the rest of the cohort. This study found that cumulative exposure was the best disease predictor, followed by duration of exposure and average exposure. Lifetime risks were estimated from Poisson regression models using standard life table techniques; the results indicated an estimated risk of 47 percent associated with 45 years of exposure to 90 μg/m^3 respirable crystalline silica, which reduced to 35 percent after adjustment for age and calendar time.

OSHA used the same life table approach as described for estimating lung cancer and NMRD mortality risks to estimate lifetime silicosis risk based on the silicosis rates, adjusted for age and calendar time, calculated by Steenland and Brown (1995b, Table 2, Document ID 0451). Silicosis risk was estimated through age 85, assuming exposure from age 20 through 65, and assuming that the silicosis rate remains constant after age 65. All-cause mortality rates to all males for calendar year 2006 were used to account for background competing risk. From this analysis, OSHA estimated the risk from exposure to the previous general industry PEL of 100 μg/m^3 to be 43 percent; this is somewhat higher than estimated by Steenland and Brown (1995b) because of the use by OSHA of more recent mortality data and calculation of risk through age 85 rather than 75. For exposure to the revised PEL of 50 μg/m^3, OSHA estimated the lifetime risk to be 7 percent. Since the time of the original analysis, NCHS has released updated all-cause mortality background rates from 2011; OSHA's final risk estimates, which incorporate these updated rates, are available in Section VI, Final Quantitative Risk Assessment and Significance of Risk.

Miller *et al.* (1995, Document ID 1097; 1998, 0374) and Buchanan *et al.* (2003, Document ID 0306) reported on a follow-up study conducted in 1990 and 1991 of 547 survivors of a 1,416 member cohort of Scottish coal workers from a single mine. These men all worked in the mine during a period between early 1971 and mid-1976, during which they had experienced ''unusually high concentrations of freshly cut quartz in mixed coalmine dust'' (Document ID 0374, p.52). Thus, this cohort allowed for the study of exposure-rate effects on the development of silicosis. The men all had radiographs dating from before, during, or just after this high concentration period, and the 547 participating survivors received follow-up chest x-rays between November 1990 and April 1991.

Buchanan *et al.* (2003, Document ID 0306) presented logistic regression models in stages. In the first stage they compared the effect of pre- vs. post-1964 cumulative quartz exposures on odds ratios; this yielded a statistically significant odds ratio estimate for post-1964 exposures. In the second stage they added total dust levels both pre- and post-1964, age, smoking status, and the number of hours worked pre-1954; only post-1964 cumulative exposures remained significant. Finally, in the third stage, they started with only the statistically significant post-1964 cumulative exposures, and separated these exposures into two quartz bands, one for exposure to concentrations less than 2,000 μg/m^3 respirable quartz and the other for concentrations greater than or equal to 2,000 μg/m^3. Both concentration bands were highly statistically significant in the presence of the other, with the coefficient for exposure concentrations greater than or equal to 2000 μg/m^3 being three times that of the coefficient for concentrations less than 2000 μg/m^3. From this, the authors concluded that their analysis showed that ''the risks of silicosis over a working lifetime can rise dramatically with exposure to such high concentrations over a timescale of merely a few months'' (Buchanan *et al.* 2003, Document ID 0306, p. 163). The authors then used the model to estimate the risk of acquiring a chest x-ray classified as ILO category 2/1+, 15 years after exposure, as a function of both low (<2000 μg/m^3) and high (>2000 μg/m^3) quartz concentrations. OSHA chose to use this model to estimate the risk of radiological silicosis consistent with an ILO category 2/1+ chest x-ray for several exposure scenarios; in each, it assumed 45 years of exposure, 2000 hours/year of exposure, and no exposure above a concentration of 2000 μg/m^3. The results showed that occupational exposures to the revised PEL of 50 μg/m^3 led to an estimated risk of 55 cases per 1,000 workers. Exposure at the previous general industry PEL of 100 μg/m^3 increased the estimate to 301 cases per 1,000 workers. At higher exposure levels the risk estimates rose quickly to near certainty.

Chen *et al.* (2001, Document ID 0332) reported the results of a retrospective study of a Chinese cohort of 3,010 underground miners who had worked in tin mines at least one year between 1960 and 1965. They were followed through 1994, by which time 2,426 (80.6 percent) workers had either retired or died, and only 400 (13.3 percent) remained employed at the mines. Annual radiographs were taken beginning in 1963 and cohort members continued to have chest x-rays taken every 2 or 3 years after leaving work. Silicosis was diagnosed when at least 2 of 3 radiologists classified a radiograph as being a suspected case or at Stage I, II, or III under the 1986 Chinese pneumoconiosis roentgen diagnostic criteria, which the authors reported agreed closely with ILO categories 0/1, Category 1, Category 2, and Category 3, respectively. Silicosis was observed in 33.7 percent of the group; 67.4 percent of the cases developed after exposure ended.

Chen *et al.* (2001, Document ID 0332) found that a Weibull model provided the best fit to relate cumulative silicosis risk to eight categories of cumulative total dust exposure. The risk of silicosis was strongly related to cumulative silica exposure. The investigators predicted a 55-percent risk of silicosis associated with 45 years of exposure to 100 μg/m^3. The paper did not report the risk associated with a 45-year exposure to 50 μg/m^3, but OSHA estimated the risk to be about 17 percent (based on the parameters of the Weibull model).

In a later study, Chen *et al.* (2005, Document ID 0985) investigated silicosis morbidity risks among three cohorts to determine if the risk varied among workers exposed to silica dust having different characteristics. The cohorts consisted of 4,547 pottery workers, 4,028 tin miners, and 14,427 tungsten miners, all employed after January 1, 1950 and selected from a total of 20 workplaces. The approximate

mean cumulative exposures to respirable silica for pottery, tin, and tungsten workers were 6.4 mg/m^3-yrs, 2.4 mg/m^3-yrs, and 3.2 mg/m^3-yrs, respectively. Measurement of particle surface occlusion (presence of a mineral coating that may affect the biological availability of the quartz component) indicated that, on average, 45 percent of the surface area of respirable particles collected from pottery factory samples was occluded, compared to 18 percent of the particle surface area for tin mine samples and 13 percent of particle surface area for tungsten mines. When cumulative silica exposure was adjusted to reflect exposure to surface-active quartz particles (*i.e.,* not occluded), the estimated cumulative risk among pottery workers more closely approximated those of the tin and tungsten miners, suggesting to the authors that alumino silicate occlusion of the crystalline particles in pottery factories at least partially explained the lower risk seen among pottery workers, despite their having been more heavily exposed. Based on Chen *et al.* (2005, Document ID 0985), OSHA estimated the cumulative silicosis risk associated with 45 years of exposure to 100 μg/m^3 respirable crystalline silica to be 6 percent for pottery workers, 12 percent for tungsten miners, and 40 percent for tin miners. For 45 years of exposure to 50 μg/m^3, cumulative silicosis morbidity risks were estimated to be 2 percent for pottery workers, 2 percent for tungsten miners, and 10 percent for tin miners.

ii. Risk Estimates

OSHA's risk estimates for silicosis morbidity ranged between 60 and 773 per 1,000 workers for a 45-year exposure to the previous general industry PEL of 100 μg/m^3, and between 20 and 170 per 1,000 workers for a 45-year exposure to the revised PEL of 50 μg/m^3, depending upon the study used. OSHA recognizes that actual risk, to the extent that workers are exposed for less than 45 years or intermittently, is likely to be lower, but also recognizes that silicosis can progress for years after exposure ends. Also, given the consistent finding of a monotonic exposure-response relationship for silicosis morbidity with cumulative exposure in the studies reviewed, OSHA continues to find that cumulative exposure is a reasonable exposure metric upon which to base risk estimates in the exposure range of interest.

D. Comments and Responses Concerning Silicosis and Non-Malignant Respiratory Disease Mortality and Morbidity

In this section, OSHA focuses on comments pertaining to the literature used by the Agency to assess risk for silicosis and non-malignant respiratory disease (NMRD) mortality and morbidity. As discussed in the Review of Health Effects Literature and Preliminary QRA (Document ID 1711) and in Section V.C, Summary of the Review of Health Effects Literature and Preliminary QRA, of this preamble, OSHA used two studies (ToxaChemica, 2004, Document ID 0469; Park *et al.,* 2002, 0405) to determine lifetime risk for silicosis and NMRD mortality and five studies (Buchanan *et al.,* 2003, Document ID 0306; Chen *et al.,* 2001, 0332; Chen *et al.,* 2005, 0985; Hnizdo and Sluis-Cremer, 1993, 1052; and Steenland and Brown, 1995b, 0451) to determine cumulative risk for silicosis morbidity. OSHA discussed the reasons for selecting these scientific studies for quantitative risk assessment in its Review of Health Effects Literature and Preliminary QRA (Document ID 1711, pp. 340–342). Briefly, OSHA concluded that the aforementioned studies used scientifically accepted techniques to measure silica exposures and health effects in order to determine exposure-response relationships. The Agency believed, and continues to believe, that these studies, as a group, provide the best available evidence of the exposure-response relationships between silica exposure and silicosis morbidity, silicosis mortality, and NMRD mortality and that they constitute a solid and reliable foundation for OSHA's final risk assessment.

OSHA received both supportive and critical comments and testimony regarding these studies. Comments largely focused on how the authors of these studies analyzed their data, and concerns expressed by commenters generally focused on exposure levels and measurement, potential biases, confounding, statistical significance of study results, and model forms. This section does not include extensive discussion on exposure measurement error, potential biases, thresholds, confounding factors, and the use of the cumulative exposure metric, which are discussed in depth in other sections of this preamble, including V.J Comments and Responses Concerning Biases in Key Studies and V.K Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis. OSHA addresses comments on general model form and various other issues here and concludes that these comments do not meaningfully affect OSHA's reliance on the studies discussed herein or the results of the Agency's final risk assessment.

1. Silicosis and NMRD Mortality

There are two published studies that report quantitative risk assessments of silicosis and NMRD mortality (*see* Document ID 1711, pp. 292–298). The first is an exposure-response analysis of diatomaceous earth (DE) workers (Park *et al.,* 2002, Document ID 0405). Park *et al.* quantified the relationship between cristobalite exposure and mortality caused by NMRD, which includes silicosis, pneumoconiosis, emphysema, and chronic bronchitis (Park *et al.* refers to these conditions as ''lung disease other than cancer (LDOC),'' while OSHA uses the term ''NMRD''). Because NMRD captures much of the silicosis misclassification that results in underestimation of the disease and includes risks from other lung diseases associated with crystalline silica exposures, OSHA believes the risk estimates derived from the Park *et al.* study reasonably reflect the risk of death from silica-related respiratory diseases, including silicosis (Document ID 1711, pp. 297–298). The second study (Mannetje *et al.* 2002b, Document ID 1089) is a pooled analysis of six epidemiological studies that were part of an IARC effort. OSHA's contractor ToxaChemica later conducted a reanalysis and uncertainty analysis using these data (ToxaChemica, 2004, Document ID 0469). OSHA believes that the estimates from the pooled study represent credible estimates of mortality risk from silicosis across a range of industrial workplaces, but are likely to understate the actual risk because silicosis is under-reported as a cause of death.

a. Park *et al.* (2002)

The American Chemistry Council (ACC) submitted several comments pertaining to the Park *et al.* (2002, Document ID 0405) study, including comments on the cohort's exposure concentrations. In its post-hearing brief, the ACC noted that the mean crystalline silica exposure in Park's DE cohort was estimated to be more than three times the former general industry PEL of 100 μg/m^3 and the mean estimated exposure of the workers with silicosis could have been close to 10 times that level. According to the ACC, extrapolating risks from the high exposure levels in this cohort to the much lower levels relevant to OSHA's risk assessment (the previous general industry PEL of 100

μg/m³ and the revised PEL of 50 μg/m³) is ''fraught with uncertainty'' (Document ID 4209, pp. 84–85).

OSHA acknowledges that there is some uncertainty in using models heavily influenced by exposures above the previous PEL due to potential deviance at areas of the relationship with fewer data points. However, OSHA believes that the ACC's characterization of exposures in the Park *et al.* (2002) study as vastly higher than the final and former PELs is incorrect. The ACC focused on mean exposure concentrations, reported by Park *et al.* as 290 μg/m³, to make this argument (Document ID 0405, p. 37). However, in the Park *et al.* study, the mean cumulative exposure of the cohort was 2.16 mg/m³-yrs, lower than what the final rule would permit over 45 years of exposure (2.25 mg/m³-yrs) (Document ID 0405, p. 37). Thus, whereas some participants in the Park *et al.* study had higher average-8-hour exposures than were typical under the previous PEL, they were quite comparable to the exposures workers might accumulate over their working lives under the final PEL of 50 μg/m³. In addition, as discussed in Section V.M, Comments and Responses Concerning Working Life, Life Tables, and Dose Metric, OSHA believes that the evidence in the rulemaking record, including comments and testimony from NIOSH (Document ID 3579, Tr. 127), Kyle Steenland, Ph.D. (Document ID 3580, Tr. 1227), and OSHA peer reviewer Kenneth Crump, Ph.D. (Document ID 1716, p. 166), points to cumulative exposure as a reasonable and appropriate dose metric for deriving exposure-response relationships. In sum, OSHA does not agree that the Park study should be discounted based on the ACC's concerns about the estimated exposure concentrations in the diatomaceous earth cohort.

The ACC also criticized the Park study for its treatment of possible confounding by smoking and exposure to asbestos. The ACC commented in its pre-hearing brief that data on smoking was available for only half of the cohort (Document ID 2307, Attachment A, p. 108). The Panel also wrote that, ''while Park *et al.* dismissed asbestos as a potential confounder and omitted asbestos exposure in their final models, the situation is not as clear-cut as they would have one believe'' (Document ID 2307, Attachment A, p. 109). The Panel highlighted that Checkoway *et al.* (1997), the study upon which Park relied to dismiss asbestos as a potential confounder, noted that ''misclassification of asbestos exposure may have hindered our ability to control for asbestos as a potential confounder'' (Document ID 0326, p. 685; 2307, Attachment A, p. 109).

OSHA has reviewed the ACC's concerns, and maintains that Park *et al.* adequately addressed the issues of possible confounding by smoking and exposure to asbestos in this data set. Smoking habits of a third of the individuals who died from NMRD were known in the Park *et al.* (2002) study. Based on that partial knowledge of smoking habits, Park *et al.* presented analyses indicating that confounding by smoking was unlikely to significantly impact the observed relationship between cumulative exposure to crystalline silica and NMRD mortality (Document ID 0405, p. 41). Specifically, Park *et al.* (2002) performed internally standardized analyses, which tend to be less susceptible to confounding by smoking since they compare the mortality experience of groups of workers within the cohort rather than comparing the mortality experience of the cohort with an external population (such as by using national mortality rates); the authors found that the internally standardized models yielded only slightly lower exposure-response coefficients than externally adjusted models (Document ID 0405; 1711, p. 302). These results suggested that estimates of NMRD mortality risks based on this cohort are not likely to be exaggerated due to cohort members' smoking habits. Park *et al.* also stated that the authors' findings regarding possible confounding by smoking were consistent with those of Checkoway *et al.*, who also concluded there it was ''very unlikely'' that smoking could explain the association between mortality from NMRD and silica exposure in this cohort (Document ID 0405, p. 41; 0326, p. 687). NIOSH noted that ''[r]esidual confounding from poorly characterized smoking could have an effect,'' but that effect could be either positive or negative (Document ID 4233, pp. 32–33). While OSHA agrees that comprehensive smoking data would be ideal, the Agency believes that the approach taken by Park *et al.* to address this issue was reasonable.

Asbestos exposure was estimated for all workers in Park *et al.*, which enabled the researchers to directly test confounding. They ''found no confounding by asbestos'' and, accordingly, omitted asbestos exposure in their final modeling (Document ID 0405, p. 41). As discussed in the Review of Health Effects Literature and Preliminary QRA (Document ID 1711, pp. 301–302), exposure to asbestos was particularly prevalent among workers employed prior to 1930; after 1930, asbestos was presumably no longer used in the process (Gibbs, 1998, Document ID 1024, p. 307; Checkoway *et al.*, 1998, 0984, p. 309). Checkoway *et al.* (1998), who evaluated the issue of asbestos confounding for the same cohort used by Park *et al.*, found that the risk ratio for the highest silica exposure group after excluding the workers employed before 1930 from the cohort (Relative Risk (RR) = 1.73) was almost identical to the risk ratio of the high-exposure group before excluding those same workers (RR = 1.74) (Document ID 0984, p. 309). In addition, Checkoway's reanalysis of the original cohort study (Checkoway *et al.*, 1993) examined those members of the cohort for whom there was quantitative information on asbestos exposure, based on a mixture of historical exposure monitoring data, production records, and recorded quantities of asbestos included in mixed products of the plant (Checkoway *et al.*, 1996, Document ID 0325). The authors found an increasing trend in lung cancer mortality with exposure to crystalline silica after controlling for asbestos exposure and found only minor changes in relative risk estimates after adjusting for asbestos exposure (1996, Document ID 0325). Finally, Checkoway *et al.* (1998) reported that the prevalence of pleural abnormalities (indicators of asbestos exposure) among workers hired before 1930 (4.2 percent) was similar to that of workers hired after 1930 who presumably had no asbestos exposure (4.9 percent), suggesting that asbestos exposure was not a confounder for lung abnormalities in this group of workers (Document ID 0984, p. 309). Therefore, Checkoway *et al.* (1998) concluded that asbestos was not likely to significantly confound the exposure-response relationship observed between lung cancer mortality and exposure to crystalline silica in diatomaceous earth workers.

Rice *et al.* also utilized Checkoway's (1997, Document ID 0326) data to test for confounding by asbestos in their Poisson and Cox proportional hazards models. Finding no evidence of confounding, Rice *et al.* did not include asbestos exposure as a variable in the final models presented in their 2001 paper (Document ID 1118, p. 41). Based on these numerous assessments of the effects of exposure to asbestos in the diatomaceous earth workers cohort used by Park *et al.* (2002), OSHA concludes that concerns about asbestos confounding in this cohort have been adequately addressed and that the additional analyses performed by Park *et al.* on this issue confirmed the findings of prior researchers that

confounding by asbestos exposure was not likely to have a large effect on exposure-response relationships.

The ACC also expressed concern about model selection. Louis Anthony Cox, Jr., Ph.D., of Cox Associates, on behalf of the ACC, was concerned that the linear relative rate model was not appropriate because it is not designed to test for exposure-response thresholds and, similarly, the ACC has argued that threshold models are appropriate for crystalline silica-related diseases (Document ID 2307, Attachment 4, pp. 91). The ACC claimed that the Park *et al.* (2002) study is ''fully consistent'' with a threshold above the 100 μg/m^3 concentration for NMRD, including silicosis, mortality (Document ID 2307, Attachment A, p. 107).

In its post-hearing comments, NIOSH explained that categorical analysis for NMRD indicated no threshold existed with cumulative exposure corresponding to 25 μg/m^3 over 40 years of exposure, which is below the cumulative exposure equivalent to the new PEL over 45 years (Document ID 4233, p. 27). Park *et al.* did not estimate a threshold below that level because the data lacked the power needed to discern a threshold (Document ID 4233, p. 27). OSHA agrees with NIOSH's assessment. In addition, as discussed extensively in Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases, OSHA has carefully reviewed the issue of thresholds and has concluded, based on the best available evidence, that workers with cumulative and average exposure levels permitted under the previous PEL of 100 μg/m^3 are at risk of silica-related disease (that is, there is unlikely to be an exposure-response threshold at or near 100 μg/m^3). For these reasons, OSHA disagrees with Dr. Cox's criticism of Park *et al.*'s reliance on the linear relative rate model.

The ACC then questioned the use of unlagged cumulative exposures as the metric in Park et al. (2002). Dr. Cox noted that ''[u]nlagged models are not very biologically plausible for dust-related NMRD deaths (if any) caused by exposure concentrations in the range of interest. Unresolved chronic inflammation and degradation of lung defenses takes years to decades to manifest'' (Document ID 2307, Attachment 4, p. 92). OSHA considers this criticism overstated. Park *et al.* considered a range of lag periods, from two years to 15. They found that ''[u]nlagged models seemed to provide the best fit to the data in Poisson analyses although lagged models performed almost as well'' (Document ID 0405, p. 37). Based on those findings, as well as acknowledgments that NMRD effects other than silicosis (*e.g.*, chronic bronchitis) may be observable without a relatively long lag time (unlike cancer) and that the majority of deaths observed in the cohort were indeed NMRD other than silicosis, the researchers decided to use an unlagged model. Because Park found the differences between the lagged and unlagged models for this cohort and the NMRD endpoint to be insignificant, OSHA finds that Park's final choice to use an unlagged model does not detract from OSHA's decision to utilize lagged models in its risk assessment.

The ACC was also concerned about the truncation of cumulative exposures in the Park *et al.* (2002) paper. Peter Morfeld, Dr. rer. medic, stated that Park *et al.*:

> suffers from a methodological drawback. . . . The authors truncated the cumulative RCS dust exposures before doing the final analyses based on their observation of where the cases were found. The maximum in the study was 62.5 mg/m^3-years but exposures were only used up to 32 mg/m^3-years because no LDOC deaths occurred at exposures higher than that level. Such a selection distorts the estimated exposure-response relationship because it is based on the outcome of the study and on the exposure variable. Because high exposures with no effects were deliberately ignored, the exposure-response effect estimates are biased upward (Document ID 2307, Attachment 2, p. 27).

OSHA acknowledges this concern about the truncation of data in the study, and asked Mr. Park about it at the public hearing. Mr. Park testified that there were good reasons to truncate the part of the exposed workforce at the high end of cumulative exposure. He noted several plausible reasons for the drop-off in the number of cases at high exposures (attenuation), including random variance in susceptibility to disease among different people and the healthy worker survivor effect [6] (Document ID 3579, Tr. 242–243). He also stated that this attenuation is a common occurrence in studies of workers (Document ID 3579, Tr. 242). Mr. Park then emphasized that how one describes the higher end of the exposure-response relationship is inconsequential for the risk assessment process because the relationship at the lower end of the spectrum, where the PEL was determined, is more important for rulemaking (Document ID 3579, Tr. 242–243). He also stated, in a post-hearing comment, that ''[f]or the purpose of low exposure extrapolation, adding a quadratic term [to better describe the entirety of the exposure-response relationship] would result in loss of precision with no advantage [gained] over truncation of high cumulative exposure observation time'' (Document ID 4233, p. 26). To summarize, Mr. Park stated that there are good scientific reasons to expect attenuation of exposure-response at the high end of the cumulative exposure range and that use of higher-exposure data affected by healthy worker survivor effect or other issues could reduce precision of the exposure-response model at the lower exposures that are more relevant to the final silica standard. OSHA finds that Mr. Park's approach in his study, along with his explanations in the rulemaking record, are reasonable and that he has fully responded to the concerns of the ACC.

Dr. Morfeld also noted that alternative techniques that do not require truncation are available to account for a healthy worker survivor effect (Document ID 2307, Attachment 2, pp. 27–28). OSHA believes such techniques, such as g-estimation, to be relatively new or not yet in standard use in occupational epidemiology. As discussed above, OSHA finds Mr. Park's approach in his study to be reasonable.

Finally, Dr. Cox stated in his comments that:

> key studies relied on by OSHA, such as Park *et al.* (2002), do not correct for biases in reported ER [exposure-response] relations due to residual confounding by age (within age categories), *i.e.*, the fact that older workers may tend to have both higher lung cancer risks and higher values of occupational exposure metrics, even if one does not cause the other. This can induce a non-causal association between the occupational exposure metrics and the risk of cancer (Document ID 2307, Attachment 4, p. 29).

Confounding occurs in an epidemiological study when the contribution of a causal factor cannot be separated from the effect of another variable (*e.g.*, age) not accounted for in the analysis. Residual confounding occurs when attempts to control for confounding are not precise enough (*e.g.*, controlling for age by using groups with age spans that are too wide), or subjects are misclassified with respect to confounders (Document ID 3607, p. 1). However, the Park *et al.* (2002) study of non-malignant respiratory disease mortality, which Dr. Cox cited as not

[6] Briefly, if individuals cease working due to illness, then those individuals will not be represented in cohort subgroups having the highest cumulative exposures. That exclusion may enable individuals with greater physiological resilience to silica exposures to be overrepresented in cohorts exposed to greater amounts of silica. Further discussion on the healthy worker survivor effect can be found in Section V.F, Comments and Responses on Lung Cancer Mortality.

considering residual confounding by age, actually addressed this issue by using 13 five-year age groups (<25, 25–29, 30–34, etc.) in the models (Document ID 0405, p. 37). Further discussion on residual confounding bias is found in Section V.J, Comments and Responses Concerning Biases in Key Studies.

The inclusion of Park *et al.* (2002) (Document ID 0405) in OSHA's risk assessment has additional support in the record. OSHA's expert peer-review panel supported including the Park *et al.* study in the risk assessment, with Gary Ginsberg, Ph.D., stating that it ''represents a reasonable estimate of silica-induced total respiratory mortality'' (Document ID 3574, p. 29). In addition, as OSHA noted in its Review of Health Effects Literature and Preliminary QRA (Document ID 1711, pp. 355–356), the Park *et al.* study is complemented by the Mannetje *et al.* multi-cohort silicosis mortality pooled study, which included several cohorts that had exposure concentrations in the range of interest for this rulemaking and also showed clear evidence of significant risk of silicosis and other NMRD at the previous general industry and construction PELs (2002b, Document ID 1089).

b. Mannetje *et al.* (2002b) and ToxaChemica (2004)

The ACC also submitted several comments on the Mannetje *et al.* (2002b) study of silicosis mortality; the data from Mannetje *et al.* were used in the ToxaChemica (2004) re-analysis. As noted above, the Mannetje *et al.* (2002b) study was a pooled analysis of silicosis mortality data from six epidemiological cohorts. This study showed a statistically significant association between silicosis mortality and workers' cumulative exposure, as well as with average exposure and exposure duration. The ACC's pre-hearing brief stated that the study ''provided no justification for the relative rate model forms [Mannetje *et al.*] used to evaluate exposure-response'' (Document ID 2307, Attachment A, p. 113). The concern expressed was that the study may not have considered all potential exposure-response relationships and was unable to discern differences between monotonic and non-monotonic characteristics (Document ID 2307, Attachment A, p. 113–114).

Mannetje *et al.* (2002b, Document ID 1089) did not discuss whether models other than relative rate models were tested. However, Mannetje's data was reexamined by ToxaChemica, Inc. on request from OSHA and the reexamined data was used by OSHA to help estimate lifetime risk for silicosis mortality (2004, Document ID 0469; 1711, pp. 310–314). The ToxaChemica reanalysis of the data included a categorical analysis and a five-knot restricted spline analysis, in addition to a logistic model, using the log of cumulative exposure (Document ID 0469, p. 50). ToxaChemica also corrected some errors found in the original data set and used a nested case-control approach, which they stated would control more precisely for age than the Poisson regression approach used by Mannetje *et al.* (Document ID 0469, p. 18). As shown in Figure 5 of ToxaChemica's report, the restricted spline model (which has considerable flexibility to represent non-monotonic features of exposure-response data) appeared to be monotonic, while the categorical analysis appeared largely monotonic but for one exposure group (Document ID 0469, p. 40, 50). When not adjusted for measurement error, the second highest exposure group deviated from the monotonic relationship existing between the other groups. However, the deviation was resolved when two sources of measurement error were accounted for (Document ID 0469, p. 40). The categorical analysis, restricted spline model, and logistic model yielded roughly similar exposure-response curves (Document ID 0469, p. 50). OSHA concludes that the ToxaChemica reanalysis addresses the concerns raised by the ACC by finding similar exposure-response relationships regardless of the model as well as providing greater validation of a monotonic curve.

The ACC next questioned the odds ratios generated in the Mannetje *et al.* (2002b) study (Document ID 2307, p. 114; 4209, p. 88). The Panel noted that ''the exposure-response relationship is not even fully monotonic'' and that the silica odds ratios in the pooled analysis have overlapping confidence intervals, suggesting no statistically significant difference (Document ID 2307, p. 114). The Panel concluded that ''the data indicate that there is no clear effect of exposure on odds ratios over the entire range considered by the authors; hence, the study provides no basis for concluding that reducing exposures will reduce the odds ratio for silicosis mortality'' (Document ID 4209, p. 88). Essentially, the ACC argued that the data do not appear to fit a monotonic relationship and that the confidence intervals for each exposure level overlap too much to discern any differences in risk ratios between those exposures.

OSHA believes that the ACC overstated its contention about confidence interval overlap between groups in the Mannetje *et al.* (2002b) paper. Although the original data set reported in the study lacks a monotonic relationship on the upper end of the exposure spectrum (>9.58 mg/m^3-yrs) (possibly due to a healthy worker survivor effect, as explained above), OSHA notes that the 95 percent confidence intervals reported do not contradict the presence of a monotonic relationship (Document ID 1089). First, the confidence intervals of the lower exposed groups did not overlap with those of the higher exposed groups in that study (Document ID 1089). Second, even if they did, overlap in confidence intervals does not mean that there is not a significant difference between those groups. While it is true that, if 95 percent confidence intervals do not overlap, the represented populations are statistically significantly different, the converse—that, if confidence intervals do overlap, there is no statistically significant difference—is not always true (Nathaniel Schenker and Jane F. Gentleman. ''On Judging the Significance of Differences by Examining the Overlap Between Confidence Intervals.'' The American Statistician. 55(3): 2001. 182–186. (*http://www.tandfonline.com/doi/abs/10.1198/000313001317097960*).

