

FEDERAL REGISTER

Vol. 81 Friday,
No. 68 April 8, 2016

Book 1 of 2 Books
Pages 20523–20856

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 81, No. 68

Friday, April 8, 2016

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 630

RIN 3206-AM90

Family and Medical Leave Act; Definition of Spouse

AGENCY: U.S. Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The U.S. Office of Personnel Management (OPM) is revising the definition of *spouse* in its regulations on the Family and Medical Leave Act (FMLA) as a result of the decision by the United States Supreme Court holding section 3 of the Defense of Marriage Act (DOMA) unconstitutional. The new definition replaces the existing definition, which contains language from DOMA that refers to “a legal union between one man and one woman.” The new definition permits Federal employees with same-sex spouses to use FMLA leave in the same manner as Federal employees with opposite-sex spouses.

DATES: This final rule is effective on May 9, 2016.

FOR FURTHER INFORMATION CONTACT: Kurt Springmann by email at pay-leave-policy@opm.gov or by telephone at (202) 606-2858.

SUPPLEMENTARY INFORMATION: The U.S. Office of Personnel Management is issuing a final regulation that revises the definition of *spouse* under 5 CFR 630.1202 for purposes of the Family and Medical Leave Act. This change stems from the June 26, 2013, decision of the U.S. Supreme Court in *United States v. Windsor*, 133 S. Ct. 2675 (2013), invalidating Section 3 (1 U.S.C. 7) of the Defense of Marriage Act (Public Law 104-199, 110 Stat. 2419 (1996)). The revised definition establishes in regulation that Federal employees who

are in legal marriages with same-sex spouses can use their leave entitlement under FMLA in the same manner as Federal employees who are in legal marriages with opposite-sex spouses.

Background

Two Federal agencies administer regulations governing FMLA. The Department of Labor (DOL) issues regulations for title I of FMLA, which covers non-Federal employees and certain Federal employees not covered under title II. OPM issues regulations for title II of FMLA, which covers most Federal employees. Title II of FMLA directs OPM to prescribe regulations that are consistent, to the extent appropriate, with regulations prescribed by the Secretary of Labor to carry out title I of FMLA. (See 5 U.S.C. 6387.) DOL published its final regulations on the definition of *spouse* under title I of FMLA on February 25, 2015, at 80 FR 9989.

On June 26, 2013, the U.S. Supreme Court ruled in *Windsor* that Section 3 of DOMA is unconstitutional. Section 3 states in part: “In determining the meaning of any Act of Congress, or of any ruling, regulation, or interpretation of the various administrative bureaus and agencies of the United States, the word ‘marriage’ means only a legal union between one man and one woman as husband and wife, and the word ‘spouse’ refers only to a person of the opposite sex who is a husband or a wife.” OPM’s definition of *spouse* in the FMLA regulations had its basis in the Section 3 language. In response to this ruling, OPM issued a memorandum on October 21, 2013, informing Federal agencies that the definition of *spouse* used in OPM’s FMLA regulations was no longer valid. (See CPM 2013-14, *Family and Medical Leave Act (FMLA) Coverage of Same-Sex Spouses*, at <https://www.chcoc.gov/content/family-and-medical-leave-act-fmla-coverage-same-sex-spouses>.) The memorandum made clear that, effective June 26, 2013, an employee in a legally recognized same-sex marriage, regardless of state of residency, could use his or her FMLA leave entitlement in the same manner as an employee with an opposite-sex spouse.

Evaluation of Comments

On June 23, 2014, at 79 FR 35497, OPM published a notice of proposed rulemaking to change the definition of

spouse in the regulations implementing title II of FMLA to mirror the definition proposed by DOL for title I employees. OPM also proposed conforming amendments that would revise the definition of *parent* and add a definition for *State* to align with DOL’s definitions of these terms. We received 27 comments in response to the proposed regulations, of which 24 supported the changes.

The three commenters who opposed the change cited religious and traditional beliefs as reasons for adhering to a definition of marriage that applies only to opposite-sex couples. One supported equal benefits for same-sex couples, but did not agree with redefining marriage as other than between one man and one woman. Another maintained that the Government should not impose this change on States that had previously banned same-sex marriage. The change to the definition complies with the Supreme Court’s ruling in *Windsor*, which invalidated the language in Section 3 of DOMA that had limited Federal recognition of marriages only to opposite-sex marriages, as well as its decision in *Obergefell v. Hodges*, 135 S.Ct. 2584 (2015), which held that States are required to license marriages between same-sex couples and to recognize same-sex marriages performed in other States. The change is also in accordance with 5 U.S.C. 6387, which directs that OPM’s FMLA regulations be consistent, to the extent practicable, with those of the Department of Labor. Moreover, OPM’s definition of *spouse* in these regulations only applies to Federal employee coverage under FMLA and does not affect State marriage licensing practices. We note that, to the extent the commenter is suggesting that a marriage performed in one State should have no effect in a State that banned same-sex marriage, the Supreme Court squarely rejected that position in *Obergefell*.

Six commenters urged OPM to maintain support for the *in loco parentis* standard in parent and child FMLA eligibility determinations. Four of these commenters requested that OPM clarify that the regulations will not affect its implementation of the DOL Administrator’s Interpretation No. 2010-3, both in how parents may be determined to stand *in loco parentis* and in recognizing that more than two adults may stand *in loco parentis* to a child.

OPM noted its continuing use of the *in loco parentis* standard described in Administrator's Interpretation No. 2010-3 in the Supplementary Information to the proposed rule under the section, "Children of Same-Sex Couples," which referenced OPM's August 31, 2010, memorandum titled *Interpretation of 'Son or Daughter' Under the Family and Medical Leave Act*. (See CPM 2010-15 at <https://www.chcoc.gov/content/interpretation-son-or-daughter-under-family-and-medical-leave-act>.) As noted in the memorandum, Administrator's Interpretation No. 2010-3 applies only to title I of FMLA; however, OPM has adopted the interpretation to also apply to employees covered by title II of FMLA. The memorandum specifies how individuals may be determined to stand *in loco parentis* and that neither the law nor OPM regulations restrict the number of parents a child may have under FMLA.

Two commenters asked that OPM consider amending the definition of *parent* to extend eligibility to parents-in-law. The definition of *parent* in the regulations derives from the statutory definition at 5 U.S.C. 6381(3). Inclusion of parents-in-law would require a statutory change; therefore, it is outside the scope of these regulations.

Three commenters noted that the phrase "in a same-sex or common law marriage" used in the definition of *spouse* could be interpreted as excluding same-sex common law marriages. We do not see the need to deviate from DOL's definition on this point. The definition uses the term "common law marriage" without exclusion; therefore, it applies to all common law marriages, including same-sex common law marriages. Additionally, OPM's October 21, 2013, memorandum (cited above in the Background section) makes clear that same-sex spouses in common law marriages are included in the definition of *spouse*.

One commenter said the Federal Government should take legislative action to meet the needs of working families excluded by FMLA because of the business-size threshold and employee tenure and hours-worked requirements. These exclusions do not apply to Federal employees covered by title II of FMLA and, regardless, legislation is outside the scope of the regulations. The same commenter expressed the need for paid family leave. FMLA does not authorize paid family leave; therefore, this comment is outside the scope of the regulations.

A Federal agency suggested adding "at the time of the marriage ceremony"

in four places within the definition of *spouse* to make clear that, for purposes of the FMLA entitlement, the marriage need only have been valid in a State at the point in time that the ceremony took place. We believe that the verb tense used in the definition provides the needed clarity on this point where applicable. Therefore, we are not adopting this suggestion.

We made a minor editorial change to the definition of *spouse* (changing "was valid" to "is valid" in subparagraph (2)) to conform to the definition used by DOL in its title I regulations. We also made a minor change to the wording of the definition of *parent* to ensure coverage not only of individuals who stood *in loco parentis* to an employee but also of individuals who still stand *in loco parentis* to an employee. Because OPM received no comments requiring further changes to the definitions provided in the proposed rule, we are adopting the definitions as final.

Executive Order 13563 and Executive Order 12866

The Office of Management and Budget has reviewed this rule in accordance with E.O. 13563 and 12866.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because it will apply only to Federal agencies and employees.

Beth F. Cobert,

Acting Director.

Accordingly, OPM amends 5 CFR part 630 as follows:

PART 630—ABSENCE AND LEAVE

■ 1. The authority citation for part 630 continues to read as follows:

Authority: 5 U.S.C. 6311; § 630.205 also issued under Pub. L. 108-411, 118 Stat. 2312; § 630.301 also issued under Pub. L. 103-356, 108 Stat. 3410 and Pub. L. 108-411, 118 Stat. 2312; § 630.303 also issued under 5 U.S.C. 6133(a); §§ 630.306 and 630.308 also issued under 5 U.S.C. 6304(d)(3), Pub. L. 102-484, 106 Stat. 2722, and Pub. L. 103-337, 108 Stat. 2663; subpart D also issued under Pub. L. 103-329, 108 Stat. 2423; § 630.501 and subpart F also issued under E.O. 11228, 30 FR 7739, 3 CFR, 1974 Comp., p. 163; subpart G also issued under 5 U.S.C. 6305; subpart H also issued under 5 U.S.C. 6326; subpart I also issued under 5 U.S.C. 6332, Pub. L. 100-566, 102 Stat. 2834, and Pub. L. 103-103, 107 Stat. 1022; subpart J also issued under 5 U.S.C. 6362, Pub. L. 100-566, and

Pub. L. 103-103; subpart K also issued under Pub. L. 105-18, 111 Stat. 158; subpart L also issued under 5 U.S.C. 6387 and Pub. L. 103-3, 107 Stat. 23; and subpart M also issued under 5 U.S.C. 6391 and Pub. L. 102-25, 105 Stat. 92.

■ 2. In § 630.1202, the definitions of *parent* and *spouse* are revised and the definition of *State* is added in alphabetical order to read as follows:

§ 630.1202 Definitions.

* * * * *

Parent means a biological, adoptive, step, or foster father or mother, or any individual who stands or stood *in loco parentis* to an employee meeting the definition of son or daughter below. This term does not include parents "in law."

* * * * *

Spouse, as defined in the statute, means a husband or wife. For purposes of this definition, husband or wife refers to the other person with whom an individual entered into marriage as defined or recognized under State law for purposes of marriage in the State where the marriage was entered into or, in the case of a marriage entered into outside of any State, if the marriage is valid in the place where entered into and could have been entered into in at least one State. This definition includes an individual in a same-sex or common law marriage that either:

- (1) Was entered into in a State that recognizes such marriages, or
- (2) If entered into outside of any State, is valid in the place where entered into and could have been entered into in at least one State.

State means any State of the United States or the District of Columbia or any Territory or possession of the United States.

7 CFR Part 319

[Docket No. APHIS-2014-0085]

RIN 0579-AE04

Importation of Fresh Andean Blackberry and Raspberry Fruit From Ecuador Into the Continental United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the fruits and vegetables regulations to allow the importation of fresh Andean blackberry and raspberry fruit from Ecuador into

the continental United States. As a condition of entry, the fruit will have to be produced in accordance with a systems approach that includes requirements for importation in commercial consignments from a pest free production site within a certified low pest prevalence area for fruit flies, and pest monitoring and trapping. The fruit will also have to be accompanied by a phytosanitary certificate issued by the national plant protection organization of Ecuador bearing an additional declaration stating that the consignment was produced and prepared for export in accordance with the requirements of the systems approach. This action will allow for the importation of fresh Andean blackberry and raspberry fruit from Ecuador while continuing to provide protection against the introduction of quarantine pests into the continental United States.

DATES: Effective May 9, 2016.

FOR FURTHER INFORMATION CONTACT: Ms. Claudia Ferguson, M.S., Senior Regulatory Policy Specialist, Regulatory Coordination and Compliance, Imports, Regulations and Manuals, PPQ, APHIS, (301) 851-2352; email: Claudia.Ferguson@aphis.usda.gov.

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in “Subpart-Fruits and Vegetables” (7 CFR 319.56–1 through 319.56–74, referred to below as the regulations), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture prohibits or restricts the importation of fruits and vegetables into the United States from certain parts of the world to prevent plant pests from being introduced into and spread within the United States.

On April 24, 2015, we published in the **Federal Register** (80 FR 22927–22930, Docket No. APHIS-2014-0085) a proposal¹ to amend the regulations to allow importation of Andean blackberry (*Rubus glaucus* Benth) and raspberry (*Rubus idaeus* Linnaeus) fruit into the continental United States from Ecuador subject to a systems approach. We also prepared a pest risk assessment (PRA) and a risk management document (RMD). The PRA evaluates the risks associated with the importation of fresh Andean blackberry and raspberry fruit from Ecuador into the continental United States. The RMD draws upon the findings of the PRA to determine the phytosanitary measures necessary to

ensure the safe importation into the continental United States of fresh Andean blackberry and raspberry fruit from Ecuador.

In the proposed rule, we noted that the PRA rated three plant pests as having a high pest risk potential for following the pathway of fresh Andean blackberry and raspberry fruit from Ecuador into the continental United States: *Anastrepha fraterculus* (South American fruit fly), *Ceratitis capitata* (Mediterranean fruit fly, or Medfly), and *Copitarsia decolora*, a moth.

We determined in the PRA that measures beyond standard port of arrival inspection will adequately mitigate the risks posed by these plant pests and proposed a systems approach that includes requirements for importation in commercial consignments from a pest free production site within a certified low pest prevalence area for fruit flies, pest monitoring, and pest trapping. We also proposed that the fruit be imported in commercial consignments only and accompanied by a phytosanitary certificate issued by the national plant protection organization (NPPO) of Ecuador stating that the consignment was produced and prepared for export in accordance with the systems approach.

We solicited comments concerning our proposal for 60 days ending June 23, 2015. We received five comments during the comment period from members of the public and an employee of a foreign NPPO. The comments are discussed below.

General Comments

Two commenters stated that the importation of fresh Andean blackberry and raspberry fruit into the continental United States should not be allowed due to the associated plant pest risk. One of these commenters added that production of blackberry and raspberry fruit in the United States, along with existing import agreements with other countries, renders importation of Andean blackberry and raspberry fruit from Ecuador unnecessary.

We are making no changes in response to these comments. Under the Plant Protection Act (7 U.S.C. 7701 *et seq.*), we have the authority to prohibit or restrict the importation of plants and plant products only when necessary to prevent the introduction into, or dissemination of plant pests or noxious weeds within, the United States. We have determined that fresh Andean blackberry and raspberry fruit from Ecuador may be safely imported into the continental United States under the

¹ To view the proposed rule, supporting documents, and the comments we received, go to <http://www.regulations.gov/#/docketDetail;D=APHIS-2014-0085>.

conditions we are adding to the regulations.

Mitigations for Medfly

One commenter stated that while the PRA lists Medfly as having a high pest risk potential for following the pathway of Andean blackberries and raspberries imported into the continental United States from Ecuador, the production site requirements we propose do not require mitigation for Medfly beyond standard commercial production and inspection. The commenter requested that we include an additional mitigation measure for Medfly and that we gradually reduce the requirements to commercial production and inspection only.

Another commenter observed that we currently do not require mitigations for Medfly beyond standard commercial production and inspection for raspberries imported from other countries with this pest, including Colombia, Costa Rica, El Salvador, France, Guatemala, Honduras, Nicaragua, and Panama. The commenter asked why no additional mitigations exist to prevent Medfly from following the pathway of raspberries imported into the continental United States from these countries and from Ecuador. The commenter stated that raspberries from all production sites in these countries should be inspected and undergo additional mitigation if they have the potential for bringing Medfly to the continental United States.

We respect the concerns of these commenters regarding the potential introduction of Medfly into the continental United States. However, as we noted in the RMD and the proposed rule, Andean blackberries and raspberries have been established in the scientific literature as being poor hosts for both Medfly and *Anastrepha fraterculus*. We also noted that there has never been an interception of fruit flies from the family *Tephritidae*, which includes Medfly as well as *Anastrepha fraterculus*, in any commercial shipments of fresh Andean blackberries or raspberries from the countries cited by the commenter. For these reasons, APHIS considers standard commercial production and inspection practices to be a sufficient mitigation for Medfly in Andean blackberries and raspberries imported from countries where the pest is present.

We also noted in the proposed rule that a slightly stronger host status potential exists for *Anastrepha fraterculus* in Andean blackberries and raspberries, and as a result included a requirement for field trapping in order to maintain low pest prevalence for this

pest. Furthermore, we added to the proposed rule the requirement that if a single *Anastrepha fraterculus*, Medfly, or *Copitarsia decolora* is detected in a consignment, the consignment may not be exported to the United States.

Production Site Requirements

One commenter stated that requiring the production sites of Andean blackberry and raspberry fruit to be free of *Anastrepha fraterculus* within an area of low prevalence is excessive. The commenter stated that the production sites are over 2,800 meters in altitude with an average temperature of 13 °C, resulting in conditions too adverse for the establishment of *Anastrepha fraterculus*. The commenter also stated that production centers for Andean blackberries and raspberries are in areas of Ecuador isolated from other fruit crop production. The commenter requested that we remove the requirement that production sites for Andean blackberries and raspberries must be within areas of low prevalence.

We agree with the commenter that given the low temperature and high altitude, the areas in Ecuador in which blackberry and raspberry production sites are located are generally inhospitable to the establishment of *Anastrepha fraterculus*. However, within Ecuador there is frequent commercial and consumer transport of fruit into these production areas from areas of lower altitude with established populations of *Anastrepha fraterculus*. Given the risk of *Anastrepha fraterculus* moving to production areas via host fruit, we will retain the requirement for trapping at each production site to ensure that the sites are free of *Anastrepha fraterculus* and remain areas of low pest prevalence. Details of trapping requirements will be included in the operational workplan and can be adjusted if necessary based on the frequency of pest interceptions.

Economic Impacts

One commenter, concerned about potential economic impacts to raspberry and blackberry growers in the United States resulting from imports of Andean raspberry and blackberry from Ecuador, requested that we provide more data on the potential impact to these growers.

In the economic analysis accompanying this rule, we gathered and analyzed data sufficient to determine that this action will not have a significant economic impact on small domestic growers. Between 2008 and 2012, the United States imported 37.22 million pounds of fresh raspberries and between 2011 and 2013 imported 63 million pounds of fresh blackberries.

Comparing the volume level of these imports with the proposed maximum level of imports from Ecuador, the Ecuadorian import share would be less than 0.4 percent of the U.S. import share for these fruits.

The same commenter asked what costs APHIS will incur in monitoring and auditing Ecuador's implementation of the systems approach.

APHIS conducts monitoring of production areas and trapping practices, audits of trap records, and other tasks necessary to ensure that the NPPO of Ecuador is implementing the systems approach. The costs of conducting these tasks are included in the APHIS budget.

The commenter also asked if the costs would be feasible for Ecuadorian blackberry and raspberry farmers and whether the regulation imposes burdens on these farmers.

Under Executive Order 12866 and the Regulatory Flexibility Act, we are required to analyze the potential regulatory and economic effects of this action on small entities within the United States. We therefore have not researched the economic effects of this action on Ecuadorian blackberry and raspberry farmers.

Therefore, for the reasons given in the proposed rule, we are adopting the proposed rule as a final rule, without change.

Executive Order 12866 and Regulatory Flexibility Act

This final rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with the Regulatory Flexibility Act, we have analyzed the potential economic effects of this action on small entities. The analysis is summarized below. Copies of the full analysis are available by contacting the person listed under **FOR FURTHER INFORMATION CONTACT** or on the Regulations.gov Web site (see **ADDRESSES** above for instructions for accessing Regulations.gov).

The final rule will allow importation into the continental United States of fresh Andean blackberry (*Rubus glaucus* Benth.) and raspberry (*Rubus idaeus* L.) fruit from Ecuador. We have information on the total quantity of Andean blackberry and raspberry fruit expected to be imported from Ecuador yearly (less than 180 metric tons (MT)), but not the amount by species. Also, the Andean blackberry is more closely comparable to the loganberry (a blackberry-raspberry hybrid) than it is to the common blackberry (*Rubus fruticosus*). For these reasons, we base

our analysis on aggregate quantities of *Rubus* species commercially produced by the United States.

The majority of U.S. raspberry and blackberry farms are in three States—California, Oregon, and Washington. They are classified within the North American Industry Classification System under “Berry except Strawberry Farming” (NAICS 111334). For this industry classification, a business is considered to be a small entity if its annual receipts are not more than \$750,000. The average 2012 market value of crops sold by farms in this category was less than \$135,000. We infer that most fresh raspberry and blackberry fruit production is by small entities.

Over the 5-year period 2008–2012, U.S. raspberry and blackberry production for the fresh market averaged about 96 million pounds and 4 million pounds per year, respectively, for a total of about 100 million pounds, or about 45,372 MT. Expected annual imports from Ecuador of less than 180 MT will be the equivalent of less than 0.4 percent of U.S. production.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Executive Order 12988

This final rule allows fresh Andean blackberry and raspberry fruit to be imported into the continental United States from Ecuador. State and local laws and regulations regarding fresh Andean blackberry and raspberry fruit imported under this rule will be preempted while the fruit is in foreign commerce. Fresh fruits are generally imported for immediate distribution and sale to the consuming public, and remain in foreign commerce until sold to the ultimate consumer. The question of when foreign commerce ceases in other cases must be addressed on a case-by-case basis. No retroactive effect will be given to this rule, and this rule will not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the information collection or recordkeeping requirements included in this final rule, which were filed under 0579–0435, have been submitted for approval to the Office of Management and Budget (OMB). When OMB notifies us of its decision, if approval is denied, we will

publish a document in the **Federal Register** providing notice of what action we plan to take.

E-Government Act Compliance

APHIS is committed to compliance with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this rule, please contact Ms. Kimberly Hardy, APHIS’ Information Collection Coordinator, at (301) 851–2727.

Lists of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

Accordingly, we are amending 7 CFR part 319 as follows:

PART 319—FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

Authority: 7 U.S.C. 450, 7701–7772, and 7781–7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Section 319.56–75 is added to read as follows:

§ 319.56–75. Andean blackberries and raspberries from Ecuador.

Andean blackberries (*Rubus glaucus* Benth) and raspberries (*Rubus idaeus* Linnaeus) may be imported into the continental United States from Ecuador under the conditions described in this section and other applicable provisions of this subpart. These conditions are designed to prevent the introduction of the following quarantine pests: *Anastrepha fraterculus*, *Ceratitis capitata*, and *Copitarsia decolora*.

(a) *General requirements.* (1) The national plant protection organization (NPPO) of Ecuador must provide an operational workplan to APHIS that details the systems approach to pest mitigations and other specific requirements that the NPPO of Ecuador will, subject to APHIS’ approval of the workplan, carry out to meet the requirements of this section.

(2) APHIS will be directly involved with the NPPO of Ecuador in monitoring and auditing implementation of the systems approach.

(3) Andean blackberry and raspberry fruit from Ecuador may be imported into

the continental United States in commercial consignments only.

(b) *Production site requirements.* (1) Each production site must carry out the phytosanitary measures specified in the APHIS-approved operational workplan.

(2) All places of production that participate in the export program must be approved by and registered with the NPPO of Ecuador. APHIS reserves the right to conduct oversight visits in the event of pest interceptions or other problems.

(3) The NPPO of Ecuador or their designee must conduct a fruit fly trapping program for the detection of *Anastrepha fraterculus* at each production site in accordance with the operational workplan. If a designee conducts the program, the designation must be detailed in the operational workplan. The approved designee can be a contracted entity, a coalition of growers, or the growers themselves.

(4) The NPPO of Ecuador must maintain records of trap placement, trap checks, and any captures of *Anastrepha fraterculus*. The trapping records must be maintained for APHIS’ review for at least 1 year.

(5) The NPPO of Ecuador must maintain a quality control program, approved by APHIS, to monitor or audit the trapping program in accordance with the operational workplan.

(c) *Packinghouse requirements.* (1) Packinghouses must be registered with the NPPO of Ecuador and comply with the requirements as specified in the operational workplan.

(2) While in use for exporting Andean blackberries and raspberries to the continental United States, the packinghouses may only accept fruit from registered production sites.

(3) If a single *Anastrepha fraterculus*, *Ceratitis capitata*, or *Copitarsia decolora* is detected by the NPPO in a consignment, the consignment may not be exported to the United States. Furthermore, if a single *Anastrepha fraterculus* or *Ceratitis capitata* is detected in a consignment at the port of entry and traced back to a registered production site, that production site will lose its ability to export Andean blackberries and raspberries to the continental United States until APHIS and the NPPO of Ecuador mutually determine that risk mitigation is achieved.

(d) *Phytosanitary certificate.* Each consignment of Andean blackberries and/or raspberries must be accompanied by a phytosanitary certificate issued by the NPPO of Ecuador and bear an additional declaration stating that the consignment was produced and

prepared for export in accordance with the requirements of § 319.56–75.

(Approved by the Office of Management and Budget under control number 0579–0435)

Done in Washington, DC, this 5th day of April 2016.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

[Docket No. APHIS–2014–0086]

RIN 0579–AE07

Importation of Fresh Peppers From Ecuador Into the United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule; technical amendment.

SUMMARY: In a final rule published in the *Federal Register* on October 23, 2015, and effective on November 23, 2015, we amended the fruits and vegetables regulations to allow the importation of fresh peppers into the United States from Ecuador subject to a systems approach. However, the scope of the pest risk analysis supporting the rule was limited to the continental United States. Therefore, we are amending the regulations to limit the importation of fresh peppers from Ecuador to the continental United States only.

DATES: Effective April 8, 2016.

FOR FURTHER INFORMATION CONTACT: Ms. Claudia Ferguson, M.S., Senior Regulatory Policy Specialist, Regulatory Coordination and Compliance, Imports, Regulations and Manuals, PPQ, APHIS, (301) 851–2352; email: Claudia.Ferguson@aphis.usda.gov.

SUPPLEMENTARY INFORMATION: In a final rule¹ that was published in the *Federal Register* on October 23, 2015 (80 FR 64307–64309, Docket No. APHIS–2014–0086), and effective on November 23, 2015, we amended the fruits and vegetables regulations by adding 7 CFR 319.56–74 to allow the importation of fresh peppers from Ecuador into the United States under a systems approach.

However, the pest risk analysis we prepared for the rule examined the importation of fresh peppers from Ecuador to the continental United States only and did not examine the risks associated with the fruit entering Hawaii or the U.S. Territories. Therefore, in order for the regulations to be consistent with the scope of the pest risk analysis, we are amending § 319.56–74 to limit the importation of fresh peppers from Ecuador to the continental United States.

Lists of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

Accordingly, we are amending 7 CFR part 319 as follows:

PART 319—FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

[Docket Number EERE–2013–BT–TP–0002]

RIN 1904–AC93

Energy Conservation Program: Test Procedures for Commercial Clothes Washers; Correction

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Final rule; correcting amendments.

SUMMARY: The Department of Energy (DOE) published a final rule in the *Federal Register* on December 3, 2014 revising the test procedure provisions for commercial clothes washers. DOE published another final rule on

December 15, 2014 amending the energy conservation standards for commercial clothes washers. This final rule correction amends the test procedure provisions for commercial clothes washers to clarify the applicability of the revised test procedures to the amended energy conservation standards. The correction also removes obsolete regulatory provisions.

DATES: This correction is effective April 8, 2016.

FOR FURTHER INFORMATION CONTACT:

Bryan Berringer, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, EE–5B, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 586–0371. Email: commercial_clothes_washers@ee.doe.gov.

Jennifer Tiedeman, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 287–6111. Email: Jennifer.Tiedeman@hq.doe.gov.

SUPPLEMENTARY INFORMATION: Energy conservation standards for commercial clothes washers (CCWs) are codified at 10 CFR 431.156. Pursuant to 10 CFR 431.154, the test procedures for clothes washers at 10 CFR part 430, subpart B, appendix J1 must be used to test CCWs to determine compliance with the current energy conservation standards codified at 10 CFR 431.156(b).

DOE published a final rule on March 7, 2012, establishing a new test procedure for clothes washers at 10 CFR part 430, subpart B, appendix J2. 77 FR 13887.

DOE published another final rule on December 3, 2014, revising the test procedure provisions for CCWs at 10 CFR 431.154 to specify that the test procedures for clothes washers at appendix J2 must be used to determine compliance with any amended standards for CCWs based on appendix J2 efficiency metrics published after December 3, 2014. 79 FR 71624.

DOE then published a final rule on December 15, 2014, amending the energy conservation standards for CCWs, which are codified at 10 CFR 431.156(c). 79 FR 74492. These amended standards are based on appendix J2 efficiency metrics, and compliance with the amended standards is required beginning January 1, 2018.

This final rule correction (1) removes obsolete CCW standards listed at 10 CFR 431.156(a), (2) redesignates paragraphs (b) and (c) of 10 CFR 431.156 as paragraphs (a) and (b), and (3) amends the CCW test procedure provisions at 10

¹ To view the final rule and supporting documents, go to <http://www.regulations.gov/#/docketDetail;D=APHIS-2014-0086>.

CFR 431.154 to clarify that the test procedures at appendixes J1 and J2 must be used to determine compliance with the CCW energy conservation standards at redesignated 10 CFR 431.156(a) and (b), respectively.

Procedural Issues and Regulatory Review

The regulatory reviews conducted for this rulemaking are those set forth in the December 3, 2014 final rule that originally codified amendments to DOE's test procedures for commercial clothes washers. 79 FR 71624. The amendments from that final rule became effective January 2, 2015. *Id.*

Pursuant to the Administrative Procedure Act, 5 U.S.C. 553(b), DOE has determined that notice and prior opportunity for comment on this rule are unnecessary and contrary to the public interest. The amended CCW standards codified at 10 CFR 431.156(c) correspond to the "amended standards based on appendix J2 efficiency metrics published after December 3, 2014" referenced in 10 CFR 431.154. This correction is needed to ensure clarity regarding the amended CCW standards for which the appendix J2 test procedure must be used. This final rule also removes obsolete regulatory provisions.

List of Subjects in 10 CFR Part 431

Administrative practice and procedure, Energy conservation, Household appliances.

Issued in Washington, DC, on March 28, 2016.

Kathleen Hogan,

Deputy Assistant Secretary, Energy Efficiency and Renewable Energy.

For the reasons stated in the preamble, DOE amends part 431 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, by making the following correcting amendments:

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317.

■ 2. Section 431.154 is revised to read as follows:

§ 431.154 Test procedures.

The test procedures for clothes washers in appendix J1 to subpart B of part 430 of this chapter must be used to test commercial clothes washers to determine compliance with the energy

conservation standards at § 431.156(a). The test procedures for clothes washers in appendix J2 to subpart B of part 430 of this chapter must be used to determine compliance with the energy conservation standards at § 431.156(b).

§ 431.156 [Amended]

■ 3. Section 431.156 is amended by removing paragraph (a) and redesignating paragraphs (b) and (c) as paragraphs (a) and (b), respectively.

BILLING CODE 6450–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2016–0275]

Drawbridge Operation Regulation; Annisquam River and Blynman Canal, Gloucester, MA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Blynman (SR127) Bridge across the Annisquam River and Blynman Canal at mile 0.0 at Gloucester, MA. This deviation is necessary to facilitate public safety during a public event, the annual Saint Peter's Fiesta 5K Road Race. This deviation allows the bridge to remain closed for thirty minutes to facilitate public safety.

DATES: This deviation is effective from 6:15 p.m. to 6:45 p.m. on June 23, 2016.

ADDRESSES: The docket for this deviation, [USCG–2016–0275] is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH". Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Jim Rousseau, First Coast Guard District Bridge Branch, Coast Guard; telephone 617–223–8619, email James.L.Rousseau2@uscg.mil.

SUPPLEMENTARY INFORMATION: The Blynman (SR 127) Bridge across the Annisquam River and Blynman Canal, mile 0.0, at Gloucester, Massachusetts, has a vertical clearance in the closed position of 8.2 feet at mean high water and 16 feet at mean low water. The

existing bridge operating regulations are found at 33 CFR 117.586.

The owner of the bridge, Massachusetts Department of Transportation, requested a temporary deviation from the normal operating schedule to facilitate a public event, the Annual Saint Peter's Fiesta 5K Road Race.

Under this temporary deviation, the Blynman (SR 127) Bridge may remain in the closed position for thirty minutes between 6:15 p.m. and 6:45 p.m. on Thursday June 23, 2016.

The waterways are transited by commercial and seasonal recreational vessels of various sizes. There is an alternate route for vessel traffic around Cape Ann. Also, vessels that can pass under the closed draws during this closure may do so at all times.

The Coast Guard will inform the users of the waterways through our Local and Broadcast Notice to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: April 5, 2016.

C.J. Bisignano,

Supervisory Bridge Management Specialist, First Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2016–0181]

Drawbridge Operation Regulation; North Landing River, Chesapeake, VA

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from drawbridge regulations; modification.

SUMMARY: The Coast Guard has modified a temporary deviation from the operating schedule that governs the S165 (North Landing Road) Bridge across the North Landing River, mile 20.2, at Chesapeake, VA. This modified deviation is necessary to perform emergency bridge repairs and provide for safe navigation. This modified

deviation allows the bridge to remain in the closed-to-navigation position.

DATES: This modified deviation is effective without actual notice from April 8, 2016 through 6 p.m. on June 30, 2016. For the purposes of enforcement, actual notice will be used from April 4, 2016, until April 8, 2016.

ADDRESSES: The docket for this deviation, [USCG–2016–0181] is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH”. Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this modified temporary deviation, call or email Mr. Hal R. Pitts, Bridge Administration Branch Fifth District, Coast Guard, telephone 757–398–6222, email Hal.R.Pitts@uscg.mil.

SUPPLEMENTARY INFORMATION: On March 11, 2016, the Coast Guard published a temporary deviation entitled “Drawbridge Operation Regulation; North Landing River, Chesapeake, VA” in the **Federal Register** (81 FR 12824). Under that temporary deviation, the north span of the bridge opened-to-navigation on the hour and half hour, upon request, from 6 a.m. to 7 p.m., and on demand from 7 p.m. to 6 a.m. Additionally under that deviation, the north and south spans of the bridge would open to navigation concurrently, with the south span only opening partially due to damage, upon request, for scheduled openings at 10 a.m., noon and 2 p.m., Monday through Friday.

The United States Army Corps of Engineers, Norfolk District Office, who owns and operates the S165 (North Landing Road) Bridge, has requested a modified temporary deviation from the currently published deviation to perform additional repairs to the south swing span of the bridge due to damage sustained as a result of a vessel allision with the bridge.

Under this modified temporary deviation, the north span of the bridge will open-to-navigation on the hour and half hour, upon request, from 6 a.m. to 7 p.m., and on demand from 7 p.m. to 6 a.m. The north and south spans of the bridge will open to navigation concurrently, with the south span only opening partially due to damage, upon request, for: (1) Scheduled openings at 9:30 a.m. for vessels transiting southeast, (2) 10:30 a.m. for vessels transiting northwest, and (3) at noon and 2 p.m. for two-way vessel traffic through the bridge, Monday through Friday. The horizontal clearance of the bridge with the south span closed-to-navigation is 38 feet and the horizontal

clearance of the bridge with the south span partially open-to-navigation is 70 feet. The modified temporary deviation is necessary to relieve vessel congestion and provide for safe navigation on the waterway. The bridge is a double swing draw bridge and has a vertical clearance in the closed position of 6 feet above mean high water.

The North Landing River is used by a variety of vessels including small U.S. government and public vessels, small commercial vessels, tug and barge, and recreational vessels. The Coast Guard has carefully considered the nature and volume of vessel traffic on the waterway in publishing this temporary deviation.

During the closure times there will be limited opportunity for vessels which are able to safely pass through the bridge in the closed position to do so. Vessels able to safely pass through the bridge in the closed position may do so, after receiving confirmation from the bridge tender that it is safe to transit through the bridge. The north span of the bridge will be able to open for emergencies. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessel operators can arrange their transit to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: April 4, 2016.

Hal R. Pitts,

Bridge Program Manager, Fifth Coast Guard District.

POSTAL REGULATORY COMMISSION

39 CFR Part 3020

[Docket Nos. MC2010–21 and CP2010–36]

Update to Product Lists

AGENCY: Postal Regulatory Commission.
ACTION: Final rule.

SUMMARY: The Commission is updating the product lists. This action reflects a publication policy adopted by Commission order. The referenced policy assumes periodic updates. The updates are identified in the body of this document. The product lists, which is re-published in its entirety, includes these updates.

DATES: *Effective Date:* April 8, 2016.

Applicability Dates: January 5, 2016, Priority Mail Contract 171 (MC2016–48 and CP2016–63); January 5, 2016, Priority Mail Contract 170 (MC2016–47 and CP2016–62); January 6, 2016, Priority Mail Contract 176 (MC2016–54 and CP2016–69); January 6, 2016, Priority Mail Express Contract 31 (MC2016–61 and CP2016–76); January 6, 2016, Priority Mail Express, Priority Mail & First-Class Package Service Contract 7 (MC2016–55 and CP2016–70); January 6, 2016, Priority Mail Contract 177 (MC2016–57 and CP2016–72); January 6, 2016, Priority Mail & First-Class Package Service Contract 11 (MC2016–62 and CP2016–77); January 6, 2016, Priority Mail Contract 179 (MC2016–63 and CP2016–78); January 6, 2016, Priority Mail Contract 180 (MC2016–64 and CP2016–79); January 6, 2016, Priority Mail Contract 183 (MC2016–67 and CP2016–82); January 6, 2016, Priority Mail & First-Class Package Service Contract 10 (MC2016–58 and CP2016–73); January 6, 2016, Priority Mail Express & Priority Mail Contract 26 (MC2016–56 and CP2016–71); January 6, 2016, Priority Mail Contract 175 (MC2016–53 and CP2016–68); January 6, 2016, Priority Mail Contract 181 (MC2016–65 and CP2016–80); January 6, 2016, Priority Mail Contract 178 (MC2016–60 and CP2016–75); January 6, 2016, Priority Mail Express & Priority Mail Contract 27 (MC2016–59 and CP2016–74); January 6, 2016, Priority Mail Contract 184 (MC2016–66 and CP2016–81); January 7, 2016, Priority Mail Express, Priority Mail & First-Class Package Service Contract 8 (MC2016–72 and CP2016–87); January 7, 2016, Priority Mail & First-Class Package Service Contract 12 (MC2016–70 and CP2016–85); January 7, 2016, Priority Mail Contract 185 (MC2016–69 and CP2016–84); January 7, 2016, Priority Mail Contract 186 (MC2016–71 and CP2016–86); January 7, 2016, First-Class Package Service Contract 41 (MC2016–73 and CP2016–88); January 7, 2016, Priority Mail Contract 182 (MC2016–68 and CP2016–83); January 8, 2016, Priority Mail Contract 172 (MC2016–49 and CP2016–64); January 8, 2016, First-Class Package Service Contract 40 (MC2016–51 and CP2016–66); January 8, 2016, Priority Mail Contract 173 (MC2016–50 and CP2016–65); January 12, 2016, First-Class Package Service Contract 42 (MC2016–74 and CP2016–91); January 12, 2016, Parcel Select Contract 13 (MC2016–75 and CP2016–93); February 10, 2016, Priority Mail & First-Class Package Service Contract 13 (MC2016–76 and CP2016–98); February 12, 2016,

Priority Mail Contract 165 (MC2016–39 and CP2016–48); February 12, 2016, Priority Mail Contract 166 (MC2016–40 and CP2016–49); February 12, 2016, Priority Mail Contract 167 (MC2016–41 and CP2016–50); February 12, 2016, Priority Mail Contract 168 (MC2016–42 and CP2016–51); February 12, 2016, Priority Mail Contract 169 (MC2016–43 and CP2016–52); February 12, 2016, Priority Mail Contract 174 (MC2016–52 and CP2016–67); February 26, 2016, Priority Mail Express, Priority Mail & First-Class Package Service Contract 9 (MC2016–78 and CP2016–103); February 29, 2016, First-Class Package Service Contract 43 (MC2016–81 and CP2016–106); February 29, 2016, Priority Mail Contract 188 (MC2016–80 and CP2016–105); February 29, 2016, Priority Mail Contract 187 (MC2016–79 and CP2016–104); February 29, 2016, Priority Mail Express Contract 32 (MC2016–77 and CP2016–102); March 1, 2016, First-Class Package Service Contract 44 (MC2016–82 and CP2016–107); March 8, 2016, Priority Mail Contract 189 (MC2016–83 and CP2016–108); March 8, 2016, Priority Mail Express Contract 33 (MC2016–87 and CP2016–112); March 8, 2016, Priority Mail Contract 190 (MC2016–84 and CP2016–109); March 8, 2016, Priority Mail & First-Class Package Service Contract 14 (MC2016–88 and CP2016–113); March 8, 2016, Priority Mail Contract 192 (MC2016–86 and CP2016–111); March 8, 2016, Priority Mail Contract 191 (MC2016–85 and CP2016–110); March 10, 2016, Priority Mail & First-Class Package Service Contract 15 (MC2016–89 and CP2016–114); March 15, 2016, Priority Mail Contract 195 (MC2016–92 and CP2016–117); March 15, 2016, Priority Mail Contract 193 (MC2016–90 and CP2016–115); March 15, 2016, Priority Mail Contract 194 (MC2016–91 and CP2016–116); March 15, 2016, Priority Mail Express Contract 34 (MC2016–93 and CP2016–118); March 17, 2016, Competitive International Merchandise Return Service Agreements with Foreign Postal Operators Non-Published Rates 2 (MC2016–94 and CP2016–119); March 22, 2016, Priority Mail Contract 196 (MC2016–95 and CP2016–120); March 23, 2016, First-Class Package Service Contract 45 (MC2016–96 and CP2016–121); March 29, 2016, Priority Mail Contract 199 (MC2016–100 and CP2016–128); March 29, 2016, Global Expedited Package Services (GEPS)—Non-Published Rates 10 (MC2016–97 and CP2016–122); March 29, 2016, Priority Mail Contract 198 (MC2016–99 and CP2016–127); March 29, 2016, First-Class Package Service Contract 46

(MC2016–103 and CP2016–131); March 30, 2016, Priority Mail Contract 200 (MC2016–101 and CP2016–129); March 30, 2016, Priority Mail Express & Priority Mail Contract 28 (MC2016–106 and CP2016–134); March 30, 2016, First-Class Package Service Contract 47 (MC2016–104 and CP2016–132); March 30, 2016, Priority Mail & First-Class Package Service Contract 16 (MC2016–105 and CP2016–133); March 30, 2016, Parcel Select Contract 14 (MC2016–102 and CP2016–130); March 30, 2016, Priority Mail Express Contract 35 (MC2016–107 and CP2016–135); March 30, 2016, Priority Mail Contract 197 (MC2016–98 and CP2016–126).

FOR FURTHER INFORMATION CONTACT:

David A. Trissell, General Counsel, at 202–789–6800.

SUPPLEMENTARY INFORMATION: This document identifies updates to the product lists, which appear as 39 CFR Appendix A to Subpart A of Part 3020—Mail Classification Schedule. Publication of the updated product lists in the **Federal Register** is addressed in the Postal Accountability and Enhancement Act (PAEA) of 2006.

Authorization. The Commission process for periodic publication of updates was established in Docket Nos. MC2010–21 and CP2010–36, Order No. 445, April 22, 2010, at 8.

Changes. The product lists are being updated by publishing a replacement in its entirety of 39 CFR Appendix A to Subpart A of Part 3020—Mail Classification Schedule. The following products are being added, removed, or moved within the product lists:

1. Priority Mail Contract 171 (MC2016–48 and CP2016–63) (Order No. 2977), added January 5, 2016.
2. Priority Mail Contract 170 (MC2016–47 and CP2016–62) (Order No. 2978), added January 5, 2016.
3. Priority Mail Contract 176 (MC2016–54 and CP2016–69) (Order No. 2981), added January 6, 2016.
4. Priority Mail Express Contract 31 (MC2016–61 and CP2016–76) (Order No. 2982), added January 6, 2016.
5. Priority Mail Express, Priority Mail & First-Class Package Service Contract 7 (MC2016–55 and CP2016–70) (Order No. 2983), added January 6, 2016.
6. Priority Mail Contract 177 (MC2016–57 and CP2016–72) (Order No. 2984), added January 6, 2016.
7. Priority Mail & First-Class Package Service Contract 11 (MC2016–62 and CP2016–77) (Order No. 2985), added January 6, 2016.
8. Priority Mail Contract 179 (MC2016–63 and CP2016–78) (Order No. 2986), added January 6, 2016.

9. Priority Mail Contract 180 (MC2016–64 and CP2016–79) (Order No. 2987), added January 6, 2016.

10. Priority Mail Contract 183 (MC2016–67 and CP2016–82) (Order No. 2988), added January 6, 2016.

11. Priority Mail & First-Class Package Service Contract 10 (MC2016–58 and CP2016–73) (Order No. 2989), added January 6, 2016.

12. Priority Mail Express & Priority Mail Contract 26 (MC2016–56 and CP2016–71) (Order No. 2990), added January 6, 2016.

13. Priority Mail Contract 175 (MC2016–53 and CP2016–68) (Order No. 2991), added January 6, 2016.

14. Priority Mail Contract 181 (MC2016–65 and CP2016–80) (Order No. 2992), added January 6, 2016.

15. Priority Mail Contract 178 (MC2016–60 and CP2016–75) (Order No. 2993), added January 6, 2016.

16. Priority Mail Express & Priority Mail Contract 27 (MC2016–59 and CP2016–74) (Order No. 2995), added January 6, 2016.

17. Priority Mail Contract 184 (MC2016–66 and CP2016–81) (Order No. 2996), added January 6, 2016.

18. Priority Mail Express, Priority Mail & First-Class Package Service Contract 8 (MC2016–72 and CP2016–87) (Order No. 2997), added January 7, 2016.

19. Priority Mail & First-Class Package Service Contract 12 (MC2016–70 and CP2016–85) (Order No. 2998), added January 7, 2016.

20. Priority Mail Contract 185 (MC2016–69 and CP2016–84) (Order No. 2999), added January 7, 2016.

21. Priority Mail Contract 186 (MC2016–71 and CP2016–86) (Order No. 3001), added January 7, 2016.

22. First-Class Package Service Contract 41 (MC2016–73 and CP2016–88) (Order No. 3002), added January 7, 2016.

23. Priority Mail Contract 182 (MC2016–68 and CP2016–83) (Order No. 3004), added January 7, 2016.

24. Priority Mail Contract 172 (MC2016–49 and CP2016–64) (Order No. 3006), added January 8, 2016.

25. First-Class Package Service Contract 40 (MC2016–51 and CP2016–66) (Order No. 3007), added January 8, 2016.

26. Priority Mail Contract 173 (MC2016–50 and CP2016–65) (Order No. 3009), added January 8, 2016.

27. First-Class Package Service Contract 42 (MC2016–74 and CP2016–91) (Order No. 3018), added January 12, 2016.

28. Parcel Select Contract 13 (MC2016–75 and CP2016–93) (Order No. 3023), added January 12, 2016.

29. Priority Mail & First-Class Package Service Contract 13 (MC2016–76 and CP2016–98) (Order No. 3067), added February 10, 2016.

30. Priority Mail Contract 165 (MC2016–39 and CP2016–48) (Order No. 3069), added February 12, 2016.

31. Priority Mail Contract 166 (MC2016–40 and CP2016–49) (Order No. 3070), added February 12, 2016.

32. Priority Mail Contract 167 (MC2016–41 and CP2016–50) (Order No. 3071), added February 12, 2016.

33. Priority Mail Contract 168 (MC2016–42 and CP2016–51) (Order No. 3072), added February 12, 2016.

34. Priority Mail Contract 169 (MC2016–43 and CP2016–52) (Order No. 3073), added February 12, 2016.

35. Priority Mail Contract 174 (MC2016–52 and CP2016–67) (Order No. 3074), added February 12, 2016.

36. Priority Mail Express, Priority Mail & First-Class Package Service Contract 9 (MC2016–78 and CP2016–103) (Order No. 3102), added February 26, 2016.

37. First-Class Package Service Contract 43 (MC2016–81 and CP2016–106) (Order No. 3110), added February 29, 2016.

38. Priority Mail Contract 188 (MC2016–80 and CP2016–105) (Order No. 3111), added February 29, 2016.

39. Priority Mail Contract 187 (MC2016–79 and CP2016–104) (Order No. 3112), added February 29, 2016.

40. Priority Mail Express Contract 32 (MC2016–77 and CP2016–102) (Order No. 3116), added February 29, 2016.

41. First-Class Package Service Contract 44 (MC2016–82 and CP2016–107) (Order No. 3120), added March 1, 2016.

42. Priority Mail Contract 189 (MC2016–83 and CP2016–108) (Order No. 3135), added March 8, 2016.

43. Priority Mail Express Contract 33 (MC2016–87 and CP2016–112) (Order No. 3136), added March 8, 2016.

44. Priority Mail Contract 190 (MC2016–84 and CP2016–109) (Order No. 3138), added March 8, 2016.

45. Priority Mail & First-Class Package Service Contract 14 (MC2016–88 and CP2016–113) (Order No. 3139), added March 8, 2016.

46. Priority Mail Contract 192 (MC2016–86 and CP2016–111) (Order No. 3140), added March 8, 2016.

47. Priority Mail Contract 191 (MC2016–85 and CP2016–110) (Order No. 3141), added March 8, 2016.

48. Priority Mail & First-Class Package Service Contract 15 (MC2016–89 and CP2016–114) (Order No. 3147), added March 10, 2016.

49. Priority Mail Contract 195 (MC2016–92 and CP2016–117) (Order No. 3152), added March 15, 2016.

50. Priority Mail Contract 193 (MC2016–90 and CP2016–115) (Order No. 3153), added March 15, 2016.

51. Priority Mail Contract 194 (MC2016–91 and CP2016–116) (Order No. 3154), added March 15, 2016.

52. Priority Mail Express Contract 34 (MC2016–93 and CP2016–118) (Order No. 3155), added March 15, 2016.

53. International Merchandise Return Service Agreements with Foreign Postal Operators Non-Published Rates 2 (MC2016–94 and CP2016–119) (Order No. 3160), added March 17, 2016.

54. Priority Mail Contract 196 (MC2016–95 and CP2016–120) (Order No. 3174), added March 22, 2016.

55. First-Class Package Service Contract 45 (MC2016–96 and CP2016–121) (Order No. 3176), added March 23, 2016.

56. Priority Mail Contract 199 (MC2016–100 and CP2016–128) (Order No. 3188), added March 29, 2016.

57. Global Expedited Package Services Contracts Non-Published Rates 10 (MC2016–97 and CP2016–122) (Order No. 3189), added March 29, 2016.

58. Priority Mail Contract 198 (MC2016–99 and CP2016–127) (Order No. 3191), added March 29, 2016.

59. First-Class Package Service Contract 46 (MC2016–103 and CP2016–131) (Order No. 3192), added March 29, 2016.

60. Priority Mail Contract 200 (MC2016–101 and CP2016–129) (Order No. 3194), added March 30, 2016.

61. Priority Mail Express & Priority Mail Contract 28 (MC2016–106 and CP2016–134) (Order No. 3195), added March 30, 2016.

62. First-Class Package Service Contract 47 (MC2016–104 and CP2016–132) (Order No. 3198), added March 30, 2016.

63. Priority Mail & First-Class Package Service Contract 16 (MC2016–105 and CP2016–133) (Order No. 3199), added March 30, 2016.

64. Parcel Select Contract 14 (MC2016–102 and CP2016–130) (Order No. 3200), added March 30, 2016.

65. Priority Mail Express Contract 35 (MC2016–107 and CP2016–135) (Order No. 3201), added March 30, 2016.

66. Priority Mail Contract 197 (MC2016–98 and CP2016–126) (Order No. 3202), added March 30, 2016.

The following negotiated service agreements have expired and are being deleted from the Mail Classification Schedule:

1. Priority Mail Contract 44 (MC2013–2 and CP2013–2) (Order No. 1508).

2. Express Mail & Priority Mail Contract 11 (MC2013–1 and CP2013–1) (Order No. 1509).

3. Priority Mail Contract 50 (MC2013–26 and CP2013–34) (Order No. 1608).

4. Priority Mail Contract 51 (MC2013–31 and CP2013–40) (Order No. 1632).

5. Express Mail Contract 13 (MC2013–32 and CP2013–41) (Order No. 1640).

6. Priority Mail Contract 52 (MC2013–35 and CP2013–46) (Order No. 1646).

7. Priority Mail Contract 53 (MC2013–36 and CP2013–47) (Order No. 1650).

8. Priority Mail Contract 54 (MC2013–37 and CP2013–48) (Order No. 1653).

9. Express Mail Contract 14 (MC2013–41 and CP2013–53) (Order No. 1673).

10. Priority Mail Contract 55 (MC2013–40 and CP2013–52) (Order No. 1675).

11. Priority Mail Contract 48 (MC2013–16 and CP2013–15) (Order No. 1548).

12. Express Mail Contract 11 (MC2011–14 and CP2011–50) (Order No. 644).

Updated product lists. The referenced changes to the product lists are incorporated into 39 CFR Appendix A to Subpart A of Part 3020—Mail Classification Schedule.

List of Subjects in 39 CFR Part 3020

Administrative practice and procedure, Postal Service.

For the reasons discussed in the preamble, the Postal Regulatory Commission amends chapter III of title 39 of the Code of Federal Regulations as follows:

PART 3020—PRODUCT LISTS

■ 1. The authority citation for part 3020 continues to read as follows:

Authority: 39 U.S.C. 503; 3622; 3631; 3642; 3682.

■ 2. Revise Appendix A to Subpart A of Part 3020—Mail Classification Schedule to read as follows:

Appendix A to Subpart A of Part 3020—Mail Classification Schedule

(An asterisk (*) indicates an organizational class or group, not a Postal Service product.)

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Parts 9 and 721****[EPA-HQ-OPPT-2014-0697; FRL-9943-83]****RIN 2070-AK05****Trichloroethylene; Significant New Use Rule****AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: Under the Toxic Substance Control Act (TSCA), EPA is finalizing a significant new use rule (SNUR) for trichloroethylene (TCE). The significant new use is the manufacture or processing for use in a consumer product, with an exception for use of TCE in cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray. Persons subject to the SNUR will be required to notify EPA at least 90 days before commencing any manufacturing or processing of TCE for a significant new use. The required notification will provide EPA with the opportunity to evaluate the intended use and, if necessary based on the information available at that time, an opportunity to protect against potential unreasonable risks, if any, from that activity before it occurs.

DATES: This final rule is effective June 7, 2016.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPPT-2014-0697, is available at <http://www.regulations.gov> or at the Office of Pollution Prevention and Toxics Docket (OPPT Docket), Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPPT Docket is (202) 566-0280. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Tyler Lloyd, Chemical Control Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (202) 564-4016; email address: lloyd.tyler@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:**I. Executive Summary***A. Does this action apply to me?*

You may be potentially affected by this action if you manufacture, process, or distribute in commerce chemical substances and mixtures. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Textile Product Mills (NAICS code 314).
- Wood Product Manufacturing (NAICS code 321).
- Printing and Related Support Activities (NAICS code 323).
- Chemical Manufacturing (NAICS code 325).
- Plastics and Rubber Product Manufacturing (NAICS code 326).
- Primary Metal Manufacturing (NAICS code 331).
- Fabricated Metal Product Manufacturing (NAICS code 332).
- Machinery Manufacturing (NAICS code 333).
- Computer and Electronic Product Manufacturing (NAICS code 334).
- Electrical Equipment, Appliance, and Component Manufacturing (NAICS code 335).
- Transportation Equipment Manufacturing (NAICS code 336).
- Furniture and Product Related Manufacturing (NAICS code 337).
- Miscellaneous Manufacturing (NAICS code 339).
- Clothing and Clothing Accessory Stores (NAICS code 488).
- Warehousing and Storage (NAICS code 493).
- Repair and Maintenance (NAICS code 811).
- National Security and International Affairs (NAICS code 928).

Other types of entities not listed in this unit could also be affected. The NAICS codes have been provided to assist you and others in determining whether this action might apply to certain entities.

This action may also affect certain entities through pre-existing import certification and export notification rules under TSCA. Persons who import any chemical substance governed by a final SNUR are subject to the TSCA

section 13 (15 U.S.C. 2612) import certification requirements and the corresponding regulations at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28. Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including any SNUR requirements. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B. In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), (see 40 CFR 721.20), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

To determine whether you or your business may be affected by this action, you should carefully examine the applicability provisions in 40 CFR 721.5. If you have any questions regarding the applicability of this action to a particular entity, consult the technical information contact listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is the agency's authority for taking this action?

Section 5(a)(2) of TSCA (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a "significant new use." EPA must make this determination by rule after considering all relevant factors, including those listed in TSCA section 5(a)(2). Once EPA determines that a use of a chemical substance is a significant new use, TSCA section 5(a)(1)(B) requires persons to submit a significant new use notice (SNUN) to EPA at least 90 days before they manufacture (including import) or process the chemical substance for that use (15 U.S.C. 2604(a)(1)(B)). As described in Unit V., the general SNUR provisions are found at 40 CFR part 721, subpart A.

C. What action is the agency taking?

This final SNUR will require persons to notify EPA at least 90 days before commencing the manufacture (including import) or processing of TCE for use in a consumer product except for use in cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray.

The SNUR was proposed in the **Federal Register** of August 7, 2015 (80 FR 47441) (FRL-9930-33) (Ref. 1). Please consult the August 7, 2015 **Federal Register** document for further background information for this final rule. Additionally, please note that the

RIN for the proposed SNUR was inadvertently published as RIN 2070-AK50. This final SNUR bears the correct identification, RIN 2070-AK05. EPA received 4 public comments on the proposal and EPA's response to those comments appear in Unit X.

D. Why is the agency taking this action?

This SNUR is necessary to ensure that EPA receives timely advance notice of any future manufacturing and processing of TCE for new uses that may produce changes in human and environmental exposures. The rationale and objectives for this SNUR are explained in Unit III.

E. What are the estimated incremental impacts of this action?

EPA has evaluated the potential costs of establishing SNUR reporting requirements for potential manufacturers and processors of TCE. This analysis (Ref. 2), which is available in the docket, is discussed in Unit IX., and is briefly summarized here.

In the event that a SNUN is submitted, costs are estimated to be less than \$8,900 per SNUN submission for large business submitters and \$6,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN and the payment of a user fee. The SNUR requires first-time submitters of any TSCA section 5 notice to register their company and key users with the CDX reporting tool, deliver a CDX electronic signature to EPA, and establish and use a Pay.gov E-payment account before they may submit a SNUN, for a cost of approximately \$200 per firm. However, these activities are only required of first time submitters of section 5 notices. In addition, for persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country, which is estimated to be approximately \$80 per notification.

II. Chemical Substance Subject to This Rule

This final SNUR applies to TCE (Chemical Abstract Services Registry Number (CASRN) 79-01-6) manufactured (including import) or processed for use in any consumer product, except for use in cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray. A consumer product is defined at 40 CFR 721.3 as "a chemical substance that is directly, or as part of a mixture, sold or made available to consumers for their use in or around a permanent or temporary household or

residence, in or around a school, or in recreation."

III. Rationale and Objectives

A. Rationale

As discussed in detail in Units II and III of the proposed rule (80 FR 47441; August 7, 2015), TCE has the potential to induce neurotoxicity, immunotoxicity, developmental toxicity, liver toxicity, kidney toxicity, endocrine effects, and several forms of cancer (Ref. 3). EPA is concerned about the adverse health effects of TCE resulting from commercial and consumer uses of the chemical substance. In EPA's final risk assessment of TCE, released on June 25, 2014, the Agency identified risks to workers using TCE and to bystanders for use as degreasers and a spot-cleaner in dry cleaning uses, and EPA also identified health risks to consumers using spray aerosol degreasers and spray fixatives (Ref. 3).

EPA believes that any additional use of this chemical substance in consumer products could significantly increase human exposure, and that such exposures should not occur without an opportunity for EPA review and control as appropriate. However, as discussed in Unit II of the proposed rule (80 FR 47441; August 7, 2015), based on review of Safety Data Sheets and the National Institutes of Health's Household Products Database, EPA believes that cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray presently contain TCE and are therefore ongoing uses of this chemical. EPA believes that other consumer products do not presently contain TCE. Spray fixative product use was discontinued by September 1, 2015, as described in Unit II.A of the proposed rule (80 FR 47441).

Consistent with EPA's past practice for issuing SNURs under TSCA section 5(a)(2), EPA's decision to promulgate a SNUR for a particular chemical use need not be based on an extensive evaluation of the hazard, exposure, or potential risk associated with that use. Rather, the Agency action is based on EPA's determination that if the use begins or resumes, it may present a risk that EPA should evaluate under TSCA before the manufacturing or processing for that use begins. Since the new use does not currently exist, deferring a detailed consideration of potential risks or hazards related to that use is an effective use of resources. If a person decides to begin manufacturing or processing the chemical for the use, the notice to EPA allows EPA to evaluate

the use according to the specific parameters and circumstances surrounding that intended use.

B. Objectives

Based on the considerations in Unit III.A., EPA will achieve the following objectives with regard to the significant new use(s) that are designated in this final rule:

1. EPA will receive notice of any person's intent to manufacture or process TCE for the described significant new use before that activity begins.

2. EPA will have an opportunity to review and evaluate data submitted in a SNUN before the notice submitter begins manufacturing or processing TCE for the described significant new use.

3. EPA will be able to regulate prospective manufacturers or processors of TCE before the described significant new use of the chemical substance occurs, provided that regulation is warranted pursuant to TSCA section 5(e), 5(f), 6, or 7.

IV. Significant New Use Determination

Section 5(a)(2) of TSCA states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors including:

1. The projected volume of manufacturing and processing of a chemical substance.

2. The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.

3. The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.

4. The reasonably anticipated manner and methods of manufacturing, processing, distribution in commerce, and disposal of a chemical substance.

In addition to these factors enumerated in TSCA section 5(a)(2), the statute authorizes EPA to consider any other relevant factors.

To determine what would constitute a significant new use of TCE, as discussed in Unit II of the proposed rule (80 FR 47441), EPA considered relevant information about the toxicity of the substance, likely human exposures and environmental releases associated with possible uses, and the four factors listed in section 5(a)(2) of TSCA (80 FR 47441). EPA has determined as the significant new use: Manufacture or processing for any use in a consumer product, except for use in cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray. Because

TCE is not used in consumer products (with the limited exceptions of use in cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray). EPA believes new use in consumer products could increase the magnitude and duration of human exposure to TCE. Exposure to TCE through inhalation may lead to a wide array of adverse health effects, such as neurotoxicity, immunotoxicity, developmental toxicity, liver toxicity, kidney toxicity, endocrine effects, and several forms of cancer, as further explained in Unit II.C of the proposed rule (80 FR 47441), and because of these potential adverse effects EPA would like the opportunity to evaluate such potential uses in consumer products for any associated risks or hazards that might exist before those uses would begin.

V. Applicability of the General Provisions

General provisions for SNURs appear under 40 CFR part 721, subpart A. These provisions describe persons subject to the rule, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the final rule.

Provisions relating to user fees appear at 40 CFR part 700. According to 40 CFR 721.1(c), persons subject to SNURs must comply with the same notice requirements and EPA regulatory procedures as submitters of Premanufacture Notices (PMNs) under TSCA section 5(a)(1)(A). In particular, these requirements include the information submissions requirements of TSCA section 5(b) and 5(d)(1), the exemptions authorized by TSCA section 5(h)(1), (h)(2), (h)(3), and (h)(5), and the regulations at 40 CFR part 720. Once EPA receives a SNUN, EPA may take regulatory action under TSCA section 5(e), 5(f), 6, or 7 to control the activities on which it has received the SNUN. If EPA does not take action, EPA is required under TSCA section 5(g) to explain in the **Federal Register** its reasons for not taking action.

Persons who export or intend to export a chemical substance identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b). The regulations that interpret TSCA section 12(b) appear at 40 CFR part 707, subpart D. In accordance with 40 CFR 707.60(b), this final SNUR does not trigger export notification for articles. Persons who import a chemical substance identified in a final SNUR are subject to the TSCA section 13 import certification

requirements, codified at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28. Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including any SNUR requirements. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B.

VI. Applicability of Rule to Uses Occurring Before Effective Date of the Final Rule

As discussed in the **Federal Register** of April 24, 1990 (55 FR 17376; FRL-3658-5) (Ref. 4), EPA has decided that the intent of section 5(a)(1)(B) of TSCA is best served by designating a use as a significant new use as of the date of publication of the proposed rule rather than as of the effective date of the final rule. If uses begun after publication of the proposed rule were considered ongoing rather than new, it would be difficult for EPA to establish SNUR notice requirements, because a person could defeat the SNUR by initiating the proposed significant new use before the rule became final, and then argue that the use was ongoing as of the effective date of the final rule. Thus, persons who begin commercial manufacture or processing of TCE after the proposal was published on August 7, 2015, must cease such activity before the effective date of this final rule. To resume their activities, these persons would have to comply with all applicable SNUR notice requirements and wait until the notice review period, including all extensions, expires. Uses arising after the publication of the proposed rule are distinguished from uses that exist at publication of the proposed rule. The former would be new uses, the latter ongoing uses, except that uses that are ongoing as of the publication of the proposed rule would not be considered ongoing uses if they have ceased by the date of issuance of a final rule.

However, recognizing that use in a consumer product of TCE in spray fixatives was to cease and did cease by September 1, 2015 as described in Unit II.A. of the proposed rule (80 FR 47441), EPA considers September 1, 2015 as the date from which the significant new use with respect only to such spray fixatives would be designated. Public commenters on the proposed rule did not identify any additional ongoing uses. EPA has promulgated provisions to allow persons to comply with this SNUR before the effective date. If a person were to meet the conditions of advance compliance under 40 CFR 721.45(h), that person would be considered to have met the

requirements of the final SNUR for those activities.

VII. Test Data and Other Information

EPA recognizes that TSCA section 5 does not usually require developing any particular test data before submission of a SNUN. There are two exceptions:

1. Development of test data is required where the chemical substance subject to the SNUR is also subject to a test rule under TSCA section 4 (see TSCA section 5(b)(1)); and

2. Development of test data may be necessary where the chemical substance has been listed under TSCA section 5(b)(4) (see TSCA section 5(b)(2)).

In the absence of a section 4 test rule or a section 5(b)(4) listing covering the chemical substance, persons are required to submit only test data in their possession or control and to describe any other data known to or reasonably ascertainable by them (15 U.S.C. 2604(d); 40 CFR 721.25, and 40 CFR 720.50). However, as a general matter, EPA recommends that SNUN submitters include data that would permit a reasoned evaluation of risks posed by the chemical substance during its manufacture, processing, use, distribution in commerce, or disposal. EPA encourages persons to consult with the Agency before submitting a SNUN. As part of this optional pre-notice consultation, EPA would discuss specific data it believes may be useful in evaluating a significant new use. SNUNs submitted for significant new uses without any test data may increase the likelihood that EPA will take action under TSCA section 5(e) to prohibit or limit activities associated with this chemical.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs that provide detailed information on:

- Human exposure and environmental releases that may result from the significant new uses of the chemical substance;
- Potential benefits of the chemical substance; and
- Information on risks posed by the chemical substances compared to risks posed by potential substitutes.

VIII. SNUN Submissions

EPA recommends that submitters consult with the Agency prior to submitting a SNUN to discuss what data may be useful in evaluating a significant new use. Discussions with the Agency prior to submission can afford ample time to conduct any tests that might be helpful in evaluating risks posed by the substance. According to 40 CFR 721.1(c), persons submitting a SNUN

must comply with the same notice requirements and EPA regulatory procedures as persons submitting a PMN, including submission of test data on health and environmental effects as described in 40 CFR 720.50. SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 721.25 and 40 CFR 720.40. E-PMN software is available electronically at <http://www.epa.gov/opptintr/newchems>.

IX. Economic Analysis

A. SNUNs

EPA has evaluated the potential costs of establishing SNUR reporting requirements for potential manufacturers and processors of the chemical substance included in this final rule (Ref. 2). In the event that a SNUN is submitted, costs are estimated at approximately \$8,900 per SNUN submission for large business submitters and \$6,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN, and the payment of a user fee. Businesses that submit a SNUN would be subject to either a \$2,500 user fee required by 40 CFR 700.45(b)(2)(iii), or, if they are a small business with annual sales of less than \$40 million when combined with those of the parent company (if any), a reduced user fee of \$100 (40 CFR 700.45(b)(1)). EPA's complete economic analysis is available in the public docket for this final rule (Ref. 2).

B. Export Notification

Under section 12(b) of TSCA and the implementing regulations at 40 CFR part 707, subpart D, exporters must notify EPA if they export or intend to export a chemical substance or mixture for which, among other things, a rule has been proposed or promulgated under TSCA section 5. For persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country. The total costs of export notification will vary by chemical, depending on the number of required notifications (*i.e.*, the number of countries to which the chemical is exported). While EPA is unable to make any estimate of the likely number of export notifications for the chemical covered in this final SNUR, as stated in the accompanying economic analysis of this final SNUR, the estimated cost of the export notification requirement on a per unit basis is approximately \$80.

X. Response to Public Comment

The Agency reviewed and considered all comments received related to the proposed rule. Copies of all comments are available in the docket for this action (EPA–HQ–OPPT–2014–0697). A discussion of the major comments germane to the rulemaking and the Agency's responses follow.

A. Support for TCE SNUR

1. *Comment.* One commenter supports the proposed rule and reiterates human health effects related to TCE exposure. (Docket ID# EPA–HQ–OPPT–2014–0697–0009.)

Response. EPA acknowledges the comment.

2. *Comment.* One commenter supports the proposed rule and asks EPA to (a) “broaden the scope of the SNUR to: (1) Include certain commercial uses of TCE, and (2) regularly review ongoing uses of TCE and update the SNUR to include any discontinued uses” and (b) “promptly promulgate a TSCA section 6(a) rule to address identified risks of TCE from ongoing uses.” (Docket ID# EPA–HQ–OPPT–2014–0697–0010.)

Response. The commenter points out that there are “widespread ongoing commercial uses of TCE.” Currently ongoing commercial uses of TCE cannot be included in the SNUR. EPA will continue to monitor uses of TCE and consider promulgating future SNURs for discontinued or other non-ongoing uses.

TSCA section 6 provides authority for EPA to ban or restrict the manufacture (including import), processing, distribution in commerce, and use of chemicals, as well as any manner or method of disposal. EPA identified TCE for risk evaluation as part of its Work Plan for Chemical Assessment under TSCA. TCE is used in industrial and commercial processes, and also has some limited uses in consumer products. In the June 2014 TSCA Work Plan Chemical Risk Assessment, EPA identified risks associated with commercial degreasing and some consumer uses. EPA is initiating rulemaking under TSCA section 6 to address these risks. Specifically, EPA will determine whether the use of TCE in some commercial degreasing uses, as a spotting agent in dry cleaning, and in certain consumer products presents an unreasonable risk to human health and the environment such that regulation is warranted under TSCA section 6.

3. *Comment.* One commenter agrees with the EPA's understanding that TCE is not widely used, with the exception of TCE in cleaners and solvent, degreasers, film cleaners, hoof polishes,

lubricants, mirror edge sealants, and pepper spray. (Docket ID# EPA–HQ–OPPT–2014–0697–0011.)

Response. EPA acknowledges the comment.

4. *Comment.* One commenter asks the Agency to “rescind any exemption to issuing a notice to any party looking to begin using TCE in the production of any consumer good” because TCE “is known to be a volatile organic compound (VOC) with a close association with many adverse health and environmental effects.” (Docket ID# EPA–HQ–OPPT–2014–0697–0008.)

Response. EPA acknowledges the comment. As described in Unit III.A., by issuing this final rule EPA defers, if and until such time as a SNUN is submitted, the opportunity to evaluate the use according to the specific parameters and circumstances surrounding that intended use before such use could occur. In the event that a SNUN is submitted, EPA will follow all regulations and guidelines, pursuant to TSCA section 5(a)(2), that guide the assessment of any environmental and health concerns resulting from the Significant New Use.

B. Review of Work Plan Chemical Risk Assessment

1. *Comment.* One commenter contends that the final Work Plan Chemical Risk Assessment “should not serve as the basis for regulation” and notes specific concerns with it, asking EPA to respond to each. (Docket ID# EPA–HQ–OPPT–2014–0697–0011.)

Response. The peer-reviewed Work Plan Chemical Risk Assessment referenced by the commenter includes an assessment of the hazard of TCE. As described in the risk assessment, TCE is carcinogenic to humans and TCE exposure is associated with a range of non-cancer health effects in humans and animals, including developmental toxicity, immunotoxicity, kidney toxicity, reproductive toxicity, neurotoxicity and liver toxicity. While EPA considered relevant information about the toxicity of the substance, likely human exposures and environmental releases associated with possible uses, and the four factors listed in section 5(a)(2) of TSCA (80 FR 47441), EPA believes that the commenter's specific concerns are not relevant to the “basis for regulation” for this SNUR.

Under section 5(a)(2), EPA is neither required to determine that a particular new use of any chemical substances presents, nor even that it may present, an unreasonable risk to human health or the environment. Rather, EPA issues a SNUR for a particular new use of a

substance if it has reason to anticipate that the use would raise significant questions related to potential exposure, so that it should have an opportunity to review the use before such use should occur. As discussed in Unit IV, EPA based this judgement on a consideration of all relevant factors, including the specific factors identified at section 5(a)(2).

XI. References

The following is a listing of the documents that are specifically referenced in this document. The docket includes these documents and other information considered by EPA, including documents that are referenced within the documents that are included in the docket, even if the referenced document is not physically located in the docket. For assistance in locating these other documents, please consult the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

1. EPA. Trichloroethylene (TCE); Significant New Use Rule; TCE in Certain Consumer Products; Proposed Rule. **Federal Register** (80 FR 47441, August 7, 2015) (FRL–9930–33).
2. EPA. Economic Analysis for the Final Significant New Use Rule for Trichloroethylene (TCE). March 10, 2016.
3. EPA. TSCA Workplan Chemical Risk Assessment—Trichloroethylene: Degreasing, Spot Cleaning and Arts & Crafts Uses; Supporting and Related Material. June 25, 2014.
4. EPA. Significant New Uses of Certain Chemical Substances; Final Rule. **Federal Register** (55 FR 17376, April 24, 1990) (FRL–3658–5).

XII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011).

B. Paperwork Reduction Act (PRA)

This action does not impose any new information collection burden under the PRA, 44 U.S.C. 3501 *et seq.* Burden is defined in 5 CFR 1320.3(b). The information collection activities associated with existing chemical SNURs are already approved by OMB under OMB control number 2070–0038 (EPA ICR No. 1188); and the information collection activities associated with export notifications are already approved by OMB under OMB

control number 2070–0030 (EPA ICR No. 0795). If an entity were to submit a SNUN to the Agency, the annual burden is estimated to be less than 100 hours per response, and the estimated burden for export notifications is less than 1.5 hours per notification. In both cases, burden is estimated to be reduced for submitters who have already registered to use the electronic submission system.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under the PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument, or form, if applicable. EPA is amending the table in 40 CFR part 9 to list this SNUR. This listing of the OMB control numbers and their subsequent codification in the CFR satisfies the display requirements of the PRA and OMB's implementing regulations at 5 CFR part 1320. Since the existing OMB approval was previously subject to public notice and comment before OMB approval, and given the technical nature of the table, EPA finds that further notice and comment to amend the table is unnecessary. As a result, EPA finds that there is "good cause" under section 553(b)(3)(B) of the Administrative Procedure Act, 5 U.S.C. 553(b)(3)(B), to amend this table without further notice and comment.

C. Regulatory Flexibility Act (RFA)

Pursuant to section 605(b) of the RFA, 5 U.S.C. 601 *et seq.*, I certify that this action will not have a significant economic impact on a substantial number of small entities.

A SNUR applies to any person (including small or large entities) who intends to engage in any activity described in the rule as a "significant new use." By definition of the word "new" and based on all information currently available to EPA, it appears that no small or large entities presently engage in such activities. Since this SNUR will require a person who intends to engage in such activity in the future to first notify EPA by submitting a SNUN, no economic impact will occur unless someone files a SNUN to pursue a significant new use in the future or forgoes profits by avoiding or delaying the significant new use. Although some small entities may decide to conduct such activities in the future, EPA cannot presently determine how many, if any, there may be. However, EPA's

experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemical substances, the Agency receives only a handful of notices per year. During the six year period from 2005–2010, only three submitters self-identified as small in their SNUN submission (Ref. 2). EPA believes the cost of submitting a SNUN is relatively small compared to the cost of developing and marketing a chemical new to a firm or marketing a new use of the chemical and that the requirement to submit a SNUN generally does not have a significant economic impact.

Therefore, EPA believes that the potential economic impact of complying with this final SNUR is not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published as a final rule on August 8, 1997 (62 FR 42690) (FRL–5735–4), the Agency presented its general determination that proposed and final SNURs are not expected to have a significant economic impact on a substantial number of small entities.

D. Unfunded Mandates Reform Act (UMRA)

Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by these rulemakings, and EPA does not have any reason to believe that any State, local, or Tribal government would be impacted by this rulemaking. As such, the requirements of sections 202, 203, 204, or 205 of UMRA, 2 U.S.C. 1531–1538, do not apply to this action.

E. Executive Order 13132: Federalism

This action will not have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999).

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This final rule does not have Tribal implications because it is not expected to have any effect (*i.e.*, there will be no increase or decrease in authority or jurisdiction) on Tribal governments, on the relationship between the Federal government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes. Thus, Executive Order 13175 (65 FR 67249,

November 9, 2000) does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997), as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This final rule is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001), because this action is not expected to affect energy supply, distribution, or use.

I. National Technology Transfer and Advancement Act (NTTAA)

Since this action does not involve any technical standards, section 12(d) of NTTAA, 15 U.S.C. 272 note, does not apply to this action.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

This final rule does not invoke special consideration of environmental justice related issues as delineated by Executive Order 12898 (59 FR 7629, February 16, 1994), because EPA has determined that this action will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations. This action does not affect the level of protection provided to human health or the environment.

XIII. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.*, and the EPA will submit a rule report to each House of Congress and the Comptroller of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects

40 CFR Part 9

Environmental protection, Reporting and recordkeeping requirements.

40 CFR Part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: April 4, 2016.

Wendy Cleland-Hamnett,

Director, Office of Pollution Prevention and Toxics.

Therefore, 40 CFR chapter I is amended as follows:

PART 9—[AMENDED]

■ 1. The authority citation for part 9 continues to read as follows:

Authority: 7 U.S.C. 135 *et seq.*, 136–136y; 15 U.S.C. 2001, 2003, 2005, 2006, 2601–2671; 21 U.S.C. 331j, 346a, 348; 31 U.S.C. 9701; 33 U.S.C. 1251 *et seq.*, 1311, 1313d, 1314, 1318, 1321, 1326, 1330, 1342, 1344, 1345 (d) and (e), 1361; E.O. 11735, 38 FR 21243, 3 CFR, 1971–1975 Comp. p. 973; 42 U.S.C. 241, 242b, 243, 246, 300f, 300g, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–1, 300j–2, 300j–3, 300j–4, 300j–9, 1857 *et seq.*, 6901–6992k, 7401–7671q, 7542, 9601–9657, 11023, 11048.

■ 2. In § 9.1, add the following section in numerical order under the undesignated center heading “Significant New Uses of Chemical Substances” to read as follows:

§ 9.1 OMB approvals under the Paperwork Reduction Act.

PART 721—[AMENDED]

■ 3. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 4. Add § 721.10851 to subpart E to read as follows:

§ 721.10851 Trichloroethylene.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance trichloroethylene (CAS 79–01–6) is subject to reporting under this section for the significant new use described in paragraph (a)(2) of this section.

(2) Manufacture or processing for use in a consumer product except for use in

cleaners and solvent degreasers, film cleaners, hoof polishes, lubricants, mirror edge sealants, and pepper spray.

(b) [Reserved]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R03–OAR–2015–0773; FRL–9944–73–Region 3]

Approval and Promulgation of Air Quality Implementation Plans; Pennsylvania; Attainment Plan and Base Year Inventory for the North Reading Area for the 2008 Lead National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a state implementation plan (SIP) revision submitted by the Commonwealth of Pennsylvania (Pennsylvania). The revision demonstrates attainment of the 2008 lead national ambient air quality standards (NAAQS) in the North Reading 2008 lead nonattainment area (North Reading Area or Area). The attainment plan includes the base year emissions inventory, an analysis of reasonably available control technology (RACT), reasonably available control measures (RACM), and reasonable further progress (RFP), modeling demonstration of lead attainment, and contingency measures for the Area. EPA is approving Pennsylvania's lead attainment plan with the base year emissions inventory for the North Reading Area as a revision to Pennsylvania's SIP in accordance with the requirements of the Clean Air Act (CAA).

DATES: This final rule is effective on May 9, 2016.

ADDRESSES: EPA has established a docket for this action under Docket ID Number EPA–R03–OAR–2015–0773. All documents in the docket are listed in the www.regulations.gov Web site. Although listed in the electronic docket, some information is not publicly available, *i.e.*, confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are

available through www.regulations.gov or may be viewed during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the Commonwealth's submittal are available at the Pennsylvania Department of Environmental Protection, Bureau of Air Quality Control, P.O. Box 8468, 400 Market Street, Harrisburg, Pennsylvania 17105.

SUPPLEMENTARY INFORMATION:

I. Background

On January 11, 2016 (81 FR 1136), EPA published a notice of proposed rulemaking (NPR) for the Commonwealth of Pennsylvania. In the NPR, EPA proposed approval of a revision to Pennsylvania's SIP for the purpose of demonstrating attainment of the 2008 lead NAAQS in the North Reading Area. The formal SIP revision was submitted by Pennsylvania on August 12, 2015.

On November 12, 2008 (73 FR 66964), EPA revised the lead NAAQS, lowering the level from 1.5 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) to 0.15 $\mu\text{g}/\text{m}^3$ calculated over a three-month rolling average. Following promulgation of a new or revised NAAQS, EPA is required by the CAA to designate areas throughout the United States as attaining or not attaining the NAAQS; this designation process is described in section 107(d)(1) of the CAA.

On November 22, 2010, EPA designated Alsace and Muhlenberg Townships and the Laureldale Borough, all of which are located in Berks County, Pennsylvania, as the North Reading Area for its nonattainment status with the 2008 lead NAAQS. 76 FR 72097. The designation of the North Reading Area as nonattainment for the 2008 lead NAAQS triggered requirements under section 191(a) of the CAA, requiring Pennsylvania to submit a SIP revision with a plan for how the Area will attain the 2008 lead NAAQS, as expeditiously as practicable, but no later than December 31, 2015.

Section 179(a)(1) of the CAA establishes specific consequences if EPA finds that a state has failed to submit a SIP or, with regard to a submitted SIP, if EPA determines it is incomplete or if EPA disapproves it. Additionally, any of these findings also triggers an obligation for EPA to promulgate a federal implementation plan (FIP) if the state has not submitted, and EPA has not

approved, the required SIP within 2 years of the finding pursuant to section 110(c) of the CAA. On February 25, 2014, the EPA issued a finding that Pennsylvania failed to make the required nonattainment SIP submission for the North Reading Area. 79 FR 10391. With this final approval by EPA of Pennsylvania's North Reading attainment plan SIP in accordance with section 172(c) of the CAA, the Agency no longer has any obligation to issue a FIP for the North Reading Area in accordance with section 110(c) of the CAA.

II. Summary of SIP Revision

On August 12, 2015, Pennsylvania through the Department of Environmental Protection (PADEP) submitted an attainment plan for the North Reading Area as a SIP revision which includes a base year emissions inventory, an attainment demonstration, an analysis of RACM and RACT, provisions for RFP, and contingency measures.

The SIP revision also includes paragraph 3 of a consent order and agreement (COA), dated June 15, 2015, between Exide Technologies (Exide) and PADEP and paragraphs 5 and 22 of a COA, dated June 12, 2015, between Yuasa Battery, Inc (Yuasa) and PADEP. EPA's analysis of the submitted attainment plan includes a review of these elements for the North Reading Area.

EPA's approval of the attainment plan is based on the Agency's finding that the Area meets all lead NAAQS attainment plan requirements under CAA sections 172, 191, and 192. Due to monitored ambient air quality violations in early 2013, before a major source of lead began idling, the Area did not attain the NAAQS, over 36 consecutive three-month periods, by December 2015, the attainment date. However, as a result of implementation of PADEP's August 12, 2015 SIP revision, EPA and PADEP expect the North Reading Area will attain the 2008 lead NAAQS on the basis of 2014–2016 ambient air quality data. EPA is approving the base year emissions inventory submitted with the plan, as well as the RACM/RACT and RFP analyses, the attainment demonstration including modeling, and the contingency measures for the North Reading Area.

Other specific requirements of the SIP submittal attainment plan for the North Reading Area and the rationale for EPA's proposed action are explained in the NPR and its accompanying Technical Support Documents (TSDs)

and will not be restated here.¹ No public comments were received on the NPR.

III. Final Action

EPA is approving the lead attainment plan for the North Reading Area and paragraph 3 of the COA between PADEP and Exide and paragraphs 5 and 22 of the COA between PADEP and Yuasa, as submitted on August 12, 2015 as a revision to the Pennsylvania SIP. EPA has determined that the SIP meets the applicable requirements of the CAA. Specifically, EPA is taking final action to approve Pennsylvania's August 12, 2015 SIP submission which includes the attainment demonstration, base year emissions inventory, RACM/RACT and RFP analyses, and contingency measures.

With the EPA's final approval of Pennsylvania's North Reading attainment plan submittal, EPA no longer has any obligation to promulgate a FIP for the North Reading Area pursuant to sections 110(c) or 172(c) of the CAA.

IV. Statutory and Executive Order Reviews

A. General Requirements

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions

¹ In the Control Strategies, Reasonable Further Progress, and Contingency Measures TSD that accompanied EPA's NPR, published in the **Federal Register** on January 11, 2016 (81 FR 1136), EPA inadvertently made a misstatement when summarizing a small portion of a COA between PADEP and Yuasa Battery, Inc. The statement made in the TSD was "Yuasa shall conduct stack testing on all the stacks listed above in 2020, and thereafter in any year that is divisible, with remainder, by five" when it should have stated "Yuasa shall conduct stack testing on all the stacks listed above in 2020, and thereafter in any year that is divisible, without remainder, by five." This error was inadvertent and in no way alters EPA's conclusion or analysis regarding reasonableness of Pennsylvania's RACM for the North Reading Area.

of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);

- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

- does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country

located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 7, 2016. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action approving

Pennsylvania’s SIP revision containing the attainment plan and base year inventory for the 2008 lead NAAQS in the North Reading Area may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

* * * * *

■ 3. Section 52.2036 is amended by adding paragraph (z) to read as follows:

§ 52.2036 Base year emissions inventory.

* * * * *

(z) EPA approves as a revision to the Pennsylvania state implementation plan the 2010 base year emissions inventory for the North Reading, Pennsylvania nonattainment area for the 2008 lead NAAQS. This SIP revision was submitted by the Secretary of the Pennsylvania Department of

Environmental Protection on August 10, 2015. This submittal consists of the 2010 base year emissions inventories for all relevant sources in the North Reading nonattainment area for the pollutant lead (Pb).

■ 4. Section 52.2055 is amended by adding paragraph (b) to read as follows:

§ 52.2055 Control strategy: Lead.

* * * * *

(b) EPA approves the state implementation plan for the North Reading, Pennsylvania nonattainment

area for the 2008 lead NAAQS. This SIP revision including reasonably available control measures, reasonably available control technology, contingency measures, and attainment demonstration was submitted by the Secretary of the Pennsylvania Department of Environmental Protection on August 10, 2015.

[FR Doc. 2016–07993 Filed 4–7–16; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Parts 52 and 81****[EPA–R04–OAR–2015–0743; FRL–9944–74–Region 4]****Air Plan Approval and Designation of Areas; MS; Redesignation of the DeSoto County, 2008 8-Hour Ozone Nonattainment Area to Attainment****AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: On December 11, 2015, the State of Mississippi, through the Mississippi Department of Environment Quality (MDEQ), submitted a request for the Environmental Protection Agency (EPA) to redesignate the portion of Mississippi that is within the Memphis, Tennessee-Mississippi-Arkansas (Memphis, TN–MS–AR) 2008 8-hour ozone nonattainment area (hereafter referred to as the “Memphis, TN–MS–AR Area” or “Area”) and a related State Implementation Plan (SIP) revision containing a maintenance plan for the Area. EPA is taking the following separate final actions related to the December 11, 2015, redesignation request and SIP revision: Determining that the Memphis, TN–MS–AR Area is attaining the 2008 8-hour ozone national ambient air quality standards (NAAQS); approving the State’s plan for maintaining attainment of the 2008 8-hour ozone NAAQS in the Area, including the motor vehicle emission budgets (MVEBs) for nitrogen oxides (NO_x) and volatile organic compounds (VOC) for the year 2027 for the Mississippi portion of the Area, into the SIP; and redesignating the Mississippi portion of the Area to attainment for the 2008 8-hour ozone NAAQS. Additionally, EPA finds the 2027 MVEBs for the Mississippi portion of the Area adequate for the purposes of transportation conformity.

DATES: This rule will be effective May 9, 2016.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA–R04–OAR–2015–0743. All documents in the docket are listed on the www.regulations.gov Web site. Although listed in the index, some information is not publicly available, *i.e.*, Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are

available either electronically through www.regulations.gov or in hard copy at the Air Regulatory Management Section, Air Planning and Implementation Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office’s official hours of business are Monday through Friday 8:30 a.m. to 4:30 p.m., excluding federal holidays.

FOR FURTHER INFORMATION CONTACT: Sean Lakeman of the Air Regulatory Management Section, Air Planning and Implementation Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. Mr. Lakeman may be reached by phone at (404) 562–9043 or via electronic mail at lakeman.sean@epa.gov.

SUPPLEMENTARY INFORMATION:**I. Background for Final Actions**

On May 21, 2012, EPA designated areas as unclassifiable/attainment or nonattainment for the 2008 8-hour ozone NAAQS that was promulgated on March 27, 2008. *See* 77 FR 30088. The Memphis, TN–MS–AR Area was designated nonattainment for the 2008 8-hour ozone NAAQS on May 21, 2012 (effective July 20, 2012) using 2008–2010 ambient air quality data. *See* 77 FR 30088. The Memphis, TN–MS–AR Area consists of a portion of DeSoto County in Mississippi, all of Shelby County in Tennessee, and all of Crittenden County in Arkansas. At the time of designation, the Memphis, TN–MS–AR Area was classified as a marginal nonattainment area for the 2008 8-hour ozone NAAQS. In the final implementation rule for the 2008 8-hour ozone NAAQS (SIP Implementation Rule),¹ EPA established ozone nonattainment area attainment dates based on Table 1 of section 181(a) of the Clean Air Act (CAA or Act). This

¹ This rule, entitled Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements and published at 80 FR 12264 (March 6, 2015), addresses a range of nonattainment area SIP requirements for the 2008 ozone NAAQS, including requirements pertaining to attainment demonstrations, reasonable further progress (RFP), reasonably available control technology (RACT), reasonably available control measures (RACM), major new source review (NSR), emission inventories, and the timing of SIP submissions and of compliance with emission control measures in the SIP. This rule also addresses the revocation of the 1997 ozone NAAQS and the anti-backsliding requirements that apply when the 1997 ozone NAAQS are revoked.

established an attainment date three years after the July 20, 2012, effective date for areas classified as marginal areas for the 2008 8-hour ozone nonattainment designations. Therefore, the Memphis, TN–MS–AR Area’s attainment date is July 20, 2015.

On December 11, 2015, MDEQ requested that EPA redesignate Mississippi’s portion of the Memphis, TN–MS–AR Area to attainment for the 2008 8-hour ozone NAAQS and submitted a SIP revision containing the State’s plan for maintaining attainment of the 2008 8-hour ozone standard in the Area, including the MVEBs for NO_x and VOC for the year 2027 for the Mississippi portion of the Area.² In a notice of proposed rulemaking (NPRM) published on February 11, 2016, EPA proposed to determine that the Memphis, TN–MS–AR Area is attaining the 2008 8-hour ozone NAAQS; to approve and incorporate into the Mississippi SIP the State’s plan for maintaining attainment of the 2008 8-hour ozone standard in the Area, including the 2027 MVEBs for NO_x and VOC for Mississippi’s portion of Memphis, TN–MS–AR Area; and to redesignate the Mississippi portion of the Area to attainment for the 2008 8-hour ozone NAAQS. *See* 81 FR 7269. In that notice, EPA also notified the public of the status of the Agency’s adequacy determination for the NO_x and VOC MVEBs for Mississippi’s portion of Memphis, TN–MS–AR Area. No comments were received on the February 11, 2016, proposed rulemaking. The details of Mississippi’s submittal and the rationale for EPA’s actions are further explained in the NPRM. *See* 81 FR 7269 (February 11, 2016).

II. What are the effects of these actions?

Approval of Mississippi’s redesignation request changes the legal designation of DeSoto County in the Mississippi portion of the Memphis, TN–MS–AR Area, found at 40 CFR 81.325, from nonattainment to attainment for the 2008 8-hour ozone NAAQS. Approval of Mississippi’s associated SIP revision also incorporates a plan into the SIP for maintaining the 2008 8-hour ozone NAAQS in the Mississippi portion of the Memphis, TN–MS–AR Area through 2027. The maintenance plan establishes NO_x and VOC MVEBs for 2027 for the DeSoto County portion of the Memphis, TN–MS–AR Area and includes contingency measures to remedy any future

² The Mississippi Commission on Environmental Quality adopted the SIP revision containing the maintenance plan on December 2, 2015.

violations of the 2008 8-hour ozone NAAQS and procedures for evaluating potential violations. The MVEBs for the

Mississippi portion of the Memphis, TN–MS–AR Area, along with the

allocations from the safety margin, are provided in the table below.³

MVEBS FOR THE MISSISSIPPI PORTION OF THE MEMPHIS, TN–MS–AR AREA

[tpd]

| | 2027 | |
|---------------------------------------|-----------------|------|
| | NO _x | VOC |
| On-Road Emissions | 2.74 | 2.54 |
| Safety Margin Allocated to MVEB | 5.26 | 2.46 |
| Conformity MVEB | 8.00 | 5.00 |

III. Final Actions

EPA is taking three separate final actions regarding Mississippi's December 11, 2015, request to redesignate the Mississippi portion of the Memphis, TN–MS–AR Area to attainment and associated SIP revision. First, EPA is determining that the Memphis, TN–MS–AR Area is attaining the 2008 8-hour ozone NAAQS.

Second, EPA is approving and incorporating the maintenance plan for the Memphis, TN–MS–AR Area, including the NO_x and VOC MVEBs for 2027, into the Mississippi SIP. The maintenance plan demonstrates that the Area will continue to maintain the 2008 8-hour ozone NAAQS through 2027.

Third, EPA is determining that Mississippi has met the criteria under CAA section 107(d)(3)(E) for redesignation of the State's portion of the Memphis, TN–MS–AR Area from nonattainment to attainment for the 2008 8-hour ozone NAAQS. On this basis, EPA is approving Mississippi's redesignation request. As mentioned above, approval of the redesignation request changes the official designation of DeSoto County in the Mississippi portion of the Memphis, TN–MS–AR Area for the 2008 8-hour ozone NAAQS from nonattainment to attainment, as found at 40 CFR part 81.

EPA is also notifying the public that EPA finds the newly-established NO_x and VOC MVEBs for the Mississippi portion of the Memphis, TN–MS–AR Area adequate for the purpose of transportation conformity. Within 24 months from this final rule, the transportation partners will need to demonstrate conformity to the new NO_x and VOC MVEBs pursuant to 40 CFR 93.104(e)(3).

IV. Statutory and Executive Order Reviews

Under the CAA, redesignation of an area to attainment and the accompanying approval of a maintenance plan under section 107(d)(3)(E) are actions that affect the status of a geographical area and do not impose any additional regulatory requirements on sources beyond those imposed by state law. A redesignation to attainment does not in and of itself create any new requirements, but rather results in the applicability of requirements contained in the CAA for areas that have been redesignated to attainment. Moreover, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, these actions merely approve state law as meeting Federal requirements and do not impose additional requirements beyond those imposed by state law. For this reason, these actions:

- Are not significant regulatory actions subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- do not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- are certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- do not contain any unfunded mandate or significantly or uniquely affect small governments, as described

in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

- do not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- are not economically significant regulatory actions based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- are not significant regulatory actions subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- are not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- will not have disproportionate human health or environmental effects under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in

³ As discussed in the NPRM, the safety margin is the difference between the attainment level of emissions (from all sources) and the projected level

of emissions (from all sources) in the maintenance plan. Mississippi chose to allocate a portion of the available safety margin to the NO_x and VOC MVEBs

for 2027. MDEQ has allocated 5.26 tpd of the NO_x safety margin to the 2027 NO_x MVEB and 2.46 tpd of the VOC safety margin to the 2027 VOC MVEB.

the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 7, 2016. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to

enforce its requirements. *See* section 307(b)(2).

[FR Doc. 2016–08155 Filed 4–7–16; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2015–0197; FRL–9942–99]

Fluazinam; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of fluazinam in or on cabbage, mayhaw, the cucurbit vegetable crop group 9, and the tuberous and corm vegetable subgroup 1C and amends the existing tolerance for “vegetable, *Brassica* leafy, group 5” to read “vegetable, *Brassica* leafy, group 5, except cabbage.” Interregional Research Project Number 4 (IR–4) requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective April 8, 2016. Objections and requests for hearings must be received on or before June 7, 2016, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2015-0197, is available at <http://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Susan Lewis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: RDFFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of EPA's tolerance regulations at 40 CFR part 180 through the Government Printing Office's e-CFR site at http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2015-0197 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before June 7, 2016. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA-HQ-OPP-2015-0197, by one of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- **Mail:** OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.
- **Hand Delivery:** To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

II. Summary of Petitioned-For Tolerance

In the **Federal Register** of May 20, 2015 (80 FR 28925) (FRL-9927-39), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 5E8349) by IR-4, 500 College Road East, Suite 201W, Princeton, NJ 08540. The petition requested that 40 CFR part 180 be

amended by establishing tolerances for residues of the fungicide fluazinam (3-chloro-N-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-2-pyridinamine), including its metabolites and degradates in or on mayhaw at 2.0 parts per million (ppm); cabbage at 3.0 ppm; the squash/cucumber subgroup 9B at 0.05 ppm; and vegetable, tuberous and corm, subgroup 1C at 0.02 ppm. The petition also requested to amend the tolerances in 40 CFR 180.574 in or on the vegetable, *Brassica* leafy, group 5 at 0.01 by changing it to read "vegetable, *Brassica* leafy, group 5, except cabbage" at 0.01 ppm and by removing the existing tolerance on potato at 0.02 ppm upon approval of the requested tolerance on the tuberous and corm subgroup 1C. That document referenced a summary of the petition prepared by ISK Biosciences, the registrant, which is available in the docket, <http://www.regulations.gov>. There were no comments received in response to the notice of filing.

EPA is combining the existing tolerance for the melon subgroup 9A tolerance with the proposed squash/cucumber subgroup 9B tolerance and establishing a tolerance for the entire cucurbit vegetable crop group 9, rather than just subgroup 9B. The reason for these changes is explained in Unit IV.C.

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is "safe." Section 408(b)(2)(A)(ii) of FFDCA defines "safe" to mean that "there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information." This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to "ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . ."

Consistent with FFDCA section 408(b)(2)(D), and the factors specified in FFDCA section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has

sufficient data to assess the hazards of and to make a determination on aggregate exposure for fluazinam including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with fluazinam follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered its validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children.

The liver is a primary target organ for fluazinam and numerous liver effects were observed in rats, mice, and dogs after oral and dermal exposure. After inhalation exposure, portal of entry effects (increased lung/bronchial weights, alveolar macrophages and peribronchiolar proliferation) were seen.

Clinical signs were observed in an acute oral neurotoxicity study in rats; decreases in motor activity and soft stools were seen on the day of dosing at the limit dose. These effects were attributed to systemic toxicity and were not considered to be evidence of frank neurotoxicity. In two subchronic neurotoxicity studies (evaluated together) in rats, no evidence of neurotoxicity was observed. A neurotoxic lesion was observed initially in long-term studies in mice and dogs; however, the lesion is reversible and was later attributed to the presence of an impurity (Impurity-5) in the technical material. A NOAEL for the impurity was determined (based on the maximum concentration of Impurity-5 in technical grade fluazinam), equivalent to a NOAEL for central nervous system (CNS) effects of 20 mg/kg/day for technical grade fluazinam. The current acute and chronic reference doses selected for risk assessment are lower than the determined NOAEL and thus, protective of any possible neurotoxic effects resulting from exposure to Impurity-5.

In an immunotoxicity study in mice, significant suppressions of anti-SRBC AFC assay response were demonstrated at the highest dose tested indicating potential immunotoxicity. However, clear NOAELs and LOAELs were identified for the effects seen in the study and the points of departure (PODs) and endpoints selected for risk assessment are protective of immunotoxic effects.

There was no evidence of increased quantitative or qualitative susceptibility

in the rabbit developmental or rat reproduction studies. However, quantitative susceptibility was seen in rat developmental and developmental neurotoxicity (DNT) studies where fetal/offspring effects were observed in the absence of maternal toxicity. The concern is low for the increased susceptibility noted in the studies since clear NOAELs are established, and the most sensitive endpoints/PODs are used for risk assessment and are protective of the observed susceptibility. Therefore, the Food Quality Protection Act (FQPA) safety factor (SF) has been reduced to 1x.

Fluazinam is classified as having "Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential," based on increases in thyroid gland follicular cell tumors in male rats and increases in hepatocellular tumors in male mice. Although there is evidence of thyroid tumors in male rats and liver tumors in male mice, the NOAEL used (1.12 mg/kg/day) for establishing the chronic reference dose (cRfD) is approximately 3-fold lower than the lowest dose that induced tumors (3.8 mg/kg/day). The Agency has determined that quantification of cancer risk using a non-linear approach (cRfD) would adequately account for all chronic toxicity, including carcinogenicity, which could result from exposure to fluazinam.

Specific information on the studies received and the nature of the adverse effects caused by fluazinam as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies can be found at <http://www.regulations.gov> in the document titled "Fluazinam. Human Health Risk Assessment to Support Section 3 Registration for New Uses on Tuberous and Corm, Subgroup 1C, Mayhaw, Squash/Cucumber Subgroup 9B; Amended Uses on Cabbage" on page 44 in docket ID number EPA-HQ-OPP-2015-0197.

B. Toxicological Points of Departure/ Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the

dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see <http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/assessing-human-health-risk-pesticides>.

A summary of the toxicological endpoints for fluazinam used for human risk assessment is discussed in Unit III.B. of the final rule published in the **Federal Register** of November 7, 2012 (77 FR 66723) (FRL-9366-6).

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to fluazinam, EPA considered exposure under the petitioned-for tolerances as well as all existing fluazinam tolerances in 40 CFR 180.574. EPA assessed dietary exposures from fluazinam in food as follows:

i. *Acute exposure.* Quantitative acute dietary exposure and risk assessments are performed for a food-use pesticide, if a toxicological study has indicated the possibility of an effect of concern occurring as a result of a 1-day or single exposure. Such effects were identified for fluazinam. In estimating acute dietary exposure, EPA used food consumption information from the 2003–2008 United States Department of Agriculture's (USDA's) National Health and Nutrition Examination Survey, What We Eat in America, (NHANES/WWEIA). As to residue levels in food, the acute analysis is based on tolerance-level residues for all commodities and uses high-end residue estimates for the metabolite AMGT ((3-[[4-amino-3-[[3-chloro-5-(trifluoromethyl)-2-pyridinyl]amino]-2-nitro-6-(trifluoromethyl) phenyl]thio]-2-(beta-D-glucopyranosyloxy) propionic acid)). In addition, the acute assessment assumes 100 percent crop treated (PCT).

ii. *Chronic exposure.* In conducting the chronic dietary exposure assessment EPA used the food consumption data from the USDA's NHANES/WWEIA. As to residue levels in food, the chronic

analysis is based on tolerance-level residues for all commodities except apples. For apples, the average field trial value was used. As with the acute assessment, it incorporates high-end estimates for AMGT, 100 PCT assumptions, default processing factors for all relevant processed commodities without a separate tolerance.

iii. *Cancer.* Based on the data summarized in Unit III.A., EPA has concluded that a nonlinear RfD approach is appropriate for assessing cancer risk to fluazinam. Cancer risk was assessed using the same exposure estimates as discussed in Unit III.C.1.ii.

iv. *Anticipated residue and PCT information.* Section 408(b)(2)(E) of FFDCA authorizes EPA to use available data and information on the anticipated residue levels of pesticide residues in food and the actual levels of pesticide residues that have been measured in food. If EPA relies on such information, EPA must require pursuant to FFDCA section 408(f)(1) that data be provided 5 years after the tolerance is established, modified, or left in effect, demonstrating that the levels in food are not above the levels anticipated. For the present action, EPA will issue such data call-ins as are required by FFDCA section 408(b)(2)(E) and authorized under FFDCA section 408(f)(1). Data will be required to be submitted no later than 5 years from the date of issuance of these tolerances.

2. *Dietary exposure from drinking water.* The Agency used screening level water exposure models in the dietary exposure analysis and risk assessment for fluazinam and its transformation products, including DCPA (6-(4-carboxy-3-chloro-2,6-dinitroanilino)-5-chloronicotinic acid), CAPA (3-chloro-6-(3-chloro-2,6-dinitro-4-trifluoromethyl anilino)nicotinic acid), DAPA (3-chloro-N⁴-(3-chloro-5-trifluoromethyl-2-pyridyl)- α,α,α -trifluorotoluene-3,5,5-triamine; 3-chloro-2-(2,6-diamino-3-chloro- α,α,α -trifluoro-p-toluidino)-5-(trifluoromethyl) pyridine), HYPA (5-[[3-chloro-5-(trifluoromethyl-2-pyridyl)amino]- α,α,α -trifluoro-4,6-dinitro-o-cresol]), and AMPA (2-(6-amino-3-chloro- α,α,α -trifluoro-2-nitro-p-toluidino)-3-chloro-5-(trifluoromethyl)pyridine).

These simulation models take into account data on the physical, chemical, and fate/transport characteristics of fluazinam and its transformation products. Further information regarding EPA drinking water models used in pesticide exposure assessment can be found at <http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/about-water-exposure-models-used-pesticide>.

Based on the First Index Reservoir Screening Tool (FIRST) and the Pesticide Root Zone Model Ground Water (PRZM GW) models, the estimated drinking water concentrations (EDWCs) for total residues of fluazinam and its transformation products for acute exposures are estimated to be 226 parts per billion (ppb) for surface water and 137 ppb for ground water and for chronic exposures are estimated to be 37.8 ppb for surface water and 119 ppb for ground water.

Modeled estimates of drinking water concentrations were directly entered into the dietary exposure model. For the acute dietary risk assessment, the water concentration value of 226 ppb was used to assess the contribution to drinking water, and for the chronic dietary risk assessment, the water concentration of value 119 ppb was used to assess the contribution to drinking water.

3. *From non-dietary exposure.* The term “residential exposure” is used in this document to refer to non-occupational, non-dietary exposure (e.g., for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets).

Fluazinam is currently registered for the following uses that could result in residential exposures: golf course turf. EPA assessed residential exposure using the following assumptions: Only short-term dermal exposure is expected for residential post-application scenarios for children, teens, and adults who could potentially be exposed when they play golf on treated turf. No other residential exposures are expected. Further information regarding EPA standard assumptions and generic inputs for residential exposures may be found at <http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/standard-operating-procedures-residential-pesticide>.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider “available information” concerning the cumulative effects of a particular pesticide’s residues and “other substances that have a common mechanism of toxicity.”

EPA has not found fluazinam to share a common mechanism of toxicity with any other substances, and fluazinam does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that fluazinam does not have a common mechanism of toxicity with

other substances. For information regarding EPA’s efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA’s Web site at <http://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides>.

D. Safety Factor for Infants and Children

1. *In general.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the FQPA SF. In applying this provision, EPA either retains the default value of 10x, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* There was no evidence of increased quantitative or qualitative susceptibility in the rabbit developmental or rat reproduction studies. However, quantitative susceptibility was seen in rat developmental and DNT studies where fetal/offspring effects were observed in the absence of maternal toxicity. The concern is low for the increased susceptibility noted in the studies since clear NOAELs are established, and the most sensitive endpoints/PODs are used for risk assessment and are protective of the observed susceptibility.

3. *Conclusion.* EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1x. That decision is based on the following findings:

i. The toxicity database for fluazinam is complete.

ii. Although indications of neurotoxicity and immunotoxicity were observed in the database for fluazinam, there were clear NOAELs for these effects, and the endpoints and doses for risk assessment are protective of the potential effects.

iii. There is no evidence that fluazinam results in increased susceptibility in the rabbit developmental or rat reproduction studies. However, quantitative susceptibility was seen in rat developmental and DNT studies where fetal/offspring effects were observed in

the absence of maternal toxicity. The concern is low for the increased susceptibility noted in the studies since clear NOAELs are established, and the most sensitive endpoints/PODs are used for risk assessment.

iv. There are no residual uncertainties identified in the exposure databases. The dietary food exposure assessments were performed based on 100 PCT and tolerance-level residues for all commodities except apples, where anticipated residues were used in the chronic assessment. EPA made conservative (protective) assumptions in the ground and surface water modeling used to assess exposure to fluazinam and its transformation products in drinking water. EPA used similarly conservative assumptions to assess post-application exposure of children. These assessments will not underestimate the exposure and risks posed by fluazinam.

E. Aggregate Risks and Determination of Safety

EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute PAD (aPAD) and chronic PAD (cPAD). For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate PODs to ensure that an adequate MOE exists.

1. *Acute risk.* Using the exposure assumptions discussed in this unit for acute exposure, the acute dietary exposure from food and water to fluazinam will occupy 32% of the aPAD for females 13–49 years old, the population group receiving the greatest exposure.

2. *Chronic risk.* Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to fluazinam from food and water will utilize 92% of the cPAD for all infants, the population group receiving the greatest exposure. Based on the explanation in Unit III.C.3., regarding residential use patterns, chronic residential exposure to residues of fluazinam is not expected.

3. *Short-term risk.* Short-term aggregate exposure takes into account short-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level). Fluazinam is currently registered for uses that could result in short-term residential exposure, and the Agency has determined that it is appropriate to aggregate chronic

exposure through food and water with short-term residential exposures to fluazinam.

Using the exposure assumptions described in this unit for short-term exposures, EPA has concluded the combined short-term food, water, and residential exposures result in aggregate MOEs of 690 for children 6 to <11 years old, 820 for youth 11 to <16 years old and 890 for adults. Because EPA's level of concern for fluazinam is a MOE of 100 or below, these MOEs are not of concern.

4. Intermediate-term risk.

Intermediate-term aggregate exposure takes into account intermediate-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

An intermediate-term adverse effect was identified; however, fluazinam is not registered for any use patterns that would result in intermediate-term residential exposure. Intermediate-term risk is assessed based on intermediate-term residential exposure plus chronic dietary exposure. Because there is no intermediate-term residential exposure and chronic dietary exposure has already been assessed under the appropriately protective cPAD (which is at least as protective as the POD used to assess intermediate-term risk), no further assessment of intermediate-term risk is necessary, and EPA relies on the chronic dietary risk assessment for evaluating intermediate-term risk for fluazinam.

5. *Aggregate cancer risk for U.S. population.* EPA assessed cancer risk using a non-linear approach (*i.e.*, RfD) since it adequately accounts for all chronic toxicity, including carcinogenicity, that could result from exposure to fluazinam. As the chronic dietary endpoint and dose are protective of potential cancer effects, fluazinam is not expected to pose an aggregate cancer risk.

6. *Determination of safety.* Based on these risk assessments, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to fluazinam residues.

IV. Other Considerations

A. Analytical Enforcement Methodology

An adequate Gas Chromatography with Electron Capture Detector (GC/ECD) method is available for enforcing fluazinam tolerances on plant commodities.

The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701

Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; email address: residuemethods@epa.gov.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint United Nations Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The Codex has not established MRLs for fluazinam for any of the commodities covered by this action.

C. Revisions to Petitioned-For Tolerances

Because the tolerance level for the existing melon subgroup 9A is the same as the squash/cucumber subgroup 9B tolerance the Agency is establishing, the Agency is combining the tolerances for the two subgroups and establishing a tolerance for the entire cucurbit vegetable crop group 9.

V. Conclusion

Therefore, tolerances are established for residues of fluazinam (3-chloro-N-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-2-pyridinamine), including its metabolites and degradates in or on mayhaw at 2.0 ppm; cabbage at 3.0 ppm; cucurbit vegetables crop group 9 at 0.07 ppm; and vegetable, tuberous and corm, subgroup 1C at 0.02 ppm. In addition, the existing tolerance on the vegetable, *Brassica* leafy, group 5 at 0.01 is modified to read “vegetable, *Brassica* leafy, group 5, except cabbage” at 0.01 ppm and the existing tolerance on potato at 0.02 ppm is removed as unnecessary since it is covered by the tolerance on the tuberous and corm subgroup 1C, and the melon subgroup 9A tolerance is removed since it is now replaced by the cucurbit vegetables crop group 9 tolerance.

VI. Statutory and Executive Order Reviews

This action establishes tolerances under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as

described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: March 31, 2016.

G. Jeffrey Herndon,

Acting Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

- 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

- 2. In § 180.574, amend the table in paragraph (a)(1) as follows:

- a. Alphabetically add the entries “Cabbage” and “Mayhaw”.
 ■ b. Remove the entries “Melon subgroup 9A” and “Potato”.
 ■ c. Remove the entry for “Vegetable, *Brassica* leafy, group 5” and alphabetically add entries for “Vegetable, *Brassica* leafy, group 5, except cabbage” and “Vegetable, tuberous and corm, subgroup 1C”.

The additions read as follows:

§ 180.574 Fluazinam; tolerances for residues.

(a) * * * (1) * * *

| Commodity | Parts per million |
|---------------|-------------------|
| Cabbage | 3.0 |
| Mayhaw | 2.0 |

| Commodity | Parts per million |
|--|-------------------|
| * * * * * | |
| Vegetable, <i>Brassica</i> leafy, group 5, except cabbage | 0.01 |
| Vegetable, cucurbit, group 9 .. | 0.07 |
| * * * * * | |
| Vegetable, tuberous and corm, subgroup 1C | 0.02 |

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 229

[Docket No. 150306230–6303–02]

RIN 0648–BE88

List of Fisheries for 2016

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: The National Marine Fisheries Service (NMFS) publishes its final List of Fisheries (LOF) for 2016, as required by the Marine Mammal Protection Act (MMPA). The final LOF for 2016 reflects new information on interactions between commercial fisheries and marine mammals. NMFS must classify each commercial fishery on the LOF into one of three categories under the MMPA based upon the level of mortality and serious injury of marine mammals that occurs incidental to each fishery. The classification of a fishery on the LOF determines whether participants in that fishery are subject to certain provisions of the MMPA, such as registration, observer coverage, and take reduction plan (TRP) requirements. In addition, NMFS begins publishing online fact sheets for Category III fisheries on a rolling basis.

DATES: The effective date of this final rule is May 9, 2016.

ADDRESSES: Chief, Marine Mammal and Sea Turtle Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Lisa White, Office of Protected Resources, 301–427–8494; Allison Rosner, Greater Atlantic Region, 978–281–9328; Jessica Powell, Southeast Region, 727–824–

5312; Elizabeth Petras, West Coast Region, 206–526–6155; Bridget Mansfield, Alaska Region, 907–586–7642; Dawn Golden, Pacific Islands Region, 808–725–5000. Individuals who use a telecommunications device for the hearing impaired may call the Federal Information Relay Service at 1–800–877–8339 between 8 a.m. and 4 p.m. Eastern time, Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION:

What is the list of fisheries?

Section 118 of the MMPA requires NMFS to place all U.S. commercial fisheries into one of three categories based on the level of incidental mortality and serious injury of marine mammals occurring in each fishery (16 U.S.C. 1387(c)(1)). The classification of a fishery on the LOF determines whether participants in that fishery may be required to comply with certain provisions of the MMPA, such as registration, observer coverage, and take reduction plan requirements. NMFS must reexamine the LOF annually, considering new information in the Marine Mammal Stock Assessment Reports (SARs) and other relevant sources, and publish in the **Federal Register** any necessary changes to the LOF after notice and opportunity for public comment (16 U.S.C. 1387(c)(1)(C)).

How does NMFS determine in which category a fishery is placed?

The definitions for the fishery classification criteria can be found in the implementing regulations for section 118 of the MMPA (50 CFR 229.2). The criteria are also summarized here.

Fishery Classification Criteria

The fishery classification criteria consist of a two-tiered, stock-specific approach that first addresses the total impact of all fisheries on each marine mammal stock and then addresses the impact of individual fisheries on each stock. This approach is based on consideration of the rate, in numbers of animals per year, of incidental mortalities and serious injuries of marine mammals due to commercial fishing operations relative to the potential biological removal (PBR) level for each marine mammal stock. The MMPA (16 U.S.C. 1362 (20)) defines the PBR level as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population. This definition can also be found in the

implementing regulations for section 118 of the MMPA (50 CFR 229.2).

Tier 1: Tier 1 considers the cumulative fishery mortality and serious injury for a particular stock. If the total annual mortality and serious injury of a marine mammal stock, across all fisheries, is less than or equal to 10 percent of the PBR level of the stock, all fisheries interacting with the stock will be placed in Category III (unless those fisheries interact with other stock(s) in which total annual mortality and serious injury is greater than 10 percent of PBR). Otherwise, these fisheries are subject to the next tier (Tier 2) of analysis to determine their classification.

Tier 2: Tier 2 considers fishery-specific mortality and serious injury for a particular stock.

Category I: Annual mortality and serious injury of a stock in a given fishery is greater than or equal to 50 percent of the PBR level (*i.e.*, frequent incidental mortality and serious injury of marine mammals).

Category II: Annual mortality and serious injury of a stock in a given fishery is greater than 1 percent and less than 50 percent of the PBR level (*i.e.*, occasional incidental mortality and serious injury of marine mammals).

Category III: Annual mortality and serious injury of a stock in a given fishery is less than or equal to 1 percent of the PBR level (*i.e.*, a remote likelihood of or no known incidental mortality and serious injury of marine mammals).

Additional details regarding how the categories were determined are provided in the preamble to the final rule implementing section 118 of the MMPA (60 FR 45086, August 30, 1995).

Because fisheries are classified on a per-stock basis, a fishery may qualify as one Category for one marine mammal stock and another Category for a different marine mammal stock. A fishery is typically classified on the LOF at its highest level of classification (*e.g.*, a fishery qualifying for Category III for one marine mammal stock and for Category II for another marine mammal stock will be listed under Category II). Stocks driving a fishery's classification are denoted with a superscript "1" in Tables 1 and 2.

Other Criteria That May Be Considered

The tier analysis requires a minimum amount of data, and NMFS does not have sufficient data to perform a tier analysis on certain fisheries. Therefore, NMFS has classified certain fisheries by analogy to other Category I or II fisheries that use similar fishing techniques or gear that are known to cause mortality

or serious injury of marine mammals, or according to factors discussed in the final LOF for 1996 (60 FR 67063, December 28, 1995) and listed in the regulatory definition of a Category II fishery: "In the absence of reliable information indicating the frequency of incidental mortality and serious injury of marine mammals by a commercial fishery, NMFS will determine whether the incidental mortality or serious injury is 'frequent,' 'occasional,' or 'remote' by evaluating other factors such as fishing techniques, gear used, methods used to deter marine mammals, target species, seasons and areas fished, qualitative data from logbooks or fisher reports, stranding data, and the species and distribution of marine mammals in the area, or at the discretion of the Assistant Administrator for Fisheries" (50 CFR 229.2).

Further, eligible commercial fisheries not specifically identified on the LOF are deemed to be Category II fisheries until the next LOF is published (50 CFR 229.2).

How does NMFS determine which species or stocks are included as incidentally killed or injured in a fishery?

The LOF includes a list of marine mammal species and/or stocks incidentally killed or injured in each commercial fishery. The list of species and/or stocks incidentally killed or injured includes "serious" and "non-serious" documented injuries as described later in the List of Species and/or Stocks Incidentally Killed or Injured in the Pacific Ocean and the Atlantic Ocean, Gulf of Mexico, and Caribbean sections. To determine which species or stocks are included as incidentally killed or injured in a fishery, NMFS annually reviews the information presented in the current SARs and injury determination reports. The SARs are based upon the best available scientific information and provide the most current and inclusive information on each stock's PBR level and level of interaction with commercial fishing operations. The best available scientific information used in the SARs reviewed for the 2016 LOF generally summarizes data from 2008–2012. NMFS also reviews other sources of new information, including injury determination reports, bycatch estimation reports, observer data, logbook data, stranding data, disentanglement network data, fisher self-reports (*i.e.*, MMPA reports), and anecdotal reports from that time period. In some cases, more recent information may be available and used in the LOF, but in an effort to be consistent with the

most recent SARs and across the LOF, NMFS typically restricts the analysis to data within the five-year time period summarized in the current SAR.

For fisheries with observer coverage, species or stocks are generally removed from the list of marine mammal species and/or stocks incidentally killed or injured if no interactions are documented in the five-year timeframe summarized in that year's LOF. For fisheries with no observer coverage and for observed fisheries with evidence indicating that undocumented interactions may be occurring (e.g., fishery has low observer coverage and stranding network data include evidence of fisheries interaction that cannot be attributed to a specific fishery) species and stocks may be retained for longer than five years. For these fisheries, NMFS will review the other sources of information listed above and use its discretion to decide when it is appropriate to remove a species or stock.

Where does NMFS obtain information on the level of observer coverage in a fishery on the LOF?

The best available information on the level of observer coverage and the spatial and temporal distribution of observed marine mammal interactions is presented in the SARs. Data obtained from the observer program and observer coverage levels are important tools in estimating the level of marine mammal mortality and serious injury in commercial fishing operations. Starting with the 2005 SARs, each SAR includes an appendix with detailed descriptions of each Category I and II fishery on the LOF, including the observer coverage in those fisheries. The SARs generally do not provide detailed information on observer coverage in Category III fisheries because, under the MMPA, Category III fisheries are generally not required to accommodate observers aboard vessels due to the remote likelihood of mortality and serious injury of marine mammals. Fishery information presented in the SARs' appendices and other resources referenced during the tier analysis may include: Level of observer coverage, target species, levels of fishing effort, spatial and temporal distribution of fishing effort, characteristics of fishing gear and operations, management and regulations, and interactions with marine mammals. Copies of the SARs are available on the NMFS Office of Protected Resources Web site at: <http://www.nmfs.noaa.gov/pr/sars/>. Information on observer coverage levels in Category I, II, and III fisheries can be found in the fishery fact sheets on the

NMFS Office of Protected Resources' Web site: <http://www.nmfs.noaa.gov/pr/interactions/fisheries/lof.html>.

Additional information on observer programs in commercial fisheries can be found on the NMFS National Observer Program's Web site: <http://www.st.nmfs.gov/observer-home/>.

How do I find out if a specific fishery is in Category I, II, or III?

This rule includes three tables that list all U.S. commercial fisheries by LOF Category. Table 1 lists all of the commercial fisheries in the Pacific Ocean (including Alaska); Table 2 lists all of the commercial fisheries in the Atlantic Ocean, Gulf of Mexico, and Caribbean; and Table 3 lists all U.S.-authorized commercial fisheries on the high seas. A fourth table, Table 4, lists all commercial fisheries managed under applicable take reduction plans (TRPs) or take reduction teams (TRTs).

Are high seas fisheries included on the LOF?

Beginning with the 2009 LOF, NMFS includes high seas fisheries in Table 3 of the LOF, along with the number of valid High Seas Fishing Compliance Act (HSFCA) permits in each fishery. As of 2004, NMFS issues HSFCA permits only for high seas fisheries analyzed in accordance with the National Environmental Policy Act (NEPA) and the Endangered Species Act (ESA). The authorized high seas fisheries are broad in scope and encompass multiple specific fisheries identified by gear type. For the purposes of the LOF, the high seas fisheries are subdivided based on gear type (e.g., trawl, longline, purse seine, gillnet, troll, etc.) to provide more detail on composition of effort within these fisheries. Many fisheries operate in both U.S. waters and on the high seas, creating some overlap between the fisheries listed in Tables 1 and 2 and those in Table 3. In these cases, the high seas component of the fishery is not considered a separate fishery, but an extension of a fishery operating within U.S. waters (listed in Table 1 or 2). NMFS designates these fisheries in Tables 1, 2, and 3 by a "*" after the fishery's name. The number of HSFCA permits listed in Table 3 for the high seas components of these fisheries operating in U.S. waters does not necessarily represent additional effort that is not accounted for in Tables 1 and 2. Many vessels/participants holding HSFCA permits also fish within U.S. waters and are included in the number of vessels and participants operating within those fisheries listed in Tables 1 and 2.

HSFCA permits are valid for five years, during which time Fishery Management Plans (FMPs) can change. Therefore, some vessels/participants may possess valid HSFCA permits without the ability to fish under the permit because it was issued for a gear type that is no longer authorized under the most current FMP. For this reason, the number of HSFCA permits displayed in Table 3 is likely higher than the actual U.S. fishing effort on the high seas. For more information on how NMFS classifies high seas fisheries on the LOF, see the preamble text in the final 2009 LOF (73 FR 73032; December 1, 2008). Additional information about HSFCA permits can be found at: <http://www.nmfs.noaa.gov/ia/permits/highseas.html>.

Where can I find specific information on fisheries listed on the LOF?

Starting with the 2010 LOF, NMFS developed summary documents, or fishery fact sheets, for each Category I and II fishery on the LOF. These fishery fact sheets provide the full history of each Category I and II fishery, including: When the fishery was added to the LOF, the basis for the fishery's initial classification, classification changes to the fishery, changes to the list of species and/or stocks incidentally killed or injured in the fishery, fishery gear and methods used, observer coverage levels, fishery management and regulation, and applicable TRPs or TRTs, if any. These fishery fact sheets are updated after each final LOF and can be found under "How Do I Find Out if a Specific Fishery is in Category I, II, or III?" on the NMFS Office of Protected Resources' Web site: <http://www.nmfs.noaa.gov/pr/interactions/fisheries/lof.html>, linked to the "List of Fisheries by Year" table. NMFS is developing similar fishery fact sheets for each Category III fishery on the LOF. However, due to the large number of Category III fisheries on the LOF and the lack of accessible and detailed information on many of these fisheries, the development of these fishery fact sheets is taking significant time to complete. As it completes work on each one, NMFS began posting Category III fishery fact sheets online on a rolling basis with the 2016 LOF.

Am I required to register under the MMPA?

Owners of vessels or gear engaging in a Category I or II fishery are required under the MMPA (16 U.S.C. 1387(c)(2)), as described in 50 CFR 229.4, to register with NMFS and obtain a marine mammal authorization to lawfully take non-endangered and non-threatened marine mammals incidental to

commercial fishing operations. Owners of vessels or gear engaged in a Category III fishery are not required to register with NMFS or obtain a marine mammal authorization.

How do I register and receive my MMAP authorization certificate?

NMFS has integrated the MMPA registration process, implemented through the Marine Mammal Authorization Program (MMAP), with existing state and Federal fishery license, registration, or permit systems for Category I and II fisheries on the LOF. Participants in these fisheries are automatically registered under the MMAP and are not required to submit registration or renewal materials. In the Pacific Islands, West Coast, and Alaska regions, NMFS will issue vessel or gear owners an authorization certificate via U.S. mail or with their state or Federal license or permit at the time of issuance or renewal. In the Greater Atlantic Region, NMFS will issue vessel or gear owners an authorization certificate via U.S. mail automatically at the beginning of each calendar year. Certificates may also be obtained by visiting the Greater Atlantic Regional Office Web site (<http://www.greateratlantic.fisheries.noaa.gov/Protected/mmp/mmap/>). In the Southeast Region, NMFS will issue vessel or gear owners notification of registry and vessel or gear owners may receive their authorization certificate by contacting the Southeast Regional Office at 727-209-5952 or by visiting the Southeast Regional Office Web site (http://sero.nmfs.noaa.gov/protected_resources/marine_mammal_authorization_program/) and following the instructions for printing the certificate.

The authorization certificate, or a copy, must be on board the vessel while it is operating in a Category I or II fishery, or for non-vessel fisheries, in the possession of the person in charge of the fishing operation (50 CFR 229.4(e)). Although efforts are made to limit the issuance of authorization certificates to only those vessel or gear owners that participate in Category I or II fisheries, not all state and Federal license or permit systems distinguish between fisheries as classified by the LOF. Therefore, some vessel or gear owners in Category III fisheries may receive authorization certificates even though they are not required for Category III fisheries. Individuals fishing in Category I and II fisheries for which no state or Federal license or permit is required must register with NMFS by contacting their appropriate Regional Office (see **ADDRESSES**).

How do I renew my registration under the MMAP?

In Alaska regional and Greater Atlantic regional fisheries, registrations of vessel or gear owners are automatically renewed and participants should receive an authorization certificate by January 1 of each new year. In Pacific Islands regional fisheries, vessel or gear owners receive an authorization certificate by January 1 for state fisheries and with their permit renewal for federal fisheries. In West Coast regional fisheries, vessel or gear owners receive authorization with each renewed state fishing license, the timing of which varies based on target species. Vessel or gear owners who participate in fisheries in these regions and have not received authorization certificates by January 1 or with renewed fishing licenses must contact the appropriate NMFS Regional Office (see **FOR FURTHER INFORMATION CONTACT**).

In Southeast regional fisheries, vessel or gear owners' registrations are automatically renewed and participants will receive a letter in the mail by January 1 instructing them to contact the Southeast Regional Office to have an authorization certificate mailed to them or to visit the Southeast Regional Office Web site (http://sero.nmfs.noaa.gov/protected_resources/marine_mammal_authorization_program/) to print their own certificate.

Am I required to submit reports when I kill or injure a marine mammal during the course of commercial fishing operations?

In accordance with the MMPA (16 U.S.C. 1387(e)) and 50 CFR 229.6, any vessel owner or operator, or gear owner or operator (in the case of non-vessel fisheries), participating in a fishery listed on the LOF must report to NMFS all incidental mortalities and injuries of marine mammals that occur during commercial fishing operations, regardless of the category in which the fishery is placed (I, II, or III) within 48 hours of the end of the fishing trip or, in the case of non-vessel fisheries, fishing activity. "Injury" is defined in 50 CFR 229.2 as a wound or other physical harm. In addition, any animal that ingests fishing gear or any animal that is released with fishing gear entangling, trailing, or perforating any part of the body is considered injured, regardless of the presence of any wound or other evidence of injury, and must be reported.

Mortality/injury reporting forms and instructions for submitting forms to NMFS can be found at: <http://www.nmfs.noaa.gov/pr/interactions/>

[mmap/#form](http://www.nmfs.noaa.gov/pr/interactions/) or by contacting the appropriate Regional office (see **FOR FURTHER INFORMATION CONTACT**). Forms may be submitted via any of the following means: (1) Online using the electronic form, (2) emailed as an attachment to nmfs.mireport@noaa.gov, (3) faxed to the NMFS Office of Protected Resources at 301-713-0376, or (4) mailed to the NMFS Office of Protected Resources (mailing address is provided on the postage-paid form that can be printed from the web address listed above). Reporting requirements and procedures can be found in 50 CFR 229.6.

Am I required to take an observer aboard my vessel?

Individuals participating in a Category I or II fishery are required to accommodate an observer aboard their vessel(s) upon request from NMFS. MMPA section 118 states that the Secretary is not required to place an observer on a vessel if the facilities for quartering an observer or performing observer functions are so inadequate or unsafe that the health or safety of the observer or the safe operation of the vessel would be jeopardized; thereby authorizing the exemption of vessels too small to accommodate an observer from this requirement. However, U.S. Atlantic Ocean, Caribbean, or Gulf of Mexico large pelagics longline vessels operating in special areas designated by the Pelagic Longline Take Reduction Plan implementing regulations (50 CFR 229.36(d)) will not be exempted from observer requirements, regardless of their size. Observer requirements can be found in 50 CFR 229.7.

Am I required to comply with any marine mammal take reduction plan regulations?

Table 4 in this rule provides a list of fisheries affected by TRPs and TRTs. TRP regulations can be found at 50 CFR 229.30 through 229.37. A description of each TRT and copies of each TRP can be found at: <http://www.nmfs.noaa.gov/pr/interactions/trt/teams.html>. It is the responsibility of fishery participants to comply with applicable take reduction regulations.

Where can I find more information about the LOF and the MMAP?

Information regarding the LOF and the Marine Mammal Authorization Program, including: Registration procedures and forms; current and past LOFs; descriptions of each Category I and II fishery, and some Category III fisheries; observer requirements; and marine mammal mortality/injury reporting forms and submittal

procedures, may be obtained at: <http://www.nmfs.noaa.gov/pr/interactions/fisheries/lof.html>, or from any NMFS Regional Office at the addresses listed below:

NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930–2298, Attn: Allison Rosner;

NMFS, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, Attn: Jessica Powell;

NMFS, West Coast Region, Seattle Office, 7600 Sand Point Way NE., Seattle, WA 98115, Attn: Elizabeth Petras, Protected Resources Division; NMFS, Alaska Region, Protected Resources, P.O. Box 22668, 709 West 9th Street, Juneau, AK 99802, Attn: Bridget Mansfield; or

NMFS, Pacific Islands Regional Office, Protected Resources Division, 1845 Wasp Blvd., Building 176, Honolulu, HI 96818, Attn: Dawn Golden.

Sources of Information Reviewed for the 2016 LOF

NMFS reviewed the marine mammal incidental mortality and serious injury information presented in the SARs for all fisheries to determine whether changes in fishery classification are warranted. The SARs are based on the best scientific information available at the time of preparation, including the level of mortality and serious injury of marine mammals that occurs incidental to commercial fishery operations and the PBR levels of marine mammal stocks. The information contained in the SARs is reviewed by regional Scientific Review Groups (SRGs) representing Alaska, the Pacific (including Hawaii), and the U.S. Atlantic, Gulf of Mexico, and Caribbean. The SRGs were created by the MMPA to review the science that informs the SARs, and to advise NMFS on marine mammal population status, trends, and stock structure, uncertainties in the science, research needs, and other issues.

NMFS also reviewed other sources of new information, including marine mammal stranding data, observer program data, fisher self-reports through the Marine Mammal Authorization Program, reports to the SRGs, conference papers, FMPs, and ESA documents.

The LOF for 2016 was based on, among other things, stranding data; fisher self-reports; and SARs, primarily the 2014 SARs, which are generally based on data from 2008–2012. The final SARs referenced in this LOF include: 2013 (79 FR 49053, August 19, 2014) and 2014 (80 FR 50599, August

20, 2015). The SARs are available at: <http://www.nmfs.noaa.gov/pr/sars/>.

Comments and Responses

NMFS received four comment letters on the proposed LOF for 2016 (80 FR 58427, September 29, 2015). Comments were received from the Marine Mammal Commission (Commission), Hawaii Longline Association (HLA), West Coast Seafood Processors Association (WCSPA), and a joint letter from Center for Biological Diversity (CBD) and Humane Society of the United States (HSUS).

General Comments

Comment 1: The Commission recommends that NMFS consider alternative methods for the classification of fisheries that rarely interact with marine mammals that would average data over longer periods.

Response: NMFS is currently evaluating the potential for analyzing data over longer periods for rare events and its application to the SARs through the GAMMS process. The method will be considered for its application to the LOF in the future once more discussion has taken place regarding the expanded use of such methods in the SARs.

Comment 2: The Commission urges NMFS to complete the development of the fact sheets for all Category III fisheries.

Response: NMFS acknowledges the importance of having these fact sheets completed and will continue working on completing the remaining Category III fact sheets. Given the limited information for many Category III fisheries, fact sheets are being developed as new information becomes available.

Comment 3: The Commission recommends that NMFS consistently summarize information across regions, as necessary, to evaluate proposed changes to the LOF in 2016 and subsequent LOF reports.

Response: NMFS agrees and will continue to provide a consistent level of detail across regions, where available. Some flexibility will be maintained for cases unique to a region's geography, ecology, management structure, or culture.

Comments on Commercial Fisheries in the Pacific Ocean

Comment 4: The Commission recommends that NMFS assess the potential for interactions between main Hawaiian Islands (MHI) insular false killer whales and hook-and-line fisheries that overlap with the range and habitats used by this stock and reclassify by analogy those fisheries

with which MHI insular false killer whales are likely to interact. At a minimum, the Commission recommends that NMFS reclassify the Hawaii troll fishery from Category III to Category II based on analogy to longline fisheries.

Response: NMFS acknowledges the potential for interactions between MHI insular false killer whales and hook-and-line fisheries other than longline. There are a variety of commercial, recreational, and subsistence hook-and-line fisheries in Hawaii that use a mix of gear types and methods. These fisheries are not currently observed, and NMFS has not received any fisher's self-reports of marine mammal hookings or entanglements. Currently available information on MHI insular false killer whale injuries, such as dorsal fin scarring and various hooks within a stranded animal's stomach, indicate interactions are occurring, but they have not been linked to mortalities or serious injuries, nor to any specific commercial fishery.

We do not consider the various Hawaii commercial hook-and-line fisheries on the LOF to be analogous to the Category I or II Hawaii longline fisheries, given, for example, dissimilarities in fishing gear, technique, the number of hooks deployed, and areas fished. Additionally, there are no other hook-and-line fisheries listed as Category I or II on the LOF. At this time, the available information does not support reclassification by analogy of Hawaii hook-and-line fisheries, including the Hawaii troll fishery.

However, given the potential for MHI insular false killer whales to interact with hook-and-line fisheries, we are committed to working with the State of Hawaii and others to assess the frequency and severity of marine mammal interactions in state-managed fisheries and reduce impacts as appropriate. For example, NMFS researchers worked with the Hawaii Department of Land and Natural Resources (DLNR) to analyze marine mammal depredation data on State of Hawaii commercial catch reports (Boggs *et al.*, 2015), which may assist in accurately identifying fisheries that are more likely to have false killer whale interactions. NMFS also recently awarded a 2015 Endangered Species Act Section 6 Grant to the Hawaii DLNR for nearly \$1.2 million over three years to strengthen efforts to minimize and mitigate incidental take of MHI insular false killer whales, including spatial and temporal analysis of the overlap between fisheries and false killer whale habitat. We will continue to work with

our partners to evaluate the risk the various hook-and-line fisheries may pose to MHI insular false killer whales and whether these fisheries are appropriately classified on the annual LOF.

Comment 5: The Hawaii Longline Association (HLA) contends the Hawaii-based deep-set longline fishery does not interact with the MHI insular or Northwestern Hawaiian Islands (NWHI) stocks of false killer whales. HLA states that (a) there has never been a documented interaction between the fishery and an animal from either stock, (b) the False Killer Whale Take Reduction Plan essentially eliminates any overlap between the longline fisheries and the assumed ranges of the MHI insular and NWHI stocks, and (c) the revised stock boundaries presented in the draft 2015 SAR indicate that there is only a very small area in which longline fishing may overlap with either stock, and no false killer whale interaction has ever occurred in these areas. HLA opposes including the stocks on the list of marine mammals injured or killed in the deep-set fishery. If NMFS retains these species on the list (which HLA opposes), HLA requests that NMFS state in the LOF that there are no confirmed interactions with either stock and no interactions with either stock have ever occurred in the very limited area where longline effort might overlap with either stock's assumed range.

Response: NMFS determines which species or stocks are included as incidentally killed or injured in a fishery by annually reviewing the information presented in the current SARs, among other relevant sources. The SARs are based on the best available scientific information and provide the most current and inclusive information on each stock, including range, abundance, PBR, and level of interaction with commercial fishing operations. Determinations in the LOF are based on the data and calculations contained within the SARs.

The 2016 LOF is based on the 2014 SARs, which report fishery interactions from 2008–2012. NMFS deems this to be the best scientific and commercial information available for the time period examined. During that time period, NMFS estimates a five-year average mortality and serious injury level of 0.9 MHI insular and 0.4 NWHI false killer whales per year incidental to the Hawaii-based deep-set longline fishery from 2008–2012 (Carretta *et al.*, 2015).

NMFS is retaining the stocks on the list of marine mammal stocks incidentally killed or injured in the

Hawaii deep-set longline fishery. We disagree with HLA's recommended text and are not including it because false killer whale interactions have been observed in the deep-set longline fishery within the area of overlap between the pelagic, MHI insular, and NWHI stocks of false killer whales as defined in the 2014 SAR. While no genetic samples are available to establish stock identity for these takes, all stocks are considered at risk of interacting with longline gear. For a more complete analysis of the methodology for determining mortality and serious injury of MHI insular false killer whales, NMFS refers the commenter to the 2014 SAR.

Comment 6: HLA restates its comment from the proposed 2015 LOF regarding its opposition to including short-finned pilot whales on the list of species injured or killed in the Hawaii-based shallow-set longline fishery (see Comment 3 in the 2015 LOF final rule, 79 FR 77919, December 29, 2014). HLA commented that NMFS included the species because of a single interaction on the high seas involving an unidentified cetacean that "may have" been a short-finned pilot whale. HLA states that there have been no confirmed short-finned pilot whale interactions in the shallow-set fishery. In the absence of data confirming that the fishery is interacting with short-finned pilot whales, HLA contends NMFS may not add the species to the list of species and/or stocks that are incidentally killed or injured by the fishery.

Response: The estimated average annual mortality and serious injury of short-finned pilot whales in the fishery on the high seas from 2008–2012 is 0.1 (McCracken, 2014). NMFS is retaining short-finned pilot whales on the list of species or stocks that are incidentally killed or injured by the fishery based on the mortality and serious injury estimate presented in McCracken, 2014.

Comment 7: HLA restates its comment from the proposed 2015 LOF regarding its opposition to including pygmy or dwarf sperm whales on the list of species injured or killed in the Hawaii-based shallow-set longline fishery (see Comment 4 in the 2015 LOF final rule, 79 FR 77919, December 29, 2014). HLA maintains that the MMPA requires NMFS to list the species in the LOF that are seriously injured or killed by a fishery. HLA cites the 2013 SAR, which reports a single interaction with a pygmy or dwarf sperm whale in 2008 that was classified as a non-serious injury.

Response: As described in the preamble to this final rule and in the MMPA implementing regulations (50 CFR 229.8(b)(2)), the LOF lists the

marine mammals that have been incidentally injured or killed in each commercial fishery. Separately, MMPA implementing regulations at 50 CFR 229.2 specify a tier analysis process for classifying fisheries on the LOF based on their levels of incidental serious injury and mortality of marine mammals. Therefore, while only mortalities and serious injuries are considered in the tier analysis, all species that are injured (seriously or non-seriously) or killed in the fishery are included in the list. Finally, the *Kogia* species whale (pygmy or dwarf sperm whale) was included in the list for the Hawaii shallow-set longline fishery because a *Kogia* species whale was non-seriously injured in the fishery in 2008 (McCracken, 2014; Carretta *et al.*, 2015).

Comment 8: HLA restates its comment from the proposed 2015 LOF regarding how marine mammal takes should be listed in transboundary fisheries (see Comment 5 in the 2015 LOF final rule, 79 FR 77919, December 29, 2014). HLA is concerned that fisheries operating in the U.S. EEZ and on the high seas have marine mammals, for which an interaction has occurred in either the EEZ or the high seas, included on the lists of species killed or injured in both the EEZ and the high seas (*i.e.*, on both Tables 1 or 2 and Table 3). HLA is concerned this redundant listing results in a mistaken implication that a given fishery may interact with a certain species in one geographic area (*e.g.*, within the EEZ) when that fishery has only been observed to interact with the species in another geographic area (*e.g.*, on the high seas). HLA requests that NMFS revise the LOF to attribute species interactions in transboundary fisheries to only those geographic regions where interactions are actually observed. HLA contends this change would adequately report species injured or killed, but would avoid the arbitrary result of takes being attributed to fisheries in areas in which no take has ever been observed. HLA requests that if NMFS does not attribute interactions for transboundary fisheries to the geographic regions in which they occurred, then NMFS should include a footnote in the LOF to clarify, for certain stocks and fisheries, that interactions have only been observed on the high seas or in the U.S. EEZ, as appropriate, to more accurately convey the best available information to the public.

Response: As described in the preamble, NMFS has included high seas fisheries in Table 3 of the LOF since 2009. Several fisheries operate in both U.S. waters and on the high seas, creating some overlap between the

fisheries listed in Tables 1 and 2 and those in Table 3. In these cases, the high seas component of the fishery is not considered a separate fishery but an extension of a fishery operating within U.S. waters. For these fisheries, the lists of species or stocks injured or killed in Table 3 are identical to their Table 1 or 2 counterparts, except for those species or stocks with distributions known to occur on only one side of the EEZ boundary. Because the fisheries and the marine mammal lists are the same, takes of these animals are not being attributed to one geographic area or the other, even when that information may be available. This parallel list structure is explained in the footnotes for each table. We are not including additional footnotes to individual stocks and fisheries to indicate whether interactions have only been observed on the high seas or in the U.S. EEZ, but that information may be available in previous LOF rules when species and stocks are added or deleted.

Comment 9: The Commission concurs with NMFS that the Alaska Bering Sea/Aleutian Islands Pacific cod longline fishery should be elevated to a Category II fishery.

Response: NMFS acknowledges this comment and finalizes the reclassification of the Alaska Bering Sea/Aleutian Islands Pacific Cod Longline Fishery from Category III to Category II.

Comment 10: The Commission recommends NMFS retain the Alaska Kodiak salmon purse seine and Cook Inlet salmon purse seine fisheries as Category II fisheries because they are unobserved.

Response: The Alaska Kodiak salmon purse seine and Cook Inlet salmon purse seine fisheries were added to the LOF as Category II in the 2007 LOF (72 FR 14466, March 28, 2007) based on one mortality of a humpback whale in each of those fisheries in 2005. Both mortalities occurred in an area of geographic overlap of the Central and Western North Pacific humpback whales stocks. The 2005 mortalities were reported to NMFS through the Stranding/Entanglement program, as the fisheries are not observed. Samples were not obtained from the takes for genetic analysis, resulting in uncertain stock identification for either mortality.

The 2005 mortalities were each included in the standard five-year data sets (resulting in an average 0.4 mortalities/year) used in LOF Tier I and II analyses for the 2007–2011 LOFs. Because of the uncertainty regarding the whales' stock identity, NMFS used the standard precautionary measure of using the lower PBR of the Western North Pacific stock in each year's LOF analysis, which resulted in both

fisheries remaining in Category II for the 2007–2011 LOFs. Once they "aged" out of the standard five-year data set, those mortalities continued to be included in the LOF analyses four additional years (2012–2015) as a precautionary measure due to the rarity of documented humpback takes in purse seine fisheries (only two other humpback whale mortalities were previously documented in purse seine fisheries in Alaska in the mid-1990s, a mother and calf taken in one event) and because the fisheries were unobserved. Although the five-year data set used in the 2016 LOF is 2008–2012, no additional humpback whale mortalities were reported in Alaska Kodiak salmon purse seine and Cook Inlet salmon purse seine fisheries from 2013 through 2015. Further, the PBRs for each the Central and Western North Pacific humpback whale stocks have increased substantially since the initial 2005 mortalities. The PBR for the Central North Pacific humpback whales has increased from 12.9 in the 2006 SAR to 82.8 in the 2014 SAR used for the 2007 and 2016 LOFs, respectively. The PBR for the Western North Pacific humpback whales has likewise increased from 1.3 to 3.0 for those same years. Given the absence of other evidence to the contrary, ten years with no additional mortalities or serious injuries reported (since 2005 via the Stranding Network or fisherman self-reports) and a substantial increase in PBR for both North Pacific humpback whale stocks, NMFS is reclassifying the fisheries as Category III fisheries. NMFS will continue to review the most recent data and changes in these fisheries and will update the LOF, as appropriate.

Comment 11: The Commission recommends NMFS assess the potential for all unobserved Category III AK purse seine fisheries to take humpback whales or similar species and, if appropriate, reclassify them by analogy as Category II fisheries.

Response: NMFS believes that because takes are so rare and there are no Table 1 purse seine fisheries analogous to Alaska's fisheries, the fisheries should remain in Category III. NMFS will continue to review stranding and entanglement data as alternative sources of data for these unobserved fisheries.

Comment 12: The Commission recommends NMFS investigate the circumstances and details of the reported interactions with the five stocks of marine mammals proposed to be added to the list of stocks incidentally killed or injured in the Category III CA halibut bottom trawl fishery and consider elevating it to Category II, if warranted. NMFS does

not provide information on the sources of information upon which this proposal is based, nor does it provide any information about the number of interactions, their outcomes, or their magnitudes relative to PBR. In the absence of such information, it is difficult to assess the importance of five stocks being added in one year, although the Commission suggests that the number of stocks alone is sufficient to indicate the fishery may pose a greater threat to marine mammals, although of uncertain magnitude, than was previously understood.