Finally, as discussed above and in detail in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis, the ToxaChemica *et al.* (2004) re-analysis of the corrected Mannetje *et al.* (2002b) data adjusting for two sources of measurement error resulted in a monotonic relationship for the risk ratios (Document ID 0469).

2. Silicosis Morbidity

OSHA relied on five studies for determining risk for silicosis morbidity: Buchanan *et al.*, 2003 (Document ID 0306), Chen *et al.*, 2001 (Document ID 0332), Chen *et al.*, 2005 (Document ID 0985), Hnizdo and Sluis-Cremer, 1993 (Document ID 1052), and Steenland and Brown, 1995b (Document ID 0451). OSHA finds that the most reliable estimates of silicosis morbidity, as detected by chest radiographs, come from these five studies because they evaluated radiographs over time, included post-employment radiographic evaluations, and derived cumulative or lifetime estimates of silicosis disease risk. OSHA received several comments about these studies.

a. Buchanan *et al.* (2003)

Buchanan *et al.* (2003) reported on a cohort of Scottish coal workers (Document ID 0306). The authors found a statistically significant relationship

between silicosis and cumulative exposure acquired after 1964 (Document ID 0306). They also found that the risks of silicosis over a working lifetime can rise dramatically with exposure to high concentrations over a timescale of merely a few months (Document ID 0306). In the Preliminary QRA, OSHA considered this study to be of the highest overall quality of the studies relied upon to assess silicosis morbidity risks, in large measure because the underlying exposure data was based on modern exposure measurement methods and avoided the need to estimate historical exposures. The risk estimates derived from this study were lower than those derived from any of the other studies criticized by the ACC. One reason for this is because Buchanan *et al.* only included cases with chest x-ray findings having an ILO score of 2/1 or higher, whereas the other studies included cases with less damage, having a lower degree of perfusion on x-ray (ILO 1/0 or 1/1) (Document ID 0306). Thus, OSHA considered the risk estimates derived from the Buchanan *et al.* study to be more likely to understate risks.

Dr. Cox commented that age needed to be included for modeling in Dr. Miller's 1998 paper, the data from which were used in the Buchanan *et al.* (2003) paper (Document ID 2307, Attachment 4, p. 97). However, the Miller *et al.* (1998) study explicitly states that age was one of several variables that were tried in the model but did not improve the model's fit, as was time spent working in the poorly characterized conditions before 1954 (Document ID 0374, p. 57). OSHA concludes that the original paper did assess these variables and how they related to the exposure-response relationship. Buchanan *et al.* (2003) also noted their own finding that differences in age and exposure both failed to improve fit, in agreement with Miller *et al.*'s conclusion (Document ID 0306, p. 161). OSHA therefore finds no credible reason that age should have been included as a variable in Miller *et al.* (1998).

Dr. Cox also questioned the modeling methods in the Buchanan paper, which presented logistic regression in progressive stages to search for significance (Document ID 2307, Attachment 4, pp. 97–98; 0306, pp. 161–163). Dr. Cox claimed that this is an example of uncorrected multiple testing bias where the post hoc selection of data, variables, and models can make independent variables appear to be statistically significant in the prediction model. He suggested that corrections for bias are needed to determine if the reported significance is causal or statistical (Document ID 2307, Attachment 4, pp. 97–98). OSHA peer reviewer Brian Miller, Ph.D., stated that Dr. Cox's claim that the model was affected by multiple testing bias is unfounded (Document ID 3574, pp. 31–32). He noted that the model was based on a detailed knowledge of the history of exposures at that colliery, and represented the researchers' attempt to build ''a reality-driven and 'best-fitting' model,'' (Document ID 3574, p. 31, quoting 2307, Attachment 4, p. 4). Furthermore, none of OSHA's peer reviewers raised any concerns about the approach taken by Buchanan *et al.* to develop their exposure-response model and none suggested that corrections needed to be made for multiple testing bias; all of them supported the study's inclusion in OSHA's risk assessment (Document ID 3574). Finally, the cumulative risk for silicosis morbidity derived from this study is similar to values from other papers reported in the QRA (*see* OSHA's Final Quantitative Risk Assessment in Section VI). Therefore, for the reasons discussed above, OSHA is not convinced by Dr. Cox's arguments and finds no credible reason to remove Buchanan *et al.* (2003) from consideration.

b. Chen *et al.* (2001, 2005), Steenland and Brown (1995), and Hnizdo and Sluis-Cremer (1993)

The ACC also commented on several other studies used by OSHA to estimate silicosis morbidity risks; these were the studies by Chen *et al.* (2001, Document ID 0332; 2005, 0985), Steenland and Brown (1995b, Document ID 0451), and Hnizdo and Sluis-Cremer (1993, Document ID 1052). The ACC's comments focus on uncertainties in estimating the historical exposures of cohort members (Document ID 2307, Attachment A, pp. 117–122, 124–130, 132–136). Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis, discusses the record in detail with respect to the general issue of uncertainties in estimating historical exposures to respirable crystalline silica in epidemiological studies. The issues specific to the studies relied upon by OSHA in its risk estimates for silicosis morbidity will be discussed below.

In the Chen *et al.* studies, which focused on mining (*i.e.*, tin, tungsten) and pottery cohorts, high volume area samplers collected dust and the respirable crystalline silica concentration was determined from those samples (2001, Document ID 0332; 2005, 0985). However, according to the ACC, the rest of the collected dust was not assessed for chemicals that potentially could also cause radiographic opacities (Document ID 2307, Attachment A, pp. 132–135). Neither study expressed reason to be concerned about the non-silica portion of the dust samples. OSHA recognizes that uncertainty about potential unknown exposures exists in retrospective studies, which describes most epidemiological research. However, OSHA emphasizes that the risk values derived from the Chen *et al.* studies do not differ remarkably from other silicosis morbidity studies used in the risk assessment (Document ID 0306, 1052, 0451). Therefore, OSHA concludes that it is unlikely that an unknown compound significantly impacted the exposure-response relationships reported in both Chen studies.

The study on gold miners (Steenland and Brown, 1995b, Document ID 0451), which found that cumulative exposure was the best disease predictor, followed by duration of exposure and average exposure, was also criticized by the ACC, which alleged that the exposure assessment suffered from ''enormous uncertainty'' (Document ID 2307, Attachment A, pp. 146–147). The ACC noted that exposure measurements were not available for the years prior to 1937 or after 1975 and that this limitation of the exposure information may have resulted in an underestimation of exposures (Document ID 2307, Attachment A, pp. 124–126). OSHA agrees that these are potential sources of uncertainty in the exposure estimates, but recognizes exposure uncertainty to be a common occurrence in occupational epidemiology studies. OSHA believes that the authors used the best measurement data available to them in their study.

The ACC also took issue with Steenland and Brown's conversion factor for converting particle count to respirable silica mass (10 mppcf = 100 $\mu g/m^3$), which was somewhat higher than that used in the Vermont granite worker studies (10 mppcf = 75 $\mu g/m^3$) (Document ID 2307, Attachment A, p. 126). OSHA notes that the study's reasoning for adopting that specific particle count conversion factor was to address the higher percentage of silica found in the gold mine samples applicable to their cohort in comparison to the Vermont granite study (Document ID 0451, p. 1373). OSHA finds this decision, which was based on the specific known exposure conditions of this cohort, to be reasonable.

With respect to the Hnizdo and Sluis-Cremer (1993, Document ID 1052)

study, which found that silicosis risk increased exponentially with cumulative exposure to respirable dust (Document ID 1052, p. 447), the ACC questioned three assumptions the study made about exposures. First, exposures were assumed to be static from the 1930s to the 1960s, based on measurements from the late 1950s to mid-1960s, an assumption that, according to the ACC, might underestimate exposure for workers employed before the late 1950s (Document ID 2307, Attachment A, pp. 117–119). Second, although respirable dust, by definition, includes particles up to 10 μm, the study only considered particles sized between 0.5 and 5 μm in diameter (Document ID 1052, p. 449). The ACC contends this exclusion may have resulted in underestimated exposure and overestimated risk (Document ID 2307, Attachment A, p. 119). OSHA agrees that uncertainty in exposure estimates is an important issue in the silica risk assessment, and generally discusses the issue of exposure measurement uncertainty in depth in a quantitative uncertainty analysis described in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis. As discussed there, after accounting for the likely effects of exposure measurement uncertainty in the risk assessment, OSHA affirms the conclusion of the risk assessment that there is significant risk of silicosis to workers exposed at the previous PELs.

Thirdly, the ACC challenged the authors' estimate of the quartz content of the dust as 30 percent when it should have been 54 percent (Document ID 1052, p. 450; 2307, Attachment A, p. 120). According to the ACC, the 30 percent estimate was based on an incorrect assumption that the samples had been acid-washed (resulting in a reduction in silica content) before the quartz content was measured (Document ID 2307, Attachment A, pp. 120–122). This assumption would greatly underestimate the exposures of the cohort and the exposures needed to cause adverse effects, thus overestimating actual risk (Document ID 2307, Attachment A, pp. 121–122). The ACC recommended that the quartz content in the Hnizdo and Sluis-Cremer study be increased from 30 to 54 percent, based on the Gibbs and Du Toit study (2002, Document ID 1025, p. 602).

OSHA considered this issue in the Preliminary QRA (Document ID 1711, p. 332). OSHA noted that the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment reviewed the source data for Hnizdo and Sluis-Cremer, located in the Page-Shipp and Harris (1972, Document ID 0583) study, and compared them to the quartz exposures calculated by Hnizdo and Sluis-Cremer (OEHHA, 2005, Document ID 1322, p. 29). OEHHA concluded after analyzing the data that the samples likely were not acid-washed and that the Hnizdo and Sluis-Cremer paper erred in describing that aspect of the samples. Additionally, OEHHA reported data that suggests that the 30 percent quartz concentration may actually overestimate the exposure. It noted that recent investigations found the quartz content of respirable dust in South African gold mines to be less than 30 percent (Document ID 1322). In summary, OSHA concludes that no meaningful evidence was submitted to the rulemaking record that changes OSHA's original decision to include the Hnizdo and Sluis-Cremer study in its risk assessment.

Despite the uncertainties inherent in estimating the exposures of occupational cohorts in silicosis morbidity studies, the resulting estimates of risk for the previous general industry PEL of 100 $\mu g/m^3$ are in reasonable agreement and indicate that lifetime risks of silicosis morbidity at this level, and, by extension, risks at the higher previous PELs for maritime and construction (*see* section VI, Final Quantitative Risk Assessment and Significance of Risk) are in the range of hundreds of cases per 1,000 workers. Even in the unlikely event that exposure estimates underlying all of these studies were systematically understated by several fold, the magnitude of resulting risks would likely still be such that OSHA would determine them to be significant.

3. Conclusion

After carefully considering all of the comments on the studies relied on by OSHA to estimate silicosis and NMRD mortality and silicosis morbidity risks, OSHA concludes that the scientific evidence used in its quantitative risk assessment substantially supports the Agency's finding of significant risk for silicosis and non-malignant respiratory disease. In its risk estimates in the Preliminary QRA, OSHA acknowledged the uncertainties raised by the ACC and other commenters, but the Agency nevertheless concluded that the assessment was sufficient for evaluating the significance of the risk. After evaluating the evidence in the record on this topic, OSHA continues to conclude that its risk assessment (*see* Final Quantitative Risk Assessment in Section VI.C of this preamble) provides a reasonable and well-supported estimate of the risk faced by workers who are exposed to respirable crystalline silica.

E. Comments and Responses Concerning Surveillance Data on Silicosis Morbidity and Mortality

As discussed above in this preamble, OSHA has relied on epidemiological studies to assess the risk of silicosis, a debilitating and potentially fatal occupationally-related lung disease caused by exposure to respirable crystalline silica. In the proposed rule (78 FR 56273, 56298; also Document ID 1711, pp. 31–49), OSHA also discussed data from silicosis surveillance programs that provide some information about the number of silicosis-associated deaths or the extent of silicosis morbidity in the U.S. (78 FR at 56298). However, as OSHA explained, the surveillance data are not sufficient for estimating the risks of health effects associated with exposure to silica, nor are they sufficient for estimating the benefits of any potential regulatory action. This is because silicosis-related surveillance data are only available from a few states and do not provide exposure data that can be matched to surveillance data. Consequently, there is no way of knowing how much silica a person was exposed to before developing fatal silicosis (78 FR at 56298).

In addition, the available data likely understate the resulting death and disease rates in U.S. workers exposed to crystalline silica (78 FR 56298). This understatement is due in large part to: (1) The passive nature of these surveillance systems, which rely on healthcare providers' awareness of a reporting requirement and submission of the appropriate information on standardized forms to health departments; (2) the long latency period of silicosis; (3) incomplete occupational exposure histories, and (4) other factors that result in a lack of recognition of silicosis by healthcare providers, including the low sensitivity, or ability of chest x-rays to identify cases of silicosis (78 FR 56298). Specific to death certificate data, information on usual industry and occupation are available from only 26 states for the period 1985 to 1999, and those codes are not verifiable (Document ID 1711). Added to these limitations is the ''lagging'' nature of surveillance data; it often takes years for cases to be reported, confirmed, and recorded. Furthermore, in many cases, the available surveillance systems lack information about actual exposures or even information about the usual occupation or industry of the deceased individual, which could provide some information about occupational

exposure (*see* 78 FR at 56298). Therefore, the Agency did not use these surveillance data to estimate the risk of silicosis for the purpose of meeting its legal requirements to prove a significant risk of material impairment of health (*see* 29 U.S.C. 655(b)(5); *Benzene*, 448 U.S. 607, 642 (1980)).

Comments and testimony focusing on the silicosis surveillance data alleged that OSHA should have used the surveillance data in its risk estimates. Stakeholders argued that the declining numbers of reported silicosis deaths prove the lack of necessity for a new silica standard. Commenters also claimed that the surveillance data prove that OSHA overestimated both the risks at the former permissible exposure limits (PELs) and the benefits of the new rule.

After reviewing the rulemaking record, OSHA maintains its view that these silicosis surveillance data, although useful for providing context and an illustration of a significant general trend in the reduction of deaths associated with silicosis over the past 4–5 decades, are not sufficient for estimating the magnitude of the risk or the expected benefits. In the case of silicosis, surveillance data are useful for describing general trends nationally and a few states have the ability to use the data at the local or state level to identify ''sentinel events'' that would justify initiating an inspection of a workplace, for example. The overall data, however, are inadequate and inappropriate for estimating risks or benefits associated with various exposure levels, as is required of OSHA's regulatory process, in part because they significantly understate the extent of silicosis in workers in the United States and because they lack information about exposure levels, exposure sources (*e.g.*, type of job), controls, and health effects that is necessary to examine the effects of lowering the PEL. Thus, for these reasons and the ones discussed below, OSHA has continued to rely on epidemiological data to meet its burden of demonstrating that workers exposed to respirable crystalline silica at the previous PELs face a significant risk of developing silicosis and that risk will be reduced when the new limit is fully implemented. Another related concern identified by stakeholders is the apparent inconsistency between surveillance data and risk and benefits estimates derived from modeling epidemiological data (Document ID 4194, pp. 7–10; 4209, pp. 3–4). However, this difference is not an inconsistency, but the result of comparing two distinctly different items. Surveillance data, primarily death certificate data, are known to be under-reported and lack associated exposure data necessary to model relationships between various exposure levels and observance of health effects. For these reasons, OSHA relied on epidemiologic studies with detailed exposure-response relationships to evaluate the significance of risk at the preceding and new PELs. Thus, the silicosis mortality data derived from death certificates and estimates of silica-related mortality risks derived from well-conducted epidemiologic studies cannot be directly compared in any meaningful way. With respect to silicosis morbidity, OSHA notes that the estimates by Rosenman *et al.* (2003, Document ID 0420) of the number of cases of silicosis estimated to occur in the U.S. (between 2,700 and 5,475 estimated to be in OSHA's jurisdiction (*i.e.*, excluding miners)) each year is in reasonable agreement with the estimates derived from epidemiologic studies, assuming either a 13-year or 45-year working life (*see* Chapter VII, Table VII–2 of the FEA).

1. Surveillance Data on Silicosis Mortality

The principal source of data on annual silicosis mortality in the U.S. is the National Institute for Occupational Safety and Health (NIOSH) Work-Related Lung Disease (WoRLD) Surveillance System (*e.g.*, NIOSH, 2008c, Document ID 1308), which compiles cause-of-death data from death certificates reported to state vital statistics offices and collected by the National Center for Health Statistics (NCHS). Paper copies were published in 2003 and 2008 (Document ID 1307; 1308) and data are updated periodically in the electronic version on the CDC Web site (*http://www.cdc.gov/eworld*). NIOSH also developed and manages the National Occupational Respiratory Mortality System (NORMS), a data-storage and interactive data retrieval system that reflects death certificate data compiled by NCHS (*http://webappa.cdc.gov/ords/norms.html*).

From 1968 to 2002, silicosis was recorded as an underlying or contributing cause of death on 16,305 death certificates; of these, a total of 15,944 (98 percent) deaths occurred in males (CDC, 2005, Document ID 0319). Over time, silicosis-related mortality has declined in the U.S., but has not been eliminated. Based on the death certificate data, the number of recognized and coded deaths for which silicosis was an underlying or contributing cause decreased from 1,157 in 1968 to 161 in 2005, corresponding to an 86-percent decline (Document ID 1711, p. 33; 1308, p. 55) (*http://wwwn.cdc.gov/eworld*). The crude mortality rate, expressed as the number of silicosis deaths per 1,000,000 general population (age 15 and higher) fell from about 8.9 per million to about 0.5 per million over that same time frame, a decline of 94 percent (Document ID 1711, p. 33; 1308, p. 55) (*http://wwwn.cdc.gov/eworld*).

OSHA's Review of Health Effects Literature and Preliminary QRA included death certificate statistics for silicosis up to and including 2005 (Document ID 1711, p. 33). OSHA has since reviewed the more recent NORMS and NCHS data, up to and including 2013, which appear to show a general downward trend in mortality, as presented in Table V–1.

Table V-1. Total Number of Deaths with Silicosis Mentioned on Death Certificate, as an Underlying or Contributing Cause (U.S. residents, age 15 and older, all races, both sexes) 1970-2013.		
Years	Total number of Silicosis Deaths	Percent Change (Reduction)
1970-1974	4,263	
1975-1979	2,711	36%
1980-1984	1,958	28%
1985-1989	1,601	18%
1990-1994	1,389	13%
1995-1999	1,018	27%
2000-2004	809	20%
2005-2009	679	16%
2010-2013†	563	17%
Source: NORMS database (http://webappa.cdc.gov/ords/norms.html). † Represents most recent data available from CDC Wonder database (http://wonder.cdc.gov/mcd-icd10.html). Database accessed July 30, 2015.		

However, more detailed examination of the most recent data collected through NCHS (Table V–2) indicates that the decline in the number of deaths with silicosis as an underlying or contributing cause has leveled off in more recent years, suggesting that the number of silicosis deaths being recorded and captured by death certificates may be stabilizing after 30 or more years of decline.

Table V-2. Deaths Attributed to Silicosis, 2000-2013	
Year	Underlying or Contributing Cause
2000	152
2001	164
2002	148
2003	179
2004	166
2005	161
2006	126
2007	123
2008	148
2009	121
2010	101
2011	89
2012	103
2013*	111*

Robert Cohen, M.D., representing the American Thoracic Society, noted this apparent plateau effect, testifying that ''[t]he data from the NIOSH work-related lung disease surveillance report and others show a plateau in silicosis

mortality since the 1990s, and we are concerned that that has been the same without any further reduction for more than 20 years. So we think that we still have work to do'' (Document ID 3577, p. 775).

Some commenters raised the question about whether decedents who died more recently were exposed to high levels of silica (pre-1970s) and therefore wouldn't necessarily reflect mortalities relevant to the current OSHA standard (Document ID 4194, p. 9; 4209, pp. 7–8). OSHA has no information on the age of these decedents, or the timing of their exposure to silica. If we assume that workers born in 1940–1950 would have started working around 1960, at the earliest, and into the 1970's, and life expectancy in general of 70 years, or 60–70 years to account for years of life lost due to silicosis, most of these workers' working life would have been spent after the 1971 PEL went into effect. It is likely that some of the more recent decedents were exposed to silica prior to 1971; however, it is less likely that all were exposed prior to 1971. At the end of the day, there is no actual exposure information on these decedents, and this generalization does not account for overexposures, which have persisted over time.

2. Surveillance Data on Silicosis Morbidity

There is no nation-wide system for collecting silicosis morbidity case data. The data available are from three sources: (1) The National Hospital Discharge Survey (Document ID 1711, p. 40–43); (2) the Agency for Healthcare Research and Quality's (AHRQ) Nationwide Inpatient Survey (Document ID 3425, p. 2; *https://www.hcup-us.ahrq.gov/nisoverview.jsp*); and (3) states that administer silicosis and/or pneumoconiosis disease surveillance (*see* Document ID 1711, p. 40–43; *http://www.cdc.gov/niosh/topics/surveillance/ords/StateBasedSurveillance/stateprograms.html*).

Both of the first two sources of data on silicosis morbidity cases are surveys that provide estimates of hospital discharges. The first is the National Hospital Discharge Survey (NHDS), which was conducted annually from 1965–2010. The NHDS was a national probability survey designed to meet the need for information on characteristics of inpatients discharged from non-Federal short-stay hospitals in the United States (*see http://www.cdc.gov/nchs/nhds.htm*). Estimates of silicosis listed as a diagnosis on hospital discharge records are available from the NHDS for the years 1985 to 2010 (*see http://www.cdc.gov/nchs/nhds.htm*). National estimates were rounded to the nearest 1,000, and the NHDS has consistently reported approximately 1,000 discharges/hospitalizations annually since 1980 (*e.g.,* Document ID 1307; 1308). The second survey, the National (Nationwide) Inpatient Sample (NIS), is conducted annually by the AHRQ. Dr. Kenneth Rosenman, Division Chief and Professor of Medicine at Michigan State University and who oversees one of the few occupational disease surveillance systems in the U.S., testified that data from the NIS indicated that the nationwide number of hospitalizations where silicosis was one of the discharge diagnoses has remained constant, with 2,028 hospitalizations reported in 1993 and 2,082 in 2011 (Document ID 3425, p. 2).

Morbidity data are also available from the states that administer silicosis and/or pneumoconiosis disease surveillance. These programs rely primarily on hospital discharge records and also may get some reports of cases from the medical community and workers' compensation programs. Currently, NIOSH funds the State-Based Occupational Safety and Health Surveillance cooperative agreements (Document ID 1711, p. 40–41; *http://www.cdc.gov/niosh/topics/surveillance/ords/StateBasedSurveillance.html*). All states funded under a cooperative agreement conduct population-based surveillance for pneumoconiosis (hospitalizations and mortality), and a few states (currently Michigan and New Jersey) have expanded surveillance specifically for silicosis (Document ID 1711, p. 40–42; *http://www.cdc.gov/niosh/topics/surveillance/ords/StateBasedSurveillance/stateprograms.html*).

State-based hospital discharge data are a useful population-based surveillance data source for quantifying pneumoconiosis (including silicosis), even though only a small number of individuals with pneumoconiosis are hospitalized for that condition (Document ID 0996), and the data refer to hospitalizations with a diagnosis of silicosis, and not specific people. In addition to mortality data, NIOSH has updated its WoRLD Surveillance System with some state-based morbidity case data (*http://wwwn.cdc.gov/eworld/Grouping/Silicosis/94*). State-based surveillance systems can provide more detailed information on a few cases of silicosis.

NIOSH has published aggregated state case data in its WoRLD Reports (Document ID 1308; 1307) for two ten-year periods that overlap, 1989 to 1998 and 1993 to 2002. State morbidity case data are compiled and evaluated by variables such as ascertainment source, primary industry, and occupations. For the time period 1989 to 1998, Michigan reported 589 cases of silicosis, New Jersey 191 cases, and Ohio 400 cases (Document ID 1307, p. 69). In its last published report, for the later and partially overlapping time period 1993 to 2002, Michigan reported 465 cases, New Jersey 135, and Ohio 279 (Document ID 1308, p. 72). Data for the years 2003 to 2011, from the CDC/NIOSH electronic report, eWoRld, show a modest decline in the number of cases of silicosis in these three states; however, decreases are not nearly as substantial as are those seen in the mortality rates (see Table V–3). Annual averages for the two ten-year periods and the nine-year time period were calculated by OSHA solely for the purpose of comparing cases of silicosis reported over time.

Table V-3. Number of cases of silicosis reported to selected state surveillance systems

	1989-1998	Annual average	1993-2002	Annual average	2003-2011	Annual average
Michigan	589	59	465	47	201	22
New Jersey	191	19	135	14	102	11
Ohio	400	40	279	28

3. Critical Comments Received on Surveillance Data

Industry representatives, including ACC's Crystalline Silica Panel and Dr. Jonathan Borak, representing the Chamber of Commerce (Chamber), contended that the steep decline seen in the number and rate of silicosis deaths since 1968 proves that OSHA cannot meet its burden of demonstrating that a more protective standard is necessary (*e.g.,* Document ID 4209, p. 10; 2376, p. 8; 4016, p. 9). Similarly, other commenters, such as the American Petroleum Institute, the Independent Petroleum Association of America, the National Mining Association, the American Foundry Society (AFS), the National Utility & Excavating Contractors Association, Acme Brick, the National Ready Mixed Concrete Association, and the Small Business Administration's Office of Advocacy stated that surveillance data demonstrate that the previous OSHA PEL was sufficiently effective in reducing the number of deaths from silicosis (Document ID 3589, Tr. 4041; 4122; 2301, pp. 3, 7–9; 2211, p. 2; 2379, pp. 23–25; 2171, p. 1; 3730, p. 5; 3586, Tr. 3358–3360; 3589, Tr. 4311; 2349, pp. 3–4). Industry commenters also argued that the number of recorded silicosis-related deaths in recent years, as reflected in the surveillance data, is far lower than the number of lives that OSHA projected would be saved by a more stringent rule, indicating that OSHA's risk assessment is flawed (*e.g.,* Document ID 3578, Tr. 1074–1075; 4209, p. 3–4).

The Chamber, along with others, declared that OSHA ignored steep declines in silicosis mortality, which in its view indicates that there is no further need to reduce the PEL (Document ID 4194, pp. 7–8). OSHA has not ignored the fact that the available surveillance data indicate a decline in silicosis mortality. As discussed above and in the proposal, the Agency has acknowledged that the available surveillance data do show a decline in the silicosis mortality since 1968. Furthermore, OSHA has no information on whether underreporting has increased or decreased over time, and does not believe that differing rates of reporting and underreporting of silicosis on death certificates explains the observed decline in silicosis mortality. OSHA believes that the reductions in deaths attributable to silicosis are real, and not a statistical artifact. However, OSHA disagrees with commenters' argument that this trend shows the lack of a need for this new rule. First, as explained above, there is strong evidence that the death certificate data do not capture the entirety of silicosis mortality that actually exists, due to underreporting of silicosis as a cause of death. Second, the stakeholders' argument assumes that mortality will continue to decline, even in the absence of a stronger silica standard, and that OSHA and workers should wait for this decline to hit bottom (*e.g.,* Document ID 4209, p. 7). However, testimony in the record suggests that the decline in the number of deaths has leveled off since 2000, probably because of the deaths of those historically exposed to higher levels of silica occurred before then (*e.g.,* Document ID 3577, p. 775).

Third, the decline in silicosis deaths recorded over the past several decades cannot be solely explained by improved working conditions, but also reflects the decline in employment in industries that historically were associated with high workplace exposures to crystalline silica. One of OSHA's peer reviewers for the Review of Health Effects Literature and Preliminary QRA, Bruce Allen, commented that the observed decline in mortality ''. . . in no way adjusts for the declining employment in jobs with silica exposure,'' making ''its interpretation problematic. To emphasize the contribution of historic declines in exposure as the underlying cause is spurious; no information is given to allow one to account for declining employment'' (Document ID 3574, p. 7). The CDC/NIOSH also identified declining employment in heavy industries where silica exposure was prevalent as a ''major factor'' in the reduction over time in silicosis mortality (Document ID 0319, p. 2). As discussed below, however, some silica-generating operations or industries are new or becoming more prevalent.

In his written testimony, Dr. Rosenman pointed out that there are ''two aspects to the frequency of occurrence of disease (1) . . . the risk of disease based on the level of exposure and (2) the number of individuals at risk'' (Document ID 3425, pp. 3–4). Dr. Rosenman estimated the decline in the number of workers in Michigan foundries (75 percent) and the number of abrasive blasting companies in Michigan (71 percent), and then compared these percentages to the percentage decline in the number of recorded silicosis deaths (80 percent) over a similar time period. The similarities in these values led him to attribute ''almost all'' of the decrease in silicosis deaths to a decrease in the population at risk (Document ID 3425, pp. 3–4).

Finally, OSHA's reliance on epidemiological data for its risk assessment purposes does not suggest that the Agency ignored the available surveillance data. As discussed above, the data are inadequate and inappropriate for estimating risks or benefits associated with various exposure levels, as is required of OSHA's regulatory process. Even in the limited cases where surveillance data are available, OSHA generally relies on epidemiological data, to the extent they include sufficiently detailed information on exposures, exposure sources (*e.g.*, type of job), and health effects, to satisfy its statutory requirement to use the best available evidence to evaluate the significance of risk associated with exposure to hazardous substances.