Response: NMFS compiled information on marine mammal, seabird, and sea turtle takes observed in the west coast groundfish fisheries for the 2011 report entitled *"Estimated Bycatch of Marine Mammals, Seabirds, and Sea Turtles in the U.S. West Coast Commercial Groundfish Fishery, 2002–2009"* available at http://www.nwfsc.noaa.gov/research/divisions/ram/observation/data_products/datareport/docs/mmsbt_report02-09.pdf. The report provides observed numbers and estimates of marine mammals, in table 7, that were observed incidentally taken in the groundfish fisheries, including the CA halibut bottom trawl fishery, between 2002 and 2009. The marine mammals reported as killed or seriously injured are California sea lion, Steller sea lion, harbor seal, elephant seal, and harbor porpoise. We reviewed the annual fishery mortality and serious injury estimates and PBRs for each of the five species/stocks. The Tier 1 analysis indicated that mortality and serious injury did not exceed 10 percent of PBR when added to other fishery mortality and serious injury for these stocks, therefore, the fishery remains in Category III.

Comment 13: CBD/HSUS recommend NMFS add bottlenose dolphin, CA/OR/WA offshore stock, humpback whale, CA/OR/WA stock, and sea otter, CA stock, to the list of species and/or stocks incidentally killed or injured by the CA spiny lobster fishery. In addition, CBD/HSUS recommend that NMFS list the CA spiny lobster fishery as Category II based on the interactions with bottlenose dolphin and humpback whale. The most current stock assessment report documents take of: Bottlenose dolphin (one serious injury in 2008) and humpback whale (one serious injury between 2007 and 2011). The list should include sea otters by analogy because the stock assessment report cited controlled experiments conducted by the U.S. Geological Survey and the Monterey Bay Aquarium that demonstrated that sea otters

exposed to lobster traps in a captive setting would succeed in entering them (Carretta *et al.*, 2015 (citing Hatfield *et al.*, 2011)). The mean annual take of offshore bottlenose dolphins in the spiny lobster fishery is 0.2, which is 3.6 percent of the PBR of 5.5. The mean annual take of humpback whales in the spiny lobster fishery is 0.2, which is 1.8 percent of the PBR of 11 that is allocated to U.S. waters. The fishery should be classified as Category II because the take of both stocks are between one and fifty percent of PBR.

Response: NMFS notes this oversight and adds bottlenose dolphins and humpback whales to the list of species/stocks incidentally killed or injured in the CA spiny lobster fishery. NMFS will address the classification of this fishery in the proposed 2017 LOF. See Response to Comment 14 regarding the request to add sea otters to the list of species/stocks killed or injured.

Comment 14: CBD/HSUS recommend that NMFS list the CA/OR coonstripe shrimp pot, CA rock crab pot, and WA/OR/CA hagfish pot fisheries as Category II by analogy to other pot fisheries because of the number of entanglements due to unknown fishery interactions and the evidence that pots can attract sea otters (Carretta *et al.*, 2015 (citing Hatfield *et al.*, 2011)). CBD/HSUS noted that from 2000–2015, NMFS received 231 reports of entanglements, 156 of which were confirmed, 114 of which were assigned to a reported fishery and 69 of which were confirmed to a fishery.

Response: NMFS has received similar comments regarding pot/trap fishery classifications in the past. NMFS relies upon the most recently available complete information to evaluate categorizations of fisheries on the List of Fisheries. For the proposed 2016 LOF, the most recent available information is through 2012. NMFS will address reports of entanglements and strandings during 2014 as part of the development of the proposed 2017 LOF. NMFS received a similar comment regarding sea otters for the proposed 2012 LOF (76 FR 73912, November 29, 2011, comment/response 9) as well as 2011 LOF (75 FR 68475, November 8, 2010, comment/response 13) and 2010 LOF (74 FR 58859, November 16, 2009, comment/response 3). As described in the response to comments in the final 2012 LOF and described in detail in the proposed 2009 LOF (73 FR 33760, June 13, 2008), NMFS conducted an extensive review of all available information on marine mammal interactions with pot/trap gear in 2008 and found no evidence of sea otter bycatch at that time or since. The USFWS completed a stock assessment

for southern sea otters in 2008, which has not been updated. The USFWS, as part of public comments for the 2012 LOF, submitted a paper by Hatfield *et al.*, (2011), detailing experiments that indicate that sea otters can enter and become entrapped in pots or traps with openings of certain sizes. However, the paper presented no evidence of this occurring during commercial fishing activities off California. The possibility of an interaction is insufficient justification to include southern sea otters on the list of species incidentally killed or injured in particular fisheries. Instead, NMFS needs some indication that mortalities/injuries are occurring or have occurred in these fisheries in recent years (*e.g.*, fisher's self-reports, observer data, stranding data). If additional information becomes available indicating that southern sea otters have been killed or injured in CA trap/pot fisheries in recent years, NMFS will consider including this species on the LOF at that time.

Comment 15: CBD/HSUS recommend that NMFS clarify the discrepancy between the number of vessels participating in the Table 3 “Pacific highly migratory species longline” fishery (estimated 126 vessels/persons) and the Table 1 “California pelagic longline” fishery (estimated one vessel/person) because the definition of the fishery and identification of vessels participating in the fishery drastically affects how to quantify marine mammal interactions and both fisheries operate only on the high seas.

Response: The commenter is correct that the use of longline gear to target HMS within the EEZ is prohibited under the West Coast HMS FMP and that the CA pelagic longline fishery (on Table 1) does occur exclusively on the high seas. We have edited the footnote associated with this fishery. The preamble of the final 2009 LOF describes the relationship between the High Seas Pacific Highly Migratory Species Fisheries (Table 3) and West Coast HMS fisheries on Tables 1 and 2. The CA pelagic longline fishery has been included on the LOF since 2001. The high seas Pacific Highly Migratory Species longline fishery was added to the LOF in Table 3 in 2008 when all high seas fisheries were added to the LOF.

As described in the preamble of the final 2009 LOF (73 FR 73032, December 1, 2008), the number of participants in the high seas fisheries, Table 3, is drawn from the National Permitting System database and does not necessarily reflect actual fishing activity. As shown on Table 1, there is one vessel actively engaged in longline fishing with a West

Coast HMS permit. This vessel also has an HSFCA permit. A number of individuals hold West Coast HMS permits endorsed to longline (and HSFCA permits) but are not actively fishing with this gear type. In addition, a number of vessels fish with a HI pelagics FMP permit, but make landings in the U.S. West Coast, which requires a West Coast HMS FMP permit (see the HMS SAFE for more details). There are over 40 vessels with a HSFCA permit that hold both a HI pelagics HMS permit and a West Coast HMS permit, which allows them to fish with longline on the high seas (under the HI pelagics permit) and land into the U.S. West Coast (under the West Coast HMS permit).

The number of HSFCA permits issued by NMFS changes frequently as new permits are added or renewed, or old permits expire, and does not necessarily reflect the effort or vessels in a fishery. NMFS has promulgated a regulation (80 FR 62488, October 16, 2015) to improve the administration and monitoring of the HSFCA, effective January 14, 2016, and requires vessel operators or owners identify the authorized fishery in which he or she intends to fish when applying for an HSFCA permit. There are eight fisheries authorized on the high seas, including the U.S. West Coast Fisheries for Highly Migratory Species, and this regulation should improve the accuracy of Table 3 in the LOF.

Comment 16: The WCSPA recommends that NMFS maintain the Category III designation and separate fishery names for the WA/OR sardine purse seine fishery and the CA anchovy, mackerel, sardine purse seine fishery. WCSPA notes the WA/OR fishery is spatially separate from the CA fishery, and while the quotas that all three fisheries access are set by the Pacific Fishery Management Council under its Coastal Pelagic Species Fishery Management Plan, the day-to-day management of each fishery is different. Each state has its own effort restriction plan and landing limits. There are some signs of a northern sub-population of sardine which forms part of the WA/OR fishery. In the remote occurrence of a marine mammal take that would change the categorization of either the WA/OR or the CA fishery. WCSPA believes it would be unfair to penalize the other spatially separate component.

Response: NMFS appreciates the information and withdraws this recommendation, and leaves the “WA/OR purse seine” and the “CA anchovy, mackerel, sardine purse seine” fisheries in place.

Comments on Commercial Fisheries in the Atlantic Ocean, Gulf of Mexico, and Caribbean

Comment 17: The Commission and CBD/HSUS recommend that NMFS not remove stocks from the list of stocks and/or species incidentally killed or injured in the Category I “Mid-Atlantic gillnet” and Category II “Mid-Atlantic mid-water trawl” fisheries because the fisheries have very low observer coverage.

Response: In general, NMFS lists species incidentally killed or injured in a particular fishery based on data observed from the last five years. The list contained in the LOF is not intended to serve as a historical overview of takes within a fishery as the data are available in individual species SARs as well as Appendix III. The agency does, however, maintain flexibility to analyze fisheries on a case-by-case basis in response to low observer coverage.

Mid-Atlantic gillnet fisheries have been observed at the following percent coverage from 2009–2013: 3%, 4%, 2%, 2% and 3%, respectively. For this fishery, we recommended the removal of Risso’s and white-sided dolphins from the list of species incidentally taken in this fishery. The last observed takes of Risso’s and white-sided dolphins occurred in 2007 and 1997 when observer coverage was 4% and 3%, respectively. While observer coverage averaged 2.8% over the last five years, Mid-Atlantic gillnet sampling levels are in the developing to mature stage (*i.e.*, sampling 1–2% is recommended for pilot coverage, where coverage greater than 2% is considered developing to mature programs) according to the 2004 NMFS Report on Evaluating Bycatch (http://www.nmfs.noaa.gov/bycatch/SPO_final_rev_12204.pdf) (NMFS, 2004). Therefore, current estimated observer coverage for this fishery is considered adequate for bycatch estimation purposes. More importantly, given what we know about the overlap between species distribution and fishing effort, there is low probability that the Mid-Atlantic gillnet fishery will interact with Risso’s and white-sided dolphins, and if they do occur, that they are rare occurrences. Thus, NMFS removes these species from the list of species and/or stocks incidentally killed or injured in the Mid-Atlantic gillnet fishery.

For the Mid-Atlantic mid-water trawl fishery, we proposed to remove short-beaked common dolphin, long-finned pilot whale, and short-finned pilot whale from this fishery. The last documented takes of these species in

the Mid-Atlantic mid-water trawl fishery were in 2007. New genetic information on pilot whales (Waring *et al.*, 2015b) and their distribution has also determined that the distribution of short-finned pilot whales does not overlap with the Mid-Atlantic mid-water trawl fishery effort; and, therefore, takes in this fishery are highly unlikely and that previous pilot whale takes should be considered long-finned pilot whales. During the period 2009–2013, analysis has shown that the percent observer sampling coverage for the Mid-Atlantic mid-water trawl fishery is also adequate for understanding marine mammal bycatch in this fishery (NMFS, 2004). NMFS removes these species from the list of species and/or stocks incidentally killed or injured in the Mid-Atlantic mid-water trawl fishery.

In the case of the Mid-Atlantic gillnet and Mid-Atlantic mid-water trawl fisheries, NMFS asserts observer coverage is adequate for determining if recent takes of certain species have occurred within these fisheries. The removal of these species from the list of species incidentally killed or injured from these respective fisheries does not impact the classification of the fisheries in question because other species taken are currently influencing the current classification. NMFS will continue to annually monitor bycatch of marine mammals in these fisheries and will make adjustments to Table 2 should incidental mortalities or injuries occur in the future.

Summary of Changes From the Proposed Rule

NMFS retains the Category III fisheries, WA/OR sardine purse seine and CA anchovy, mackerel, sardine purse seine, as separate and does not merge and re-name the two fisheries “CA/OR/WA anchovy, mackerel, sardine purse seine” fishery, as proposed.

NMFS adds bottlenose dolphin, CA/OR/WA offshore, and humpback whale, CA/OR/WA, to the list of species and/or stocks incidentally killed or injured in the Category III CA spiny lobster fishery.

Summary of Changes to the LOF for 2016

The following summarizes the changes to the LOF for 2016, including the fisheries listed in the LOF, the estimated number of vessels/persons in a particular fishery, and the species and/or stocks that are incidentally killed or injured in a particular fishery. In the LOF for 2016, NMFS re-classifies three fisheries. Additionally, NMFS adds two fisheries to the LOF and removes six

fisheries from the LOF. NMFS makes changes to the list of species and/or stocks killed or injured in certain fisheries and the estimated number of vessels/persons in certain fisheries, as well as certain administrative changes. While detailed information describing each fishery in the LOF is included within the SARs, a Fishery Management Plan, or a TRP, or by state agencies, general descriptive information is important to include in the LOF for improved clarity; starting with the 2016 LOF, NMFS is releasing Category III fishery fact sheets as they are completed. The classifications and definitions of U.S. commercial fisheries for 2016 are identical to those provided in the LOF for 2015 with the changes discussed below. State and regional abbreviations used in the following paragraphs include: AK (Alaska), BSAI (Bering Sea and Aleutian Islands), CA (California), DE (Delaware), FL (Florida), GMX (Gulf of Mexico), HI (Hawaii), MA (Massachusetts), ME (Maine), NC (North Carolina), NY (New York), OR (Oregon), RI (Rhode Island), SC (South Carolina), VA (Virginia), WA (Washington), and WNA (Western North Atlantic).

Commercial Fisheries in the Pacific Ocean

Classification of Fisheries

NMFS reclassifies the Category III Alaska Bering Sea/Aleutian Island Pacific Cod Longline Fishery as Category II.

NMFS reclassifies the Category II Alaska Kodiak Salmon Purse Seine Fishery as Category III.

NMFS reclassifies the Category II Alaska Cook Inlet Salmon Purse Seine Fishery as Category III.

Addition of Fisheries

NMFS adds the CA sea cucumber trawl fishery to the LOF as Category III.

NMFS adds the WA/OR Mainstem Columbia River eulachon gillnet fishery to the LOF as Category III.

Removal of Fisheries

NMFS removes the Category III WA/OR herring, smelt, shad, sturgeon, bottom fish, mullet, perch, rockfish gillnet fishery from the LOF.

NMFS removes the Category III WA/OR smelt, herring dip net fishery from the LOF.

Fishery Name and Organizational Changes and Clarification

NMFS renames the Category III “WA (all species) beach seine or drag seine” as the “WA/OR Lower Columbia River salmon seine” fishery.

NMFS divides out three fisheries from the Category III “AK North Pacific

halibut, AK bottom fish, WA/OR/CA albacore, groundfish, bottom fish, CA halibut non-salmonid troll” fishery and renames them as: “WA/OR/CA albacore surface hook and line/troll” fishery, “CA halibut hook and line/handline” fishery, and “CA White seabass hook and line/handline” fishery and removes the remaining fisheries in the group.

NMFS renames the Category III “WA/OR salmon net pens” fishery as the “WA salmon net pen” fishery.

NMFS renames (by revising, separating, and combining) the Category III “WA/OR sea urchin, other clam, octopus, oyster, sea cucumber, scallop, ghost shrimp, dive, hand/mechanical collection” and “CA sea urchin” fisheries to become the “WA/OR bait shrimp, clam hand, dive or mechanical

collection” and “OR/CA sea urchin, sea cucumber dive, hand/mechanical collection” fisheries.

NMFS renames the Category III “WA shellfish aquaculture” fishery as the “WA/OR shellfish aquaculture” fishery.

Number of Vessels/Persons

NMFS updates the estimated number of vessels/persons in the Pacific Ocean (Table 1) as follows:

| Category | Fishery | Number of vessels/persons (Final 2015 LOF) | Number of vessels/persons (Final 2016 LOF) |
|-----------|---|--|--|
| I | HI deep-set longline | 128 | 135 |
| I | CA thresher shark/swordfish drift gillnet (≥14 in mesh) | 19 | 18 |
| II | CA spot prawn trap | 28 | 25 |
| II | HI shallow-set longline | 18 | 15 |
| II | American Samoa longline | 25 | 22 |
| II | HI shortline | 6 | 9 |
| III | CA set gillnet (mesh size <3.5 in) | 304 | 296 |
| III | HI inshore gillnet | 42 | 36 |
| III | WA/OR Lower Columbia River salmon seine | 235 | 10 |
| III | HI lift net | 21 | 17 |
| III | HI throw net, cast net | 20 | 23 |
| III | HI seine net | 21 | 24 |
| III | American Samoa tuna troll | 7 | 13 |
| III | HI troll | 1,755 | 2,117 |
| III | HI rod and reel | 221 | 322 |
| III | HI kaka line | 24 | 15 |
| III | HI vertical line | 6 | 3 |
| III | CA halibut bottom trawl | 53 | 47 |
| III | CA/OR coonstripe shrimp pot | 10 | 36 |
| III | CA rock crab pot | 150 | 124 |
| III | CA spiny lobster | 198 | 194 |
| III | HI crab trap | 7 | 5 |
| III | HI fish trap | 5 | 9 |
| III | HI shrimp trap | 6 | 10 |
| III | HI Kona crab loop net | 35 | 33 |
| III | American Samoa bottomfish handline | 14 | 17 |
| III | HI bottomfish handline | 578 | 496 |
| III | HI inshore handline | 376 | 357 |
| III | HI pelagic handline | 484 | 534 |
| III | CA swordfish harpoon | 30 | 6 |
| III | HI bullpen trap | <3 | 3 |
| III | HI handpick | 58 | 46 |
| III | HI lobster diving | 23 | 19 |
| III | HI spearfishing | 159 | 163 |

List of Species and/or Stocks Incidentally Killed or Injured in the Pacific Ocean

NMFS adds the southwest Alaska stock of northern sea otters to the list of species and/or stocks killed or injured in the Category II Alaska Peninsula/Aleutian Islands salmon set gillnet fishery.

NMFS adds the U.S. stock of California sea lions, unknown stock of harbor porpoise, unknown stock of harbor seals, California breeding stock of northern elephant seals, unknown stock of Steller sea lions to the species and/or stocks incidentally killed or injured by the Category III CA halibut bottom trawl fishery.

NMFS adds bottlenose dolphin, CA/OR/WA offshore, and humpback whale, CA/OR/WA, to the list of species and/or stocks killed or injured in the Category III CA spiny lobster fishery.

NMFS adds the Northwestern Hawaiian Islands stock of false killer whales to the list of species and/or stocks killed or injured in the Category I Hawaii deep-set longline fishery.

NMFS removes the Palmyra Atoll stock of false killer whales from the list of species and/or stocks killed or injured in the Category I Hawaii deep-set longline fishery.

NMFS adds notation “1” to indicate that the Main Hawaiian Islands (MHI) insular stock of false killer whales,

along with the HI pelagic stock of false killer whales, is also driving the Hawaii deep-set longline fishery’s Category I classification.

NMFS adds the Gulf of Alaska, BSAI transient stock of killer whales to the list of species and/or stocks killed or injured in the Category II Alaska BSAI Pacific cod longline fishery.

NMFS removes notation “1” from the Central North Pacific stock of humpback whales under the Category III fisheries: Alaska Cook Inlet salmon purse seine and Alaska Kodiak salmon purse seine.

Commercial Fisheries in the Atlantic Ocean, Gulf of Mexico, and Caribbean

“U.S. Mid-Atlantic offshore surf clam/quahog dredge” fishery.

Ocean, Gulf of Mexico, and Caribbean (Table 2) as follows:

Fishery Name and Organizational Changes and Clarification

NMFS renames and changes the geographic scope of the Category III

Number of Vessels/Persons

NMFS updates the estimated number of vessels/persons in the Atlantic

| Category | Fishery | Number of vessels/persons (Final 2015 LOF) | Number of vessels/persons (Final 2016 LOF) |
|----------|---|--|--|
| I | Mid-Atlantic gillnet | 5,509 | 4,063 |
| I | Northeast sink gillnet | 4,375 | 4,332 |
| I | Northeast/Mid-Atlantic American lobster trap/pot | 11,693 | 10,163 |
| II | Chesapeake Bay inshore gillnet | 1,126 | 272 |
| II | Northeast anchored float gillnet | 421 | 995 |
| II | Northeast drift gillnet | 311 | 1,567 |
| II | Mid-Atlantic mid-water trawl (including pair trawl) | 322 | 507 |
| II | Mid-Atlantic bottom trawl | 631 | 994 |
| II | Northeast mid-water trawl | 1,103 | 1,087 |
| II | Northeast bottom trawl | 2,987 | 3,132 |
| II | Atlantic mixed-species trap pot | 3,467 | 3,284 |
| II | Mid-Atlantic menhaden purse seine | 5 | 19 |
| II | Mid-Atlantic haul/beach seine | 565 | 243 |
| II | Virginia pound net | 67 | 47 |

*List of Species and/or Stocks**Incidentally Killed or Injured in the Atlantic Ocean, Gulf of Mexico, and Caribbean*

NMFS adds the Gulf of Maine/Bay of Fundy stock of harbor porpoise and the Gulf of Mexico stock of pygmy sperm whale to the list of marine mammal species and/or stocks incidentally killed or injured in the Category I Atlantic Ocean, Caribbean, Gulf of Mexico large pelagics longline fishery.

NMFS adds the Western North Atlantic stock of Risso's dolphin to the list of marine mammal species and/or stocks incidentally killed or injured in the Category II Northeast bottom trawl fishery.

NMFS adds the central Georgia estuarine system stock of bottlenose dolphin to the list of marine mammal species and/or stocks incidentally killed or injured in the Category II Atlantic blue crab trap/pot fishery.

NMFS removes the Western North Atlantic stocks of Risso's dolphin and white-sided dolphin from the list of marine mammal species and/or stocks incidentally killed or injured in the Category I Mid-Atlantic gillnet fishery.

NMFS removes the Western North Atlantic stocks of common dolphin, long-finned pilot whale, and short-finned pilot whale from the list of marine mammal species and/or stocks incidentally killed or injured in the Category II Mid-Atlantic mid-water trawl fishery.

NMFS removes the Western North Atlantic stocks of white-sided dolphin, long-finned pilot whale, and short-finned pilot whale from the list of marine mammal species and/or stocks incidentally killed or injured in the Category II Mid-Atlantic bottom trawl fishery.

NMFS removes the Western North Atlantic stocks of white-sided dolphin and short-finned pilot whale from the

list of marine mammal species and/or stocks incidentally killed or injured in the Category II Northeast mid-water trawl fishery.

NMFS removes the Western North Atlantic stock of short-finned pilot whale from the list of marine mammal species and/or stock incidentally killed or injured in the Category II Northeast bottom trawl fishery.

Commercial Fisheries on the High Seas*Removal of Fisheries*

NMFS removes the following Category II high seas fisheries from the List of Fisheries: (1) Western Pacific Pelagic Trawl, (2) Pacific Highly Migratory Species Liners, not elsewhere included (NEI), (3) South Pacific Albacore Troll Liners (NEI), and (4) Western Pacific Pelagic Liners (NEI).

Number of Vessels/Persons

NMFS updates the estimated number of HSFCA permits (Table 3) as follows:

| Category | Fishery | Number of HSFCA permits (Final 2015 LOF) | Number of HSFCA permits (Final 2016 LOF) |
|-----------|--|--|--|
| I | Atlantic Highly Migratory Species Longline | 83 | 86 |
| I | Western Pacific Pelagic (HI Deep-set component) | 128 | 135 |
| I | Pacific Highly Migratory Species Drift Gillnet | 4 | 5 |
| II | South Pacific Tuna Fisheries Purse Seine | 38 | 39 |
| II | South Pacific Albacore Troll Longline | 13 | 15 |
| II | Western Pacific Pelagic (HI Shallow-set component) | 18 | 15 |
| II | Atlantic Highly Migratory Species Handline/Pole and Line | 2 | 3 |
| II | Pacific Highly Migratory Species Handline/Pole and Line | 41 | 50 |
| II | South Pacific Albacore Troll Handline/Pole and Line | 8 | 9 |
| II | Western Pacific Pelagic Handline/Pole and Line | 3 | 5 |
| II | South Pacific Albacore Troll | 35 | 38 |
| II | South Pacific Tuna Fisheries Troll | 3 | 5 |
| II | Western Pacific Pelagic Troll | 19 | 21 |
| III | Pacific Highly Migratory Species Longline | 100 | 126 |

| Category | Fishery | Number of HSFCA permits (Final 2015 LOF) | Number of HSFCA permits (Final 2016 LOF) |
|-----------|--|--|--|
| III | Pacific Highly Migratory Species Troll | 253 | 243 |

List of Fisheries

The following tables set forth the list of U.S. commercial fisheries according to their classification under section 118 of the MMPA. Table 1 lists commercial fisheries in the Pacific Ocean (including Alaska); Table 2 lists commercial fisheries in the Atlantic Ocean, Gulf of Mexico, and Caribbean; Table 3 lists commercial fisheries on the high seas; and Table 4 lists fisheries affected by TRPs or TRTs.

In Tables 1 and 2, the estimated number of vessels or persons participating in fisheries operating within U.S. waters is expressed in terms of the number of active participants in the fishery, when possible. If this information is not available, the estimated number of vessels or persons licensed for a particular fishery is provided. If no recent information is available on the number of participants, vessels, or persons licensed in a fishery, then the number from the most recent LOF is used for the estimated number of vessels or persons in the fishery. NMFS acknowledges that, in some cases, these estimates may be inflations of actual effort. For example, the State of Hawaii does not issue fishery-specific licenses, and the number of participants reported in the LOF represents the number of commercial marine license holders who reported using a particular fishing gear type/method at least once in a given year, without considering how many times the gear was used. For these fisheries, effort by a single participant is counted the same whether the fisher used the gear only once or every day. In the Mid-Atlantic and New England fisheries, the numbers represent the potential effort for each fishery, given the multiple gear types for which several state permits may allow. Changes made to Mid-Atlantic and New England fishery participants will not affect observer coverage or bycatch estimates, as observer coverage and bycatch estimates are based on vessel

trip reports and landings data. Tables 1 and 2 serve to provide a description of the fishery's potential effort (state and Federal). If NMFS is able to extract more accurate information on the gear types used by state permit holders in the future, the numbers will be updated to reflect this change. For additional information on fishing effort in fisheries found on Table 1 or 2, contact the relevant regional office (contact information included above in **SUPPLEMENTARY INFORMATION**).

For high seas fisheries, Table 3 lists the number of valid HSFCA permits currently held. Although this likely overestimates the number of active participants in many of these fisheries, the number of valid HSFCA permits is the most reliable data on the potential effort in high seas fisheries at this time. As noted previously in this rule, the number of HSFCA permits listed in Table 3 for the high seas components of fisheries that also operate within U.S. waters does not necessarily represent additional effort that is not accounted for in Tables 1 and 2. Many vessels holding HSFCA permits also fish within U.S. waters and are included in the number of vessels and participants operating within those fisheries in Tables 1 and 2.

Tables 1, 2, and 3 also list the marine mammal species and/or stocks incidentally killed or injured (seriously or non-seriously) in each fishery based on SARs, injury determination reports, bycatch estimation reports, observer data, logbook data, stranding data, disentanglement network data, fisher self-reports (*i.e.*, MMPA reports), and anecdotal reports. The best available scientific information included in these reports is based on data through 2012. This list includes all species and/or stocks known to be killed or injured in a given fishery but also includes species and/or stocks for which there are anecdotal records of a mortality or injury. Additionally, species identified

by logbook entries, stranding data, or fishermen self-reports (*i.e.*, MMPA reports) may not be verified. In Tables 1 and 2, NMFS has designated those species/stocks driving a fishery's classification (*i.e.*, the fishery is classified based on mortalities and serious injuries of a marine mammal stock that are greater than or equal to 50 percent [Category I], or greater than 1 percent and less than 50 percent [Category II], of a stock's PBR) by a "1" after the stock's name.

In Tables 1 and 2, there are several fisheries classified as Category II that have no recent documented mortalities or serious injuries of marine mammals, or fisheries that did not result in a mortality or serious injury rate greater than 1 percent of a stock's PBR level based on known interactions. NMFS has classified these fisheries by analogy to other Category I or II fisheries that use similar fishing techniques or gear that are known to cause mortality or serious injury of marine mammals, as discussed in the final LOF for 1996 (60 FR 67063, December 28, 1995), and according to factors listed in the definition of a "Category II fishery" in 50 CFR 229.2 (*i.e.*, fishing techniques, gear types, methods used to deter marine mammals, target species, seasons and areas fished, qualitative data from logbooks or fisher reports, stranding data, and the species and distribution of marine mammals in the area). NMFS has designated those fisheries listed by analogy in Tables 1 and 2 by a "2" after the fishery's name.

There are several fisheries in Tables 1, 2, and 3 in which a portion of the fishing vessels cross the exclusive economic zone (EEZ) boundary and therefore operate both within U.S. waters and on the high seas. These fisheries, though listed separately between Table 1 or 2 and Table 3, are considered the same fisheries on either side of the EEZ boundary. NMFS has designated those fisheries in each table by a "*" after the fishery's name.

| | | Northern elephant seal, North Pacific. |
| | | Steller sea lion, Western U.S. |
| AK Gulf of Alaska rockfish trawl | 43 | None documented. |
| AK food/bait herring trawl | 4 | None documented. |
| AK miscellaneous finfish otter/beam trawl | 282 | None documented. |
| AK shrimp otter trawl and beam trawl (statewide and Cook Inlet) | 38 | None documented. |
| AK state-managed waters of Cook Inlet, Kachemak Bay, Prince William Sound, Southeast AK groundfish trawl | 2 | None documented. |
| CA halibut bottom trawl | 47 | California sea lion, U.S. |
| | | Harbor porpoise, unknown. |
| | | Harbor seal, unknown. |
| | | Northern elephant seal, CA breeding. |
| | | Steller sea lion, unknown. |
| CA sea cucumber trawl | 16 | None documented. |
| WA/OR/CA shrimp trawl | 300 | None documented. |
| WA/OR/CA groundfish trawl | 160–180 | California sea lion, U.S. |
| | | Dall's porpoise, CA/OR/WA. |
| | | Harbor seal, OR/WA coast. |
| | | Northern fur seal, Eastern Pacific. |
| | | Pacific white-sided dolphin, CA/OR/WA. |
| | | Steller sea lion, Eastern U.S. |
| <i>POT, RING NET, AND TRAP FISHERIES:</i> | | |
| AK statewide miscellaneous finfish pot | 4 | None documented. |
| AK Aleutian Islands sablefish pot | 4 | None documented. |
| AK Bering Sea, Aleutian Islands Pacific cod pot | 59 | None documented. |
| AK Bering Sea, Aleutian Islands crab pot | 540 | Gray whale, Eastern North Pacific. |
| AK Bering Sea sablefish pot | 2 | None documented. |

TABLE 1—LIST OF FISHERIES—COMMERCIAL FISHERIES IN THE PACIFIC OCEAN—Continued

| Fishery description | Estimated number of vessels/ persons | Marine mammal species and/or stocks incidentally killed or injured |
|--|--------------------------------------|--|
| AK Gulf of Alaska crab pot | 381 | None documented. |
| AK Gulf of Alaska Pacific cod pot | 128 | Harbor seal, GOA. |
| AK Southeast Alaska crab pot | 41 | Humpback whale, Central North Pacific (Southeast AK). |
| AK Southeast Alaska shrimp pot | 269 | Humpback whale, Central North Pacific (Southeast AK). |
| AK shrimp pot, except Southeast | 236 | None documented. |
| AK octopus/squid pot | 26 | None documented. |
| AK snail pot | 1 | None documented. |
| CA/OR coonstripe shrimp pot | 36 | Gray whale, Eastern North Pacific. |
| CA rock crab pot | 124 | Harbor seal, CA. |
| CA spiny lobster | 194 | Gray whale, Eastern North Pacific. |
| | | Harbor seal, CA. |
| | | Bottlenose dolphin, CA/OR/WA offshore. |
| | | Humpback whale, CA/OR/WA. |
| | | Gray whale, Eastern North Pacific. |
| WA/OR/CA hagfish pot | 54 | None documented. |
| WA/OR shrimp pot/trap | 254 | None documented. |
| WA Puget Sound Dungeness crab pot/trap | 249 | None documented. |
| HI crab trap | 5 | Humpback whale, Central North Pacific. |
| HI fish trap | 9 | None documented. |
| HI lobster trap | <3 | None documented in recent years. |
| HI shrimp trap | 10 | None documented. |
| HI crab net | 4 | None documented. |
| HI Kona crab loop net | 33 | None documented. |
| HOOK-AND-LINE, HANDLINE, AND JIG FISHERIES: | | |
| AK miscellaneous finfish handline/hand troll and mechanical jig. | 456 | None documented. |
| AK North Pacific halibut handline/hand troll and mechanical jig. | 180 | None documented. |
| AK octopus/squid handline | 7 | None documented. |
| American Samoa bottomfish | 17 | None documented. |
| Commonwealth of the Northern Mariana Islands bottomfish | 28 | None documented. |
| Guam bottomfish | >300 | None documented. |
| HI aku boat, pole, and line | <3 | None documented. |
| HI bottomfish handline | 578 | None documented in recent years. |
| HI inshore handline | 357 | None documented. |
| HI pelagic handline | 534 | None documented. |
| WA groundfish, bottomfish jig | 679 | None documented. |
| Western Pacific squid jig | 0 | None documented. |
| HARPOON FISHERIES: | | |
| CA swordfish harpoon | 6 | None documented. |
| POUND NET/WEIR FISHERIES: | | |
| AK herring spawn on kelp pound net | 409 | None documented. |
| AK Southeast herring roe/food/bait pound net | 2 | None documented. |
| HI bullpen trap | 3 | None documented. |
| BAIT PENS: | | |
| WA/OR/CA bait pens | 13 | California sea lion, U.S. |
| DREDGE FISHERIES: | | |
| Alaska scallop dredge | 108 (5 AK) ... | None documented. |
| DIVE, HAND/MECHANICAL COLLECTION FISHERIES: | | |
| AK abalone | 0 | None documented. |
| AK clam | 130 | None documented. |
| AK Dungeness crab | 2 | None documented. |
| AK herring spawn on kelp | 339 | None documented. |
| AK urchin and other fish/shellfish | 398 | None documented. |
| HI black coral diving | <3 | None documented. |
| HI fish pond | 5 | None documented. |
| HI handpick | 46 | None documented. |
| HI lobster diving | 19 | None documented. |
| HI spearfishing | 163 | None documented. |
| WA/CA kelp | 4 | None documented. |
| WA/OR bait shrimp, clam hand, dive, or mechanical collection. | 201 | None documented. |
| OR/CA sea urchin, sea cucumber hand, dive, or mechanical collection. | 10 | None documented. |
| COMMERCIAL PASSENGER FISHING VESSEL (CHARTER BOAT) FISHERIES: | | |
| AK/WA/OR/CA commercial passenger fishing vessel | >7,000 (2,702 AK). | Killer whale, unknown. |
| | | Steller sea lion, Eastern U.S. |

TABLE 1—LIST OF FISHERIES—COMMERCIAL FISHERIES IN THE PACIFIC OCEAN—Continued

| Fishery description | Estimated number of vessels/ persons | Marine mammal species and/or stocks incidentally killed or injured |
|--|--------------------------------------|--|
| <i>LIVE FINFISH/SHELLFISH FISHERIES:</i> | | Steller sea lion, Western U.S. |
| CA nearshore finfish live trap/hook-and-line | 93 | None documented. |
| HI aquarium collecting | 90 | None documented. |

List of Abbreviations and Symbols Used in Table 1: AI—Aleutian Islands; AK—Alaska; BS—Bering Sea; CA—California; ENP—Eastern North Pacific; GOA—Gulf of Alaska; HI—Hawaii; MHI—Main Hawaiian Islands; OR—Oregon; WA—Washington;

¹ Fishery classified based on mortalities and serious injuries of this stock, which are greater than or equal to 50 percent (Category I) or greater than 1 percent and less than 50 percent (Category II) of the stock's PBR;

² Fishery classified by analogy; * Fishery has an associated high seas component listed in Table 3; ^ The list of marine mammal species and/or stocks killed or injured in this fishery is identical to the list of species and/or stocks killed or injured in high seas component of the fishery, minus species and/or stocks that have geographic ranges exclusively on the high seas. The species and/or stocks are found, and the fishery remains the same, on both sides of the EEZ boundary. Therefore, the EEZ components of these fisheries pose the same risk to marine mammals as the components operating on the high seas.

TABLE 2—LIST OF FISHERIES—COMMERCIAL FISHERIES IN THE ATLANTIC OCEAN, GULF OF MEXICO, AND CARIBBEAN

| TROLL FISHERIES: | | |
| Pacific Highly Migratory Species * | 243 | None documented. |

List of Terms, Abbreviations, and Symbols Used in Table 3:

CA—California; GMX—Gulf of Mexico; HI—Hawaii; OR—Oregon; WA—Washington; WNA—Western North Atlantic.

* Fishery is an extension/component of an existing fishery operating within U.S. waters listed in Table 1 or 2. The number of permits listed in Table 3 represents only the number of permits for the high seas component of the fishery.

** These gear types are not authorized under the Pacific HMS FMP (2004), the Atlantic HMS FMP (2006), or without a South Pacific Tuna Treaty license (in the case of the South Pacific Tuna fisheries). Because HSFCA permits are valid for five years, permits obtained in past years exist in the HSFCA permit database for gear types that are now unauthorized. Therefore, while HSFCA permits exist for these gear types, it does not represent effort. In order to land fish species, fishers must be using an authorized gear type. Once these permits for unauthorized gear types expire, the permit-holder will be required to obtain a permit for an authorized gear type.

^ The list of marine mammal species and/or stocks killed or injured in this fishery is identical to the list of marine mammal species and/or stocks killed or injured in U.S. waters component of the fishery, minus species and/or stocks that have geographic ranges exclusively in coastal waters, because the marine mammal species and/or stocks are also found on the high seas and the fishery remains the same on both sides of the EEZ boundary. Therefore, the high seas components of these fisheries pose the same risk to marine mammals as the components of these fisheries operating in U.S. waters.

TABLE 4—FISHERIES AFFECTED BY TAKE REDUCTION TEAMS AND PLANS

| Take reduction plans | Affected fisheries |
|---|---|

| Pelagic Longline Take Reduction Plan (PLTRP)—50 CFR 229.36 | <i>Category I</i> Atlantic Ocean, Caribbean, Gulf of Mexico large pelagics longline. |
| Pacific Offshore Cetacean Take Reduction Plan (POCTRP)—50 CFR 229.31. | <i>Category I</i> CA thresher shark/swordfish drift gillnet (≥14 in mesh) |
| Atlantic Trawl Gear Take Reduction Team (ATGTRT) | <i>Category II</i> Mid-Atlantic bottom trawl. Mid-Atlantic mid-water trawl (including pair trawl). Northeast bottom trawl. Northeast mid-water trawl (including pair trawl) |

*Only applicable to the portion of the fishery operating in U.S. waters; [^] Only applicable to the portion of the fishery operating in the Atlantic Ocean.

Classification

The Chief Counsel for Regulation of the Department of Commerce has certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) at the proposed rule stage that this rule would not have a significant economic impact on a substantial number of small entities. No comments were received on that certification, and no new information has been discovered to change that conclusion. Accordingly, no regulatory flexibility analysis is required, and none has been prepared.

This rule contains collection-of-information requirements subject to the Paperwork Reduction Act. The collection of information for the registration of individuals under the MMPA has been approved by the Office of Management and Budget (OMB) under OMB control number 0648–0293 (0.15 hours per report for new registrants and 0.09 hours per report for renewals). The requirement for reporting marine mammal mortalities or injuries has been approved by OMB under OMB control number 0648–0292 (0.15 hours per report). These estimates include the time for reviewing

instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding these reporting burden estimates or any other aspect of the collections of information, including suggestions for reducing burden, to NMFS and OMB (see **ADDRESSES** and **SUPPLEMENTARY INFORMATION**).

Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

This rule has been determined to be not significant for the purposes of Executive Order 12866.

An environmental assessment (EA) was prepared under the National Environmental Policy Act (NEPA) in 1995 and 2005. The 1995 EA examined the effects of regulations implementing section 118 of the 1994 Amendments of the MMPA on the affected environment. The 2005 EA analyzed the environmental impacts of continuing

the existing scheme (as described in the 1995 EA) for classifying fisheries on the LOF. The 1995 EA and the 2005 EA concluded that implementation of MMPA section 118 regulations would not have a significant impact on the human environment. NMFS reviewed the 2005 EA in 2009. NMFS concluded that because there were no changes to the process used to develop the LOF and implement section 118 of the MMPA, there was no need to update the 2005 EA. This rule would not change NMFS's current process for classifying fisheries on the LOF; therefore, this rule is not expected to change the analysis or conclusion of the 2005 EA and FONSI, and no update is needed. If NMFS takes a management action, for example, through the development of a TRP, NMFS would first prepare an environmental document, as required under NEPA, specific to that action.

This rule would not affect species listed as threatened or endangered under the Endangered Species Act (ESA) or their associated critical habitat. The impacts of numerous fisheries have been analyzed in various biological opinions, and this rule will not affect the conclusions of those opinions. The

classification of fisheries on the LOF is not considered to be a management action that would adversely affect threatened or endangered species. If NMFS takes a management action, for example, through the development of a TRP, NMFS would consult under ESA section 7 on that action.

This rule would have no adverse impacts on marine mammals and may have a positive impact on marine mammals by improving knowledge of marine mammals and the fisheries interacting with marine mammals through information collected from observer programs, stranding and sighting data, or take reduction teams.

This rule would not affect the land or water uses or natural resources of the coastal zone, as specified under section 307 of the Coastal Zone Management Act.

Proposed Rules

Federal Register

Vol. 81, No. 68

Friday, April 8, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

7 CFR Part 319

[Docket No. APHIS-2015-0004]

RIN 0579-AE12

Importation of Fresh Pitahaya Fruit From Ecuador Into the Continental United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: We are proposing to amend the fruits and vegetables regulations to allow the importation of fresh pitahaya fruit into the continental United States from Ecuador. As a condition of entry, the fruit would have to be produced in accordance with a systems approach that would include requirements for fruit fly trapping, pre-harvest inspections, approved production sites, and packinghouse procedures designed to exclude quarantine pests. The fruit would also be required to be imported in commercial consignments and accompanied by a phytosanitary certificate issued by the national plant protection organization of Ecuador stating that the consignment was produced and prepared for export in accordance with the requirements of the systems approach. This action would allow for the importation of fresh pitahaya from Ecuador while continuing to provide protection against the introduction of plant pests into the United States.

DATES: We will consider all comments that we receive on or before June 7, 2016.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/#!docketDetail;D=APHIS-2015-0004>.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No.

APHIS-2015-0004, Regulatory Analysis and Development, PPD, APHIS, Station 3A-03.8, 4700 River Road Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket may be viewed at <http://www.regulations.gov/#!docketDetail;D=APHIS-2015-0004> or in our reading room, which is located in room 1141 of the USDA South Building, 14th Street and Independence Avenue SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799-7039 before coming.

FOR FURTHER INFORMATION CONTACT: Ms. Claudia Ferguson, M.S., Senior Regulatory Policy Specialist, Regulatory Coordination and Compliance, Imports, Regulations and Manuals, PPQ, APHIS, (301) 851-2352; email: Claudia.Ferguson@aphis.usda.gov.

SUPPLEMENTARY INFORMATION:

Background

The regulations in “Subpart-Fruits and Vegetables” (7 CFR 319.56-1 through 319.56-75, referred to below as the regulations) prohibit or restrict the importation of fruits and vegetables into the United States from certain parts of the world to prevent the introduction and dissemination of plant pests. The regulations currently do not authorize the importation of fresh pitahaya fruit (sometimes referred to as “dragon fruit”) from Ecuador.

The national plant protection organization (NPPQ) of Ecuador has requested that the Animal and Plant Health Inspection Service (APHIS) amend the regulations in order to allow fresh fruit of any color of pitahaya (*Hylocereus* spp., *Acanthocereus* spp., *Cereus* spp., *Echinocereus* spp., *Escontria* spp., *Myrtillocactus* spp., and *Stenocereus* spp.) to be imported into the continental United States. (Hereafter we refer to these species as “pitahaya.”)

As part of our evaluation of Ecuador’s request, we prepared a pest risk assessment (PRA) and a risk management document (RMD). Copies of the PRA and the RMD may be obtained from the person listed under **FOR FURTHER INFORMATION CONTACT** or viewed on the Regulations.gov Web site (see **ADDRESSES** above for instructions for accessing Regulations.gov).

The PRA, titled “Importation of Pitahaya from Ecuador into the Continental United States (August 2013),” evaluates the risks associated with the importation of fresh pitahaya fruit from Ecuador into the United States. The RMD relies upon the findings of the PRA to determine the phytosanitary measures necessary to ensure the safe importation into the continental United States of fresh pitahaya from Ecuador.

The PRA identifies one quarantine pest present in Ecuador that could be introduced into the United States through the importation of fresh pitahaya: *Anastrepha fraterculus* (Wiedemann), South American fruit fly.

A quarantine pest is defined in § 319.56-2 of the regulations as a pest of potential economic importance to the area endangered thereby and not yet present there, or present but not widely distributed and being officially controlled. Potential plant pest risks associated with the importation of fresh pitahaya from Ecuador into the continental United States were determined by estimating the consequences and likelihood of introduction of quarantine pests into the United States and ranking the risk potential as high, medium, or low. The PRA rated the insect *A. fraterculus* as having a high pest risk potential for following the pathway of fresh pitahaya from Ecuador into the continental United States.

APHIS has determined that measures beyond standard port of arrival inspection are required to mitigate the risks posed by this plant pest. Therefore, we are proposing to allow the importation of fresh pitahaya from Ecuador into the continental United States produced under a systems approach. The RMD prepared for fresh pitahaya from Ecuador identifies a systems approach of specific mitigation measures against the quarantine pest identified in the PRA and concludes that those measures, along with the general requirements for the importation of fruits and vegetables in the regulations, will be sufficient to prevent the introduction of this pest into the United States. Therefore, we are proposing to add the systems approach to the regulations in a new § 319.56-76. The proposed measures are described below.

General Requirements

Paragraph (a) of proposed § 319.56–76 would require the NPPO of Ecuador to provide an operational workplan to APHIS that details the activities that the NPPO would, subject to APHIS' approval of the workplan, carry out to meet the requirements of proposed § 319.56–76. An operational workplan is an agreement developed between APHIS' Plant Protection and Quarantine program, officials of the NPPO of a foreign government, and, when necessary, foreign commercial entities, that specifies in detail the phytosanitary measures that will be carried out to comply with our regulations governing the importation of a specific commodity. Operational workplans apply only to the signatory parties and establish detailed procedures and guidance for the day-to-day operations of specific import/export programs. Operational workplans also establish how specific phytosanitary issues are dealt with in the exporting country and make clear who is responsible for dealing with those issues. The implementation of a systems approach typically requires an operational workplan to be developed.

Paragraph (b) of proposed § 319.56–76 would require fresh pitahaya from Ecuador to be imported in commercial consignments only. Produce grown commercially is less likely to be infested with plant pests than noncommercial consignments. Noncommercial consignments are more prone to infestations because the commodity is often ripe to overripe, could be of a variety with unknown susceptibility to pests, and is often grown with little or no pest control.

Production Site Requirements

Paragraph (c)(1) of proposed § 319.56–76 would require that all production sites participating in the fresh pitahaya export program be approved by and registered with the NPPO of Ecuador in accordance with the requirements of the operational workplan. Such registration would facilitate traceback of a consignment of pitahayas to the production site in the event that quarantine pests were discovered in the consignment at the packinghouse, or at the first port of arrival into the United States.

Paragraph (c)(2) of proposed § 319.56–76 would require that trees and other structures, other than the crop itself, not shade the crop during the day. No other host of *A. fraterculus* would be permitted to be grown within 100 meters of the edge of the field. Pitahaya fruit that has fallen on the ground

would have to be removed from the place of production at least once every 7 days and may not be included in field containers of fruit to be packed for export. Harvested pitahayas would have to be placed in field cartons or containers that are marked to show the place of production so that traceback is possible.

Paragraph (c)(3) of proposed § 319.56–76 would require the NPPO of Ecuador or its approved designee¹ to visit and inspect the production sites prior to each harvest in accordance with the operational workplan. APHIS may also monitor the places of production if necessary. If APHIS or the NPPO of Ecuador finds that a place of production is not complying with the requirements of the systems approach, no fruit from the place of production will be eligible for export to the continental United States until APHIS and the NPPO of Ecuador conduct an investigation and appropriate remedial actions have been implemented.

Paragraph (c)(4) of proposed § 319.56–76 would require trapping for the fruit fly *A. fraterculus* at each production site in accordance with the operational workplan. The NPPO of Ecuador would have to certify that exporting places of production have effective fruit fly trapping programs and follow control guidelines, when necessary, to reduce regulated pest populations. Personnel conducting the trapping and pest surveys would need to be hired, trained, and supervised by the NPPO of Ecuador. The trapping would have to begin at least 1 year before harvest begins and continue through the completion of harvest.

Paragraph (c)(5) would state that, if more than an average of 0.07 *A. fraterculus* per trap per day is trapped for more than 2 consecutive weeks, the production site would be ineligible for export until the rate of capture drops to less than that average. If levels exceed that average, from 2 months prior to harvest to the end of the shipping season, the production site would be prohibited from shipping under the systems approach until APHIS and the NPPO of Ecuador both agree that the pest risk has been mitigated. As conditions warrant, the average number of *A. fraterculus* per trap per day may be raised or lowered if jointly agreed to between APHIS and the NPPO of Ecuador in the operational workplan.

¹ An approved designee is an entity with which the NPPO creates a formal agreement that allows that entity to certify that the appropriate procedures have been followed. The approved designee can be a contracted entity, a coalition of growers, or the growers themselves.

Paragraph (c)(6) of proposed § 319.56–76 would require the NPPO of Ecuador to maintain records of trap placement, trap checks, and any quarantine pest captures in accordance with the operational workplan. Trapping records would have to be maintained for APHIS' review for at least 1 year.

Packinghouse Requirements

We are proposing several requirements for packinghouse activities, which would be contained in paragraph (d) of proposed § 319.56–76.

Paragraph (d)(1) would state that the NPPO of Ecuador must monitor packinghouse operations to verify that the packinghouses are complying with the requirements of the systems approach. If the NPPO of Ecuador finds that a packinghouse is not complying with the requirements of the systems approach, no pitahaya fruit from the packinghouse will be eligible for export to the continental United States until APHIS and the NPPO of Ecuador conduct an investigation and both agree that the pest risk has been mitigated.

Paragraph (d)(2) would require that fresh pitahaya be packed in a packinghouse registered with the NPPO of Ecuador. Such registration would facilitate traceback of a consignment of pitahaya fruit to the packinghouse in which it was packed in the event that quarantine pests were discovered in the consignment at the port of first arrival into the United States.

Paragraph (d)(3) would require that the pitahaya be packed within 24 hours of harvest in a pest-exclusionary packinghouse that meets the requirements of the operational workplan. The pitahaya would have to be safeguarded by an insect-proof mesh screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing. These safeguards would have to remain intact until arrival in the continental United States or the consignment would be denied entry.

Paragraph (d)(4) of proposed § 319.56–76 would require that during the time that the packinghouse is in use for exporting fresh pitahayas to the continental United States, the packinghouse would only be allowed to accept pitahayas from registered production sites. This requirement would prevent such pitahayas intended for export to the continental United States from being exposed to or otherwise mixed with pitahayas that are not produced according to the requirements of the systems approach.

Phytosanitary Inspection

Paragraph (e)(1) of proposed § 319.56–76 would require that a biometric sample of pitahaya fruit jointly agreed upon by APHIS and the NPPO of Ecuador would need to be inspected in Ecuador by the NPPO of Ecuador following post-harvest processing. The biometric sample would be visually inspected for any quarantine pests, and a portion of the fruit would be cut open to detect internal signs of *A. fraterculus*.

Paragraph (e)(2) would require that fruit presented for inspection at the port of entry to the United States be identified in the shipping documents accompanying each lot of fruit to specify the production site or sites, in which the fruit was produced, and the packing shed or sheds, in which the fruit was processed, in accordance with the requirements in the operational workplan. This identification would need to be maintained until the fruit is released for entry into the continental United States. The pitahaya fruit are subject to inspection at the port of entry for all quarantine pests of concern, including *A. fraterculus*. If a single larva of *A. fraterculus* is found in a shipment from a place of production (either by the NPPO in Ecuador or by inspectors at the continental United States port of entry), the entire lot of fruit would be prohibited from entry into the United States, and the place of production of that fruit would be suspended from the export program until appropriate measures, as agreed upon by the NPPO of Ecuador and APHIS, have been taken.

Phytosanitary Certificate

To certify that the fresh pitahaya fruit from Ecuador has been grown and packed in accordance with the requirements of proposed § 319.56–76, paragraph (f) would require each consignment of fruit to be accompanied by a phytosanitary certificate issued by the NPPO of Ecuador, with an additional declaration stating that the fruit in the consignment was produced and prepared for export in accordance with the requirements of § 319.56–76.

Executive Order 12866 and Regulatory Flexibility Act

The proposed rule has been determined to be Not Significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with 5 U.S.C. 603, we have performed an initial regulatory flexibility analysis, which is summarized below, regarding the economic effects of this proposed rule on small entities. Copies of the full

analysis are available by contacting the person listed under **FOR FURTHER INFORMATION CONTACT** or on the Regulations.gov Web site (see **ADDRESSES** above for instructions for accessing Regulations.gov).

Based on the information we have, there is no reason to conclude that adoption of this proposed rule would result in any significant economic effect on a substantial number of small entities. However, we do not currently have all of the data necessary for a comprehensive analysis of the effects of this proposed rule on small entities. Therefore, we are inviting comments on potential effects. In particular, we are interested in determining the number and kind of small entities that may incur benefits or costs from the implementation of this proposed rule.

The proposed rule would amend the regulations to allow the importation of fresh pitahaya (of any color) (*Hylocereus* spp., *Acanthocereus* spp., *Cereus* spp., *Echinocereus* spp., *Escontria* spp., *Myrtillocactus* spp., and *Stenocereus* spp.) from Ecuador into the continental United States under a systems approach. Entities potentially affected by the proposed rule are U.S. pitahaya fruit growers, of which most, if not all, are small entities.

APHIS has been marginally successful in acquiring information on the U.S. market for pitahaya fruit. At this point, we do not know the quantity of pitahaya fruit domestically produced, numbers of U.S. producers, the total quantity imported, or other factors needed to assess likely economic effects of this rule. Vietnam, the largest exporter of pitahaya to the United States, shipped 1,300 metric tons of the fruit to the United States in 2013. It is unknown what percentage of the total supply this represents. Domestically, pitahaya fruit is produced in Hawaii, California, and Florida. Hawaii's pitahaya production is mainly consumed within that State.

The quantity of pitahaya fruit that would be imported from Ecuador is unknown. In 2014, Ecuador exported about 165 metric tons of pitahaya to 32 countries. They have indicated that, if this proposed rule is finalized, they expect to divert 147 shipments to the United States per year. Given that there is no consistent indication of the expected individual size of these shipments, it is unknown what percentage of the total exported tonnage this would represent, or the total quantity of these shipments. Lack of information about the quantity of pitahaya fruit that would be imported, and about the quantities produced by the United States, prevents a clear

understanding of what the economic effects of the proposed rule may be.

Executive Order 12988

This proposed rule would allow fresh pitahaya to be imported into the continental United States from Ecuador. If this proposed rule is adopted, State and local laws and regulations regarding fresh pitahaya imported under this rule would be preempted while the fruit is in foreign commerce. Fresh fruit are generally imported for immediate distribution and sale to the consuming public and would remain in foreign commerce until sold to the ultimate consumer. The question of when foreign commerce ceases in other cases must be addressed on a case-by-case basis. If this proposed rule is adopted, no retroactive effect will be given to this rule, and this rule will not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the information collection or recordkeeping requirements included in this proposed rule have been submitted for approval to the Office of Management and Budget (OMB). Please send written comments to the Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for APHIS, Washington, DC 20503. Please state that your comments refer to Docket No. APHIS–2015–0004. Please send a copy of your comments to: (1) APHIS, using one of the methods described under **ADDRESSES** at the beginning of this document, and (2) Clearance Officer, OCIO, USDA, Room 404–W, 14th Street and Independence Avenue SW., Washington, DC 20250.

APHIS is proposing to amend the fruits and vegetables regulations to allow the importation of fresh pitahaya fruit into the continental United States from Ecuador. As a condition of entry, the fruit would have to be produced in accordance with a systems approach that would include requirements for fruit fly trapping, pre-harvest inspections, production sites, and packinghouse procedures designed to exclude quarantine pests. The fruit would also be required to be imported in commercial consignments and be accompanied by a phytosanitary certificate issued by the NPPO of Ecuador stating that the consignment was produced and prepared for export in accordance with the requirements in the systems approach.

This action would allow for the importation of fresh pitahaya fruit from Ecuador while continuing to provide

protection against the introduction of plant pests into the United States.

Allowing the importation of fresh pitahaya fruit into the continental United States from Ecuador would require an operational workplan, registered production sites, trapping records, inspections, monitoring, packinghouse registrations, box labeling, shipping documents, and phytosanitary certificates.

We are soliciting comments from the public (as well as affected agencies) concerning our proposed information collection and recordkeeping requirements. These comments will help us:

(1) Evaluate whether the proposed information collection is necessary for the proper performance of our agency's functions, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the information collection on those who are to respond (such as through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology; e.g., permitting electronic submission of responses).

Estimate of burden: Public reporting burden for this collection of information is estimated to average 0.003 hours per response.

Respondents: NPPO of Ecuador, producers, and exporters.

Estimated annual number of respondents: 132.

Estimated annual number of responses per respondent: 1,367.

Estimated annual number of responses: 180,561.

Estimated total annual burden on respondents: 673 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

Copies of this information collection can be obtained from Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851-2727.

E-Government Act Compliance

The Animal and Plant Health Inspection Service is committed to compliance with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government

information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this proposed rule, please contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851-2727.

International Trade Data System

The Security and Accountability for Every Port Act of 2006² ("SAFE Act") requires the interagency establishment of a single portal system, known as the International Trade Data System (ITDS), to be operated by U.S. Customs and Border Protection. This unified data system electronically collects and distributes import and export data required by government agencies that license or clear the import or export of goods. ITDS provides individuals and companies involved in the international trade of plants and plant products, including pitahaya from Ecuador, with an electronic format to secure necessary certifications, complete required forms, and provide information about the requirements and regulations relevant to the commodity of interest.

List of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

Accordingly, we propose to amend 7 CFR part 319 as follows:

PART 319—FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

Authority: 7 U.S.C. 450, 7701-7772, and 7781-7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Section 319.56-76 is added to read as follows:

§ 319.56-76 Pitahaya from Ecuador.

Fresh pitahaya (*Hylocereus* spp., *Acanthocereus* spp., *Cereus* spp., *Echinocereus* spp., *Escontria* spp., *Myrtillocactus* spp., and *Stenocereus* spp.) from Ecuador may be imported into the continental United States only under the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pest: *Anastrepha fraterculus* (Wiedemann), South American fruit fly.

(a) *General requirements.* The national plant protection organization (NPPO) of Ecuador must provide an operational workplan to APHIS that

details activities that the NPPO of Ecuador will, subject to APHIS' approval of the workplan, carry out to meet the requirements of this section. The operational workplan must include and describe the specific requirements as set forth in this section.

(b) *Commercial consignments.*

Pitahaya from Ecuador may be imported in commercial consignments only.

(c) *Production site requirements.* (1) All production sites that participate in the pitahaya export program must be approved by and registered with the NPPO of Ecuador in accordance with the operational workplan.

(2) Trees and other structures, other than the crop itself, must not shade the crop during the day. No other host of *A. fraterculus* is permitted to be grown within 100 meters of the edge of the field. Pitahaya fruit that has fallen on the ground must be removed from the place of production at least once every 7 days and may not be included in field containers of fruit to be packed for export. Harvested pitahayas must be placed in field cartons or containers that are marked to show the place of production so that traceback is possible.

(3) The production sites must be inspected prior to each harvest by the NPPO of Ecuador or its approved designee in accordance with the operational workplan. An approved designee is an entity with which the NPPO creates a formal agreement that allows that entity to certify that the appropriate procedures have been followed. If APHIS or the NPPO of Ecuador finds that a place of production is not complying with the requirements of the systems approach, no fruit from the place of production will be eligible for export to the continental United States until APHIS and the NPPO of Ecuador conduct an investigation and appropriate remedial actions have been implemented.

(4) The registered production sites must conduct trapping for the fruit fly *A. fraterculus* at each production site in accordance with the operational workplan. Personnel conducting the trapping and pest surveys must be hired, trained, and supervised by the NPPO of Ecuador. The trapping must begin at least 1 year before harvest begins and continue through the completion of harvest.

(5) If more than an average of 0.07 *A. fraterculus* per trap per day is trapped for more than 2 consecutive weeks, the production site will be ineligible for export until the rate of capture drops to less than that average. If levels exceed that average per trap per day, from 2 months prior to harvest to the end of the shipping season, the production site

² Public Law 109-347, October 13, 2006.

will be prohibited from shipping under the systems approach until APHIS and the NPPO of Ecuador both agree that the pest risk has been mitigated. As conditions warrant, the average number of *A. fraterculus* per trap per day may be raised or lowered if jointly agreed to between APHIS and the NPPO of Ecuador in the operational workplan.

(6) The NPPO of Ecuador must maintain records of trap placement, checking of traps, and any quarantine pest captures in accordance with the operational workplan. Trapping records must be maintained for APHIS review for at least 1 year.

(d) *Packinghouse requirements.* (1) The NPPO of Ecuador must monitor packinghouse operations to verify that the packinghouses are complying with the requirements of the systems approach. If the NPPO of Ecuador finds that a packinghouse is not complying with the requirements of the systems approach, no pitahaya fruit from the packinghouse will be eligible for export to the continental United States until APHIS and the NPPO of Ecuador conduct an investigation and both agree that the pest risk has been mitigated.

(2) All packinghouses that participate in the pitahaya export program must be registered with the NPPO of Ecuador.

(3) The pitahaya fruit must be packed within 24 hours of harvest in a pest-exclusionary packinghouse. The pitahaya must be safeguarded by an insect-proof mesh screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing. These safeguards must remain intact until arrival in the continental United States or the consignment will be denied entry.

(4) During the time the packinghouse is in use for exporting pitahaya fruit to the continental United States, the packinghouse may only accept pitahaya fruit from registered production sites.

(e) *Phytosanitary inspection.* (1) A biometric sample of pitahaya fruit (jointly agreed upon by APHIS and the NPPO) must be inspected in Ecuador by the NPPO of Ecuador following post-harvest processing. The biometric sample must be visually inspected for any quarantine pests, and a portion of the fruit will be cut open to detect internal signs of *A. fraterculus*.

(2) Pitahaya fruit presented for inspection at the port of entry to the United States must be identified in the shipping documents accompanying each lot of fruit to specify the production site or sites, in which the fruit was produced, and the packing shed or sheds, in which the fruit was processed, in accordance with the requirements in the operational

workplan. This identification must be maintained until the fruit is released for entry into the continental United States. The pitahaya fruit are subject to inspection at the port of entry for all quarantine pests of concern, including *A. fraterculus*. If a single larva of *A. fraterculus* is found in a shipment from a place of production (either by the NPPO in Ecuador or by inspectors at the continental United States port of entry), the entire lot of fruit will be prohibited from export, and the place of production of that fruit will be suspended from the export program until appropriate measures agreed upon by the NPPO of Ecuador and APHIS have been taken.

(f) *Phytosanitary certificate.* Each consignment of pitahaya fruit must be accompanied by a phytosanitary certificate issued by the NPPO of Ecuador bearing the additional declaration that the consignment was produced and prepared for export in accordance with the requirements of § 319.56–76.

Done in Washington, DC, this 5th day of April 2016.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

FEDERAL RESERVE SYSTEM

12 CFR Part 217

[Regulation Q; Docket No. R–1535]

RIN 7100 AE–49

Risk-Based Capital Guidelines: Implementation of Capital Requirements for Global Systemically Important Bank Holding Companies

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is inviting public comment on proposed clarifying revisions (proposed rule) to the Board's rule regarding risk-based capital surcharges for U.S. based global systemically important bank holding companies (GSIB surcharge rule). The proposed rule proposed rule would modify the GSIB surcharge rule to provide that a bank holding company subject to the rule would continue to calculate its method 1 and method 2 GSIB surcharge scores annually using data as of December 31 of the previous calendar year, even though the data will be due quarterly beginning with the June 30, 2016, report. In addition, the

proposed rule would clarify that a bank holding company subject to the GSIB surcharge rule is required to calculate its method 2 GSIB surcharge score using systemic indicator amounts expressed in billions of dollars even though the data is reported in millions of dollars. The preamble to the proposed rule also provides clarifying information on how a covered bank holding company should calculate its short-term wholesale funding score for purposes of calculating its method 2 score under the GSIB surcharge rule.

DATES: Comments must be received May 13, 2016.

ADDRESSES: When submitting comments, please consider submitting your comments by email or fax because paper mail in the Washington, DC area and at the Board may be subject to delay. You may submit comments, identified by Docket No. R–1535 and RIN 7100 AE–49, by any of the following methods:

- *Agency Web site:* www.federalreserve.gov. Follow the instructions for submitting comments at www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm.

- *Federal eRulemaking Portal:* www.regulations.gov. Follow the instructions for submitting comments.

- *Email:* regs.comments@federalreserve.gov. Include the docket number in the subject line of the message.

- *Fax:* (202) 452–3819 or (202) 452–3102.

- *Mail:* Address to Robert de V. Frierson, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW., Washington, DC 20551.

All public comments will be made available on the Board's Web site at www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm as submitted, unless modified for technical reasons. Accordingly, comments will not be edited to remove any identifying or contact information. Public comments may also be viewed electronically or in paper in Room MP–500 of the Board's Martin Building (20th and C Streets NW., Washington, DC 20551) between 9 a.m. and 5 p.m. on weekdays.

Introduction

Section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) authorizes the Board to establish enhanced prudential standards for bank holding companies with \$50 billion or more in total consolidated assets and for nonbank financial companies that the Financial Stability Oversight Council has designated for supervision by the Board.¹ These standards must include risk-based capital requirements as well as other enumerated standards. In July 2015, the Board adopted the GSIB surcharge rule, pursuant to section 165 of the Dodd-Frank Act, to identify global systemically important bank holding companies and impose a risk-based capital surcharge on those institutions.²

II. Background

The GSIB surcharge rule works to mitigate the potential risk that the material financial distress or failure of a GSIB could pose to U.S. financial stability by increasing the stringency of capital standards for GSIBs, thereby increasing the resiliency of these firms. The GSIB surcharge rule takes into consideration the nature, scope, size, scale, concentration, interconnectedness, and mix of activities of each company subject to the rule. These factors are reflected in the GSIB surcharge rule's method 1 and method 2 scores, which use quantitative metrics reported on the FR Y-15 reporting form to measure the firm's

systemic footprint. A bank holding company whose method 1 score exceeds a defined threshold is identified as a GSIB. Bank holding companies that are identified as GSIBs under the GSIB surcharge rule must calculate their method 1 and method 2 scores each year using data reported on a firm's FR Y-15 as of December 31 of the prior year. GSIB surcharges are established using these scores, and GSIBs with higher scores are subject to higher GSIB surcharges.

Method 1 uses five equally-weighted categories that are correlated with systemic importance—size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity—and these categories are subdivided into twelve systemic indicators.³ For each systemic indicator, a firm divides its own measure of the systemic indicator by an aggregate global indicator amount. Each resulting value is then weighted and put onto a standard scale. The firm's method 1 score is the sum of its weighted systemic indicator scores. Method 2 uses similar inputs to those used in method 1, but replaces the substitutability category with a measure of a firm's use of short-term wholesale funding.⁴ The GSIB surcharge for the firm is the higher of the two surcharges determined under method 1 and method 2.⁵ Method 2 is calibrated differently from method 1 and method 2 generally results in a higher GSIB surcharge.

The FR Y-15 reporting form collects systemic risk data from U.S. bank holding companies and covered savings and loan holding companies⁶ with total consolidated assets of \$50 billion or more. The Federal Reserve primarily uses the FR Y-15 data to monitor, on an ongoing basis, the systemic risk profile of the institutions that are subject to enhanced prudential standards under section 165 of the Dodd-Frank Act. The information reported on the FR Y-15 is also used in the calculation of a bank holding company's method 1 and method 2 scores under the GSIB surcharge rule. Currently, the FR Y-15 requires reporting of the components used in calculating the method 1 and method 2 scores on the FR Y-15, but

does not require reporting of the scores themselves.⁷

III. Revisions Related to FR Y-15 Reporting Frequency

The FR Y-15, as implemented on December 31, 2012, is an annual report that collects data regarding a firm's systemic risk.⁸ The Board recently adopted revisions to the FR Y-15 that include requiring the FR Y-15 to be filed on a quarterly basis, beginning with the report as of June 30, 2016.⁹ Under the GSIB surcharge rule, bank holding companies are required to calculate their method 1 and method 2 scores using data from the most recent FR Y-15.¹⁰ At the time the GSIB surcharge rule was adopted, these calculations were intended to be conducted annually consistent with the frequency of the FR Y-15 and using data as of December 31 of the prior calendar year.

The proposed rule would revise the GSIB surcharge rule to require continued use of a December 31 as-of date for purposes of a bank holding company's calculation of its method 1 and method 2 scores. In particular, the proposed rule would revise sections 217.404 and 217.405 of the GSIB surcharge rule, which are the sections that describe the methodology for calculating a firm's method 1 and method 2 scores, respectively. The revisions to sections 217.404 and 217.405 would clarify that the systemic indicator amount used in the calculations would be drawn from a firm's FR Y-15 as of December 31 of the previous calendar year even after the FR Y-15 becomes a quarterly report.

IV. Revision To Clarify the Method 2 Score Calculation

The proposed rule would revise section 217.405 of the Board's Regulation Q to clarify that, for purposes of calculating its method 2 score, a GSIB should convert its systemic indicator amounts as reported on the FR Y-15 in millions of dollars to billions of dollars. The FR Y-15 requires these data to be reported in millions of dollars, while the fixed coefficients used in the calculation of a firm's method 2 score were determined using aggregate data expressed in billions of dollars.¹¹

⁷ Beginning on January 1, 2016, a bank holding company that is subject to a GSIB surcharge is required to report its applicable GSIB surcharge on line 67 of the FFIEC 101 report.

⁸ See 77 FR 76487 (December 28, 2012). The Board subsequently revised the FR Y-15 in December 2013. See 78 FR 77128 (December 20, 2013).

⁹ 80 FR 77344 (December 14, 2015).

¹⁰ 80 FR 49082 (August 14, 2015).

¹¹ See 80 FR 49082, 49088.

¹ See 12 U.S.C. 5365.

² 80 FR 49082 (August 14, 2015).

³ 12 CFR 217.404.

⁴ 12 CFR 217.405.

⁵ 12 CFR 217.403.

⁶ Covered savings and loan holding companies are those which are not substantially engaged in insurance or commercial activities. For more information, see the definition of "covered savings and loan holding company" provided in 12 CFR 217.2.

Therefore, to properly use the fixed coefficients in the method 2 score methodology, a firm should reflect its systemic indicator amounts used in the method 2 score calculation in billions of dollars.

V. Clarification of the Short-Term Wholesale Funding Method 2 Score Calculation

A firm subject to the GSIB surcharge rule must calculate a short-term wholesale funding score in order to calculate the denominator of its method 2 GSIB surcharge, if any.¹² Some firms subject to the GSIB surcharge rule have requested clarification on what the appropriate denominator should be for determining the short-term wholesale funding score during the transitional period before the GSIB surcharge becomes fully phased in. Consistent

with the definition in the GSIB surcharge rule, the draft **Federal Register** notice would state that, for purposes of calculating this denominator during the transitional period, the average risk-weighted assets used in determining a firm's short-term wholesale funding score is the four-quarter average of total risk-weighted assets associated with the lower of the firm's common equity tier 1 capital ratios, as reported on the firm's FR Y-9C for each quarter of the previous calendar year.¹³

As it relates to the numerator used in the short-term wholesale funding score calculation, the GSIB surcharge rule contains a transition provision that directs firms identified as GSIBs to determine the average of their weighted short-term wholesale funding amounts

for the GSIB surcharge in effect beginning January 1, 2016, and January 1, 2017, by averaging their weighted short-term wholesale funding amounts on July 31, 2015, August 24, 2015, and September 30, 2015.¹⁴ These transition arrangements relate only to the calculation of a firm's average weighted short-term wholesale funding amount that is used as a component of the calculation of a firm's short-term wholesale funding score for the GSIB surcharges in effect during calendar year 2016 and calendar year 2017. These transition arrangements do not affect any other amount used in the calculation of a firm's short-term wholesale funding score, method 2 score, method 1 score, or GSIB surcharge. This is described further in the table below.

GSIB SURCHARGE CALCULATION DURING THE TRANSITIONAL PERIOD

| Surcharges calculated in: | Using indicator data reported on the FR Y-15 as of: | Using short-term wholesale funding calculated as the average of the weighted amounts for the following days (numerator): | Using RWAs in the short-term wholesale funding metric calculated as the 4-quarter average over the year (denominator): | Resulting in a GSIB surcharge in effect on: | If the surcharge decreases, then it is in effect on: |
|---------------------------|---|--|--|---|--|
| December 2015 .. | December 31, 2014 | July 31, August 24, and September 30, 2015. | 2014 | January 1, 2016 | |
| December 2016 .. | December 31, 2015 | July 31, August 24, and September 30, 2015. | 2015 | January 1, 2017. January 1, 2018 | January 1, 2017 |
| December 2017 .. | December 31, 2016 | 2016 daily values | 2016 | January 1, 2019 | January 1, 2018 |
| December 2018 .. | December 31, 2017 | 2017 daily values | 2017 | January 1, 2020 | January 1, 2019 |
| December [Year] | December 31, [Year - 1]. | [Year - 1] daily values | [Year - 1] | January 1, [Year + 2] | January 1, [Year + 1] |

VI. Request for Comment

The Board seeks comment on all aspects of the proposed revisions to the GSIB surcharge rule.

VII. Regulatory Analysis

A. Paperwork Reduction Act (PRA)

There is no new collection of information pursuant to the PRA (44 U.S.C. 3501 *et seq.*) contained in this proposed rule.

B. Regulatory Flexibility Act Analysis

The Board is providing an initial regulatory flexibility analysis with respect to this proposed rule. The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.* (RFA), generally requires that an

agency prepare and make available an initial regulatory flexibility analysis in connection with a notice of proposed rulemaking. Under regulations issued by the Small Business Administration, a small entity includes a depository institution, bank holding company, or savings and loan holding company with assets of \$550 million or less (small banking organizations).¹⁵ As of December 31, 2014, there were approximately 3,833 small bank holding companies.

The proposed rule would apply only to advanced approaches bank holding companies, which, generally, are bank holding companies with total consolidated assets of \$250 billion or more, that have total consolidated on-

balance sheet foreign exposures of \$10 billion or more, that have subsidiary depository institutions that are advanced approaches institutions, or that elect to use the advanced approaches framework.¹⁶ Bank holding companies that are subject to the proposed rule therefore are expected to substantially exceed the \$550 million asset threshold at which a banking entity would qualify as a small bank holding company.

Because the proposed rule is not likely to apply to any bank holding company with assets of \$550 million or less, if adopted in final form, it is not expected to apply to any small bank holding company for purposes of the RFA. The Board does not believe that

¹² 12 CFR 217.401(c).

¹³ 12 CFR 217.401(c).

¹⁴ 12 CFR 217.400(b)(3). The funding sources were defined using terminology from the Liquidity Coverage Ratio rule (12 CFR part 249) and aligned

with items that are reported on the Board's Complex Institution Liquidity Monitoring Report on Form FR 2052a.

¹⁵ See 13 CFR 121.201. Effective July 14, 2014, the Small Business Administration revised the size

standards for banking organizations to \$550 million in assets from \$500 million in assets. 79 FR 33647 (June 12, 2014).

¹⁶ See 12 CFR 217.100.

the proposed rule duplicates, overlaps, or conflicts with any other Federal rules. In light of the foregoing, the Board does not believe that the proposed rule, if adopted in final form, would have a significant economic impact on a substantial number of small entities. Nonetheless, the Board seeks comment on whether the proposed rule would impose undue burdens on, or have unintended consequences for, small organizations, and whether there are ways such potential burdens or consequences could be minimized in a manner consistent with the purpose of the proposed rule.

C. Riegle Community Development and Regulatory Improvement Act of 1994

In determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on state member banks, the Board is required to consider, consistent with the principles of safety and soundness and the public interest, any administrative burdens that such regulations would place on depository institutions, and the benefits of such regulations.¹⁷ In addition, new regulations that impose additional reporting disclosures or other new requirements on insured depository institutions generally must take effect on the first day of a calendar quarter which begins on or after the date on which the regulations are published in final form.¹⁸

The proposed revision to the Board's GSIB surcharge rule are only applicable to advanced approaches bank holding companies. Therefore, these requirements are not applicable to this proposed rule.

D. Plain Language

Section 722 of the Gramm-Leach-Bliley Act requires the Board to use plain language in all proposed and final rules published after January 1, 2000. The Board has sought to present the proposed rule in a simple straightforward manner, and invites comment on the use of plain language. For example:

- Has the Board organized the material to suit your needs? If not, how could the Board present the proposed rule more clearly?
- Are the requirements in the proposed rule clearly stated? If not, how could the proposed rule be more clearly stated?
- Do the regulations contain technical language or jargon that is not clear? If so, which language requires clarification?

- Would a different format (grouping and order of sections, use of headings, paragraphing) make the regulation easier to understand? If so, what changes would achieve that?
- Is the section format adequate? If not, which of the sections should be changed and how?
- What other changes can the Board incorporate to make the regulation easier to understand?

Administrative practice and procedure, Banks, Banking, Holding companies, Reporting and recordkeeping requirements, Securities.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

12 CFR CHAPTER II

Authority and Issuance

For the reasons set forth in the preamble, the Board proposes to amend chapter II of title 12 of the Code of Federal Regulations as follows:

PART 217—CAPITAL ADEQUACY OF BANK HOLDING COMPANIES, SAVINGS AND LOAN HOLDING COMPANIES, AND STATE MEMBER BANKS (REGULATION Q)

- 1. The authority citation for part 217 continues to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1462a, 1467a, 1818, 1828, 1831n, 1831o, 1831p–l, 1831w, 1835, 1844(b), 1851, 3904, 3906–3909, 4808, 5365, 5368, 5371.

- 2. In § 217.404, paragraph (b)(1) is revised to read as follows:

§ 217.404 Method 1 score.

* * * * *

(b) *Systemic indicator score.* (1) Except as provided in paragraph (b)(2) of this section, the systemic indicator score in basis points for a given systemic indicator is equal to:

- (i) The ratio of:
 - (A) The amount of that systemic indicator, as reported by the bank holding company as of December 31 of the previous calendar year; to
 - (B) The aggregate global indicator amount for that systemic indicator published by the Board in the fourth quarter of that year;
- (ii) Multiplied by 10,000; and
- (iii) Multiplied by the indicator weight corresponding to the systemic indicator as set forth in Table 1 of this section.

* * * * *

- 3. In § 217.405, paragraph (b)(1) is revised to read as follows:

§ 217.405 Method 2 score.

* * * * *

(b) *Systemic indicator score.* A global systemically important BHC's score for a systemic indicator is equal to:

- (1) The amount of the systemic indicator, as reported by the bank holding company as of December 31 of the previous calendar year, expressed in billions of dollars;

* * * * *

By order of the Board of Governors of the Federal Reserve System, April 4, 2016.

Robert deV. Frierson,
Secretary of the Board.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

Proposed Modification of the San Diego, CA, Class B Airspace Area; Public Meetings

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of meetings.

SUMMARY: This notice announces three fact-finding informal airspace meetings to solicit information from airspace users and others concerning a proposal to amend the Class B airspace area at San Diego, CA. The purpose of these meetings is to provide interested parties an opportunity to present views, recommendations, and comments on the proposal. All comments received during these meetings will be considered prior to any revision or issuance of a notice of proposed rulemaking.

DATES: The meetings will be held on Tuesday, June 28, 2016, at 6:00 p.m.; Wednesday, June 29, 2016, at 6:00 p.m.; and Thursday, June 30, 2016, at 6:00 p.m. Doors open 30 minutes prior to the beginning of each meeting. Comments must be received on or before August 15, 2016.

ADDRESSES: All meetings will be held at San Diego International Airport, Commuter Airport Terminal, 3225 North Harbor Drive, San Diego, CA 92101.

Comments: Send comments on the proposal, in triplicate, to: Tracey Johnson, Manager, Operations Support Group, Western Service Center, Air Traffic Organization Federal Aviation Administration, 1601 Lind Avenue SW., Renton, WA 98057, or by fax to (425) 203–4505.

FOR FURTHER INFORMATION CONTACT: Brian Fagan, FAA Support Manager, Southern California TRACON, 9175

¹⁷ See Section 302 of the Riegle Community Development and Regulatory Improvement Act of 1994 (“RCDRIA”), 12 U.S.C. 4802.

¹⁸ 12 U.S.C. 4802(b).

Kearny Villa Rd, San Diego, CA 92126, (858) 537-5830.

SUPPLEMENTARY INFORMATION:

Meeting Procedures

(a) The meetings will be informal in nature and will be conducted by one or more representatives of the FAA Western Service Center and Southern California TRACON. A representative from the FAA will present a briefing on the planned modification to the Class B airspace at San Diego, CA. Each participant will be given an opportunity to deliver comments or make a presentation, although a time limit may be imposed. Only comments concerning the plan to modify the San Diego Class B airspace will be accepted.

(b) The meetings will be open to all persons on a space-available basis. There will be no admission fee to attend and participate. Parking will be validated. Attendees needing parking validation should bring their parking stub to the meeting.

(c) Any person wishing to make a presentation to the FAA panel will be asked to sign in and estimate the amount of time needed for such presentation. This will permit the panel to allocate an appropriate amount of time for each presenter. These meetings will not be adjourned until everyone on the list has had an opportunity to address the panel.

(d) Position papers or other handout material relating to the substance of these meetings will be accepted. Participants wishing to submit handout material should present an original and two copies (three copies total) to the presiding officer. There should be additional copies of each handout available for other attendees.

(e) The meetings will not be formally recorded. However, a summary of comments made at the meeting will be filed in the docket.

Agenda for the Meetings

- Sign-in
- Presentation of Meeting Procedures
- Informal Presentation of the Planned Class B Airspace Area Modifications
- Solicitation of Public Comments
- Stations of Interest on Class B airspace area modification
- Drop box for written comments

Certain Natural Gas and Electric Power Contracts

AGENCY: Commodity Futures Trading Commission; Securities and Exchange Commission.

ACTION: Proposed guidance.

SUMMARY: In accordance with section 712(d)(4) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”), the Commodity Futures Trading Commission (the “CFTC”) and the Securities and Exchange Commission (“SEC”), after consultation with the Board of Governors of the Federal Reserve System (“Board of Governors”), are jointly issuing the CFTC’s proposed guidance on certain contracts that provide for rights and obligations with respect to electric power and natural gas. The CFTC invites public comment on all aspects of its proposed guidance.

DATES: Comments must be received on or before May 9, 2016.

ADDRESSES: You may submit comments by any of the following methods:

- **CFTC Web site:** <http://comments.cftc.gov>. Follow the instructions for submitting comments through the Comments Online process on the Web site.
- **Mail:** Send to Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581.
- **Hand Delivery/Courier:** Same as Mail, above.
- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.

Please submit your comments using only one of these methods.

All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to www.cftc.gov. You should submit only information that you wish to make available publicly. If you wish the CFTC to consider information that you believe is exempt from disclosure under the Freedom of

Information Act, a petition for confidential treatment of the exempt information may be submitted according to the procedures established in § 145.9 of the CFTC’s regulations, 17 CFR 145.9.

The CFTC reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse or remove any or all of a submission from www.cftc.gov that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the notice will be retained in the public comment file and will be considered as required under all applicable laws, and may be accessible under the Freedom of Information Act.

SEC: Carol McGee, Assistant Director, Office of Derivatives Policy, Division of Trading and Markets, at (202) 551-5870, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

SUPPLEMENTARY INFORMATION:

I. Introduction

In the final rule further defining the term “swap,” the CFTC and the SEC adopted an interpretation regarding the facts and circumstances in which certain agreements, contracts, or transactions entered into by commercial and non-profit entities should be considered not to be swaps because they are customary commercial arrangements.¹ Following adoption of this interpretation, the CFTC received public comments describing certain types of contracts that are closely tied to regulatory obligations in the markets for electric power and natural gas.²

¹ See Further Definition of “Swap,” Security-Based Swap,” and “Security-Based Swap Agreement”; Mixed Swaps; Security-Based Swap Agreement Recordkeeping, 77 FR 48207, 48246 (Aug. 13, 2012) (the “Products Release”).

² The comments were received in response to the CFTC’s proposed interpretation on Forward Contracts With Embedded Volumetric Optionality, 79 FR 69073 (Nov. 20, 2014) (comments available at <http://comments.cftc.gov/PublicComments/CommentList.aspx?id=1541>), and the CFTC’s notice of proposed rulemaking on Trade Options, 80 FR 26200 (May 7, 2015) (comments available at <http://comments.cftc.gov/PublicComments/CommentList.aspx?id=1580>). In addition, the CFTC’s Energy and Environmental Markets Advisory Committee discussed related issues at its

Continued

Having reviewed these comments, the CFTC proposes to issue guidance regarding particular facts and specific circumstances in which these contracts should be considered not to be “swaps” for purposes of the Commodity Exchange Act (“CEA”).³ This proposed guidance applies the interpretation in the Products Release to the contracts described in Part II.A. of this document and the CFTC preliminarily concludes that such contracts should be considered not to be swaps because they are customary commercial arrangements.

II. Proposed Guidance

A. Commenters’ Description of Certain Contracts

Commenters described two types of contracts that are similar in some respects, but are used in different situations to provide for rights and obligations that are suitable to the parties’ particular needs in those situations, and which are closely tied to compliance with certain regulatory requirements and frameworks. Each is described briefly below.

1. Certain Capacity Contracts—Electric Power

The CFTC understands that certain types of capacity contracts in electric power markets are used in situations where regulatory requirements from a state public utility commission (“PUC”) obligate load serving entities (“LSEs”) and load serving electric utilities in that state to purchase “capacity” (sometimes referred to as “resource adequacy”) ⁴ from suppliers to secure grid management and on-demand deliverability of power to consumers. A

commenter explained that the LSE or load serving electric utility will be recognized by the PUC and the Federal Energy Regulatory Commission (“FERC”) as having purchased capacity and, therefore, having satisfied that portion of its obligation to purchase the ability to supply the electricity when and as needed.⁵ In each of these instances, a commenter asserted, the purchaser, as required by law, will be considered to have purchased the supplier’s capacity to generate, produce and deliver electric power, regardless of whether the electricity underlying the capacity contract is called upon and delivered.⁶

A commenter said the purchaser does not treat this type of capacity contract as a “hedge” in the same sense as it would otherwise use a commodity option as a financial hedge.⁷ In this type of capacity contract, the commenter contended, the purchaser is not procuring the right to profit from a change in the value of the underlying commodity, which the purchaser will then financially settle in order to offset the price volatility risk of some underlying physical transaction in the cash market.⁸ Rather, the purchaser is purchasing a supplier’s capacity to produce, generate, and deliver the underlying electricity, thereby ensuring its ability to supply electricity in compliance with a regulatory requirement.⁹ Certain commenters explained that they do not view these contracts as financial instruments, but rather as commercial agreements that enable the purchaser of capacity to ensure that the underlying electricity is delivered when needed by the purchaser to meet state- and/or federally-required reliability objectives.¹⁰ One commenter stated that state PUCs and the FERC generally do not treat a purchase of capacity in this context as a purchase of a financial

instrument or an option, but rather as a purchase of the ability to ensure delivery of the underlying physical commodity.¹¹

A commenter explained how the payment structure under a capacity contract for resource adequacy is different from the payment structure under a financially-settled commodity option. According to this commenter, capacity contracts do not involve payment of a nominal option premium, followed by payment of the full market price of the electric power if and when the “option” is exercised.¹² Instead, the initial payment under the capacity contract frequently recovers for the seller the entire fixed cost of producing, generating, supplying or transmitting the electric power.¹³

2. Certain Peaking Supply Contracts—Natural Gas

Commenters requested further guidance on whether certain natural gas contracts, which commenters labeled as “peaking supply contracts,” and which are entered into by electric utilities (with or without a minimum gas delivery requirement) should be regulated as swaps.¹⁴ The CFTC understands a peaking supply contract in this context to be a contract that enables an electric utility to purchase natural gas from another natural gas provider on those days when its local natural gas distribution companies (“LDCs”) curtail its natural gas transportation service. For example, one commenter, Linden, explained that it procures sufficient natural gas and gas transportation services to operate its cogeneration facility in the ordinary course through natural gas service agreements with its LDCs.¹⁵ Linden

meeting on July 29, 2015 (transcript available at http://www.cftc.gov/PressRoom/Events/opaevent_eemac072915).

³ See 7 U.S.C. 1a(47). This proposed guidance is being issued jointly with the SEC pursuant to section 712(d)(4) of the Dodd-Frank Act but, given the specific types of contracts at issue, pertains only to the CFTC and swaps. Because the proposed guidance is limited to the particular facts and circumstances of the contracts at issue, the proposed guidance, if adopted, would not pertain to the SEC or security-based swaps.

⁴ The resource adequacy framework adopted by the California Public Utilities Commission (“CPUC”) is an illustrative example. The CPUC adopted a resource adequacy policy framework in 2004 in order to ensure the reliability of electric service in California. The CPUC established resource adequacy obligations applicable to all LSEs within the CPUC’s jurisdiction. The CPUC’s resource adequacy policy framework—implemented as the Resource Adequacy program—guides resource procurement and promotes infrastructure investment by requiring that LSEs procure capacity so that capacity is available to the California Independent System Operator (“ISO”) when and where needed. See generally the discussion of resource adequacy available at <http://www.cpuc.ca.gov/ra/>.

⁵ See letter from International Energy Credit Association (“IECA”) (June 22, 2015) at 9. The CFTC understands that this type of contract enables a Regional Transmission Organization (“RTO”) or ISO to call on resource adequacy capacity to ensure the reliability of electric service to end users or consumers. The LSE or load serving electric utility, which is required to purchase capacity contracts, cannot itself call on the supplier to deliver electricity—only the RTO or ISO can.

⁶ See *id.*

⁷ See *id.*

⁸ See *id.*

⁹ One commenter contended that although this type of capacity contract may not impose a binding obligation on the parties to make and take delivery of a specific quantity of electricity, it does impose a binding obligation on the parties to make and take delivery of the capacity. See *id.* at 10.

¹⁰ See letter from IECA (June 22, 2015) at 10, and letter from Coalition for Derivatives End-Users (“CDEU”) (Dec. 22, 2014) at 7–8.

¹¹ See letter from IECA (June 22, 2015) at 10.

¹² See *id.* at 11.

¹³ See *id.* Resource adequacy capacity is not tied to a specific power price and the purchaser of capacity does not have access to the energy tied to the capacity requirement. The capacity purchased is essentially conferred or assigned to the RTO or ISO, and these entities can call the capacity.

¹⁴ See letter from American Gas Association (“AGA”) (Dec. 22, 2014) at 9–11, letter from AGA (June 22, 2015) at 2–5; and letter from Cogen Technologies Linden Venture, L.P. (“Linden”) (June 22, 2015) at 2–3. For purposes of this proposed guidance, the term electric utility means “all enterprises engaged in the production and/or distribution of electricity for use by the public, including investor-owned electric utility companies; cooperatively-owned electric utilities; government-owned electric utilities (municipal systems, federal agencies, state projects, and public power districts).” See Federal Energy Regulatory Commission (FERC) Glossary, available at <http://ferc.gov/resources/glossary.asp>.

¹⁵ Linden is an exempt wholesale generator selling electric power at market-based rates under the jurisdiction of the FERC, and owns and operates a combined cycle natural gas-fired cogeneration facility located in Linden, New Jersey. The

explained that its natural gas service agreements require Linden to take natural gas from the LDCs if they supply it. However, to ensure that the LDCs are able to meet their regulatory commitments to prioritize and serve residential demand for natural gas, the local board of public utilities (“BPU”) requires that the service agreements permit the LDCs to interrupt natural gas transportation service to Linden during certain specified conditions.¹⁶ Due to the LDCs’ tariff-based commitments to serve residential natural gas demand, the BPU will not allow the LDCs to provide a “firmer” category of natural gas service to Linden.¹⁷ Because of the possibility of these interruptions of transportation service, Linden uses peaking supply contracts to ensure it has sufficient natural gas to operate its cogeneration facility during the interruptions.¹⁸

Linden represented that, under its natural gas service agreements, the LDCs determine when the conditions for interrupting Linden’s service are present, and Linden therefore has no control over such conditions. Thus, Linden does not have discretion as to whether and when an interruption of service as described above will occur.¹⁹

Linden explained that, under the terms of its natural gas service agreements, Linden is required to take natural gas from the LDCs if they supply it. There is no ability for financial settlement under Linden’s peaking supply contracts, and natural gas supplied under those peaking supply contracts cannot be re-sold by Linden.²⁰ Linden represented that the price for natural gas in its peaking supply contracts is based on the market cost of fuel at specified delivery points, plus a specified adjustment depending on delivery point.²¹ Thus, since Linden could not use that natural gas for any purpose other than to fuel its facility when an interruption of service occurs, Linden represented that it is practically limited to exercising its right to take delivery under its peaking supply

contracts only in the event of an interruption of service, and that it has no discretion as to whether and when it will exercise the right to take delivery under its natural gas peaking supply contracts.²²

3. Common Characteristics Described by Commenters

As they have been described by commenters, the natural gas and electric power contracts discussed above are all entered into by commercial market participants, who contemplate physical settlement of the transactions, in response to regulatory requirements, the need to maintain reliable supplies, and practical considerations of storage or transport.²³ In each case, the particular commodities covered by the contract are needed by at least one of the parties for the normal operation of its business, and the specific identity of the counterparty is an important consideration because of, for example, concerns about reliability or the practicability of supply.²⁴

B. Products Release Discussion of Commercial Contracts

In the Products Release, the CFTC and the SEC (the “Commissions”) adopted an interpretation to assist commercial and non-profit entities in understanding whether certain agreements, contracts, or transactions that they enter into would or would not be regulated as swaps.²⁵ To that end, the Products Release listed several specific types of commercial agreements, contracts, and transactions that involve customary business arrangements (whether or not involving a for-profit entity) that will not be considered swaps, including: Employment contracts; sales, servicing, or distribution arrangements; certain fixed or variable interest rate commercial loans or mortgages; and certain agreements, contracts, or transactions related to business combination transactions, real property, intellectual property, and warehouse lending arrangements.²⁶ The Commissions stated their intent that this interpretation should “allow commercial and non-profit entities to continue to operate their businesses and operations without significant disruption and provide that the swap . . . definition [is] not read to include commercial and non-profit operations

that historically have not been considered to involve swaps.”²⁷

The Commissions also explained that the list provided in the Products Release was not intended to be exhaustive and that there may be other, similar types of agreements, contracts, and transactions that also should not be considered to be swaps.²⁸ The Commissions said that in determining whether similar types of agreements, contracts, and transactions entered into by commercial entities should not be considered swaps, they intend to consider the characteristics and factors that are common to the commercial transactions listed in the Products Release, which are:

- They do not contain payment obligations, whether or not contingent, that are severable from the agreement, contract, or transaction;
- They are not traded on an organized market or over-the-counter; and . . .
- In the case of commercial arrangements, they are entered into:
 - By commercial or non-profit entities as principals (or by their agents) to serve an independent commercial, business, or non-profit purpose, and
 - Other than for speculative, hedging, or investment purposes.²⁹

The Commissions concluded that in determining whether an agreement, contract, or transaction not enumerated in the Products Release is a swap, the agreement, contract, or transaction will be evaluated based on its particular facts and circumstances,³⁰ and the representative characteristics and factors set out in the Products Release “are not intended to be a bright-line test for determining whether a particular . . . commercial arrangement is a swap.”³¹

In the Products Release, the CFTC also addressed certain capacity contracts and peaking supply contracts in the context of the CFTC’s interpretation of when an agreement, contract, or transaction with embedded volumetric optionality would be considered a forward contract.³² The CFTC stated that depending on the relevant facts and circumstances, capacity contracts and peaking supply contracts may qualify as forward contracts with embedded volumetric optionality if they met the elements of the CFTC’s interpretation of that provision.³³ This remains the case; the CFTC does not intend that the proposed

electricity produced from Linden’s generator is sold, under a long-term power purchase agreement, to Consolidated Edison Company, which then uses the power to serve the electricity needs of consumers in New York City. Steam from Linden’s operation is sold, also under a long-term contract, to the co-located Bayway Refinery, the largest refinery on the East Coast, for its industrial processes. See letter from Linden (June 22, 2015) at 1–3.

guidance herein would affect the interpretation of when an agreement, contract, or transaction with embedded volumetric optionality would be considered a forward contract.³⁴

C. Proposed Guidance on Whether Certain Contracts Should Be Considered To Be Swaps

In response to the comments, described above, which were provided by market participants regarding certain capacity contracts for electric power and certain peaking supply contracts for natural gas, the CFTC has considered the specific facts and circumstances of these contracts in light of the interpretation in the Products Release of when a contract would be considered not to be a swap because it is a customary commercial arrangement.

The CFTC understands, based on the commenters' descriptions, that the contracts described in Part II.A. above are not traded on an organized market or over-the-counter, and do not have severable payment obligations. Thus, the CFTC preliminarily believes that the contracts described in Part II.A. are consistent with the first two elements of the interpretation in the Products Release.³⁵

³⁴ The CFTC has clarified this interpretation. See Forward Contracts With Embedded Volumetric Optionality, 80 FR 28239 (May 18, 2015). In this clarification, the CFTC addressed certain retail electric market demand-response programs, under which electric utilities have the right to interrupt or curtail service to a customer to support system reliability. See *id.*, 80 FR at 28242, citing letter from the National Rural Electric Cooperative Association, the American Public Power Association, the Large Public Power Association, and the Transmission Access Policy Study Group (Oct. 12, 2012) at 9.

The CFTC clarified that since a key function of an electricity system operator is to ensure grid reliability, demand response agreements, even if not specifically mandated by a system operator, may be properly characterized as the product of regulatory requirements within the meaning of the seventh element of the CFTC's interpretation regarding forward contracts with embedded volumetric optionality. For the avoidance of doubt, the CFTC reiterates that the proposed guidance herein would not affect this interpretation.

Also, the CFTC's interpretations regarding full requirements and output contracts, as provided in the Products Release, would be unaffected by the proposed guidance herein. See Products Release, 77 FR at 48239–40.

Furthermore, the CFTC does not intend that the proposed guidance would supersede or modify a document issued by the CFTC's Office of General Counsel—"Response to Frequently Asked Questions Regarding Certain Physical Commercial Agreements for the Supply and Consumption of Energy," available at http://www.cftc.gov/idc/groups/public/@newsroom/documents/file/leaslike_faq.pdf—which continues to be the position of the CFTC's Office of General Counsel on the issues discussed in that document.

³⁵ See Products Release, 77 FR at 48247 (the contracts "do not contain payment obligations, whether or not contingent, that are severable from the agreement, contract, or transaction; [and] . . . are not traded on an organized market or over-the-counter").

The CFTC has also considered the contracts described in Part II.A. in light of the statement in the Products Release that, in order not to be considered swaps, the contracts should be entered into "[b]y commercial or non-profit entities as principals (or by their agents) to serve an independent commercial, business, or non-profit purpose, and [o]ther than for speculative, hedging, or investment purposes."³⁶ In view of all the facts and circumstances of the contracts described in Part II.A., the CFTC preliminarily believes that such contracts would satisfy this element of the Products Release, and therefore should be considered not to be swaps under the interpretation set forth in the Products Release because they are customary commercial arrangements of the type described in the Products Release.

The CFTC notes that commenters have represented that the contracts described in Part II.A. are entered into in response to regulatory requirements, the need to maintain reliable supplies, and practical considerations of storage or transport which arise in the course of the normal operation of at least one party's business. In this respect, the CFTC preliminarily believes that the contracts described in Part II.A. are similar to certain contracts—namely, sales, servicing and distribution arrangements, and contracts for the purchase of equipment or inventory—listed in the Products Release as commercial contracts that will not be considered swaps.³⁷ Also, in the Products Release the Commissions addressed commenters' assertion that all commercial merchandising transactions hedge an enterprise's commercial risks by stating that a commercial arrangement undertaken for hedging purposes may or may not be a swap depending on the particular facts and circumstances of the arrangement.³⁸

The CFTC observes that when an entity enters into a purchase contract, it is assured of a supply of the equipment or inventory it will need in the future. Similarly, a service contract assures the availability of a needed service in the future. The contracts described in Part II.A. are similar to the purchase and service contracts enumerated in the Products Release because they appear to satisfy the elements of commercial contracts, transactions or arrangements that are not considered swaps, including that they are entered into by commercial or non-profit entities to assure availability of a commodity, not to

hedge against risks arising from a future change in price for the commodity or to serve a speculative or investment purpose.

As stated in the Products Release, whether a particular commercial arrangement is a swap depends on the particular facts and circumstances of the arrangement.³⁹ This proposed guidance would not apply to any agreement, contract or transaction other than those described in Part II.A., and would not preclude the CFTC from issuing further guidance considering other commodity contracts under the interpretation in the Products Release.

III. Request for Comment

The CFTC believes that it would benefit from public comment about its proposed guidance, and therefore requests public comment on all aspects of its proposed guidance set forth above, and on the following questions:

1. Are there natural gas and electric power contracts that would not qualify as trade options within the scope of CFTC regulation 32.3 but which would be covered by the proposed guidance? If so, should the proposed guidance be limited so that it encompasses only contracts that do qualify as trade options? Why or why not?

2. Does the proposed guidance provide sufficient clarity on whether the specific types of natural gas and electric power contracts in question should or should not be considered to be swaps? If not, how should the guidance be revised to provide more clarity?

3. Are there other facts and circumstances that the CFTC should consider in determining whether the contracts described in Part II.A. are swaps? If so, what are these factors and how should they be considered?

4. Are there contracts (other than those described in Part II.A.) that are entered into by participants in the electric power and natural gas markets and necessitated by, or closely tied to, compliance with regulatory obligations or frameworks that are similar to those described in Part II.A.?

5. Are there other types of commodity contracts, outside of the electric power and natural gas markets, which are necessitated by, or closely tied to, compliance with regulatory obligations or frameworks that should be considered under the interpretation in the Products Release? If so, please describe these contracts and the regulatory obligations and frameworks to which they are closely tied.

6. Are there public interest considerations regarding the natural gas

³⁶ See *id.*

³⁷ See *id.*

³⁸ See *id.*, 77 FR at 48249.

³⁹ See *id.*, 77 FR at 48248.

and electric power contracts in question that should be reflected in the proposed guidance? If so, why and how?

7. Does the proposed guidance provide sufficient clarity that it does not supersede or modify the CFTC OGC FAQ referenced in footnote 34? Is there any potential overlap between the proposed guidance and the CFTC OGC FAQ that should be further clarified? If so, what elements of the proposed guidance should be clarified to indicate that the proposed guidance does not supersede or modify the CFTC OGC FAQ?

8. With respect to natural gas peaking contracts, are there natural gas providers other than LDCs, such as Intrastate and Interstate Natural Gas Pipelines (as those terms are defined by the Energy Information Administration),⁴⁰ which are subject to regulatory obligations to prioritize and serve residential demand for natural gas, such that the providers are obligated to curtail service to electric utilities under certain circumstances? If so, please explain.

By the Securities and Exchange Commission.

Dated: April 4, 2016.

Brent J. Fields,
Secretary.

Issued in Washington, DC, on April 4, 2016, by the Commodity Futures Trading Commission.

Christopher J. Kirkpatrick,
Secretary of the Commission.

Commodity Futures Trading Commission (CFTC) Appendices to Certain Natural Gas and Electric Power Contracts—Commission Voting Summary and Chairman's Statement
Appendix 1—Commodity Futures Trading Commission Voting Summary

On this matter, Chairman Massad and Commissioners Bowen and Giancarlo voted in the affirmative. No Commissioner voted in the negative.

Appendix 2—Statement of CFTC Chairman Timothy G. Massad

Today, the CFTC and the Securities and Exchange Commission (SEC), have jointly proposed guidance relating to the appropriate treatment of certain peaking supply and capacity contracts. We are issuing this guidance after considering the useful input we have received from market participants expressing concern about this issue. I support this proposal, as it will properly clarify the treatment of contracts used by many businesses with respect to the supply and delivery of electric power and natural gas.

We have proposed that certain electric power and natural gas contracts should not be considered "swaps" under the Commodity Exchange Act. We have done so because we believe they are examples of customary commercial arrangements as described in the final rule defining the term "swap."

For example, these contracts are entered into to assure availability of a commodity, not to hedge against risks arising from a future change in price of that commodity or for speculative, or investment purposes. They are typically entered into in response to regulatory requirements, the need to maintain reliable energy supplies, and practical considerations of storage or transport. All of these factors are consistent with what has been set forth in previous commission guidance.

Today's proposed guidance is an important complement to our final rule regarding Trade Options, which will reduce burdens on end-users and allow them to better address commercial risk. I thank my fellow Commissioners Bowen and Giancarlo for joining me in unanimously approving this proposal as well as that final rule.

Partial Withdrawal of Proposed Application of Section 367 to a Section 351 Exchange Resulting From a Transaction Described in Section 304(a)(1); Partial Withdrawal of Proposed Guidance for Determining Stock Ownership

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Partial withdrawal of notice of proposed rulemaking.

SUMMARY: This document withdraws portions of a notice of proposed rulemaking published in the **Federal Register** on February 11, 2009. The withdrawn portions relate to the application of section 367(b) to transactions described in section 304(a)(1). This document also withdraws portions of a notice of proposed rulemaking published in the **Federal Register** on January 17, 2014. The withdrawn portions relate to the identification of certain stock of a foreign corporation that is disregarded in calculating ownership of the foreign corporation for purposes of determining whether it is a surrogate foreign corporation for purposes of section 7874.

DATES: As of April 8, 2016, portions of proposed rules (REG-147636-08 and REG-121534-12) published in the **Federal Register** on February 11, 2009 (74 FR 6840) and January 17, 2014 (79 FR 3145) are withdrawn.

FOR FURTHER INFORMATION CONTACT: Shane M. McCarrick or David A. Levine, (202) 317-6937.

SUPPLEMENTARY INFORMATION:

Background

On February 11, 2009, the Department of Treasury (Treasury Department) and the IRS published in the **Federal Register** proposed regulations (REG-147636-08, 74 FR 6840), including § 1.367(b)-4(e), (f), and (g), which provide guidance on the application of section 367(b) to transactions described in section 304(a)(1). The regulations were proposed by cross-reference to temporary regulations in § 1.367(b)-4T in the same issue of the **Federal Register** (T.D. 9444, 74 FR 6824). This document withdraws these proposed regulations because the rules in the proposed regulations do not reflect current law. See Notice 2012-15, 2012-9 I.R.B. 424 (revising the approach under the proposed regulations regarding the interaction of sections 367 and 304 and providing that section 367(a) and (b) apply fully to certain transactions described in section 304(a)(1)). In the Rules and Regulations section of this issue of the **Federal Register**, the Treasury Department and the IRS are issuing additional temporary regulations in § 1.367(b)-4T(e), (f), and (g), as well as (h), that, in the case of certain exchanges, generally require an inclusion of amounts in income as a deemed dividend or recognition of realized gain that is not otherwise recognized, or both. Accordingly, the Treasury Department and the IRS are issuing a notice of proposed rulemaking in the Proposed Rules section of this issue of the **Federal Register** that proposes new rules in § 1.367(b)-4T by cross-reference to the temporary regulations.

On January 17, 2014, the Treasury Department and the IRS published in the **Federal Register** proposed regulations (REG-121534-12, 79 FR 3145), including in § 1.7874-4, that provide that certain stock of a foreign corporation is disregarded in calculating ownership of the foreign corporation for purposes of determining whether it is a surrogate foreign corporation for purposes of section 7874. The regulations were proposed by cross-reference to temporary regulations in § 1.7874-4T in the same issue of the **Federal Register** (T.D. 9654, 79 FR

⁴⁰ See *Distribution of Natural Gas: The Final Step in the Transmission Process*, Energy Information Administration, Office of Oil and Gas, June 2008, available at https://www.eia.gov/pub/oil_gas/natural_gas/feature_articles/2008/ldc2008/ldc2008.pdf.

3094). In the Rules and Regulations section of this issue of the **Federal Register**, the Treasury Department and the IRS are amending certain of the temporary regulations in § 1.7874–4T. Accordingly, the Treasury Department and the IRS are issuing a notice of proposed rulemaking in the Proposed Rules section of this issue of the **Federal Register** that proposes rules in § 1.7874–4 by cross-reference to the amended temporary regulations. This document withdraws the previously proposed regulations that are replaced by the notice of proposed rulemaking in the Proposed Rules section of this issue of the **Federal Register**.

Inversions and Related Transactions

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking by cross-reference to temporary regulation.

SUMMARY: The Department of Treasury (Treasury Department) and the IRS are issuing temporary regulations that address transactions that are structured

to avoid the purposes of sections 7874 and 367 of the Internal Revenue Code (the Code) and certain post-inversion tax avoidance transactions in the Rules and Regulations section of this issue of the **Federal Register**. The temporary regulations affect certain domestic corporations and domestic partnerships whose assets are directly or indirectly acquired by a foreign corporation and certain persons related to such domestic corporations and domestic partnerships. The text of the temporary regulations also serves as the text of these proposed regulations.

DATES: Written or electronic comments and requests for a public hearing must be received by July 7, 2016.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–135734–14), room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20224. Submissions may be hand-delivered Monday through Friday between the hours of 8 a.m. and 4 p.m. to CC:PA:LPD:PR (REG–135734–14), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC 20224, or sent electronically via the Federal eRulemaking Portal at <http://www.regulations.gov> (IRS REG–135734–14).

FOR FURTHER INFORMATION CONTACT:

Concerning the proposed regulations under sections 304, 367, and 7874, Shane M. McCarrick or David A. Levine, (202) 317–6937; concerning the proposed regulations under sections 956 and 7701(l), Rose E. Jenkins, (202) 317–6934 (not toll-free numbers); concerning submissions of comments or requests for a public hearing, Regina Johnson, (202) 317–5177 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

The temporary regulations in the Rules and Regulations section of this issue of the **Federal Register** contain regulations under sections 304, 367, 954, 956, 7701(l), and 7874 of the Internal Revenue Code (Code) that address transactions that are structured to avoid the purposes of sections 7874 and 367 of the Internal Revenue Code (the Code) and certain post-inversion tax avoidance transactions. The text of the temporary regulations also serves as the text of the proposed regulations herein. The preamble to the temporary regulations explains the temporary regulations and the corresponding proposed regulations.

Special Analyses

Certain IRS regulations, including this one, are exempt from the requirements

of Executive Order 12866, as supplemented and reaffirmed by Executive Order 13563. Therefore, a regulatory assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. Chapter 5) does not apply to these regulations, and because the regulations do not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply. Pursuant to section 7805(f), this notice of proposed rulemaking has been submitted to the Chief Counsel of Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Requests for Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any comments that are submitted timely to the IRS as prescribed in this preamble under the **ADDRESSES** heading. Treasury and the IRS request comments on all aspects of the proposed rules. All comments will be available at www.regulations.gov or upon request. A public hearing will be scheduled if requested in writing by any person that timely submits electronic or written comments. If a public hearing is scheduled, notice of the date, time, and place for the public hearing will be published in the **Federal Register**.

Drafting Information

The principal authors of these proposed regulations are Rose E. Jenkins, David A. Levine, and Shane M. McCarrick of the Office of Associate Chief Counsel (International). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding and revising entries in numerical order to read in part as follows:

Authority: 26 U.S.C. 7805 * * * Section 1.304–7 also issued under 26 U.S.C. 304(b)(5)(C).

Section 1.367(b)–4 also issued under 26 U.S.C. 367(a), 367(b), and 954(c)(6)(A).

Section 1.956–2 also issued under 26 U.S.C. 956(d) and 956(e).

Section 1.7701(l)–4 also issued under 26 U.S.C. 7701(l) and 954(c)(6)(A).

Section 1.7874–2 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–4 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–6 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–7 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–8 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–9 also issued under 26 U.S.C. 7874(c)(6) and 7874(g).

Section 1.7874–10 also issued under 26 U.S.C. 7874(c)(4) and 7874(g).

Section 1.7874–11 also issued under 26 U.S.C. 7874(g).

Section 1.7874–12 also issued under 26 U.S.C. 7874(g).

■ **Par. 2.** Section 1.304–7 is added to read as follows:

§ 1.304–7 Certain acquisitions by foreign acquiring corporations.

[The text of proposed § 1.304–7 is the same as the text of § 1.304–7T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 3.** Section 1.367(a)–3 is amended by revising paragraphs (c)(3)(iii)(C) and (c)(11)(ii) to read as follows:

§ 1.367(a)–3 Treatment of transfers of stock or securities to foreign corporations.

* * * * *

(c) * * *

(3) * * *

(iii) * * *

(C) [The text of the proposed amendment to § 1.367(a)–3(c)(3)(iii)(C) is the same as the text of § 1.367(a)–3T(c)(3)(iii)(C) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(11) * * *

(ii) [The text of the proposed amendment to § 1.367(a)–3(c)(11)(ii) is the same as the text of § 1.367(a)–3T(c)(11)(ii) published elsewhere in this issue of the **Federal Register**.]

* * * * *

■ **Par. 4.** Section 1.367(b)–4 is amended by revising paragraph (a), paragraph (b) introductory text, and paragraphs (b)(1)(i)(C), (d)(1), (e), (f), (g), and (h) to read as follows:

§ 1.367(b)–4 Acquisition of foreign corporate stock or assets by a foreign corporation in certain nonrecognition transactions.

(a) [The text of the proposed amendment to § 1.367(b)–4(a) is the same as the text of § 1.367(b)–4T(a) published elsewhere in this issue of the **Federal Register**.]

(b) [The text of the proposed amendment to the introductory text to § 1.367(b)–4(b) is the same as the introductory text of § 1.367(b)–4T(b)

published elsewhere in this issue of the **Federal Register**.]

(1) * * *

(i) * * *

(C) [The text of the proposed amendment to § 1.367(b)–4(b)(1)(i)(C) is the same as the text of § 1.367(b)–4T(b)(1)(i)(C) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(d) * * *

(1) [The text of the proposed amendment to § 1.367(b)–4(d)(1) is the same as the text of § 1.367(b)–4T(d)(1) published elsewhere in this issue of the **Federal Register**.]

(h) [The text of proposed § 1.367(b)–4(h) is the same as the text of § 1.367(b)–4T(h) published elsewhere in this issue of the **Federal Register**.]

■ **Par. 5.** Section 1.956–2 is amended by revising paragraphs (a)(4), (c)(5), (d)(2), and (i) to read as follows:

§ 1.956–2 Definition of United States property.

(a) * * *

(4) [The text of the proposed amendment to § 1.956–2(a)(4) is the same as the text of § 1.956–2T(a)(4) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(c) * * *

(5) [The text of the proposed amendment to § 1.956–2(c)(5) is the same as the text of § 1.956–2T(c)(5) published elsewhere in this issue of the **Federal Register**.]

(d) * * *

(2) [The text of the proposed amendment to § 1.956–2(d)(2) is the same as the text of § 1.956–2T(d)(2) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(i) [The text of the proposed amendment to § 1.956–2(i) is the same as the text of § 1.956–2T(i) published elsewhere in this issue of the **Federal Register**.]

■ **Par. 6.** Section 1.7701(l)–4 is added to read as follows:

§ 1.7701(l)–4 Rules regarding inversion transactions.

[The text of proposed § 1.7701(l)–4 is the same as the text of § 1.7701(l)–4T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 7.** Section 1.7874–1 is amended by revising paragraphs (c)(2)(iii), (f), and (h)(2) to read as follows.

§ 1.7874–1 Disregard of affiliate-owned stock.

* * * * *

(c) * * *

(2) * * *

(iii) [The text of the proposed amendment to § 1.7874–1(c)(2)(iii) is the same as the text of § 1.7874–1T(c)(2)(iii) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(f) [The text of the proposed amendment to § 1.7874–1(f) is the same as the text of § 1.7874–1T(f) published elsewhere in this issue of the **Federal Register**.]

* * * * *

(h) * * *

(2) [The text of the proposed amendment to § 1.7874–1(h)(2) is the same as the text of § 1.7874–1T(h)(2) published elsewhere in this issue of the **Federal Register**.]

■ **Par. 8.** Section 1.7874–2 is amended by:

■ 1. Revising paragraphs (a), (b)(7), (b)(8), (b)(9), (b)(10), (b)(11), (b)(12), (b)(13), (c)(2), and (c)(4).

■ 2. Revising paragraph (f)(1) introductory text.

■ 3. Revising paragraph (f)(1)(iv).

■ 4. Revising *Example 21* of paragraph (k)(2).

■ 5. Revising paragraph (l)(2).

The revisions read as follows:

§ 1.7874–2 Surrogate foreign corporation.

(a) [The text of the proposed amendment to § 1.7874–2(a) is the same as the text of § 1.7874–2T(a) published elsewhere in this issue of the **Federal Register**.]

(b) * * *

(7) [The text of the proposed amendment to § 1.7874–2(b)(7) is the same as the text of § 1.7874–2T(b)(7) published elsewhere in this issue of the **Federal Register**.]

■ **Par. 10.** Section 1.7874–4 is added to read as follows.

§ 1.7874–4 Disregard of certain stock related to the acquisition.

(a) through (c)(1) introductory text [Reserved].

(i) [The text of proposed § 1.7874–4(c)(1)(i) is the same as the text of § 1.7874–4T(c)(1)(i) as revised elsewhere in this issue of the **Federal Register**.]
(ii) [Reserved].

(B) [The text of proposed § 1.7874–4(c)(1)(ii)(B) is the same as the text of § 1.7874–4T(c)(1)(ii)(B) as revised elsewhere in this issue of the **Federal Register**.]

(2) [The text of proposed § 1.7874–4(c)(2) is the same as the text of § 1.7874–4T(c)(2) as revised elsewhere in this issue of the **Federal Register**.]

(d) introductory text through (d)(1) introductory text [Reserved].

(i) [The text of proposed § 1.7874–4(d)(1)(i) is the same as the text of § 1.7874–4T(d)(1)(i) published elsewhere in this issue of the **Federal Register**.]

(ii) [The text of proposed § 1.7874–4(d)(1)(ii) is the same as the text of § 1.7874–4T(d)(1)(ii) as revised elsewhere in this issue of the **Federal Register**.]

(d)(2) through (g) [Reserved].
(h) [The text of proposed § 1.7874–4(h) is the same as the text of § 1.7874–4T(h) as revised elsewhere in this issue of the **Federal Register**.]

(i) introductory text through (i)(5) [Reserved].

(6) [The text of proposed § 1.7874–4(i)(6) is the same as the text of § 1.7874–4T(i)(6) published elsewhere in this issue of the **Federal Register**.]

(i)(7)(iii) introductory text [Reserved].

(C) [The text of proposed § 1.7874–4(i)(7)(iii)(C) is the same as the text of § 1.7874–4T(i)(7)(iii)(C) as revised elsewhere in this issue of the **Federal Register**.]

(iv) [The text of proposed § 1.7874–4(i)(7)(iv) is the same as the text of § 1.7874–4T(i)(7)(iv) published

elsewhere in this issue of the **Federal Register**.]

(j) introductory text through (j)(6) [Reserved].

(7) [The text of proposed § 1.7874–4(j)(7) is the same as the text of § 1.7874–4T(j)(7) as revised elsewhere in this issue of the **Federal Register**.]

(8) [The text of proposed § 1.7874–4(j)(8) is the same as the text of § 1.7874–4T(j)(8) as revised elsewhere in this issue of the **Federal Register**.]

(9) [The text of proposed § 1.7874–4(j)(9) is the same as the text of § 1.7874–4T(j)(9) published elsewhere in this issue of the **Federal Register**.]

(10) [The text of proposed § 1.7874–4(j)(10) is the same as the text of § 1.7874–4T(j)(10) published elsewhere in this issue of the **Federal Register**.]

(11) [The text of proposed § 1.7874–4(j)(11) is the same as the text of § 1.7874–4T(j)(11) published elsewhere in this issue of the **Federal Register**.]

Example 1 introductory text through Example 1 paragraph (i) [Reserved].

(ii) [The text of proposed paragraph (ii) of Example 1 of § 1.7874–4(j) is the same as the text of paragraph (ii) of Example 1 of § 1.7874–4T(j) as revised elsewhere in this issue of the **Federal Register**.]

Example 2 introductory text through Example 2 paragraph (i) [Reserved].

(ii) [The text of proposed paragraph (ii) of Example 2 of § 1.7874–4(j) is the same as the text of paragraph (ii) of Example 2 of § 1.7874–4T(j) as revised elsewhere in this issue of the **Federal Register**.]

Example 3. [The text of proposed Example 3 of § 1.7874–4(j) is the same as the text of Example 3 of § 1.7874–4T(j) published elsewhere in this issue of the **Federal Register**.]

Example 4. [The text of proposed Example 4 of § 1.7874–4(j) is the same as the text of Example 4 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

Example 5. [The text of proposed Example 5 of § 1.7874–4(j) is the same as the text of Example 5 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

Example 6. [The text of proposed Example 6 of § 1.7874–4(j) is the same as the text of Example 6 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

Example 7. [The text of proposed Example 7 of § 1.7874–4(j) is the same as the text of Example 7 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

Example 8. [The text of proposed Example 8 of § 1.7874–4(j) is the same as the text of Example 8 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

Example 9. [The text of proposed Example 9 of § 1.7874–4(j) is the same as the text of Example 9 of § 1.7874–4T(j) as redesignated and revised elsewhere in this issue of the **Federal Register**.]

(k) introductory text [Reserved].

(1) [The text of proposed § 1.7874–4(k)(1) is the same as the text of § 1.7874–4T(k)(1) published elsewhere in this issue of the **Federal Register**.]

(k)(2) through (k)(3) [Reserved].

■ **Par. 11.** Section 1.7874–6 is added to read as follows:

§ 1.7874–6 Stock transferred by members of the EAG.

[The text of proposed § 1.7874–6 is the same as the text of § 1.7874–6T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 12.** Section 1.7874–7 is added to read as follows:

§ 1.7874–7 Disregard of certain stock attributable to passive assets.

[The text of proposed § 1.7874–7 is the same as the text of § 1.7874–7T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 13.** Section 1.7874–8 is added to read as follows:

§ 1.7874–8 Disregard of certain stock attributable to multiple domestic entity acquisitions.

[The text of proposed § 1.7874–8 is the same as the text of § 1.7874–8T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 14.** Section 1.7874–9 is added to read as follows:

§ 1.7874–9 Disregard of certain stock in third-country transactions.

[The text of proposed § 1.7874–9 is the same as the text of § 1.7874–9T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 15.** Section 1.7874–10 is added to read as follows:

§ 1.7874–10 Disregard of certain distributions.

[The text of proposed § 1.7874–10 is the same as the text of § 1.7874–10T published elsewhere in this issue of the **Federal Register**.]

■ **Par. 16.** Section 1.7874–11 is added to read as follows:

§ 1.7874–11 Rules regarding inversion gain.

[The text of proposed § 1.7874–11 is the same as the text of § 1.7874–11T

published elsewhere in this issue of the **Federal Register**.]

■ **Par. 17.** Section 1.7874–12 is added to read as follows:

§ 1.7874–12 Definitions.

[The text of proposed § 1.7874–12 is the same as the text of § 1.7874–12T published elsewhere in this issue of the **Federal Register**.]

John Dalrymple,

Deputy Commissioner for Services and Enforcement.

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 943

[SATS No. TX–067–FOR; Docket ID: OSM–2016–0001; S1D1S SS08011000 SX064A000 167S180110; S2D2S SS08011000 SX064A000 16XS501520]

Texas Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Proposed rule; public comment period and opportunity for public hearing on proposed amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are announcing receipt of a proposed amendment to the Texas regulatory program (Texas program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). Texas proposes revisions to its regulations regarding annual permit fees. Texas intends to revise its program to improve operational efficiency.

This document gives the times and locations that the Texas program and proposed amendment to that program are available for your inspection, the comment period during which you may submit written comments on the amendment, and the procedures that we will follow for the public hearing, if one is requested.

DATES: We will accept written comments on this amendment until 4:00 p.m., c.t., May 9, 2016. If requested, we will hold a public hearing on the amendment on May 3, 2016. We will accept requests to speak at a hearing until 4:00 p.m., c.t. on April 25, 2016.

ADDRESSES: You may submit comments, identified by SATS No. TX–067–FOR, by any of the following methods:

- *Mail/Hand Delivery:* Director, Tulsa Field Office, Office of Surface Mining

Reclamation and Enforcement, 1645 South 101st East Avenue, Suite 145, Tulsa, Oklahoma 74128–4629.

- *Fax:* (918) 581–6419.
- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. For detailed instructions on submitting comments and additional information on the rulemaking process, see the “Public Comment Procedures” heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to review copies of the Texas program, this amendment, a listing of any scheduled public hearings, and all written comments received in response to this document, you must go to the address listed below during normal business hours, Monday through Friday, excluding holidays. You may receive one free copy of the amendment by contacting OSMRE’s Tulsa Field Office or going to www.regulations.gov.

Director: Tulsa Field Office, Office of Surface Mining Reclamation and Enforcement, 1645 South 101st East Avenue, Suite 145, Tulsa, Oklahoma 74128–4629, Telephone: (918) 581–6430.

In addition, you may review a copy of the amendment during regular business hours at the following location: Surface Mining and Reclamation Division, Railroad Commission of Texas, 1701 North Congress Avenue, Capitol Station, P.O. Box 12967, Austin, Texas 78711–2967, Telephone: (512) 463–6900.

FOR FURTHER INFORMATION CONTACT: Director, Tulsa Field Office. Telephone: (918) 581–6430. Email: ddale@osmre.gov.

SUPPLEMENTARY INFORMATION:

- Background on the Texas Program
- Description of the Proposed Amendment
- Public Comment Procedures
- Procedural Determinations

I. Background on the Texas Program

Section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its program includes, among other things, “a State law which provides for the regulation of surface coal mining and reclamation operations in accordance with the requirements of this Act . . . ; and rules and regulations consistent with regulations issued by the Secretary pursuant to this Act.” See 30 U.S.C. 1253(a)(1) and (7). On the basis of these

criteria, the Secretary of the Interior conditionally approved the Texas program effective February 16, 1980. You can find background information on the Texas program, including the Secretary's findings, the disposition of comments, and the conditions of approval of the Texas program in the February 27, 1980, **Federal Register** (45 FR 12998). You can also find later actions concerning the Texas program and program amendments at 30 CFR 943.10, 943.15, and 943.16.

II. Description of the Proposed Amendment

By letter dated November 17, 2015 (Administrative Record No. TX-705), Texas sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*) at its own initiative. Below is a summary of the changes proposed by Texas. The full text of the program amendment is available for you to read at the locations listed above under **ADDRESSES**.

Texas proposes to revise its regulation at 16 Texas Administrative Code (TAC) section 12.108(b) regarding annual permit fees by:

(1) Removing paragraph (b)(1), regarding fees for each acre of land within the permit area on which coal or lignite was actually removed during the calendar year;

(2) Increasing the amount of the fee, from \$12.00 to \$13.05, for each acre of land within a permit area covered by a reclamation bond on December 31st of the year; and

(3) Increasing the amount of the fee, from \$6,540 to \$6,600, for each permit in effect on December 31st of the year.

Texas fully funds its share of costs to regulate the coal mining industry with fees paid by the coal industry. Texas charges three fees to meet these costs, a permit application fee and two annual fees as mentioned above. The proposed fee revisions are intended to provide adequate funding to pay the State's cost of operating its regulatory program, and provide incentives for industry to accomplish reclamation and achieve bond release as quickly as possible.

III. Public Comment Procedures

Under the provisions of 30 CFR 732.17(h), we are seeking your comments on whether the amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If we approve the amendment, it will become part of the State program.

Electronic or Written Comments

If you submit written comments, they should be specific, confined to issues pertinent to the proposed regulations,

and explain the reason for any recommended change(s). We appreciate any and all comments, but those most useful and likely to influence decisions on the final regulations will be those that either involve personal experience or include citations to and analyses of SMCRA, its legislative history, its implementing regulations, case law, other pertinent State or Federal laws or regulations, technical literature, or other relevant publications.

We cannot ensure that comments received after the close of the comment period (see **DATES**) or sent to an address other than those listed (see **ADDRESSES**) will be included in the docket for this rulemaking and considered.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Public Hearing

If you wish to speak at the public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT** by 4:00 p.m., c.t. on April 25, 2016. If you are disabled and need reasonable accommodations to attend a public hearing, contact the person listed under **FOR FURTHER INFORMATION CONTACT**. We will arrange the location and time of the hearing with those persons requesting the hearing. If no one requests an opportunity to speak, we will not hold a hearing.

To assist the transcriber and ensure an accurate record, we request, if possible, that each person who speaks at the public hearing provide us with a written copy of his or her comments. The public hearing will continue on the specified date until everyone scheduled to speak has been given an opportunity to be heard. If you are in the audience and have not been scheduled to speak and wish to do so, you will be allowed to speak after those who have been scheduled. We will end the hearing after everyone scheduled to speak and others present in the audience who wish to speak, have been heard.

Public Meeting

If only one person requests an opportunity to speak, we may hold a public meeting rather than a public hearing. If you wish to meet with us to

discuss the amendment, please request a meeting by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**. All such meetings are open to the public and, if possible, we will post notices of meetings at the locations listed under **ADDRESSES**. We will make a written summary of each meeting a part of the administrative record.

IV. Procedural Determinations

Executive Order 12866—Regulatory Planning and Review

This proposed rule is exempted from review by the Office of Management and Budget (OMB) under Executive Order 12866.

Other Laws and Executive Orders Affecting Rulemaking

When a State submits a program amendment to OSMRE for review, our regulations at 30 CFR 732.17(h) require us to publish a notice in the **Federal Register** indicating receipt of the proposed amendment, its text or a summary of its terms, and an opportunity for public comment. We conclude our review of the proposed amendment after the close of the public comment period and determine whether the amendment should be approved, approved in part, or not approved. At that time, we will also make the determinations and certifications required by the various laws and executive orders governing the rulemaking process and include them in the final rule.

List of Subjects in 30 CFR Part 943

Intergovernmental relations, Surface mining, Underground mining.

[Docket Number USCG-2015-1079]

RIN 1625-AA00

Safety Zones; Sector Upper Mississippi River Annual and Recurring Safety Zones Update

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to amend and update its annual and recurring safety zones that take place in the Coast Guard Sector Upper Mississippi River area of responsibility (AOR). This document informs the public of regularly scheduled events that require additional safety measures through establishing a safety zone. This document also proposes to update the current list of recurring safety zones with revisions, additional events, and removal of events that no longer take place in Sector Upper Mississippi River's AOR. Additionally, this one proposed rulemaking project reduces administrative costs involved in producing separate proposed rules for each individual recurring safety zone and serves to provide notice of the known recurring safety zones throughout the year. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before May 9, 2016.

ADDRESSES: You may submit comments identified by docket number USCG–2015–1079 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the “Public Participation and Request for Comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email LCDR Sean Peterson, Chief of Prevention, U.S. Coast Guard; telephone 314–269–2332, email Sean.M.Peterson@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

AOR Area of Responsibility
CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The Captain of the Port (COTP) Upper Mississippi River is proposing to amend and update its current list of recurring safety zones.

The current list of annual and recurring safety zones occurring in Sector Upper Mississippi River's AOR is published under 33 CFR part 165.801, Table 2. This current list was established through a rulemaking process providing for comment and public participation. No adverse comments were received, resulting in the final rulemaking 80 FR 49911, which was published August 18, 2015. The final rulemaking amended 33 CFR 165.801 to establish the current list of recurring safety zones.

This rulemaking proposes to add to, amend, and update the list of annually recurring safety zones under Table 2 in 33 CFR 165.801 for annual and recurring safety zones in the COTP Upper Mississippi zone.

The Coast Guard is amending and updating the annual and recurring safety zone regulations under 33 CFR part 165 to include the most up to date list of annual and recurring safety zones for events held on or around navigable waters within Sector Upper Mississippi River's AOR. These events include fireworks displays, air shows, festival events, and other recurring marine

related safety needs. The current list under 33 CFR 165.801 requires amending to provide new information on existing safety zones, updating to include new safety zones expected to recur annually, and to remove safety zones that are no longer required. Issuing individual regulations for each new safety zone, amendment, or removal of an existing safety zones creates unnecessary administrative costs and burdens. This single proposed rulemaking will considerably reduce administrative overhead and provide the public with notice through publication in the **Federal Register** of the upcoming annual and recurring safety zones. The Coast Guard proposes this rulemaking under the authority in 33 U.S.C. 1221.

III. Discussion of Proposed Rule

33 CFR part 165 contains regulations establishing limited access areas on U.S. navigable waters. Section 165.801 lists the established recurring safety zones taking place in the Eighth Coast Guard District separated into tables for each of the seven sectors within the Eighth District. Table 2 lists the recurring safety zones for Sector Upper Mississippi River. This section, and table, requires amendment from time to time to properly reflect the recurring safety zones in Sector Upper Mississippi River's AOR. This proposed rule amends and updates Section 165.801 replacing the current Table 2 for Sector Upper Mississippi River.

Additionally, this proposed rule adds 3 new, modifies 7, and removes 14 recurring safety zones as listed below.

This proposed rule adds 3 new safety zones to Table 2 in § 165.801 as follows:

| Date | Sponsor/name | Sector Upper Mississippi River location | Safety zone |
|--------------------------------------|---|---|---|
| 1 day—Weekend before Thanksgiving .. | Main Street Parkway Association/Parkville Christmas on the River. | Parkville, MO | Missouri River mile marker 377.5 to 378.0. |
| 2 days—A weekend in September | St. Louis Drag Boat Association/New Athens Drag Boat Race. | New Athens, IL | Kaskaskia River mile marker 119.7 to 120.3. |
| 1 day—4th of July weekend | City of Marquette/Marquette Independence Day Celebration. | Marquette, IA | Upper Mississippi River mile marker 634.2 to 635.7. |

This proposed rule modifies the following 7 safety zones currently listed in Table 2 in § 165.801 as follows:

| Date | Sponsor/name | Sector Upper Mississippi River location | Safety zone |
|---------------------------------------|---|---|---|
| 3. 1 day—2nd weekend of June | City of Champlin/Father Hennepin Fireworks Display. | Champlin, MN | Upper Mississippi River mile marker 870.5 to 872.0. |
| 6. 1 day—1st weekend of September ... | Tan-Tar-A Resort/Tan-Tar-A Labor Day Fireworks. | Lake of the Ozarks, MO. | Lake of the Ozarks mile marker 025.8 to 026.2. |

| Date | Sponsor/name | Sector Upper Mississippi River location | Safety zone |
|---|--|---|---|
| 12. 1 day—4th of July weekend | Guttenberg Development and Tourism/ Stars and Stripes River Day. | Guttenberg, IA | Upper Mississippi River mile marker 615.0 to 615.5. |
| 34. 1 day—Sunday of Father's Day weekend. | Winona Steamboat Days/Winona Steamboat Days Fireworks. | Winona, MN | Upper Mississippi River mile marker 725.4 to 725.7. |
| 35. 3 days—4th of July weekend | Fair of St. Louis/Fair St. Louis | St. Louis, MO | Upper Mississippi River mile marker 179.2 to 180.0. |
| 45. 2 days—3rd weekend of September | Riverside Chamber of Commerce/ Riverfest. | Riverside, MO | Missouri River mile marker 371.8 to 372.2 |
| 48. 2 days—Weekend that precedes Labor Day Weekend. | Lake of the Ozarks Shootout, Inc./Lake of the Ozarks Shootout. | Lake of the Ozarks, MO. | Lake of the Ozarks mile marker 032.5 to 034.5. |

This proposed rule removes the following 14 safety zones from the existing Table 2 in § 165.801:

| Date | Sponsor/name | Sector Upper Mississippi River location | Safety zone |
|--|--|---|---|
| 14. 1 day—4th of July weekend | Hannibal Jaycees/National Tom Sawyer Days. | Hannibal, MO | Upper Mississippi River mile marker 308.0 to 309.0. |
| 15. 1 day—4th of July weekend | Fort Madison Partner/ Fort Madison Fourth of July Fireworks. | Fort Madison, WI | Upper Mississippi River mile marker 383.0 to 384.0. |
| 16. 5 days—Last week in June/1st week in July. | Taste of Minnesota/ Taste of Minnesota. | Minneapolis, MN | Upper Mississippi River mile marker 839.8 to 840.2. |
| 17. 1 day—4th of July weekend | John E. Curran/John E. Curran Fireworks. | Lake of the Ozarks, MO. | Lake of the Ozarks mile marker 008.8 to 009.2. |
| 25. 1 day—4th of July weekend | Chillicothe Police Department/Chillicothe 4th of July. | Chillicothe, IL | Illinois River mile marker 179.1 to 180.0. |
| 26. 2 days—2nd weekend in July | Clinton Riverboat Day/ Clinton Riverboat Days. | Clinton, IA | Upper Mississippi River mile marker 518.0 to 519.0. |
| 27. 1 day—4th of July weekend | Harrah's Casino and Hotel/Harrah's Fireworks Extravaganza. | Omaha, NE | Missouri River mile marker 615.0 to 615.6. |
| 36. Friday and Saturday, every weekend from the 2nd weekend of July until the 2nd weekend in August. | Fair of St. Louis/Live on the Levee. | St. Louis, MO | Upper Mississippi River mile marker 179.2 to 180.0. |
| 47. 1 day—3rd week in July | Rivercade Association/ Sioux City Rivercade. | North Sioux City, SD .. | Missouri River mile marker 732.2 to 732.6. |
| 49. 1 day—1st weekend of September | Camden on the Lake Labor Day Fireworks/Camden on the Lake. | Lake of the Ozarks, MO. | Lake of the Ozarks mile marker 007.1 to 006.9. |
| 51. 1 day—1st weekend of August | New Piasa Chautauqua/New Piasa Chautauqua. | Elsah, IL | Upper Mississippi River mile marker 215.6 to 216. |
| 52. 1 day—last weekend in May | Horny Toad, Inc./ Horny Toad Fireworks Display. | Lake of the Ozarks | Lake of the Ozarks mile marker 006.8 to 007.2. |
| 53. 1 day—4th of July weekend | Omaha Royals/Omaha World Herald Fireworks. | Omaha, NE | Missouri River mile marker 612.1 to 613.9. |
| 54. 1 day—Last weekend in July | Great River Days, Inc./ Great River Days. | Muscatine, IA | Upper Mississippi River mile marker 455.0 to 456.0. |

The effect of this proposed rule will be to restrict general navigation in the safety zone during the event. Vessels will experience limited access on the waterway when the safety zones are in effect. Requests to transit into, through, or within a safety zone will be

considered and will be allowed only when deemed safe by the COTP Upper Mississippi River, or designated representative.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and

Executive Orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This NPRM has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget.

The Coast Guard expects the economic impact of this proposed rule to be minimal, and therefore a full regulatory evaluation is unnecessary. This proposed rule establishes safety zones limiting access to certain areas under 33 CFR part 165 within Sector Upper Mississippi River’s AOR. The effect of this proposed rulemaking will not be significant because these safety zones are limited in scope and duration. Additionally, the public is given advance notification through local forms of notice, the **Federal Register**, and/or Notices of Enforcement and thus will be able to plan operations around the safety zones in advance. Deviation from the safety zones established through this proposed rulemaking may be requested from the COTP Upper Mississippi River or a designated representative and requests will be considered on a case-by-case basis.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit these safety zones may be small entities, for the reasons stated in section IV.A. above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental

jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions

that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves rules establishes safety zones limiting access to certain areas under 33 CFR 165 within Sector Upper Mississippi River’s AOR. Normally such actions are categorically excluded from further review under paragraph 34(h) of Figure 2–1 of Commandant Instruction M16475.ID. A preliminary environmental analysis checklist and Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protestors. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>

www.regulations.gov. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Documents mentioned in this NPRM as being available in the docket, and all

public comments, will be in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Amend § 165.801(d) by revising Table 2 to read as follows:

§ 165.801 Annual fireworks displays and other events in the Eighth Coast Guard District requiring safety zones.

* * * * *

TABLE 2 OF § 165.801—SECTOR UPPER MISSISSIPPI RIVER ANNUAL AND RECURRING SAFETY ZONES

| Date | Sponsor/name | Sector Upper Mississippi River location | Safety zone |
|---|--|---|---|
| 1. 1 day—4th weekend of July | Marketing Minneapolis LLC/Target Aquatennial Fireworks. | Minneapolis, MN | Upper Mississippi River mile marker 853.2 to 854.2. |

BILLING CODE 9110-04-P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 52****[EPA-R03-OAR-2016-0005; FRL-9944-72-Region 3]****Approval and Promulgation of Air Quality Implementation Plans; Pennsylvania; Measurement and Reporting of Condensable Particulate Matter Emissions****AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Proposed rule.**SUMMARY:** The Environmental Protection Agency (EPA) is proposing to approve a state implementation plan (SIP) revision submitted by the Commonwealth of

Pennsylvania. This SIP revision amends two regulations to clarify testing and sampling methods for stationary sources of particulate matter (PM) and add the requirement to measure and report filterable and condensable PM. This action is being taken under the Clean Air Act (CAA).

DATES: Written comments must be received on or before May 9, 2016.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA-R03-OAR-2016-0005 at <http://www.regulations.gov>, or via email to fernandez.cristina@epa.gov. For comments submitted at Regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment.

The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Maria A. Pino, (215) 814-2181, or by email at pino.maria@epa.gov.

SUPPLEMENTARY INFORMATION:**I. Background**

PM, also known as particle pollution, is a complex mixture of extremely small particles and liquid droplets. Particle pollution is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The

size of particles is directly linked to their potential for causing health problems. EPA is concerned about particles that are 10 micrometers in diameter or smaller, because those are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects.

EPA established the first national ambient air quality standard (NAAQS) for coarse particles (PM₁₀), which are particles less than 10 microns in diameter, on July 1, 1987. 52 FR 24634. The rules established primary (health based) and secondary (welfare based) PM₁₀ standards for short term (24-hour) and long term (annual) exposures to PM. The 24-hour standards were set at 150 micrograms per cubic meter (µg/m³), not to be exceeded more than once per year on average over a 3-year period. The annual standards were set at 50 µg/m³, based on a three-year average annual arithmetic mean. On July 18, 1997, EPA established the first NAAQS for particles less than 2.5 microns in diameter, known as fine particulate (PM_{2.5}). 62 FR 38652. EPA set an annual primary and secondary standards at 15 µg/m³, based on a three-year average of annual mean PM_{2.5} concentrations and 24-hour primary and secondary standards at 65 µg/m³, based on a three-year average of the 98th percentile of 24-hour concentrations. EPA revised the PM_{2.5} NAAQS on October 17, 2006, lowering the primary and secondary 24-hour NAAQS from 65 µg/m³ to 35 µg/m³. 71 FR 61144. In that rule, EPA retained the 24-hour PM₁₀ NAAQS, and revoked the annual PM₁₀ standard. On December 14, 2012, EPA once again revised the PM_{2.5} NAAQS, lowering the level of the health based primary annual standard from 15 to 12 µg/m³, while retaining the welfare based secondary annual standard at 15 µg/m³. That rule also retained the 24-hour PM_{2.5} standard at a level of 35 µg/m³.

On December 1, 2010, EPA revised two test methods for measuring PM emissions from stationary sources. 75 FR 80118. One of the revised methods, called Method 201A, provides the capability to measure the mass of filterable PM_{2.5}. The second revised method, called Method 202, makes measurement of condensable PM more accurate. Condensable PM forms from condensing gases or vapors. It is a common component of both PM₁₀ and PM_{2.5}. The combination of Methods 201A and 202 helps EPA and states to develop more accurate primary PM emissions inventories, determine whether stationary sources are major sources of PM₁₀ or PM_{2.5} emissions for

the New Source Review (NSR)/Prevention of Significant Deterioration (PSD) program or the Title V Permit program, determine more accurately the effectiveness of control devices for PM₁₀ or PM_{2.5}, develop regulatory limits with more appropriate test methods, and determine compliance with regulatory limits with greater accuracy. See 40 CFR part 51 appendix M and 75 FR 80118 (December 21, 2010).

II. Summary of SIP Revision

On June 25, 2015, the Commonwealth of Pennsylvania submitted a formal SIP revision that amends chapters 121 and 139 of title 25, Environmental Protection, of the Pennsylvania Code (25 Pa. Code). Methods 201A and 202 are incorporated by reference in Pennsylvania's Source Testing Manual, which is incorporated by reference in 25 Pa. Code, chapter 139, Sampling and Testing. Amendments to chapter 121, in section 121.1, add definitions for the terms "condensable particulate matter" and "filterable particulate matter." The amendments to 25 Pa. Code section 139.12 explain the process for determining compliance with filterable and condensable PM emission limitations, and explains the compliance demonstration process. Under 25 Pa. Code section 139.12(b), the owner or operator of a stationary source subject to PM emission limitations or to NSR/PSD applicability determinations is required to demonstrate compliance for filterable and condensable PM emissions. The amendment to 25 Pa. Code section 139.53 specifies to whom monitoring reports must be submitted.

III. Proposed Action

EPA is proposing to approve the June 25, 2015 Pennsylvania SIP revision, which amends specific provisions within chapters 121 and 139 of 25 Pa. Code. The amendments clarify testing and sampling methods and reporting requirements for stationary sources of PM and add the requirement to measure and report filterable and condensable PM. This revision meets requirements in section 110 of the CAA and strengthens the Pennsylvania SIP. EPA is soliciting public comments on the issues discussed in this document. These comments will be considered before taking final action.

IV. Incorporation by Reference

In this proposed rulemaking action, EPA is proposing to include in a final EPA rule, regulatory text that includes incorporation by reference. In accordance with the requirements of 1 CFR 51.5, EPA is proposing to incorporate by reference the revised

Pennsylvania regulations, published in the Pennsylvania Bulletin, Vol. 44 No. 15, April 12, 2014, and effective on April 12, 2014. EPA has made, and will continue to make, these documents generally available electronically through www.regulations.gov and/or in hard copy at the appropriate EPA office (see the ADDRESSES section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible

methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rulemaking action, proposing to approve amendments to Pennsylvania's regulations regarding testing and sampling methods for stationary sources of PM, including filterable and condensable PM, does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the Commonwealth, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Particulate matter, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: March 24, 2016

Shawn M. Garvin,

Regional Administrator Region III.

[FR Doc. 2016-08159 Filed 4-7-16; 8:45 am]

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52

[EPA-R04-OAR-2016-0072; FRL-9944-53-Region 4]

Air Plan Approval; North Carolina; Prong 4-2008 Ozone, 2010 NO₂, SO₂, and 2012 PM_{2.5}

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve portions of revisions to the North Carolina State Implementation Plan (SIP), submitted by the North Carolina Department of Environment and Natural Resources (NC DENR), addressing the Clean Air Act (CAA or Act) visibility transport (prong 4) infrastructure SIP requirements for the 2008 8-hour Ozone, 2010 1-hour Nitrogen Dioxide (NO₂), 2010 1-hour Sulfur Dioxide (SO₂), and 2012 annual Fine Particulate Matter (PM_{2.5}) National Ambient Air Quality Standards (NAAQS). The CAA requires that each state adopt and submit a SIP for the implementation, maintenance, and enforcement of each NAAQS promulgated by EPA, commonly referred to as an "infrastructure SIP." Specifically, EPA is proposing to approve the prong 4 portions of North Carolina's November 2, 2012, 2008 8-

hour Ozone infrastructure SIP submission; August 23, 2013, 2010 1-hour NO₂ infrastructure SIP submission; March 18, 2014, 2010 1-hour SO₂ infrastructure SIP submission; and December 4, 2015, 2012 annual PM_{2.5} infrastructure SIP submission. All other applicable infrastructure requirements for these SIP submissions have been or will be addressed in separate rulemakings.

DATES: Comments must be received on or before April 29, 2016.