Some stakeholders provided comments to the rulemaking record consistent with OSHA's assessment. For example, Dr. Borak stated that the surveillance data ''provide little or no basis'' (Document ID 2376, p. 8) for OSHA to evaluate the protectiveness of the previous PELs. Similarly, NIOSH asserted that relying on the surveillance data to show that there is no need for a lower PEL or that there is no significant risk at 100 $\mu g/m^3$ would be ''a misuse of surveillance data'' (Document ID 3579, Tr. 167). NIOSH also added that, because the surveillance data do not include information about exposures, it is not the kind of data that could be used for a quantitative risk assessment. NIOSH concluded that surveillance data are, in fact, ''really not germane to the risk assessment'' (Document ID 3579, Tr. 248). OSHA agrees with both Dr. Borak and NIOSH that the surveillance data cannot and do not inform the Agency on the need for a lower PEL, nor is there a role for surveillance data in making its significant risk findings. Therefore, for its findings of significant risk at the current PEL, the Agency relied on evidence derived from detailed exposure-response relationships from well-conducted epidemiologic studies, and not surveillance data, which have no associated exposure information. In this case, epidemiologic data provided the best available evidence.

In its testimony, the AFL–CIO pointed out that a recent U.S. Government Accountability Office (GAO) report on the Mine Safety and Health Administration's (MSHA) proposed coal dust standard references the National Academy of Sciences (NAS) conclusion that risk assessments based on epidemiological data, not surveillance data, were an appropriate means to assess risk for coal-dust exposures (Document ID 4204, p. 21; 4072, Attachment 48, pp. 7–8). The NAS

emphasized that the surveillance data available to MSHA did not include individual miners' levels of exposure to coal mine dust and, therefore, could not be used for the purpose of estimating disease risk for miners. ''Based on principles of epidemiology and statistical modeling, measures of past exposures to coal mine dust are critical to assessing the relationship between miners' cumulative coal mine dust exposure and their risk of developing [pneumoconiosis]'' (Document ID 4072, Attachment 48, p. 8). The same rationale applies here. Thus, OSHA's decision to rely on epidemiological data is well supported by the record.

Commenters from companies and industry groups also argued that they had no knowledge of workers acquiring silicosis in their companies or industry (*e.g.*, Document ID 2384, p. 2; 2338, p. 3; 2365, p. 2; 2185, p. 3; 2426, p. 1). OSHA received similar comments as part of a letter campaign in which over 100 letters from brick industry representatives claimed there to be little or no silicosis observed in the industry despite historical exposures above the PEL (*e.g.*, Document ID 2009). OSHA considered these comments and believes that many companies, including companies in the brick industry, may not have active medical surveillance programs for silicosis. Silicosis may not develop until after retirement as a result of its long latency period. In addition, silica exposures in some workplaces may be well below the final PEL as a result of the environment in which workers operate, including existing controls. Thus, OSHA believes that it is difficult to draw conclusions about the rate of silicosis morbidity in specific workplaces without having detailed information on medical surveillance, silica exposures, and follow-up. This is why OSHA relies heavily on epidemiological studies with detailed exposure data and extended follow-up, and uses these data to evaluate exposure-response relationships to assess health risks at the preceding and new PELs.

Commenters also argued that, due to the long latency of the disease, silicosis cases diagnosed today are the result of exposures that occurred before the former PELs were adopted, and thus reflect exposures considerably higher than the previous PELs (*e.g.*, Document ID 2376, p. 3; 2307, p. 12; 4194, p. 9; 3582, Tr. 1935). OSHA notes that the evidence shows that the declining trend in silicosis mortality does not provide a complete picture with regard to silicosis trends in the United States. Although many silicosis deaths reported today are likely the result of higher exposures (both magnitude and duration), some of which may have occurred before OSHA adopted the previous PELs, silicosis cases continue to occur today—some in occupations and industries where exposures are new and/or increasing. For example, five states reported cases of silicosis in dental technicians for the years 1994 to 2000 (CDC, MMWR Weekly, 2004, 53(09), pp. 195–197), for the first time. For the patients described in this report, the only identified source of crystalline silica exposure was their work as dental technicians. Exposure to respirable crystalline silica in dental laboratories can occur during procedures that generate airborne dust (*e.g.*, mixing powders, removing castings from molds, grinding and polishing castings and porcelain, and using silica sand for abrasive blasting). In 2015, the CDC reported the first case of silicosis (progressive massive fibrosis) associated with exposure to quartz surfacing materials (countertop fabrication and installation) in the U.S. The patient was exposed to dust for 10 years from working with conglomerate or quartz surfacing materials containing 70%–90% crystalline silica. Cases had previously been reported in Israel, Italy and Spain (MMWR, 2015, 64(05); 129–130). Recently, hazardous silica exposures have been newly documented during hydraulic fracturing of gas and oil wells (Bang *et al.*, MMWR, 2015, 64(05); 117–120).

Dr. Rosenman's testimony provides support for this point. He testified that newer industries with high silica exposures may also be under-recognized because workers in those industries have not yet begun to be diagnosed with silicosis due to the latency period (Document ID 3577, p. 858). Dr. Rosenman submitted to the record a study by Valiante *et al.* (2004, Document ID 3926) that identified newly exposed construction workers in the growing industry of roadway repair, which began using current methods for repair in the 1980s. These methods use quick-setting concrete that generates dust containing silica above the OSHA PEL when workers perform jackhammering, and sawing and milling concrete operations. State surveillance systems identified 576 confirmed silicosis cases in New Jersey, Michigan, and Ohio that were reported to NIOSH for the years 1993 through 1997. Of these, 45 (8 percent) cases were in construction workers, three of which had been engaged in highway repair.

Sample results for this study indicated a significant risk of overexposure to crystalline silica for workers who performed the five highway repair tasks involving concrete. Sample results in excess of the OSHA PEL were found for operating a jackhammer (88 percent of samples), sawing concrete and milling concrete tasks (100 percent of samples); cleaning up concrete tasks (67 percent of samples); and drilling dowels (100 percent of samples). No measured exposures in excess of the PEL were found for milling asphalt and cleaning up asphalt; however, of the eight samples collected for milling asphalt, six (55 percent) results approached the OSHA PEL, and one was at 92 percent of the PEL. No dust-control measures were in place during the sampling of these highway repair operations.

The authors pointed out that surveillance systems such as those implemented by these states are limited in their ability to detect diseases with long latencies in highway repair working populations because of the relatively short period of time that modern repair methods had been in use when the study was conducted. Nevertheless, a few cases were identified, although the authors explain that the work histories of these cases were incomplete, and the authors recommended ongoing research to evaluate the silicosis disease potential among this growing worker population (Document ID 3926, pp. 876–880). In construction, use of equipment such as blades used on handheld saws to dry-cut masonry materials have increased both efficiency and silica exposures for workers over the past few decades (Document ID 4223, p. 11–13). Exposure data collected by OSHA as part of its technological feasibility analysis demonstrates that exposures frequently exceed previous exposure limits for these operations when no dust controls are used (*see* Chapter IV of the FEA). Another operation seeing new and increasing exposures to respirable crystalline silica is hydraulic fracturing in the oil and gas industry (Document ID 3588, p. 3773). Information in the record from medical professionals noted that lung diseases caused by silica exposures are ''not relics of the past,'' and that they continue to see cases of silicosis and other related diseases, even among younger workers who entered the workforce after the former PEL was enacted (*see* Document ID 3577, Tr. 773).

Furthermore, the general declining trend seen in the death certificate data is considerably more modest in silicosis morbidity data. In his written testimony, Dr. Rosenman stated that the nationwide number of hospitalizations where silicosis was one of the discharge diagnoses has remained constant, with 2,028 hospitalizations reported in 1993

and 2,082 in 2011 (Document ID 3425, p. 2). It is the opinion of medical professionals including the American Thoracic Society and the American College of Chest Physicians that these hospitalizations likely represent ''the tip of the iceberg'' (of silicosis cases) since milder cases are not likely to be admitted to the hospital (Document ID 2175, p. 3). Again, this evidence shows that the declining trend observed in silicosis mortality statistics does not provide a complete picture with regard to silicosis trends in the United States. While silicosis mortality has decreased substantially since records were first available in 1968, the number of silicosis related deaths appears to have leveled off (*see* Table V–2; Document ID 3577, Tr. 775). Workers are still dying from silicosis today, and new cases are being identified by surveillance systems, where they exist.

Based on the testimony and evidence described above, OSHA finds that the surveillance data describing trends in silicosis mortality and morbidity provide useful evidence of a continuing problem, but are not suitable for evaluating either the adequacy of the previous PELs or whether a more protective standard is needed. In fact, it would not be possible to derive estimates of risk at various exposure levels from the available surveillance data for silica. OSHA therefore appropriately continues to rely on epidemiological data and its quantitative risk assessment to support the need to reduce the previous PELs in its final rule.

Commenters also argued that OSHA has failed to prove that a new standard is necessary because silica-associated deaths are due to existing exposures in excess of the previous PELs; therefore, the Agency should focus on better enforcing the previous PELs, rather than enacting a new standard (*e.g.*, Document ID 2376, p. 8; 2307, p. 12; 4016, pp. 9–10; 3582, Tr. 1936). OSHA does not find this argument persuasive. First, many of the commenters used OSHA's targeted enforcement data to make this point. These data were obtained during inspections where OSHA suspected that exposures would be above the previous PELs. Consequently, the data by their very nature are skewed in the direction of exceeding the previous PELs, and such enforcement serves a deterrence function, encouraging future compliance with the PEL.

Second, not all commenters agreed that overexposures were ''widespread.'' A few other commenters (*e.g.*, AFS) thought that OSHA substantially overstated the number of workers occupationally exposed above 100 μg/m^3 in its PEA (Document ID 2379, p. 25). However OSHA's risk analyses evaluated various exposure levels in determining risks to workers, and did not rely on surveillance data, which rarely have associated exposure data. Although OSHA relied on exposure data from inspections to assess technological feasibility, it did not rely on inspection data for its risk assessment because these exposure data are not tied to specific health outcomes. Instead, the exposure data used for risk assessment purposes is found in the scientific studies discussed throughout this preamble section.

The surveillance data are also not comparable to OSHA's estimate of deaths avoided by the final rule because, as is broadly acknowledged, silicosis is underreported as a cause of death on death certificates. Thus, the surveillance data capture only a portion of the actual silicosis mortality. This point was raised by several rulemaking participants, including Dr. Rosenman; Dr. James Cone, MD, MPH, Occupational Medicine Physician at the New York City Department of Health, the AFL–CIO; and the American Thoracic Society (ATS) (Document ID 3425, p. 2; 3577, Tr. 855, 867; 4204, p. 17; 2175, p. 3; 3577, Tr. 772).

The rulemaking record includes one study that evaluated underreporting of silicosis mortality. Goodwin *et al.* (2003, Document ID 1030) estimated, through radiological confirmation, the prevalence of unrecognized silicosis in a group of decedents presumed to be occupationally exposed to silica, but whose causes of death were identified as respiratory diseases other than silicosis. In order to assess whether silicosis had been overlooked and under-diagnosed by physicians, the authors looked at x-rays of decedents whose underlying cause of death was listed as tuberculosis, cor pulmonale, chronic bronchitis, emphysema, or chronic airway obstruction, and whose usual industry was listed as mining, construction, plastics, soaps, glass, cement, concrete, structural clay, pottery, miscellaneous mineral/stone, blast furnaces, foundries, primary metals, or shipbuilding and repair.

Any decedent found to have evidence of silicosis on chest x-ray with a profusion score of 1/0 was considered to be a missed diagnosis. Of the 177 individuals who met study criteria, radiographic evidence of silicosis was found in 15 (8.5 percent). The authors concluded that silicosis goes undetected even when the state administers a case-based surveillance system. Goodwin *et al.* (2003, Document ID 1030) also cites mortality studies of Davis *et al.* (1983, Document ID 0999) and Hughes (1982, Document ID 0362) who reported finding decedents with past chest x-ray records showing evidence of silicosis but no mention of silicosis on the death certificate.

The Goodwin *et al.* (2003) study illustrates the importance of information about the decedent's usual occupation and usual industry on death certificates. Yet for the years 1985 to 1999, only 26 states coded this information for inclusion on death certificates. If no occupational information is available, recognizing exposure to silica, which is necessary to diagnose silicosis, becomes even more difficult, further contributing to possible underreporting.

Dr. Rosenman, a physician, epidemiologist and B-reader, testified that in his research he found silicosis recorded on only 14 percent of the death certificates of individuals with confirmed silicosis (Document ID 3425, p. 2; 3577, Tr. 854; *see also* 3756, Attachment 11). This means that as much as 86 percent of deaths related to silicosis are missing from the NIOSH WoRLD database, substantially compromising the accuracy of the surveillance information. Dr. Rosenman also found that silicosis is listed as the cause of death in a small percentage of individuals who have an advanced stage of silicosis; 18 percent in those with progressive massive fibrosis (PMF) and 10 percent in those with category 3 profusion.

As noted above, factors that contribute to underreporting by health care providers include lack of information about exposure histories and difficulty recognizing occupational illnesses that have long latency periods, like silicosis (*e.g.*, Document ID 4214, p. 13; 3584, Tr. 2557). Dr. Rosenman's testimony indicated that many physicians are unfamiliar with silicosis and this lack of recognition is one factor that contributes to the low recording rate for silicosis on death certificates (Document ID 3577, Tr. 855). In order to identify cases of silicosis, a health care provider must be informed of the patient's history of occupational exposure to dust containing respirable silica, a critical piece of information in identifying and reporting cases of silicosis. However, information on a decedent's usual occupation and/or industry is often not available at the time of death or is too general to be useful. If the physician completing the death certificate is unaware of the decedent's occupational exposure history to crystalline silica, and does not have that information available to her/him on a medical record, a diagnosis of silicosis on the death certificate is

unlikely. According to a study submitted by the Laborers' Health and Safety Fund of North America, (Wexelman *et al.*, 2010), a sample of physician residents surveyed in New York City did not believe that cause of death reporting is accurate; this was a general finding, and not specific to silicosis (Document ID 3756, Attachment 7).

The ATS and the American College of Chest Physicians commented that physicians often fail to recognize or misdiagnose silicosis as another lung disease on the death certificate, leading to under-reporting on death certificates (3577, Tr. 821, 826–827) and under-recognize and underreport cases of silicosis (Document ID 2175, p. 3). As Dr. Weissman from NIOSH responded:

> . . . it's well known that death certificates don't capture all of the people that have a condition when they pass away, and so there would be many that probably would not be captured if the silicosis didn't directly contribute to the death and depending on who filled out the death certificate, and the conditions of the death and all those kinds of things. So it's an under-representation of people who die with the condition . . . . (Document ID 3579, pp. 166–167).

Although there is little empirical evidence describing the extent to which silicosis is underreported as a cause of death, OSHA finds, based on this evidence as well as on testimony in the record, that the available silicosis surveillance data are likely to significantly understate the number of deaths that occur in the U.S. where silicosis is an underlying or contributing cause. This is in large part due to physicians and medical residents who record causes of death not being familiar or having access to the patient's work or medical history (*see* Wexelman *et al.*, 2010, Document ID 3756, Attachment 7; Al-Samarri *et al.*, Prev. Chronic Dis. 10:120210,2013). According to Goodwin *et al.* (2003, Document ID 1030, p. 310), most primary care physicians do not take occupational histories, nor do they receive formal training in occupational disease. They further stated that, since it is likely that a person would not retain the same health care provider over many years, even if the presence of silicosis in a patient might have been known by a physician who cared for them, it would not necessarily be known by another physician or resident who recorded cause of death years or decades later and who did not have access to the patient's medical or work history. OSHA finds the testimony of Dr. Rosenman compelling, who found that silicosis was not recorded as an underlying or contributing cause of death even where there was chest x-ray evidence of progressive massive fibrosis related to exposure to crystalline silica.

Some commenters stated that the decline in silicosis mortality demonstrates that there is a threshold for silicosis above the prior PEL of 100 $\mu g/m^3$ (Document ID 4224, p. 2–5; 3582, Tr. 1951–1963). OSHA finds this argument irrelevant as the threshold concept does not apply to historical surveillance data. As noted above and discussed in Section V.I, Comments and Responses Concerning Threshold for Silica-Related Diseases, OSHA believes that surveillance data should not be used for quantitative risk analysis (including determination of threshold effects) because it lacks an exposure characterization based on sampling. Thus, the surveillance data cannot demonstrate the existence of a population threshold.

There is also evidence in the record that silicosis morbidity statistics reviewed earlier in this section are underreported. This can be due, in part, to the relative insensitivity of chest roentgenograms for detecting lung fibrosis. Hnizdo *et al.* (1993) evaluated the sensitivity, specificity and predictive value of radiography by correlating radiological and pathological (autopsy) findings of silicosis. ''Sensitivity'' and ''specificity'' refer to the ability of a test to correctly identify those with the disease (true positive rate), and those without the disease (true negative). Because pathological findings are the most definitive for silicosis, findings on biopsy and autopsy provide the best comparison for determining sensitivity and specificity of chest imaging.

The study used three readers and defined a profusion score of 1/1 as positive for silicosis. Sensitivity was defined as the probability of a positive radiological reading (ILO category >1/1) given that silicotic nodules were found in the lungs at autopsy. Specificity was defined as the probability of a negative radiological reading (ILO category <1/1) given that no, or only an insignificant number of silicotic nodules were found at autopsy. The average sensitivity values were low for each of the three readers (0.39, 0.37, and 0.24), whereas the average specificity values were high (0.99, 0.97, and 0.98). For all readers, the proportion of true positive readings (*i.e.*, the sensitivity) increased with the extent of silicosis found at autopsy (Document ID 1050).

In the only published study that quantified the extent of underreporting of silicosis mortality and morbidity, Rosenman *et al.* estimated the number of new cases of silicosis occurring annually in the U.S. at between 3,600 and 7,300 based on the ratio of living to deceased persons identified and confirmed as silicotics in the Michigan surveillance data and extrapolating that ratio using the number of deaths due to silicosis for the U.S. as a whole (2003, Document ID 0420). OSHA reviewed the study in its Review of the Health Effects Literature (Document ID 1711, p. 48). Patrick Hessel, Ph.D., criticized the methods used by Dr. Rosenman, and deemed the resulting estimates unreliable, stating that the actual number of new silicosis cases arising each year is likely to be lower than the authors estimated (Document ID 2332, p. 2; 3576, Tr. 323–331).

OSHA disagrees with the criticisms that Dr. Hessel, commenting on behalf of the Chamber, offered on the study by Rosenman *et al.* (2003, Document ID 0420). Specifically, Dr. Hessel argued: (1) That the silicosis-related deaths used by Rosenman *et al.* occurred during the period 1987 through 1996, and do not reflect the declining numbers after that time period; (2) that the Michigan surveillance system relied on a single B-reader who was biased toward finding silicosis in patients who were brought to his attention for suspected silicosis; and (3) that the Michigan population was not representative of the rest of the country, since about 80 percent of the workers diagnosed with silicosis worked in foundries, which are not prevalent in most other states. Finally, in his hearing testimony, Dr. Hessel criticized the capture-recapture analysis used by Rosenman *et al.* to estimate the extent of underreporting of cases, stating that a number of underlying assumptions used in the analysis were not met (Document ID 3576, Tr. 323–332).

Dr. Rosenman addressed many of these criticisms in the study and at the rulemaking hearing. Regarding the fact that the number of silicosis-related deaths does not reflect the decline in deaths after 1996, Dr. Rosenman testified that, although the number of recorded silicosis deaths have declined since then, the ratio of cases to deaths has increased because the number of cases has not declined. ''The living to dead ratio that we reported in our published study in 2003 was 6.44. This ratio has actually increased in recent years to 15.2. A similar ratio . . . [was] found in the New Jersey surveillance data, which went from 5.97 to 11.5 times'' (Document ID 3577, Tr. 854). If one were to apply the more recent ratio from Michigan (more than double the ratio used by Rosenman *et al.*) to the more recent number of deaths in the country (about half that recorded in the mid-1990s; *see* Table V–1) to extrapolate

the number of silicosis cases for the U.S. overall, the result would be even greater than the estimate in Rosenman *et al.* (2003).

At the hearing, Dr. Rosenman testified that he was the sole B-reader of lung x-rays for the study, and that he received the x-ray films from other radiologists who suspected but did not confirm the presence of silicosis (Document ID 3577, Tr. 877–878). Dr. Rosenman, while acknowledging that there could be differences between readers in scoring x-ray films, argued that such differences in scoring—for example, whether a film is scored a 3/3, 3/2, or 2/3—did not affect this study since the study design only required that a case be identified and confirmed (diagnosis requires a chest radiograph interpretation showing rounded opacities of 1/0 or greater profusion) (Document ID 3577, Tr. 877–878; 0420, p. 142).

Dr. Rosenman also addressed the criticism that Michigan's worker population with silica exposure is significantly different from the rest of the country. In the study, Rosenman *et al.* reported that the ratio of cases to deaths was about the same for Ohio as for Michigan and, during the public hearing, Dr. Rosenman testified that the ratio of cases to deaths for New Jersey was also similar to Michigan's (11.5 vs. 15.2) (Document ID 0420, p. 146; 3577, Tr. 854). This similarity was despite the fact that New Jersey had a different industrial mix, with fewer foundries (Document ID 3577, Tr. 878). Furthermore, the estimates made by Rosenman *et al.* depended on the ratio of cases to deaths in Michigan, rather than just the number of cases in that state. The authors believed that the ratio would be unaffected by the level of industrialization in Michigan (Document ID 0420, p. 146).

Finally, regarding the capture-recapture analysis, OSHA notes that Dr. Hessel acknowledged that this technique has been used in epidemiology to estimate sizes of populations identified from multiple overlapping sources (Document ID 2332, p. 2), which is the purpose for which Rosenman *et al.* used the approach. In addition, the Rosenman *et al.* study noted that the assumptions used in capture-recapture analysis could not be fully met in most epidemiological study designs, but that the effect of violating these assumptions was either negligible or was evaluated using interaction terms in the regression models employed. The investigators also reported that the capture-recapture analysis used on Ohio state surveillance data found that the total number of cases estimated for the state was between 3.03 and 3.18 times the number of cases identified, a result that is comparable to that for Michigan (Document ID 0420, pp. 146–147). After considering Dr. Hessel's written testimony, Dr. Rosenman testified that ''. . . overall I don't think his comments make a difference in my data'' (Document ID 3577, Tr. 877).

OSHA finds all of Dr. Rosenman's responses to Dr. Hessel's criticisms to be reasonable. And based on Dr. Rosenman's comments and testimony, OSHA continues to believe that the Rosenman *et al.* (2003) analysis and resulting estimates of the number of new silicosis cases that arise each year are reasonable. Additionally, Dr. Rosenman, in updating his data for his testimony for this rulemaking, found that the ratio had increased from 6.44 in the published study to 15.2 times in more recent years (Document ID 3577, Tr. 854). The study supports OSHA's hypothesis that silicosis is a much more widespread problem than the surveillance data suggest and that OSHA's estimates of the non-fatal illnesses that will be avoided as a result of this new silica standard are not unreasonable. Regardless, even assuming commenters' criticisms have merit, they do not significantly affect OSHA's own estimates from the epidemiological evidence of the risks of silicosis.

Accordingly, after careful consideration of the available surveillance data, stakeholders' comments and testimony, and the remainder of the record as a whole, OSHA has determined that the available silicosis surveillance data are useful for providing context and an illustration of a significant general trend in the reduction of deaths associated with silicosis over the past four to five decades. As discussed above, and in large part because the data themselves are limited and incomplete, OSHA believes reliance upon them for the purpose of estimating the magnitude of the risk would be inappropriate. The Agency has chosen instead to follow its well-established practice of relying on epidemiological data to meet its burden of demonstrating that workers exposed to respirable crystalline silica at the previous PELs face a significant risk of developing silicosis and that such risk will be reduced when the new limit is fully implemented.

F. Comments and Responses Concerning Lung Cancer Mortality

OSHA received numerous comments regarding the carcinogenic potential of crystalline silica as well as the studies of lung cancer mortality that the Agency relied upon in the Preliminary Quantitative Risk Assessment (QRA). Many of these comments, particularly from the ACC, asserted that (1) OSHA should have relied upon additional epidemiological studies, and (2) the studies that the Agency did rely upon (Steenland *et al.*, 2001a, as re-analyzed in ToxaChemica, 2004; Rice *et al.*, 2001; Attfield and Costello, 2004; Hughes *et al.*, 2001; and Miller and MacCalman, 2009) were flawed or biased. In this section, OSHA presents these comments and its responses to them.

1. Carcinogenicity of Crystalline Silica

As discussed in the Review of Health Effects Literature and Preliminary QRA (Document ID 1711, pp. 76–77), in 1997, the World Health Organization's International Agency for Research on Cancer (IARC) conducted a thorough expert committee review of the peer-reviewed scientific literature and classified crystalline silica dust, in the form of quartz or cristobalite, as Group 1, ''carcinogenic to humans'' (Document ID 2258, Attachment 8, p. 211). IARC's overall finding for silica was based on studies of nine occupational cohorts that it considered to be the least influenced by confounding factors (Document ID 1711, p. 76). In March of 2009, 27 scientists from eight countries participated in an additional IARC review of the scientific literature and subsequently, in 2012, IARC reaffirmed that respirable crystalline silica dust is a Group 1 human carcinogen that causes lung cancer (Document ID 1473, p. 396). Additionally, in 2000, the National Toxicology Program (NTP) of HHS concluded that respirable crystalline silica is a known human carcinogen (Document ID 1164, p. 1).

The ACC, in its pre-hearing comments, questioned the carcinogenic potential of crystalline silica, asserting that IARC's 1996 recommendation that crystalline silica be classified as a Group 1 carcinogen was controversial (Document ID 2307, Attachment A, p. 29). The ACC cited Dr. Patrick Hessel's 2005 review of epidemiological studies, published after the initial IARC determination, in which he concluded that ''the silica-lung cancer hypothesis remained questionable'' (Document ID 2307, Attachment A, p. 31). The ACC reasserted this position in its post-hearing brief, contending that ''epidemiological studies have been negative as often as they have been positive'' (Document ID 4209, pp. 33–34).

After the publication of Dr. Hessel's 2005 review article, IARC reaffirmed in 2012 its earlier Group 1 classification for crystalline silica dust (Document ID 1473). As pointed out by Steenland and

Ward, IARC is one of ''2 agencies that are usually considered to be authoritative regarding whether a substance causes cancer in humans,'' the other being the NTP, which has also determined crystalline silica to be carcinogenic on two separate occasions (2013, article included in Document ID 2340, p. 5). David Goldsmith, Ph.D., who coauthored one of the first published articles linking silica exposure to lung cancer, echoed Steenland and Ward:

> It is important to recognize that evidence for silica's carcinogenicity has been reviewed three times by the International Agency for Research on Cancer, once in 1987, 1997, and 2012. It has been evaluated by California's Proposition 65 in 1988, by the National Toxicology Program in 2000 and reaffirmed in 2011, and by the National Institute for Occupational Safety and Health in 2002 (Document ID 3577, Tr. 861–862).

Multiple organizations with great expertise in this area, including the American Cancer Society, submitted comments supporting the thorough and authoritative nature of IARC's findings regarding silica's carcinogenicity (*e.g.,* Document ID 1171; 1878). OSHA likewise places great weight on the IARC and NTP classifications and, based on their findings, concludes that the carcinogenic nature of crystalline silica dust has been well established. Further support for this finding is discussed in Section V.L, Comments and Responses Concerning Causation.

2. Silicosis and Lung Cancer

In addition to debating the conclusions of IARC, Peter Morfeld, Dr. rer. medic, testifying on behalf of the ACC Crystalline Silica Panel, concluded that OSHA's risk estimates for lung cancer are ''unreliable'' because they ''ignore threshold effects and the apparent mediating role of silicosis'' (Document ID 2307, Attachment 2, p. 16). Dr. Morfeld argued that silicosis is a necessary prerequisite for silica-related lung cancer. Commenters' arguments about silicosis being a prerequisite for lung cancer and silicosis having a threshold are linked; if it were shown both that silicosis requires a certain threshold of exposure and that only persons with silicosis get lung cancer, then silica-related lung cancer would also have an exposure threshold. As discussed in Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases, commenters claimed that there is a threshold for silicosis above the previous PEL for general industry, which would make any threshold for lung cancer above that level as well. OSHA discusses these comments in detail in that section, and has determined that even if lung cancer does not occur in the absence of silicosis, the record strongly supports the conclusion that workers exposed to respirable crystalline silica would still be at risk of developing lung cancer as a result of their exposure because silicosis can develop among workers whose average and cumulative exposures are below the levels permitted by the previous PELs.

OSHA received comments from other stakeholders, including Robert Glenn, representing the Brick Industry Association, and the AFS on the possible mediating role of silicosis in the development of lung cancer (Document ID 2307, pp. 29–35; 2343, Attachment 1, pp. 42–45; 2379, Attachment 2, pp. 24–25). The ACC cited several review articles in support of its claim that ''silica exposures have not been shown to increase the risk of lung cancer in the absence of silicosis'' (Document ID 2307, Attachment A, pp. 29, 32, 35). These articles included: A 2004 review of studies by Kurihara and Wada that found that while silicosis is a risk factor for lung cancer, exposure to silica itself may not be a risk factor (Document ID 1084); a 2006 review by Pelucchi *et al.* that determined that the issue of whether silica itself increases lung cancer risk in the absence of silicosis has not been resolved (Document ID 0408); and a 2011 review by Erren *et al.* that concluded it is unclear whether silica causes lung cancer in persons who do not already have silicosis (Document ID 3873). Similarly, the AFS cited a review by the Health and Safety Executive (2003) that concluded that increased risks of lung cancer are restricted to those groups with the highest cumulative exposures, with evidence tending to show that excess lung cancer mortality is restricted to those with silicosis (Document ID 2379, Attachment 2, pp. 24–25). Having reviewed the studies cited by commenters, OSHA has come to the conclusion that none of the cited studies demonstrates that silicosis is a necessary precursor to lung cancer, but acknowledges that uncertainty remains about what percentage of lung cancers in silica-exposed workers are independent of silicosis.