ADDRESSES: Submit your comments, identified by Docket ID No EPA-R04-OAR-2016-0072 at <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Sean Lakeman of the Air Regulatory Management Section, Air Planning and Implementation Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Mr. Lakeman can be reached by telephone at (404) 562-9043 or via electronic mail at lakeman.sean@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

By statute, SIPs meeting the requirements of sections 110(a)(1) and (2) of the CAA are to be submitted by states within three years after promulgation of a new or revised NAAQS to provide for the implementation, maintenance, and enforcement of the new or revised NAAQS. EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements

of sections 110(a)(1) and 110(a)(2) as "infrastructure SIP" submissions. Sections 110(a)(1) and (2) require states to address basic SIP elements such as for monitoring, basic program requirements, and legal authority that are designed to assure attainment and maintenance of the newly established or revised NAAQS. More specifically, section 110(a)(1) provides the procedural and timing requirements for infrastructure SIPs. Section 110(a)(2) lists specific elements that states must meet for the infrastructure SIP requirements related to a newly established or revised NAAQS. The contents of an infrastructure SIP submission may vary depending upon the data and analytical tools available to the state, as well as the provisions already contained in the state's implementation plan at the time in which the state develops and submits the submission for a new or revised NAAQS.

Section 110(a)(2)(D) has two components: 110(a)(2)(D)(i) and 110(a)(2)(D)(ii). Section 110(a)(2)(D)(i) includes four distinct components, commonly referred to as "prongs," that must be addressed in infrastructure SIP submissions. The first two prongs, which are codified in section 110(a)(2)(D)(i)(I), are provisions that prohibit any source or other type of emissions activity in one state from contributing significantly to nonattainment of the NAAQS in another state (prong 1) and from interfering with maintenance of the NAAQS in another state (prong 2). The third and fourth prongs, which are codified in section 110(a)(2)(D)(i)(II), are provisions that prohibit emissions activity in one state from interfering with measures required to prevent significant deterioration of air quality in another state (prong 3) or from interfering with measures to protect visibility in another state (prong 4). Section 110(a)(2)(D)(ii) requires SIPs to include provisions ensuring compliance with sections 115 and 126 of the Act, relating to interstate and international pollution abatement.

Through this action, EPA is proposing to approve the prong 4 portions of North Carolina's infrastructure SIP submissions for the 2008 8-hour Ozone, 2010 1-hour NO₂, 2010 1-hour SO₂, and 2012 annual PM_{2.5} NAAQS as discussed in section IV of this document. All other applicable infrastructure SIP requirements for these SIP submissions have been or will be addressed in separate rulemakings. A brief background regarding the NAAQS relevant to this proposal is provided below. For comprehensive information on these NAAQS, please refer to the

Federal Register documents cited in the following subsections.

a. 2008 8-Hour Ozone NAAQS

On March 12, 2008, EPA revised the 8-hour Ozone NAAQS to 0.075 parts per million. *See* 73 FR 16436 (March 27, 2008). States were required to submit infrastructure SIP submissions for the 2008 8-hour Ozone NAAQS to EPA no later than March 12, 2011. North Carolina submitted its infrastructure SIP submission on November 2, 2012, for the 2008 8-hour Ozone NAAQS. This proposed action only addresses the prong 4 element of that submission.

b. 2010 1-Hour NO₂ NAAQS

On January 22, 2010, EPA established a new 1-hour primary NAAQS for NO₂ at a level of 100 parts per billion, based on a 3-year average of the 98th percentile of the yearly distribution of 1-hour daily maximum concentrations. *See* 75 FR 6474 (February 9, 2010). States were required to submit infrastructure SIP submissions for the 2010 1-hour NO₂ NAAQS to EPA no later than January 22, 2013. North Carolina submitted its infrastructure SIP submission on August 23, 2013, for the 2010 1-hour NO₂ NAAQS. This proposed action only addresses the prong 4 element of that submission.

c. 2010 1-Hour SO₂ NAAQS

On June 2, 2010, EPA revised the primary SO₂ NAAQS to an hourly standard of 75 parts per billion based on a 3-year average of the annual 99th percentile of 1-hour daily maximum concentrations. *See* 75 FR 35520 (June 22, 2010). States were required to submit infrastructure SIP submissions for the 2010 1-hour SO₂ NAAQS to EPA no later than June 2, 2013. North Carolina submitted its infrastructure SIP submission on March 18, 2014, for the 2010 1-hour SO₂ NAAQS. This proposed action only addresses the prong 4 element of that submission.

d. 2012 Annual PM_{2.5} NAAQS

On December 14, 2012, EPA revised the primary annual PM_{2.5} NAAQS to 12 micrograms per cubic meter (µg/m³). *See* 78 FR 3086 (January 15, 2013). States were required to submit infrastructure SIP submissions for the 2012 PM_{2.5} NAAQS to EPA no later than December 14, 2015. North Carolina submitted its infrastructure SIP submission on December 4, 2015, for the 2012 PM_{2.5} NAAQS. This proposed action only addresses the prong 4 element of that submission.

II. What is EPA's approach to the review of infrastructure SIP submissions?

The requirement for states to make a SIP submission of this type arises out of section 110(a)(1). Pursuant to section 110(a)(1), states must make SIP submissions "within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof)," and these SIP submissions are to provide for the "implementation, maintenance, and enforcement" of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon EPA's taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that "each such plan" submission must address.

EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of section 110(a)(1) and (2) as "infrastructure SIP" submissions. Although the term "infrastructure SIP" does not appear in the CAA, EPA uses the term to distinguish this particular type of SIP submission from submissions that are intended to satisfy other SIP requirements under the CAA, such as "nonattainment SIP" or "attainment plan SIP" submissions to address the nonattainment planning requirements of part D of Title I of the CAA, "regional haze SIP" submissions required by EPA rule to address the visibility protection requirements of section 169A of the CAA, and nonattainment new source review permit program submissions to address the permit requirements of CAA, Title I, part D.

Section 110(a)(1) addresses the timing and general requirements for infrastructure SIP submissions and section 110(a)(2) provides more details concerning the required contents of these submissions. The list of required elements provided in section 110(a)(2) contains a wide variety of disparate provisions, some of which pertain to required legal authority, some of which pertain to required substantive program provisions, and some of which pertain to requirements for both authority and substantive program provisions.¹ EPA

¹ For example: section 110(a)(2)(E)(i) provides that states must provide assurances that they have adequate legal authority under state and local law to carry out the SIP; Section 110(a)(2)(C) provides that states must have a SIP-approved program to address certain sources as required by part C of Title I of the CAA; and section 110(a)(2)(G) provides that states must have legal authority to address

therefore believes that while the timing requirement in section 110(a)(1) is unambiguous, some of the other statutory provisions are ambiguous. In particular, EPA believes that the list of required elements for infrastructure SIP submissions provided in section 110(a)(2) contains ambiguities concerning what is required for inclusion in an infrastructure SIP submission.

The following examples of ambiguities illustrate the need for EPA to interpret some section 110(a)(1) and section 110(a)(2) requirements with respect to infrastructure SIP submissions for a given new or revised NAAQS. One example of ambiguity is that section 110(a)(2) requires that "each" SIP submission must meet the list of requirements therein, while EPA has long noted that this literal reading of the statute is internally inconsistent and would create a conflict with the nonattainment provisions in part D of Title I of the CAA, which specifically address nonattainment SIP requirements.² Section 110(a)(2)(I) pertains to nonattainment SIP requirements and part D addresses when attainment plan SIP submissions to address nonattainment area requirements are due. For example, section 172(b) requires EPA to establish a schedule for submission of such plans for certain pollutants when the Administrator promulgates the designation of an area as nonattainment, and section 107(d)(1)(B) allows up to two years or in some cases three years, for such designations to be promulgated.³ This ambiguity illustrates that rather than apply all the stated requirements of section 110(a)(2) in a strict literal sense, EPA must determine which provisions of section 110(a)(2) are applicable for a particular infrastructure SIP submission.

Another example of ambiguity within section 110(a)(1) and (2) with respect to infrastructure SIPs pertains to whether states must meet all of the infrastructure

emergencies as well as contingency plans that are triggered in the event of such emergencies.

² *See, e.g.*, "Rule To Reduce Interstate Transport of Fine Particulate Matter and Ozone (Clean Air Interstate Rule); Revisions to Acid Rain Program; Revisions to the NO_x SIP Call; Final Rule," 70 FR 25162, at 25163–65 (May 12, 2005) (explaining relationship between timing requirement of section 110(a)(2)(D) versus section 110(a)(2)(I)).

³ EPA notes that this ambiguity within section 110(a)(2) is heightened by the fact that various subparts of part D set specific dates for submission of certain types of SIP submissions in designated nonattainment areas for various pollutants. Note, *e.g.*, that section 182(a)(1) provides specific dates for submission of emissions inventories for the ozone NAAQS. Some of these specific dates are necessarily later than three years after promulgation of the new or revised NAAQS.

SIP requirements in a single SIP submission, and whether EPA must act upon such SIP submission in a single action. Although section 110(a)(1) directs states to submit “a plan” to meet these requirements, EPA interprets the CAA to allow states to make multiple SIP submissions separately addressing infrastructure SIP elements for the same NAAQS. If states elect to make such multiple SIP submissions to meet the infrastructure SIP requirements, EPA can elect to act on such submissions either individually or in a larger combined action.⁴ Similarly, EPA interprets the CAA to allow it to take action on the individual parts of one larger, comprehensive infrastructure SIP submission for a given NAAQS without concurrent action on the entire submission. For example, EPA has sometimes elected to act at different times on various elements and sub-elements of the same infrastructure SIP submission.⁵

Ambiguities within section 110(a)(1) and (2) may also arise with respect to infrastructure SIP submission requirements for different NAAQS. Thus, EPA notes that not every element of section 110(a)(2) would be relevant, or as relevant, or relevant in the same way, for each new or revised NAAQS. The states’ attendant infrastructure SIP submissions for each NAAQS therefore could be different. For example, the monitoring requirements that a state might need to meet in its infrastructure SIP submission for purposes of section 110(a)(2)(B) could be very different for different pollutants, because the content and scope of a state’s infrastructure SIP submission to meet this element might be very different for an entirely new

NAAQS than for a minor revision to an existing NAAQS.⁶

EPA notes that interpretation of section 110(a)(2) is also necessary when EPA reviews other types of SIP submissions required under the CAA. Therefore, as with infrastructure SIP submissions, EPA also has to identify and interpret the relevant elements of section 110(a)(2) that logically apply to these other types of SIP submissions. For example, section 172(c)(7) requires attainment plan SIP submissions required by part D to meet the “applicable requirements” of section 110(a)(2); thus, attainment plan SIP submissions must meet the requirements of section 110(a)(2)(A) regarding enforceable emission limits and control measures and section 110(a)(2)(E)(i) regarding air agency resources and authority. By contrast, it is clear that attainment plan SIP submissions required by part D would not need to meet the portion of section 110(a)(2)(C) that pertains to the PSD program required in part C of Title I of the CAA, because PSD does not apply to a pollutant for which an area is designated nonattainment and thus subject to part D planning requirements. As this example illustrates, each type of SIP submission may implicate some elements of section 110(a)(2) but not others.

Given the potential for ambiguity in some of the statutory language of section 110(a)(1) and section 110(a)(2), EPA believes that it is appropriate to interpret the ambiguous portions of section 110(a)(1) and section 110(a)(2) in the context of acting on a particular SIP submission. In other words, EPA assumes that Congress could not have intended that each and every SIP submission, regardless of the NAAQS in question or the history of SIP development for the relevant pollutant, would meet each of the requirements, or meet each of them in the same way. Therefore, EPA has adopted an approach under which it reviews infrastructure SIP submissions against the list of elements in section 110(a)(2), but only to the extent each element applies for that particular NAAQS.

Historically, EPA has elected to use guidance documents to make recommendations to states for infrastructure SIPs, in some cases conveying needed interpretations on newly arising issues and in some cases conveying interpretations that have already been developed and applied to

individual SIP submissions for particular elements.⁷ EPA most recently issued guidance for infrastructure SIPs on September 13, 2013 (2013 Guidance).⁸ EPA developed this document to provide states with up-to-date guidance for infrastructure SIPs for any new or revised NAAQS. Within this guidance, EPA describes the duty of states to make infrastructure SIP submissions to meet basic structural SIP requirements within three years of promulgation of a new or revised NAAQS. EPA also made recommendations about many specific subsections of section 110(a)(2) that are relevant in the context of infrastructure SIP submissions.⁹ The guidance also discusses the substantively important issues that are germane to certain subsections of section 110(a)(2). EPA interprets section 110(a)(1) and (2) such that infrastructure SIP submissions need to address certain issues and need not address others. Accordingly, EPA reviews each infrastructure SIP submission for compliance with the applicable statutory provisions of section 110(a)(2), as appropriate.

As an example, section 110(a)(2)(E)(ii) is a required element of section 110(a)(2) for infrastructure SIP submissions. Under this element, a state must meet the substantive requirements of section 128, which pertain to state boards that approve permits or enforcement orders and heads of executive agencies with similar powers. Thus, EPA reviews infrastructure SIP submissions to ensure that the state’s SIP appropriately addresses the requirements of section 110(a)(2)(E)(ii) and section 128. The 2013 Guidance explains EPA’s interpretation that there

⁴ See, e.g., “Approval and Promulgation of Implementation Plans; New Mexico; Revisions to the New Source Review (NSR) State Implementation Plan (SIP); Prevention of Significant Deterioration (PSD) and Nonattainment New Source Review (NNSR) Permitting,” 78 FR 4339 (January 22, 2013) (EPA’s final action approving the structural PSD elements of the New Mexico SIP submitted by the State separately to meet the requirements of EPA’s 2008 PM_{2.5} NSR rule), and “Approval and Promulgation of Air Quality Implementation Plans; New Mexico; Infrastructure and Interstate Transport Requirements for the 2006 PM_{2.5} NAAQS,” 78 FR 4337 (January 22, 2013) (EPA’s final action on the infrastructure SIP for the 2006 PM_{2.5} NAAQS).

⁵ On December 14, 2007, the State of Tennessee, through the Tennessee Department of Environment and Conservation, made a SIP revision to EPA demonstrating that the State meets the requirements of sections 110(a)(1) and (2). EPA proposed action for infrastructure SIP elements (C) and (J) on January 23, 2012 (77 FR 3213) and took final action on March 14, 2012 (77 FR 14976). On April 16, 2012 (77 FR 22533) and July 23, 2012 (77 FR 42997), EPA took separate proposed and final actions on all other section 110(a)(2) infrastructure SIP elements of Tennessee’s December 14, 2007 submittal.

⁶ For example, implementation of the 1997 PM_{2.5} NAAQS required the deployment of a system of new monitors to measure ambient levels of that new indicator species for the new NAAQS.

⁷ EPA notes, however, that nothing in the CAA requires EPA to provide guidance or to promulgate regulations for infrastructure SIP submissions. The CAA directly applies to states and requires the submission of infrastructure SIP submissions, regardless of whether or not EPA provides guidance or regulations pertaining to such submissions. EPA elects to issue such guidance in order to assist states, as appropriate.

⁸ “Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2),” Memorandum from Stephen D. Page, September 13, 2013.

⁹ EPA’s September 13, 2013, guidance did not make recommendations with respect to infrastructure SIP submissions to address section 110(a)(2)(D)(i)(I). EPA issued the guidance shortly after the U.S. Supreme Court agreed to review the DC Circuit decision in *EME Homer City*, 696 F.3d 7 (D.C. Circuit 2012) which had interpreted the requirements of section 110(a)(2)(D)(i)(I). In light of the uncertainty created by ongoing litigation, EPA elected not to provide additional guidance on the requirements of section 110(a)(2)(D)(i)(I) at that time. As the guidance is neither binding nor required by statute, whether EPA elects to provide guidance on a particular section has no impact on a state’s CAA obligations.

may be a variety of ways by which states can appropriately address these substantive statutory requirements, depending on the structure of an individual state's permitting or enforcement program (e.g., whether permits and enforcement orders are approved by a multi-member board or by a head of an executive agency). However they are addressed by the state, the substantive requirements of Section 128 are necessarily included in EPA's evaluation of infrastructure SIP submissions because section 110(a)(2)(E)(ii) explicitly requires that the state satisfy the provisions of section 128.

As another example, EPA's review of infrastructure SIP submissions with respect to the PSD program requirements in section 110(a)(2)(C), (D)(i)(II), and (J) focuses upon the structural PSD program requirements contained in part C and EPA's PSD regulations. Structural PSD program requirements include provisions necessary for the PSD program to address all regulated sources and NSR pollutants, including Greenhouse Gases (GHGs). By contrast, structural PSD program requirements do not include provisions that are not required under EPA's regulations at 40 CFR 51.166 but are merely available as an option for the state, such as the option to provide grandfathering of complete permit applications with respect to the PM_{2.5} NAAQS. Accordingly, the latter optional provisions are types of provisions EPA considers irrelevant in the context of an infrastructure SIP action.

For other section 110(a)(2) elements, however, EPA's review of a state's infrastructure SIP submission focuses on assuring that the state's SIP meets basic structural requirements. For example, section 110(a)(2)(C) includes, *inter alia*, the requirement that states have a program to regulate minor new sources. Thus, EPA evaluates whether the state has an EPA-approved minor new source review program and whether the program addresses the pollutants relevant to that NAAQS. In the context of acting on an infrastructure SIP submission, however, EPA does not think it is necessary to conduct a review of each and every provision of a state's existing minor source program (*i.e.*, already in the existing SIP) for compliance with the requirements of the CAA and EPA's regulations that pertain to such programs.

With respect to certain other issues, EPA does not believe that an action on a state's infrastructure SIP submission is necessarily the appropriate type of

action in which to address possible deficiencies in a state's existing SIP. These issues include: (i) Existing provisions related to excess emissions from sources during periods of startup, shutdown, or malfunction (SSM) that may be contrary to the CAA and EPA's policies addressing such excess emissions;¹⁰ (ii) existing provisions related to "director's variance" or "director's discretion" that may be contrary to the CAA because they purport to allow revisions to SIP-approved emissions limits while limiting public process or not requiring further approval by EPA; and (iii) existing provisions for PSD programs that may be inconsistent with current requirements of EPA's "Final NSR Improvement Rule," 67 FR 80186 (December 31, 2002), as amended by 72 FR 32526 (June 13, 2007) (NSR Reform). Thus, EPA believes that it may approve an infrastructure SIP submission without scrutinizing the totality of the existing SIP for such potentially deficient provisions and may approve the submission even if it is aware of such existing provisions.¹¹ It is important to note that EPA's approval of a state's infrastructure SIP submission should not be construed as explicit or implicit re-approval of any existing potentially deficient provisions that relate to the three specific issues just described.

EPA's approach to review of infrastructure SIP submissions is to identify the CAA requirements that are logically applicable to that submission. EPA believes that this approach to the review of a particular infrastructure SIP submission is appropriate, because it would not be reasonable to read the general requirements of section 110(a)(1) and the list of elements in section 110(a)(2) as requiring review of each and every provision of a state's existing SIP against all requirements in

¹⁰ Subsequent to issuing the 2013 Guidance, EPA's interpretation of the CAA with respect to the approvability of affirmative defense provisions in SIPs has changed. See "State Implementation Plans: Response to Petition for Rulemaking; Restatement and Update of EPA's SSM Policy Applicable to SIPs; Findings of Substantial Inadequacy; and SIP Calls To Amend Provisions Applying to Excess Emissions During Periods of Startup, Shutdown and Malfunction," 80 FR 33839 (June 12, 2015). As a result, EPA's 2013 Guidance (p. 21 & n.30) no longer represents the EPA's view concerning the validity of affirmative defense provisions, in light of the requirements of section 113 and section 304.

¹¹ By contrast, EPA notes that if a state were to include a new provision in an infrastructure SIP submission that contained a legal deficiency, such as a new exemption or affirmative defense for excess emissions during SSM events, then EPA would need to evaluate that provision for compliance against the rubric of applicable CAA requirements in the context of the action on the infrastructure SIP.

the CAA and EPA regulations merely for purposes of assuring that the state in question has the basic structural elements for a functioning SIP for a new or revised NAAQS. Because SIPs have grown by accretion over the decades as statutory and regulatory requirements under the CAA have evolved, they may include some outmoded provisions and historical artifacts. These provisions, while not fully up to date, nevertheless may not pose a significant problem for the purposes of "implementation, maintenance, and enforcement" of a new or revised NAAQS when EPA evaluates adequacy of the infrastructure SIP submission. EPA believes that a better approach is for states and EPA to focus attention on those elements of section 110(a)(2) of the CAA most likely to warrant a specific SIP revision due to the promulgation of a new or revised NAAQS or other factors.

For example, EPA's 2013 Guidance gives simpler recommendations with respect to carbon monoxide than other NAAQS pollutants to meet the visibility requirements of section 110(a)(2)(D)(i)(II), because carbon monoxide does not affect visibility. As a result, an infrastructure SIP submission for any future new or revised NAAQS for carbon monoxide need only state this fact in order to address the visibility prong of section 110(a)(2)(D)(i)(II).

Finally, EPA believes that its approach with respect to infrastructure SIP requirements is based on a reasonable reading of section 110(a)(1) and (2) because the CAA provides other avenues and mechanisms to address specific substantive deficiencies in existing SIPs. These other statutory tools allow EPA to take appropriately tailored action, depending upon the nature and severity of the alleged SIP deficiency. Section 110(k)(5) authorizes EPA to issue a "SIP call" whenever the Agency determines that a state's SIP is substantially inadequate to attain or maintain the NAAQS, to mitigate interstate transport, or to otherwise comply with the CAA.¹² Section 110(k)(6) authorizes EPA to correct errors in past actions, such as past approvals of SIP submissions.¹³

¹² For example, EPA issued a SIP call to Utah to address specific existing SIP deficiencies related to the treatment of excess emissions during SSM events. See "Finding of Substantial Inadequacy of Implementation Plan; Call for Utah State Implementation Plan Revisions," 74 FR 21639 (April 18, 2011).

¹³ EPA has used this authority to correct errors in past actions on SIP submissions related to PSD programs. See "Limitation of Approval of Prevention of Significant Deterioration Provisions Concerning Greenhouse Gas Emitting-Sources in

Significantly, EPA's determination that an action on a state's infrastructure SIP submission is not the appropriate time and place to address all potential existing SIP deficiencies does not preclude EPA's subsequent reliance on provisions in section 110(a)(2) as part of the basis for action to correct those deficiencies at a later time. For example, although it may not be appropriate to require a state to eliminate all existing inappropriate director's discretion provisions in the course of acting on an infrastructure SIP submission, EPA believes that section 110(a)(2)(A) may be among the statutory bases that EPA relies upon in the course of addressing such deficiency in a subsequent action.¹⁴

III. What are the Prong 4 requirements?

Section 110(a)(2)(D)(i)(II) requires a state's SIP to contain provisions prohibiting sources in that state from emitting pollutants in amounts that interfere with any other state's efforts to protect visibility under part C of the CAA (which includes sections 169A and 169B). The 2013 Guidance states that these prong 4 requirements can be satisfied by approved SIP provisions that EPA has found to adequately address any contribution of that state's sources to impacts on visibility program requirements in other states. The 2013 Guidance also states that EPA interprets this prong to be pollutant-specific, such that the infrastructure SIP submission need only address the potential for interference with protection of visibility caused by the pollutant (including precursors) to which the new or revised NAAQS applies.

The 2013 Guidance lays out two ways in which a state's infrastructure SIP may satisfy prong 4. The first way is through an air agency's confirmation in its infrastructure SIP submission that it has an EPA-approved regional haze SIP that fully meets the requirements of 40 CFR 51.308 or 51.309. 40 CFR 51.308 and 51.309 specifically require that a state

participating in a regional planning process include all measures needed to achieve its apportionment of emission reduction obligations agreed upon through that process. A fully approved regional haze SIP will ensure that emissions from sources under an air agency's jurisdiction are not interfering with measures required to be included in other air agencies' plans to protect visibility.

Alternatively, in the absence of a fully approved regional haze SIP, a state may meet the requirements of prong 4 through a demonstration in its infrastructure SIP submission that emissions within its jurisdiction do not interfere with other air agencies' plans to protect visibility. Such an infrastructure SIP submission would need to include measures to limit visibility-impairing pollutants and ensure that the reductions conform with any mutually agreed regional haze reasonable progress goals for mandatory Class I areas in other states.

IV. What is EPA's analysis of how North Carolina addressed Prong 4?

North Carolina's November 2, 2012, 2008 8-hour Ozone submission; August 23, 2013, 2010 1-hour NO₂ submission; March 18, 2014, 2010 1-hour SO₂ submission; and December 4, 2015, 2012 annual PM_{2.5} submission cite to the State's regional haze SIP as satisfying prong 4 requirements. However, as explained below, EPA has not yet fully approved North Carolina's regional haze SIP because the SIP relies on the Clean Air Interstate Rule (CAIR) to satisfy the nitrogen oxides (NO_x) and SO₂ Best Available Retrofit Technology (BART) requirements for the CAIR-subject electric generating units (EGUs) in the State and the requirement for a long-term strategy (LTS) sufficient to achieve the state-adopted reasonable progress goals.¹⁵

EPA demonstrated that CAIR achieved greater reasonable progress toward the national visibility goal than BART for NO_x and SO₂ at BART-eligible EGUs in CAIR affected states, and revised the regional haze rule (RHR) to provide that states participating in CAIR's cap-and-trade program need not require affected BART-eligible EGUs to install, operate, and maintain BART for emissions of SO₂ and NO_x. See 70 FR

39104 (July 6, 2005). As a result, a number of states in the CAIR region designed their regional haze SIPs to rely on CAIR as an alternative to NO_x and SO₂ BART for CAIR-subject EGUs. These states also relied on CAIR as an element of a LTS for achieving their reasonable progress goals.

The United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) initially vacated CAIR in 2008,¹⁶ but ultimately remanded the rule to EPA without vacatur to preserve the environmental benefits provided by CAIR.¹⁷ On August 8, 2011, acting on the D.C. Circuit's remand, EPA promulgated the Cross-State Air Pollution Rule (CSAPR) to replace CAIR and thus to address the interstate transport of emissions contributing to nonattainment and interfering with maintenance of the two air quality standards covered by CAIR as well as the 2006 PM_{2.5} NAAQS.¹⁸ See 76 FR 48208.

Due to CAIR's status as a temporary measure following the D.C. Circuit's 2008 ruling, EPA could not fully approve regional haze SIP revisions to the extent that they relied on CAIR to satisfy the BART requirement and the requirement for a long-term strategy sufficient to achieve the state-adopted reasonable progress goals. On these grounds, EPA finalized a limited disapproval of North Carolina's regional haze SIP on June 7, 2012, triggering the requirement for EPA to promulgate a FIP unless North Carolina submitted and EPA approved a SIP revision that corrected the deficiency. See 77 FR 33642. EPA finalized a limited approval of North Carolina's regional haze SIP on June 27, 2012, as meeting the remaining applicable regional haze requirements set forth in the CAA and the Regional Haze Rule. See 77 FR 38185.

On October 31, 2014, North Carolina submitted a regional haze SIP revision to correct the deficiencies identified in the June 7, 2012, limited disapproval by replacing reliance on CAIR with reliance on a BART Alternative to

State Implementation Plans; Final Rule," 75 FR 82536 (December 30, 2010). EPA has previously used its authority under section 110(k)(6) of the CAA to remove numerous other SIP provisions that the Agency determined it had approved in error. See, e.g., 61 FR 38664 (July 25, 1996) and 62 FR 34641 (June 27, 1997) (corrections to American Samoa, Arizona, California, Hawaii, and Nevada SIPs); 69 FR 67062, November 16, 2004 (corrections to California SIP); and 74 FR 57051 (November 3, 2009) (corrections to Arizona and Nevada SIPs).

¹⁴ See, e.g., EPA's disapproval of a SIP submission from Colorado on the grounds that it would have included a director's discretion provision inconsistent with CAA requirements, including section 110(a)(2)(A). See, e.g., 75 FR 42342 at 42344 (July 21, 2010) (proposed disapproval of director's discretion provisions); 76 FR 4540 (January 26, 2011) (final disapproval of such provisions).

¹⁵ CAIR, promulgated in 2005, required 27 states and the District of Columbia to reduce emissions of NO_x and SO₂ that significantly contribute to, or interfere with maintenance of, the 1997 NAAQS for fine particulates and/or ozone in any downwind state. CAIR imposed specified emissions reduction requirements on each affected State, and established an EPA-administered cap and trade program for EGUs in which States could join as a means to meet these requirements.

¹⁶ *North Carolina v. EPA*, 531 F.3d 896 (D.C. Circuit 2008).

¹⁷ *North Carolina v. EPA*, 550 F.3d 1176 (D.C. Circuit 2008).

¹⁸ Although a number of parties challenged the legality of CSAPR and the D.C. Circuit initially vacated and remanded CSAPR to EPA in *EME Homer City Generation, L.P. v. EPA*, 696 F.3d 7, 38 (D.C. Circuit 2012), the United States Supreme Court reversed the D.C. Circuit's decision on April 29, 2014, and remanded the case to the D.C. Circuit to resolve remaining issues in accordance with the high court's ruling. *EPA v. EME Homer City Generation, L.P.*, 134 S. Ct. 1584 (2014). On remand, the D.C. Circuit affirmed CSAPR in most respects and CSAPR is now in effect. *EME Homer City Generation, L.P. v. EPA*, 795 F.3d 118 (D.C. Circuit 2015).

satisfy NO_x and SO₂ BART requirements for EGUs formerly subject to CAIR. Concurrent with this proposed prong 4 action, EPA is proposing to approve the October 31, 2014, SIP revision and convert North Carolina's regional haze SIP from a limited approval to a full approval because EPA believes that final approval of this SIP revision would correct the deficiencies that led to EPA's limited disapproval of the State's regional haze SIP. Because a state may satisfy prong 4 requirements through a fully approved regional haze SIP, EPA is proposing to approve the prong 4 portions of North Carolina's November 2, 2012, August 23, 2013, 2010, March 18, 2014, and December 4, 2015, 2012 SIP submissions. EPA will not finalize this proposed prong 4 action unless it approves North Carolina's October 31, 2014, SIP revision and converts the State's regional haze SIP from a limited approval to a full approval.

V. Proposed Action

As described above, EPA is proposing to approve the prong 4 portions of North Carolina's November 2, 2012, 2008 8-hour Ozone infrastructure SIP submission; August 23, 2013, 2010 1-hour NO₂ infrastructure SIP submission; March 18, 2014, 2010 1-hour SO₂ infrastructure SIP submission; and December 4, 2015, 2012 annual PM_{2.5} infrastructure SIP submission. All other applicable infrastructure requirements for these SIP submissions have been or will be addressed in separate rulemakings.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate Matter, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: March 25, 2016.

Friday, April 8, 2016

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

AFRICAN DEVELOPMENT FOUNDATION

Public Quarterly Meeting of the Board of Directors

AGENCY: United States African Development Foundation.

ACTION: Notice of meeting.

SUMMARY: The US African Development Foundation (USADF) will hold its quarterly meeting of the Board of Directors to discuss the agency's programs and administration.

DATES: The meeting date is Monday, April 25, 2016, 12:00 p.m. to 2:00 p.m.

ADDRESSES: The meeting location is USADF, 1400 I St. NW., Suite 1000, Washington, DC 20005.

FOR FURTHER INFORMATION CONTACT: Julia Tanton, 202-233-8811.

Authority: Public Law 96-533 (22 U.S.C. 290h).

Dated: April 5, 2016.

Doris Mason Martin,
General Counsel.

DEPARTMENT OF AGRICULTURE

Forest Service

National Advisory Committee for Implementation of the National Forest System Land Management Planning Rule

AGENCY: Forest Service, USDA.

ACTION: Notice of meetings.

SUMMARY: The National Advisory Committee for Implementation of the National Forest System Land Management Planning Rule Committee (Committee) will meet in Charleston, South Carolina. Attendees may also participate via webinar and conference call. The Committee operates in

compliance with the Federal Advisory Committee Act (FACA) (Pub. L. 92-463). Committee information can be found at the following Web site: <http://www.fs.usda.gov/main/planningrule/committee>.

DATES: The meeting will be held in-person and via webinar/conference call on the following dates and times:

- Tuesday, May 10, 2016, from 8:30 a.m. to 5:00 p.m. EST.
- Wednesday, May 11, 2016, from 8:30 a.m. to 5:00 p.m. EST.
- Thursday, May 12, 2016, from 8:30 a.m. to 12:00 p.m. EST.

All meetings are subject to cancellation. For updated status of meetings prior to attendance, please contact the person listed under *For Further Information Contact*.

ADDRESSES: The meeting will be held at the Holiday Inn Charleston Historic Downtown, 425 Meeting Street, Charleston, South Carolina. For anyone who would like to attend via webinar and/or conference call, please visit the Web site listed above or contact the person listed in the section titled *For Further Information Contact*. Written comments may be submitted as described under *Supplementary Information*. All comments, including names and addresses, when provided, are placed in the record and available for public inspection and copying. The public may inspect comments received at the USDA Forest Service Washington Office—Yates Building, 201 14th Street SW., Mail Stop 1104, Washington, DC 20250-1104. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT:

Jennifer Helwig, Committee Coordinator, by phone at 202-205-0892, or by email at jahelwig@fs.fed.us.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of this meeting is to provide:

1. Continued deliberations on formulating advice for the Secretary,
2. Discussion of Committee work group findings,
3. Hearing public comments, and
4. Administrative tasks.

This meeting is open to the public. The agenda will include time for people

to make oral comments of three minutes or less. Individuals wishing to make an oral comment should submit a request in writing by May 2, 2016, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the Committee may file written statements with the Committee's staff before or after the meeting. Written comments and time requests for oral comments must be sent to Jennifer Helwig, USDA Forest Service, Ecosystem Management Coordination, 201 14th Street SW., Mail Stop 1104, Washington, DC, 20250-1104; or by email at jahelwig@fs.fed.us. The agenda and summary of the meeting will be posted on the Committee's Web site within 21 days of the meeting.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices, or other reasonable accommodation. For access to the facility or proceedings, please contact the person listed in the section titled *For Further Information Contact*. All reasonable accommodation requests are managed on a case by case basis.

Dated: March 30, 2016.

Brian Ferebee.

Associate Deputy Chief, National Forest System.

DEPARTMENT OF AGRICULTURE

Forest Service

Black Hills National Forest Advisory Board

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Black Hills National Forest Advisory Board (Board) will meet in Rapid City, South Dakota. The Board is established consistent with the Federal Advisory Committee Act of 1972 (5 U.S.C. App. II), the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1600 *et seq.*), the National Forest Management Act of 1976 (16 U.S.C. 1612), and the Federal Public Lands Recreation Enhancement Act (Pub. L. 108-447). Additional information concerning the Board, including the meeting summary/

minutes, can be found by visiting the Board's Web site at: <http://www.fs.usda.gov/main/blackhills/workingtogether/advisorycommittees>.

DATES: The meeting will be held on Wednesday, April 20, 2016, at 1:00 p.m.

All meetings are subject to cancellation. For updated status of meeting prior to attendance, please contact the person listed under *For Further Information Contact*.

ADDRESSES: The meeting will be held at the Mystic Ranger District, 8221 South Highway 16, Rapid City, South Dakota.

Written comments may be submitted as described under *Supplementary Information*. All comments, including names and addresses, when provided, are placed in the record and available for public inspection and copying. The public may inspect comments received at the Black Hills National Forest Supervisor's Office. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT:

Scott Jacobson, Board Coordinator, by phone at 605-440-1409 or by email at sjjacobson@fs.fed.us.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to provide:

- (1) Over-snow and Non-motorized Working Group Report update;
- (2) Elk Management Report;
- (3) Heritage and Sacred Site update;
- (4) Forest Health Working Group Recommendation for FY 16-18;
- (5) Motorized Trails and Permit Fees;
- (6) Fire Season 2016 Outlook; and
- (7) Election.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should submit a request in writing by April 11, 2016, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the Board may file written statements with the Board's staff before or after the meeting. Written comments and time requests for oral comments must be sent to Scott Jacobson, Black Hills National Forest Supervisor's Office, 1019 North Fifth Street, Custer, South Dakota 57730; by email to sjjacobson@fs.fed.us, or via facsimile to 605-673-9208.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language

interpreting, assistive listening devices, or other reasonable accommodation for access to the facility or proceedings by contacting the person listed in the section titled *For Further Information Contact*. All reasonable accommodation requests are managed on a case by case basis.

Dated: March 28, 2016.

Craig Bobzien,
Forest Supervisor.

BILLING CODE 3411-15-P

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

Inviting Applications for Value-Added Producer Grants

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Notice.

SUMMARY: This Notice announces that the Rural Business-Cooperative Service (Agency) is accepting fiscal year (FY) 2016 applications for the Value-Added Producer Grant (VAPG) program. Approximately \$44 million is available to help agricultural producers enter into value-added activities for FY 2016, including approximately \$30.25 million available through the Agricultural Act of 2014 (2014 Farm Bill), \$10.75 million through the Consolidated Appropriations Act, 2016 and \$3 million in carryover funding.

DATES: You must submit your application by July 1, 2016 or it will not be considered for funding. Paper applications must be postmarked and mailed, shipped or sent overnight by this date. You may also hand carry your application to one of our field offices, but it must be received by close of business on the deadline date. Electronic applications are permitted via <http://www.grants.gov> only, and must be received before midnight Eastern Time, June 24, 2016. Late applications are not eligible for grant funding under this Notice.

ADDRESSES: You should contact your USDA Rural Development State Office if you have questions about eligibility or submission requirements. You are encouraged to contact your State Office well in advance of the application deadline to discuss your project and to ask any questions about the application process. Application materials are available at <http://www.rd.usda.gov/programs-services/value-added-producer-grants>.

If you want to submit an electronic application, follow the instructions for

the VAPG funding announcement on <http://www.grants.gov>. Please review the Grants.gov Web site at <http://grants.gov/web/applicants/organization-registration.html> for instructions on the process of registering your organization as soon as possible to ensure you are able to meet the electronic application deadline. If you want to submit a paper application, send it to the State Office located in the State where your project will primarily take place. You can find State Office Contact information at <http://www.rd.usda.gov/contact-us/state-offices>.

FOR FURTHER INFORMATION CONTACT:

Grants Division, Cooperative Programs, Rural Business-Cooperative Service, United States Department of Agriculture, 1400 Independence Avenue SW., MS 3253, Room 4008-South, Washington, DC 20250-3253, or call 202-690-1374.

SUPPLEMENTARY INFORMATION:

Overview

Federal Agency Name: USDA Rural Business-Cooperative Service.

Funding Opportunity Title: Value-Added Producer Grant.

Announcement Type: Initial funding request.

Catalog of Federal Domestic Assistance Number: 10.352.

Dates: Application Deadline. You must submit your complete paper application by July 1, 2016 or it will not be considered for funding. Electronic applications must be received by <http://www.grants.gov> no later than midnight Eastern Time, June 24, 2016 or it will not be considered for funding.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act, the paperwork burden associated with this Notice has been approved by the Office of Management and Budget (OMB) under OMB Control Number 0570-0039.

A. Program Description

The VAPG program is authorized under section 231 of the Agriculture Risk Protection Act of 2000 (Pub. L. 106-224), as amended by section 6203 of the Agricultural Act of 2014 (Pub. L. 113-79) (see 7 U.S.C. 1632a). Applicants must adhere to the requirements contained in the program regulation, 7 CFR 4284, subpart J, which is incorporated by reference in this Notice.

The objective of this grant program is to assist viable Independent Producers, Agricultural Producer Groups, Farmer and Rancher Cooperatives, and Majority-Controlled Producer-Based Businesses in starting or expanding value-added activities related to the

processing and/or marketing of Value-Added Agricultural Products. Grants will be awarded competitively for either planning or working capital projects directly related to the processing and/or marketing of value-added products. Generating new products, creating and expanding marketing opportunities, and increasing producer income are the end goals of the program. All proposals must demonstrate economic viability and sustainability in order to compete for funding.

Funding priority will be made available to Beginning Farmers and Ranchers, Veteran Farmers and Ranchers, Socially-Disadvantaged Farmers and Ranchers, Operators of Small and Medium-Sized Farms and Ranches structured as Family Farms or Ranches, Farmer or Rancher Cooperatives, and projects proposing to develop a Mid-Tier Value Chain. See 7 CFR 4284.923 for Reserved Funds eligibility and 7 CFR 4284.924 for Priority Scoring eligibility.

Definitions

The terms you need to understand are defined in 7 CFR 4284.902.

B. Federal Award Information

Type of Instrument: Grant.

Fiscal Year 2016 Funds: \$10.75 million.

Approximate Number of Awards: Approximately 300.

Available Total Funding: Approximately \$44 million.

Maximum Award Amount: Planning—\$75,000; Working Capital—\$250,000.

Project Period: Up to 36 months depending on the complexity of the project.

Anticipated Award Date: September 30, 2016.

Reservation of Funds: Ten percent of available funds for applications will be reserved for applications submitted by Beginning and Socially-Disadvantaged Farmers or Ranchers, and an additional ten percent of available funds for applications from farmers or ranchers proposing development of Mid-Tier Value Chains. Reserved funds not obligated prior to June 30, 2016, will be used for the VAPG general competition. If this is the case, Beginning and Socially-Disadvantaged Farmers or Ranchers and applicants proposing Mid-Tier Value Chains will compete with other eligible VAPG applications.

C. Eligibility Information

Applicants must comply with the program regulation 7 CFR part 4284 subpart J in order to meet all of the following eligibility requirements.

Applications which fail to meet any of these requirements by the application deadline will be deemed ineligible and will not be evaluated further.

1. Eligible Applicants

You must demonstrate that you meet all the applicant eligibility requirements of 7 CFR 4284.920 and 4284.921. This includes meeting the definition requirements at 7 CFR 4284.902 for one of the following applicant types: Independent Producer, Agricultural Producer Group, Farmer or Rancher Cooperative or Majority-Controlled Producer-Based Business and also meeting the Emerging Market, Citizenship, Legal Authority and Responsibility, Multiple Grants and Active Grants requirements of the section. Required documentation to support eligibility is contained at 7 CFR 4284.931.

Federally-recognized Tribes and tribal entities must demonstrate that they meet the definition requirements for one of the four eligible applicant types. Rural Development State Offices and posted application toolkits will provide additional information on Tribal eligibility.

Per 7 CFR 4284.921, an applicant is ineligible if they have been debarred or suspended or otherwise excluded from or ineligible for participation in Federal assistance programs under Executive Order 12549, "Debarment and Suspension." In addition, an applicant will be considered ineligible for a grant due to an outstanding judgment obtained by the U.S. in a Federal Court (other than U.S. Tax Court), is delinquent on the payment of Federal income taxes, or is delinquent on Federal debt.

An Applicant may submit only one application in response to a solicitation, and must explicitly direct that it compete in either the general funds competition or in one of the named reserved funds competitions. Multiple applications from separate entities with identical or greater than 75 percent common ownership, or from a parent, subsidiary or affiliated organization (with "affiliation" defined by Small Business Administration regulation 13 CFR 121.103, or successor regulation) are not permitted. Further, Applicants who have already received a Planning Grant for the proposed project cannot receive another Planning Grant for the same project. Applicants who have already received a Working Capital Grant for the proposed project cannot receive any additional grants for that project (Proposals from previous award recipients should be substantially different in terms of products and/or

markets and should not merely be extensions of previously funded projects).

2. Cost-Sharing or Matching

There is a matching funds requirement of at least \$1 for every \$1 in grant funds provided by the Agency (matching funds plus grant funds must equal proposed Total Project Costs). Matching funds may be in the form of cash or eligible in-kind contributions and may be used only for eligible project purposes. Tribal applicants may utilize grants made available under Public Law 93-638, the Indian Self-Determination and Education Assistance Act of 1975, as their matching contribution, and should check with appropriate tribal authorities regarding the availability of such funding.

Matching funds must be available at time of application and must be certified and verified as described in 7 CFR 4284.931(b)(3) and (4). Note that matching funds must also be discussed as part of the scoring criterion Commitments and Support as described in section E.1. (c).

3. Project Eligibility

You must demonstrate that you meet all the project eligibility requirements of 7 CFR 4284.922.

(a) *Product eligibility.* Applicants for both planning and working capital grants must meet all requirements at 7 CFR 4284.922(a), including that your value-added product must result from one of the five methodologies identified in the definition of Value-Added Agricultural Product at 7 CFR 4284.902. In addition, you must demonstrate that, as a result of the project, the customer base for the agricultural commodity or value-added product will be expanded, by including a baseline of current customers for the commodity, and an estimated target number of customers that will result from the project; and that, a greater portion of the revenue derived from the marketing or processing of the value-added product is available to the applicant producer(s) of the agricultural commodity, by including a baseline of current revenues from the sale of the agricultural commodity and an estimate of increased revenues that will result from the project.

(b) *Purpose eligibility.* Applicants for both planning and working capital grants must meet all requirements at 7 CFR 4284.922(b) regarding maximum grant amounts, verification of matching funds, eligible and ineligible uses of grant and matching funds, a substantive work plan and budget.

(i) **Planning Grants.** A planning grant is used to fund development of a defined program of economic planning activities to determine the viability of a potential value-added venture, and specifically for the purpose of paying for a qualified consultant to conduct and develop a feasibility study, business plan, and/or marketing plan associated with the processing and/or marketing of a value-added agricultural product. Planning grant funds may not be used to fund working capital activities.

(ii) **Working Capital Grants.** This type of grant provides funds to operate a value-added project, specifically to pay the eligible project expenses related to the processing and/or marketing of the value-added product that are eligible uses of grant funds. Working capital funds may not be used for planning purposes.

(c) **Reserved Funds Eligibility.** To qualify for Reserved Funds as a Beginning or Socially-Disadvantaged Farmer or Rancher or if you propose to develop a Mid-Tier Value Chain, you must meet the requirements found at 7 CFR 4284.923. If your application is eligible, but is not awarded under the Reserved Funds, it will automatically be considered for general funds in that same fiscal year, as funding levels permit.

(d) **Priority Points.** To qualify for Priority Points for projects that contribute to increasing opportunities for Beginning Farmers or Ranchers, Socially-Disadvantaged Farmers or Ranchers, or if you are an Operator of a Small- or Medium-sized Farm or Ranch structured as a Family Farm, a Veteran Farmer or Rancher, propose a Mid-Tier Value Chain project, or are a Farmer or Rancher Cooperative, you must meet the applicable eligibility requirements at 7 CFR 4284.923 and 4284.924 and must address the relevant proposal evaluation criterion.

Priority points will also be awarded during the scoring process to eligible Agricultural Producer Groups, Farmer or Cooperatives, and Majority-Controlled Producer-Based Business Ventures that best contribute to creating or increasing marketing opportunities for Beginning Farmers or Ranchers, Socially-Disadvantaged Farmers or Ranchers, and/or Veteran Farmers or Ranchers. You must meet the eligibility requirements at 7 CFR 4284.923 and 4284.924 and must address the relevant proposal evaluation criterion.

4. Eligible Uses of Grant and Matching Funds

Eligible uses of grant and matching funds are discussed, along with examples, in 7 CFR 4284.923. In

general, grant and cost-share matching funds have the same use restrictions and must be used to fund only the costs for eligible purposes as defined at 7 CFR 4284.923 (a) and (b).

5. Ineligible Uses of Grant and Matching Funds

Federal procurement standards prohibit transactions that involve a real or apparent Conflict of Interest for owners, employees, officers, agents, or their Immediate Family members having a personal, professional, financial or other interest in the outcome of the project; including organizational conflicts, and conflicts that restrict open and free competition for unrestrained trade. A list (not all inclusive) of ineligible uses of grant and matching funds is found in 7 CFR 4284.926.

D. Application and Submission Information

1. Address To Request Applications

The application toolkit, regulation, and official program notification for this funding opportunity can be obtained online at <http://www.rd.usda.gov/programs-services/value-added-producer-grants>. You may also contact your USDA Rural Development State Office by visiting <http://www.rd.usda.gov/contact-us/state-offices>. You may also obtain a copy by calling 202-690-1374. The toolkit contains an application checklist, templates, required grant forms, and instructions. Although the Agency highly recommends their use, use of the templates in the toolkit is not mandatory.

2. Content and Form of Application Submission

You may submit your application in paper form or electronically through Grants.gov. Your application must contain all required information.

To submit an application electronically, you must follow the instructions for this funding announcement at <http://www.grants.gov>. Please note that we cannot accept emailed or faxed applications.

You can locate the Grants.gov downloadable application package for this program by using a keyword, the program name, or the Catalog of Federal Domestic Assistance Number for this program.

When you enter the Grants.gov Web site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

To use Grants.gov, you must already have a DUNS number and you must also

be registered and maintain registration in SAM. We strongly recommend that you do not wait until the application deadline date to begin the application process through Grants.gov.

You must submit all of your application documents electronically through Grants.gov.

After electronically submitting an application through Grants.gov, you will receive an automatic acknowledgement from Grants.gov that contains a Grants.gov tracking number.

If you want to submit a paper application, send it to the State Office located in the State where your project will primarily take place. You can find State Office Contact information at: <http://www.rd.usda.gov/contact-us/state-offices>. An optional-use Agency application template is available online at <http://www.rd.usda.gov/programs-services/value-added-producer-grants>.

Your application must contain all of the required forms and proposal elements described in 7 CFR 4284.931, unless otherwise clarified in this Notice. You are encouraged, but not required to utilize the Application Toolkits found at <http://www.rd.usda.gov/programs-services/value-added-producer-grants>, however, you must become familiar with the program regulation at 7 CFR part 4284, subpart J in order to submit a successful application. Basic application contents are outlined below:

- Standard Form (SF)—424, “Application for Federal Assistance,” to include your DUNS number and SAM (CAGE) code and expiration date. Because there are no specific fields for a CAGE code and expiration date, you may identify them anywhere you want to on the form. If you do not include the CAGE code and expiration date and the DUNS number in your application, it will not be considered for funding.
- SF—424A, “Budget Information—Non-Construction Programs.” This form must be completed and submitted as part of the application package.
- SF—424B, “Assurances—Non-Construction Programs.” This form must be completed, signed, and submitted as part of the application package.
- Form AD—3030, “Representations Regarding Felony Conviction and Tax Delinquent Status for Corporate Applicants,” if you are a corporation. A corporation is any entity that has filed articles of incorporation in one of the 50 States, the District of Columbia, the Federated States of Micronesia, the Republic of Palau, and the Republic of the Marshall Islands, or the various territories of the United States including American Samoa, Guam, Midway Islands, the Commonwealth of the Northern Mariana Islands, Puerto Rico,

or the U.S. Virgin Islands. Corporations include both for profit and non-profit entities.

- You must certify that there are no current outstanding Federal judgments against your property and that you will not use grant funds to pay for any judgment obtained by the United States. To satisfy the Certification requirement, you should include this statement in your application: “[INSERT NAME OF APPLICANT] certifies that the United States has not obtained an unsatisfied judgment against its property and will not use grant funds to pay any judgments obtained by the United States.” A separate signature is not required.

- Executive Summary and Abstract. A one-page Executive Summary containing the following information: Legal name of applicant entity, application type (planning or working capital), applicant type, amount of grant request, a summary of your project, and whether you are submitting a simplified application, and whether you are requesting Reserved Funds. Also include a separate abstract of up to 100 words briefly describing your project.

- Eligibility discussion.
- Work plan and budget.
- Performance evaluation criteria.
- Proposal evaluation criteria.
- Certification and verification of matching funds.

- Reserved Funds and Priority Point documentation (as applicable).
- Appendices containing required supporting documentation.

3. Dun and Bradstreet Data Universal Numbering System (DUNS) and System for Awards Management (SAM)

In order to be eligible (unless you are accepted under 2 CFR 25.110(b), (c) or (d), you are required to:

(a) Provide a valid DUNS number in your application, which can be obtained at no cost via a toll-free request line at (866) 705-5711;

(b) Register in SAM before submitting your application. You may register in SAM at no cost at <https://www.sam.gov/portal/public/SAM/>; and

(c) Continue to maintain an active SAM registration with current information at all times during which you have an active Federal award or an application or plan under consideration by a Federal awarding agency.

If you have not fully complied with all applicable DUNS and SAM requirements, the Agency may determine that the applicant is not qualified to receive a Federal award and the Agency may use that determination as a basis for making an award to another applicant. Please refer to

Section F. 2. for additional submission requirements that apply to grantees selected for this program.

4. Submission Dates and Times

Application Deadline Date: July 1, 2016.

Explanation of Deadlines: Paper applications must be postmarked and mailed, shipped, or sent overnight by July 1, 2016. The Agency will determine whether your application is late based on the date shown on the postmark or shipping invoice. You may also hand carry your application to one of our field offices, but it must be received by close of business on the deadline date. If the due date falls on a Saturday, Sunday, or Federal holiday, the application is due the next business day. Late applications will automatically be considered ineligible and will not be evaluated further.

Electronic applications must be received at <http://www.grants.gov> no later than midnight Eastern time, June 24, 2016 to be eligible for FY 2016 grant funding. Please review the Grants.gov Web site, http://grants.gov/applicants/organization_registration.jsp for instructions on the process of registering your organization as soon as possible to ensure you are able to meet the electronic application deadline. Grants.gov will not accept applications submitted after the deadline.

5. Intergovernmental Review

Executive Order (EO) 12372, Intergovernmental Review of Federal Programs, applies to this program. This EO requires that Federal agencies provide opportunities for consultation on proposed assistance with State and local governments. Many States have established a Single Point of Contact (SPOC) to facilitate this consultation. A list of States that maintain a SPOC may be obtained at http://www.whitehouse.gov/omb/grants_spoc. If your State has a SPOC, you must submit your application directly for review. Any comments obtained through the SPOC must be provided to RD for consideration as part of your application. If your State has not established a SPOC or you do not want to submit your application to the SPOC, RD will submit your application to the SPOC or other appropriate agency or agencies.

6. Funding Restrictions

Funding limitations and reservations found in the program regulation at 7 CFR 4284.927 will apply, including:

(a) Use of Funds. Grant funds may be used to pay up to 50 percent of the total eligible project costs, subject to the

limitations established for maximum total grant amount. Grant funds may not be used to pay any costs of the project incurred prior to the date of grant approval. Grant and matching funds may only be used for eligible purposes. (see examples of eligible and ineligible uses in 7 CFR 4284.923 and 4284.924, respectively).

(b) Grant Term (project period). Your project timeframe or grant period can be a maximum of 36 months in length from the date of award. Your proposed grant period should begin no earlier than the anticipated award announcement date in this notice and should end no later than 36 months following that date. If you receive an award, your grant period will be revised to begin on the actual date of award—the date the grant agreement is executed by the Agency—and your grant period end date will be adjusted accordingly. Your project activities must begin within 90 days of that date of award. The length of your grant period should be based on your project's complexity, as indicated in your application work plan. For example, it is expected that most planning grants can be completed within 12 months.

(c) Program Income. If income (Program Income) is earned during the grant period as a result of the project activities, it is subject to the requirements in 2 CFR 200.80, and must be managed and reported accordingly.

(d) Majority Controlled Producer-Based Business. The aggregate amount of awards to Majority Controlled Producer-Based Businesses in response to this announcement shall not exceed 10 percent of the total funds obligated for the program during the fiscal year.

(e) Reserved Funds. Ten percent of all funds available for FY 2016 will be reserved to fund projects that benefit Beginning Farmers or Ranchers, or Socially-Disadvantaged Farmers or Ranchers. In addition, 10 percent of total funding available will be used to fund projects that propose development of Mid-Tier Value Chains as part of a Local or Regional Supply Chain Network. See related definitions in 7 CFR 4284.902.

(f) Disposition of Reserved Funds Not Obligated. For this announcement, any reserved FY 2015 funds that have not been obligated by June 30, 2016, will be available to the Secretary to make VAPG grants in accordance with 7 CFR 4284.927(d).

7. Other Submission Requirements

(a) National Environmental Policy Act

This notice has been reviewed in accordance with 7 CFR part 1940,

subpart G, "Environmental Program," or successor regulation. We have determined that an Environmental Impact Statement is not required because the issuance of regulations and instructions, as well as amendments to them, describing administrative and financial procedures for processing, approving, and implementing the Agency's financial programs is categorically excluded in the Agency's National Environmental Policy Act (NEPA) regulation found at 7 CFR 1940.310(e)(3) of subpart G, "Environmental Program." We have determined that this Notice does not constitute a major Federal action significantly affecting the quality of the human environment. Individual awards under this Notice are hereby classified as Categorical Exclusions according to 7 CFR 1940.310(e), which do not require any additional documentation.

(b) Civil Rights Compliance Requirements

All grants made under this Notice are subject to title VI of the Civil Rights Act of 1964 as required by the USDA (7 CFR part 15, subpart A) and section 504 of the Rehabilitation Act of 1973.

E. Application Review Information

Applications will be reviewed and processed as described at 7 CFR 4284.940. The Agency will review your application to determine if it is complete and eligible. If at any time, the Agency determines that your application is ineligible, you will be notified in writing as to the reasons it was determined ineligible and you will be informed of your review and appeal rights. Funding of successfully appealed applications will be limited to available FY 2016 funds.

The Agency will only score applications in which the applicant and project are eligible, which are complete and sufficiently responsive to program requirements, and in which the Agency agrees on the likelihood of financial feasibility for working capital requests. We will score your application according to the procedures and criteria specified in 7 CFR 4284.942, and with tiered scoring thresholds as specified below.

1. Scoring Criteria

For each criterion, you must show how the project has merit and why it is likely to be successful. If you do not address all parts of the criterion, or do not sufficiently communicate relevant project information, you will receive lower scores. VAPG is a competitive program, so you will receive scores based on the quality of your responses.

Simply addressing the criteria will not guarantee higher scores. The maximum number of points that can be awarded to your application is 100. For this announcement, the minimum score requirement for funding is 50 points.

The Agency application toolkit provides additional instruction to help you to respond to the criteria below.

(a) Nature of the Proposed Venture (graduated score 0–30 points).

For both planning and working capital grants, you should discuss the technological feasibility of the project, as well as operational efficiency, profitability, and overall economic sustainability resulting from the project. In addition, demonstrate the potential for expanding the customer base for the agricultural commodity or value-added product, and the expected increase in revenue returns to the producer-owners providing the majority of the raw agricultural commodity to the project. You should reference third-party data and other information that specifically supports your value-added project; discuss the value-added process you are proposing; potential markets and distribution channels; the value to be added to the raw commodity through the value-added process; cost and availability of inputs, your experience in marketing the proposed or similar product; business financial statements; and any other relevant information that supports the viability of your project. Working capital applicants should demonstrate that these outcomes will result from the project. Planning grant applicants should describe the expected results, and the reasons supporting those expectations.

Points will be awarded as follows:

(i) 0 points will be awarded if you do not substantively address the criterion.

(ii) 1–5 points will be awarded if you do not address each of the following: technological feasibility, operational efficiency, profitability, and overall economic sustainability.

(iii) 6–13 points will be awarded if you address technological feasibility, operational efficiency, profitability, and overall economic sustainability, but do not reference third-party information that supports the success of your project.

(iv) 14–22 points will be awarded if you address technological feasibility, operational efficiency, profitability, and overall economic sustainability, supported by third-party information demonstrating a reasonable likelihood of success.

(v) 23–30 points will be awarded if all criterion components are well addressed, supported by third-party

information, and demonstrate a high likelihood of success.

(b) Qualifications of Project Personnel (graduated score 0–20 points).

You must identify all individuals who will be responsible for completing the proposed tasks in the work plan, including the roles and activities that owners, staff, contractors, consultants or new hires may perform; and show that these individuals have the necessary qualifications and expertise, including those hired to do market or feasibility analyses, or to develop a business operations plan for the value-added venture. You must include the qualifications of those individuals responsible for leading or managing the total project (applicant owners or project managers), as well as those individuals responsible for actually conducting the various individual tasks in the work plan (such as consultants, contractors, staff or new hires). You must discuss the commitment and the availability of any consultants or other professionals to be hired for the project. If staff or consultants have not been selected at the time of application, you must provide specific descriptions of the qualifications required for the positions to be filled. Applications that demonstrate the strong credentials, education, capabilities, experience and availability of project personnel that will contribute to a high likelihood of project success will receive more points than those that demonstrate less potential for success in these areas.

Points will be awarded as follows:

(i) 0 points will be awarded if you do not substantively address the criterion.

(ii) 1–4 points will be awarded if qualifications and experience of all staff is not addressed and/or if necessary qualifications of unfilled positions are not provided.

(iii) 5–9 points will be awarded if all project personnel are identified but do not demonstrate qualifications or experience relevant to the project.

(iv) 10–14 will be awarded if most key personnel demonstrate strong credentials and/or experience, and availability indicating a reasonable likelihood of success.

(v) 15–20 points will be awarded if all personnel demonstrate strong, relevant credentials or experience, and availability indicating a high likelihood of project success.

(c) Commitments and Support (graduated score 0–10 points).

Producer commitments to the project will be evaluated based on the number of independent producers currently involved in the project; and the nature, level and quality of their contributions, including matching contributions. End-

user commitments will be evaluated on the basis of potential or identified markets and the potential amount of output to be purchased, as indicated by letters of intent or contracts from potential buyers referenced within the application. Other third-party commitments to the project will be evaluated based on the critical and tangible nature of their contribution to the project, such as technical assistance, storage, processing, marketing, or distribution arrangements that are necessary for the project to proceed; and the level and quality of these contributions. All cash or in-kind contributions from producers, end users, or other contributors should be discussed. End-user commitments may include contracts or letters of intent or interest in purchasing the value-added product. Letters of commitment by producers, end-users, and third-parties should be summarized as part of your response to this criterion, and the letters should be included in Appendix B. Applications that demonstrate the project has strong direct financial support in the form of cash matching contributions and strong technical and logistical support to successfully complete the project will receive more points than those that demonstrate less potential for success in these areas.

Points will be awarded as follows:

(i) 0 points will be awarded if you do not substantively address the criterion.

(ii) 1–3 points will be awarded if you are the only producer participating in the project, AND show real, direct support from at least one end-user or third-party contributor.

(iii) 4–6 points will be awarded if you, as the applicant, are the only producer participating in the project, AND show strong financial commitment in the form of cash matching contributions to the project AND measurable commitment or interest in purchasing the value-added product from at least one end-user; AND commitment or tangible support from at least one other third-party contributor; OR you, as the applicant, demonstrate participation from multiple producers, AND measurable commitment or interest in purchasing the value-added product from at least one end-user; AND commitment or tangible support from at least one third party contributor.

(iv) 7–10 points will be awarded if you, as the applicant, show strong financial commitment to the project in the form of cash matching contributions, AND participation from additional producers, AND measurable commitment or interest from multiple end-users, AND commitment or tangible support from multiple third-party contributors.

(d) *Work Plan and Budget (graduated score 0–20 points).*

You must submit a comprehensive work plan and budget (for full details, see 7 CFR 4284.922(b)(5)). Your work plan must provide specific and detailed descriptions of the tasks and the key project personnel that will accomplish the project's goals. The budget must present a detailed breakdown of all estimated costs of project activities and allocate those costs among the listed tasks. You must show the source and use of both grant and matching funds for all tasks. Matching funds must be spent at a rate equal to, or in advance of, grant funds. An eligible start and end date for the project and for individual project tasks must be clearly shown and may not exceed Agency specified timeframes for the grant period. Working capital applications must include an estimate of program income expected to be earned during the grant period (see 2 CFR 200.307).

Points will be awarded as follows:

(i) 0 points will be awarded if you do not substantively address the criterion.

(ii) 1–7 points will be awarded if the work plan and budget do not account for all project goals, tasks, costs, timelines, and responsible personnel.

(iii) 8–14 points will be awarded if you provide a clear, comprehensive work plan detailing all project goals, tasks, timelines, costs, and responsible personnel in a logical and realistic manner that demonstrates a reasonable likelihood of success.

(iv) 15–20 points will be awarded if you provide a clear, comprehensive work plan detailing all project goals, tasks, timelines, costs, and responsible personnel in a logical and realistic manner that demonstrates a high likelihood of success.

(e) *Priority Points up to 10 points (lump sum 0 or 5 points plus, graduated score 0–5 points).*

It is recommended that you use the Agency application package when applying for priority points and refer to the requirements specified in 7 CFR 4284.924. Priority points may be awarded in both the general funds and Reserved Funds competitions.

(i) 5 points will be awarded if you meets the requirements for one of the following categories and provide the documentation described in 7 CFR 4284.923 and 4284.924 as applicable: Beginning Farmer or Rancher, Socially-Disadvantaged Farmer or Rancher, Veteran Farmer or Rancher, or Operator of a Small or Medium-sized Farm or Ranch that is structured as a Family Farm, Farmer or Rancher Cooperative, or are proposing a Mid-Tier Value Chain project.

(ii) Up to 5 priority points will be awarded if you are an Agricultural Producer Group, Farmer or Rancher Cooperative, or Majority-Controlled Producer-Based Business Venture (referred to below as “applicant group”) whose project “best contributes to creating or increasing marketing opportunities” for Operators of Small- and Medium-sized Farms and Ranches that are structured as Family Farms, Beginning Farmers and Ranchers, Socially-Disadvantaged Farmers and Ranchers, and Veteran Farmers and Ranchers (referred to below as “priority groups”). For each of the priority point levels below, applications must demonstrate how the proposed project will contribute to new or increased marketing opportunities for respective priority groups. Guidance on relevant information required to adequately demonstrate this requirement can be found in program application package.

(A) 2 priority points will be awarded if the existing membership of the applicant group is comprised of either more than 50 percent of any one of the four priority groups or more than 50 percent of any combination of the four priority groups.

(B) 1 priority point will be awarded if the existing membership of the applicant group is comprised of two or more of the priority groups. One point is awarded regardless of whether a group's membership is comprised of two, three, or all four of the priority groups.

(C) 2 priority points will be awarded if the applicant's proposed project will increase the number of priority groups that comprise applicant membership by one or more priority groups. However, if an applicant group's membership is already comprised of all four priority groups, such an applicant would not be eligible for points under this criterion because there is no opportunity to increase the number of priority groups. Note also that this criterion does not consider either the percentage of the existing membership that is comprised of the four priority groups or the number of priority groups currently comprising the applicant group's membership.

(f) *Priority Categories (graduated score 0–10 points).*

The Administrator of the Agency may choose to award up to 10 points to an application to improve the geographic diversity of awardees in a fiscal year.

2. Review and Selection Process

The Agency will select applications for award under this Notice in accordance with the provisions specified in 7 CFR 4284.950(a).

If your application is eligible and complete, it will be qualitatively scored by at least two reviewers based on criteria specified in section E.1. of this Notice. One of these reviewers will be an experienced RD employee from your servicing State Office and at least one additional reviewer will be a non-Federal, independent reviewer, who must meet the following qualifications. Independent reviewers must have at least bachelor's degree in one or more of the following fields: Agri-business, agricultural economics, agriculture, animal science, business, marketing, economics or finance; and a minimum of 8 years of experience in an agriculture-related field (e.g. farming, marketing, consulting, or research; or as university faculty, trade association official or non-Federal government official in an agriculturally-related field). Each reviewer will score evaluation criteria (a) through (d) and the totals for each reviewer will be added together and averaged. The RD State Office reviewer will also assign priority points based on criterion (e) in section E.1. of this Notice. These will be added to the average score. The sum of these scores will be ranked highest to lowest and this will comprise the initial ranking.

The Administrator of the Agency may choose to award up to 10 Administrator priority points based on criterion (f) in section E.1. of this Notice. These points will be added to the cumulative score for a total possible score of 100.

A final ranking will be obtained based solely on the scores received for criteria (a) through (e). A minimum score of 50 points is required for funding. Applications for Reserved Funds will be funded in rank order until funds are depleted. Unfunded reserve applications will be returned to the general funds where applications will be funded in rank order until the funds are expended. Funding for Majority Controlled Producer-Based Business Ventures is limited to 10 percent of total grant funds expected to be obligated as a result of this Notice. These applications will be funded in rank order until the funding limitation has been reached. Grants to these applicants from Reserved Funds will count against this funding limitation. In the event of tied scores, the Administrator shall have discretion in breaking ties.

If your application is ranked, but not funded, it will not be carried forward into the next competition.

F. Federal Award Administration Information

1. Federal Award Notices

If you are selected for funding, you will receive a signed notice of Federal award by postal mail, containing instructions on requirements necessary to proceed with execution and performance of the award.

If you are not selected for funding, you will be notified in writing via postal mail and informed of any review and appeal rights. Funding of successfully appealed applications will be limited to available FY 2016 funding.

2. Administrative and National Policy Requirements

Additional requirements that apply to grantees selected for this program can be found in 7 CFR part 4284, subpart J; the Grants and Agreements regulations of the Department of Agriculture codified in 2 CFR parts 180, 400, 415, 417, 418, 421; 2 CFR parts 25 and 170; and 48 CFR 31.2, and successor regulations to these parts.

In addition, all recipients of Federal financial assistance are required to report information about first-tier sub-awards and executive compensation (see 2 CFR part 170). You will be required to have the necessary processes and systems in place to comply with the Federal Funding Accountability and Transparency Act of 2006 (Pub.L. 109–282) reporting requirements (see 2 CFR 170.200(b), unless you are exempt under 2 CFR 170.110(b)). More information on these requirements can be found at <http://www.rd.usda.gov/programs-services/value-added-producer-grants>.

The following additional requirements apply to grantees selected for this program:

(a) Agency approved Grant Agreement.

(b) Letter of Conditions.

(c) Form RD 1940–1, “Request for Obligation of Funds.”

(d) Form RD 1942–46, “Letter of Intent to Meet Conditions.”

(e) Form AD–1047, “Certification Regarding Debarment, Suspension, and Other Responsibility Matters—Primary Covered Transactions.”

(f) Form AD–1048, “Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion—Lower Tier Covered Transactions.”

(g) Form AD–1049, “Certification Regarding a Drug-Free Workplace Requirement (Grants).”

(h) Form AD–3031, “Assurance Regarding Felony Conviction or Tax Delinquent Status for Corporate Applicants.” Must be signed by corporate applicants who receive an award under this Notice.

(i) Form RD 400–4, “Assurance Agreement.”

(j) SF LLL, “Disclosure of Lobbying Activities,” if applicable.

(k) Use Form SF 270, “Request for Advance or Reimbursement.”

3. Reporting

After grant approval and through grant completion, you will be required to provide the following, as indicated in the Grant Agreement:

(a) A SF–425, “Federal Financial Report,” and a project performance report will be required on a semiannual basis (due 45 working days after end of the semiannual period). For the purposes of this grant, semiannual periods end on March 31st and September 30th. The project performance reports shall include the elements prescribed in the grant agreement.

(b) A final project and financial status report within 90 days after the expiration or termination of the grant.

(c) Provide outcome project performance reports and final deliverables.

G. Agency Contacts

If you have questions about this Notice, please contact the State Office as identified in the **ADDRESSES** section of this Notice. You are also encouraged to visit the application Web site for application tools, including an application guide and templates. The Web site address is: <http://www.rd.usda.gov/programs-services/value-added-producer-grants>. You may also contact National Office staff: Tracey Kennedy, VAPG Program Lead, tracey.kennedy@wdc.usda.gov, or Shantelle Gordon, shantelle.gordon@wdc.usda.gov, or call the main line at 202–690–1374.

H. Nondiscrimination Statement

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the bases of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file an employment complaint, you must contact your agency's EEO Counselor (PDF) within 45 days of the date of the alleged

discriminatory act, event, or in the case of a personnel action. Additional information can be found online at http://www.ascr.usda.gov/complaint_filing_file.html.

If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form (PDF), found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW., Washington, DC 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.

Individuals who are deaf, hard of hearing or have speech disabilities and you wish to file either an EEO or program complaint please contact USDA through the Federal Relay Service at (800) 877-8339 or (800) 845-6136 (in Spanish).

Persons with disabilities, who wish to file a program complaint, please see information above on how to contact us by mail directly or by email. If you require alternative means of communication for program information (e.g., Braille, large print, audiotape, etc.) please contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

Dated: April 4, 2016.

Samuel Rikkers,

Administrator, Rural Business—Cooperative Service.

BILLING CODE 3410-XY-P

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

Rural Broadband Access Loans and Loan Guarantees Program

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice of Solicitation of Applications (NOSA).

SUMMARY: The Rural Utilities Service (RUS), an agency of the United States Department of Agriculture (USDA), announces that it is accepting applications for fiscal year (FY) 2016 for the Rural Broadband Access Loan and Loan Guarantee program (the Broadband Program).

In addition to announcing the application window, RUS announces the minimum and maximum amounts for broadband loans for FY 2016.

DATES: Applications under this NOSA will be accepted immediately and must be submitted through the Agency's online application system *no later than* July 7, 2016 to be eligible for FY 2016 broadband loan funding. Applications are subject to the requirements of the interim final regulation published in the **Federal Register** at Vol. 80, No. 146 on Thursday, July 30, 2015.

FOR FURTHER INFORMATION CONTACT: For further information contact Shawn Arner, Deputy Assistant Administrator, Loan Originations and Approval Division, Rural Utilities Service, STOP 1597, 1400 Independence Avenue SW., Washington, DC 20250-1597, Telephone: (202) 720-0800, or email: Shawn.Arner@wdc.usda.gov.

SUPPLEMENTARY INFORMATION:

General Information

The Rural Broadband Access Loan and Loan Guarantee Program (the Broadband Program) is authorized by the Rural Electrification Act (7 U.S.C. 901 *et seq.*), as amended by the Agricultural Act of 2014 (Pub. L. 113-79) also referred to as the 2014 Farm Bill.

During FY 2016, loans will be made available for the construction, improvement, and acquisition of facilities and equipment to provide service at the broadband lending speed for eligible rural areas. Applications must be submitted in accordance with the interim final rule published July 30, 2015.

For questions about the requirements of completing an application please use the RUS contact listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Application requirements: All requirements for submission of an application under the Broadband Program have been set forth in the interim regulation published July 30, 2015.

Application Materials: Application materials for the Broadband Program are available at <http://www.rd.usda.gov/programs-services/farm-bill-broadband-loans-loan-guarantees>.

Application Submission: All applications must be submitted through the Agency's online application system located at <http://www.rd.usda.gov/programs-services/rd-apply>. Paper applications will not be accepted.

Minimum and Maximum Loan Amounts

Loans under this authority will not be made for less than \$100,000. The maximum loan amount that will be considered for FY 2016 is \$10,000,000.

Required Definitions for Broadband Program Regulation

The interim regulation for the Broadband Program requires that certain definitions affecting eligibility be revised and published from time to time by the agency in the **Federal Register**. For the purposes of this NOSA, the agency will be revising the definition of Broadband Service established therein, such that for applications under this window, existing Broadband Service shall mean the minimum rate-of-data transmission of ten megabits downstream and one megabit upstream for both fixed and mobile broadband service. On the other hand, the rate at which applicants must propose to offer new broadband service, the Broadband Lending Speed, will be a minimum bandwidth of ten megabits downstream and one megabit upstream for both fixed and mobile service to the customer.

Priority for Approving Loan Applications

Applications for FY 2016 will be accepted from April 8, 2016 through July 7, 2016. Although review of applications will start when they are submitted, all applications submitted by July 7, 2016, will be evaluated and ranked together on the basis of the number of unserved households in the proposed funded service area. Subject to available funding, eligible applications that propose to serve the most unserved households will receive funding offers before other eligible applications that have been submitted.

Applications will not be accepted after July 7, 2016, until a new funding window has been opened with the publication of an additional NOSA in the **Federal Register**.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995, the information collection requirements associated with Broadband loans, as covered in this NOSA, have been approved by the Office of Management and Budget (OMB) under OMB Control Number 0572-0130.

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/

parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotope, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

- (1) *Mail*: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW., Washington, DC 20250-9410;
 - (2) *Fax*: (202) 690-7442; or
 - (3) *Email*: program.intake@usda.gov.
- USDA is an equal opportunity provider, employer, and lender.

Dated: March 30, 2016.

Brandon McBride,

Administrator, Rural Utilities Service.

BILLING CODE 3410-15-P

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

Information Collection Activity; Comment Request

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended), the Rural Utilities Service (RUS) invites comments on this information collection for which approval from the Office of Management and Budget (OMB) will be requested.

DATES: Comments on this notice must be received by June 7, 2016.

FOR FURTHER INFORMATION CONTACT:

Thomas P. Dickson, Acting Director, Program Development and Regulatory Analysis, USDA Rural Utilities Service, 1400 Independence Avenue SW., STOP 1522, Room 5164 South Building, Washington, DC 20250-1522. Telephone: (202) 690-4492; Email: Thomas.Dickson@wdc.usda.gov.

SUPPLEMENTARY INFORMATION: The Office of Management and Budget's (OMB) regulation (5 CFR 1320) implementing provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104-13) requires that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d)). This notice identifies an information collection that RUS is submitting to OMB for extension.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to: Thomas P. Dickson, Acting Director, Program Development and Regulatory Analysis, USDA Rural Utilities Service, 1400 Independence Avenue SW., STOP 1522, Washington, DC 20250-1522. FAX: (202) 720-8435, Email: Thomas.Dickson@wdc.usda.gov.

Title: Preloan Procedures and Requirements for Telecommunications Program.

OMB Control Number: 0572-0079.

Type of Request: Extension of a currently approved information collection.

Abstract: The burden required by this collection consists of information that will allow the Agency to determine an applicant's eligibility to borrow from the Agency under the terms of the Rural Electrification Act (RE Act) of 1936 as amended (U.S.C. 912). This information is also used by the Agency to determine that the Government's security for loans made by the Agency is reasonably adequate and that the loans will be repaid within the time agreed.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 9.17 hours per response.

Respondents: Business or other for-profit; not-for-profit organizations.

Estimated Number of Respondents: 40.

Estimated Number of Responses per Respondent: 8.79.

Estimated Total Annual Burden on Respondents: 3,224.

Copies of this information collection can be obtained from Rebecca Hunt, Program Development and Regulatory Analysis, at (202) 205-3660, FAX: (202) 720-8435, Email: Rebecca.Hunt@wdc.usda.gov.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Dated: March 30, 2016.

Brandon McBride,

Administrator, Rural Utilities Service.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Texas State Advisory Committee

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of public meeting.

DATES: Friday, May 6, 2016.

Time: 11:00 a.m.-12:00 p.m. (CT).

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act (FACA) that a meeting of the Texas State Advisory Committee (Committee) to the Commission will be held at 11:00 a.m. (Central Time) Friday, May 6, 2016, for the purpose of discussing plans to hold a briefing meeting assessing the impact of a 2012 study by the Public Policy Research Institute at Texas A&M University and the Council of State Governments Justice Center that found ethnic and racial disparities in school discipline in Texas.

This meeting is available to the public through the following toll-free call-in number: 888-395-3227; when prompted, please provide conference ID number: 4227309. Any interested member of the public may call this number and listen to the meeting. An open comment period will be provided to allow members of the public to make a statement at the end of the meeting.

The conference call operator will ask callers to identify themselves, the organization they are affiliated with (if any), and an email address prior to placing callers into the conference room. Callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number.

Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1-800-977-8339 and providing the Service with the conference call number and conference ID number. Hearing-impaired persons who will attend the meeting and require the services of a sign language interpreter should contact the Regional Office at least ten (10) working days before the scheduled date of the meeting.

Members of the public may also submit written comments. The comments must be received in the Western Regional Office of the Commission by Monday, June 6, 2016. The address is Western Regional Office, U.S. Commission on Civil Rights, 300 N. Los Angeles Street, Suite 2010, Los Angeles, CA 90012. Persons wishing to email their comments may do so by sending them to Angela French-Bell, Regional Director, Western Regional Office, at abell@usccr.gov.

Records and documents discussed during the meeting will be available for public viewing prior to and after the meeting at <http://facadatabase.gov/committee/meetings.aspx?cid=276>. Please click on the "Meeting Details" and "Documents" links. Records generated from this meeting may also be inspected and reproduced at the Western Regional Office, as they become available, both before and after the meeting. Persons interested in the work of this Committee are directed to the Commission's Web site, <http://www.usccr.gov>, or may contact the Western Regional Office at the above email or street address.

Agenda

- I. Introductory Remarks
- II. Discussion of the Committee's Briefing Meeting on School Discipline
- III. Public Comment
- IV. Adjournment

Public Call Information

Dial: 888-395-3227
Conference ID: 4227309

FOR FURTHER INFORMATION CONTACT:

DEPARTMENT OF COMMERCE

Census Bureau

Census Scientific Advisory Committee

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of advisory committee charter renewal.

SUMMARY: The Bureau of the Census (Census Bureau) is giving notice that the Secretary of the Department of Commerce has determined that the renewal of an advisory committee of technical advisors is necessary and in the public interest. Accordingly, the Census Bureau has chartered the Census Scientific Advisory Committee (CSAC). The renewed charter can be found on the Census Bureau's Advisory Committee Web site at the following link: <https://www.census.gov/cac/>.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop, Chief, Advisory Committee Branch, U.S. Census Bureau, Room 8H177, Washington, DC 20233, telephone 301-763-5222, Tara.T.Dunlop@Census.gov.

SUPPLEMENTARY INFORMATION: The CSAC will advise the Census Bureau's Director on the full range of Census Bureau programs and activities. The CSAC will provide scientific and technical expertise from the following disciplines: demography, economics, geography, psychology, statistics, survey methodology, social and behavioral sciences, Information Technology and computing, marketing and other fields of expertise, as appropriate, to address Census Bureau program needs and objectives.

The CSAC will function solely as an advisory body and in compliance with provisions of the Federal Advisory Committee Act. Pursuant to subsection 9(c) of the Federal Advisory Committee Act, 5 U.S.C., App., as amended, copies of this charter were furnished to the Library of Congress and to the following Committees of Congress:

- Senate Committee on Commerce, Science, and Transportation
- Senate Committee on Homeland Security and Governmental Affairs
- Senate Committee on Finance
- Senate Committee on Appropriations
- House Committee on Appropriations
- House Committee on Oversight and Government Reform

Dated: April 4, 2016.

John H. Thompson,

Director, Bureau of the Census.

DEPARTMENT OF COMMERCE

Bureau of the Census

National Advisory Committee on Racial, Ethnic and Other Populations

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of advisory committee charter renewal.

SUMMARY: The Bureau of the Census (Census Bureau) is giving notice that the Secretary of the Department of Commerce has determined that the charter renewal of the National Advisory Committee of Racial, Ethnic, and Other Populations (NAC) is necessary and in the public interest. The renewed charter can be found on the Census Bureau's Advisory Committee Web site at the following link: <https://www.census.gov/cac/>.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop, Chief, Advisory Committee Branch, Room 8H177, U.S. Census Bureau, Washington, DC 20233, telephone 301-763-5222, Tara.T.Dunlop@Census.gov.

SUPPLEMENTARY INFORMATION: The Census Bureau's National Advisory Committee on Racial, Ethnic, and Other Populations will advise the Director of the Census Bureau on the full range of Census Bureau programs and activities. The NAC will provide race, ethnic, and other population expertise from the following disciplines: economic, housing, demographic, socioeconomic, linguistic, technological, methodological, geographic, behavioral and operational variables affecting the cost, accuracy, and implementation of Census Bureau programs and surveys, including the decennial census.

The NAC will function solely as an advisory body and in compliance with provisions of the Federal Advisory Committee Act. Pursuant to subsection 9(c) of the Federal Advisory Committee Act, 5 U.S.C., App., as amended, copies of this charter were furnished to the Library of Congress and to the following Committees of Congress:

- Senate Committee on Commerce, Science, and Transportation
- Senate Committee on Homeland Security and Governmental Affairs
- Senate Committee on Finance
- Senate Committee on Appropriations
- House Committee on Appropriations

- House Committee on Oversight and Government Reform

Dated: April 4, 2016.

BILLING CODE 3510-07-P

DEPARTMENT OF COMMERCE

Bureau of the Census

National Advisory Committee

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of public virtual meeting.

SUMMARY: The Bureau of the Census (Census Bureau) is giving notice of a virtual meeting of the National Advisory Committee (NAC). The Committee will address updates on the 2015 National Content Test and Tribal Enrollment Question Focus Groups. The NAC will meet virtually on Thursday, April 21, 2016. Last minute changes to the schedule are possible, which could prevent giving advance public notice of schedule adjustments. Please visit the Census Advisory Committees Web site for the most current meeting agenda at: <http://www.census.gov/cac/>.

DATES: April 21, 2016. The virtual meeting will begin at approximately 2:00 p.m. ET and end at approximately 4:00 p.m. ET.

ADDRESSES: The meeting will be held via teleconference. To attend, participants should call the following phone number to access the audio portion of the meeting: 1-800-369-1730, passcode: 5198433. The meeting will be available via WebEx, please [CLICK HERE](#) for access. The meeting number is 744882915.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop, Advisory Committee Branch Chief, Customer Liaison and Marketing Services Office, tara.t.dunlop@census.gov, Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, telephone 301-763-5222. For TTY callers, please use the Federal Relay Service 1-800-877-8339.

SUPPLEMENTARY INFORMATION: The NAC was established in March 2012 and operates in accordance with the Federal Advisory Committee Act (Title 5, United States Code, Appendix 2, Section 10). The NAC members are appointed by the Director, Census Bureau, and consider topics such as hard to reach populations, race and ethnicity, language, aging populations,

American Indian and Alaska Native tribal considerations, new immigrant populations, populations affected by natural disasters, highly mobile and migrant populations, complex households, rural populations, and population segments with limited access to technology. The Committee also advises on data privacy and confidentiality, among other issues.

All meetings are open to the public. A brief period will be set aside at the meeting for public comment on April 21, 2016. However, individuals with extensive questions or statements must submit them in writing to: census.national.advisory.committee@census.gov (subject line "April 21, 2016, NAC Virtual Meeting Public Comment"), or by letter submission to the Committee Liaison Officer, Department of Commerce, U.S. Census Bureau, Room 8H119, 4600 Silver Hill Road, Washington, DC 20233.

Dated: April 4, 2016.

John H. Thompson,

Director, Bureau of the Census.

BILLING CODE 3510-07-P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B-17-2016]

Notification of Proposed Production Activity; Max Home, LLC; Subzone 158F (Upholstered Furniture); luka and Fulton, Mississippi

The Greater Mississippi Foreign-Trade Zone, Inc., grantee of FTZ 158, submitted a notification of proposed production activity to the FTZ Board on behalf of Max Home, LLC (Max Home), for its facilities in luka and Fulton, Mississippi. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on March 17, 2016.

Max Home previously had authority to conduct cut-and-sew activity using certain foreign micro-denier suede upholstery fabrics to produce upholstered furniture and related parts (upholstery cover sets) on a restricted basis (see Board Order 1744, 76 FR 11425, March 2, 2011). Board Order 1744 authorized the production of upholstered furniture (chairs, seats, sofas, sleep sofas, and sectionals) for a five-year period, with a scope of authority that only provided FTZ savings on a limited quantity (2.23 million square yards per year) of foreign origin, micro-denier suede upholstery

fabric finished with a hot caustic soda solution process (*i.e.*, authorized fabrics). All foreign upholstery fabrics other than micro-denier suede finished with a hot caustic soda solution process (*i.e.*, unauthorized fabrics) used in Max Home's production within Subzone 158F were subject to full customs duties.

The current request seeks to renew Max Home's previously approved FTZ authority indefinitely (with no increase in the company's annual quantitative limit of 2.23 million square yards) and to add foreign-status leather and certain polyurethane-type fabrics to the scope of authority. Pursuant to 15 CFR 400.14(b), additional FTZ authority would be limited to the specific foreign-status materials and components and specific finished products described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt Max Home from customs duty payments on the foreign-status fabrics used in export production. On its domestic sales, Max Home would be able to apply the finished upholstery cover set (*i.e.*, furniture part) or finished furniture duty rate (free) for the previously authorized fabrics and the additional fabrics (indicated below). Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

Authority to admit foreign-status fabrics to Subzone 158F would only involve micro-denier suede upholstery fabrics finished with a hot caustic soda solution process (classified within HTSUS Headings 5407, 5512, 5515, 5516, 5801, and 5903), polyurethane fabrics backed with ground leather (5903.20.2500), wet coagulation process 100 percent polyurethane coated fabrics (5903.20.2500), and upholstery leather (Heading 4107), as detailed in the notification (duty rate ranges from free to 14.9%).

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary at the address below. The closing period for their receipt is May 18, 2016.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230-0002, and in the "Reading Room" section of the FTZ Board's Web site, which is accessible via www.trade.gov/ftz.

For further information, contact Pierre Duy at Pierre.Duy@trade.gov or (202) 482-1378.

Dated: March 31, 2016.

Andrew McGilvray,
Executive Secretary.

Bureau of Industry and Security

[Docket No. 160329302-6302-01]

Reporting for Calendar Year 2015 on Offsets Agreements Related to Sales of Defense Articles or Defense Services to Foreign Countries or Foreign Firms

AGENCY: Bureau of Industry and Security, Department of Commerce.

ACTION: Notice; annual reporting requirements.

SUMMARY: This notice is to remind the public that U.S. firms are required to report annually to the Department of Commerce (Commerce) information on contracts for the sale of defense articles or defense services to foreign countries or foreign firms that are subject to offsets agreements exceeding \$5,000,000 in value. U.S. firms are also required to report annually to Commerce information on offsets transactions completed in performance of existing offsets commitments for which offsets credit of \$250,000 or more has been claimed from the foreign representative. This year, such reports must include relevant information from calendar year 2015 and must be submitted to Commerce no later than June 15, 2016.

ADDRESSES: Submit reports in both hard copy and electronically. Address the hard copy to "Offsets Program Manager, U.S. Department of Commerce, Office of Strategic Industries and Economic Security, Bureau of Industry and Security (BIS), Room 3878, Washington, DC 20230". Submit electronic copies to OffsetReport@bis.doc.gov.

FOR FURTHER INFORMATION CONTACT: Ronald DeMarines, Office of Strategic Industries and Economic Security, Bureau of Industry and Security, U.S. Department of Commerce, telephone: 202-482-3755; fax: 202-482-5650; email: ronald.demarines@bis.doc.gov.

SUPPLEMENTARY INFORMATION:

Background

Section 723(a)(1) of the Defense Production Act of 1950, as amended (DPA) (50 U.S.C. 4568 (2015)) requires the President to submit an annual report

to Congress on the impact of offsets on the U.S. defense industrial base. Section 723(a)(2) directs the Secretary of Commerce (Secretary) to prepare the President's report and to develop and administer the regulations necessary to collect offsets data from U.S. defense exporters.

The authorities of the Secretary regarding offsets have been delegated to the Under Secretary of Commerce for Industry and Security. The regulations associated with offsets reporting are set forth in part 701 of title 15 of the Code of Federal Regulations. Offsets are compensation practices required as a condition of purchase in either government-to-government or commercial sales of defense articles and/or defense services, as defined by the Arms Export Control Act (22 U.S.C. 2778) and the International Traffic in Arms Regulations (22 CFR 120-130). Offsets are also applicable to certain items controlled on the Commerce Control list (CCL) and with an Export Control Classification Number (ECCN) including the numeral "6" as its third character. The CCL is found in Supplement No. 1 to part 774 of the Export Administration Regulations.

An example of an offset is as follows: a company that is selling a fleet of military aircraft to a foreign government may agree to offset the cost of the aircraft by providing training assistance to plant managers in the purchasing country. Although this distorts the true price of the aircraft, the foreign government may require this sort of extra compensation as a condition of awarding the contract to purchase the aircraft. As described in the regulations, U.S. firms are required to report information on contracts for the sale of defense articles or defense services to foreign countries or foreign firms that are subject to offsets agreements exceeding \$5,000,000 in value. U.S. firms are also required to report annually information on offsets transactions completed in performance of existing offsets commitments for which offsets credit of \$250,000 or more has been claimed from the foreign representative.

Commerce's annual report to Congress includes an aggregated summary of the data reported by industry in accordance with the offsets regulation and the DPA (50 U.S.C. 4568 (2015)). As provided by section 723(c) of the DPA, BIS will not publicly disclose individual firm information it receives through offsets reporting unless the firm furnishing the information specifically authorizes public disclosure. The information collected is sorted and organized into an aggregate report of national offsets data,

and therefore does not identify company-specific information.

In order to enable BIS to prepare the next annual offset report reflecting calendar year 2015 data, affected U.S. firms must submit required information on offsets agreements and offsets transactions from calendar year 2015 to BIS no later than June 15, 2016.

Dated: April 4, 2016.

Kevin J. Wolf,
Assistant Secretary for Export Administration.

Diamond Sawblades and Parts Thereof From the People's Republic of China: Final Results of Antidumping Duty Changed Circumstances Review

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On March 3, 2016, the Department of Commerce (the Department) published a notice of initiation and preliminary results of a changed circumstances review of the antidumping duty order on diamond sawblades and parts thereof (diamond sawblades) from the People's Republic of China (the PRC).¹ In that notice, we preliminarily determined that Wuhan Wanbang Laser Diamond Tools Co., Ltd. (Wuhan Wanbang Co., Ltd.) is the successor-in-interest to Wuhan Wanbang Laser Diamond Tools Co. (Wuhan Wanbang Co.) for purposes of determining antidumping duty cash deposits and liabilities.² No interested party submitted comments on or requested a public hearing to discuss the *Initiation and Preliminary Results*. For these final results, the Department continues to find that Wuhan Wanbang Co., Ltd. is the successor-in-interest to Wuhan Wanbang Co.

DATES: *Effective Date:* April 8, 2016.

FOR FURTHER INFORMATION CONTACT: Yang Jin Chun AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-5760.

¹ See *Diamond Sawblades and Parts Thereof From the People's Republic of China: Initiation and Preliminary Results of Changed Circumstances Review*, 81 FR 11177 (March 3, 2016) (*Initiation and Preliminary Results*).

² *Id.*

SUPPLEMENTARY INFORMATION:

Background

Effective May 4, 2015, Wuhan Wanbang Co. (1) changed its legal status from a limited liability company to a joint-stock limited company and (2) changed its name to Wuhan Wanbang Laser Diamond Tools Co., Ltd.³ On December 22, 2015, Wuhan Wanbang Co., Ltd. requested that the Department initiate an expedited changed circumstances review and determine that Wuhan Wanbang Co., Ltd. is the successor-in-interest to Wuhan Wanbang Co.

On March 3, 2016, we initiated this changed circumstances review and preliminarily determined that Wuhan Wanbang Co., Ltd. is the successor-in-interest to Wuhan Wanbang Co.⁴ In the *Initiation and Preliminary Results*, we provided all interested parties with an opportunity to comment or request a public hearing regarding our preliminary results. We received no comments or requests for a public hearing.

Scope of the Order

The products covered by the order are all finished circular sawblades, whether slotted or not, with a working part that is comprised of a diamond segment or segments, and parts thereof, regardless of specification or size, except as specifically excluded below. Within the scope of the order are semifinished diamond sawblades, including diamond sawblade cores and diamond sawblade segments. Diamond sawblade cores are circular steel plates, whether or not attached to non-steel plates, with slots. Diamond sawblade cores are manufactured principally, but not exclusively, from alloy steel. A diamond sawblade segment consists of a mixture of diamonds (whether natural or synthetic, and regardless of the quantity of diamonds) and metal powders (including, but not limited to, iron, cobalt, nickel, tungsten carbide) that are formed together into a solid shape (from generally, but not limited to, a heating and pressing process).

Sawblades with diamonds directly attached to the core with a resin or electroplated bond, which thereby do not contain a diamond segment, are not included within the scope of the order. Diamond sawblades and/or sawblade cores with a thickness of less than 0.025 inches, or with a thickness greater than 1.1 inches, are excluded from the scope

of the order. Circular steel plates that have a cutting edge of non-diamond material, such as external teeth that protrude from the outer diameter of the plate, whether or not finished, are excluded from the scope of the order. Diamond sawblade cores with a Rockwell C hardness of less than 25 are excluded from the scope of the order. Diamond sawblades and/or diamond segment(s) with diamonds that predominantly have a mesh size number greater than 240 (such as 250 or 260) are excluded from the scope of the order. Merchandise subject to the order is typically imported under heading 8202.39.00.00 of the Harmonized Tariff Schedule of the United States (HTSUS). When packaged together as a set for retail sale with an item that is separately classified under headings 8202 to 8205 of the HTSUS, diamond sawblades or parts thereof may be imported under heading 8206.00.00.00 of the HTSUS. On October 11, 2011, the Department included the 6804.21.00.00 HTSUS classification number to the customs case reference file, pursuant to a request by U.S. Customs and Border Protection (CBP).⁵ The tariff classification is provided for convenience and customs purposes; however, the written description of the scope of the order is dispositive.

Final Results of Changed Circumstances Review

For the reasons stated in the *Initiation and Preliminary Results*, and because we received no comments from interested parties to the contrary, we continue to find that Wuhan Wanbang Co., Ltd. is the successor-in-interest to Wuhan Wanbang Co.⁶ As a result of this determination, we find that Wuhan Wanbang Co., Ltd. should receive the cash deposit rate previously assigned to Wuhan Wanbang Co. in the most recently completed administrative review of the antidumping duty order on diamond sawblades from the PRC.⁷ Consequently, the Department will instruct U.S. Customs and Border Protection to suspend liquidation of all shipments of subject merchandise exported by Wuhan Wanbang Co., Ltd., and entered, or withdrawn from warehouse, for consumption on or after the publication date of this notice in the

Federal Register at 2.34 percent, which is the current antidumping duty cash deposit rate for Wuhan Wanbang Co.⁸ This cash deposit requirement shall remain in effect until further notice.

This notice of final results is in accordance with sections 751(b)(1) and 777(i)(1) and (2) of the Tariff Act of 1930, as amended, and 19 CFR 351.216, and 19 CFR 351.221(c)(3).

Dated: April 1, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

[C-535-904]

Circular Welded Carbon-Quality Steel Pipe From Pakistan: Preliminary Affirmative Countervailing Duty Determination and Alignment of Final Countervailing Duty Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce.

SUMMARY: The U.S. Department of Commerce (the Department) preliminarily determines that countervailable subsidies are being provided to exporters/producers of circular welded carbon-quality steel pipe (circular welded pipe) from Pakistan. The period of investigation (POI) is July 1, 2014, through June 30, 2015.¹ Interested parties are invited to

³ See *Diamond Sawblades and Parts Thereof From the People's Republic of China: Final Results of Antidumping Duty Administrative Review*; 2012-2013, 80 FR 32344, 32345 (June 8, 2015).

¹ Pursuant to 19 CFR 351.204(b)(2), the Department's *Initiation Notice* stated that the POI was January 1, 2014, through December 31, 2014. See *Circular Welded Carbon-Quality Steel Pipe from Pakistan: Initiation of Countervailing Duty Investigation*, 80 FR 73704 (November 25, 2015) (*Initiation Notice*). The Department, however, identified public information supporting the conclusion that both the Government of Pakistan (the GOP) and the sole company selected for individual examination (*i.e.*, the mandatory respondent), International Industries Limited (IIL), operate according to an annual fiscal year beginning on July 1 and ending on June 30. See Department Memorandum, "Countervailing Duty Investigation of Circular Welded Carbon-Quality Steel Pipe from Pakistan: Period of Investigation," December 16, 2015 (POI Memorandum); see also Letter from the Department, "Countervailing Duty Investigation of Circular Welded Carbon-Quality Steel Pipe from Pakistan: Countervailing Duty Questionnaire," December 16, 2015 (CVD Questionnaire), at I-4. Therefore, consistent with 19 CFR 351.204(b)(2), we determined that July 1, 2014, through June 30, 2015,

comment on this preliminary determination.

DATES: Effective April 8, 2016.

FOR FURTHER INFORMATION CONTACT: Kaitlin Wojnar, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-3857.

SUPPLEMENTARY INFORMATION:

Alignment of Final Countervailing Duty Determination With Final Antidumping Duty Determination

On the same day that the Department initiated this countervailing duty (CVD) investigation, the Department also initiated an antidumping duty (AD) investigation of circular welded pipe from Pakistan.² The AD and CVD investigations cover the same class or kind of merchandise from the same country. On March 29, 2016, in accordance with section 705(a)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.210(b)(4), Bull Moose Tube Company, EXLTUBE, Wheatland Tube Company, and Western Tube and Conduit (collectively, Petitioners) requested alignment of the final CVD determination with the final AD determination regarding circular welded pipe from Pakistan.³ Therefore, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), we are aligning the final CVD determination in this investigation with the final determination in the companion AD investigation of circular welded pipe from Pakistan. Consequently, the final CVD determination will be issued on the same date as the final AD determination, which is currently due no later than August 15, 2016.

Scope of the Investigation

The product covered by this investigation is circular welded pipe from Pakistan. Interested parties filed comments regarding the scope of the investigation, which resulted in one clarification to the scope language and are addressed, in detail, in the

is the appropriate POI for this proceeding. See POI Memorandum; see also CVD Questionnaire at I-4. Although the Department provided interested parties with the opportunity to comment on the modified POI, we received no comments.

² See *Initiation Notice*, 80 FR at 73704; see also *See Circular Welded Carbon-Quality Steel Pipe from the Sultanate of Oman, Pakistan, the Philippines, the United Arab Emirates, and the Socialist Republic of Vietnam: Initiation of Less-Than-Fair-Value Investigations*, 80 FR 73708 (November 25, 2015).

³ See Letter from Petitioners, "Circular Welded Carbon-Quality Steel Pipe from Pakistan: Request for Alignment," March 29, 2016.

Department's Preliminary Scope Decision Memorandum.⁴ For a full description of the scope of the investigation, see Appendix I to this notice.

Methodology

The Department is conducting this countervailing duty investigation in accordance with section 701 of the Act. We preliminarily determine that, for each of the programs found countervailable, there is a subsidy (*i.e.*, a financial contribution by an "authority," giving rise to a benefit to the recipient) and that the subsidy is specific. For a full description of the methodology underlying the Department's preliminary conclusions, see the Preliminary Decision Memorandum.⁵ The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov> and to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/index.html>. The signed Preliminary Decision Memorandum and the electronic versions of the Preliminary Decision Memorandum are identical in content.

For this preliminary determination, pursuant to section 776(a) of the Act, the Department relied on facts otherwise available because necessary information is not available on the record.⁶ Furthermore, the GOP and IIL failed to provide information requested by the Department. By refusing to participate as respondents, IIL and the GOP significantly impeded the Department's investigation.⁷ Because the GOP and IIL are uncooperative (*i.e.*, they did not act

⁴ See Department Memorandum, "Antidumping Duty Investigations of Circular Welded Carbon-Quality Steel Pipe from the Sultanate of Oman, Pakistan, the United Arab Emirates, and the Socialist Republic of Vietnam and Countervailing Duty Investigation of Circular Welded Carbon-Quality Steel Pipe from Pakistan; Scope Comments Decision Memorandum for the Preliminary Determination," dated concurrently with and hereby adopted by this notice (Preliminary Scope Decision Memorandum).

⁵ See Department Memorandum, "Circular Welded Carbon-Quality Steel Pipe from Pakistan: Preliminary Affirmative Countervailing Duty Determination Decision Memorandum," dated concurrently with and hereby adopted by this notice (Preliminary Decision Memorandum).

⁶ See section 776(a)(1) of the Act.

⁷ See section 776(a)(2)(B)-(C) of the Act.

to the best of their ability to respond to the Department's requests for necessary information), the Department has drawn an adverse inference in selecting information from facts otherwise available, in accordance with section 776(b) of the Act. Specifically, the Department applied an adverse inference to find that the programs on which the Department initiated the investigation are countervailable. The Department has also applied an adverse inference in its calculation of an estimated *ad valorem* countervailable subsidy rate for IIL. Additional information is provided in the "Use of Facts Otherwise Available and Adverse Inferences" section of the Preliminary Decision Memorandum.

A complete list of topics discussed in the Preliminary Decision Memorandum can be found at Appendix II to this notice.

Preliminary Determination and Suspension of Liquidation

In accordance with sections 776(a) and (b) of the Act, the Department applied facts otherwise available, with adverse inferences, to determine a countervailable subsidy rate for the non-cooperative mandatory respondent, IIL. With respect to the "all-others" rate, section 705(c)(5)(A)(ii) of the Act provides that, if the countervailable subsidy rates established for all individually-investigated exporters/producers are determined entirely under section 776 of the Act (*i.e.*, based entirely on facts otherwise available), the Department may use any reasonable method to establish an all-others rate for exporters/producers not individually-examined. In this case, as noted above, the countervailable subsidy rate assigned to IIL is based entirely on facts otherwise available under section 776 of the Act. There is no other information on the record upon which to determine an all-others rate. As a result, under section 705(c)(5)(A)(ii) of the Act, we are assigning IIL's rate as the all-others rate. This method is consistent with the Department's established practice.⁸

⁸ See, *e.g.*, *Grain-Oriented Electrical Steel from the People's Republic of China: Final Affirmative Countervailing Duty Determination*, 79 FR 59221 (October 1, 2014), and accompanying Issues and Decision Memorandum at Comment 1 (assigning the sole mandatory respondent's rate, which was based on AFA, as the all-others rate); see also *Circular Welded Carbon-Quality Steel Pipe from India: Final Affirmative Countervailing Duty Determination*, 77 FR 64468, 64470 (October 22, 2012) (averaging two total AFA respondents' rates together to determine the all-others rate); *Certain Potassium Phosphate Sales from the People's Republic of China: Final Affirmative Countervailing Duty Determination and Termination of Critical Circumstances Inquiry*, 75 FR 30375 (June 1, 2010)

We preliminarily determine estimated countervailable subsidy rates as follows:

| Exporter/producer | Subsidy rate (percent) |
|-------------------------------------|------------------------|
| International Industries Limited .. | 64.81 |
| All-Others | 64.81 |

In accordance with sections 703(d)(1)(B) and (d)(2) of the Act, we are directing U.S. Customs and Border Protection to suspend liquidation of all entries of circular welded pipe from Pakistan, as described in the “Scope of the Investigation,” that are entered, or withdrawn from warehouse, for consumption on or after the date of the publication of this notice in the **Federal Register**, and to require a cash deposit for such entries of merchandise in the amounts indicated above.

Disclosure and Public Comment

Because the Department has reached its conclusions on the basis of adverse facts available, the calculations performed in connection with this preliminary determination are not proprietary in nature and are described in the Preliminary Decision Memorandum. Interested parties may submit case and rebuttal briefs, as well as request a hearing.⁹ For a schedule of the deadlines for filing case briefs, rebuttal briefs, and hearing requests for non-scope issues, see the Preliminary Decision Memorandum. For a schedule of the deadlines for filing case briefs, rebuttal briefs, and hearing request regarding scope issues, see the Preliminary Scope Decision Memorandum.

International Trade Commission Notification

In accordance with section 703(f) of the Act, we will notify the U.S. International Trade Commission (ITC) of our determination. In addition, we are making all non-privileged and non-proprietary information relating to this investigation available to the ITC. We will allow the ITC access to all privileged and business proprietary information in our files, provided that the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order, without the written consent of the Assistant Secretary for Enforcement and Compliance.

In accordance with section 705(b)(2) of the Act, if our final determination is

affirmative, the ITC will make its final determination no more than 45 days after the Department makes its final determination.

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: April 1, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Appendix I—Scope of the Investigation

This investigation covers welded carbon-quality steel pipes and tube, of circular cross-section, with an outside diameter (O.D.) not more than nominal 16 inches (406.4 mm), regardless of wall thickness, surface finish (e.g., black, galvanized, or painted), end finish (plain end, beveled end, grooved, threaded, or threaded and coupled), or industry specification (e.g., American Society for Testing and Materials International (ASTM), proprietary, or other), generally known as standard pipe, fence pipe and tube, sprinkler pipe, and structural pipe (although subject product may also be referred to as mechanical tubing). Specifically, the term “carbon quality” includes products in which:

- (a) Iron predominates, by weight, over each of the other contained elements;
- (b) the carbon content is 2 percent or less, by weight; and
- (c) none of the elements listed below exceeds the quantity, by weight, as indicated:
 - (i) 1.80 percent of manganese;
 - (ii) 2.25 percent of silicon;
 - (iii) 1.00 percent of copper;
 - (iv) 0.50 percent of aluminum;
 - (v) 1.25 percent of chromium;
 - (vi) 0.30 percent of cobalt;
 - (vii) 0.40 percent of lead;
 - (viii) 1.25 percent of nickel;
 - (ix) 0.30 percent of tungsten;
 - (x) 0.15 percent of molybdenum;
 - (xi) 0.10 percent of niobium;
 - (xii) 0.41 percent of titanium;
 - (xiii) 0.15 percent of vanadium; or
 - (xiv) 0.15 percent of zirconium.

Covered products are generally made to standard O.D. and wall thickness combinations. Pipe multi-stenciled to a standard and/or structural specification and to other specifications, such as American Petroleum Institute (API) API-5L specification, may also be covered by the scope of these investigations. In particular, such multi-stenciled merchandise is covered when it meets the physical description set forth above, and also has one or more of the following characteristics: is 32 feet in length or less; is less than 2.0 inches (50 mm) in outside diameter; has a galvanized and/or painted (e.g., polyester coated) surface finish; or has a threaded and/or coupled end finish.

Standard pipe is ordinarily made to ASTM specifications A53, A135, and A795, but can also be made to other specifications. Structural pipe is made primarily to ASTM specifications A252 and A500. Standard and structural pipe may also be produced to proprietary specifications rather than to industry specifications.

Sprinkler pipe is designed for sprinkler fire suppression systems and may be made to industry specifications such as ASTM A53 or to proprietary specifications.

Fence tubing is included in the scope regardless of certification to a specification listed in the exclusions below, and can also be made to the ASTM A513 specification. Products that meet the physical description set forth above but are made to the following nominal outside diameter and wall thickness combinations, which are recognized by the industry as typical for fence tubing, are included despite being certified to ASTM mechanical tubing specifications:

| O.D. in inches (nominal) | Wall thickness in inches (nominal) | Gage |
|--------------------------|------------------------------------|------|
| 1.315 | 0.035 | 20 |
| 1.315 | 0.047 | 18 |
| 1.315 | 0.055 | 17 |
| 1.315 | 0.065 | 16 |
| 1.315 | 0.072 | 15 |
| 1.315 | 0.083 | 14 |

| 2.375 | 0.120 | 11 |
| 2.875 | 0.109 | 12 |
| 2.875 | 0.165 | 8 |
| 3.500 | 0.109 | 12 |
| 3.500 | 0.165 | 8 |
| 4.000 | 0.148 | 9 |
| 4.000 | 0.165 | 8 |
| 4.500 | 0.203 | 7 |

The scope of this investigation does not include:

(a) Pipe suitable for use in boilers, superheaters, heat exchangers, refining furnaces and feedwater heaters, whether or not cold drawn, which are defined by standards such as ASTM A178 or ASTM A192;

(b) finished electrical conduit, i.e., Electrical Rigid Steel Conduit (also known as Electrical Rigid Metal Conduit and Electrical Rigid Metal Steel Conduit), Finished Electrical Metallic Tubing, and Electrical Intermediate Metal Conduit, which are defined by specifications such as American National Standard (ANSI) C80.1–2005, ANSI C80.3–2005, or ANSI C80.6–2005, and Underwriters Laboratories Inc. (UL) UL–6, UL–797, or UL–1242;

(c) finished scaffolding, i.e., component parts of final, finished scaffolding that enter the United States unassembled as a “kit.” A

(assigning the rate for three total AFA companies as the all-others rate).

⁹ See 19 CFR 351.309(c)–(d), 19 CFR 351.310(c); see also 19 CFR 351.303 (for general filing requirements).

kit is understood to mean a packaged combination of component parts that contains, at the time of importation, all of the necessary component parts to fully assemble final, finished scaffolding;

(d) tube and pipe hollows for redrawing;
(e) oil country tubular goods produced to API specifications;

(f) line pipe produced to only API specifications, such as API 5L, and not multi-stenciled; and

(g) mechanical tubing, whether or not cold-drawn, other than what is included in the above paragraphs.

The products subject to this investigation are currently classifiable in Harmonized Tariff Schedule of the United States (HTSUS) statistical reporting numbers 7306.19.1010, 7306.19.1050, 7306.19.5110, 7306.19.5150, 7306.30.1000, 7306.30.5015, 7306.30.5020, 7306.30.5025, 7306.30.5032, 7306.30.5040, 7306.30.5055, 7306.30.5085, 7306.30.5090, 7306.50.1000, 7306.50.5030, 7306.50.5050, and 7306.50.5070. The HTSUS subheadings above are provided for convenience and U.S. Customs purposes only. The written description of the scope of the investigation is dispositive.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Mid-Atlantic Fishery Management Council (MAFMC); Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Mid-Atlantic Fishery Management Council's (Council) Surfclam and Ocean Quahog Advisory Panel will hold a public meeting.

DATES: The meeting will be held on Monday, May 2, 2016, from 1:30 p.m. until 4 p.m.

ADDRESSES: The meeting will be held via Internet Webinar. Detailed connection details are available at

<http://www.mafmc.org>. To join the Webinar, follow this link and enter the online meeting room: <http://mafmc.adobeconnect.com/april2016scoq/>.

Council address: Mid-Atlantic Fishery Management Council, 800 North State Street, Suite 201, Dover, DE 19901; telephone: (302) 674–2331.

FOR FURTHER INFORMATION CONTACT:

Christopher M. Moore Ph.D., Executive Director, Mid-Atlantic Fishery Management Council, 800 N. State Street, Suite 201, Dover, DE 19901; telephone: (302) 526–5255.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to develop a fishery performance report by the Council's Surfclam and Ocean Quahog Advisory Panel. The intent of this report is to facilitate structured input from the Surfclam and Ocean Quahog Advisory Panel members to the Council and its Scientific and Statistical Committee (SSC) on setting catch and landings limits for 2017–18, changes that may be occurring in the fisheries, and other fishery-related issues.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to M. Jan Saunders at the Mid-Atlantic Council Office, (302) 526–5251, at least 5 days prior to the meeting date.

Dated: April 5, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[Docket No. 151014950–5950–01]

RIN 0648–XE260

Notice of Availability of a Draft NOAA/NESDIS Commercial Space Activities Assessment Process

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of availability of a Draft NOAA/NESDIS Commercial Space Activities Assessment Process; request for comments.

SUMMARY: On January 8, 2016, NOAA released the NOAA Commercial Space Policy. Consistent with that policy, the Draft National Environmental Satellite, Data, and Information Service (NESDIS)

Commercial Space Activities Assessment Process identifies the NESDIS process for engagement with the commercial sector by which NESDIS will assess and pursue commercial opportunities to support NOAA's space-based observational information requirements. In order to ensure consideration of a broad range of ideas for optimal methods of engaging with the commercial sector, NESDIS seeks comments on the Draft NESDIS Commercial Space Activities Assessment Process. Through <http://www.regulations.gov/#!docketDetail;D=NOAA-NESDIS-2015-0132>, the public can view the Draft NESDIS Commercial Space Activities Assessment Process, submit ideas, review submissions from other parties, and make comments.

All comments are welcome. In particular, NOAA would like comments on the following areas:

What contractual or other mechanisms could NOAA use to work with commercial sector data providers beyond traditional acquisition approaches?

What steps should NOAA take to consider the long-term viability of a commercial data provider prior to an operational data purchase?

What are the key aspects of demonstration projects that allow the commercial sector to gain necessary insights?

What are the key aspects of demonstration projects that would allow NOAA to perform the necessary data validation for the continued success of NOAA's public safety mission?

DATES: Comments must be received by 5 p.m. on May 9, 2016.

ADDRESSES: You may submit comments on this document, identified by NOAA–NESDIS–2015–0132, by either of the following methods:

Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <http://www.regulations.gov/#!docketDetail;D=NOAA-NESDIS-2015-0132>, click the “Comment Now!” icon, complete the required fields, and enter or attach your comments.

Mail: Submit written comments to: NOAA NESDIS, c/o Ms. Kate Becker, U.S. Department of Commerce, National Oceanic and Atmospheric Administration, National Environmental Satellite, Data, and Information Service, Room 8229, 1335 East West Highway, Silver Spring, MD 20910.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NOAA. All comments

received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NOAA will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous). Additional information as well as instructions on how to submit comments can be found at the following Web site: <http://www.regulations.gov/#!docketDetail;D=NOAA-NESDIS-2015-0132>. The Draft NESDIS Commercial Space Activities Assessment Process can also be viewed here.

FOR FURTHER INFORMATION CONTACT: Ms. Kate Becker, NESDIS Office of the Chief of Staff, U.S. Department of Commerce, National Oceanic and Atmospheric Administration, National Environmental Satellite, Data, and Information Service, Room 8229, 1335 East West Highway, Silver Spring, MD 20910. (Phone: 301-713-7049, kate.becker@noaa.gov).

SUPPLEMENTARY INFORMATION: NOAA is a science-based services agency charged with understanding and predicting changes in Earth systems in order to provide critical environmental intelligence to the American public, decision makers, and our partners. NOAA's environmental intelligence depends on observations obtained via a variety of systems, including satellites, ships, ground, and in situ networks.

The NOAA Commercial Space Policy and the NESDIS Commercial Space Activities Assessment Process are two steps of NOAA's multi-step approach to engaging the commercial sector to ensure best use of commercial sector capabilities. NOAA has developed these documents as timeless guidance to provide a foundation for a long-term endeavor. Both documents formally establish core principles that will guide NOAA's engagement with the commercial sector. In January, NOAA released the Commercial Space Policy to establish the broad principles for the use of commercial space-based approaches to meet NOAA's observational requirements. Now, to supplement the principles established in the policy, NESDIS has released the draft NESDIS Commercial Space Activities Assessment Process.

The NESDIS Process lays out the phases of the process that NESDIS will follow leading to any potential commercial data acquisition. First, NESDIS will release one or more Requests for Information (RFIs) to gather

a sense of commercial capabilities and convey our interest in a new dataset. Based on assessment of the RFI responses, NESDIS will then release one or more Requests for Proposals (RFPs) to acquire and evaluate commercial data, which will include the data specifications we require. Based on RFP responses, NOAA may purchase data from one or more vendors for analysis and evaluation through a demonstration project.

Because specifications are unique to each individual dataset, RFPs are an appropriate vehicle for sharing data specifications rather than through the policy or the process. The RFPs will focus on individual systems and allow for an in-depth, detailed description of requirements.

Following the demonstration project and the pending results, NESDIS may issue one or more RFPs to purchase on-orbit observations from commercial sources for operational use by NOAA.

These steps are formally outlined in the draft NESDIS Commercial Space Activities Assessment Process, which can be found at: <http://www.regulations.gov/#!docketDetail;D=NOAA-NESDIS-2015-0132>.

Both the NOAA Commercial Space Policy and the NESDIS Commercial Space Activities Assessment Process firmly establish the principles that will guide NOAA's engagement with the commercial sector and the practices for how NOAA will assess, pursue, and determine the viability of using commercial data. We are actively implementing the activities identified in the two documents toward this end. In the near future, we plan to share more specific information on individual datasets and steps involved in our process. NOAA will use multiple platforms to share important information, including RFIs, RFPs, the Office of Space Commerce Web site, and ongoing engagement events to promote dialogue and transparency.

Dated: April 1, 2016.

Stephen M. Volz,

Assistant Administrator for Satellite and Information Services.

BILLING CODE 3510-HR-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE549

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Pacific Fishery Management Council (Pacific Council) and the NOAA's Southwest Fisheries Science Center (SWFSC) will convene a workshop to develop methods for conducting stock assessments of short-lived coastal pelagic species (CPS) on the U.S. West Coast. The meeting is open to the public.

DATES: The meeting will be held Monday, May 2, 2016 through Thursday, May 5, 2016. The meeting will begin at 10 a.m. the first day, and at 8 a.m. each subsequent day, Pacific Standard Time. The meeting will conclude at 5 p.m. each day, or when business for the day has been completed.

ADDRESSES: The meeting will be held at the Southwest Fisheries Science Center Pacific Room, 8901 La Jolla Shores Drive, La Jolla, CA 92037.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220; telephone: (503) 820-2280.

FOR FURTHER INFORMATION CONTACT: Kerry Griffin, Staff Officer; telephone: (503) 820-2409.

SUPPLEMENTARY INFORMATION: The primary purpose of the workshop is to develop methods for conducting stock assessments of short-lived CPS on the U.S. West Coast, with an emphasis on the central subpopulation of northern anchovy. The workshop will include a discussion of how stock assessments and/or single point biomass estimates can be used in management. The intent is to provide recommendations to the SWFSC for use in conducting CPS stock assessments, especially for data-limited stocks.

Special Accommodations

Note: All foreign nationals must complete the Foreign National Registration form at https://docs.google.com/a/noaa.gov/forms/d/13wQaOZ_YcMV21b7aLYnh-WWkmpNYrYJhmDjDIbnNOA/viewform?c=0&w=1 no later than two weeks prior to the meeting. Forms are

also available by contacting Mr. Dale Sweetnam (dale.sweetnam@noaa.gov). Foreign nationals will not be allowed on the premises unless they have been cleared prior to arrival.

Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Dale Sweetnam (858) 546-7170 at least 5 days prior to the meeting date.

Dated: April 5, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: This action deletes products from the Procurement List that were previously furnished by nonprofit agency employing persons who are blind or have other severe disabilities.

DATES: Effective: May 8, 2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Deletions

On 3/4/2016 (81 FR 11520), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the products listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the products to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501-8506) in connection with the products deleted from the Procurement List.

End of Certification

Accordingly, the following products are deleted from the Procurement List:

Products

NSN(s)—Product Name(s)

MR 941—Cloth, Dish, Knitted Cotton, 4 pack

Mandatory Source(s) of Supply: Lions Services, Inc., Charlotte, NC

Contracting Activity: Defense Commissary Agency

NSN(s)—Product Name(s)

MR 354—Multipurpose Food Dicer

Mandatory Source(s) of Supply: Industries for the Blind, Inc., West Allis, WI

Contracting Activity: Defense Commissary Agency

NSN(s)—Product Name(s)

7530-00-NIB-0496—Index Tabs, Mylar Reinforced

7530-00-NIB-0497—Index Tabs, Mylar Reinforced

7530-00-NIB-0498—Index Tabs, Mylar Reinforced

7530-00-NIB-0499—Index Tabs, Mylar Reinforced

7530-00-NIB-0500—Index Tabs, Mylar Reinforced

7530-00-NIB-0501—Index Tabs, Mylar Reinforced

7530-00-NIB-0502—Index Tabs, Mylar Reinforced

7530-00-NIB-0503—Index Tabs, Mylar Reinforced

7530-00-NIB-0504—Index Tabs, Mylar Reinforced

Mandatory Source(s) of Supply: South Texas Lighthouse for the Blind, Corpus Christi, TX

Contracting Activity: General Services Administration, New York, NY

NSN(s)—Product Name(s)

9320-00-NSH-0001—Foam Cutouts

Mandatory Source(s) of Supply: Epilepsy Association of Georgia, Warner Robins, GA (Deleted)

Contracting Activity: Dept of the Air Force, FA8501 AFSC PZIO, Robins AFB, GA

BILLING CODE 6353-01-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List Proposed Addition and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Addition to and Deletions from the Procurement List.

SUMMARY: The Committee is proposing to add a service to the Procurement List that will be provided by nonprofit agency employing persons who are blind or have other severe disabilities and, deletes products and services previously furnished by such agencies.

DATES: Comments must be received on or before: 5/8/2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Addition

If the Committee approves the proposed addition, the entities of the Federal Government identified in this notice will be required to provide the service listed below from the nonprofit agency employing persons who are blind or have other severe disabilities.

The following service is proposed for addition to the Procurement List for provision by the nonprofit agency listed:

Service

Service Type: Administrative and Human Resource Contact Center Service

Mandatory for: U.S. Air Force, Total Force Service Center—San Antonio; Air Force Personnel Center, Joint Base San Antonio, Randolph AFB, TX

Mandatory Source(s) of Supply: Goodwill Industries of San Antonio Contract Services, San Antonio, TX

Contracting Activity: Air Force Installation Contracting Agency, 338 Specialized Contracting Squadron, Wright Patterson Air Force Base, OH

Deletions

The following products and services are proposed for deletion from the Procurement List:

Products**NSN(s)—Product Name(s)**

MR 10654—Bottle, Single Wall

MR 10656—Saver, Sandwich

MR 10666—Thermos, 25 oz., Licensed

MR 10667—Tumbler, Drinking, 16 oz., Licensed

MR 10669—Kit, Party, New Year's

BILLING CODE 6353-01-P**DEPARTMENT OF DEFENSE****Office of the Secretary****Threat Reduction Advisory Committee; Notice of Closed Federal Advisory Committee Meeting****AGENCY:** Department of Defense (DoD), Office of the Under Secretary of Defense (Acquisition, Technology, and Logistics).**ACTION:** Federal advisory committee meeting notice.**SUMMARY:** The Department of Defense announces the following closed Federal advisory committee meeting of the

Threat Reduction Advisory Committee (TRAC).

DATES: Thursday, May 5, 2016, from 8:30 a.m. to 5:00 p.m. and Friday, May 6, 2016, from 8:30 a.m. to 3:00 p.m.**ADDRESSES:** CENTRA Technology Inc., Ballston, VA on May 5, 2016, and CENTRA Technology, Inc. and the Pentagon, Arlington, Virginia on May 6, 2016.**FOR FURTHER INFORMATION CONTACT:** Mr. William Hostyn, DoD, Defense Threat Reduction Agency (DTRA) J2/5/8R-AC, 8725 John J. Kingman Road, MS 6201, Fort Belvoir, VA 22060-6201. Email: william.p.hostyn.civ@mail.mil. Phone: (703) 767-4453. Fax: (703) 767-4206.**SUPPLEMENTARY INFORMATION:****Purpose of Meeting:** This meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (FACA) (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.150. The TRAC will obtain, review and evaluate classified information related to the Committee's mission to advise on technology security, Combating Weapons of Mass Destruction (CWMD), counterterrorism and counterproliferation.**Agenda:** All discussions for the two day meeting will be classified at the secret level or higher. On Thursday, May 5, the Designated Federal Officer, William Hostyn, will make his remarks and then the Chair will open the meeting with comments that outline the topics to be covered in the two day meeting. Following the opening remarks, the TRAC will hear from the Principal Deputy, Performing the Duties of the Assistant Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs, Dr. Arthur T. Hopkins on updates regarding the Unified Command Plan changes, funding issues, as well as other developments related to CWMD.

Following that brief, there will be a classified intelligence briefing covering North Korea's recent provocations with missile tests and China's role in the region. The TRAC will then receive a classified brief on global CWMD intelligence issues from Mr. Hollatz with the National Counterproliferation Center. Next, the TRAC will hear from Mr. Baker of the Office of Net Assessment on observations regarding Russia and the Near Abroad. Following the discussion, the TRAC will discuss findings on the Future Challenges for the Defense Threat Reduction Agency (DTRA) and the implications for the Agency going forward. Specifically, how will the impending changes to the

Unified Command Plan affect the mission of DTRA. The group will then consider recent provocations by North Korea, and hear an in-progress report on the North Korea study. The first day will conclude with a TRAC session to deliberate and finalize recommendations in preparation for the meeting on day two with the TRAC's sponsor, Under Secretary of Defense for Acquisition, Technology and Logistics, Mr. Kendall.

The TRAC will continue to meet on May 6, 2016. The TRAC will receive a classified brief from retired General Carns on Russia and issues related to CWMD based upon his recent trips and meetings with high-level leaders in the region. The briefing will be followed by a closed session led by Hon. Koch and Dr. Reichart on Russian provocations and the relationship to nuclear strategic stability in the region. Hon. Benkert and Dr. Choi will follow suit with a session on China. Amb Lehman will discuss future efforts of the TRAC and the way forward in 2016-2017 based upon the sponsor's guidance and direction. The TRAC will then transition to the Pentagon, where they will provide Under Secretary Kendall with a brief from the previous days meeting. At the conclusion of the discussion, the Chair will adjourn the 37th Plenary.

Meeting Accessibility: Pursuant to section 10(d) of the FACA, 5 U.S.C. 552b(c), and 41 CFR 102-3.155, the Department of Defense has determined that the meeting shall be closed to the public. The Under Secretary of Defense for Acquisition, Technology, and Logistics, in consultation with the Department of Defense FACA Attorney, has determined in writing that the public interest requires all sessions of this meeting be closed to the public because the discussions will be concerned with classified information and matters covered by 5 U.S.C. 552b(c)(1). Such classified matters are inextricably intertwined with the unclassified material and cannot reasonably be segregated into separate discussions without disclosing secret-level or higher material.**Advisory Committee's Designated Federal Officer or Point of Contact:** Mr. William Hostyn, DoD, Defense Threat Reduction Agency/J2/5/8R-ACP, 8725 John J. Kingman Road, MS 6201, Fort Belvoir, VA 22060-6201.Email: william.p.hostyn.civ@mail.mil. Phone: (703) 767-4453. Fax: (703) 767-4206.**Written Statements:** Pursuant to section 10(a)(3) of FACA and 41 CFR 102-3.105(j) and 102-3.140, the public or interested organizations may submit written statements to the membership of

the Committee at any time or in response to the stated agenda of a planned meeting. Written statements should be submitted to the Committee's Designated Federal Officer. The Designated Federal Officer's contact information is listed in this notice, or it can be obtained from the General Services Administration's FACA Database: <http://www.facadatabase.gov/committee/committee.aspx?cid=1663&aid=41>. Written statements that do not pertain to a scheduled meeting of the TRAC may be submitted at any time. However, if individual comments pertain to a specific topic being discussed at a planned meeting, then these statements must be submitted no later than five business days prior to the meeting in question. The Designated Federal Officer will review all submitted written statements and provide copies to all TRAC members.

Dated: April 5, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

TRICARE Demonstration Project for the Philippines

AGENCY: Office of the Secretary of Defense (Health Affairs)/TRICARE Management Activity, Department of Defense.

ACTION: Notice of an extension of the TRICARE demonstration project for the Philippines.

SUMMARY: On Wednesday, September 28, 2011, the Department of Defense (DoD) published a notice of the Philippines Demonstration Project (PDP) (76 FR 60007-60008). This notice is to advise interested parties of an extension to a Military Health System demonstration project entitled "TRICARE Demonstration Project for the Philippines." The purpose of this demonstration is to validate an alternative approach to providing healthcare services for those beneficiaries covered under the TRICARE Standard option in the Philippines, controlling costs, eliminating any balance billing issues, and ensuring that the billing practices comply with regulatory requirements. During the initial two years of the demonstration project, significant reductions in providers under Pre-

Payment Review has been observed, resulting in less fraudulent claim investigations. In addition, beneficiaries have been over 93% compliant with utilizing approved network providers in the Philippines demonstration areas. The DHA's intent is to extend the demonstration project for an additional three years in order to determine if the cost savings to the Government in terms of the average cost per paid claim along with the savings on fraudulent claims can exceed the administrative costs related to the project while ensuring Standard beneficiaries are able to access high quality medical care within TRICARE access standards.

DATES: *Effective Date:* Effective December 31, 2015.

ADDRESSES: Defense Health Agency (DHA), TRICARE Overseas Program Office, 16401 East Centretech Parkway, Aurora, CO 80011.

FOR FURTHER INFORMATION CONTACT:

CAPT Bruno Himmeler, Office of the ASD (HA)—DHA, (303) 676-3728.

SUPPLEMENTARY INFORMATION: TRICARE has recognized the unique circumstances existing in the Philippines which made the provision of medical care to TRICARE beneficiaries through the TRICARE Overseas program operated in other overseas locations challenging. TRICARE has experienced dramatic increases in the amount billed for healthcare services rendered in the Philippines from \$15 million in 1999 to \$59 million in 2009 while the number of beneficiaries has remained constant. Administrative controls such as the validation of providers, implementation of a fee reimbursement schedule, duplicate claims edits and the impact of the cost-shares and deductibles have limited actual TRICARE expenditures to \$17 million in 2009 for only approximately 11,000 beneficiaries.

In addition to these administrative controls, fraud and abuse activities in the Philippines have been a growing concern that necessitated prompt investigation and actions to reduce the number of fraudulent or abusive incidences. Measures were taken to prevent or reduce the level of fraud and abuse against TRICARE while concurrent investigations and prosecutions were conducted. In April 2008, seventeen individuals were convicted of defrauding the TRICARE program of more than \$100 million.

As a result, prepayment review of claims is conducted to identify excessive charges and aberrant practices. Prepayment review is a tool typically used on a limited basis. Nevertheless, these efforts alone are not

expected to control and eliminate the rising costs in the Philippines.

Because of this concern, the purpose of this demonstration is to validate an alternative approach to providing healthcare services for those beneficiaries covered under the TRICARE Standard option in the Philippines, controlling costs, eliminating any balance billing issues, and ensuring that the billing practices comply with regulatory requirements.

Initial results have shown some partial success with the PDP, but additional data needs to be gathered and assessed to be able to determine the long term implications of the PDP. Therefore, DHA proposes, utilizing the new overseas contract as the vehicle, to extend the demonstration for an additional three years in the Philippines to validate that use of a well-certified and limited set of approved providers in the Philippines will result in a significant reduction in the level of claims billing issues, including beneficiaries being liable for balanced billing amounts and fraud by providers, and average cost per claim paid by the Government, while ensuring beneficiaries have sufficient access to high quality care. The demonstration would continue to be conducted under 10 U.S.C. 1092.

During the next three years, the Government will look to expand the demonstration areas to other locations/cities with a significant Standard population. Also, the contractor will be requested to look at including pharmacies as network providers to help control costs related to outpatient prescriptions.

Dated: April 4, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2016-08065 Filed 4-7-16; 8:45 am]

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board; Notice of Federal Advisory Committee Meeting

AGENCY: Department of Defense.

ACTION: Notice of federal advisory committee meeting.

SUMMARY: The Defense Science Board will meet in closed session on Thursday, May 19, 2016, from 8:00 a.m. to 5:00 p.m. at the Pentagon, Room 3E863, Washington, DC.

DATES: Thursday, May 19, 2016, from 8:00 a.m. to 5:00 p.m.

ADDRESSES: The Pentagon, Room 3E863, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Ms. Debra Rose, Executive Officer, Defense Science Board, 3140 Defense Pentagon, Room 3B888A, Washington, DC 20301–3140, via email at debra.a.rose20.civ@mail.mil, or via phone at (703) 571–0084.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition, Technology & Logistics on scientific and technical matters as they affect the perceived needs of the Department of Defense. At this meeting, the Board will discuss interim findings and recommendations resulting from ongoing Task Force activities. The Board will also discuss plans for future consideration of scientific and technical aspects of specific strategies, tactics, and policies as they may affect the U.S. national defense posture and homeland security.

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law 92–463, as amended (5 U.S.C. App. 2) and 41 CFR 102–3.155, the Department of Defense has determined that the Defense Science Board meeting for May 19, 2016, will be closed to the public. Specifically, the Under Secretary of Defense (Acquisition, Technology, and Logistics), in consultation with the DoD Office of General Counsel, has determined in writing that all sessions of meeting for May 19, 2016, will be closed to the public because it will consider matters covered by 5 U.S.C. 552b(c)(1) and (4).

In accordance with 41 CFR 102–3.140 and section 10(a)(3) of the Federal Advisory Committee Act, interested persons may submit a written statement for consideration by the Defense Science Board. Individuals submitting a written statement must submit their statement to the Designated Federal Official at the address detailed in **FOR FURTHER INFORMATION CONTACT**; at any point, however, if a written statement is not received at least 10 calendar days prior to the meeting, which is the subject of this notice, then it may not be provided to or considered by the Defense Science Board. The Designated Federal Official will review all timely submissions with the Defense Science Board Chairperson,

and ensure they are provided to members of the Defense Science Board before the meeting that is the subject of this notice.

Dated: April 5, 2016.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

SUMMARY: The Department of the Navy (DoN), after carefully weighing the strategic, operational, and environmental consequences of the proposed action, announces its decision to continue and enhance training and testing activities as identified in Alternative 2 in the Final Environmental Impact Statement for Military Readiness Activities at the at Naval Weapons Systems Training Facility Boardman, Oregon. This alternative provides for the construction and operation of new range facilities and other enhancements, and increases in training and testing activities. Alternative 2 also includes a proposal to establish new special use airspace in the form of a Military Operations Area (MOA), including the Boardman Low MOA and an extension to the existing Boardman MOA, both to the northeast of NWSTF Boardman. Implementation of Alternative 2 will enable the DoN to achieve the levels of operational readiness required under Section 5062 Title 10 U.S.C. without resulting in significant environmental impacts.

SUPPLEMENTARY INFORMATION: The complete text of the Record of Decision is available at <http://www.NWSTFBoardmanEIS.com> and at the following public library locations: Multnomah County Central, Salem Central, West Salem, Oregon Trail Heppner, Oregon Trail Boardman and the Stafford Hansell Government Center. Single copies of the Record of Decision are available upon request by contacting: NWSTF Boardman EIS Project Manager, Naval Facilities Engineering Command Northwest, 1101 Taughtog Circle, Suite

203, Silverdale, Washington 98315–1101.

Dated: April 5, 2016.

C. Pan

Lieutenant, Judge Advocate General's Corps, U.S. Navy, Alternate Federal Register Liaison Officer.

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP16–751–000.

Applicants: WBI Energy Transmission, Inc.

Description: § 4(d) Rate Filing: 2016 Negotiated Rate Service Agreement—ONEOK to be effective 4/1/2016.

Filed Date: 3/29/16.

Accession Number: 20160329–5050.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: RP16–752–000.

Applicants: Natural Gas Pipeline Company of America.

Description: § 4(d) Rate Filing: Nicor Negotiated Rate to be effective 4/1/2016.

Filed Date: 3/29/16.

Accession Number: 20160329–5115.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: RP16–753–000.

Applicants: Natural Gas Pipeline Company of America.

Description: § 4(d) Rate Filing: Occidental Energy Marketing to be effective 4/1/2016.

Filed Date: 3/29/16.

Accession Number: 20160329–5123.

Comments Due: 5 p.m. ET 4/11/16.

Docket Numbers: RP16–754–000.

Applicants: Texas Eastern Transmission, LP.

Description: § 4(d) Rate Filing: Infinite Energy 911250 2016–2017 Negotiated Rate to be effective 4/1/2016.

Filed Date: 3/29/16.

Accession Number: 20160329–5141.

Comments Due: 5 p.m. ET 4/11/16.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP15–527–000]

Transcontinental Gas Pipe Line Company, LLC; Notice of Availability of the Environmental Assessment for the Proposed New York Bay Expansion Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared this environmental assessment for the New York Bay Expansion Project (Project) proposed by Transcontinental Gas Pipe Line Company, LLC (Transco) in the above-referenced docket. Transco requests authorization to construct, replace, and operate natural gas pipeline facilities located in Chester County, Pennsylvania, Richmond County, New York, and Middlesex and Essex Counties, New Jersey. This Project would enable Transco to modify existing facilities and replace existing pipeline to transport an additional 115 million cubic feet of natural gas per day.

The Project would involve the following activities at existing aboveground facilities in the specified towns and municipalities:

- Uprate Compressor Station 200 from 30,860 horsepower (hp) to 33,000 hp (East Whiteland Township, Chester County, Pennsylvania) and uprate a unit of Compressor Station 303 from 25,000 hp to 27,500 hp (Roseland Borough, Essex County, New Jersey);
- Add 11,000 hp of electric-driven compression to Compressor Station 207 (Old Bridge Township, Middlesex County, New Jersey);
- Install various appurtenances and modifications at three meter and regulation (M&R) stations in East Brandywine Township (Chester County,

Pennsylvania), Sayreville Borough (Middlesex County, New Jersey) and Staten Island Borough (Richmond County, New York), including setting up a temporary M&R station during construction in Staten Island Borough.

In addition, Transco proposes to replace three segments of its 42-inch-diameter Lower New York Bay Lateral pipeline, totaling 0.25 mile, and uprate the lateral pipeline's operating pressure from 960 to 1000 pounds per square inch in Middlesex County, New Jersey.

The environmental assessment assesses the potential environmental effects of the construction and operation of the Project in accordance with the National Environmental Policy Act. The FERC staff concludes that approval of the proposed Project, with appropriate mitigating measures, would not constitute a major federal action significantly affecting the quality of the human environment.

The environmental assessment has been placed in the public files of the FERC and is available for public viewing on the FERC's Web site at www.ferc.gov using the eLibrary link. A limited number of copies of the EA are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Conference Room, 888 First Street NE., Room 2A, Washington, DC 20426, (202) 502-8371.

Copies of the environmental assessment have been mailed to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes; potentially affected landowners and other interested individuals and groups; libraries in the Project area; and parties to this proceeding.

Any person wishing to comment on the environmental assessment may do so. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that your comments are properly recorded and considered prior to a Commission decision on the proposal, it is important that the FERC receives your comments in Washington, DC on or before May 4, 2016.

For your convenience, there are three methods you can use to submit your comments to the Commission. In all instances, please reference the Project docket number (CP15-527-000) with your submission. The Commission encourages electronic filing of comments and has dedicated eFiling expert staff available to assist you at (202) 502-8258 or efiling@ferc.gov.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's Web site at www.ferc.gov under the link to Documents and Filings. An eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments electronically by using the eFiling feature, which is located on the Commission's Web site at www.ferc.gov under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "eRegister." You will be asked to select the type of filing you are making. A comment on a particular project is considered a "Comment on a Filing"; or

(3) You may file a paper copy of your comments at the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Although your comments will be considered by the Commission, simply filing comments will not serve to make the commentator a party to the proceeding. Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR 385.214).¹ Only intervenors have the right to seek rehearing of the Commission's decision. Affected landowners and parties with environmental concerns may be granted intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which would not be adequately represented by any other parties. You do not need intervenor status to have your comments considered.

Additional information about the Project is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC Web site (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on "General Search," and enter the docket number excluding the last three digits in the Docket Number field (*i.e.*, CP15-527). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission,

¹ See the previous discussion on the methods for filing comments.

such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to <http://www.ferc.gov/docs-filing/esubscription.asp>.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL16–53–000]

Michigan Electric Transmission Company, LLC v. Midcontinent Independent System Operator, Inc. as Agent for Consumers Energy Company; Notice of Complaint

Take notice that on April 1, 2016, pursuant to section 206 of the Federal

Power Act, 16 U.S.C. 824e and Rule 206 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.206 (2015), Michigan Electric Transmission Company, LLC (Complainant) filed a formal complaint against Midcontinent Independent System Operator, Inc. (MISO or Respondent) requesting a refund effective date of April 1, 2016, as a protective measure in case refunds of certain Michigan Joint Zone revenues are necessary for charges assessed by the MISO in the latter's capacity as agent for Consumers Energy Company, as more fully explained in the complaint.

Complainant certifies that copies of the complaint were served on the contacts for MISO as listed on the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to intervene, and protests must be served on the Complainants.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: 5:00 p.m. Eastern Time on April 21, 2016.

Dated: April 4, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC11–41–001.

Applicants: Varde Partners, L.P., Varde Management, L.P., Varde Management International, L.P., Granite Ridge Holding, LLC, Granite Ridge Energy, LLC.

Description: Motion of Varde Partners, L.P., et. al. to terminate authorization previously granted.

Filed Date: 3/22/16.

Accession Number: 20160322–5208.

Comments Due: 5 p.m. ET 4/12/16.

Docket Numbers: EC16–98–000.

Applicants: Chubu Electric Power Company U.S.A. Inc., Tokyo Electric Power Company, Incorporated.

Description: Application for Approval Under Section 203 of the Federal Power Act of Chubu Electric Power Company U.S.A. Inc. and Tokyo Electric Power Company, Incorporated.

Filed Date: 3/31/16.

Accession Number: 20160331–5403.

Comments Due: 5 p.m. ET 4/21/16.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER16–693–001.

Applicants: California Independent System Operator Corporation.

Description: Compliance filing: 2016–04–01 IPE 2015 Compliance Filing to be effective 3/8/2016.

Filed Date: 4/1/16.

Accession Number: 20160401–5317.

Comments Due: 5 p.m. ET 4/22/16.

Docket Numbers: ER16–1018–001.

Applicants: Guzman Renewable Energy Partners LLC.

Description: Tariff Amendment: Market-Based Rate Tariff #1 Amendment to be effective 3/31/2016.

Filed Date: 4/1/16.

Accession Number: 20160401–5012.

Comments Due: 5 p.m. ET 4/22/16.

Docket Numbers: ER16–1211–001.

Applicants: Midcontinent Independent System Operator, Inc.

Description: Tariff Amendment: 2016–04–01 SA 2906 Amendment to Indianapolis Power & Light GIA (J401) to be effective 3/18/2016.

Filed Date: 4/1/16.
Accession Number: 20160401–5202.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1316–000.
Applicants: Entergy Services, Inc.
Description: § 205(d) Rate Filing: Entergy Services, Inc., Amended Service Agreements to be effective 9/1/2016.
Filed Date: 3/31/16.
Accession Number: 20160331–5357.
Comments Due: 5 p.m. ET 4/21/16.
Docket Numbers: ER16–1317–000.
Applicants: Orange and Rockland Utilities, Inc.
Description: § 205(d) Rate Filing: Attachment J—Municipal Underground Surcharge Revision to be effective 4/1/2016.
Filed Date: 3/31/16.
Accession Number: 20160331–5359.
Comments Due: 5 p.m. ET 4/21/16.
Docket Numbers: ER16–1318–000.
Applicants: Westar Energy, Inc.
Description: § 205(d) Rate Filing: Revisions, Full Requirement Service Agreements, Attachment D to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5007.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1319–000.
Applicants: Entergy Services, Inc.
Description: Tariff Cancellation: ESI Notice of Cancellation of SA 435–B to be effective 8/31/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5009.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1321–000.
Applicants: New England Power Pool Participants Committee.
Description: § 205(d) Rate Filing: April 2016 Membership Filing to be effective 3/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5143.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1322–000.
Applicants: Midcontinent Independent System Operator, Inc., Entergy Services, Inc.
Description: § 205(d) Rate Filing: 2016–04–01 Entergy Merger Filing to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5191.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1323–000.
Applicants: Public Service Company of New Mexico.
Description: § 205(d) Rate Filing: Annual Real Power Loss Factor Filing for 2016 to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5192.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1324–000.

Applicants: Midcontinent Independent System Operator, Inc.
Description: § 205(d) Rate Filing: 2016–04–01 RTOR Settlement Interim Rate Filing to be effective 1/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5203.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1325–000.
Applicants: Mesquite Solar 2, LLC.
Description: Initial rate filing: Mesquite Solar 2, LLC Petition for Order Accepting Market Based Rate Tariff to be effective 5/20/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5204.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1326–000.
Applicants: Mesquite Solar 3, LLC.
Description: Initial rate filing: Mesquite Solar 3, LLC Petition for Order Accepting Market Based Rate Tariff to be effective 5/20/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5205.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1327–000.
Applicants: Copper Mountain Solar 4, LLC.
Description: Baseline eTariff Filing: Copper Mountain Solar 4, LLC Petition for Order Accepting Market Based Rates to be effective 5/20/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5206.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1328–000.
Applicants: Public Service Company of New Mexico.
Description: Application of Public Service Company of New Mexico for 2016 Transmission Formula Rate Post-Retirement Benefits Other than Pensions Expense under ER16–1328.
Filed Date: 4/1/16.
Accession Number: 20160401–5208.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1329–000.
Applicants: PacifiCorp.
Description: § 205(d) Rate Filing: PacifiCorp Energy Construction Agmt—Granite Mountain Solar to be effective 3/28/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5276.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1330–000.
Applicants: Idaho Power Company.
Description: Initial rate filing: Construction Agreement for Don-Blackfoot 138 kV Thermal Relay to be effective 3/18/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5291.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1331–000.
Applicants: Southwest Power Pool, Inc.

Description: § 205(d) Rate Filing: Tariff Revisions to Clarify the Process to Study Requests for Short-Term Service to be effective 5/31/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5303.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1332–000.
Applicants: Arizona Public Service Company.
Description: § 205(d) Rate Filing: Rate Schedule No. 217, Exhibit B.Bke-LIB to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5306.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1333–000.
Applicants: Midcontinent Independent System Operator, Inc., WPPI Energy.
Description: § 205(d) Rate Filing: 2016–04–01 WPPI ATRR Recovery Filing to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5308.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1334–000.
Applicants: Public Service Company of Colorado.
Description: § 205(d) Rate Filing: 2016–4–1_PSC–PRPA–LaPorte Const-414–0.0.0-Filing to be effective 4/2/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5322.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1335–000.
Applicants: PJM Interconnection, L.L.C.
Description: § 205(d) Rate Filing: Revisions to OA Schedule 6 section 1.5 re: Lower Voltage Facilities Threshold to be effective 6/1/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5324.
Comments Due: 5 p.m. ET 4/22/16.
Docket Numbers: ER16–1336–000.
Applicants: PJM Interconnection, L.L.C.
Description: § 205(d) Rate Filing: Revisions to OATT Att. DD.10A re: Ramp Rate—CP Resource Performance to be effective 5/31/2016.
Filed Date: 4/1/16.

Applicants: Merrill Lynch Commodities, Inc.

Description: § 205(d) Rate Filing: Normal 2016 to be effective 4/4/2016.
Filed Date: 4/1/16.
Accession Number: 20160401–5362.
Comments Due: 5 p.m. ET 4/22/16.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: <http://www.ferc.gov/docs-filing/efiling/filing-req.pdf>. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: April 1, 2016.