Similarly, the ACC stated that none of the studies of lung cancer mortality that OSHA relied upon in the Preliminary QRA demonstrates that silica exposure causes lung cancer in the absence of silicosis (Document ID 2307, Attachment A, p. 66). During the rulemaking hearing, NIOSH scientists addressed the issue of whether silicosis is a necessary precursor to the development of lung cancer. They stated that it is a difficult issue to resolve because the two diseases may have a similar pathway, such that they can develop independently but still appear correlated. Mr. Robert Park also added that:

> [S]ilicosis isn't detectable until there's splotches on the lung that are visible in x-rays. So prior to that point, somebody could have [been] developing lung disease and you just can't see it. So, of course, people that have silicosis are going to have higher lung cancer, and it's going to look like a threshold because you didn't see the silicosis in other people that have lower lung cancer risk. To really separate those two, you'd have to do a really big study. You'd have to have some measures, independent measures of lung physiological pathology, and see what's going on with silicosis as a necessary condition for development of lung cancer (Document ID 3579, Tr. 245–247).

Similarly, David Weissman, MD, concurred that ''there's quite a bit of reason as Bob [Park] said to think that the two processes [development of silicosis and development of lung cancer] don't require each other, and it would be extraordinarily difficult to sort things out in human data'' (Document ID 3579, Tr. 247). Indeed, Checkoway and Franzblau (2000) reviewed the epidemiological literature addressing this topic, and found that the ''limitations of existing epidemiologic literature that bears on the question at hand suggest that prospects for a conclusive answer are bleak'' (Document ID 0323, p. 257). The authors concluded that silicosis and lung cancer should be treated in risk assessments as ''separate entities whose cause/effect relations are not necessarily linked'' (Document ID 0323, p. 257). Brian Miller, Ph.D., a peer reviewer of OSHA's Review of Health Effects Literature and Preliminary QRA, likewise wrote in his post-hearing comments, ''I consider this issue unanswerable, given that we cannot investigate for early fibrotic lesions in the living, but must rely on radiographs'' (Document ID 3574, p. 31).

During the public rulemaking hearing, several stakeholders pointed to a recent study of Chinese pottery workers and miners by Liu *et al.* (2013, article included in Document ID 2340) as evidence that exposure to crystalline silica is associated with lung cancer even in the absence of silicosis (Document ID 3580, Tr. 1232–1235; 3577, Tr. 803–804, 862–863). In this study, the authors excluded 15 percent of the cohort (including 119 lung cancer deaths) with radiographic evidence of silicosis and found that the risk of lung cancer mortality still increased with cumulative exposure to crystalline silica, suggesting that clinically-

apparent silicosis is not a prerequisite for silica-related lung cancer (article included in Document ID 2340, pp. 3, 7).

The ACC argued that it is ''premature to draw that conclusion,'' stating that the Liu study's conclusions are not supported by the data and raising questions about uncertainty in the exposure estimates, modeling and statistics, confounding, and the silicosis status of cohort members (Document ID 2307, Attachment A, p. 48; 4027, pp. 35–36; 4209, pp. 40–51). With regard to exposure estimates, the ACC had a number of concerns, including that conversion factors determined by side-by-side sampling in 1988–1989 were used to convert Chinese total dust concentrations to respirable crystalline silica exposures (Document ID 4209, pp. 40–41). Dr. Cox expressed concern that these conversion factors from 1988–1989 might not have been applicable to other time periods, as particle size distributions could change over time (Document ID 4027, p. 32). OSHA acknowledges this concern, but given the ''insufficient historical particle size data . . . to analyze whether there were changes in particle size distributions from the 1950s to the 1990s,'' believes that the authors were justified in making their exposure assumptions (Document ID 4027, p. 32). Dr. Cox's concerns involving modeling and statistics (*see* Document ID 4027, pp. 33–36) in the study, including the absence of model diagnostics, the use of inappropriate or misspecified models, the lack of a discussion of residual confounding and model uncertainty, and the use of inappropriate data adjustments and transformations, are discussed in detail in Section V.J, Comments and Responses Concerning Biases in Key Studies.

On the issue of confounding, the ACC noted that Liu *et al.* (2013) used a subcohort of 34,018 participants from 6 tungsten mines, 1 iron mine, and 4 potteries derived from a total cohort of 74,040 participants from 29 mines and pottery factories studied previously by Chen *et al.* (2007, Document ID 1469; 2307, Attachment A, pp. 48–50). Liu *et al.* (2013) excluded participants in the original cohort if detailed information on work history or smoking was not available, or if they worked in copper mines or tin mines where the analysis could be confounded by other exposures, namely radon and carcinogenic polycyclic aromatic hydrocarbons (PAHs) in the former and arsenic in the latter (article included in Document ID 2340, p. 2). The ACC's main concern was that Liu *et al.* (2013) did not adjust for these confounders in their analyses, but rather claimed that there were no confounding exposures in their smaller cohort on the basis of the exclusion criteria (Document ID 2307, Attachment A, p. 49).

The ACC also noted that Chen *et al.* (2007) stated that the Chinese pottery workers were exposed to PAHs, and some of the iron-copper miners were exposed to PAHs and radon progeny (Document ID 2307, Attachment A, p. 49). Chen *et al.* (2007) initially found an association between respirable silica and lung cancer mortality in the pottery workers and iron-copper miners, but it disappeared after adjusting for PAH exposures (Document ID 1469). In the tungsten miners, Chen *et al.* (2007) found no significant association for lung cancer mortality, while Liu *et al.* (2013) did. Similarly, the ACC pointed out that a subsequent study by Chen *et al.* (2012, article included in Document ID 2340) also failed to find a statistically significant increase in the hazard ratio for lung cancer, meaning that there was no significant positive exposure-response relationship between cumulative silica exposure and lung cancer mortality (Document ID 4209, p. 45). Dr. Morfeld concluded, ''Unless and until these issues are resolved, Liu *et al.* (2013) should not be used to draw conclusions regarding exposure-response relationships between RCS [respirable crystalline silica], silicosis and lung cancer risk'' (Document ID 2307, Attachment 2, pp. 15–16).

During the public hearing, counsel to the ACC asked Dr. Steenland, a co-author on the Liu *et al.* (2013) study, if he would provide measurement data on the PAH exposures in the potteries, as well as present the data from the Liu *et al.* (2013) study separately for pottery factories and tungsten mines, as they were in Chen *et al.* (2007, Document ID 1469) (Document ID 3580, Tr. 1237–1240). Dr. Steenland subsequently provided the requested data for inclusion in the rulemaking record (Document ID 3954).

With respect to the PAH data for the potteries, Dr. Weihong Chen, the study's first author, reported that, in measurements in 1987–1988 in the four potteries that were excluded from the Liu *et al.* (2013) analysis, the mean total PAHs was 38.9 μg/m^3 and the mean carcinogenic PAHs was 4.7 μg/m^3. In the four potteries that were included in the Liu *et al.* (2013) analysis, the mean total and carcinogenic PAHs, as measured in 1987–1988, were substantially lower at 11.6 and 2.5 μg/m^3, respectively. When the measurements were repeated in 2006, the mean total and carcinogenic PAHs in the four potteries included in the analysis were still lower, at 2.2 and 0.08 μg/m^3, levels that were ''not much higher than environmental PAH in many [Chinese] cities'' (Document ID 3954, p. 2). Dr. Chen also reported that, when comparing levels within six job titles, there was no significant correlation between total or carcinogenic PAHs (based on the 2006 measurements) and respirable silica dust. When the results were presented separately for the mines and potteries, in analyses using continuous cumulative exposure, the relationship between silica exposure and lung cancer mortality remained significant for the pottery factories, but not the metal mines. In the categorical analyses using quartiles of cumulative exposure, the results were mixed: The association between silica exposure and lung cancer mortality was statistically significant in some exposure quartiles for both metal mines and pottery factories (Document ID 3954, p. 2).

Based upon these subsequent data, the ACC concluded that PAHs were likely present in the potteries but not in the mines (Document ID 4209, p. 45). OSHA believes this conclusion, although plausible, to be speculative. What is known is that the potteries that were excluded had a higher average level of PAHs, and that a significant association between cumulative silica exposure and lung cancer mortality remained in the included potteries even after the analysis was separated by potteries and mines. However, the association was less clear in the metal mines.

The ACC also raised concerns about the silicosis status of lung cancer cases in the Liu cohort, asserting that some workers may not have had post-employment radiography given that social health insurance only recently began to pay for it. As such, the ACC asserted that some workers who developed lung cancer post-employment may have also had undiagnosed silicosis (Document ID 4209, pp. 49–50). OSHA acknowledges the limitations of the study, as with any retrospective study, but also notes that no evidence was put forth to indicate that workers with silicosis were misclassified in the study as workers without silicosis. Further, Dr. Goldsmith testified that the method used by Liu *et al.* for excluding workers with silicosis (x-ray findings) was ''very eminently reasonable,'' given that the only foolproof means of proving the absence of silicosis—autopsy—was not available for this particular cohort (Document ID 3577, Tr. 874–875).

Thus, OSHA concludes that the Liu *et al.* (2013) study preliminarily suggests

that silicosis is not required for the development of lung cancer; however, no one study will settle the question of the role of silicosis in the carcinogenicity of crystalline silica. As acknowledged by Dr. Cox, the Agency did not rely upon the Liu *et al.* (2013) study in its preliminary or final QRA (Document ID 2307, Attachment 4, p. 37).

Overall, after giving lengthy consideration to all evidence in the record regarding whether silicosis is a necessary precursor to the development of lung cancer, including the Liu study, the NIOSH testimony, and the mechanistic evidence for the carcinogenicity of crystalline silica discussed in Section V.H, Mechanisms of Silica-Induced Adverse Health Effects, OSHA concludes that the mediating role of silicosis in the development of lung cancer is not ''apparent,'' as suggested by Dr. Morfeld and the ACC (Document ID 2307, Attachment 2, p. 16). As such, OSHA continues to believe that substantial evidence supports the Agency's decision to consider lung cancer as a separate, independent health endpoint in its risk analysis. The Agency also notes that even if lung cancer does not occur in the absence of silicosis, the record strongly supports the conclusion that workers exposed to respirable crystalline silica would still be at risk of developing lung cancer as a result of their exposure because silicosis can develop from average and cumulative exposures below the levels allowed at the previous PEL (*see* Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases.)

3. Additional Studies

Stakeholders also suggested several additional studies that they believe OSHA should include in its QRA on lung cancer. The AFS commented that OSHA's Preliminary QRA overlooked a 2003 report by the Health and Safety Executive (HSE, Document ID 1057), asserting that over 40 percent of the references cited by HSE were omitted in OSHA's review (Document ID 4035, p. 2). OSHA disagrees with this assessment of overlooking the report, noting that the Agency reviewed and referenced the HSE report in its Review of Health Effects Literature and Preliminary QRA (Document ID 1711, p. 77). As discussed in Section V.C, Summary of the Review of Health Effects Literature and Preliminary QRA, OSHA used a weight-of-evidence approach to evaluate the scientific studies in the literature to determine their overall quality. In so doing, OSHA thoroughly reviewed approximately 60 published, peer-reviewed primary epidemiological studies covering more than 30 occupational cohorts in over a dozen industrial sectors, as well as the IARC pooled study and several meta-analyses (Document ID 1711, pp. 75–172).

The AFS also submitted a 2011 review of 30 foundry epidemiology studies by the Industrial Industries Advisory Council (IIAC) and noted that only 7 of those 30 studies were included in OSHA's Review of Health Effects Literature and Preliminary QRA (Document ID 2379, p. 24). AFS wrote:

> The PQRA largely dismisses the foundry epidemiology studies, based on assertions of positive confounding. However, a study showing that there is no adverse effect despite a positive confounder is not only still relevant to the question, but should be more persuasive than a study without positive confounders because the data then show that even with an additive risk, there is no increase in effect at the reported exposure levels (Document ID 2379, p. 24).

In response to this comment, OSHA gathered the remaining 23 foundry studies cited in the submitted report and placed them in the rulemaking docket during the post-hearing comment period. OSHA notes, in the first instance, that most of these studies were not designed to study the effects of silica exposure on foundry workers, and did not even attempt to do so; rather, their purpose was to examine lung cancer mortality and/or morbidity in foundry work, which involves many toxic and otherwise harmful substances besides silica. Therefore, OSHA would likely be unable to suitably use these studies as a basis for a quantitative risk assessment regarding respirable crystalline silica by itself.

With respect to AFS's assertions of studies showing ''no adverse effect,'' OSHA notes that the summary section of the IIAC review report, submitted as evidence by AFS, stated that, ''The cohort mortality studies and two morbidity studies suggest an increased risk of lung cancer in foundry workers when considered overall, but do not support a doubling of risk. . . . Findings in the case-control studies, the majority of which adjust for the effects of smoking . . . tend to support those of the cohort studies'' (Document ID 3991, p. 5). As such, this review of 30 foundry epidemiology studies showed an increased excess risk of lung cancer from foundry work; the fact that the excess risk was not increased by a factor of two is irrelevant to the current proceedings. The factor of two appears to be used by the IIAC in determining whether monetary benefits should be paid to foundry workers in Great Britain and is completely unrelated to OSHA's statutory requirements for determining whether workers exposed to silica are at a significant risk of material impairment of health. Given that excess lung cancer was observed in many of these studies, OSHA rejects the AFS's assertion that, even with positive confounding, there was no increase in adverse effect (*i.e.*, lung cancer).

OSHA also notes that the IIAC's finding of an elevated risk of lung cancer in foundries is not surprising. As Dr. Mirer stated during his testimony, IARC categorized foundry work as Group 1, carcinogenic to humans, in 1987 based on observed lung cancer (Document ID 2257, Attachment 3, p. 5). IARC reaffirmed its Group 1 classification for foundry work in 2012 (Document ID 4130). However, as noted by OSHA in its Review of Health Effects Literature, the foundry epidemiology studies were profoundly confounded by the presence of exposures to other carcinogens, including PAHs, aromatic amines, and metals (Document ID 1711, p. 264). Because of this confounding, as well as the fact that most of these studies did not specifically study the effects of silica exposure on foundry workers, OSHA has decided not to include them in its QRA.

The ACC likewise cited several individual studies that it believed found no relationship between silica exposure and lung cancer risk (Document ID 2307, Attachment A, pp. 33–35). These included studies by: (1) Yu *et al.* (2007), which found no consistent exposure-response relationship between silica exposure and lung cancer death in workers with silicosis in Hong Kong (Document ID 3872); (2) Chen *et al.* (2007), which found, as mentioned in relation to the Liu *et al.* (2013) study, no relationship between silica exposure and lung cancer after adjusting for confounders in a study of Chinese tungsten miners, tin miners, iron-copper miners, and pottery workers (Document ID 1469); (3) Birk *et al.* (2009), which found the standardized mortality ratio (SMR) for lung cancer was not elevated in a subgroup of men who worked in areas of German porcelain plants with the highest likely silica exposures (Document ID 1468); (4) Mundt *et al.* (2011), which found, in a subsequent analysis of the German porcelain industry, that cumulative silica exposure was not associated with lung cancer mortality, mortality from kidney cancer, or any other cause of death other than silicosis (Document ID 1478); and (5) Westberg *et al.* (2013), which found that cumulative silica exposure was not associated with lung cancer morbidity (Document ID 4054).

Briefly, Chen *et al.* (2007) examined a cohort of male workers in 29 Chinese mines and factories, and initially found a significant trend between cumulative silica exposure and lung cancer mortality in pottery workers and tin miners; this trend was no longer significant after adjustment for occupational confounders (carcinogenic PAHs in potteries, arsenic in tin mines) (Document ID 1469, pp. 320, 323–324). On the contrary, Liu *et al.* (2013) demonstrated a statistically significant association between cumulative silica exposure and lung cancer mortality after excluding mines and factories with confounding exposures (article included in Document ID 2340). As noted previously, there are questions of how confounding exposures to radon, PAHs, and arsenic were handled in both the Chen *et al.* (2007) and Liu *et al.* (2013) studies. One important difference between the two studies, however, was the follow-up time. While Chen *et al.* (2007) had follow-up to 1994 and identified 511 lung cancer deaths in a cohort of 47,108 workers (Document ID 1469, pp. 321–322), Liu *et al.* (2013) had follow-up to 2003 and identified 546 lung cancer deaths in a cohort of 34,018 workers (article included in Document ID 2340, pp. 2–4).

OSHA discussed the Birk *et al.* (2009, Document ID 1468) and Mundt *et al.* (2011, Document ID 1478) studies of the German porcelain industry in its Supplemental Literature Review, noting several limitations that are applicable to both studies and might preclude the conclusion that there was no association between silica exposure and lung cancer (Document ID 1711, Attachment 1, pp. 6–12). One such limitation was the mean age of subjects—35 years—at the start of follow-up, making this a relatively young cohort in which to observe lung cancer. The mean follow-up period of 19 years per subject was also a limitation, given the long latency for lung cancer and the young age of the cohort at the start of follow-up; only 9.2 percent of the cohort was deceased by the end of the follow-up period. OSHA noted that Mundt *et al.* (2011) acknowledged that additional follow-up of the cohort may be valuable (Document ID 1711, Attachment 1, pp. 10–11; 1478, p. 288). In addition, Mundt *et al.* (2011) had only 74 male lung cancer deaths, some of whom had possible or probable prior silica exposure that could have resulted in cumulative exposure misclassification (Document ID 1478, pp. 285, 288). The authors also reported statistically significantly elevated lung cancer hazard ratios for some categories of average silica exposure, but did not present any trend analysis data (Document ID 1478, p. 285). It also does not appear that Mundt *et al.* performed any lagged analyses for lung cancer to account for the latency period of lung cancer.

Following the ACC's citation of the Yu *et al.* (2007) and Westberg *et al.* (2013) studies in its pre-hearing comments, OSHA obtained and reviewed these studies, and added them to the rulemaking docket (Document ID 3872; 4054). Yu *et al.* (2007) followed a cohort of 2,789 workers in Hong Kong diagnosed with silicosis between 1981 and 1998. The average follow-up time was 9 years, with 30.6 percent of the cohort deceased when the study ended in 1999. The SMR for lung cancer was not statistically significantly elevated following indirect adjustment for cigarette smoking; similarly, the authors did not find a significant exposure-response relationship between cumulative silica exposure and lung cancer mortality (Document ID 3872). Westberg *et al.* (2013) studied a group of 3,045 male Swedish foundry workers to determine lung cancer incidence and morbidity. Although the lung cancer incidence was statistically significantly elevated, the authors did not find a significant exposure-response relationship with cumulative quartz exposure (Document ID 4054, p. 499).

Regarding these studies, OSHA notes that the Westberg *et al.* (2013) study, like other foundry studies, is confounded by other carcinogenic substances present in foundries, including, as the authors pointed out, phenol, formaldehyde, furfuryl alcohols, PAHs, carbon black, isocyanates, and asbestos (Document ID 4054, p. 499). The Yu *et al.* (2007) study had an average follow-up period of only 9 years (Document ID 3872, p. 1058, Table 1), which is a short follow-up period when considering the latency period for the development of cancer. In addition, the Yu *et al.* study (2007), as described in the earlier Tse *et al.* (2007) study, used a job exposure matrix developed from expert opinion to assign estimated past levels of silica exposure to individuals based on self-reported work history; changes in exposure intensity with calendar year were not considered because of limited data (Document ID 3841, p. 88; 3872, p. 1057). OSHA notes that this exposure estimation may have included considerable misclassification due to inaccuracies in self-reported work history, the use of expert opinion to estimate past exposure levels rather than actual measurements for the subjects under study, and the failure to incorporate any changes in exposure levels over calendar time into the exposure estimates. Although these exposure estimates were used in an analysis that found a significant exposure-response for NMRD mortality among workers with silicosis (Tse *et al.,* 2007, Document ID 3841), an exposure-response for lung cancer mortality may not be as strong and may be harder to detect, requiring more accurate exposure information. OSHA also notes that NMRD mortality is likely to be a competing cause of death with lung cancer, such that some workers may have died from NMRD before developing lung cancer. The workers with silicosis in this study also had high exposures (mean cumulative exposure of 10.89 mg/m^3-yrs) (Document ID 3872, p. 1058), possibly making it difficult to detect an exposure-response for lung cancer when exposures are relatively homogenous and high. Selection effects would have been extreme in these highly-exposed workers, whose all-cause mortality was double what would be expected (853 deaths observed, 406 expected) in the general population of males in Hong Kong and whose respiratory disease mortality was an astounding six times the expected level (445 deaths observed, 75 expected) (Document ID 3872, p. 1059).

OSHA acknowledges that not every study reaches the same results and conclusions. This is typically true in epidemiology, as there are different cohorts, measurements, study designs, and analytical methods, among other factors. As a result, scientists critically examine the studies, both individually and overall, in the body of literature to draw weight-of-evidence conclusions. IARC noted, with respect to its 1997 carcinogenicity determination:

> [N]ot all studies reviewed demonstrated an excess of cancer of the lung and, given the wide range of populations and exposure circumstances studied, some non-uniformity of results had been expected. However, overall, the epidemiological findings at the time supported an association between cancer of the lung and inhaled crystalline silica (α-quartz and cristobalite) resulting from occupational exposure (Document ID 1473, p. 370).

Given IARC's re-affirmation of this finding in 2012, OSHA does not believe that the individual studies mentioned above fundamentally change the weight of evidence in the body of literature supporting the carcinogenicity of crystalline silica. The best available evidence in the rulemaking record continues to indicate that exposure to respirable crystalline silica causes lung cancer. OSHA acknowledges, however, that there is some uncertainty with respect to the exact magnitude of the

lung cancer risk, as each of the key studies relied upon provides slightly different risk estimates, as indicated in Table VI–1.

Further, the ACC focused extensively on and advocated for a study by Vacek *et al.* (2011) that found no significant association between respirable silica exposure and lung cancer mortality in a cohort of Vermont granite workers (Document ID 1486, pp. 75–81). Included in the rulemaking docket are the peer-reviewed published version of the study (Document ID 1486) and the earlier Final Report to the ACC, whose Crystalline Silica Panel funded the study (Document ID 2307, Attachment 6), as well as comments from two of the authors of Vacek *et al.* (2011) responding to OSHA's treatment of the study in its Supplemental Literature Review (Document ID 1804). The ACC stated:

> Perhaps of most interest and relevance for present purposes—because the cohort has been studied so extensively in the past and because the present PEL is based indirectly on experience in the Vermont granite industry—is the mortality study of Vermont granite workers published in 2011. While the Vermont granite workers cohort has been studied on a number of previous occasions, this is the most comprehensive mortality study of Vermont granite workers to date (Document ID 2307, Attachment A, p. 36).

The ACC criticized OSHA for rejecting the Vacek *et al.* (2011) study in its Supplemental Literature Review and instead relying upon the Attfield and Costello (2004, Document ID 0284) study of Vermont granite workers (Document ID 2307, Attachment A, pp. 36–47; 4209, pp. 34–36). The ACC asserted several differences between the studies. First, while Attfield and Costello had 5,414 workers (201 lung cancer deaths) in the cohort, Vacek *et al.* had 7,052 workers (356 lung cancer deaths) as they extended the follow-up period by 10 years to 2004. Vacek *et al.* also claimed to have more complete mortality data, finding that ''162 workers, whom Attfield assumed were alive in 1994, had died before that time and some decades earlier'' (Document ID 2307, Attachment A, p. 38). In addition, Vacek *et al.* used exposure measurements and raw data not used by Attfield and Costello; for example, Vacek *et al.* used pension records and interviews from other studies to account for gaps in employment and changes in jobs, while Attfield and Costello assumed that a person remained in the same job between chest x-rays at the Vermont Department of Industrial Health surveillance program. Different conversion factors to estimate gravimetric concentrations from particle count data were also used: Attfield and Costello used a factor of 10 mppcf = 75 $\mu g/m^3$ while Vacek *et al.* used a factor of 10 mppcf = 100 $\mu g/m^3$ (Document ID 2307, Attachment A, pp. 36–39; 1804, p. 3). OSHA notes that this discrepancy in gravimetric conversion factors should not affect the detection of an exposure-response relationship, as all exposures would differ by a constant factor.

The ACC also pointed out that Attfield and Costello's exposure estimate for sandblasters was 60 $\mu g/m^3$ prior to 1940, 50 $\mu g/m^3$ from 1940–1950, and 40 $\mu g/m^3$ after 1950, maintaining these numbers were too low compared to Vacek *et al.'s* estimates of 240, 160, and 70 $\mu g/m^3$, respectively (Document ID 2307, Attachment A, p. 39; 1486, p. 313). Attfield and Costello took these estimates for sand blasters from the Davis *et al.* (1983, Document ID 0999) study, discussed in detail below; the estimates were based on six published industrial hygiene measurement studies.

Lastly, the ACC posited that Attfield and Costello inappropriately excluded the highest exposure group, stating:

> Vacek *et al.* used all their data in evaluating potential E–R [exposure-response] trends with increasing exposure. Attfield and Costello did not. Instead, on a post hoc basis, they excluded the highest exposure category from their analysis when they discovered that the E–R trend for lung cancer was not significant if that group was included (even though the trends for non-malignant respiratory diseases were significant when all the data were used). This is an example of both data selection bias and confirmation bias (Document ID 2307, Attachment A, p. 40).

Based upon these assertions, the ACC concluded, ''In sum, when judged without a result-oriented confirmation bias, the larger, more recent, more comprehensive, and more detailed study by Vacek *et al.* (2011) must be deemed to supersede Attfield and Costello (2004) as the basis for evaluating potential silica-related lung cancer risks in the Vermont granite industry'' (Document ID 2307, Attachment A, p. 41).

OSHA initially discussed some issues surrounding the Vacek *et al.* (2011) study in its Supplemental Literature Review (Document ID 1711, Attachment 1, pp. 2–5). Specifically, OSHA noted that (1) the cumulative exposure quintiles used in the Vacek *et al.* (2011) analysis were higher than the values used in the Attfield and Costello (2004) analysis; (2) the regression models used in the Vacek *et al.* (2011) study exhibited signs of uncontrolled confounding, as workers in the second lowest cumulative exposure stratum in the models (except for silicosis) exhibited a lower risk than those in the lowest stratum, while all outcomes (except NMRD) in the highest exposure stratum showed a decline in the odds ratio (a measure of the association between silica exposure and health outcome) compared to the next lower stratum; and (3) Vacek *et al.* (2011) found a statistically significant excess of lung cancer (SMR = 1.37, with almost 100 excess lung cancer deaths) in the cohort when compared to U.S. white males (Document ID 1486, p. 315). Regarding the excess lung cancer deaths, although they were unable to obtain information on smoking for many of the cohort members, Vacek *et al.* suggested that the elevated SMR for lung cancer was due, at least in part, to the differences between the smoking habits of the cohort and reference populations (Document ID 1486, p. 317). OSHA noted that although the SMR for other NMRD was elevated, there was no significant SMR elevation for other smoking-associated diseases, including cancers of the digestive organs, larynx, and bladder, as well as bronchitis, emphysema, and asthma (Document ID 1711, Attachment 1, p. 5). Elevated SMRs for these diseases would be expected if workers in the study population smoked more than those in the reference population; in fact, for all heart disease, the mortality in the study population (SMR = 0.89) was statistically significantly lower than the reference population (Document ID 1486, p. 315). These data do not support Vacek *et al.'s* assertion that smoking was responsible for the increased lung cancer SMR in the cohort. In addition, Davis *et al.* (1983) noted that granite shed workers employed during the 1970's smoked only slightly more than U.S. white males (Document ID 0999, p. 717). OSHA also pointed out that the SMR may have been understated, as Vacek *et al.* did not account for a healthy worker effect (HWE).

The ACC did not agree with OSHA's review of the Vacek *et al.* study, noting that OSHA ''rejects Vacek *et al.* (2011) on grounds that are confusing and unfounded'' (Document ID 2307, Attachment A, p. 41). The ACC argued that the quintiles of cumulative exposure used by Vacek *et al.* were not higher than typical values for lung cancer, and that OSHA, in its Supplemental Literature Review, compared the Vacek *et al.* quintiles of cumulative exposure for silicosis with the Attfield and Costello groups used for both silicosis and lung cancer (Document ID 2307, Attachment A, pp. 41–42). OSHA acknowledges this discrepancy and, given that Vacek *et al.*

used quintiles of cumulative exposure that differed for each health endpoint, agrees that the quintiles for lung cancer used by Vacek *et al.* were not appreciably higher than the exposure groups used by Attfield and Costello, though the Agency recognizes that there may be alternative explanations for the patterns observed in the Vacek *et al.* data. Regarding uncontrolled confounding, the ACC stated that ''The Vermont granite worker cohort, after all, supposedly is free of confounding exposures,'' (Document ID 2307, Attachment A, p. 43 (citing Attfield and Costello, 2004, 0284)). Vacek *et al.* also pointed out that although the odds ratios for the second lowest exposure stratums were lower than those for the lowest categories for each of the diseases, they were not statistically significantly lower (Document ID 1804, pp. 1–2).