Nathaniel J. Davis, Sr.,
Deputy Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9943–98–OARM; DOCKET NO. FIFRA–HQ–2016–0001]

Flubendiamide; Notice of Intent To Cancel Pesticide Registrations

AGENCY: United States Environmental Protection Agency (EPA).

ACTION: Notice of objections filed and hearing requested; Notice of public hearing.

SUMMARY: Notice is hereby given, pursuant to Section 6 of the Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. 136d, and Section 164.8 of the associated Rules of Practice Governing Hearings set forth at 40 CFR part 164, that objections were filed and a hearing was requested in response to the Notice of Intent to Cancel Pesticide Registrations, published in the **Federal Register** on March 04, 2016, 81 FR 11558.

This proceeding has been assigned Docket No. FIFRA–HQ–2016–0001, *In the Matter of Bayer CropScience LP and Nichino America Inc.*, and the undersigned has been designated to preside. A hearing on the objections filed will be conducted in accordance with the Rules of Practice set forth at 40 CFR part 164.

DATES: The hearing in this matter will be held beginning promptly at 8:30 a.m. on Tuesday, May 10, 2016, and continue as necessary through Friday, May 13, 2016.

ADDRESSES: EPA Administrative Courtroom, EPA East Building, Room 1152, 1201 Constitution Avenue NW., Washington, DC 20460.

An electronic copy of the case file in this proceeding is publically available online at http://yosemite.epa.gov/oarm/alj/alj_web_docket.nsf. The official case file is available for public inspection between the hours of 8:30 a.m. and 4:30 p.m., Monday through Friday, in the office of the Hearing Clerk, located in Room M1200 of the Ronald Reagan Building, 1300 Pennsylvania Avenue NW., Washington, DC 20460.

Dated: April 4, 2016.

Susan L. Biro,

Chief Administrative Law Judge.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2016–0021; FRL–9944–58]

Certain New Chemicals; Receipt and Status Information for February 2016

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is required under the Toxic Substances Control Act (TSCA) to publish in the **Federal Register** a notice of receipt of a premanufacture notice (PMN); an application for a test marketing exemption (TME), both pending and/or expired; and a periodic status report on any new chemicals under EPA review and the receipt of

notices of commencement (NOC) to manufacture those chemicals. This document covers the period from February 1, 2016 to February 29, 2016.

DATES: Comments identified by the specific case number provided in this document, must be received on or before May 9, 2016.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2016–2016–0021, and the specific PMN number or TME number for the chemical related to your comment, by one of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

- **Mail:** Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.

- **Hand Delivery:** To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Jim Rahai, IMD 7407M, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: 202–564–8593; email address: rahai.jim@epa.gov.

For general information contact: The TSCA–Hotline, ABVI–Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. As such, the Agency has not attempted to describe the specific entities that this action may apply to. Although others may be affected, this action applies directly to the submitters of the actions addressed in this document.

B. What should I consider as I prepare my comments for EPA?

1. **Submitting CBI.** Do not submit this information to EPA through www.regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. **Tips for preparing your comments.** When preparing and submitting your comments, see the commenting tips at <http://www.epa.gov/dockets/comments.html>.

II. What action is the Agency taking?

This document provides receipt and status reports, which cover the period from February 1, 2016 to February 29, 2016, and consists of the PMNs and TMEs both pending and/or expired, and the NOCs to manufacture a new chemical that the Agency has received under TSCA section 5 during this time period.

III. What is the Agency's authority for taking this action?

Under TSCA, 15 U.S.C. 2601 *et seq.*, EPA classifies a chemical substance as either an “existing” chemical or a “new” chemical. Any chemical substance that is not on EPA’s TSCA

Inventory is classified as a “new chemical,” while those that are on the TSCA Inventory are classified as an “existing chemical.” For more information about the TSCA Inventory go to: <http://www.epa.gov/opptintr/newchems/pubs/inventory.htm>.

Anyone who plans to manufacture or import a new chemical substance for a non-exempt commercial purpose is required by TSCA section 5 to provide EPA with a PMN, before initiating the activity. Section 5(h)(1) of TSCA authorizes EPA to allow persons, upon application, to manufacture (includes import) or process a new chemical substance, or a chemical substance subject to a significant new use rule (SNUR) issued under TSCA section 5(a), for “test marketing” purposes, which is referred to as a test marketing exemption, or TME. For more information about the requirements applicable to a new chemical go to: <http://www.epa.gov/oppt/newchems>.

Under TSCA sections 5(d)(2) and 5(d)(3), EPA is required to publish in the **Federal Register** a notice of receipt of a PMN or an application for a TME and to publish in the **Federal Register** periodic reports on the status of new chemicals under review and the receipt of NOCs to manufacture those chemicals.

IV. Receipt and Status Reports

As used in each of the tables in this unit, (S) indicates that the information in the table is the specific information provided by the submitter, and (G) indicates that the information in the table is generic information because the specific information provided by the submitter was claimed as CBI.

For the 37 PMNs received by EPA during this period, Table 1 provides the following information (to the extent that such information is not claimed as CBI): The EPA case number assigned to the PMN; The date the PMN was received by EPA; the projected end date for EPA’s review of the PMN; the submitting manufacturer/importer; the potential uses identified by the manufacturer/importer in the PMN; and the chemical identity.

TABLE 1—PMNS RECEIVED FROM FEBRUARY 1, 2016 TO FEBRUARY 29, 2016

| Case No. | Received date | Projected notice end date | Manufacturer importer | Use | Chemical |
|-----------|---------------|---------------------------|-----------------------|------------------------------|--|
| P–16–0044 | 2/19/2016 | 5/19/2016 | CBI | (G) Industrial coating | (G) Benzenedicarboxylic acid, polymer with alkanedioic acid, alkanediol, alkoxyated alcohol and aromatic isocyanate. |

TABLE 1—PMNS RECEIVED FROM FEBRUARY 1, 2016 TO FEBRUARY 29, 2016—Continued

| Case No. | Received date | Projected notice end date | Manufacturer importer | Use | Chemical |
|-----------|---------------|---------------------------|-----------------------------|--|---|
| P-16-0054 | 2/19/2016 | 5/19/2016 | CBI | (S) Metal working fluid component | (S) Phosphoric acid, mixed 2-hexyldodecyl and 2-hexyldodecyl and 2-octyldodecyl and 2-octyldodecyl mono- and diesters. |
| P-16-0093 | 2/23/2016 | 5/23/2016 | CBI | (G) Ingredient for consumer products ... | (S) 2-cyclohexen-1-one, 2-methyl-5-propyl- |
| P-16-0137 | 2/2/2016 | 5/2/2016 | H.B. Fuller Company. | (G) Industrial adhesive | (S) Dicarboxylic acid polymers with alkane diols and e23. |
| P-16-0138 | 2/2/2016 | 5/2/2016 | H.B. Fuller Company. | (G) Industrial adhesive | (S) Dicarboxylic acid polymers with alkane diols and e23. |
| P-16-0165 | 2/19/2016 | 5/19/2016 | Dura Chemicals, Inc. | (S) Ferrous propionate is a component in a metal organic product that will be used in paint and ink driers, upr promoters, lube/grease additives, fuel additives, polymerization catalysts, specialty petrochemical catalysts, etc. the amount of the ferrous propionate will be well under 1% in any final product. | (S) Propanoic acid, iron (2+) salt (2:1). |
| P-16-0177 | 2/12/2016 | 5/12/2016 | CBI | (G) Glass coating | (G) Mixed metal oxides. |
| P-16-0186 | 2/18/2016 | 5/18/2016 | CBI | (G) Surfactant | (G) Sodium branched chain alkyl hydroxyl and branched chain alkenyl sulfonates. |
| P-16-0200 | 2/2/2016 | 5/2/2016 | Chitec Technology Co., Ltd. | (G) Component of Inks | (S) 1-propanone, 1-[1,1'-biphenyl]-4-yl-2-methyl-2-(4-morpholinyl)- |
| P-16-0201 | 2/12/2016 | 5/12/2016 | CBI | (G) Adhesive Additive | (G) Triethoxysilyl polyurethane alkylpolyether. |
| P-16-0202 | 2/5/2016 | 5/5/2016 | CBI | (G) Separation Material | (G) Modified styrenic polymer (strongly and weakly basic anion exchange resin type). |
| P-16-0203 | 2/8/2016 | 5/8/2016 | CBI | (S) Polyurethane catalyst | (G) Pentanoic acid, compd. with polyalkylpolyamine. |
| P-16-0206 | 2/10/2016 | 5/10/2016 | CBI | (G) Pigment wetting and dispersing additive. | (G) Formaldehyde ketone condensate polymer. |

BILLING CODE 6560-50-P

EXPORT-IMPORT BANK

[Public Notice 2016-3017]

Agency Information Collection Activities: Comment Request

AGENCY: Export-Import Bank of the United States.

ACTION: New Submission for OMB review and Final comments request.

Form Title: EIB 15-04 Exporter's Certificate for Co-Financed Loan, Guarantee & MT Insurance Programs.

SUMMARY: The Export-Import Bank of the United States (Ex-Im Bank), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal Agencies to comment on the proposed information collection, as required by the Paperwork Reduction Act of 1995.

Ex-Im Bank's borrowers, financial institution policy holders and guaranteed lenders provide this form to U.S. exporters, who certify to the eligibility of their exports for Ex-Im Bank support. For direct loans and loan guarantees, the completed form is required to be submitted at time of disbursement and held by either the guaranteed lender or Ex-Im Bank. For MT insurance, the completed forms are held by the financial institution, only to be submitted to Ex-Im Bank in the event of a claim filing.

Ex-Im Bank uses the referenced form to obtain exporter certifications regarding the export transaction, content sourcing, and their eligibility to participate in USG programs with respect to co-financed transactions. These details are necessary to determine the value and legitimacy of Ex-Im Bank financing support and claims submitted. It also provides the financial institutions a check on the export transaction's eligibility at the time it is fulfilling a financing request.

The information collection tool can be reviewed at: <http://www.exim.gov/sites/default/files/pub/pending/eib15-04.pdf>.

DATES: Comments must be received on or before May 9, 2016 to be assured of consideration.

ADDRESSES: Comments may be submitted electronically on WWW.REGULATIONS.GOV or by mail to Office of Information and Regulatory Affairs, 725 17th Street NW., Washington, DC 20038 Attn: OMB 3048-00XX EIB15-04.

SUPPLEMENTARY INFORMATION:

Title and Form Number: EIB 15-04 Exporter's Certificate for Co-Financed Loan, Guarantee & MT Insurance Programs.

OMB Number: 3048-00XX.

Type of Review: Regular.

Need and Use: The information collected will allow Ex-Im Bank to determine compliance and content for transaction requests submitted to Ex-Im Bank under its co-financed insurance, guarantee, and direct loan programs.

Affected Public: This form affects entities involved in the export of U.S. goods and services.

Annual Number of Respondents: 30.
Estimated Time per Respondent: 30 minutes.

Annual Burden Hours: 15 hours.

Frequency of Reporting of Use: As required.

Government Expenses:

Reviewing time per year: 0.5 hours.

Average Wages per Hour: \$42.50.

Average Cost per Year (time*wages): \$21.25.

Benefits and Overhead: 20%.

Total Government Cost: \$25.5.

Bonita Jones-McNeil,

*Program Analyst, Agency Clearance Officer,
Office of the Chief Information Officer.*

BILLING CODE 6690-01-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than April 25, 2016.

A. Federal Reserve Bank of Atlanta (Chapelle Davis, Assistant Vice President) 1000 Peachtree Street, NE., Atlanta, Georgia 30309. Comments can

also be sent electronically to

Applications.Comments@atl.frb.org:

1. *Andrew Charles Heaner*, Atlanta, Georgia; to acquire additional voting shares of Heritage First Bancshares, Inc., and thereby indirectly acquire additional voting shares of Heritage First Bank, both in Rome, Georgia.

B. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198-0001:

1. *The Margaret March Brownlee Trust, Margaret M. Brownlee, trustee, Orlando, Florida; the Paula March Romanovsky Trust, Paula March Romanovsky, trustee, San Francisco, California; the Crotty Brownlee Family Charitable Remainder Trust, Margaret M. Brownlee, trustee, Orlando, Florida; the Paula March Romanovsky Trust, Paula March Romanovsky, trustee, San Francisco, California; and the Crotty Brownlee Family Charitable Remainder Trust, Margaret M. Brownlee, trustee, Orlando, Florida*; all as members of the March family group; to retain voting shares of Bank Management, Inc., and thereby indirectly retain voting shares of FirstBank of Nebraska, both in Wahoo, Nebraska.

Board of Governors of the Federal Reserve System, April 5, 2016.

Michael J. Lewandowski,

Associate Secretary of the Board.

[FR Doc. 2016-08104 Filed 4-7-16; 8:45 am]

BILLING CODE 6210-01-P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Savings and Loan Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*) (HOLA), Regulation LL (12 CFR part 238), and Regulation MM (12 CFR part 239), and all other applicable statutes and regulations to become a savings and loan holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a savings association and nonbanking companies owned by the savings and loan holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in

the HOLA (12 U.S.C. 1467a(e)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 10(c)(4)(B) of the HOLA (12 U.S.C. 1467a(c)(4)(B)). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than May 5, 2016.

A. Federal Reserve Bank of Cleveland (Nadine Wallman, Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101-2566. Comments can also be sent electronically to

Comments.applications@clev.frb.org:

1. *Belpre Bancorp*, Belpre, Ohio; to acquire Belpre Savings Bank, Belpre, Ohio, and reorganize into a mutual holding company structure.

Board of Governors of the Federal Reserve System, April 5, 2016.

Michael J. Lewandowski,

Associate Secretary of the Board.

BILLING CODE 6210-01-P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090-0297]; [Docket No. 2016-0001; Sequence 3]

Information Collection; General Services Administration Acquisition Regulation; Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery (GSA)

AGENCY: General Services Administration (GSA).

ACTION: Notice of request for an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement regarding the Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

DATES: Submit comments on or before June 7, 2016.

ADDRESSES: Submit comments identified by Information Collection 3090-0297, Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery, by any of the following methods:

- *Regulations.gov*: <http://www.regulations.gov>. Submit comments via the Federal eRulemaking portal by searching for "Information Collection 3090-0297, Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery." Select the link "Submit a Comment" that corresponds with "Information Collection 3090-0297, Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery." Follow the instructions provided at the "Submit a Comment" screen. Please include your name, company name (if any), and "Information Collection 3090-0297" on your attached document.

- *Mail*: General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405. Attn: Ms. Flowers/IC 3090-0297, Generic Clearance.

Instructions: Please submit comments only and cite Information Collection 3090-0297, Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery, in all correspondence related to this collection. Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Ms. Anahita Reilly, Customer Advocate Executive, Office of Customer Experience, GSA, 202-714-9421, or email anahita.reilly@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study.

This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve

delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance.

Such data uses require more rigorous designs that address: The target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior fielding the study.

Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results. The Digital Government Strategy released by the White House in May, 2012 drives agencies to have a more customer-centric focus. Because of this, GSA anticipates an increase in requests to use this generic clearance, as the plan states that: A customer-centric principle charges us to do several things: Conduct research to understand the customer's business, needs and desires; "make content more broadly available and accessible and present it through multiple channels in a program-and device-agnostic way; make content more accurate and understandable by maintaining plain language and content freshness standards; and offer easy paths for feedback to ensure we continually improve service delivery.

The customer-centric principle holds true whether our customers are internal (e.g., the civilian and military federal workforce in both classified and unclassified environments) or external (e.g., individual citizens, businesses, research organizations, and state, local, and tribal governments)."

B. Annual Reporting Burden

Respondents: 160,082.

Responses per Respondent: 1.
Total Annual Responses: 160,082.
Hours per response: 3.8386 minutes.
Total Burden hours: 10,241.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405, telephone 202-501-4755. Please cite OMB Control No. 3090-0297, Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery, in all correspondence.

Dated: March 31, 2016.

David A. Shive,

Chief Information Officer.

BILLING CODE 6820-34-P

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090-0283; Docket 2015-0001; Sequence 16]

Submission for OMB Review; Contractor Information Worksheet; GSA Form 850

AGENCY: Identity, Credential, and Access Management (ICAM) Division, Office of Security, Office of Mission Assurance (OMA), General Services Administration (GSA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve a previously approved information collection requirement, with changes, expanding the coverage of the information collection of the Contractor Information Worksheet; GSA Form 850.

GSA requires OMB approval for this collection to make determinations on granting unescorted physical access to GSA-controlled facilities and/or logical access to GSA-controlled information

systems. The approval is critical for GSA to continue following contractor onboarding processes required for working on GSA contracts. An updated System of Record Notice (SORN) was published in the **Federal Register** at 79 FR 47139, on August 12, 2014. A notice was published in the **Federal Register** at 80 FR 75864 on December 4, 2015. No comments were received.

DATES: Submit comments on or before: May 9, 2016.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for GSA, Room 10236, NEOB, Washington, DC 20503. Additionally submit a copy to GSA by any of the following methods:

- *Regulations.gov:* <http://www.regulations.gov>. Submit comments via the Federal eRulemaking portal by searching the OMB control number. Select the link "Submit a Comment" that corresponds with "Information Collection 3090-0283, Contractor Information Worksheet; GSA Form 850". Follow the instructions provided at the "Submit a Comment" screen. Please include your name, company name (if any), and "Information Collection 3090-0283, Contractor Information Worksheet; GSA Form 850" on your attached document.

- *Mail:* General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405. ATTN: Ms. Flowers/IC 3090-0283, Contractor Information Worksheet; GSA Form 850.

Instructions: Please submit comments only and cite Information Collection 3090-0283, Contractor Information Worksheet; GSA Form 850, in all correspondence related to this collection. Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Mr. Phil Ahn, Deputy Director, OMA Identity Credential and Access Management Division, GSA, telephone 202-501-2447 or via email at phillip.ahn@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

The U.S. Government conducts criminal checks to establish that applicants or incumbents working for the Government under contract may have unescorted access to federally controlled facilities. GSA uses the Contractor Information Worksheet; GSA Form 850, and digitally captured fingerprints to conduct a FBI National Criminal Information Check (NCIC) for each contractor's physical access determination to GSA-controlled facilities and/or logical access to GSA-controlled information systems. Manual fingerprint card SF-87 is used for exception cases such as contractor's significant geographical distance from fingerprint enrollment sites.

The Office of Management and Budget (OMB) Guidance M-05-24 for Homeland Security Presidential Directive (HSPD) 12, authorizes Federal departments and agencies to ensure that contractors have limited/controlled access to facilities and information systems. GSA Directive CIO P 2181.1 Homeland Security Presidential Directive-12, Personal Identity Verification and Credentialing (available at <http://www.gsa.gov/hspd12>), states that GSA contractors must undergo a minimum of an FBI National Criminal Information Check (NCIC) to receive unescorted physical access to GSA-controlled facilities and/or logical access to GSA-controlled information systems.

Contractors' Social Security Number is needed to keep records accurate, because other people may have the same name and birth date. Executive Order 9397, Numbering System for Federal Accounts Relating to Individual Persons, also allows Federal agencies to use this number to help identify individuals in agency records.

B. Annual Reporting Burden

Respondents: 25,000.

Responses per Respondent: 1.

Total Annual Responses: 25,000.

Hours per Response: .25.

Total Burden Hours: 6,250.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected.

Obtaining Copies of Proposals: Requesters may obtain a copy of the

information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405, telephone 202-501-4755. Please cite OMB Control No. 3090-0283, Contractor Information Worksheet; GSA Form 850 in all correspondence. The form can be downloaded from the GSA Forms Library at <http://www.gsa.gov/forms>. Type GSA 850 in the form search field.

Dated: March 31, 2016.

David A. Shive,

Chief Information Officer.

BILLING CODE 6820-34-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the proposed information collection project: "Hospital Survey on Patient Safety Culture Comparative Database." In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501-3521, AHRQ invites the public to comment on this proposed information collection.

DATES: Comments on this notice must be received by June 7, 2016.

ADDRESSES: Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at doris.lefkowitz@AHRQ.hhs.gov.

Copies of the proposed collection plans, data collection instruments, and specific details on the estimated burden can be obtained from the AHRQ Reports Clearance Officer.

FOR FURTHER INFORMATION CONTACT:

Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427-1477, or by email at doris.lefkowitz@AHRQ.hhs.gov.

SUPPLEMENTARY INFORMATION:

Proposed Project

Hospital Survey on Patient Safety Culture Comparative Database

In 1999, the Institute of Medicine called for health care organizations to

develop a "culture of safety" such that their workforce and processes focus on improving the reliability and safety of care for patients (IOM, 1999; *To Err is Human: Building a Safer Health System*). To respond to the need for tools to assess patient safety culture in health care, AHRQ developed and pilot tested the Hospital Survey on Patient Safety Culture with OMB approval (OMB NO. 0935-0115; Approved 2/4/2003).

The survey is designed to enable hospitals to assess staff opinions about patient safety issues, medical errors, and error reporting. The survey includes 42 items that measure 12 composites of patient safety culture. AHRQ made the survey publicly available along with a Survey User's Guide and other toolkit materials in November 2004 on the AHRQ Web site (located at <http://www.ahrq.gov/professionals/quality-patient-safety/patientsafetyculture/hospital/index.html>). Since its release, the survey has been voluntarily used by hundreds of hospitals in the U.S.

The Hospital SOPS Comparative Database consists of data from the AHRQ Hospital Survey on Patient Safety Culture. Hospitals in the U.S. are asked to voluntarily submit data from the survey to AHRQ, through its contractor, Westat. The Hospital SOPS Database (OMB NO. 0935-0162, last approved on September 26, 2013) was developed by AHRQ in 2006 in response to requests from hospitals interested in knowing how their patient safety culture survey results compare to those of other hospitals in their efforts to improve patient safety.

Rationale for the information collection. The Hospital SOPS and the Comparative Database support AHRQ's goals of promoting improvements in the quality and safety of health care in hospital settings. The survey, toolkit materials, and comparative database results are all made publicly available on AHRQ's Web site. Technical assistance is provided by AHRQ through its contractor at no charge to hospitals, to facilitate the use of these materials for hospital patient safety and quality improvement.

Request for information collection approval. AHRQ requests that the Office of Management and Budget (OMB) reapprove, under the Paperwork Reduction Act of 1995, AHRQ's collection of information for the AHRQ Hospital Survey on Patient Safety Culture (Hospital SOPS) Comparative Database; OMB NO. 0935-0162, last approved on September 26, 2013.

This database will:

(1) Allow hospitals to compare their patient safety culture survey results with those of other hospitals,

(2) provide data to hospitals to facilitate internal assessment and learning in the patient safety improvement process, and

(3) provide supplemental information to help hospitals identify their strengths and areas with potential for improvement in patient safety culture.

This study is being conducted by AHRQ through its contractor, Westat, pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency, appropriateness and value of health care services and with respect to quality measurement and improvement. 42 U.S.C. 299a(a)(1) and (2).

Method of Collection

To achieve the goal of this project the following activities and data collections will be implemented:

(1) Eligibility and Registration Form—The hospital point-of-contact (POC) completes a number of data submission steps and forms, beginning with the completion of an online eligibility and registration form. The purpose of this form is to determine the eligibility status and initiate the registration process for hospitals seeking to voluntarily submit their Hospital SOPS data to the Hospital SOPS Comparative Database.

(2) Data Use Agreement—The purpose of the data use agreement, completed by the hospital POC, is to state how data submitted by hospitals will be used and provides confidentiality assurances.

(3) Hospital Site Information Form—The purpose of the site information form is to obtain basic information about the characteristics of the hospitals submitting their Hospital SOPS data to the Hospital SOPS Comparative Database (e.g. number of providers and staff, ownership, and teaching status). The hospital POC completes the form.

(4) Data Files Submission—The number of submissions to the database is likely to vary each year because

hospitals do not administer the survey and submit data every year. Data submission is typically handled by one POC who is either a manager or a survey vendor who contracts with a hospital to collect its data. POCs submit data on behalf of 3 hospitals, on average, because many hospitals are part of a health system that includes many hospitals, or the POC is a vendor that is submitting data for multiple hospitals.

Survey data from the AHRQ Hospital Survey on Patient Safety Culture is used to produce three types of products: (1) A Hospital SOPS Comparative Database Report that is produced periodically and made publicly available on the AHRQ Web site (see <http://www.ahrq.gov/professionals/quality-patient-safety/patientsafetyculture/hospital/hosp-reports.html>); (2) Individual Hospital Survey Feedback Reports which are confidential, customized reports produced for each hospital that submits data to the database (the number of reports produced is based on the number of hospitals submitting each year); and (3) Research data sets of individual-level and hospital-level de-identified data to enable researchers to conduct analyses.

Hospitals are asked to voluntarily submit their Hospital SOPS survey data to the comparative database. The data are then cleaned and aggregated and used to produce a Comparative Database Report that displays averages, standard deviations, and percentile scores on the survey's 42 items and 12 composites of patient safety culture, as well as displaying these results by hospital characteristics (bed size, teaching status, ownership) and respondent characteristics (hospital work area, staff position, and those with direct interaction with patients). In addition, trend data, showing changes in scores over time, are presented from hospitals that have submitted to the database more than once.

Data submitted by hospitals are used to give each hospital its own customized survey feedback report that presents the hospital's results compared to the latest comparative database results. If the hospital submits data in two

consecutive database submission years, its survey feedback report also presents trend data, comparing its previous and most recent data.

Hospitals use the Hospital SOPS, Comparative Database Reports and Individual Hospital Survey Feedback Reports for a number of purposes, to:

- Raise staff awareness about patient safety.
- Diagnose and assess the current status of patient safety culture in their hospital.
- Identify strengths and areas for improvement in patient safety culture.
- Examine trends in patient safety culture change over time.
- Evaluate the cultural impact of patient safety initiatives and interventions.
- Facilitate meeting Joint Commission hospital accreditation standards in Leadership that require a regular assessment of hospital patient safety culture.
- Compare patient safety culture survey results with other hospitals in their efforts to improve patient safety and quality.

Estimated Annual Respondent Burden

Exhibit 1 shows the estimated annualized burden hours for the respondents' time to participate in the database. An estimated 304 POCs, each representing an average of 3 individual hospitals each, will complete the database submission steps and forms annually. The POCs typically submit data on behalf of 3 hospitals, on average, because many hospitals are part of a multi-hospital system that is submitting data, or the POC is a vendor that is submitting data for multiple hospitals. Completing the registration form will take about 3 minutes. The Hospital Information Form is completed by all POCs for each of their hospitals (304 × 3 = 912). The total annual burden hours are estimated to be 410.

Exhibit 2 shows the estimated annualized cost burden based on the respondents' time to submit their data. The cost burden is estimated to be \$21,801 annually.

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS

| Form name | Number of respondents/ POCs | Number of responses per POC | Hours per response | Total burden hours |
|-------------------------------------|-----------------------------|-----------------------------|--------------------|--------------------|
| Eligibility/Registration Form | 304 | 1 | 3/60 | 15 |
| Data Use Agreement | 304 | 1 | 3/60 | 15 |
| Hospital Information Form | 304 | 3 | 5/60 | 76 |
| Data Files Submission | 304 | 1 | 1 | 304 |
| Total | 1,216 | NA | NA | 410 |

EXHIBIT 2—ESTIMATED ANNUALIZED COST BURDEN

| Form Name | Number of respondents/ POCs | Total burden hours | Average hourly wage rate* | Total cost burden |
|-------------------------------------|--------------------------------|-----------------------|---------------------------------|----------------------|
| Eligibility/Registration Form | 304 | 15 | \$53.17 | \$798 |
| Data Use Agreement | 304 | 15 | 53.17 | 798 |
| Hospital Information Form | 304 | 76 | 53.17 | 4,041 |
| Data Files Submission | 304 | 304 | 53.17 | 16,164 |
| Total | 1,216 | 410 | NA | 21,801 |

*Wage rates were calculated using the mean hourly wage based on occupational employment and wage estimates from the Dept. of Labor, Bureau of Labor Statistics' May 2014 National Industry-Specific Occupational Employment and Wage Estimates NAICS 622000—Hospitals, located at http://www.bls.gov/oes/current/naics3_622000.htm. Wage rate of \$53.17 is based on the mean hourly wages for Medical and Health Services Managers (11–9111).

Request for Comments

In accordance with the Paperwork Reduction Act, comments on AHRQ's information collection are requested with regard to any of the following: (a) Whether the proposed collection of information is necessary for the proper performance of AHRQ health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Sharon B. Arnold,
Acting Director.

BILLING CODE 4160–90–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Common Formats for Reporting on Health Care Quality and Patient Safety

AGENCY: Agency for Healthcare Research and Quality (AHRQ), Department of Health and Human Services (HHS).

ACTION: Notice of availability—new common formats.

SUMMARY: As authorized by the Secretary of HHS, AHRQ coordinates the development of sets of common

definitions and reporting formats (Common Formats) for reporting on health care quality and patient safety. The purpose of this notice is to announce the availability of new formats for public review and comment, Common Formats for Event Reporting for Hospitals Version 2.0.

DATES: May 9, 2016.

ADDRESSES: The Common Formats for Event Reporting for Hospitals Version 2.0, and the remaining Common Formats, can be accessed electronically at the following HHS Web site: <http://www.pso.ahrq.gov/common/>.

FOR FURTHER INFORMATION CONTACT:

Cathryn Bach, Center for Quality Improvement and Patient Safety, AHRQ, 5600 Fishers Lane, Rockville, MD 20857; Telephone (toll free): (866) 403–3697; Telephone (local): (301) 427–1111; TTY (toll free): (866) 438–7231; TTY (local): (301) 427–1130; Email: PSO@AHRQ.hhs.gov.

SUPPLEMENTARY INFORMATION:

Background

The Patient Safety and Quality Improvement Act of 2005, 42 U.S.C. 299b–21 to b–26, (Patient Safety Act) and the related Patient Safety and Quality Improvement Final Rule, 42 CFR part 3 (Patient Safety Rule), published in the **Federal Register** on November 21, 2008, (73 FR 70732–70814), provide for the formation of Patient Safety Organizations (PSOs), which collect, aggregate, and analyze confidential information regarding the quality and safety of health care delivery. The collection of patient safety work product allows the aggregation of data that help to identify and address underlying causal factors of patient quality and safety problems.

The Patient Safety Act and Patient Safety Rule establish a framework by which doctors, hospitals, skilled nursing facilities, and other health care providers may assemble information regarding patient safety events and quality of care. Information that is

assembled and developed by providers for reporting to PSOs and the information received and analyzed by PSOs—called “patient safety work product”—is privileged and confidential. Patient safety work product is used to conduct patient safety activities, which may include identifying events, patterns of care, and unsafe conditions that increase risks and hazards to patients. Definitions and other details about PSOs and patient safety work product are included in the Patient Safety Act and Patient Safety Rule which can be accessed electronically at: <http://www.pso.ahrq.gov/legislation/>.

Definition of Common Formats

The term “Common Formats” refers to the common definitions and reporting formats, specified by AHRQ, that allow health care providers to collect and submit standardized information regarding patient quality and safety to PSOs and other entities. The formats are not intended to replace any current mandatory reporting system, collaborative/voluntary reporting system, research-related reporting system, or other reporting/recording system; rather the formats are intended to enhance the ability of health care providers to report information that is standardized both clinically and electronically.

In collaboration with the interagency Federal Patient Safety Workgroup (PSWG), the National Quality Forum (NQF), and the public, AHRQ has developed Common Formats for three settings of care—acute care hospitals, nursing homes, and retail pharmacies—in order to facilitate standardized data collection and analysis. The scope of the formats applies to all patient safety concerns including: Incidents—patient safety events that reached the patient, whether or not there was harm; near misses or close calls—patient safety events that did not reach the patient; and unsafe conditions—circumstances

that increase the probability of a patient safety event.

AHRQ's Common Formats for patient safety event reporting include:

- Event descriptions (definitions of patient safety events, near misses, and unsafe conditions to be reported);
- Specifications for patient safety aggregate reports and individual event summaries that derive from event descriptions;
- Delineation of data elements and algorithms to be used for collection of adverse event data to populate the reports; and
- Technical specifications for electronic data collection and reporting.

The technical specifications promote standardization of collected patient safety event information by specifying rules for data collection and submission, as well as by providing guidance for how and when to create data elements, their valid values, conditional and go-to logic, and reports. These specifications will ensure that data collected by PSOs and other entities have comparable clinical meaning. They also provide direction to software developers, so that the formats can be implemented electronically, and to PSOs, so that the Common Formats can be submitted electronically to the PSO Privacy Protection Center (PSOPPC) for data de-identification and transmission to the Network of Patient Safety Databases (NPSD).

Common Formats Development

In anticipation of the need for Common Formats, AHRQ began their development by creating an inventory of functioning private and public sector patient safety reporting systems. This inventory provided an evidence base to inform construction of the Common Formats. The inventory included many systems from the private sector, including prominent academic settings, hospital systems, and international reporting systems (e.g., from the United Kingdom and the Commonwealth of Australia). In addition, virtually all major Federal patient safety reporting systems were included, such as those from the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), the Department of Defense (DoD), and the Department of Veterans Affairs (VA).

Since February 2005, AHRQ has convened the PSWG to assist AHRQ with developing and maintaining the Common Formats. The PSWG includes major health agencies within HHS—CDC, Centers for Medicare & Medicaid Services, FDA, Health Resources and Services Administration, Indian Health Service, National Institutes of Health,

National Library of Medicine, Office of the National Coordinator for Health Information Technology, Office of Public Health and Science, and Substance Abuse and Mental Health Services Administration—as well as the DoD and VA.

When developing Common Formats, AHRQ first reviews existing patient safety practices and event reporting systems. In collaboration with the PSWG and Federal subject matter experts, AHRQ drafts and releases beta versions and updates to current versions of the Common Formats for public review and comment. The prior version of Common Formats for Event Reporting for Hospitals, Version 1.2, was released in April 2013. The PSWG assists AHRQ with assuring the consistency of definitions/formats with those of relevant government agencies as refinement of the Common Formats continues.

Since the initial release of the Common Formats in August 2008, AHRQ has regularly revised the formats based upon public comment. AHRQ solicits feedback on beta, and subsequent, versions of Common Formats from private sector organizations and individuals. Based upon the feedback received, AHRQ further revises the formats. To the extent practicable, the Common Formats are also aligned with World Health Organization (WHO) concepts, frameworks, and definitions.

Participation by the private sector in the development and subsequent revision of the Common Formats is achieved through working with the NQF. The Agency engages the NQF, a non-profit organization focused on health care quality, to solicit comments and advice regarding proposed versions of the Common Formats. AHRQ began this process with the NQF in 2008, receiving feedback on AHRQ's 0.1 Beta release of the Common Formats for Event Reporting—Hospital. After receiving public comment, the NQF solicits the review and advice of its Common Formats Expert Panel and subsequently provides feedback to AHRQ. The Agency then revises and refines the Common Formats and issues them as a production version. AHRQ has continued to employ this process for all subsequent versions of the formats.

Commenting on Common Formats for Event Reporting—Hospital Version 2.0

AHRQ used a tiered approach to develop Hospital Version 2.0. This approach was done in response to feedback from PSOs and the public to decrease the number of questions for each module of the formats in order to

reduce the burden on health care providers and to facilitate data transmission. These formats have two tiers, or data sets. The first tier, or national data set, contains elements that are collected for submission to the PSOPPC. The second tier, or local data set, is optional and is designed for use at the local level for additional analyses. This local data set is not meant for transmission to the PSOPPC.

The Agency is specifically interested in obtaining feedback from both the private and public sectors on the updated Common Formats for Event Reporting—Hospitals Version 2.0. At this time, only the event descriptions—which define adverse events of interest in the inpatient hospital setting—are available. Other elements of the Common Formats, including aggregate reports and technical specifications, will be developed following revision of the Common Formats for Hospital Version 2.0 based on public comment and NQF advice. Information on how to comment and provide feedback on the Common Formats for Hospital Version 2.0 is available at the NQF Web site: http://www.qualityforum.org/Project_Pages/Common_Formats_for_Patient_Safety_Data.aspx.

AHRQ appreciates the time and effort individuals invest in providing comments. The Agency will review and consider all feedback received to help guide the development of a revised version. The process for updating and refining the formats will continue to be an iterative one.

Further information on the Common Formats can be obtained through AHRQ's PSO Web site: <http://www.pso.ahrq.gov/>. To receive notifications about final versions of AHRQ Common Formats, please subscribe to "E-Mail Updates" at: <https://pso.ahrq.gov/about/subscribe>.

Sharon B. Arnold,
Acting Director.

BILLING CODE 4160-90-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS-317, CMS-319, CMS-10166, CMS-10178, and CMS-10184]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by *June 7, 2016*.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to <http://www.regulations.gov>. Follow the instructions for "Comment or Submission" or "More Search Options" to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number ___, Room C4-26-05, 7500 Security Boulevard, Baltimore, Maryland 21244-1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at <http://www.cms.hhs.gov/PaperworkReductionActof1995>.

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov.

3. Call the Reports Clearance Office at (410) 786-1326.

FOR FURTHER INFORMATION CONTACT: Reports Clearance Office at (410) 786-1326.

SUPPLEMENTARY INFORMATION:**Contents**

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS-317 State Medicaid Eligibility Quality Control Sampling Plan

CMS-319 State Medicaid Eligibility Quality Control Sample Selection Lists

CMS-10166 Payment Error Rate Measurement in Medicaid and the State Children's Health Insurance Program

CMS-10178 Medicaid and State Children's Health Insurance Plan (SCHIP) Managed Care

CMS-10184 Payment Error Rate Measurement—State Medicaid and SCHIP Eligibility

Under the PRA (44 U.S.C. 3501-3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term "collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* State Medicaid Eligibility Quality Control (MEQC) Sample Plans; *Use:* The Medicaid Eligibility Quality Control (MEQC) system is based on monthly State reviews of Medicaid and Medicaid expansion under Title XXI cases by States performing the traditional sampling process identified through statistically reliable statewide samples of cases selected from the eligibility files. These reviews are conducted to determine whether or not the sampled

cases meet applicable State Title XIX or XXI eligibility requirements when applicable. The reviews are also used to assess beneficiary liability, if any, and to determine the amounts paid to provide Medicaid services for these cases. In the MEQC system, sampling is the only practical method of validating eligibility of the total caseload and determining the dollar value of eligibility liability errors. Any attempt to make such validations and determinations by reviewing every case would be an enormous and unwieldy undertaking. In 1993, CMS implemented MEQC pilots in which States could focus on special studies, targeted populations, geographic areas or other forms of oversight with CMS approval. States must submit a sampling plan, or pilot proposal to be approved by CMS before implementing their pilot program. The Children's Health Insurance Program Reauthorization Act (CHIPRA) was enacted February 4, 2009. Sections 203 and 601 of the CHIPRA relate to MEQC. Section 203 of the CHIPRA establishes an error rate measurement with respect to the enrollment of children under the express lane eligibility option. The law directs States not to include children enrolled using the express lane eligibility option in data or samples used for purposes of complying with the MEQC requirements. Section 601 of the CHIPRA, among other things, requires a new final rule for the Payment Error Rate Measurement (PERM) program and aims to harmonize the PERM and MEQC programs and provides States with the option to apply PERM data resulting from its eligibility reviews for meeting MEQC requirements and vice versa, with certain conditions. We review, either directly or through its contractors, of the sampling plans helps to ensure States are using valid statistical methods for sample selection. The collection of information is also necessary to implement provisions from the Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) (Pub. L. 111-3) with regard to the Medicaid Eligibility Quality Control (MEQC) and Payment Error Rate Measurement (PERM) programs. *Form Number:* CMS-317 (OMB control number: 0938-0146); *Frequency:* Semi-Annually *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 10; *Total Annual Responses:* 20; *Total Annual Hours:* 480. (For policy questions regarding this collection contact Bridgett Rider at 410-786-2602.)

2. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of*

Information Collection: State Medicaid Eligibility Quality Control (MEQC) Sample Selection Lists; *Use:* The MEQC system is based on monthly State reviews of Medicaid and Medicaid expansion under Title XXI cases by States performing the traditional sampling process identified through statistically reliable statewide samples of cases selected from the eligibility files. These reviews are conducted to determine whether or not the sampled cases meet applicable State Title XIX or XXI eligibility requirements when applicable. The reviews are also used to assess beneficiary liability, if any, and to determine the amounts paid to provide Medicaid services for these cases. In the MEQC system, sampling is the only practical method of validating eligibility of the total caseload and determining the dollar value of eligibility liability errors. Any attempt to make such validations and determinations by reviewing every case would be an enormous and unwieldy undertaking. At the beginning of each month, State agencies still performing the traditional sample are required to submit sample selection lists which identify all of the cases selected for review in the States' samples. The sample selection lists contain identifying information on Medicaid beneficiaries such as: State agency review number, beneficiary's name and address, the name of the county where the beneficiary resides, Medicaid case number, etc. The submittal of the sample selection lists is necessary for Regional Office validation of State reviews. Without these lists, the integrity of the sampling results would be suspect and the Regional Offices would have no data on the adequacy of the States' monthly sample draw or review completion status. The authority for collecting this information is Section 1903(u) of the Social Security Act. The specific requirement for submitting sample selection lists is described in regulations at 42 CFR 431.814(h). Regional Office staff review the sample selection lists to determine that States are sampling a sufficient number of cases for review. *Form Number:* CMS-319 (OMB control number: 0938-0147); *Frequency:* Monthly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 10; *Total Annual Responses:* 120; *Total Annual Hours:* 960. (For policy questions regarding this collection contact Bridgett Rider at 410-786-2602.)

3. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Payment Error Rate Measurement in Medicaid &

Children's Health Insurance Program (CHIP); *Use:* The Improper Payments Information Act (IPIA) of 2002 as amended by the Improper Payments Elimination and Recovery Improvement Act (IPERIA) of 2012 requires CMS to produce national error rates for Medicaid and Children's Health Insurance Program (CHIP). To comply with the IPIA, CMS will engage a Federal contractor to produce the error rates in Medicaid and CHIP. The error rates for Medicaid and CHIP are calculated based on the reviews on three components of both Medicaid and CHIP program. They are: Fee-for-service claims medical reviews and data processing reviews, managed care claims data-processing reviews, and eligibility reviews. Each of the review components collects different types of information, and the state-specific error rates for each of the review components will be used to calculate an overall state-specific error rate, and the individual state-specific error rates will be used to produce a national error rate for Medicaid and CHIP. The states will be requested to submit, at their option, test data which include full claims details to the contractor prior to the quarterly submissions to detect potential problems in the dataset to and ensure the quality of the data. These states will be required to submit quarterly claims data to the contractor who will pull a statistically valid random sample, each quarter, by strata, so that medical and data processing reviews can be performed. State-specific error rates will be based on these review results. We need to collect the fee-for-service claims data, medical policies, and other information from states as well as medical records from providers in order for the contractor to sample and review adjudicated claims in those states selected for medical reviews and data processing reviews. Based on the reviews, state-specific error rates will be calculated which will serve as part of the basis for calculating national Medicaid and CHIP error rates. *Form Number:* CMS-10166 (OMB control number: 0938-0974); *Frequency:* Annually, Quarterly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 34; *Total Annual Responses:* 34; *Total Annual Hours:* 56,100. (For policy questions regarding this collection contact Bridgett Rider at 410-786-2602.)

4. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Medicaid and Children's Health Insurance (CHIP) Managed Care Claims and Related

Information; *Use:* The Payment Error Rate Measurement (PERM) program measures improper payments for Medicaid and the State Children's Health Insurance Program (SCHIP). The program was designed to comply with the Improper Payments Information Act (IPIA) of 2002 and the Office of Management and Budget (OMB) guidance. Although OMB guidance requires error rate measurement for SCHIP, 2009 SCHIP legislation temporarily suspended PERM measurement for this program and changed to Children's Health Insurance Program (CHIP) effective April 01, 2009. See Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) Public Law 111-3 for more details. There are two phases of the PERM program, the measurement phase and the corrective action phase. The PERM measures improper payments in Medicaid and CHIP and produces State and national-level error rates for each program. The error rates are based on reviews of Medicaid and CHIP fee-for-service (FFS) and managed care payments made in the Federal fiscal year under review. States conduct eligibility reviews and report eligibility related payment error rates also used in the national error rate calculation. We created a 17 State rotation cycle so that each State will participate in PERM once every three years. Following is the list of States in which we will measure improper payments over the next three years in Medicaid. We need to collect capitation payment information from the selected States so that the federal contractor can draw a sample and review the managed care capitation payments. We will also collect State managed care contracts, rate schedules and updates to the contracts and rate schedules. This information will be used by the Federal contractor when conducting the managed care claims reviews. Sections 1902(a)(6) and 2107(b)(1) of the Social Security Act grants CMS authority to collect information from the States. The IPIA requires us to produce national error rates in Medicaid and CHIP fee-for-service, including the managed care component. The State-specific Medicaid managed care and CHIP managed care error rates will be based on reviews of managed care capitation payments in each program and will be used to produce national Medicaid managed care and CHIP managed care error rates. *Form Number:* CMS-10178 (OMB control number: 0938-0994); *Frequency:* Occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 34; *Total Annual*

Responses: 28,050; *Total Annual Hours:* 28,050. (For policy questions regarding this collection contact Bridgett Rider at 410–786–2602.)

5. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Eligibility Error Rate Measurement in Medicaid and the Children’s Health Insurance Program; *Use:* The Improper Payments Information Act (IPIA) of 2002 requires CMS to produce national error rates for Medicaid and the Children’s Health Insurance Program (CHIP). To comply with the IPIA, CMS will use a national contracting strategy to produce error rates for Medicaid and CHIP fee-for-service and managed care improper payments. The federal contractor will review States on a rotational basis so that each State will be measured for improper payments, in each program, once and only once every three years. Subsequent to the first publication, we determined that we will measure Medicaid and CHIP in the same State. Therefore, States will measure Medicaid and CHIP eligibility in the same year measured for fee-for-service and managed care. We believe this approach will advantage States through economies of scale (e.g. administrative ease and shared staffing for both programs reviews). We also determined that interim case completion timeframes and reporting are critical to the integrity of the reviews and to keep the reviews on schedule to produce a timely error rate. Lastly, the sample sizes were increased slightly in order to produce an equal sample size per strata each month. Periodically, CMS will conduct Federal

re-reviews of States’ PERM files to ensure the accuracy of States’ review findings and the validity of the review process. CMS will select a random subsample of Medicaid and CHIP cases from the sample selection lists provided by each State. States will submit all pertinent information related to the review of each sampled case that is selected by CMS. *Form Number:* CMS–10184 (OMB control number: 0938–1012); *Frequency:* Annually, Quarterly *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 34; *Total Annual Responses:* 1,583; *Total Annual Hours:* 946,164. (For policy questions regarding this collection contact Bridgett Rider at 410–786–2602.)

Dated: April 5, 2016.
William N. Parham, III,
Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Title: National Survey of Child and Adolescent Well-Being-Third Cohort (NSCAW III): Agency Recruitment.
OMB No.: 0970–0202.
Description: The Administration for Children and Families (ACF) within the U.S. Department of Health and Human

Services (HHS) intends to collect data on a third cohort of children and families for the National Survey of Child and Adolescent Well-Being (NSCAW). NSCAW is the only source of nationally representative, longitudinal, firsthand information about the functioning and well-being, service needs, and service utilization of children and families who come to the attention of the child welfare system. The first two cohorts of NSCAW were collected beginning in 1999 and 2008 and studied children who had been the subject of investigation by Child Protective Services. Children were sampled from child welfare agencies nationwide. The proposed data collection plan for the third cohort of NSCAW includes two phases: Phase 1 includes child welfare agency recruitment and collection of files for sampling children, and Phase 2 includes baseline data collection and an 18-month follow-up data collection. The current data collection plan calls for selecting a new cohort of 4,565 children and families and repeating similar data collection procedures as the previous two cohorts. This Notice is specific to Phase 1. The overall goal is to recruit child welfare agencies in 83 primary sampling units nationwide. Child welfare agencies will be selected with probability proportional to size, based on the current distributions in the child welfare system. Child welfare agency recruitment will include: mail, email, phone calls, and site visits with child welfare agency administrators.

Respondents: Child welfare agency administrators and other personnel. Data collection will take place over a 2-year period.

ANNUAL BURDEN ESTIMATES

| Instrument | Total number of respondents | Annual number of respondents (rounded) | Number of responses per respondent | Average burden hours per response | Annual burden hours |
|--|-----------------------------|--|------------------------------------|-----------------------------------|---------------------|
| Information package for agency administrators | 83 | 42 | 1 | .25 | 11 |
| Initial visit or call with agency staff | 83 | 42 | 1 | 1 | 42 |
| Visit or call with agency staff explaining the sample file process | 83 | 42 | 1 | 2 | 84 |
| Agency staff monthly sample file generation and transmission | 83 | 42 | 15 | 1 | 630 |

Estimated Total Annual Burden Hours: 767.
In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 330 C Street SW., Washington, DC 20201, Attn: OPRE Reports Clearance Officer. Email address: OPREinfocollection@acf.hhs.gov. All requests should be

identified by the title of the information collection.
The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the

proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Robert Sargis,

ACF Certifying Officer.

BILLING CODE 4184-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; Comment Request

Title: Assets for Independence Program Performance Progress Report.
OMB No.: New.

Description: The Assets for Independence (AFI) Act (Title IV of the Community Opportunities, Accountability, and Training and Educational Services Act of 1998, Pub. L. 105-285, [42 U.S.C. 604 note]) requires that organizations operating AFI projects submit annual progress reports.

This request is to create an AFI program specific Performance Progress Report (PPR) to replace the semiannual standard form performance progress report (SF-PPR) and the annual data

report. The AFI PPR will collect data on project activities and attributes similar to the reports that it is replacing. The Office of Community Services (OCS) in the Administration for Children and Families (ACF) will use the data collected in the AFI PPR to prepare the annual AFI Report to Congress, to evaluate and monitor the performance of the AFI program overall and of individual projects, and to inform and support technical assistance efforts. The AFI PPR would fulfill AFI Act reporting requirements and program purposes.

The AFI PPR will be submitted quarterly: three times per year using an abbreviated short form and one time using a long form. Both draft data collection instruments are available for review online at <http://idaresources.acf.hhs.gov/AFIPPR>.

Respondents: Assets for Independence (AFI) program grantees.

Annual Burden Estimates:

| Form name | Number of responses | Number of responses per respondent | Average burden hours per response | Total burden hours |
|-------------------------------------|---------------------|------------------------------------|-----------------------------------|--------------------|
| AFI PPR Short Form | 300 | 3 | 0.5 | 450 |
| AFI PPR Long Form | 300 | 1 | 3.8 | 1,140 |
| Estimated Annual Burden Hours | | | | 1,590 |

Additional Information

Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 370 L'Enfant Promenade SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. All requests should be identified by the title of the information collection. Email address: infocollection@acf.hhs.gov.

OMB Comment

OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, Email: OIRA.SUBMISSION@OMB.EOP.GOV, Attn: Desk Officer for the Administration for Children and Families.

Robert Sargis,

Reports Clearance Officer.

BILLING CODE 4184-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2013-N-0519]

Agency Information Collection Activities; Proposed Collection; Comment Request; Guidance for Industry on How To Submit Information in Electronic Format to the Center for Veterinary Medicine Using the Food and Drug Administration Electronic Submission Gateway

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on extending Office

of Management and Budget (OMB) approval on the existing reporting requirements relating to how one may submit information electronically to the Center for Veterinary Medicine (CVM) using the FDA Electronic Submissions Gateway (ESG).

DATES: Submit either electronic or written comments on the collection of information by June 7, 2016.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <http://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that

identifies you in the body of your comments, that information will be posted on <http://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2013-N-0519 for “Guidance for Industry on How To Submit Information in Electronic Format to the Center for Veterinary Medicine Using the Food and Drug Administration Electronic Submission Gateway.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <http://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information

redacted/blacked out, will be available for public viewing and posted on <http://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, 8455 Colesville Rd., COLE-14526, Silver Spring, MD 20993-0002, PRASStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. “Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information,

before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA’s functions, including whether the information will have practical utility; (2) the accuracy of FDA’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Guidance for Industry on How To Submit Information in Electronic Format to the Center for Veterinary Medicine Using the Food and Drug Administration Electronic Submission Gateway—21 CFR 11.2 OMB Control Number 0910-0454—Extension

We accept certain types of submissions electronically with no requirement for a paper copy. These types of documents are listed in public docket 97S-0251 as required by 21 CFR 11.2. Our ability to receive and process information submitted electronically is limited by our current information technology capabilities and the requirements of the Electronic Records; Electronic Signatures final regulation. Our guidance entitled “Guidance for Industry #108: How to Submit Information in Electronic Format to CVM Using the FDA Electronic Submission Gateway” outlines general standards to be used for the submission of any electronic information to CVM using the FDA ESG. The likely respondents are sponsors for new animal drug applications.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN ¹

| 21 CFR section | FDA form No. | Number of respondents | Number of responses per respondent | Total annual responses | Average burden per response | Total hours |
|----------------|--------------|-----------------------|------------------------------------|------------------------|-----------------------------|-------------|
| 11.2 | 3538 | 29 | 1.3 | 38 | .08 (5 minutes) | 3.0 |

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

We base our estimates on our experience with the submission of electronic information to us using the FDA ESG and the number of electronic registration or change requests received between January 1, 2014, and December 31, 2014.

Dated: April 1, 2016.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice.

SUMMARY: In compliance with Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the Health Resources and Services Administration (HRSA) has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period.

DATES: Comments on this ICR should be received no later than May 9, 2016.

ADDRESSES: Submit your comments, including the Information Collection Request Title, to the desk officer for HRSA, either by email to OIRA_submission@omb.eop.gov or by fax to 202-395-5806.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email the HRSA Information Collection Clearance Officer at paperwork@hrsa.gov or call (301) 443-1984.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: Enrollment and Re-Certification of Entities in the 340B Drug Pricing Program and Collection of Manufacturer

Data to Verify 340B Drug Pricing Program Ceiling Price Calculations.

OMB No. 0915-0327—Revision

Abstract: Section 602 of Public Law 102-585, the Veterans Health Care Act of 1992, enacted as Section 340B of the Public Health Service Act (PHS Act; “Limitation on Prices of Drugs Purchased by Covered Entities”), provides that the Secretary of Health and Human Services will enter into a Pharmaceutical Pricing Agreement (PPA) with each manufacturer of covered outpatient drugs in which the manufacturer agrees to charge a price for covered outpatient drugs that will not exceed the average manufacturer price decreased by a rebate percentage. Under this PPA, a manufacturer agrees not to charge a price for covered outpatient drugs that exceeds an amount determined under a statutory formula (ceiling price). A manufacturer subject to a PPA must offer all covered outpatient drugs at no more than the ceiling price to a covered entity listed in the 340B Program database if such drug is made available to any other purchaser at any price. The manufacturer shall rely on the information in the 340B database to determine if the covered entity is participating in the 340B Program or for any notifications of changes to eligibility that may occur within a quarter. By signing the PPA, the manufacturer agrees to comply with all applicable statutory and regulatory requirements. In response to comments submitted during the first public review of this ICR, the language has been revised in this notice and in the draft instruments in order to align with the applicable statutory language regarding the obligation to sign the PPA, the circumstances under which participating manufacturers must offer covered outpatient drugs to covered entities, and the description of the ceiling price data required to be provided.

The purpose of this revision is to include an addendum to the PPA to incorporate the administrative requirement for manufacturer integrity provisions directly addressed in the Affordable Care Act.

Need and Proposed Use of the Information: HRSA is proposing revisions to the current PPA to include an addendum in response to manufacturer integrity provisions implemented in the Affordable Care

Act. Section 7102(b) of the Affordable Care Act amends section 340B(a)(1) of the Public Health Service Act (PHSA) to add two new requirements for inclusion in the PPA with manufacturers of covered outpatient drugs:

I. “Each such agreement shall require that the manufacturer furnish the Secretary with reports, on a quarterly basis, of the price for each covered outpatient drug subject to the agreement that, according to the manufacturer, represents the maximum price that covered entities may permissibly be required to pay for the drug . . .” and

II. “. . . shall require that the manufacturer offer each covered entity covered outpatient drugs for purchase at or below the applicable ceiling price if such drug is made available to any other purchaser at any price.”

These requirements shall be included in the PPA addendum to be signed by manufacturers participating in the 340B Program to ensure that the provisions of the 340B statute requiring inclusion in the PPA are satisfied. The execution of the addendum by manufacturers will fulfill the administrative requirement of the statute that these provisions be included in the PPA. The burden imposed on manufacturers by the proposed requirement of the PPA is minimal because the addendum does not impose requirements beyond review and a signature by the manufacturer.

Likely Respondents: Drug Manufacturers.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this Information Collection Request are summarized in the table below.

Total Estimated Annualized Burden Hours:

| Form name | Number of respondents | Number of responses per respondent | Total responses | Hours per respondent | Total burden hours |
|--|-----------------------|------------------------------------|-----------------|----------------------|--------------------|
| Hospital Enrollment, Additions & Recertifications | | | | | |
| 340B Program Registrations & Certifications for Hospitals | 194 | 1 | 194 | 2 | 388 |
| Certifications to Enroll Hospital Outpatient Facilities | 697 | 8 | 5576 | 0.5 | 2788 |
| Hospital Annual Recertifications | 2134 | 6 | 12804 | 0.25 | 3201 |
| Registrations and Recertifications for Entities Other Than Hospitals | | | | | |
| 340B Registrations for Community Health Centers | 427 | 3 | 1281 | 1 | 1281 |
| 340B Registrations for STD/TB Clinics | 647 | 1 | 647 | 1 | 647 |
| 340B Registrations for Various Other Eligible Entity Types | 405 | 1 | 405 | 1 | 405 |
| Community Health Center Annual Recertifications | 1204 | 5 | 6020 | 0.25 | 1505 |
| STD & TB Annual Recertifications | 3123 | 1 | 3123 | 0.25 | 780.75 |
| Annual Recertification for entities other than Hospitals, Community Health Centers, and STD/TB Clinics | 4899 | 1 | 4899 | 0.25 | 1224.75 |
| Contracted Pharmacy Services Registration & Recertifications | | | | | |
| Contracted Pharmacy Services Registration | 1758 | 5 | 8790 | 1 | 8790 |
| Other Information Collections | | | | | |
| Submission of Administrative Changes for any Covered Entity | 9396 | 1 | 9396 | 0.5 | 4698 |
| Submission of Administrative Changes for any Manufacturer | 350 | 1 | 350 | 0.5 | 175 |
| Manufacturer Data Required to Verify 340B Ceiling Price Calculations | 600 | 4 | 2400 | 0.5 | 1200 |
| Pharmaceutical Pricing Agreement | 200 | 1 | 200 | 1 | 200 |
| Pharmaceutical Pricing Agreement (PPA) Addendum | 620 | 1 | 620 | 0.5 | 310 |
| Total | 26,654 | | 56,705 | | 27593.5 |

HRSA specifically requests comments on (1) the necessity and utility of the proposed information collection for the proper performance of the agency's functions, (2) the accuracy of the estimated burden, (3) ways to enhance the quality, utility, and clarity of the information to be collected, and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Jackie Painter,

Director, Division of the Executive Secretariat.

BILLING CODE 4165-15-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

National Advisory Council on Nurse Education and Practice; Notice of Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), notice is hereby given of the following meeting:

Name: National Advisory Council on Nurse Education and Practice (NACNEP).

Dates and Time: June 7–8, 2016, 8:30 a.m.–5:00 p.m. EST.

Place: In-Person Meeting with Webinar/Conference Call Component, U.S. Department of Health and Human Services, Health Resources and Services Administration, 5600 Fishers Lane, Room 5A02/5A03, Rockville, Maryland 20857.

Status: This Advisory Council meeting will be open to the public.

Purpose: The purpose of the 133rd NACNEP meeting is to explore strategies to prepare registered nurses (RNs) to address the complex health needs of populations within an evolving health care delivery system. NACNEP members will identify and discuss gaps in population health education, as well as educational competencies in population health for RNs. This meeting will contribute to the development of NACNEP's mandated 14th Annual Report to the Secretary of the U.S. Department of Health and Human Services and Congress.

Agenda: A final agenda will be posted on the NACNEP Web site 3 days prior to the meeting. Agenda items are subject to change as priorities dictate.

SUPPLEMENTARY INFORMATION: Further information regarding NACNEP, including the roster of members, reports to Congress, and minutes from previous meetings, is available at the NACNEP Web site. Members of the public and

interested parties may request to attend the meeting by contacting Staff Assistant, Jeanne Brown, at jbrown@hrsa.gov. Access to the meeting will be granted on a first-come, first-served basis and space is limited. Public attendees may submit written statements in advance of the scheduled meeting. In addition, a public comment period is tentatively scheduled for the first day of the meeting after the lunch break. Oral comments will be limited to three minutes per speaker. Written statements and registration for oral comments must be received in advance and should be sent to Erin Fowler by email at: nacnep@hrsa.gov. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the contact person listed above at least 10 days prior to the meeting.

Please be advised that council members are given copies of all written statements submitted by the public prior to the meeting. Any further public participation will be at the discretion of the Chair, with approval of the Designated Federal Official in attendance. Any member of the public who wishes to have printed materials distributed to NACNEP should submit materials to the National Advisory Council on Nurse Education and Practice mailbox at nacnep@hrsa.gov.

no later than 12:00 noon EST on May 26, 2016.

For additional information regarding NACNEP, please contact Jeanne Brown, Staff Assistant, National Advisory Council on Nurse Education and Practice, 5600 Fishers Lane, Rockville, Maryland 20857. The telephone number is: (301) 443-5688. The email is: jbrown@hrsa.gov.

Jackie Painter,

Director, Division of the Executive Secretariat.

BILLING CODE 4165-15-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting Notice for the President's Advisory Council on Faith-Based and Neighborhood Partnerships

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the President's Advisory Council on Faith-based and Neighborhood Partnerships announces the following meetings:

Name: President's Advisory Council on Faith-based and Neighborhood Partnerships Council Meetings.

Time and Date: Monday, April 25th, 2016 12:30 p.m.–5 p.m. (EDT) and Tuesday, April 26th, 2016 10 a.m.–1 p.m. (EDT).

Place: Meeting will be held at a location to be determined in the White House complex, 1600 Pennsylvania Ave NW., Washington, DC. Space is extremely limited. Photo ID and RSVP by April 20, 2016 are required to attend the event. Please RSVP to Ben O'Dell at partnerships@hhs.gov.

The meeting will be available to the public through a conference call line. Register to participate in the conference call on Monday, April 25th at the Web site <https://attendee.gotowebinar.com/register/911554886758464772>. Register to participate in the conference call on Tuesday, April 26th at the Web site <https://attendee.gotowebinar.com/register/7807447724588340484>.

Status: Open to the public, limited only by space available. Conference call limited only by lines available.

Purpose: The Council brings together leaders and experts in fields related to the work of faith-based and neighborhood organizations in order to: Identify best practices and successful modes of delivering social services; evaluate the need for improvements in the implementation and coordination of public policies relating to faith-based and other neighborhood organizations; and make recommendations for changes in policies, programs, and practices.

Contact Person for Additional Information: Please contact Ben O'Dell for any additional information about the President's Advisory Council meeting at partnerships@hhs.gov.

Agenda: For April 25th, the agenda will begin with an Opening and Welcome from the Chairperson and Executive Director for the President's Advisory Council for Faith-based and Neighborhood Partnership. Then there will be presentation of any Recommendations for deliberation and vote. For April 26th, there will be presentations of any Recommendations for deliberation and vote after a welcome and opening from the Chairperson and Executive Director for the President's Advisory Council.

Public Comment: There will be an opportunity for public comment at the end of the meeting. Comments and questions can be sent in advance to partnerships@hhs.gov.

Dated: April 4th, 2016.

Ben O'Dell,

Associate Director for Center for Faith-based and Neighborhood Partnerships at U.S. Department of Health and Human Services.

[FR Doc. 2016-08150 Filed 4-7-16; 8:45 am]

BILLING CODE 4154-07-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the National Coordinator for Health Information Technology; Medicare Access and CHIP Reauthorization Act of 2015; Request for Information Regarding Assessing Interoperability for MACRA

AGENCY: Office of the National Coordinator for Health IT (ONC), HHS.

ACTION: Request for information.

SUMMARY: In section 106(b)(1) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, enacted April 16, 2015), Congress declares it a national objective to achieve widespread exchange of health information through interoperable certified electronic health record (EHR) technology nationwide by December 31, 2018. Section 106(b)(1)(C) of the MACRA provides that by July 1, 2016, and in consultation with stakeholders, the Secretary of Health and Human Services (HHS) shall establish metrics to be used to determine if and to the extent this objective has been met.

ONC intends to consider metrics that address the specific populations and aspects of interoperable health information described in section 106(b)(1)(B) of the MACRA. ONC is

issuing this RFI is to solicit input on the following three topics: (1) Measurement population and key components of interoperability that should be measured; (2) current data sources and potential metrics that address section 106(b)(1) of the MACRA; and (3) other data sources and metrics ONC should consider with respect to section 106(b)(1) of the MACRA or interoperability measurement more broadly.

DATES: To be assured consideration, written or electronic comments must be received at one of the addresses provided below, no later than 5 p.m. on June 3, 2016.

ADDRESSES: In commenting, refer to file code ONC xxxx. Because of staff and resource limitations, ONC cannot accept comments by facsimile (FAX) transmission. You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the "Submit a comment" instructions. Attachments should be in Microsoft Word, Microsoft Excel, or Adobe PDF; however, we prefer Microsoft Word.

2. *By regular mail.* Please allow sufficient time for mailed comments to be received before the close of the comment period. You may mail written comments to the following address: Department of Health and Human Services, Office of the National Coordinator for Health Information Technology, Attention, *RFI Regarding Assessing Interoperability for MACRA*, 330 C Street SW., Room 7025A, Washington, DC 20201. Please submit one original and two copies.

3. *By express or overnight mail.* You may send written comments to the following address: Department of Health and Human Services, Office of the National Coordinator for Health Information Technology, Attention, *RFI Regarding Assessing Interoperability for MACRA*, 330 C Street SW., Room 7025A, Washington, DC 20201. Please submit one original and two copies.

4. *By hand or courier.* Alternatively, you may deliver (by hand or courier) your written comments ONLY to the following address: Department of Health and Human Services, Office of the National Coordinator for Health Information Technology, Attention, *RFI Regarding Assessing Interoperability for MACRA*, 330 C Street SW., Room 7025A, Washington, DC 20201.

If you intend to deliver your comments to this address, contact 202-205-8417 in advance to schedule your arrival with one of our staff members.

Comments erroneously mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

Enhancing the Public Comment

Experience: We will make a copy of this document available in Microsoft Word format in order to make it easier for commenters to access and copy portions of the RFI for use in their individual comments. Additionally, a separate document will be made available for the public to use to provide comments. This document is meant to provide the public with a simple and organized way to submit comments and respond to specific questions posed in the RFI. While use of this document is entirely voluntary, we encourage commenters to consider using the document in lieu of unstructured comments or to use it as an addendum to narrative cover pages. We believe that use of the document may facilitate our review and understanding of the comments received. The Microsoft Word version of this RFI and the document that can be used for providing comments can be found on ONC's Web site (<http://www.healthit.gov>).

FOR FURTHER INFORMATION CONTACT:

Talisha Searcy, Office of Policy, Evaluation & Analysis, ONC, 202–205–8417, talisha.searcy@hhs.gov. Vaishali Patel, Office of Policy, Evaluation & Analysis, ONC, 202–603–1239, vaishali.patel@hhs.gov.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period will be available for public inspection, including any personally identifiable or confidential business information that is included in a comment. Please do not include anything in your comment submission that you do not wish to share with the general public. Such information includes, but is not limited to: A person's social security number; date of birth; driver's license number; state identification number or foreign country equivalent; passport number; financial account number; credit or debit card number; any personal health information; or any business information that could be considered to be proprietary. We will post all comments received before the close of the comment period at <http://www.regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection, generally beginning approximately 3 weeks after publication of a document at Office of the National Coordinator for

Health Information Technology, 330 C Street SW., Room 7025A, Washington, DC 20201. Contact Talisha Searcy, listed above, to arrange for inspection.

I. Background

Overview of MACRA Section 106(b)(1)

In section 106(b)(1) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted April 16, 2015), Congress declares it a national objective to achieve widespread exchange of health information through interoperable certified electronic health record (EHR) technology nationwide by December 31, 2018. Section 106(b)(1)(C) of the MACRA provides that by July 1, 2016, and in consultation with stakeholders, the Secretary of Health and Human Services (HHS) shall establish metrics to be used to determine if and to the extent this objective has been met. Section 106(b)(1)(D) of the MACRA provides that if the Secretary determines that this objective has not been achieved by December 31, 2018, then by December 31, 2019 the Secretary shall submit a report to Congress that identifies barriers to this objective and recommends actions that the Federal Government can take to achieve it.

The Secretary of HHS will delegate authority to carry out the provisions of section 106(b)(1) of the MACRA to the Office of the National Coordinator for Health Information Technology (ONC). ONC is committed to advancing interoperability of health information and has developed a roadmap with stakeholder input, entitled *Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap* (Interoperability Roadmap), which lays out the milestones, calls to action and commitments that public and private stakeholders should focus on achieving.^{1 2} The Interoperability Roadmap also specifies that ONC will report on the nation's progress towards interoperability.

ONC is issuing this RFI to solicit input on the following three topics, which are described in the comments section (Section II) of the RFI:

(1) Measurement population and key components of interoperability that should be measured;

¹ *Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap Version 1.0.* <https://www.healthit.gov/policy-researchers-implementers/interoperability>.

² *Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap—Version 1.0, BuzzBlog.* <http://www.healthit.gov/buzz-blog/electronic-health-and-medical-records/interoperability-electronic-health-and-medical-records/connecting-health-care-nation-shared-nationwide-interoperability-roadmap-version-10>.

(2) Current data sources and potential metrics that address section 106(b)(1) of the MACRA; and

(3) Other data sources and metrics ONC should consider with respect to section 106(b)(1) of the MACRA or interoperability measurement more broadly.

II. Solicitation of Comments

Scope of Measurement: Defining Interoperability and Population

In order to establish metrics that will assess whether, and the extent to which, widespread exchange of health information through interoperable certified EHR technology nationwide has occurred, ONC needs to first define the scope of measurement.

Section 106(b)(1)(B) of the MACRA describes key components of interoperability that should be measured and the population that should be the focus of measurement. Section 106(b)(1)(B)(ii) of the MACRA defines interoperability as the ability of two or more health information systems or components to: (1) Exchange clinical and other information and (2) use the information that has been exchanged using common standards to provide access to longitudinal information for health care providers in order to facilitate coordinated care and improve patient outcomes. We believe appropriate metrics should address both of these aspects of interoperability. Section 106(b)(1)(B)(i) of the MACRA defines “widespread interoperability” as interoperability between certified EHR technology systems employed by meaningful EHR users under the Medicare and Medicaid EHR Incentive Programs and other clinicians and health care providers on a nationwide basis.

ONC intends to consider metrics that address the specific populations and aspects of interoperable health information as described above and in section 106(b)(1)(B) of the MACRA. Thus, ONC plans to assess interoperability among “meaningful EHR users” and clinicians and health care providers with whom they exchange clinical and other information—their exchange partners. Note that the exchange partners do not have to be “meaningful EHR users” themselves. Additionally, ONC plans to measure interoperability by identifying measures that relate to both exchange of health information as well as use of information that has been exchanged using common standards. More specifically, ONC seeks to measure the interoperable exchange and use of information by examining the following:

electronically sending; receiving; finding (e.g., request or querying); integrating (e.g., incorporating) information received into a patient's medical record; and the subsequent use of information received electronically from outside sources.

ONC expects that the scope of the metrics established pursuant to section 106(b)(1)(C) of the MACRA will support overarching interoperability measurement. However, ONC recognizes the need to measure interoperability across populations and settings beyond those specified by section 106(b)(1)(B) of the MACRA. The last chapter of the Interoperability Roadmap details ONC's plans for measuring interoperability across a variety of populations and settings, including proposed measures and accompanying timeframes.³

In summary, under section 106(b)(1)(B)(i) of the MACRA, ONC believes the scope of the measurement should be limited to "meaningful EHR users" and their exchange partners. ONC believes this should include eligible professionals, eligible hospitals, and critical access hospitals (CAHs) that attest to meaningful use of certified EHR technology under CMS' Medicare and Medicaid EHR Incentive Programs. ONC would measure interoperability for section 106(b)(1)(B) of the MACRA by assessing the extent to which "meaningful EHR users" are electronically sending, receiving, finding, integrating information that has been received within an EHR, and subsequently using information they receive electronically from outside sources. Thus, this RFI focuses on obtaining input on measures that address these aspects of interoperability for the specified populations. Although this RFI seeks to obtain input on proposed measures that address section 106(b)(1)(B) of the MACRA, ONC also plans to measure interoperability across a variety of settings and populations, as well as barriers to interoperability in order to evaluate progress for the Interoperability Roadmap. ONC is requesting input regarding the provisions of section 106(b)(1) of the MACRA. Below are a specific set of questions related to those provisions.

Questions: We would appreciate comments you may have in response to some or all of the questions below. We also welcome any additional comments related to Section 106(b)(1) of the

MACRA that you may want us to consider.

- Should the focus of measurement be limited to "meaningful EHR users," as defined in this section (e.g., eligible professionals, eligible hospitals, and CAHs that attest to meaningful use of certified EHR technology under CMS' Medicare and Medicaid EHR Incentive Programs), and their exchange partners? Alternatively, should the populations and measures be consistent with how ONC plans to measure interoperability for the assessing progress related to the Interoperability Roadmap? For example, consumers, behavioral health, and long-term care providers are included in the Interoperability Roadmap's plans to measure progress; however, these priority populations for measurement are not specified by section 106(b)(1)(B)(i) of the MACRA.

- How should eligible professionals under the Merit-Based Incentive Payment System (MIPS) and eligible professionals who participate in the alternative payment models (APMs) be addressed? Section 1848(q) of the Social Security Act, as added by section 101(c) of the MACRA, requires the establishment of a Merit-Based Incentive Payment System for MIPS eligible professionals (MIPS eligible professionals).

- ONC seeks to measure various aspects of interoperability (electronically sending, receiving, finding and integrating data from outside sources, and subsequent use of information electronically received from outside sources). Do these aspects of interoperability adequately address both the exchange and use components of section 106(b)(1) of the MACRA?

- Should the focus of measurement be limited to use of certified EHR technology? Alternatively, should we consider measurement of exchange and use outside of certified EHR technology?

ONC's Available Data Sources and Potential Measures

ONC is considering using a combination of the data sources to evaluate interoperability from two different perspectives: (1) By provider, based upon the proportion of "meaningful EHR users" exchanging information with other clinicians and health care providers and subsequently using electronic health information that has been exchanged; and (2) by transactions (e.g., volume of exchange activity), based upon the proportion of care transitions and encounters where information is electronically exchanged and used. ONC's currently available data sources that will enable evaluation from these two perspectives include: (1)

National survey data from key stakeholder organizations and federal entities; and (2) CMS's Medicare and Medicaid EHR Incentive Programs data. We describe these data sources further below.

ONC recognizes that its currently available data sources might not be sufficient to fully measure and determine whether the goal of widespread exchange of health information through interoperable certified EHR technology has been achieved. ONC's currently available data sources are largely limited to eligible professionals, eligible hospitals, and CAHs as defined under the current Medicare and Medicaid EHR Incentive Programs. Therefore, ONC is requesting input on these measures and data sources, and is requesting feedback on additional national data sources which may be available for this purpose.

Measures Based Upon National Survey Data

ONC is considering using nationally representative surveys of hospitals and office-based physicians to evaluate progress related to the interoperable exchange of health information from the health care provider perspective. ONC collaborates with the American Hospital Association (AHA) to conduct the AHA Health IT Supplement Survey and with the National Center for Health Statistics (NCHS) to conduct the National Electronic Health Record Survey of office-based physicians. Both surveys have relatively high response rates and convey health care providers' perspectives on exchange and interoperability (e.g., proportion of health care providers exchanging and subsequently using health information that has been exchanged). The survey measures electronic exchange with "outside" providers not part of their organization. The measures of electronic exchange specifically exclude e-fax, scanned documents or other forms of unstructured data. In addition, multiple years of survey data will be available for both populations, which will support examining trends. However, these self-reported data are subject to potential biases, do not reflect all types of health care providers, and do not report on transaction-based measures of exchange activity.

Using these national survey data, ONC is considering the following measures below for both hospitals and office-based physicians.

- Proportion of health care providers who are electronically sending, receiving, finding, and easily integrating key health information, such as summary of care records. This can be a

³ *Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap Version 1.0.* <https://www.healthit.gov/policy-researchers-implementers/interoperability>.

composite measure (engaging in all four aspects of interoperable exchange) or separate, individual measures.

- Proportion of health care providers who use the information that they electronically receive from outside providers and sources for clinical decision-making.
- Proportion of health care providers who electronically perform reconciliation of clinical information (e.g. medications).

Based upon data collected in 2014, approximately one-fifth of non-federal acute care hospitals electronically sent, received, found (queried) and were able to easily integrate summary of care records into their EHRs.⁴ Similar data for office-based physicians will be available in 2016. Starting in 2015 for hospitals and 2016 for office-based physicians, the surveys will also collect information on the subsequent usage of information that is received from outside sources. These data will be available in 2016 and 2017 for hospitals and office-based physicians, respectively. Given that the response rate of survey items that assess the use of information from outside sources is unknown, an alternative measure to assess downstream use of information that is exchanged relates to reconciliation of clinical information. The reconciliation measure has been available since 2014 for office-based physicians. For hospitals, the survey has assessed capability to electronically conduct reconciliations since 2014; the survey has not assessed whether hospitals have used that functionality. If this measure were to be selected, this new measure would have to be added to the 2016 hospital survey, which would be available in 2017.

ONC could also use data from national surveys to evaluate whether hospitals and office-based physicians are unable to widely share and use health information, and to identify what barriers to interoperable exchange exist. This would provide contextual information regarding whether interoperability is progressing as expected. For example, in 2014, hospitals reported a number of barriers they faced in exchanging and using interoperable health information.⁵

Questions

- Do the survey-based measures described in this section, which focus

on measurement from a health care provider perspective (as opposed to transaction-based approach) adequately address the two components of interoperability (exchange and use) as described in section 106(b)(1) of the MACRA?

- Could office-based physicians serve as adequate proxies for eligible professionals who are “meaningful EHR users” under the Medicare and Medicaid EHR Incentive Programs (e.g. physician assistants practicing in a rural health clinic or federally qualified health center led by the physician assistant)?

- Do national surveys provide the necessary information to determine why electronic health information may not be widely exchanged? Are there other recommended methods that ONC could use to obtain this information?

CMS Medicare and Medicaid EHR Incentive Programs Measures

CMS Medicare and Medicaid EHR Incentive Program data could potentially be a useful data source as it consists of the population and measures aspects of interoperability as described in section 106(b)(1)(B) of the MACRA. However, there are limitations associated with these data for addressing both the exchange and use components of section 106(b)(1) of the MACRA. One primary limitation is that differences exist in how CMS currently receives performance data from each of the Medicare and Medicaid EHR Incentive Programs. Currently, Medicare collects and reports on performance data for each individual eligible professional, eligible hospital, and CAH. However, performance data is not available for each individual Medicaid eligible professional, eligible hospital, or CAH as the Medicaid EHR Incentive Program is operated by the states. Thus, ONC would not be able to evaluate interoperability across individual health care providers or transactions for the Medicaid EHR Incentive Program, unless it obtained these data from each state individually.

Additionally, not all aspects of health information exchange can be measured using the CMS EHR Incentive Programs data. The purpose of this meaningful use objective is to ensure a summary of care record is *sent* to the receiving provider when a patient is transitioning to a new provider. However these data do not assess whether a summary of care record was electronically *received* by the receiving provider.

Based upon CMS EHR Incentive Programs data, ONC is considering the

following measures listed below.⁶ These measures could be used to evaluate the exchange and use aspects of interoperability as described in section 106(b)(1)(B) of the MACRA.

- Proportion of transitions of care or referrals where a summary of care record was created using certified EHR technology and exchanged or transmitted electronically.
- For 2017 and subsequent years, the proportion of transitions or referrals and patient encounters in which the health care provider is the recipient of a transition or referral or has never before encountered the patient, and where the health care provider (e.g., eligible professional, eligible hospital, or CAH) receives, requests or queries for an electronic summary of care document to incorporate into the patient's record.
- Proportion of transitions of care where medication reconciliation is performed.

- For 2017 and subsequent years, the proportion of transitions or referrals received and patient encounters in which the health care provider is the recipient of a transition or referral or has never before encountered the patient, and the health care provider performs clinical information reconciliation for medications, medication allergies, and problem lists.

Reconciliation may include both automated and manual processes to allow the receiving provider to work with both electronic data and with the patient to reconcile their health information. The assumption underlying including this measure is that although some portion of the medication reconciliation processes may be occurring manually, it should be facilitated by the electronic exchange of clinical data, and therefore may serve as an adequate proxy for assessing use of information that is exchanged.⁷

Questions

- Given some of the limitations described above, do these potential measures adequately address the “exchange” component of interoperability required by section 106(b)(1) of the MACRA?

⁶ Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 Through 2017. <https://www.federalregister.gov/articles/2015/10/16/2015-25595/medicare-and-medicicaid-programs-electronic-health-record-incentive-program-stage-3-and-modifications>.

⁷ Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 Through 2017. <https://www.federalregister.gov/articles/2015/10/16/2015-25595/medicare-and-medicicaid-programs-electronic-health-record-incentive-program-stage-3-and-modifications>. See page 62810.

⁴ Charles D. Swain M Patel V. (August 2015) *Interoperability among U.S. Non-federal Acute Care Hospitals*. ONC Data Brief, No. 25 ONC: Washington DC. https://www.healthit.gov/sites/default/files/briefs/nc_databrief25_interoperabilityv16final_081115.pdf.

⁵ Ibid.

- Do the reconciliation-related measures serve as adequate proxies to assess the subsequent use of exchanged information? What alternative, national-level measures (e.g., clinical quality measures) should ONC consider for assessing this specific aspect of interoperability?

- Can state Medicaid agencies share health care provider-level data with CMS similar to how Medicare currently collects and reports on these data in order to report on progress toward widespread health information exchange and use? If not, what are the barriers to doing so? What are some alternatives?

- These proposed measures evaluate interoperability by examining the exchange and subsequent use of that information across encounters or transitions of care rather than across health care providers. Would it also be valuable to develop measures to evaluate progress related to interoperability across health care providers, even if this data source may only be available for eligible professionals under the Medicare EHR Incentive Program?

Identifying Other Data Sources to Measure Interoperability

ONC acknowledges that other data sources might exist that could aid in the measurement of interoperability. For example, other potential data sources are Medicare Fee-For-Service (FFS) claims data as well as performance data from other programs. Section 1848(q)(2)(B) of the Social Security Act, as added by section 101(c) of the MACRA, describes the measures and activities for each of the four performance categories under the Merit-Based Incentive Payment System (MIPS), which includes meaningful use of certified EHR technology. These measures may also serve as a potential data source for assessing progress related to interoperability for MIPS eligible professionals. As the MIPS Program is implemented, ONC will be assessing whether any measures could be used for this purpose. Additionally, some of the information used to evaluate the performance of eligible professionals who participate in the alternative payment models (APMs) may also help inform progress related to interoperability.

Additionally, ONC is considering use of electronically-generated data from certified EHR technology or other systems, such as log-audit data, or leveraging surveys of entities that enable exchange to evaluate progress related to widespread electronic information exchange and use. ONC recognizes this

will require collaboration and coordination with federal entities and stakeholders across the ecosystem including entities that enable exchange and interoperable health information use, such as technology developers, Health Information Organizations (HIOs) and Health Information Service Providers (HISPs).

Overarching Questions

- Should ONC select measures from a single data source for consistency, or should ONC leverage a variety of data sources? If the latter, would a combination of measures from CMS EHR Incentive Programs and national survey data of hospitals and physicians be appropriate?

- What, if any, other measures should ONC consider that are based upon the data sources that have been described in this RFI?

- Are there Medicare claims based measures that have the potential to add unique information that is not available from the combination of the CMS EHR Incentive Programs data and survey data?

- If ONC seeks to limit the number of measures selected, which are the highest priority measures to include?

- What, if any, other national-level data sources should ONC consider? Do technology developers, HISPs, HIOs and other entities that enable exchange have suggestions for national-level data sources that can be leveraged to evaluate interoperability for purposes of section 106(b)(1) of the MACRA (keeping in mind the December 31, 2018 deadline) or for interoperability measurement more broadly?

- How should ONC define “widespread” in quantifiable terms across these measures? Would this be a simple majority, over 50%, or should the threshold be set higher across these measures to be considered “widespread”?

III. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

IV. Response to Comments

ONC typically receives a large public response to its published **Federal Register** documents. ONC will consider all comments received by the date and time specified in the “DATES” section

of this document, but will not be able to acknowledge or respond individually to public comments.

Dated: April 1, 2016.

Karen DeSalvo,

National Coordinator, Office of the National Coordinator for Health Information Technology.

BILLING CODE 4150-45-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Office of the Director, National Institutes of Health; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the meeting of the Council of Councils.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be accessed from the NIH Videocasting and Podcasting Web site (<http://videocast.nih.gov>).

A portion of the meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4), and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Council of Councils.
Open: May 20, 2016.

Time: 8:15 a.m. to 11:15 a.m.

Agenda: Call to Order and Introductions; Announcements; NIH Update; Undiagnosed Disease Network; Introduction to Zika Virus; Nonhuman Primate Models in Zika Virus; Introduction of and Updates from NHGRI.

Place: National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

Closed: May 20, 2016.

Time: 11:45 a.m. to 2:00 p.m.

Agenda: Review of grant applications.

Place: National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

Open: May 20, 2016.

Time: 2:00 p.m. to 4:10 p.m.

Agenda: Update on Awards for the NIH Precision Medicine Initiative Cohort Program; Council Input in the Office of Behavioral and Social Sciences Research Strategic Plan; Update on Common Fund Program; and Closing Remarks.

Place: National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

Contact Person: Franziska Grieder, DVM, Ph.D., Executive Secretary, Director, Office of Research Infrastructure Programs, Division of Program Coordination, Planning, and Strategic Initiatives, Office of the Director, NIH, 6701 Democracy Boulevard, Room 948, Bethesda, MD 20892, GriederF@mail.nih.gov, 301-435-0744.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NIH campus. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Council of Council's home page at <http://dpcpsi.nih.gov/council/> where an agenda will be posted before the meeting date.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Office of the Director; Notice of Charter Renewal

In accordance with Title 41 of the U.S. Code of Federal Regulations, Section 102-3.65(a), notice is hereby given that the Charter for the National

Science Advisory Board for Biosecurity was renewed for an additional two-year period on April 7, 2016.

It is determined that the National Science Advisory Board for Biosecurity is in the public interest in connection with the performance of duties imposed on the National Institutes of Health by law, and that these duties can best be performed through the advice and counsel of this group.

Inquiries may be directed to Jennifer Spaeth, Director, Office of Federal Advisory Committee Policy, Office of the Director, National Institutes of Health, 6701 Democracy Boulevard, Suite 1000, Bethesda, Maryland 20892 (Mail code 4875), Telephone (301) 496-2123, or spaethj@od.nih.gov.

Dated: April 4, 2016.

Jennifer Spaeth,

Director, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****Center for Scientific Review; Notice of Closed Meetings**

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****National Institute of Mental Health; Notice of Closed Meetings**

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****Prospective Grant of Start-up Exclusive License: Therapeutics and PMA-Approved Diagnostics for Alzheimer's Disease (intranasal delivery), Parkinson's Disease, Neuropathy, Neuropathic Pain, Peripheral Neuropathy, Diabetic Neuropathy, Neurapraxia, Axonotmesis and Neurotmesis**

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209 and 37 CFR part 404, that the National Institute of Neurological Disorders and Stroke (NINDS), National Institutes of Health (NIH), Department of Health and Human Services, is contemplating the grant of a start-up exclusive license to AestasRx Inc., which is located in North Carolina, to practice the inventions embodied in the following patents: U.S. Patent 8,597,660, issued December 3, 2013 (HHS reference E-144-2010/0-US-02).

The patent rights in these inventions have been assigned to the United States of America. The prospective start-up exclusive license territory may be worldwide and the field of use may be limited to therapeutics (including small-molecule TFP5 mimetics) and PMA-approved diagnostics for Alzheimer's disease (intranasal delivery only), Parkinson's Disease, neuropathy, neuropathic pain, peripheral neuropathy, diabetic neuropathy, neurapraxia, axonotmesis and neurotmesis.

DATES: Only written comments and/or applications for a license which are received by NINDS Technology Transfer on or before April 25, 2016 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, comments, and other materials relating to the contemplated start-up exclusive license should be directed to: Susan Ano, Ph.D., NINDS Technology Transfer, 31 Center Drive, Suite 8A52, MSC2540, Bethesda, MD 20892; Telephone: (301) 435-5515; Email: anos@mail.nih.gov.

SUPPLEMENTARY INFORMATION: This invention discloses treating neurodegenerative diseases by administering cyclin dependent kinase 5 (Cdk5) inhibitory peptides derived from P35, the activator of Cdk5. Abnormally hyperactive Cdk5 has been shown to be associated with a variety of

neurodegenerative disorders. This invention describes isolated peptide fragments, pharmaceutical compositions and methods for use of such for treating subjects with a neurodegenerative disease, such as Alzheimer's disease (AD), Amyotrophic Lateral Sclerosis (ALS) and Parkinson's disease (PD). An inhibitory fragment, TFP5, disclosed in this invention, has been shown to ameliorate symptoms of AD in disease animal models without any evidence of toxicity. In particular, TFP5 treatment of rat cortical neurons reduced hyperactivation of Cdk5 upon neuronal stress and insults. Following intraperitoneal (ip) injection, TFP5 was capable of crossing the blood-brain barrier and localizing within the brain where it was found to rescue memory deficits and pathology in a double transgenic mouse (APP/PS1) AD model.

The prospective start-up exclusive license may be granted unless within fifteen (15) days from the date of this published notice, the NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the field of use filed in response to this notice will be treated as objections to the grant of the contemplated start-up exclusive license. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: April 4, 2016.

Susan Ano,

*Technology Development Coordinator,
NINDS Technology Transfer, National
Institutes of Health.*

[FR Doc. 2016-08097 Filed 4-7-16; 8:45 am]

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****Cooperative Research and Development Agreement (CRADA) Opportunity for Development of an Assay To Detect Genetic Markers Related to Elevated Serum Tryptase in Familial Tryptasemia and Mast Cell Activation Disorders**

ACTION: Notice.

SUMMARY: The National Institute of Allergy and Infectious Diseases (NIAID), a component of the National Institutes

of Health (NIH), Department of Health and Human Services (HHS) seeks to enter into a CRADA with a commercial partner to collaborate on the development and commercialization of an assay to detect a genetic variation related to mast cell activation disorders.

DATES: Interested CRADA collaborators must submit a confidential proposal summary to the NIAID (attention Amy F. Petrik at the address below) on or before 8 June 2016 for consideration. Guidelines for preparing full CRADA proposals will be communicated shortly thereafter to all respondents with whom initial confidential discussions will have established sufficient mutual interest. CRADA proposals submitted thereafter may be considered if a suitable CRADA collaborator has not been selected.

ADDRESSES: Questions should be addressed to Amy F. Petrik, Ph.D., Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases, 5601 Fishers Lane, Suite 6D, Rockville, MD 20892-9804, Tel: (240) 627-3721 or email: petrika@niaid.nih.gov.

SUPPLEMENTARY INFORMATION:

Approximately 4-6% of the general Western population exhibit elevated basal levels of serum tryptase. As a mast cell mediator, tryptase is expected to be transiently elevated following allergic stimuli. Sustained elevation of serum tryptase levels can be associated with symptoms of mast cell mediator release (such as flushing, itching and swelling), neuropsychiatric symptoms (such as chronic pain, anxiety and dysautonomia) and gastrointestinal (GI) symptoms (including functional GI disorders like irritable bowel syndrome as well as eosinophilic GI disease) as well as an increased risk for systemic anaphylaxis.

The NIAID Investigators have recently reported that these symptomatic tryptase elevations can be inherited in an autosomal dominant fashion and are associated with the phenotype described above (Lyons, J.J., et al. J Allergy Clin Immunol, 133 (2014), pp. 1471-1474). Through next generation sequencing and linkage analysis the NIAID Investigators identified a structural variant cosegregating with disease. They then developed an assay, based on digital droplet PCR, to identify individuals with this variant, and estimate that 5-8% of Caucasians may have it, and be at risk for being symptomatic.

Under the CRADA, the assay will be developed toward licensure. Due to the relatively high prevalence of serum tryptase elevation, NIAID Investigators

anticipate receiving a large number of samples for analysis which would exceed their capacity. A collaborator with the expertise and capacity for implementing a CLIA or FDA approved test for this genetic variant is sought.

A Cooperative Research and Development Agreement (CRADA) is the anticipated collaborative agreement to be entered into with NIAID pursuant to the Federal Technology Transfer Act of 1986, codified as 15 U.S.C. 3710a, and Executive Order 12591 of April 10, 1987, as amended. A CRADA is an agreement designed to enable certain collaborations between Government laboratories and non-Government laboratories. A CRADA is not a grant, and it is not a contract for the procurement of goods/services. The NIAID is prohibited from transferring funds to a CRADA collaborator. Under a CRADA, NIAID can contribute facilities, staff, materials, and expertise. The CRADA collaborator can contribute facilities, staff, materials, expertise, and funds. The CRADA collaborator will also have an option to negotiate the terms of an exclusive or non-exclusive commercialization license to subject inventions arising under the CRADA. The goals of the CRADA include the rapid publication of research results and timely commercialization of products, diagnostics, and treatments that result from the research.

The expected duration of the CRADA with be two (2) to three (3) years.

Dated: April 2, 2016.

Suzanne Frisbie,

Deputy Director, Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Submission for OMB Review; 30-Day Comment Request; The Framingham Heart Study (NHLBI)

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on 12/31/2015, pages 81830–81832. No comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Heart, Lung and Blood Institute (NHLBI), National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after

October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202-395-6974, Attention: NIH Desk Officer.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30-days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact: Ms. Deshree Belis, National Heart, Lung, and Blood Institute, National Institutes of Health, 6705 Rockledge Dr., Suite 6185A, Bethesda, MD 20892, or call non-toll-free number 301-435-1032, or Email your request, including your address to deshree.belis@nih.gov. Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: The Framingham Heart Study, 0925-0216, Revision, National Heart, Lung, and Blood Institute (NHLBI), the National Institutes of Health (NIH).

Need and Use of Information Collection: This proposal is to extend the Framingham Study to examine the Generation Three Cohort, New Offspring Spouses and Omni Group 2 Cohort, as well as to continue to monitor the morbidity and mortality which occurs in all Framingham Cohorts. The contractor, with the collaborative assistance of NHLBI Intramural staff, will invite study participants, schedule appointments, administer examinations and testing, enter information into computer databases for editing, and prepare scientific reports of the information for publication in appropriate scientific journals. All participants have been examined previously and thus the study deals with a stable, carefully described group. Data are collected in the form of an observational health examination involving such components as blood pressure measurements, venipuncture, electrocardiography and a health interview, including questions about lifestyles and daily living situations. The National Heart, Lung, and Blood Institute uses the results of the Framingham Study to: (1) Characterize risk factors for cardiovascular and lung

diseases so that national prevention programs can be designed and implemented; (2) evaluate trends in cardiovascular diseases and risk factors over time to measure the impact of overall preventive measures; and (3) understand the etiology of

cardiovascular and lung diseases so that effective treatment and preventive modalities can be developed and tested. Most of the reports of study results have been published in peer reviewed medical journals and books.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 8,382.

Estimated Annualized Burden Hours

TABLE A.12–1.1—ESTIMATE OF RESPONDENT BURDEN, ORIGINAL COHORT ANNUALIZED

| Type of respondent | Number of respondents | Number of responses per respondent | Average time per response (in hours) | Total annual burden hour |

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2016–0002]

Final Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final notice.

SUMMARY: Flood hazard determinations, which may include additions or modifications of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or regulatory floodways on the Flood Insurance Rate Maps (FIRMs) and where applicable, in the supporting Flood Insurance Study (FIS) reports

have been made final for the communities listed in the table below.

The FIRM and FIS report are the basis of the floodplain management measures that a community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the Federal Emergency Management Agency's (FEMA's) National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report are used by insurance agents and others to calculate appropriate flood insurance premium rates for buildings and the contents of those buildings.

DATES: The effective date of July 6, 2016 which has been established for the FIRM and, where applicable, the supporting FIS report showing the new or modified flood hazard information for each community.

ADDRESSES: The FIRM, and if applicable, the FIS report containing the final flood hazard information for each community is available for inspection at the respective Community Map Repository address listed in the tables below and will be available online through the FEMA Map Service Center

at www.msc.fema.gov by the effective date indicated above.

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) Luis.Rodriguez3@fema.dhs.gov; or visit the FEMA Map Information eXchange (FMIX) online at www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final determinations listed below for the new or modified flood hazard information for each community listed. Notification of these changes has been published in newspapers of local circulation and 90 days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

This final notice is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67.

FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the new or revised FIRM and FIS report available at the address cited below for

each community or online through the FEMA Map Service Center at www.msc.fema.gov.

The flood hazard determinations are made final in the watersheds and/or communities listed in the table below.

(Catalog of Federal Domestic Assistance No. 97.022, "Flood Insurance.")

Dated: March 20, 2016.

Roy E. Wright,

Deputy Associate Administrator for Insurance and Mitigation, Department of Homeland Security, Federal Emergency Management Agency.

BILLING CODE 9110-12-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5907-N-15]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402-3970; TTY number for the hearing- and speech-impaired (202) 708-2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800-927-7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless v. Veterans Administration*, No. 88-2503-OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies,

and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B-17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301)-443-2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the

determination of unsuitability should call the toll free information line at 1-800-927-7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.*, acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685-9426; (This is not a toll-free number).

Dated: March 30, 2016.

DEPARTMENT OF THE INTERIOR**Fish and Wildlife Service**

[Docket No. FWS-HQ-IA-2016-0058;
FXIA16710900000-156-FF09A30000]

Endangered Species; Receipt of Applications for Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications for permit.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications to conduct certain activities with endangered species. With some exceptions, the Endangered Species Act (ESA) prohibits activities with listed species unless Federal authorization is acquired that allows such activities.

DATES: We must receive comments or requests for documents on or before May 9, 2016.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments on Docket No. FWS-HQ-IA-2016-0058.

- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: Docket No. FWS-HQ-IA-2016-0058; U.S. Fish and Wildlife Service Headquarters, MS: BPHC; 5275 Leesburg Pike, Falls Church, VA 22041-3803.

When submitting comments, please indicate the name of the applicant and the PRT# you are commenting on. We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see the Public Comments section below for more information). *Viewing Comments:* Comments and materials we receive will be available for public inspection on <http://www.regulations.gov>, or by appointment, between 8 a.m. and 4 p.m., Monday through Friday, except Federal holidays, at the U.S. Fish and Wildlife Service, Division of Management Authority, 5275 Leesburg Pike, Falls Church, VA 22041-3803; telephone 703-358-2095.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358-2104 (telephone); (703) 358-2281 (fax); DMAFR@fws.gov (email).

SUPPLEMENTARY INFORMATION:**I. Public Comment Procedures***A. How do I request copies of applications or comment on submitted applications?*

Send your request for copies of applications or comments and materials concerning any of the applications to the contact listed under **ADDRESSES**. Please include the **Federal Register** notice publication date, the PRT-number, and the name of the applicant in your request or submission. We will not consider requests or comments sent to an email or address not listed under **ADDRESSES**. If you provide an email address in your request for copies of applications, we will attempt to respond to your request electronically.

Please make your requests or comments as specific as possible. Please confine your comments to issues for which we seek comments in this notice, and explain the basis for your comments. Include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) Those that include citations to, and analyses of, the applicable laws and regulations. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**) or comments delivered to an address other than those listed above (see **ADDRESSES**).

B. May I review comments submitted by others?

Comments, including names and street addresses of respondents, will be available for public review at the street address listed under **ADDRESSES**. The public may review documents and other information applicants have sent in support of the application unless our allowing viewing would violate the Privacy Act or Freedom of Information Act. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

To help us carry out our conservation responsibilities for affected species, and

in consideration of section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), along with Executive Order 13576, “Delivering an Efficient, Effective, and Accountable Government,” and the President’s Memorandum for the Heads of Executive Departments and Agencies of January 21, 2009—Transparency and Open Government (74 FR 4685; January 26, 2009), which call on all Federal agencies to promote openness and transparency in Government by disclosing information to the public, we invite public comment on these permit applications before final action is taken.

III. Permit Applications*Endangered Species*

Applicant: Bhagavan Antle, Myrtle Beach, SC; PRT-71654B

On September 30, 2015, we published a **Federal Register** notice inviting the public to comment on an application for a permit to conduct certain activities with endangered species (80 FR 58768). We are now reopening the comment period to allow the public the opportunity to review additional information submitted for their permit to export 18 captive-born tigers (*Panthera tigris*) for the purpose of enhancement of the survival of the species to Cancun, Puerto Morelos, Quintana Roo, Mexico.

Applicant: University of Washington, Seattle, WA; PRT-80987B

The applicant requests a permit to import biological samples from black rhinoceros (*Diceros bicornis*) collected in the wild in South Africa, for the purpose of scientific research.

Applicant: Wade Harrell, Whooping Crane Recovery Plan Coordinator, U.S. Fish and Wildlife Service, Region 2, Austwell, TX; PRT-013808

The applicant requests renewal of a permit to import captive-bred/captive-hatched and wild live specimens, captive-bred/wild-collected viable eggs, biological samples, and salvaged materials from captive-bred/wild specimens of whooping cranes (*Grus americana*) from Canada, for completion of identified tasks and objectives mandated under the Service Whooping Crane Recovery Plan. Salvage materials may include, but are not limited to, whole or partial specimens, feathers, eggs and egg shell fragments. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Peter Stein, South Windsor, CT; PRT-165944

The applicant requests amendment of their captive-bred wildlife registration under 50 CFR 17.21(g) for the following species: Spotted pond turtle (*Geoclemys hamiltonii*), Bolson tortoise (*Gopherus flavomarginatus*), yellow-spotted river turtle (*Podocnemis unifilis*), and aquatic box turtle (*Terrapene coahuila*) to enhance the species' propagation or survival. The notification covers activities to be conducted by the applicant over the remainder of the 5-year period for which the permit would be valid.

Applicant: Claws "N" Paws Wild Animal Park, Lake Ariel, PA; PRT-66990B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species to enhance species propagation or survival: Lar gibbon (*Hylobates lar*), ring-tailed lemur (*Lemur catta*), black and white ruffed lemur (*Varecia variegata variegata*), snow leopard (*Uncia uncia*), leopard (*Panthera pardus*), and cottontop tamarin (*Saguinus Oedipus*). This notification covers activities to be conducted by the applicant over a 5-year period.

Multiple Applicants

The following applicants each request a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Aubrey Beacham, Gulfport, MS; PRT-91319B

Applicant: Wayne Catto, Gahanna, OH; PRT-91923B

Applicant: Roger Hooten, Emory, TX; PRT-92092B

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

BILLING CODE 4333-15-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLNVS00000 L58530000.ER0000 241A; N-94234; 10-08807; MO #4500090193; TAS:14X5232]

Notice of Realty Action: Classification for Lease and Subsequent Conveyance for Recreation and Public Purposes of Public Lands (N-94234) for a Park in the Southwest Portion of the Las Vegas Valley, Clark County, NV

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Land Management (BLM) has examined and found suitable for classification for lease and subsequent conveyance under the provisions of the Taylor Grazing Act and the Recreation and Public Purposes (R&PP) Act, as amended, approximately 15 acres of public land in the Las Vegas Valley, Clark County, Nevada. Clark County proposes to use the land for a community park. The 15-acre park will help meet future expanding needs in the southwestern part of Las Vegas Valley.

DATES: Interested parties may submit written comments regarding the proposed classification for lease and conveyance of the land until May 23, 2016.

ADDRESSES: Mail written comments to the BLM Field Manager, Las Vegas Field Office, 4701 N. Torrey Pines Drive, Las Vegas, Nevada 89130.

FOR FURTHER INFORMATION CONTACT: Luis Rodriguez, (702) 515-5069, email: lrodriguez@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The parcel of land is located southwest of the intersection of Wigwam Avenue and Torrey Pines Drive and is legally described as:

Mount Diablo Meridian, Nevada

T. 22 S., R. 60 E.,
Sec. 14, NW $\frac{1}{4}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$ and
E $\frac{1}{2}$ NE $\frac{1}{4}$ NW $\frac{1}{4}$ SW $\frac{1}{4}$.

The area described contains 15 acres, more or less, in Clark County.

In accordance with the R&PP Act, Clark County has filed an application to develop the above-described land as a community park with covered play

structures, restrooms, parking, picnic pavilions, open turf areas, walking path, basketball courts, landscaping, lighting signage, and other ancillary amenities. Additional detailed information pertaining to this application, plan of development, and site plan is located in case file N-94234, which is available for review at the BLM Las Vegas Field Office at the above address.

Clark County is a political subdivision of the State of Nevada; and is therefore, a qualified applicant under the R&PP Act.

Subject to limitations prescribed by law and regulation, prior to patent issuance, the holder of any right-of-way grant within the lease area may be given the opportunity to amend the right-of-way grant for conversion to a new term, including perpetuity, if applicable.

The land identified is not needed for any Federal purpose. The lease and/or conveyance is consistent with the BLM Las Vegas Resource Management Plan dated October 5, 1998, and would be in the public interest. Clark County has not applied for more than the 640-acre limitation for public purpose uses in a year and has submitted a statement in compliance with the regulations at 43 CFR 2741.4(b).

The lease and conveyance, when issued, will be subject to the provisions of the R&PP Act and applicable regulations of the Secretary of the Interior, and will contain the following reservations to the United States:

1. A right-of-way thereon for ditches or canals constructed by the authority of the United States, Act of August 30, 1890 (43 U.S.C. 945); and

2. All minerals shall be reserved to the United States, together with the right to prospect for, mine, and remove such deposits from the same under applicable law and such regulations as the Secretary of the Interior may prescribe.

Any lease and conveyance will also be subject to valid existing rights, will contain any terms or conditions required by law (including, but not limited to, any terms or conditions required by 43 CFR 2741.4), and will contain an appropriate indemnification clause protecting the United States from claims arising out of the lessee's/patentee's use, occupancy, or operations on the leased/patented lands. It will also contain any other terms and conditions deemed necessary and appropriate by the Authorized Officer.

Any lease and conveyance will also be subject to all valid and existing rights.

Upon publication of this notice in the **Federal Register**, the land described above will be segregated from all other

forms of appropriation under the public land laws, including the general mining laws, except for lease and conveyance under the R&PP Act, leasing under the mineral leasing laws, and disposals under the mineral material disposal laws.

Interested parties may submit written comments on the suitability of the land for a public park in the Enterprise area. Comments on the classification are restricted to whether the land is physically suited for the proposal, whether the use will maximize the future use or uses of the land, whether the use is consistent with local planning and zoning, or if the use is consistent with State and Federal programs. Interested parties may also submit written comments regarding the specific use proposed in the application and plan of development, and whether the BLM followed proper administrative procedures in reaching the decision to lease and convey under the R&PP Act.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. Only written comments submitted to the Field Manager, BLM Las Vegas Field Office, will be considered properly filed. Any adverse comments will be reviewed by the BLM Nevada State Director, who may sustain, vacate, or modify this realty action.

In the absence of any adverse comments, the decision will become effective on June 7, 2016. The lands will not be available for lease and conveyance until after the decision becomes effective.

Authority: 43 CFR 2741.5.

Frederick Marcell,

Acting Assistant Field Manager, Division of Lands, Las Vegas Field Office.

BILLING CODE 4310-HC-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[15X LLUTG01100 L13110000.EJ0000 24 1A]

Notice of Intent To Prepare an Environmental Impact Statement for the Crescent Point Energy Utah Federal-Tribal Well Development Project, Duchesne and Uintah Counties, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Intent.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM), Vernal Field Office, Vernal, Utah, intends to prepare an Environmental Impact Statement (EIS) for the Utah Federal-Tribal Well Development proposal submitted by Crescent Point Energy. By this notice the BLM is also announcing the beginning of the scoping process and is soliciting public comments on the issues to be analyzed in the EIS.

DATES: This notice initiates a public scoping process for the EIS. Comments on issues may be submitted in writing for 30 days following the publication of this notice. The date(s) and location(s) of any public scoping meetings will be announced at least 15 days in advance through local news media, a project newsletter, and the BLM Web site at: <http://www.blm.gov/ut/st/en/info/newsroom.2.html>. In order to be included in the draft EIS, all comments must be received prior to the close of the 30-day scoping period or 15 days after the last public meeting, whichever is later. Additional opportunities for public participation will be provided upon publication of the Draft EIS.

ADDRESSES: Comments on issues related to the Crescent Point Energy Utah Federal-Tribal Well Development Project may be submitted by any of the following methods:

- **Email:** UT_Vernal_Comments@blm.gov.
- **Fax:** (435) 781-4410.
- **Mail:** 170 South 500 East, Vernal, Utah 84078.
- **BLM NEPA Register:** https://eplanning.blm.gov/epl-front-office/eplanning/nepa/nepa_register.do (go to the "text" tab, enter the following search criteria "Utah," "UT—Vernal FO," and "EIS").

Documents pertinent to this proposal may be examined at the Vernal Field Office.

FOR FURTHER INFORMATION CONTACT:

Stephanie Howard, BLM Project Manager; telephone at 435-781-4469; email showard@blm.gov. Contact Stephanie Howard to have your name added to our mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to leave a message or question for the above individual. The FIRS is available 24 hours a day, 7 days a week. Replies are provided during normal business hours.

SUPPLEMENTARY INFORMATION: The applicant, Crescent Point Energy U.S. Corp., has filed a plan of development for their Federal, State, private, and tribal trust leases. Crescent Point proposes to drill up to 3,925 new oil and gas wells and build 863 miles of roads; 693 miles of pipelines co-located with the proposed roads; 170 miles of cross-country pipelines; 400 miles of trunk pipelines; 5 salt water disposal wells; 5 produced water treatment facilities; 20 central tank batteries; 4 gas processing plants; 8 oil storage areas; and, 4 equipment storage areas. These activities would occur on Federal-, tribal trust-, allottee-, State-, and privately-owned or administered lands. The project area is located within Duchesne and Uintah counties. It encompasses lands from 1 mile east of Myton, Utah, to 1 mile west of Highway 45. It is directly south of Roosevelt and Ballard cities, Utah, and north of the Ouray Wildlife Refuge. It encompasses:

Salt Lake Meridian, Utah

T. 5 S., R. 19 E.,
Tps. 6 and 7 S., Rs. 19 thru 22 E.,
T. 8 S., R. 20 E.

Uintah Special Meridian, Utah

T. 3 S., R. 1 W.,
Tps. 3 S., Rs. 1 and 2 E.,
Tps. 4 S., Rs. 2 and 3 E.

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives and mitigation, and to guide the process for developing the EIS. At present, the BLM has identified the following resources as potentially being impacted by the project: Air quality and air-related values; surface water and groundwater resources including floodplains, wetlands, the Dry Gulch Creek, Pelican Lake, and the Green, Uinta, and Duchesne Rivers; cultural and paleontological resources; soils; special status plant and animal species; greater sage-grouse habitat; livestock grazing; recreation; the Pelican Lake Special Recreation Management Area; residences and residential areas; local

and regional social programs and economics; and environmental justice considerations.

Alternatives identified at this time include the proposed action and the no action alternatives. Additional alternatives and mitigation will be developed as a result of issues and concerns identified through the scoping process. The BLM will identify and analyze impacts to resources that could be expected to occur from the approval of this project, and the BLM will consider potential mitigation measures to address those impacts, where available. Mitigation may include avoidance, minimization, rectification, reduction or elimination over time, and compensatory mitigation; and may be considered at multiple scales, including the landscape scale.

The BLM-Vernal Field Office Record of Decision and Approved Resource Management Plan (RMP) (October 2008), as amended (September 2015), directs management of the BLM-administered public lands within the project area. The RMP provides for development of valid existing oil and gas leases. An amendment of the RMP is not required in connection with this project.

The BLM is the designated lead Federal agency for preparation of the EIS as defined in 40 CFR 1501.5. Agencies with legal jurisdiction or special expertise have been invited to participate as cooperating agencies in preparation of the EIS. These include: Ballard City; Myton City; Roosevelt City; Duchesne County; Uintah County; Utah School and Institutional Trust Lands Administration; Utah Public Lands Policy and Coordination Office; Ute Indian Tribe; United States (U.S.) Environmental Protection Agency Region 8; U.S. Fish and Wildlife Service Utah Field Office; U.S. Army Corps of Engineers Utah/Nevada Regulatory Office; Bureau of Reclamation Provo Area Office; Bureau of Indian Affairs Uintah and Ouray Agency; Utah Reclamation Mitigation and Conservation Commission; and, the Ouray Wildlife Refuge.

The BLM will use and coordinate the NEPA commenting process to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470f) as provided for in 36 CFR 800.2(d)(3). The BLM will consult with Indian tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration.

Comments regarding issues, alternatives, scope, mitigation, or other concerns or ideas may be submitted in writing to the BLM at any public scoping meeting, or you may submit them to the BLM using one of the methods listed in the **ADDRESSES** section above. To be most helpful, comments should be submitted by the end of the public scoping period (within 30 days from the BLM's publication in the **Federal Register**). Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1501.7

Jenna Whitlock,

Acting State Director.

BILLING CODE 4310-DQ-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLWYD09000.L14400000.FR0000; WYW-171474]

Notice of Realty Action: Recreation and Public Purposes Act Classification of Public Lands in Uinta County, WY

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Land Management (BLM) has examined and found suitable for classification for conveyance under the provisions of the Recreation and Public Purposes Act (R&PP), as amended, approximately 10 acres of public land in Uinta County, Wyoming. Uinta County, Wyoming, proposes to use the land for an expansion of the Bridger Valley Landfill for a municipal solid waste transfer station.

DATES: Interested parties may submit comments regarding the proposed conveyance or classification of the lands until May 23, 2016.

ADDRESSES: You may submit comments by any of the following methods:

- **Mail:** Field Manager, Kemmerer Field Office, 430 North Highway 189, Kemmerer, WY 83101.

- **Email:** Kemmerer.WYMail@blm.gov with "Uinta County R&PP" in the subject line.

Documents pertinent to this proposal may be examined at the Kemmerer Field Office at the above address.

FOR FURTHER INFORMATION CONTACT:

Kelly Lamborn, Realty Specialist, BLM Kemmerer Field Office, 430 North Highway 189, Kemmerer, WY 83101; telephone 307-828-4505; email klamborn@blm.gov. Persons who use a telecommunications device for the deaf may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: In accordance with Section 7 of the Taylor Grazing Act (43 U.S.C. 3150), and Executive Order No. 6910, the following described public land in Uinta County, Wyoming, has been examined and found suitable for classification for conveyance under the provisions of the R&PP, as amended (43 U.S.C. 869 *et seq.*):

Sixth Principal Meridian, Wyoming

T. 16 N., R. 115 W.,
Sec. 10, N $\frac{1}{2}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$,
N $\frac{1}{2}$ NW $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$.

The land described contains 10 acres in Uinta County, Wyoming, according to the official plat of the survey of the said land, on file with the BLM.

In accordance with the R&PP, Uinta County filed an application to purchase the above described 10 acres of public land to be developed as a municipal solid waste transfer station, as an expansion of the existing Bridger Valley Landfill. Additional detailed information pertaining to this application, plan of development, and site plan is in case file WYW-171474, located in the BLM Kemmerer Field Office at the above address.

The conveyance is consistent with the Kemmerer Resource Management Plan (RMP) dated May 2010, as amended by the Approved RMP Amendments for the Rocky Mountain Region (ARMPA) approved September 22, 2015. The proposal is consistent with the objectives, goals, and decision of the 2010 BLM Kemmerer RMP, and would be in the public interest. The ARMPA Management Decision, LR 7, allows for lands within general habitat management areas to be disposed of, as long as the action is consistent with the goals and objectives of the plan, including, but not limited to, the RMP

goal to conserve, recover, and enhance sage-grouse habitat on a landscape scale.

The parcel of land is not required for any other Federal purposes and does not contain other known public values. The patent will include an appropriate indemnification claim protecting the United States from claims arising out of the patentee's use occupancy or occupations on the patented lands. The BLM will retain all mineral rights.

Upon publication of this notice in the **Federal Register**, the lands will be segregated from all forms of appropriation under the public land laws, including the general mining laws, except for conveyance under the R&PP, leasing under the mineral leasing laws, and disposals under the mineral material disposal laws. This segregative effect will end upon issuance of the patent, publication in the **Federal Register** of a termination of the segregation, or April 9, 2018, unless extended by the BLM State Director in accordance with 43 CFR 2711.1-2(d) prior to the termination date.

The patent, if issued, will be subject to the provisions of the R&PP and applicable regulations of the Secretary of the Interior, and will contain the following reservations to the United States:

1. All minerals, together with the right to prospect for, mine, and remove such deposits from the same under applicable law and such regulations as the Secretary of the Interior may prescribe;

2. A right-of-way thereon for ditches or canals constructed by the authority of the United States pursuant to the Act of August 30, 1890, (43 U.S.C. 945); and

3. All valid existing rights of record, including those documented on the official public land records at the time of patent issuance.

4. An appropriate indemnification clause protecting the United States from claims arising out of the patentee's use, occupancy, or operations on the patented lands.

5. No portion of the land shall under any circumstance revert to the United States if any such portion has been used for solid waste disposal or for any other purpose which may result in the disposal, placement, or release of any hazardous substance.

Detailed information concerning these actions is available for review at the address above during normal business hours, 7:45 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

Interested parties may submit comments involving the suitability of the lands for a municipal solid waste transfer station. Classification comments are restricted to whether the land is

physically suitable for the proposal, whether the use will maximize the future use or uses of the land, whether the use is consistent with local planning and zoning, or if the use is consistent with State and Federal programs.

Interested parties may submit comments regarding the conveyance and specific uses proposed in the application and plan of development, whether the BLM followed proper administrative procedures in reaching the decision to convey under the R&PP, or any other factor not directly related to the suitability of the land for R&PP use.

Interested parties may submit written comments to the BLM Kemmerer Field Manager at the address above. Comments, including names and street addresses of respondents, will be available for public review at the BLM Kemmerer Field Office during regular business hours.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Any adverse comments will be reviewed by the State Director, who may sustain, vacate, or modify this realty action. In the absence of timely filed objections, the classification of the land described in this notice will become effective June 7, 2016. The lands will not be available for conveyance until after the classification becomes effective.

Authority: 43 CFR 2741.5(h).

Brian W. Davis,

Acting State Director, Wyoming.

Notice of Availability of the Final Programmatic Environmental Impact Statement To Evaluate the Use of Herbicides on Public Lands Administered by the Bureau of Land Management

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: Pursuant to the National Environmental Policy Act of 1969, the BLM is making available for public review and comment the Final National Programmatic Environmental Impact Statement (EIS) on vegetation treatments involving the use of aminopyralid, fluroxypyr, and rimsulfuron herbicides on public lands administered by 11 BLM state offices in 17 western states, including Alaska. The BLM is the lead Federal agency for the preparation of this final Programmatic EIS in compliance with the requirements of NEPA. If a Record of Decision is approved, the BLM would be permitted to use three new herbicide formulations on public lands.

DATES: The BLM will not issue a final decision on the proposal for a minimum of 30 days after the date that the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**.

ADDRESSES: The Final Programmatic EIS and associated documents will be available for review in either hard copy or on compact disks at all BLM State, District, and Field Office public rooms. You can also review or download the document from the BLM Web site: <http://blm.gov/3vkd>.

FOR FURTHER INFORMATION CONTACT: Gina Ramos, Senior Weeds Specialist, telephone 202-912-7226, or Stuart Paulus, Project Manager, telephone 206-403-4287. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the referenced individuals during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individuals. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Final National Programmatic EIS proposes to add aminopyralid, fluroxypyr, and rimsulfuron to the BLM's approved list of herbicides for: (1) Controlling noxious weeds and other invasive species; and (2) Conserving and restoring native vegetation, watersheds, and fish and wildlife habitat. The Programmatic EIS evaluated the use of the three new herbicides as part of the BLM's vegetation treatment programs on public lands in 17 Western States. This action would increase the number of active ingredients approved for use, and would give the BLM increased flexibility and options when designing herbicide treatments. The Programmatic EIS is neither a land-use plan nor a

land-use plan amendment. The Programmatic EIS will provide a comprehensive programmatic NEPA document to allow effective tiering and incorporation by reference of environmental effects and baseline cumulative impact assessment for new, revised, or existing land use and activity level plans and implementation projects that involve vegetation modification or maintenance. The analysis area includes only surface estate public lands administered by 11 BLM state offices: Alaska, Arizona, California, Colorado, Idaho, Montana (North Dakota/South Dakota), New Mexico (Oklahoma/Texas/Nebraska), Nevada, Oregon (Washington), Utah and Wyoming.

The BLM issued a Notice of Availability of the Draft Programmatic Environmental Impact Statement Using Aminopyralid, Fluroxypyr, and Rimsulfuron on June 19, 2015 (80 FR 35394). The BLM responded to public comments during the Draft Programmatic EIS public review period. Comment responses and the subsequent changes in the impact analysis as a result of public comments are documented in this Final Programmatic EIS per requirements under 40 CFR 1503.4. The BLM will prepare a Record of Decision for the Final Programmatic EIS after the 30-day period following publication of this notice.

Nancy Haug,

Acting Director, Resources and Planning.

Notice of Availability of the Draft Environmental Impact Statement for the Enefit American Oil Utility Corridor Project, Uintah County, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act (FLPMA) of 1976, as amended, the Bureau of Land Management (BLM) has prepared a Draft Environmental Impact Statement (EIS) for the Enefit American Oil Utility Corridor Project. Through this Notice, the BLM is announcing a 60-day public comment period on the draft.

DATES: To ensure comments will be considered, the BLM must receive written comments on the Enefit American Oil Utility Corridor Project Draft EIS within 60 days following the date on which the Environmental Protection Agency publishes its Notice of Availability of the Draft EIS in the **Federal Register**. The BLM will announce future meetings and any other public involvement activities at least 15 days in advance through public notices, media releases, and/or mailings.

ADDRESSES: Copies of the Enefit American Oil Utility Corridor Project Draft EIS are available for public inspection in the BLM Vernal Field Office, 170 South 500 East, Vernal, Utah 84078. Interested persons may also review the Draft EIS on the Internet at: https://eplanning.blm.gov/epl-front-office/eplanning/nepa/nepa_register.do.

FOR FURTHER INFORMATION CONTACT: Stephanie Howard, NEPA Coordinator; telephone 435-781-4469; address 170 South 500 East, Vernal, Utah 84078; email BLM_UT_Vernal_Comments@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. Replies are provided during normal business hours.

SUPPLEMENTARY INFORMATION: Enefit American Oil (Enefit) submitted five rights-of-way (ROW) applications under Title V of FLPMA. Collectively, these ROW applications are known as the Enefit American Oil Utility Corridor Project. The Project involves three pipeline ROWs, a ROW for a 138-kV power line, and a ROW grant to widen an existing road. The project area is located in the southern portion of Townships 8-10 South, Ranges 24-25 East, Salt Lake Meridian, in Uintah County, Utah, approximately 12 miles southeast of Bonanza Utah.

The BLM is the lead Federal agency for this Draft EIS. Cooperating agencies include the Environmental Protection Agency Region 8, Corps of Engineers Utah Regulatory Office, Fish and Wildlife Service Utah Field Office, Utah's Public Lands Policy and Coordination Office, and Uintah County.

The BLM published a Notice of Intent (NOI) to prepare an EIS for this project in the **Federal Register** on July 1, 2013, 78 FR 39313. Public scoping in response to the NOI and meetings resulted in 260 submittals, including letters from Federal, State, and local agencies,

special interest groups, corporations, comment forms, and email messages. Comments focused on applicants' interests and objectives, project description, climate and air quality, soil and water, vegetation, fish and wildlife, cultural resources, Native American concerns, paleontological resources, visual resources, wilderness characteristics, travel management, lands and realty, social and economic conditions, environmental justice, health and safety, solid and hazardous waste management, and indirect and cumulative impacts.

The Draft EIS describes and analyzes the impacts of the Utility Corridor Project and the No Action Alternative. The following is a summary of the alternatives:

1. *Proposed Action*—The proposed action consists of approval of five ROW requests for: (a) 19 miles of water supply lines (116 acres); (b) 8.8 miles of buried natural gas supply lines (52.6 acres); (c) 11.2 miles of buried oil product line (68.3 acres); (d) the upgrade and improvement of 5.7 miles of Dragon Road (41.7 acres); and, (e) 30 miles of 138-kV power line (501.4 acres). The proposed action also includes the utilization of some temporary lay-down areas during construction of the pipelines (31.2 acres).

2. *No Action Alternative*—Under the No Action Alternative, the ROWs listed in the Proposed Action Alternative would be denied.

Enefit has applied for the ROW across public land to facilitate utilities access to and transport finished product from its South Project. The South Project is located entirely on private land and involves accessing privately-owned oil shale mineral resources. The South Project will include development of a 7,000-9,000-acre commercial oil shale mining, retorting, and upgrading operation in Uintah County. The South Project is anticipated to produce 50,000 barrels of oil per day at full build out for a period of up to 30 years utilizing oil shale ore rock mined from Enefit's private property holdings.

Because of its location on fee surface and fee minerals, the South Project is outside of the jurisdiction of the BLM. As explained in the Draft EIS, it is expected to reach full build out regardless of whether or not the BLM approves the Proposed Action.

Because of the relationship between the South Project and the Proposed Action, the Draft EIS evaluates the environmental impacts of the South Project as indirect effects of the Proposed Action. Based on the impact analysis, on-site, landscape, and compensatory conservation and

mitigation actions have been identified in the Draft to achieve applicable resource objectives.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 40 CFR 1506.10

Jenna Whitlock,

Acting State Director.

BILLING CODE 4310-DQ-P

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[MMAA104000]

Notice of Rescheduled Public Meetings for the Draft Programmatic Environmental Impact Statement for the Outer Continental Shelf (OCS) Oil and Gas Leasing Program: 2017–2022

AGENCY: Bureau of Ocean Energy Management (BOEM), Interior.

ACTION: Rescheduling of public meetings.

SUMMARY: BOEM is announcing the dates, locations, and times of rescheduled meetings in Washington, DC; Houston, TX; and New Orleans, LA, to elicit comments on the OCS Oil and Gas Leasing Program 2017–2022 Draft Programmatic Environmental Impact Statement (Draft Programmatic EIS), which has been prepared by BOEM to support the Proposed OCS Oil and Gas Leasing Program for 2017–2022 (2017–2022 Program).

DATES: See “Public Meetings” in **SUPPLEMENTARY INFORMATION.**

FOR FURTHER INFORMATION CONTACT: Jill Lewandowski, Ph.D., Bureau of Ocean Energy Management, 45600 Woodland Road VAM-OEP, Sterling, VA 20166; Dr. Lewandowski may also be reached by telephone at (703) 787–1703.

SUPPLEMENTARY INFORMATION:

Draft Programmatic EIS Availability: Persons interested in reviewing the Draft Programmatic EIS can download it on the Internet at www.boemoeceaninfo.com, or may contact BOEM at the address provided above to request a paper copy or a CD-ROM version. Please specify if you wish

a CD-ROM or paper copy. If neither is specified, a CD-ROM containing the Draft Programmatic EIS will be provided.

Library Availability: The Draft Programmatic EIS will also be available for review at libraries in states adjacent to the proposed lease sales. These libraries are listed at the Web site www.boemoeceaninfo.com.

Public Meetings: Meetings in Washington, DC, Houston, TX, and New Orleans, LA, to elicit comments on the Draft Programmatic EIS will be held as follows:

- April 18, 2016, DoubleTree by Hilton New Orleans Airport, 2150 Veterans Memorial Blvd., Kenner, LA 70062; 2–6 p.m.; parking available at garage adjacent to hotel at a discounted rate. Validation tickets will be provided to guests upon request at the hotel’s registration desk.
- April 20, 2016, Hyatt Regency Houston, 1200 Louisiana Street, Houston, TX 77002; 3–7 p.m.; validated valet parking at hotel.
- April 26, 2016, Marriott Metro Center, 775 12th Street NW., Washington, DC 20005; 3–7 p.m.; valet parking at no charge to meeting attendees up to 8 hours.

All other public meetings were held on the dates and at the locations previously announced, with the exception of the public meeting in Kotzebue, Alaska. The meeting in Kotzebue, Alaska was rescheduled from March 29, 2016, and held on April 1, 2016, because of hazardous travel conditions due to the eruption of the Pavlof Volcano in Alaska.

Additional information: For additional information on the Draft Programmatic EIS and instructions on how to submit comments, please see the **Federal Register** notice published on March 18, 2016 (81 FR 14885).

Dated: April 5, 2016.

Abigail Ross Hopper,

Director, Bureau of Ocean Energy Management.

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–985]

Certain Surgical Stapler Devices and Components Thereof; Commission Decision Not To Review an Initial Determination Terminating the Investigation in Its Entirety Based on a Consent Order Stipulation and Proposed Consent Order; Issuance of Consent Order; Termination of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review the presiding administrative law judge’s (“ALJ”) initial determination (“ID”) (Order No. 4), granting a joint motion to terminate the investigation based on a consent order stipulation and proposed consent order in the above-captioned investigation. The consent order is issued and the investigation is terminated.

FOR FURTHER INFORMATION CONTACT:

Megan M. Valentine, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202)

708–2301. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at <http://www.usitc.gov>. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at <http://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on February 16, 2016, based on a complaint filed by Covidien LP of Mansfield, Massachusetts (“Covidien”). 81 FR 7830–31 (Feb. 16, 2016). The complaint alleged violations of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), in the importation into the United States, the sale for importation, or the sale within the United States after importation of surgical stapler devices and components thereof, by reason of infringement of certain claims of U.S. Patent Nos. 6,669,073; 8,342,377; and 6,079,606. The notice of investigation named Chongqing QMI Surgical Co., Ltd. of Chongqing, China (“QMI”) as respondent. The Office of Unfair Import Investigations was also named as a party.

On March 1, 2016, Covidien and QMI jointly moved for termination of the investigation in its entirety based on a consent order stipulation and proposed consent order. See 19 CFR 210.21(c). On March 10, 2016, the Commission investigative attorney responded in support of the motion. No other responses were submitted.

On March 10, 2016, the ALJ issued the subject ID, granting the joint motion. The ID finds that the consent order stipulation and proposed consent order comply with Commission rules, see 19 CFR 210.21(c)(3)–(c)(4), and that granting the motion would not adversely affect the public interest, *id.* § 210.50(b)(2). ID at 2–4.

No petitions for review of the ID were filed.

The Commission has determined not to review the ID and to issue the consent order.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as

amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: April 4, 2016.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. AA1921–167 (Fourth Review)]

Pressure Sensitive Plastic Tape From Italy, Determination

On the basis of the record¹ developed in the subject five-year review, the United States International Trade Commission (“Commission”) determines, pursuant to the Tariff Act of 1930, that revocation of the antidumping duty finding on pressure sensitive plastic tape from Italy would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.²

Background

The Commission, pursuant to section 751(c) of the Tariff Act of 1930 (19 U.S.C. 1675(c)), instituted this review on March 2, 2015 (80 FR 11224) and determined on June 5, 2015 that it would conduct a full review (80 FR 34458, June 16, 2015). Notice of the scheduling of the Commission's review and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on September 28, 2015 (80 FR 58295). The hearing was held in Washington, DC, on February 2, 2016, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission made this determination pursuant to section 751(c) of the Tariff Act of 1930 (19 U.S.C. 1675(c)). It completed and filed its determination in this review on April 4, 2016. The views of the Commission are contained in USITC Publication 4602 (April 2016), entitled *Pressure Sensitive Plastic Tape from Italy*:

¹ The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

² Chairman Broadbent and Commissioner Kieff dissenting.

Investigation No. AA1921–167 (Fourth Review).

By order of the Commission.

Issued: April 4, 2016.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

[OMB Number 1122–NEW]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Financial Capability Form

AGENCY: Office on Violence Against Women, Department of Justice.

ACTION: 30-Day Notice.

SUMMARY: The Department of Justice (DOJ), Office on Violence Against Women, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** at 81 FR 6293, on February 5, 2016, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for 30 days until May 9, 2016.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Cathy Poston, Attorney Advisor, Office on Violence Against Women, 145 N Street NE., Washington, DC 20530 (phone: 202–514–5430). Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20530 or sent to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including

- whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* Financial Capability Form.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: 1122-NEW. U.S. Department of Justice, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* The affected public includes non-governmental applicants to OVW grant programs that do not currently (or within the last 3 years) have funding from OVW. In accordance with 2 CFR 200.205, the information is required for assessing the financial risk of an applicant's ability to administer federal funds. The form includes a mix of check box and narrative questions related to the organization's financial systems, policies and procedures.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the approximately 40 respondents (non-governmental) applicants to OVW grant programs approximately 4 hours to complete an online assessment form.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total annual hour burden to complete the data collection forms is 160 hours, that is 40 applicants completing a form once as a new applicant with an estimated completion time for the form being 4 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution

Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: April 5, 2016.

Jerri Murray,
Department Clearance Officer for PRA, U.S.
Department of Justice.

BILLING CODE 4410-FX-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Second Modification Under The Clean Water Act

On April 1, 2016, the Department of Justice lodged a proposed Consent Decree Second Modification with the United States District Court for the District of New Hampshire in the lawsuit entitled *United States, State of New Hampshire, and Conservation Law Foundation v. City of Portsmouth, NH*, Civil Action No. 09-cv-283-PB.

The Consent Decree Second Modification is a modification to the 2009 Clean Water Act Consent Decree that was entered into by the United States, State of New Hampshire, and the City. This Consent Decree Second Modification, signed by the original parties and intervenor-plaintiff Conservation Law Foundation, revises Portsmouth's schedule for constructing secondary wastewater treatment facilities that had been set forth in a 2013 Consent Decree Modification. The Consent Decree Second Modification also establishes enhanced reporting obligations and mitigation requirements designed to counter the harm to the Piscataqua River and Great Bay estuary caused by delayed implementation of secondary treatment.

The publication of this notice opens a period for public comment on the Consent Decree Second Modification. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States, State of New Hampshire, and Conservation Law Foundation v. City of Portsmouth, NH*, D.J. Ref. No. 90-5-1-1-09308. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

| | |
|----------------------------|--------------------------------|
| <i>To submit comments:</i> | <i>Send them to:</i> |
| By email | pubcomment-ees.enrd@usdoj.gov. |

| | |
|----------------------------|---|
| <i>To submit comments:</i> | <i>Send them to:</i> |
| By mail | Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611. |

During the public comment period, the Consent Decree Second Modification may be examined and downloaded at this Justice Department Web site: <https://www.justice.gov/enrd/consent-decrees>. We will provide a paper copy of the Consent Decree Second Modification upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Please enclose a check or money order for \$4.00 (25 cents per page reproduction cost) payable to the United States Treasury.

Robert E. Maher, Jr.,

Assistant Section Chief, Environmental
Enforcement Section, Environment and
Natural Resources Division.

BILLING CODE 4410-15-P

DEPARTMENT OF JUSTICE

[OMB Number 1105-0092]

Agency Information Collection Activities; Proposed eCollection eComments Requested

AGENCY: September 11th Victim Compensation Fund, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Civil Division, September 11th Victim Compensation Fund, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** at 80 FR 28707 on May 19, 2015, allowing for a 60-day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until May 9, 2016.

FOR FURTHER INFORMATION CONTACT: If you have additional comments on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information please call

Jordana Feldman, 212-619-3209. Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Department of Justice Desk Officer. The best way to ensure your comments are received is to email them to oir_submissions@omb.eop.gov. All comments should reference the 8 digit OMB number for the collection or the title of the collection.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Reauthorization of a currently approved collection.

(2) *Title of the Form/Collection:* VCF Claim Form.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: N/A. Civil Division.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: The September 11th Victim Compensation Fund of 2001 provides compensation to any individual (or beneficiary of a deceased individual) who was physically injured or killed as a result of the terrorist-related aircraft crashes of September 11, 2001. On December 18, 2015, President Obama signed into law a bill reauthorizing the James Zadroga 9/11 Health and

Compensation Act of 2010. This includes the reauthorization of the September 11th Victim Compensation Fund ("VCF") for five years from the date the legislation was signed and includes other important changes to the VCF's policies and procedures for evaluating claims and calculating each claimant's loss and the documents required to submit claims, including claim forms and accompanying materials.

The information collected from the VCF Claim Form will be used to determine whether claimants will be eligible for compensation from the Fund, and if so, the amount of compensation they will be awarded. The Form consists primarily of two main sections: Eligibility and Compensation.

The Eligibility section seeks the information required by the Zadroga Act to determine whether a claimant is eligible for the Fund, including information related to: Participation in lawsuits related to September 11, 2001; presence at a 9/11 crash site between September 11, 2001 and May 30, 2002; and physical harm suffered as a result of the air crashes and/or debris removal.

The Compensation section seeks the information required by the Zadroga Act to determine the amount of compensation for which the claimant is eligible. Specifically, the section seeks information regarding the out-of-pocket losses (including medical expenses) incurred by the claimant that are attributable to the 9/11 air crashes or debris removal; the claimant's loss of earnings or replacement services that are attributable to the 9/11 air crashes or debris removal; and any collateral source payments (such as insurance payments) that the claimant received as a result of the terrorist-related aircraft crashes of September 11, 2001 or debris removal efforts.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that there are 33,000 total potential claimants who may respond to this form. Of those, the VCF has already received forms from 22,836 respondents who submitted claims using the former version of the claim form. The estimated total number of respondents for this form is therefore 10,164 over the next five (5) years, through December 18, 2020. It is estimated that respondents will complete the paper form in an average of 2 hours and the electronic form in an average of 1.5 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 3,049

annual total burden hours associated with this collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: April 5, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-12-P

DEPARTMENT OF JUSTICE

[Docket No. OLP 156]

Notice of Public Comment Period on the Presentation of the Forensic Science Discipline Review Framework

AGENCY: Department of Justice.

ACTION: Notice.

SUMMARY: This notice announces the opening of the public comment period on the presentation of the Forensic Science Discipline Review (FSDR) framework.

DATES: Written public comment regarding the presentation should be submitted through www.regulations.gov before May 9, 2016.

FOR FURTHER INFORMATION CONTACT: The Office of Legal Policy, 950 Pennsylvania Avenue NW., Washington, DC 20530, by phone at 202-514-4601 or via email at FSDR.OLP@usdoj.gov.

SUPPLEMENTARY INFORMATION: At the 2016 American Academy of Forensic Sciences (AAFS) Meeting, Deputy Attorney General Sally Yates announced that the Department of Justice (DOJ) would undertake a "quality assurance review" of certain forensic disciplines practiced by the Federal Bureau of Investigation (FBI), and that the DOJ would seek input from the National Commission on Forensic Science (NCFS) in developing this review. Jonathan J. Wroblewski, Office of Legal Policy, Principal Deputy Assistant Attorney General, presented the draft framework for the FSDR to the NCFS on March 21, 2016. The proposed FSDR would advance the practice of forensic science by ensuring DOJ forensic examiners have testified as appropriate in legal proceedings. The presentation is available online at <https://www.justice.gov/ncfs/file/835636/download>. Members of the public are welcomed to provide comments on this proposed framework.

Posting of Public Comments: To ensure proper handling of comments, please reference "Docket No. OLP 156" on all electronic and written correspondence. The Department encourages all comments on this framework be submitted electronically through www.regulations.gov using the electronic comment form provided on that site. Paper comments that duplicate the electronic submission are not necessary as all comments submitted to www.regulations.gov will be posted for public review and are part of the official docket record.

In accordance with the Federal Records Act, please note that all comments received are considered part of the public record, and shall be made available for public inspection online at <http://www.regulations.gov>. The comments to be posted may include personally identifiable information (such as your name, address, etc.) and confidential business information voluntarily submitted by the commenter.

DOJ will post all comments received on <http://www.regulations.gov> without making any changes to the comments or redacting any information, including any personally identifiable information provided. It is the responsibility of the commenter to safeguard personally identifiable information. You are not required to submit personally identifying information in order to comment on this presentation DOJ recommends that commenters not include personally identifiable information such as Social Security Numbers, personal addresses, telephone numbers, and email addresses that they do not want made public in their comments as such submitted information will be available to the public via <http://www.regulations.gov>. Comments submitted through <http://www.regulations.gov> will not include the email address of the commenter unless the commenter chooses to include that information as part of his or her comment.

Dated: April 4, 2016.

Kira Antell,

Senior Counsel, Office of Legal Policy.

Overview of this information collection:

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* Campus Program Grantee Needs and Progress Assessment Tool.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: 1122-NEW. U.S. Department of Justice, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* The affected public includes current grantees under the Grants to Reduce Sexual Assault, Domestic Violence, Dating Violence, and Stalking on Campus Program. The Campus Program strengthens the response of institutions of higher education to the crimes of sexual assault, domestic violence, dating violence and stalking on campuses and enhances collaboration among campuses, local law enforcement, and victim advocacy organizations. Eligible applicants are institutions of higher education. The affected public includes the approximately 100 institutions of higher education currently funded through the Campus program. The Grantee Needs and Progress Assessment Tool will be used to determine the training and technical assistance needs of Campus Program grantees—both new and continuation grantees—throughout the life of the grant award as well measure the development of the capacity of grantees to respond and prevent violence against women on their campuses. In addition, the tool will help campuses and OVW document the impact of their grant-funded work, promote sustainability of important intervention and prevention activities, and provide outcome-based information throughout the life of the grant to help OVW-funded technical assistance providers and grantees make changes to the goals and objectives necessary to achieve the statutory intent when Congress authorized the Campus Program. There is a need for a more effective assessment tool that better achieves the following purposes: (1) Assess grantee needs and resources related to achieving the program's core

competencies that are central to the goals of the Campus Program; (2) assess capacity building by the grantees over the three year grant period which will help campuses and OVW document the impact of their work and promote sustainability; (3) provide information throughout the grant cycle to help technical assistance providers and campuses work together to achieve key goals of the Campus Program. This data collection tool will promote matching the specific technical assistance needs of each campus and also reflection by the grantees on their goals for the grant. The questions will be given in an online survey platform. The questions are mainly multiple choice. The few narrative questions used are brief and require one or two sentence answers.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the approximately 100 respondents (Campus Program grantees) approximately 2 hours to complete an online assessment tool.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total annual hour burden to complete the data collection forms is 200 hours, that is 100 grantees completing a tool once a year with an estimated completion time for the form being 2 hours.

If additional information is required contact: Jerri Murray, Department, Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room 3E.405B, Washington, DC 20530.

Dated: April 5, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-FX-P

DEPARTMENT OF JUSTICE

[OMB Number 1121-0243]

Agency Information Collection Activities; Proposed eCollection; eComments Requested; Renewal of a Currently Approved Collection: Office of Justice Programs' Community Partnership Grants Management System (GMS)

AGENCY: Office of Justice Programs, U.S. Department of Justice

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Office of Justice Programs (OJP),

will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** at 81 FR 5784, on February 3, 2016, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until May 9, 2016.

FOR FURTHER INFORMATION CONTACT: If you have additional comments on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Maria Swineford, (202) 616-0109, Office of Audit, Assessment, and Management, Office of Justice Programs, U.S. Department of Justice, 810 Seventh Street NW., Washington, DC 20531 or maria.swineford@usdoj.gov. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Overview of this information:

(1) *Type of Information Collection:* Renewal of a currently approved collection (1121-0243).

(2) *The Title of the Form/Collection:* Community Partnership Grants Management System (GMS).

(3) The Agency Form Number, if any, and the Applicable Component of the Department Sponsoring the Collection:

Form Number: None.

Component: Office of Justice Programs, Department of Justice.

(4) Affected Public Who Will be Asked or Required to Respond, as well as a Brief Abstract:

Primary: State, Local or Tribal Governments, Organizations, and Institutes of Higher Education, and other applicants, applying for grants.

Other: None.

Abstract: GMS is the OJP web-based grants applications and award management system. GMS provides automated support throughout the award lifecycle. GMS facilitates reporting to Congress and other interested agencies. The system provides essential information required to comply with the Federal Funding Accountability and Transparency Act of 2006 (FFATA). GMS has also been designated the OJP official system of record for grants activities by the National Archives and Records Administration (NARA).

(5) *An Estimate of the Total Number of Respondents and the Amount of Time Estimated for an Average Respondent to Respond:* An estimated 6,402 organizations will respond to GMS and on average it will take each of them up to 10 hours to complete various award lifecycle processes within the system varying from application submission, award management and reporting, and award closeout.

(6) *An Estimate of the Total Public Burden (in hours) Associated with the Collection:* The estimated public burden associated with this application is 64,020 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: April 5, 2016.

Jerri Murray,

Department Clearance Officer, PRA Department of Justice.

[FR Doc. 2016-08085 Filed 4-7-16; 8:45 am]

BILLING CODE 4410-18-P

DEPARTMENT OF LABOR**Bureau of Labor Statistics****Data Users Advisory Committee;
Notice of Meeting and Agenda**

The Bureau of Labor Statistics Data Users Advisory Committee will meet on Thursday, May 12, 2016. The meeting will be held in the Postal Square Building, 2 Massachusetts Avenue NE., Washington, DC.

The Committee provides advice to the Bureau of Labor Statistics from the points of view of data users from various sectors of the U.S. economy, including the labor, business, research, academic, and government communities, on technical matters related to the collection, analysis, dissemination, and use of the Bureau's statistics, on its published reports, and on the broader aspects of its overall mission and function.

The meeting will be held in Meeting Rooms 1, 2, and 3 of the Janet Norwood Conference and Training Center. The schedule and agenda for the meeting are as follows:

- 8:30 a.m. Registration
- 9:00 a.m. Commissioner's welcome and review of agency developments
- 9:45 a.m. Decreasing the level of detail in certain occupations and industries in the OES Program
- 10:45 a.m. Redesigned news releases
- 1:00 p.m. New CPI estimation system capabilities and stakeholder survey results
- 2:00 p.m. Measuring quarterly labor productivity by industry
- 3:15 p.m. Research on wages and compensation benefits for non-profits
- 4:15 p.m. Meeting wrap-up

The meeting is open to the public. Any questions concerning the meeting should be directed to Kathy Mele, Data Users Advisory Committee, on 202.691.6102. Individuals who require special accommodations should contact Ms. Mele at least two days prior to the meeting date.

Signed at Washington, DC, this 5th day of April 2016.

Kimberly D. Hill,

*Chief, Division of Management Systems,
Bureau of Labor Statistics.*

BILLING CODE 4510-24-P

DEPARTMENT OF LABOR**Occupational Safety and Health
Administration**

[Docket No. OSHA-2015-0017]

Rollins College; AmerenUE (Formerly Union Electric Company); and Outfront Media, LLC (Formerly Gannett Outdoor Companies, Operating as Outdoor Systems, Inc., Subsequently CBS Outdoor Systems, Inc.): Technical Amendment to, and Revocation of, Permanent Variances

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor.

ACTION: Notice.

SUMMARY: With this notice, the Occupational Safety and Health Administration ("OSHA" or "the Agency") is making a technical amendment to an existing permanent variance, and revoking two others. The technical amendment involves updating the name of one employer granted a variance whose name has changed. The technical amendment and revocations result from an OSHA review to identify variances that are outdated, unnecessary, or otherwise defective.

DATES: The effective date of the technical correction and revocation of the permanent variances is April 8, 2016.

FOR FURTHER INFORMATION CONTACT:

General information and press inquiries. Contact Frank Meilinger, Director, OSHA Office of Communications, Room N-3647, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693-1999. Email: meilinger.francis2@dol.gov

Technical information. Contact Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Room N-3655, OSHA, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693-2110; fax: (202) 693-1644. Email: robinson.kevin@dol.gov

Copies of this Federal Register notice. Electronic copies of this notice are available at <http://www.regulations.gov>. Electronic copies of this notice, as well as news releases and other relevant information, are available on OSHA's Web site at <http://www.osha.gov>.

SUPPLEMENTARY INFORMATION:

I. Background

OSHA recently reviewed variances currently in effect to identify those that are outdated, unnecessary, or otherwise defective. As part of this review, OSHA

contacted by telephone, every employer with an active OSHA variance to determine if they still needed the variance. As a result of this review, OSHA found that one employer identified in a variance had a new name, and two additional employers no longer needed the variances because conditions at their worksite addressed by the variance no longer exist.

With this notice, the Agency is correcting these technical deficiencies and is announcing the following: (1) Revocation of a permanent variance granted to Rollins College in 1974 from 29 CFR 1910.37(i) [39 FR 11481]; (2) revocation of a permanent variance granted to AmerenUE (formerly Union Electric Company) in 1974 from 29 CFR 1910.28(g)(1) [39 FR 37278]; and (3) renaming CBS Outdoor Systems, Inc. (formerly Gannett Outdoor Companies, operating as Outdoor Systems, Inc.) granted a permanent variance in 1991 from 29 CFR 1910.27(d)(1)(ii), (d)(2), and (d)(5) [56 FR 8801] to Outfront Media, LLC.

Rollins College and AmerenUE representatives confirmed by letter that they no longer needed the variances because conditions which prompted them to seek the variances no longer exist; and they now can comply with the standard from which OSHA granted the variances. Company representatives requested that OSHA revoke their respective variances. Additionally, an Outfront Media, LLC management representative requested the corporate name change and provided documentation supporting the request.

Further, OSHA believes that with this notice it will be able to: (1) Accurately and expeditiously determine the employers covered by a variance; (2) enhance enforcement of the variance; (3) ensure that a variance identifies and covers the appropriate worksites; (4) inform employers and employees that the revoked variances no longer cover the employers, and therefore, the employers must comply with the applicable OSHA standards; and (5) inform employees that the applicable OSHA standards replacing the revoked variances will provide them with the necessary protection.

The corporate name change implemented by this notice maintains the employer's regulatory obligations and does not alter the substantive requirements specified in the original variance. The variance continues to remain in effect and to provide employees with the safety and health protection afforded to them by the original variance.

A list of variances that remain in effect by this notice is available on

OSHA's Variance Program Web site at http://www.osha.gov/dts/otpc/variances/variances_ineffect.html.

As previously indicated, with this notice, the Agency is making only a technical correction to an existing variance, and revoking variances that

employers no longer need for employee protection. Accordingly, this notice will not have a substantive effect on employers or employees; OSHA, therefore, finds that public notice-and-comment procedures specified under Section 6(d) of the Occupational Safety

and Health Act of 1970 (29 U.S.C. 655), and by 29 CFR 1905.11 or 1905.13, are unnecessary.

The following table provides details about the variances addressed by this notice:

| Name of employer (company) affected | Variance No. | Date granted | Federal Register cite | OSHA Standards |
|---|----------------------|--------------|-----------------------|-----------------------------------|
| Rollins College | V-74-16 | 03/28/1974 | 39 FR 11481 | 1910.37(i). |
| | OSHA-2012-0024 | 07/06/2012 | 77 FR 40088 | 1910.36(g)(1). |
| AmerenUE (formerly Union Electric Company) | V-74-5 | 10/18/1974 | 39 FR 37278 | 1910.28(g)(1). |
| | OSHA-V05-2-2006-0785 | 12/09/2008 | 73 FR 74754 | |
| Outfront Media, LLC (formerly Gannett Outdoor Companies, operating as Outdoor Systems, Inc., subsequently CBS Outdoor Systems, Inc.). | V-90-1 | 03/01/1991 | 56 FR 8801 | 1910.27(d)(1)(ii), |
| | OSHA-V05-2-2006-0785 | 12/09/2008 | 73 FR 74754 | 1910.27(d)(2), and 1910.27(d)(5). |

II. Technical Amendment to, and Revocation of, Permanent Variances

A. Renaming a Company

OSHA initially granted a permanent variance to the Gannett Outdoor Companies operating as Outdoor Systems, Inc. on March 1, 1991, (56 FR 8801). Subsequently, on December 9, 2008, OSHA granted Gannett Outdoor Companies operating as Outdoor Systems, Inc. a name change to CBS Outdoor Systems, Inc. (73 FR 74754). Further, on November 11, 2015, a management representative of CBS Outdoor Systems, Inc. sent a letter and supporting documentation to OSHA stating that the former company and associated variance names were no longer valid, and requested the Agency to correct the variance using the new successor company's name (Exhibit OSHA-2015-0017-0004).

CBS Outdoor Systems, Inc. notified the Agency (via letter dated November 11, 2014) that the company changed its name from CBS Outdoor, Inc. (formerly Gannett Outdoor Companies, operating as Outdoor Systems, Inc. for whom the initial variance was granted) to the successor company, Outfront Media, LLC. As was the case with the December 9, 2008 name change (73 FR 74754), Outfront Media, LLC will continue to follow the conditions specified by the variance.

Additionally, CBS Outdoor Systems, Inc. provided supporting documentation including: (1) A series of documents from the State of Delaware (having jurisdiction where the corporation first formed), each acknowledging a sequential name change for the entity beginning in 1997 as Outdoor Systems, Inc. to November of 2014, when Outdoor Systems, Inc. became Outfront Media, LLC (Exhibit OSHA-2015-0017-0004, attachment 1); and (2) an updated listing of locations (places of

employment) potentially affected by the Outfront Media, LLC variance (*i.e.*, regional centers of operation from which climbing activities take place in support of Outfront Media's outdoor advertising business (Exhibit OSHA-2015-0017-0004, attachment #2)).

B. Revoking the Permanent Variance Granted to Rollins College

On March 28, 1974, OSHA granted Rollins College a variance from 29 CFR 1910.37(i), which governed ceiling height for means of egress (39 FR 11481). The Agency renumbered this provision (to 29 CFR 1910.36(g)(1)) in a subsequent rulemaking that revised its means-of-egress standards to improve the clarity and comprehensibility of these standards (67 FR 67962; November 7, 2002). While this rulemaking renumbered 29 CFR 1910.37(i) as 29 CFR 1910.36(g)(1), it did not revise the substantive requirements of the provision. On July 6, 2012, OSHA published a **Federal Register** notice that amended the permanent variance granted to Rollins College to account for this renumbering of the standard (77 FR 40088).

Subsequently, in a letter dated July 7, 2015, Rollins College, indicated that the college no longer requires or uses the variance. Further, the college's letter indicated that the ceiling height of the buildings where the variance was used in the past has been renovated and the means of egress are now in compliance with the applicable OSHA standards. As a result, the variance is no longer needed or used and should be revoked (Exhibit OSHA-2015-0017-0002).

C. Revoking the Permanent Variance Granted to AmerenUE

On October 18, 1974, OSHA granted Union Electric Company a variance from 29 CFR 1910.28(g)(1), which required that two-point suspension

scaffolds be a minimum of 20 inches in width (39 FR 37278). On December 9, 2008, the Agency found that Union Electric Company had a new name and operated as AmerenUE. On that same date, the Agency responded to a request from a company officer to correct Union Electric Company's variance by using the company's new name. OSHA published a **Federal Register** notice announcing a technical amendment updating the variance grantee's name from Union Electric Company to AmerenUE (73 FR 74754).

Subsequently, in a letter dated September 18, 2015, Ameren Missouri [(formerly Union Electric Company, then AmerenUE) (Exhibit OSHA-2015-0017-0003)], indicated that the company no longer requires or uses the variance and requested OSHA to revoke it.

III. Decision

Based on the information described herein, the Agency is taking the following actions:

A. Revising the name of CBS Outdoor, Inc. (formerly Gannett Outdoor Companies, operating as Outdoor Systems, Inc. for whom the initial variance was granted) to the successor company, Outfront Media, LLC.

B. Revoking the variances granted to Rollins College and AmerenUE (formerly Union Electric Company).

Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Ave. NW., Washington, DC, authorized the preparation of this notice. OSHA is issuing this notice under the authority specified by Section 6(d) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655), Secretary of Labor's Order No. 1-2012 (76 FR 3912), and 29 CFR part 1905.

Signed at Washington, DC, on March 4, 2016.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA-2014-0022]

Nucor Steel Connecticut Incorporated; Grant of a Permanent Variance

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice.

SUMMARY: In this notice, OSHA grants a permanent variance to Nucor Steel Connecticut Incorporated from the provisions of OSHA standards that regulate the control of hazardous energy (lockout/tagout).

DATES: The permanent variance specified by this notice, becomes effective on April 8, 2016 and shall remain in effect until it is modified or revoked.

FOR FURTHER INFORMATION CONTACT: Information regarding this notice is available from the following sources:

Press inquiries: Contact Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor, 200 Constitution Avenue NW., Room N-3647, Washington, DC 20210; telephone: (202) 693-1999; email: meilinger.francis2@dol.gov.

General and technical information: Contact Mr. Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Room N-3655, Washington, DC 20210; phone: (202) 693-2110 or email: robinson.kevin@dol.gov.

SUPPLEMENTARY INFORMATION:

Copies of this Federal Register notice.

Electronic copies of this **Federal Register** notice are available at <http://www.regulations.gov>. This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's Web page at <http://www.osha.gov>.

I. Notice of Application

On September 22, 2014, Nucor Steel Connecticut Incorporated (hereafter, "NSCI" or "the applicant") 35 Toelles

Road, Wallingford, CT 06492, submitted under Section 6(d) of the Occupational Safety and Health Act of 1970 ("OSH Act"; 29 U.S.C. 655) and 29 CFR 1905.11 ("Variances and other relief under section 6(d)") an application for a permanent variance from several provisions of the OSHA standard that regulates the control of hazardous energy ("lockout/tagout" or "LOTO"), as well as a request for an interim order pending OSHA's decision on the application for variance (Ex. OSHA-2014-0022-0003) at its Wallingford, CT facility. Specifically, NSCI was seeking a variance from the provisions of the standard that require: (1) Lockout or tagout devices be affixed to each energy isolating device by authorized employees (29 CFR 1910.147(d)(4)(i)); and (2) lockout devices, where used, be affixed in a manner that holds the energy isolating devices in a "safe" or "off" position (29 CFR 1910.147(d)(4)(ii)). Also, NSCI requested an interim order pending OSHA's decision on the application for variance.

According to its application, NSCI manufactures steel wire rod and coiled rebar from billets of steel by using rolling and forming processes. Further, NSCI's description of its operation indicated that the hot steel billets are shaped and formed into steel wire rod and coiled rebar by running them through a series of rolls. The rolls shape and form the steel as it moves from one stand to the next. Each roll has several passes (or grooves), only one of which is used at a time. The pass is designed to shape the bar to a certain size as it goes through the mill by compressing, squeezing, and stretching the bar. Rolls are designed with passes to bring a bar down through roughing, intermediate and finish mills to a finished size.

As with any shaping tool, the passes wear during use and from time to time need to be changed. As the pass wears, the shape of the bar and the appearance of the bar are affected. When new rolls are brought into production, every pass is prepared with a spray that provides friction which allows the rolls to bite the bar between the rolls. Once rolls are in operation, roll grinding is regularly required, because during the operation of the mill stands water is used to cool the rolls to prevent fracturing and damage to the rolls. The water protects the pass while in use, but it also creates rust in the other passes. The rust can affect the final quality of the bar being processed, so steps are taken to remove the rust prior to restarting the operations. Rust is removed from the passes using a common 4-inch hand grinder. Since January 2012, the rolls

have been ground with the rolls stopped and locked out.

NSCI asserted that grinding the rolls requires access to the Motor Control Room (MCR), in order to operate the energy isolation disconnects for the roll mills. Employees who perform the particular task of grinding the passes are exposed to potentially serious arc flash hazards if they accessed the MCR in order to perform energy isolation functions. To control exposure to the arc flash hazards, NSCI instituted safe work rules that: (1) Designate the MCR as a restricted entry work area; (2) restrict MCR access to qualified electricians only; and (3) prohibit employees who perform pass grinding from entering the MCR because they are not qualified electrical employees trained in recognition and mitigation of electrical hazards. Further, NSCI asserted that as a consequence of following these safe work rules the employees performing pass grinding cannot lockout the energy isolation disconnects located in the MCR or personally verify that a lockout has been performed.

OSHA initiated a technical review of NSCI's variance application and developed a set of follow-up questions regarding the assertions of equivalent worker protection included in the application. On November 26, 2014, OSHA sent NSCI a letter containing a set of follow-up questions (Ex. OSHA-2014-0022-0006). On December 19, 2014, NSCI provided its responses to the follow-up questions (Ex. OSHA-2014-0022-0007). Based on these responses to the follow-up questions and the alternate safety measures proposed in NSCI's application, on May 22, 2015, the Agency sent NSCI a letter (Ex. OSHA-2014-0022-0009) describing its findings on the technical merits of the application. OSHA's letter also included a set of proposed conditions for the grant of an interim order and permanent variance and a request for NSCI's comments on these proposed conditions. On July 10, 2015, NSCI provided its response (Ex. OSHA-2014-0022-0010) indicating acceptance of the proposed conditions and including a few recommended changes. OSHA carefully reviewed NSCI's recommended changes and incorporated the majority of the changes into the conditions of the variance.

Following this review, OSHA determined that the applicant proposed an alternative that provides a workplace as safe and healthful as that provided by the standard. On December 2, 2015, OSHA published a preliminary **Federal Register** announcing NSCI's application for a permanent variance and interim

order, grant of an interim order, and request for comments (80 FR 75472).

The comment period closed on January 4, 2016, and OSHA received one comment (Ex. OSHA–2014–0022–0012) from the Association for Packaging and Processing Technologies in support of granting NSCI the variance.

II. The Variance Application

A. Background

NSCI's variance application and the responses to OSHA's follow-up questions included the following: Detailed descriptions of the manufacturing process; the equipment used; the proposed alternative to lockout/tagout (LOTO) devices and procedures implemented during servicing and maintenance of specific equipment (*e.g.*, grinding of roll mill passes located in the roll mill stands); and technical evidence supporting NSCI's assertions of equivalency of worker protection.

According to the information included in its application, performing lockout on the roll mill stands requires access to the MCR, an area restricted to qualified electricians. Because NSCI employees who perform the particular task of grinding the passes are not qualified electrical employees trained in recognition and mitigation of electrical hazards, they may not access the MCR. Therefore, they cannot use the EID in that location to isolate the hazardous electrical energy or personally verify that energy isolation has been achieved if the EID is operated by a qualified employee.

To address these issues, NSCI developed an alternative method of preventing the unexpected startup or energization of the roll mill passes located in the roll mill stands. NSCI proposes to use a comprehensive engineered system and appropriate administrative procedures to meet the energy isolation requirements. The engineered system uses a "trapped key" concept and monitored safety-rated power relays in combination with administrative procedures. The trapped key system is designed to: Replace a locked out energy isolating device; and function similarly (to a lockout device), in that only the employee in possession of the key can restart the machine undergoing maintenance. The single key is controlled through administrative group lockout procedures that NSCI believes match the requirements of 29 CFR 1910.147.

Further, NSCI asserted that its proposed trapped key energy control

system has been evaluated¹ for three scenarios that could result in unexpected energization of the rolls including: (1) Intentional de-energization; (2) intentional re-energization; and (3) potential faults. The system prevents unexpected startup or energization in all three scenarios.

The applicant contended that the alternative safety measures included in its application provide its workers with a place of employment that is at least as safe and healthful as they would obtain under the existing provisions of OSHA's control of hazardous energy (lockout/tagout) standard. The applicant certified that it provided employee representatives with a copy of the variance application. The applicant also certified that it notified its workers of the variance application by posting, at prominent locations where it normally posts workplace notices, a summary of the application and information specifying where the workers can examine a copy of the application. In addition, the applicant informed its workers of their rights to petition the Assistant Secretary of Labor for Occupational Safety and Health for a hearing on the variance application.

B. Variance From Paragraph (d)(4)(i) and (d)(4)(ii) of 29 CFR 1910.147

As an alternative means of compliance to the requirements of 1910.147(d)(4)(i) and (ii), NSCI proposed to use a comprehensive engineered system and appropriate administrative procedures to meet these requirements. The engineered system uses a "trapped key" concept and monitored safety-rated power relays in combination with administrative procedures. The trapped key system is designed to: Replace a locked out energy isolating device; and function similarly (to a lockout device), in that only the employee in possession of the key can restart the machine undergoing maintenance. The single key is controlled through administrative group lockout procedures identical to those required by 29 CFR 1910.147. Although the trapped key prevents normal intended startup of the

equipment being serviced, it is not being used on an EID, as required by OSHA's standards. To meet this requirement, NSCI proposed to use a monitored safety-relay system that uses approved components, redundant systems, and control-reliable circuitry. Use of the trapped key system in combination with detailed administrative energy control policies and procedures, as well as providing effective training allows NSCI's authorized and affected employees to complete the required grinding of its stationary rolls in a manner that provides equivalency in energy isolation to compliance with the applicable provisions of the LOTO standard. The trapped key system is based on use of an Allen Bradley *GuardMaster* safety-rated relay, which is specifically designed for safety applications. However, the use of the Allen Bradley *GuardMaster* safety-rated relay does not meet the LOTO standard's definition of EID because this relay is a form of control circuitry.

The applicant maintains that use of the trapped key system provides equivalent safety with what can be achieved by strict compliance with the 1910.147(d)(4)(i) and (ii) requirements. According to NSCI's variance application, equivalent safety is achieved by prohibiting roll movement during de-energization while grinding is being performed, as well as prohibiting mistaken intentional re-energization and re-energization due to fault conditions, without exposing employees to hazards within the MCR. To protect against system faults causing re-energization, the trapped key system meets the requirements for control reliability as stated in ANSI B11.19 (2010) *Performance of Safeguarding*, in that no single fault results in the loss of the safety function. In addition, the system includes system fault monitoring, tamper resistance, and exclusive employee control over lockout devices.

Further, the applicant asserted that the trapped key system uses well tried components, which is a key factor in the reliability of a control system. The system is based on an Allen Bradley *GuardMaster* safety-rated relay which is specifically designed for safety applications. The trapped key is a specially manufactured unique key that is only available from the manufacturer at a significant cost, and cannot be otherwise duplicated.

C. Technical Review

OSHA conducted a review of NSCI's application and the supporting technical documentation. After completing the review of the application

¹ NSCI provided documentation that TUV Rheinland, an independent third-party testing laboratory reviewed and certified that the trapped key interlock system is a suitable component for use in safety category 2, 3, and 4 safety systems as specified in International Electrotechnical Commission (IEC) and International Organization for Standardization (ISO) machinery standards. Further, NSCI asserted that several independent experts (including Dr. James Barrett, Mr. Ed Grund, Mr. Bruce Main, and Mr. Alan Metelsky) skilled in the evaluation of electrical circuitry, guarding, and the control of hazardous energy evaluated the circuitry of the trapped key system and found that it was appropriately designed and installed for this application.

and supporting documentation, OSHA concluded that NSCI:

1. Modified the electrical controls at the pulpit (central control station located on the roll mill floor for the 15 roll mill stands), to prevent employee exposure to hazards associated with movement of the roll mill while performing the task of grinding roll mill passes located in the roll mill stands;

2. Installed a trapped key control system and implemented administrative energy control procedures that prevent employee exposure to hazards associated with energy while grinding on the roll mill passes;

3. Utilizing qualified engineering safety experts, performed a job hazard analysis for roll grinding associated tasks, conducted and documented an electrical isolation analysis, system and functional safety reviews, and control reliability analysis to verify that the use of the trapped key system and administrative energy control procedures prevent the movement of roll mill passes; prevent mistaken or intentional re-energization; and maintain immobility in the event of fault conditions;

4. Developed a two-tiered system of securing the trapped key as follows:

a. Stopping the operation and energization of the roll mill passes by removing the trapped key from the system, and securing the key within a lock box inside the pulpit area (central control station located on the roll mill floor for the 15 roll mill stands); and

b. Locking the key to the lock box in the pulpit area inside a secondary group lock box installed on the roll mill floor, with each employee performing roll mill grinding applying their personal lock to the lock box;

5. Developed detailed administrative energy control procedures for use of the trapped key system;

6. Implemented detailed administrative energy control procedures designed to ensure that each authorized employee applies a personal lock to the secondary group lock box;

7. Procured and provided appropriate equipment and supplies;

8. Made the administrative energy control policies and procedures available in English and Spanish;

9. Trained authorized and affected employees on the application of the trapped key system and associated administrative energy control policies and procedures;

10. Ensured that grinding on the passes is conducted only while using the administrative energy control procedures based on the trapped key system;

11. Installed guarding on the entry/infeed and exit/outfeed sides of each roll mill stand to prevent employees from standing between turning mills and being exposed to the crushing hazards of in-running nip points;

12. Developed additional administrative controls and procedures to minimize the potential for authorized and affected employees to enter between the mill stands when harm could occur; and

13. Designated and posted the areas as "No Entry" unless the procedures (1–12 above) are followed.

III. Description of the Conditions Specified for the Permanent Variance

As previously indicated in this notice, OSHA conducted a review of NSCI's application and the supporting technical documentation. After completing the review of the application and supporting documentation, OSHA determined that NSCI developed, and proposed to implement, effective alternative means of protection that protect its employees as effectively as paragraphs 1910.147(d)(4)(i) and (ii) of OSHA's LOTO standard during the servicing and maintenance task of grinding roll mill passes located in the roll mill stands. Therefore, on December 2, 2015, OSHA published a preliminary **Federal Register** announcing NSCI's application for a permanent variance and interim order, grant of an interim order, and request for comments (80 FR 75472). The comment period closed on January 4, 2016, and OSHA received one comment (Ex. OSHA–2014–0022–0012) from the Association for Packaging and Processing Technologies in support of granting NSCI the variance.

During the period starting with the December 2, 2015, publication of the preliminary **Federal Register** notice announcing grant of the interim order (80 FR 75472), until the Agency modifies or revokes the interim order or makes a decision on its application for a permanent variance, the applicant was required to comply fully with the conditions of the interim order as an alternative to complying with the requirements of 29 CFR 1910.147(d)(4)(i) and 1910.147(d)(4)(ii). With the publication of this notice, OSHA is revoking the interim order granted to the employer on December 2, 2015 (80 FR 75472).

This section describes the conditions that comprise the alternative means of compliance with 29 CFR 1910.147(d)(4)(i) and (d)(4)(ii). Also, these conditions provide additional detail regarding the conditions that form

the basis of the permanent variance OSHA is granting to NSCI.

Condition A: Scope

The scope of the permanent variance limits coverage of the conditions of the permanent variance to the work situations specified under this condition. Clearly defining the scope of the permanent variance provides NSCI, NSCI's employees, other stakeholders, the public, and OSHA with necessary information regarding the work situations in which the permanent variance applies and does not apply. For example, condition A limits coverage of the permanent variance only to the task of grinding roll mill passes located in the roll mill stands. The condition clarifies that no other maintenance work, including electrical maintenance, can be performed on the roll mill passes, the roll mill motors, other residual or stored energy sources, or electric circuits connected to the trapped key system or roll mill stands using the trapped key system to control hazardous energy.

According to 29 CFR 1905.11, an employer or class or group of employers² may request a permanent variance for a specific workplace or workplaces. If granted, the variance applies only to the specific employer(s) that submitted the application. In this instance, the permanent variance applies to NSCI at its Wallingford, CT plant only. As a result, it is important to understand that permanent variance does not apply to any other employers or NSCI plant locations.

Condition B: Definitions

Condition B defines a series of terms, mostly technical terms, used in the permanent variance to standardize and clarify their meaning. Defining these terms serves to enhance the applicant's and its employees' understanding of the conditions specified by the permanent variance.

Condition C: Safety and Health Practices

Condition C requires the applicant to: (1) Modify certain controls at the pulpit by installing and operating a trapped key system designed to replace an energy isolating device; (2) develop and implement certain trapped key system-related alternate energy control policies and procedures; and (3) develop and implement a series of trapped key

² A class or group of employers (such as members of a trade alliance or association) may apply jointly for a variance provided an authorized representative for each employer signs the application and the application identifies each employer's affected facilities.

system-related hazard prevention and control requirements and methods designed to ensure the continued effective functioning of the alternate energy control equipment, policies, and procedures. Examples of such hazard control measures include, but are not limited to: (1) Conducting grinding on the passes only after using the steps required to properly de-energize the system; (2) under the direction of a qualified person,³ ensuring that the trapped key system is installed, inspected, serviced, maintained, used, and when appropriate modified in accordance with good engineering practices, and/or in strict accordance with the manufacturers' specifications and instructions, where available; and (3) no other maintenance can be performed on the roll mill stands while grinding is taking place.

Condition D: Steps Required To De-Energize the System

Condition D requires the applicant to develop and implement a detailed procedure for de-energizing the roll mill passes located in the roll mill stands in order to perform the grinding task. The procedure for de-energizing the roll mill passes includes a series of steps to ensure that all authorized and effected employees are notified that: The roll mill passes are effectively de-energized; the task of grinding the roll mill passes is ready to begin; and no other servicing or maintenance is to be performed on the roll mill stands while grinding is taking place.

Condition E: Steps Required To Start Motion Intentionally

Condition E requires the applicant to develop and implement a detailed procedure for re-energizing and intentionally starting motion in the roll mill passes located in the roll mill stands in order to resume normal operations at the conclusion of the grinding task. The procedure for re-energizing the roll mill passes includes a series of steps to ensure that all authorized and effected employees are notified that the task of grinding the roll mill passes is complete and that the roll mill passes are ready for use.

Condition F: Training and Methods of Operation

Condition F requires the applicant to develop and implement an effective hazardous energy control qualification and training program for authorized employees involved in using the trapped key system while grinding roll mill passes. The condition specifies the

factors that an employee must know following completion of the training program. Elements to be included in the training program encompass, among others: The program to be presented in language that the employees can understand; the instruction be reviewed periodically to accommodate changes in the energy control program; the contents and conditions included in the variance; the preparation of a job hazard analysis (JHA) describing the application of the trapped key system, the identification of associated hazards and safe use of the associated energy control procedures; and instruction regarding the safe use of the associated energy control procedures. Additionally, condition F also requires the applicant to train each affected employee in the purpose and use of the alternative energy control procedures using the trapped key system.

Condition G: Inspections, Tests, and Accident Prevention

Condition G requires the applicant to develop, implement and operate an effective program for completing inspections, tests, program evaluations, and accident prevention measures for the use of the trapped key system and safe application of the hazardous energy control procedures in the roll mill stands and associated work areas. This condition serves to ensure the safe operation and physical integrity of the equipment and work area. Use of the trapped key system while conducting roll mill grinding operations enhances worker safety by reducing the risk of unexpected energization of the equipment.

This condition also requires the applicant to document tests, inspections, corrective actions and repairs involving the use of the trapped key system, and maintain these documents. Further, this requirement provides the applicant with information needed to schedule tests and inspections to ensure the continued safe operation of the equipment and systems, and to determine that the actions taken to correct defects are appropriate.

Condition H: Recordkeeping

Condition H requires the applicant to maintain records of specific factors associated with use of the trapped key system implemented to prevent the unexpected energization of the equipment while grinding roll mill passes. The information gathered and recorded under this provision, in concert with the information provided under condition I (Notifications, for using the OSHA 301 Incident Report form to investigate and record energy

isolation failure-related injuries as defined by 29 CFR 1904.4, 1904.7, 1904.8 through 1904.12), enables the applicant and OSHA to determine the effectiveness of the permanent variance in preventing recordable injuries.⁴

Condition I: Notifications

Condition I requires the applicant, within specified periods to: (1) Notify OSHA (*i.e.*, Office of Technical Programs and Coordination Activities (OTPCA), and the Bridgeport, CT, Area Office) of any recordable injuries, illnesses, fatalities, work-related in-patient hospitalizations, amputations and all losses of an eye (as defined by 29 CFR 1904.4, and 1904.7 through 1904.12) that occur as a result of complying with the alternative energy control conditions of the variance (*e.g.*, as a result of performing roll mill pass grinding operations) within 8 hours of the incident (or becoming aware of the incident); (2) provide OSHA (*i.e.*, OTPCA and the Bridgeport, CT, Area Office) with a copy of the preliminary incident investigation report (using OSHA 301 form) within 24 hours of the incident (or becoming aware of the incident); (3) provide OSHA (*i.e.*, OTPCA and the Bridgeport, CT, Area Office) with a copy of the full incident investigation within 7 calendar days of the incident (or becoming aware of the incident); (4) include on the 301 form information on the energy isolation procedures and conditions associated with the recordable injury or illness, the root-cause determination, and preventive and corrective actions identified and implemented; (5) provide its certification that it informed affected workers of the incident and the results of the incident investigation; (6) notify OTPCA and the Bridgeport, CT, Area Office within 15 working days should the applicant need to revise its energy isolation procedures to accommodate changes in the application of its trapped key system that affect its ability to comply with the conditions of the permanent variance; and (7) provide OTPCA and the Bridgeport, CT, Area Office, by January 31st at the beginning of each calendar year, with a report covering the year just ended, evaluating the effectiveness of the alternate energy isolation program.

⁴ See 29 CFR 1904 Recording and Reporting Occupational Injuries and Illnesses (http://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=STANDARDS&p_id=9631); recordkeeping forms and instructions (<http://www.osha.gov/recordkeeping/RKform300pkg-fillable-enabled.pdf>); and Updates to OSHA's Recordkeeping Rule (<http://www.osha.gov/recordkeeping2014/index.html>).

³ See footnote 9.

This condition for completing and submitting the variance conditions-related (recordable) preliminary incident investigation report (OSHA 301 form) is more restrictive than the current recordkeeping requirement of completing the OSHA 301 form within 7 calendar days of the incident (1904.29(b)(3)). Submittal of the preliminary incident investigation report is to be followed by submittal of the full incident investigation report within 7 calendar days. This modified and more stringent incident investigation and reporting requirement is restricted to variance conditions-related (recordable) incidents only. Providing this notification is essential because time is a critical element in OSHA's ability to determine the continued effectiveness of the variance conditions in preventing recordable incidents as well as the employer's identification of appropriate hazard control measures and implementation of corrective and preventive actions. Further, these notification requirements enable the applicant, its employees, and OSHA to determine the effectiveness of the permanent variance in providing the requisite level of safety to the employer's workers and, based on this determination, whether to revise or revoke the conditions of the permanent variance. Timely notification permits OSHA to take whatever action is necessary and appropriate to prevent further variance conditions-related recordable injuries and illnesses. Providing notification to employees informs them of the precautions taken by the employer to prevent similar incidents in the future. Additionally, these notification requirements allow OSHA to: Communicate effectively, expedite administration, and enforce the conditions of the permanent variance.

Additionally, this condition requires the applicant to notify OSHA if it ceases to do business, has a new address or location for its main office, or transfers the operations covered by the permanent variance to a successor company. In addition, the condition specifies that OSHA must approve the transfer of the permanent variance to a successor company. These requirements allow OSHA to communicate effectively with the applicant regarding the status of the permanent variance, and expedite the Agency's administration and enforcement. Stipulating that an applicant is required to have OSHA's approval to transfer a variance to a successor company provides assurance that the successor company has knowledge of, and will comply with, the conditions specified by the permanent

variance. Also, seeking OSHA's approval to transfer a variance to a successor company serves to further ensure the safety of workers involved in performing the operations covered by the variance.

IV. Decision

As described earlier in this notice, after reviewing the proposed alternatives OSHA determined that NSCI developed, and proposed to implement, effective alternative means of protection that protect its employees as effectively as paragraphs 1910.147(d)(4)(i) and (ii) of OSHA's LOTO standard during the servicing and maintenance task of grinding roll mill passes located in the roll mill stands. Further, under section 6(d) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655(d)), and based on the record discussed above, the Agency finds that when the employer complies with the conditions of the variance, the working conditions of the employers' workers are at least as safe and healthful as if the employers complied with the working conditions specified by paragraph 1910.147(d)(4)(i) and (ii) of OSHA's LOTO standard. Therefore, under the terms of this variance NSCI must: (1) Comply with the conditions listed below under section V of this notice ("Order") for the period between the date of this notice and until the Agency modifies or revokes this final order in accordance with 29 CFR 1905.13; (2) comply fully with all other applicable provisions of 29 CFR part 1910; and (3) provide a copy of this **Federal Register** notice to all employees affected by the conditions using the same means it used to inform these employees of its application for a permanent variance.

V. Order

As of the effective date of this final order, OSHA is revoking the interim order granted to the employer on December 2, 2015 (80 FR 75472).

OSHA issues this final order authorizing Nucor Steel Connecticut Incorporated ("NSCI" or "the applicant") to comply with the following conditions instead of complying with the requirements of paragraphs 29 CFR 1910.147(d)(4)(i) and (ii) of OSHA's LOTO standard during the servicing and maintenance task of grinding roll mill passes located in the roll mill stands. This final order applies to all NSCI employees located at the 35 Toelles Road, Wallingford, CT 06492 establishment during the servicing and maintenance task of grinding roll mill

passes located in the roll mill stands. These conditions are:⁵

A. Scope

1. This permanent variance applies only to the task of grinding roll mill passes located in the roll mill stands of NSCI's Wallingford, CT establishment. This work is to be performed by authorized employees under alternative energy control procedures using a trapped key system and lock boxes.

2. No other maintenance work, including electrical maintenance (such as troubleshooting or maintenance covered under 29 CFR 1910.333), may be performed on the roll mill passes, the roll mill motors, or electric circuits connected to the trapped key system or roll mill stands using the trapped key system to control hazardous energy.

3. If any other maintenance or servicing work is performed, even if that work is performed at the same time as grinding roll mill passes, all of the maintenance work at that time must be performed under full lockout as required by 29 CFR 1910.147.

4. Except for the requirements specified by 29 CFR 1910.147(d)(4)(i) and (ii), NSCI must comply fully with all other applicable provisions of 29 CFR 1910.147 during servicing and maintenance of roll mills during the task of grinding roll mill passes.

5. The interim order granted to the employer on December 2, 2015 (80 FR 75472) is hereby revoked.

B. Definitions

The following definitions apply to this permanent variance:

1. *Affected employee*—an employee whose job requires him/her to work in an area in which grinding of roll mill passes located in the roll mill stands is being performed.

2. *Authorized employee*—an employee who uses the trapped key system in order to perform grinding of roll mill passes located in the roll mill stands. An affected employee becomes an authorized employee when that employee's duties include performing grinding of roll mill passes located in the roll mill stands covered under this section.

3. *Competent person*—an employee who is capable of identifying existing and predictable hazards in the surroundings associated with grinding of roll mill passes located in the roll mill stands or working conditions that are unsanitary, hazardous, or dangerous to employees, and who has

⁵ See footnote 2.

authorization to take prompt corrective measures to eliminate them.⁶

4. *Equipment lock box*—a part of the trapped key system consisting of any group lock box designated for and mounted on or near equipment used for securing the equipment lock box key by use of a personal lockout device.

5. *Equipment lock box lock and key*—a part of the trapped key system consisting of a uniquely identified equipment specific lock (red) and key used to secure the pulpit designated lock box containing and securing the trapped key.

6. *Group lock box*—a purchased lock box labeled as “TRAPPED KEY SYSTEM” that is used to enable more than one lock to be applied to the box. There are two types of lock boxes used in association with the trapped key system (see definitions for pulpit designated lock box and secondary group lock box).

7. *Job Hazard Analysis/Job Safety Analysis*—an evaluation of tasks or operations to identify potential hazards and to determine the necessary controls.

8. *Personal lock and key*—a durable, standardized substantial and uniquely identified device (a lock) that is maintained and controlled by a single authorized employee whose name is attached to the device. The key is unique to this device and is equally maintained and controlled by the authorized employee⁷ whose name is attached to the device. The personal lock and key is used to secure the equipment lock box key in the secondary group lock box.

9. *Pulpit designated lock box*—a group lock box mounted inside the pulpit designated for use with the “TRAPPED KEY SYSTEM” and including the: (a) Trapped key; (b) equipment lock box lock and key; and (c) pulpit operator personal lock and key placed on the pulpit designated lock box to secure the trapped key.

10. *Pulpit operator*—an authorized employee who: (a) Is designated to work on a roll mill crew; (b) is authorized to use the trapped key system during the grinding of roll mill passes; and (c) is trained to operate the pulpit panel. The pulpit panel has the ability to control the following equipment systems: Reheat furnace, discharge roll line, turntable, roll mill stands A & B; roll mill stands 1–15; water system; finishing mill; laying head; and stelmor conveyor.

11. *Pulpit operator trapped key system personal lock and key*—a part of the trapped key system consisting of a uniquely identified lock (green) and key used by the pulpit operator to secure the pulpit designated lock box containing and securing the trapped key.

12. *Qualified person*—an employee who, by possession of a recognized degree, certificate, or professional standing, or who, by extensive knowledge, training, and experience, successfully demonstrates an ability to solve or resolve problems relating to the subject matter, the work, or the project.⁸

13. *Roll mill operator and/or lead*—an authorized employee who is designated and trained to operate specific and multiple equipment systems or perform a specific job task that is part of the rolling process, including application of the trapped key system for the grinding of roll mill passes.

14. *Secondary group lock box*—a group lock box located on the mill floor just below the pulpit where authorized employees apply personal locks and follow trapped key system alternative energy isolation procedures to secure the equipment lock box key.

15. *Safety-rated relay*—a device specifically designed for safety applications that meets the requirements for control reliability as stated in ANSI B11.19 (2010) Performance of Safeguarding. The term “control reliable” means that no single fault results in the loss of the safety function. In addition, the relay must include monitoring and tamper resistance.

16. *Team member*—an employee who is trained and authorized to use the trapped key system in order to perform grinding of roll mill passes located in the roll mill stands.

17. *Trapped key*—a specially manufactured unique key only available from its manufacturer that is inserted into the trapped key system’s rotary switch. The rotary switch trapped key is mechanically attached by a chain to the pulpit designated lock box.

18. *Trapped key system*—the alternative method of preventing the unexpected startup or energization during grinding of roll mill passes located in the roll mill stands. NSCI presented the trapped key system to OSHA in its variance application of September 22, 2014, as supplemented by its responses to OSHA’s questions during the Agency’s application review. The system is based on an Allen Bradley GuardMaster safety-rated relay which is specifically designed for safety applications and use of a trapped key

that is a specially manufactured unique key only available from its manufacturer, and the administrative controls described in this variance.

C. Safety and Health Practices

1. NSCI shall modify the electrical controls at the pulpit (central control station located on the roll mill floor for the 15 roll mill stands), to prevent employee exposure to hazards associated with movement of the roll mill during the task of grinding roll mill passes;

2. NSCI shall install a trapped key system;

3. NSCI shall install a pulpit designated lock box for the trapped key in the pulpit area;

4. NSCI shall install a secondary group lock box in the roll mills floor area for securing the pulpit designated lock box key;

5. NSCI shall develop administrative energy control procedures for use of the trapped key system as described below;

6. NSCI shall implement detailed energy control procedures designed to ensure that each authorized employee applies a personal lock to the secondary group lock box, and has the ability to personally verify de-energization of the system, as described below;

7. NSCI shall make the energy control policies and procedures available to authorized and affected employees in English and Spanish;

8. NSCI shall ensure that grinding on the passes is conducted only while using the administrative energy control procedures based on the trapped key system, or using full lockout procedures that comply with 29 CFR 1910.147 when the roll stands must be de-energized so that other maintenance operations can be performed simultaneously with roll grinding;

9. NSCI shall install guarding on the entry/infeed and exit/outfeed sides of each roll mill stand to prevent employees from standing between turning mills and being exposed to the crushing hazards of in-running nip points;

10. NSCI shall develop additional administrative controls and procedures to minimize the potential for authorized and affected employees to enter between the mill stands when harm could occur; and

11. NSCI shall designate and post the areas as “No Entry” unless the procedures (1–10) are followed.

12. NSCI shall ensure that the trapped key system and its components are properly installed, inspected, maintained, and used so that it works as designed. NSCI shall strictly follow, where applicable, manufacturers’

⁶ Adapted from 29 CFR 1926.32(f).

⁷ See 29 CFR part 1910 [Docket No. S–012A], RIN 1218–AA53. Control of Hazardous Energy Sources (Lockout/Tagout), regarding “one person, one lock, one key.”

⁸ Adapted from 29 CFR 1926.32(m).

recommendations for the installation, inspection, maintenance, and use of the system and its components.

13. NSCI shall ensure that the trapped key system is only altered or modified for uses specified and approved by a qualified person by following good engineering practices. Where available, such alterations and modifications shall strictly follow the manufacturers' specifications, instructions, and written authorization. No changes or modifications may be made to the trapped key system or its components that diminish the protection provided to affected employees.

14. NSCI shall ensure that alteration or modification of the trapped key system is fully justified and documented when the manufacturers' specifications, instructions, and written authorization are lacking.

15. NSCI shall implement a procedure to ensure that no other maintenance will be performed on the roll mill stands while grinding is taking place, unless full lockout is used for all maintenance tasks being performed at that time.

D. Steps Required To De-Energize the System

NSCI shall develop and implement a detailed procedure for de-energizing the roll mill passes located in the roll mill stands in order to perform the grinding task. The procedure for de-energizing the roll mill passes shall include the following steps:

1. The authorized employee de-energizing the roll mill passes shall notify all affected employees that the equipment will be shut down and locked out to perform grinding of the passes;
2. The pulpit operator shall turn off the control lever on the control panel;
3. The pulpit operator shall activate the E-stop;
4. The pulpit operator verifies that the red "system functional" indicator is illuminated, then turns the trapped lockout key 90° to OFF position, and removes the trapped key from the panel. The operator verifies that the green "safe to work indicator" illuminates, and that the red "system functional" indicator goes out;
5. The pulpit operator:
 - a. Places the trapped key in the pulpit designated lock box and applies his or her personal lock to the pulpit designated lock box; and
 - b. Applies the equipment lock box lock designated for this energy control procedure;
6. The pulpit operator hands the equipment lock box lock key to the roll mill operator and/or lead;

7. The roll mill operator and/or lead takes the equipment lock box lock key to the secondary group lock box;

8. The roll mill operator and/or lead places the equipment lock box lock key in the secondary group lock box and attaches his or her personal lock;

9. Authorized employees (team members) place their personal locks on the secondary group lock box;

10. The roll mill operator and/or lead verifies that the equipment is de-energized and locked out by trying to operate the equipment (using the start button);

11. The roll mill operator and/or lead ensures that there are no additional sources of energy that could lead to the unexpected energization of the roll mill passes;

12. Authorized employees who placed their personal trapped key system locks on the secondary group lockout box shall also confirm that the equipment is fully de-energized;

13. Authorized employees who placed their personal locks on the secondary group lock box shall maintain their personal key in their possession while performing grinding of the roll mill passes; and

14. Authorized employees shall perform the task of grinding the passes only while these procedures are used.

E. Steps Required To Start Motion Intentionally

NSCI shall develop and implement a detailed procedure for re-energizing and intentionally starting motion in the roll mill passes located in the roll mill stands in order to resume normal operations at the conclusion of the grinding task. The procedure for re-energizing the roll mill passes shall include the following steps:

1. The roll mill operator and/or lead shall check the equipment and the immediate area around the equipment to ensure that necessary items have been removed and that the equipment components are operationally intact;
2. The roll mill operator and/or lead shall check the work area to ensure that all affected employees have been safely positioned or removed from the area;
3. The roll mill operator and/or lead shall check that all controls are in the neutral or off position;
4. Authorized employees shall remove their personal trapped key system locks from the secondary group lock box;
5. The roll mill operator and/or lead shall remove the equipment lock box lock key from the secondary group lock box and take it to the pulpit;
6. The roll mill operator and/or lead shall hand the equipment lock box lock key to the pulpit operator;

7. The pulpit operator shall verify that all personnel are clear of the equipment before starting to re-energize the roll mill passes;

8. The pulpit operator shall remove his or her trapped key system personal lock from the pulpit designated lock box;

9. Using the equipment lock box lock key, the pulpit operator shall remove the equipment lock box lock;

10. The pulpit operator shall remove the trapped key from the pulpit designated lock box and shall insert the key into the rotary switch and turn it 90° to the ON position;

11. The pulpit operator shall press the reset button to re-energize the roll mill passes;

12. The pulpit operator shall confirm that the green light clears and the red light activates indicating that the system is powered and that the trapped key system no longer prevents roll mill motion; and

13. The pulpit operator shall notify affected employees that the task of grinding the roll mill passes is complete and that the roll mill passes are ready for use.

F. Training and Methods of Operation

NSCI shall develop and implement a detailed worker qualifications and training program. NSCI must:

1. Develop an energy control training program and train each authorized employee, pulpit operator, roll mill designated person, and their supervisors on the trapped key system, and the procedures each must perform under it. The training program shall be provided in a language that the employees can understand;
2. Develop a training program and train each affected employee in the purpose and use of the alternative energy control procedures using the trapped key system before commencing operations under this variance, and document this instruction. The training program shall be provided in a language that the employees can understand;
3. Repeat the instruction specified in paragraph (1) of this condition periodically and as necessary (e.g., after making changes, in accordance with condition I–5, to the use of the trapped key system that affect its component configuration or operation and associated energy control procedures);
4. Ensure that each authorized and affected employee, designated pulpit operator, roll mill designated person, and each of their supervisors have effective and documented training in the contents and conditions covered by this proposed variance;

5. Ensure that only trained and authorized employees, designated pulpit operators, and roll mill designated persons, perform energy control procedures for the task of grinding roll mill passes;

6. Prepare a JHA for the safe application of energy control procedures; and

7. Review periodically and as necessary (*e.g.*, after making changes, in accordance with conditions C-13 and I-5, to the component configuration or operation of the trapped key system and energy control procedures that affect the grinding of roll mill passes located in the roll mill stands), the contents of the JHA with affected personnel.

G. Inspections, Tests and Incident Prevention

NSCI shall develop and implement a detailed program for completing inspections, tests, program evaluations and incident prevention. NSCI must:

1. Initiate and maintain a program of frequent and regular inspections of the trapped key system and associated work areas by:

a. Ensuring that a competent person (authorized employee) conducts daily visual checks and quarterly inspections and functionality tests of the trapped key system components and configuration or operation and energy control procedures that affect the grinding of roll mill passes located in the roll mill stands to ensure that the procedure and the conditions of this variance are being followed;

b. Ensuring that a competent person conducts weekly inspections of the work areas associated with the grinding of roll mill passes located in the roll mill stands; and

c. Developing a set of checklists to be used by a competent person in conducting the weekly inspections of the work areas associated with the grinding of roll mill passes located in the roll mill stands and the quarterly inspections and functionality tests of the trapped key system components and configuration or operation and energy control procedures that affect the grinding of roll mill passes.

2. Remove the equipment from service if the competent person determines that the equipment constitutes a safety hazard. NSCI must not return the equipment to service until the hazardous condition is corrected and the correction has been approved by a qualified person.

3. All maintenance, servicing, and installation of replacement parts must be performed in strict accordance with good engineering practices. Where available, the maintenance, servicing

and installation of replacement parts must strictly follow the manufacturers' specifications, instructions, and limitations.

H. Recordkeeping

1. NSCI must maintain a record of any recordable injury, illness, in-patient hospitalizations, amputations, loss of an eye or fatality (using the OSHA 301 Incident Report form to investigate and record energy control-related recordable injuries as defined by 29 CFR 1904.4, 1904.7, 1904.8 through 1904.12⁹), resulting from the task of grinding roll mill passes located in the roll mill stands by completing the OSHA 301 Incident Report form and OSHA 300 Log of Work-Related Injuries and Illnesses.

2. NSCI must maintain records of all tests and inspections of the component configuration or operation, and energy control procedures, as well as associated hazardous condition corrective actions and repairs.

I. Notifications

To assist OSHA in administering the conditions specified herein, NSCI shall:

1. Notify the OTPCA and the Bridgeport, CT, Area Office of any recordable injuries, illnesses, in-patient hospitalizations, amputations, loss of an eye or fatality (by submitting the completed OSHA 301 Incident Report form) resulting from implementing the alternative energy control procedures of the proposed variance conditions while completing the task of grinding roll mill passes located in the roll mill stands. The notification must be made within 8 hours of the incident or 8 hours after becoming aware of a recordable injury, illness, in-patient hospitalizations, amputations, loss of an eye, or fatality.

2. Submit a copy of the preliminary incident investigation (OSHA form 301) to the OTPCA and the Bridgeport, CT, Area Office within 24 hours of the incident or 24 hours after becoming aware of a recordable case and submit a copy of the full incident investigation within 7 calendar days of the incident or 7 calendar days after becoming aware of the case. In addition to the information required by the OSHA form 301, the incident-investigation report must include a root-cause determination, and the preventive and corrective actions identified and implemented.

3. Provide certification within 15 working days of the incident that NSCI informed affected workers of the incident and the results of the incident investigation (including the root-cause

determination and preventive and corrective actions identified and implemented).

4. Notify the OTPCA and the Bridgeport, CT, Area Office in writing and 15 working days prior to any proposed change in the energy control operations (including changes addressed by condition C-13) that affects NSCI's ability to comply with the conditions specified herein.

5. Obtain OSHA's approval prior to implementing the proposed change in the energy control operations that affects NSCI's ability to comply with the conditions specified herein.

6. Provide a written evaluation report, by January 31st at the beginning of each calendar year, with a report covering the year just ended, to the OTPCA and the Bridgeport, CT, Area Office summarizing the quarterly inspections and functionality tests of the trapped key system components and configuration or operation and energy control procedures that affect the grinding of roll mill passes located in the roll mill stands, to ensure that the energy control procedure and the conditions of this variance are being followed.

Note: The evaluation report is to contain summaries of: (1) The number of variance-related incidents (as recorded on OSHA 301 forms); and (2) root causes of any incidents, and preventive and corrective actions identified and implemented.

7. Inform the OTPCA and the Bridgeport, CT, Area Office as soon as possible after it has knowledge that it will:

a. Cease to do business;

b. change the location and address of the main office for managing the alternative energy control procedures specified herein; or

c. transfer the operations specified herein to a successor company.

8. Notify all affected employees of this permanent variance by the same means required to inform them of its application for a variance.

9. Request approval from OSHA for the transfer of the permanent variance to a successor company.

Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Avenue NW., Washington, DC 20210, authorized the preparation of this notice. Accordingly, the Agency is issuing this notice pursuant to Section 29 U.S.C. 655(6)(d), Secretary of Labor's Order No. 1-2012 (77 FR 3912, Jan. 25, 2012), and 29 CFR 1905.11.

⁹ See footnote 5.

Signed at Washington, DC, on March 4, 2016.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P

NATIONAL SCIENCE FOUNDATION

Notice of Intent To Seek Approval To Extend a Current Information Collection

AGENCY: National Science Foundation.

ACTION: Notice and request for comments.

SUMMARY: The National Science Foundation (NSF) is announcing plans to request renewal of this collection. In accordance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (Pub. L. 104-13), we are providing opportunity for public comment on this action. After obtaining and considering public comment, NSF will prepare the submission requesting that OMB approve clearance of this collection for three years.

Comments: Written comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the NSF, including whether the information shall have practical utility; (b) the accuracy of the NSF's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

DATES: Written comments on this notice must be received by June 7, 2016 to be assured of consideration. Comments received after that date will be considered to the extent practicable.

For Additional Information or Comments: Contact Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230; telephone (703) 292-7556; or send email to splimpto@nsf.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and

8:00 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Title of Collection: Higher Education Research and Development Survey
OMB Approval Number: 3145-0100.
Expiration Date of Current Approval: September 30, 2016.

Type of Request: Intent to Extend a Current Information Collection.

Abstract: The Higher Education Research and Development (R&D) Survey (formerly known as the Survey of R&D Expenditures at Universities and Colleges) originated in fiscal year (FY) 1954 and has been conducted annually since FY 1972. The survey represents one facet of the higher education component of the NSF's National Center for Science and Engineering Statistics (NCSES) statistical program authorized by the America COMPETES Reauthorization Act of 2010 § 505, codified in the National Science Foundation Act of 1950 (NSF Act), as amended, at 42 U.S.C. 1862. Under paragraph "b", NCSES is directed to "(1) collect, acquire, analyze, report, and disseminate statistical data related to the science and engineering enterprise in the U.S. and other nations that is relevant and useful to practitioners, researchers, policymakers, and the public, including statistical data on

(A) research and development trends; (B) the science and engineering workforce;

(C) U.S. competitiveness in science, engineering, technology, and research and development"

Use of the Information: The proposed project will continue the annual survey cycle for three years. The Higher Education R&D Survey will provide continuity of statistics on R&D expenditures by source of funding, type of R&D (basic research, applied research, or development), and field of research, with separate data requested on research equipment by field. Further breakdowns are collected on funds passed through to subrecipients and funds received as a subrecipient, and on R&D expenditures by field from specific federal agency sources. As of FY 2010, the survey also requests total R&D expenditures funded from foreign sources, R&D within an institution's medical school, clinical trial expenditures, R&D by type of funding mechanism (contracts vs. grants), and R&D by cost category (salaries, equipment, software, etc.). The survey also requests headcounts of principal investigators and other personnel paid from R&D funds.

Data are published in NSF's annual publication series *Higher Education*

Research and Development, available on the web at <http://www.nsf.gov/statistics/srvyherd/>.

Expected respondents: The FY 2016 Higher Education R&D Survey will be administered to an expected minimum of 600 institutions. In addition, a shorter version of the survey asking for R&D expenditures by source of funding and broad field will be sent to approximately 300 institutions spending under \$1 million on R&D in their previous fiscal year. Finally, a survey requesting R&D expenditures by source of funds, cost categories, and type of R&D will be administered to the 42 Federally Funded Research and Development Centers.

Estimate of burden: The survey is a fully automated web data collection effort and is handled primarily by administrators in university sponsored programs and accounting offices. To minimize burden, institutions are provided with an abundance of guidance and resources on the web, and are able to respond via downloadable spreadsheet if desired. Each institution's record is pre-loaded with the 2 previous years of comparable data that facilitate editing and trend checking. Response to this voluntary survey has exceeded 95 percent each year.

The average burden estimate is 54 hours for the approximately 650 institutions reporting over \$1 million in R&D expenditures, 8 hours for the approximately 280 institutions reporting less than \$1 million, and 11 hours for the 42 organizations completing the FFRDC survey. The total calculated burden across all forms is 37,802 hours.

Dated: April 5, 2016.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52-027 and 52-028; NRC-2008-0441]

Virgil C. Summer Nuclear Station, Units 2 and 3 South Carolina Electric & Gas Company; Control Rod Drive Mechanism Motor Generator Set Field Relay Change

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemption and combined license amendment; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is granting an

exemption to allow a departure from the certification information of Tier 1 of the generic design control document (DCD) and is issuing License Amendment No. 27 to Combined Licenses (COLs), NPF-93 and NPF-94. The COLs were issued to South Carolina Electric & Gas Company, (the licensee); for construction and operation of the Virgil C. Summer Nuclear Station (VCSNS) Units 2 and 3, located in Fairfield County, South Carolina. The granting of the exemption allows the changes to Tier 1 information asked for in the amendment. Because the acceptability of the exemption was determined in part by the acceptability of the amendment, the exemption and amendment are being issued concurrently.

ADDRESSES: Please refer to Docket ID NRC-2008-0441 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2008-0441. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document. The request for the amendment and exemption was submitted by letter dated October 30, 2014 (ADAMS Accession No. ML14303A448).

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Paul Kallan, Office of New Reactors, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone:

301-415-2809; email: Paul.Kallan@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is granting an exemption from paragraph B of Section III, "Scope and Contents," of appendix D, "Design Certification Rule for the AP1000," to part 52 of title 10 of the *Code of Federal Regulations* (10 CFR), and issuing License Amendment No. 27 to COLs, NPF-93 and NPF-94, to the licensee. The exemption is required by paragraph A.4 of Section VIII, "Processes for Changes and Departures," appendix D, to 10 CFR part 52 to allow the licensee to depart from Tier 1 information. With the requested amendment, the licensee sought proposed changes that specifies the use of latching control relays in lieu of breakers to de-energize the control rod drive mechanism (CRDM) motor generator (MG) set generator field on a diverse actuation system (DAS) reactor trip signal. The replacement of the CRDM MG set generator field breakers with field control relays requires an updated final safety analysis report (UFSAR) Tier 2 departure that involves changes to COL Appendix C, Tables 2.5.1-4, "Inspections, Tests, Analyses, and Acceptance Criteria," and 3.7-1, "Risk-Significant Components," along with corresponding departures from plant-specific DCD Tier 1 information.

Part of the justification for granting the exemption was provided by the review of the amendment. Because the exemption is necessary in order to issue the requested license amendment, the NRC granted the exemption and issued the amendment concurrently, rather than in sequence. This included issuing a combined safety evaluation containing the NRC staff's review of both the exemption request and the license amendment. The exemption met all applicable regulatory criteria set forth in 10 CFR 50.12, 10 CFR 52.7, and Section VIII.A.4 of appendix D to 10 CFR part 52. The license amendment was found to be acceptable as well. The combined safety evaluation is available in ADAMS under Accession No. ML15135A211.

Identical exemption documents (except for referenced unit numbers and license numbers) were issued to the licensee for VCSNS Units 2 and 3 (COLs NPF-93 and NPF-94). The exemption documents for VCSNS Units 2 and 3 can be found in ADAMS under Accession Nos. ML15135A160 and ML15135A170, respectively. The exemption is reproduced (with the exception of abbreviated titles and additional citations) in Section II of this document. The amendment documents for COLs

NPF-93 and NPF-94 are available in ADAMS under Accession Nos. ML15135A145 and ML15135A156, respectively. A summary of the amendment documents is provided in Section III of this document.

II. Exemption

Reproduced below is the exemption document issued to Summer Units 2 and Unit 3. It makes reference to the combined safety evaluation that provides the reasoning for the findings made by the NRC (and listed under Item 1) in order to grant the exemption:

1. In a letter dated October 30, 2014, the licensee requested from the Commission an exemption from the provisions of 10 CFR part 52, appendix D, Section III.B, as part of license amendment request 13-27, "Control Rod Mechanism Motor Generator Set Field Relay Change (LAR-13-27)."

For the reasons set forth in Section 3.1, "Evaluation of Exemption," of the NRC staff's Safety Evaluation, which can be found in ADAMS under Accession No. ML15135A211, the Commission finds that:

- A. The exemption is authorized by law;
- B. the exemption presents no undue risk to public health and safety;
- C. the exemption is consistent with the common defense and security;
- D. special circumstances are present in that the application of the rule in this circumstance is not necessary to serve the underlying purpose of the rule;
- E. the special circumstances outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; and
- F. the exemption will not result in a significant decrease in the level of safety otherwise provided by the design.

2. Accordingly, the licensee is granted an exemption from the certified DCD Tier 1, COL appendix C, Table 2.5.1-4, and Table 3.7-1, as described in the licensee's request dated October 30, 2014. This exemption is related to, and necessary for the granting of License Amendment No. 27, which is being issued concurrently with this exemption.

3. As explained in Section 5.0, "Environmental Consideration," of the NRC staff's Safety Evaluation (ADAMS Accession No. ML15135A211), this exemption meets the eligibility criteria for categorical exclusion set forth in 10 CFR 51.22(c)(9). Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment needs to be prepared in connection with the issuance of the exemption.

4. This exemption is effective as of June 10, 2015.

III. License Amendment Request

By letter dated October 30, 2014, the licensee requested that the NRC amend the COLs for VCSNS, Units 2 and 3, COLs NPF-93 and NPF-94. The proposed amendment is described in Section I of this document.

The Commission has determined for these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or combined license, as applicable, proposed no significant hazards consideration determination, and opportunity for a hearing in connection with these actions, was published in the **Federal Register** on January 6, 2015 (80 FR 520). No comments were received during the 30-day comment period.

The Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments.

IV. Conclusion

Using the reasons set forth in the combined safety evaluation, the staff granted the exemption and issued the amendment that the licensee requested on October 30, 2014. The exemption and amendment were issued on June 10, 2015 as part of a combined package to the licensee (ADAMS Accession No. ML15135A140).

Dated at Rockville, Maryland, this 31st day of March 2016.

For the Nuclear Regulatory Commission,
John McKirgan,

*Acting Branch Chief, Licensing Branch 4,
Division of New Reactor Licensing, Office of
New Reactors.*

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52-025 and 52-026; NRC-2008-0252]

Vogle Electric Generating Plant Units 3 and 4; Southern Nuclear Operating Company, Inc. Georgia Power Company, Oglethorpe Power Corporation, MEAG Power SPVM, LLC., MEAG Power SPVJ, LLC., MEAG Power SPVP, LLC., and the City of Dalton, Georgia

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemption; issuance.

SUMMARY: Southern Nuclear Operating Company, Inc. (SNC); Georgia Power Company, Oglethorpe Power Corporation, MEAG Power SPVM, LLC., MEAG Power SPVJ, LLC., MEAG Power SPVP, LLC., and the City of Dalton, Georgia (together, the "VEGP Owners") are the holders of Combined License (COL) Nos. NPF-91 and NPF-92, which authorize the construction and operation of Vogle Electric Generating Plant, Units 3 and 4 (VEGP 3 & 4), respectively.¹ The NRC is issuing an exemption allowing applicants for an operator license at VEGP 3 & 4 to satisfy the requirement to provide evidence that the applicant, as a trainee, has successfully manipulated the controls of either the facility for which the license is sought or a plant-referenced simulator (PRS) by, instead, providing evidence that the applicant has successfully manipulated the controls of a Commission-approved simulation facility for VEGP 3 & 4.

DATES: This exemption is effective as of April 8, 2016.

ADDRESSES: Please refer to Docket ID NRC-2008-0252 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- **Federal Rulemaking Web site:** Go to <http://www.regulations.gov> and search for Docket ID NRC-2008-0252. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- **NRC's Agencywide Documents Access and Management System**

¹ SNC is authorized by the VEGP Owners to exercise responsibility and control over the physical construction, operation, and maintenance of the facility, and will be referred to as "facility licensee."

(ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that a document is referenced. The facility licensee's Commission-Approved Simulation Facility application and exemption request was submitted to the NRC by letter dated September 18, 2015 (ADAMS Accession No. ML15265A107).

- **NRC's PDR:** You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Paul Kallan, Office of New Reactors, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2809; email: Paul.Kallan@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Background

Vogle Electric Generating Plant, Units 3 and 4 (VEGP 3 & 4) are Westinghouse AP1000 pressurized-water reactors under construction in Burke County, Georgia. They are co-located with Vogle Electric Generating Plant, Units 1 and 2, which are two operating Westinghouse four-loop pressurized-water reactors.

The simulation facility for VEGP 3 & 4 comprises two AP1000 full scope simulators, which are designated "3A" and "3B." Both simulators are referenced to Vogle Unit 3 and are intended to be maintained functionally identical. The simulators are licensed to conform to the requirements of ANSI/ANS-3.5-1998, "Nuclear Power Plant Simulation Facilities for Use in Operator Training and License Examination" (ANS 3.5), as endorsed by Revision 3 of NRC Regulatory Guide 1.149, "Nuclear Power Plant Simulation Facilities for Use in Operator Training and License Examinations."

On March 29, 2016, the Commission approved the simulation facility under § 55.46(b) of title 10 of the *Code of Federal Regulations* (10 CFR), for use in the administration of operating tests after finding that the simulation facility and its proposed use are suitable for the conduct of operating tests for the facility

licensee's reference plant under 10 CFR 55.45(a) (ADAMS Accession No. ML16070A301).

II. Request/Action

Section 55.31(a)(5) states that to apply for an operator or senior operator license the applicant shall provide evidence that the applicant, as a trainee, has successfully manipulated the controls of either the facility for which a license is sought or a PRS that meets the requirements of 10 CFR 55.46(c). However, the VEGP 3 & 4 simulators have not yet been found to meet the NRC's requirements for plant-referenced simulators at 10 CFR 55.46(c) because the design activities required by the AP1000 design certification to establish the human factors engineering design for the main control room are incomplete.

Southern Nuclear Operating Company, Inc. (SNC) has not requested an exemption. The Commission, on its own initiative, has determined that an exemption is warranted from the requirement in 10 CFR 55.31(a)(5) that the applicant for a VEGP 3 & 4 operator license use a PRS or the facility to provide evidence of having successfully manipulated the controls of the facility. In lieu of that requirement, the Commission will accept evidence that the applicant, as a trainee, has successfully manipulated the controls of the VEGP 3 & 4 Commission-approved simulation facility meeting the requirements of 10 CFR 55.46(b).

The staff's evaluation of this action follows.

III. Discussion

Pursuant to 10 CFR 55.11, the Commission may, upon application by an interested person, or upon its own initiative, grant exemptions from the requirements of 10 CFR part 55 as it determines are (1) authorized by law and (2) will not endanger life or property and (3) are otherwise in the public interest.

1. The Exemption Is Authorized by Law

Exemptions are authorized by law where they are not expressly prohibited by statute or regulation. A proposed exemption is implicitly "authorized by law" if all of the conditions listed therein are met (*i.e.*, will not endanger life or property and is otherwise in the public interest) and no other provision prohibits, or otherwise restricts, its application. As discussed in this section of the evaluation, no provisions in law restrict or prohibit an exemption to the requirements concerning control manipulations; the "endanger" and

"public interest" factors are addressed later in this evaluation.

The regulations in 10 CFR part 55 implement Section 107 of the Atomic Energy Act of 1954, as amended (AEA), which sets requirements upon the Commission concerning operators' licenses and states, in part, that the Commission shall (1) "prescribe uniform conditions for licensing individuals as operators of any of the various classes of . . . utilization facilities licensed" by the NRC and (2) "determine the qualifications of such individuals."

These requirements in the AEA do not expressly prohibit exemptions to the portion of 10 CFR 55.31(a)(5) that requires the use of a PRS or the facility for control manipulations. Further, as explained below, the exemption has little impact on the uniformity of licensing conditions, and little impact on the determinations of qualifications.

In a letter from Ms. Karen Fili, Vice President, VEGP 3 & 4 Operational Readiness, to the NRC dated September 18, 2015 (ADAMS Accession No. ML15265A107), the facility licensee requested Commission approval of the simulation facility for VEGP 3 & 4 to support the administration of operator licensing examinations.²

The staff's evaluation of the simulation facility for VEGP 3 & 4 concluded that the simulation facility for VEGP 3 & 4 provides the necessary reactor physics, thermal hydraulic, and integrated system modeling of the reference plant (*i.e.*, the AP1000 plant as described in the design certification) necessary to perform operator license examinations. This modeling includes the predicted core performance instead of the most recent core load. Because VEGP 3 & 4 is under construction, plant experience from the most recent core load is not available. Predicted core performance is acceptable because operating experience with core design has demonstrated that the reactor physics and thermal hydraulic characteristics associated with a core design can be accurately predicted. As described in the staff's evaluation of the simulation facility for VEGP 3 & 4, simulator performance testing has demonstrated that the core performance predictions have been accurately modeled.

The staff's evaluation of the simulation facility for VEGP 3 & 4

² The publicly-available portions of the Commission-approved simulation facility request submittal ("CAS request submittal") and enclosures are available at ADAMS Accession No. ML15265A107. Pursuant to 10 CFR 2.390, SNC requested that some information be withheld from public disclosure.

concluded that the simulation facility for VEGP 3 & 4 is capable of providing a wide range of scenarios that address the 13 items in 10 CFR 55.45(a) without procedural exceptions, simulator performance exceptions, or deviation from the approved examination scenario sequence. Control manipulations are a subset of actions included in these scenarios and have a defined scope that is significantly less than an exam scenario. Because of the reduced scope, the presence of existing simulator discrepancies in any training scenarios that provide applicants with the opportunity to provide the required control manipulations is even less likely as compared to operating tests. Therefore, there exists a large variety of control manipulations that can be completed without procedural exceptions, simulator performance exceptions, or deviation from the approved training scenario sequence.

Further, the conditions under which the applicants are licensed will be essentially unchanged, and the usage of the VEGP 3 & 4 CAS in place of a PRS will not significantly change how the Commission determines the qualifications of applicants. Under the exemption, 10 CFR 55.31(a)(5) will continue to require the applicant to perform, at a minimum, five significant control manipulations that affect reactivity or power level.

For purposes of control manipulations, the staff has already determined in its safety evaluation documenting Commission-approval of the simulation facility for VEGP 3 & 4 (ADAMS Accession No. ML16070A301) that the facility sufficiently models the systems of the reference plant, including the operating consoles, and permits use of the reference plant's procedures. Facility licensees that propose to use a PRS to meet the control manipulation requirements in 10 CFR 55.31(a)(5) must ensure that:

(i) The plant-referenced simulator utilizes models relating to nuclear and thermal-hydraulic characteristics that replicate the most recent core load in the nuclear power reference plant for which a license is being sought; and

(ii) Simulator fidelity has been demonstrated so that significant control manipulations are completed without procedural exceptions, simulator performance exceptions, or deviation from the approved training scenario sequence.

In its safety evaluation documenting Commission-approval of the simulation facility for VEGP 3 & 4, the staff found that the VEGP 3 & 4 Commission-approved simulation facility meets these criteria and, therefore, is equivalent to a PRS with respect to performing control

manipulations. Thus, the simulation facility for VEGP 3 & 4 is an acceptable simulation facility for meeting the experience requirements in 10 CFR 55.31(a)(5).

Accordingly, because a PRS and the Commission-approved simulation facility for VEGP 3 & 4 are essentially the same with respect to control manipulations, an exemption from 10 CFR 55.31(a)(5) allowing the use of the Commission-approved simulation facility for VEGP 3 & 4 in lieu of a PRS or the facility for control manipulations will still satisfy the applicable statutory requirements of the AEA that the Commission prescribe uniform conditions for licensing individuals as operators and determine the qualifications of operators.

The acceptability of the simulation facility for VEGP 3 & 4 with respect to the significant control manipulations required by 10 CFR 55.31(a)(5) is additionally assured by the fact that SNC performs scenario-based testing (SBT) for scenarios used to satisfy the control manipulation requirement. To ensure that simulator discrepancies and/or procedure issues do not affect control manipulations, SNC, as a standard practice in accordance with its licensing basis, implements SBT in accordance with Revision 1 of NEI 09–09, “Nuclear Power Plant-Referenced Simulator Scenario Based Testing Methodology.”³ The NRC staff endorsed NEI 09–09 in Regulatory Guide 1.149, Revision 4, dated April 2011. NEI 09–09 describes SBT as follows:

Key to the SBT Methodology is parallel testing and evaluation of simulator performance while instructors validate simulator training and evaluation scenarios. As instructors validate satisfactory completion of training or evaluation objectives, procedure steps and scenario content, they are also ensuring satisfactory simulator performance in parallel, not series, making the process an “online” method of evaluating simulator performance. Also critical is the assembly of the SBT package—the collection of a marked-up scenario, appropriate procedures, monitored parameters, an alarm summary and an affirmation checklist that serves as the proof of the robust nature of this method of performance testing. Proper conduct of the SBT Methodology is intended to alleviate the need for post-scenario evaluation of simulator performance since the performance of the simulator is being evaluated (*i.e.*: compared to actual or predicted reference plant performance) during the parallel conduct of SBT and scenario validation.

Therefore, since the Commission-approved simulation facility for VEGP 3

& 4 conforms to the same control manipulation requirements as a PRS, the NRC staff will continue to comply with its requirements governing uniformity and operator qualifications.

Accordingly, for the reasons above, and in light of the reasons discussed in Sections 2 and 3 below, the Commission concludes that the exemption is authorized by law.

2. The Exemption Will Not Endanger Life or Property

As discussed above, as part of its review and approval of SNC’s request for a Commission-approved simulation facility for VEGP 3 & 4, the staff found that the simulator demonstrates expected plant response to operator input and to normal, transient, and accident conditions to which the simulator has been designed to respond. Further, the staff found that the simulator is designed and implemented so that (i) it is sufficient in scope and fidelity to allow conduct of the evolutions listed in 10 CFR 55.45(a)(1) through (13), and 10 CFR 55.59(c)(3)(i)(A) through (AA), as applicable to the design of the reference plant and (ii) it allows for the completion of control manipulations for operator license applicants. Accordingly, the staff concludes that the simulation facility for VEGP 3 & 4 will replicate reference plant performance for the significant control manipulations required by 10 CFR 55.31(a)(5).

Because the Commission-approved simulation facility for VEGP 3 & 4 matches the criteria of a PRS with respect to control manipulations, the staff concludes that there is no basis to find endangerment of life or property as a consequence of the exemption.

3. The Exemption Is Otherwise in the Public Interest

The Commission’s values guide the NRC in maintaining certain principles as it carries out regulatory activities in furtherance of its safety and security mission. These principles focus the NRC on ensuring safety and security while appropriately considering the interests of the NRC’s stakeholders, including the public and licensees. These principles include Independence, Openness, Efficiency, Clarity, and Reliability. Whether the grant of an exemption to the requirement to use a PRS or the facility rather than the Commission-approved simulation facility for VEGP 3 & 4 would be in the public interest depends on the consideration and balancing of the foregoing factors.

Concerning Efficiency, the public has an interest in the best possible management and administration of

regulatory activities. Regulatory activities should be consistent with the degree of risk reduction they achieve. Where several effective alternatives are available, the option which minimizes the use of resources should be adopted. Regulatory decisions should be made without undue delay. As applied to using a CAS rather than a PRS or the facility, in light of the Commission’s findings that the capabilities of the VEGP 3 & 4 CAS are equivalent to those of a PRS for control manipulations, the usage of the VEGP 3 & 4 CAS provides both an effective and an efficient alternative for the VEGP 3 & 4 operator license applicant to gain the required experience.

Concerning Reliability, once established, regulations should be perceived to be reliable and not unjustifiably in a state of transition. Regulatory actions should always be fully consistent with written regulations and should be promptly, fairly, and decisively administered so as to lend stability to the nuclear operational and planning processes. Here, where the staff has already found that the VEGP 3 & 4 CAS is equivalent to a PRS with respect to control manipulations, the substantive requirements upon the operator license applicant are unchanged with the granting of the exemption. Further, the public has an interest in reliability in terms of the stability of the nuclear planning process. This exemption aids planning by allowing operator license applicants to complete their applications sooner, with the underlying requirements essentially unchanged, and could result in licensing decisions being made earlier than would be possible if the applicants had to wait for a PRS to be available.

Concerning Clarity, there should be a clear nexus between regulations and agency goals and objectives whether explicitly or implicitly stated. Agency positions should be readily understood and easily applied. For the reasons explained in the NRC’s evaluation of the VEGP 3 & 4 CAS, the CAS is sufficient for administering operating tests, and is able to meet the requirements of a PRS with respect to control manipulations. The exemption accordingly recognizes that the capabilities of the VEGP 3 & 4 CAS are suitable to accomplish the regulatory purpose underlying the requirements of 10 CFR 55.31(a)(5).

The exemption is also consistent with the principles of Independence and Openness; the Commission has independently and objectively considered the regulatory interests involved and has explicitly documented its reasons for issuing the exemption.

³ By letter dated March 23, 2016 (ADAMS Accession No. ML16083A463), SNC stated that it conforms to Revision 1 of NEI 09–09.

Accordingly, on balance the Commission concludes that the exemption is in the public interest.

Conclusion

The Commission concludes that the exemption is (1) authorized by law and (2) will not endanger life or property and (3) is otherwise in the public interest. Therefore, in lieu of the requirements of 10 CFR 55.31(a)(5), the Commission will accept evidence that the applicant for a VEGP 3 & 4 operator license has completed the required manipulations on the VEGP 3 & 4 Commission-approved simulation facility that meets the requirements of 10 CFR 55.46(b), rather than on a PRS or the facility.

Expiration and Limitation

This exemption will expire when a VEGP 3 & 4 plant-referenced simulator that meets the requirements in 10 CFR 55.46(c) is available. Furthermore, this exemption is subject to the condition that the Commission-approved simulation facility for VEGP 3 & 4 continues to model the reference plant with sufficient scope and fidelity, in accordance with 10 CFR 55.46(c) and (d).

Environmental Consideration

This exemption allows the five significant control manipulations required by 10 CFR 55.31(a)(5) to be performed on the VEGP 3 & 4 CAS that has been approved for the administration of operating tests instead of on the VEGP 3 & 4 facility or a PRS.

For the following reasons, this exemption meets the eligibility criteria of 10 CFR 51.22(c)(25) for a categorical exclusion. There is no significant hazards consideration related to this exemption. The staff has also determined that the exemption involves no significant increase in the amounts, and no significant change in the types, of any effluents that may be released offsite; that there is no significant increase in individual or cumulative public or occupational radiation exposure; that there is no significant construction impact; and that there is no significant increase in the potential for or consequences from radiological accidents. Finally, the requirements to which the exemption applies involve qualification requirements. Accordingly, the exemption meets the eligibility criteria for categorical exclusion set forth in 10 CFR 51.22(c)(25). Pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared in connection with the issuance of the exemption.

IV. Conclusion

Accordingly, the Commission has determined that, pursuant to 10 CFR 55.11, issuing this exemption from the requirements in 10 CFR 55.31(a)(5) is authorized by law and will not endanger life or property and is otherwise in the public interest. The Commission will accept evidence of control manipulations performed on the VEGP 3 & 4 Commission-approved simulation facility instead of on the VEGP 3 & 4 facility or a PRS.

Dated at Rockville, Maryland, this 31st day of March 2016.

For the Nuclear Regulatory Commission.

Mark Delligatti,

Deputy Director, Division of New Reactor Licensing, Office of New Reactors.

BILLING CODE 7590-01-P

OVERSEAS PRIVATE INVESTMENT CORPORATION

[OPIC-162, OMB 3420-0019]

Submission for OMB Review; Comments Request

AGENCY: Overseas Private Investment Corporation (OPIC).

ACTION: Notice and request for comments.

SUMMARY: Under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35), agencies are required to publish a Notice in the **Federal Register** notifying the public that the agency is modifying an existing information collection for OMB review and approval and requests public review and comment on the submission. OPIC received no comments in response to the sixty (60) day notice. The purpose of this notice is to allow an additional thirty (30) days for public comments to be submitted. Comments are being solicited on the need for the information; the accuracy of OPIC's burden estimate; the quality, practical utility, and clarity of the information to be collected; and ways to minimize reporting the burden, including automated collection techniques and uses of other forms of technology.

The proposed change to OPIC-162 clarifies existing questions, incorporates sector-specific development impact questions and eliminates ineffective questions in an effort to harmonize development impact indicators with other Development Finance Institutions ("DFIs"). OPIC is a signatory to a "Memorandum of Understanding" with 25 partnering DFIs to harmonize development impact metrics where

possible. The goal of this effort is to reduce the reporting burden on clients that receive financing from multiple DFIs and to instill best practices in the collection and the reporting on OPIC's developmental impacts. To minimize the reporting burden on respondents, OPIC has designed OPIC-162 as an electronic form with questions populating if they relate to the project.

DATES: Comments must be received within thirty (30) calendar days of publication of this Notice.

ADDRESSES: Mail all comments and requests for copies of the subject form to OPIC's Agency Submitting Officer: James Bobbitt, Overseas Private Investment Corporation, 1100 New York Avenue NW., Washington, DC 20527. See **SUPPLEMENTARY INFORMATION** for other information about filing.

FOR FURTHER INFORMATION CONTACT: OPIC Agency Submitting Officer: James Bobbitt, (202) 336-8558.

SUPPLEMENTARY INFORMATION: OPIC received no comments in response to the sixty (60) day notice published in **Federal Register** volume 81 page 5505 on February 2, 2016. All mailed comments and requests for copies of the subject form should include form number OPIC-162 on both the envelope and in the subject line of the letter. Electronic comments and requests for copies of the subject form may be sent to James.Bobbitt@opic.gov, subject line OPIC-162.

Summary Form Under Review

Type of Request: Revision of a currently approved information collection.

Title: Self-Monitoring Questionnaire.
Form Number: OPIC-162.

Frequency of Use: One per investor per project annually.

Type of Respondents: Business or other institutions and individuals.

Standard Industrial Classification Codes: All.

Description of Affected Public: U.S. companies or citizens investing overseas.

Reporting Hours: 2,186 (4.7 hours per form).

Number of Responses: 465 per year.

Federal Cost: \$48,518.

Authority for Information Collection: Sections 231, 231A, 239(d), and 240A of the Foreign Assistance Act of 1961, as amended.

Abstract (Needs and Uses): The Self Monitoring Questionnaire is the principal document used by OPIC to monitor the developmental effects of OPIC's investment projects, monitor the economic effects on the U.S. economy, and collect information on compliance with environmental and labor policies.

Dated: April 5, 2016.

Nichole Skoyles,

Administrative Counsel, Department of Legal Affairs.

BILLING CODE 3210-01-P

OFFICE OF PERSONNEL MANAGEMENT

Excepted Service

AGENCY: U.S. Office of Personnel Management (OPM).

ACTION: Notice.

SUMMARY: This notice identifies Schedule A, B, and C appointing authorities applicable to a single agency that were established or revoked from December 1, 2015, to December 31, 2015.

FOR FURTHER INFORMATION CONTACT: Senior Executive Resources Services, Senior Executive Services and Performance Management, Employee Services, 202-606-2246.

SUPPLEMENTARY INFORMATION: In accordance with 5 CFR 213.103, Schedule A, B, and C appointing authorities available for use by all agencies are codified in the Code of Federal Regulations (CFR). Schedule A, B, and C appointing authorities applicable to a single agency are not codified in the CFR, but the Office of Personnel Management (OPM) publishes a notice of agency-specific

authorities established or revoked each month in the **Federal Register** at www.gpo.gov/fdsys/. OPM also publishes an annual notice of the consolidated listing of all Schedule A, B, and C appointing authorities, current as of June 30, in the **Federal Register**.

Schedule A

03. Executive Office of the President (Sch. A 213.3103)

(b) Office of Management and Budget

(2) Not to Exceed 85 positions that require unique technical skills needed for the re-designing and re-building of digital interfaces between citizens, businesses, and government as a part of Smarter Information Technology Delivery Initiative. This authority may be used to make permanent, time-limited and temporary appointments to Digital Services Expert positions (GS-301) directly related to the implementation of the Smarter Information Technology Delivery Initiative at the GS-14 to 15 level. No new appointments may be made under this authority after September 30, 2017.

06. Department of Defense (Sch. A 213.3106)

(b) Entire Department (Including the Office of the Secretary of Defense and the Departments of the Army, Navy, and Air Force)

(11) Not to exceed 3,000 positions that require unique cyber security skills and

knowledge to perform cyber risk and strategic analysis, incident handling and malware/vulnerability analysis, program management, distributed control systems security, cyber incident response, cyber exercise facilitation and management, cyber vulnerability detection and assessment, network and systems engineering, enterprise architecture, investigation, investigative analysis and cyber-related infrastructure inter-dependency analysis. This authority may be used to make permanent, time-limited and temporary appointments in the following occupational series: Security (GS-0080), computer engineers (GS-0854), electronic engineers (GS-0855), computer scientists (GS-1550), operations research (GS-1515), criminal investigators (GS-1811), telecommunications (GS-0391), and IT specialists (GS-2210). Within the scope of this authority, the U.S. Cyber Command, Army Cyber Command, Fleet [Navy] Cyber Command, Air Force Cyber Command, and Marine Forces Cyber.

Schedule B

No Schedule B Authorities to report during December 2015.

Schedule C

The following Schedule C appointing authorities were approved during December 2015.

| Agency name | Organization name | Position title | Authorization number | Effective date |
|------------------------------|---|---|----------------------|----------------|
| DEPARTMENT OF AGRICULTURE | Office of Communications | Deputy Director of Scheduling | DA160014 | 12/1/2015 |
| | Office of the Secretary | Confidential Assistant | DA160019 | 12/4/2015 |
| | Rural Housing Service | State Director—California | DA160021 | 12/11/2015 |
| | Office of the Assistant Secretary for Congressional Relations. | Director, Intergovernmental Affairs .. | DA160026 | 12/22/2015 |
| DEPARTMENT OF COMMERCE | Office of the General Counsel | Senior Counselor | DA160027 | 12/22/2015 |
| | Rural Utilities Service | Senior Advisor | DA160028 | 12/22/2015 |
| | Assistant Secretary for Industry and Analysis. | Director, Office of Advisory Committees and Industry Outreach. | DC160041 | 12/4/2015 |
| | Office of the Chief Financial Officer and Assistant Secretary for Administration. | Chief of Staff for Administration | DC160042 | 12/4/2015 |
| DEPARTMENT OF DEFENSE | Office of the Under Secretary | Senior Advisor | DC160043 | 12/4/2015 |
| | Office of the Secretary | Advance Officer | DD160022 | 12/9/2015 |
| | | Confidential Assistant | DD160026 | 12/14/2015 |
| | Washington Headquarters Services | Defense Fellow | DD160024 | 12/9/2015 |
| DEPARTMENT OF EDUCATION | Office of the Assistant Secretary of Defense (Legislative Affairs). | Special Assistant | DD160027 | 12/15/2015 |
| | Office of the Under Secretary of Defense (Personnel and Readiness). | Special Assistant (Personnel and Readiness). | DD160031 | 12/28/2015 |
| | Office of the Under Secretary | Chief of Staff, White House Initiative on Historically Black Colleges. | DB160015 | 12/11/2015 |
| | Office of Legislation and Congressional Affairs. | Director of Budget and Appropriations. | DB160014 | 12/14/2015 |
| DEPARTMENT OF ENERGY | Office of Career Technical and Adult Education. | Director of Outreach and Engagement. | DB160018 | 12/22/2015 |
| | Office of Innovation and Improvement. | Confidential Assistant | DB160017 | 12/21/2015 |
| | | Strategic Advisor | DB160019 | 12/22/2015 |
| | Office of the Assistant Secretary for Nuclear Energy. | Associate Deputy Assistant Secretary for Policy and Small Modular Reactors Commercialization. | DE160027 | 12/2/2015 |

| Agency name | Organization name | Position title | Authorization number | Effective date |
|--|---|--|----------------------|----------------|
| GENERAL SERVICES ADMINISTRATION. DEPARTMENT OF HEALTH AND HUMAN SERVICES. | Office of the Secretary | White House Liaison | DE160043 | 12/10/2015 |
| | Office of Scheduling and Advance .. | Senior Advisor for Strategic Planning. | DE160039 | 12/14/2015 |
| | Office of the Deputy Secretary | Special Advisor for Communications | DE160040 | 12/14/2015 |
| | Office of the Assistant Secretary for Energy Efficiency and Renewable Energy. | Senior Advisor for External Affairs .. | DE160045 | 12/18/2015 |
| | Office of Assistant Secretary for Electricity Delivery and Energy Reliability. | Special Advisor | DE160044 | 12/30/2015 |

BILLING CODE 6325–39–P

OFFICE OF PERSONNEL MANAGEMENT

Submission for Review: Application for Refund of Retirement Deductions (CSRS), SF 2802 and Current/Former Spouse's Notification of Application for Refund of Retirement Deductions Under the Civil Service Retirement System, SF 2802A, 3206–0128

AGENCY: Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Retirement Services, Office of Personnel Management (OPM) offers the general public and other federal agencies the opportunity to comment an extension without change of a currently approved information collection (ICR) 3206–0128, Application For Refund of Retirement Deductions Civil Service Retirement System and Current/Former Spouse's Notification of Application for Refund of Retirement Deductions Under the Civil Service Retirement System. As required by the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 35) as amended by the Clinger-Cohen Act (Pub. L. 104–106), OPM is soliciting comments for this collection.

DATES: Comments are encouraged and will be accepted until June 7, 2016. This

process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the U.S. Office of Personnel Management 1900 E Street NW., Washington, DC 20415, Attention: Alberta Butler, Room 2347–E, or sent via electronic mail to Alberta.Butler@opm.gov.

FOR FURTHER INFORMATION CONTACT: A copy of this ICR with applicable supporting documentation, may be obtained by contacting the Retirement Services Publications Team, U.S. Office of Personnel Management, 1900 E Street NW., Room 3316–L, Washington, DC 20415, Attention: Cyrus S. Benson, or sent via electronic mail to Cyrus.Benson@opm.gov or faxed to (202) 606–0910.

SUPPLEMENTARY INFORMATION: The Office of Management and Budget is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

SF 2802 is used to support the payment of monies from the Retirement Fund. It identifies the applicant for refund of retirement deductions. SF 2802A is used to comply with the legal requirement that any spouse or former spouse of the applicant has been notified that the former employee is applying for a refund.

Analysis

Agency: Retirement Operations, Retirement Services, Office of Personnel Management.

Title: Application For Refund of Retirement Deductions (CSRS)/Current/Former Spouse's Notification of Application for Refund of Retirement Deductions Under the Civil Service Retirement System.

OMB Number: 3206-0128.

Frequency: On occasion.

Affected Public: Individuals or Households.

Number of Respondents: SF 2802 = 3,741; SF 2802A = 3,389.

Estimated Time per Respondent: SF 2802 = 1 hour; SF 2802A = 15 minutes.

Total Burden Hours: 4,588.

U.S. Office of Personnel Management.

Beth F. Cobert,

Acting Director.

BILLING CODE 6325-38-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77511; File No. SR-CBOE-2016-024]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing of a Proposed Rule Change, as Modified by Amendment No. 2 Thereto, Relating to AIM Retained Orders

April 4, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that, on March 22, 2016, Chicago Board Options Exchange, Incorporated (the "Exchange" or "CBOE") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. On April 1, 2016, the Exchange filed Amendment No. 1 to the proposal. On April 4, 2016, the Exchange filed Amendment No. 2 to the proposal.³ The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The text of the proposed rule change is available on the Exchange's Web site (<http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx>), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ In Amendment No. 2, which superseded Amendment No. 1 in its entirety, the Exchange proposed changes to amend the proposed rule text of Interpretation and Policy .08 to Rule 6.53C in Exhibit 5 to include references to Rule 6.74A when referring to proposed Interpretation and Policy .09 to Rule 6.74A.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 6.74A (Automated Improvement Mechanism ("AIM")) to clarify how orders submitted for electronic crossing into the AIM auction are treated if an auction cannot occur, to adopt Interpretation and Policy .09 to Rule 6.74A (AIM Retained Order Functionality) to describe the Exchange's AIM Retained Order ("A:AIR") functionality in the Rules, and make minor edits to Interpretation and Policy .08 to Rule 6.53C (Price Check Parameters) relating to the treatment of complex AIM orders marked A:AIR and correct certain typographical errors.

Under Rule 6.74A (Automated Improvement Mechanism ("AIM")), a Trading Permit Holder ("TPH") that represents agency orders may electronically execute an order it represents as agent ("Agency Order") against principal interest or against a solicited order provided it submits the Agency Order for electronic execution into the AIM auction ("Auction") for processing. Matched Agency Orders may be processed via AIM subject to certain eligibility requirements contained in Rule 6.74A(a). Specifically, to be eligible for processing via AIM, the Agency Order must be: (1) In a class designated as eligible for Auctions and within the designated eligibility size parameters as determined by the Exchange; (2) stopped with a principal or solicited order priced at the national best bid or offer ("NBBO") (if 50 standard option contracts or 500 mini-option contracts or greater) or one cent/one minimum increment better than the NBBO (if less than 50 standard option contracts or 500 mini-option contracts); and (3) submitted in a series in which at least three Market-Makers are quoting if submitted during regular trading hours.⁴ Orders submitted for crossing into AIM, which are ineligible for Auction processing will result in both the Agency Order and the matching contra order(s) being cancelled.

A:AIR functionality is an enhancement to AIM that allows TPHs the flexibility to choose, on an order-by-order basis, whether an Agency Order should continue into the Hybrid Trading System⁵ for processing rather

⁴ See Rule 6.74A(a).

⁵ The Hybrid Trading System refers to the Exchange's trading platform as defined in Rule 1.1(aaa) (Hybrid Trading System).

than cancel in the event that an Auction cannot occur.⁶ A:AIR functionality essentially allows for the entry of Agency Orders into AIM with contingency processing instructions for handling in the event that the order cannot be processed via Auction. For example, using the A:AIR functionality, a TPH might submit a matched Agency Order for 50 standard contracts that is stopped with a principal interest or solicited order priced outside of the NBBO and into AIM. In such a case, the order would not initiate an auction (as the eligibility requirement in Rule 6.74A(a)(2) would not be met),⁷ but would continue into the Hybrid Trading System and be booked at the Agency Order limit price (rather than cancelled if A:AIR functionality were not used) and the contra order would be cancelled.

The Exchange notes that A:AIR functionality is currently available for use on the Exchange and is referred to in the Rules (although not using that term)⁸ and explained in various Information and Regulatory Circulars.⁹ A:AIR functionality, however, is not explicitly defined in the Rules. Accordingly, this filing is intended to further codify, clarify, and describe A:AIR functionality in the Rules. Specifically, the Exchange proposes to adopt Interpretation and Policy .09 to Rule 6.74A (AIM Retained Order Functionality), under which the Exchange would define an AIM Retained Order as the transmission of two or more orders for crossing pursuant to Rule 6.74A, with the Agency Order priced at the market or a limit price in the standard increment for the option series and marked with a contingency instruction to route the Agency Order for processing and cancel any contra orders if an Auction cannot

occur (including if the conditions described in Rule 6.74A(a) are not met).

Furthermore, to ensure that A:AIR orders are properly priced to allow the Exchange to book the Agency Order in the event an Auction cannot occur, proposed Interpretation and Policy .09 to Rule 6.74A would provide that orders marked "A:AIR" with Agency Orders that are not priced at the market or that are priced with a limit price not in the standard increment for the option series in which they are entered would be cancelled. For example, if a TPH were to submit a matched Agency Order into AIM for processing in a class with a minimum increment of a nickel, which was stopped with a contra order at \$0.07, both the Agency Order and the contra order would be cancelled because the order, which is not priced in the minimum increment for the class, would not be eligible for AIM processing and because the System would not be able to book an order at \$0.07 in a class with a minimum increment of a nickel. Notably, this provision of proposed Interpretation and Policy .09 to Rule 6.74A is consistent with previous descriptions of A:AIR functionality by the Exchange and Exchange rules that only permit orders at the standard increment to enter the book.¹⁰ Finally, proposed Interpretation and Policy .09 to Rule 6.74A would provide that A:AIR order functionality will be made available on those order management platforms as determined by the Exchange and announced via Regulatory Circular. This provision is intended to make clear that A:AIR functionality may not be available on all trading platforms in use on the Exchange.¹¹

The Exchange also notes that although orders submitted into AIM, which are not marked A:AIR and are ineligible for Auction processing will result in both the Agency Order and the matching contra order(s) being cancelled, the Rules do not explicitly provide as much. Accordingly, the Exchange proposes to add language to Rule 6.74A(a) to provide that in the event that a Trading Permit Holder submits a matched Agency Order for electronic execution

into the Auction that is ineligible for processing because it does not meet the conditions described in paragraph (a), both the Agency Order and any solicited contra orders will be cancelled unless marked as an AIM Retained order pursuant to proposed Interpretation and Policy .09 to Rule 6.74A.¹²

The Exchange also proposes to make minor changes to Interpretation and Policy .08 to Rule 6.53C regarding price reasonability checks on complex orders to harmonize references to A:AIR functionality in Rule 6.53C with the language in proposed Interpretation and Policy .09 to Rule 6.74A. Specifically, the Exchange proposes to modify Interpretation and Policy .08(c)(5), (d), (f)(2), and (g)(4) to Rule 6.53C (Price Check Parameters) to change references to AIM orders that instruct the System to process the Agency Order as an unpaired order if an AIM auction cannot be initiated, to instead refer to AIM Retained ("A:AIR") orders as defined in proposed Interpretation and Policy .09 to Rule 6.74A. These changes are non-substantive and intended only to harmonize existing references to A:AIR functionality currently in the Rules with the definition of A:AIR orders set forth in proposed Interpretation and Policy .09 to Rule 6.74A. The proposed rule change also makes non-substantive changes in these paragraphs to capitalize the defined term Agency Order, consistent with Rule 6.74A.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.¹³ Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)¹⁴ requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to

⁶ There are a variety of circumstances in which an AIM order may be submitted to the Exchange for processing, but an auction may not occur. For example, TPH may submit an order for AIM processing, which is not AIM eligible because one or more of the conditions required for an AIM auction to occur pursuant to Rule 6.74A(a) is not present. In addition, an order that is otherwise AIM eligible may not be able to process for a variety of reasons, including, but not limited to circumstances in which AIM functionality is suspended. In either of such cases, A:AIR functionality may allow the Agency Order to process despite the overall order not being AIM eligible.

⁷ See Rule 6.74A(a).

⁸ See Interpretation and Policy .08 to Rule 6.53C (Price Check Parameters) at paragraphs (c)(5), (d), (f)(2), and (g)(4) referring to orders that instruct the System to process the Agency Order as an unpaired order if an AIM Auction cannot be initiated.

⁹ See, e.g., Regulatory Circular RG13-053 (Limit Up-Limit Down Order Handling); Regulatory Circular RG13-009 (AIM Primary Order Allowed in Penny Increments); Information Circular IC07-62 (Automated Improvement Mechanism (AIM)).

¹⁰ See Regulatory Circular RG13-009 (AIM Primary Order Allowed in Penny Increments); see also Rule 6.42.

¹¹ A:AIR functionality is not currently supported on Floor Broker Workstation ("FBW"), FBW2, or the PULSe trader workstation. FBW, FBW2, and PULSe are order handling tools used for manual handling of orders. Thus, when ineligible AIM orders are rejected back to FBW, FBW2, and PULSe users, a person is present to decide how best to handle such orders. FBW, FBW2, and PULSe users can either re-route such orders to be booked or for alternative electronic processing on the Exchange or to their broker on the floor of the Exchange.

¹² Notably, the A:AIR functionality is used primarily by smart router technology to ensure that ineligible AIM orders are submitted into the Hybrid Trading System for processing and not cancelled. Whereas traditional brokers and dealers are equipped to manually handle cancelled orders that are returned to them and may revise the cancelled orders' terms or contact their customers for further instructions, smart routers are generally all electronic algorithmic systems that may not allow for manual handling of cancelled orders.

¹³ 15 U.S.C. 78f(b).

¹⁴ 15 U.S.C. 78f(b)(5).

and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)¹⁵ requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The proposed rule change seeks to provide additional clarity and completeness in the Rules regarding functionalities in use at the Exchange. The Exchange is continuously updating the Rules to provide additional detail, clarity, and transparency regarding its operations and trading systems. The Exchange believes that the adoption of detailed, clear, and transparent rules reduces burdens on competition and promotes just and equitable principles of trade. The Exchange also believes that A:AIR functionality is valuable enhancement to AIM, which provides the opportunity for execution of customer orders that a TPH submitted for crossing via AIM but cannot be executed via AIM and helps prevent inadvertent mishandling of Agency Orders (*i.e.* customer orders) submitted for Auction. The Exchange believes that these outcomes serve to protect investors' interests by helping to ensure that ineligible AIM Agency Orders are processed rather than cancelled. In addition, the Exchange believes that price improvement mechanisms promote competition amongst market participants and that enhancements to such price improvement mechanisms promote competition between exchanges. A:AIR functionality makes such mechanisms easier to use and minimizes the risk of order submitted into AIM being mishandled. Thus, the Exchange believes that the A:AIR functionality is an enhancement consistent with the purposes of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that price improvement mechanisms are widely used across the national options exchanges. The exchanges have developed these mechanisms in order to provide market participants diverse opportunities to seek valuable price improvement and as a means to compete with one another for order flow. Such price improvement mechanisms not only promote

intermarket competition for order flow between the exchanges, but also intramarket competition between market participants competing for orders directly through the auction process. Accordingly, the exchanges are continuously making enhancements and adding functionalities to their price improvement mechanisms in order to provide more competitive marketplaces for market participants and better compete with one another. A:AIR functionality is simply one of many enhancements that the Exchange has made to AIM for this purpose.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

- A. By order approve or disapprove such proposed rule change, or
- B. institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as modified by Amendment No. 2, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CBOE-2016-024 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-CBOE-2016-024. This file number should be included on the subject line if email is used. To help the

Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CBOE-2016-024, and should be submitted on or before April 29, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁶

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 32065; 812-14528]

Madison ETF Trust and Madison ETF Advisers, LLC; Notice of Application

April 4, 2016.

AGENCY: Securities and Exchange Commission ("Commission").

ACTION: Notice of an application for an order under section 6(c) of the Investment Company Act of 1940 (the "Act") for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c-1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(f) for an exemption from

¹⁵ *Id.*

¹⁶ 17 CFR 200.30-3(a)(12).

sections 12(d)(1)(A) and 12(d)(1)(B) of the Act.

SUMMARY OF APPLICATION: Applicants request an order that would permit (a) series of certain open-end management investment companies to issue shares (“Shares”) redeemable in large aggregations only (“Creation Units”); (b) secondary market transactions in Shares to occur at negotiated market prices rather than at net asset value (“NAV”); (c) certain series to pay redemption proceeds, under certain circumstances, more than seven days after the tender of Shares for redemption; (d) certain affiliated persons of the series to deposit securities into, and receive securities from, the series in connection with the purchase and redemption of Creation Units; (e) certain registered management investment companies and unit investment trusts outside of the same group of investment companies as the series to acquire Shares; and (f) certain series to perform creations and redemptions of Creation Units in-kind in a master-feeder structure.

APPLICANTS: Madison ETF Trust (“Trust”) and Madison ETF Advisers, LLC (“Initial Adviser”).

FILING DATES: The application was filed on August 4, 2015, and amended on December 11, 2015.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission’s Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on April 29, 2016, and should be accompanied by proof of service on applicants, in the form of an affidavit, or for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer’s interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission’s Secretary.

ADDRESSES: Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090; Applicants: 1209 Orange Street, Wilmington, DE 19801.

FOR FURTHER INFORMATION CONTACT: Courtney S. Thornton, Senior Counsel, at (202) 551–6812, or Mary Kay Frech, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel’s Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission’s Web site by searching for the file number, or for an applicant using the Company name box, at <http://www.sec.gov/search/search.htm> or by calling (202) 551–8090.

Applicants’ Representations

1. The Trust is a Delaware statutory trust that will register under the Act as a series open-end management investment company. The Trust will offer a number of Funds (as defined below), each tracking a particular index and utilizing either a replication or representative sampling strategy. Applicants currently expect that the Trust’s initial series will be the Madison Gold Miners ETF (the “Initial Fund”). The Underlying Index (as defined below) for the Initial Fund is currently expected to be the Solactive Global Pure Gold Miners Index. Each Fund will operate as an exchange traded fund (“ETF”).

2. The Initial Adviser, a Delaware limited liability company, will be the investment adviser to the Initial Fund. The Initial Adviser is, and any other Adviser (as defined below) will be, registered as an investment adviser under the Investment Advisers Act of 1940 (“Advisers Act”). The Adviser may enter into sub-advisory agreements with one or more investment advisers to act as sub-advisers (each, a “Sub-Adviser”) to particular Funds, or their respective Master Fund (as defined below). Any Sub-Adviser will either be registered under the Advisers Act or will not be required to register thereunder.

3. The Trust will enter into a distribution agreement with one or more distributors. Each distributor will be a broker-dealer (“Broker”) registered under the Securities Exchange Act of 1934 (“Exchange Act”) and will act as distributor and principal underwriter (“Distributor”) of one or more of the Funds. No Distributor will be affiliated with any Exchange (as defined below), and each Distributor will comply with the terms and conditions of the application. The Distributor of a Fund may be an affiliated person or an affiliated person of an affiliated person of that Fund’s Adviser and/or Sub-Advisers.

4. Applicants request that the order apply to the Initial Fund and any additional series of the Trust and any other existing or future open-end management investment company or existing or future series thereof (“Future Fund” and together with the Initial Fund, “Funds”), that operate as ETFs,

and their respective existing or future Master Funds, and will track a specified index comprised of domestic or foreign equity and/or fixed income securities (each, an “Underlying Index”). Each Fund will (a) be advised by the Initial Adviser or an entity controlling, controlled by, or under common control with the Initial Adviser (each, an “Adviser”) and (b) comply with the terms and conditions of the application.¹

5. Applicants state that a Fund may operate as a feeder fund (“Feeder Fund”) in a master-feeder structure. Applicants request that the order permit a Feeder Fund to acquire shares of a master fund (“Master Fund”), which will be another registered investment company in the same group of investment companies having substantially the same investment objectives as the Feeder Fund, beyond the limitations in section 12(d)(1)(A) of the Act and permit the Master Fund, and any principal underwriter for the Master Fund, to sell shares of the Master Fund to the Feeder Fund beyond the limitations in section 12(d)(1)(B) of the Act (“Master-Feeder Relief”). Applicants may structure certain Feeder Funds to generate economies of scale and incur lower overhead costs.² There would be no ability by Fund shareholders to exchange Shares of Feeder Funds for shares of another feeder series of the Master Fund.

6. Each Fund, or its respective Master Fund, will hold certain securities, assets or other positions (“Portfolio Holdings”) selected to correspond generally to the performance of its Underlying Index. Certain Funds will be based on Underlying Indexes comprised solely of equity and/or fixed income securities issued by one or more of the following categories of issuers: (i) Domestic issuers and (ii) non-domestic issuers meeting the requirements for trading in U.S. markets. Other Funds will be based on Underlying Indexes that will be comprised solely of foreign and domestic, or solely foreign, equity and/

¹ All existing entities that intend to rely on the requested order have been named as applicants. Any other existing or future entity that subsequently relies on the order will comply with the terms and conditions of the order. A Fund of Funds (as defined below) may rely on the order only to invest in the Funds and not in any other registered investment company.

² Operating in a master-feeder structure could also impose costs on a Feeder Fund and reduce its tax efficiency. The Feeder Fund’s board of trustees (“Board”) will consider any such potential disadvantages against the benefits of economies of scale and other benefits of operating within a master-feeder structure. In a master-feeder structure, the Master Fund—rather than the Feeder Fund—would invest its portfolio in compliance with the requested order.

or fixed income securities ("Foreign Funds").

7. Applicants represent that each Fund, or its respective Master Fund, will invest at least 80% of its assets (excluding securities lending collateral) in the component securities of its respective Underlying Index ("Component Securities"), or, in the case of Fixed Income Funds,³ in the Component Securities of its respective Underlying Index and TBA Transactions⁴ representing Component Securities and, in the case of Foreign Funds, Component Securities and Depositary Receipts⁵ representing Component Securities.⁶ Each Fund, or its respective Master Fund, may also invest up to 20% of its assets ("20% Asset Basket") in certain index futures, options, options on index futures, swap contracts or other derivatives, as related to its respective Underlying Index and its Component Securities, cash and cash equivalents, other investment companies, as well as in securities and other instruments not included in its Underlying Index but which the Adviser believes will help the Fund, or its respective Master Fund, track its Underlying Index. A Fund may also engage in short sales in accordance with its investment objective.

8. The Trust may offer Funds that seek to track Underlying Indexes constructed using 130/30 investment strategies ("130/30 Funds") or other

long/short investment strategies ("Long/Short Funds"). Each Long/Short Fund will establish (i) exposures equal to approximately 100% of the long positions specified by the Long/Short Index⁷ and (ii) exposures equal to approximately 100% of the short positions specified by the Long/Short Index. Each 130/30 Fund will include strategies that: (i) Establish long positions in securities so that total long exposure represents approximately 130% of a Fund's net assets; and (ii) simultaneously establish short positions in other securities so that total short exposure represents approximately 30% of such Fund's net assets. Each Business Day (as defined below), for each Long/Short Fund and 130/30 Fund, the Adviser will provide full portfolio transparency on the Fund's publicly available Web site ("Website") by making available the Fund's, or its respective Master Fund's, Portfolio Holdings before the commencement of trading of Shares on the Listing Exchange (defined below).⁸ The information provided on the Web site will be formatted to be reader-friendly.

9. A Fund will utilize either a replication or representative sampling strategy to track its Underlying Index. A Fund using a replication strategy will invest in the Component Securities of its Underlying Index in the same approximate proportions as in such Underlying Index. A Fund using a representative sampling strategy will hold some, but not necessarily all of the Component Securities of its Underlying Index. Applicants state that a Fund using a representative sampling strategy will not be expected to track the performance of its Underlying Index with the same degree of accuracy as would an investment vehicle that invested in every Component Security of the Underlying Index with the same weighting as the Underlying Index. Applicants expect that each Fund, or its respective Master Fund, will have an annual tracking error relative to the performance of its Underlying Index of less than 5%.

10. The Initial Funds are, and any Future Fund will be, entitled to use its Underlying Index pursuant to either a

licensing agreement with the entity that compiles, creates, sponsors or maintains the Underlying Index (each, an "Index Provider") or a sub-licensing arrangement with the Adviser, which will have a licensing agreement with such Index Provider.⁹ A "Self-Indexing Fund" is a Fund for which an affiliated person, as defined in section 2(a)(3) of the Act, or an affiliated person of such person, of the Trust or a Fund, of the Adviser, of any Sub-Adviser to or promoter of a Fund, or of the Distributor (each, an "Affiliated Index Provider")¹⁰ will serve as the Index Provider. In the case of Self-Indexing Funds, an Affiliated Index Provider will create a proprietary, rules-based methodology to create Underlying Indexes (each an "Affiliated Index").¹¹ Except with respect to the Self-Indexing Funds, no Index Provider is or will be an affiliated person, or an affiliated person of an affiliated person, of the Trust or a Fund, of the Adviser, of any Sub-Adviser to or promoter of a Fund, or of the Distributor.

11. Applicants recognize that Self-Indexing Funds could raise concerns regarding the ability of the Affiliated Index Provider to manipulate the Underlying Index to the benefit or detriment of the Self-Indexing Fund. Applicants further recognize the potential for conflicts that may arise with respect to the personal trading activity of personnel of the Affiliated Index Provider who have knowledge of changes to an Underlying Index prior to

³ "Fixed-Income Funds" track an Underlying Index comprised of domestic and/or foreign fixed income securities.

⁴ A "to-be-announced transaction" or "TBA Transaction" is a method of trading mortgage-backed securities. In a TBA Transaction, the buyer and seller agree upon general trade parameters such as agency, settlement date, par amount and price. The actual pools delivered generally are determined two days prior to settlement date.

⁵ Depositary receipts representing foreign securities ("Depositary Receipts") include American Depositary Receipts and Global Depositary Receipts. The Funds, or their respective Master Funds, may invest in Depositary Receipts representing foreign securities in which they seek to invest. Depositary Receipts are typically issued by a financial institution (a "depository bank") and evidence ownership interests in a security or a pool of securities that have been deposited with the depository bank. A Fund, or its respective Master Fund, will not invest in any Depositary Receipts that the Adviser or any Sub-Adviser deems to be illiquid or for which pricing information is not readily available. No affiliated person of a Fund, the Adviser or any Sub-Adviser will serve as the depository bank for any Depositary Receipts held by a Fund, or its respective Master Fund, except a depository bank that is deemed to be affiliated solely because a Fund owns greater than 5% of the outstanding voting securities of such depository bank.

⁶ With respect to a Fund, or its respective Master Fund, that invests in a Wholly-Owned Subsidiary (defined below), the Fund, or its respective Master Fund, will look through the Wholly-Owned Subsidiary to determine whether certain assets fall within the 20% Asset Basket (as defined below).

⁷ Underlying Indexes that include both long and short positions in securities are referred to as "Long/Short Indexes."

⁸ Under accounting procedures followed by each Fund, trades made on the prior Business Day ("T") will be booked and reflected in NAV on the current Business Day (T + 1). Accordingly, the Funds will be able to disclose at the beginning of the Business Day the portfolio that will form the basis for the NAV calculation at the end of the Business Day. This disclosure will look through any Wholly-Owned Subsidiary and identify the specific Portfolio Holdings held by that entity.

⁹ The licenses for the Self-Indexing Funds will specifically state that the Affiliated Index Provider (as defined below), or in case of a sub-licensing agreement, the Adviser, must provide the use of the Affiliated Indexes (as defined below) and related intellectual property at no cost to the Trust and the Self-Indexing Funds.

¹⁰ In the event that an Adviser serves as the Affiliated Index Provider for a Self-Indexing Fund, the terms "Affiliated Index Provider" or "Index Provider," with respect to that Self-Indexing Fund, will refer to the employees of the Adviser that are responsible for creating, compiling and maintaining the relevant Underlying Index.

¹¹ The Affiliated Indexes may be made available to registered investment companies, as well as separately managed accounts of institutional investors, foreign investment companies, and privately offered funds that are not deemed to be "investment companies" in reliance on section 3(c)(1) or 3(c)(7) of the Act for which the Adviser acts as adviser or subadviser ("Affiliated Accounts") as well as other such registered investment companies, separately managed accounts, foreign investment companies, and privately offered funds for which it does not act either as adviser or subadviser ("Unaffiliated Accounts"). The Affiliated Accounts and the Unaffiliated Accounts, like the Funds, would seek to track the performance of one or more Underlying Index(es) by investing in the constituents of such Underlying Indexes or a representative sample of such constituents of the Underlying Index. Consistent with the relief requested from section 17(a), the Affiliated Accounts will not engage in Creation Unit transactions with a Fund.

the time that information is publicly disseminated.

12. Applicants propose that each day that the Trust, the NYSE and the national securities exchange (as defined in section 2(a)(26) of the Act) (an "Exchange") on which the Fund's Shares are primarily listed ("Listing Exchange") are open for business, including any day that a Fund is required to be open under section 22(e) of the Act (a "Business Day"), each Self-Indexing Fund will post on its Web site, before commencement of trading of Shares on the Listing Exchange, the identities and quantities of the Portfolio Holdings held by the Fund, or its respective Master Fund, that will form the basis for the Fund's calculation of its NAV at the end of the Business Day.¹² Applicants believe that requiring Self-Indexing Funds to maintain full portfolio transparency will also provide an additional mechanism for addressing any such potential conflicts of interest.

13. In addition, applicants do not believe the potential for conflicts of interest raised by the Adviser's use of the Underlying Indexes in connection with the management of the Self-Indexing Funds and the Affiliated Accounts will be substantially different from the potential conflicts presented by an adviser managing two or more registered funds. Both the Act and the Advisers Act contain various protections to address conflicts of interest where an adviser is managing two or more registered funds and these protections will also help address these conflicts with respect to the Self-Indexing Funds.¹³

14. The Adviser and any Sub-Adviser has adopted or will adopt, pursuant to rule 206(4)–7 under the Advisers Act, written policies and procedures reasonably designed to prevent violations of the Advisers Act and the rules thereunder. These include policies and procedures designed to minimize potential conflicts of interest among the Self-Indexing Funds and the Affiliated Accounts, such as cross trading policies, as well as those designed to ensure the equitable allocation of portfolio transactions and brokerage commissions. In addition, the Initial Adviser has adopted policies and procedures as required under section 204A of the Advisers Act, which are reasonably designed in light of the nature of its business to prevent the misuse, in violation of the Advisers Act

or the Exchange Act or the rules thereunder, of material non-public information by the Initial Adviser or an associated person ("Inside Information Policy"). Any other Adviser or Sub-Adviser will be required to adopt and maintain a similar Inside Information Policy. In accordance with the Code of Ethics (as defined below)¹⁴ and Inside Information Policy of each Adviser and Sub-Adviser, personnel of those entities with knowledge about the composition of the Portfolio Deposit¹⁵ will be prohibited from disclosing such information to any other person, except as authorized in the course of their employment, until such information is made public. In addition, an Index Provider will not provide any information relating to changes to an Underlying Index's methodology for the inclusion of component securities, the inclusion or exclusion of specific component securities, or methodology for the calculation or the return of component securities, in advance of a public announcement of such changes by the Index Provider. The Adviser will also include under Item 10.C of part 2 of its Form ADV a discussion of its relationship to any Affiliated Index Provider and any material conflicts of interest resulting therefrom, regardless of whether the Affiliated Index Provider is a type of affiliate specified in Item 10.

15. To the extent the Self-Indexing Funds transact with an affiliated person of the Adviser or Sub-Adviser, such transactions will comply with the Act, the rules thereunder and the terms and conditions of the requested order. In this regard, each Self-Indexing Fund's Board will periodically review the Self-Indexing Fund's use of an Affiliated Index Provider. Subject to the approval of the Self-Indexing Fund's Board, the Adviser, affiliated persons of the Adviser ("Adviser Affiliates") and affiliated persons of any Sub-Adviser ("Sub-Adviser Affiliates") may be authorized to provide custody, fund accounting and administration and transfer agency services to the Self-Indexing Funds. Any services provided by the Adviser, Adviser Affiliates, Sub-Adviser and Sub-Adviser Affiliates will be performed in accordance with the provisions of the Act, the rules under

the Act and any relevant guidelines from the staff of the Commission.

16. The Shares of each Fund will be purchased and redeemed in Creation Units and generally on an in-kind basis. Except where the purchase or redemption will include cash under the limited circumstances specified below, purchasers will be required to purchase Creation Units by making an in-kind deposit of specified instruments ("Deposit Instruments"), and shareholders redeeming their Shares will receive an in-kind transfer of specified instruments ("Redemption Instruments").¹⁶ On any given Business Day, the names and quantities of the instruments that constitute the Deposit Instruments and the names and quantities of the instruments that constitute the Redemption Instruments will be identical, unless the Fund is Rebalancing (as defined below). In addition, the Deposit Instruments and the Redemption Instruments will each correspond pro rata to the positions in the Fund's portfolio (including cash positions)¹⁷ except: (a) In the case of bonds, for minor differences when it is impossible to break up bonds beyond certain minimum sizes needed for transfer and settlement; (b) for minor differences when rounding is necessary to eliminate fractional shares or lots that are not tradeable round lots;¹⁸ (c) TBA Transactions, short positions, derivatives and other positions that cannot be transferred in kind¹⁹ will be excluded from the Deposit Instruments and the Redemption Instruments;²⁰ (d) to the extent the Fund determines, on a given Business Day, to use a representative sampling of the Fund's portfolio;²¹ or (e) for temporary periods,

¹⁶ The Funds must comply with the federal securities laws in accepting Deposit Instruments and satisfying redemptions with Redemption Instruments, including that the Deposit Instruments and Redemption Instruments are sold in transactions that would be exempt from registration under the Securities Act of 1933 ("Securities Act"). In accepting Deposit Instruments and satisfying redemptions with Redemption Instruments that are restricted securities eligible for resale pursuant to rule 144A under the Securities Act, the Funds will comply with the conditions of rule 144A.

¹⁷ The portfolio used for this purpose will be the same portfolio used to calculate the Fund's NAV for the Business Day.

¹⁸ A tradeable round lot for a security will be the standard unit of trading in that particular type of security in its primary market.

¹⁹ This includes instruments that can be transferred in kind only with the consent of the original counterparty to the extent the Fund does not intend to seek such consents.

²⁰ Because these instruments will be excluded from the Deposit Instruments and the Redemption Instruments, their value will be reflected in the determination of the Cash Amount (as defined below).

²¹ A Fund may only use sampling for this purpose if the sample: (i) Is designed to generate

¹² This disclosure will look through any Wholly-Owned Subsidiary and identify the specific Portfolio Holdings held by that entity.

¹³ See, e.g., rule 17j–1 under the Act and section 204A under the Advisers Act and rules 204A–1 and 206(4)–7 under the Advisers Act.

¹⁴ The Initial Adviser has adopted (and any other Adviser has adopted or will adopt) a code of ethics pursuant to rule 17j–1 under the Act and rule 204A–1 under the Advisers Act, which contains provisions reasonably necessary to prevent Access Persons (as defined in rule 17j–1) from engaging in any conduct prohibited in rule 17j–1 ("Code of Ethics").

¹⁵ The instruments and cash that the purchaser is required to deliver in exchange for the Creation Units it is purchasing is referred to as the "Portfolio Deposit."

to effect changes in the Fund's portfolio as a result of the rebalancing of its Underlying Index (any such change, a "Rebalancing"). If there is a difference between the NAV attributable to a Creation Unit and the aggregate market value of the Deposit Instruments or Redemption Instruments exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference (the "Cash Amount").

17. Purchases and redemptions of Creation Units may be made in whole or in part on a cash basis, rather than in kind, solely under the following circumstances: (a) To the extent there is a Cash Amount; (b) if, on a given Business Day, the Fund announces before the open of trading that all purchases, all redemptions or all purchases and redemptions on that day will be made entirely in cash; (c) if, upon receiving a purchase or redemption order from an Authorized Participant, the Fund determines to require the purchase or redemption, as applicable, to be made entirely in cash;²² (d) if, on a given Business Day, the Fund requires all Authorized Participants purchasing or redeeming Shares on that day to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments or Redemption Instruments, respectively, solely because: (i) Such instruments are not eligible for transfer through either the NSCC or DTC (defined below); or (ii) in the case of Foreign Funds holding non-U.S. investments, such instruments are not eligible for trading due to local trading restrictions, local restrictions on securities transfers or other similar circumstances; or (e) if the Fund permits an Authorized Participant to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments

performance that is highly correlated to the performance of the Fund's portfolio; (ii) consists entirely of instruments that are already included in the Fund's portfolio; and (iii) is the same for all Authorized Participants (as defined below) on a given Business Day.

²² In determining whether a particular Fund will sell or redeem Creation Units entirely on a cash or in-kind basis (whether for a given day or a given order), the key consideration will be the benefit that would accrue to the Fund and its investors. For instance, in bond transactions, the Adviser may be able to obtain better execution than Share purchasers because of the Adviser's size, experience and potentially stronger relationships in the fixed income markets. Purchases of Creation Units either on an all cash basis or in-kind are expected to be neutral to the Funds from a tax perspective. In contrast, cash redemptions typically require selling portfolio holdings, which may result in adverse tax consequences for the remaining Fund shareholders that would not occur with an in-kind redemption. As a result, tax consideration may warrant in-kind redemptions.

or Redemption Instruments, respectively, solely because: (i) Such instruments are, in the case of the purchase of a Creation Unit, not available in sufficient quantity; (ii) such instruments are not eligible for trading by an Authorized Participant or the investor on whose behalf the Authorized Participant is acting; or (iii) a holder of Shares of a Foreign Fund holding non-U.S. investments would be subject to unfavorable income tax treatment if the holder receives redemption proceeds in kind.²³

18. Creation Units will consist of specified large aggregations of Shares (e.g., at least 10,000 Shares), and it is expected that the initial trading price per individual Share will range from \$10 to \$100. All orders to purchase Creation Units must be placed with the Distributor by or through an "Authorized Participant" which is either (1) a "Participating Party," i.e., a Broker or other participant in the Continuous Net Settlement System of the NSCC, a clearing agency registered with the Commission, or (2) a participant in The Depository Trust Company ("DTC") ("DTC Participant"), which, in either case, has signed a participant agreement with the Distributor. The Distributor will be responsible for transmitting the orders to the Funds and will furnish to those placing such orders confirmation that the orders have been accepted, but applicants state that the Distributor may reject any order that is not submitted in proper form.

19. Each Business Day, before the open of trading on the Listing Exchange, each Fund will cause to be published through the NSCC the names and quantities of the instruments comprising the Deposit Instruments and the Redemption Instruments, as well as the estimated Cash Amount (if any), for that day. The list of Deposit Instruments and Redemption Instruments will apply until a new list is announced on the following Business Day, and there will be no intra-day changes to the list except to correct errors in the published list. Each Listing Exchange, or other major market data provider, will disseminate, every 15 seconds during regular Exchange trading hours, through the facilities of the Consolidated Tape Association, or other widely disseminated means, an amount for each Fund stated on a per individual Share basis representing the sum of (i) the estimated Cash Amount and (ii) the

²³ A "custom order" is any purchase or redemption of Shares made in whole or in part on a cash basis in reliance on clause (e)(i) or (e)(ii).

current value of the Deposit Instruments.

20. Transaction expenses, including operational processing and brokerage costs, will be incurred by a Fund when investors purchase or redeem Creation Units in-kind and such costs have the potential to dilute the interests of the Fund's existing shareholders. Each Fund will impose purchase or redemption transaction fees ("Transaction Fees") in connection with effecting such purchases or redemptions of Creation Units. With respect to Feeder Funds, the Transaction Fee would be paid indirectly to the Master Fund.²⁴ In all cases, such Transaction Fees will be limited in accordance with requirements of the Commission applicable to management investment companies offering redeemable securities. Since the Transaction Fees are intended to defray the transaction expenses as well as to prevent possible shareholder dilution resulting from the purchase or redemption of Creation Units, the Transaction Fees will be borne only by such purchasers or redeemers.²⁵ The Distributor will be responsible for delivering the Fund's prospectus to those persons acquiring Shares in Creation Units and for maintaining records of both the orders placed with it and the confirmations of acceptance furnished by it. In addition, the Distributor will maintain a record of the instructions given to the applicable Fund to implement the delivery of its Shares.

21. Shares of each Fund will be listed and traded individually on an Exchange. It is expected that one or more member firms of an Exchange will be designated to act as a market maker (each, a "Market Maker") and maintain a market for Shares trading on the Exchange. The price of Shares trading on an Exchange will be based on the current bid/offer market. Transactions involving the sale of Shares on an Exchange will be subject to customary brokerage commissions and charges.

²⁴ Applicants are not requesting relief from section 18 of the Act. Accordingly, a Master Fund may require a Transaction Fee payment to cover expenses related to purchases or redemptions of the Master Fund's shares by a Feeder Fund only if it requires the same payment for equivalent purchases or redemptions by any other feeder fund. Thus, for example, a Master Fund may require payment of a Transaction Fee by a Feeder Fund for transactions for 20,000 or more shares so long as it requires payment of the same Transaction Fee by all feeder funds for transactions involving 20,000 or more shares.

²⁵ Where a Fund permits an in-kind purchaser to substitute cash-in-lieu of depositing one or more of the requisite Deposit Instruments, the purchaser may be assessed a higher Transaction Fee to cover the cost of purchasing such Deposit Instruments.

22. Applicants expect that purchasers of Creation Units will include institutional investors and arbitrageurs. Market Makers, acting in their roles to provide a fair and orderly secondary market for the Shares, may from time to time find it appropriate to purchase or redeem Creation Units. Applicants expect that secondary market purchasers of Shares will include both institutional and retail investors.²⁶ The price at which Shares trade will be disciplined by arbitrage opportunities created by the option continually to purchase or redeem Shares in Creation Units, which should help prevent Shares from trading at a material discount or premium in relation to their NAV.

23. Shares will not be individually redeemable, and owners of Shares may acquire those Shares from the Fund, or tender such Shares for redemption to the Fund, in Creation Units only. To redeem, an investor must accumulate enough Shares to constitute a Creation Unit. Redemption requests must be placed through an Authorized Participant. A redeeming investor may pay a Transaction Fee, calculated in the same manner as a Transaction Fee payable in connection with purchases of Creation Units.

24. Neither the Trust nor any Fund will be advertised or marketed or otherwise held out as a traditional open-end investment company or a "mutual fund." Instead, each such Fund will be marketed as an "ETF." All marketing materials that describe the features or method of obtaining, buying or selling Creation Units, or Shares traded on an Exchange, or refer to redeemability, will prominently disclose that Shares are not individually redeemable and will disclose that the owners of Shares may acquire those Shares from the Fund or tender such Shares for redemption to the Fund in Creation Units only. The Funds will provide copies of their annual and semi-annual shareholder reports to DTC Participants for distribution to beneficial owners of Shares.

Applicants' Legal Analysis

1. Applicants request an order under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c-1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(j) of the Act for

an exemption from sections 12(d)(1)(A) and (B) of the Act.

2. Section 6(c) of the Act provides that the Commission may exempt any person, security or transaction, or any class of persons, securities or transactions, from any provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Section 17(b) of the Act authorizes the Commission to exempt a proposed transaction from section 17(a) of the Act if evidence establishes that the terms of the transaction, including the consideration to be paid or received, are reasonable and fair and do not involve overreaching on the part of any person concerned, and the proposed transaction is consistent with the policies of the registered investment company and the general provisions of the Act. Section 12(d)(1)(j) of the Act provides that the Commission may exempt any person, security, or transaction, or any class or classes of persons, securities or transactions, from any provisions of section 12(d)(1) if the exemption is consistent with the public interest and the protection of investors.

Sections 5(a)(1) and 2(a)(32) of the Act

3. Section 5(a)(1) of the Act defines an "open-end company" as a management investment company that is offering for sale or has outstanding any redeemable security of which it is the issuer. Section 2(a)(32) of the Act defines a redeemable security as any security, other than short-term paper, under the terms of which the owner, upon its presentation to the issuer, is entitled to receive approximately a proportionate share of the issuer's current net assets, or the cash equivalent. Because Shares will not be individually redeemable, applicants request an order that would permit the Funds to register as open-end management investment companies and issue Shares that are redeemable in Creation Units only.²⁷ Applicants state that investors may purchase Shares in Creation Units and redeem Creation Units from each Fund. Applicants further state that because Creation Units may always be purchased and redeemed at NAV, the price of Shares on the secondary market should not vary materially from NAV.

Section 22(d) of the Act and Rule 22c-1 under the Act

4. Section 22(d) of the Act, among other things, prohibits a dealer from selling a redeemable security that is currently being offered to the public by or through an underwriter, except at a current public offering price described in the prospectus. Rule 22c-1 under the Act generally requires that a dealer selling, redeeming or repurchasing a redeemable security do so only at a price based on its NAV. Applicants state that secondary market trading in Shares will take place at negotiated prices, not at a current offering price described in a Fund's prospectus, and not at a price based on NAV. Thus, purchases and sales of Shares in the secondary market will not comply with section 22(d) of the Act and rule 22c-1 under the Act. Applicants request an exemption under section 6(c) from these provisions.²⁸

5. Applicants assert that the concerns sought to be addressed by section 22(d) of the Act and rule 22c-1 under the Act with respect to pricing are equally satisfied by the proposed method of pricing Shares. Applicants maintain that while there is little legislative history regarding section 22(d), its provisions, as well as those of rule 22c-1, appear to have been designed to (a) prevent dilution caused by certain riskless-trading schemes by principal underwriters and contract dealers, (b) prevent unjust discrimination or preferential treatment among buyers, and (c) ensure an orderly distribution of investment company shares by eliminating price competition from dealers offering shares at less than the published sales price and repurchasing shares at more than the published redemption price.

6. Applicants believe that none of these purposes will be thwarted by permitting Shares to trade in the secondary market at negotiated prices. Applicants state that (a) secondary market trading in Shares does not involve a Fund as a party and will not result in dilution of an investment in Shares, and (b) to the extent different prices exist during a given trading day, or from day to day, such variances occur as a result of third-party market forces, such as supply and demand. Therefore, applicants assert that secondary market transactions in Shares will not lead to discrimination or preferential treatment among purchasers. Finally, applicants contend that the price at which Shares trade will be disciplined by arbitrage

²⁶ Shares will be registered in book-entry form only. DTC or its nominee will be the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or the DTC Participants.

²⁷ The Master Funds will not require relief from sections 2(a)(32) and 5(a)(1) because the Master Funds will issue individually redeemable securities.

²⁸ The Master Funds will not require relief from section 22(d) or rule 22c-1 because shares of the Master Funds will not trade at negotiated prices in the secondary market.

opportunities created by the option continually to purchase or redeem Shares in Creation Units, which should help prevent Shares from trading at a material discount or premium in relation to their NAV.

Section 22(e)

7. Section 22(e) of the Act generally prohibits a registered investment company from suspending the right of redemption or postponing the date of payment of redemption proceeds for more than seven days after the tender of a security for redemption. Applicants state that settlement of redemptions for Foreign Funds will be contingent not only on the settlement cycle of the United States market, but also on current delivery cycles in local markets for underlying foreign Portfolio Holdings held by a Foreign Fund. Applicants state that the delivery cycles currently practicable for transferring Redemption Instruments to redeeming investors, coupled with local market holiday schedules, may require a delivery process of up to fifteen (15) calendar days. Accordingly, with respect to Foreign Funds only, applicants hereby request relief under section 6(c) from the requirement imposed by section 22(e) to allow Foreign Funds to pay redemption proceeds within fifteen calendar days following the tender of Creation Units for redemption.²⁹

8. Applicants believe that Congress adopted section 22(e) to prevent unreasonable, undisclosed or unforeseen delays in the actual payment of redemption proceeds. Applicants propose that allowing redemption payments for Creation Units of a Foreign Fund to be made within fifteen calendar days would not be inconsistent with the spirit and intent of section 22(e). Applicants suggest that a redemption payment occurring within fifteen calendar days following a redemption request would adequately afford investor protection.

9. Applicants are not seeking relief from section 22(e) with respect to Foreign Funds that do not effect creations and redemptions of Creation Units in-kind.³⁰

²⁹ Applicants acknowledge that no relief obtained from the requirements of section 22(e) will affect any obligations applicants may otherwise have under rule 15c6-1 under the Exchange Act requiring that most securities transactions be settled within three business days of the trade date.

³⁰ In addition, the requested exemption from section 22(e) would only apply to in-kind redemptions by the Feeder Funds and would not apply to in-kind redemptions by other feeder funds.

Section 12(d)(1)

10. Section 12(d)(1)(A) of the Act prohibits a registered investment company from acquiring securities of an investment company if such securities represent more than 3% of the total outstanding voting stock of the acquired company, more than 5% of the total assets of the acquiring company, or, together with the securities of any other investment companies, more than 10% of the total assets of the acquiring company. Section 12(d)(1)(B) of the Act prohibits a registered open-end investment company, its principal underwriter and any other broker-dealer from knowingly selling the investment company's shares to another investment company if the sale will cause the acquiring company to own more than 3% of the acquired company's voting stock, or if the sale will cause more than 10% of the acquired company's voting stock to be owned by investment companies generally.

11. Applicants request an exemption to permit registered management investment companies and unit investment trusts ("UITs") that are not advised or sponsored by the Adviser, and not part of the same "group of investment companies," as defined in section 12(d)(1)(G)(ii) of the Act as the Funds (such management investment companies are referred to as "Investing Management Companies," such UITs are referred to as "Investing Trusts," and Investing Management Companies and Investing Trusts are collectively referred to as "Funds of Funds"), to acquire Shares beyond the limits of section 12(d)(1)(A) of the Act; and the Funds, and any principal underwriter for the Funds, and/or any Broker registered under the Exchange Act, to sell Shares to Funds of Funds beyond the limits of section 12(d)(1)(B) of the Act.

12. Each Investing Management Company will be advised by an investment adviser within the meaning of section 2(a)(20)(A) of the Act (the "Fund of Funds Adviser") and may be sub-advised by investment advisers within the meaning of section 2(a)(20)(B) of the Act (each, a "Fund of Funds Sub-Adviser"). Any Fund of Funds Adviser will be registered under the Advisers Act. Any Fund of Funds Sub-Adviser will be registered under the Advisers Act or will not be required to register. Each Investing Trust will be sponsored by a sponsor ("Sponsor").

13. Applicants submit that the proposed conditions to the requested relief adequately address the concerns underlying the limits in sections 12(d)(1)(A) and (B), which include

concerns about undue influence by a fund of funds over underlying funds, excessive layering of fees and overly complex fund structures. Applicants believe that the requested exemption is consistent with the public interest and the protection of investors.

14. Applicants believe that neither a Fund of Funds nor a Fund of Funds Affiliate would be able to exert undue influence over a Fund.³¹ To limit the control that a Fund of Funds may have over a Fund, applicants propose a condition prohibiting a Fund of Funds Adviser or Sponsor, any person controlling, controlled by, or under common control with a Fund of Funds Adviser or Sponsor, and any investment company and any issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act that is advised or sponsored by a Fund of Funds Adviser or Sponsor, or any person controlling, controlled by, or under common control with a Fund of Funds Adviser or Sponsor ("Fund of Funds Advisory Group") from controlling (individually or in the aggregate) a Fund, or its respective Master Fund, within the meaning of section 2(a)(9) of the Act. The same prohibition would apply to any Fund of Funds Sub-Adviser, any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser, and any investment company or issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act (or portion of such investment company or issuer) advised or sponsored by the Fund of Funds Sub-Adviser or any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser ("Fund of Funds Sub-Advisory Group").

15. Applicants propose other conditions to limit the potential for undue influence over the Funds, or their respective Master Funds, including that no Fund of Funds or Fund of Funds Affiliate (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund, or its respective Master Fund, to purchase a security in an offering of securities during the existence of an underwriting or selling syndicate of which a principal underwriter is an Underwriting Affiliate ("Affiliated Underwriting"). An

³¹ A "Fund of Funds Affiliate" is a Fund of Funds Adviser, Fund of Funds Sub-Adviser, Sponsor, promoter, and principal underwriter of a Fund of Funds, and any person controlling, controlled by, or under common control with any of those entities. A "Fund Affiliate" is an investment adviser, promoter, or principal underwriter of a Fund, or its respective Master Fund, and any person controlling, controlled by or under common control with any of these entities.

“Underwriting Affiliate” is a principal underwriter in any underwriting or selling syndicate that is an officer, director, member of an advisory board, Fund of Funds Adviser, Fund of Funds Sub-Adviser, employee or Sponsor of the Fund of Funds, or a person of which any such officer, director, member of an advisory board, Fund of Funds Adviser or Fund of Funds Sub-Adviser, employee or Sponsor is an affiliated person (except that any person whose relationship to the Fund is covered by section 10(f) of the Act is not an Underwriting Affiliate).

16. Applicants do not believe that the proposed arrangement will involve excessive layering of fees. The board of directors or trustees of any Investing Management Company, including a majority of the directors or trustees who are not “interested persons” within the meaning of section 2(a)(19) of the Act (“disinterested directors or trustees”), will find that the advisory fees charged under the contract are based on services provided that will be in addition to, rather than duplicative of, services provided under the advisory contract of any Fund, or its respective Master Fund, in which the Investing Management Company may invest. In addition, under condition B.5., a Fund of Funds Adviser, or a Fund of Funds’ trustee or Sponsor, as applicable, will waive fees otherwise payable to it by the Fund of Funds in an amount at least equal to any compensation (including fees received pursuant to any plan adopted by a Fund, or its respective Master Fund, under rule 12b–1 under the Act) received from a Fund by the Fund of Funds Adviser, trustee or Sponsor or an affiliated person of the Fund of Funds Adviser, trustee or Sponsor, other than any advisory fees paid to the Fund of Funds Adviser, trustee or Sponsor or its affiliated person by a Fund, in connection with the investment by the Fund of Funds in the Fund. Applicants state that any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.³²

17. Applicants submit that the proposed arrangement will not create an overly complex fund structure. Applicants note that no Fund, or its respective Master Fund, will acquire securities of any investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the

Act, except to the extent (i) the Fund, or its respective Master Fund, acquires securities of another investment company pursuant to exemptive relief from the Commission permitting the Fund, or its respective Master Fund, to purchase shares of other investment companies for short-term cash management purposes; (ii) the Fund acquires securities of the Master Fund pursuant to Master-Feeder Relief; or (iii) the Fund invests in a Wholly-Owned Subsidiary that is a wholly-owned and controlled subsidiary of the Fund (or its respective Master Fund).³³ Further, no Wholly-Owned Subsidiary will acquire securities of any other investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act other than money market funds that comply with rule 2a–7 for short-term cash management purposes. To ensure a Fund of Funds is aware of the terms and conditions of the requested order, the Fund of Funds will enter into an agreement with the Fund (“FOF Participation Agreement”). The FOF Participation Agreement will include an acknowledgement from the Fund of Funds that it may rely on the order only to invest in the Funds and not in any other investment company.

18. Applicants also note that a Fund may choose to reject a direct purchase of Shares in Creation Units by a Fund of Funds. To the extent that a Fund of Funds purchases Shares in the secondary market, a Fund would still retain its ability to reject any initial investment by a Fund of Funds in excess of the limits of section 12(d)(1)(A) by declining to enter into a FOF Participation Agreement with the Fund of Funds.

19. Applicants also are seeking the Master-Feeder Relief to permit the Feeder Funds to perform creations and redemptions of Shares in-kind in a master-feeder structure. Applicants assert that this structure is substantially identical to traditional master-feeder structures permitted pursuant to the exception provided in section

12(d)(1)(E) of the Act. Section 12(d)(1)(E) provides that the percentage limitations of section 12(d)(1)(A) and (B) shall not apply to a security issued by an investment company (in this case, the shares of the applicable Master Fund) if, among other things, that security is the only investment security held by the investing investment company (in this case, the Feeder Fund). Applicants believe the proposed master-feeder structure complies with section 12(d)(1)(E) because each Feeder Fund will hold only investment securities issued by its corresponding Master Fund; however, the Feeder Funds may receive securities other than securities of its corresponding Master Fund if a Feeder Fund accepts an in-kind creation. To the extent that a Feeder Fund may be deemed to be holding both shares of the Master Fund and other securities, applicants request relief from section 12(d)(1)(A) and (B). The Feeder Funds would operate in compliance with all other provisions of section 12(d)(1)(E).

Sections 17(a)(1) and (2) of the Act

20. Sections 17(a)(1) and (2) of the Act generally prohibit an affiliated person of a registered investment company, or an affiliated person of such a person, from selling any security to or purchasing any security from the company. Section 2(a)(3) of the Act defines “affiliated person” of another person to include (a) any person directly or indirectly owning, controlling or holding with power to vote 5% or more of the outstanding voting securities of the other person, (b) any person 5% or more of whose outstanding voting securities are directly or indirectly owned, controlled or held with the power to vote by the other person, and (c) any person directly or indirectly controlling, controlled by or under common control with the other person. Section 2(a)(9) of the Act defines “control” as the power to exercise a controlling influence over the management or policies of a company, and provides that a control relationship will be presumed where one person owns more than 25% of a company’s voting securities. The Funds may be deemed to be controlled by the Adviser or an entity controlling, controlled by or under common control with the Adviser and hence affiliated persons of each other. In addition, the Funds may be deemed to be under common control with any other registered investment company (or series thereof) advised by an Adviser or an entity controlling, controlled by or under common control with an Adviser (an “Affiliated Fund”). Any investor, including Market Makers, owning 5% or

³² Any references to NASD Conduct Rule 2830 include any successor or replacement FINRA rule to NASD Conduct Rule 2830.

³³ A Fund, or its respective Master Fund, may invest in a wholly-owned subsidiary, organized under the laws of the Cayman Islands as an exempted company or under the laws of another non-U.S. jurisdiction (each, a “Wholly-Owned Subsidiary”), in order to pursue its investment objectives and/or ensure that the Fund remains qualified as a registered investment company for U.S. federal income tax purposes. Certain Wholly-Owned Subsidiaries may be investment companies or excluded from the definition of investment company by section 3(c)(1) or 3(c)(7) of the Act. For a Fund, or its respective Master Fund, that invests in a Wholly-Owned Subsidiary, the Adviser will serve as investment adviser to both the Fund, or its respective Master Fund, and the Wholly-Owned Subsidiary. A Feeder Fund will not invest in a Wholly-Owned Subsidiary.

holding in excess of 25% of the Trust or such Funds, may be deemed affiliated persons of the Trust or such Funds. In addition, an investor could own 5% or more, or in excess of 25% of the outstanding shares of one or more Affiliated Funds making that investor an affiliated person of an affiliated person of the Funds.

21. Applicants request an exemption from sections 17(a)(1) and 17(a)(2) of the Act pursuant to sections 6(c) and 17(b) of the Act to permit persons that are affiliated persons of the Funds, or an affiliated person of such affiliated person of the Funds, solely by virtue of one or more of the following: (a) Holding 5% or more, or in excess of 25%, of the outstanding Shares of one or more Funds; (b) an affiliation with a person with an ownership interest described in (a); or (c) holding 5% or more, or more than 25%, of the shares of one or more Affiliated Funds, to effectuate purchases and redemptions “in-kind.”

22. Applicants assert that no useful purpose would be served by prohibiting such affiliated persons from making “in-kind” purchases or “in-kind” redemptions of Shares of a Fund in Creation Units. Both the deposit procedures for “in-kind” purchases of Creation Units and the redemption procedures for “in-kind” redemptions of Creation Units will be effected in exactly the same manner for all purchases and redemptions, regardless of size or number. There will be no discrimination between purchasers or redeemers. Deposit Instruments and Redemption Instruments for each Fund will be valued in the identical manner as those Portfolio Holdings currently held by such Fund, or its respective Master Fund, and the valuation of the Deposit Instruments and Redemption Instruments will be made in an identical manner regardless of the identity of the purchaser or redeemer. Applicants do not believe that “in-kind” purchases and redemptions will result in abusive self-dealing or overreaching, but rather assert that such procedures will be implemented consistently with each Fund’s objectives and with the general purposes of the Act. Applicants believe that “in-kind” purchases and redemptions will be made on terms reasonable to Applicants and any affiliated persons because they will be valued pursuant to verifiable objective standards. The method of valuing Portfolio Holdings held by a Fund is identical to that used for calculating “in-kind” purchase or redemption values and therefore creates no opportunity for affiliated persons or affiliated persons of affiliated persons of

applicants to effect a transaction detrimental to the other holders of Shares of that Fund. Similarly, applicants submit that, by using the same standards for valuing Portfolio Holdings held by a Fund as are used for calculating “in-kind” redemptions or purchases, the Fund will ensure that its NAV will not be adversely affected by such securities transactions. Applicants also note that the ability to take deposits and make redemptions “in-kind” will help each Fund to track closely its Underlying Index and therefore aid in achieving the Fund’s objectives.

23. Applicants also seek relief under sections 6(c) and 17(b) from section 17(a) to permit a Fund that is an affiliated person, or an affiliated person of an affiliated person, of a Fund of Funds to sell its Shares to and redeem its Shares from a Fund of Funds, and to engage in the accompanying in-kind transactions with the Fund of Funds.³⁴ Applicants state that the terms of the transactions are fair and reasonable and do not involve overreaching. Applicants note that any consideration paid by a Fund of Funds for the purchase or redemption of Shares directly from a Fund will be based on the NAV of the Fund.³⁵ Applicants believe that any proposed transactions directly between the Funds and Funds of Funds will be consistent with the policies of each Fund of Funds. The purchase of Creation Units by a Fund of Funds directly from a Fund will be accomplished in accordance with the investment restrictions of any such Fund of Funds and will be consistent with the investment policies set forth in the Fund of Funds’ registration

³⁴ Although applicants believe that most Funds of Funds will purchase Shares in the secondary market and will not purchase Creation Units directly from a Fund, a Fund of Funds might seek to transact in Creation Units directly with a Fund that is an affiliated person of a Fund of Funds. To the extent that purchases and sales of Shares occur in the secondary market and not through principal transactions directly between a Fund of Funds and a Fund, relief from section 17(a) would not be necessary. However, the requested relief would apply to direct sales of Shares in Creation Units by a Fund to a Fund of Funds and redemptions of those Shares. Applicants are not seeking relief from section 17(a) for, and the requested relief will not apply to, transactions where a Fund could be deemed an affiliated person, or an affiliated person of an affiliated person of a Fund of Funds because an Adviser or an entity controlling, controlled by or under common control with an Adviser provides investment advisory services to that Fund of Funds.

³⁵ Applicants acknowledge that the receipt of compensation by (a) an affiliated person of a Fund of Funds, or an affiliated person of such person, for the purchase by the Fund of Funds of Shares of a Fund or (b) an affiliated person of a Fund, or an affiliated person of such person, for the sale by the Fund of its Shares to a Fund of Funds, may be prohibited by section 17(e)(1) of the Act. The FOF Participation Agreement also will include this acknowledgment.

statement. Applicants also state that the proposed transactions are consistent with the general purposes of the Act and are appropriate in the public interest.

24. To the extent that a Fund operates in a master-feeder structure, applicants also request relief permitting the Feeder Funds to engage in in-kind creations and redemptions with the applicable Master Fund. Applicants state that the customary section 17(a)(1) and 17(a)(2) relief would not be sufficient to permit such transactions because the Feeder Funds and the applicable Master Fund could also be affiliated by virtue of having the same investment adviser. However, applicants believe that in-kind creations and redemptions between a Feeder Fund and a Master Fund advised by the same investment adviser do not involve “overreaching” by an affiliated person. Such transactions will occur only at the Feeder Fund’s proportionate share of the Master Fund’s net assets, and the distributed securities will be valued in the same manner as they are valued for the purposes of calculating the applicable Master Fund’s NAV. Further, all such transactions will be effected with respect to pre-determined securities and on the same terms with respect to all investors. Finally, such transaction would only occur as a result of, and to effectuate, a creation or redemption transaction between the Feeder Fund and a third-party investor. Applicants believe that the terms of the proposed transactions are reasonable and fair and do not involve overreaching on the part of any person concerned, the proposed transactions are consistent with the policy of each Fund and will be consistent with the investment objectives and policies of each Fund of Funds, and the proposed transactions are consistent with the general purposes of the Act.

Applicants’ Conditions

Applicants agree that any order of the Commission granting the requested relief will be subject to the following conditions:

A. ETF Relief

1. The requested relief to permit ETF operations, other than the Master-Feeder Relief, will expire on the effective date of any Commission rule under the Act that provides relief permitting the operation of index-based ETFs.

2. As long as a Fund operates in reliance on the requested order, the Shares of such Fund will be listed on an Exchange.

3. Neither the Trust nor any Fund will be advertised or marketed as an open-end investment company or a mutual

fund. Any advertising material that describes the purchase or sale of Creation Units or refers to redeemability will prominently disclose that Shares are not individually redeemable and that owners of Shares may acquire those Shares from the Fund and tender those Shares for redemption to a Fund in Creation Units only.

4. The Web site, which is and will be publicly accessible at no charge, will contain, on a per Share basis for each Fund, the prior Business Day's NAV and the market closing price or the midpoint of the bid/ask spread at the time of the calculation of such NAV ("Bid/Ask Price"), and a calculation of the premium or discount of the market closing price or Bid/Ask Price against such NAV.