Although OSHA notes that this latter phenomenon, in which the odds ratio for the second lowest exposure stratum is lower than that for the lowest stratum, is commonly observed and often attributable to some form of selection confounding, the Agency recognizes that there may be alternative explanations for the patterns observed in the Vacek *et al.* data. One such explanation for the decreased odds ratios in the highest exposure group is potential attenuation resulting from a HWE.

The HWE, as defined by Stayner *et al.* (2003), has two components: (1) A healthy initial hire effect, in which bias is ''introduced by the initial selection of workers healthy enough to work . . . and the use of general population rates for the comparison group, which includes people who are not healthy enough to work,'' and (2) a healthy worker survivor effect, referring ''to the tendency of workers with ill health to drop from the workforce and the effect this dropout may have on exposure-response relationships in which cumulative exposure is the measure of interest'' (Document ID 1484, p. 318). Thus, the healthy initial hire effect occurs in the scenario in which the death rate in a worker group is compared to that in the general population; because the general population has many people who are sick, the death rate for workers may be lower, such that a direct comparison of the two death rates results in a bias. The healthy worker survivor effect occurs in the scenario in which less healthy workers transfer out of certain jobs into less labor-intensive jobs due to decreased physical fitness or illness, or leave the workforce early due to exposure-related illness prior to the start of follow-up in the study. As a result, the healthier workers accumulate the highest exposures such that the risk of disease at higher exposures may appear to be constant or decrease.

OSHA disagrees with the ACC's statement that ''the possibility of a potential HWE in this cohort could not have affected the E–R analyses'' in Vacek *et al.* (2011) (Document ID 2307, Attachment A, p. 46), and with the similar statement by study authors Pamela Vacek, Ph.D. and Peter Callas, Ph.D., both of the University of Vermont, who asserted that the HWE could not have impacted their exposure-response analyses ''because they were not based on an external reference population'' (Document ID 1804, p. 2). This explanation only considers one component of the HWE, the healthy initial hire effect. An internal control analysis, such as that performed by Vacek *et al.,* will generally minimize the healthy initial hire effect but does not address the healthy worker survivor effect (*see* Document ID 1484, p. 318 (Stayner *et al.* (2003)). Thus, the statement by the ACC that there could be no HWE in the internal case control analysis of Vacek *et al.* (2011) is incorrect, as it considered only the healthy initial hire effect and not the healthy worker survivor bias.

In contrast, Attfield and Costello's stated rationale for excluding the highest exposure group is related to the healthy worker survivor effect:

> We do know that this group is distinctive in entering the cohort with substantial exposures—83% had worked for 20 years or more in the high dust levels prevalent prior to controls. They were, therefore, a highly selected healthy worker group. A further reason may be that in the days when tuberculosis and silicosis were the main health concerns in these workers, lung cancer may have been obscured in this group as a cause of death in some cases'' (Document ID 0284, p. 136).

Support for Attfield and Costello's reasoning is provided by a study by Applebaum *et al.* (2007), which re-analyzed the data from the Attfield and Costello (2004) paper and concluded that there was a healthy worker survivor effect present (study cited by Vacek *et al.,* 2009, Document ID 2307, Attachment 6, p. 3). Applebaum *et al.* (2007) split the cohort of Vermont granite workers into two groups: (1) Those that began working before the start of the study follow-up, *i.e.*, prevalent hires; and (2) those that began working after the start of the study follow-up, *i.e.*, incident hires. The rationale for splitting the cohort into these two groups was to examine if a healthy worker survivor effect was more likely in the prevalent hire group, as this group would be affected by workers that were more susceptible to health effects and left the industry workforce prior to the start of the study follow-up (Applebaum *et al.*, 2007, pp. 681–682). Using spline models to examine exposure-response relationships without forcing a particular form (*e.g.,* linear, linear-quadratic) on the observed data, the authors found that the inclusion of prevalent hires in the analysis weakened the association between cumulative silica exposure and lung cancer because of bias from the healthy worker survivor effect. The bias can be reduced by including only incident hires, or keeping the date of hire close to the start of follow-up (Applebaum *et al.*, 2007, pp. 685–686). An alternative explanation for this trend offered by Applebaum *et al.* may be that, assuming that there was more measurement error in the older data, the prevalent hires had more exposure misclassification (2007, p. 686); in such a case, however, the inclusion of prevalent hires would still bias the results towards the null. Given the findings of the Applebaum *et al.* (2007) study, OSHA believes that Attfield and Costello (2004) had good reasons for removing the highest exposure group, which was composed mostly of prevalent workers (83 percent of workers in the highest exposure group had worked at least 20 years prior to the start of the follow-up period) (Document ID 0284, p. 136).

Vacek *et al.* (2011), on the other hand, excluded 609 workers in the design of their study cohort due to insufficient information. However, the majority of the workers excluded from the cohort were incident hires who began work after 1950 (Document ID 2307, Attachment 6, p. 12; 1486, p. 314). The final Vacek *et al.* (2011) cohort included 2,851 prevalent hires (began employment before 1950) compared to 4,201 incident hires (began employment in or after 1950) (Document ID 2307, Attachment 6, p. 12; 1486, p. 314). By composing about 40 percent of their cohort with prevalent hires and excluding many incident hires, Vacek *et al.* (2011) may have introduced additional healthy worker survivor effect bias into their study. Interestingly, Vacek *et al.* described the Applebaum *et al.* (2007) results in their 2009 report, stating, ''They [Applebaum *et al.*] found that decreasing the relative proportion of prevalent to incident hires [in the data used by Attfield and Costello] resulted in a stronger association between cumulative silica exposure and lung cancer mortality'' (Document ID

2307, Attachment 6, p. 3). Despite their acknowledgement of the Applebaum *et al.* (2007) findings, Vacek *et al.* (2011) did not conduct any analysis of only the incident hires, or use statistical methods to better determine the presence and effect of a healthy worker survivor effect in their study.

The ACC also commented on Vacek *et al.*'s suggestion that the elevated SMR observed for lung cancer in the cohort (when compared to a reference population of U.S. white males) was due to differences in the smoking habits of the cohort and reference population, which OSHA criticized in its Supplemental Literature Review (Document ID 1486, p. 317; 1711, Attachment 1, p. 5). The ACC stated, ''OSHA suggests that the lack of complete smoking data for the cohort is a problem and contends that smoking could not explain the elevated SMR for lung cancer. This criticism, as Dr. Vacek explains, is overstated, and, in any event, does not detract from the study's findings regarding the absence of an association between silica exposure and lung cancer'' (Document ID 2307, Attachment A, pp. 46–47; 1804, p. 2).

Vacek *et al.* (2011) estimated the relative smoking prevalence in the cohort to be 1.35 times that in the reference population; using this estimated relative smoking prevalence, the authors estimated that ''the expected number of lung cancer deaths in the cohort after adjusting the reference rates for smoking would be 353, yielding a [non-significant] SMR of 1.02'' (Document ID 1486, p. 317). OSHA notes that this method used by Vacek *et al.* to adjust the SMR for smoking neglects the healthy worker survivor effect (*i.e.*, smokers may leave the workforce sooner than nonsmokers because smoking is a risk factor for poor health). Absent control for the healthy worker survivor effect, smoking would (and perhaps did) become a negative confounder because long duration—high cumulative exposure—workers would tend toward lower smoking attributes. The method used by Vacek *et al.* is also inconsistent with the frequently cited Axelson (1978) method, which is used to adjust the SMR when the exposed population has a higher percentage of smokers than the reference population (Checkoway *et al.* 1997, Document ID 0326; Chan *et al.* 2000, 0983). As a result, Vacek *et al.* (2011) likely overestimated the confounding effect of smoking in this cohort.

In addition, as previously noted by OSHA, the SMRs for cancers largely attributable to smoking, such as those of the buccal cavity and pharynx (SMR = 1.01), larynx (SMR = 0.99), and esophagus (SMR = 1.15) were not significant in the Vacek *et al.* study (Document ID 1486, p. 315; 2307, Attachment 6, p. 14). The SMR of 0.94 for bronchitis, emphysema, and asthma also was not significant. If smoking were truly responsible for the highly statistically significant SMR (1.37) observed for lung cancer, the SMRs for these other diseases should be significant as well. OSHA likewise notes that other studies have found that smoking does not have a substantial impact on the association between crystalline silica exposure and lung cancer mortality (*e.g.,* Checkoway *et al.*, 1997, Document ID 0326; Steenland *et al.*, 2001a, 0452, p. 781) and that crystalline silica is a risk factor for lung cancer independent of smoking (Kachuri *et al.*, 2014, Document ID 3907, p. 138; Preller *et al.*, 2010, 4055, p. 657).

OSHA is also concerned about some features of the study design and exposure assessment in Vacek *et al.* (2011). Regarding the study design, in their nested case-control analyses, Vacek *et al.* sorted cases into risk sets based on year of birth and year of death, and then matched three controls to each risk set; from the data presented in Table 5 of the study, the actual number of controls per lung cancer case can be calculated as 2.64 (Document ID 1486, p. 316). Vacek *et al.*'s decision to use such a small number of controls per case was unnecessarily restrictive, as there were additional cohort members who could have been used as controls for the lung cancer deaths. Typically, if the relevant information is available, four or more (or all eligible) controls are used per case to increase study power to detect an association. OSHA notes that Steenland *et al.* (2001a), in their nested case-control pooled analysis, used 100 controls per case (Document ID 0452, p. 777).

In addition, Vacek *et al.* stated that for the categorical analysis, cut points on cumulative exposure were based on quintiles of the combined distribution for cases and controls (Document ID 1486, p. 314). Therefore, there should be an approximately equal total number of subjects (cases plus controls) in each group (or quintile). OSHA's examination of Table 5 in the Vacek *et al.* (2011) study shows that there is an approximately equal distribution of subjects for all endpoints except lung cancer; for example, the silicosis groups each had 43–44 subjects, the NMRD groups each had 125–130 subjects, the kidney cancer groups each had 22–23 subjects, and the kidney disease groups each had 25 subjects. However, the lung cancer groups, ranging from the lowest to the highest exposure, had 325, 232, 297, 241, and 202 subjects (Document ID 1486, p. 316). OSHA could find no explanation for this discrepancy in the text of the Vacek *et al.* (2011) study, and questions how the lung cancer groups were composed.

With respect to the different job exposure matrices, OSHA has reason to believe that the exposure data reported in the Attfield and Costello study are more accurate than the data Vacek *et al.* used. OSHA is particularly concerned that Vacek *et al.*'s pre-1940 exposure estimate of 150 $\mu g/m^3$ for one job (channel bar operator) was much lower than Attfield and Costello's estimate, from the Davis *et al.* (1983) matrix, of 1070 $\mu g/m^3$ (Document ID 1486, p. 313; 0284, p. 131). As NIOSH observed in its post-hearing comments, changing the exposure estimate for channel bar operators could have ''major consequences'' on the exposure-response analysis, as the job occurred frequently (Document ID 4233, p. 22). NIOSH then pointed out that the Attfield and Costello (2004) exposure estimate for channel bar operators was based on multiple exposure measurements conducted by Davis *et al.* (1983), whereas Vacek *et al.* based their exposure estimate ''on only three dust measurements'' in which ''only wet drilling was used. Thus, their study used not only very limited sampling data but also values that were biased towards low levels, since the samples were taken when water was being used to control dust,'' a practice that was not typically used for this occupation at the time (Document ID 4233, p. 22). In fact, photographs from Hosey *et al.* (1957) showed channel bar drilling in 1936 and 1937 with and without dust control; the caption for the photo without dust control states that the ''operator in background is barely visible through dust cloud'' (Document ID 4233, p. 24, citing 3998, Attachment 14b). As NIOSH explained,

> If there is a true [linear] relationship between exposure to silica dust and lung cancer mortality, classifying highly exposed workers incorrectly as low-exposed shifts the elevated risks to the low exposure range. The impact is to spuriously elevate risks at low exposures and lower them at high exposures, resulting in the exposure-response trend being flattened or even obscured. Ultimately, the true relationship may not be evident, or if it is, may be attenuated (Document ID 4233, p. 22, n. 1).

Vacek *et al.* reported in their study that they conducted a sensitivity analysis that did not change the exposure-response relationship between silica exposure and lung cancer risk,

even when Attfield and Costello's pre-1940 exposure estimates were used for channel bar operators (Document ID 2340, pp. 317–318; 2307, Attachment 6, p. 31). Part of the problem may be the way that channel bar operators were defined by Vacek *et al.* As noted by NIOSH, ''Leyner driller and channel bar operator or driller are synonyms'' (Document ID 4233, p. 22, n. 3). Attfield and Costello defined channel bar operators in that way, with a pre-1940 exposure estimate of 1070 μg/m^3 (Document ID 0284, p. 131). Vacek *et al.*, on the contrary, assigned channel bar operators to a category called ''channel bar (wet)'' and assigned a pre-1940 exposure estimate of 150 μg/m^3 (Document ID 2307, Attachment 6, Appendix B, pp. 7, 15). They included Leyner drillers under a general category called ''driller'' with a pre-1940 exposure estimate of 1070 μg/m^3 (Document ID 2307, Attachment 6, Appendix B, pp. 7, 15). Included in the Vacek *et al.* (2009) category of ''drillers'' were plug drillers (Document ID 2307, Attachment 6, Appendix B, p. 15); OSHA notes that Attfield and Costello used a lower pre-1940 exposure estimate of 650 μg/m^3 for plug drillers, as defined by Davis *et al.* (1983). OSHA believes that Vacek *et al.* underestimated the exposures of some channel bar operators, and overestimated the exposures of plug drillers, which may have contributed to the lack of association, and that the categorization used by Attfield and Costello, with the synonymous channel bar operators and Leyner drillers in one category, and plug drillers in a separate category, was more appropriate. Thus, even in Vacek *et al'*s sensitivity analysis, in which they used Attfield and Costello's exposure estimate of 1070 μg/m^3 for channel bar operators and drillers, the plug drillers would still have had a higher exposure estimate (1070 μg/m^3 versus Attfield and Costello's 650 μg/m^3), making the analysis different from that of Attfield and Costello.

For the reasons discussed herein, OSHA has decided not to reject the Attfield and Costello (2004) study in favor of the Vacek *et al.* (2011) study as a basis for risk assessment. OSHA maintains that it has performed an objective analysis of the Attfield and Costello (2004) and Vacek *et al.* (2011) studies. OSHA agrees with some of the ACC's criticisms regarding the Agency's initial evaluation of the exposure groupings and confounding in the Vacek *et al.* (2011) study. OSHA is concerned, however, as discussed above, about several aspects of Vacek *et al.* (2011), including a potential bias from the healthy worker survivor effect, which was shown to exist in this cohort (see Applebaum *et al.*, 2007, cited in Document ID 2307, Attachment 6, p. 3), as well as about job categorization that may have resulted in exposure misclassification for certain job categories (*e.g.,* the synonymous channel bar operators and Leyner drillers). Despite its concerns with the Vacek *et al.* study, OSHA acknowledges that comprehensive studies, such as Attfield and Costello (2004) and Vacek *et al.* (2011), in the Vermont granite industry have shown conflicting results with respect to lung cancer mortality (Document ID 0284; 1486). As discussed earlier, conflicting results are often observed in epidemiological studies due to differences in study designs, analytical methods, exposure assessments, populations, and other factors. In addition, the exposure-response relationship between silica and lung cancer may be easily obscured by bias, as crystalline silica is a comparably weaker carcinogen (*i.e.*, the increase in risk per unit exposure is smaller) than other well-studied, more potent carcinogens such as hexavalent chromium (Steenland *et al.*, 2001, Document ID 0452, p. 781). Although OSHA believes that the Attfield and Costello (2004) study is the most appropriate Vermont granite study to use in its QRA, the Agency notes that, even in the absence of the Attfield and Costello (2004) study, the risk estimates for lung cancer mortality based on other studies still provide substantial evidence that respirable crystalline silica poses a significant risk of serious health conditions to exposed workers.

4. Comments on Specific Studies Relied Upon by OSHA in Its QRA

a. Attfield and Costello (2004)

As stated above, OSHA disagrees with the ACC's contention that Vacek *et al.* provides a more reliable scientific basis for estimating risk than Attfield and Costello. While it is true that the final risk estimate (54 deaths per 1,000 workers) derived from the Attfield and Costello study for an exposure level of 100 μg/m^3 is the highest when compared to the other studies, it is not true that the final risk estimate (22 deaths per 1,000 workers) derived from the Attfield and Costello study is the highest for the final rule's PEL of 50 μg/m^3. In fact, it is within the range of risk estimates derived from the ToxaChemica (2004) pooled analysis of 16 to 23 deaths per 1,000 workers at the final PEL. Thus OSHA has decided to retain its reliance on the Attfield and Costello (2004) study and, again, notes that, even without the Attfield and Costello (2004) study, all of the other studies in the Final QRA demonstrate a clearly significant risk of lung cancer mortality (11 to 54 deaths per 1,000 workers) at an exposure level of 100 μg/m^3, with a reduced, albeit still significant, risk (5 to 23 deaths per 1,000 workers) at an exposure level of 50 μg/m^3 (see Table VI–1 in Section VI, Final Quantitative Risk Assessment and Significance of Risk). Excluding Attfield and Costello (2004), in other words, would not change OSHA's final conclusion regarding the risk of death from lung cancer.

b. Miller and MacCalman (2009)

According to the ACC, OSHA's risk estimates based on the Miller and MacCalman (2009, Document ID 1306) study are ''more credible than the others—because [the study] involved a very large cohort and was of higher quality in terms of design, conduct, and detail of exposure measurements,'' and also adjusted for smoking histories (Document ID 2307, Attachment A, p. 73). Although the risk estimates generated from the Miller and MacCalman data were the lowest of the lung cancer mortality estimates, the ACC next asserted that they were biased upwards for several reasons. First, the ACC stated that exposure information was lacking for cohort members after the mines closed in the mid-1980's, and quoted OSHA as stating, ''Not accounting for this exposure, if there were any, would bias the risk estimates upwards'' (Document ID 2307, Attachment A, p. 74 (quoting 1711, p. 289)). OSHA, however, does not believe there to have been additional substantial quartz exposures. As the study authors wrote, ''Because of the steep decline of the British coal industry, the opportunities for further extensive coal mine exposure were vanishingly small'' (Document ID 1306, p. 11). Thus OSHA believes it to be unlikely that the risk estimates are biased upwards to any meaningful degree based on lack of exposure information at the end of the study period.

The ACC also stated that the unrestricted smoking of cohort members after the closure of the mines would have resulted in risk estimates that were biased upwards (Document ID 2307, Attachment A, p. 74). OSHA has no reason to believe, nor did the ACC submit any evidence in support of its contention, that unrestricted smoking occurred, however, and notes that the authors stated that the period after the mines closed was one of ''greater anti-

smoking health promotion campaigns'' (Document ID 1306, p. 11).

Finally, the ACC noted that Miller and MacCalman did not adjust significance levels for the multiple comparisons bias with respect to lag selection that Dr. Cox alleged affected their study (Document ID 2307, Attachment A, p. 74). Dr. Cox claimed that trying multiple comparisons of alternative approaches, such as different lag periods, and then selecting a final choice based on the results of these multiple comparisons, leads to a multiple comparisons bias that could result in false-positive associations (Document ID 2307, Attachment 4, p. 28; see Section V.J, Comments and Responses Concerning Biases in Key Studies). He argued that the authors should have reduced the significance level (typically p = 0.05) at which a result is considered to be significant. ''Lag'' refers to the exclusion of the more recent years of exposure (*e.g.,* 10-year lag, 15-year lag) to account for the fact that diseases like cancer often have a long latency period (*i.e.,* that the cancer may not be detected until years after the initiating exposure, and exposures experienced shortly before detection probably did not contribute to the development of disease). ''Lag selection,'' therefore, refers to the choice of an appropriate lag period. As addressed later in the Section V.J, Comments and Responses Concerning Biases in Key Studies, OSHA does not necessarily believe such an adjustment of significance levels to be appropriate, based upon the testimony of Mr. Park of NIOSH, nor is it typically performed in the occupational epidemiology literature (Document ID 3579, Tr. 151–152). Similarly, the ACC stated that the confidence intervals are overly narrow because they ignore model uncertainty, and that multiple imputation of uncertain exposure values should have been performed (Document ID 2307, Attachment A, p. 75). OSHA rejects this assertion on the grounds that the authors used detailed exposure estimates that the ACC recognized raised the credibility of the study; the ACC wrote, regarding the study, ''it involved a very large cohort and was of higher quality in terms of design, conduct, and detail of exposure measurements'' (Document ID 2307, Attachment A, p. 73). Lastly, the ACC argued that an exposure threshold should have been examined (Document ID 2307, Attachment A, p. 75). OSHA discusses at length this issue of thresholds, and the difficulty in ruling them in or out at low exposures, in Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases.

In summary, OSHA notes that the ACC has not provided any non-speculative evidence to support its claims that the risk estimates derived from the Miller and MacCalman (2009) study are biased upwards. As stated in the Review of Health Effects Literature and Preliminary QRA, and acknowledged by the ACC (Document ID 2307, p. 73), OSHA believes these risk estimates to be very credible, as the study was based on well-defined union membership rolls with good reporting, had over 17,000 participants with nearly 30 years of follow-up, and had detailed exposure measurements of both dust and quartz, as well as smoking histories (Document ID 1711, pp. 288–289).

c. Steenland (2001a) and ToxaChemica (2004)

OSHA also received several comments on the ToxaChemica (2004, Document ID 0469) analysis, which was based on the Steenland *et al.* (2001a, Document ID 0452) pooled analysis. First, the ACC claimed that there is significant heterogeneity in the exposure-response coefficients, derived from the individual studies. Because the risk estimates based on these coefficients differ by almost two orders of magnitude, the ACC suggested that these models are misspecified for the data (Document ID 2307, Attachment A, pp. 75–76). Essentially, the ACC claimed that the exposure-response coefficients differ too much among the individual studies, and asserted that it is therefore inappropriate to use the pooled models. Dr. Cox wrote: ''Steenland et al. did not address the heterogeneity, but artificially suppressed it by unjustifiably applying a log transformation. This is not a valid statistical approach for exposure estimates with substantial estimation errors'' (Document ID 2307, Attachment 4, p. 75). During the public hearing, however, Dr. Steenland explained to OSHA's satisfaction how the data in his study was transformed, using accepted statistical methods. Specifically, referring to his use of a log transformation to address the heterogeneity, Dr. Steenland testified:

> [I]t reduces the effect of the very highest exposures being able to drive an exposure-response curve because those exposures are often [skewed] way out—skewed to the right, because occupational exposure data is often log normal. With some very high exposures, they are sort of extreme, and that can drive your exposure-response curve. And you take the log, it pulls them in, and so therefore gives less influence to those high data points. And I think those high data points are often measured with more error (Document ID 3580, Tr. 1265–1266).

OSHA finds this testimony to be persuasive and, therefore, believes that Dr. Steenland's use of a log transformation to address the heterogeneity was appropriate. The log transformation also permits a better model fit when attenuation of the response is observed at high cumulative exposures.

Dr. Morfeld commented that Steenland et al. did not take into account smoking, which could explain the observed excess lung cancer of 20 percent (SMR = 1.2). Dr. Morfeld stated, ''Thus, lung cancer excess risks were demonstrated only under rather high occupational exposures to RCS dust, and, even then, an upward bias due to smoking and a necessary intermediate role for silicosis could not be ruled out'' (Document ID 2307, Attachment 2, p. 10). Dr. Steenland addressed the concern about a potential smoking bias during his testimony:

> We concluded that this positive exposure response was not likely due to different smoking habits between high exposed and low exposed workers. And the reason we did that was twofold. First, workers tend to smoke similar amounts regardless of their exposure level in general. We often worry about comparing workers to the general population because workers tend to smoke more than the general population. But, in internal analyses, we don't have this problem very often. When we have smoking data, we see that it is not related to exposure, so a priori we don't think it is likely to be a strong confounder in internal analyses. Secondly, a number of the studies we used in our pool[ed] cohort had smoking data, either for the whole cohort or partially. And when they took that into account, their results did not change. In fact, they also found that smoking was not related to exposure in their studies, which means that it won't affect the exposure-disease relationship because if it is going to do that, it has to differ between the high exposed and the low exposed, and it generally did not (Document ID 3580, Tr. 1227–1228).

In addition, Brown and Rushton (2009), in their review article submitted to the rulemaking record by Dr. Morfeld, appeared to agree with Dr. Steenland, stating, ''This [Steenland *et al.*] internal analysis removed the possibility of confounding by smoking'' (Document ID 3573, Attachment 5, p. 150). Thus, OSHA rejects Dr. Morfeld's assessment that the risk estimates may be biased upwards due to smoking.

The ACC also commented that exposure misclassification due to uncertain exposure estimates in Steenland's pooled cohort could have created the appearance of a monotonic relationship, in which the response

increases with the exposure, even if the true response was not monotonic (Document ID 2307, Attachment A, p. 76). The ACC, along with Dr. Borak (representing the U.S. Chamber of Commerce) and others, likewise cited OSHA's statement from the Review of Health Effects Literature and Preliminary QRA, in which the Agency acknowledged that uncertainty in the exposure estimates that underlie each of the 10 studies in the pooled analysis was likely to represent one of the most important sources of uncertainty in the risk estimates (Document ID 1711, p. 292; 2376, p. 16). Dr. Borak also quoted Mannetje et al. (2002), who developed quantitative exposure data for the pooled analysis, as stating, ''While some measurement error certainly occurred in our estimates, a categorical analysis based on broad exposure groups should not be much affected by the resulting level of misclassification'' (Document ID 2376, p. 17, quoting 1090, p. 84). From this statement, Dr. Borak concluded that the researchers themselves believed the data were only adequate for ''categorical analyses which might lead to qualitative conclusions'' (Document ID 2376, p. 17).

OSHA disagrees with Dr. Borak's interpretation of the Mannetje *et al.* statement, as categorical analyses are typically quantitative in nature, with the data being used to draw quantitative conclusions. However, OSHA recognized the possibility for uncertainty in the exposure estimates, and it is for this reason that OSHA commissioned a quantitative analysis of uncertainty in Steenland's pooled study (ToxaChemica, 2004, Document ID 0469). This analysis suggested that exposure misclassification had little effect on the pooled exposure coefficient (and the variance around that estimate) for the lung cancer risk model (Document ID 1711, pp. 313–314). Given this analysis, OSHA also disagrees with the ACC's statement that ''it is virtually certain that substantial exposure estimation error infused the pooled analysis, resulting in exposure misclassification that would create a false appearance of a monotonically increasing exposure-response even where none exists'' (Document ID 2307, Attachment A, p. 78). OSHA notes that this statement is not supported with any evidence from the Steenland et al. (2001) study. In addition, as discussed at length in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis, exposure estimation error can also bias results towards the null (weaken or obscure the exposure-response relationship) (Document ID 3580, Tr. 1266–67; 3576, Tr. 358–359; 3574, p. 21). Other criticisms from the ACC concerning alleged modeling errors and biases in the Steenland study and the alleged threshold for the health effects of silica exposure are discussed generally in Section V.J, Comments and Responses Concerning Biases in Key Studies, and Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases. Dr. Cox's and Dr. Morfeld's criticisms of the uncertainty analysis performed by Toxachemica are addressed in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis. For the reasons stated in those sections, OSHA is unpersuaded by these criticisms.

The ACC concluded:

> For all these reasons, the pooled analysis by Steenland *et al.* (2001) does not yield credible or reliable estimates of silica-related lung cancer risk. But, even if risk estimates based on Steenland *et al.* (2001) were not so problematic, that study would not demonstrate that reducing the PEL from 0.1 mg/m^3 [100 μg/m^3] to 0.05 mg/m^3 [50 μg/m^3] will result in a substantial reduction in the risk of lung cancer (Document ID 2307, Attachment A, p. 81).

The ACC then discussed the ToxaChemica report (2004), which the ACC claimed shows that ''under the spline model (which the authors prefer over the log cumulative model because of biological plausibility)'' reducing the PEL from 100 μg/m^3 to 50 μg/m^3 would negligibly reduce the excess risk of lung cancer mortality from 0.017 (17/1,000) to 0.016 (16/1,000), ''risk values that are indistinguishable given the overlapping confidence limits of the two estimates'' (Document ID 2307, Attachment A, p. 81). In addition, the ACC noted that the excess risk at 150 μg/m^3 and 250 μg/m^3 in the spline model is the same as the excess risk at 50 μg/m^3, while that at 200 μg/m^3 is lower. ''Estimates of lung cancer risk in the neighborhood of the current general industry PEL are hugely uncertain—with the data suggesting that a greater reduction in lung cancer risk could be achieved by doubling the PEL to 200 μg/m^3 than by cutting it in half to a level of 50 μg/m^3'' (Document ID 2307, Attachment A, pp. 81–82).

OSHA notes that these risk estimates cited by the ACC were the original estimates for the spline model provided to OSHA by ToxaChemica in its 2004 report (Document ID 0469). These are not the risk estimates used by OSHA. Instead, to estimate the risks published in this final rule, the Agency used the exposure-response coefficients from the study in an updated life table analysis using background all-cause mortality and lung cancer mortality rates from 2006 and 2011, respectively. The risk estimates using the 2011 background data are the most updated numbers with which to make the comparisons ACC has suggested. With the 2011 background data, the estimated excess risk is 20 deaths per 1,000 workers at 100 μg/m^3, and 16 deaths per 1,000 workers at 50 μg/m^3, a reduction of 4 deaths. OSHA's estimated excess risk at 250 μg/m^3 is 24 deaths per 1,000 workers, an increase in 8 deaths when compared to 50 μg/m^3. Thus it is not the case, as ACC suggested, that increasing the PEL would cause a reduction in lung cancer mortality risk.