5. Each Self-Indexing Fund, Long/Short Fund and 130/30 Fund will post on the Web site on each Business Day, before commencement of trading of Shares on the Exchange, the Fund's, or its respective Master Fund's, Portfolio Holdings.

6. No Adviser or any Sub-Adviser to a Self-Indexing Fund, directly or indirectly, will cause any Authorized Participant (or any investor on whose behalf an Authorized Participant may transact with the Self-Indexing Fund) to acquire any Deposit Instrument for the Self-Indexing Fund, or its respective Master Fund, through a transaction in which the Self-Indexing Fund, or its respective Master Fund, could not engage directly.

B. Fund of Funds Relief

1. The members of a Fund of Funds' Advisory Group will not control (individually or in the aggregate) a Fund, or its respective Master Fund, within the meaning of section 2(a)(9) of the Act. The members of a Fund of Funds' Sub-Advisory Group will not control (individually or in the aggregate) a Fund, or its respective Master Fund, within the meaning of section 2(a)(9) of the Act. If, as a result of a decrease in the outstanding voting securities of a Fund, the Fund of Funds' Advisory Group or the Fund of Funds' Sub-Advisory Group, each in the aggregate, becomes a holder of more than 25 percent of the outstanding voting securities of a Fund, it will vote its Shares of the Fund in the same proportion as the vote of all other holders of the Fund's Shares. This condition does not apply to the Fund of Funds' Sub-Advisory Group with respect to a Fund, or its respective Master Fund, for which the Fund of Funds' Sub-Adviser or a person controlling, controlled by or under common control with the Fund of

Funds' Sub-Adviser acts as the investment adviser within the meaning of section 2(a)(20)(A) of the Act.

2. No Fund of Funds or Fund of Funds Affiliate will cause any existing or potential investment by the Fund of Funds in a Fund to influence the terms of any services or transactions between the Fund of Funds or Fund of Funds Affiliate and the Fund, or its respective Master Fund, or a Fund Affiliate.

3. The board of directors or trustees of an Investing Management Company, including a majority of the disinterested directors or trustees, will adopt procedures reasonably designed to ensure that the Fund of Funds Adviser and Fund of Funds Sub-Adviser are conducting the investment program of the Investing Management Company without taking into account any consideration received by the Investing Management Company or a Fund of Funds Affiliate from a Fund, or its respective Master Fund, or Fund Affiliate in connection with any services or transactions.

4. Once an investment by a Fund of Funds in the securities of a Fund exceeds the limits in section 12(d)(1)(A)(i) of the Act, the Board of the Fund, or its respective Master Fund, including a majority of the directors or trustees who are not "interested persons" within the meaning of section 2(a)(19) of the Act ("non-interested Board members"), will determine that any consideration paid by the Fund, or its respective Master Fund, to the Fund of Funds or a Fund of Funds Affiliate in connection with any services or transactions: (i) Is fair and reasonable in relation to the nature and quality of the services and benefits received by the Fund, or its respective Master Fund; (ii) is within the range of consideration that the Fund would be required to pay to another unaffiliated entity in connection with the same services or transactions; and (iii) does not involve overreaching on the part of any person concerned. This condition does not apply with respect to any services or transactions between a Fund, or its respective Master Fund, and its investment adviser(s), or any person controlling, controlled by or under common control with such investment adviser(s).

5. The Fund of Funds Adviser, or trustee or Sponsor of an Investing Trust, as applicable, will waive fees otherwise payable to it by the Fund of Funds in an amount at least equal to any compensation (including fees received pursuant to any plan adopted by a Fund, or its respective Master Fund, under rule 12b-1 under the Act) received from a Fund, or its respective Master Fund, by the Fund of Funds

Adviser, or trustee or Sponsor of the Investing Trust, or an affiliated person of the Fund of Funds Adviser, or trustee or Sponsor of the Investing Trust, other than any advisory fees paid to the Fund of Funds Adviser, or trustee or Sponsor of an Investing Trust, or its affiliated person by the Fund, or its respective Master Fund, in connection with the investment by the Fund of Funds in the Fund. Any Fund of Funds Sub-Adviser will waive fees otherwise payable to the Fund of Funds Sub-Adviser, directly or indirectly, by the Investing Management Company in an amount at least equal to any compensation received from a Fund, or its respective Master Fund, by the Fund of Funds Sub-Adviser, or an affiliated person of the Fund of Funds Sub-Adviser, other than any advisory fees paid to the Fund of Funds Sub-Adviser or its affiliated person by the Fund, or its respective Master Fund, in connection with the investment by the Investing Management Company in the Fund made at the direction of the Fund of Funds Sub-Adviser. In the event that the Fund of Funds Sub-Adviser waives fees, the benefit of the waiver will be passed through to the Investing Management Company.

6. No Fund of Funds or Fund of Funds Affiliate (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund, or its respective Master Fund, to purchase a security in any Affiliated Underwriting.

7. The Board of a Fund, or its respective Master Fund, including a majority of the non-interested Board members, will adopt procedures reasonably designed to monitor any purchases of securities by the Fund, or its respective Master Fund, in an Affiliated Underwriting, once an investment by a Fund of Funds in the securities of the Fund exceeds the limit of section 12(d)(1)(A)(i) of the Act, including any purchases made directly from an Underwriting Affiliate. The Board will review these purchases periodically, but no less frequently than annually, to determine whether the purchases were influenced by the investment by the Fund of Funds in the Fund. The Board will consider, among other things: (i) Whether the purchases were consistent with the investment objectives and policies of the Fund, or its respective Master Fund; (ii) how the performance of securities purchased in an Affiliated Underwriting compares to the performance of comparable securities purchased during a comparable period of time in underwritings other than Affiliated Underwritings or to a benchmark such as a comparable market index; and (iii)

whether the amount of securities purchased by the Fund, or its respective Master Fund, in Affiliated Underwritings and the amount purchased directly from an Underwriting Affiliate have changed significantly from prior years. The Board will take any appropriate actions based on its review, including, if appropriate, the institution of procedures designed to ensure that purchases of securities in Affiliated Underwritings are in the best interest of shareholders of the Fund.

8. Each Fund, or its respective Master Fund, will maintain and preserve permanently in an easily accessible place a written copy of the procedures described in the preceding condition, and any modifications to such procedures, and will maintain and preserve for a period of not less than six years from the end of the fiscal year in which any purchase in an Affiliated Underwriting occurred, the first two years in an easily accessible place, a written record of each purchase of securities in Affiliated Underwritings once an investment by a Fund of Funds in the securities of the Fund exceeds the limit of section 12(d)(1)(A)(i) of the Act, setting forth from whom the securities were acquired, the identity of the underwriting syndicate's members, the terms of the purchase, and the information or materials upon which the Board's determinations were made.

9. Before investing in a Fund in excess of the limit in section 12(d)(1)(A), a Fund of Funds and the Trust will execute a FOF Participation Agreement stating, without limitation, that their respective boards of directors or trustees and their investment advisers, or trustee and Sponsor, as applicable, understand the terms and conditions of the order, and agree to fulfill their responsibilities under the order. At the time of its investment in Shares of a Fund in excess of the limit in section 12(d)(1)(A)(i), a Fund of Funds will notify the Fund of the investment. At such time, the Fund of Funds will also transmit to the Fund a list of the names of each Fund of Funds Affiliate and Underwriting Affiliate. The Fund of Funds will notify the Fund of any changes to the list of the names as soon as reasonably practicable after a change occurs. The Fund and the Fund of Funds will maintain and preserve a copy of the order, the FOF Participation Agreement, and the list with any updated information for the duration of the investment and for a period of not less than six years thereafter, the first two years in an easily accessible place.

10. Before approving any advisory contract under section 15 of the Act, the

board of directors or trustees of each Investing Management Company including a majority of the disinterested directors or trustees, will find that the advisory fees charged under such contract are based on services provided that will be in addition to, rather than duplicative of, the services provided under the advisory contract(s) of any Fund, or its respective Master Fund, in which the Investing Management Company may invest. These findings and their basis will be fully recorded in the minute books of the appropriate Investing Management Company.

11. Any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.

12. No Fund, or its respective Master Fund, will acquire securities of an investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the Act, except to the extent (i) the Fund, or its respective Master Fund, acquires securities of another investment company pursuant to exemptive relief from the Commission permitting the Fund, or its respective Master Fund, to acquire securities of one or more investment companies for short-term cash management purposes, (ii) the Fund acquires securities of the Master Fund pursuant to the Master-Feeder Relief, or (iii) the Fund invests in a Wholly-Owned Subsidiary that is a wholly-owned and controlled subsidiary of the Fund (or its respective Master Fund) as described in the Application. Further, no Wholly-Owned Subsidiary will acquire securities of any other investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act other than money market funds that comply with rule 2a-7 for short-term cash management purposes.

For the Commission, by the Division of Investment Management, under delegated authority.

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77509; File No. SR-BatsBZX-2016-02]

Self-Regulatory Organizations; Bats BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Changes in Connection With the Operation of the Exchange's Equity Options Platform

April 4, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on March 24, 2016, Bats BZX Exchange, Inc. (the "Exchange" or "BZX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Rule 21.15, Data Dissemination, in connection with the operation BZX Options, as described below. In connection with this change the Exchange also proposes to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1. Finally, the Exchange also proposes a related change to Rule 20.6.

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange is proposing to modify Rule 21.15, Data Dissemination, which sets forth information regarding quotations and data feeds provided by BZX Options. Specifically, the Exchange proposes to adopt new paragraph (c) to provide information regarding the existence of Priority Customer interest on the BZX order book ("BZX Book"). In connection with this change the Exchange also proposes to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1. Finally, the Exchange also proposes a related change to Rule 20.6.

As proposed, the Exchange will make available to all market participants through the Options Price Reporting Authority ("OPRA") an indication that there is Priority Customer interest included in the best bid or offer ("BBO") disseminated by the Exchange. Further, the Exchange will identify Priority Customer orders and trades as such on messages disseminated by the Exchange through its Multicast PITCH data feed. The proposed rule is similar to and based on Rule 21.15(c) of the Exchange's affiliated options exchange, the options platform operated by Bats EDGX Exchange, Inc. ("EDGX Options").

The Exchange notes that EDGX Options Rule 21.15(c) is identical to the proposed rule with the exception that EDGX Options Rule 21.15(c) currently refers to Customers, which term also includes broker-dealers and Public Customers, rather than Priority Customers as proposed by the Exchange. The Exchange notes that simultaneous with this proposal, Bats EDGX Exchange, Inc. is filing a proposal to modify Rule 21.15 to change the reference in such rule to "Priority Customer" and to adopt definitions of "Priority Customer" and "Priority Customer Order."⁵

In addition to the change described above, the Exchange proposes to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1 and to use such defined terms in proposed Rule 21.15(c). As proposed, a

Priority Customer would mean any person or entity that is not: (A) a broker or dealer in securities; or (B) a Professional.⁶ In turn, a Priority Customer Order would mean an order for the account of a Priority Customer. The proposed definitions are similar to and based on the definitions of the same terms set forth in MIA Rule 100. The Exchange proposes to adopt these new definitions in new paragraph (a)(45) and to re-number existing paragraphs (a)(45) through (a)(47) as paragraphs (a)(46) through (a)(48). In addition, because the defined term "Public Customer Order" is not currently utilized in Exchange Rules, the Exchange proposes to delete this definition, which is currently contained in paragraph (a)(48).

The Exchange proposes to adopt the definition of Priority Customer to exclude both broker-dealers and Professionals. This change is consistent with the Exchange's fee schedule, which already excludes Professionals from the definition of the term Customer for purposes of pricing on the Exchange.⁷

In addition to the proposed changes described above, the Exchange also proposes to modify Rule 20.6(a)(1) to use the defined term of "Professional" rather than the term "Professional Customer," which is not defined in Rule 16.1.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.⁸ In particular, the proposal is consistent with Section 6(b)(5) of the Act⁹ because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the

public interest. The proposed rule change will allow the Exchange to provide information that is provided by other options exchanges.¹⁰ Equivalent information from the Exchange will enable market participants to participate on the Exchange in the same way that they participate on other options exchanges. In particular, the indication that Priority Customer interest exists on the BZX Book might increase the likelihood of executions for such orders. As set forth above, proposed Exchange Rule 21.15(c) is based on EDGX Rule 21.15(c) and will be identical to such rule following a modification by EDGX Options to instead use the term Priority Customer rather than Customer. Further, the definitions of Priority Customer and Priority Customer Order are similar to and based on the definitions of the same terms set forth in MIA Rule 100.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change does not introduce any burden on competition, but rather, would allow the Exchange to provide information provided by other option exchanges regarding the existence of customer interest on the order book.¹¹ Similarly, the proposed definitions of Priority Customer and Priority Customer Order would align the Exchange's rules more closely with those of other options exchanges.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become

⁶ Pursuant to Rule 16.1(a)(45) (proposed to be renumbered as 16.1(a)(46)), the Exchange defines a "Professional" as any person or entity that (A) is not a broker or dealer in securities, and (B) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s).

⁷ See the BZX Options fee schedule available at: http://www.batsoptions.com/support/fee_schedule/bzx. As defined on the fee schedule, a "Customer" is synonymous with the proposed term Priority Customer in the Exchange's Rules as the definition excludes both broker-dealers and Professionals as defined in BZX Rule 16.1.

⁸ 15 U.S.C. 78f(b).

⁹ 15 U.S.C. 78f(b)(5).

¹⁰ See EDGX Rule 21.15; see also MIA Rule 506(c); Securities Exchange Act Release No. 62399 (June 28, 2010), 75 FR 38587 (July 2, 2010) (SR-ISE-2010-34) (Order Approving Proposed Rule Change to Fees for the ISE Order Feed) (describing that information is contained on individual limit orders indicating whether such orders are customer orders).

¹¹ See *id.*

⁵ See SR-BatsEDGX-2016-03, available at: http://www.batstrading.com/regulation/rule_filings/edgx/.

operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹² and Rule 19b-4(f)(6) thereunder.¹³

A proposed rule change filed under Rule 19b-4(f)(6) under the Act¹⁴ normally does not become operative for 30 days after the date of filing. However, Rule 19b-4(f)(6)(iii)¹⁵ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiver of the 30-day operative delay is appropriate because it will allow the Exchange to immediately begin providing information regarding the existence of a Priority Customer on the order book that is similar to information provided by other options exchanges. The Commission also believes that it is appropriate for the Exchange to adopt definitions of Priority Customer and Priority Customer Order as they are similar to and based on MIAX Rule 100. Accordingly, the proposed definitions are similar to existing rules of other options exchanges and do not raise any new policy issues. Based on the foregoing, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest.¹⁶ The Commission hereby grants the Exchange's request and designates the proposal operative upon filing.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings

to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsBZX-2016-02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BatsBZX-2016-02. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BatsBZX-2016-02 and should be submitted on or before April 29, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁷

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77508; File No. SR-BatsEDGX-2016-03]

Self-Regulatory Organizations; Bats EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Changes in Connection With the Operation of the Exchange's Equity Options Platform

April 4, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on March 24, 2016, Bats EDGX Exchange, Inc. (the "Exchange" or "EDGX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to make a modification to Rule 21.1 (Definitions) in connection with the operation of the attribution feature of EDGX Options, as described below. In addition, the Exchange proposes to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1 and to use such definitions throughout Rules 21.8, 21.10 and 21.15. Finally, the Exchange also proposes related changes to Rules 20.6 and 21.8.

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

¹⁷ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

¹² 15 U.S.C. 78s(b)(3)(A).

¹³ In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁴ 17 CFR 240.19b-4(f)(6).

¹⁵ 17 CFR 240.19b-4(f)(6)(iii).

¹⁶ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

As further described below, the Exchange is proposing to modify Rule 21.1(c) to remove the limitation related to Customer orders to allow such orders to be Attributable Orders (as such terms are defined below). In addition, the Exchange proposes to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1 and to use such definitions throughout Rules 21.8, 21.10 and 21.15. Finally, the Exchange also proposes related changes to Rules 20.6 and 21.8.

Attributable Orders

The Exchange is proposing to modify Rule 21.1, Definitions, which sets forth the various definitions applicable to the operation of the EDGX Options platform, including order types and order type modifiers accepted by EDGX Options. As set forth in Rule 21.1, an order can be attributed on EDGX Options, meaning that such order is displayed with not only a price and size but also a User's⁵ market participant identifier, or MPID (such order an "Attributable Order"). Alternatively, a User may also submit an order that is designated for display on an anonymous basis, a "Non-Attributable Order." In addition to attribution, as discussed in Rule 21.1, Exchange Rule 21.15(c) states that the Exchange will indicate on OPRA when there is "Customer" (the definition of which is described below) interest on EDGX Options and will identify Customer orders and trades as such on the Exchange's proprietary data feeds.

Recently, the Exchange modified Rule 21.1(c) to limit the use of Attributable

Orders to non-Customers, thereby eliminating the ability for a Customer Order to also be an Attributable Order.⁶ Thus, Rule 21.1(c) states that all non-Customer Orders shall be treated as Attributable Orders unless a User has entered instructions to treat such orders as Non-Attributable Orders. Further, Rule 21.1(c) states that all Customer Orders are treated as Non-Attributable Orders. The Exchange did not make the change set forth above due to concerns with respect to Customer orders being entered as Attributable Orders but rather due to system limitations in supporting both the attribution feature and the identification of Customer orders as such. The Exchange is now able to accept a Customer order that is both identified as such and attributed to a specified MPID. The Exchange therefore proposes to modify Rule 21.1(c) to remove the limitation related to Customer orders to allow such orders to be Attributable Orders. The Exchange notes that this proposed change will return the Exchange's rules to their prior form, by accepting Attributable Orders regardless of the capacity designated on the order.

Definition and Use of Term "Priority Customer" and "Priority Customer Order"

In addition to the change described above, the Exchange proposes changes to Rules 16.1 to adopt definitions of "Priority Customer" and "Priority Customer Order" in Rule 16.1 and to use such definitions throughout Rules 21.8, 21.10 and 21.15. Specifically, in such Rules, the Exchange proposes to use the terms "Priority Customer" and "Priority Customer Order", respectively, in place of the terms "Customer" and "Customer Order". As proposed, a Priority Customer would mean any person or entity that is not: (A) A broker or dealer in securities; or (B) a Professional (as defined below). In turn, a Priority Customer Order would mean an order for the account of a Priority Customer. The proposed definitions are similar to and based on the definitions of the same terms set forth in MIA Rule 100. The Exchange proposes to adopt these new definitions in new paragraph (a)(45) and to re-number existing paragraphs (a)(45) through (a)(47) as paragraphs (a)(46) through (a)(48). In addition, because the defined term "Public Customer Order" is not currently utilized in Exchange Rules, the Exchange proposes to delete this

definition, which is currently contained in paragraph (a)(48).

Pursuant to Rule 16.1(a)(19) a "Customer" is defined as a Public Customer or a broker-dealer. Under Rule 16.1(a)(47), a "Public Customer" is defined as a person that is not a broker or dealer in securities ("broker-dealer"). The Exchange separately defines a "Professional" as any person or entity that (A) is not a broker or dealer in securities, and (B) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). The Exchange proposes to adopt the definition of Priority Customer to exclude both broker-dealers and Professionals. This change is consistent with the Exchange's fee schedule, which already excludes Professionals from the definition of the term Customer for purposes of pricing on the Exchange.⁷ This change is also consistent Exchange Rule 20.6(a)(1)⁸ and with the rules of other options exchanges.⁹

In addition, the Exchange proposes to modify Rules 21.8, 21.10, and 21.15 to refer to "Priority Customer" rather than "Customer" and "Priority Customer Order" rather than "Customer Order", to more closely reflect the Exchange's current implementation of the Rules, which follows the definition of Customer on the Exchange's fee schedule and in Rule 20.6(a)(1) by excluding broker-dealers and Professionals. As noted above, the Exchange is also proposing to replace the phrase "Customer Order", or in some instances "Customer order," with the phrase "Priority Customer Order".

The Exchange believes that each of these changes will more closely align the Exchange's rules with the Exchange's implementation of the Rules and the rules of other options exchanges.¹⁰ The Exchange believes that the original discrepancy was based in

⁷ See the EDGX Options fee schedule available at: http://www.batsoptions.com/support/fee_schedule/edgx. As defined on the fee schedule, a "Customer" is synonymous with the proposed term Priority Customer in the Exchange's Rules as the definition excludes both broker dealers and Professionals as defined in EDGX Rule 16.1.

⁸ Rule 20.6(a)(1) similarly defines a Customer as a party other than a broker-dealer or Professional Customer. The Exchange also proposes to amend Rule 20.6(a)(1) to instead refer to a "Professional" as discussed below.

⁹ See, e.g., MIA Rule 100, Definitions, which defines a "Priority Customer," by excluding both broker dealers and customers who do not meet the criteria generally established by options exchanges to qualify as a Professional (i.e., 390 orders in listed options per day); see also ISE Rule 100(37A).

¹⁰ See, e.g., MIA Rules 514, which closely resembles Exchange Rules 21.8 and uses the term Priority Customer, a term equivalent to the Exchange's proposed definition of Priority Customer.

⁵ The term User is defined in Rule 1.5(ee) as "any Member or Sponsored Participant who is authorized to obtain access to the System pursuant to Rule 11.3."

⁶ Securities Exchange Act Release No. 77036 (February 2, 2016), 81 FR 6552 (February 8, 2016) (SR-EDGX-2016-01).

part on the use of the general term “Customer” in other Exchange Rules and on the Exchange’s fee schedule as noted above, which in such other contexts mirrors the definition of Priority Customer, as proposed.¹¹ The Exchange also believes that the intended application of the term Customer in Chapter 21 of the Exchange’s rules is also clear. In particular, the Exchange’s priority rule, Rule 21.8(e), explicitly refers to “non-Customers” as “including Professional Customers” when it discusses the priority algorithm that applies after execution of Customer (to be re-designated as “Priority Customer”) orders. Thus, the change from Customer to Priority Customer in Rule 21.8, 21.10 and 21.15 will conform the Exchange’s Rules to the current implementation by using a defined term that excludes broker-dealers and Professionals.

Additional Changes

To ensure clarity, the Exchange proposes related changes to Rule 21.8(d)(1) and Rule 21.8(e). Specifically, the Exchange proposes to restate the priority of Priority Customers as priority “over orders on behalf of all other types of participants” and to define all such other participants as non-Customers. As above, this change conforms the Rule to the Exchange’s implementation of the Rule as well as the way that the Exchange believes the Rule was proposed and approved when read in light of Rule 21.8(e). The Exchange believes that the amended Rule, however, sets forth in a more clear fashion the fact that all other participants other than Priority Customers, including Professionals and broker-dealers, are considered as non-Customers for purposes of the Rule. Based on this proposed change, the Exchange also proposes to remove the reference to “non-Customers, including Professional Customers” in Rule 21.8(e) and to instead refer to the definition of non-Customer that is proposed to be added to Rule 21.8(d)(1).

In addition to the proposed changes to utilize the term Priority Customer instead of Customer and the term Priority Customer Order instead of Customer Order in the Rules listed above, the Exchange also proposes to modify Rule 20.6(a)(1) to use the defined term of “Professional” rather than the term “Professional Customer,” which is not defined in Rule 16.1.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules

and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.¹² In particular, the proposal is consistent with Section 6(b)(5) of the Act¹³ because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The proposed rule change will allow the Exchange to accept Attributable Orders from all market participants, including Priority Customers, while also designating Priority Customer orders as such on applicable data feeds. As set forth above, the Exchange recently limited the use of Attributable Orders to non-Customers due to systems limitations but is now proposing to remove this limitation. The Exchange is therefore seeking to re-introduce the feature that was originally intended in connection with the launch of EDGX Options. The proposed rule change will also achieve consistency with respect to the use of the term “Priority Customer” and “Priority Customer Order” both internally in aligning with the implementation of such Rules as well as with the rules of other options exchanges. As set forth above, each of the changes proposed above will align the Exchange’s Rules with the current implementation of the Rules but will do so in a way that will avoid confusion regarding the application of the definitions used in such Rules. The Exchange believes that the proposed change is consistent with the Act for the reasons set forth above.

(B) Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is intended to make a modification to the Exchange’s attribution offering to again permit Attributable Orders on behalf of all market participants, including Priority Customers. As noted above, this was the original intent when the Exchange’s rules for EDGX Options were originally approved. The Exchange does not believe that such proposal, or the

proposal to adopt the definitions of Priority Customer and Priority Customer Order as described above, will result in rules that are different than the rules of other options exchanges but rather that such rules will be better aligned with the implementation of the Exchange’s Rules as well as the rules of other options exchanges.

(C) Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁴ and Rule 19b-4(f)(6) thereunder.¹⁵

A proposed rule change filed under Rule 19b-4(f)(6) under the Act¹⁶ normally does not become operative for 30 days after the date of filing. However, Rule 19b-4(f)(6)(iii)¹⁷ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiver of the 30-day operative delay is appropriate because it will allow the Exchange to immediately offer the originally intended attribution feature by permitting orders from all types of market participants to be attributable orders. Further, the Commission believes that the adoption of the terms “Priority Customer” and “Priority

¹⁴ 15 U.S.C. 78s(b)(3)(A).

¹⁵ In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange’s intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁶ 17 CFR 240.19b-4(f)(6).

¹⁷ 17 CFR 240.19b-4(f)(6)(iii).

¹¹ See *supra*, notes 6 and 7.

¹² 15 U.S.C. 78f(b).

¹³ 15 U.S.C. 78f(b)(5).

Customer Order” and the use of such terms as proposed will help to avoid confusion by participants on EDGX Options by aligning the Exchange’s rules with the rules of other options exchanges. Thus, the proposed definitions are similar to existing rules of other options exchanges and do not raise any new policy issues. Based on the foregoing, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest.¹⁸ The Commission hereby grants the Exchange’s request and designates the proposal operative upon filing.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsEDGX-2016-03 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BatsEDGX-2016-03. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements

with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission’s Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BatsEDGX-2016-03 and should be submitted on or before April 29, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77505; File No. SR-FINRA-2016-012]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend FINRA Rule 6184 (Transactions in Exchange-Traded Managed Fund Shares (“NextShares”))

April 4, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b-4 thereunder,² notice is hereby given that on March 29, 2016, Financial Industry Regulatory Authority, Inc. (“FINRA”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as constituting a “non-controversial” rule change under paragraph (f)(6) of Rule

19b-4 under the Act,³ which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of the Substance of the Proposed Rule Change

FINRA is proposing to amend FINRA Rule 6184 (Transactions in Exchange-Traded Managed Fund Shares (“NextShares”)) to provide that the FINRA/Nasdaq Trade Reporting Facility (“FINRA/Nasdaq TRF”) will make available to market participants a daily file with the final trade price for each over-the-counter transaction in exchange-traded managed fund shares (“NextShares”) reported to the FINRA/Nasdaq TRF for public dissemination purposes.

Below is the text of the proposed rule change. Proposed new language is in italics; proposed deletions are in brackets.

* * * * *

6000. QUOTATION AND TRANSACTION REPORTING FACILITIES

6100. QUOTING AND TRADING IN NMS STOCKS

* * * * *

6180. Transaction Reporting

* * * * *

6184. Transactions in Exchange-Traded Managed Fund Shares (“NextShares”)

(a) through (d) No Change.

. . . Supplementary Material:

.01 No Change.

.02 End of Day Processing

Members that clear transactions in NextShares directly at NSCC, *e.g.*, via direct QSR submission, must ensure that they submit to NSCC all pricing information, including the IIV-based price on intraday submissions and the final NAV-based trade price after market close, in accordance with NSCC requirements; such information will not be provided to NSCC by FINRA.

Following publication of the NAV, the FINRA/Nasdaq Trade Reporting Facility will make available to market participants a daily file with the final NAV-based trade price for each transaction in NextShares reported during the trading day to the FINRA/Nasdaq Trade Reporting Facility for public dissemination purposes.

* * * * *

¹⁸ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule’s impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

¹⁹ 17 CFR 200.30-3(a)(12).

² 17 CFR 240.19b-4.

³ 17 CFR 240.19b-4(f)(6).

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FINRA recently adopted Rule 6184⁴ relating to the reporting of over-the-counter ("OTC") transactions in NextShares, which have been approved by the SEC for listing and trading on the Nasdaq Stock Market LLC ("Nasdaq").⁵ As described more fully in SR-FINRA-2015-043 and SR-NASDAQ-2014-020, NextShares will trade in the secondary market using a new trading protocol called "NAV-Based Trading." In NAV-Based Trading, all bids, offers and execution prices will be expressed as a premium or discount (which may be zero) to the fund's next-determined net asset value per share ("NAV"), e.g., NAV - \$0.01 or NAV + \$0.01. A NextShares Fund's NAV will be determined each business day after the close of trading, and consequently, the final value of a transaction will not be known until the end of the trading day. Because existing order transmission and processing systems commonly used by exchanges and firms are generally not designed to accommodate pricing arrangements such as NAV-Based Trading, the prices of NextShares trades and quotes will be represented intraday using a "proxy price" format (discussed more fully in SR-FINRA-2015-043 and SR-NASDAQ-2014-020). The securities information processor ("SIP") will publicly disseminate trades in the proxy price format.

In SR-NASDAQ-2015-036, Nasdaq stated that after a NextShares Fund's NAV is calculated, Nasdaq will price

each NextShares trade executed on the exchange during the day at the Fund's NAV plus or minus the trade's executed premium or discount.⁶ Using the final trade price, each NextShares trade executed on the exchange will be disseminated to Nasdaq member firms and market data services via a File Transfer Protocol ("FTP") file to be created for NextShares to supplement the previously provided information to include final pricing.⁷

Similarly, Nasdaq, Inc., as the "Business Member" under the limited liability company agreement with FINRA establishing the FINRA/Nasdaq TRF, has determined to make available to market participants a daily file in FTP format with the final NAV-adjusted trade price for each OTC transaction in NextShares reported during the trading day to the FINRA/Nasdaq TRF for public dissemination purposes. Nasdaq has represented to FINRA that the daily FTP files will be accessible at no cost to market participants on Nasdaq's public Web site. FINRA is proposing to amend Rule 6184.02 to reflect the proposed FTP file.

FINRA has filed the proposed rule change for immediate effectiveness and proposes that the operative date will be on or about April 4, 2016, the date that the systems development work to support the proposed FTP file is expected to be completed by the FINRA/Nasdaq TRF.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,⁸ which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. FINRA believes that the proposed rule change is consistent with the Act because it will further enhance market transparency and price discovery by ensuring that additional pricing information relating to OTC transactions in NextShares, i.e., the final

NAV-adjusted trade price on a transaction-by-transaction basis, is available to market participants.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change will enhance the pricing information relating to OTC transactions in NextShares available to market participants. The proposed rule change will not impose any reporting or other requirements on member firms, and as a result, will have no impact on member firms from a systems development and reporting perspective. Member firms that choose to trade NextShares may incur some costs to integrate the pricing information that will be provided pursuant to the proposed rule change. However, FINRA anticipates these costs to be minor because the pricing information will be accessible at no cost to market participants on Nasdaq's public Web site and also provided through data vendors, and firms will factor in any attendant costs when making the decision to enter into the market for NextShares.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act⁹ and subparagraph (f)(6) of Rule 19b-4 thereunder.¹⁰

A proposed rule change filed under Rule 19b-4(f)(6) normally does not become operative before 30 days from the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),¹¹ the Commission may designate a shorter time if such action is consistent with the

⁴ See Securities Exchange Act Release No. 76213 (October 21, 2015), 80 FR 65838 (October 27, 2015) (Notice of Filing and Immediate Effectiveness; File No. SR-FINRA-2015-043). Rule 6184 became operative on February 26, 2016.

⁵ See Securities Exchange Act Release No. 73562 (November 7, 2014), 79 FR 68309 (November 14, 2014) (Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of File No. SR-NASDAQ-2014-020).

⁶ See Securities Exchange Act Release No. 75499 (July 21, 2015), 80 FR 44406 (July 27, 2015) (Order Granting Approval of Proposed Rule Change, as Modified by Amendments Nos. 1 and 2; File No. SR-NASDAQ-2015-036).

⁷ As described in SR-NASDAQ-2015-036, FTP is a standard network protocol used to transfer computer files on the Internet, and Nasdaq will arrange for the daily dissemination of an FTP file with executed NextShares trades to Nasdaq member firms and market data services. See also Frequently Asked Questions: NextShares Exchange-Traded Managed Funds, #35, available at www.nasdaqtrader.com/content/ETFs/ETMF_FAQs.pdf.

⁸ 15 U.S.C. 78o-3(b)(6).

⁹ 15 U.S.C. 78s(b)(3)(A)(iii).

¹⁰ 17 CFR 240.19b-4(f)(6).

¹¹ 17 CFR 240.19b-4(f)(6)(iii).

protection of investors and the public interest.

FINRA has asked the Commission to waive the 30-day operative delay. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Such waiver will allow the proposed rule change to become operative on or about April 4, 2016, the date that Nasdaq has designated (and represented to FINRA) as the date by which it will complete the systems development work to support the proposed FTP file. This will ensure that additional pricing information relating to OTC transactions in NextShares will be available to market participants without delay and will supplement the FTP file that is already available for trades in NextShares executed on the Nasdaq exchange. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative on or about April 4, 2016.¹²

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-FINRA-2016-012 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-FINRA-2016-012. This file

number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-FINRA-2016-012, and should be submitted on or before April 29, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹³

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77507; File No. SR-MIAX-2016-08]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Filing of a Proposed Rule Change To Amend the Exchange's Amended and Restated By-Laws

April 4, 2016.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² notice is hereby given that on March 29, 2016, Miami International Securities Exchange LLC ("MIAX" or "Exchange") filed with the Securities

and Exchange Commission ("Commission") a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the Exchange's Amended and Restated By-Laws.

The text of the proposed rule change is available on the Exchange's Web site at http://www.miaxoptions.com/filter/wotitle/rule_filing, at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Amended and Restated By-Laws ("By-Laws") to eliminate the last sentence of Article II, Section 2.2(d),³ the last sentence of Article II, Section 2.2(g)(ii)⁴ and the last sentence of Article IV, Section 4.2(b)⁵ as well as the defined

³ Article II, Section 2.2(d) of the By-Laws reads in relevant part: In the event a Director appointed after the Effective Date becomes a member of the board of directors or similar governing body of a Specified Entity, such individual shall immediately cease to be a Director of the Company and the resulting vacancy shall be filled pursuant to the provisions of Article II, Section 2.2(e).

⁴ Article II, Section 2.2(g)(ii) of the By-Laws reads in relevant part: In the event an individual designated as an Observer becomes a member of the board of directors or similar governing body of a Specified Entity after the Effective Date, such individual shall immediately cease to be an Observer and the resulting vacancy shall be filled pursuant to the provisions of Article II, Section 2.2(e).

⁵ Article IV, Section 4.2(b) of the By-Laws reads in relevant part: In the event a committee member appointed after the Effective Date becomes a

¹² For purposes only of waiving the operative delay for this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

terms set forth in Article I (p) and (oo)⁶ which are used only in connection with the foregoing By-Law provisions proposed to be eliminated. Article I of the By-Laws will be re-lettered accordingly. These By-Law provisions restrict an individual who is a Director,⁷ Observer⁸ or committee member of MIAx from also serving as a member of the board of directors or similar governing body of a Specified Entity and would cause such individual to immediately cease being a Director, Observer or committee member, as applicable, of the Exchange's Board of Directors ("Board") upon such individual becoming a member of the board of directors or similar governing body of a Specified Entity. The term "Specified Entity" generally refers to any U.S. securities option exchange (or facility thereof) or U.S. alternative trading system on which securities options are traded which competes with the Exchange, or an affiliate of the foregoing.⁹

This restriction was added to the By-Laws in connection with the Equity Rights Program ("ERP")¹⁰ established by the Exchange in 2013.¹¹ This

member of the board of directors or similar governing body of a Specified Entity, such individual shall immediately cease to be even a committee member and the resulting vacancy shall be filled pursuant to the provisions of Article IV.

⁶ The term "Specified Entity" means (i) any U.S. securities option exchange (or facility thereof) or U.S. alternative trading system on which securities options are traded (other than the Company or any of its affiliates) that lists for trading any option contract that competes with an Exchange Contract, (ii) any person that owns or controls such U.S. securities option exchange or U.S. alternative trading system, and (iii) any affiliate of a person described in clause (i) or (ii) above. See By-Laws Article I (oo). The term "Exchange Contract" means a contract that is then listed for trading by the Exchange or that is contemplated by the then current business plan of the Company to be listed for trading by the Exchange within ninety (90) days following such date. See By-Laws Article I (p).

⁷ The term "Director" means the persons elected or appointed to the [MIAx] Board of Directors from time to time in accordance with the LLC Agreement [of MIAx] and these By-Laws in their capacity as managers of the Company. See By-Laws Article I (j).

⁸ The term "Observer" means a person invited to attend meetings of the [MIAx] Board of Directors in a nonvoting observer capacity as further described in Article II, Section 2.2(g)(i)–(iii) of the By-Laws. See By-Laws Article II, Section 2.2(g).

⁹ See *supra* note 6.

¹⁰ Pursuant to the ERP, units representing the right to acquire equity in the Exchange's parent holding company, Miami International Holdings, Inc., were issued to participating Members in exchange for payment of an initial purchase price or the prepayment of certain transaction fees and the achievement of certain liquidity addition volume thresholds on the Exchange over a fixed period of time. The By-Laws were also then amended to incorporate rights granted to Members participating in the ERP to appoint representation on the MIAx Board.

¹¹ See Securities Exchange Act Release No. 70498 (September 25, 2013), 78 FR 60348 (October 1,

prohibition was intended to prevent any potential conflicts of interest that might arise by virtue of such MIAx Director, Observer or committee member also serving as a member of the governing body of a competitor. MIAx has since learned through experience that such prohibition is unnecessarily restrictive because (1) any such potential conflicts of interest are more effectively and more efficiently addressed by other means, and (2) it results in the unavailability to MIAx (or to its competitors) of many excellent Board (or other governing body) candidates.

MIAx has found that potential conflicts of interest are best addressed through such vehicles as the covenant of good faith and fair dealing and fiduciary duties applicable to limited liability company ("LLC") managers under the Delaware Limited Liability Company Act ("LLC Act")¹² and self-regulatory obligations imposed upon directors of a self-regulatory organization ("SRO") such as MIAx under the Act,¹³ which generally apply to Directors, Observers and committee members of MIAx, as well as the confidentiality agreements that MIAx generally enters into with Directors, Observers and committee members, By-Law provisions directly addressing potential conflicts of interest¹⁴ and MIAx policies relating to confidentiality of MIAx information and addressing the aforementioned fiduciary and other obligations of company directors generally and as directors of a SRO. MIAx has also found that any potential benefit that could be derived from prohibiting a MIAx Director, Observer or committee member from also serving as member of a governing body of a competitor is by far out-weighted by the loss to MIAx of the experience, knowledge and expertise of potential Board members who are disqualified from such service simply by virtue of their service as a member of a governing body of a competitor. The proposed rule change is designed to enable MIAx to engage the best suited and most qualified leaders to serve in the capacity of Director, Observer or committee member, regardless of their service on the governing body of a competitor.

2013) (SR–MIAx–2013–43) and Securities Exchange Act Release No. 71172 (December 23, 2013), 78 FR 79530 (December 30, 2013) (SR–MIAx–2013–58).

¹² 6 Del. C. § 18–101 *et seq.* Fiduciary duties of LLC managers include the duty of loyalty (requires managers to serve the best interest of the company and avoid conflicts of interest) and the duty of care (requires managers to act as a prudent person would in similar circumstances).

¹³ 15 U.S.C. 78 *et seq.*

¹⁴ See By-Laws Article II, Section 2.20.

Further, MIAx has reviewed the rules of other U.S. securities option exchanges and noted that most other option exchanges do not restrict their board (or other governing body) members from sitting on the board of directors or other governing body of another options exchange.¹⁵

2. Statutory Basis

MIAx believes that this proposed rule change is consistent with Section 6(b) of the Act¹⁶ in general, and furthers the objectives of Sections 6(b)(1) and 6(b)(5) of the Act¹⁷ in particular, in that it enables the Exchange to be so organized as to have the capacity to carry out the purposes of the Act and to comply, and to enforce compliance by its Members and persons associated with its Members with, the provisions of the Act, the rules and regulations thereunder, and the rules of the Exchange; and that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest.

MIAx is proposing to eliminate the restriction in its By-Laws prohibiting a Director, Observer or committee member of the Exchange's Board of Directors from simultaneously serving as a member of the governing body of a competitor. This proposed rule change is consistent with and will facilitate a Board structure and composition by MIAx that will strengthen its ability to carry out the purposes of the Act and comply with the provisions of the Act and the rules and regulations thereunder, and to enforce compliance by Exchange Members and persons associated with Exchange Members with the provisions of the Act and the rules and regulations thereunder and the rules of the Exchange. This proposed rule change is also consistent with the

¹⁵ None of the BATS Exchange, Inc., BOX Options Exchange LLC, Chicago Board Options Exchange, Incorporated, Nasdaq OMX PHLX LLC, Nasdaq Options Market or International Securities Exchange, LLC have such a restriction. Only one U.S. securities options exchange restricts those of its directors designated by its founding firm members (*i.e.*, investors in its strategic founding transaction) from sitting on the board of directors or other governing body of another options exchange. See Amended and Restated Limited Liability Company Agreement of NYSE Amex Options LLC, Article VIII, 8.1(h). See also Securities Exchange Act Release No. 71408 (January 27, 2014), 79 FR 5481 (January 31, 2014) (SR–NYSEMKT–2014–08) (Exhibit 5A).

¹⁶ 15 U.S.C. 78f(b).

¹⁷ 15 U.S.C. 78f(b)(1) and (b)(5).

protection of investors and the public interest. Specifically, the proposed rule change will allow for the selection by MIAx of nominees best qualified to serve as Directors, Observers or committee members on the Exchange's Board of Directors based on the overall strategic needs of the Board, the Exchange and its constituents, regardless of such individuals' service as a member of the governing body of a competitor. (Conversely, this proposed rule change will also allow for the selection by MIAx's competitors of nominees best qualified to serve on their governing bodies, regardless of such individuals' service on the Exchange's Board). In addition, the proposed rule change will alleviate the disruption that might occur if a Director, Observer or committee member of MIAx were to become a member of the board of directors or similar governing body of a Specified Entity and thereby immediately cease to be a Director, Observer or committee member of MIAx, thus resulting in the loss of a valuable Director, Observer or committee member and a vacancy on the MIAx Board which the Exchange would have to divert efforts to refill, and potentially disrupting compliance with MIAx's Board composition requirements as set forth in its By-Laws.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed change to the By-Laws relates to the corporate governance of MIAx, and as such, is not a competitive filing and does not impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings

to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-MIAx-2016-08 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-MIAx-2016-08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-MIAx-2016-08 and should be submitted on or before April 29, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁸

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77512; File No. SR-NYSEArca-2016-17]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change To List and Trade Shares of the JPMorgan Diversified Alternative ETF

April 4, 2016.

On February 5, 2016, NYSE Arca, Inc. filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to list and trade shares of the JPMorgan Diversified Alternative ETF. The proposed rule change was published for comment in the **Federal Register** on February 25, 2016.³ The Commission received no comment letters on the proposed rule change.

Section 19(b)(2) of the Act⁴ provides that, within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is April 8, 2016. The Commission is extending this 45-day time period.

The Commission finds that it is appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,⁵ designates May 23,

BILLING CODE 8011-01-P

SMALL BUSINESS ADMINISTRATION

Meeting of the Council on Underserved Communities Advisory Board

AGENCY: U.S. Small Business Administration (SBA).

ACTION: Notice of open Federal Advisory Committee meetings.

SUMMARY: The SBA is issuing this notice to announce the location, date, time and agenda for the initial meeting of the Council on Underserved Communities (CUC) Advisory Board.

DATES: The meeting will be held on Monday, April 25th at 1:00 p.m. EST.

ADDRESSES: The meeting will be held at the U. S. Small Business Administration, in the Administrator's Large Conference Room, located at 409 3rd St. SW., Suite 7000, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: The meeting is open to the public however advance notice of attendance is requested. Anyone wishing to be a listening participant must contact DeJuana L. Thompson by phone or email. Her contact information is DeJuana Thompson, Senior Advisor for Public Engagement, 409 Third Street SW., Washington, DC 20416, Phone, 202-205-6920, email, dejuana.thompson@gmail.com. Additionally, if you need accommodations because of a disability or require additional information, please contact DeJuana Thompson at the information above.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a) of the Federal Advisory Committee Act (5 U.S.C. Appendix 2), SBA announces the meeting of the Council on Underserved Communities Advisory Board. This Board provides advice and counsel to the SBA Administrator and Associate Administrator. CUC members will examine the obstacles facing small businesses in underserved communities

and recommend to SBA policy and programmatic changes to help strengthen SBA's programs and services to these communities.

The purpose of this meeting is to discuss following issues pertaining to the CUC Advisory Board.:

- Provide information on key SBA programs
- Board Assignments
- Determine the 2016 CUC Agenda

Miguel L' Heureux,
White House Liaison.

BILLING CODE 8025-01-P

TENNESSEE VALLEY AUTHORITY

Renewal of the Regional Resource Stewardship Council Charter

AGENCY: Tennessee Valley Authority (TVA).

ACTION: Notice of charter renewal.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA) (5 U.S.C. Appendix 2), the TVA Board of Directors has renewed the Regional Resource Stewardship Council (Council) charter for an additional two years. The charter for the Ninth Term begins on April 29, 2016.

FOR FURTHER INFORMATION CONTACT: Beth A. Keel, 400 West Summit Hill Drive, WT 9D-K, Knoxville, Tennessee 37902-1499, (865) 632-6113.

SUPPLEMENTARY INFORMATION: Pursuant to FACA and its implementing regulations, and following consultation with the Committee Management Secretariat, General Services Administration (GSA), notice is hereby given that the Council has been renewed for a two-year period beginning April 29, 2016. The Council will provide advice to TVA on its issues affecting natural resource stewardship activities.

Numerous public and private entities are traditionally involved in the stewardship of the natural resources of the Tennessee Valley region. The Council was originally established in 1999 to advise TVA on its natural resource stewardship activities through balanced and broad range of diverse views and interests. It has been determined that the Council continues to be needed to provide an additional mechanism for public input regarding stewardship issues.

Dated: March 28, 2016.

Joseph J. Hoagland,
Vice President, Stakeholder Relations,
Tennessee Valley Authority.

BILLING CODE 8120-08-P

TENNESSEE VALLEY AUTHORITY

Meeting of the Regional Resource Stewardship Council

AGENCY: Tennessee Valley Authority (TVA).

ACTION: Notice of meeting.

SUMMARY: The TVA Regional Resource Stewardship Council (RRSC) will hold a meeting on Tuesday, April 26, 2016, to consider various matters.

The RRSC was established to advise TVA on its natural resource stewardship activities. Notice of this meeting is given under the Federal Advisory Committee Act (FACA), 5 U.S.C. App. 2.

The meeting agenda includes the following:

1. Introductions
2. Updates on Natural Resources issues
3. Presentations regarding TVA Stewardship Initiatives and Reservoir Release Improvement Program.
4. Public Comments
5. Council Discussion

The RRSC will hear opinions and views of citizens by providing a public comment session starting at 10:15 a.m., EDT, on Tuesday, April 26. Persons wishing to speak are requested to register at the door by 9:45 a.m. EDT on Tuesday, April 26 and will be called on during the public comment period. Handout materials should be limited to one printed page. Written comments are also invited and may be mailed to the Regional Resource Stewardship Council, Tennessee Valley Authority, 400 West Summit Hill Drive, WT-9 D, Knoxville, Tennessee 37902.

DATES: The public meeting will be held on Tuesday, April 26, from 8:30 a.m. to 2:30 p.m. EDT.

ADDRESSES: The meeting will be held at the Tennessee Valley Authority Auditorium, 400 West Summit Hill Drive, Knoxville, Tennessee 37902, and will be open to the public. Anyone needing special access or accommodations should let the contact below know at least a week in advance.

FOR FURTHER INFORMATION CONTACT: Beth Keel, 400 West Summit Hill Drive, WT-9 D, Knoxville, Tennessee 37902, (865) 632-6113.

Dated: March 28, 2016.

DEPARTMENT OF THE TREASURY**Office of the Secretary****List of Countries Requiring Cooperation With an International Boycott**

In accordance with section 999(a)(3) of the Internal Revenue Code of 1986, the Department of the Treasury is publishing a current list of countries which require or may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1986).

On the basis of the best information currently available to the Department of the Treasury, the following countries require or may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1986).

Iraq
Kuwait
Lebanon
Libya
Qatar
Saudi Arabia
Syria
United Arab Emirates
Yemen

Dated: April 1, 2016.

Pipeline and Hazardous Materials Safety Administration

49 CFR Parts 191 and 192

Pipeline Safety: Safety of Gas Transmission and Gathering Pipelines;
Proposed Rule

DEPARTMENT OF TRANSPORTATION**Pipeline and Hazardous Materials
Safety Administration****49 CFR Parts 191 and 192****[Docket No. PHMSA–2011–0023]****RIN 2137–AE72****Pipeline Safety: Safety of Gas
Transmission and Gathering Pipelines**

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking.

SUMMARY: This Notice of Proposed Rulemaking (NPRM) proposes to revise the Pipeline Safety Regulations applicable to the safety of onshore gas transmission and gathering pipelines. PHMSA proposes changes to the integrity management (IM) requirements and proposes changes to address issues related to non-IM requirements. This NPRM also proposes modifying the regulation of onshore gas gathering lines.

DATES: Persons interested in submitting written comments on this NPRM must do so by June 7, 2016.

ADDRESSES: You may submit comments identified by the docket number PHMSA–2011–0023 by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Fax:* 1–202–493–2251.

- *Mail:* Hand Delivery: U.S. DOT Docket Management System, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: If you submit your comments by mail, submit two copies. To receive confirmation that PHMSA received your comments, include a self-addressed stamped postcard.

Note: Comments are posted without changes or edits to <http://www.regulations.gov>, including any personal information provided. There is a privacy statement published on <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Mike Israni, by telephone at 202–366–4571, or by mail at U.S. DOT, PHMSA, 1200 New Jersey Avenue SE., PHP–30, Washington, DC 20590–0001.

- VI. Availability of Standards Incorporated by Reference
- VII. Regulatory Analysis and Notices

I. Executive Summary**A. Purpose of the Regulatory Action**

PHMSA believes that the current regulatory requirements applicable to gas pipeline systems have increased the level of safety associated with the transportation of gas. Still, incidents with significant consequences and various causes continue to occur on gas pipeline systems. PHMSA has also identified concerns during inspections of gas pipeline operator programs that indicate a potential need to clarify and enhance some requirements. Based on this experience, this NPRM proposes additional safety measures to increase the level of safety for those pipelines that are not in HCAs as well as clarifications and selected enhancements to integrity management

requirements to improve safety in HCAs.

On August 25, 2011, PHMSA published an Advance Notice of Proposed Rulemaking (ANPRM) to seek feedback and comments regarding the revision of the Pipeline Safety Regulations applicable to the safety of gas transmission and gas gathering pipelines. In particular, PHMSA requested comments regarding whether integrity management (IM) requirements should be changed and whether other issues related to system integrity should be addressed by strengthening or expanding non-IM requirements.

Subsequent to issuance of the ANPRM, the National Transportation Safety Board (NTSB) adopted its report on the San Bruno accident on August 30, 2011. The NTSB issued safety recommendations P–11–1 and P–11–2 and P–11–8 through –20 to PHMSA, and issued safety recommendations P–10–2 through –4 to Pacific Gas & Electric (PG&E), among others. Several of these NTSB recommendations related directly to the topics addressed in the August 25, 2011 ANPRM and have an impact on the proposed approach to rulemaking. Also subsequent to issuance of the ANPRM, the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 (the Act) was enacted on January 3, 2012. Several of the Act's statutory requirements related directly to the topics addressed in the August 25, 2011 ANPRM and have an impact on the proposed approach to rulemaking.

Congress has authorized Federal regulation of the transportation of gas by pipeline in the Pipeline Safety Laws (49 U.S.C. 60101 *et seq.*), a series of statutes that are administered by the DOT, PHMSA. PHMSA has used that authority to promulgate comprehensive minimum safety standards for the transportation of gas by pipeline.

Congress established the current framework for regulating pipelines transporting gas in the Natural Gas Pipeline Safety Act of 1968, Public Law 90–481. That law delegated to DOT the authority to develop, prescribe, and enforce minimum Federal safety standards for the transportation of gas, including natural gas, flammable gas, or toxic or corrosive gas, by pipeline. Congress has since enacted additional legislation that is currently codified in the Pipeline Safety Laws, including:

In 1992, Congress required regulations be issued to define the term “gathering line” and establish safety standards for certain “regulated gathering lines,” Public Law 102–508. In 1996, Congress directed that DOT conduct demonstration projects evaluating the application of risk management principles to pipeline safety regulation, and

mandated that regulations be issued for the qualification and testing of certain pipeline personnel, Public Law 104–304. In 2002, Congress required that DOT issue regulations requiring operators of gas transmission pipelines to conduct risk analyses and to implement IM programs under which pipeline segments in high consequence areas (HCA) would be subject to a baseline assessment within 10 years and re-assessments at least every seven years, and required that standards be issued for assessment of pipelines using direct assessment, Public Law 107–355.

B. Summary of the Major Provisions of the Regulatory Action in Question

PHMSA plans to address several of the topics in the ANPRM in separate rulemakings because of the diverse scope and nature of several NTSB recommendations and the statutory requirements of the Act that were covered in the ANPRM. This proposed rule addresses several IM topics, including: Revision of IM repair criteria for pipeline segments in HCAs to address cracking defects, non-immediate corrosion metal loss anomalies, and other defects; explicitly including functional requirements related to the nature and application of risk models currently invoked by reference to industry standards; explicitly specifying requirements for collecting, validating, and integrating pipeline data models currently invoked by reference to industry standards; strengthening requirements for applying knowledge gained through the IM Program models currently invoked by reference to industry standards; strengthening requirements on the selection and use of direct assessment methods models by incorporating recently issued industry standards by reference; adding requirements for monitoring gas quality and mitigating internal corrosion, and adding requirements for external corrosion management programs including above ground surveys, close interval surveys, and electrical interference surveys; and explicitly including requirements for management of change currently invoked by reference to industry standards. With respect to non-IM requirements, this NPRM proposes: A new “moderate consequence areas” definition; adding requirements for monitoring gas quality and mitigating internal corrosion; adding requirements for external corrosion management programs including above ground surveys, close interval surveys, and

electrical interference surveys; additional requirements for management of change, including invoking the requirements of ASME/ANSI B31.8S, Section 11; establishing repair criteria for pipeline segments located in areas not in an HCA; and requirements for verification of maximum allowable operating pressure (MAOP) in accordance with new § 192.624 and for verification of pipeline material in accordance with new section § 192.607 for certain onshore, steel, gas transmission pipelines. This includes establishing and documenting MAOP if the pipeline MAOP was established in accordance with § 192.619(c) or the pipeline meets other criteria indicating a need for establishing MAOP.

In addition, this NPRM proposes modifying the regulation of onshore gas gathering lines. The proposed rulemaking would repeal the exemption for reporting requirements for gas gathering line operators and repeal the use of API RP 80 for determining regulated onshore gathering lines and add a new definition for “onshore production facility/operation” and a revised definition for “gathering lines.” The proposed rulemaking would also extend certain part 192 regulatory requirements to Type A lines in Class 1 locations for lines 8 inches or greater. Requirements that would apply to previously unregulated pipelines meeting these criteria would be limited to damage prevention, corrosion control (for metallic pipe), public education program, maximum allowable operating pressure limits, line markers, and emergency planning.

This NPRM also proposes requirements for additional topics that have arisen since issuance of the ANPRM. These include: (1) Requiring inspections by onshore pipeline operators of areas affected by an extreme weather event such as a hurricane or flood, landslide, an earthquake, a natural disaster, or other similar event; (2) revising the regulations to allow extension of the IM 7-year reassessment interval upon written notice per Section 5 of the Act; (3) adding a requirement to report each exceedance of the MAOP that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices per Section 23 of the Act; (4) adding requirements to ensure consideration of seismicity of the area in identifying and evaluating all potential threats per Section 29 of the

Act; (5) adding regulations to require safety features on launchers and receivers for in-line inspection, scraper, and sphere facilities; and (6) incorporating consensus standards into the regulations for assessing the physical condition of in-service pipelines using in-line inspection, internal corrosion direct assessment, and stress corrosion cracking direct assessment.

The overall goal of this proposed rule is to increase the level of safety associated with the transportation of gas by proposing requirements to address the causes of recent incidents with significant consequences, clarify and enhance some existing requirements, and address certain statutory mandates of the Act and NTSB recommendations.¹

C. Costs and Benefits

Consistent with Executive Orders 12866 and 13563, PHMSA has prepared an assessment of the benefits and costs of the proposed rule as well as reasonable alternatives. PHMSA is publishing the Preliminary Regulatory Impact Analysis (PRIA) for this proposed rule simultaneously with this document, and it is available in the docket.

PHMSA estimates the total (15-year) present value of benefits from the proposed rule to be approximately \$3,234 to \$3,738 million² using a 7% discount rate (\$4,050 to \$4,663 million using a 3% discount rate) and the present value of costs to be approximately \$597 million using a 7% discount rate (\$711 million using a 3% discount rate). The table below summarizes the average annual present value benefits and costs by topic area. The majority of benefits reflect cost savings from material verification (processes to determine maximum allowable operating pressure for segments for which records are inadequate) under the proposed rule compared to existing regulations; the range in these benefits reflects different effectiveness assumptions for estimating safety benefits. Costs reflect primarily integrity verification and assessment costs (pressure tests, inline inspection, and direct assessments). The proposed gas gathering regulations account for the next largest portion of benefits and costs and primarily reflect safety provisions and associated risk reductions on previously unregulated lines.

¹ PHMSA plans to initiate separate rulemaking to address other topics included in the ANPRM and

that would implement other requirements of the Act and NTSB recommendations.

² Range reflects uncertainty in defect failure rates for Topic Area 1.

SUMMARY OF AVERAGE ANNUAL PRESENT VALUE BENEFITS AND COSTS ¹

[Millions; 2015\$]

| Topic area | 7% discount rate | | 3% discount rate | |
|---|------------------|--------|------------------|--------|
| | Benefits | Costs | Benefits | Costs |
| Re-establish MAOP, verify material properties, and integrity assessments outside HCAs | \$196.9–\$230.5 | \$17.8 | \$247.8–\$288.6 | \$22.0 |
| Integrity management process clarifications | n.e. | 2.2 | n.e. | 1.3 |
| Management of change process improvement | 1.1 | 0.7 | 1.2 | 0.8 |
| Corrosion control | 5.5 | 6.3 | 5.9 | 7.9 |
| Pipeline inspection following extreme events | 0.3 | 0.1 | 0.3 | 0.1 |
| MAOP exceedance reports and records verification | n.e. | 0.2 | n.e. | 0.2 |
| Launcher/receiver pressure relief | 0.4 | 0.0 | 0.6 | 0.0 |
| Gas gathering regulations | 11.3 | 12.6 | 14.2 | 15.1 |
| Total | 215.6–249.2 | 39.8 | 270–310.8 | 47.4 |

HCA = high consequence area.

MAOP = maximum allowable operating pressure.

n.e. = not estimated.

¹ Total over 15-year study period divided by 15. Additional costs to states estimated not to exceed \$1.5 million per year. Range of benefits reflects range in estimated defect failure rates.

² Break even value of benefits, based on the average consequences for incidents in high consequence areas, would equate to less than one incident averted over the 15-year study period.

For the seven percent discount rate scenario, approximately 13 percent of benefits are due to safety benefits from incidents averted, 82 percent represent cost savings from MAOP verification in Topic Area 1, and four percent are attributable to reductions in greenhouse gas emissions. (For the three percent discount rate scenario, these percentages are approximately 13, 83, and 3 percent, respectively.)

II. Background

A. Detailed Overview

Introduction

The significant and expected growth in the nation's production and use of natural gas is placing unprecedented demands on the nation's pipeline system, underscoring the importance of moving this energy product safely and efficiently. With changing spatial patterns of natural gas production and use and an aging pipeline network, improved documentation and data collection are increasingly necessary for the industry to make reasoned safety choices and for preserving public confidence in its ability to do so. Congress recognized these needs when passing the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011, calling for an examination of a broad range of issues pertaining to the safety of the nation's pipeline network, including a thorough application of the risk-based integrity assessment, repair, and validation system known as "integrity management" (IM).

This proposed rulemaking advances the goals established by Congress in the 2011 Act, which are consistent with the emerging needs of the natural gas pipeline system. This proposed rule also

advances an important discussion about the need to adapt and expand risk-based safety practices in light of changing markets and a growing national population whose location choices increasingly encroach on existing pipelines. As some severe pipeline accidents have occurred in areas outside of high consequence areas (HCA) where the application of IM principles is not required, and as gas pipelines continue to experience failures from causes that IM was intended to address, this conversation is increasingly important.

This proposed rule strengthens protocols for IM, including protocols for inspections and repairs, and improves and streamlines information collection to help drive risk-based identification of the areas with the greatest safety deficiencies. Further, this proposed rule establishes requirements to periodically assess and extend aspects of IM to pipeline segments in locations where the surrounding population is expected to potentially be at risk from an incident. Even though these segments are not within currently defined HCAs, they could be located in areas with significant populations where incidents could have serious consequences. This change would facilitate prompt identification and remediation of potentially hazardous defects and anomalies while still allowing operators to make risk-based decisions on where to allocate their maintenance and repair resources.

Natural Gas Infrastructure Overview

The U.S. natural gas pipeline network is designed to transport natural gas to and from most locations in the lower 48 States. Approximately two-thirds of the lower 48 States depend almost entirely

on the interstate transmission pipeline system for their supplies of natural gas.³ To envision the scope of the nation's natural gas pipeline infrastructure, it is best to consider it in three interconnected parts that together transport natural gas from the production field, where gas is extracted from underground, to its end users, where the gas is used as an energy fuel or chemical feedstock. These three parts are referred to as gathering, transmission, and distribution systems. Because this proposed rule applies only to gas gathering and transmission lines, this document will not discuss natural gas distribution infrastructure and its associated issues. Currently, there are over 11,000 miles of onshore gas gathering pipelines and 297,814 miles of onshore gas transmission pipelines throughout the U.S.⁴

Gas gathering lines are pipelines used to transport natural gas from production sites to central collection points, which are often gas treatment plants where pipeline-quality gas is separated from petroleum liquids and various impurities. Historically, these lines were of smaller diameters than gas transmission lines and operated at lower pressures. However, due to changing demand factors, some gathering lines are being constructed with diameters equal to or larger than typical transmission lines and are being operated at much higher pressures.

Transmission pipelines primarily transport natural gas from gas treatment

³ U.S. Department of Energy, "Appendix B: Natural Gas," *Quadrennial Energy Review Report: Energy Transmission, Storage, and Distribution Infrastructure*, p. NG-28, April 2015.

⁴ US DOT Pipeline and Hazardous Materials Safety Administration Data as of 9/25/2015.

plants and gathering systems to bulk customers, local distribution networks, and storage facilities. Transmission pipelines are typically made of steel and can range in size from several inches to several feet in diameter. They can operate over a wide range of pressures, from relatively low (200 pounds per square inch gage (psig)) to over 1,500 pounds per square inch gage (psig). They can operate within the geographic boundaries of a single State, or span hundreds of miles, crossing one or more State lines.

Regulatory History

PHMSA and its State partners regulate pipeline safety for jurisdictional⁵ gas gathering, transmission, and distribution systems under minimum Federal safety standards authorized by statute⁶ and codified in the Pipeline Safety Regulations at 49 CFR parts 190–199.

Federal regulation of gas pipeline safety began in 1968 with the creation of the Office of Pipeline Safety and their subsequent issuance of interim minimum Federal safety standards for gas pipeline facilities and the transportation of natural and other gas in accordance with the Natural Gas Pipeline Safety Act of 1968 (Pub. L. 90–481). These Federal safety standards were upgraded several times over the following decades to address different aspects of natural gas transportation by pipeline, including construction standards, pipeline materials, design standards, class locations, corrosion control, and maximum allowable operating pressure (MAOP).

These original Pipeline Safety Regulations were not designed with risk-based regulations in mind. In the mid-1990s, following models from other industries such as nuclear power, PHMSA started to explore whether a risk-based approach to regulation could improve safety of the public and the environment. During this time, PHMSA found that many operators were performing forms of IM that varied in scope and sophistication but that there were no minimum standards or requirements.

In response to a hazardous liquid incident in Bellingham, WA, in 1999 that killed 3 people and a gas transmission incident in Carlsbad, NM, in 2000 that killed 12, IM regulations for gas transmission pipelines were

finalized in 2004.⁷ The primary goal of the 2004 IM regulations was to provide a structure to operators for focusing their resources on improving pipeline integrity in the areas where a failure would have the greatest impact on public safety. Further objectives included accelerating the integrity assessment of pipelines in HCAs, improving IM systems within companies, improving the government's ability to review the adequacy of integrity programs and plans, thus providing increased public assurance in pipeline safety.

The IM regulations specify how pipeline operators must conduct comprehensive analyses to identify, prioritize, assess, evaluate, repair, and validate the integrity of gas transmission pipelines in HCAs, which are typically areas where population is highly concentrated. Currently, approximately 7 percent of onshore gas transmission pipeline mileage is located in HCAs. PHMSA and state inspectors review operators' written IM programs and associated records to verify that the operators have used all available information about their pipelines to assess risks and take appropriate actions to mitigate those risks.

Since the implementation of the IM regulations more than 10 years ago, many factors have changed. Most importantly, sweeping changes in the natural gas industry have caused significant shifts in supply and demand, and the nation's relatively safe but aging pipeline network faces increased pressures from these changes as well as from the increased exposure caused by a growing and geographically dispersing population. Long-identified pipeline safety issues, some of which IM set out to address, remain problems. Infrequent but severe accidents indicate that some pipelines continue to be vulnerable to failures stemming from outdated construction methods or materials. Some severe pipeline accidents have occurred in areas outside HCAs where the application of IM principles is not required. Gas pipelines continue to experience failures from causes that IM was intended to address, such as corrosion, and the measures currently in use have not always been effective in identifying and preventing these causes of pipeline damage.

There is a pressing need for an improved strategy to protect the safety and integrity of the nation's pipeline system. Following a significant pipeline

incident in 2010 at San Bruno, CA, in which 8 people died and more than 50 people were injured, Congress, the National Transportation Safety Board (NTSB), and the Government Accountability Office (GAO) charged PHMSA with improving IM. Comments from a 2011 advanced notice of proposed rulemaking (ANPRM) suggested there were many common-sense improvements that could be made to IM, as well as a clear need to extend certain IM provisions to pipelines not now covered by the IM regulations. A large portion of the transmission pipeline industry has voluntarily committed to extending certain IM provisions to non-HCA pipe, which clearly underscores the common understanding of the need for this strategy.

Through this proposed rule, PHMSA is taking action to deliver a comprehensive strategy to improve gas transmission pipeline safety and reliability, through both immediate improvements to IM and a long-range review of risk management and information needs, while also accounting for a changing landscape and a changing population.

Supply Changes

The U.S. natural gas industry has undergone changes of unprecedented magnitude and pace, increasing production by 33 percent between 2005 and 2013, from 19.5 trillion cubic feet per year to 25.7 trillion cubic feet per year.⁸ Driving these changes has been a shift towards the production of “unconventional” natural gas supplies using improved technology to extract gas from low permeability shales. The increased use of directional drilling and improvements to a long-existing industrial technique—hydraulic fracturing, which began as an experiment in 1947—made the recovery of unconventional natural gas easier and economically viable. This shift in production has decreased prices and spurred tremendous increases in the use of natural gas.

While conventional natural gas production in the U.S. has fallen over the past decade by about 14 billion cubic feet per day, overall natural gas production has grown due to increased unconventional shale gas production. In 2004, unconventional shale gas accounted for about 5 percent of the total natural gas production in the U.S. Since then, unconventional shale gas

⁵ Typically, onshore pipelines involved in the “transportation of gas”—see 49 CFR 192.1 and 192.3 for detailed applicability.

⁶ Title 49, United States Code, Subtitle VIII, Pipelines, Sections 60101, *et. seq.*

⁸ U.S. Department of Energy, “Appendix B: Natural Gas,” *Quadrennial Energy Review Report: Energy Transmission, Storage, and Distribution Infrastructure*, p. NG–2, April 2015.

production has increased more than tenfold from 2.7 Bcf/d to about 35.0 Bcf/d in 2014⁹ and now accounts for about half of overall gas production in the U.S.¹⁰

This increase in unconventional natural gas production shifted production away from traditional gas-rich regions towards onshore shale gas regions. In 2004, the Gulf of Mexico produced about 20 percent of the nation's natural gas supply, but by 2013, that number had fallen to 5 percent. During that same time, Pennsylvania's share of production grew from 1 percent to 13 percent. An analysis conducted by the Department of Energy's (DOE) Office of Energy Policy and Systems Analysis projects that the most significant increases in production through 2030 will occur in the Marcellus and Utica Basins in the Appalachian Basin,¹¹ which will continue to fuel growth in natural gas production from current levels of 66.5 Bcf/d to more than 93.5 Bcf/d.¹²

Demand Changes

The recent increase in domestic natural gas production has led to decreased gas price volatility and lower average prices.¹³ In 2004, the outlook for natural gas production and demand growth was weak. Monthly average spot prices at Henry Hub¹⁴ were high, fluctuating between \$4 per million British thermal units (Btu) and \$7 per million Btu. Prices rose above \$11 per million Btu for several months in both 2005 and 2008.¹⁵ Since 2008, after production shifted to onshore unconventional shale resources, and price volatility fell away following the Great Recession, natural gas has traded between about \$2 per million Btu and \$5 per million Btu.¹⁶

These historically low prices for this commodity are fueling tremendous consumption growth and changes in markets and spatial patterns of consumption. A shift towards natural gas-fueled electric power generation is helping to serve the needs of the

nation's growing population while helping reduce greenhouse gas emissions, and American industries are taking advantage of cheap energy by investing in onshore production capacity, while also exploring economic opportunities for international energy export.

Plentiful domestic natural gas supply and comparatively low natural gas prices have changed the economics of electric power markets.¹⁷ Further, new environmental standards at the local, state, regional, and Federal levels have encouraged switching to fuels with lower emissions profiles, including natural gas and renewables. U.S. natural gas consumption for power generation grew from 15.8 billion cubic feet per day (Bcf/d) in 2005 to 22.2 Bcf/d in 2013, and demand is projected to increase by another 8.9 Bcf/d by 2030.¹⁸ Net gas-fired electricity generation increased 73 percent nationally from 2003 to 2013, and natural gas-fired power plants accounted for more than 50 percent of new utility-scale generating capacity added in 2013. To accommodate continued future growth in natural gas-fueled power, changes in pipeline infrastructure will be needed, including reversals of existing pipelines; additional lines to gas-fired generators; looping of the existing network, where pipelines are laid parallel to one another along a single right-of-way to increase capacity; and potentially new pipelines as well.

Further, the increased availability of low-cost natural gas has brought jobs back to American soil, and increasing investment in projects designed to take advantage of the significant increase in supplies of low-cost gas available in the U.S. suggests this trend will continue.¹⁹ Moreover, low domestic prices and high international prices have made natural gas export increasingly attractive to American businesses. The Federal Energy Regulatory Commission, as of September 2015, estimated U.S. LNG prices at \$2.25–\$2.41 per million Btu, while prices in areas of Asia, Europe, and South America ranged from \$6.30 to \$7.62 per million Btu.²⁰ Due to high capital investment barriers and coordination difficulties between pipeline shippers, the maritime shipping industry, and pipeline operators, there are not enough ships and processing facilities to transport enough LNG to equalize prices. Taking advantage of these price differentials,

liquefied natural gas exporting terminals in the U.S. and British Columbia, Canada, are projected to demand between 5.1 Bcf/d and 8.3 Bcf/d of gas by 2030.²¹

Increasing Pressures on the Existing Pipeline System Due to Supply and Demand Changes

Despite the significant increase in domestic gas production, the widespread distribution of domestic gas demand, combined with significant flexibility and capacity in the existing transmission system, mitigates the level of pipeline expansion and investment required to accommodate growing and shifting demand. Some of the new gas production is located near existing or emerging sources of demand, which reduces the need for additional natural gas pipeline infrastructure. In many instances where new natural gas pipelines are needed, the network is being expanded by participants pursuing lowest-cost options to move product to market—often making investments to enhance network capacity on existing lines rather than increasing coverage through new infrastructure. Where this capacity is not increasing via additional mileage, it is increasing through larger pipeline diameters or higher operating pressures. In short, the nation's existing, and in many cases, aging, pipeline system is facing the full brunt of this dramatic increase in natural gas supply and the shifting energy needs of the country.

The U.S. Energy Information Administration estimates that between 2004 and 2013, the natural gas industry spent about \$56 billion expanding the natural gas pipeline network. Between 2008 and 2013, pipeline capacity additions totaled more than 110 Bcf/d.²² Despite this increase in capacity, gas transmission mileage decreased from 299,358 miles in 2010 to 298,287 miles in 2013.

Building new infrastructure, or replacing and modernizing old infrastructure, is expensive and requires a long lead-time for planning. Frequently, the most inexpensive way to move new production to demand centers is by using available existing infrastructure. For several reasons, the U.S.'s extensive pre-existing gas network is currently underutilized: (1) Pipelines are long-lived assets that reflect historic supply and demand trends; (2) pipelines often are sized to meet high initial production levels and

have excess long-term capacity due to changing economics; and (3) pipelines that were built specifically to provide gas to residential and commercial consumers in cold-weather regions but not for power generation are often under-utilized during off-peak seasons.

In cases where utilization of the existing pipeline network is high, the next most cost-effective solution is to add capacity to existing lines via compression. While this is technically a form of infrastructure investment, it is less costly, faster, and simpler for market participants in comparison to building a new pipeline. Adding compression, however, may raise average pipeline operating pressures, exposing previously hidden defects.

Developers also recognize that building new pipelines is challenging due to societal fears and cost, so new pipelines are typically designed in such a way that they can handle additional capacity if needed. In New England, new pipeline projects have been proposed to address pending supply constraints and higher prices. However, public acceptance presents a substantial challenge to natural gas pipeline development. Investments and proposals to pay for new natural gas transmission pipeline capacity and services often face significant challenges in determining feasible rights of way and developing community support for the projects.

Data Challenges

Because there is so much emphasis on using the existing pipeline system to meet the country's energy needs, it is increasingly important for that system to be safe and efficient. In order to keep the public safe and to assure the nation's energy security, operators and regulators must have an intimate understanding of the threats to and operations of the entire pipeline system.

Data gathering and integration are important elements of good IM practices, and while many strides have been made over the years to collect more and better data, several data gaps still exist. Ironically, the comparatively positive safety record of the nation's pipeline system to date makes it harder to quantify some of these gaps. Over the 20-year period of 1995–2014, transmission facilities accounted for 42 fatalities and 174 injuries, or about one-seventh of the total fatalities and injuries on the nation's natural gas pipeline system.²³ Over the 4-year period of 2011–2014, there was only 1

transmission-related fatality.

Fortunately, there have been only limited “worst-case scenarios” to evaluate for cost/benefit analysis of measures to improve safety, so there are limited bases for projecting the possible impacts of low-probability, high-consequence events.

On September 9, 2010, a 30-inch-diameter segment of an intrastate natural gas transmission pipeline owned and operated by the Pacific Gas and Electric Company ruptured in a residential area of San Bruno, California. The rupture produced a crater about 72 feet long by 26 feet wide. The section of pipe that ruptured, which was about 28 feet long and weighed about 3,000 pounds, was found 100 feet south of the crater. The natural gas that was released subsequently ignited, resulting in a fire that destroyed 38 homes and damaged 70. Eight people were killed, many were injured, and many more were evacuated from the area.

The San Bruno incident exposed several problems in the way data on pipeline conditions is collected and managed, showing that many operators have inadequate records regarding the physical and operational characteristics of their pipelines. Many of these records are necessary for the correct setting and validation of MAOP, which is critically important for providing an appropriate margin of safety to the public.

Much of operator and PHMSA's data is obtained through testing and inspection under IM requirements. However, this testing can be expensive, and the approaches to obtaining data that are most efficient over the long term may require significant upfront costs to modernize pipes and make them suitable for automated inspection. As a result, there continue to be data gaps that make it hard to fully understand the risks to and the integrity of the nation's pipeline system.

To assess a pipeline's integrity, operators generally choose between three methods of testing a pipeline: inline inspection (ILI), pressure testing, and direct assessment (DA). There is a marked difference in the distribution of assessment methods between interstate and intrastate pipelines. In 2013, we estimate that about two-thirds of interstate pipeline mileage was suitable for in-line inspection, compared to only about half of intrastate pipeline mileage. Because a larger percentage of intrastate pipelines are unable to accommodate ILI tools, intrastate operators use more pressure testing and DA than interstate operators.

ILIs are performed by using special tools, sometimes referred to as “smart

pigs,” which are usually pushed through a pipeline by the pressure of the product being transported. As the tool travels through the pipeline, it identifies and records potential pipe defects or anomalies. Because these tests can be performed with product in the pipeline, the pipeline does not have to be taken out of service for testing to occur, which can prevent excessive cost to the operator and possible service disruptions to consumers. Further, ILI is a non-destructive testing technique, and it can be less costly on a per-unit basis to perform than other assessment methods.

Pressure tests are typically used by pipeline operators as a means to determine the integrity (or strength) of the pipeline immediately after construction and before placing the pipeline in service, as well as periodically during a pipeline's operating life. In a pressure test, a test medium inside the pipeline is pressurized to a level greater than the normal operating pressure of the pipeline. This test pressure is held for a number of hours to ensure there are no leaks in the pipeline.

Direct assessment (DA) is the evaluation of various locations on a pipeline for corrosion threats. Operators will review records, indirectly inspect the pipeline, or use mathematical models and environmental surveys to find likely locations on a pipeline where corrosion might be occurring. Areas that are likely to have suffered from corrosion are subsequently excavated and examined. DA can be prohibitively expensive to use unless targeting specific locations, which may not give an accurate representation of the condition of lengths of entire pipeline segments.

Ongoing research and industry response to the ANPRM²⁴ appear to indicate that ILI and spike hydrostatic pressure testing is more effective than DA for identifying pipe conditions that are related to stress corrosion cracking defects. Both regulators and operators have expressed interest in improving ILI methods as an alternative to hydrostatic testing for better risk evaluation and management of pipeline safety. Hydrostatic pressure testing can result in substantial costs, occasional disruptions in service, and substantial methane emissions due to the routine evacuation of natural gas from pipelines prior to tests. Further, many operators prefer not to use hydrostatic pressure tests because it can potentially be a

²³ PHMSA, Pipeline Incident 20-Year Trends, <http://www.phmsa.dot.gov/pipeline/library/data-stats/pipelineincidenttrends>.

²⁴ “Pipeline Safety: Safety of Gas Transmission Pipelines—Advanced Notice of Proposed Rulemaking,” 76 FR 5308; August 25, 2011.

destructive method of testing.²⁵ ILI testing can obtain data along a pipeline not otherwise obtainable via other assessment methods, although this method also has certain limitations.

In this proposed rulemaking, PHMSA would expand the range of permissible assessment methods while imposing new requirements to guide operators' selection of appropriate methods. Allowing alternatives to hydrostatic testing (including ILI technologies), combined with further research and development to make ILI testing more accurate, could help to drive innovation in pipeline integrity testing technologies. This could eventually lead to improved safety and system reliability through better data collection and assessment.

Increased and Changing Use, Coupled With Age, Exposure to Weather, and Other Factors Can Increase the Risk of Pipeline Incidents

While the existing pipeline network's capacity is expected to bear the brunt of the increasing demand for natural gas in this country, due in part due to the location of new gas resources, new production patterns are causing unique concerns for some pipeline operators. The significant growth of production outside the Gulf Coast region—especially in Pennsylvania and Ohio—is causing a reorientation of the nation's transmission pipeline network. The most significant of these changes will require reversing flows on pipelines to move Marcellus and Utica gas to the southeastern Atlantic region and the Midwest.

Reversing a pipeline's flow can cause added stresses on the system due to changes in pressure gradients, flow rates, and product velocity, which can create new risks of internal corrosion. Occasional failures on natural gas transmission pipelines have occurred after operational changes that include flow reversals and product changes. PHMSA has noticed a large number of recent or proposed flow reversals and product changes on a number of gas transmission lines. In response to this phenomenon, PHMSA issued an Advisory Bulletin notifying operators of the potentially significant impacts such changes may have on the integrity of a pipeline.²⁶

Further, the rise of shale gas production is altering not just the extent, but also the characteristics of the nation's gas gathering systems. Gas fields are being developed in new geographic areas, thus requiring entirely new gathering systems and expanded networks of gathering lines. Producers are employing gathering lines with diameters as large as 36 inches and maximum operating pressures up to 1480 psig, far exceeding historical design and operating pressure of typical gathering lines and making them similar to large transmission lines. Most of these new gas gathering lines are unregulated, and PHMSA does not collect incident data or report annual data on these unregulated lines.

However, PHMSA is aware of incidents that show gathering lines are subject to the same sorts of failures common to other pipelines that the agency does regulate. For example, on November 14, 2008, three homes were destroyed and one person was injured when a gas gathering line ruptured in Grady County, OK. On June 8, 2010, two workers died when a bulldozer struck a gas gathering line in Darrouzett, TX, and on June 29, 2010, three men working on a gas gathering line in Grady County, OK, were injured when it ruptured. The dramatic expansion in natural gas production and changes in typical gathering line characteristics require PHMSA to review its regulatory approach to gas gathering pipelines to address new safety and environmental risks.

In addition to demands placed on the nation's pipeline system due to increased and changing use, there are many other factors—including recurring issues that IM was initially developed to address—that affect the integrity of the nation's pipelines.

Data indicate that some pipelines continue to be vulnerable to issues stemming from outdated construction methods or materials. Much of the older line pipe in the nation's gas transmission infrastructure was made before the 1970s using techniques that have proven to contain latent defects due to the manufacturing process. For example, line pipe manufactured using low frequency electric resistance welding is susceptible to seam failure. Because these manufacturing techniques were used during the time before the Federal gas regulations were issued, many of those pipes are subsequently exempt from certain regulations, most notably the requirement to pressure test the pipeline or otherwise verify its integrity to establish MAOP. A substantial amount of this type of pipe is still in service. The IM regulations

include specific requirements for evaluating such pipe if located in HCAs, but infrequent-yet-severe failures that are attributed to longitudinal seam defects continue to occur. The NTSB's investigation of the San Bruno incident determined that the pipe failed due to a similar defect. Additionally, between 2010 and 2014, fifteen other reportable incidents were attributed to seam failures, resulting in over \$8 million of property damage.

The nation's pipeline system also faces a greater risk from failure due to extreme weather events such as hurricanes, floods, mudslides, tornadoes, and earthquakes. A 2011 crude oil spill into the Yellowstone River near Laurel, MT, was caused by channel migration and river bottom scour, leaving a large span of the pipeline exposed to prolonged current forces and debris washing downstream in the river. Those external forces damaged the exposed pipeline. In October 1994, flooding along the San Jacinto River led to the failure of eight hazardous liquid pipelines and also undermined a number of other pipelines. The escaping products were ignited, leading to smoke inhalation and burn injuries of 547 people. From 2003 to 2013, there were 85 reportable incidents in which storms or other severe natural force conditions damaged pipelines and resulted in their failure. Operators reported total damages of over \$104M from these incidents. PHMSA has issued several Advisory Bulletins to operators warning about extreme weather events and the consequences of flooding events, including river scour and river channel migration.

Considering recent incidents and many of the factors outlined above, PHMSA believes IM has led to several improvements in managing pipeline safety, yet the agency believes there is still more to do to improve the safety of natural gas transmission pipelines and ensure public confidence.

Challenges to Modernization and Historical Problems Underscore the Need for a Clear Strategy To Protect the Safety and Integrity of the Nation's Pipeline System

The current IM program is both a set of regulations and an overall regulatory approach to improve pipeline operators' ability to identify and mitigate the risks to their pipeline systems. The objectives of IM are to accelerate and improve the quality of integrity assessments, promote more rigorous and systematic management of integrity, strengthen oversight, and increase public confidence. On the operator level, an IM program consists of multiple

²⁵ National Transportation Safety Board, "Pacific Gas and Electric Company; Natural Gas Transmission Pipeline Rupture and Fire; San Bruno, California; September 9, 2010," *Pipeline Accident Report NTSB/PA-11-01*, Page 96, 2011.

²⁶ "Pipeline Safety: Guidance for Pipeline Flow Reversals, Product Changes, and Conversion to Service," *ADB PHMSA-2014-0040*, 79 FR 56121; September 18, 2014.

components, including adopting procedures and processes to identify HCAs, determining likely threats to the pipeline within the HCA, evaluating the physical integrity of the pipe within the HCA, and repairing or remediating any pipeline defects found. Because these procedures and processes are complex and interconnected, effective implementation of an IM program relies on continual evaluation and data integration.

The initial definition for HCAs was finalized on August 6, 2002,²⁷ providing concentrations of populations with corridors of protection spanning 300, 660, or 1,000 feet, depending on the diameter and MAOP of the particular pipeline.²⁸ In a later NPRM,²⁹ PHMSA proposed changes to the definition of a HCA by introducing the concept of a covered segment, which PHMSA defined as the length of gas transmission pipeline that could potentially impact an HCA.³⁰ Previously, only distances from the pipeline centerline related to HCA definitions. PHMSA also proposed using Potential Impact Circles, Potential Impact Zones, and Potential Impact Radii (PIR) to identify covered segments instead of a fixed corridor width. The final Gas Transmission Pipeline Integrity Management Rule, incorporating the new HCA definition, was issued on December 15, 2003.³¹

The incident at San Bruno in 2010 motivated a comprehensive reexamination of gas transmission pipeline safety. Congress responded to concerns in light of the San Bruno incident by passing the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011, which directed the DOT to reexamine many of its safety requirements, including the expansion of IM regulations for transmission pipelines.

Further, both the NTSB and the GAO issued several recommendations to

PHMSA to improve its IM program and pipeline safety. The NTSB noted, in a 2015 study,³² that IM requirements have reduced the rate of failures due to deterioration of pipe welds, corrosion, and material failures. However, pipeline incidents in high-consequence areas due to other factors increased between 2010 and 2013, and the overall occurrence of gas transmission pipeline incidents in high-consequence areas has remained stable. The NTSB also found many types of basic data necessary to support comprehensive probabilistic modeling of pipeline risks are not currently available.

Many of these mandates and recommendations caused PHMSA to evaluate whether IM system requirements, or elements thereof, should be expanded beyond HCAs to afford protection to a larger percentage of the nation's population. Additionally, several of these mandates and recommendations asked PHMSA to enhance the existing IM regulations by addressing MAOP verification, inadequate operator records, legacy pipe issues, and inadequate integrity assessments. Further, PHMSA was charged with reducing data gaps and improving data integration, considering the regulatory framework for gas gathering systems, and deleting the "grandfather clause" to require all gas transmission pipelines constructed before 1970 be subjected to a hydrostatic spike pressure test. This proposed rule addresses several of the recommendations from the 2015 study including P-15-18 (IM-ILI capability), P-15-20 (IM-ILI tools), P-15-21 (IM-Direct Assessments), and P-21 (IM-Data Integration).

PHMSA Is Delivering a Comprehensive Strategy To Protect the Nation's Pipeline System While Accounting for a Changing Landscape and a Changing Population

To address these statutory mandates, the post-San Bruno NTSB and GAO recommendations, and other pipeline safety mandates, PHMSA posed a series of questions to the public in the context of an August 2011 ANPRM titled "Pipeline Safety: Safety of Gas Transmission Pipelines" (PHMSA-2011-0023). In that document, PHMSA asked whether the regulations governing the safety of gas transmission pipelines needed changing. In particular, PHMSA asked whether IM requirements should be changed, including through adding

more prescriptive language in some areas, and whether other issues related to system integrity should be addressed by strengthening or expanding non-IM requirements. Among the specific issues PHMSA considered concerning IM requirements were whether the definition of an HCA should be revised, and whether additional restrictions should be placed on the use of specific pipeline assessment methods. In the ANPRM, PHMSA also considered changes to non-IM requirements, including valve spacing and installation, corrosion control, and whether regulations for gathering lines needed to be modified.

PHMSA received 103 comments in response to the ANPRM, which are summarized in more detail later in this document. Feedback from the ANPRM helped to identify a series of common-sense improvements to IM, including improvements to assessment goals such as integrity verification, MAOP verification, and material documentation; clarified repair criteria; clarified protocol for identifying threats, risk assessments and management, and prevention and mitigation measures; expanded and enhanced corrosion control; requirements for inspecting pipelines after incidents of extreme weather; and new guidance on how to calculate MAOP in order to set operating parameters more accurately and predict the risks of an incident.

Many of these aspects of IM have been an integral part of PHMSA's expectations since the inception of the IM program. As specified in the first IM rule, PHMSA expects operators to start with an IM framework, evolve a more detailed and comprehensive IM program, and continually improve their IM programs as they learn more about the IM process and the material condition of their pipelines through integrity assessments. This NPRM's proposals regarding operators' processes for implementing IM reflect PHMSA's expectations regarding the degree of progress operators should be making, or should have made, during the first 10 years of IM program implementation.

To address issues involving the increased risk posed by larger-diameter, higher-pressure gathering lines, PHMSA is proposing to issue requirements for certain currently unregulated gas gathering pipelines that are intended to prevent the most frequent causes of failure—corrosion and excavation damage—and to improve emergency response preparedness. Minimum Federal safety standards would also bring an appropriate level of consistency to the current mix of regulations that differ from state to state.

²⁷ "Pipeline Safety: High Consequence Areas for Gas Transmission Pipelines," *Final rule*, 67 FR 50824; August 6, 2002.

²⁸ The influence of the existing class location concept on the early definition of HCAs is evident from the use of class locations themselves in the definition, and the use of fixed 660 ft. distances, which corresponds to the corridor width used in the class location definition. This concept was later significantly revised, as discussed later, in favor of a variable corridor width (referred to as the Potential Impact Radius) based on case-specific pipe size and operating pressure.

²⁹ "Pipeline Safety: Pipeline Integrity Management in High Consequence Areas (Gas Transmission Pipelines)," *Notice of Proposed Rulemaking*, 68 FR 4278; January 28, 2003.

³⁰ HCA and PIR definitions are in 49 CFR 192.903.

³¹ "Pipeline Safety: Pipeline Integrity Management in High Consequence Areas (Gas Transmission Pipelines)," *Final rule*, 68 FR 69778; December 15, 2003.

³² National Transportation Safety Board, "Safety Study: Integrity Management of Gas Transmission Pipelines in High Consequence Areas," *NTSB SS-15/01*, January 27, 2015.

PHMSA believes these proposed changes will improve the safety and protection of pipeline workers, the public, property, and the environment by improving the detection and remediation of unsafe conditions, ensuring that certain currently unregulated pipelines are subject to appropriate regulatory oversight, and speeding mitigation of adverse effects of pipeline failures. In addition to safety benefits, the rule is expected to improve the performance and extend the economic life of critical pipeline infrastructure that transports domestically produced natural gas energy, thus supporting national economic and security energy objectives.

Looking at Risk Beyond HCAs

In addition to the common sense improvements to IM, responses to the ANPRM reinforced the importance of carefully reconsidering the scope of areas covered by IM. While PHMSA's IM program manages risks primarily by focusing oversight on areas with the greatest population density, responses to the ANPRM highlight the imperative of protecting the safety of communities throughout the country in light of a changing landscape of production, consumption, and product movement that merits a refreshed look at the current scope of IM coverage.

In the 2011 Act, Congress required PHMSA to have pipeline operators conduct a records verification to ensure that their records accurately reflect the physical and operational characteristics of pipelines in certain HCAs and class locations, and to confirm the established MAOP of the pipelines. The results of that action indicate that problems similar to the contributing factors of the San Bruno incident are more widespread than previously believed, affecting both HCA and non-HCA segments. This indicates that a rupture on the scale of San Bruno, with the potential to affect populations, the environment, or commerce, could occur elsewhere on the nation's pipeline system.

In fact, devastating incidents have occurred outside of HCAs in rural areas where populations are sparse but present. On August 19, 2000, a 30-inch-diameter gas transmission pipeline ruptured adjacent to the Pecos River near Carlsbad, NM. The released gas ignited and burned for 55 minutes. Twelve persons who were camping under a concrete-decked steel bridge that supported the pipeline across the river were killed, and their vehicles were destroyed. Two nearby steel suspension bridges for gas pipelines

crossing the river were damaged extensively.

On December 14, 2007, two men were driving in a pickup truck on Interstate 20 near Delhi, LA, when a 30-inch gas transmission pipeline ruptured. One of the men was killed, and the other was injured.

On December 11, 2012, a 20-inch-diameter gas transmission line ruptured in a sparsely populated area about 106 feet west of Interstate 77 (I-77) in Sissonville, WV. An area of fire damage about 820 feet wide extended nearly 1,100 feet along the pipeline right-of-way. Three houses were destroyed by the fire, and several other houses were damaged. Reported losses, repairs, and upgrades from this incident totaled over \$8.5 million, and major transportation delays occurred. I-77 was closed in both directions because of the fire and resulting damage to the road surface. The northbound lanes were closed for about 14 hours, and the southbound lanes were closed for about 19 hours while the road was resurfaced, causing delays to both travelers and commercial shipping.

Because the nation's population is growing, moving, and dispersing, population density is a changing measure, and we need to be prepared for further shifts in the coming decades. The current definition of an HCA uses building density as a proxy for approximating the presence of communities and surrounding infrastructure. This can be a meaningful metric for prioritizing implementation of safety and risk management protocols for areas where an accident would have the greatest likelihood of putting human life in danger, but it is not necessarily an accurate reflection of whether an incident will have a significant impact on people. Requiring assessment and repair criteria for pipelines that, if ruptured, could pose a threat to areas where any people live, work, or congregate would improve public safety and would improve public confidence in the nation's natural gas pipeline system.

Feedback from industry indicated that some pipeline operators are already moving towards expanding the protections of IM beyond HCAs. In 2012, the Interstate Natural Gas Association of America (INGAA) issued a "Commitment to Pipeline Safety,"³³

³³ Letter from Terry D. Boss, Senior Vice President of Environment, Safety and Operations to Mike Israni, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, dated January 20, 2012, "*Safety of Gas Transmission Pipelines*, Docket No. PHMSA-2011-0023." INGAA represents companies that operate approximately 65 percent of the gas

underscoring its efforts towards a goal of zero incidents, a committed safety culture, a pursuit of constant improvement, and applying IM principles on a system-wide basis. INGAA divides the commitment into four stages:

- Stage 1—INGAA members will complete an initial assessment using some degree of IM on their pipelines, covering 90% of the population living, working, or congregating along INGAA member pipelines, by the end of 2012. This represents roughly 64% of INGAA member pipeline mileage, including the 4% of pipelines that are in HCAs.

- Stage 2—By 2020, INGAA members will consistently and comprehensively apply IM principles to those pipelines.

- Stage 3—By 2030, INGAA members will apply IM principles to pipelines, extending IM protection to 100% of the population living along INGAA member pipelines. This stage would cover roughly 16% of pipeline mileage, bringing the total coverage by 2030 to approximately 80% of INGAA's pipeline mileage.

- Stage 4—Beyond 2030, INGAA members will apply IM principles to the remaining 20% of pipeline mileage where no population resides.

To accomplish this commitment, INGAA's members are performing actions that include applying risk management beyond HCAs; raising the standards for corrosion management; demonstrating "fitness for service" on pre-regulation pipelines; and evaluating, refining, and improving operators' ability to assess and mitigate safety threats. Ultimately, these actions aim to extend protection to people who live near pipelines but not within defined HCAs.

INGAA's commitment and other stakeholder feedback on this issue have triggered an important exchange about measuring the risks that exist in less-densely populated areas and the impacts of expanding greater protections to those areas. If constant improvement and zero incidents are goals for pipeline operators, INGAA's plan to extend and prioritize IM assessments and principles to all parts of their pipeline networks that are located near any concentrations of population is an effective way to achieve those goals. Such an approach is needed to help clarify vulnerabilities and prioritize improvements, and this proposed rulemaking takes important steps forward towards developing such an approach.

transmission pipelines, but INGAA does not represent all pipeline operators subject to 49 CFR part 192.

The question then, is how to implement risk management standards that most accurately target the safety of communities, while also providing sufficient ability to prioritize areas of greatest possible risk and/or impact. Addressing that question has been, and remains, an important part of this proposed rule, recognizing that the answer will remain fluid based on factors that continue to change.

Given INGAA's commitment, feedback from the ANPRM, the results of incident investigations, and IM considerations, PHMSA has determined it is appropriate to improve aspects of the current IM program and codify requirements for additional gas transmission pipelines to receive integrity assessments on a periodic basis to monitor for, detect, and remediate pipeline defects and anomalies. In addition, in order to achieve the desired outcome of performing assessments in areas where people live, work, or congregate, while minimizing the cost of identifying such locations, PHMSA proposes to base the requirements for identifying those locations on processes already being implemented by pipeline operators and that protect people on a risk-prioritized basis.

Establishing integrity assessment requirements and associated repair conditions for non-HCA pipe segments is important for providing safety to the public. Although those segments are not within defined HCAs, they will usually be located in populated areas, and pipeline accidents in these areas may cause fatalities, significant property damage, or disrupt livelihoods. This rulemaking proposes a newly defined moderate consequence area (MCA) to identify additional non-HCA pipeline segments that would require integrity assessments, thus assuring timely discovery and repair of pipeline defects in MCA segments. These changes would ensure prompt remediation of anomalous conditions that could potentially impact people, property, or the environment, and commensurate with the severity of the defects, while at the same time allowing operators to allocate their resources to HCAs on a higher-priority basis. INGAA's commitment and PHMSA's MCA definition are comparable, which shows a common understanding of the importance of this issue and a path towards a solution.

B. Advance Notice of Proposed Rulemaking

On August 25, 2011, PHMSA published an Advance Notice of Proposed Rulemaking (ANPRM) to seek public comments regarding the revision

of the Pipeline Safety Regulations applicable to the safety of gas transmission pipelines. In particular, PHMSA requested comments regarding whether integrity management (IM) requirements should be changed and whether other issues related to system integrity should be addressed by strengthening or expanding non-IM requirements. The ANPRM may be viewed at <http://www.regulations.gov> by searching for Docket ID PHMSA-2011-0023. As mentioned above, pursuant to the related issues raised by the NTSB recommendations and statutory requirements of the Act, PHMSA is issuing separate rulemaking for several of the topics in the ANPRM. These topics are so designated in the following list. Specifically, the ANPRM sought comments on the following topics:

A. Modifying the Definition of HCA (to be addressed in separate rulemaking),

B. Strengthening Requirements to Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs (partially addressed in separate rulemaking—aspects related to Remote Control Valves and Leak Detection will be addressed in separate rulemaking, other aspects are being addressed in this NPRM),

C. Modifying Repair Criteria,

D. Improving Requirements for Collecting, Validating, and Integrating Pipeline Data,

E. Making Requirements Related to the Nature and Application of Risk Models More Prescriptive,

F. Strengthening Requirements for Applying Knowledge Gained Through the IM Program,

G. Strengthening Requirements on the Selection and Use of Assessment Methods,

H. Valve Spacing and the Need for Remotely or Automatically Controlled Valves (to be addressed in separate rulemaking),

I. Corrosion Control,

J. Pipe Manufactured Using Longitudinal Weld Seams,

K. Establishing Requirements Applicable to Underground Gas Storage (to be considered for separate rulemaking),

L. Management of Change,

M. Quality Management Systems (QMS) (to be considered for separate rulemaking),

N. Exemption of Facilities Installed Prior to the Regulations,

O. Modifying the Regulation of Gas Gathering Lines.

A summary of comments and responses to those comments are provided later in the document.

C. National Transportation Safety Board Recommendations

On August 30, 2011, following the issuance of the ANPRM, the NTSB adopted its report on the gas pipeline accident that occurred on September 9, 2010, in San Bruno, California. On September 26, 2011, the NTSB issued safety recommendations P-11-8 through -20 to PHMSA, and issued safety recommendations P-10-2 through -4 to Pacific Gas & Electric (PG&E), among others. The NTSB made these recommendations following its investigation of the tragic September 9, 2010 natural gas pipeline rupture in the city of San Bruno, California. Several of the NTSB recommendations related directly to the topics addressed in the August 25, 2011 ANPRM and impacted the proposed approach to rulemaking. The potentially impacted topics and the related NTSB recommendations include, but are not limited to:

- Topic B—Strengthening Requirements to Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs. NTSB Recommendation P-11-10: “*Require that all operators of natural gas transmission and distribution pipelines equip their supervisory control and data acquisition systems with tools to assist in recognizing and pinpointing the location of leaks, including line breaks; such tools could include a real-time leak detection system and appropriately spaced flow and pressure transmitters along covered transmission lines.*”

- Topic D—Improving Requirements for Collecting, Validating, and Integrating Pipeline Data. NTSB Recommendation P-11-19: “*(1) Develop and implement standards for integrity management and other performance-based safety programs that require operators of all types of pipeline systems to regularly assess the effectiveness of their programs using clear and meaningful metrics, and to identify and then correct deficiencies; and (2) make those metrics available in a centralized database.*”

- Topic G—Strengthening Requirements on the Selection and Use of Assessment Methods. NTSB Recommendation P-11-17: “*Require that all natural gas transmission pipelines be configured so as to accommodate in-line inspection tools, with priority given to older pipelines.*”

- Topic H—Valve Spacing and the Need for Remotely or Automatically Controlled Valves. NTSB Recommendation P-11-11: “*Amend Title 49 Code of Federal Regulations Section 192.935(c) to directly require that automatic shutoff valves or remote*

control valves in high consequence areas and in class 3 and 4 locations be installed and spaced at intervals that consider the population factors listed in the regulations.”

- Topic J—Pipe Manufactured Using Longitudinal Weld Seams. NTSB Recommendation P–11–15: “*Amend Title 49 Code of Federal Regulations Part 192 of the Federal pipeline safety regulations so that manufacturing- and construction-related defects can only be considered stable if a gas pipeline has been subjected to a post-construction hydrostatic pressure test of at least 1.25 times the maximum allowable operating pressure.*”

- Topic N—Exemption of Facilities Installed Prior to the Regulations. NTSB Recommendation P–11–14: *Amend title 49 Code of Federal Regulations 192.619 to repeal exemptions from pressure test requirements and require that all gas transmission pipelines constructed before 1970 be subjected to a hydrostatic pressure test that incorporates a spike test.*”

D. Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011

Also subsequent to issuance of the ANPRM, the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 (the Act) was enacted on January 3, 2012. Several of the Act’s statutory requirements relate directly to the topics addressed in the August 25, 2011 ANPRM. The related topics and statutory citations include, but are not limited to:

- Section 5(e)—Allow periodic reassessments to be extended for an additional 6 months if the operator submits sufficient justification.
- Section 5(f)—Requires regulations issued by the Secretary, if any, to expand integrity management system requirements, or elements thereof, beyond high-consequence areas.
- Section 21—Regulation of Gas (and Hazardous Liquid) Gathering Lines
- Section 23—Testing regulations to confirm the material strength of previously untested natural gas transmission pipelines.
- Section 29—Consider seismicity when evaluating pipeline threats.

E. Summary of Each Topic Under Consideration

This NPRM proposes new requirements and revisions to existing requirements to address topics discussed in the ANPRM, including some topics from the Act and the NTSB recommendations. Each topic area discussed in the ANPRM, as well as additional topics that have arisen since issuance of the ANPRM, is summarized

below. Details of the changes proposed in this rule are discussed below in section V. Section-by-Section Analysis.

- Topic A—Modifying the Definition of HCA. The ANPRM requested comments regarding expanding the definition of an HCA so that more miles of pipe would be subject to IM requirements and so that all Class 3 and 4 locations would be subject to the IM requirements. The Act, Section 5, requires that the Secretary of Transportation complete an evaluation and issue a report on whether integrity management requirements should be expanded beyond HCAs and whether such expansion would mitigate the need for class location requirements. PHMSA has prepared the class location report and a copy is available in the docket (www.regulations.gov) for this proposed rulemaking. PHMSA invites commenters to review the class location report when formulating their comments.

Although PHMSA is not proposing to expand the definition of an HCA, PHMSA is proposing to expand certain IM requirements beyond HCAs by creating a new “moderate consequence areas (MCA).” MCAs would be used to define the subset of non-HCA pipeline locations where periodic integrity assessments are required (§ 192.710), where material documentation verification is required (§ 192.607), and where MAOP verification is required (§§ 192.619(e) and 192.624). The proposed criteria for determining MCA locations would use the same process and the same definitions as currently used to identify HCAs, except that the threshold for buildings intended for human occupancy and the threshold for persons that occupy other defined sites, that are located within the potential impact radius, would both be lowered from 20 to 5. The intention is that any pipeline location at which persons are normally expected to be located would be afforded extra safety protections described above. In addition, as a result of the Sissonville, West Virginia incident, NTSB issued recommendation P–14–01, to revise the gas regulations to add principal arterial roadways including interstates, other freeways and expressways, and other principal arterial roadways as defined in the Federal Highway Administration’s *Highway Functional Classification Concepts, Criteria and Procedures* to the list of “identified sites” that establish a high consequence area. PHMSA proposes to meet the intent of NTSB’s recommendation by incorporating designated interstates, freeways, expressways, and other principal 4-lane arterial roadways (as opposed to NTSB’s

all “other principal arterial roadways”) within the new definition of MCAs. PHMSA believes this approach would be cost-beneficial. The Sissonville, WV, incident location would not meet the current definition of an HCA, but would, however, meet the proposed definition of an MCA. PHMSA considered expanding the scope of HCAs instead of creating Moderate Consequence Areas. Such an approach was contemplated in the 2011 ANPRM and PHMSA received a number of comments on this approach. PHMSA concluded that this approach would be counter to a graded approach based on risk (*i.e.*, risk based gradation of requirements to apply progressively more protection for progressively greater consequence locations). By simply expanding HCAs, PHMSA would be simply lowering the threshold for what is considered “high consequence.” Expanding HCAs would require that all integrity management program elements (specified in subpart O) be applied to pipe located in a newly designated HCA. The proposed rule would only apply three IM program elements (assessment, periodic reassessment, and remediation of discovered defects) to the category of pipe that has lesser consequences than HCAs (*i.e.*, MCAs), but not to segments without any structure or site within the PIR (arguably “low consequence areas”). There would be additional significant costs to apply all other integrity management program elements (most notably the risk analysis and preventive/mitigative measures program elements) to additional segments currently not designated as HCA. Also, if HCAs were expanded, long term reassessment costs would approximately triple (compared to the proposed MCA requirements) based on an almost 3:1 ratio of reassessment interval. For the above reasons, PHMSA is not proposing to expand HCAs. Instead, PHMSA is proposing to create and apply selected integrity management requirements to a category of lesser consequence areas defined as MCAs. With regard to the criteria for defining HCAs, PHMSA also considered several alternatives, including more relaxed population density and excluding small pipe diameters.

In addition, a major constituency of the pipeline industry (INGAA) has committed to apply IM principles to all segments where any persons are located. This is comparable to PHMSA’s proposed MCA definition. PHMSA seeks comment on the relative merits of expanding High Consequence Areas

versus creating a new category of “Moderate Consequence Areas.”

Another alternative PHMSA considered was a shorter a compliance deadline (10 years) and a shorter reassessment interval (15 years) for MCA assessments. The assessment timeframes in the proposed rule were selected based on a graded approach which would apply relaxed timeframes to MCAs, as compared to HCAs. The industry was originally required to perform baseline assessments for approximately 20,000 miles of HCA pipe within approximately 8 years from the effective date of the integrity management rule. PHMSA estimates that approximately 41,000 miles of pipe would require an assessment within 15 years under this proposed rule, thus constituting a comparable level of effort on the part of industry. The maximum HCA reassessment interval is 20 years for low stress pipe. The 20 year interval was selected to align with the longest interval allowed for any HCA pipe, which is 20 years for pipe operating less than 30% SMYS. A reassessment interval of 15 years for MCAs would be shorter than the reassessment interval for some HCAs. PHMSA also considered that compliance with the proposed rule would be performed in parallel with ongoing HCA reassessments at the same time, thus resulting in greater demand for ILI tools and industry resources than during the original IM baseline assessment period. In addition, the proposed rule incorporates other assessment goals, including integrity verification, maximum allowable operating pressure (MAOP) verification, and material documentation, thus constituting a larger/more costly assessment effort than originally required under IM rules. For the above reasons, PHMSA believes that this proposed rule would require full utilization or expansion of industry resources devoted to assessments. Therefore, PHMSA believes that compressing the timeframes would place unreasonably high demands on the industry’s assessment capabilities. PHMSA also considered the possibility that placing burdensome demands on the industry’s assessment capability might drive assessment costs higher. PHMSA seeks comments on the potential safety benefits, avoided lost gas, economic costs, and operational considerations involved in longer or shorter compliance periods for initial MCA assessment periods and reassessment intervals.

More generally, PHMSA seeks comment on the approach and scope of the proposed rule with respect to applying integrity management program

elements to additional pipe segments not currently designated as HCA, including, *inter alia*, alternative definitions of “Moderate Consequence Area” and limits on the categories of pipeline to be regulated within this new area.

- **Topic B—Strengthening Requirements to Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs.** The ANPRM requested comments regarding whether the requirements of Section 49 CFR 192.935 for pipelines in HCAs should be more prescriptive and whether these requirements, or other requirements for additional preventive and mitigative measures, should apply to pipelines outside of HCAs. Section 5 of the Act requires the Secretary of Transportation to evaluate and report to Congress on expanding IM requirements to non-HCA pipelines. PHMSA will further evaluate applying P&M measures to non-HCA areas after this evaluation is complete.

This NPRM proposes rulemaking for amending the integrity management rule to add requirements for selected preventive and mitigative measures (internal and external corrosion control).

Two special topics associated with preventive and mitigative measures, leak detection and automatic valve upgrades, were addressed by the NTSB and Congress. The NTSB recommended that all operators of natural gas transmission and distribution pipelines equip their supervisory control and data acquisition systems with tools to assist in recognizing and pinpointing the location of leaks, including line breaks; such tools could include a real-time leak detection system and appropriately spaced flow and pressure transmitters along covered transmission lines (recommendation P–11–10). In addition, Section 8 of the Act requires issuance of a report on leak detection systems used by operators of hazardous liquid pipelines which was completed and submitted to Congress in December 2012. Although that study is specific to hazardous liquid pipelines, its analysis and conclusions could influence PHMSA’s approach to leak detection for gas pipelines. In response to the NTSB recommendations, PHMSA conducted as part of a larger study on pipeline leak detection technology a public workshop in 2012. This study, among other things, examined how enhancements to SCADA systems can improve recognition of pipeline leak locations. Additionally, in 2012 PHMSA held a pipeline research forum to identify technological gaps, potentially including the advancement of leak detection methodologies. PHMSA is developing a rulemaking

with respect to leak detection in consideration of these studies and ongoing research. In addition, PHMSA is focusing this rulemaking on regulations oriented toward preventing incidents. Leak detection (in the context of mitigating pipe breaks as described in NTSB P–11–10)³⁴ and automatic valve upgrades are features that serve to mitigate the consequences of incidents after they occur but do not prevent them. In order to not delay the important requirements proposed in this NPRM, PHMSA will address the topic of incident mitigation later in a separate rulemaking. It is anticipated that advancing rulemaking to address the NTSB recommendations will follow assessment of the results of these actions.

PHMSA completed and submitted the valve study to congress in December 2012. PHMSA is developing a separate rulemaking related to the need for remotely or automatically controlled valves to addresses the NTSB recommendations and statutory requirements related to this topic as discussed under Topic H.

- **Topic C—Modifying Repair Criteria.** The ANPRM requested comments regarding amending the integrity management regulations by revising the repair criteria for pipelines in HCAs to provide greater assurance that injurious anomalies and defects are repaired before the defect can grow to a size that leads to a leak or rupture. PHMSA is proposing in this rule to revise the repair criteria for pipelines in HCAs. Revisions include repair criteria for cracks and crack-like defects, corrosion metal loss for defects less severe than an immediate condition (already included), and mechanical damage defects.

In addition, the ANPRM requested comments regarding establishing repair criteria for pipeline segments located in areas that are not in HCAs. PHMSA is proposing rulemaking for establishing repair criteria for pipelines that are not in HCAs. Such repair criteria would be similar to the repair criteria for HCAs, with more relaxed deadlines for non-immediate conditions. It is acknowledged that applying repair criteria to pipelines that are not in HCAs is one of the factors to be considered in the integrity management evaluation required in the Act, as discussed in Topic A above.

- **Topic D—Improving Requirements for Collecting, Validating, and Integrating Pipeline Data.** The ANPRM

³⁴ Leak detection in the context of detecting small, latent leaks such as leaks at fittings typical of gas distribution systems, and is outside the scope of the ANPRM, Topic B.

requested comments regarding whether more prescriptive requirements for collecting, validating, integrating, and reporting pipeline data are necessary. PHMSA also discussed this topic in a 2012 pipeline safety data workshop.

PHMSA issued Advisory Bulletin 12–06 to remind operators of gas pipeline facilities to verify their records relating to operating specifications for maximum allowable operating pressure (MAOP) required by 49 CFR 192.517. On January 10, 2011, PHMSA also issued Advisory Bulletin 11–01, which reminded operators that if they are relying on the review of design, construction, inspection, testing and other related data to establish MAOP, they must ensure that the records used are reliable, traceable, verifiable, and complete. PHMSA is proposing in this rule to add specificity to the data integration language in the IM rule to establish a number of pipeline attributes that must be included in these analyses, by explicitly requiring that operators integrate analyzed information, and by requiring that data be verified and validated. In addition, PHMSA has determined that additional rules are needed to ensure that records used to establish MAOP are reliable, traceable, verifiable, and complete. The proposed rule would add a new paragraph (e) to section 192.619 to codify this requirement and to require that such records be retained for the life of the pipeline.

- **Topic E—Making Requirements Related to the Nature and Application of Risk Models More Detailed.** The ANPRM requested comments regarding making requirements related to the nature and application of risk models more specific to improve the usefulness of these analyses in informing decisions to control risks from pipelines. This NPRM contains proposed requirements that address this topic.

- **Topic F—Strengthening Requirements for Applying Knowledge Gained Through the IM Program.** The ANPRM requested comments regarding strengthening requirements related to operators' use of insights gained from implementation of its IM program. In this NPRM, PHMSA proposes detailed requirements for strengthening integrity management requirements for applying knowledge gained through the IM Program. These requirements include provisions for analyzing interacting threats, potential failures, and worst-case incident scenarios from initial failure to incident termination. Though not proposed, PHMSA seeks comment on whether a time period for updating aerial photography and patrol information should be established.

- **Topic G—Strengthening Requirements on the Selection and Use of Assessment Methods for pipelines requiring assessment.** The ANPRM requested comments regarding the applicability, selection, and use of assessment methods, including the application of existing consensus standards. NTSB recommendation P–11–17 related to this topic, recommends that all gas pipelines be upgraded to accommodate ILI tools. PHMSA will consider separate rulemaking for upgrading pipelines pending further evaluation of the issue from new data being collected in the annual reports.

This NPRM proposes to strengthen requirements for the selection and use of assessment methods. The proposed rule would provide more detailed guidance for the selection of assessment methods, including the requirements in new § 192.493 when performing an assessment using an in-line inspection tool. This NPRM also proposes to add more specific requirements for use of internal inspection tools to require that an operator using this method must explicitly consider uncertainties in reported results when identifying anomalies. In addition, the proposed rulemaking would add a “spike” hydrostatic pressure test, which is particularly well suited to address SCC and other cracking or crack-like defects, guided wave ultrasonic testing (GWUT), which is particularly appropriate in cases where short segments, such as roads or railroad crossings, are difficult to assess, and excavation and *in situ* direct examination, which is well suited to address crossovers and other short, easily accessible segments that are impractical to assess by remote technology, as allowed assessment methods and would revise the requirements for direct assessment to allow its use only if a line is not capable of inspection by internal inspection tools.

The issue of selection and use of assessment methods is related to the statutory mandate in the Act for the Comptroller General of the United States to evaluate whether risk-based reassessment intervals are a more effective alternative. The Act requires an evaluation of reassessment intervals and the anomalies found in reassessments. While not directly addressing selection of assessment methods, the results of the evaluation will have an influence on the general approach for conducting future integrity assessments. PHMSA will consider the Comptroller General's evaluation when it becomes available. Additional rulemaking may be considered after PHMSA considers the results of the evaluation.

- **Topic H—Valve Spacing and the Need for Remotely or Automatically Controlled Valves.** The ANPRM requested comments regarding proposed changes to the requirements for sectionalizing block valves. In response to the NTSB recommendations, PHMSA held a public workshop in 2012 on pipeline valve issues, which included the need for additional valve installation on both natural gas and hazardous liquid transmission pipelines. PHMSA also included this topic in the 2012 Pipeline Research Forum. In addition, Section 4 of the Act requires issuance of regulations on the use of automatic or remote-controlled shut-off valves, or equivalent technology, where economically, technically, and operationally feasible on transmission pipeline facilities constructed or entirely replaced after the date of the final rule. The Act also requires completion of a study by the Comptroller General of the United States on the ability of transmission pipeline facility operators to respond to a hazardous liquid or gas release from a pipeline segment located in an HCA. Separate rulemaking on this topic will be considered based on the results of the study.

- **Topic I—Corrosion Control.** The ANPRM requested comments regarding proposed revisions to subpart I to improve the specificity of existing requirements. This NPRM proposes to revise subpart I, including a general update to the technical requirements in appendix D to part 192 for cathodic protection.

- **Topic J—Pipe Manufactured Using Longitudinal Weld Seams.** In recommendation P–11–15, the NTSB recommended that PHMSA amend its regulations to require that any longitudinal seam in an HCA be pressure tested in order to consider the seam to be “stable.” This issue is addressed in Topic N. PHMSA proposes to address this issue by revising the integrity management requirements in § 192.917(e)(3) to specify that longitudinal seams may not be treated as stable defects unless the segment has been pressure tested (and therefore would require an integrity assessment for seam threats). Also, PHMSA proposes to add new requirements for verification of maximum allowable operating pressure (MAOP) in new § 192.624.

- **Topic K—Establishing Requirements Applicable to Underground Gas Storage.** The ANPRM requested comments regarding establishing requirements within part 192 applicable to underground gas storage in order to help assure safety of

underground storage and to provide a firm basis for safety regulation. PHMSA will consider proposing a separate rulemaking that specifically focuses on improving the safety of underground natural gas storage facilities will allow PHMSA to fully consider the impacts of incidents that have occurred since the close of the initial comment period. It will also allow the Agency to consider voluntary consensus standards that were developed after the close of the comment period for this ANPRM, and to solicit feedback from additional stakeholders and members of the public to inform the development of potential regulations.

- **Topic L—Management of Change.** The ANPRM requested comments regarding adding requirements for management of change to provide a greater degree of control over this element of pipeline risk. This NPRM contains proposed requirements that address this topic. Specifically, PHMSA proposes to revise the general applicability requirements in § 192.13 to require each operator of an onshore gas transmission pipeline to develop and follow a management of change process, as outlined in ASME/ANSI B31.8S, section 11, that addresses technical, design, physical, environmental, procedural, operational, maintenance, and organizational changes to the pipeline or processes, whether permanent or temporary.

- **Topic M—Quality Management Systems (QMS).** The ANPRM requested comments regarding whether and how to impose requirements related to quality management systems. PHMSA will consider separate rulemaking for this topic.

- **Topic N—Exemption of Facilities Installed Prior to the Regulations.** The ANPRM requested comments regarding proposed changes to part 192 regulations that would repeal exemptions to pressure test requirements. The NTSB recommended that PHMSA repeal 49 CFR 192.619(c) and require that all gas transmission pipelines be pressure tested to establish MAOP (recommendation P-11-14). In addition, section 23 of the Act requires issuance of regulations requiring tests to confirm the material strength of previously untested natural gas transmission lines. In response to the NTSB recommendation and the Act, this NPRM proposes requirements for verification of maximum allowable operating pressure (MAOP) in accordance with new § 192.624 for certain onshore, steel, gas transmission pipelines, including establishing and documenting MAOP if the pipeline

MAOP was established in accordance with § 192.619(c).

The Act also requires verification of records to ensure they accurately reflect the physical and operational characteristics of the pipelines and to confirm the established maximum allowable operating pressure of the pipelines. PHMSA issued Advisory Bulletin 12-06 on May 7, 2012 to notify operators of this required action. PHMSA has initiated an information collection effort to gather data needed to accurately characterize the quantity and location of pre-1970 gas transmission pipeline operating under an MAOP established by 49 CFR 192.619(c). This NPRM proposes requirements in new § 192.607 for certain onshore, steel, gas transmission pipelines to confirm and record the physical and operational characteristics of pipelines for which adequate records are not available.

- **Topic O—Modifying the Regulation of Gas Gathering Lines.** The ANPRM requested comments regarding modifying the regulations relative to gas gathering lines. The Act required several actions related to this topic, including: review existing regulations for gathering lines; provide a report to Congress; and make recommendations on: (1) The sufficiency of existing regulations, (2) the economic impacts, technical practicability, and challenges of applying existing federal regulations to gathering lines, and (3) subject to a risk-based assessment, the need to modify or revoke existing exemptions from Federal regulation for gas and hazardous liquid gathering lines. PHMSA proposes to address aspects of this topic identified before enactment of the Act in this NPRM. The report submitted to Congress will be evaluated to determine the need for any future rulemaking, specifically the need to apply integrity management concepts to gas gathering lines.

In addition, on August 20, 2014, the Government Accountability Office (GAO) released a report (GAO Report 14-667) to address the increased risk posed by new gathering pipeline construction in shale development areas. The GAO recommended that rulemaking be pursued for gathering pipeline safety that addresses the risks of larger-diameter, higher-pressure gathering pipelines, including subjecting such pipelines to emergency response planning requirements that currently do not apply. PHMSA proposes to address this recommendation as described below in the “Section-by-Section Analysis” under § 192.9.

Additional Topics

- **Inspection of Pipelines Following a Severe Weather Event.** Existing pipeline regulations prescribe requirements for surveillance periodically patrolling of pipeline to observe surface conditions on and adjacent to the transmission line right-of-way for indications of leaks, construction activity, and other factors affecting safety and operation, including unusual operating and maintenance conditions. The cause of the 2011 hazardous liquid pipeline accident resulting in a crude oil spill into the Yellowstone River near Laurel, Montana was scouring at the river crossing due to flooding. In this case, annual heavy flooding occurred in the Spring of the 2011. In late May, the operator shut down the pipeline for several hours to assess the state of the pipeline. Following the assessment, the operator restarted the pipeline and agreed to monitor the river area on a daily basis. On July 1, 2011 the pipeline ruptured which resulted in the release of 1,500 barrels of crude oil into the Yellowstone River. A second break, due to exposure to flood conditions, occurred several years later on the same pipeline led to an additional spill in the Yellowstone River. Other examples include Hurricane Katrina (2005) which resulted in significant damage to the oil and gas production structures and the San Jacinto flood (1994) which resulted in 8 ruptures and undermining of 29 other pipelines. In the context of the San Jacinto flood, “undermining” occurred when support material for the pipelines was removed due to erosion driven by the floodwaters. As a result, the unsupported pipelines were subjected to stress from the floodwaters that resulted in fatigue cracks in the pipe walls. Based on these examples of extreme weather events that did result, or could have resulted, in pipeline incidents, PHMSA has determined that additional regulations are needed to require, and establish standards for, inspection of the pipeline and right-of-way for “other factors affecting safety and operation” following an extreme weather event, such as a hurricane or flood, an earthquake, a natural disaster, or other similar event that has the likelihood of damage to infrastructure. The proposed rule would require such inspections, specify the timeframe in which such inspections should commence, and specify the appropriate remedial actions that must be taken to ensure safe pipeline operations. The new regulation would apply to onshore transmission pipelines and their rights-of-way.

- Notification for 7-Year Reassessment Interval Extension. Subsection 5(e) of the Act identifies a technical correction amending section 60109(c)(3)(B) of title 49 of the United States Code to allow the Secretary of Transportation to extend the 7- calendar year reassessment interval for an additional 6 months if the operator submits written notice to the Secretary with sufficient justification of the need for the extension. PHMSA would expect that any justification, at a minimum, would need to demonstrate that the extension does not pose a safety risk. PHMSA proposes to codify this statutory requirement.

- Reporting Exceedances of Maximum Allowable Operating Pressure. Section 23 of the Act requires operators to report to PHMSA each exceedance of the maximum allowable operating pressure (MAOP) that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices. Implicit in § 192.605 is the intent for operators to establish operational and maintenance controls and procedures to effectively preclude operation at pressures that exceed MAOP. PHMSA expects that operators' procedures should already address this aspect of operations and maintenance, as it is a long-standing, critical aspect of safe pipeline operations. PHMSA issued ADB 12-11 to address exceedances of MAOP. However, PHMSA proposes to codify this statutory requirement in § 192.605.

- Consideration of Seismicity. Section 29 of the Act states that in identifying and evaluating all potential threats to each pipeline segment, an operator of a pipeline facility must consider the seismicity of the area. PHMSA proposes to codify this statutory requirement by adding requirements to explicitly reference seismicity for data gathering and integration, threat identification, and implementation of preventive and mitigative measures.

- Safety Regulations for In-line Inspection (ILI), Scraper, and Sphere Facilities. PHMSA is proposing to add explicit requirements for safety features on launchers and receivers associated with ILI, scraper and sphere facilities.

- Consensus Standards for Pipeline Assessments. The proposed rule would incorporate by reference industry standards for assessing the physical condition of in-service pipelines using in-line inspection, internal corrosion direct assessment, and stress corrosion cracking direct assessment. Periodic assessment of the condition of gas transmission pipelines in HCAs is required by 49 CFR 192.921 and

192.937. The regulations provide minimal requirements for the use of these assessment techniques since at the time these regulations were established, industry standards did not exist addressing how these techniques should be applied. Incorporation of standards subsequently published by the American Petroleum Institute (API), the National Association of Corrosion Engineers (NACE), and the American Society of Nondestructive Testing (ASNT) would assure better consistency, accuracy and quality in pipeline assessments conducted using these techniques.

F. Integrity Verification Process Workshop

An Integrity Verification Process (IVP) workshop was held on August 7, 2013. At the workshop, PHMSA, the National Association of State Pipeline Safety Representatives and various other stakeholders presented information and comments were sought on a proposed IVP that will help address mandates set forth in Section 23, Maximum Allowable Operating Pressure, of the Act and the NTSB Recommendations P-11-14 (repeal pressure test exemptions) and P-11-15 (stability of manufacturing and construction defects). Key aspects of the proposed IVP process include criteria for establishing which pipe segments would be subject to the IVP, technical requirements for verifying material properties where adequate records are not available, and technical requirements for re-establishing MAOP where adequate records are not available or the existing MAOP was established under § 192.619(c). Comments were received from the American Gas Association, the Interstate Natural Gas Association of America, and other stakeholders addressing the draft IVP flow chart, technical concerns for implementing the proposed IVP, and other issues. The detailed comments are available under Docket No. PHMSA-2013-0119. PHMSA considered and incorporated the stakeholder input, as appropriate, into this NPRM, which proposes requirements to address the current exemptions to pressure test requirements, manufacturing and construction defect stability, verification of MAOP where records to establish MAOP are not available or inadequate (new §§ 192.619(e) and 192.624), and verification and documentation of pipeline material for certain onshore, steel, gas transmission pipelines (new § 192.607).

III. Analysis of Comments on the ANPRM

In Section II of the ANPRM, PHMSA sought comments concerning the significance of the proposed issues to pipeline safety; whether new/revised regulations are needed and, if so, suggestions as to what changes are needed; and likely costs that would be associated with implementing any new/revised requirements. PHMSA posed specific questions to solicit stakeholder input. These included questions related to 15 specific topic areas in two broad categories:

1. Should IM requirements be revised and strengthened to bring more pipeline mileage under IM requirements and to better assure safety of pipeline segments in HCAs? Specific topics included:

- A. Modifying the Definition of HCA,
- B. Strengthening Requirements to Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs,

- C. Modifying Repair Criteria,
- D. Improving Requirements for Collecting, Validating, and Integrating Pipeline Data,

- E. Making Requirements Related to the Nature and Application of Risk Models More Prescriptive,

- F. Strengthening Requirements for Applying Knowledge Gained Through the IM Program,

- G. Strengthening Requirements on the Selection and Use of Assessment Methods.

2. Should non-IM requirements be strengthened or expanded to address other issues associated with pipeline system integrity. Specific topics included:

- H. Valve Spacing and the Need for Remotely or Automatically Controlled Valves,

- I. Corrosion Control,
- J. Pipe Manufactured Using Longitudinal Weld Seams,

- K. Establishing Requirements Applicable to Underground Gas Storage,

- L. Management of Change,
- M. Quality Management Systems (QMS),

- N. Exemption of Facilities Installed Prior to the Regulations,

- O. Modifying the Regulation of Gas Gathering Lines.

PHMSA received a total of 1,463 comments; 1,080 from industry sources (Trade Associations/Unions, Pipeline Operators and Consultants); 316 comments from the public (Environmental Groups, Government Agencies/Municipalities, NAPS and individual members of the general public); and 67 general comments not directly related to the ANPRM questions or categories. Commenters included:

- Commenters responded to ANPRM questions, but also submitted comments on subjects generally related to gas pipeline safety regulation (but not related to an ANPRM topic) and general comments related to a topic but not in response to any specific question. This NPRM presents a summary of the comments received (similar or duplicate comments are consolidated). The general (no-topic) comments are presented first under the heading "General Comments." Comments on each topic follow under the heading "Comments on ANPRM Section II Topics on Which PHMSA Sought Comment," beginning with general comments related to the topic and then proceeding to each individual question.
- General Comments**
- General Industry Comments**
1. A number of commenters associated with the pipeline industry suggested that PHMSA should defer action on the changes discussed in the ANPRM until the studies required by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011

are completed. They contended the Act presents critical issues that require priority attention. They believe the questions raised by Congress, and to which the studies are addressed, could lead to fundamental changes in how pipeline safety is regulated and these changes need to be understood before new rules are written. Several commenters also suggested PHMSA lacks the resources to pursue simultaneously the required studies and complicated rulemakings. The Railroad Commission of Texas also suggested no new requirements be proposed until the effects of the new Act are understood, since they believe that the Act will change the scope of regulatory authority and impose additional costs on industry and regulators.

Response

PHMSA has placed studies and evaluations that relate to the topics in this proposed rulemaking on the docket. PHMSA seeks public comment on those reports and will consider comments before finalizing this rule. Other topics not addressed in this rulemaking that require additional study or evaluation will be addressed separately. Areas for safety improvement that have previously been identified and that are not dependent on the outcome of the required studies are also the subject of the proposals in this Notice.

2. INGAA, AGA, and several pipeline operators and consultants commented that the ANPRM suggested that PHMSA intends to pursue prescriptive regulation in a number of areas. They objected to this approach. They prefer performance-based regulation, under which operators have greater flexibility in deciding how the required safety goal can be met, considering the specific circumstances of their pipeline systems. They noted that integrity management, a performance-based approach, has greatly improved pipeline safety, and suggested PHMSA consider expanding the elements to be covered in an IM plan and providing more well-defined guidelines on how these expanded plans should evolve over time. They noted that implementing pipeline safety regulations is a complex process and implementing prescriptive requirements is usually inefficient. They also noted that prescriptive requirements tend to discourage technological advancements which can lead to improved means to assure safety.

Response

PHMSA believes performance-based regulations are central to improving pipeline performance. In some instances, however, prescriptive

requirements may be necessary to provide the requisite improvement to pipeline safety performance; for example, requirements for corrosion control, repair conditions, and repair criteria to more specifically address significant corrosion issues. In these cases, the unsafe condition can be clearly specified, and steps necessary to remediate the risk are well-understood engineering practice. PHMSA is committed to an efficient and effective approach to pipeline safety, and using prescriptive regulatory requirements only where necessary.

3. AGA, Texas Pipeline Association, Texas Oil and Gas Association, and a number of pipeline operators objected to the scope and pace of change in pipeline safety regulation. These commenters noted that the ANPRM covered a number of complex issues. In addition, they noted that pipeline operators are still implementing a number of large new initiatives including control room management, public awareness, distribution integrity management, and damage prevention. They commented that the industry needs time to complete implementing these other new regulations and PHMSA and the industry need time to evaluate the effect they have on pipeline safety. AGA specifically expressed concern that the pace of change could result in unintended adverse consequences. The Texas Associations suggested that any expansion of non-HCA regulations should address highest risks first and be structured to tailor requirements to different pipeline conditions because other approaches are likely to result in increased costs with little safety benefit. MidAmerican commented that the ANPRM appeared to be based on an incorrect assumption that there are no current requirements applicable to non-HCA pipe; they noted that part 192 includes many requirements applicable to non-HCA segments and that they assure safety. Atmos suggested PHMSA avoid the “one size fits all” approach to pipeline safety regulations.

Response

PHMSA understands that assimilation of change is an important consideration and agrees that the ANPRM covers a number of complex issues. Many of the more complex issues contemplated in the ANPRM, such as leak detection and automatic valves, will be addressed by separate rulemaking so that more careful and detailed analysis can be completed. However, PHMSA is proposing rulemaking in a number of areas to assure that the regulations continue to provide an adequate level of safety for both HCAs and non-HCAs. Additional

discussion of the basis for the proposed rulemaking is presented in the response to comments received for each ANPRM topic and in Section V below (Section-by-Section Analysis).

4. A number of industry commenters suggested that PHMSA exercise care in developing broad requirements that may be inappropriate for some types of pipelines. In particular, APGA noted that “transmission” pipeline operated by local distribution companies is very different from long-distance transmission lines. They are typically smaller diameter, operate at lower pressures, and are often made of plastic. AGA and distribution pipeline operators noted that leaks are a routine management issue for distribution pipelines and those requirements appropriate to leak response for transmission pipelines would not be appropriate in a distribution context. The Texas Oil & Gas Association requested that any changes be examined for possible unexpected impact on gathering lines, which also differ from transmission pipelines.

Response

PHMSA is aware of the varying nature of pipeline systems. One aspect of performance-based requirements is the ability of operators to customize the integrity management program so that it is appropriate to its circumstances.

5. AGA and some pipeline operators noted that the ANPRM suggested that PHMSA intends to extrapolate hazardous liquid pipeline experience to gas pipelines. In particular, they expressed concern regarding the discussion of leak detection. They noted pin-point leak detection may be practical for non-compressible liquids but is not for gas.

Response

PHMSA appreciates the significant differences between hazardous liquid pipelines and gas pipelines with respect to leak detection. PHMSA is sponsoring studies and research to address leak detection in a responsible way, while still being responsive to related NTSB recommendations. PHMSA is considering separate rulemaking for leak detection that will address these studies and research.

6. Pipeline industry trade associations reported that their members plan to implement voluntary approaches to improve pipeline safety. INGAA reported it has implemented a strategy to achieve a goal of zero pipeline incidents. This strategy includes voluntary application of IM principles to non-HCA pipeline segments where people live. Their goal is to apply

ASME/ANSI B31.8S, Managing System Integrity of Gas Pipelines, principles to 90 percent of people who live or work in close proximity to pipelines by 2020, and 100 percent by 2030. INGAA’s strategy also includes assuring the fitness for service of pipelines installed before federal safety regulations were promulgated, improving incident response time (to less than one hour in populated areas), and implementing the Pipelines and Informed Planning Alliance (PIPA) guidelines. AGA similarly reported their intentions to address improvements to safety proactively by applying Operator Qualification to new construction, continuing to advance IM principles (including developing industry guidelines for data management and data quality), and working with a coalition of PIPA stakeholders to adopt PIPA-recommended best practices, among other initiatives.

Response

PHMSA commends the pipeline industry for these initiatives and is committed to working with the industry to improve performance toward the goal of zero pipeline incidents.

7. A number of comments addressed the cost-benefit analyses that will be required in support of rulemaking that results from this ANPRM. AGA noted that a detailed estimate has not been completed but that preliminary evaluations suggest that the cost of implementing the initiatives included in the ANPRM could well exceed the cost of implementing the 2003 gas transmission IM rule. APGA agreed that some of the concepts discussed in the ANPRM are potentially very costly and must be considered carefully. Accufacts cautioned PHMSA to be wary of efforts to distort the cost-benefit analyses by hyper inflating costs. As an example, Accufacts pointed to estimates of costs to perform hydrostatic tests ranging from \$500,000 to \$1,000,000 per mile compared to costs of \$29,400 to \$40,000 per mile cited in the NTSB report on the San Bruno accident.

Response

PHMSA acknowledges that estimates of hydrostatic test costs can vary and that there is risk in using overstated estimates in the analysis of benefits and costs since regulatory decisions regarding public safety can be based on these results. For the Preliminary Regulatory Impact Assessment (PRIA) for this proposed rule PHMSA used vendor pricing data to develop unit costs for pressure testing. These costs represent the contractor’s costs to complete an eight hour pressure test for

various segment diameters and lengths. PHMSA applied a multiplier to account for other operator costs, such as manifold installation and operational oversight, and also added estimated costs to provide temporary gas supplies and the market value of lost gas. Based on these data and assumptions, PHMSA estimated per mile pressure test costs range from approximately \$60,000 per mile (12" diameter, 10 mile segment) to 630,000 (36" diameter, one mile segment). Detailed explanations of these unit costs are available in the PRIA, provided in the regulatory docket.

8. AGA and several pipeline operators suggested PHMSA should establish jointly with industry a committee to evaluate pipeline data and to determine whether more data is needed. They commented industry has repeatedly made this request and PHMSA has, to date, not responded. They contended PHMSA's current analysis of pipeline safety performance data is inadequate. Similarly, Panhandle Energy noted a number of the questions in the ANPRM requested data on various subjects; Panhandle expressed its belief that PHMSA collects and has access to at least some of data requested, and this data, collected pursuant to regulatory requirements, should be more complete, and consistently collected and reported, than piecemeal collections of data in response to this ANPRM. Expressing a somewhat contrary view, El Paso suggested more data should be collected and analyzed before notices of proposed rulemakings are prepared; PHMSA needs to collect and analyze data to determine the proper path for future requirements, if any.

Response

In response to NTSB recommendation P-11-19, PHMSA held a pipeline safety data workshop in January 2013. The workshop: (1) Summarized the data OPS collects, who it is collected from, and why it is collected; (2) addressed how stakeholders, including OPS, industry, and the public use the data; (3) addressed data quality improvement efforts and performance measures; and (4) discussed the best method(s) for collecting, analyzing, and ensuring transparency of additional data needed to improve performance measures. PHMSA considered the results of the workshop as well as the comments to the ANPRM related to pipeline safety performance data.

9. APGA suggested PHMSA revise the definitions of transmission and distribution pipelines to be more risk-based. APGA contended that the current definitions are not risk-based and lead to inappropriate outcomes. In particular,

classification of some pipelines as "transmission" based on functional aspects of the current definition leads to inappropriate application of requirements. In a similar vein, Oleksa and Associates suggested it may be time to reduce IM requirements on low-stress transmission pipelines, which pose lower risk than high-stress lines. Texas Pipeline Association and Texas Oil & Gas Association commented PHMSA should not extrapolate experience with interstate pipelines to intrastate lines, which differ in design and operation.

Response

The definition of transmission vs. distribution pipelines and the applicability requirements for integrity management in High Consequence Areas is not within the scope of this proposed rule. The general topic of the scope and applicability of integrity management is addressed in the class location report which available in the docket.

10. Northern Natural Gas recommended all exemptions from one-call requirements be eliminated. They noted excavation damage remains, by far, the single greatest threat to pipeline safety and management of excavation damage, through one-call programs, has been demonstrated to be an effective means of countering that threat.

Response

This comment is not within the scope of the ANPRM topics. However, PHMSA has revised the pipeline safety regulations related to pipeline damage prevention programs, which includes one-call programs, in an final rule issued July 23, 2015 (80 FR 43836).

11. The Gas Processors Association, Texas Pipeline Association, and Texas Oil & Gas Association commented regarding current efforts to clarify the applicability of part 192 requirements, particularly requirements for distribution integrity management, to farm taps. They suggested PHMSA is engaged in an expansion of requirements in this area without notice or a demonstrated safety need. They suggested PHMSA initiate a rulemaking specifically to clarify requirements applicable to farm taps.

Response

Treatment of farm taps is not within the scope of the ANPRM topics. However, PHMSA has engaged in dialogue with industry on this topic and will continue to consider options to address this issue in a separate action.

12. Northern Natural Gas suggested PHMSA reduce the time allowed for conducting a baseline assessment in

cases where a new HCA is found, tailored to the circumstances of the particular segment. Northern expressed its belief this would address threats to integrity in areas affecting population more quickly than current requirements.

Response

Currently, § 192.905(c) requires that newly identified HCAs be incorporated into the baseline assessment plan within one year. PHMSA does not currently have plans to address this requirement. However, periodically DOT or PHMSA seeks public input on retrospective review of existing regulations under Executive Order 13563. PHMSA encourages the commenter to raise this issue the next time DOT or PHMSA solicits comments on retrospective review of existing regulations.

13. Alliance Pipeline suggested many pipeline safety questions can be answered by applying INGAA's five guiding principles of pipeline safety. They noted INGAA has developed the Integrity Management-Continuous Improvement (IMCI) Initiative to implement these principles and suggested PHMSA actively engage with INGAA in developing workable solutions to pipeline safety issues.

Response

PHMSA appreciates the industry efforts to improve pipeline safety and is committed to working with all stakeholders toward this end.

14. Paiute Pipeline and Southwest Gas commented integrity management requirements have not been in effect long enough to gauge their effectiveness and decide whether additional changes are needed. The companies noted the first, baseline assessments of pipeline segments subject to those requirements are only now being completed. AGA and other pipeline operators agreed, noting IM is still new, operators are still refining their processes, and PHMSA should approach change with caution.

Response

While the first round of baseline assessments are only now being completed, the gas IM rule has been in place approximately 10 years. PHMSA expects that operator IM programs should have significantly matured in this timeframe.

15. Panhandle Energy suggested that PHMSA evaluate rule changes that could have prevented incidents which occurred in recent years. Any initiatives that would not have contributed to improved safety, they suggest, should be postponed or treated as lower priority activities. Panhandle suggested rulemaking without a sound basis is not

only ineffective but counterproductive in that it diverts resources that could have been used to improve safety. Questar Gas similarly commented PHMSA needs to minimize unnecessary activities that inappropriately divert safety resources. Questar also recommended that PHMSA explicitly consider the diversity within the regulated community.

Response

One of the major motivations for PHMSA's issuance of the ANPRM was to solicit information useful to ensuring that pipeline safety reforms have a sound basis. PHMSA is also required by Executive Orders 12866 and 13563 to ensure that the benefits of its rules justify the costs, to the extent permitted by law. PHMSA has prepared an initial regulatory impact analysis for this proposed rule, which is available in the docket for this rule. PHMSA encourages the commenter as well as other members of the public to review the analysis and provide input for improving the final rule.

16. AGA and several pipeline operators commented that, while enhancements can be made, IM requirements need not be subjected to wholesale change. They cited GAO and NTSB reports on the efficacy of transmission pipeline integrity management and the lack of pipeline safety issues among the NTSB's "Most Wanted" issues.

Response

While PHMSA believes that IM has led to improvements in managing pipeline integrity, recent incidents and accidents demonstrate that much work remains to improve pipeline safety.

17. AGA and pipeline operators noted that transmission and distribution integrity management are not distinct activities for most intrastate pipeline operators. They contended that the ANPRM seemed to be based on a presumption that operators manage their transmission and distribution pipeline safety differently, and that this assumption is without basis.

Response

PHMSA has promulgated specific IM rules for both transmission and distribution systems with a view toward allowing operators to customize their performance based programs as appropriate to their specific systems.

18. AGA and several pipeline operators suggested that any changes to public awareness requirements should be made at the state level. They noted that federal requirements in this area are

new and that effectiveness reviews are still in progress.

Response

This issue is not within the scope of the ANPRM. However, PHMSA has revised the pipeline safety regulations related to pipeline damage prevention programs in a final rule issued July 23, 2015 (80 FR 43836).

19. NACE International suggested that adopting its standards for corrosion control would be the best means to accomplish the goal of maintaining pipelines safe and functional for long periods of time.

Response

This NPRM proposes to incorporate industry consensus standards into the regulations for assessing the physical condition of in-service pipelines using in-line inspection, internal corrosion direct assessment, and stress corrosion cracking direct assessment. In addition, this NPRM proposes to enhance subpart I requirements for corrosion control and to revise Appendix D to improve requirements for cathodic protection.

20. The NTSB commented that regulations for gas transmission pipelines can and should be improved and expressed its support for the overall intent of the ANPRM. The NTSB noted publication of the ANPRM prior to its recommendations resulting from the San Bruno incident investigation precluded any mention in the ANPRM of these NTSB safety recommendations. The NTSB suggested PHMSA should seek comment on its recommendations.

Response

PHMSA has reviewed the NTSB recommendations that were issued on September 26, 2011 and found that several recommendations related directly to the topics addressed in the ANPRM and that may impact the proposed approach to rulemaking. The topics impacted are discussed above in the Background section above, in sections II.C and II.E, and include NTSB Recommendations P-11-10, P-11-11, P-11-14, P-11-15, P-11-17, and P-11-19. The NTSB's other recommendations will be addressed in separate proceedings.

21. El Paso suggested that the proper approach to attain the highest pipeline safety levels is through a structured, deliberate rulemaking that closely examines all issue aspects prior to making informed decisions.

Response

PHMSA agrees and is taking a careful, structured, and phased approach to

enhancing pipeline safety regulations and IM performance standards.

22. Thomas M. Lael, a pipeline industry consultant, suggested any new regulations be concise and clear. He contended past lack of clarity has created the need for many re-interpretations and enforcement problems.

Response

PHMSA concurs but also notes that performance-based regulations, by their nature, are not as specific, nor as easily measurable, as prescriptive regulations, but are more likely to improve safety and the cost-effectiveness of regulations. PHMSA provides guidance to help stakeholders understand the intent and scope of performance-based regulations.

General Public Comments

1. A member of the public stated that the ANPRM did not provide specific options for consideration. As written, only those with direct involvement in the industry could understand it well enough to comment. Presenting the options more specifically would allow for better informed public comment. The discussion should also include a regional component, since issues affecting different states/regions are not the same.

Response

By its nature, the ANPRM did not propose specific alternatives or rules, but solicited input to help inform future proposals. This NPRM provides specific proposed rules for public comment.

2. The Alaska Natural Gas Development Authority stated that the regulations should require consideration of earthquakes, as recent history shows they can be very important to safety of high-pressure gas lines.

Response

Section 29 of the Act states that in identifying and evaluating all potential threats to each pipeline segment, an operator of a pipeline facility shall consider the seismicity of the area. Rulemaking for this issue is addressed in this NPRM and would add requirements to explicitly reference seismicity for data gathering and integration, threat identification and implementation of preventive and mitigative measures.

3. The Environmental Defense Fund pointed out that methane is a very potent greenhouse gas. They commented that PHMSA should consider and minimize the potential environmental effects of any future rulemaking. They suggested EPA's Natural Gas Star program as a model.

Response

The proposals in this rulemaking are designed to minimize the risk of pipeline failures, which will result in environmental benefits. The draft environmental assessment addresses the environmental effects of this rulemaking.

In addition, the RIA provides estimates of the environmental benefits of this proposed rule. Natural gas transported in transmission pipelines contains heat-trapping gases that contribute to global climate change and its attendant societal costs. Of these gases, of primary importance for evaluation are methane—by far, the largest constituent of natural gas—and carbon dioxide. Other natural gas components (ethane, propane, etc.) contribute as well, but they account for a much smaller percentage of the natural gas mixture and, as a result, are much less significant than methane in terms of their environmental impact. The proposed rule is expected to prevent incidents, leaks, and other types of failures that might occur, thereby preventing future releases of greenhouse gases (GHG) to the atmosphere, thus avoiding additional contributions to global climate change. PHMSA estimated net GHG emissions abatement over 15 years of 69,000 to 122,000 metric tons of methane and 14,000 to 22,000 metric tons of carbon dioxide, based on the estimated number of incidents averted and emissions from pressure tests and ILI upgrades.

4. A member of the public questioned the openness and clarity of PHMSA's enforcement of pipeline safety regulations, and the use of civil penalty revenues.

Response

This comment is not within the scope of the ANPRM topics, however, it should be noted that PHMSA embraces transparency in its regulatory oversight program and has established a Pipeline Safety Stakeholder Communications Web site, <http://primis.phmsa.dot.gov/comm/>, which presents a variety of reports detailing enforcement activity. These reports are offered on both nationwide and operator-specific bases.