In addition, the linear spline model employed by Steenland et al. (2001) was only one of three models used by OSHA to estimate quantitative risks from the pooled analysis. OSHA also used the log-linear model with log cumulative exposure as well as the linear model with log cumulative exposure (see Section VI, Final Quantitative Risk Assessment and Significance of Risk). OSHA notes that all three models indicated a reduction in risk when comparing an exposure level of 100 μg/m^3 to 50 μg/m^3.

In summary, OSHA disagrees with the ACC's assertion that the Steenland et al. pooled analysis does not yield credible risk estimates for lung cancer mortality. Dr. Morfeld's assertion that the risk estimates were biased upwards due to smoking is quite unlikely to be true, given that the study was an internal (worker to worker) analysis. The ACC's claim that exposure estimation error resulted in false exposure-response relationships was not supported by any actual data; as discussed in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis, exposure estimation error can also bias results towards the null (weaken or obscure the exposure-response relationship) (Document ID 3580, Tr. 1266–67; 3576, Tr. 358–359; 3574, p. 21). For these reasons, OSHA rejects the ACC's claims that the Steenland study of lung cancer mortality does not yield credible risk estimates. Rather, based upon its review, OSHA believes this pooled analysis to be of high quality. As Dr. Steenland testified during the informal public hearings, this pooled analysis, with its more than 60,000 workers and 1,000 lung cancer deaths, involved ''a rich dataset with high statistical power to see anything, if there was anything to see'' (Document ID 3580, Tr. 1227). In fact, OSHA believes the Steenland *et al.* (2001a) study to be among the best available studies in the peer-reviewed literature on the topic of

silica exposure and its relationship to lung cancer mortality.

d. Rice *et al.* (2001)

The ACC also commented on the Rice *et al.* (2001, Document ID 1118) study of diatomaceous earth workers, which found a significant risk of lung cancer mortality that increased with cumulative silica exposure in a cohort of diatomaceous earth workers. The ACC claimed that it had a high likelihood of exposure misclassification. Dr. Cox contended that the practice of ''[a]ssigning each worker a single estimated cumulative exposure based on estimated mean values produces biased results and artificially narrow confidence intervals (and hence excess false-positive associations)'' (Document ID 2307, Attachment 4, p. 76). OSHA notes that Rice *et al.* (2001) described the exposure estimation procedure in their paper. There were more than 6,000 measurements of dust exposure taken from 1948–1988; particle count data were converted to gravimetric data using linear regression modeling. Cumulative exposures to respirable crystalline silica were then estimated for each worker using detailed employment records (Document ID 1118, p. 39). OSHA concludes it is highly unlikely that the exposure estimates are biased to such an extent, as Dr. Cox suggests, that they would produce false-positive associations.

The ACC also noted that the mean crystalline silica exposure in the diatomaceous earth worker cohort was 290 $\mu g/m^3$, approximately three times the former PEL for general industry (Document ID 2307, Attachment A, p. 83). OSHA, however, believes that the cumulative respirable crystalline silica dust concentration is the metric of concern here, as that is what was used in the regression models. The mean cumulative respirable crystalline silica dust concentration in the study was 2.16 mg/m^3-yrs, which is a very realistic cumulative exposure for many workers (Document ID 1118, p. 39).

The ACC also stated that the results of the Rice study were confounded by smoking and possibly asbestos exposure (Document ID 2307, Attachment A, p. 83). OSHA previously addressed the possible confounding in this cohort in its Review of Health Effects Literature and Preliminary QRA (Document ID 1711, pp. 139–143). Rice *et al.* (2001) used the same cohort originally reported on by Checkoway *et al.* (1993, Document ID 0324; 1996, 0325; 1997, 0326). The Rice study discussed the smoking confounding analysis performed by Checkoway *et al.* (1997), in which the Axelson method (1978) was used to make a worst case estimate (assuming 20 times greater lung cancer risk in smokers compared to non-smokers) and indirectly adjust the relative risk (RR) estimates for lung cancer for differences in smoking rates (Document ID 1118, pp. 40–41). With exposures in the Checkoway study lagged 15 years to account for the latency period, the worst case effect was to reduce the RR for lung cancer in the highest exposure group from 2.15 to 1.67. Checkoway *et al.* concluded that the association between respirable silica exposure and lung cancer was unlikely to be confounded by cigarette exposure (Document ID 0326, pp. 684, 687). Regarding confounding by asbestos exposure, Rice *et al.* (2001) stated:

> Checkoway *et al.* found no evidence that exposure to asbestos accounted for the observed association between mortality from lung cancer and cumulative exposure to silica. Our analyses of their data also found no evidence of confounding by asbestos in the Poisson regression or Cox's proportional hazards models regardless of lag period; therefore, exposure to asbestos was not included in the models presented in this paper (Document ID 1118, p. 41).

Based upon these analyses, OSHA rejects the ACC's unsupported assertion that the results of Rice *et al.* (2001) were confounded by smoking and asbestos exposure.

Lastly, Dr. Cox asserted that there were several biases in Rice *et al.* (2001), including multiple-testing bias from testing multiple lag periods, exposure groupings, and model forms; model specification bias; and a lack of model diagnostics (Document ID 2307, Attachment 4, pp. 63–64, 77). OSHA addressed these issues generally in Section V.J, Comments and Responses Concerning Biases in Key Studies, and rejects these assertions for the same reasons. OSHA also discussed regression diagnostics at length in the same section. In summary, despite the criticisms directed at the Rice *et al.* study by the ACC, OSHA continues to believe that the quantitative exposure-response analysis by Rice *et al.* (2001) is of high quality and appropriate for inclusion in the QRA (Document ID 1711, p. 143).

e. Hughes *et al.* (2001)

The ACC, through the comments of Dr. Cox, presented a similar critique of the study of North American industrial sand workers by Hughes *et al.* (2001, Document ID 1060). This study found a statistically significant association (increased odds ratios) between lung cancer mortality and cumulative silica exposure as well as average silica concentration (Document ID 1060). In this study, according to Dr. Cox, ''The selected model form guarantees a monotonic exposure-response relation, independent of the data. Model uncertainty and errors in exposure estimates have both been ignored, so the slope estimate from Hughes *et al.* (2001), as well as the resulting excess risk estimates, are likely to be biased and erroneous'' (Document ID 2307, Attachment 4, p. 85). The ACC also noted that this cohort had incomplete smoking information, with the proportion of ''ever smokers'' significantly higher in cases than in controls. In addition, the ACC asserted that asbestos exposure may have also occurred, as three death certificates listed mesothelioma as the cause of death (Document ID 2307, Attachment A, pp. 85–86).

OSHA discussed the Hughes *et al.* (2001, Document ID 1060) study in its Review of Health Effects Literature and Preliminary QRA, highlighting as strengths the individual job, exposure, and smoking histories that were available (Document ID 1711, p. 285). Exposure levels over time were estimated via a job exposure matrix constructed by Rando *et al.* (2001, Document ID 0415) utilizing substantial exposure data, including 14,249 respirable dust and silica samples taken from 1974 to 1998 in nine plants (Document ID 1711, pp. 88, 124–128; 1060, 202). Smoking data were collected from medical records supplemented by information from next of kin or living subjects for 91 percent of cases and controls (Document ID 1060, p. 202). OSHA believes these smoking histories allowed the authors to adequately control for confounding by smoking in their analyses. Regarding the three death certificates listing mesothelioma, McDonald *et al.* (2001) explained that two were for workers not included in the case/control study because they were hired at or after age 40 with less than 10 years of work time; the third was for a worker hired at age 19 who then accumulated 32 years of experience in maintenance jobs (Document ID 1091, p. 195). As such, OSHA does not believe it likely that asbestos exposure was a large source of confounding in typical industrial sand operations in this study. OSHA also notes that the positive findings of this study were consistent with those of other studies of workers in this cohort, including Steenland and Sanderson (2001, Document ID 0455) and McDonald *et al.* (2005, Document ID 1092).

The ACC also noted that there was no consistent correlation in Hughes *et al.* (2001) between employment duration

and lung cancer risk (Document ID 2307, Attachment A, p. 86), with Dr. Cox suggesting that model specification error was to blame (Document ID 2307, Attachment 4, p. 86). OSHA believes that cumulative exposure is a more appropriate metric for determining risk than is duration of exposure because the cumulative exposure metric considers both the duration and intensity of exposure. For example, some workers may have been employed for a very long duration with low exposures, whereas others may have been employed for a short duration but with high exposures; both groups could have similar cumulative exposures.

In summary, OSHA considers the Hughes *et al.* (2001) study to be of high enough quality to provide risk estimates for excess lung cancer from silica exposure, as the study is unlikely to be substantially confounded. For these reasons, the Agency finds the assertion that the risk estimates based on this study are erroneous to be unconvincing.

Overall, regarding all of the studies upon which OSHA relied in its Preliminary QRA, the ACC concluded, ''In sum, none of the studies on which OSHA relies is inconsistent with a concentration threshold above 100 μg/m^3 for any risk of silica-related lung cancer; none demonstrates an increased lung cancer risk in the absence of silicosis; and none provides a sound basis for estimating lung cancer risks at RCS [respirable crystalline silica] exposure levels of 100 μg/m^3 and below'' (Document ID 2307, Attachment A, p. 87).

OSHA is not persuaded that the evidence presented by the ACC supports these conclusions. On the contrary, as OSHA discussed in the Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases, demonstrating the absence of a threshold is not a feasible scientific pursuit, and some models produce threshold estimates well below the PELs. Similarly, the ACC has not put forward any study that has proven that silicosis must be a precursor for lung cancer and, as discussed in Section V.H, Mechanisms of Silica-Induced Adverse Health Effects, some studies have shown genotoxic mechanisms by which exposure to crystalline silica may lead to lung cancer. The strong epidemiological evidence for carcinogenicity, supported by evidence from experimental animal and mechanistic studies, allowed IARC to conclude on multiple occasions that respirable crystalline silica is a Group I carcinogen. OSHA places great weight on this conclusion given IARC's authority and standing in the international scientific community. In addition, all of the lung cancer studies relied upon by OSHA used models that allow for the estimation of lung cancer risks at crystalline silica exposure levels of 100 μg/m^3 and below. OSHA believes these studies (Steenland *et al.*, 2001a, Document ID 0452, as re-analyzed in ToxaChemica, 2004, 0469; Rice *et al.*, 2001, 1118; Attfield and Costello, 2004, 0284; Hughes *et al.*, 2001, 1060; and Miller and MacCalman, 2009, 1306) are of high quality and contain well-supported findings. Thus, OSHA continues to rely upon these studies for deriving quantitative risk estimates in its QRA and continues to believe that workers exposed to respirable crystalline silica at levels at or near the previous and new PELs are faced with a significant risk of dying from lung cancer. As such, the Agency believes it would be irresponsible as a scientific matter, and inconsistent with its statutory obligations to issue standards based on the best available evidence after conducting an extensive rulemaking, to retain the regulatory status quo.

G. Comments and Responses Concerning Renal Disease Mortality

OSHA estimated quantitative risks for renal disease mortality (Document ID 1711, pp. 314–316) using data from a pooled analysis of renal disease, conducted by Steenland *et al.* (2002a, Document ID 0448). As illustrated in Table VI–1, the lifetime renal disease mortality risk estimate for 45 years of exposure to the previous general industry PEL (100 μg/m^3 respirable crystalline silica) is 39 deaths per 1,000 workers. However, for the final PEL (50 μg/m^3), it is 32 deaths per 1,000 workers. Although OSHA acknowledges that there are considerably less data for renal disease mortality, and thus the risk findings based on them are less robust than those for silicosis, lung cancer, and non-malignant respiratory disease (NMRD) mortality, the Agency believes the renal disease risk findings are based on credible data. Indeed, the Steenland *et al.* pooled analysis had a large number of workers from three cohorts with sufficient exposure data, and exposure matrices for the three cohorts had been used in previous studies that showed positive exposure-response trends for silicosis morbidity or mortality, thus tending to validate the underlying exposure and work history data (*see* Document ID 1711, pp. 215–216). Nevertheless, OSHA received comments that were critical of its risk estimates for renal disease mortality. Based upon its review of the best available evidence, OSHA finds that these comments do not alter its overall conclusions on renal disease mortality. In addition, OSHA notes that even if the risk of renal disease mortality is discounted, there would remain clearly significant risks of lung cancer mortality, silicosis and NMRD mortality, and silicosis morbidity, with more robust risk estimates based upon a larger amount of data from numerous studies (*see* Table VI–1).

OSHA received several comments from the ACC regarding the Agency's quantitative risk estimates for renal disease mortality. Specifically, the ACC argued that: (1) The pooled study (Steenland *et al.*, 2002a, Document ID 0448) that OSHA relied upon did not provide sufficient data to estimate quantitative risks; (2) the individual studies included in the pooled study had several limitations; and (3) most epidemiological studies have not demonstrated a statistically significant association between silica exposure and renal disease mortality (Document ID 2307, Attachment A, pp. 139–157; 4209, pp. 92–96). As explained below, and as stated above, although the Agency acknowledges there is greater uncertainty in the risk estimates related to renal disease than other silica-related diseases, the best available evidence is of sufficient quality to quantify the risk of renal disease in the final risk assessment.

1. Pooled Study

Some commenters expressed concern about the Steenland *et al.* (2002a, Document ID 0448) pooled study of renal disease mortality, which OSHA and its contractor, ToxaChemica, used to calculate quantitative risk estimates. Specifically, the ACC questioned why the analysis only used three studies (Homestake, North Dakota gold miners, Steenland and Brown, 1995a, Document ID 0450; U.S. industrial sand workers, Steenland *et al.*, 2001b, Document ID 0456; Vermont granite workers, Costello and Graham, 1988, Document ID 0991) out of the ten originally used in the pooled study of lung cancer mortality (Steenland *et al.*, 2001a, Document ID 0452). Peter Morfeld, Dr. rer. medic., representing the ACC, wrote in his written testimony that although Steenland *et al.* (2002a, Document ID 0448) indicated that the three studies were selected because they were the only ones to have information on multiple cause mortality, all 10 studies had information on renal disease as an underlying cause of death (Document ID 2308, Attachment 4, pp. 24–25). Since ToxaChemica focused on underlying cause results in their discussion, Dr. Morfeld argued that not having used all

10 studies in the pooled analysis ''raises a suspicion of study selection bias'' (Document ID 2308, Attachment 4, pp. 24–25).

OSHA finds this assertion of study selection bias by the ACC and Dr. Morfeld to be unpersuasive because Steenland *et al.*'s explanation (2002a) for including only three studies in the pooled analysis was sound. The authors reported in their pooled study that both underlying cause and multiple cause mortality were available for only three cohorts of silica-exposed workers, and ''multiple cause (any mention on the death certificate) was of particular interest because renal disease is often listed on death certificates without being the underlying cause'' (Document ID 0448, p. 5). The authors likewise cited a study (Steenland *et al.*, 1992), indicating that the ratio of chronic renal disease mortality shown anywhere on a U.S. death certificate versus being shown as an underlying cause is 4.75 (Document ID 0453, Table 2, pp. 860–861). Indeed, in their pooled analysis of renal disease mortality, Steenland *et al.* noted that there were 51 renal disease deaths when using underlying cause, but 204 when using multiple cause mortality (Document ID 0448, p. 5). As renal disease is a serious disabling disease, the use of multiple cause mortality gives a much better sense of the burden of excess disease than does the use of underlying cause of death as an endpoint. As such, Steenland *et al.* calculated odds ratios by quartile of cumulative silica exposure for renal disease in a nested case-control analysis that considered any mention of renal disease on the death certificate as well as underlying cause. For multiple-cause mortality, the exposure-response trend was statistically significant for both cumulative exposure ($p = 0.004$) and log cumulative exposure ($p = 0.0002$); whereas for underlying cause mortality, the trend was statistically significant only for log cumulative exposure ($p = 0.03$) (Document ID 1711, p. 315). Thus, OSHA believes that Steenland *et al.* (2002a, Document ID 0448) were justified in including only the three cohorts with all-cause mortality in their pooled analysis.

Concern was also expressed about the model selection in the pooled analysis. Dr. Morfeld noted that a statistically significant association between exposure to crystalline silica and renal disease mortality was only found in the underlying cause analysis in which the model was logged ($p = 0.03$) (Document ID 2308, Attachment 4, p. 25). Dr. Morfeld commented, ''The authors stated that the log-model fit better, but evidence was not given (*e.g.,* information criteria), and it is unclear whether the results are robust to other transformations'' (Document ID 2308, Attachment 4, p. 25).

OSHA disagrees with this criticism because a log transformation of the cumulative exposure metric is reasonable, given that exposure variables are often lognormally distributed in epidemiological studies, as discussed in Section V.J, Comments and Responses Concerning Biases in Key Studies. Also, while it is true that Steenland *et al.* (2002a) only found a statistically significant association in the continuous underlying cause analysis when the cumulative exposure metric was logged ($p = 0.03$), OSHA notes that the authors also found a statistically significant association in the highest quartile of unlogged cumulative silica exposure (1.67 + mg/m^3-yr) in the categorical underlying cause analysis (95% confidence interval: 1.31–11.76) (Document ID 0448, Table 2, p. 7). Thus, for the highest cumulative exposures, there was a significant association with renal disease mortality even without a log transformation of the exposure metric. Dr. Morfeld also failed to mention that Steenland *et al.* (2002a) found statistically significant associations in the continuous analyses (for both untransformed and log-transformed cumulative exposure) using any mention of renal disease on the death certificate, which adds weight to the study's findings that exposure to respirable crystalline silica is associated with renal disease mortality (Document ID 0448, Table 2, p. 7). In light of this, OSHA concludes that Dr. Morfeld's criticism of the pooled analysis is without merit.

The ACC also noted that the authors of this study, Drs. Kyle Steenland and Scott Bartell, acknowledged the limitations of the data in their 2004 ToxaChemica report to OSHA. Specifically, in reference to the 51 renal deaths (underlying cause) and 23 renal cases in the pooled study, Drs. Steenland and Bartell wrote, ''This amount of data is insufficient to provide robust estimates of risk'' (Document ID 2307, Attachment A, p. 139, citing 0469, p. 27). Given this acknowledgement, the ACC concluded that OSHA's inclusion of the renal disease mortality risk estimates in the significant risk determination and calculation of expected benefits was speculative (Document ID 2307, Attachment A, pp. 139–140). During the hearing, Dr. Steenland further explained, ''I think there is pretty good evidence that silica causes renal disease. I just think that there is not as big a database as there is for lung cancer and silicosis. And so there is more uncertainty'' (Document ID 3580, Tr. 1245). OSHA agrees with Dr. Steenland and acknowledges, as it did in its Review of Health Effects Literature and Preliminary QRA (Document ID 1711, p. 357), that its quantitative risk estimates for renal disease mortality have more uncertainty and are less robust than those for the other health effects examined (*i.e.*, lung cancer mortality, silicosis and NMRD mortality, and silicosis morbidity). However, OSHA disagrees with the ACC's suggestion that the Agency's renal disease risk estimates are ''rank speculation'' (Document ID 4209, pp. 95–96), as these estimates are based on the best available evidence in the form of a published, peer-reviewed pooled analysis (Steenland *et al.* 2002a, Document ID 0448) that uses sound epidemiological and statistical methods. Thus, OSHA believes that it is appropriate to present the risk estimates along with the associated uncertainty estimate (*e.g.*, 95% confidence intervals) (*see* Document ID 1711, p. 316).

2. Individual Studies in the Pooled Study

The ACC also identified limitations in each of the three epidemiological studies included in the Steenland *et al.* (2002a, Document ID 0448) pooled study. First, with respect to the Steenland and Brown (1995a, Document ID 0450) study of North Dakota gold miners, the ACC noted there was a significantly elevated standardized mortality ratio (SMR) for chronic renal disease only in the men hired prior to 1930. It noted that there were no silica exposure measurement data available for this early time period, such that Steenland and Brown (1995a, Document ID 0450) instead estimated a median exposure (150 μg/m^3) that was seven times higher for men hired prior to 1930, versus men hired after 1950 (20 μg/m^3) (Document ID 2307, Attachment A, p. 147). The ACC maintained that these exposure estimates were likely to be understated and not credible, while also suggesting ''the existence of an average exposure threshold ≥150 μg/m^3 for any risk of silica-related renal disease mortality'' (Document ID 2307, Attachment A, p. 147).

OSHA finds the ACC's suggestion of a threshold to be unpersuasive, as the ACC provided no analysis to indicate a threshold in this study. OSHA addresses the Steenland and Brown (1995a, Document ID 0450) exposure assessment in Section V.D, Comments and Responses Concerning Silicosis and Non-Malignant Respiratory Disease Mortality and Morbidity. The ACC also

ignored the alternative explanation, that elevated chronic renal disease mortality may have only been seen in the workers hired prior to 1930 because they had a higher cumulative exposure than workers hired later, not because there was necessarily a threshold.

The ACC had a similar criticism of the Steenland *et al.* (2001b, Document ID 0456) study of North American industrial sand workers. The ACC posited that the exposure estimates were highly uncertain and likely to be understated (Document ID 2307, Attachment A, p. 149). The ACC noted that these exposure estimates, developed by Sanderson *et al.* (2000, Document ID 0429), were considerably lower than those developed by Rando *et al.* (2001, Document ID 0415) for another study of North American industrial sand workers (Document ID 2307, Attachment A, p. 149). After discussing several differences between these two exposure assessments, the ACC pointed to OSHA's discussion in the lung cancer section of the preamble to the Proposed Rule (78 FR at 56302) in which the Agency acknowledged that McDonald *et al.* (2001, Document ID 1091), Hughes *et al.* (2001, Document ID 1060) and Rando *et al.* (2001, Document ID 0415) had access to smoking histories, plant records, and exposure measurements that allowed for the development of a job exposure matrix, while Steenland and Sanderson (2001, Document ID 0455) had limited access to plant facilities, less detailed historic exposure data, and used MSHA enforcement records for estimates of recent exposure (Document ID 2307, Attachment A, pp. 149–151). The ACC then noted that the McDonald *et al.* study (2005, Document ID 1092), using the Rando *et al.* (2001, Document ID 0415) exposure assessment, found no association between end-stage renal disease or renal cancer and cumulative silica exposure (Document ID 2307, Attachment A, pp. 149, 152).

The ACC also noted that, based on underlying cause of death, the SMR for acute renal death in the Steenland *et al.* (2001b, Document ID 0456) study was not significant (95% confidence interval: 0.70–9.86), and the SMR for chronic renal disease was barely significant (95% confidence interval: 1.06–4.08) (Document ID 2307, Attachment A, p. 151). In light of this, the ACC maintained that Steenland *et al.* based their exposure-response analyses on multiple-cause mortality data, using all deaths with any mention of renal disease on the death certificate even if it was not listed as the *underlying cause*. The ACC asserted that ''only the underlying cause data involve actual deaths from renal disease'' (Document ID 2307, Attachment A, p. 152).

OSHA does not find this criticism persuasive. For regulatory purposes, multiple-cause mortality data is, if anything, more relevant because renal disease constitutes the type of material impairment of health that the Agency is authorized to protect against through regulation regardless of whether it is determined to be the underlying cause of a worker's death. Moreover, the discrepancy in the renal disease mortality findings is a moot point, as only the model in the pooled study with renal disease as an underlying cause was used to estimate risks in the Preliminary QRA (Document ID 1711, p. 316). In any event, OSHA notes an important difference between the Steenland *et al.* study (2001b, Document ID 0456) and the McDonald study (2005, Document ID 1092): They did not look at the same cohort of North American industrial sand workers. Steenland *et al.* (2001b) examined a cohort of 4,626 workers from 18 plants; the average year of first employment was 1967, with follow-up through 1996 (Document ID 0456, pp. 406–408). McDonald *et al.* (2005) examined a cohort of 2,452 workers employed between 1940 and 1979 at eight plants, with follow-up through 2000 (Document ID 1092, p. 368). Although there was overlap of about six plants in the studies (Document ID 1711, p. 127), these were clearly two fairly different cohorts of industrial sand workers. These differences in the cohorts might explain the discrepancy in the studies' results. In addition, OSHA notes that McDonald *et al.* (2005, Document ID 1092) observed statistically significant excess mortality from nephritis/nephrosis in their study that was not explained by the findings of their silica exposure-response analyses (Document ID 1092, p. 369).

The ACC further argued that the Steenland *et al.* (2002a, Document ID 0448) pooled study is inferior to the Vacek *et al.* (2011, Document ID 2340) study of Vermont granite workers, which found no association between cumulative silica exposure and mortality from either kidney cancer or non-malignant kidney disease and which it contended has better mortality and exposure data (Document ID 2307, Attachment A, p. 154) (citing Vacek *et al.* (2011, Document ID 2340). In particular, it argued that the Vacek *et al.* study is more reliable for this purpose than the unpublished Attfield and Costello data (2004, Document ID 0285) on Vermont granite workers, which Steenland *et al.* relied on in finding an association between silica exposure and renal disease.

OSHA notes that Steenland *et al.* acknowledged in their pooled study that that unpublished data had not undergone peer review (Document ID 0448, p. 5). Despite this limitation, OSHA is also unpersuaded that the Vacek *et al.* study, although it observed no increased kidney disease mortality (Document ID 2340, Table 3, p. 315), negates Steenland *et al.*'s overall conclusions. OSHA discussed several substantial differences between these two studies in Section V.F, Comments and Responses Concerning Lung Cancer Mortality.

3. Additional Studies

The ACC also submitted to the record several additional studies that did not show a statistically significant association between exposure to crystalline silica and renal disease mortality. These included the aforementioned studies by McDonald *et al.* (2005, Document ID 1092) and Vacek *et al.* (2011, Document ID 2340), as well as studies by Davis *et al.* (1983, Document ID 0999), Koskela *et al.* (1987, Document ID 0363), Cherry *et al.* (2012, article included in Document ID 2340), Birk *et al.* (2009, Document ID 1468), Mundt *et al.* (2011, Document ID 1478), Steenland *et al.* (2002b, Document ID 0454), Rosenman *et al.* (2000, Document ID 1120), and Calvert *et al.* (2003, Document ID 0309) (Document ID 2307, Attachment A, pp. 140–145). In light of its assertions on the limitations of the three studies in the pooled analysis, and because the three studies ''run counter to a larger number of studies in which a causal association between silica exposure and renal disease was not found,'' the ACC concluded that ''the three studies relied on by OSHA do not provide a reliable or supportable basis for projecting any risk of renal disease mortality from silica exposure'' (Document ID 4209, p. 94). Similarly, the AFS argued that renal disease was only ''found in a couple of selected studies and not observed in most others,'' including no foundry studies (Document ID 2379, Attachment 1, pp. 1–3).

In light of the analysis contained in the Review of Health Effects Literature and Preliminary QRA, and OSHA's confirmation of its preliminary findings through examination of the record, OSHA finds these claims to be lacking in merit (Document ID 1711, pp. 211–229). In the Review of Health Effects Literature and Preliminary QRA, OSHA presented a comprehensive analysis of several studies that showed an association between crystalline silica

and renal disease, as well as discussing other studies that did not (Document ID 1711, pp. 211–229). Based upon its overall analysis of the literature, including the negative studies, OSHA concluded that there was substantial evidence suggesting an association between exposure to crystalline silica and increased risks of renal disease. This conclusion was supported by a number of case reports and epidemiological studies that found statistically significant associations between occupational exposure to silica dust and chronic renal disease (Calvert *et al.*, 1997, Document ID 0976), subclinical renal changes (Ng *et al.*, 1992c, Document ID 0386), end-stage renal disease morbidity (Steenland *et al.*, 1990, Document ID 1125), end-stage renal disease incidence (Steenland *et al.* 2001b, Document ID 0456), chronic renal disease mortality (Steenland *et al.*, 2002a, 0448), and granulomatosis with polyangitis (Nuyts *et al.*, 1995, Document ID 0397). In other findings, silica-exposed individuals, both with and without silicosis, had an increased prevalence of abnormal renal function (Hotz *et al.*, 1995, Document ID 0361), and renal effects were reported to persist after cessation of silica exposure (Ng *et al.*, 1992c, Document ID 0386). While the mechanism of causation is presently unknown, possible mechanisms suggested for silica-induced renal disease included a direct toxic effect on the kidney, deposition in the kidney of immune complexes (IgA) following silica-related pulmonary inflammation, or an autoimmune mechanism (Calvert *et al.*, 1997, Document ID 0976; Gregorini *et al.*, 1993, 1032).

From this review of the studies on renal disease, OSHA concluded that there were considerably less data, and thus the findings based on them were less robust, than the data available for silicosis and NMRD mortality, lung cancer mortality, or silicosis morbidity. Nevertheless, OSHA concluded that the Steenland *et al.* (2002a, Document ID 0448) pooled study had a large number of workers and validated exposure information, such that it was sufficient to provide useful estimates of risk of renal disease mortality. With regard to the additional negative studies presented by the ACC, OSHA notes that it discussed the Birk *et al.* (2009, Document ID 1468) and Mundt *et al.* (2011, Document ID 1478) studies in the Supplemental Literature Review of the Review of Health Effects Literature and Preliminary QRA, noting the short follow-up period as a limitation, which makes it unlikely to observe the presence of renal disease (Document ID 1711, Supplement, pp. 6–12). OSHA likewise discussed the Vacek *et al.* (2011, Document ID 2340) study earlier in this section, and notes that Cherry *et al.* reported a statistically significant excess of non-malignant renal disease mortality in the cohort for the period 1985–2008, with an unexplained cause (2012, p. 151, article included in Document ID 2340). Although these latter two studies did not find a significant association between silica exposure and renal disease mortality, OSHA does not believe that they substantially change its conclusions on renal disease mortality from the Preliminary QRA, given the number of positive studies presented and the limitations of those two studies.