5. One member of the public suggested that DOT define "safe corridors" for above-ground construction of pipelines. The commenter suggested this would be similar, in principle, to the interstate highway system. It would help to keep pipelines separated from residences, avoid corrosive environments, and make pipelines available for routine direct examination. At a minimum, this

commenter suggested the regulations should specify a minimum separation between new pipelines and residences, as does the New Jersey state code, or homebuyers be informed when a home is within the potential impact radius of a gas transmission pipeline so they may make an informed buying decision.

Response

This comment addresses pipeline siting and routing, which is outside the scope of PHMSA's statutory authority. As specified in 49 U.S.C. 60104, Requirements and Limitations of the Act, PHMSA is prohibited from regulating activities associated with locating and routing pipelines. Paragraph (e) of the statute states "Location and routing of facilities.— This chapter does not authorize the Secretary of Transportation to prescribe the location or routing of a pipeline facility." However, PHMSA is an active participant in the Pipeline and Informed Planning Alliance (PIPA) and encourages all stakeholders to learn about, and become involved with, PIPA. More information can be obtained online at: <http://primis.phmsa.dot.gov/comm/pipa/landuseplanning.htm>.

6. One member of the public noted there is an increasing trend in significant incidents and suggested that this trend may be related to undue influence of the pipeline industry on the regulations under which it operates. The commenter recommended regulations should not be weakened in favor of industry. The League of Women Voters of Pennsylvania also recommended that regulatory agencies be insulated from political and other influences of natural gas pipeline companies to avoid the appearance of a conflict of interest.

Response

PHMSA appreciates these comments. PHMSA is committed to improving pipeline safety, and that is the goal of this endeavor. Significant incidents on Gas Transmission (GT) pipelines have averaged between 70 and 80 incidents per year over the past 9 years. The existing integrity management regulations in 49 CFR part 192, subpart O, addresses pipeline integrity in HCAs, which is only about 7 percent of the GT pipeline mileage. This proposed NPRM is focused on strengthening requirements in HCAs and applying integrity management principles to areas outside HCAs to better address safety issues. In addition, the proposed rule seeks to address significant issues that caused or contributed to the San Bruno accident, which include lack of pressure test, inadequate records, poor materials, and inadequate integrity

assessment. The operator reports submitted to PHMSA as mandated by the Act confirm that these issues are widespread for both HCA and non-HCA pipe segments.

7. The Harris County Fire Marshall's Office (HCFM) suggested stiffer regulations are needed for gas transmission pipeline safety, because of the large potential for negative impact and catastrophic consequences. HCFM expressed concern about corrosion control and current inspection practices for aging transmission infrastructure.

Response

This NPRM proposes enhanced corrosion control requirements, including periodic close interval surveys, post construction surveys for coating damage, and interference current surveys. This NPRM also proposes enhanced requirements for internal corrosion and external corrosion management programs.

8. The Pipeline Safety Trust (PST) commented that the ANPRM, itself, may heighten and fuel existing public concerns about pipeline safety. PST noted that many of the questions asked the industry to provide information they believe the public would believe PHMSA should already have. PST expressed its view that the number and types of questions asked in the ANPRM reflect gaps in PHMSA's knowledge of gas transmission pipeline systems and operator practices.

Response

PHMSA appreciates these comments. PHMSA is committed to improving pipeline safety and stakeholder input is valuable to the regulatory process.

9. Professional Engineers in California Government (PECG) commented that private companies should not be solely responsible for the safety of their pipelines. PECG contended that this approach has not worked. PECG also suggested PHMSA examine options for increasing the number of inspectors at state pipeline regulatory agencies and require public inspectors be on site for pipeline construction and testing. They contended such inspection is necessary to assure that older pipelines are tested adequately and replaced when needed.

Response

PHMSA appreciates these comments. PHMSA is committed to ensuring that operators maintain and operate their pipelines safely. This rulemaking contains a number of measures aimed at enhancing oversight.

10. The City and County of San Francisco (CCSF) noted the scope of potential rulemaking discussed in the

ANPRM did not include consideration of PHMSA's coordination with and oversight of state certified agencies. In order to ensure the proper oversight over natural gas transmission operators and the safe operation of natural gas transmission lines, CCSF believes PHMSA must address its state certification program and its oversight of state enforcement of pipeline safety standards. CCSF recommended PHMSA publish regulations for certification of state programs. They cited NTSB recommendation P-11-20 and asserted PHMSA has not corrected inadequate practices of the California Public Utilities Commission.

Response

This comment is outside the scope of this rulemaking. PHMSA is addressing NTSB recommendation P-11-20 separately.

11. Two members of the public suggested the processes of the Federal Energy Regulatory Commission (FERC) for siting pipelines should be revised. One suggested a Commission on Public Accountability and Safety Standards be established, consisting of a majority of local public officials, first responder experts, and independent qualified engineers, to make recommendations for FERC's pre-application process and standards. The purpose would be to assure standards require public accountability for review and vetting of pipeline safety issues with local authorities when pipelines are proposed. The other commenter suggested the relationship between FERC and DOT should be clarified, that a company's enforcement history be taken into account in siting decisions, and PHMSA be a full party to all FERC proceedings. The commenter believes this is necessary because FERC does not have a public safety mandate.

Response

PHMSA is a separate agency from FERC and has no statutory authority with respect to pipeline siting or approval. As specified in 49 U.S.C. 60104, Requirements and Limitations of the Act, PHMSA is prohibited from regulating activities associated with locating and routing pipelines. Paragraph (e) of the statute states "Location and routing of facilities.—This chapter does not authorize the Secretary of Transportation to prescribe the location or routing of a pipeline facility." However, PHMSA is an active participant in the Pipeline and Informed Planning Alliance (PIPA) and encourages all stakeholders to learn about, and become involved with, PIPA. More information can be obtained

online at: <http://primis.phmsa.dot.gov/comm/pipa/landuseplanning.htm>.

12. Two members of the public commented federal regulations should not override local ordinances. They noted the concern of local authorities is safety, while others are concerned about industry costs. They believe federal regulations that allow operators significant discretion are a poor basis to supersede specific local requirements.

Response

PHMSA appreciates these comments. Federal regulations provide for a uniform body of standards and requirements related to pipeline safety. PHMSA is receptive to input from state and local authorities on pipeline safety issues. States and local authorities may adopt requirements that are more stringent than and consistent with the federal regulations for their intrastate pipelines if they have a 49 U.S.C. 60105 certification.

13. One member of the public suggested regulations require periodic safety audits by an auditor not selected by the pipeline operator. The commenter further suggested that local authorities should have approval authority in the choice of the auditor. The commenter contended this approach would strengthen public confidence in pipeline safety.

Response

PHMSA appreciates this comment. Highly trained federal and state pipeline inspectors conduct inspections of pipeline operators, their facilities, and their compliance programs on a regular basis.

Comments on ANPRM Section II Topics on Which PHMSA Sought Comment

In section II of the ANPRM, commenters were urged to consider whether additional safety measures are necessary to increase the level of safety for those pipelines that are in non-HCA areas as well as whether the current IM requirements need to be clarified and in some cases enhanced to assure that they continue to provide an adequate level of safety in HCAs. PHMSA posed specific questions to solicit stakeholder input. These included questions related to the following topics:

- A. Modifying the Definition of HCA,
- B. Strengthening Requirements to Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs,
- C. Modifying Repair Criteria,
- D. Improving Requirements for Collecting, Validating, and Integrating Pipeline Data,

E. Making requirements Related to the Nature and Application of Risk Models More Prescriptive,

F. Strengthening Requirements for Applying Knowledge Gained Through the IM Program

G. Strengthening Requirements on the Selection and Use of Assessment Methods,

H. Valve Spacing and the Need for Remotely or Automatically Controlled Valves,

I. Corrosion Control,

J. Pipe Manufactured Using Longitudinal Weld Seams,

K. Establishing Requirements Applicable to Underground Gas Storage,

L. Management of Change,

M. Quality Management Systems (QMS),

N. Exemption of Facilities Installed Prior to the Regulations,

O. Modifying the Regulation of Gas Gathering Lines.

Each topic is summarized as presented in the ANPRM, then general comments related to the topic are presented, followed by each individual question and comments received for the question.

A. Modifying the Definition of HCA

The ANPRM stated that "IM requirements in subpart O of part 192 specify how pipeline operators must identify, prioritize, assess, evaluate, repair and validate; *[sic]* through comprehensive analyses, the integrity of gas transmission pipelines in HCAs. Although operators may voluntarily apply IM practices to pipeline segments that are not in HCAs, the regulations do not require operators to do so. A gas transmission pipeline ruptured in San Bruno, California on September 9, 2010, resulting in eight deaths and considerable property damage. As a result of this event, public concern has been raised regarding whether safety requirements applicable to pipe in populated areas can be improved. PHMSA is thus considering expanding the definition of an HCA so that more miles of pipe are subject to IM requirements." The ANPRM then listed questions for consideration and comment. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic A

1. INGAA and a number of pipeline operators noted this is an opportune time for considering the next steps in integrity management, since baseline assessments under the current IM rules are now being completed. INGAA noted its policy goal is to apply IM principles

(as described in ASME/ANSI B31.8S) beyond HCAs, covering 90 percent of people living near transmission pipelines by 2020 and 100 percent by 2030. TransCanada submitted information in support of INGAA's proposal, noting that by the end of 2012 the company will have assessed more than 85 percent of its US pipeline mileage covering more than 95 percent of people living near their pipelines. Thus, the current IM rules are having a significant positive impact on pipeline safety. TransCanada believes significant technological challenges would be encountered if IM regulations were extended to all pipelines.

2. MidAmerican commented it would be reasonable to differentiate between transmission pipelines operating above and below 30 percent specified minimum yield strength (SMYS) in terms of IM requirements. They estimated that less than 3 percent of local distribution company (LDC) transmission lines operate at greater than 30 percent SMYS.

3. MidAmerican and a member of the public suggested PHMSA eliminate class locations in favor of better-defined HCAs. They contend such a change would result in administrative savings for pipeline operators.

4. Southwest Gas and Paiute commented no new regulations should be promulgated in this area until the study required by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 is completed.

Response to General Comments for Topic A

PHMSA appreciates the information provided by the commenters. Section 5 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 (the Act) (Pub. L. 112–90) requires the Secretary of Transportation to “evaluate (1) whether integrity management system requirements, or elements thereof, should be expanded beyond high-consequence areas; and (2) with respect to gas transmission pipeline facilities, whether applying integrity management program requirements, or elements thereof, to additional areas would mitigate the need for class location requirements.” PHMSA has completed the report mandated by the Act that documents that evaluation and addresses whether integrity management (IM) program requirements should be expanded beyond high consequence areas (HCAs) and, specifically for gas transmission pipelines regulated under 49 Code of Federal Regulations (CFR) part 192, whether such expansion would mitigate the need for class location designations

and corresponding requirements. The class location report is available for review in the docket.

In October 2010 and August 2011, the Pipeline and Hazardous Materials Safety Administration (PHMSA) published notices in the **Federal Register** to solicit comments on revising the pipeline safety regulations applicable to hazardous liquid and natural gas transmission pipelines including expansion of IM program requirements beyond HCAs. In general, industry representatives and pipeline operators were opposed to any expansion of HCAs and in favor of eliminating class locations on newly constructed pipelines, whereas public interest groups were in favor of expanding HCA but against curtailing class location requirements.

PHMSA has carefully considered the input and comments. At this time PHMSA plans to propose an approach that balances the need to provide additional protections for persons within the potential impact radius (PIR) of a pipeline rupture (outside of a defined HCA), and the need to prudently apply IM resources in a fashion that continues to emphasize the risk priority of HCAs. PHMSA, therefore, is considering an approach that would require selected aspects of IM programs (namely, integrity assessments and repair criteria) to be applicable for non-HCA segments. For hazardous liquid pipelines, PHMSA would propose to apply these requirements to non-HCA pipeline segments. For gas transmission pipelines, PHMSA would propose to apply these requirements where persons live and work and could reasonably be expected to be located within a pipeline PIR. Under this approach, PHMSA would propose requirements that integrity assessments be conducted, and that injurious anomalies and defects be repaired in a timely manner, using similar standards in place for HCAs. However, the other program elements of a full IM program contained in 49 CFR part 192, subpart O, or 49 CFR 195.452 (as applicable) would not be required for non-HCA segments.

The Act also required the Secretary of Transportation to evaluate if expanding IM outside of HCAs, as discussed above, would mitigate the need for class location requirements. In August 2013, PHMSA published a notice in the **Federal Register** (78 FR 53086) soliciting comments on expanding IM program requirements and mitigating class location requirements. In addition, PHMSA held a Class Location Workshop on April 16, 2014, to discuss the notice and comments were received

from stakeholders, including industry representatives, pipeline operators, state regulatory agencies, and the public. Overall, the majority of stakeholder responses suggested that PHMSA not change the current class location approach for class locations and class location changes as population increases used for establishing MAOP and operation and maintenance (O&M) surveys for existing pipelines. For new transmission pipelines, some industry groups and operators supported some type of bifurcated approach for existing and new pipelines as described above.

Based upon stakeholder input and findings from lessons learned, incident investigations, assessments, IM, and operating, maintenance, design and construction considerations, PHMSA believes the application of integrity management assessment and remediation requirements to MCAs does not warrant elimination of class locations. Class locations affect all gas pipelines, including transmission (interstate and intrastate), gathering, and distribution pipelines, whether they are constructed of steel pipe or plastic pipe. Class location is integral to determining MAOPs, design pressures, pipeline repairs, high consequence areas (HCAs), and operating and maintenance inspections and surveillance intervals. Class locations affect 12 subparts and 28 sections of 49 CFR part 192 for gas pipelines. The subparts and sections are listed and discussed in Sections 3.1.2.4 and 3.7.2.2. While assessment and remediation of defects on gas transmission pipelines is an important risk mitigation program, it does not adequately compensate for other aspects of class location as it relates to other types of gas pipelines and as it relates (for all gas pipelines) to the original pipeline design and construction such as the design factor, initial pressure testing, establishment of MAOP, O&M activities, and other aspects of pipeline safety, that are based on class location. Thus, PHMSA has determined not to eliminate class location requirements.

With respect to the application of gas transmission IM requirements to pipeline operating at less than 30% SMYS, as part of its consideration of the issues discussed in Topics J and N, PHMSA considered but rejected the suggestion that pipelines operating less than 30% SMYS be differentiated from those operating at higher stress levels.

Comments submitted for questions in Topic A.

A.1—Should PHMSA revise the existing criteria for identifying HCAs to expand the miles of pipeline included in HCAs? If so, what amendments to the criteria should PHMSA consider (e.g.,

increasing the number of buildings intended for human occupancy in Method 2?) Have improvements in assessment technology during the past few years led to changes in the cost of assessing pipelines? Given that most non-HCA mileage is already subjected to in-line inspection (ILI), does the contemplated expansion of HCAs represent any additional cost for conducting integrity assessments? If so, what are those costs? How would amendments to the current criteria impact state and local governments and other entities?

1. INGAA, industry consultant Thomas Lael, and a number of pipeline operators commented that modification of the HCA definition is unnecessary. They contended that the current definition is already risk-based and provides an effective basis for IM requirements along with a reasonable point from which to expand the application of IM principles by voluntary action. Accufacts commented that PHMSA should focus on closing gaps and loopholes rather than increasing HCA mileage, and that increasing covered mileage would only create the illusion of more safety.

2. AGA, APGA, and a number of gas distribution pipeline operators also opposed changes to the definition. They commented that other requirements of part 192 already address the primary threats for pipe outside HCA. They noted that much effort went into establishing the current definition, there is no safety rationale to abandon it, and change would be inconsistent with risk-based principles and would dilute safety efforts. AGA further noted that imprudent expansion would be contrary to Congressional intent, in that it would dilute the focus on densely populated and environmentally sensitive areas. AGA commented that PHMSA should make no change in this area before completing the related studies required by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011.

3. Taking a contrary position, a number of commenters not affiliated with the pipeline industry supported increasing the pipeline mileage classified as HCA. One private citizen suggested that all pipelines in cities with population greater than 100,000 should be classified as HCA. This commenter believes that existing regulations result in insufficient requirements for urban pipelines. Another citizen suggested that all high-stress lines with a “receptor,” which he defines as “something which needs to be protected,” should be assessed. If changes to the HCA definition are needed to accomplish this, then he

contended those changes should be made. The Pipeline Safety Trust would strengthen IM requirements and expand them to all transmission pipelines, although they allow that the details could be different for pipelines not currently classified as HCA. PST believes this would be an effective way to identify and eliminate threats.

4. The Oklahoma Independent Petroleum Association (OKIPA) commented that any changes to the HCA definition must be supported by a scientifically-valid assessment of risks and a complete cost-benefit analysis.

5. The Iowa Association of Municipal Utilities commented that PHMSA should not revise the HCA definition without taking into account the differences between high-pressure transmission pipelines and low-pressure, low-risk lines that are also classified as transmission. IAMU reported “transmission lines” operated by Iowa Municipal Utilities are typically 2 to 4 inches in diameter and have potential impact radii less than 90 feet.

6. The Texas Pipeline Association and Texas Oil & Gas Association contended that expanding HCA pipeline mileage would increase assessment costs, particularly if the arbitrary requirement for reassessments every 7 years is not changed. These associations also believe that additional assessments will result in significant service interruptions. They suggested that assessment requirements be expanded to other pipelines, if needed, rather than changing the definition of HCA, contending that this would allow a more reasoned approach not burdened by the requirement for 7-year reassessments.

7. The Texas Pipeline Association, Texas Oil & Gas Association and several pipeline operators disagreed with the ANPRM assertion that most non-HCA transmission pipeline has been subject to ILI inspections. They noted much non-HCA pipeline has been pigged (*i.e.*, assessed using an in-line inspection tool) but that intrastate transmission pipelines are typically not piggable.

8. MidAmerican suggested that there is no reason to believe that changes to the HCA definition would improve safety. They also noted that the effects of other recent regulatory changes have not yet been realized and could mask any effect of changes in HCA. At the same time, the company noted that revising the definition of an HCA to encompass potential impact circles with 15 structures intended for human occupancy, vs. the current 20, would increase the amount of HCA mileage on its pipeline system by about 10 percent, contending that the safety benefit of such a change would be questionable.

They suggested it would be better to focus on pipe in HCAs rather than adding lower-risk pipe, since part 192 already provides a good level of safety for all pipelines.

9. INGAA and a number of pipeline operators commented that increasing the amount of HCA mileage would add or increase costs for hundreds of state and local government agencies. The increases would result from increased demands for identification, certification, and compliance auditing.

10. Northern Natural Gas suggested that PHMSA consider expanding HCA coverage by modifying the specifics of Method 2 for defining HCAs over time. Changes could include reducing the number of structures in potential impact circles that define an HCA, reducing the number of people that defines an identified site, etc. The company believes this kind of change would have the benefit of continued use of the “science” represented by the C-FER Technologies circle for determining HCAs (see part 192, appendix E, figure E.I.A). Northern also suggested PHMSA define a time period for occupation of an identified site which, they contended, would eliminate the need to address locations where a gathering of people is truly transient.

11. TransCanada reported its belief that the current HCA criteria provide an appropriate risk focus. In support of this belief, they noted that only 3 percent of their US transmission pipeline mileage is in HCAs but this includes 45 percent of the population within a potential impact radius of their pipelines.

12. The Iowa Utilities Board opposed changes to the HCA criteria to encompass more mileage. IUB commented that such changes would divert resources from application to higher-risk pipeline segments and there has been no demonstration that non-HCA pipeline segments pose as much risk as those currently defined as HCA.

13. Two private citizens and the Commissioners of Wyoming County, Pennsylvania, suggested the existence of one structure intended for human occupancy within a potential impact circle should be sufficient to define an HCA. These commenters noted that catastrophic consequences (*i.e.*, loss of life) are still possible in such sparsely populated areas. The Commissioners noted homes in their jurisdiction generally did not encroach on the pipelines; the homes were there first and the pipeline encroached on what should have been a safe zone around the home. They implied pipeline operators should expect a higher burden to assure safety in such circumstances.

14. The Pipeline Safety Trust commented that there should be a single set of criteria defining HCAs and that these criteria should be known to the public. They contended the public currently has no information on the criteria defining HCAs.

15. The California Public Utilities Commission commented that HCA criteria should be revised to include more pipeline mileage and that method 2 (use of potential impact circles) should be eliminated.

16. The Alaska Natural Gas Development Authority suggested that the definition of an HCA should accommodate the phenomenon of rapid growth in previously rural areas. They noted that such growth has occurred within Alaska due, in part, to disposal of state lands.

17. NAPSRS suggested that PHMSA require all transmission pipelines to meet Class 3 and 4 requirements and eliminate HCAs. NAPSRS contended that focusing resources on higher-risk pipelines is bad public policy, since an accident anywhere poses a risk to public safety and reduces public confidence.

18. The Texas Pipeline Association, Texas Oil & Gas Association and several pipeline operators objected to the implication in the ANPRM that assessment costs have decreased. They contended that costs have actually increased due to such factors as operational cost escalation and increased costs to address cased pipeline segments.

19. INGAA and a number of pipeline operators contended that costs cannot be estimated accurately absent a specific regulatory proposal. They suggested that additional costs would be minimal if expanding HCA mileage results in actions similar to INGAA's Integrity Management—Continuous Improvement (IMCI) action plan, but that costs could be high if different requirements are imposed.

20. INGAA reported that a recent survey showed that its members' identified baseline IM assessments will cover 64 percent of members' pipeline mileage, only 4 percent of which is in HCAs. INGAA stated that these assessments will have covered 90 percent of the population within a potential impact radius of the pipelines.

21. Southwest Gas and Paiute provided cost estimates for conducting IM assessments on their pipeline systems: \$45,000 per mile for direct assessment, up to \$125,000 per mile for in-line inspection, and from \$200,000 to \$2 million per instance where changes need to be made to a pipeline to accommodate instrumented pigs.

22. The California Public Utilities Commission and MidAmerican commented that costs would increase if the changes suggested in the ANPRM were made, but they provided no specific estimates.

23. APGA noted that costs incurred by or passed on to municipal utilities are costs to local governments, since the utilities are, themselves, government agencies.

24. Paiute and Southwest Gas noted that costs to local governments, including preparation of permits, paving repairs, etc., can be high.

25. An anonymous commenter suggested that costs are not likely to increase much, since most operators already assess more than HCAs and IM has fostered growth in I/I vendors.

26. Kern River noted that its costs would not increase much, since the company is already under similar restrictive requirements via special permit.

27. Accufacts noted that safety is not free. They suggested that relative ranking of assessment methods, by cost, is not likely to have changed. They cautioned that costs used in cost-benefit analyses supporting any rules must be credible and should have an auditable trail available to the public. They suggested that serious accidents can be a "cost" of associated deregulation and lack of proper, effective, and efficient safety regulatory oversight for this critical infrastructure.

Response to Question A.1 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that the definition of HCAs is adequate, and does not propose to modify the definition of scope of HCAs in this proposed rulemaking. However, to afford additional protections to other segments along the pipeline, PHMSA is proposing to apply selected IM program elements (namely assessment and remediation of defects) to areas outside HCAs that are newly defined as MCAs. PHMSA believe this approach applies appropriate risk-based levels of safety.

A.2. Should the HCA definition be revised so that all Class 3 and 4 locations are subject to the IM requirements? What has experience shown concerning the HCA mileage identified through present methods (e.g., number of HCA miles relative to system mileage or mileage in Class 3 and 4 locations)? Should the width used for determining class location for pipelines over 24 inches in diameter that operate above 1000 psig be increased? How many miles of HCA covered segments are Class 1, 2, 3, and 4? How many miles of Class 2, 3, and 4 pipe do

operators have that are not within HCAs?

A.3. Of the 19,004 miles of pipe that are identified as being within an HCA, how many miles are in Class 1 or 2 locations?

1. Industry trade associations, pipeline operators, and the Iowa Utilities Board objected to the suggestion all Class 3 and 4 locations should be treated as HCA. They noted class location does not have a direct relationship to risk. Small, low-pressure pipelines with no structures intended for human occupancy within the PIR (or for which the PIR is contained entirely within the right of way) could be Class 3 or 4 under current definitions. INGAA noted approximately 90 percent of Class 3 and 4 mileage not in HCA is presently assessed through over testing during IM assessments. Kern River commented that class location is an outmoded system that is confusing and unduly complex. Many of these commenters noted there is no demonstration of need for including all Class 3 and 4 areas, since existing HCA criteria adequately identify areas posing higher risks.

2. Public commenters took a contrary position, suggesting class locations are a reasonable basis for increasing HCA mileage. Pipeline Safety Trust and California Public Utilities Commission commented all Class 3 and 4 locations should be HCA. They noted these are all highly populated areas putting more people at risk from pipeline accidents. CPUC noted the location of the significant 2010 pipeline accident in San Bruno, CA, could have avoided HCA classification if method 2 of the current definition had been used. An anonymous commenter supported this position, suggesting all Class 3 and 4 locations be treated as HCA and use of method 2 be restricted to Class 1 and 2 locations; this commenter contended use of method 2 to exclude some portions of Class 3 and 4 locations from HCA classification is inappropriate. This commenter further suggested the definition of Class 4 locations be revised, contending that the criterion of 4-story buildings being "prevalent" is not specific enough. Thomas Lael, an industry consultant, suggested all Class 4 locations should be HCA. Lael contended that this would be an easy change and would assure that the highest risk pipe is included.

3. NAPSRS also suggested all Class 3 and 4 locations should be classified as HCA. NAPSRS noted this is an alternative to their preferred solution of eliminating HCA and requiring that all transmission pipelines meet Class 3 and 4 requirements.

4. One public commenter went further. He suggested a new classification, Class 5, be established encompassing all pipeline in cities with populations of more than 100,000. He further suggested pipe in this new class should meet enhanced construction requirements, including required installation of automatic valves to isolate the pipeline in the event of an incident. He contended the existing regulations impose inadequate safety requirements on urban pipelines.

5. Accufacts suggested PHMSA focus first on closing loopholes and gaps rather than increasing HCA mileage. They commented increasing covered mileage without closing gaps would produce only the illusion of safety.

6. Northern Natural Gas suggested PHMSA consider an option of eliminating method 2 of the current HCA definition. They contended such a change would be easy to accomplish. At the same time, they questioned its efficacy, suggesting that it would result

in limited or no increase in safety while imposing large costs.

7. INGAA and many pipeline operators objected to the suggested increase in the width of a class location unit for larger, high-pressure pipelines. They noted such a change would contravene the goals of IM and divert resources to pipe of lower risk, and pipe of this type posing high risks to population concentrations is already included as HCA based on its potential impact radius (which could be larger than 220 yards).

8. Here, again, public commenters generally took a contrary position. Pipeline Safety Trust suggested class location width should be at least as much as the potential impact radius. PST noted the PIR is intended to focus on areas requiring more protection while the existing class location width is arbitrary. Two private citizens agreed, one noting that large-diameter, high-pressure gathering pipelines in the Marcellus shale area are located slightly

more than 220 yards from pre-existing houses and the other suggesting the class location width in higher-class areas should be 220 yards or the PIR, whichever is larger. Accufacts would go further, suggesting class location width be increased for large-diameter pipe regardless of pressure. Accufacts contended diameter is a more significant factor in determining the potential extent of post-accident damage than is pressure, noting the devastation resulting from the San Bruno accident extended to a much greater distance than the PIR. The Texas Pipeline Association and Texas Oil & Gas Association commented no change should be made until the studies required by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 are completed.

9. INGAA and a number of pipeline companies submitted data concerning the amount of pipeline mileage currently in HCAs. INGAA's data is based on a survey of its members.

| | INGAA | Paiute | SWGas | MidAmerican | Northern Natural |
|---------------|------------------------------|----------------------------------|--------------------------|------------------------------|-----------------------------|
| Class 1 | 475 miles HCA, 103,286 not. | 1 mile HCA, 632 not | <1 of 382 miles are HCA. | 0.63 miles HCA, 493.11 not. | 0.1% of all mileage is HCA. |
| Class 2 | 535 miles HCA, 11,318 not. | 0 miles HCA, 55 not | <1 of 20 miles are HCA | 0.98 miles HCA, 101.92 not. | 2% of mileage is HCA. |
| Class 3 | 4,100 miles HCA, 4, 646 not. | 26 miles HCA, 142 not | 185 miles HCA, 242 not. | 44.96 miles HCA, 128.38 not. | 27% of mileage is HCA. |
| Class 4 | 24 miles HCA, 5 not | None of less than 1 mile is HCA. | 6 miles HCA, 5 not | no HCA mileage | no data reported. |

10. Iowa Association of Municipal Utilities reported its members have zero HCA miles in any class. Most member transmission pipelines are in Class 1 locations. Members have 1.46 miles of Class 2 pipe and one mile in Class 3.

11. Ameren Illinois reported 3.5 of its 82 HCA miles are in Class 1 or 2.

12. Kern River reported it has 18.51 HCA miles in Class 1 and 3.14 miles in Class 2, of a total of 95.96 miles of HCA.

13. On March 15, 2012, PHMSA received a petition for rulemaking from the Jersey City Mayor's office contending that the current Class Location system "does not sufficiently reflect high density urban areas, as the regulation fails to contemplate either (1) the dramatic differences in population densities between highly congested areas and other less dense Class 4 Locations, or (2) the full continuum of population densities found in urban areas themselves." Based on this, Jersey City petitioned PHMSA to add three (3) new Class Locations, which would be defined as follows:

- A Class 5 location is any class location unit that includes one or more

building(s) with between four (4) and eight (8) stories;

- A Class 6 location is any class location unit that includes one or more building(s) with between nine (9) and forty (40) stories;
- A Class 7 location is any class location unit that includes at least one building with at least forty-one (41) stories.

Response to Questions A.2 and A.3 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that HCAs should not be based exclusively on class location. Similarly, PHMSA does not propose to define MCAs based on class location. PHMSA proposes that *moderate consequence area* means an onshore area that is within a potential impact circle, as defined in § 192.903, containing five (5) or more buildings intended for human occupancy, an occupied site, or a right-of-way for a designated interstate, freeway, expressway, and other principal 4-lane arterial roadway as defined in the Federal Highway Administration's *Highway Functional*

Classification Concepts, Criteria and Procedures, and does not meet the definition of high consequence area, as defined in § 192.903. This assures a comparable level of safety for all pipelines, regardless of class location. As a result, PHMSA is not proposing to expand class locations in this proposed rule. The issue of expanding class locations is addressed in the class location report which is available for review in the docket while formulating comments.

A.4. Do existing criteria capture any HCAs that, based on risk, do not provide a substantial benefit for inclusion as an HCA? If so, what are those criteria? Should PHMSA amend the existing criteria in any way which could better focus the identification of an HCA based on risk while minimizing costs? If so, how? Would it be more beneficial to include more miles of pipeline under existing HCA IM procedures, or, to focus more intense safety measures on the highest risk, highest consequence areas or something else? If so why?

1. INGAA and several pipeline operators commented the method described in paragraph 2 in the

definition of HCA in § 192.903 appropriately focuses attention on at-risk populations. They contended that the method described in paragraph 1 in the definition of HCA in § 192.903 captures some inappropriate areas.

2. Texas Pipeline Association, Texas Oil & Gas Association, and Ameren Illinois contended the existing criteria do not capture areas not posing risk. They noted the criteria were based on the science of pipeline accidents to identify high-risk areas.

3. Paiute and Southwest Gas commented neither more HCA miles nor additional safety measures are needed. They contended existing criteria are adequate and rule provisions for preventive and mitigative measures and to consider pipe with similar conditions when anomalies are found in HCA are sufficient to address non-HCA pipeline segments.

4. APGA recommended the regulations be modified to treat transmission pipelines operated by local distribution companies, most of which operate at less than 30 percent SMYS, under distribution integrity management rather than transmission IM. APGA suggested this is an optimum time to make this change, which was discussed in the phase 1 work leading up to the distribution IM rule. Atmos agreed, noting failure by leakage rather than rupture, similar to distribution pipelines, is much more prevalent for this low-stress pipeline and it thus poses much lower risks.

5. Northern Natural Gas suggested PHMSA revisit its treatment of “well defined areas” that constitute identified sites. They contended current practice treats an entire area as an identified site even if only an unoccupied corner is within the PIR and persons congregating are outside that critical radius.

6. MidAmerican suggested PHMSA consider adding a multiplier to the PIR equation for higher-stress pipelines. They contended this could capture more high-risk pipe without adversely affecting low-stress pipelines that pose considerably less risk.

7. Atmos commented no change should be made which would increase the amount of HCA mileage, contending that this would dilute the current focus on high-risk pipe.

8. INGAA and several of its members suggested PHMSA rely on its Integrity Management—Continuous Improvement (IMCI) initiative to address pipeline in non-HCA areas.

Response to Question A.4 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that the existing method for

identifying HCAs and calculating PIR is appropriate and is not proposing a change to either. However, PHMSA disagrees that existing requirements are sufficient for non-HCAs segments. PHMSA believes non-HCA segments where people congregate should be afforded additional protections. Therefore, PHMSA is proposing that selected IM program elements (assessment and remediation of defects) be applied to MCAs.

A.5. In determining whether areas surrounding pipeline right-of-ways meet the HCA criteria as set forth in part 192, is the potential impact radius sufficient to protect the public in the event of a gas pipeline leak or rupture? Are there ways that PHMSA can improve the process of right-of-ways HCA criteria determinations?

1. INGAA, AGA, GPTC and a number of pipeline operators contended the existing PIR criteria are sufficiently conservative. They noted the criteria were derived from scientific analysis of the consequences of past pipeline accidents. Texas Pipeline Association and Texas Oil & Gas Association commented there is no reason to modify the PIR criteria or to establish alternate criteria to define HCAs; they contended there is no evidence the current PIR definition has provided insufficient protection to the public.

2. One private citizen and Alaska’s Department of Natural Resources suggested HCA criteria should be revised to consider parallel pipelines in a common right of way, contending that an accident on one pipeline could impact adjacent lines, thus compounding consequences. They further suggested requirements for pipelines in common rights of way should include minimum spacing between the pipelines.

3. An anonymous commenter suggested plume releases be considered to determine which pipeline segments can affect an HCA, contending that this would be a good practice.

4. AGA, Texas Pipeline Association, Texas Oil & Gas Association, GPTC, and several pipeline operators cautioned against use of the term “right of way” in the context of defining HCAs. They noted this term is imprecise and the actual location of the pipeline, rather than an ill-defined right of way, is the important factor in evaluating risk.

5. Accufacts, INGAA, and numerous pipeline operators cautioned against discussions that imply that the PIR concept is applicable to considerations of risk from pipeline leaks. These commenters noted that the PIR is based on the consequences of a pipeline rupture and resulting conflagrations and

was never intended to address leaks not involving fires.

6. ITT Exelis Geospatial Systems, a company providing services to the pipeline industry, noted accurate location of a pipeline is as important to assuring adequate protection of high-risk populations as is the calculation of PIR.

7. Accufacts suggested PHMSA require a report of the actual impact area, including aerial photographs, within 24 hours of any pipeline rupture. Accufacts contended this data would provide a further basis for continuing review of PIR adequacy.

Response to Question A.5 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that the existing definition of PIR is appropriate at this time. PHMSA believes that adjusting the PIR formula based on parallel pipelines in the right-of-way, or other right-of-way factors, are premature at this time. Also, PHMSA acknowledges that the PIR approach only applies such incidents resulting in explosions and fires. While certain gases might be better modeled using plume models, such models have not been carefully studied or developed. However, PHMSA plans to pursue (outside the scope of this rulemaking) additional incident reporting requirements for the purpose of further evaluating the extent of damage following incidents.

A.6. Some pipelines are located in right-of-ways also used, or paralleling those, for electric transmission lines serving sizable communities. Should HCA criteria be revised to capture such critical infrastructure that is potentially at risk from a pipeline incident?

1. INGAA, AGA, Texas Pipeline Association, Texas Oil & Gas Association, and many pipeline operators objected to any potential inclusion of “critical infrastructure” in HCA criteria. They noted there is no history of problems caused by impacts on infrastructure, there is little public risk involved, data regarding such infrastructure would be difficult for pipeline operators to obtain, and issues involving potential interactions with critical infrastructure are usually addressed during pipeline planning and construction.

2. GPTC and Nicor recommended HCA criteria not be revised to include critical infrastructure. They noted the intent of defining HCAs is to address risk to life and not property damage and damages to local infrastructure are unlikely to result in consequences similar to those that could affect population concentrations near the

pipeline. Atmos agreed, noting planning for accident-caused outages is a responsibility of electric system operators.

3. Pipeline Safety Trust, Accufacts, NAPSR, Alaska Department of Natural Resources, California Public Utilities Commission and ITT Exelis Geospatial Systems recommended critical infrastructure be included among HCA-defining criteria. Several of these commenters suggested infrastructure beyond electric transmission be considered, including, for example, water and sewage treatment plants, fire stations, and communications facilities. The commenters noted damages to critical infrastructure can lead to cascading effects and additional public safety consequences. ITT Exelis acknowledged these considerations may be secondary to loss of life but contended they are still important to public safety.

4. Northern Natural Gas, Kern River, MidAmerican, Paiute, and Southwest Gas noted determining the impact of damages to infrastructure items is complex. These commenters suggested it is not practical to define what constitutes "critical" infrastructure, from a public safety standpoint, on a generic basis. They recommended PHMSA leave consequence determination to operators, as part of their risk assessments, providing additional guidance for such considerations if needed.

5. An anonymous commenter suggested more frequent tests of cathodic protection and coating surveys be required in areas potentially subject to induced currents from nearby electric transmission infrastructure.

Response to Question A.6 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that there have been relatively few pipeline incidents that have had a major impact on critical infrastructure. PHMSA also acknowledges that the PIR formula was developed based on life safety (*i.e.*, heat flux that result in fatalities). However, PHMSA is also aware of recent incidents that, among other consequences, damaged and caused temporary closure of interstate highways. Among them are the 2012 incident at Sissonville, WV and the 2010 incident at New Delhi, LA, which also resulted in one fatality. Even though PHMSA is not proposing to revise the HCA criteria or the PIR formula, PHMSA is proposing to include major highways in the MCA criteria.

A.7. What, if any, input and/or oversight should the general public and/

or local communities provide in the identification of HCAs? If commenters believe that the public or local communities should provide input and/or oversight, how should PHMSA gather information and interface with these entities? If commenters believe that the public or local communities should provide input and/or oversight, what type of information should be provided and should it be voluntary to do so? If commenters believe that the public or local communities should provide input, what would be the burden entailed in providing this information? Should state and local governments be involved in the HCA identification and oversight process? If commenters believe that state and local governments be involved in the HCA identification and oversight process what would the nature of this involvement be?

1. INGAA and its pipeline operator members commented no additional public involvement is needed. INGAA noted consultation is required under the current regulations, and it seldom identifies any relevant information. Additional involvement, INGAA contends, would likely lead to inconsistencies and would degrade the technical/scientific basis for determining HCAs.

2. AGA and several of its member companies suggested local government agencies should provide information when requested by pipeline operators. They contended additional required involvement would pose an additional burden on pipeline operators while adding no benefit. AGA noted information from its members suggests that local government agencies very rarely point out identified sites not otherwise known to the pipeline operator.

3. Texas Pipeline Association, Texas Oil & Gas Association, GPTC, Nicor, Ameren Illinois and Oleksa and Associates (a pipeline industry consultant) suggested further involvement of local governments not be required. These commenters contended pipeline operators have more relevant knowledge and involvement of inexperienced entities in identifying HCAs is more likely to result in confusion than useful information. The Texas associations suggested current public awareness requirements afford sufficient involvement of local agencies.

4. Accufacts noted local governmental agencies have maps identifying locations important to public safety and suggested these maps should be used by pipeline operators in HCA determinations. Accufacts believes this could assist operators in assuring

consideration of accurate, complete, and current information.

5. Northern Natural Gas reported it has a phone number and email address that local residents and agencies can use to provide input to its HCA determinations. Northern further reported no HCAs have been identified from information provided via these avenues that were not otherwise known to the company.

6. Public commenters suggested local residents and government agencies should receive more information concerning pipelines and HCAs. One commenter suggested operators should provide copies of IM plans upon request, and should provide prior notification to residents within a PIR of assessments and a subsequent report of assessment results or problems otherwise identified. This individual also suggested locations of HCAs and assessment trend results should be provided to local communities upon request. The League of Women Voters of Pennsylvania suggested distribution integrity management plans should be readily available and the public should be involved in decisions related to those plans.

7. Pipeline Safety Trust commented public review should be part of any process by which PHMSA reviews or approves of HCA identifications.

8. Wyoming County Pennsylvania Commissioners suggested stakeholder meetings and public comment periods be required as part of HCA identification. They noted local residents know their communities better than others, including expected changes that could affect HCA identification.

9. AGA and several of its member operators recommended local governments play no role in oversight of HCA determinations. They contended this would increase burden and result in inconsistencies and confusion.

10. An anonymous commenter suggested existing public awareness contacts should be used to improve HCA determinations. The commenter expressed the belief this existing structure could allow low-cost involvement of local officials in such determinations.

11. The NTSB suggested PHMSA work with states to employ oversight of pipeline IM plans based on objective metrics. The NTSB noted this would be consistent with recommendation P-11-20 resulting from its investigation of the San Bruno, CA pipeline accident.

12. Iowa Association of Municipal Utilities noted local government employees are involved when HCA determinations are made by municipal utilities and further requirements for

local involvement would be inappropriate for such operators.

Response to Question A.7 Comments

PHMSA appreciates the information provided by the commenters. PHMSA is continuing to evaluate this aspect of integrity management but has not yet reached any conclusions. PHMSA may consider this input for future action, if applicable.

A.8. Should PHMSA develop additional safety measures, including those similar to IM, for areas outside of HCAs? If so, what would they be? If so, what should the assessment schedule for non-HCAs be?

1. Pipeline operators and their associations generally agreed additional measures were not needed outside HCA. INGAA and several transmission pipeline operators suggested operators be allowed to apply the principles of ASME/ANSI B31.8S voluntarily, as needed. INGAA noted this is the concept behind its Integrity Management—Continuous Improvement (IMCI) initiative.

2. AGA and a number of its member operators noted the regulations already require implementation of preventive and mitigative measures outside of HCA for low-stress pipe (§ 192.935(d)). These requirements include using qualified personnel to conduct work that could adversely affect the integrity of the covered segment, collecting excavation damage information, and participating in one-call systems.

3. Ameren Illinois and MidAmerican commented additional measures are not needed, because existing operations & maintenance requirements already assure integrity.

4. GPTC and Nicor agreed, noting it would be inappropriate to apply IM measures outside of HCA and existing requirements are assuring an adequate level of safety.

5. Atmos contended the existing provision requiring that operators evaluate and remediate non-HCA pipeline segments when corrosion is found during an IM assessment of a covered pipeline segment (§ 192.917(e)(5)) already provides that actions be taken to assure the integrity of non-HCA pipeline segments.

6. Texas Pipeline Association and Texas Oil & Gas Association would not object to a phased expansion of IM requirements provided that required assessment intervals are scientifically based. The associations noted Texas pipelines are already subject to the broader requirements of the Texas IM rule. They commented phased implementation would assure the next-highest risks are addressed first and

would allow time for IM-support resources to grow.

7. Iowa Association of Municipal Utilities commented new requirements are not needed for its members' pipelines. These lines are small-diameter, low-pressure, odorized, and already pose low risk.

8. Northern Natural Gas suggested PHMSA expand the HCA definition gradually over time rather than imposing IM requirements outside HCA. Northern commented such an approach would retain and expand the focus on areas posing the highest risk.

9. Accufacts commented repair criteria, including required response times, and reporting of anomalies should be the same in- or outside HCA, since the progression of an anomaly to failure is unrelated to whether the anomaly exists within or outside of an HCA.

10. Pipeline Safety Trust suggested non-HCA pipeline segments should be subject to a baseline of IM requirements.

11. The Commissioners of Wyoming County Pennsylvania suggested PHMSA consolidate operators' best practices and require assessment of all pipe frequently enough to realize a benefit. They commented this approach would assure a consistent level of public protection regardless of the practices of individual pipeline operators.

12. California Public Utilities Commission noted this question would be moot if method 2 for defining HCA is eliminated.

Response to Question A.8 Comments

PHMSA appreciates the information provided by the commenters. Although most industry commenters did not support expansion of integrity management requirements outside HCAs, PHMSA believes additional protections are needed for pipeline segments where people are expected within the PIR. In this NPRM, PHMSA proposes an approach that balances the need to provide additional protections for persons within the potential impact radius (PIR) of a pipeline rupture (outside of a defined HCA), and the need to prudently apply IM resources in a fashion that continues to emphasize the risk priority of HCAs. The proposed regulation would require selected aspects of IM programs (namely, integrity assessments and repair criteria) to be applicable for selected non-HCA segments defined as MCAs. An MCA would be a segment located where persons live and work and could reasonably be expected to be located within a pipeline PIR. PHMSA would propose requirements that integrity assessments be conducted, and that

injurious anomalies and defects be repaired in a timely manner, using similar standards in place for HCAs. However, the other program elements of a full IM program contained in 49 CFR part 192, subpart O would not be required for MCA segments.

A.9. Should operators be required to submit to PHMSA geospatial information related to the identification of HCAs?

1. Most industry commenters, including INGAA, AGA, and numerous pipeline operators supported this proposed requirement. They noted submission of this data will be required for PHMSA to comply with the mapping provisions of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011.

2. Accufacts, Alaska Department of Natural Resources, California Public Utility Commission, and one private citizen agreed, suggesting PHMSA should know where HCAs are located and that this information is important to emergency responders. CPUC also suggested operators should be required to submit this information to State regulatory authorities as well.

3. Pipeline Safety Trust also supported this proposal, adding the information should be shared with the public.

4. League of Women Voters of Pennsylvania and Accufacts also supported making maps identifying pipeline locations, including HCA, available to the public.

5. Atmos, Northern Natural Gas, Kern River, Nicor, and GPTC opposed a requirement to submit this information. They noted this is a large amount of information which is available for audits and questioned how it would be used by PHMSA and how related security issues would be addressed.

6. Ameren Illinois suggested a requirement to submit HCA locations is not needed, since location data on the entire pipeline system must already be submitted to the National Pipeline Mapping System.

7. Texas Pipeline Association, Texas Oil & Gas Association, and MidAmerican agreed that providing HCA information as part of NPMS submissions is adequate. They noted this is consistent with Section 6 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011.

Response to Question A.9 Comments

PHMSA appreciates the information provided by the commenters. Most commenters supported the submittal of HCA information in geospatial format. As noted by one commenter, this is required by the Act. Although outside

the scope of this rulemaking, PHMSA is pursuing data reporting improvements by proposing revisions to its currently approved information collection for the National Pipeline Mapping System. PHMSA has published several **Federal Register** notices and held several public workshops on the proposals.

A.10. Why has the number of HCA miles declined over the years?

1. Responses to this question consisted of speculation regarding reasons why the number of HCA miles may have declined. No commenters reported having specific data to describe the reducing trend.

2. AGA suggested pipe replacement, reductions in MAOP, and use of better data could be among the many reasons for a decline in HCA mileage.

3. INGAA speculated the reduction could be a result of operators changing from method 1 to method 2 to identify HCAs and abandoning or retiring older pipelines.

4. Texas Pipeline Association, Texas Oil & Gas Association, Atmos, and a private citizen agreed a change in the method for identifying HCAs is a likely reason for the decreasing mileage trend.

5. Northern Natural Gas commented changes in land use over time result in changes in the pipeline segments identified as HCA. Northern noted it has changed from method 1 to method 2 for identifying HCA but that the change had resulted in an increase in HCA mileage rather than a decrease. Kern River also reported that its HCA mileage is increasing, citing changes in land use along the pipeline as the reason for this change.

6. GPTC and Nicor suggested operational changes and removal of pipe from service could be the cause of the observed changes.

7. Iowa Utilities Board noted reductions in pressure and other operational changes can eliminate covered pipeline segments. IUB also suggested a change from method 1 to method 2 and better analyses of potential impact circles, etc. could have resulted in decreased HCA mileage.

8. MidAmerican noted its HCA mileage has fluctuated but remains relatively constant overall. They noted periodic fluctuations result from changes in various parameters that go into identifying HCAs.

9. A private citizen suggested operators may be buying properties within potential impact circles and razing them or that new pipelines in rural areas may be replacing current pipelines.

10. An anonymous commenter suggested HCA mileage is decreasing because operators are getting better at

identifying HCAs. The commenter noted operators have been doing so for 9 years.

Response to Question A.10 Comments

PHMSA appreciates the information provided by the commenters. PHMSA considered this input in its evaluation mandated by the Act.

A.11. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible.

1. Accufacts commented property damage costs reported to PHMSA following pipeline incidents appear to be understated. Accufacts noted this raises serious questions about the validity of cost-benefit analyses performed using this data.

2. Iowa Association of Municipal Utilities commented the costs to comply with IM-like requirements are not justified for small, low-pressure transmission pipelines such as those operated by its members. Significant costs to develop IM plans, evaluate remote valves, and comply with other IM requirements must be passed on to a small rate base for many municipal utilities.

3. ITT Exelis Geospatial Systems suggested HCA criteria be revised and requirements for protection of critical infrastructure and populated areas be made more prescriptive. They commented such changes would require that leak surveys be performed more frequently, providing improved safety.

4. ITT Exelis Geospatial Systems reported its leak detection systems, developed as part of research jointly sponsored with DOT and other agencies, could facilitate this testing and initial costs would be offset by longer term savings.

5. California Public Utilities Commission observed the public has indicated its desire for more prescriptive safety requirements.

Response to Question A.11 Comments

The Act requires that the Secretary of Transportation to evaluate whether integrity management requirements should be expanded beyond HCAs and whether such expansion would mitigate the need for class location requirements. The proposed rulemaking does not change the HCA definition. However, PHMSA is proposing pipeline assessment requirements in new § 192.710 for newly defined moderate consequence areas (MCAs). PHMSA is also proposing new requirements in § 192.607 for verification of pipeline material and § 192.624 for MAOP verification would also apply to MCAs. PHMSA performed a Preliminary Regulatory Impact Analysis, using the

best available data and information. It is available on the docket and PHMSA invites comments on the PRIA.

B. Strengthening Requirements To Implement Preventive and Mitigative Measures for Pipeline Segments in HCAs

Section 192.935 requires gas transmission pipeline operators to take additional measures, beyond those already required by part 192, to prevent a pipeline failure and to mitigate the consequences of a potential failure in a HCA following the completion of a risk assessment. Section 192.935(a) specifies examples of additional measures, which include, but are not limited to installing automatic Shut-off Valves or Remote Control Valves; installing computerized monitoring and leak detection systems; replacing pipe segments with pipe of heavier wall thickness; providing additional training to personnel on response procedures; conducting drills with local emergency responders; and implementing additional inspection and maintenance programs. In the ANPRM, PHMSA expressed concern that these additional measures are not explicitly required. As a result, operators may not be employing the appropriate additional measures as intended. Section 192.935(b) specifies that operators are also required to enhance their damage prevention programs and to take additional measures to protect HCA segments subject to the threat of outside force damage (non-excavation). PHMSA also noted in the ANPRM that the provisions in § 192.935 only apply to HCAs and that the expansion of the HCA definition would increase the mileage of pipelines subject to § 192.935. Further, PHMSA acknowledged the consideration of expanding preventive and mitigative measures to pipelines outside of HCAs. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic B

1. INGAA suggested PHMSA can substantially improve prevention and mitigation of accidents caused by excavation damage by facilitating full implementation of state damage prevention programs. INGAA further suggested PHMSA actively promote the use of 811 one-call programs. INGAA noted excavation damage remains the most prevalent cause of serious incidents and failure to notify is a primary cause of these incidents. Many pipeline operators supported the INGAA comments.

2. INGAA, supported by many of its pipeline operator members, noted it has a policy goal to apply integrity management principles, voluntarily, to pipelines beyond HCAs. Their goal is to address 90 percent of the population near pipelines by 2020 and 100 percent by 2030 through application of appropriate principles from ASME/ANSI B31.8S.

3. AGA supported application of IM principles, but not assessment requirements, outside HCAs. AGA commented requiring operators to understand and address risks is a good application of IM principles. Many pipeline operators supported the AGA comments.

4. AGA commented the ANPRM incorrectly states that § 192.935 applies only to pipe within HCAs. AGA noted paragraph (d) of that section applies to low-stress pipe in Class 3 and 4 areas that is not in HCAs.

5. California Public Utilities Commission suggested pipelines installed prior to the promulgation of federal pipeline safety requirements (so-called “pre-code” pipe) be reassessed more frequently.

6. Alaska Natural Gas Development Authority commented Alaska’s experience indicates improved pipeline design and construction requirements are needed to assure pipeline integrity. These would include stronger pipe, improved requirements for mainline valves (including spacing and remote operation), and improved corrosion control. The Authority also commented that design requirements need to accommodate likely changes in class location, noting that explosive growth in some Alaska areas has resulted in rapid changes from Class 1 to Class 3.

7. One private citizen suggested some level of assessment should be required for all pipelines.

8. Another private citizen suggested integrity management plans for densely populated areas (Class 4 and Class 5—a new class suggested by the commenter encompassing cities with population greater than 100,000) should be developed in consultation with local emergency responders. The commenter further suggested these plans should be available at the FERC environmental impact study stage and should be reviewed with local authorities.

9. Another private citizen suggested information should be shared across pipeline operators, noting this would augment the knowledge of individual companies and improve safety. Similarly, the commenter suggested PHMSA require operators to submit a list of preventive and mitigative measures that have been implemented

and reports of their effectiveness. The commenter noted PHMSA should know this information but apparently does not, as indicated by questions posed in this ANPRM (particularly questions B.1 and B.2).

Comments Submitted for Questions in Topic B

B.1. What practices do gas transmission pipeline operators now use to make decisions as to whether/which additional preventive and mitigative measures are to be implemented? Are these decisions guided by any industry or consensus standards? If so, what are those industry or consensus standards?

1. Most industry commenters indicated ASME/ANSI B31.8S is a common standard used to guide decisions concerning preventive and mitigative measures. INGAA suggested enhancing this standard would be the best approach to provide additional guidance for selection and implementation of these measures. Other commenters also cited the GPTC Guide as a useful guideline. INGAA listed other standards used by pipeline operators, including:

- Common Ground Alliance Best Practices
- Pipelines and Informed Planning Alliance Recommended Practices
- API-RP 1162—Public Awareness Programs,
- API-RP 1166—Excavation Monitoring
- NACE SP0169, other associated NACE standards
- Gas Piping Technology Committee guidance materials
- RSTRENG—A Modified Criterion for Evaluating the Remaining Strength of Corroded Pipe
- INGAA Foundation Guidelines for Evaluation and Mitigation of Expanded Pipes

AGA also noted that operators are guided by their own risk assessments. Many pipeline operators supported the INGAA and AGA comments.

2. Northern Natural Gas reported it does not rely on a specific consensus standard to select preventive and mitigative measures. It relies, instead, on company subject matter experts guided by statistical analyses of their risk model.

3. Paiute and Southwest Gas reported they use an algorithm combining risk scores, threats, and the value of specific measures. Company engineers analyze the results of applying this algorithm and develop preventive and mitigative measure implementation plans.

4. An anonymous commenter noted many pipeline operators are implementing actions that could be

considered preventive and mitigative measures but these actions may not be identified as such if they are implemented as part of operations and maintenance activities and not specifically included in IM plans.

5. INGAA suggested PHMSA would benefit by applying ASME/ANSI B31.8S in its IM enforcement activities.

B.2. Have any additional preventive and mitigative measures been voluntarily implemented in response to the requirements of § 192.935? How prevalent are they? Do pipeline operators typically implement specific measures across all HCAs in their pipeline system, or do they target measures at individual HCAs? How many miles of HCA are afforded additional protection by each of the measures that have been implemented? To what extent do pipeline operators implement selected measures to protect additional pipeline mileage not in HCAs?

1. INGAA reported many pipeline operators have implemented additional preventive and mitigative measures. INGAA does not keep data on this and did not provide examples. Some pipeline operators submitted examples in support of the INGAA comments. Preventive and mitigative measures cited in these examples include:

- Additional reconnaissance (after seismic events, floods, etc.);
- Concrete mats over pipelines in areas particularly susceptible to excavation damage;
- Encroachment sensors;
- Remotely operated valves;
- Removal of casings;
- Completion of CIS surveys;
- Clearing of rights-of-way;
- Derating/deactivating of pipelines;
- Relocation of pipelines;
- Increased inspection of river crossings;
- Lowering of shallow pipelines;
- Installation of additional marker posts;
- Revising marking standards for locates;
- Completing depth-of-cover surveys;
- Enhancing right-of-way patrols.

In addition, one pipeline operator reported augmented implementation of many requirements of part 192 and implementation of some requirements (e.g., operator qualification) beyond their specified bounds.

2. AGA also reported many additional preventive and mitigative actions have been implemented but, again, does not keep data on them. Examples cited by AGA and its operator members included increased use of indirect inspection tools, increased patrols, and investigation of apparent instances of encroachment.

3. GPTC reported data is not collected concerning voluntary measures.

4. Texas Pipeline Association and Texas Oil & Gas Association similarly reported that they do not collect this data, and there was only limited response to a survey of their operators regarding this question. The associations reported their understanding that measures are not generally implemented system-wide.

5. California Public Utilities Commission reported some CA operators are stationing personnel at the location of excavations near transmission pipelines. CAPUC also noted California's one-call law requires a mandatory field meeting before any excavation near a transmission pipeline operating above 60 psi.

6. An anonymous commenter suggested operators avoid implementing non-required actions for fear they will lead to new requirements.

7. Industry comments indicated data is not collected concerning the extent of implementation of voluntary preventive and mitigative measures. Some measures are implemented in specific HCAs while others may be implemented more broadly across a pipeline system. The extent depends largely on the threat being addressed and its prevalence.

8. Northern Natural Gas reported it has implemented voluntary measures outside HCA, citing as examples high-visibility markers in Class 1 areas and use of LIDAR leak detection. Northern reported broad implementation of voluntary measures is more prevalent than site specific use.

9. MidAmerican reported virtually all of its transmission pipeline mileage is subject to at least one preventive and mitigative measure.

10. Paiute reported nine measures are applied to all of its 856 miles of transmission pipeline while 13 are applicable to all 27 miles of HCA.

11. Similarly, Southwest Gas has implemented nine measures on 841 miles and 13 on all 191 miles of HCA.

12. AGA reported that approximately 195,000 non-HCA miles have been assessed, generally through assessing pipe upstream and downstream of the HCA segment.

B.3. Are any additional prescriptive requirements needed to improve selection and implementation decisions? If so, what are they and why?

1. Industry commenters unanimously agreed no new prescriptive requirements are needed. INGAA pointed out selection of preventive and mitigative measures is based on criteria in consensus standards and operator judgment. INGAA contended this allows appropriate customization and results in

improved safety. AGA agreed, noting operators are in the best position to decide what is needed for their pipeline systems. GPTC stated that its Guide is sufficient, and there has been no demonstrated safety need for additional requirements. Several pipeline operators suggested conducting assessments and making repairs provides the most effective safety improvement.

2. Paiute and Southwest Gas suggested a best practices workshop to share industry experience could be beneficial.

3. Accufacts suggested additional prescriptiveness is needed to guide decisions regarding remote and automatically operated valves in HCA.

4. The Alaska Department of Natural Resources would suggest signoff by a professional engineer on preventive and mitigative action decisions.

5. The NTSB recommended improved use of metrics in inspection protocols, citing their recommendations P-11-18 and 19.

6. One private citizen suggested the lack of specifically-required actions in the regulations represents a deficiency in the pipeline safety regulatory program. The commenter suggested the extent of operator judgment be limited and that state and local officials should participate in developing a list of applicable preventive and mitigative actions.

7. An anonymous commenter suggested including more examples of preventive and mitigative actions in the regulations would help guide operator consideration of appropriate actions. The commenter also suggested operators be required to update their risk analyses, and selection of preventive and mitigative actions, more frequently including after changes in their pipeline systems or the occurrence of significant events.

B.4. What measures, if any, should operators be required explicitly to implement? Should they apply to all HCAs, or is there some reasonable basis for tailoring explicit mandates to particular HCAs? Should additional preventative and mitigative measures include any or all of the following: Additional line markers (line-of-sight); depth of cover surveys; close interval surveys for cathodic protection (CP) verification; coating surveys and recoating to help maintain CP current to pipe; additional right-of-way patrols; shorter ILI run intervals; additional gas quality monitoring, sampling, and inline inspection tool runs; and improved standards for marking pipelines for operator construction and maintenance and one-calls? If so, why?

1. INGAA, supported by many of its pipeline operator members, commented prescriptive requirements are not needed. INGAA contended prescriptive requirements are neither effective nor efficient and that ASME/ANSI B31.8S and the GPTC Guide provide sufficient guidance.

2. AGA commented one-call requirements and the actions required by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 are the only actions that should be required on a system-wide basis. AGA further suggested it could be appropriate to apply the additional measures required of low-pressure pipelines in § 192.935(d) to pipelines operating above 30 percent SMYS.

3. Texas Pipeline Association and Texas Oil & Gas Association recommended no new requirements be adopted applying specific preventive and mitigative actions throughout pipeline systems. The associations noted part 192 already requires application of some measures throughout pipeline systems and expressed their conclusion these already-specified measures are sufficient.

4. MidAmerican commented requiring application of specified measures throughout pipeline systems would provide a disincentive for the application of other measures which could be more appropriate.

5. The NTSB recommended requirements for leak detection in SCADA systems should be improved, citing their recommendation P-11-10.

6. California Public Utilities Commission recommended operators be required to station stand-by personnel at excavations near transmission pipelines and operator procedures should specify the actions these stand-by personnel must take. CPUC further suggested these standby activities should be a covered task under operators' personnel qualification programs.

7. Pipeline Safety Trust recommended PHMSA mandate the NTSB recommendations, noting many are similar to the specific measures suggested in this question. PST further commented operators should not be allowed sufficient latitude to render a regulation meaningless.

8. An anonymous commenter suggested the regulations should not specify particular preventive and mitigative measures but should emphasize consideration of potential accident consequences when selecting actions. The commenter noted there are too many variables to specify particular actions in regulation.

9. A private citizen suggested operators should be required to conduct drills with local responders periodically as part of their integrity management programs. The commenter noted such drills would improve coordination and would validate the ability to respond in the event of an emergency.

10. A private citizen suggested stronger enforcement is needed based on the belief that operators should already be taking many of the actions suggested in this question.

11. With respect to the specific actions suggested in this question:

a. Line-of-sight markers: National Utility Locating Contractors Association recommended line-of-sight markers be required, noting that they would reduce the instances of excavators failing to call for a locate, which the Common Ground Alliance's Damage Information Reporting Tool (DIRT) continues to indicate is a major cause of excavation damage. The Association further recommended the message on markers should be visible from all angles, noting that most current markers are only visible from two directions. The Commissioners of Wyoming County Pennsylvania, and MidAmerican suggested line-of-sight markers should be required, noting that they are a low-cost good practice for improving safety. An industry consultant disagreed, noting installation would be impractical in many areas where the sight line is obscured by crops, terrain, etc.

b. Depth of cover: MidAmerican opposed required depth of cover surveys, commenting they are not a good indicator of likely damage and such surveys are inherently inaccurate. Texas Pipeline Association and Texas Oil & Gas Association suggested compliance with depth of cover requirements over time is impractical. They noted operators do not have full control over rights of way and that owners can make changes. For example, a landowner may pave an area following grading which reduces the depth of cover. California Public Utilities Commission recommended depth of cover surveys be required wherever external corrosion direct assessment is applied and where vehicles or other loads capable of damaging the pipeline have access to the surface over the pipeline. Wyoming County Pennsylvania's Commissioners suggested depth of cover surveys be required as a good safety practice.

c. Close interval surveys: MidAmerican recommended against requiring these surveys. The company noted they are only one means of determining the adequacy of cathodic protection. The Commissioners of

Wyoming County Pennsylvania recommended such surveys be required as a good safety practice.

d. Coating surveys and re-coating: MidAmerican opposed a requirement for coating surveys, noting holidays are found and repaired through in-line inspection and external direct assessment. The company further noted pipe replacement is often a superior repair to recoating. The Wyoming County Commissioner commented periodic coating surveys are a good practice and recommended that they be required.

e. Additional right of way patrols: MidAmerican and the Wyoming County Commissioners agreed increased frequency of patrols would be appropriate. MidAmerican noted patrols are a relatively low cost action that generates useful data.

f. Shorter ILI intervals: MidAmerican opposed shorter intervals, noting many lines cannot accommodate in-line inspection or more frequent runs. The Wyoming County Commissioners argued that frequent assessment is a good practice that should be required.

g. Additional gas quality monitoring: MidAmerican opposed such a requirement, arguing it would be redundant for distribution pipeline operators receiving gas from suppliers. The Wyoming County Commissioners argued frequent gas monitoring would be a good practice.

h. Improved pipeline marking standards: MidAmerican agreed implementing new marking standards would be a low cost action. Wyoming County again noted this is a good practice.

B.5. Should requirements for additional preventive and mitigative measures be established for pipeline segments not in HCAs? Should these requirements be the same as those for HCAs or should they be different? Should they apply to all pipeline segments not in HCAs or only to some? If not all, how should the pipeline segments to which new requirements apply be delineated?

1. INGAA, supported by many of its member companies, argued preventive and mitigative measures should be applied to non-HCA areas on a risk basis rather than by prescriptive requirement. INGAA commented this is a more effective and efficient means of increasing pipeline safety.

2. AGA commented codifying different requirements for non-HCA areas would likely cause confusion and extending existing IM requirements to non-HCA areas would create an enormous burden for PHMSA and states. AGA noted the NTSB has already

questioned the ability of regulators to apply the existing IM inspection protocols to HCA mileage. AGA recommended one-call and the actions required by statute be the only additional measures required system-wide.

3. GPTC, Texas Pipeline Association, Texas Oil & Gas Association, and two pipeline operators opposed requirements for preventive and mitigative actions in non-HCA areas. These commenters argued it is important to allow pipeline operators the flexibility to select actions that are appropriate to their circumstances and implementing actions required arbitrarily would be expensive and ineffective.

4. Northern Natural Gas suggested PHMSA expand the HCA definition gradually over time rather than imposing IM requirements outside HCA. Northern commented such an approach would retain and expand the focus on areas posing the highest risk.

5. MidAmerican opposed additional requirements for preventive and mitigative actions, noting all pipeline is covered by other requirements in part 192 and it is better to focus enhanced requirements on areas posing highest risk.

6. AGA commented measures required in HCA should always be equal to or more stringent than measures required outside of HCA. AGA noted this is a fundamental principle of integrity management: Focusing on areas posing higher risks.

7. Ameren Illinois and an anonymous commenter suggested better enforcement and/or specificity for provisions requiring operators consider other areas of their systems when problems are discovered would be more effective than requiring preventive and mitigative measures outside HCA.

8. ITT Exelis Geospatial Systems commented requirements should be the same in- or outside HCA. They contended non-HCA areas are not monitored for leakage as often as Class 3 and 4 locations. They suggested their LIDAR system would allow effective and efficient leak surveys in all locations.

9. A public citizen recommended exposed pipe be wrapped in bright colors and protected from damage whether inside or outside of HCA. The commenter suggested analysis of data from CGA's Damage Information Reporting Tool would be an effective preventive measure.

B.6. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible.

In addition, PHMSA requests commenters to provide information and supporting data related to, among other factors, the potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.

1. Northern Natural Gas reported the additional cost of preventative and mitigative measures it employs, including instrumented aerial leakage surveys, close-interval surveys, additional mailings and additional signage, has been approximately \$950,000. Northern further reported the approximate cost of conducting assessments through in-line inspection or pressure testing for all high-consequence areas every seven years is \$45,000,000 and reduction of the inspection interval would increase the cost accordingly.

Response to Topic B comments

Section 5 of the Act requires that the Secretary of Transportation complete an evaluation and issue a report on whether integrity management requirements should be expanded beyond HCAs and whether such expansion would mitigate the need for class location requirements. Aspects of this topic that relate to applying a risk analysis to determine additional preventive and mitigative measures for non-HCA pipeline segments will be addressed later, pending completion of the evaluation and report. PHMSA will review the comments received on this topic and will address them in the future in light of these statutory requirements.

Section 3 of the Act requires that the Secretary of Transportation complete an evaluation and issue a report on the impact of excavation damage on pipeline safety. Aspects of this topic that relate to additional preventive and mitigative measures for damage prevention will be addressed after completion of the evaluation and report. PHMSA will review the comments received on this topic and will address them in the future in light of this evaluation and report.

Section 6 of the Act requires that the Secretary of Transportation provide guidance on public awareness and emergency response plans. Aspects of this topic that relate to additional preventive and mitigative measures for public awareness and emergency response will be further evaluated in conjunction with this statutory mandate. PHMSA will review the comments received on this topic and will address them in the future in light of this evaluation.

Two specific areas of preventive and mitigative actions addressed in the IM requirements (49 CFR 192.935) are leak detection and automatic/remote control valves. The IM rule does not require specific measures be taken to address these aspects of pipeline design and operations, but does include them among candidate preventive and mitigative measures operators should consider. Both of these topics are the subject of recommendations that the NTSB made (recommendations P-11-10 and P-11-11) following the San Bruno explosion. In response to these recommendations, PHMSA conducted a public workshop on March 27, 2012, to seek stakeholder input on these issues, and is sponsoring additional research and development to further inform PHMSA's response on these issues. Aspects of this topic that relate to leak detection and automatic/remote control valves will be addressed after completion and evaluation of the above activities. PHMSA will review the comments received on leak detection and automatic/remote control valves and will address them in the future in light of this evaluation.

PHMSA is proposing to add requirements for enhanced preventive and mitigative measures to address internal and external corrosion control. The intent of the IM rulemaking is to enhance protections for high consequence areas. PHMSA believes that enhanced requirements for internal corrosion and external corrosion control are prudent. To address internal corrosion, PHMSA is proposing specific requirements for operators to monitor gas quality and contaminants and to take actions to mitigate adverse conditions. To address external corrosion, PHMSA is proposing specific requirements for operators to monitor and confirm the effectiveness of external corrosion control through electrical interference surveys and indirect assessments, including cathodic protection surveys and coating surveys, to take actions needed to mitigate conditions that are unfavorable to effective cathodic protection, and to integrate the results of these surveys with integrity assessment and other integrity-related data. PHMSA addresses this topic in more detail in response to comments related to Topic I, Corrosion Control.

Note: Specific comments submitted for Topic B that are related to risk and integrity assessments are addressed under Topics E and G.

C. Modifying Repair Criteria

The existing integrity management regulations establish criteria for the timely repair of injurious anomalies and defects discovered in the pipe (49 CFR 192.933). These criteria apply to pipeline segments in an HCA, but not to segments outside an HCA. The ANPRM announced that PHMSA is considering amending the integrity management rule by revising the repair criteria to provide greater assurance that injurious anomalies and defects are repaired before the defect can grow to a size that leads to a leak or rupture. In addition, PHMSA is considering establishing repair criteria for pipeline segments located in areas that are not in an HCA in order to provide greater assurance that defects on non-HCA pipeline segments are repaired in a timely manner. The following are general comments received related to the topic and then comments related to the specific questions:

General Comments for Topic C

1. INGAA reported its members' commitment to apply ASME/ANSI B31.8S corrosion anomaly criteria both inside and outside of HCAs. INGAA noted that new research to refine and extend the technical bases for responding to corrosion anomalies identified primarily by ILI has been completed by Pipeline Research Council International, whose report was expected to be published in the first quarter of 2012. INGAA also reported a commitment to develop and use criteria for mitigation of dents, corrosion pitting, expanded pipe corrosion, and selective seam weld corrosion. Numerous pipeline operators supported INGAA's comments.

2. AGA suggested that ASME/ANSI B31.8S should be the basis for defining anomalies requiring remediation. Anomalies not meeting the criteria in that standard, in AGA's opinion, do not require repair. AGA further commented that risk prioritization of maintenance and anomaly response should not be regulated because operators are in the best position to know the factors influencing prioritization for apparently-similar anomalies. AGA also suggested that PHMSA review INGAA's paper "Anomaly Response and Mitigation Outside of High Consequence Areas when Using in Line Inspection," dated May 30, 2010, as this paper forms the basis for current industry response outside of HCAs. Numerous pipeline operators supported AGA's comments.

3. Accufacts contended that there have been too many corrosion-caused ruptures occurring shortly after in-line

inspection runs and that this indicates the need for more prescriptive criteria for corrosion evaluation and remediation.

4. Alaska Department of Natural Resources commented that repairs should be made using permanent methods, and that clamps and similar repairs are not sufficient.

Response to General Comments for Topic C

PHMSA appreciates the information provided by the commenters. Because the current repair criteria only address corrosion metal loss as an immediate condition, PHMSA agrees that more prescriptive repair criteria are needed to address significant corrosion metal loss that does not meet the immediate repair criterion, similar to the hazardous liquid integrity management repair criteria at 49 CFR 195.452(h). In addition, other conditions that are not currently addressed in the repair criteria, such as stress corrosion cracking and selective seam weld corrosion, are addressed in ASME B31.8S and other sources, but not explicitly addressed in part 192. PHMSA is proposing to enhance the repair criteria for HCA segments and is also proposing to add specific repair criteria for pipeline in non-HCA segments. In general, PHMSA is proposing to add more immediate repair conditions and more one-year conditions for HCA segments. The additional criteria address conditions not previously addressed, such as stress corrosion cracking, and also include more specific one-year criteria for corrosion metal loss, based on the design factor for the class location in which the pipeline is located, to address corrosion metal loss that reduces the design safety factor of the pipe. PHMSA is also proposing to apply similar repair criteria in non-HCA segments, except that response times will be tiered, with longer response times for non-immediate conditions. PHMSA reviewed available industry literature, including ASME/ANSI B31.8S, in developing the proposed repair criteria. Specific aspects of the proposed rules are discussed in response to the specific questions for Topic C, below.

PHMSA has not addressed the specific procedures and techniques for performing repairs in this rulemaking, but may do so at a later date.

Comments Submitted for Questions in Topic C

C.1. Should the immediate repair criterion of failure pressure ratio (FPR) ≤ 1.1 be revised to require repair at a higher threshold (i.e., additional safety margin to failure)? Should repair safety

margins be the same as new construction standards? Should class location changes, where the class location has changed from Class 1 to 2, 2 to 3, or 3 to 4 without pipe replacement have repair criteria that are more stringent than other locations? Should there be a metal loss repair criterion that requires immediate or a specified time to repair regardless of its location (HCA and non-HCA)?

1. INGAA, supported by numerous pipeline operators, commented the FPR criterion need not be changed, noting there have been no reported incidents due to the criterion being too lax. INGAA also objected to PHMSA's characterization of this issue, noting that repair criteria already exceed 1.1 FPR; the 1.1 FPR criterion in the regulations governs response to anomalies and not the criteria to which repairs must be made.

2. AGA, supported by numerous of its pipeline operator members, commented that the FPR criterion should not be changed. AGA contended that the criterion already provides a 10 percent safety margin and is based on sound engineering practices.

3. Northern Natural Gas and Kern River stated that conservatism is present in burst pressure calculations and in the measurement of anomalies (considering tool tolerance), providing a safety margin greater than 10 percent.

4. Accufacts argued against changing the FPR criterion, but suggested that PHMSA require operators to use better assumptions in their failure analyses. Accufacts suggested that the regulations should focus on preventing failures but that existing safety margins need not be increased.

5. Texas Pipeline Association, Texas Oil & Gas Association, Atmos, and MidAmerican opposed changes to this criterion. These commenters noted that experience through the baseline inspections has demonstrated the criterion is adequate and ASME/ANSI B31.8S remains a good guide for anomaly response. Atmos added that this criterion separates immediate repairs from scheduled repairs: It allows a risk-based focus on more serious anomalies but does not mean that anomalies providing more than 10 percent margin to burst pressure are never addressed.

6. California Public Utilities Commission suggested that the FPR criterion be increased to 1.25 times MAOP. CPUC noted that the 10 percent margin in the current criterion can be completely erased by the 10 percent margin to safety relief settings allowed by § 192.201.

7. INGAA commented that additional repair criteria are not needed. INGAA noted that §§ 192.485(a) and 192.713(a) already specify repair criteria applicable to pipe outside HCA. Numerous pipeline operators supported INGAA's comments.

8. AGA, supported by numerous of its pipeline operator members, suggested that safety margins for repairs need not be the same as those for new construction. AGA argued that the construction margins are intended to address potential unknowns and forces applied during construction, which are not applicable to repairs.

9. Accufacts, Northern Natural Gas, and an anonymous commenter agreed that repairs, once initiated, should meet new construction safety margins.

10. INGAA and several of its pipeline operator members argued that repair criteria should not be more stringent where class location has changed. INGAA noted that § 192.611 does not change the original design criteria for segments that have been subject to a change in class location and there is no incident experience suggesting that additional safety margin is needed in these cases.

11. Northern Natural Gas and Kern River argued against a change in repair criteria where class location has changed, noting that the likelihood of failure of an anomaly is not affected by the class location and that treatment in accordance with integrity management requirements already considers risk.

12. MidAmerican, Paiute, and Southwest Gas added that use of the factor failure pressure divided by MAOP in ASME/ANSI B31.8S already reflects any change in MAOP necessitated by a change in class location.

13. Accufacts commented that repair criteria should be commensurate with the more restrictive design criteria of higher class locations.

14. INGAA commented no new metal loss criterion is needed, noting that its members use HCA response criteria as a guide for responding to indications of metal loss outside of HCAs. Numerous pipeline operators supported INGAA's comments.

15. AGA commented any metal loss criterion should reflect current science and should be the same regardless of class location. AGA suggested that immediate response to any indication of a dent with metal loss is not needed, noting that there have been many examples of dents with metal loss not sufficient to require recalculating remaining strength. AGA also noted the external corrosion direct assessment standard requires a similar response regardless of whether an indication is in

or outside HCA. Numerous pipeline operators supported AGA's comments.

16. Accufacts encouraged PHMSA to establish a prompt-action criterion for wall loss inside or outside HCAs, suggesting the focus should be on preventing ruptures regardless of where they occur. Accufacts also cautioned PHMSA against accepting studies attempting to show that 80 percent wall loss is sometimes acceptable, and stated that continued operation with such wall loss is too risky for onshore pipelines.

Response to Question C.1 Comments

PHMSA appreciates the information provided by the commenters. The majority of comments supported no changes to the immediate repair criterion of predicted failure pressure of less than or equal to 1.1 times MAOP for HCAs, and PHMSA is not proposing to change this criterion; however, PHMSA is proposing several changes to enhance the repair criteria both for HCA segments and non-HCA segments. For immediate conditions, PHMSA proposes to add the following to the immediate repair criteria: Metal loss greater than 80% of nominal wall thickness, indication of metal-loss affecting certain types of longitudinal seams, significant stress corrosion cracking, and selective seam weld corrosion. These additional repair criteria would address specific issues or gaps with the existing criteria. The methods specified in the IM rule to calculate predicted failure pressure are explicitly not valid if metal loss exceeds 80% of wall thickness. Corrosion affecting a longitudinal seam, especially associated with seam types that are known to be susceptible to latent manufacturing defects such as the failed pipe at San Bruno, and selective seam weld corrosion are known near-term integrity threats. Stress corrosion cracking is listed in ASME B31.8S as an immediate repair condition, which is not reflected in the current IM regulations. PHMSA proposes to add requirements to address these gaps.

The current regulations include no explicit metal loss repair criteria, other than one immediate condition. The regulations direct operators to use Figure 4 in ASME B31.8S to determine non-immediate metal loss repair criteria. PHMSA now proposes to explicitly include selected metal loss repair conditions in the one-year criteria. These proposed criteria are consistent with similar criteria currently invoked in the hazardous liquid integrity management rule at 40 CFR 195.452(h). In addition, PHMSA proposes to incorporate safety factors commensurate with the class location in

which the pipeline is located, to include predicted failure pressure less than or equal to 1.25 times MAOP for Class 1 locations, 1.39 times MAOP for Class 2 locations, 1.67 times MAOP for Class 3 locations, and 2.00 times MAOP for Class 4 locations in HCAs. Lastly, in response to the lessons learned from the Marshall, Michigan, rupture, PHMSA proposes to include any crack or crack-like defect that does not meet the proposed immediate criteria as a one year condition. PHMSA proposes to apply these same criteria as two-year conditions for non-HCAs.

PHMSA agrees with Accufacts' comment that the regulations should focus on preventing failures but that existing safety margins are adequate when properly applied. Therefore, the proposed rule does not propose to increase safety margins such as the design factor. PHMSA maintains that the proposed changes discussed above provide a tiered, risk-based approach to metal loss repair criteria and by requiring predicted failure pressures as a function of class locations does not compound safety margins. Counter to INGAA's and AGA's comments that repair criteria should not be more stringent where class location has changed, PHMSA believes the tiered approach to metal loss repair criteria, which is a function of class location, provides a logical framework to address the risk presented by these types of pipeline anomalies.

In conjunction with enhanced repair criteria, PHMSA is proposing specific new regulations to require that operators properly analyze uncertainties and other factors that could lead to non-conservative predictions of failure pressure, and time remaining to failure, when evaluating ILI anomaly indications. PHMSA specifically is proposing that operators must analyze specific known sources of uncertainty regarding ILI tool performance, anomaly interactions, and other sources of uncertainty when determining if an anomaly meets any repair criterion.

C.2. Should anomalous conditions in non-HCA pipeline segments qualify as repair conditions subject to the IM repair schedules? If so, which ones? What projected costs and benefits would result from this requirement?

1. INGAA suggested that new criteria are not needed, commenting that operators generally treat non-HCA anomalies in a manner similar to HCA anomalies, except for response time. INGAA stated that industry costs to address non-HCA anomalies should be nominal unless immediate response is required because this is consistent with current operator practice, which INGAA

stated is to apply ASME/ANSI B31.8S response criteria for anomalies both inside and outside HCAs.

2. Texas Pipeline Association and Texas Oil & Gas Association commented that differing repair criteria, if any, should be based upon the population at risk, since there is no valid engineering basis for treating anomalies differently depending on location.

3. Atmos and Northern Natural Gas suggested that non-HCA anomalies should be treated like HCA anomalies, although additional schedule flexibility should be allowed. Northern reported that it applies HCA metal loss criteria everywhere because it is prudent, although response time differs for non-HCA anomalies. Northern reported that it has expended approximately \$7.7 million on anomaly repairs, \$7 million of which was outside an HCA.

4. Kern River agreed that IM schedules are too stringent to apply everywhere and providing schedule flexibility will reduce costs.

5. MidAmerican disagreed with the suggestion that non-HCA and HCA anomalies be treated alike. MidAmerican commented that it is illogical to back off from focusing sooner on anomalies that pose greater risks.

6. California Public Utilities Commission commented that all locations identified by the method described in paragraph 1 in the definition of HCA in § 192.903 should be subject to HCA repair criteria.

7. Pipeline Safety Trust, Accufacts, and NAPSR commented that the same repair criteria and response schedule should apply regardless of where an anomaly is located. These commenters contended that there is no logical justification for different treatment, that any risk to the pipeline and public safety should be resolved, and that a pipeline accident anywhere is seen by the public as a failure to exercise adequate control of pipeline safety. NAPSR, in particular, suggested that all anomalies should be repaired immediately, regardless of where they are located.

8. Iowa Utilities Board, Iowa Association of Municipal Utilities, GPTC, Nicor, Ameren Illinois and an anonymous commenter contended that HCA repair criteria should not be applied outside HCAs. These commenters noted that there has been no demonstrated safety need for new criteria, that non-HCA anomalies are adequately addressed under existing operations and maintenance requirements, and that the cost to apply HCA repair criteria everywhere is not justified. IAMU particularly noted that

existing requirements are adequate for small, low-pressure transmission pipelines such as those operated by its members.

9. A private citizen supported application of HCA repair criteria in non-HCA areas, particularly where there are “receptors,” which the commenter defines as “something which needs to be protected.”

Response to Question C.2 Comments

PHMSA appreciates the information provided by the commenters. PHMSA proposes to modify the general requirement for repair of pipelines to include immediate repair condition criteria, one-year conditions, and monitored conditions. The definition of these conditions would be the same as the existing definitions for covered segments (*i.e.*, HCA segments) in the IM rule; however, PHMSA proposes that those conditions that must be repaired within one year in a HCA segment would be required to be repaired within two years in a non-HCA segment. Defects that meet any of the immediate criteria are considered to be near-term threats to pipeline integrity and would be required to be repaired immediately regardless of location.

PHMSA believes that establishing these non-HCA segment repair conditions are important because, even though they are not within the defined high consequence locations, they could be located in populated areas and are not without consequence. For example, as reported by operators in the 2011 annual reports, while there are approximately 20,000 miles of gas transmission pipe in HCA segments, there are approximately 65,000 miles of pipe in Class 2, 3, and 4 populated areas. PHMSA believes it is prudent and appropriate to include criteria to assure the timely repair of injurious pipeline defects in non-HCA segments. These changes will ensure the prompt remediation of anomalous conditions on all gas pipeline segments while allowing operators to allocate their resources to high consequence areas on a higher priority basis.

C.3. Should PHMSA consider a risk tiering—where the conditions in the HCA areas would be addressed first, followed by the conditions in the non-HCA areas? How should PHMSA evaluate and measure risk in this context, and what risk factors should be considered?

1. INGAA, and many pipeline operators, opposed the suggested tiering. They commented that anomalies meeting response criteria should be addressed in an appropriate time frame whether inside or outside HCAs.

2. AGA, supported by many of its operator members, suggested that PHMSA not adopt any risk tiering beyond the current requirements to focus first on HCA anomalies. AGA noted that outside factors, *e.g.*, permitting, affect the timing and the sequence of repairs.

3. Texas Pipeline Association and Texas Oil & Gas Association commented that PHMSA should allow risk tiering system-wide, not just in differentiating between responses in and outside HCA. The associations suggested that this could be an improvement to requirements addressing anomalies. At the same time, they noted the description in the ANPRM is sketchy and requested PHMSA propose specific requirements for comment.

4. Iowa Association of Municipal Utilities commented that no new requirements are needed, and that the existing requirements are sufficient for the small, low-stress transmission pipelines operated by its members.

5. Atmos commented that the risk tiering concept is confusing and stated that it was considered and rejected when the initial IM rules were promulgated.

6. Northern Natural Gas commented that allowing a longer response time for anomalies outside HCA would be a form of risk tiering. The company reported it has incorporated this practice in its procedures.

7. Accufacts agreed that a focus on HCA anomalies is needed but cautioned against ignoring anomalies outside HCAs. Accufacts noted the progression of an anomaly to failure does not depend on whether or not it is located in an HCA.

Response to Question C.3 Comments

PHMSA appreciates the information provided by the commenters. Current regulations do not prescribe response timeframes for anomalies outside HCAs. As stated by Northern Natural Gas, allowing a longer response time for anomalies outside HCAs (compared to response times for anomalies inside HCAs) would be a form of risk-tiering. PHMSA is proposing such an approach, which would establish three timeframes for performing repairs in non-HCA areas: Immediate repair conditions, 2-year repair conditions, and monitored conditions. These changes will ensure the prompt remediation of anomalous conditions on all gas pipeline segments, while allowing operators to allocate their resources to those areas that present a higher risk.

C.4. What should be the repair schedules for anomalous conditions discovered in non-HCA pipeline

segments through the integrity assessment or information analysis? Would a shortened repair schedule significantly reduce risk? Should repair schedules for anomalous conditions in HCAs be the same as or different from those in non-HCAs?

1. INGAA commented that repair schedules outside HCAs should be similar to those in HCAs but should allow for more scheduling latitude. This comment was supported by comments received from many of its operator members. They also noted that adding requirements to repair non-HCA anomalies would significantly increase the number of required repairs and that an inappropriate requirement for rapid response would dilute the focus on risk-significant repairs. INGAA suggested that repair schedules should be more a function of anomaly growth rates than location along the pipeline. INGAA further suggested that inappropriately rapid response schedules would increase risk; experience shows that most anomalies that have been found and repaired are old, do not require a rapid response, and that mandating rapid response to such anomalies would necessarily dilute other safety activities.

2. Texas Pipeline Association and Texas Oil & Gas Association expressed doubt that significant risk reduction would result from shortened repair schedules, given the logistics and related work involved in repairs.

3. GPTC, Nicor, and an anonymous commenter objected to applying HCA repair criteria outside HCAs. They believe that the costs for such an approach are not justified and non-HCA anomalies are appropriately dealt with under operations and maintenance requirements and procedures.

4. Ameren Illinois, Paiute, and Southwest Gas agreed that prescriptive repair schedules are not needed outside HCAs. They expressed a belief that operators must have scheduling flexibility to accommodate the needs of their operations.

5. MidAmerican suggested that immediate repair criteria be applied both in HCAs and outside HCAs, but that other criteria be limited to HCAs.

6. Northern Natural Gas suggested that PHMSA should require operators to determine response schedules for non-HCA anomalies as part of this rulemaking.

7. Iowa Association of Municipal Utilities commented that the existing requirements are sufficient for the small, low-stress transmission pipelines operated by its members.

8. California Public Utilities Commission commented that all method

1 HCA locations should be subject to HCA repair criteria.

9. MidAmerican, Paiute, and Southwest Gas commented that shortened response schedules will not reduce risk. These operators suggested that response times should be based on risk rather than being established arbitrarily.

Response to Question C.4 Comments

PHMSA appreciates the information provided by the commenters. PHMSA believes repair schedules outside HCAs should be similar to those in HCAs but should allow for more scheduling latitude. PHMSA proposes to establish three timeframes for remediating defects in non-HCA areas: Immediate repair conditions, 2-year repair conditions (rather than one-year for HCAs), and monitored conditions. These changes will ensure the prompt remediation of anomalous conditions on all gas pipeline segments, commensurate with risk, while allowing operators to allocate their resources to those areas that present a higher risk.

C.5. Have ILI tool capability advances resulted in a need to update the "dent with metal loss" repair criteria?

1. INGAA commented that ILI tool capabilities have improved to the point where it is appropriate to revise the dent-with-metal loss criterion. This comment was supported by comments received from many of its operator members. INGAA suggested that Section 851.4(f) of ASME/ANSI B31.8 provides appropriate guidance in this area.

2. AGA suggested that it would be appropriate to eliminate the immediate response criterion for "dent with metal loss." This comment was supported by comments received from many of its operator members. They commented that industry experience has shown that many dents do not require immediate repair.

3. Texas Pipeline Association, Texas Oil & Gas Association, MidAmerican, Paiute, Southwest Gas, and Atmos supported revising this criterion. These commenters noted that improvements in ILI allow better distinction between a gouge and corrosion wall loss. MidAmerican further commented that there are problems with implementing § 192.933 as written.

4. Northern Natural Gas stated that it would support treating these anomalies as mechanical damage, and suggested that this would simplify the regulations.

5. Ameren Illinois suggested further study of this proposal taking into account current ILI technology.

6. Accufacts and an anonymous commenter opposed changes to this criterion. These commenters suggested

that ILI is still not adequate to determine reliably the time to failure of this compound threat.

7. GPTC and Nicor suggested that PHMSA consider updating the Dent Study technical report³⁵ that discusses reliability and application of ILI.

Response to Question C.5 Comments

PHMSA appreciates the information provided by the commenters. PHMSA is not proposing to update the dent-with-metal-loss criterion at this time. PHMSA will continue to evaluate this criterion, including consideration of additional research to better define the repair criteria for this specific type of defect.

C.6. How do operators currently treat assessment tool uncertainties when comparing assessment results to repair criteria? Should PHMSA adopt explicit voluntary standards to account for the known accuracy of in-line inspection tools when comparing in-line inspection tool data with the repair criteria? Should PHMSA develop voluntary assessment standards or prescribe ILI assessment standards including wall loss detection threshold depth detection, probability of detection, and sizing accuracy standards that are consistent for all ILI vendors and operators? Should PHMSA prescribe methods for validation of ILI tool performance such as validation excavations, analysis of as-found versus as-predicted defect dimensions? Should PHMSA prescribe appropriate assessment methods for pipeline integrity threats?

1. INGAA, supported by many of its member companies, reported that operators use many methods to accommodate ILI uncertainties, not simply adding tool tolerance to results. INGAA suggested API-1163, In-line Inspection Systems Qualification Standard, as an appropriate guide. INGAA noted this standard is non-prescriptive; INGAA expressed its belief prescriptive standards would stifle innovation. INGAA also reported that ASME has plans to update its standard on "Gas Transmission and Distribution Piping Systems," ASME/ANSI B31.8S, regarding treatment of uncertainties based on the results of Pipeline Research Council International (PRCI) research that was underway at the time comments were submitted.

2. AGA and a number of pipeline operators suggested that tool tolerances should be added to ILI results.

3. Texas Pipeline Association, Texas Oil & Gas Association, and Atmos

reported their understanding that most operators follow ASME/ANSI B31.8S as a guide.

4. Northern Natural Gas and Kern River expressed their conclusion that PHMSA's Gas Integrity Management Program Frequently Asked Question FAQ-68 provides sufficient guidance on the treatment of uncertainties (FAQs can be viewed at <http://primis.phmsa.dot.gov/gasimp/faqs.htm>). They noted that technology is developing rapidly in this area, which they imply is a reason not to impose prescriptive requirements.

5. Texas Pipeline Association and Texas Oil & Gas Association agreed that prescriptive requirements should not be imposed, because the rapidly-developing technology would soon render them obsolete.

6. GPTC, Nicor, MidAmerican, and Atmos argued that prescriptive methods for validating tool performance are not an appropriate subject for regulation.

7. Ameren Illinois commented that it sees no technical justification for establishing requirements in this area.

8. Accufacts suggested that PHMSA specify minimum standards for ILI validation, including specifying a required number of digs. Alaska Department of Natural Resources and California Public Utilities Commission took a similar stance, all arguing that standards assure public confidence and consistency of results.

9. A private citizen commented that voluntary standards are not sufficient because they cannot be enforced.

10. An anonymous commenter recommended against adopting requirements for treatment of inaccuracies. The commenter opined that operators are doing better in this area, contending that smaller operators, in particular, needed time to learn. The commenter suggested that specific rules would set many operators back.

11. INGAA and many of its pipeline operators commented that incorporating standards into part 192 that compete with industry standards would be counterproductive. INGAA noted that API-1163, API-579-1, Fitness-for-Service, and ASNT ILI-PQ, In-Line Inspection Personnel Qualification and Certification Standard, are already in wide use and contended specifying standards in the regulations would stifle further development.

12. GPTC and Nicor agreed with INGAA, noting that the regulatory approval process cannot keep up with technological development.

13. Northern Natural Gas recommended that PHMSA not adopt standards for addressing ILI inaccuracies, contending the many

³⁵ Baker and Kiefner & Associates, "Dent Study Technical Report," (November 2004, OPS TTO Number 10, available at <http://primis.phmsa.dot.gov/gasimp/techreports.htm>).

different tools currently in use would make this impractical.

14. MidAmerican reported its belief that operators have sufficient incentive to work with ILI vendors to assure appropriate validation of ILI results.

15. Paiute and Southwest Gas argued against adoption of regulatory standards to treat ILI uncertainties, noting that this subject is already addressed in ASME/ANSI B31.8S.

16. AGA, supported by a number of its member companies, suggested that PHMSA should not prescribe IM methods, noting that operators have demonstrated the ability to conduct assessments without them.

17. Accufacts, Alaska Natural Gas Development Authority, and California Public Utilities Commission argued for requirements prescribing assessment methods for various threats. These commenters suggested that such requirements would be a bridge to better risk management strategies and contended that there is currently an over-reliance on direct assessment.

Response to Question C.6 Comments

PHMSA appreciates the information provided by the commenters. The majority of comments do not support adopting explicit standards or analytical methodologies to account for the known accuracy of in-line inspection tools. PHMSA concurs that prescriptive rules to account for the accuracy of in-line inspection tools is not practical, however it is beneficial to all to clarify PHMSA's expectations with respect to current performance-based regulations in this area which specify that internal inspection may be used to identify and evaluate potential pipeline threats. Therefore, PHMSA proposes to add detailed performance-based rule language to require that operators using ILI must explicitly consider uncertainties in reported results (including tool tolerance, anomaly findings, and unity chart plots or equivalent for determining uncertainties) in identifying anomalies. While ASME/ANSI B31.8S discusses uncertainties, PHMSA believes it will improve the visibility and emphasis on this important issue to explicitly address uncertainties in the rule text.

C.7. Should PHMSA adopt standards for conducting in-line inspections using "smart pigs," the qualification of persons interpreting in-line inspection data, the review of ILI results including the integration of other data sources in interpreting ILI results, and/or the quality and accuracy of in-line inspection tool performance, to gain a greater level of assurance that injurious pipeline defects are discovered? Should

these standards be voluntary or adopted as requirements?

1. AGA and its pipeline operator members argued against the adoption of standards. AGA commented that voluntary use has proven to be sufficient and expressed its position that consensus standards should not be adopted into regulations until widespread experience has been gained with their use. AGA contended that premature adoption would stifle technological innovation.

2. INGAA and many of its members commented that PHMSA's process for review and adoption of standards must be streamlined if existing consensus standards are incorporated into regulations. Such improvements, INGAA contended, would assure that standard improvements are adopted without delay.

3. An anonymous commenter, GPTC, and Nicor cited similar concerns in suggesting that standards not be adopted into regulations, contending that the rulemaking process cannot keep up with technological change.

4. Texas Pipeline Association and Texas Oil & Gas Association objected to the adoption of ILI standards in regulations, contending that voluntary use is more appropriate.

5. MidAmerican commented that operator qualification requirements should be applied to ILI, as this would provide higher assurance of defect discovery. Beyond this, however, MidAmerican contended that the use of consensus standards should remain voluntary, as this allows the operator to select those standards most appropriate to its circumstances.

6. Paiute and Southwest Gas objected to the incorporation of ILI standards into regulations. The companies expressed a belief that there is no technical basis for doing so. They commented that the question, as posed in the ANPRM, implies that anomalies are not now being found and contended that there is no evidence to support this implication.

7. A private citizen, Thomas Lael, and Alaska Department of Natural Resources commented that PHMSA should require operators to meet specified standards. Mr. Lael referred to an incident that occurred following a pipeline assessment conducted in Ohio in 2011; Mr. Lael contended that the reasons the incident cause was not identified by the assessment are unknown to the public.

8. Pipeline Safety Trust commented that PHMSA should assure assessment tools are capable and are used properly.

9. The NTSB recommended that PHMSA require all pipelines to be made

piggable, giving priority to older lines, citing their recommendation P-11-17.

Response to Question C.7 Comments

PHMSA appreciates the information provided by the commenters. The majority of industry comments do not support the incorporation of ILI standards into regulations. However, based on the information presented below, PHMSA has concluded that it is prudent to propose incorporating available consensus ILI standards into the regulations. The current pipeline safety regulations for integrity management of segments in HCAs contained in 49 CFR 192.921 and 192.937 require that operators assess the material condition of pipelines in certain circumstances and allow use of in-line inspection tools for these assessments. PHMSA proposes to incorporate similar requirements for non-HCA pipe segments in § 192.710. Operators are required to follow the requirements of ASME/ANSI B31.8S in selecting the appropriate ILI tools. However, ASME B31.8S provides only limited guidance for conducting ILI assessments. At the time the integrity management rules were promulgated, there was no consensus industry standard that addressed performance of ILI. Three related standards have since been published: API STD 1163-2005, NACE SP0102-2010, and ANSI/ASNT ILI-PQ-2010. API-1163 serves as an umbrella document to be used with and complement the NACE and ASNT standards. These three standards have enabled service providers and pipeline operators to provide processes that will qualify the equipment, people, processes, and software utilized in the in-line inspection industry. The incorporation of these standards into pipeline safety regulations developed through best practices of the industry based on the experience of numerous operators will promote high quality and more consistent assessment practices. Therefore, PHMSA is proposing to incorporate these industry standards into the regulations to provide clearer guidance for conducting integrity assessments with in-line inspection. PHMSA will continue to evaluate the need for additional guidance for conducting integrity assessments.

C.8. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements*

pursuant to the commenter's suggestions.

- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*

- *The potential impacts on small businesses of modifying the existing regulatory requirements.*

- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

D. Improving the Collection, Validation, and Integration of Pipeline Data

The ANPRM requested comments regarding whether more prescriptive requirements for collecting, validating, integrating and reporting pipeline data are necessary. The current IM regulations require that gas transmission pipeline operators gather and integrate existing data and information concerning their entire pipeline that could be relevant to pipeline segments in HCAs (§ 192.917(b)). Operators are then required to use this information in a risk assessment of the HCA segments (§ 192.917(c)) that must subsequently be used to determine whether additional preventive and mitigative measures are needed (§ 192.935) and to define the intervals at which IM reassessments must be performed (§ 192.939). Operators' risk analyses and conclusions can only be as good as the information used to perform the analyses. On August 30, 2011, after the ANPRM was issued, the NTSB adopted its report on the gas pipeline accident that occurred on September 9, 2010, in San Bruno, California. Results from the NTSB investigation indicate that the pipeline operator's records regarding the physical attributes of the pipe segments involved in the incident were erroneous. NTSB recommendation P-11-19 recommended that PHMSA require IM programs be assessed to assure that they are based on clear and meaningful metrics. In addition, Section 23 of the Act requires verification to ensure that records accurately reflect the physical and operational characteristics of pipelines. PHMSA issued an Advisory Bulletin (76 FR 1504; January 10, 2011) on this issue. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic D

1. INGAA reported that it is presently working on data integration guidelines. INGAA cautioned that requirements in this area can be very costly, since they often necessitate redesign of existing data management systems.

2. AGA commented that no records requirements would have prevented the San Bruno accident, and stated that verifying records does not assure completeness, as unknown parameters remain unknown.

3. A private citizen suggested that PHMSA should require operators to identify segments where they lack knowledge of critical parameters. The commenter suggested that this could facilitate emergency communications and help prioritize pipe replacement programs.

Response to General Comments for Topic D

PHMSA appreciates the information provided by the commenters. PHMSA is proposing to clarify requirements for collecting, validating, and integrating data. The current rule invokes ASME/ANSI B31.8S requirements for data collection and integration. To provide greater visibility and emphasis on this important aspect of integrity management, PHMSA is proposing to place these requirements in the rule text, rather than incorporating ASME/ANSI B31.8S by reference. The proposed requirements clarify PHMSA's expectations regarding the minimum list of data an operator must collect, and also includes performance-based language that requires the operator to validate data it will use to make integrity-related decisions, and require operators to integrate all such data in a way that improves the analysis. The proposed rule would also require operators to use reliable, objective data to the maximum extent practical. To the degree that subjective data from subject matter experts must be used, PHMSA proposes to require that an operator's program include specific integrity assessment and findings data for the threat features to compensate for subject matter expert (SME) bias. The importance of these aspects of integrity management was emphasized by both the NTSB (Recommendation P-11-19) and Congress (The Act, Section 11(a)(4)).

Comments Submitted for Questions in Topic D

D.1. What practices are now used to acquire, integrate and validate data (e.g., review of mill inspection reports, hydrostatic tests reports, pipe leaks and rupture reports) concerning pipelines? Are practices in place, such as excavations of the pipeline, to validate data?

1. INGAA reported that its members have completed a concerted effort to validate pipeline historical records

pursuant to PHMSA Advisory Bulletin 11-01 (issued January 10, 2011).

2. Texas Pipeline Association and Texas Oil & Gas Association commented that there is no great benefit to be gained from adding a verification requirement for historical data to the regulations. The associations believe that most operators will correct their records when they become aware of errors regardless of how the erroneous information is discovered. The associations suggested that there could be value in validating databases against original records, since an underlying problem of the San Bruno accident was errors in transferring original records into a database.

3. Ameren Illinois reported that it collects data on exposed pipe in accordance with §§ 192.459 and 192.475.

4. Northern Natural Gas and Kern River reported that their primary integration tool is integrity alignment sheets, which show the class location, profile, aerial photography, alignment and structure data, in-line inspection results, other integrity data, *i.e.*, close-interval survey or pressure test results and pipe, coating and appurtenance data. Data is validated as opportunities arise.

5. Paiute and Southwest Gas reported that they confirm the location and properties of its pipeline as opportunities arise; more data are collected as assessments are conducted.

6. California Public Utilities Commission suggested that operators be explicitly required to obtain all historical records and that there be an officer statement that a thorough search for all records has been conducted.

7. A private citizen commented on the lack of some historical data, implying that operators should be required to validate their knowledge of older pipelines.

8. An anonymous commenter stated that older data is typically not validated.

9. INGAA and AGA reported that pipeline operators take advantage of exposed pipe to collect and validate data on in-service pipelines. This includes excavations for ILI validation, those conducted as part of direct assessment, and removed or replaced pipelines. A number of pipeline operators provided comments supporting the comments of each association.

10. GPTC and Nicor suggested that excavations not be required for the sole purpose of validating data, contending that the risks posed by such a requirement would outweigh any benefit obtained.

11. MidAmerican reported that it validates information when pipeline is excavated and through its routine practices.

Response to Question D.1 Comments

PHMSA appreciates the information provided by the commenters. See response to question D.4.

D.2. Do operators typically collect data when the pipeline is exposed for maintenance or other reasons to validate information in their records? If discrepancies are found, are investigations conducted to determine the extent of record errors? Should these actions be required, especially for HCA segments?

1. AGA, Paiute, and Southwest Gas reported that operators use exposed pipe as an opportunity to collect information. AGA further suggested, however, that PHMSA should not draft a rule governing these practices. AGA contended the circumstances of pipe exposures vary too much to be addressed by a regulatory requirement. AGA expressed its conclusion that the requirements in § 192.605(b)(3) provide adequate guidance and that section 23 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 provides additional guidance. AGA noted that operators investigate identified inaccuracies and errors. A number of other pipeline operators provided comments supporting AGA's comments.

2. Texas Pipeline Association, Texas Oil & Gas Association, Atmos, MidAmerican, and Ameren Illinois reported that operators typically collect information on pipe type and condition, but not on historical information and pipe specifications. They commented that collecting this information would require additional testing and pose operational impacts.

3. Iowa Utilities Board and Iowa Association of Municipal Utilities commented that any new requirement should be limited to collecting readily obtainable data, principally that which can be determined visually. They suggested that the data elements in ANPRM questions D.1 and D.3 go beyond what can readily be observed or obtained and it would be impractical to require this data to be collected during pipe exposures.

4. California Public Utilities Commission commented that any new requirements to collect data during pipe exposures should address all instances of exposure rather than be limited to HCAs, noting that non-HCA segments can become HCA segments due to changes in land use near the pipeline.

5. Thomas Lael and Alaska Department of Natural Resources commented that operators should be required to collect specific data during pipe exposures. These commenters contended that not all operators currently collect available data during pipe exposures.

6. MidAmerican, Paiute, and Southwest Gas commented that no new requirements are needed because the requirements in part 192 and guidance in ASME/ANSI B31.8S are sufficient.

7. An anonymous commenter suggested that operators be required to collect data if they do not have enough information to analyze the risks of the pipeline segment.

Response to Question D.2 Comments

PHMSA appreciates the information provided by the commenters. The expanded rule language does not impose new requirements for collecting specific data during pipe exposures, but the response to question D.4 discusses proposed changes to collection and validation practices to improve data integration and risk assessment practices.

D.3. Do operators try to verify data on pipe, pipe seam type, pipe mechanical and chemical properties, mill inspection reports, hydrostatic tests reports, coating type and condition, pipe leaks and ruptures, and operations and maintenance (O&M) records on a periodic basis? Are practices in place to validate data, such as excavation and in situ examinations of the pipeline? If so, what are these practices?

1. AGA, GPTC, Nicor, Paiute, and Southwest Gas reported that operators do try to verify information but that operator practices are too numerous to list in response to this general question. They contended that the requirements for external corrosion control in § 192.459 and for internal corrosion control in § 192.475 and the guidance in Advisory Bulletin 11–01 are sufficient and no new requirements are needed. A number of other pipeline operators provided comments supporting AGA's comments.

2. INGAA, supported by many of its pipeline operator members, commented that there are limited, if any, methods to determine accurately mechanical properties of pipe that is *in situ*. INGAA's comments listed a number of methods that can be used to obtain approximate values for some pipe characteristics, such as steel hardness and yield strength.

3. Texas Pipeline Association and Texas Oil & Gas Association commented that operators do not validate mill data after initial construction.

4. Ameren Illinois reported that data review and correction is a normal part of the business of pipeline operation. Ameren commented that additional work in this area is likely to result from Advisory Bulletin 11–01.

5. Northern Natural Gas reported that data correction occurs when a discrepancy is identified. Northern also noted that it has added data to its risk model over time, principally related to determination of the potential consequences of a pipeline accident.

6. MidAmerican commented that operators validate pipeline information periodically.

7. California Public Utilities Commission reported that California pipeline operators have begun validating pipeline data since the San Bruno accident. CPUC commented that operators should determine pipeline specifications for all exposed facilities and use them to validate their records.

8. Paiute and Southwest Gas reported that it is their practice to obtain pipeline data before an integrity management excavation and then to validate that information in the field.

9. MidAmerican reported that it uses a geospatial database as its principal tool for collecting and validating pipeline information.

10. An anonymous commenter suggested that pipeline operators do not routinely collect information to validate their databases during pipeline excavations.

Response to Question D.3 Comments

PHMSA appreciates the information provided by the commenters. See response to question D.4.

D.4. Should PHMSA make current requirements more prescriptive so operators will strengthen their collection and validation practices necessary to implement significantly improved data integration and risk assessment practices?

1. INGAA, GPTC, Nicor, Ameren Illinois, MidAmerican, Paiute and Southwest Gas commented that additional prescriptive requirements are not needed. These commenters suggested that Advisory Bulletin ADB–11–01, subpart O of part 192, and ASME/ANSI B31.8S are sufficient to govern these practices. INGAA added requirements for data validation during excavations could introduce workplace hazards that would outweigh any benefit to be gained. In the event PHMSA proceeds to propose new requirements, INGAA requested they be limited to a reasonable process and allow assumptions to be made to fill information gaps, suggesting this would be a more cost-effective approach than

rigorous requirements to collect and validate all information. A number of other pipeline operators provided comments supporting INGAA's comments.

2. AGA, supported by a number of its pipeline operator members, commented that there is no evidence to support a need for more prescriptive requirements leading to better data collection or validation and, therefore, no such requirements are needed.

3. Pipeline Safety Trust, NAPSR, California Public Utilities Commission, and Commissioners of Wyoming County, Pennsylvania, commented that requirements for data collection, validation, and use should be more prescriptive. These commenters noted that the investigation of the San Bruno accident identified at least one pipeline operator was not doing an adequate job of data validation. They noted that NTSB recommendations P-11-18 and P-11-19 apply to this topic. NAPSR specifically requested that new requirements specify precise inspection criteria.

4. Texas Pipeline Association and Texas Oil & Gas Association suggested that there is no value in periodic validation of pipeline data and new requirements are not needed in this area. Northern Natural Gas agreed, noting that pipeline data does not change over time, and relevant data that is subject to change, is that data needed to evaluate the consequences of potential pipeline accidents.

5. Accufacts commented that more specific criteria, including minimum data requirements, are needed for record retention. Accufacts noted that integrity management is data-based and that too many operators claim that data is lost or cannot be found.

6. Alaska Department of Natural Resources suggested that data integration should be required in interpreting ILI results.

7. An anonymous commenter suggested that specific requirements are not needed in this area, contending that most data has been validated through normal operator practices.

8. A private citizen suggested that PHMSA require pipeline operators to post all records for access by state and local government officials, PHMSA, and the media. The commenter suggested such a "sunshine" provision would improve recordkeeping, even if no one ever examines the posted records.

Response to Question D.4 Comments

PHMSA appreciates the information provided by the commenters in response to questions D.1 through D.4. Commenters disagreed on the need and

benefit of making current requirements more prescriptive so operators will strengthen their collection and validation practices. PHMSA believes enhancing regulations in this area is an important element of good integrity management practices. On July 21, 2011, in response to the San Bruno incident, PHMSA sponsored a public workshop on risk assessment and related data analysis and recordkeeping issues to seek input from stakeholders. Based in part on the input received at this workshop, and the information submitted in response to the ANPRM, PHMSA proposes to clarify the performance-based requirements for collecting, validating, and integrating pipeline data by adding specificity to the data integration language, establishing a number of pipeline attributes that must be included in these analyses, explicitly requiring that operators integrate analyzed information, and ensuring data is reliable. The rule also requires operators to use validated, objective data to the maximum extent practical. PHMSA also understands that objective sources such as as-built drawings, alignment sheets, material specifications, and design, construction, inspection, testing, maintenance, manufacturer, or other related documents are not always available or obtainable. To the degree that subjective data from subject matter experts must be used, PHMSA proposes to require that an operator's program include specific features to compensate for subject matter expert bias. PHMSA believes that these proposed changes would not impose new requirements or more prescriptive requirements, but clarifies the intent of the regulation. However, PHMSA requests public comment on whether and the extent to which this proposal may change behavior.

D.5. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

E. Making Requirements Related to the Nature and Application of Risk Models More Prescriptive

The ANPRM requested comments regarding whether requirements related to the nature and application of risk models should be made more prescriptive to improve the usefulness of these analyses in controlling risks from pipelines. Current regulations require that gas transmission pipeline operators perform risk analyses of their pipelines and use these analyses to make certain decisions to assure the integrity of their pipeline and to enhance protection against the consequences of potential incidents. The regulations do not prescribe the type of risk analysis nor do they impose any requirements regarding its breadth and scope, other than requiring that it consider the entire pipeline. PHMSA's experience in inspecting operator compliance with IM requirements has identified that most pipeline operators use a relative index-model approach to performing their risk assessments and that there is a wide range in scope and quality of the resulting analyses. It is not clear that all of the observed risk analyses can support robust decision-making and management of the pipeline risk. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic E

1. INGAA and Chevron commented that continuing the performance-based regulatory approach, exemplified by integrity management, is critically important to pipeline safety. They suggested that prescriptive management systems are task oriented, do not adjust easily to new information or knowledge, inhibit innovation, and could thwart safety improvements. A number of other pipeline operators provided comments supporting INGAA's comments.

2. Accufacts commented that risk management approaches permitted in IM need additional prescriptive measures to clarify strengths and weaknesses and to assure compliance. Public perception resulting from the number of serious incidents is that current risk analysis and risk management approaches are not sufficient. The impression is that risk management is being used to justify unwise lowest cost decisions rather than being used as a tool to avoid failure. Accufacts further suggested that interactive threats need to be addressed by prescriptive requirements in safety

regulations because operators may be under the illusion that some of the more serious threats are stable after almost 10 years of IM regulation.

3. Oleksa and Associates suggested that it would be statistically more valid for many (perhaps most) operators for PHMSA to perform continual evaluation and assessment using established performance measures along with data submitted by operators on annual, incident, and safety-related condition reports, and then to promulgate more prescriptive regulations resulting from that assessment. Oleksa suggested that it may be time to re-evaluate the overall concept of integrity management to determine whether it makes sense for each operator to make assessments that might be more valid if made on a national level. Oleksa also stated that there should be a concerted effort in promulgating any new regulations towards making the regulations simple enough so that they can be understood relatively easily.

4. TransCanada commented that PHMSA's IM regulations should provide explicit metrics for operators to demonstrate safety decision processes without restricting the opportunity to use more accurate and advanced methods. TransCanada said that any efforts to make risk models more prescriptive should focus on process elements while providing operators the flexibility to build processes which recognize the unique characteristics of their pipeline systems. The company also opined that issuing more detailed guidelines on specific integrity management plan elements would enhance the current, performance-based approach and generate additional benefits that the public and operators desire.

5. Dominion East Ohio Gas opposed making requirements for risk models more prescriptive. Like INGAA, they noted prescriptive management systems are task oriented and do not adjust easily to new information or knowledge. They inhibit innovation and could thwart safety improvements.

6. NAPSR strongly urged PHMSA to make the nature and application of risk models more prescriptive. NAPSR commented that PHMSA has not provided any data that supports the theory that risk modeling provides a stronger safety environment and contended that, in fact, the opposite may be occurring.

7. A private citizen suggested that PHMSA correlate the quality of an operator's risk model with the number of enforcement actions against that operator.

8. A private citizen suggested that risk analysis requirements should remain flexible, commenting that prescribed methods or requirements could mask operator-specific issues.

Response to General Comments for Topic E

PHMSA appreciates the information provided by the commenters. PHMSA agrees that prescriptive rules for risk assessments are not appropriate because one-size-fits-all regulations would not be effective for such a diverse industry. However, PHMSA does believe that operator risk models and risk assessments should have substantially improved since the initial framework programs established nearly 10 years ago. While simple index or relative (qualitative) ranking models were useful to prioritize HCA segments for purposes of scheduling integrity baseline assessments, those models have limited utility to perform the analyses needed to better understand pipeline risks, better understand failure mechanisms (especially for interacting threats), or to identify effective preventive and mitigative measures. PHMSA is proposing to further clarify its expectations for this aspect of the performance-based regulations to further improve pipeline safety. On July 21, 2011, PHMSA sponsored a public workshop on risk assessment to seek input from stakeholders. PHMSA has evaluated the input it received at this workshop. PHMSA proposes to clarify the risk assessment aspects of the IM rule to explicitly articulate functional requirements and to assure that risk assessments are adequate to: (1) Evaluate the effects of interacting threats, (2) determine intervals for continual integrity reassessments, (3) determine additional preventive and mitigative measures needed, (4) analyze how a potential failure could affect HCAs, including the consequences of the entire worst-case incident scenario from initial failure to incident termination, (5) identify the contribution to risk of each risk factor, or each unique combination of risk factors that interact or simultaneously contribute to risk at a common location, (6) account and compensate for uncertainties in the model and the data used in the risk assessment, and (7) evaluate predicted risk reduction associated with preventive and mitigative measures. In addition, in response to NTSB recommendation P-11-18, PHMSA proposes to require that operators validate their risk models in light of incident, leak, and failure history and other historical information. PHMSA also proposes to expand the list

of example preventive and mitigative measures to include the following items: establish and implement adequate operations and maintenance processes that could affect safety; establish and deploy adequate resources for successful execution of activities, processes, and systems associated with operations, maintenance, preventive measures, mitigative measures, and managing pipeline integrity; and correct the root cause of past incidents to prevent recurrence.

In response to Oleksa's comments, PHMSA is addressing performance measures outside of this rulemaking. Performance measures will be addressed separately in response to NTSB safety recommendations P-11-18 and P-11-19.

Comments Submitted for Questions in Topic E

E.1. Should PHMSA either strengthen requirements on the functions risk models must perform or mandate use of a particular risk model for pipeline risk analyses? If so, how and which model?

1. INGAA, AGA, and many pipeline operators reported that they do not believe there is a pipeline safety benefit for PHMSA to "strengthen" or revise the requirements on functions that risk models must perform or in mandating the use of specific risk models. These commenters noted that there is a tremendous amount of diversity in the pipeline systems of individual operators and operators must have the flexibility to select the risk model that best supports their systems.

2. GPTC commented that there is no 'one-size-fits-all' risk model. GPTC further commented PHMSA has offered no data supporting the need to strengthen requirements or mandate a particular risk model.

3. Kern River noted that differences exist between pipeline operators on how much detail is needed in their risk assessment models. The specific factors and required risk model complexity will differ for each pipeline company based on its active threats, the preventive and mitigative measures employed, its data acquisition methods and the amount of required data.

4. MidAmerican commented that no change is needed to requirements concerning risk models. MidAmerican noted that ASME/ANSI B31.8S provides extremely detailed requirements in this area, and suggested that operators should have the freedom to choose the risk model best suited to their operation. Northern Natural Gas agreed, noting that there are large differences within the industry on the complexity of the risk assessment models used based on the

pipeline age and configuration, threats, and data available.

5. Paiute and Southwest Gas opposed more restrictive requirements for risk modeling. They noted that operators have a decade of experience working with IM and therefore, should have the flexibility to choose the risk model that best suits their system.

6. Accufacts commented that this is an area that needs more prescriptive requirements. Accufacts questioned whether the current approach of reliance on risk modeling is even appropriate. They stated that there appears to be a disconnect between the use of risk models and risk analysis with pipeline operation and the ability of regulators to apply and enforce the approach.

7. TransCanada noted that mandating the use of a specific risk model may result in a more uniform approach across the industry, but may also force operators to abandon their existing risk models, including the improvements made to them based on 10 years of integrity management experience. This would not appear to advance risk modeling and might even be counterproductive.

8. WKM Consultancy commented that mandating a specific risk assessment model would not be a beneficial addition to regulations. Such a mandate would stifle creativity and require extensive definitions and documentation of that methodology. A mandated model would introduce a prescriptive element with substantial "overhead" related to the maintenance of the model's documentation by the regulators. They suggested that a better solution would be to develop guidelines of essential ingredients necessary in any pipeline risk assessment.

9. An anonymous commenter opposed requiring the use of a specific risk model, suggesting that operators should use models with which they are comfortable. The commenter did suggest that PHMSA strengthen requirements concerning the use of risk models for purposes other than risk-ranking segments, expressing a belief that most operators are using their models only for that purpose.

10. California Public Utilities Commission recommended that PHMSA require statistical data be maintained and used to support the weightings assigned by risk models to various threats.

Response to Question E.1 Comments

PHMSA appreciates the information provided by the commenters. A large number of comments do not support adding a requirement for a specific risk

assessment model or for strengthening or revising the required functions that risk models must perform. PHMSA agrees that prescribing the use of particular risk assessment models is not appropriate for such a diverse industry, and notes that relative index models have been successfully used to rank pipelines to prioritize baseline assessments. However, PHMSA believes that the integrity management rule anticipates that operators would continually improve their risk assessment processes and that there are specific risk assessment attributes related to the nature and application of risk models that need clarification. Such attributes and shortcomings were discussed at the "Improving Pipeline Risk Assessments and Recordkeeping" workshop with stakeholders, held on July 21, 2011.

PHMSA proposes to articulate clear functional requirements, in performance-based terms, for risk assessment methods used by operators. While PHMSA does not propose to prescribe the specific risk assessment model operators must use, PHMSA does propose to clarify the characteristics of a mature risk assessment program. These include: (1) Identifying risk drivers; (2) evaluating interactive threats; (3) assuring the use of traceable and verifiable information and data; (4) accounting for uncertainties in the risk model and the data used; (5) incorporating a root cause analysis of past incidents; (6) validating the risk model in light of incident, leak and failure history and other historical information; (7) using the risk assessment to establish criteria for acceptable risk levels; and (8) determining what additional preventive and mitigative measures are needed to achieve risk reduction goals. PHMSA proposes to clarify that the risk assessment method selected by the operator must be capable of successfully performing these functions.

E.2. It is PHMSA's understanding that existing risk models used by pipeline operators generally evaluate the relative risk of different segments of the operator's pipeline. PHMSA is seeking comment on whether or not that is an accurate understanding. Are relative index models sufficiently robust to support the decisions now required by the regulation (e.g., evaluation of candidate preventive and mitigative measures, and evaluation of interacting threats)?

1. Industry commenters, including INGAA, AGA, Texas Pipeline Association, Texas Oil & Gas Association, WKM Consultancy, and many pipeline operators reported that

PHMSA's understanding is correct and that risk models in use generally *evaluate the relative risk of different segments of the operator's pipeline*. AGA noted that operators have selected and implemented the risk models that allowed them to prioritize the covered segments for the baseline assessment and subsequent reassessments and that this complied with the Pipeline Safety Improvement Act of 2002.

2. AGA, supported by a number of its pipeline operator members, commented that risk models currently in use are sufficiently robust. Ameren Illinois and GPTC expressed a similar belief.

3. INGAA, supported by some of its members, noted that there is room for improvement in the current practices of risk modeling. INGAA reported that the industry has established committees to identify advancements in risk modeling.

4. WKM Consultancy commented that the more robust of the relative risk index techniques are often capable of fulfilling some aspects of IM risk management requirements such as prioritization, but that other aspects of the risk management requirements are not well supported by relative risk assessments. They suggested that some risk assessment models in current use could benefit from application of more robust and modern techniques.

5. Kern River commented that a relative risk model is sufficiently robust to support decisions on preventive and mitigative measures and assessment intervals.

6. MidAmerican reported that its risk model complies with ASME/ANSI B31.8S and is sufficiently robust to support decisions that are not specifically related to assessments. MidAmerican further stated that its risk model produces results consistent with its subject matter expert assessments of relative risk.

7. Paiute and Southwest Gas reported their conclusion that their risk models are robust and support the process of evaluation and selection of preventive and mitigative measures.

8. Texas Pipeline Association and Texas Oil & Gas Association noted that all sources of information relative to the integrity of a transmission pipeline segment and the identified risk should be used in the selection of preventive and mitigative measures. Atmos agreed, noting that preventive and mitigative measures for a given pipeline segment are based on the identified threats.

9. A private citizen suggested that consideration of system-wide high risk (e.g., urban areas) should be required, contending relative risk is not good enough when an entire system poses high risks.

Response to Question E.2 Comments

PHMSA appreciates the information provided by the commenters. Although a large number of comments contend risk models currently in use are sufficiently robust, PHMSA believes that there are specific risk assessment attributes not found in many of the simple index or relative risk models currently in use. The July 21, 2011, workshop on "Improving Pipeline Risk Assessments and Recordkeeping" identified several shortcomings in risk assessments conducted using qualitative, index, or relative risk methodologies, and PHMSA is proposing to clarify requirements to address these issues including the need for better or more prescriptive guidance to address data gaps, data integration, uncertainty, interacting threats, risk management, and quantitative approaches instead of subjective or qualitative approaches. The proposed regulation would require operators to conduct risk assessments that effectively analyze the identified threats and potential consequences of an incident for each HCA segment. Additionally, the proposed regulation would require the risk assessment to include evaluation of the effects of interacting threats, including those threats and anomalous conditions not previously evaluated. It should be further noted that the intent of the original IM rule is that any risk assessment would consider system-wide risk.

E.3. How, if at all, are existing models used to inform executive management of existing risks?

1. INGAA commented that operators should develop internal communication plans and they should follow Section 10.3 of ASME/ANSI B31.8S in doing so. AGA similarly noted that the methods used to disseminate results of the risk evaluation to executive management are operator specific and detailed in the operator's integrity management plan. A number of pipeline operators provided comments supporting both INGAA's and AGA's comments.

2. Texas Pipeline Association and Texas Oil & Gas Association noted that the results of risk modeling are usually used in conjunction with assessment results to inform executive management of actions required beyond normal repair, additional preventive and mitigative measures, discussion of high risk pipelines, and progress in meeting assessment goals.

3. WKM Consultancy commented that operators are obliged to communicate all aspects of integrity management to higher level managers at regular intervals. They noted that all prudent

operators are very interested in risk management and results of risk modeling are usually a centerpiece of discussion and decision-making.

4. Ameren Illinois reported that its IM plan provides for informing executive management of existing risks.

5. Atmos reported that it provides executive management with periodic updates on the status of its integrity management program. During these updates, Atmos' executive management reviews baseline assessment plans, assessment results, anomalies discovered and mitigated, anomalies discovered and scheduled for repair, leading causes of anomalies, and preventive and mitigative actions taken.

6. Kern River noted that it provides its executive management with reports describing integrity management program activities and results and that the company engages the use of the risk model as an input to financial planning and maintenance planning.

MidAmerican also reported that risk scores are used to support capital, operating and maintenance expenditures to executive management.

7. Northern Natural Gas reported that it provides executive management with reports describing integrity management program activities and results. Its executive management is engaged in the process and the use of the risk model to prioritize projects.

8. Paiute and Southwest Gas reported that integrity management activities are discussed with executive management quarterly.

9. An anonymous commenter suggested that operators generally do not use risk models to inform executives, because they would have to explain the models in order to do so.

Response to Question E.3 Comments

PHMSA appreciates the information provided by the commenters. PHMSA understands that internal company processes for communication with executive management are specific to each company. To strengthen the application of risk assessment, PHMSA is proposing to clarify requirements by providing more specific and detailed examples of the kinds of preventive and mitigative measures operators should consider. The proposed rulemaking would include the following specific examples of preventive and mitigative measures that operators should consider: Establish and implement adequate operations and maintenance processes; establish and deploy adequate resources for successful execution of activities, processes, and systems associated with operations, maintenance, preventive measures,

mitigative measures, and managing pipeline integrity; and correct the root cause of past incidents to prevent recurrence. The last item necessarily requires a robust root cause analysis that identifies underlying programmatic or policy issues that create or facilitate conditions or circumstances that ultimately lead to pipeline failures.

E.4. Can existing risk models be used to understand major contributors to segment risk and support decisions regarding how to manage these contributors? If so, how?

1. INGAA and many of its pipeline operator members commented that existing models can and do provide an understanding of segment risk through threat identification, performing "what if" analyses, and identifying preventive and mitigative measures that will reduce risk.

2. AGA and GPTC noted that existing models selected by operators are sufficiently robust to allow the integration of large volumes of data and information to achieve a comprehensive overall risk evaluation for their systems. These risk models allow an operator to understand the specific threats associated with each pipeline segment and the preventive and mitigative measures that would be most appropriate. A number of pipeline operators provided comments supporting AGA's comments.

3. WKM Consultancy opined that currently used risk assessment models generally can significantly improve the ability to manage risks. They noted that a formal risk assessment provides the structure to increase understanding, reduce subjectivity, and ensure that important considerations are not overlooked.

4. Atmos reported that its model can be used to generate a report listing the significant variables contributing to a relatively higher risk factor score, and that if a contributing variable can be controlled, the risk model can support further actions to control the variable.

5. Ameren Illinois reported that it uses a robust risk model that can integrate various risk factors in order to evaluate its system.

6. Kern River and Northern Natural Gas commented that existing risk models can be used to understand major contributors to segment risk and support decisions regarding how to manage these contributors. By identifying threat drivers in the risk results and analyzing the data used by the model, integrity management personnel are able to reduce risk through preventive and mitigative measures, improvements in data quality, and shorter reassessment intervals.

7. MidAmerican reported that its risk model is used to understand major contributors to risk and to support decisions regarding how to manage those contributors.

8. Paiute and Southwest Gas reported that they conduct a review of threat-specific indices to identify the major contributors to risk for each threat.

9. Texas Pipeline Association and Texas Oil & Gas Association noted that risk modeling can be used to generate reports listing the significant variables contributing to high risk scores.

10. An anonymous commenter noted that risk models can serve these functions and some operators use them in this way. The commenter opined that most operators "aren't there yet," and that operators who use models for this purpose have more enthusiasm for integrity management and more executive management support.

Response to Question E.4 Comments

PHMSA appreciates the information provided by the commenters. The majority of the comments suggest that current risk models provide an adequate understanding of major contributors to risk. PHMSA believes it is prudent to clarify the required attributes of risk assessment in this area and proposes to include performance-based language to assure that risk assessments adequately identify the contribution to risk of each risk factor, or each unique combination of risk factors that interact or simultaneously contribute to risk at a common location.

E.5. How can risk models currently used by pipeline operators be improved to assure usefulness for these purposes?

1. INGAA noted that continuous improvement is required, and that industry is working on improvements to ASME/ANSI B31.8S. AGA similarly noted that risk models are periodically improved by operators by integrating new data and the results of integrity assessments. A number of pipeline operators provided comments supporting INGAA's and AGA's comments.

2. GPTC commented that new data and information are received on an ongoing basis. This new data, and results of integrity assessments, are reviewed, integrated, and added to risk models periodically.

3. WKM Consultancy suggested that a limited amount of standardization would be appropriate. They opined that this would ensure that all risk assessments contain, at a minimum, a short list of essential ingredients. For example, all assessments should produce a profile showing changes in risk along a pipeline route.

4. Ameren Illinois reported that its risk model allows for integration of information for continuous improvement.

5. Atmos commented that there is the potential for the risk model process to handle unknown data in a more useful manner. Atmos suggested that a higher risk score with "known" data attributes should be considered more relevant for decisions on preventive and mitigative measures than a similar score derived from "unknown" data attributes.

6. Kern River suggested that industry-wide research into failure probabilities and effectiveness of preventive and mitigative measures would facilitate more rigorous quantitative models. Kern River noted that vendors are continuously improving risk models.

7. MidAmerican suggested that risk models could be improved with better tracking, recording, and retrieval of assessment results. With feedback and information sharing, refining coefficients within the model will produce more accurate risk results.

8. Northern Natural Gas reported that its risk assessment process is improved every year and that its risk model vendor is heavily involved with the company in understanding how the risk results are used.

9. Paiute and Southwest Gas suggested that risk models will be improved as additional information is gained through an assessment cycle and that this continuous improvement process will then repeat through subsequent assessment cycles.

10. Texas Pipeline Association and Texas Oil & Gas Association observed that there is no 'one size fits all' solution to this issue.

Response to Question E.5 Comments

PHMSA appreciates the information provided by the commenters. The comments speak in general terms about incremental improvement of existing index-type or qualitative relative risk models. PHMSA believes that such models, while appropriate and useful for limited purposes such as ranking segments to prioritize baseline assessments, fall far short of the type of model needed to fully execute a mature integrity management program. PHMSA proposes to clearly articulate the requirements for validation of the risk assessment and proposes to clarify that an operator must ensure validity of the methods used to conduct the risk assessment in light of incident, leak, and failure history and other historical information. Additionally, the proposed rule would require that validation must: (1) Ensure the risk assessment methods produce a risk characterization that is

consistent with the operator's and industry experience, including evaluations of the cause of past incidents as determined by root cause analysis or other means; and (2) include analysis of the factors used to characterize both the probability of loss of pipeline integrity and consequences of the postulated loss of pipeline integrity.

E.6. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- The potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.

- The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.

- The potential impacts on small businesses of modifying the existing regulatory requirements.

- The potential environmental impacts of modifying the existing regulatory requirements.

No comments were received in response to this question.

F. Strengthening Requirements for Applying Knowledge Gained Through the IM Program

The ANPRM requested comments regarding strengthening requirements related to operators' use of insights gained from implementation of an IM program. IM assessments provide information about the condition of the pipeline. Identified anomalies that exceed criteria in § 192.933 must be remediated immediately (§ 192.933(d)(1)) or within one year (§ 192.933(d)(2)) or must be monitored on future assessments (§ 192.933(d)(3)). Operators are also expected to apply knowledge gained through these assessments to assure the integrity of their entire pipeline as part of its threat identification and risk analysis process in accordance with § 192.917.

Section 192.917(e)(5) explicitly requires that operators must evaluate other portions of their pipeline if an assessment identifies corrosion requiring repair under the criteria of § 192.933. The operator must "evaluate and remediate, as necessary, all pipeline segments (both covered and non-covered) with similar material coating and environmental characteristics."

Section 192.917 also requires that operators conduct risk assessments that follow American Society of Mechanical Engineers/American National Standards Institute (ASME/ANSI) B31.8S, Section

5, and use these analyses to prioritize segments for assessment, and to determine what preventive and mitigative measures are needed for segments in HCAs. Section 5.4 of ASME/ANSI B31.8S states that “risk assessment methods should be used in conjunction with knowledgeable, experienced personnel . . . that regularly review the data input, assumptions, and results of the risk assessments.” That section further states, “an integral part of the risk assessment process is the incorporation of additional data elements or changes to facility data,” and requires that operators “incorporate the risk assessment process into existing field reporting, engineering, and facility mapping processes” to facilitate such updates. Neither part 192 nor ASME/ANSI B31.8S specifies a frequency at which pipeline risk analyses must be reviewed and updated; instead, this is considered to be a continuous, ongoing process. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comment for Topic F

1. MidAmerican suggested that application of knowledge gained through integrity management should not be treated any differently than any other information gained from work on or surveillance of the pipeline. MidAmerican considers this to be adequately addressed by § 192.613.

Response

PHMSA continues to believe that there are many important integrity management requirements related to insights gained from implementation of the IM program beyond those covered by the continuing surveillance requirements of § 192.613. Integrity management assessments provide information about the condition of the pipeline and operators are expected to apply the knowledge gained through these assessments to assure the integrity of their entire pipeline. PHMSA believes that the knowledge gained through IM assessments should be integrated into the risk assessment process, which is not required by § 192.613.

Comments Submitted for Questions in Topic F

F.1. What practices do operators use to comply with § 192.917(e)(5)?

1. INGAA and a number of pipeline operators noted that operators use available information and field knowledge to comply with this requirement.

2. AGA, supported by a number of its member companies, reported that operator practices are too distinct and varied to list. AGA stated that § 192.917(e)(5) is prescriptive enough and no new requirements are needed.

3. GPTC and Nicor cited NACE SP0169 and NACE RP0177 as examples of standards that can be used to guide compliance with § 192.917(e)(5).

4. Texas Pipeline Association and Texas Oil & Gas Association commented that operators use cathodic protection surveys and/or spot checks to determine whether failure is likely.

5. Northern Natural Gas reported that it takes the actions specified in § 192.917(e)(5) and includes consideration of incidents and safety related conditions.

6. Kern River, Paiute, and Southwest Gas stated that they use root cause evaluations of incidents to comply with § 192.917(e)(5).

Response to Question F.1 Comments

PHMSA appreciates the information provided by the commenters. The comments provide little information related to specific operator practices for compliance with § 192.917(e)(5). PHMSA is not proposing to amend § 192.917(e)(5) at this time; however, PHMSA proposes to clarify requirements in § 192.917(b) to ensure that the data gathering and integration process includes an analysis of both the HCA segments and similar non-HCA segments and integrates information about pipeline attributes and other relevant information, including data gathered through integrity assessments.

F.2. How many times has a review of other portions of a pipeline in accordance with § 192.917(e)(5) resulted in investigation and/or repair of pipeline segments other than the location on which corrosion requiring repair was initially identified?

1. Based on a limited response by their members to a survey, Texas Pipeline Association and Texas Oil & Gas Association reported that repair of corrosion beyond the initially-identified anomaly is rare.

2. Ameren Illinois reported that it has experienced two instances in which it repaired other segments after identifying corrosion on a covered pipeline segment.

3. MidAmerican reported that it has experienced a few instances of corrosion where coating was damaged during installation of a vent, and some at air-to-soil interfaces.

4. Northern Natural Gas has experienced no instances in which other pipeline segments required repair.

Northern added that corrosion wall loss requiring repair is, itself, rare.

5. Paiute and Southwest Gas reported that they had not identified any immediate repair corrosion conditions.

Response to Question F.2 Comments

PHMSA appreciates the information provided by the commenters. See the response to question F.1.

F.3. Do pipeline operators assure that their risk assessments are updated as additional knowledge is gained, including results of IM assessments? If so, how? How is data integration used and how often is it updated? Is data integration used on alignment maps and layered in such a way that technical reviews can identify integrity-related problems and threat interactions? How often should aerial photography and patrol information be updated for IM assessments? If the commenter proposes a time period for updating, what is the basis for this recommendation?

1. INGAA and several pipeline operators reported that operators update risk analyses whenever new information is obtained and particularly after unexpected events.

2. AGA, GPTC, Nicor, Kern River, and TransCanada commented that risk analyses are updated at least annually.

3. Northern Natural Gas reported that its procedures provide for updating to include assessment results and changes in environmental factors.

4. Paiute and Southwest Gas reported that risk model updating is a continuous process. Rankings are updated at 18- to 24-month intervals. Ameren Illinois and Atmos similarly reported that updating is an ongoing activity.

5. Texas Pipeline Association and Texas Oil & Gas Association commented that most operators have dedicated teams to perform risk model updates.

6. Alaska Department of Natural Resources commented that risk models should be reviewed whenever significant operational or environmental changes occur. AKDNR contended that risk models are not valid if there are significant changes in these areas.

7. NAPSR reported its conclusion that risk models should be updated after every O&M activity or any finding that a required activity was not performed.

8. INGAA and a number of pipeline operators reported that data is updated using a common spatial reference system, e.g., maps or tables, and the frequency of data integration varies by operator.

9. AGA, supported by a number of its member companies, reported that data integration does not always involve use of geospatial tools.

10. Atmos reported that it uses internal teams of subject matter experts for data integration and that its maps are not layered for technical data use.

11. Northern Natural Gas, Paiute, and Southwest Gas stated that they perform integration on alignment sheets based on integrity management summaries and subject matter expert reviews.

12. Texas Pipeline Association and Texas Oil & Gas Association reported that many pipeline operators are migrating to GIS systems.

13. INGAA and many pipeline operators commented that information from aerial photography should be updated annually. They noted that this would be consistent with the frequency of reviewing HCA designations and operator budgeting and contended that more frequent updates would not increase risk model accuracy. INGAA suggested that other information, including information related to external events, should be updated based on the nature and severity of experienced events.

14. AGA, Paiute, and Southwest Gas noted that not all operators use aerial photography and expressed their belief that such use should not be required. AGA noted that there are many tools, including routine patrols, to gather data about the pipeline environment. A number of member pipeline operators supported AGA's comments.

15. Northern Natural Gas reported that it updates information periodically, but with no set frequency. Northern noted that some areas are stable while change can occur rapidly in others.

16. Texas Pipeline Association and Texas Oil & Gas Association recommended annual updates as a minimum. The associations noted that this recognizes the time required to produce/acquire assessment data.

Response to Question F.3 Comments

PHMSA appreciates the information provided by the commenters. After review of the comments, PHMSA agrees that annual updates are desirable and many operators perform full updates, or partial data updates (such as updating aerial photos), annually. Some pipeline segments may be in rapidly changing, dynamic environments, while others may remain static for years. PHMSA also agrees that prescriptive requirements to perform a full risk assessment annually are not necessary and potentially burdensome, especially for very small operators, whose systems and conditions do not change often. PHMSA is satisfied that the current requirement, which contains a performance based requirement to update risk assessments as frequently as

needed to assure the integrity of each HCA segment is adequate, if properly implemented, and is not proposing a prescribed frequency at this time. However, PHMSA proposes to clarify requirements in §§ 192.917 and 192.937(b) to ensure the continual process of evaluation and assessment is based on an updated and effective data integration and risk assessment process as specified in § 192.917.

F.4. Should the regulations specify a maximum period in which pipeline risk assessments must be reviewed and validated as current and accurate? If so, why?

1. INGAA and numerous pipeline operators recommended that reviews be annual, as suggested in PHMSA's Gas Integrity Management Program Frequently Asked Question FAQ-234, arguing that this is practical and sufficient (FAQs can be viewed at <http://primis.phmsa.dot.gov/gasimp/faqs.htm>).

2. AGA, GPTC, and a number of other pipeline operators commented that no maximum period should be specified for review of risk assessments. These commenters argued that no one-size-fits-all interval would be appropriate and expressed their conclusion that the current requirements in § 192.937 are adequate.

3. California Public Utilities Commission recommended that reviews be required annually, at intervals not to exceed 15 months, consistent with other requirements within part 192.

4. An anonymous commenter suggested that a specified review period would be counterproductive, arguing that most operators would simply default to the required interval, even if more frequent reviews were appropriate.

Response to Question F.4 Comments

PHMSA appreciates the information provided by the commenters. See PHMSA response to comments related to Question F.3.

F.5. Are there any additional requirements PHMSA should consider to assure that knowledge gained through IM programs is appropriately applied to improve safety of pipeline systems?

1. INGAA and many pipeline operators opined that no new requirements are needed in this area. They noted that prescriptive requirements often become out of date as technology improves.

2. AGA and numerous pipeline operators agreed that no new requirements are needed, noting that existing regulations and sharing of information through industry groups is sufficient.

3. Texas Pipeline Association and Texas Oil & Gas Association opined that existing requirements are adequate.

4. Accufacts suggested that requirements should be more prescriptive concerning threat evaluation and interactive threats, as this is the heart of integrity management.

5. An anonymous commenter suggested that new requirements be established governing assessments conducted by pressure testing. The commenter opined that the requirements in subpart J are inadequate and represent an "easy out" for some operators.

Response to Question F.5 Comments

PHMSA appreciates the information provided by the commenters. While PHMSA believes that explicit requirements should be included to address interactive threats, PHMSA also believes that prescriptive rules for how an operator must evaluate interactive threats are not practical. Therefore, PHMSA proposes to clarify performance-based requirements to include an evaluation of the effects of interacting threats and for the continual process of evaluation and assessment to include interacting threats in identification of threats specific to each HCA segment. Comments on integrity assessment methods are addressed in Topic G.

F.6. What do operators require for data integration to improve the safety of pipeline systems in HCAs? What is needed for data integration into pipeline knowledge databases? Do operators include a robust database that includes: Pipe diameter, wall thickness, grade, and seam type; pipe coating; girth weld coating; maximum operating pressure (MOP); HCAs; hydrostatic test pressure including any known test failures; casings; any in-service ruptures or leaks; ILI surveys including high resolution—magnetic flux leakage (HR-MFL), HR geometry/caliper tools; close interval surveys; depth of cover surveys; rectifier readings; test point survey readings; alternating current/direct current (AC/DC) interference surveys; pipe coating surveys; pipe coating and anomaly evaluations from pipe excavations; SCC excavations and findings; and pipe exposures from encroachments?

1. INGAA, supported by a number of pipeline operators, commented that experience and information gained from a variety of sources, including GIS data, corrosion data, ILI data/results, work management activities, SCADA, encroachments, leaks etc., is utilized in data integration. INGAA reported that operators have made major investments

in database applications to meet changing organizational and regulatory requirements and to manage increasing volumes of data effectively. Tools generally are available for integrating data into pipeline knowledge databases. For integration purposes, the database must contain adequate metadata elements such that dates, if important, and location and length attributes are maintained. Currently-available systems support these needs. INGAA expressed concern over use of the term “robust database,” since this could be construed to mean that all applicable data must be maintained in a common database or other venue which does not meet the particular needs of the operator. INGAA reported that it has an active Integrity Management—Continuous Improvement (IMCI) team addressing improvement in these processes and management systems.

2. AGA, GPTC, and a number of pipeline operators commented that a prescriptive requirement would be inappropriate because there is too much variability among operators and their risk assessment methods. AGA expressed its conclusion that there is no single methodology that incorporates the wide variety of pipeline information used by operators.

3. MidAmerican suggested that an operator needs a robust computer model to integrate diverse data dynamically into one table with one set stationing.

4. Kern River reported that it uses extensive GIS and cathodic protection databases for these purposes.

5. An anonymous commenter recommended that PHMSA require knowledge of cathodic protection current level, amount, and direction of current flow. The commenter opined that this information is not now generally collected, and that it would allow for early detection of coating failures and CP interferences.

Response to Question F.6 Comments

PHMSA appreciates the information provided by the commenters. An integral part of applying information from the IM Program to the risk assessment and other analyses is the collection, validation, and integration of pipeline data. PHMSA proposes to clarify the data integration language in the requirements by repealing the reference to ASME/ANSI B31.8S and including requirements associated with data integration directly in the rule text: (1) Establishing a number of pipeline attributes that must be included in these analyses, (2) clarifying that operators must integrate analyzed information, and (3) ensuring that data are verified and validated.

F.7. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.*

- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*

- *The potential impacts on small businesses of modifying the existing regulatory requirements.*

- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

G. Strengthening Requirements on the Selection and Use of Assessment Methods

The existing IM regulations require that baseline and periodic assessments of pipeline segments in an HCA be performed using one of four methods:

- (1) In-line inspection;
- (2) Pressure test in accordance with subpart J;
- (3) Direct assessment to address the threats of external and internal corrosion and SCC; or
- (4) Other technology that an operator demonstrates can provide an equivalent understanding of the condition of line pipe.

Operators must notify PHMSA in advance if they plan to use “other technology.” Operators must apply one or more methods, depending on the threats to which the HCA segment is susceptible. The ANPRM requested comments related to the applicability, selection, and use of each assessment method, existing consensus standards and requirements, and the potential need to strengthen the requirements. The ANPRM then listed questions for consideration and comment. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic G

1. INGAA, supported by a number of its pipeline operator members, noted that they are committed to work with technology providers and researchers to improve the integrity management assessment capabilities of its members. Further, INGAA members are sharing their experiences with applying these new and improved assessment methods to specific threats. INGAA opined that

a great advantage of the integrity management structure, as opposed to a prescriptive regulatory regime, is the creation of an environment conducive to technological development, innovation and improved knowledge.

2. Accufacts suggested that a more prescriptive regulation is needed clarifying the applicability and limitations of direct assessment. Accufacts is concerned that operators are selecting direct assessment due to a cost bias while ignoring that it cannot be used for all threats and should not be used on some pipeline segments.

3. Chevron commented that PHMSA should continue to allow operators to select and use the most effective method to assess each pipeline segment.

4. NAPSR recommended that PHMSA implement a regulatory change that requires both ILI and pressure testing for all transmission pipelines and requires a reduction in MAOP until either the ILI or the pressure tests are performed.

5. MidAmerican, a gas distribution company, noted that many of its transmission pipelines are short, small diameter lines that cannot be pigged.