Thus, OSHA recognizes that the renal risk estimates are less robust and have more uncertainty than those for the other health endpoints for which there is a stronger case for causality (*i.e.*, lung cancer mortality, silicosis and NMRD mortality, and silicosis morbidity). But, for the reasons stated above, OSHA believes that the evidence supporting causality regarding renal risk outweighs the evidence casting doubt on that conclusion. Scientific certainty is not the legal standard under which OSHA acts. OSHA is setting the standard based upon the clearly significant risks of lung cancer mortality, silicosis and NMRD mortality, silicosis morbidity, and renal disease mortality at the previous PELs; even if the risk of renal disease mortality is discounted, the conclusion would not change that regulation is needed to reduce the significant risk of material impairment of health (*see Society of the Plastics Industry, Inc.* v. *OSHA*, 509 F.2d 1301, 1308 (2d Cir. 1975)).

H. Mechanisms of Silica-Induced Adverse Health Effects

In this section, OSHA describes the mechanisms by which silica exposure may cause silica-related health effects, and responds to comments criticizing the Agency's analysis on this topic. In the proposal as well as this final rule, OSHA relied principally on epidemiological studies to establish the adverse health effects of silica exposure. The Agency also, however, reviewed animal studies (in vivo and in vitro) as well as in vitro human studies that provide information about the mechanisms by which respirable crystalline silica causes such effects, particularly silicosis and lung cancer. OSHA's review of this material can be found in the Review of Health Effects Literature and Preliminary Quantitative Risk Assessment (QRA), which provided background and support for the proposed rule (Document ID 1711, pp. 229–261).

As described in the Review of Health Effects Literature, OSHA performed an extensive evaluation of the scientific literature pertaining to inhalation of respirable crystalline silica (Document ID 1711, pp. 7–265). Due to the lack of evidence of health hazards from dermal or oral exposure, the Agency focused solely on the studies addressing the inhalation hazards of respirable crystalline silica. OSHA determined, based on the best available scientific information, that several cellular events, such as cytotoxicity (*i.e.*, cellular damage), oxidative stress, genotoxicity (*i.e.*, damage to cellular DNA), cellular proliferation, and inflammation can contribute to a range of neoplastic (*i.e.*, tumor-forming) and non-neoplastic health effects in the lung. While the exact mechanisms have yet to be fully elucidated, they are likely initiated by damage to lung cells from interaction directly with the silica particle itself or through silica particle activation of alveolar macrophages following phagocytosis (*i.e.*, engulfing particulate matter in the lung for the purpose of removing or destroying foreign particles). The crystalline structure and unusually reactive surface properties of the silica particle appear to cause the early cellular effects. Silicosis and lung cancer share common features that arise from these early cellular interactions but OSHA, in its Review of Health Effects Literature and Preliminary QRA, ''preliminarily conclude[d] that available animal and in vitro studies have not conclusively demonstrated that silicosis is a prerequisite for lung cancer in silica-exposed individuals'' (Document ID 1711, p. 259). Although the health effects associated with inhalation of respirable crystalline silica are seen primarily in the lung, other observed health effects include kidney and immune dysfunctions.

Below, OSHA reviews the record evidence and responds to comments it received on the mechanisms underlying respirable crystalline silica-induced lung cancer and silicosis. The Agency also addresses comments regarding the use of animal studies to characterize adverse health effects in humans caused by exposure to respirable crystalline silica.

1. Mechanisms for Silica-Related Health Effects

In 2012, IARC reevaluated the available scientific information regarding respirable crystalline silica and lung cancer and reaffirmed that crystalline silica is carcinogenic to

humans, *i.e.*, a Group 1 carcinogen (Document ID 1473, p. 396). OSHA's review of all the evidence now in the rulemaking record, including the results of IARC's reevaluation, indicates that silica may lead to increased risk of lung cancer in humans by a multistage process that involves a combination of genotoxic (*i.e.*, causing damage to cellular DNA) and non-genotoxic (*i.e.*, not involving damage to DNA) mechanisms. Respirable crystalline silica may cause genotoxicity as a result of reactive oxygen species (ROS) produced by activated alveolar macrophages and other lung cells exposed to crystalline silica particles during phagocytosis. ROS have been shown to damage DNA in human lung cells in vitro (*see* Document ID 1711, pp. 236–239). This genotoxic mechanism is believed to contribute to neoplastic transformation and silica-induced carcinogenesis. ROS is not only produced during the early cellular interaction with crystalline silica but also produced by PMNs (polymorphonuclear leukocytes) and lymphocytes recruited during the inflammatory response to crystalline silica. In addition to genotoxicity contributed by ROS, it is also plausible that reactive molecules on the surface of crystalline silica itself may bind directly to DNA and result in genotoxicity (Document ID 1711, p. 236). It should be noted that the mechanistic evidence summarized above suggests that crystalline silica may cause early genotoxic events that are independent of the advanced chronic inflammatory response and silicosis (Document ID 1473, pp. 391–392).

Non-genotoxic mechanisms are also believed to contribute to the lung cancer caused by respirable crystalline silica. Phagocytic activation as well as silica-induced cytotoxicity trigger release of the aforementioned ROS, cytokines (*e.g.*, TNFα), and growth factors (see Document ID 1711, pp. 233–235). These agents are able to cause cellular proliferation, loss of cell cycle regulation, activation of oncogenes (genes that have the potential to cause cancer), and inhibition of tumor suppressor genes, all of which are non-genotoxic mechanisms known to promote the carcinogenic process. It is plausible that these mechanisms may be involved in silica-induced tumorigenesis. The biopersistence and cytotoxic nature of crystalline silica leads to a cycle of cell death (*i.e.*, cytotoxicity), activation of alveolar macrophages, recruitment of inflammatory cells (*e.g.*, PMNs, leukocytes), and continual release of the non-genotoxic mediators (*i.e.*, ROS, cytokines) able to promote carcinogenesis. The non-genotoxic mechanisms caused by early cellular responses (*e.g.*, phagocytic activation, cytotoxicity) are regarded, along with genotoxicity, as important potential pathways that lead to the development of tumors (Document ID 1711, pp. 232–239; 1473, pp. 394–396).

The same non-genotoxic processes that may cause lung cancer from respirable crystalline silica exposure are also believed to lead to chronic inflammation, lung scarring, fibrotic lesions, and eventually silicosis. This would occur when inflammatory cells move from the alveolar space through the interstitium of the lung as part of the clearance process. In the interstitium, respirable crystalline silica-laden cells—macrophages and neutrophils—release ROS and TNF-α, as well as other cytokines, stimulating the proliferation of fibroblasts (*i.e.*, the major lung cell type in silicosis). Proliferating fibroblasts deposit collagen and connective tissue, inducing the typical scarring that is observed with silicosis. Alternatively, alveolar epithelial cells containing respirable crystalline silica die and may be replaced by fibroblasts due to necrosis of the epithelium. This allows for uninhibited growth of fibroblasts and formation of connective tissue where scarring proliferates (*i.e.*, silicosis). As scarring increases, there is a reduction in lung elasticity concomitant with a reduction of the lung surface area capable of gas exchange, thus reducing pulmonary function and making breathing more difficult (Document ID 0314; 0315). It should be noted that silicosis involves many of the same mechanisms that occur during the early cellular interaction with crystalline silica. Therefore, it is plausible that development of silicosis may also potentially contribute to silica-induced lung cancer. However, the relative contributions of silicosis-dependent and silicosis-independent pathways are not known.

Although it is clear that exposure to respirable crystalline silica increases the risk of lung cancer in exposed workers (*see* Section VI, Final Quantitative Risk Assessment and Significance of Risk), some commenters claimed that such exposure cannot cause lung cancer independently of silicosis (*i.e.*, only those workers who already have silicosis can get lung cancer) (Document ID 2307, Attachment A, p. 53). This claim is inconsistent with the credible scientific evidence presented above that genotoxic and non-genotoxic mechanisms triggered by early cellular responses to crystalline silica prior to development of silicosis may contribute to crystalline silica-induced carcinogenesis. OSHA finds, based on its review of all the evidence in the rulemaking record, that workers without silicosis, as well as those with silicosis, are at risk of lung cancer if regularly exposed to respirable crystalline silica at levels permitted under the previous and new PELs. The Agency also emphasizes that, regardless of the mechanism by which respirable crystalline silica exposure increases lung cancer risk, the fact remains that workers exposed to respirable crystalline silica continue to be diagnosed with lung cancer at a higher rate than the general population. Therefore, as discussed in section VI, Final Quantitative Risk Assessment and Significance of Risk, OSHA has met its burden of proving that workers exposed to previously allowed levels of respirable crystalline silica are at significant risk, by one or more of these mechanisms, of serious and life-threatening health effects, including both silicosis and lung cancer.

2. Relevance of Animal Models to Humans

Animal data has been used for decades to evaluate hazards and make inferences regarding causal relationships between human health effects and exposure to toxic substances. The National Academies of Science has endorsed the use of well-conducted animal studies to support hazard evaluation in the risk assessment process (Document ID 4052, p. 81) and OSHA's policy has been to rely on such studies when regulating carcinogens. In the case of respirable crystalline silica, OSHA has used evidence from animal studies, along with human epidemiology and other relevant information, to establish that occupational exposure is associated with silicosis, lung cancer, and other non-malignant respiratory diseases, as well as renal and autoimmune effects (Document ID 1711, pp. 261–266). Exposure to various forms of respirable crystalline silica by inhalation and intratracheal instillation has consistently caused lung cancer in rats (IARC, 1997, Document ID 1062, pp. 150–163). These results led IARC and NTP to conclude that there is sufficient evidence in experimental animals to demonstrate the carcinogenicity of crystalline silica in the form of quartz dust. IARC also concluded that there is sufficient evidence in human studies for the carcinogenicity of crystalline silica in the form of quartz or cristobalite.

In its pre-hearing comments and post-hearing brief, the ACC noted that increased lung cancer risks from exposure to respirable crystalline silica have not been found in animal species other than rats, and questioned the relevance of the rat model for evaluating potential lung carcinogenicity in humans (Document ID 2307, Attachment A, p. 30; 4209, p. 32). Specifically, the ACC highlighted studies by Holland (1995) and Saffiotti *et al.* (1996) indicating that bioassays in respirable crystalline silica-exposed mice, guinea pigs, and Syrian hamsters have not found increased lung cancer (Document ID 2307, Attachment A, p. 30, f. 51).

The ACC proposed that the increased lung cancer risk in respirable crystalline silica-exposed rats is due to a particle overload phenomenon, in which lung clearance of nonfibrous durable particles initiates a non-specific response that results in intrapulmonary lung tumors (Document ID 2307, Attachment A, p. 30, n. 51). Dr. Cox, on behalf of the ACC, citing Mauderly (1997, included in Document ID 3600), Oberdorster (1996, Document ID 3969), and Nikula *et al.* (1997, included in Document ID 3600), likewise commented that rats are ''uniquely sensitive to particulate pollution, for species-specific reasons that do not generalize to other rodents or mammals, including humans'' (Document ID 2307, Attachment 4, p. 83). OSHA reviewed the three studies referenced by Dr. Cox and notes that two actually appear to support the use of the rat model and the third does not reject it. Mauderly (1997) noted that the rat model was the only one to correctly predict carcinogenicity after inhalation exposure to several types of asbestos, and highlighted the shortcomings of other models, such as those using hamsters, which are highly insensitive to particle-induced lung cancers (article included in Document ID 3600, pp. 1339–1343). While Mauderly (1997) advised caution when using the rat because it is the most sensitive rodent species for lung cancer, he concluded that ''there is evidence supporting continued use of rats in exploration of carcinogenic hazards of inhaled particles,'' and that the other test species are problematic because they provide too many false negatives to be predictive (article included in Document ID 3600, p. 1343). Similarly, Oberdorster (1996), in discussing particle parameters used in the evaluation of exposure-dose-relationships of inhaled particles, stated that ''the rat model should not be dismissed prematurely'' (Document ID 3969, p. 73). Oberdorster (1996) postulated that humans and rats have very similar responses to particle-induced effects when analyzing the exposure-response relationship using particle surface area, rather than particle mass, as the exposure metric. Oberdorster concluded that there simply was not enough known regarding exact mechanisms to reject the model outright (Document ID 3969, pp. 85–87). The remaining paper cited by Dr. Cox, Nikula *et al.* (1997), evaluated the anatomical differences between primate and rodent responses to inhaled particulate matter and the role of clearance patterns and physiological responses to inhaled toxicants. The study noted that the differences between primate clearance patterns and rat clearance patterns may play a role in the pathogenesis from inhaled poorly soluble particles but did not dismiss the rat model as irrelevant to humans (Nikula, 1997, included in Document ID 3600, pp. 83, 93, 97).

Thus, OSHA finds that the Mauderly (1997) and Oberdorster (1996) articles generally support the rat as an appropriate model for qualitatively assessing the hazards associated with particle inhalation. OSHA likewise notes that the rat model is a common and well-accepted toxicological model used to assess human health effects from toxicant inhalation (ILSI, 2000, Document ID 3906, pp. 2–9). OSHA evaluated the available studies in the record, both positive and non-positive, and believes that it is appropriate to regard positive findings in experimental studies using rats as supportive evidence for the carcinogenicity of crystalline silica. This determination is consistent with that of IARC (Document ID 1473, p. 388) and NTP (Document ID 1164, p. 1), which also regarded the significant increases in incidence of malignant lung tumors in rats from multiple studies by both inhalation and intratracheal instillation of crystalline silica to be sufficient evidence of carcinogenicity in experimental animals and, therefore, to contribute to the evidence for carcinogenicity in humans.

3. Hypothesis That Lung Cancer Is Dependent on Silicosis

The ACC asserted in its comments that ''if it exists at all, silica-related carcinogenicity most likely arises through a silicosis pathway or some other inflammation-mediated mechanism, rather than by means of a direct genotoxic effect'' (Document ID 2307, Attachment A, p. 52; 4209, p. 51; 2343, Attachment 1, pp. 40–44). It explained that the ''silicosis pathway'' means that lung cancer stems from chronic inflammatory lung damage, which in turn, ''implies that there is a threshold for any causal association between silica exposure and risk of lung cancer'' (Document ID 2307, Attachment A, pp. 52–53). The ACC went on to state that a mechanism that involves ROS, growth factors, and inflammatory cytokines from alveolar macrophages is ''most consistent'' with development of advanced chronic inflammation (*e.g.*, epithelial hyperplasia, lung tissue damage, fibrosis, and silicosis). According to this hypothesis, silica-related lung cancer is restricted to people who have silicosis (Document ID 2307, Attachment 2, p. 7). Regarding this hypothesis, the ACC concluded, ''[t]his view of the likely mechanism for silica-related lung cancer is widely accepted in the scientific community, including by OSHA's primary source of silica-related health risk estimates, Dr. Kyle Steenland. OSHA appears to share this view as well'' (Document ID 2307, Attachment A, p. 54).

The ACC statement regarding acceptance by OSHA and the scientific community is inaccurate. It implies scientific consensus, as well as OSHA's concurrence, that the chronic inflammation from silicosis is the only mechanism by which crystalline silica exposure results in lung cancer. The ACC has over-simplified and neglected the findings of the mechanistic studies that show activation of phagocytic and epithelial cells to be an early cellular response to crystalline silica prior to chronic inflammation (*see* Document ID 1711, pp. 234–238). As discussed previously, alveolar macrophage activation leads to initial production of ROS and release of cytokine growth factors that could contribute to silica-induced carcinogenicity through both genotoxic and non-genotoxic mechanisms. The early cellular response does not require chronic inflammation and silicosis to be present, as postulated by the ACC. It is possible that the early mechanistic influences that increase cancer risk may be amplified by a later severe chronic inflammation or silicosis, if such a condition develops. However, as Brian Miller, Ph.D., stated ''this issue of silicosis being a precursor for lung cancer is unanswerable, given that we cannot investigate for early fibrotic lesions in the living, but must rely on radiographs.'' (Document ID 3574, Tr. 31).

In pre-hearing comments the ACC commented, as proof of silicosis being linked to lung cancer, that fibrosis was linked to adenocarcinomas (Document ID 2307, Attachment A, p. 61). This statement is misleading. As explained

earlier, silicosis results from stimulation of fibroblast cells that cause lung fibrosis. Adenocarcinomas, a hallmark tumor type in respirable crystalline silica-induced lung cancer, are tumors that arise not from fibroblasts, but exclusively from lung epithelial cells (IARC, 2012, Document ID 1473, pp. 381–389, 392). These tumors may be linked to the genotoxic and non-genotoxic mechanisms that occur prior to fibrosis, not secondary to the fibrotic process itself.

OSHA also received some comments that questioned the existence of a direct genotoxic mechanism. Jonathan Borak, M.D., on behalf of the U.S. Chamber of Commerce, commented, ''there is no direct evidence that silica causes cancer by means of a directly DNA-reactive mechanism'' (Document ID 2376, p. 21). Dr. Peter Morfeld, on behalf of the ACC, as well as Peter Valberg, Ph.D., and Christopher M. Long, Sc.D., of Gradient Corporation, on behalf of the U.S. Chamber of Commerce, cited a scientific article by Borm *et al.* (2011, included in Document ID 3573) which reported finding evidence against a genotoxic mechanism and in favor of a mechanism secondary to chronic inflammation (Document ID 3458, pp. 5–7; 4016, pp. 5–6; 4209, p. 51). Borm *et al.* (2011, included in Document ID 3573) analyzed 245 published studies from 1996 to 2008 identified using the search terms ''quartz'' and 'toxicity'' in conjunction with ''surface,'' ''inflammation,'' ''fibrosis,'' and ''genotoxicity.'' The authors then estimated the lowest dose (in units of micrograms per cell surface area) to consistently induce DNA damage or induce markers of inflammation (*e.g.*, IL–8 upregulation) in in vitro studies. They adjusted the in vitro doses for the lung surface area encountered in vivo and found the crystalline silica dose that produced primary genotoxicity was 60–120 times higher than the dose that produced inflammatory cytokines (Borm *et al.*, 2011, included in Document ID 3573, p. 762). Drs. Valberg and Long concluded that Borm *et al.* demonstrated that genotoxicity was a secondary response to chronic inflammation, except at very high exposures at which genotoxicity independent of inflammation might occur. They also maintained that lung cancer as a secondary response to chronic inflammation is considered to have a threshold (Document ID 4016, p. 6).

OSHA reviewed the Borm *et al.* study (2011, Document ID 3889), and notes several limitations. The authors examined the findings from various genotoxic assays (comet assay, 8–OH–dG, micronucleus test) (Borm *et al.*, 2011, 3889, p. 758). They reported that 40 $\mu g/cm^2$ was the lowest dose in vitro to produce significant direct DNA damage from crystalline silica. This genotoxic dose appears to be principally obtained from a study of a specific quartz sample (*i.e.*, DQ12) in a single human alveolar epithelial cell line (*i.e.*, A549 cells), even though Appendix Table 3 cited in vitro studies using other cells (*e.g.*, fibroblasts) and other types of quartz (*e.g.*, MinUsil) that produced direct genotoxic effects at lower doses (Borm *et al.*, 2011, Document ID 3889, pp. 760, 769–770). This is especially pertinent since Borm *et al.* state that in vitro systems utilizing single-cell cultures are generally much less sensitive than in vivo systems, especially if attempting to determine oxidative stress-induced effects, since many cell culture systems use reagents that can scavenge ROS (Borm *et al.* 2011, Document ID 3889, p. 760). There was no indication that the authors accounted for this deficiency. They go on to conclude that their work shows a large-scale variation in hazard across different forms of quartz with regard to effects such as DNA breakage (*e.g.*, genotoxicity) and inflammation (Borm *et al.* 2011, Document ID 3889, p. 762).

The extreme variation in response along with reliance on an insensitive genotoxicity test system could overestimate the appropriate genotoxic dose in human lung cells in vivo. In addition, Borm *et al.* used the dose sufficient to initiate production of an inflammatory cytokine (*i.e.*, IL–8) in the A549 cell-line as the threshold for inflammation. It is not clear that an early cellular response, such as IL–8 production necessarily reflects a sustained inflammatory response. In summary, OSHA finds inconsistencies in this analysis, leaving some questions regarding the study's conclusion that silica induces genotoxicity only as a secondary response to an inflammation-driven mechanism. While the in vitro dose comparisons in this study fail to demonstrate that genotoxicity is secondary to the inflammatory response, the study findings do indicate that cellular responses to crystalline silica that drive inflammation may also lead to tumorigenesis through both genotoxic and non-genotoxic mechanisms.

Dr. Morfeld, in his hearing testimony on behalf of the ACC, referred to the paper by Borm *et al.* (2011) as reaching the conclusion that the mechanism of silica-related lung cancer is secondary inflammation-driven genotoxicity. As summarized by the ACC in post-hearing comments, he observed that ''there are no crystalline silica particles found in the nucleus of the cells. There is nothing going on with particles in the epithelial cells inside the lung'' (Document ID 4209, p. 52). In hearing testimony, however, Dr. Morfeld acknowledged that the Borm paper had limitations on extrapolating from in vitro to in vivo and cited a study by Donaldson *et al.* (2009), which discussed some of the limitations and the need for caution in extrapolating from in vitro to in vivo (Document ID 3582, Tr. 2076–2077; 3894, pp. 1–2). In considering this testimony, OSHA notes that the Donaldson *et al.* (2009) study, which includes the same authors as the Borm *et al.* (2011) study, acknowledged that direct interaction between respirable crystalline silica and epithelial cellular membranes induces intracellular oxidative stress which is capable of being genotoxic (Document ID 3894, p. 3). This is consistent with the OSHA position as well as the most recent IARC reevaluation of the cancer hazard from crystalline silica dust. As IARC stated in its most recent evaluation of the carcinogenicity of respirable crystalline silica under a section on direct genotoxicity and cell transformation (Document ID 1473, section 4.2.2, pp. 391–393):

> Reactive oxygen species are generated not only at the particle surface of crystalline silica, but also by phagocytic and epithelial cells exposed to quartz particles. . . . Oxidants generated by silica particles and by the respiratory burst of silica-activated phagocytic cells may cause cellular and lung injury, including DNA damage (Document ID 1473, p. 391).

Given the IARC determination as well as the animal and in vitro studies reviewed herein, OSHA finds that there is no conclusive evidence that silica-related lung cancer only occurs as a secondary response to chronic inflammation, or that silicosis is a necessary prerequisite for lung cancer. Instead, OSHA finds support in the scientific literature for a conclusion that tumors may form through genotoxic as well as non-genotoxic mechanisms that result from respirable crystalline silica interaction with alveolar macrophages and other lung cells prior to onset of silicosis.

4. Hypothesis That Crystalline Silica-Induced Lung Disease Exhibits a Threshold

It is well established that silicosis arises from an advanced chronic inflammation of the lung. As noted above, a common hypothesis is that pathological conditions that depend on chronic inflammation may have a threshold. The exposure level at which silica-induced health effects might begin

to appear, however, is poorly characterized in the literature (*see* Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases). The threshold exposure level required for a sustained inflammatory response is dependent upon multiple pro- and anti-inflammatory factors that can be quite variable from individual to individual and from species to species (Document ID 3896).

Discounting or overlooking the evidence that respirable crystalline silica may be genotoxic in the absence of chronic inflammation, Drs. Valberg and Long commented that crystalline silica follows a threshold paradigm for poorly soluble particles (PSPs). PSPs are defined generally as nonfibrous particles of low acute toxicity, which are not directly genotoxic (ILSI, 2000, Document ID 3906, p. 1). Specifically, Drs. Valberg and Long stated:

> Mechanisms whereby lung cells respond to retention of a wide variety of PSPs, including crystalline silica, follow a generally accepted threshold paradigm, where the initiation of a chronic inflammatory response is a necessary step in the disease process, and the inflammatory response does not become persistent until particle retention loads become sufficient to overwhelm lung defense mechanisms. This overall progression from increased but controlled pulmonary inflammation across a threshold exposure that leads to lung damage has been described by a number of investigators (Mauderly and McCunney, 1995; ILSI, 2000; Boobis *et al.*, 2009; Porter *et al.* 2004) (Document ID 2330, p. 19).

Similarly, Dr. Cox, in his post-hearing comments, discussed his 2011 article describing a quantifiable exposure-response threshold for lung diseases induced by inhalation of respirable crystalline silica (Document ID 4027, p. 29). Dr. Cox hypothesized the existence of an exposure threshold such that exposures to PSPs, which he described as including titanium dioxide, carbon black, and crystalline silica, must be intense enough and last long enough to disrupt normal homeostasis (*i.e.*, normal cellular functions) and overwhelm normal repair processes. Under the scenario he described, a persistent state of chronic, unresolved inflammation results in a disruption of macrophage and neutrophil ability to clear silica and other foreign particles from the lung (Document ID 1470, pp. 1548–1551, 1555–1556).

OSHA disagrees with these characterizations about exposure thresholds because, among other reasons, respirable crystalline silica is not generally considered to be in the class of substances defined as PSPs.[7] Specifically, regarding the comments of Drs. Valberg and Long, OSHA notes that the two cited documents (Mauderly and McCunney, 1995, and ILSI, 2000) summarizing workshops on PSPs did not include crystalline silica in the definition of PSP and the lung ''overload'' concept, instead highlighting silica's cytotoxic and genotoxic mechanisms. Mauderly and McCunney (1995) stated, ''[i]t is generally accepted that the term 'overload' should be used in reference to particles having low cytotoxicity, which overload clearance [mechanisms] by virtue of the mass, volume, or surface area of the deposited material (Morrow, 1992)'' (p. 3, article cited in Document ID 2330, p. 19). Mauderly specifically cited quartz as a cytotoxic particle that may fall outside this definition (p. 24, article cited in Document ID 2330, p. 19). The International Life Science Institute's (ILSI) Workshop Report (2000) intended only to address particles of ''low acute toxicity,'' such as carbon black, coal dust, soot, and titanium dioxide (Document ID 3906, p. 1). OSHA believes that the cytotoxic nature of crystalline silica would exclude it from the class of rather nonreactive, non-toxic particles mentioned above. Therefore, the Agency concludes that most scientific experts would not include crystalline silica in the class of substances known as PSPs, nor intend for findings regarding PSPs to be extrapolated to crystalline silica.

During the public hearing, OSHA questioned Dr. Morfeld about the relevance of the rat overload response and whether he considered crystalline silica to be like other PSPs such as carbon black. Dr. Morfeld replied that he was well aware of the literature and indicated that crystalline silica was not considered one of the PSPs (specifically not like carbon black) that these reports reviewed (Document ID 3582, Tr. 2072–2074). OSHA also notes a report of the European Centre for Ecotoxicology and Toxicology of Chemicals (ECETOC), which was cited by the ACC (Document ID 4209, p. 32) and stated that ''particles exhibiting significant surface related (cyto)toxicity like crystalline silica (quartz) and/or other specific toxic properties do not fall under this definition [of PSPs]'' (Document ID 3897, p. 5).

Respirable crystalline silica differs from PSPs because it does not require particle overload to induce the same response typical of PSPs. ''Overload'' refers to the consequence of exposure that results in a retained lung burden of particles that is greater than the steady-state burden predicted from deposition rates and clearance kinetics (Document ID 4174, p. 20). This is a result of a volumetric over-exposure of dust in the lung, which overwhelms macrophage function. Respirable crystalline silica does not operate on this mechanism since macrophage function is inhibited by the cytotoxic nature of respirable crystalline silica rather than a volumetric overload (Oberdorster, 1996, Document ID 3969). Therefore, respirable crystalline silica does not require particle overload to induce the same response. Studies have found that the respirable crystalline silica exposure levels required to induce tumor formation in some animal studies are similar to those observed in human studies, whereas studies involving PSPs tend to show responses at much higher levels of exposure (Muhle *et al.*, 1991, Document ID 1284; Muhle *et al.*, 1995, 0378; Saffiotti and Ahmed, 1995, 1121).

A study by Porter *et al.* (2004) demonstrated that pulmonary fibrosis induction does not require silica particle overload (Document ID 0410, p. 377). The ACC cited this study in its post-hearing brief, stating, ''Porter . . . noted that the response of the rat lung to inhaled crystalline silica particles is biphasic, with a below-threshold phase characterized by increased but controlled pulmonary inflammation'' (Document ID 4209, p. 52). OSHA notes that this biphasic response is due in part to the cytotoxic nature of crystalline silica, which disrupts macrophage clearance of silica particles leading to a chronic inflammatory response at less than overload conditions. While there are some mechanistic similarities, OSHA believes that the argument that crystalline silica operates on the basis of lung overload is erroneous and based on false assumptions that ignore toxicological properties unique to crystalline silica, such as cytotoxicity and the generation of intracellular ROS (Porter *et al.*, 2002, Document ID 1114; Porter *et al.*, 2004, 0410). As previously discussed, the generation of ROS could

[7] OSHA notes that crystalline silica has many mechanistic features in common with asbestos. They are both durable, biopersistent mineral forms where there is sufficient evidence of an association with lung cancer (*i.e.*, IARC Group 1 carcinogens), chronic lung inflammation, and severe pulmonary fibrosis (*i.e.*, silicosis and asbestosis) in humans. Like crystalline silica, asbestos has reactive surfaces or other physiochemical properties able to hinder phagocytosis and activate macrophages to release reactive oxygen species, cytokines, and growth factors that lead to DNA damage, cytotoxicity, cell proliferation and an inflammatory response responsible for the disease outcomes mentioned above (*see* IARC 2012, Document ID 1473, pp. 283–290). Crystalline silica and asbestos can trigger phagocytic activation well below the high mass burdens required to ''overload'' the lung and impair pulmonary clearance that is typical of carbon black and other low acute-toxicity PSPs.

potentially damage cellular DNA by a genotoxic mechanism that may not exhibit a threshold.

OSHA thoroughly reviewed Dr. Cox's 2011 article (Document ID 1470), in which he proposed a threshold for crystalline silica, in its Supplemental Literature Review (Document ID 1711, Attachment 1, pp. 37–39). OSHA concluded that the evidence used to support Cox's assertion that the OSHA PEL was below a threshold for lung disease in humans was not supported by the evidence presented (Document ID 1470, p. 1543; 1711, Attachment 1). Specifically, Cox (2011) modelled a threshold level for respirable crystalline silica using animal studies of PSPs. This approach, according to the ILSI report (2000) and ECETOC report (2013), is clearly not appropriate since the cytotoxic nature of crystalline silica is not consistent with the low-toxicity PSPs (Document ID 3906, p. 1; 3897, p. 5). Dr. Cox (2011) categorized crystalline silica incorrectly as a PSP and ignored the evidence for cytotoxicity and genotoxicity associated with crystalline silica. He further failed to consider or include studies indicating a tumor response at exposure levels below that leading to an excessive chronic inflammatory response, such as Porter *et al.* (2002) and Muhle *et al.* (1995) (Document ID 1114; 0378). Thus, OSHA considers the threshold model designed by Dr. Cox (2011, Document ID 1470) and referenced by Drs. Valberg and Long (Document ID 2330) to be contradicted by the best available evidence regarding the toxicological properties of respirable crystalline silica. Although OSHA acknowledges the possible existence of a threshold for an inflammatory response, the Agency believes that the threshold is likely much lower than that advocated by industry representatives such as the ACC and the Chamber of Commerce (*see* Section V.I, Comments and Responses Concerning Thresholds for Silica-Related Diseases).

OSHA concludes that a better estimate of a threshold effect for inflammation and carcinogenesis was done by Kuempel *et al.* (2001, Document ID 1082). These researchers studied the minimum human exposures necessary to achieve adverse functional and pathological evidence of inflammation. They employed a physiologically-based lung dosimetry model, included more relevant studies, and considered a genotoxic effect for lung cancer (Kuempel *et al.*, 2001, Document ID 1082; *see* 1711, pp. 231–232). Briefly, Kuempel *et al.* evaluated both linear and nonlinear (threshold) models and determined that the average minimum critical quartz lung burden (M_{crit}) in rats associated with reduced pulmonary clearance and increased neutrophil inflammation was 0.39 mg quartz/g lung tissue. M_{crit} is based on the lowest observed adverse effect level in a study in rats (Kuempel, 2001, Document ID 1082, pp. 17–23). A human lung dosimetry model, developed from respirable coal mine dust and quartz exposure and lung burden data in UK coal miners (Tran and Buchanan, 2001, Document ID 1126), was then used to estimate the human-equivalent working lifetime exposure concentrations associated with lung doses. An 8-hour time-weighted average (TWA) concentration of 0.036 mg/m^3 (36 $\mu g/m^3$) over a 45-year working lifetime was estimated to result in a human-equivalent lung burden to the average M_{crit} in rats (Document ID 1082, pp. 24–26). OSHA peer reviewer Gary Ginsburg, Ph.D., summarized, ''the Kuempel *et al.* (2001, 2001b) rat analysis of lung threshold loading and extrapolation to human dosimetry leads to the conclusion that in the median case this threshold is approximately 3 times below the current [now former] OSHA PEL'' (Document ID 3574, pp. 23). This estimated threshold would be significantly below the final PEL of 50 $\mu g/m^3$.

In pre-hearing comments, ACC stated that some health organizations suggested a silicosis-dependent threshold exists for lung cancer (ACC, Document ID 2307, Attachment A, pp. 60–62). Specifically, ACC cited Environment and Health Canada as stating:

> Although the mechanism of induction for the lung tumours has not been fully elucidated, there is sufficient supportive mode of action evidence from the data presented to demonstrate that a threshold approach to risk assessment is appropriate based on an understanding of the key events in the pathogenesis of crystalline silica induced lung tumours (pp. 49–51 as cited by ACC, Document ID 2307, p. 62).

In addition to the statement submitted by ACC, Environment and Health Canada also stated that:

> While there is sufficient evidence to support key events in a threshold mode of action approach for lung tumours, the molecular mechanism is still not fully elucidated. Also, despite the fact that the effects seen in rats parallel the effects observed in human studies, additional mechanistic studies could further clarify why lung tumours are not seen in all experimental animals . . . Thus, the question of whether silica exposure, in the absence of silicotic response, results in lung tumours remains unanswered.'' (pp. 51–52 as cited by ACC, Document ID 2307, pp. 59–61).

It should be noted that the Environment and Health Canada report was to determine general population risk of exposure to respirable crystalline silica as a fraction of PM_{10}. Environment and Health Canada found that levels 0.1–2.1 $\mu g/m^3$ respirable crystalline silica were sufficiently protective for the general population because they represented a margin of exposure (MOE) 23–500 times lower than the 50 $\mu g/m^3$ quartz concentration associated with silicosis in humans (pp. 50–51 as cited by ACC, Document ID 2307, pp. 59–61).

A report by Mossman and Glenn (2013) reviewed the findings from several international OEL setting panels (Document ID 4070). The report cites findings from the European Commission's Scientific Committee on Occupational Exposure Limits for respirable crystalline silica. The findings ''acknowledged a No Observed Adverse Exposure Level (NOAEL) for respirable crystalline silica in the range below 0.020 mg/m^3, but stated that a clear threshold for silicosis could not be identified'' (Mossman and Glen, 2013; Document ID 4070, p. 655). The report went on to state that SCOEL (2002) recommended that an OEL should lie below 50 $\mu g/m^3$ (Document ID 4070, p. 655). Therefore, even if silica-induced lung cancer were limited only to a mechanism that involved an inflammation-dependent threshold, OSHA concludes that exposure threshold would likely be lower than the final PEL.

5. Renal Disease and Autoimmunity

While mechanistic data is limited, other observed health effects from inhalation of respirable crystalline silica include kidney and autoimmune effects. Translocation of particles through the lymphatic system and filtration through the kidneys may induce effects in the immune and renal systems similar to the types of changes observed in the lung (Miller, 2000, Document ID 4174, pp. 40–45). A review of the available literature indicates that respirable crystalline silica most likely induces an oxidative stress response in the renal and immune cells similar to that described above (Donaldson *et al.*, 2009, Document ID 3894).

6. Conclusion

OSHA has reviewed and responded to the comments received on the mechanistic studies of respirable crystalline silica-induced lung cancer and silicosis, as well as comments that the mechanistic data imply the existence of an exposure threshold. OSHA concludes that: (1) Lung cancer likely results from both genotoxic and non-genotoxic mechanisms that arise during early cellular responses as well

as during chronic inflammation from exposure to crystalline silica; (2) there is not convincing data to demonstrate that silicosis is a prerequisite for lung cancer; (3) experimental studies in rats are relevant to humans and provide supporting evidence for carcinogenicity; (4) crystalline silica does not behave like PSPs such as titanium dioxide; and (5) any threshold for an inflammatory response to respirable crystalline silica is likely several times below the final PEL of 50 μg/m³. Thus, the best available evidence on this issue supports OSHA's findings that respirable crystalline silica increases the risk of lung cancer in humans, even in the absence of silicosis, and that lung cancer risk can be increased by exposure to crystalline silica at or below the new OSHA PEL of 50 μg/m³.

I. Comments and Responses Concerning Thresholds for Silica-Related Diseases

In this section, OSHA discusses comments focused on the issue of exposure-response thresholds for silica exposure. In the comments received by OSHA on this topic, an exposure-response ''threshold'' for silica exposure typically refers to a level of exposure such that no individual whose exposure is below that level would be expected to develop an adverse health effect. Commenters referred to thresholds both in terms of concentration and cumulative exposure (*i.e.*, a level of cumulative exposure below which an individual would not be expected to develop adverse health effects). In addition to individual thresholds, some commenters referred to a ''population average threshold,'' that is, the mean or median value of individual thresholds across a population of workers. There is significant scientific controversy over whether any such thresholds exist for silicosis and lung cancer, as well as the cumulative exposure level or concentration at which a threshold effect may occur and whether certain statistical modeling approaches can be used to identify threshold effects.

OSHA has reviewed the evidence in the record pertaining to thresholds, and has determined that the best available evidence supports the Agency's use of non-threshold exposure-response models in its risk assessments for silicosis and lung cancer. The voluminous scientific record accrued by OSHA in this rulemaking supports lowering the existing PEL to 50 μg/m³. Rather than indicating a threshold of risk that starts above the previous general industry PEL, the weight of this evidence, including OSHA's own risk assessment models, supports a conclusion that there continues to be significant, albeit reduced, risk at the 50 μg/m³ exposure limit. OSHA's evaluation of the best available evidence on thresholds indicates that there is considerable uncertainty about whether there is any threshold below which silica exposure causes no adverse health effects; but, in any event, the weight of evidence supports the view that, if there is a threshold of exposure for the health effects caused by respirable crystalline silica, it is likely lower than the new PEL of 50 μg/m³. Commenters have not provided convincing evidence of a population threshold (*e.g.*, an exposure level safe for all workers) above the revised PEL. In addition, OSHA's final risk assessment demonstrates that achieving this limit—which OSHA separately concludes is overall the lowest feasible level for silica-generating operations—will result in significant reductions in mortality and morbidity from occupational exposure to respirable crystalline silica.

1. Thresholds—General

In the Preliminary Quantitative Risk Assessment (QRA) (Document ID 1711, pp. 275, 282–285), OSHA reviewed evidence on thresholds from a lung dosimetry model developed by Kuempel *et al.* (2001, Document ID 1082) and from epidemiological analyses conducted by Steenland and Deddens (2002, Document ID 1124). As discussed in the Preliminary QRA, Kuempel *et al.* (2001) used kinetic lung models for both rats and humans to relate lung burden of crystalline silica and estimate a minimum critical lung burden (M_{crit}) of quartz above which particle clearance begins to decline and lung inflammation begins to increase (early steps in the process of developing silica-related disease). The M_{crit} would be achieved by a human equivalent airborne exposure to 36 μg/m³ for 45 years, based on the authors' rat-to-human lung model conversion. Exposures below this level would not lead to an excess lung cancer risk in the average individual, if it were assumed that cancer is strictly a secondary response to persistent inflammation. OSHA notes, however, that if some of the silica-related lung cancer risk occurs as a result of direct genotoxicity from early cellular interaction with respirable silica particles, then this threshold value may not be applicable. Since silicosis is caused by persistent lung inflammation, this exposure level could be viewed as a possible average threshold level for that disease as well (Document ID 1711, p. 284). As 36 μg/m³ is well below the previous general industry PEL of 100 μg/m³ and below the final PEL of 50 μg/m³, the Kuempel *et al.* study showed no evidence of an exposure-response threshold high enough to impact OSHA's choice of PEL.

Steenland and Deddens (2002, Document ID 1124) examined a pooled lung cancer study originally conducted by Steenland *et al.* (2001a). They found that a threshold model based on the log of cumulative dose (15-year lag) fit better than a no-threshold model, with the best threshold at 4.8 log mg/m³-days (representing an average exposure of 10 μg/m³ over a 45-year working lifetime). OSHA preliminarily concluded that, in the Kuempel et al. (2001) study and among the studies evaluated by Steenland *et al.* (2001a) in the pooled analysis, there was no empirical evidence of a threshold for lung cancer in the exposure range represented by the previous and final PELs (*i.e.*, at 50 μg/m³ or higher) (Document ID 1711, pp. 275, 284). Thus, based on these two studies, workers exposed at or below the new PEL of 50 μg/m³ over a working lifetime still face a risk of developing silicosis and lung cancer because their exposure would be above the supposed exposure threshold.

In its prehearing comments, the ACC argued that OSHA's examination of the epidemiological evidence, along with animal studies and mechanistic considerations, ''has not shown that reducing exposures below currently permitted exposure levels would create any additional health benefits for workers. OSHA's analysis and the studies on which it relies have not demonstrated the absence of an exposure threshold above 100 μg/m³ for the various adverse health effects considered in the QRA'' (Document ID 2307, Attachment A, p. 26; also 2348, Attachment 1, p. 33). According to the ACC, an exposure threshold above OSHA's previous general industry PEL of 100 μg/m³ means that workers exposed below that level will not get sick, negating the need to lower the PEL (Document ID 2307, Attachment A, p. 91).

Members of OSHA's peer review panel for the Review of Health Effects Literature and Preliminary Quantitative Risk Assessment (Document ID 1711) rejected the ACC's comments as unsupportable. Peer reviewer Mr. Bruce Allen stated: ''it is essentially impossible to distinguish between dose-response patterns that represent a threshold and those that do not'' in epidemiological data (Document ID 3574, p. 8). Peer reviewer Dr. Kenneth Crump similarly commented:

> OSHA is on very solid ground in the [Preliminary QRA's] statement that ''available information cannot firmly establish a threshold exposure for silica-

related effects'' . . . the hypothesis that a particular dose response does not have a threshold is not falsifiable. Similarly, the hypothesis that a particular dose response does have a threshold is not falsifiable (Document ID 3574, p. 17).

Dr. Cox, representing the ACC, agreed with Dr. Crump that ''it's impossible to prove a negative, empirically . . . you could never rule out that possibility'' of a threshold at a low level of exposure (Document ID 3576, Tr. 402). However, he contended that it is possible to rule out a threshold in the higher-level range of observed exposures based on observed illness: ''I think that there are plenty of chemicals for which the hypothesis of a threshold exist[ing] at or above current standards could be ruled out because you see people getting sick at current levels'' (Document ID 3576, Tr. 403). Other commenters stated their belief that workers recently diagnosed with silicosis must have had exposures above the previous general industry PEL and, based on this supposition, concluded that OSHA has not definitively proven risk to workers exposed below the previous general industry PEL (Document ID 4224, pp. 2–5; Tr. 3582, pp. 1951–1963).

OSHA agrees with Dr. Cox that observation of workers ''getting sick at current levels'' can rule out a threshold effect at those levels. As is discussed below, there is evidence that workers exposed to silica at cumulative or average exposure levels permitted under the previous PELs have become ill and died as a result of their exposure. OSHA thus strongly disagrees with any implication from commenters that the Agency should postpone reducing a PEL until it has extensive documentation of sick and dying workers to demonstrate that the current PEL is not sufficiently protective (*see* Section II, Pertinent Legal Authority, and Section VI, Final Quantitative Risk Assessment and Significance of Risk).

The ACC's and Chamber's comments on this issue essentially argue that the model OSHA used to assess risk was inadequate to assess whether a threshold of risk exists and, if one does exist, at what level (Document ID 2307, Attachment A, pp. 52–65; 2376, pp. 20–22; 2330, pp. 17–21). According to OSHA peer reviewer Dr. Crump, however, the analytical approach taken by OSHA in the Preliminary QRA was appropriate. Considering the inherent limitations of epidemiological data:

an attempt to distinguish between threshold and non-threshold dose responses is not even a scientific exercise . . . The best that can be done is to attempt to place bounds on the amount of risk at particular exposures consistent with the available data, which is what OSHA had done in their risk assessment (Document ID 3574, p. 17).

A further source of uncertainty in investigating thresholds was highlighted by Dr. Mirer, on behalf of the AFL–CIO (Document ID 3578, Tr. 988–989) and by peer reviewer Dr. Andrew Salmon, who stated:

[m]any of the so-called thresholds seen in epidemiological studies represent thresholds of observability rather than thresholds of disease incidence . . . studies (and anecdotal observations) with less statistical power and shorter post-exposure followup (or none) will necessarily fail to see the less frequent and later-appearing responses at lower doses. This creates an apparent threshold which is higher in these studies than the apparent threshold implied by studies with greater statistical power and longer follow-up (Document ID 3574, p. 37).

Peer reviewer Dr. Gary Ginsberg suggested that, recognizing these inherent limitations, OSHA should characterize the body of evidence and argument surrounding thresholds by discussing the following factors related to whether a threshold for silica-related health effects exists at exposure levels above the previous general industry PEL:

the choices relative to the threshold concept for the silica dose response . . . [including] specific dose response datasets that are consistent with a linear or a threshold-type model, if a threshold seems likely, where was it seen relative to the current and proposed PEL, and a general discussion of mechanism of action, measurement error and population variability as concepts that can help us understand silica dose response for cancer and non-cancer endpoints (Document ID 3574, p. 24).

Following Dr. Ginsberg's suggestion, OSHA has, in its final health and risk analysis, considered the epidemiological evidence relevant to possible threshold effects for silicosis and lung cancer. As discussed below, first in ''Thresholds—Silicosis and NMRD'' and then in ''Thresholds—Lung Cancer,'' OSHA has carefully considered comments about statistical methods, exposure measurement uncertainty, and variability as they pertain to threshold effects. The discussion addresses the epidemiological evidence with respect to both cumulative and concentration thresholds. For reference, a working lifetime (45 years) of exposure to silica at the previous general industry PEL (100 µg/m^3) and the final PEL (50 µg/m^3) yield cumulative exposures of 4.5 mg/m^3-yrs and 2.25 mg/m^3-yrs, respectively. Other sections with detailed discussions pertinent to threshold issues include Section V.H, Mechanisms of Silica-Induced Adverse Health Effects, and Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis.

2. Thresholds—Silicosis and NMRD

OSHA has determined that the studies most relevant to the threshold issue in this rulemaking are those of workers who have cumulative exposures or average exposure concentrations below the levels associated with the previous general industry PEL (100 µg/m^3, or cumulative exposure of 4.5 mg/m^3-yrs). Contrary to comments that OSHA only relied on studies involving exposures far above the levels of interest to OSHA in this rulemaking, and then extrapolated exposure-response relationships down to relevant levels (*e.g.*, Document ID 2307, Attachment A, pp. 94–95; 4226, p. 2), a number of silicosis studies included workers who were exposed at levels close to or below the previous OSHA PEL for general industry. For example, four of the six cohorts of workers in the pooled silicosis mortality risk analysis conducted by Mannetje *et al.* (2002) had median cumulative exposures below 2.25 mg/m^3-yrs., and three had median silica concentrations below 100 µg/m^3 (Mannetje *et al.*, 2002, Document ID 1089, p. 724). Other silicosis studies with significant numbers of relatively low-exposed workers include analyses of German pottery workers (Birk *et al.,* 2009, Document ID 4002, Attachment 2; Mundt *et al.*, 2011, 1478; Morfeld *et al.*, 2013, 3843), Vermont granite workers (Attfield and Costello, 2004, Document ID 0285; Vacek *et al.*, 2011, 1486), and industrial sand workers (McDonald *et al.*, 2001, Document ID 1091; Hughes *et al.*, 2001, 1060; McDonald *et al.*, 2005, 1092). In this section, OSHA will discuss each of them in relationship to whether they suggest the existence of a threshold above 100 µg/m^3, the previous PEL for general industry.

a. Mannetje *et al.* Pooled Study and Related Analyses

Mannetje *et al.* (2002b, Document ID 1089) estimated excess lifetime risk of silicosis based on six of the ten cohorts that were part of the IARC multi-center exposure-response study (Steenland *et al.*, 2001a, Document ID 0452). The six cohorts were U.S. diatomaceous earth (DE) workers, Finnish granite workers, U.S. granite workers, U.S. industrial sand workers, U.S. gold miners, and Australian gold miners. Together, the cohorts included 18,634 subjects and 170 silicosis deaths. All cohorts except the Finnish granite workers and Australian gold miners had significant numbers of workers with median

cumulative and/or average exposures below the levels associated with OSHA's previous general industry PEL. Checking for nonlinearities in their exposure-response model, Mannetje *et al.* found that a five-knot cubic spline model (which allows for deviations, such as thresholds, from a linear relationship) did not fit the data better than the linear model used in their main analysis. The result of this attempt to check for nonlinearities suggests that there is no threshold effect in the relationship between cumulative silica exposure and silicosis risk in the study. Significantly, NIOSH stated that the results of Mannetje *et al.'s* analysis ''suggest the absence of threshold at the lowest [cumulative] exposure analyzed . . . in fact, the trend for silicosis mortality risk extends down almost linearly to the lowest cumulative exposure stratum'', in which ''the average cumulative exposure is the equivalent of 45 years of exposure at 11.1 μg/m^3 silica'' (Document ID 4233, pp. 34–35). This level is significantly below the new OSHA PEL of 50 μg/m^3.

As discussed in Section V.K, Comments and Responses Concerning Exposure Estimation Error and ToxaChemica's Uncertainty Analysis, OSHA commissioned Drs. Kyle Steenland and Scott Bartell to examine the potential effects of exposure measurement error on the mortality risk estimates derived from the pooled studies of lung cancer (Steenland *et al.*, 2001, Document ID 0452) and silicosis (Mannetje *et al.*, 2002b, Document ID 1089). Their analysis of the pooled data, using a variety of standard statistical techniques (*e.g.*, regression analysis), also found the data either consistent with the absence of a threshold or inconsistent with the existence of a threshold [8] (Document ID 0469). Thus, neither Mannetje et al. nor Steenland and Bartell's analyses of the pooled cohorts suggested the existence of a cumulative exposure threshold effect; in fact, they suggested the absence of a threshold. Given the predominance in these studies of cohorts where at least half of the workers had cumulative exposures below 4.5 mg/m^3-yrs, OSHA believes these results constitute strong evidence against an exposure threshold above the level of cumulative exposure resulting from long-term exposure at the previous PEL of 100 μg/m^3.

b. Vermont Granite Workers

As discussed in the Supplemental Literature Review of Epidemiological Studies, Vacek *et al.* (2011, Document ID 1486) examined exposures from 1950 to 1999 for a group of 7,052 workers in the Vermont granite industry (Document ID 1711, Attachment 1, pp. 2–5). The exposure samples show relatively low exposures for the worker population. For the period 1950 to 2004, Verma *et al.* (2012), who developed the job exposure matrix used by Vacek *et al.*, estimated that average exposure concentrations in 21 of 22 jobs were below 100 μg/m^3, and 11 of the 22 job classes were at 50 μg/m^3 or below. The remaining job category, laborer, had an estimated average exposure concentration of exactly 100 μg/m^3 (Verma *et al.*, 2011, Document ID 1487, p. 75).

Six of the 5,338 cohort members hired in or after 1940, when Vermont's dust control program was in effect, were identified as having died of silicosis by the end of the follow-up period (Vacek *et al.*, Document ID 1486, p. 314). The frequency of observed silicosis mortality in the population is significant by OSHA standards (1.1 per 1,000 workers), and may be underestimated due to under-reporting of silicosis as a cause of death (*see* Section V.E, Comments and Responses Concerning Surveillance Data on Silicosis Morbidity and Mortality). This observed silicosis mortality shows that deaths from silicosis occurred among workers hired after silica concentrations were reduced below OSHA's previous general industry PEL. It therefore demonstrates that a threshold for silicosis above 100 μg/m^3 is unlikely.

In terms of morbidity, Graham *et al.*'s study of radiographic evidence of silicosis among retired Vermont granite workers found silicosis in 5.7 percent of workers hired after 1940 (equivalent to 57/1,000 workers) (Graham *et al.*, 2004, Document ID 1031, p. 465). OSHA concludes that these studies of low-exposed workers in the Vermont granite industry show significant risk of silicosis—both mortality and morbidity—at concentrations below the previous PELs. These studies also indicate that a threshold at an exposure concentration significantly above the previous PEL for general industry, as posited by industry representatives, is unlikely.

c. U.S. Industrial Sand Workers

In an exposure-response study of 4,027 workers in 18 U.S. industrial sand plants, Steenland and Sanderson (2001) reported that approximately three-quarters of the workers with complete work histories had cumulative exposures below 1.28 mg/m^3-yrs, well below the cumulative exposure of 2.25 mg/m^3-yrs associated with a working lifetime of exposure at the final PEL of 50 μg/m^3 (Document ID 0455, p. 700). The study identified fourteen deaths from silicosis and unspecified pneumoconiosis (~3.5 per 1,000 workers) (Document ID 0455, p. 700), of which seven occurred among workers with cumulative exposures below 1.28 mg/m^3-yrs. As with other reports of silicosis mortality, this figure may underestimate the true rate of silicosis mortality in this worker population.

Hughes *et al.* (2001) reported 32 cases of silicosis mortality in a cohort of 2,670 workers at nine North American industrial sand plants (~12 per 1,000) (Document ID 1060, p. 203). The authors developed a job-exposure matrix based on exposure samples collected by the companies and by MSHA between 1973 and 1994, along with the 1946 exposure survey used by Steenland and Sanderson (2001, Document ID 0455; 2307, Attachment 7, p. 6). Job histories were available for 29 workers who died of silicosis. Of these, fourteen had estimated cumulative exposure less than or equal to 5 mg/m^3-yrs, and seven had cumulative exposures less than or equal to 1.5 mg/m^3-yrs (Document ID 1060, p. 204). Both studies clearly showed silicosis risk among workers whose cumulative exposures were comparable to those that workers could experience under the final PEL (Document ID 0455, p. 700; 1060, p. 204), indicating that a threshold above this level of cumulative exposure is unlikely.

d. German Porcelain Workers

A series of papers by Birk *et al.* (2009, Document ID 4002, Attachment 2; 2010, Document ID 1467), Mundt *et al.* (2011, Document ID 1478), and Morfeld *et al.* (2013, Document ID 3843) examined silicosis mortality and morbidity in a population of over 17,000 workers in the German porcelain industry. Cohort members' annual average concentrations of respirable quartz dust were reconstructed from detailed work histories and dust measurements collected in the industry from 1951 onward (Birk *et al.*, 2009, Document ID 4002, Attachment 2, pp. 374–375). Morfeld *et al.* observed 40 silicosis morbidity cases (ILO profusion category 1/1 or greater), and noted that additional

[8] This analysis included a log-cumulative logistic regression model, as well as a categorical analysis and five-knot restricted cubic spline analysis using log-cumulative exposure. Had the spline analysis shown a better-fitting model with a flat exposure-response at low cumulative exposure levels, it might have suggested a threshold effect for cumulative exposure. However, no significant difference was observed between the parametric model and the two other models, which had greater flexibility in the shape of the exposure-response (Document ID 0469, p. 50, Figure 5).

follow-up of the cohort might be necessary due to the long latency period of silicosis (2013, Document ID 3843, p. 1032).

Follow-up time is a critical factor for detection of silicosis, which has a typical latency of 20–30 years (*see* Morfeld *et al.*, 2013, Document ID 3843, p. 1028). As stated in Section V.C, Summary of the Review of Health Effects Literature and Preliminary QRA, the disease latency for silicosis can extend to around 30 years. Follow-up was extremely limited in the German porcelain workers silicosis morbidity analysis, with a mean of 7.5 years of follow up for the study population (Document ID 3843). Despite the limited follow-up time, the cohort showed evidence of silicosis morbidity among low-exposed workers: 17.5 percent of cases occurred among workers whose highest average silica exposure in any year (''highest annual'') was estimated by the authors to be less than 250 μg/m^3, and 12.5 percent of cases occurred among workers whose highest annual silica exposure was estimated at less than 100 μg/m^3 (Document ID 3843).

The lead author of the study, Dr. Peter Morfeld, testified at the public hearings on behalf of the ACC Crystalline Silica Panel. In his post-hearing comments, Dr. Morfeld stated that ''[m]echanistic considerations imply that we should not expect to see a threshold for cumulative exposure'' in silicosis, but that the question of whether a threshold concentration level may exist remains (Document ID 4003, p. 3). The study by Morfeld *et al.* ''focused on the statistical estimation of a concentration threshold . . . [and] simultaneously took into account the cumulative exposure to respirable crystalline silica dust as a driving force of the disease'' (Document ID 4003, p. 3). Morfeld *et al.* applied a technique developed by Ulm *et al.* (1989, 1991) to estimate a concentration threshold. In this method a series of candidate exposure concentration values are subtracted from the estimated annual mean concentration data. Using the recalculated exposure estimates for the study population, regression analyses for each candidate are run to identify the best fitting model, using the Akaike Information Criterion (AIC) to evaluate model fit (Document ID 3843, p. 1029). According to Morfeld, the best fitting model in their study estimated a threshold concentration of 250 μg/m^3 (AIC = 488.3) with a 95 percent confidence interval of 160 to 300 μg/m^3. A second model with very similar fit (AIC = 488.8) estimated a threshold concentration of 200 μg/m^3 with a 95 percent confidence interval of 57 μg/m^3 to 270 μg/m^3. A third model with a poorer fit (AIC=490.6) estimated a threshold concentration of 80 μg/m^3 with a 95 percent confidence interval of 0.2 μg/m^3 to 210 μg/m^3 (Document ID 3843, Table 3, p. 1031).

In the Final Peer Review Report, Dr. Crump stated that Morfeld *et al.*'s modeling approach, like ''all such attempts statistically to estimate a threshold,'' is ''not reliable because the threshold estimates so obtained are highly unstable'' (Document ID 3574, p. 17). Dr. Morfeld's co-author, Dr. Mundt, stated in the public hearings:

> I'll be the first one to tell you there is a lot of imprecision and, therefore, say confidence intervals or uncertainty should be respected, and that the—I'm hesitant to just focus on a single point number like the .25 [250 μg/m^3], and prefer that you encompass the broader range that was reported in the Morfeld, on which I was an author and consistently brought this point to the table (Document ID 3577, Tr. 645).