6. Dominion East Ohio suggested that PHMSA should be funding more research leading to the development of assessment tools, particularly smart tools, to increase the number of assessment options available rather than limiting the tools that can be used.

7. A public citizen commented that pipe with unknown or uncertain specifications should be subject to the most stringent testing requirements.

8. Two public citizens addressed required assessment intervals. One suggested that all pipe that puts the public at significant risk should be tested, by hydro testing or some other means, at approximately ten-year intervals. Another commenter recommended that assessments be required more frequently in densely populated areas.

9. PST opined that the need to ask the questions in this section makes clear that PHMSA's current level of oversight and review of IM planning and implementation is inadequate, and calls into question the value of many IM programs, particularly those relying to any extent on direct assessment methods. PST recommended that the regulations be significantly strengthened to require PHMSA's review and administration approval of any IM program.

Response

PHMSA appreciates the information provided by the commenters. PHMSA agrees that pipeline operators should be able to select the best assessment

method applicable for its pipelines and circumstances. PHMSA also agrees with NAPS and other commenters that additional requirements are needed for assessing more miles of pipeline that pose a risk to the public. PHMSA has also identified the need to address specific issues related to the selection of integrity assessment methods that have been identified following the San Bruno incident, especially related to the use of direct assessment. Therefore, PHMSA proposes to add more specific requirements related to (1) performance of integrity assessments for pipe not covered by subpart O (*i.e.*, pipeline not located in a high consequence area) that represents risk to the public, and (2) selection of assessment methods. Specifically, PHMSA proposes to revise the requirements in §§ 192.921 and 192.937 as follows: (1) Allow direct assessment only if a line is not capable of inspection by internal inspection tools; (2) add a newly defined assessment method: “spike” hydrostatic test; (3) add excavation and *in situ* direct examination as an allowed assessment method; and (4) add guided wave ultrasonic testing (GWUT) as an allowed assessment method. In addition, PHMSA proposes to add a new § 192.710 to require that a significant portion of pipelines not covered by subpart O be periodically assessed using integrity assessment techniques similar to those proposed for HCA segments. Specifically, PHMSA proposes to require that all pipeline segments in class 3 and class 4 locations and moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, “smart pigs”), be periodically assessed. Although PHMSA proposes to provide selected, more prescriptive requirements for the selection of assessment methods, the pipeline safety regulations would continue to allow the use of other technology that an operator demonstrates can provide an equivalent understanding of the condition of the line pipe (comparable to a specified integrity assessment such as pressure testing or inline inspection), in order to continue to encourage research and development of more effective assessment technologies similar to the successful development of GWUT. For non-HCA segments, operator notification to PHMSA of the selection of other technologies would not be required.

PHMSA understands the Pipeline Safety Trust’s recommendation that the regulations require PHMSA’s review and approval of any IM program.

PHMSA believes its current approach to inspection of operator IM programs is both flexible and appropriate.

Comments Submitted for Questions in Topic G

G.1. Have any anomalies been identified that require repair through various assessment methods (e.g., number of immediate and total repairs per mile resulting from ILI assessments, pressure tests, or direct assessments)?

1. INGAA reported that operators have used in-line inspection, pressure testing, and direct assessment, with in-line inspection being most prevalent. INGAA commented that all three methods have been successful at identifying anomalies requiring repair. A number of pipeline operators supported INGAA’s comments.

2. AGA and Ameren Illinois stated that all assessment methods used by pipeline operators have been used to identify, or have identified, anomalies requiring repair. A number of pipeline operators supported AGA’s comments.

3. Accufacts recommended that PHMSA publically report the number of anomalies discovered and repaired by anomaly type, time to repair, state, and assessment method for both HCAs and non-HCAs.

4. Texas Pipeline Association, Texas Oil & Gas Association, Atmos, Paiute, and Southwest Gas noted that the transmission pipeline annual report includes the number of immediate and scheduled anomalies identified by each assessment method.

5. ITT Exelis Geospatial Systems reported that aerial leak surveys using laser technology, which is not one of the assessment methods specified in the regulations, have been successful in identifying pipeline leaks.

6. Kern River reported that it did not identify any immediate or scheduled repairs from January 1, 2004, through December 31, 2010.

7. MidAmerican noted that it has used all three allowed assessment methods. Approximately 42 percent of the company’s pipeline has been assessed using direct assessment. All anomalies requiring repair have been identified using in-line inspection.

8. Northern Natural Gas reported that it identified seven immediate repair anomalies in the period from January 1, 2004, through December 31, 2010. The total number of repairs made during this same period averaged 0.1 per mile.

9. An anonymous commenter noted that few leaks are detected using subpart J pressure testing.

10. GPTC reported that it has no data with which to respond to this question.

Response to Question G.1 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that all three methods have been successful at identifying anomalies requiring repair. However, by its nature, direct assessment is a sampling-type assessment method. Hydrostatic pressure testing and in-line inspection both assess the entire segment. PHMSA, therefore, believes that these methods provide a higher level of assurance (though still not 100%) that no injurious pipeline defects remain in the pipe after the assessment is completed and anomalies repaired. Based on this inherent difference, PHMSA proposes to revise the requirements to: (1) Allow direct assessment only if a line is not capable of inspection by internal inspection tools; (2) add a newly defined assessment method: “spike” hydrostatic test; (3) add excavation and *in situ* direct examination as an allowed assessment method; and (4) add guided wave ultrasonic testing (GWUT) as an allowed assessment method.

G.2. Should the regulations require assessment using ILI whenever possible, since that method appears to provide the most information about pipeline conditions? Should restrictions on the use of assessment technologies other than ILI be strengthened? If so, in what respect? Should PHMSA prescribe or develop voluntary ILI tool types for conducting integrity assessments for specific threats such as corrosion metal loss, dents and other mechanical damage, longitudinal seam quality, SCC, or other attributes?

1. INGAA, supported by a number of its pipeline operator members, noted that ILI is effective, but has its own limitations; pressure testing and direct assessment can provide information that ILI cannot. INGAA commented that operators must be allowed to use all assessment techniques without encumbrances or conditions because all techniques are effective.

2. AGA and a number of its members commented that ILI is one option of a variety of methods available to operators and suggested that applying additional ILI assessment requirements would hinder operators’ ability to select the tool with the appropriate capabilities to address pipeline threats. AGA commented that this would be inappropriate and operators must be allowed to use any of the three assessment methods, without conditions, based on the circumstances and threats applicable to their pipelines.

3. Air Products and Chemicals, Inc. opposed a requirement to use ILI whenever possible. The company noted

that one of the benefits of the current IM framework is the flexibility it provides to operators in how to achieve regulatory goals. Air Products noted that use of alternative methods is already constrained by regulation and contended that the existing limitations are adequate and it would be inappropriate for PHMSA to specify particular tool types for individual threats. Atmos agreed, noting that ILI is not the only assessment method applicable to many threats. Atmos noted that ILI technology is developing at a rapid pace, and suggested that prescribing certain tool types could limit future advancements or cause the rate of development to be slowed.

4. TransCanada opposed requiring use of ILI. The company noted that ILI has its advantages, but it also has limitations, and commented that operators must be able to select the methods best suited to evaluate identified threats, given the wide range of circumstances and threats that may be applicable to particular pipeline segments.

5. NACE International noted that assessments using only ILI do not necessarily provide the most information about pipeline conditions; other assessment methods may be more appropriate for some threats. NACE also noted that not all pipelines are piggable. NACE believes that each assessment method has strengths and weaknesses, each should be used where appropriate, and overly prescriptive rules can supplant sound engineering judgment, stifle innovation, and prevent the development of new technologies.

6. Accufacts commented that all new pipelines should be configured to permit ILI and a timetable should be established to convert older pipelines for ILI. At the same time, Accufacts cautioned that one particular approach to ILI should not be oversold, and suggested that limitations on use of certain assessment methods should be strongly clarified in regulations. Accufacts suggested that PHMSA needs to clarify the major strengths and weaknesses of the various assessment methods identified and to improve subpart J, including requiring the reporting of hydro testing pressure ranges, both minimum and maximum pressures, as a percentage of SMYS when appropriate.

7. MidAmerican suggested that operators be allowed to address threats by category using the guidance in ASME/ANSI B31.8S. MidAmerican noted that it cannot use ILI on all of its transmission pipelines, 42 percent of which have been assessed using direct assessment. MidAmerican suggested

that operators continue to use their threat assessments to determine which pipelines should be retrofitted to accommodate ILI.

8. Northern Natural Gas reported that it uses ILI whenever possible but it cannot be used on all of its lines due to their small diameter. Northern noted that pressure testing and direct assessment may be more appropriate for some threats and that the operator is responsible for selecting the best assessment method. Northern opined that the guidance on tool selection in ASME/ANSI B31.8S is sufficient.

9. Texas Pipeline Association and Texas Oil & Gas Association recommended that ILI not be the required assessment method of choice and that operators continue to have the flexibility to select the appropriate assessment method, noting that other methods may be better for a particular threat. The associations noted that ILI technology is improving rapidly and expressed concern that rulemaking cannot keep pace with technological advancement and that prescribing tools could result in assessments being conducted with inferior technology.

10. Thomas M. Lael, an industry consultant, noted that no assessment method, including ILI, is perfect. Lael suggested that use of alternating methods be required to realize the strengths of all methods.

11. A citizen commenter suggested that use of direct assessment be limited, since it does not provide sufficient information about the pipeline.

12. An anonymous commenter noted that requiring ILI would not be cost beneficial, because corrosion metal loss is a relatively slow process.

13. GPTC noted that ILI cannot be used on all pipelines and recommended that operators have the latitude to select the assessment method most appropriate for their pipelines. Oleksa and Associates similarly noted that ILI cannot be used on some pipelines.

14. Paiute and Southwest Gas opposed a requirement to use ILI whenever possible. The companies noted that ILI provides current pipe conditions but no information on environmental conditions surrounding the pipe. They commented that operators should not be discouraged from using any appropriate assessment method.

15. Ameren Illinois opposed requiring the use of ILI, noting that it is neither practical nor feasible to require ILI assessments on all pipelines.

16. California Public Utilities Commission recommended that pressure testing and ILI be the only methods allowed for IM assessments.

CPUC suggested that the use of direct assessment be limited to confirmatory direct assessments and lines that have been pressure tested to subpart J requirements. CPUC further recommended that the regulations prescribe acceptable ILI tool types to address specific threats.

17. A private citizen suggested that pressure testing should not be allowed as an assessment method because it provides no information about anomalies not resulting in leaks or failures. The commenter suggested that use of pressure testing should be limited to verifying the integrity of new or repaired pipelines.

Response to Question G.2 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that operators should be able to select the methods best suited to evaluate identified threats. However, PHMSA believes rulemaking for strengthening requirements for the selection and use of assessment methods is needed to address specific issues identified from the San Bruno incident. PHMSA proposes more prescriptive guidance for the selection of assessment methods, especially related to the use of direct assessment and to assess for cracks and crack-like defects, as indicated in the response to general comments, above. For HCA segments, PHMSA proposes that the use of direct assessment as the assessment method would be allowed only if the pipeline is not capable of being inspected by internal, in-line inspection tools. For non-HCA segments, assessments would have to be done within 15 years and every 20 years thereafter. To facilitate the identification of non-HCA areas that require integrity assessment, PHMSA proposes to define a "Moderate Consequence Area" or MCA. PHMSA also proposes additional requirements for selection and use of internal inspection tools, including a requirement to explicitly consider uncertainties such as tool tolerance in reported results in identifying anomalies.

PHMSA disagrees with the suggestion that pressure testing should not be allowed as an assessment method. In many circumstances, pressure testing is a good indicator of a pipeline's integrity. Although it does not assess subcritical defects, it provides assurance of adequate design safety margin and can be useful in particular for lines that are not piggable.

G.3. Direct assessment is not a valid method to use where there are pipe properties or other essential data gaps. How do operators decide whether their

knowledge of pipeline characteristics and their confidence in that knowledge is adequate to allow the use of direct assessment?

1. Industry commenters, including AGA, INGAA, Texas Pipeline Association, Texas Oil and Gas Association, and numerous pipeline operators noted that the requirements applicable to direct assessment, specified in NACE Standard SP0502–2008 and incorporated into subpart O by reference, require a feasibility study to determine if use of direct assessment is appropriate. If it cannot be determined during the pre-assessment phase that adequate data is available, another assessment method must be selected. Industry commenters noted that it is the operator's responsibility to select an appropriate assessment method.

2. Paiute and Southwest Gas disagreed with the statement that "direct assessment is not a valid method to use where there are pipe properties or other essential data gaps." The companies noted that the data gathered and evaluated conforms to Section 4 of ASME/ANSI B31.8S (incorporated by reference) which allows use of conservative proxy values when data gaps exist.

3. California Public Utilities Commission recommended that pressure testing and ILI be the only methods allowed for IM assessments. CPUC suggested that use of direct assessment be limited to confirmatory direct assessments and lines that have been pressure tested to subpart J requirements.

Response to Question G.3 Comments

PHMSA appreciates the information provided by the commenters. PHMSA agrees that pressure testing and ILI are preferred integrity assessment methods, over direct assessment. However, when properly implemented, DA can be a valuable integrity assessment tool. PHMSA proposes to retain direct assessment as an assessment method where warranted, but proposes to revise the requirements in §§ 192.921 and 192.937 to allow use of direct assessment or other method only if a line is not capable of inspection by internal inspection tools.

G.4. How many miles of gas transmission pipeline have been modified to accommodate ILI inspection tools? Should PHMSA consider additional requirements to expand such modifications? If so, how should these requirements be structured?

1. A number of industry commenters submitted data concerning the number of pipeline miles that have been modified to accommodate ILI:

- INGAA reported that more than 30,000 miles of pipeline have been modified across the industry.
- Atmos reported that it has modified approximately 2,800 miles.
- Northern Natural Gas reported that it has modified approximately 2,500 miles.
- MidAmerican reported that it has modified 38 miles.
- Paiute and Southwest Gas reported that they have made modifications but have not tracked the total mileage on which they were performed.
- Ameren Illinois and Kern River reported that they have modified no pipelines. Kern River noted specifically that all of its mainline is piggable.

2. AGA reported that it has no data concerning the number of miles modified, but noted that operators are required to assure that new and replaced pipelines can accommodate ILI tools. AGA contended that modifying pipelines to accommodate ILI tools is more onerous for intrastate transmission pipeline operators than for interstate operators. A number of operators supported AGA's comments.

3. Texas Pipeline Association and GPTC reported that they have no data with which to respond to this question.

4. California Public Utilities Commission supported additional requirements to expand modifications to accommodate ILI but reported that it has no opinion on how these requirements should be structured.

5. MidAmerican noted that one-third of its 770 miles of transmission pipeline is of a diameter smaller than available ILI tools.

6. Northern Natural Gas commented that PHMSA should not consider additional requirements to expand modifications of pipelines to accommodate ILI tools, and that the inspection method and determination to assess additional line segments outside of HCAs should be based on specific risk factors and type and configuration of pipeline facility. The company noted that some lines cannot be assessed using ILI.

7. Paiute and Southwest Gas noted that § 192.150 requires that newly constructed or replacement pipelines be designed to accommodate ILI tools. They contended that the decision to modify other pipelines should be an operator decision based on the best assessment method.

8. Texas Pipeline Association and Texas Oil & Gas Association opined that PHMSA does not need to develop additional requirements for the modification of transmission pipelines to accommodate ILI tools. The associations noted that the regulations

already cover this for new and replacement pipelines and that there is a financial incentive for operators to use ILI tools versus other assessment methods. Atmos agreed, also noting that there are numerous advantages to ILI that incentivize operators to use that method when they can.

9. Accufacts commented that PHMSA should report publicly the number of miles of transmission pipeline that can be inspected by ILI as well as the number of miles inspected by other assessment methods both for HCAs and non-HCAs.

Response to Question G.4 Comments

PHMSA appreciates the information provided by the commenters. In its report on the San Bruno incident, the NTSB recommended that all natural gas transmission pipelines be configured so as to accommodate in-line inspection tools, with priority given to older pipelines (recommendation P–11–17). In its initial response to the NTSB recommendation, PHMSA stated that implementing this recommendation will involve significant technical and economic challenges and is likely to require time to implement. Additional data is needed to evaluate this issue. Therefore, further rulemaking will be considered separately in order to complete this evaluation. PHMSA will review the comments received on the ANPRM and will address this issue in the future.

G.5. What standards are used to conduct ILI assessments? Should these standards be incorporated by reference into the regulations? Should they be voluntary?

1. INGAA, supported by a number of its operator members, noted that standards are continuously upgraded and improved and recommended that PHMSA adopt performance-based language that will allow operators to select appropriate standards.

2. AGA, supported by a number of its members, noted that ILI technology is advancing rapidly and it would be unwise to restrict innovation by handcuffing it to a slow-developing rulemaking process. AGA recommended that PHMSA not adopt ILI standards into the code. Ameren Illinois agreed that standards should not be incorporated, because to do so would limit operators' ability to use up-to-date standards.

3. GPTC argued that there is no justification to enact additional prescriptive regulations for ILI assessments of pipelines. GPTC contended that performance standards allow operators to select the best approach.

4. Atmos, MidAmerican, Northern Natural Gas, Paiute, and Southwest Gas all cited one or more of API1163, ASNT ILI-PQ-2005 and RP0102-2002, and ASME/ANSI B31.8S as standards used to conduct ILI assessments. All agreed that use of industry standards should remain voluntary. Paiute and Southwest Gas, in particular, commented that technology is developing rapidly, and that incorporating current standards into the regulations may hold operators accountable to a level of performance that may be outdated.

5. Texas Pipeline Association and Texas Oil & Gas Association also opposed incorporating ILI standards into the regulations. TPA commented that there are incentives for operators to take appropriate measures to obtain accurate and reliable ILI results.

6. An anonymous commenter suggested that incorporating standards could be counterproductive, since operators would usually stop with the required actions. The commenter suggested that a better approach would be to require operators to have precise specifications, guidelines, and a written process for ILI, none of which should be developed by the operator's ILI vendor. The commenter also suggested that a similar approach be adopted for stress corrosion cracking direct assessment (SCCDA).

7. California Public Utilities Commission and a private citizen recommended that standards be incorporated for mandatory compliance, arguing that this is necessary to assure quality and accuracy.

Response to Question G.5 Comments

PHMSA appreciates the information provided by the commenters. The current pipeline safety regulations in 49 CFR 192.921 and 192.937 require that operators assess the material condition of pipelines in certain circumstances and allow use of in-line inspection tools for these assessments. Operators are required to follow the requirements of ASME/ANSI B31.8S in selecting the appropriate ILI tools. ASME B31.8S provides limited guidance for conducting ILI assessments. At the time these rules were promulgated, there was no consensus industry standard that addressed ILI. Three related standards have been published: API STD 1163-2005, NACE SP0102-2010, and ANSI/ASNT ILI-PQ-2010. These standards address the qualification of inline inspection systems, the procedure for performing ILI, and the qualification of personnel conducting ILI, respectively. The incorporation of these standards into pipeline safety regulations will promote a higher level of safety by

establishing consistent standards. Therefore, PHMSA is proposing to incorporate these industry standards into the regulations to provide better guidance for conducting integrity assessments with in-line inspection. PHMSA also encourages and actively supports the development of new and better technology for integrity assessments. Therefore, the rule also allows the application and use of new technology, provided that PHMSA is notified in advance. PHMSA will continue to evaluate the need for additional guidance for conducting integrity assessments or applying new technology.

G.6. What standards are used to conduct internal corrosion direct assessment (ICDA) and SCCDA assessments? Should these standards be incorporated into the regulations? If the commenter believes they should be incorporated into the regulations, why? What, if any, remediation, hydrostatic test or replacement standards should be incorporated into the regulations to address internal corrosion and SCC?

1. INGAA commented that standards exist for ICDA and SCCDA. AGA agreed that NACE SP0206 addresses ICDA and SP0204 addresses SCCDA. AGA opposed adopting these standards into the regulations, however, commenting that a standard must be demonstrated to be effective before it can be incorporated. AGA noted that there are long-standing issues with the ICDA standard. Numerous pipeline operators provided comments supporting the INGAA and AGA comments.

2. GPTC, Atmos, Ameren Illinois, MidAmerican, Paiute, Southwest Gas, Texas Gas Association and Texas Oil & Gas Association all referenced one or more of: NACE SP0502, NACE SP0206, ASME/ANSI B31.8S, and GRI02-0057. All agreed that the standards should not be incorporated by reference, arguing that this would stifle innovation or require operators to follow requirements that may become outdated, or both. Paiute and Southwest Gas specifically recommended that PHMSA collect additional information on industry best practices and compile/review IM results related to internal corrosion and SCC before taking any action towards incorporating the standards.

3. NACE International reported its conclusion that the existing standards for ICDA and SCCDA should be incorporated into regulations. NACE also cautioned that overly-prescriptive regulations can prevent innovation and development of new technologies.

4. Northern Natural Gas reported that it used NACE SP0206 in developing its ICDA procedures and there would be no

impact on the company if the standard were adopted into regulations. Northern further reported it does not use SCCDA.

5. Accufacts commented that few technical gains have been made in the abilities of direct assessment methods to reliably identify or assess at-risk anomalies, especially with regards to SCC.

6. California Public Utilities Commission argued that pressure testing and ILI should be the only assessment methods allowed. The Commission contended that direct assessment should be limited to use during confirmatory direct assessments and for lines that have been pressure tested to subpart J requirements.

7. An anonymous commenter noted that Kiefner, NACE, and ASTM all provide useful references for SCCDA and ICDA.

8. INGAA, supported by several of its operator members, noted that ASME/ANSI B31.8S addresses remediation and pressure testing. INGAA recommended that PHMSA adopt the 2010 version of this standard, arguing that it is improved over the 2004 standard that is currently incorporated by reference into Section 192.7 and that it addresses near-neutral SCC. The 2010 edition also includes specific guidance for SCC mitigation by means of hydrostatic pressure testing in the event SCC is identified on a pipeline.

9. MidAmerican reported that it uses ASME B31G to determine remaining wall strength and that it remediates conditions in accordance with § 192.933(d) and ASME/ANSI B31.8S.

Response to Question G.6 comments

PHMSA appreciates the information provided by the commenters. Section 192.927 specifies requirements for gas transmission pipeline operators who use ICDA for IM assessments. The requirements in § 192.927 were promulgated before there were consensus standards published that addressed ICDA. Section 192.927 requires that operators follow ASME/ANSI B31.8S provisions related to ICDA. PHMSA has reviewed NACE SP0206-2006 and finds that it is more comprehensive and rigorous than either § 192.927 or ASME B31.8S in many respects. In addition, Section 192.929 specifies requirements for gas transmission pipeline operators who use SCCDA for IM assessments. The requirements in § 192.929 were promulgated before there were consensus industry standards published that addressed SCCDA. Section 192.929 requires that operators follow Appendix A3 of ASME/ANSI B31.8S. This appendix provides some guidance for

conducting SCCDA, but is limited to SCC that occurs in high-pH environments. Experience has shown that pipelines also can experience SCC degradation in areas where the surrounding soil has a pH near neutral (referred to as near-neutral SCC). NACE Standard Practice SP0204–2008 addresses near-neutral SCC in addition to high-pH SCC. In addition, the NACE recommended practice provides technical guidelines and process requirements which are both more comprehensive and rigorous for conducting SCCDA than either § 192.929 or ASME/ANSI B31.8S. Therefore, PHMSA is proposing to incorporate these industry standards into the regulations to provide better guidance for conducting integrity assessments with ICDA or SCCDA. PHMSA will continue to evaluate the need for additional guidance for conducting integrity assessments.

G.7. Does NACE SP0204–2008 (formerly RP0204), “Stress Corrosion Cracking Direct Assessment Methodology” address the full life cycle concerns associated with SCC?

1. INGAA suggested NACE SP0204, by itself, does not address the full life cycle concerns of SCC but in combination with ASME/ANSI B31.8S the full life cycle concerns are addressed. A number of pipeline operators supported INGAA’s comments.

2. AGA, supported by a number of its members, suggested PHMSA should determine whether NACE SP0204 addresses full life cycle concerns.

3. GPTC, Texas Pipeline Association, Texas Oil & Gas Association, and Ameren Illinois commented it was not clear what PHMSA meant by “full life cycle concerns.”

4. NACE International reported that SP0204 does not address the full life cycle concerns of SCC; however, NACE noted that it has developed a 2011 “Guide to Improving Pipeline Safety by Corrosion Management” which will be converted into a NACE standard.

5. MidAmerican reported its conclusion that NACE SP0204 does address full life cycle concerns.

6. Paiute and Southwest Gas reported their conclusion that the existing standards are adequate, but deferred to NACE concerning the breadth of coverage of NACE standards.

Response to Question G.7 Comments

PHMSA appreciates the information provided by the commenters. PHMSA believes that NACE SP0204–2008 is the best available guidance and is proposing to incorporate this industry standard into the regulations for conducting

integrity assessments with SCCDA. In addition, other proposed requirements for integrity assessments and remediation in §§ 192.710, 192.713, 192.624, and subpart O provide greater assurance that the full life cycle concerns associated with SCC are addressed.

G.8. Are there statistics available on the extent to which the application of NACE SP0204–2008, or other standards, have affected the number of SCC indications operators have detected and remediated on their pipelines?

1. Industry commenters responding to this question unanimously noted that no statistics have been collected on the use of NACE SP0204. INGAA noted, in addition, that the SCC Joint Industry Project (JIP) represents the experience of operators of 160,000 miles of gas transmission pipeline.

2. Paiute and Southwest Gas reported that they have not identified any SCC on their pipeline systems.

3. An anonymous commenter noted that there has been one incident attributed to factors not addressed in current standards. The commenter noted that the only common factors among SCC colonies was high soil resistivity and disbanded coating.

Response to Question G.8 Comments

PHMSA appreciates the information provided by the commenters. As described in the response to Question G.6, PHMSA is proposing to incorporate NACE SP0204–2008 into the regulations. PHMSA will continue to gather information in this area and will evaluate the need for more specific requirements or guidance to address the threat of SCC.

G.9. Should a one-time pressure test be required to address manufacturing and construction defects?

1. INGAA and a number of its pipeline operators argued that this should be a case-by-case decision guided by INGAA’s Fitness for Service protocol. INGAA noted that new pipelines require a part 192, subpart J, pressure test while older pipelines may have been strength tested.

2. AGA, supported by a number of its pipeline operators, opined that a one-time pressure test is sufficient. AGA noted that Congress accepted the stability of pipelines that had undergone a post construction pressure test.

3. GPTC argued that a one-time pressure test is sufficient; however, such a test should not be mandated for pipelines not tested after construction unless a significant risk has been demonstrated. GPTC noted that manufacturing and construction defects are not time-related.

4. American Public Gas Association objected to any requirement for a one-time pressure test, noting that it is not practical to conduct such a test on most transmission pipelines operated by municipal pipeline operators.

5. Atmos noted that the decision to perform one-time pressure tests to address manufacturing and construction defects requires more information and consideration than can be conveyed in response to a single question. Atmos reported that it could not determine if the one-time pressure test requirement would apply to all pipeline segments or to pipelines with certain characteristics. Some of Atmos’ pipelines could not be removed from service for testing without impacts on customers.

6. Ameren Illinois argued that no one-time pressure test should be required, noting that a pressure test is already required before a pipeline is placed in service.

7. Northern Natural Gas argued that a one-time pressure test should not be required in all cases. Northern noted that assessment of manufacturing and construction defect threats should be determined based on the risk level and pipeline type for pipeline segments do not have an existing pressure test.

8. MidAmerican opined that a one-time pressure test should be a requirement for manufacturing and construction defects, noting defects that survive a pressure test are unlikely to fail during the useful life of the pipeline.

9. Oleksa and Associates noted that: (1) A one-time pressure test is all that is needed for manufacturing and construction defects; (2) an in-service pipeline should only be pressure tested if there is clear reason to believe a strength test would be beneficial; and (3) many pipelines operate at such low levels of stress that a strength test is not necessary.

10. Paiute and Southwest Gas commented that a pressure test should be conducted in accordance with subpart J when initially placing a pipeline in service. The operators reported that they support the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 which will require systematic pressure testing (or other alternative methods of equal or greater effectiveness) of certain, previously untested transmission pipelines located in HCAs and operating at a pressure greater than 30% SMYS. Texas Pipeline Association and Texas Oil & Gas Association agreed, noting that testing of new pipelines is already required and the Act requires use of pressure testing or alternate means to verify MAOP.

11. Thomas Lael and California Public Utilities Commission argued that all pipelines should be subjected to a pressure test. CPUC noted that an unspecified technical paper published by Kiefner shows that a pressure test to 1.25 times MAOP will be sufficient to demonstrate the stability of manufacturing and construction defects and girth welds.

12. The NTSB recommended that PHMSA amend part 192 so that manufacturing and construction defects can only be considered stable if a gas pipeline has been subjected to a post-construction hydrostatic pressure test of at least 1.25 times the MAOP.

13. Accufacts suggested that a requirement for a one-time pressure test is needed, noting the NTSB safety recommendations issued following San Bruno made it clear that there are problems with the current IM regulations, especially as they relate to systems that were in operation before the implementation of federal regulations.

14. A private citizen suggested that a one-time pressure test or reduction of MAOP should be required for all low-frequency electric resistance welded (LFRW) pipe.

15. A private citizen suggested that a one-time pressure test conducted in combination with ILI should be required as a baseline for subsequent ILI inspections.

16. An anonymous commenter opined that no one-time pressure test is needed unless there is a history of seam failure or SCC.

Response to Question G.9 Comments

PHMSA appreciates the information provided by the commenters. The majority of comments support performance of a one-time pressure test to address manufacturing and construction defects. The ANPRM requested comments regarding proposed changes to part 192 regulations that would repeal 49 CFR 192.619(c) and the NTSB issued recommendations to repeal 49 CFR 192.619(c) for all gas transmission pipelines (P-11-14) and to require a pressure test before concluding that manufacturing- and construction-related defects can be considered stable (P-11-15). In addition, Section 23 of the Act requires issuance of regulations regarding the use of tests to confirm the material strength of previously untested natural gas transmission lines.

An Integrity Verification Process (IVP) workshop was held in 2013. At the workshop, PHMSA, the National Association of State Pipeline Safety Representatives, and various other stakeholders presented information and

comments were sought on a proposed IVP that will help address these issues. Key aspects of the proposed IVP process include criteria for establishing which pipe segments would be subject to the IVP, technical requirements for verifying material properties where adequate records are not available, and technical requirements for re-establishing MAOP where adequate records are not available or the existing MAOP was established under § 192.619(c). Comments were received from the American Gas Association, the Interstate Natural Gas Association of America, and other stakeholders and addressed the draft IVP flow chart, technical concerns for implementing the proposed IVP, and other issues. The detailed comments are available on Docket No. PHMSA-2013-0119. PHMSA considered and incorporated the stakeholder input, as appropriate into this NPRM, which proposes requirements to address pipelines that established MAOP under 49 CFR 192.619(c), manufacturing and construction defect stability, verification of MAOP (where records that establish MAOP are not available or inadequate), and verification and documentation of pipeline material for certain onshore, steel, gas transmission pipelines.

G.10. Have operators conducted quality audits of direct assessments to determine the effectiveness of direct assessment in identifying pipeline defects?

1. INGAA, AGA, GPTC, and numerous pipeline operators noted that direct assessment is a cyclical process that continually incorporates analysis of information made available from the direct and indirect assessment tools used. The direct assessment process requires that more restrictive criteria be applied on first use and as operators become more experienced with the methodology and gather more data on the pipeline, more informed pipeline integrity decisions are made. The commenters stated that operators using the direct assessment process must continuously assess the effectiveness of the methodology.

2. Paiute and Southwest gas commented that operators confirm the findings of the pre-assessment and indirect assessment steps as part of the four-step direct assessment process. Validation digs are required to confirm the effectiveness of the direct assessment process.

3. Texas Pipeline Association and Texas Oil & Gas Association noted that direct examinations are made as part of every direct assessment. In Texas, operators have generally been required by the Railroad Commission to

demonstrate comparisons of direct assessment results to ILI results on a portion of their pipeline where both have been performed. The associations contended that this process of validating should be considered a quality audit.

4. Northern Natural Gas agreed that verification of the effectiveness of direct assessment is already a part of the required post-assessment step of the four-step direct assessment process. Ameren Illinois agreed that this process is effectively a quality audit.

5. Atmos reported that records are kept of the indicated anomalies and the actual anomalies discovered through direct examination, thus assuring the quality and validation of direct assessments.

6. Accufacts opined that there appear to be serious deficiencies in the application of direct assessment on gas pipelines.

7. An anonymous commenter noted that direct assessment, if used correctly, is informative and proactive, and best suited to identify preventive and mitigative actions and to establish assessment intervals.

Response to Question G.10 Comments

PHMSA appreciates the information provided by the commenters. The majority of comments state that quality audits are performed for direct assessments, however, PHMSA believes, as one comment suggests, that there are weaknesses in the use of direct assessments. For example, SCCDA is not as effective, and does not provide an equivalent understanding of pipe conditions with respect to SCC defects, as ILI or hydrostatic pressure testing. Accordingly, PHMSA proposes to revise the requirements in §§ 192.921 and 192.937 for direct assessment to allow use of this method only if a line is not capable of inspection by internal inspection tools.

G.11. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

H. Valve Spacing and the Need for Remotely or Automatically Controlled Valves

The ANPRM requested comments regarding proposed changes to the requirements for sectionalizing block valves. Gas transmission pipelines are required to incorporate sectionalizing block valves. These valves can be used to isolate a section of the pipeline for maintenance or in response to an incident. Valves are required to be installed at closer intervals in areas where the population density near the pipeline is higher.

Sectionalizing block valves are not required to be remotely-operable or to operate automatically in the event of an unexpected reduction in pressure (*e.g.*, from a pipeline rupture). Congress has previously required PHMSA to “assess the effectiveness of remotely controlled valves to shut off the flow of natural gas in the event of a rupture” and to require use of such valves if they were shown technically and economically feasible.³⁶ The NTSB has also issued a number of recommendations concerning requirements for use of automatic- or remotely-operated mainline valves, including one following a 1994 pipeline rupture in Edison, NJ.³⁷ The incident in San Bruno, CA on September 9, 2010, has raised public concern about the ability of pipeline operators to isolate sections of gas transmission pipelines in the event of an accident promptly and whether remotely or automatically operated valves should be required to assure this.

The ANPRM then listed questions for consideration and comment. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comments for Topic H

1. INGAA argued that while valves, spacing, and selection are important, public safety requires a broader review of incident responses and consequences. Performance-based Incident Mitigation Management (IMM), using valves and other tools, will, according to INGAA, improve incident response, reduce incident duration and minimize adverse impacts. IMM plans identify comprehensive actions that improve

mitigation performance and minimize overall incident impact. These plans cover various aspects of response, including how operators detect failures, how they place and operate valves, how they evacuate natural gas from pipeline segments, and how they prioritize coordination efforts with emergency responders. A number of pipeline operators supported INGAA’s comments, including Panhandle, TransCanada, Spectra Williams, Southern Star, and others.

2. AGA submitted a white paper that discussed potential benefits associated with remote control valves and automatic shutoff valves; however, the paper acknowledged that these valves will not prevent incidents. A number of pipeline operators supported AGA’s comments.

3. APGA reported automatic or remotely-controlled valves are not practical for municipal pipeline operators because they do not have remote monitoring or control of their pipelines. APGA also cautioned that the use of automatic valves could lead to false closures, an unintended and adverse consequence.

4. Atmos commented that the existing requirements for valve spacing allow for safe and reliable service to its customers. The company noted that requiring the installation of remote control valves or automatic shutoff valves would add minimal value to the overall safety and operation of its transmission pipeline systems. In addition, industry studies have concluded that remote or automatic features on block valves would not reduce injuries or fatalities associated with an incident.

5. MidAmerican commented that installation of automatic shutoff valves would be costly, have minimal impact on improving safety, and could cause customer outages on its pipeline system. At the same time, MidAmerican acknowledged that some applications of remote/automatic control valves could have merit, but that the election should lie with the operator given the complexity of pipeline systems and other factors that bear on that decision. MidAmerican reported its conclusion that ASME/ANSI B31.8S provides adequate guidance for the installation of sectionalizing valves. While MidAmerican opposes a requirement to install automatic or remotely-controlled valves, the company suggested factors PHMSA should consider if it decides to adopt such a requirement. Specifically, PHMSA should allow operators flexibility in deciding between automatic and remote valves and should clarify when action on a pipeline is

considered a new installation versus a repair or replacement in-kind.

6. TransCanada noted that industry studies have shown automatic or remote block valves do not prevent incidents and have a minimal effect on significant consequences, since most of the human impacts from a rupture occur in the first few seconds, well before any valve technology could reduce the flow of natural gas. TransCanada supports the use of Incident Mitigation Management (IMM) to improve incident response, reduce incident duration, and minimize adverse impacts.

7. Chevron argued operators should have the flexibility to select the most effective measures based on specific locations, risks, and conditions of the pipeline segment. Chevron noted that the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 requires a study of incident response in HCAs that must consider the swiftness of leak detection and pipeline shut-down capabilities and the location of the nearest personnel. The study must also evaluate the costs, risks, and benefits of installing automatic or remote controlled shut-off valves.

8. A private citizen suggested that periodic drills be held with local emergency responders, pipeline operators should provide specialized equipment to local responders in densely populated areas, and pipeline operators pay a fee to those municipalities to support incident response. The commenter further recommended that leak detection analyses be computerized.

9. Dominion East Ohio contended that current regulations are adequate and that automatic shutoff valves and remote control valves are an important preventive and mitigative measure to consider using. However, these valves do not prevent accidents and have very limited impact in preventing injuries and deaths caused by an initial pipeline failure.

10. Accufacts suggested that further prescriptive regulation is required concerning the placement, selection, and choice of manual, remotely-controlled, or automatic shutoff valves.

11. The Pipeline Safety Trust (PST) questioned the conclusions of the DOT study, “Remotely Controlled Valves on Interstate Natural Gas Pipelines, (Feasibility Determination Mandated by the Accountable Pipeline Safety and Partnership Act of 1996), September 1999, which concluded that remote control valves were and remain economically unfeasible. The PST noted that the study also stated that there could be a potential benefit in terminating the gas flow to a rupture

³⁶ Accountable Pipeline Safety and Partnership Act of 1996, Public Law 104–304.

³⁷ National Transportation Safety Board, “Texas Eastern Transmission Corporation Natural Gas Pipeline Explosion and Fire, Edison, New Jersey, March 23, 1994,” PB95–916501, NTSB/PAR–95/01, January 18, 1995.

expeditiously particularly in heavily populated and commercial areas. PST suggested PHMSA commission an independent analysis to reach a conclusion regarding whether to require these valves.

12. A private citizen suggested that local authorities regularly review incidents in densely populated areas, as self-policing by pipeline operators is insufficient. The commenter also recommended that pipeline construction and modifications be subject to signoff by a licensed professional engineer and be certified for compliance with applicable regulations by a corporate officer subject to criminal penalties, in order to reduce the incentive to cut corners.

13. Northern Natural Gas and a private citizen recommended that the current one-call exemptions for government agencies be eliminated.

Comments Submitted for Questions in Topic H

H.1. Are the spacing requirements for sectionalizing block valves in § 192.179 adequate? If not, why not and what should be the maximum or minimum separation distance? When class locations change as a result of population increases, should additional block valves be required to meet the new class location requirements? Should a more stringent minimum spacing of either remotely or automatically controlled valves be required between compressor stations? Under what conditions should block valves be remotely or automatically controlled? Should there be a limit on the maximum time required for an operator's maintenance crews to reach a block valve site if it is not a remotely or automatically controlled valve? What projected costs and benefits would result from a requirement for increased placement of block valves?

1. AGA and a number of pipeline operators contended that the existing requirements in § 192.179 are adequate. AGA noted that studies have shown there is no safety benefit to having more remote or automatic valves and operators should be permitted to determine the need for additional valves and spacing. AGA contended that there is no safety reason to change the existing regulation and argued that remote or automatic valves should not be mandated for any specific set of circumstances, since they are only one option for pipeline shutdown.

2. Texas Pipeline Association and Texas Oil & Gas Association commented that spacing requirements for natural gas transmission lines have been shown to be adequate for emergency situations.

Both associations observed that block valves are not in place to prevent accidents and that the greatest impact of an accident is from the initial gas release, before automatic or remote valves could actuate. The associations also noted that the addition of more block valves would increase the risk to aboveground infrastructure.

3. Accufacts contended that the existing spacing requirements are inadequate and noted that valve spacing plays a significant role in the "isolation blowdown" time, or the time to depressurize a gas pipeline segment once isolation valves are closed after a rupture. Accufacts also recommended that additional sectionalizing valves be required when class locations change.

4. Iowa Utilities Board (IUB) suggested that ease of access and the time to respond should be factors relevant to a decision as to whether to install automatic or remote valves. IUB noted that the considerations are different for valves in remote areas compared to urban valves.

5. California Public Utilities Board reported that the issue of valve spacing is under review by the State.

6. A private citizen suggested that valves be required at one-mile intervals in densely populated urban areas and that they close automatically in the event of an incident, since the duration of the fire resulting from an incident is directly proportional to the volume of gas between valves. AGA commented that it is not the amount of gas between valves but rather it is the volume between a valve and a rupture that determines the volume released.

7. Wyoming County Pennsylvania's Commissioners suggested that it is necessary to modify separation distances and to establish adequate distances for gathering lines, including in Class 1 areas. The Commissioners acknowledged that the spacing required for Class 3 locations may be more acceptable than the spacing required for Class 1 areas, but noted that it will take longer to reach a block valve with 10 mile spacing in Pennsylvania's Marcellus Shale regions.

8. An anonymous commenter responded that current valve spacing requirements are adequate and suggested that automation be required if it would take 20 to 30 minutes to respond to a mainline valve.

9. AGA, supported by a number of pipeline operators, noted that operators evaluate the need for additional block valves when they become aware of changes in class location.

10. Atmos commented that the need for additional block valves should be evaluated when class locations change,

if pipe replacement is needed to comply with the new class locations. Atmos recommended valve installations, if any, should only be required within the replaced pipeline section. Atmos further recommended that automatic or remote valves should not be required between compressor stations due to the risk of false closures and the extensive modifications that would be required.

11. MidAmerican opposed a requirement to install new block valves when a class location changes or to establish more stringent spacing requirements, noting that ASME/ANSI B31.8 provides adequate guidance for block valve considerations. Texas Pipeline Association, Texas Oil & Gas Association, and Northern Natural Gas agreed, noting that the required class location study includes consideration of current spacing as well as other criteria.

12. The Commissioners of Wyoming County Pennsylvania stated that it is imperative that a suitable number of additional block valves be required when population increases and class location changes, arguing that this is necessary to assure adequate public safety measures are in place.

13. An anonymous commenter suggested that new valves should not be required when HCA or class location boundaries change, noting that such changes occur rather frequently.

14. Northern Natural Gas argued that a prescriptive standard for valve spacing may not necessarily provide additional risk reduction, noting that many Class 2 and 3 locations are short pipe segments within an extended Class 1 location.

15. Texas Pipeline Association and Texas Oil & Gas Association noted that more block valves would not decrease the damage from a pipeline accident, noting that PHMSA studies have shown that fatalities and significant property damage occur within 3 minutes of a pipeline rupture while a remotely-operated valve takes 10 minutes to close. This and other studies have shown the only benefit to adding more valves is reducing the amount of gas lost in an accident.

16. Accufacts contended that a more scientific discussion will demonstrate a maximum spacing of eight miles will provide sufficient risk reduction.

17. MidAmerican suggested that block valves should be automatic or remotely-operated only when adequate response times cannot be achieved by operator personnel. When response times are adequate, MidAmerican contended that use of automatic or remote valves should be at the operator's discretion.

18. Northern Natural Gas suggested that the decision to use remote or automatic shut-off valves should be

based on the operator's risk assessment and should be made, by the operator, on a case-by-case basis.

19. Paiute and Southwest Gas argued that operators should have the flexibility to evaluate and determine whether remote or automatic valves would be beneficial. The companies noted that § 192.935 already requires the consideration of additional valves as a preventive and mitigative measure.

20. Accufacts contended that decisions on valve spacing and whether they should be manual, remote, or automatic will be dependent on the time established for first responders to safely enter an actual gas transmission impact zone following rupture. Accufacts noted that California has set a goal of 30 minutes for first response time.

21. A private citizen suggested that automatic shutoff valves should be used in densely populated areas because they provide the most rapid response.

22. The Commissioners of Wyoming County Pennsylvania suggested that standardization is necessary with remotely and automatically controlled shutoffs. The Commissioners contended that the operator needs to employ remote or automatic valves when transmission and gathering lines are routed through areas that are not easily accessible.

23. INGAA noted that § 192.620 requires a one-hour time frame for closing a valve, and contended this is practical for valves that would isolate pipelines in HCAs and consistent with requirements for alternative MAOP in § 192.620. A number of pipeline operators supported INGAA's comments.

24. Atmos suggested that mandating a minimum time to reach a valve site is impractical, because many variables exist in a dynamic state that affect an operator's ability to reach a block valve site.

25. MidAmerican opposed a specified time frame for response to a valve site, noting that operators should respond in an expedient manner without specified time limits.

26. Northern Natural Gas suggested PHMSA consider a two-hour response time for valves in HCA.

27. Texas Pipeline Association and Texas Oil & Gas Association noted that conditions determine how quickly an operator can reach a valve site in the event of an incident and operators make every effort to respond expeditiously when an incident occurs. The associations opposed adoption of a required response time.

28. TransCanada reported its conclusion that having personnel on site within one hour is reasonable for

planning purposes. If this cannot be met, TransCanada suggested that possible valve automation should be required.

29. The Commissioners of Wyoming County Pennsylvania reported their conclusion that there would be value in establishing a maximum response time, especially in Class 1 locations where block valves may be 10 miles apart.

30. INGAA and a number of its pipeline operator members noted that studies have shown consistently that there is no value in installing additional block valves or in automating valves. They suggested that it would be more beneficial to apply resources that would be required to comply with any new requirements in this area towards preventing accidents.

31. MidAmerican reported that installing additional block valves would entail significant costs and suggested that increasing the number of valves could cost in excess of \$40 million for its pipeline system. Northern Natural Gas agreed that costs could be substantial, without providing a specific estimate for its pipeline system.

32. Paiute and Southwest Gas estimated that costs to install new valves could range from \$100,000 to \$1 million per installation.

33. An anonymous commenter estimated that retrofitting a 36-inch valve for remote operation would cost approximately \$30,000 plus subsequent maintenance costs.

34. Accufacts noted that the San Bruno accident demonstrated that there is a cost associated with not properly spacing, installing or automating valves in high consequence areas.

H.2. Should factors other than class location be considered in specifying required valve spacing?

1. INGAA, AGA, GPTC and several pipeline operators took the position that no new requirements are needed. These associations argued that § 192.179 provides appropriate minimum standards and reported that operators install additional valves in accordance with their integrity management plans or other factors that they consider voluntarily.

2. Paiute and Southwest Gas opined that no additional criteria are needed. They noted that numerous industry studies have shown that there is little or no safety benefit to installing additional automatic or remote valves. They suggested that operators should have the flexibility to determine, based on local circumstances, where additional valves are needed.

3. Atmos suggested that valve accessibility be given more consideration, noting that installing

valves in locations that provide improved accessibility could lead to spacing greater than allowed under current regulations. Atmos further suggested that environmental factors such as water crossings and areas prone to flooding should be taken into consideration.

4. MidAmerican opined that additional factors should be considered and pointed to ASME/ANSI B31.8 for examples.

5. Accufacts concluded that additional factors need to be taken into consideration, noting that protection of identified sites in Class 1 and 2 locations will require shorter valve spacing than is currently required by regulations.

6. The California Public Utilities Commission noted that there are numerous factors to be considered that affect response time, and that this issue is under review by the State.

7. The Texas Pipeline Association, Texas Oil & Gas Association, and Commissioners of Wyoming County Pennsylvania suggested that factors other than class location should not be added to the regulations. They noted that class location serves as a surrogate for the level of risk posed by a pipeline.

H.3. Should the regulations be revised to require explicitly that new valves must be installed in the event of a class location change to meet the spacing requirements of § 192.179? What would be the costs and benefits associated with such a change?

1. INGAA and a number of its pipeline operator members opposed applying § 192.179 requirements retroactively to class location changes. INGAA suggested that, rather than absorbing the cost of installing new valves, other preventive and mitigative measures applied through an integrity management plan would produce greater benefits.

2. AGA and a number of its members opposed requiring new valves be installed when class location changes, arguing that no safety benefit will result.

3. Northern Natural Gas expressed its opinion that current regulations are adequate, noting that class location change studies require consideration of block valve spacing.

4. MidAmerican opined that the existing regulations are adequate and noted that ASME/ANSI B31.8 provides other factors for consideration.

5. GPTC expressed its belief that existing requirements are adequate, noting that operators voluntarily consider other factors in establishing valve locations.

6. Atmos suggested that PHMSA not require the installation of new valves

due to changes in class location, but stated the agency should consider the need for additional block valves if pipe replacement is needed as a result of the change.

7. Accufacts suggested that new valves should be required following class location changes, but suggested that a reasonable time should be provided for such valves to be installed and operational.

8. The Texas Pipeline Association and Texas Oil & Gas Association commented that no safety benefit has been demonstrated for the installation of additional valves. The associations suggested that installing additional valves could be counterproductive, since more above-ground valves could pose an additional risk to the public.

9. The California Public Utilities Commission opined that the regulations should require explicitly that additional valves be installed when class location changes, but expressly withheld an opinion on related costs.

10. A private citizen suggested that all requirements related to class location should apply when class location changes, unless PHMSA adopts an expanded definition for HCA to replace class location considerations.

11. An anonymous commenter stated that most operators anticipate changes to Class 3 or 4 when pipelines are designed and constructed. The commenter estimated that installing a new 36-inch valve would cost \$70 to \$100 thousand, not including down time and lost product.

12. The Commissioners of Wyoming County Pennsylvania commented that the regulations need to be revised to explicitly require that new valves be installed when class locations change. The Commissioners suggested that this needs to extend to both transmission and gathering lines in Class 1 areas.

H.4. Should the regulations require addition of valves to existing pipelines under conditions other than a change in class location?

1. INGAA and a number of pipeline operators noted that studies have indicated valve spacing has limited impact on the duration of an incident. INGAA suggested that a performance-based approach to incident mitigation management would better inform valve placement.

2. AGA opposed requiring additional valves under any scenario. A number of pipeline operators supported AGA's comments.

3. Accufacts suggested that new valves should be installed when a site becomes an HCA regardless of class location, but a reasonable time should

be allowed for such valves to be installed and become operational.

4. Ameren Illinois opposed requiring new valves under other conditions, opining that existing requirements are adequate.

5. GPTC and Atmos commented that existing regulations are a sufficient baseline for determining valve location, noting that operators often use more stringent spacing criteria during initial construction.

6. MidAmerican opposed requiring that installation of new valves on existing pipelines for any reason other than a class location change, noting that ASME/ANSI B31.8 provides additional factors for operators to consider in determining valve location.

7. Northern Natural Gas noted that existing regulations require that operators consider additional valves as a preventive and mitigative measure and expressed its conclusion that this requirement is sufficient.

8. Paiute and Southwest Gas suggested that operators should have the flexibility to evaluate and determine where remotely-controlled or automatic valves would be beneficial. The companies noted that § 192.935 requires the consideration of additional valves as a preventive and mitigative measure and industry studies indicate little or no safety benefit to installing additional valves.

9. The California Public Utilities Commission suggested that conditions that would impede access to a valve may need to be considered in determining valve placement.

H.5. What percentage of current sectionalizing block valves are remotely operable? What percentage operate automatically in the event of a significant pressure reduction?

1. INGAA estimated that 40 to 50 percent of mainline block valves are remotely-operated or automatic. INGAA did not provide an estimate specifically for automatic valves. INGAA noted that application of Incident Mitigation Management would lead operators to conclusions as to whether a valve should be remote or automatic. A number of pipeline operators supported INGAA's comments.

2. AGA and GPTC reported that they have no data with which to respond to this question.

3. Ameren Illinois reported that it has no remotely-controlled valves.

4. Atmos reported that remote and automatic valves are not installed routinely. Remotely-controlled valves are installed on a small number of select pipelines, representing approximately 0.1 percent of all valves.

5. Kern River reported that 66 percent of its mainline block valves, and all block valves in HCA, are remotely-controlled.

6. MidAmerican reported that less than one percent of its valves are remotely-controlled and a similarly small percentage of them are automatic.

7. Northern Natural Gas reported that remotely-controlled valves are located only at compressor stations on its pipeline system.

8. Paiute reported that less than 10 percent of the valves on its system are remotely-controlled. Paiute has no automatic valves.

9. Southwest Gas reported that it has no remotely-controlled or automatic valves, due to the urban nature of its pipeline system.

10. Texas Pipeline Association reported that a limited survey of its members indicated the number of remotely-controlled valves varies from 1 to 18 percent; the number of automatic valves varies from zero to 18 percent.

H.6. Should PHMSA consider a requirement for all sectionalizing block valves to be capable of being controlled remotely?

1. INGAA and a number of pipeline operators opposed consideration of such a requirement. They commented that no one solution should be mandated and Incident Mitigation Management should guide operators to decisions as to which valves should be remote or automatic.

2. AGA and a number of pipeline operators also opposed consideration of such a requirement, noting remotely-controlled valves are only one option for shutting down a pipeline.

3. Accufacts opposed such a generic requirement, noting small-diameter gas transmission pipelines may not merit automation because of the science of pipeline diameter rupture associated with high heat flux releases.

4. GPTC opined that remotely-controlled valves do not improve safety, thus there is no basis for requiring their use. GPTC noted that operators voluntarily consider many factors in establishing valve locations.

5. Atmos opposed consideration of this requirement, noting there are issues with false closures and the costs of conversion or installation are extensive. Atmos also noted that industry studies have shown no increase in safety from having more remotely-controlled or automatic valves.

6. Kern River opined that this should be an operator decision, noting that integrity management regulations require the consideration of remote or automatic valves as part of identifying preventive and mitigative measures.

7. MidAmerican strongly opposed requiring all sectionalizing block valves to be remotely controlled. MidAmerican stated that the location and type of valve should be based on an engineering assessment. A requirement that all valves be remote would increase costs and may provide disincentives to installation of additional valves.

8. Northern Natural Gas opposed such a requirement, commenting this should be a case-by-case decision based on risk reduction.

9. Paiute and Southwest Gas reported their conclusion that the existing requirements in § 192.179 are adequate. The companies recommended that operators have the flexibility to evaluate and determine where remote or automatic valves would be beneficial. They noted that § 192.935 requires the consideration of additional valves as a preventive and mitigative measure and industry studies indicate little or no safety benefit to installing additional remote or automatic valves.

10. The Texas Pipeline Association and Texas Oil & Gas Association opposed consideration of a requirement that all block valves be remotely-operable. The associations noted that it would be tremendously expensive to do so, and it would require power and communication sources that may not be readily available at valve sites.

11. The California Public Utilities Commission commented that this could be impractical for distribution systems considering space limitations and the practicability of supplying communication facilities for valves. This issue is under review by the State for transmission facilities.

12. The Iowa Utilities Board noted that remotely-operated valves require a SCADA or other type of remote monitoring and operating system. A requirement that all sectionalizing valves be remotely-operable would thus be a de facto requirement that all operators, regardless of size or the potential consequences of an accident, install a SCADA system. Small operators and municipal utilities in Iowa do not have such systems.

13. The Commissioners of Wyoming County Pennsylvania commented that it might be desirable for all valves to be remotely-operable or automatic, but PHMSA must consider what is reasonable and adequate.

14. An anonymous commenter opposed consideration of a requirement that all valves be remotely-operable, noting that most gas pipeline accident consequences occur immediately upon release, before a remote valve could have any effect.

H.7. Should PHMSA strengthen existing requirements by adding prescriptive decision criteria for operator evaluation of additional valves, remote closure, and/or valve automation? Should PHMSA set specific guidelines for valve locations in or around HCAs? If so, what should they be?

1. INGAA and a number of pipeline operators opposed PHMSA's establishment of prescriptive criteria, suggesting instead that PHMSA develop guidance for Incident Mitigation Management.

2. AGA, GPTC, and a number of pipeline operators commented that requirements in § 192.179 are adequate. AGA noted that operators already consider additional valves in their emergency response portfolio and install them where economically, technically, and operationally feasible. Some operators noted that numerous industry studies indicate that there is little or no safety benefit to installing additional remote or automatic valves and § 192.935 already requires the consideration of additional valves as a preventive and mitigative measure.

3. Accufacts supported the consideration of prescriptive criteria, arguing that prescriptive regulation should be mandated for certain gas transmission pipelines in HCAs, especially larger-diameter pipelines in certain areas where manual closure times can be long.

4. Ameren Illinois opposed additional prescriptive criteria, arguing that existing requirements are sufficient and that additional valves should be considered when economically, technically, and operationally feasible to address specific safety concerns.

5. California Public Utilities Commission expressed its conclusion that prescriptive decision criteria may need to be added for all Method 1 HCA locations.

6. The Iowa Utilities Board, the Texas Pipeline Association and the Texas Oil & Gas Association questioned whether it is possible to write prescriptive decision criteria that can reasonably address all possible situations and circumstances or always provide the best option. These commenters suggested that operator judgment and discretion should play a part in these decisions.

7. MidAmerican expressed its belief that pipeline safety would not be enhanced by additional prescriptive criteria and opposed specific requirements for valve location near HCAs, noting that ASME/ANSI B31.8 provides considerations for operators to take into account when deciding on valve locations.

8. An anonymous commenter suggested that prescriptive criteria could be useful in assuring a degree of consistency among pipeline operators.

H.8. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests

commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to the commenter's suggestions.*

- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*

- *The potential impacts on small businesses of modifying the existing regulatory requirements.*

- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

Response to Topic H Comments

PHMSA appreciates the information provided by the commenters. Based on the investigation of the San Bruno incident, the NTSB recommended (P-11-11) that PHMSA promulgate regulations to explicitly require that automatic shutoff valves or remote control valves in high consequence areas and in Class 3 and 4 locations be installed and spaced at intervals considering the population factors listed in the regulations. In addition, Section 4 of the Act requires issuance of regulations on the use of automatic or remote-controlled shut-off valves, or equivalent technology, if appropriate, and where economically, technically, and operationally feasible. The Act also requires the Comptroller General of the United States to complete a study on the ability of transmission pipeline facility operators to respond to a hazardous liquid or gas release from a pipeline segment located in a high-consequence area. On March 27, 2012, PHMSA sponsored a public workshop to seek stakeholder input on this issue. On October 5, 2012, PHMSA also briefed stakeholders, via a webcast, on the status of an ongoing study conducted by Oak Ridge National Laboratory on understanding the application of automatic control and remote control shutoff valves. The final study was published in December 2012. PHMSA also included this topic in the July 18, 2012 Pipeline Research Forum. PHMSA will take further action on this topic after completion of the assessment of the findings from these activities. PHMSA will consider the comments

received on the ANPRM and will consider this topic in future rulemaking, as required.

I. Corrosion Control

Gas transmission pipelines are generally constructed of steel pipe, and corrosion is a potential threat. Subpart I of part 192 addresses the requirements for corrosion control of gas transmission pipelines, including the requirements related to external corrosion, internal corrosion, and atmospheric corrosion. However, this subpart does not include requirements for the specific threat of Stress Corrosion Cracking (SCC). The ANPRM requested comments regarding revisions to subpart I to improve the specificity of existing requirements and to add requirements relative to SCC.

Existing requirements have proven effective in reducing the occurrence of incidents caused by external corrosion. Many of the provisions in subpart I, however, are general in nature. In addition, the current regulations do not include provisions that address issues that experience has shown are important to protecting pipelines from corrosion damage, including:

- Post-construction surveys for coating damage.
- Post-construction close interval survey (CIS) to assess the adequacy of cathodic protection (CP) and inform the location of CP test stations.
- Periodic interference current surveys to detect and address electrical currents that could reduce the effectiveness of CP.
- Periodic use of cleaning pigs or sampling of accumulated liquids to assure that internal corrosion is not occurring.

Corrosion control regulations applicable to gas transmission pipelines currently do not include requirements relative to SCC. SCC is cracking induced from the combined influence of tensile stress and a corrosive medium. SCC has caused numerous pipeline failures on hazardous liquids pipelines, including a 2003 failure on a Kinder Morgan pipeline in Arizona, a 2004 failure on an Explorer Pipeline Company pipeline in Oklahoma, a 2005 failure on an Enterprise Products Operating line in Missouri, and a 2008 failure on an Oneok NGL Pipeline in Iowa. More effective methods of preventing, detecting, assessing and remediating SCC in pipelines are important to making further reductions in pipeline failures.

The ANPRM then listed questions for consideration and comment. The following are general comments received related to the topic as well as

comments related to the specific questions:

General Comments for Topic I

1. AGA opined that the questions posed under this topic are unclear and disjointed and do not differentiate between distribution and transmission pipelines. In addition, AGA stated that PHMSA did not provide a rationale for why there is any concern over subpart I. A number of pipeline operators supported AGA's comments.

2. MidAmerican noted that PHMSA says current requirements are adequate yet goes on to propose new requirements.

3. INGAA reported that its members commit to mitigating corrosion anomalies in accordance with ASME/ANSI B31.8S, both inside and outside HCAs. INGAA argued that enhanced external corrosion management methods, such as close interval surveys and post-construction coating surveys, should not be required singularly and arbitrarily by new prescriptive regulations, since these methods can be redundant or inferior when combined with other assessment techniques. INGAA argued that these methods should continue to be used by operators on a threat-specific basis, as is currently practiced under performance-based regulations and consensus-based IM programs. A number of pipeline operators supported INGAA's comments.

4. Chevron argued that more prescriptive requirements are unnecessary, noting that current regulations allow operators the flexibility to select the most effective corrosion control method for the specific corrosion threats to a pipeline segment.

5. MidAmerican reported that it has never identified internal corrosion on its pipeline system and prescriptive requirements related to that threat would divert resources. MidAmerican opined that subpart I provides an adequate level of safety and any changes in that subpart should be approached carefully because they could be beneficial or detrimental for reducing risk. MidAmerican further noted that NACE SP0204 and ASME/ANSI B31.8S provide adequate guidance in this area.

6. TransCanada suggested that PHMSA incorporate the new SCC management provision in ASME/ANSI B31.8S as the basis for identifying and mitigating SCC and be responsive to further enhancements. TransCanada also suggested that the best way to manage corrosion anomalies is through assessments.

7. Dominion East Ohio opined that existing regulations in this area are adequate.

8. NAPSUR urged PHMSA to establish or adopt standards or procedures, through a rulemaking proceeding, for improving the methods of preventing, detecting, assessing, and remediating stress corrosion cracking. NAPSUR also suggested that PHMSA consider additional requirements to perform periodic coating surveys at compressor discharges and other high-temperature areas potentially susceptible to SCC and develop a training module for pipeline operators and federal and state inspectors that would include the identification of potential areas of SCC, detecting, assessing and remediating SCC.

9. A private citizen reported that his analysis of data from over 5000 lightning strikes indicates that cathodic protection systems make pipelines a frequent target for lightning.

10. A private citizen suggested that enforcement of cathodic protection requirements be strengthened, stating that the number of enforcement actions indicates that operators are not operating or maintaining CP as required.

11. A private citizen suggested that in-line inspection (ILI) capable of detecting seam issues should be required for pipe susceptible to selective seam weld corrosion, since pressure testing is not adequate to detect non-leak anomalies. If not possible, the commenter would require that this pipe be replaced.

Response

PHMSA appreciates the information provided by the commenters. In light of the contributing factors to the San Bruno incident, including PG&E's reliance on direct assessment under circumstances for which direct assessment was not effective, and the incident in Marshall, Michigan, where fracture features were consistent with stress corrosion cracking, PHMSA believes that more specific measures are needed to address both stress corrosion cracking and selective seam weld corrosion. Based on lessons learned from incident investigations, such as the 2012 incident in Sissonville, West Virginia and the 2007 incident in Delhi, Louisiana, and improved capabilities of corrosion evaluation tools and methods, PHMSA believes that more specific minimum requirements are needed for control of both internal and external corrosion. In addition, cathodic protection is a well-established corrosion control tool, and PHMSA believes the benefits of cathodic protection outweigh any potential risks. Therefore, PHMSA proposes several

enhancements to subpart I for corrosion control and subparts M and O for assessment, including specific requirements to address stress corrosion cracking and selective seam weld corrosion, and enhanced corrosion control measures for HCAs, which are discussed in more detail in response to specific questions, below.

Comments Submitted for Questions in Topic I

I.1. Should PHMSA revise subpart I to provide additional specificity to requirements that are now presented in general terms? If so, which sections should be revised? What standards exist from which to draw more specific requirements?

1. INGAA and a number of pipeline operators commented that adding prescriptive requirements would be disruptive to operators, noting PHMSA has acknowledged the effectiveness of performance-based elements of the current requirements.

2. The AGA, the GPTC, the Texas Pipeline Association, the Texas Oil & Gas Association, and numerous pipeline operators questioned the need to amend subpart I. AGA noted that this is one of the more prescriptive sections of the code and has a 40-year history of demonstrated effectiveness.

3. Ameren Illinois opined it is not necessary to revise subpart I, because integrity management regulations require operators to identify threats and to manage them.

4. MidAmerican opposed more specific requirements for corrosion control, noting that there is wide diversity among pipelines and it is unlikely that a single set of specific requirements would apply effectively to all pipelines. MidAmerican suggested that additional specific requirements must be tailored to a wide range of pipeline configurations to be of any value.

5. Northern Natural Gas reported that IM results demonstrate that corrosion has been adequately addressed on its pipeline system.

6. Paiute and Southwest Gas noted that subpart I is one of the most prescriptive sections of the code, subpart O provides an additional layer of regulation, and NACE standards are robust and incorporated by reference.

7. Panhandle Energy commented that existing performance based regulations require the pipeline operator to establish procedures to determine the adequacy of CP monitoring locations and appropriate remediation schedules based on circumstances that are unique to each pipeline. Panhandle observed that PHMSA appears to be attempting to

establish “One Size Fits All” prescriptive requirements and opined that such changes would have no positive effect on safety and may be detrimental.

8. Accufacts observed that too many pipeline operators are assuming that IM assessments can replace subpart I requirements when the intent was that the regulations work in conjunction with one another. Accufacts suggested that prescriptive regulation is needed to avoid serious misapplication of the IM section and to assure that subpart I regulations are implemented to keep corrosion under control.

9. Panhandle observed that the ANPRM states that “prompt” as used in § 192.465(d) is not defined, and does not recognize the definition of “prompt remedial action” outlined in the 1989 Office of Pipeline Safety’s Operation and Enforcement Manual. Panhandle noted that the enforcement guidance requires PHMSA to evaluate the circumstances and provide rationale for any determination of “unreasonable delay” in any enforcement action associated with § 192.465(d). Panhandle observed that such evaluations are inherent in the enforcement of performance-based regulations and stand in sharp contrast to the “check-box” enforcement mentality of prescriptive regulations. Panhandle complained that the language of the ANPRM contradicts more than 20 years of enforcement history. Panhandle interpreted the ANPRM to mean that PHMSA has no authority to interpret part 192 other than through rulemaking.

10. An anonymous commenter suggested that PHMSA delete the requirement regarding 300 mV pipe-to-soil reading shift and adopt NACE SP0169.

11. The California Public Utilities Commission suggested that PHMSA consider modifying acceptance criteria to be based on instant-off readings, arguing that this would provide improved specificity concerning IR drop.

Response to Question I.1 Comments

PHMSA appreciates the information provided by the commenters. The majority of industry comments do not support revising subpart I to provide additional specificity to requirements. However, for the reasons discussed in this NPRM, PHMSA believes that certain regulations can be improved to better address issues that experience has shown can be important to protecting pipelines from corrosion damage, and that prudent operators currently implement. Therefore, PHMSA proposes to amend subparts G and I to: (1)

Enhance requirements for electrical surveys (*i.e.*, close interval surveys); (2) require post construction surveys for coating damage; (3) require interference current surveys; (4) add more explicit requirements for internal corrosion control; and (5) revise Appendix D to better align with the criteria for cathodic protection in NACE SP0169. Included in these changes is a new definition of the terms “electrical survey” and “close interval survey.” To conform to the revised definition of “electrical survey,” the use of that term in subpart O would be replaced with “indirect assessment” to accommodate other techniques in addition to close-interval surveys.

I.2. Should PHMSA prescribe additional requirements for post-construction surveys for coating damage or to determine the adequacy of CP? If so, what factors should be addressed e.g., pipeline operating temperatures, coating types, etc.)?

1. INGAA and a number of pipeline operators argued that post-construction surveys are of limited use, arguing that they can identify damaged coating but not necessarily areas where SCC can occur.

2. AGA, supported by a number of its pipeline operator members, opined that existing requirements for post-construction surveys for coating damage and cathodic protection are sufficient and operators need flexibility to apply their resources to the highest risk areas.

3. GPTC agreed that existing regulations are sufficient, noting that operators are not experiencing difficulties related to post-construction surveys for coating damage or for determining the adequacy of CP.

4. Ameren Illinois noted that part 192 requirements are followed for the installation of new coated steel pipe and it will develop a process to deal with any problems that may be identified through integrity management. Atmos agreed, noting that post-construction baseline surveys are typically performed.

5. Kern River opined that corrosion control measures and mitigation are site specific and therefore universal conditions and mitigation requirements would likely be ineffective and inefficient. Performance-based criteria are the best way to ensure the integrity of the pipeline with the most innovative and effective solutions.

6. MidAmerican opposed new requirements, noting that areas of coating damage on pipelines are protected from corrosion by cathodic protection and existing requirements are adequate in this area.

7. NACE concluded that current regulations have proven adequate and

noted that PHMSA acknowledges in the ANPRM that “[T]hese requirements have proven effective in minimizing the occurrence of incidents caused by gas transmission pipeline corrosion.”

8. Paiute and Southwest Gas opined that current requirements for coatings (§ 192.461) and cathodic protection (§ 192.463) are sufficient.

9. Northern Natural Gas stated that no new requirements are needed, observing that it takes action when CP surveys indicate a concern.

10. Panhandle argued that the proposed requirement for post construction coating does not address the cause of coating damage during construction and INGAA best practices have proven to be an effective means to provide pipeline safety, affording flexibility and recognizing the inherent limitations of coating surveys. Panhandle observed that PHMSA’s requirements for the investigation of anomalies found during post construction coating surveys on alternate MAOP lines are overly conservative, waste resources, do not enhance pipeline safety, and should not be considered for use in any proposed rulemaking. Panhandle further recommended that any proposed regulations related to pipeline temperature should not use the 120 degrees Fahrenheit value used in § 192.620, since studies have demonstrated pipeline coatings can withstand temperatures up to 150 degrees. Panhandle further argued that industry experience verifies that the vast majority of coating holidays associated with pipeline construction are not an integrity threat when cathodic protection is applied to the pipeline. It also suggested that verification of pipeline integrity through ILI or pressure testing better utilizes resources than excavation and repair of pinholes in pipeline coating systems.

11. Panhandle observed that, from its experience with over 900 completed excavations, the coating anomaly ranking system of NACE SP0502 is extremely conservative and should only be used as part of the ECDA process.

12. Texas Pipeline Association and Texas Oil & Gas Association suggested that PHMSA should consider requiring close interval surveys at 5-year intervals.

13. TransCanada noted that enhanced external corrosion management methods, such as close interval surveys and post construction coating surveys, have proven effective in helping identify and mitigate certain corrosion damage conditions. TransCanada argued, however, that these methods should not be required singularly and

arbitrarily by new prescriptive requirements, as they can be redundant or inferior when combined with other assessment techniques.

14. Pipeline Safety Trust suggested that additional post-construction surveying should be required to identify damage to or weakness in coating and to ensure the integrity of CP.

15. An anonymous commenter suggested that PHMSA require close interval survey before energizing new CP components, after backfill has settled, noting that this would ensure test stations are located in areas that will assure adequate protection.

16. The Commissioners of Wyoming County Pennsylvania recommended that PHMSA review operator practices and codify the “best practices” in this area.

Response to Question I.2 Comments

PHMSA appreciates the information provided by the commenters. The majority of industry comments do not support revising subpart I to prescribe additional requirements for post-construction surveys for coating damage or to determine the adequacy of CP. However, as detailed in the ANPRM, experience has shown that construction activities can damage coating and that identifying and remediating this damage can help protect pipeline integrity. PHMSA does agree that prescriptive practices for conducting coating surveys, as well as the criteria for remediation and other responses to indications of coating damage, are not always appropriate because coating damage is case-specific. Therefore, PHMSA proposes to add a requirement that each coating be assessed to ensure integrity of the coating using direct current voltage gradient (DCVG) or alternating current voltage gradient (ACVG) and damage be remediated if damage is discovered. In addition, for HCA segments, PHMSA proposes enhanced preventive and mitigative measures and repair criteria for repair of coating with a voltage drop classified as moderate or severe.

1.3. Should PHMSA require periodic interference current surveys? If so, to which pipelines should this requirement apply and what acceptance criteria should be used?

1. INGAA and a number of pipeline operators recommended that PHMSA not establish new requirements in this area without discussing the topic with operators first. INGAA pointed out that guidance already exists in the form of Advisory Bulletin ADB-03-06 and NACE SP0169.

2. Kern River opposed new requirements for periodic surveys, arguing that §§ 192.465, 192.467, and

192.473 adequately address the concerns.

3. Ameren Illinois also opposed new requirements. Ameren reported that it conducts testing annually at sites where stray currents are expected and noted that integrity management regulations already require operators to identify and address threats.

4. NACE International suggested that current regulations are adequate and have served the public interest. NACE noted operators are currently taking action to identify interference currents and protect their pipelines, and it has provided guidance through standards and technical papers.

5. Atmos noted that interference surveys would be a part of an investigation into cathodic protection systems that do not provide minimum levels of protection. Operators are already required to maintain minimum levels of protection.

6. Northern Natural Gas reported that it conducts additional surveys when issues are discovered during periodic maintenance, when new foreign line crossing are installed, or for new construction, but opposed new requirements in this area.

7. Paiute and Southwest Gas opposed new requirements, noting that operators should have the flexibility to allocate their resources in a manner that best suits their system.

8. Panhandle opposed new requirements, noting that existing performance-based regulations have proven adequate to address the threat of stray currents. Panhandle commented that the gas pipeline industry recognized and reacted to the threat of AC interference decades prior to the ANPRM, and suggested that the lack of justification from PHMSA on this issue is a strong indicator that industry has reacted appropriately to integrity threats in accordance with the requirements of § 192.473. Panhandle noted that interference currents have been addressed in several industry standards and publications. In particular, Section 9, *Control of Interference Currents*, of NACE SP0169, *Control of External Corrosion on Underground of Submerged Metallic Piping Systems*, provides guidance for the detection and mitigation of interference currents.

9. Texas Pipeline Association and Texas Oil & Gas Association stated that current regulations are sufficient; however, if new regulations are promulgated, the associations recommended that PHMSA use the liquid pipeline requirement for periodic interference surveys and be applicable only to foreign line crossings and

pipelines near large DC-powered equipment.

10. An anonymous commenter stated that new regulations are not needed, as most operators will conduct surveys on their own, generally when pipe-to-soil readings drop.

Response to Question I.3 Comments

PHMSA appreciates the information provided by the commenters. Industry comments do not support revising subpart I to require periodic interference current surveys. However, as detailed in the ANPRM, pipelines are often routed near, in parallel with, or in common rights-of-way with, electrical transmission lines or other pipelines that can induce interference currents, which, in turn, can induce corrosion. Recent incidents on pipelines operated by Kern River and Center Point are examples of incidents this requirement seeks to prevent. Section 192.473 currently requires that operators of pipelines subject to stray currents have a program to minimize detrimental effects but does not require surveys, mitigation, or provide any criteria for determining the adequacy of such programs. Therefore, PHMSA proposes to add a requirement that the continuing program to minimize the detrimental effects of stray currents must include: (1) Interference surveys to detect the presence and level of any electrical current that could impact external corrosion where interference is suspected; (2) analysis of the results of the survey; and (3) prompt remediation of problems after completing the survey to protect the pipeline segment from deleterious current. For HCA segments, PHMSA proposes to address this in enhanced preventive and mitigative measures, and to include performance criteria.

I.4. Should PHMSA require additional measures to prevent internal corrosion in gas transmission pipelines? If so, what measures should be required?

1. INGAA, AGA, GPTC, and numerous pipeline operators contended that existing requirements are adequate to manage internal corrosion. INGAA noted that subparts I and O include requirements for controlling internal corrosion and assessments are being performed on almost all gas transmission lines. INGAA further commented that controlling gas quality is most important.

2. Ameren Illinois opposed new requirements addressing internal corrosion, noting that § 192.475 addresses the topic and subpart O requires operators to respond to risks that are identified.

3. Kern River and Northern Natural Gas opposed new requirements, noting that industry data show IC is a minor threat to natural gas transmission pipelines. Kern River commented that ASME/ANSI B31.8S, Appendix A2, covers the analysis of gas constituents. Northern monitors gas quality and takes corrective action as needed.

4. MidAmerican opposed new requirements, commenting that internal corrosion is a regional problem and does not occur in many areas of the country. MidAmerican requested that current integrity management regulations be revised to eliminate the need to conduct internal corrosion direct assessment when internal corrosion is not a threat.

5. NACE International opined that current regulations in subpart I are adequate to address internal corrosion, and PHMSA's proposed prescriptive requirements are not feasible.

6. Panhandle observed that requirements to minimize the potential for internal corrosion in gas transmission pipelines are included in §§ 192.475, 192.476, and 192.477. In addition, OPS issued ADB-00-02 requiring pipeline operators to review their internal corrosion monitoring programs and operation. IM regulations in subpart O require integrity management assessments that address the threat of internal corrosion. INGAA members report that completion of baseline assessments required by subpart O will result in the assessment of more than half of the gas transmission pipeline mileage in the U.S. Panhandle commented that several proposed prescriptive internal corrosion requirements provided in the ANPRM are not feasible and noted that liquids tend to accumulate in low spots that typically are not accessible for sampling. Panhandle opined that vigilant enforcement of gas quality standards is the most essential component of an internal corrosion control program.

7. Texas Pipeline Association and Texas Oil & Gas Association argued that no benefit would be gained by additional requirements in this area. The associations observed that internal corrosion threats are highly localized and monitoring and remediation efforts must be customized for local conditions.

8. IUB noted that not all pipelines are susceptible to internal corrosion and commented that operators and state inspection personnel should not be unduly burdened by additional measures when problems do not exist.

9. An anonymous commenter suggested that PHMSA require each operator to have a subject matter expert well qualified in internal corrosion,

arguing that most operators currently rely on third-party contractors.

Response to Question I.4 Comments

PHMSA appreciates the information provided by the commenters. The majority of industry comments do not support revising subpart I to require additional measures to prevent internal corrosion in gas transmission pipelines. However, the current requirements for internal corrosion control are non-specific and PHMSA believes that there is benefit in enhancing the current internal corrosion control requirements to establish a more effective minimum standard for internal corrosion management. Therefore, PHMSA proposes to add a requirement that each operator develop and implement a program to monitor for and mitigate the presence of, deleterious gas stream constituents and that the program be reviewed at least semi-annually. For HCA segments, PHMSA proposes to address this in enhanced preventive and mitigative measures to include objective performance criteria.

I.5. Should PHMSA prescribe practices or standards that address prevention, detection, assessment, and remediation of SCC on gas transmission pipeline systems? Should PHMSA require additional surveys or shorter IM survey intervals based upon the pipeline operating temperatures and coating types?

1. INGAA and a number of pipeline operators recommended that PHMSA avoid prescriptive requirements for the prevention, detection, assessment, and remediation of SCC. The commenters noted that SCC varies from pipeline to pipeline and suggested that threat management should be through a framework of processes and decision making that can tailor threat management to the requirements of each pipeline.

2. AGA and a number of its pipeline operators also objected to new requirements in this area, noting that numerous industry documents exist that provide guidance to address SCC.

3. Panhandle suggested that PHMSA avoid prescriptive standards for the prevention, detection, assessment, and remediation of SCC on gas transmission systems given the complex and variable nature of the factors contributing to the formation and growth of SCC, arguing performance-based standards allow operators the maximum flexibility to develop and apply situational techniques for detecting, assessing, and remediating this threat. Panhandle noted that multiple standards and publications are available to address internal corrosion and that the Pipeline

Research Council International (PRCI) has ongoing research in this area. Panhandle expressed the view that voluntary use of performance based standards, allowing operator flexibility in detecting, assessing and remediating this threat, will ensure that the methods used in managing these types of anomalies continue to improve.

4. GPTC, Ameren Illinois, Atmos, Paiute, and Southwest Gas argued that existing regulations are sufficient and noted that there are numerous industry documents that provide additional guidance for addressing SCC.

5. TransCanada suggested that PHMSA adopt the current version of ASME/ANSI B31.8S.

6. The Commissioners of Wyoming County Pennsylvania opined that it is reasonable for PHMSA to prescribe practices or standards that address prevention, detection, assessment and remediation of SCC on transmission and gas gathering lines, including those in Class 1 locations. The Commissioners argued that it is important to address this aspect of corrosion given aging of existing pipelines and the significant number of new pipelines.

7. Air Products and Chemicals argued that operators should not be required to undertake SCC prevention, detection, assessment and remediation activities where a pipeline does not meet the B31.8S criterion for SCC. Air Products further commented that it is important that PHMSA's regulations and standards reflect the threshold concept of susceptibility to SCC, and that a pipeline that does not meet the B31.8S criteria for SCC risk should not be required to undertake SCC prevention, detection, assessment, and remediation activities.

8. NACE International stated that overly prescriptive rules can supplant sound engineering judgment and prevent innovation and the development of new technologies.

9. Northern Natural Gas argued that the current regulations and industry standards provide adequate guidance and that the assessment criteria address operating temperature and coating type. Northern Natural Gas noted that operating temperature is addressed in PHMSA Gas FAQ 223 and that the reassessment interval should be determined by the results of the integrity assessment performed pursuant to ASME B31.8S.

10. MidAmerican pointed out that these concerns are addressed in the pre-assessment phase of direct assessment and adequately covered in ASME/ANSI B31.8S.

11. Texas Pipeline Association and Texas Oil & Gas Association suggested

that additional regulations related to SCC could prove beneficial. At the same time, the associations recommended that PHMSA not require additional surveys or shorter intervals, arguing that the current regulations are based on sound engineering practices.

12. A private citizen commented that SCC should be addressed as part of a comprehensive corrosion control program.

13. An anonymous commenter noted that a reliable survey technique for SCC does not now exist and suggested that PHMSA require shorter assessment intervals for pipelines with a history of SCC.

14. INGAA argued that pipe temperature and coating are not sufficient to identify SCC. INGAA contended that ASME/ANSI B31.8S adequately covers prevention, detection, assessments, and remediation of SCC and criteria to capture all pipe potentially susceptible to SCC would be overly conservative. A number of pipeline operators supported INGAA's comments.

15. NACE International opined that there are too many factors involved, and they are too interrelated and location-specific, to allow prescribing an optimal assessment interval for SCC.

Response to Question I.5 Comments

PHMSA appreciates the information provided by the commenters. The majority of industry comments do not support new requirements for the prevention, detection, assessment, and remediation of SCC. PHMSA recognizes that SCC is an important safety concern, but does not believe the current methods for managing SCC anomalies supports prescribing a detailed SCC management approach that would be effective for all operators. PHMSA does not propose to amend subpart I to prescribe an SCC management plan at this time. PHMSA will continue to study this issue and support ongoing research. PHMSA plans to hold a public forum on the development of SCC standards in the future. Once that process is complete, PHMSA will consider new minimum safety standards for managing the threat of SCC. However, under topics C and G, above, PHMSA does propose to include more specific requirements for conducting integrity assessments for the threat of SCC and for enhancing the HCA and non-HCA repair criteria to address SCC.

I.6. Does the NACE SP0204–2008 (formerly RP0204) Standard “Stress Corrosion Cracking Direct Assessment Methodology” address the full life cycle concerns associated with SCC? Should PHMSA consider this, or any other

standards to govern the SCC assessment and remediation procedures? Do these standards vary significantly from existing practices associated with SCC assessments?

1. INGAA and a number of pipeline operators stated that NACE SP0204 does not address the full life cycle of concerns of SCC. INGAA added that SP0204, along with ASME/ANSI B31.8S, NACE publication 35103, STP–TP–011, and Canadian recommended practices, do cover the full life cycle concerns.

2. NACE International reported that its standard (SP0204) does not address the full life cycle concerns of SCC.

3. GPTC noted that existing regulations and standards address SCC concerns and commented that it is not clear what is meant by “full life cycle concerns.”

4. Ameren Illinois argued that full life cycle concerns are addressed in the pre-assessment phase of stress corrosion cracking direct assessment (SCCDA) and new prescriptive requirements are not needed.

5. Northern Natural Gas commented that ASME/ANSI B31.8S should be used in conjunction with NACE SP0204.

6. Panhandle reported that SCCDA was never intended to address full life cycle management for SCC. The standard does not address aspects such as the formation or nucleation of cracks or calculations to assess the severity of cracks. Panhandle opined that the collective body of SCC research does address the full life cycle, but cautioned the full body of knowledge of all documents must be considered as some may be dated and do not reflect current knowledge on SCC management.

7. An anonymous commenter suggested that NACE SP0204 does not address full life cycle concerns, noting that SCC has been found in circumstances where the standard would suggest it should not be expected.

Response to Question I.6 Comments

PHMSA appreciates the information provided by the commenters and agrees that sufficient information is not available at this time to specify prescriptive standards for SCC management. See the response to comments received on question I.5.

I.7. Are there statistics available on the extent to which the application of the NACE Standard, or other standards, have affected the number of SCC indications operators have detected on their pipelines and the number of SCC-related pipeline failures? Are statistics available that identify the number of SCC occurrences that have been

discovered at locations that meet the screening criteria in the NACE standard and at locations that do not meet the screening criteria?

1. INGAA, GPTC, Texas Pipeline Association, Texas Oil & Gas Association, and numerous pipeline operators reported that no data has been collected on the application of any current standard. INGAA added that available statistics indicate that the annual number of failures due to SCC is generally decreasing and noted that a high percentage of in-service failures, failures during hydro testing, and instances where SCC cracks greater than 10 percent were found during excavations have met the screening criteria of ASME/ANSI B31.8S (which are identical to the NACE criteria).

2. Northern Natural Gas reported that it has found one instance of SCC and no segments were identified subject to similar circumstances.

Response to Question I.7 Comments

PHMSA appreciates the information provided by the commenters and agrees that sufficient information is not available at this time to specify prescriptive standards for SCC management. PHMSA will be studying this issue and soliciting further input from stakeholders in the future. See the response to comments received on question I.5.

I.8. If new standards were to be developed for SCC, what key issues should they address? Should they be voluntary?

1. NACE International suggested that existing standards should be updated and improved rather than developing new standards, noting that such updating is as normal part of the standards process.

2. INGAA and a number of its pipeline operators supported the development of voluntary standards to cover detection, assessment, mitigation, periodic assessment, and evaluation of effectiveness.

3. Panhandle supported the development of industry standards to manage SCC but does not believe that such a document can be completed until the gaps in the understanding of SCC have been addressed.

4. GPTC, Ameren Illinois, and Northern Natural Gas opined that the combination of ASME/ANSI B31.8S and ASME STP-PT-011 provide adequate guidance.

5. Atmos recommended that further investigation be required if SCC outside of the criterion specified in NACE SP0204-2008 is found. Atmos stated that any new standards that are developed should be voluntary so that

operators have additional methodologies available for mitigating the threat of SCC as currently required by § 192.929.

6. Texas Pipeline Association and Texas Oil & Gas Association recommended any new standards for SCC apply only to Class 1 locations, based on their conclusion that pipe designed for Class 2 conditions (and above) is not susceptible to SCC.

Response to Question I.8 Comments

PHMSA appreciates the information provided by the commenters and agrees that sufficient information is not available at this time to specify prescriptive standards for SCC management. PHMSA will be studying this issue and soliciting further input from stakeholders in the future. See the response to comments received on question I.5.

I.9. Does the definition of corrosive gas need to clarify that other constituents of a gas stream (e.g., water, carbon dioxide, sulfur and hydrogen sulfide) could make the gas stream corrosive? If so, why does it need to be clarified?

1. INGAA, supported by a number of its pipeline operators, opined that the existing regulations are adequate, and commented that prescriptive limits, such as those in § 192.620, would not be as effective in reducing the potential for internal corrosion.

2. GPTC recommended that § 192.476 be revised to reflect only those liquids that act as an electrolyte (i.e., water).

3. AGA sees no need to clarify the definition and noted that the stated constituents pose no threat if water is not present.

4. Atmos, Paiute, and Southwest Gas noted that gas tariffs maintain gas quality and water must be present with the constituents listed to produce a corrosive gas stream. Paiute opined that § 192.929 and ASME/ANSI B31.8S are sufficient.

5. NACE International expressed uncertainty as to why the definition needs to be clarified. NACE also noted that there are more factors than those listed in the question that affect the corrosiveness of a gas stream.

6. MidAmerican, Ameren Illinois, and Northern Natural Gas noted that ASME/ANSI B31.8S requires analysis of gas constituents and argued that operators know what constitutes a corrosive gas stream. The operators do not believe the definition needs to be changed.

7. Kern River suggested that the definition should be changed, noting that water must be present, in addition to the listed constituents, to make a gas stream corrosive.

8. Texas Pipeline Association and Texas Oil & Gas Association suggested no change to the definition is needed, since operators understand the listed constituents, when combined with water, can cause internal corrosion.

9. An anonymous commenter suggested that PHMSA not attempt to list constituents that could make a gas stream corrosive, arguing there are too many scenarios to cover. The commenter noted that the issue is not simple: H₂O w/o free O₂, or CO₂ or sulfur alone are not corrosive.

Response to Question I.9 Comments

PHMSA appreciates the information provided by commenters, and consistent with the majority of comments, PHMSA does not propose to revise the definition of corrosive gas at this time. However, PHMSA does propose to clarify the regulations by listing examples of constituents that are potentially corrosive, and to propose objective performance criteria for monitoring gas stream contaminants for HCA segments.

I.10. Should PHMSA prescribe for HCAs and non-HCAs external corrosion control survey timing intervals for close interval surveys that are used to determine the effectiveness of CP?

1. INGAA, supported by a number of pipeline operators, suggested that safety would be best served by following a risk-based approach to determine intervals for corrosion control or close interval surveys, arguing that prescriptive requirements applicable to all pipelines would divert safety resources from other high-risk tasks.

2. AGA, GPTC, and a number of pipeline operators argued that there is no reason for PHMSA to specify timing of close interval surveys, contending that the current subpart I requirements have proven to be successful and the use of CIS as an indirect assessment tool is built into NACE SP0502.

3. Ameren Illinois opposed the prescribed intervals for close interval surveys, arguing that § 192.463 and 192.465 are adequate. In addition, Ameren noted that § 192.917(e)(5) requires an operator to evaluate and remediate corrosion in both covered and non-covered segments when corrosion is found.

4. Atmos opposed required timing for close interval surveys, arguing that CIS is just one tool that can be used to determine the effectiveness of CP.

5. MidAmerican expressed its conclusion that establishing required timing intervals for close interval surveys would not be beneficial. MidAmerican noted that specific pipeline characteristics need to be taken

into consideration in establishing inspection intervals.

6. Paiute and Southwest Gas opposed required periodicity for close interval surveys, arguing that NACE SP0207 provides adequate guidance.

7. Northern Natural Gas commented that PHMSA should not prescribe external corrosion control survey intervals for close interval surveys, noting that its integrity management program demonstrates that external corrosion is being managed effectively.

8. Texas Pipeline Association and Texas Oil & Gas Association argued that industry experience demonstrates existing requirements are adequate.

9. An anonymous commenter suggested that specified periodicity for close interval surveys could have benefit, especially where a history of external corrosion exists.

Response to Question I.10 Comments

PHMSA appreciates the information provided by the commenters. Recent experience, including the December 2012 explosion near Sissonville, WV and the 2007 incident near Delhi, LA, underscores the need to be more attentive to external corrosion mitigation activities. PHMSA proposes to enhance the requirements of subpart I to require that operators conduct close-interval surveys if annual test station readings indicate that cathodic protection is below the level of protection required in subpart I, or to restore adequate corrosion control. For HCA segments, PHMSA proposes to address these requirements in enhanced preventive and mitigative measures, to include an objective timeframe for restoration of deficient cathodic protection.

I.11. Should PHMSA prescribe for HCAs and non-HCAs corrosion control measures with clearly defined conditions and appropriate mitigation efforts? If so, why?

1. INGAA stated it does not believe it is feasible to develop prescriptive measures that identify necessary and sufficient monitoring and mitigation efforts in all environments. A number of pipeline operators supported INGAA's comments.

2. AGA and a number of its operator members expressed their conclusion that the requirements of subpart I are sufficient, noting that they address HCA and non HCA alike.

3. GPTC commented that the question does not make clear why additional measures should be prescribed given that operators have been successfully mitigating corrosion deficiencies for many years.

4. Ameren Illinois expressed its conclusion that the science of corrosion mitigation is sufficiently advanced and appropriate mitigation measures are well known. Atmos, Paiute, and Southwest Gas agreed, concluding that subpart I is sufficient when implemented properly by appropriately trained and qualified personnel.

5. MidAmerican opposed new requirements, arguing that current regulations address all practical mitigation efforts.

6. Texas Pipeline Association and Texas Oil & Gas Association suggested that more time should be allowed before additional prescriptive requirements on cathodic protection are considered, noting that corrosion leaks are trending downward.

7. The Commissioners of Wyoming County Pennsylvania suggested that it is reasonable that PHMSA prescribe corrosion control measures for HCAs and non-HCAs with clearly defined conditions and appropriate mitigation efforts. They cited information from NACE indicating that 25 percent of all accidents are caused by corrosion and these accidents account for 36 percent of all accident damage. The Commissioners noted that gathering lines in the Marcellus Shale area have diameters and pressures similar to transmission lines and should be subjected to the same requirements.

8. An anonymous commenter recommended that PHMSA not prescribe specific measures.

Response to Question I.11 Comments

PHMSA appreciates the comments provided, and consistent with the majority of comments, does not propose additional regulatory changes at this time, other than to prescribe measures to promptly restore cathodic protection, as discussed in the response to comments received for question I.10.

PHMSA is interested in the extent to which operators have implemented Canadian Energy Pipeline Association (CEPA) SCC, Recommended Practices 2nd Edition, 2007, and what the results have been.

I.12. Are there statistics available on the extent to which gas transmission pipeline operators apply the Canadian Energy Pipeline Association (CEPA) practices?

I.13. Are there statistics available that compare the number of SCC indications detected and SCC-related failures between operators applying the CEPA practices and those applying other SCC standards or practices?

1. INGAA reported that most major operators in North America have adopted threat management closely

aligned to CEPA standards, but that no specific data exist that correlate the use of CEPA methods to anomaly detection. INGAA reported a Joint Industry Project (JIP) study that shows that applying NACE SP0204, ASME/ANSI B31.8S, CEPA, and other standards has led to a significant reduction in in-service failures. Numerous pipeline operators supported INGAA comments.

2. AGA, supported by a number of its pipeline operator members, questioned why a discussion of CEPA standards was included in the ANPRM. AGA suggested that CEPA practices are well suited to Canadian infrastructure, but not necessarily applicable in the United States and noted that CEPA is not often discussed by Canadian members at AGA meetings.

3. GPTC expressed that its membership has little knowledge of CEPA standards, commented that it is not clear what is meant by full life cycle concerns, and argued that existing standards and regulations adequately address SCC concerns. GPTC is not aware of any data correlating the efficacy of CEPA to other standards.

4. Paiute and Southwest Gas reported that they have not implemented CEPA standards.

Response to Questions I.12 and I.13 Comments

PHMSA appreciates the information provided by the commenters. PHMSA acknowledges the comments provided on the use of the CEPA SCC Recommended Practice and will consider that standard in its study of comprehensive safety requirements for SCC.

I.14. Do the CEPA practices address the full life cycle concerns associated with SCC? If not, which are not addressed?

1. INGAA reported its conclusion that CEPA standards address full life cycle concerns for near-neutral SCC. Many management techniques in CEPA standards are also applicable to high-pH SCC, but the two are not identical. Several pipeline operators supported INGAA's comments.

2. Texas Pipeline Association and Texas Oil & Gas Association expressed their conclusion that CEPA standards address the full life cycle concerns of SCC.

Response to Question I.14 Comments

PHMSA appreciates the information provided by the commenters. PHMSA acknowledges the comments provided on the use of the CEPA SCC Recommended Practice and will consider that standard in its study of

comprehensive safety requirements for SCC.

I.15. Are there additional industry practices that address SCC?

1. INGAA, supported by a number of its pipeline operator members, reported that there are no related European standards and Australia has a standard similar to ASME/ANSI B31.8S. INGAA noted that SCC failures of pipelines installed since 1980 are rare and observed that quality coating and cathodic protection are the most effective means of preventing SCC.

2. GPTC stated that NACE SP0204 and 35103, ASME/ANSI B31.8S, and GPTC guide material address SCC. Paiute and Southwest Gas agreed that NACE standards and GPTC provide relevant guidance.

3. AGA commented that it does not have the statistics available to advise whether or not additional requirements are needed to address SCC threats.

4. Atmos, Texas Pipeline Association and Texas Oil & Gas Association reported that they have no knowledge of other SCC standards or practices.

5. Northern Natural Gas cited ASME/ANSI B31.8S and ASME STP-PT-011.

Response to Question I.15 Comments

PHMSA appreciates the information provided by the commenters. PHMSA acknowledges the comments provided on the standards, and will consider these standards in its study of comprehensive safety requirements for SCC.

I.16. Are there statistics available on the extent to which various tools and methods can accurately and reliably detect and determine the severity of SCC?

1. INGAA noted that the measurement of ILI crack detection tool performance is an ongoing research activity, both within JIP Phase II and within the Pipeline Research Council International, which is actively supported by the tool vendors and the pipeline operators. Several issues regarding the acquisition and interpretation of information need to be standardized by the practitioners before a clear picture can emerge. The implications of tool tolerance on predicted failure pressure are being studied in the JIP Phase II.

2. GPTC, Atmos, Paiute, Southwest Gas, and an anonymous commenter reported that they are unaware of any relevant statistics.

3. Northern Natural Gas reported that it has used electro-magnetic acoustic transducer (EMAT) ILI with some success.

4. Panhandle commented that magnetic particle inspection (MPI) is effective at locating surface-breaking

linear indications, a subset of SCC. Furthermore, abrasive wheel grinding in conjunction with MPI is an effective method to size the length and depth of surface-breaking linear indications, limited by the amount of metal that can be removed from in-service pipelines. Panhandle noted that PRCI research indicates that laser UT techniques can effectively locate and size SCC, but this method is relatively new and Panhandle has no experience with its use. Panhandle also reported that the use of EMAT has yet to be acknowledged as a replacement for hydrostatic testing but it is being evaluated in Phase II of the SCC Joint Industry Project (JIP); results of the study will be used to determine the path forward for EMAT technology.

5. Texas Pipeline Association and Texas Oil & Gas Association reported that they have no knowledge of relevant references other than the Baker study.

Response to Question I.16 Comments

PHMSA appreciates the information provided by the commenters and will consider this information in its study of comprehensive safety requirements for SCC.

I.17. Are tools or methods available to detect accurately and reliably the severity of SCC when it is associated with longitudinal pipe seams?

1. INGAA and a number of pipeline operators noted that detecting SCC close to a longitudinal seam is difficult and even harder near a girth weld. INGAA commented that developing tools to reliably detect and assess SCC near longitudinal seams is a continuing challenge.

2. GPTC reported that SCC tools are available; however, GPTC cautioned that the ability to accurately and reliably detect the severity of SCC associated with longitudinal seams is dependent on specific operating conditions.

3. Atmos commented that it knows of no tools that can accurately detect and estimate the severity of SCC near a longitudinal seam.

4. Paiute and Southwest Gas reported that tools are being developed but are, as of yet, not accurate at determining the severity of SCC associated with longitudinal seams.

5. Northern Natural Gas reported that it has used electro-magnetic acoustic transducer (EMAT) ILI with some success. Panhandle added that difficulties in using EMAT are further complicated when cracking is associated with a longitudinal seam.

6. Texas Pipeline Association and Texas Oil & Gas Association expressed their conclusion that the best methods to assess for SCC near longitudinal seams are pressure testing and EMAT,

although they noted that some operators have had success with transverse flux ILI.

7. An anonymous commenter reported that new ILI tools exist but that analysts are not yet consistent in using them.

Response to Question I.17 Comments

PHMSA appreciates the information provided by the commenters and will consider this information in its study of comprehensive safety requirements for SCC.

I.18. Should PHMSA require that operators perform a critical analysis of all factors that influence SCC to determine if SCC is a credible threat for each pipeline segment? If so, why? What experience based indications have proven reliable in determining whether SCC could be present?

1. INGAA, supported by a number of pipeline operators, noted that operators are already required to perform an analysis to determine the likelihood of SCC. INGAA added that operators address the pipelines with the highest likelihood of SCC and apply lessons learned, as appropriate, to lower-likelihood pipelines.

2. Texas Pipeline Association and Texas Oil & Gas Association indicated that a requirement to perform a critical analysis for SCC is unnecessary, since guidance in ASME/ANSI B31.8S is sufficient. Northern Natural Gas also stated that additional requirements are unnecessary, noting that it conducted an analysis of critical factors affecting SCC and identified no new factors over those in B31.8S, Appendix 3.

3. Atmos stated that PHMSA's question was unclear whether to expand the threat of SCC to all pipeline segments or expand the requirements for investigating the presence of SCC within HCA segments? Atmos concluded that subpart O requirements provide a framework for operators to integrate data, rank risk, identify threats, and apply appropriate mitigative actions; additional requirements are not needed.

4. Texas Pipeline Association and Texas Oil & Gas Association suggested that PHMSA conduct a workshop to share industry experience with SCC.

Response to Question I.18 Comments

PHMSA appreciates the information provided by the commenters and will consider this information in its study of comprehensive safety requirements for SCC.

I.19. Should PHMSA require an integrity assessment using methods capable of detecting SCC whenever a credible threat of SCC is identified?

1. INGAA, Panhandle, Atmos, and Northern Natural Gas noted that subpart O already requires that all credible threats be identified and assessed. A number of pipeline operators supported INGAA's comments.

2. Texas Pipeline Association and Texas Oil & Gas Association also indicated that they read subpart O as requiring assessment using a method that can detect SCC if that threat is credible. The associations both added, however, that they would not object to making this requirement more explicit.

3. GPTC opined that existing regulations and standards are adequate to address SCC issues.

4. Southwest Gas opposed a new requirement, noting that § 192.929 and ASME/ANSI B31.8S are sufficient.

Response to Question I.19 Comments

PHMSA appreciates the information provided by the commenters and will consider this information in its study of comprehensive safety requirements for SCC. As indicated above in the response to comments received on question I.5, PHMSA proposes more explicit requirements for selection of appropriate methods for integrity assessments for SCC.

I.20. Should PHMSA require a periodic analysis of the effectiveness of operator corrosion management programs, which integrates information about CP, coating anomalies, in-line inspection data, corrosion coupon data, corrosion inhibitor usage, analysis of corrosion products, environmental and soil data, and any other pertinent information related to corrosion management? Should PHMSA require that operators periodically submit corrosion management performance metric data?

1. INGAA, Kern River, Paiute, and Southwest Gas commented that these issues are already addressed in subpart O, which requires operators to keep records, measure program effectiveness, continually evaluate and assess systems, integrate data, and show continual improvement. INGAA added that metrics bearing on the effectiveness of a corrosion control program are already among those required to be collected by ASME/ANSI B31.8S. These metrics are not required to be submitted, but are available for review during inspections. A number of pipeline operators supported INGAA's comments.

2. MidAmerican commented that subparts I and O include these requirements. Northern Natural Gas agreed that it manages these threats through O&M and IM activities.

3. Panhandle noted that subpart I requires operators to maintain effective

corrosion control programs to mitigate the threat of corrosion and § 192.945 requires operators to measure, on a semi-annual basis, whether the integrity management program is effective in assessing and evaluating the integrity of each covered pipeline segment and in protecting HCAs.

4. GPTC and AGA, supported by a number of its pipeline operator members, opposed requiring operators to submit corrosion management metrics. AGA noted that operators need flexibility to select the appropriate analysis methods and key performance indicators. Furthermore, operators review corrosion control program effectiveness, and plans of intrastate operators are reviewed by state commissions.

5. Ameren Illinois opposed new requirements, noting that subpart O already requires operators to identify and respond to risks.

6. Atmos questioned whether PHMSA is proposing to measure the effectiveness of corrosion management programs across all pipeline segments or to measure the effectiveness of corrosion management programs in HCA segments. Atmos added that the data points enumerated by PHMSA in this question would be difficult to gather on an operator's entire pipeline system.

7. Texas Pipeline Association and Texas Oil & Gas Association stated that they do not see a need for a requirement to periodically analyze the effectiveness of an operator's corrosion management program, arguing that existing requirements are sufficient.

8. Panhandle argued that the standardization of corrosion control efforts, as would be required for performance metric tracking, would require additional prescriptive requirements in subpart O. Panhandle does not believe that elimination of performance-based language is beneficial.

9. The Commissioners of Wyoming County Pennsylvania suggested that any communication between operators and PHMSA regarding corrosion management would be helpful in facilitating operator compliance and best practices.

10. Paiute and Southwest Gas reported that they opposed a requirement to report additional performance metrics absent a definition of how new data would be collected and used.

Response to Question I.20 Comments

PHMSA appreciates the information provided by the commenters. Following publication of the ANPRM, the NTSB issued recommendations in response to

the San Bruno pipeline incident, including a specific recommendation (P-11-19) that PHMSA establish standards for evaluating effective program performance. PHMSA will evaluate standards for integration of pipeline corrosion data to enhance corrosion management performance as part of its response to that recommendation.

I.21. Are any further actions needed to address corrosion issues?

1. INGAA, supported by a number of its pipeline operator members, commented that continued study and evaluation of the root causes of the San Bruno explosion, documentation of findings, and communication of results are needed rather than additional prescriptive requirements.

2. AGA, GPTC, and a number of pipeline operators argued that no further action is needed, given that current methodologies adequately address corrosion issues and operators are subject to periodic audits by federal and state safety regulators.

3. Accufacts suggested that PHMSA needs to assure that IM programs are not solely relied upon to prevent corrosion failure.

4. Texas Pipeline Association and Texas Oil & Gas Association reported that they do not see any deficiencies necessitating new regulations.

Response to Question I.21 Comments

PHMSA appreciates the information provided by the commenters. As discussed above, PHMSA is proposing some enhanced measures for corrosion control in subpart I and subpart O.

I.22. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to commenter's suggestions.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

J. Pipe Manufactured Using Longitudinal Weld Seams

The ANPRM requested comments regarding additional integrity management and pressure testing

requirements for pipe manufactured using longitudinal seam welding techniques that have not had a subpart J pressure test. Pipelines built since the regulations (49 CFR part 192) were implemented in early 1971 must be:

- Pressure tested after construction and prior to being placed into gas service in accordance with subpart J; and
- Manufactured in accordance with a referenced standard (most gas transmission pipe has been manufactured in accordance with American Petroleum Institute Standard 5L, 5LX or 5LS, "Specification for Line Pipe" (API 5L) referenced in 49 CFR part 192).

Many gas transmission pipelines built from the 1940's through 1970 were manufactured in accordance with API 5L, but may not have been pressure tested similar to a subpart J pressure test. For pipelines built prior to 1971, § 192.619(a) allows MAOP to be based on the highest 5-year operating pressure established prior to July 1, 1970, in lieu of a pressure test. Accordingly, some of this pre-existing pipe possesses variable characteristics throughout the longitudinal weld or pipe body.

As a result of 12 hazardous liquid pipeline failures that occurred during 1986 and 1987 involving pre-1970 ERW pipe, PHMSA issued an alert notice (ALN-88-01, January 28, 1988) to advise operators with pre-1970 ERW pipe of the 12 pipeline failures and the actions to take. Subsequent to this notice, one additional failure on a gas transmission pipeline, and eight additional failures on hazardous liquid pipelines occurred, which resulted in PHMSA issuing another alert notice (ALN-89-01, March 8, 1989) to advise operators of additional findings since the previous alert notice. These notices identified the fact that some failures appeared to be due to selective seam weld corrosion, but that other failures appeared to have resulted from flat growth of manufacturing defects in the ERW seam. In these notices, PHMSA specifically advised all gas transmission and hazardous liquid pipeline operators with pre-1970 ERW pipe to consider hydrostatic testing of affected pipelines, to avoid increasing a pipeline's long-standing operating pressure, to assure effectiveness of the CP system, and to conduct metallurgical exams in the event of an ERW seam failure.

Since 2002, there have been at least 22 reportable incidents on gas transmission pipeline caused by manufacturing or seam defects. In addition, recent high consequence incidents, including the 2009 failure in Palm City, Florida and the 2010 failure

in San Bruno, California, have been caused by longitudinal seam failures.

The ANPRM listed questions for consideration and comment. The following are general comments received related to the topic as well as comments related to the specific questions:

General Comment for Topic J

1. Texas Pipeline Association and Texas Oil & Gas Association suggested that seam issues are best addressed through inspection, detection, remediation, and monitoring, based on specific segments, not a one-size-fits-all requirement.

Response to General Comment for Topic J

PHMSA appreciates the comment and agrees that a one-size-fits-all requirement is not the best approach. Accordingly, PHMSA proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines, that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Verification of MAOP includes establishing and documenting MAOP if the pipeline segment: (1) Has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a construction-, installation-, or fabrication-related defect, or a cracking-related defect, including, but not limited to, seam cracking, girth weld cracking, selective seam weld corrosion, hard spot, or stress corrosion cracking and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, "smart pigs"); (2) Pressure test records necessary to establish maximum allowable operating pressure per subpart J for the pipeline segment, including, but not limited to, records required by § 192.517(a), are not reliable, traceable, verifiable, and complete and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; or (ii) a class 3 or class 4 location; or (3) the pipeline segment maximum allowable operating pressure was established in accordance with § 192.619(c) of this subpart before *[effective date of rule]* and is located in one of the following areas: (i) A high consequence area as defined in

§ 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, "smart pigs").

In addition, the proposed rule would allow operators to select from among several approaches to verify MAOP based on segment specific issues and limitations, such as pressure testing, pressure reduction based on historical operating pressure, and engineering critical assessment.

Comments submitted for questions in Topic J.

J.1. Should all pipelines that have not been pressure tested at or above 1.1 times MAOP or class location test criteria (§§ 192.505, 192.619 and 192.620), be required to be pressure tested in accordance with the present regulations? If not, should certain types of pipe with a pipeline operating history that has shown to be susceptible to systemic integrity issues be required to be pressure tested in accordance with the present regulations (e.g., low-frequency electric resistance welded (LF-ERW), direct current electric resistance welded (DC-ERW), lap-welded, electric flash welded (EFW), furnace butt welded, submerged arc welded, or other longitudinal seams)? If so, why?

1. AGA, GPTC, and numerous pipeline operators opposed a requirement to pressure test all lines not previously tested. These commenters supported the more-limited testing mandated by the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011. AGA noted that Congress considered and rejected proposals for more extensive testing.

2. AGA, GPTC, Iowa Utilities Board, Iowa Association of Municipal Utilities, Texas Pipeline Association, Texas Oil & Gas Association, and several distribution pipeline operators objected to requiring pressure testing of distribution pipelines. The commenters argued that the impact of resulting service disruptions was overlooked. Pressure testing would necessitate disruptions of three to seven days for many distribution pipelines, sometimes involving service to an entire town. In some cases, establishing an alternate supply is not always possible. In addition, some in-service lines are not configured in a manner that would support testing. For these reasons, the commenters argued that the high costs to perform pressure tests were inappropriate absent some demonstration of actual risk. MidAmerican added a suggestion that such a requirement of this type be

limited to pipelines operating above 30 percent of specified minimum yield strength (SMYS). Northern Natural Gas agreed with MidAmerican's suggestion and would further limit any testing requirement to pipelines outside of Class 1 locations and subject to seam issues.

3. INGAA, GPTC, Texas Pipeline Association, Texas Oil & Gas Association, and several pipeline operators opposed a blanket testing requirement for older pipelines. The commenters noted that more than sixty percent of in-service pipelines were installed prior to 1970, and have operated safely. INGAA argued that the objective of any action in this area should not be pressure testing, *per se*, but verification of fitness for service. INGAA noted that all of the listed pipe types are addressed in its Fitness for Service protocol, which would be more effective and efficient than a prescriptive test requirement. A number of additional pipeline operators supported INGAA's comments.

4. Accufacts recommended that all pipelines with at-risk seam anomalies be pressure tested to at least 90% SMYS, with priority given to lines operating under an MAOP established in accordance with 49 CFR 192.619(c).

5. Texas Pipeline Association and Texas Oil & Gas Association noted that pressure testing alone, is not sufficient to prove the integrity of pipelines subject to seam issues. The associations argued that verification must also consider any degradation mechanism present in the seam.

6. Dominion East Ohio supported a requirement to pressure test pipe susceptible to seam failure for which adequate test documentation does not exist.

7. Pipeline Safety Trust, California Public Utilities Commission, Commissioners of Wyoming County Pennsylvania, and an anonymous commenter supported requiring a pressure test for all pipelines not already tested to current requirements. The commenters argued that integrity management should have led to necessary testing but has not done so in all cases. They also noted that such a requirement would respond to an NTSB recommendation.

8. The Environmental Defense Fund (EDF) cautioned that any requirement for pressure testing should assure that the amount of gas blown down to the atmosphere is minimized. It noted that methane is a potent greenhouse gas, and uncontrolled blowdown of 182,000 miles of gas transmission pipeline would be approximately equivalent to

the annual greenhouse gas release from 9–14 million autos.

Response to Question J.1 Comments

PHMSA appreciates the information provided by the commenters. This NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Verification of MAOP includes establishing and documenting MAOP using one or more of the methods in § 192.624(c)(1) through (c)(6). With regard to the EDF comment regarding the environmental cost due to gas blow down during pressure testing, PHMSA considered this in the rule development. The proposed rulemaking is written to minimize pressure testing. The Integrity Verification Process allows MAOP verification through ILI and ECA. PHMSA believes operators will pressure test as a last resort because it is the costliest methodology. PHMSA estimates that the rule would result in approximately 1,300 miles of pipe being pressure tested. The gas release from controlled low volume release during pressure testing is much less than an uncontrolled high volume release as a result of rupture. The proposed rule is expected to prevent incidents, leaks, and other types of failures that might occur, thereby preventing future releases of greenhouse gases (GHG) to the atmosphere, thus avoiding additional contributions to global climate change. PHMSA estimated net GHG emissions abatement over 15 years of 69,000 to 122,000 metric tons of methane and 14,000 to 22,000 metric tons of carbon dioxide, based on the estimated number of incidents averted and emissions from pressure tests and ILI upgrades.

J.2. Are alternative minimum test pressures (other than those specified in subpart J) appropriate, and why?

1. INGAA, supported by a number of pipeline operators, argued that there is no evidence suggesting that subpart J test pressures are inadequate. INGAA added that there are circumstances in which additional tests to 1.25 times MAOP may be appropriate to verify fitness for service. This is consistent with ASME/ANSI B31.8S and addressed in its Fitness for Service protocol.

2. Texas Pipeline Association, Texas Oil & Gas Association, and Atmos argued that a pressure test at the time of construction is adequate. The associations further added that operating practices since part 192 became effective can also verify fitness for service, if primary test records are

not available, particularly if MAOP is reduced.

3. AGA, GPTC, and a number of pipeline operators commented that any test to pressures greater than MAOP has some value. AGA noted that even tests to 1.1 times MAOP would identify the most severe defects that have the potential to adversely affect pipeline integrity.

4. MidAmerican suggested that a fitness for service evaluation should be allowed if there are service interruption issues and for pre-1970 pipelines. MidAmerican would allow testing for existing pipelines, to 1.1 or 1.25 times MAOP or to mill test pressures if they are less than would be required by subpart J.

5. An anonymous commenter argued that alternative minimum test pressures are not appropriate, since they provide no more information than successful operation at normal operating pressures.

6. Accufacts suggested that pipelines tested to lower pressures and that have been subject to aggressive operating cycles be considered for high-pressure testing. Accufacts would also require test pressures be recorded both in psig and percent SMYS.

Response to Question J.2 Comments

PHMSA appreciates the information provided by the commenters. Following publication of the ANPRM, the NTSB issued its report on the San Bruno incident that included a recommendation for this issue (P-11-15). The NTSB recommended that PHMSA amend its regulations so that manufacturing- and construction-related defects can only be considered "stable" if a gas pipeline has been subjected to a post-construction hydrostatic pressure test of at least 1.25 times the MAOP. This NPRM proposes to revise the integrity management requirement in 192.917(e)(3) to allow the presumption of stable manufacturing and construction defects only if the pipe has been pressure tested to at least 1.25 times MAOP. In addition, PHMSA proposes to revise pressure test safety factors in § 192.619(a)(2)(ii) to correspond to at least 1.25 MAOP for newly installed pipelines.

J.3. Can ILI be used to find seam integrity issues? If so, what ILI technology should be used and what inspection and acceptance criteria should be applied?

1. INGAA and numerous pipeline operators noted that ILI tools can examine seam issues but the technology to identify and evaluate seam anomalies is still evolving. INGAA added that there are significant burdens associated

with requiring pressure testing as an alternative.

2. AGA reported that its discussions with ILI vendors have identified that ILI can detect seam issues but detection is dependent on many conditions and is not guaranteed.

3. Texas Pipeline Association and Texas Oil & Gas Association argued that ILI conducted using a multi-purpose tool can provide a seam assessment equivalent to pressure testing for detection of seam integrity issues, depending on anomaly characteristics and the ILI method used.

4. Northern Natural Gas commented that ILI can be used to detect seam anomalies. Analysis of anomalies is based on the log-secant method with consideration of toughness to determine the predicted failure pressure ratio. The response criteria can then be based on the failure pressure versus maximum allowable operating pressure, similar to wall loss. Northern noted that this is consistent with ASME/ANSI B31.8 and B31.8S.

5. Accufacts commented that ILI cannot, at present, reliably detect all seam anomalies.

Response to Question J.3 Comments

PHMSA appreciates the information provided by the commenters. PHMSA proposes requirements in the rulemaking to address the use of ILI for seam integrity issues. This includes incorporating industry standard NACE SP0102–2010 into the regulations to provide better guidance for conducting integrity assessments with in-line inspection. In addition, for pipe segments subject to MAOP verification in new § 192.624, specific guidance is provided for analyzing crack stability when using engineering critical assessment in conjunction with inline inspection to address seam or other cracking issues.

J.4. Are other technologies available that can consistently be used to reliably find and remediate seam integrity issues?

1. INGAA and numerous pipeline operators noted that magnetic particle inspection is now being used by many operators when pipe with disbanded coating is exposed.

2. GPTC, Northern Natural Gas, and MidAmerican reported that there are other methods that are useful under some circumstances, such as x-ray or other forms of radiography and guided wave ultrasound.

3. Texas Pipeline Association, Texas Oil & Gas Association, and Atmos noted that radiography, ultrasonic testing (UT), and shear wave UT are now being tested.

4. AGA, supported by a number of its pipeline operator members, noted that operators must have the flexibility to select appropriate tools without prior PHMSA approval. AGA argued that technology is advancing rapidly and that PHMSA stifles advancement by requiring prior approval of new inspection tools. AGA argued that some requirements being imposed on the use of other technologies are effectively regulations imposed without formal rulemaking, citing limitations imposed on the use of guided wave ultrasound as an example.

5. Atmos recommended that PHMSA modify its regulations to allow operators to use appropriate methods to evaluate seam integrity without requiring approval as “other technology.”

6. Accufacts opined that pressure testing and cyclic monitoring and analysis are the only useful technologies currently available.

Response to Question J.4 Comments

PHMSA appreciates the information provided by the commenters. PHMSA proposes requirements in the rulemaking to address the use of best available technology, including use of electromagnetic acoustic transducers (EMAT) or ultrasonic testing (UT) tools to assess seam integrity issues. In addition, proposed requirements include performing fracture mechanics modeling for failure stress pressure and cyclic fatigue crack growth analysis to assess crack or crack-like defects. These requirements would apply to any segment that required verification of MAOP.

J.5. Should additional pressure test requirements be applied to all pipelines, or only pipelines in HCAs, or only pipelines in Class 2, 3, or 4 location areas?

1. INGAA and several pipeline operators argued that existing requirements are adequate and any verification beyond those requirements should rely on INGAA’s Fitness for Service protocol. INGAA argued that its protocol is consistent with Section 23 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011.

2. MidAmerican suggested any new requirements should focus on pipe with manufacturing and construction defects and should prioritize pipelines in Class 3 and 4 areas and HCAs. MidAmerican sees little benefit in testing other pipelines.

3. An anonymous commenter recommended additional unspecified requirements be applied to pipelines in Class 3 and 4 areas and HCAs.

4. The California Public Utilities Commission would apply pressure

testing requirements to HCAs that are determined by the method described in paragraph 1 in the definition of HCA in § 192.903, as a minimum.

5. The Iowa Utilities Board and the Iowa Association of Municipal Utilities argued that class location is not a reasonable basis for determining where to apply pressure testing requirements, given that class location has no relationship to risk. These commenters noted that small-diameter, low-pressure lines could be Class 3, even with no structures intended for human occupancy within a potential impact radius.

6. The Commissioners of Wyoming County Pennsylvania would apply requirements to all transmission and gathering pipelines, including those in Class 1 locations.

7. Thomas Lael noted that all pipelines have been tested once, after construction.

Response to Question J.5 Comments

PHMSA appreciates the information provided by the commenters. This NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Use of the MCA location criteria would apply to pipe segments where dwellings, occupied sites, or interstate highways, freeways, and expressways, and other principal 4-lane arterial roadways are located within the potential impact radius, but would not necessarily include all class 3 or 4 locations. Verification of MAOP includes establishing and documenting MAOP using one or more of the methods in 192.624(c)(1) through (c)(6). In addition, this NPRM proposes requirements for verification of pipeline material in new § 192.607 for existing onshore, steel, gas transmission pipelines that are located in an HCA or class 3 or class 4 locations.

J.6. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements pursuant to commenter’s suggestions.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*

- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

K. Establishing Requirements Applicable to Underground Gas Storage

Underground storage facilities are comprised of wells and associated separation, compression, and metering facilities to inject and withdraw natural gas at high pressures from depleted hydrocarbon reservoirs and salt caverns. Pipelines that transport gas within a storage field are defined in § 192.3 as transmission pipelines and are regulated by PHMSA, while underground storage facilities including surface and subsurface well casing, tubing, and valves are not currently regulated under part 192. In the ANPRM, PHMSA provided a brief history of a 1992 accident that occurred in Brenham, Texas an involving underground storage facility. This incident involved an uncontrolled release of highly volatile liquids from a salt dome storage cavern that resulted in 3 fatalities, 21 people treated for injuries at area hospitals, and damages in excess of \$9 million. Following the incident, the National Transportation Safety Board (NTSB) conducted an investigation that resulted in a recommendation for the Research and Special Programs Administration, the precursor to PHMSA, to initiate a rulemaking proceeding. Following a period of study, RSPA terminated that rulemaking. RSPA described this action in an Advisory Bulletin published in the **Federal Register** on July 10, 1997 (ADB-97-04, 62 FR 37118).

Since publication of the 1997 Advisory Bulletin, significant incidents have continued to occur involving underground gas storage facilities. The most significant incident occurred in 2001 near Hutchinson, Kansas. An uncontrolled release from an underground gas storage facility resulted in an explosion and fire, in which two people were killed. Many residents were evacuated from their homes and were not able to return for four months.

The Kansas Corporation Commission initiated enforcement action against the operator of the Hutchinson storage field as a result of safety violations associated with the accident. As part of this enforcement proceeding, it was concluded that the storage field was an interstate gas pipeline facility. Federal statutes provide that “[a] State authority may not adopt or continue in force safety standards for interstate pipeline facilities or interstate pipeline transportation” (49 U.S.C. 60104). There

were, and remain, no federal safety standards against which enforcement could be taken. Therefore, the enforcement proceeding was terminated.

The ANPRM listed questions for consideration and comment. The following are general comments received related to this topic as well as comments related to the specific questions:

General Comments for Topic K

1. AGA, supported by a number of pipeline operators, suggested that any proceeding addressing gas storage be conducted under a docket separate from any pipeline requirements, arguing that the relevant engineering and regulatory concepts are vastly different.

2. The Kansas Department of Health and Environment (KDHE) noted that the ANPRM misstated the agency that took enforcement action in the case of the Kansas gas storage incident previously discussed. That action was taken by KDHE, and not the Kansas Corporation Commission, as stated.

3. Kansas Corporation Commission recommended that PHMSA work with the states to have Congress amend the Pipeline Safety Act to allow the states to regulate interstate and intrastate gas storage wellbores. KCC noted that current federal regulations undermine the ability of states to regulate gas storage facilities, as in the 2001 accident where Kansas attempted to take enforcement as a result of a serious incident but was precluded from doing so by pre-emption of federal regulations.

4. The Interstate Oil & Gas Compact Commission argued that states should be mandated to regulate gas storage wellbores, whether interstate or intrastate.

5. The Texas Pipeline Association and Texas Oil & Gas Association opposed new requirements, arguing that there has been no demonstration of undue risk or insufficiency of current regulations.

Comments submitted for questions in Topic K.

K.1. Should PHMSA develop Federal standards governing the safety of underground gas storage facilities? If so, should they be voluntary? If so, what portions of the facilities should be addressed in these standards?

1. INGAA suggested that PHMSA develop high-level, performance-based guidelines that acknowledge and reflect existing applicable state rules to address regional and geologic variations in underground storage activity. Development of guidelines should follow PHMSA’s current practice of stakeholder involvement leading to

development of a consensus standard and its subsequent adoption into regulations. INGAA reported that it is committed to developing a standard under the auspices of the American Petroleum Institute (API), with work beginning in 2012. INGAA cautioned that it is important to understand, and clearly state, the scope of “gas storage,” which it contends begins at and includes the wing valve at the wellhead, the wellhead components, the well bore, and the “underground container” (*i.e.*, the geologic formation). INGAA stated that PHMSA should recognize the limits and requirements imposed on gas storage by FERC, arguing that no new regulations are needed in these areas. A number of pipeline operators supported INGAA’s comments, and have submitted separate comments addressing one or more of these points.

2. AGA suggested that PHMSA adopt federal performance standards, in conjunction with API. AGA argued that one-size-fits-all requirements are not appropriate in this area, since they would fail to recognize variations in wells and the geologic diversity of storage caverns and structures. AGA argued that no new requirements are needed governing maximum operating parameters and environmental conditions, since these are addressed adequately by existing federal and state certification and compliance programs related to gas storage facilities. AGA recommended that any new standards should be mandatory, but also recognize regional variations by state due to geologic and geographical diversity among storage fields. A number of pipeline operators supported AGA’s comments.

3. INGAA, the Kansas Corporation Commission, and the Interstate Oil & Gas Compact Commission recommended that compliance with any new standards be mandatory, but that regulatory authority should be delegated to the states since PHMSA lacks relevant technical expertise. A number of pipeline operators supported this comment.

4. The Kansas Corporation Commission and the Interstate Oil & Gas Compact Commission recommended that any new standards cover all portions of a storage facility and that PHMSA enter into a memorandum of understanding with FERC regarding gas containment.

5. Southern Star Central Gas Pipeline agreed that the development of requirements for operation of gas storage facilities is appropriate but explicitly disagreed with Kansas Corporation Commission’s suggestion that development be delegated to states.

Southern Star indicated that it would not object to the delegation of inspection and enforcement to federal standards. Southern Star noted that a federal court has held only federal regulations can be enforced against its storage facilities. The company also argued that no new requirements are needed for storage reservoirs given existing FERC regulations.

6. GPTC, Nicor, Ameren Illinois, and Atmos argued that existing regulations are sufficient and that no new standards are needed. GPTC and Nicor added that if PHMSA elects to develop new requirements, they should be limited to facilities "affecting interstate or foreign commerce." Atmos added that geology and circumstances vary considerably among gas storage facilities and states have the requisite expertise to regulate storage safety.

7. Texas Pipeline Association and Texas Oil & Gas Association argued that PHMSA lacks the expertise to regulate wellbores and therefore should not attempt to develop gas storage regulations.

8. FERC, NAPS, Interstate Oil & Gas Compact Commission, Iowa Utilities Board, Kansas Corporation Commission, and Railroad Commission of Texas recommended that PHMSA seek statutory authority to confer jurisdiction over all gas storage facilities to the states. The commenters argued that states have expertise on local geology and storage fields and could therefore regulate in a fashion similar to that of production facilities. The commenters referred to PHMSA's Advisory Bulletin ADB 97-04 as a further basis for this recommendation. FERC further suggested that PHMSA delegate inspection and enforcement activities to states if statutory changes are not forthcoming.

9. The Alaska Department of Natural Resources recommended that PHMSA develop standards in consultation with the states.

10. The NTSB encouraged the development of gas storage regulations, noting that this was the subject of its recommendation P-93-9, which it closed as "unacceptable action," after a rulemaking proceeding to regulate underground gas storage was terminated in 1997.

11. A private citizen suggested that there should be some level of regulation, as gas storage is currently insufficiently regulated.

12. NAPS, commented that, in many states, the agency familiar with gas storage issues is not responsible for regulation of pipeline safety. As a result, NAPS, stated that certification of

additional state agencies may be required.

13. An anonymous commenter suggested that PHMSA should develop requirements applicable to piping within gas storage facilities. The commenter argued that caverns, well heads, casing, tubing, fresh water, and brine pumping are generally regulated by states.

14. ITT Exelis Geospatial Systems suggested that PHMSA consider requirements for leak detection, noting that their LIDAR system could serve this purpose.

K.2. What current standards exist governing safety of these facilities? What standards are presently used for conducting casing, tubing, isolation packer, and wellbore communication and wellhead equipment integrity tests for down-hole inspection intervals? What are the repair and abandonment standards for casings, tubing, and wellhead equipment when communication is found or integrity is compromised?

1. AGA, INGAA, GPTC, Texas Pipeline Association, Texas Oil & Gas Association and numerous pipeline operators noted that FERC, EPA, and the states regulate various aspects of gas storage. Commenters reported that state regulations generally provide standards for wells and that EPA regulations provide standards for caverns. AGA described the aspects regulated by FERC, EPA, and the states and suggested provisions of each which might be considered for new PHMSA regulations. For example, it was recommended that a federal guideline be established to require a storage operator notification-review-and-approval process for third party wells encroaching on storage containers, which is a requirement some states currently have in place. Commenters reported that repaired wells must meet state standards for new wells and state requirements for abandonment vary. AGA indicated that interstate storage operators use state requirements as guidance in the absence of federal regulations.

2. The Kansas Department of Health and Environment, the Kansas Corporation Commission, the Railroad Commission of Texas, the Interstate Oil & Gas Compact Association, Ameren Illinois, and Atmos reported that states generally regulate gas storage. For example, in Texas, Statewide Rule 16 applies and KDHE submitted a copy of its gas storage regulations.

3. Texas Pipeline Association and Texas Oil & Gas Association noted that Texas requirements for gas storage are more similar to provisions that would govern production drilling and

operations rather than pipeline operations.

K.3. What standards are used to monitor external and internal corrosion?

1. AGA, INGAA, and numerous pipeline operators noted that varying approaches are used and argued that prescriptive standards would be inappropriate given that no one tool is applicable to all wells and well casings are not available for direct examination.

2. The Railroad Commission of Texas reported that its regulations require integrity testing every five years or after a well work over. Texas regulations also require periodic casing inspections and a pipeline integrity program.

3. Northern Natural Gas reported that it uses the same measures to monitor corrosion in its gas storage facilities as it does for its pipelines.

K.4. What standards are used for welding, pressure testing, and design safety factors of casing and tubing including cementing and casing and casing cement integrity tests?

1. INGAA, AGA, the Texas Pipeline Association, the Texas Oil & Gas Association and numerous pipeline operators noted that state requirements reflect unique situations, welding is seldom used, pressure capacity is demonstrated by historical record, and casing requirements are customized for local geologic conditions. Welding, when used, is generally performed to procedures compliant with ASTM B31.8, part 192, and inspection is conducted to API-1104 criteria.

2. The Railroad Commission of Texas reported that Texas regulations are flexible to allow for site-specific decisions.

K.5. Should wellhead valves have emergency shutdowns both primary and secondary? Should there be integrity and O&M intervals for key safety and CP systems?

1. INGAA, AGA, and several pipeline operators reported that storage in salt domes generally requires emergency shutdown systems; these systems are generally not required for storage in depleted gas fields or aquifers but may be required depending on local site conditions. The commenters indicated that testing intervals are set in accordance with operator procedures and CP testing is based on an operator's local experience.

2. The Railroad Commission of Texas, the Texas Pipeline Association, and the Texas Oil & Gas Association reported that Texas' regulations require emergency shutdown systems and annual drills.

3. The Kansas Department of Health and Environment suggested that at least

the primary well should have an emergency shutdown system. KDHE stated that O&M intervals should be established for key safety systems and attached a copy of the relevant Kansas regulations to its comments.

4. Northern Natural Gas suggested that emergency shutoffs should only be required when the well is within 330 feet of a structure intended for human occupancy. Northern stated that intervals should be established for O&M activities and CP systems.

5. GPTC and Nicor expressed their opinion that no new regulations are needed in this area; decisions on emergency shutdown should be made based on local circumstances.

K.6. What standards are used for emergency shutdowns, emergency shutdown stations, gas monitors, local emergency response communications, public communications, and O&M Procedures?

1. AGA, GPTC, and several pipeline operators reported that operators generally follow DOT regulations, where applicable, and industry good practices.

2. The NTSB commented that gas storage facility information should be made available to emergency responders, per its recommendation P-11-8.

3. The Railroad Commission of Texas, the Texas Pipeline Association, the Texas Oil & Gas Association, and Atmos reported that states establish standards in these areas through their regulations.

4. The Kansas Department of Health and Environment reported that these standards are specified in its regulations, and submitted a copy of its regulations as an attachment to its comments.

K.7. Does the current lack of Federal standards and preemption provisions in Federal law preclude effective regulation of underground storage facilities by States?

1. INGAA, supported by several of its member companies, noted that jurisdiction over gas storage facilities in interstate pipeline systems is federal.

2. AGA and several of its pipeline operator members suggested that federal standards could assure a degree of consistency, and uniform standards would promote integrity and safety. AGA opined that implementation of federal standards could be delegated to the states.

3. GPTC and Nicor opined that federal regulations are not needed; as states are not now precluded from regulating gas storage and many do so.

4. The Texas Pipeline Association, the Texas Oil & Gas Association, Atmos, Ameren Illinois, and Northern Natural Gas opined that effective state

regulation is not now precluded. The commenters stated that state regulation in combination with applicable FERC and DOT requirements has been demonstrated to assure safety successfully.

5. The Kansas Department of Health and Environment and the Kansas Corporation Commission noted that state regulation of the safety of interstate gas storage facilities is currently precluded. When Kansas attempted to enforce its requirements following an accident at an interstate storage facility, it was prevented from doing so by a federal court on the basis of federal preemption. The agencies noted that lack of action by PHMSA or FERC on interstate gas storage facility safety precludes states from taking any action and leaves these facilities essentially unregulated.

K.8. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

Response to All Topic K Comments

Since the publication of the ANPRM and the close of its comment period, Southern California Gas Company's (SoCal Gas) Aliso Canyon Natural Gas Storage Facility Well SS25 failed, causing a sustained and uncontrolled natural gas leak near Los Angeles, California. The failure, possibly from the downhole well casing, resulted in the relocation of more than 4,400 families according to the Aliso Canyon Incident Command briefing report issued on February 1, 2016. On January 6, 2016, California Governor Jerry Brown issued a proclamation declaring the Aliso Canyon incident a state emergency. On February 5, 2016, PHMSA issued an advisory bulletin in the **Federal Register** (81 FR 6334) to remind all owners and operators of underground storage facilities used for the storage of natural gas to consider the overall integrity of the facilities to ensure the safety of the public and operating personnel and to protect the

environment. The advisory bulletin specifically reminded these operators to review their operations and identify the potential of facility leaks and failures, review the operation of their shut-off and isolation systems, and maintain updated emergency plans. In addition, PHMSA used the advisory bulletin to advocate the review of a previous advisory bulletin (97-04) dated July 10, 1997 and the voluntary implementation of American Petroleum Institute (API) 1170 "Design and Operation of Solution-mined Salt Caverns Used for Natural Gas Storage, First Edition, July 2015," API RP 1171 "Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs, First Edition, September 2015," and Interstate Oil and Gas Compact Commission (IOGCC) standards entitled "Natural Gas Storage in Salt Caverns—A Guide for State Regulators" (IOGCC Guide), as applicable. PHMSA will consider proposing a separate rulemaking to address the safety of underground natural gas storage facilities. Proposing a separate rulemaking that specifically focuses on improving the safety of underground natural gas storage facilities will allow PHMSA to fully consider the impacts of incidents that have occurred since the close of the initial comment period. It will also allow the Agency to consider voluntary consensus standards that were developed after the close of the comment period for this ANPRM, and to solicit feedback from additional stakeholders and members of the public to inform the development of potential regulations.

L. Management of Change

The ANPRM requested comments regarding the addition of requirements for the management of change to provide a greater degree of control over this element of pipeline risk, particularly following changes to physical configuration or operational practices. Operation of a pipeline over an extended period without effective management of change, such as changes to pipeline systems (e.g., pipeline equipment, computer equipment or software used to monitor and control the pipeline) or to practices used to construct, operate, and maintain those systems, can result in safety issues. Changes can introduce unintended consequences if the change is not well thought out or is implemented in a manner not consistent with its design or planning. Similarly, changes in procedures require people to perform new or different actions, and failure to train them properly and in a timely

manner can result in unexpected consequences. The result can be a situation in which risk or the likelihood of an accident is increased. A recently completed but poorly-designed modification to the pipeline system was a factor contributing to the Olympic Pipeline accident in Bellingham, Washington. The following are general comments received related to this topic as well as comments related to the specific questions:

General Comments for Topic L

1. INGAA and several of its pipeline operator members disagreed with the implication in the ANPRM that change management is not now addressed in regulations. They pointed out that § 192.911(k) and ASME/ANSI B31.8S (incorporated by reference) already address this subject. INGAA reported that its members are committed to clarifying and expanding the use of a formal “management of change” process, and to facilitating its consistent application as a key management system. INGAA expressed its belief that the full adoption of ASME/ANSI B31.8S will facilitate the widespread application of these principles. Dominion East Ohio Gas also noted that part 192 already contains a management of change process. In addition, Chevron noted that management of change programs are generally specific to the organizational, operational, and ownership structures of the company, and part 192 already addresses this subject.

2. A private citizen opined that management of change is necessarily an integral part of quality management systems and another private citizen supported management of change requirements, noting that accidents often result from changes to systems. The Alaska Department of Natural Resources also supported PHMSA’s goal of establishing management of change requirements or guidelines.

Response to General Comments for Topic L

PHMSA appreciates the information provided by the commenters. PHMSA agrees management of change is currently addressed in § 192.911(k). However, because of its importance, and consistent with INGAA members’ commitment to expanding use of formal MOC processes, PHMSA believes it is prudent to provide greater emphasis on MOC directly within the rule text.

Therefore, PHMSA proposes to clarify integrity management requirements for management of change by explicitly including aspects of an effective management of change process into the

rule text to emphasize the current requirements. In addition, PHMSA also proposes to add a new subsection 192.13(d) that would apply to onshore gas transmission pipelines, and require that an evaluation must be performed to evaluate and mitigate, as necessary, the risk to the public and environment as an integral part of managing pipeline design, construction, operation, maintenance and integrity, including management of change. The new paragraph would also articulate the general requirements for a management of change process, consistent with Section 192.911(k).

Comments submitted for questions in Topic L.

L.1. Are there standards used by the pipeline industry to guide management processes including management of change? Do standards governing the management of change process include requirements for IM procedures, O&M manuals, facility drawings, emergency response plans and procedures, and documents required to be maintained for the life of the pipeline?

1. AGA, supported by several of its members, and several transmission pipeline operators questioned why this question was in the ANPRM, noting that management of change requirements are already promulgated in § 192.911(k). GPTC added that § 192.909 also addresses this subject.

2. INGAA reported that Section 11 of ASME/ANSI B31.8S is the industry standard in this area, and all of the considerations in this question are included in operators’ management of change processes. Several pipeline operators supported this comment.

3. Atmos reported that it is not aware of any standards used by the industry to guide management of change processes. Atmos does not have a formal management of change process, except in its integrity management program, but expressed its conclusion that existing practices within the company contribute to its ability to manage change.

4. Texas Pipeline Association (TPA) reported that its members do not have formal management of change processes but comply with regulations that address proxy requirements (e.g., § 192.911). TPA expressed its belief that part 192, taken as a whole, includes management of change requirements to which its members adhere. Texas Oil & Gas Association supported TPA’s comments.

5. California Public Utilities Commission reported that it is unaware of any pipeline industry standards in this area.

6. An anonymous commenter opined that most operators do not have management of change processes.

7. The NTSB recommended that PHMSA require operators of natural gas transmission and distribution pipelines and hazardous liquid pipelines to ensure that their control room operators immediately notify the relevant 911 emergency call centers of possible ruptures (Recommendation P–11–9).

8. TransCanada reported that it is committed to clarifying and expanding the use of a formal “management of change” process. TransCanada expressed its conclusion that the full adoption of ASME/ANSI B31.8S will facilitate the widespread application of management of change principles.

Response to Question L.1 Comments

PHMSA appreciates the information provided by the commenters, which did not identify any standards beyond ASME/ANSI B31.8S, which is already invoked by part 192, and used by the pipeline industry to guide management processes including management of change. See response to the general comments for Topic L, above.

L.2. Are standards used in other industries (e.g., Occupational Safety and Health Administration standards at 29 CFR 1910.119) appropriate for use in the pipeline industry?

1. INGAA reported that Section 11 of ASME/ANSI B31.8S is based on OSHA’s Process Safety Management (PSM) standards. INGAA noted that OSHA worked with industry in developing PSM standards that would identify potential threats and assure that mitigative actions were taken. Several pipeline operators supported INGAA’s comments.

2. AGA and GPTC expressed their belief that there is no benefit in comparing standards with other industries, reiterating that §§ 192.909 and 192.911 and ASME/ANSI B31.8S already include management of change. Several pipeline operators supported AGA’s comments.

3. The Texas Pipeline Association and the Texas Oil & Gas Association reported that their members are aware of standards used in other industries but do not believe they are appropriate or applicable to the pipeline industry.

4. The Iowa Association of Municipal Utilities expressed its conclusion that OSHA standards are complicated and would be unduly costly for small municipal utilities.

5. Accufacts noted that transportation pipelines are specifically excluded from OSHA regulation; however, this does not prevent PHMSA from incorporating elements of 29 CFR 1910.119 into the

federal pipeline safety regulations in order to mandate a more prudent pipeline safety culture.

6. Atmos reported that it has no experience with standards used in other industries but noted that OSHA standards appear to be directed toward situations where processes interact such that a change in one process affects a second or third process.

7. Ameren Illinois suggested that standards from other industries would need to be studied to determine if they are applicable to the pipeline industry.

8. An anonymous commenter suggested that the OSHA standards are a good model for pipelines, as they are well written and thought out.

Response to Question L.2 Comments

PHMSA appreciates the information provided by the commenters. See response to the general comments for Topic L, above.

L.3. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

M. Quality Management Systems (QMS)

The ANPRM requested comments on whether and how to impose requirements related to quality management systems. Quality management includes the activities and processes that an organization uses to achieve quality. These include formulating policy, setting objectives, planning, quality control, quality assurance, performance monitoring, and quality improvement.

Achieving quality is critical to gas transmission pipeline design, construction, and operations. PHMSA recognizes that pipeline operators strive to achieve quality, but our experience has shown varying degrees of success in accomplishing this objective among pipeline operators. PHMSA believes that an ordered and structured approach to quality management can help pipeline operators achieve a more

consistent state of quality and thus improve pipeline safety.

PHMSA's pipeline safety regulations do not currently address process management issues such as quality management systems. Section 192.328 requires a quality assurance plan for the construction of pipelines intended to operate at an alternative MAOP, but there is no similar requirement applicable to other pipelines. Quality assurance is generally considered to be an element of quality management. Important elements of quality management systems are their design and application to control (1) the equipment and materials used in new construction (e.g., quality verification of materials used in construction and replacement, post-installation quality verification), and (2) the contractor work product used to construct, operate, and maintain the pipeline system (e.g., contractor qualifications, verification of the quality of contractor work products).

The ANPRM then listed questions for consideration and comment. The following are general comments received related to this topic as well as comments related to the specific questions:

General Comments for Topic M

1. MidAmerican suggested that PHMSA work with the committees for ASME/ANSI B31.8 and B31.8S to address these topics more fully, if PHMSA believes more is needed. MidAmerican opined that a general rule addressing quality management systems would divert resources and adversely affect safety, if applied to this already heavily-regulated industry.

2. The Alaska Department of Natural Resources supported quality management systems and suggested that pipeline operators should apply such standards to their contractors.

3. A private citizen supported quality management systems, noting that this is an area that would be difficult to regulate but might be an element in incentive programs.

Comments submitted for questions in Topic M.

M.1. What standards and practices are used within the pipeline industry to assure quality? Do gas transmission pipeline operators have formal QMS?

1. INGAA opined that achieving consistent quality materials, construction and management is an appropriate focus for the INGAA Foundation, which has sponsored and will continue to sponsor workshops on this subject. INGAA reported that the Foundation plans to publish five relevant White Papers in 2012 and its Integrity Management—Continuous

Improvement team is currently working on guidelines. INGAA also noted that there are elements of a quality management system in ASME/ANSI B31.8S, already incorporated by reference, including quality assurance/quality control, management of change, communication and performance measurement, Standards, specifications, and procedures governing pipe and appurtenances form part of a pipeline quality management system. INGAA cited ISO (9001:2008/29001:2010) and API (Spec Q1) quality management standards as references that are available for operator use. INGAA further noted that API published Spec Q2 in December 2011. Several pipeline operators supported INGAA's comments.

2. AGA, GPTC, Nicor, Atmos, the Texas Pipeline Association, and the Texas Oil & Gas Association suggested that part 192, taken as a whole, is essentially a quality management system. AGA provided a summary listing of part 192 requirements that assure quality. A number of additional pipeline operators supported AGA's comments.

3. Ameren Illinois reported that it has a quality assurance program for pipeline construction that includes building alliances with excavators and other elements.

4. Paiute and Southwest Gas reported that their practices beyond compliance with part 192 requirements include operator qualification (OQ) for construction, an internal quality assurance group, root cause analysis of events, and quality control verification of OQ.

5. MidAmerican reported that it has no formal quality management system but applies standards to assure quality processes. In particular, ASME/ANSI B31.8 and B31.8S and ANSI/ISO/ASQ Q9004—2000 were used to guide its company quality programs. MidAmerican also has a contractor oversight program.

6. An anonymous commenter opined that most operators have a quality management system, often incorporated into their SCADA system, to satisfy customers or end user requirements. The commenter suggested that some of these systems have only recently been modified to address internal corrosion mechanisms, often identified as part of operators' integrity management programs.

M.2. Should PHMSA establish requirements for QMS? If so, why? If so, should these requirements apply to all gas transmission pipelines and to the complete life cycle of a pipeline system?

1. INGAA, supported by a number of its pipeline operator members, asserted that no new requirements are appropriate at this time. INGAA noted that much work is ongoing in this area and it may be appropriate to adopt some standards (e.g., API Q1 or Q2) in the future.

2. AGA, GPTC, the Texas Pipeline Association, the Texas Oil & Gas Association, Oleksa and Associates, and numerous pipeline operators expressed an opinion that new quality assurance requirements are not needed. These commenters view part 192 as quality assurance requirements and argue that a new programmatic requirement would not be beneficial.

3. TransCanada opined that quality management systems need to be adopted throughout the entire industry and embraced by operators and contractors alike, arguing that this would provide a more consistent level of quality throughout the industry. TransCanada opined that the INGAA Foundation is the appropriate venue in which to develop guidelines.

4. Northern Natural Gas opined that the existing process, which includes PHMSA/State inspections, is adequate.

5. A private citizen commented that quality management systems should be required to improve pipeline safety, including documentation, investigations, validation, audits/inspections, change management, training, and quality/management oversight.

6. An anonymous commenter opined that no new requirements are needed, arguing that most operators have such systems.

M.3. Do gas transmission pipeline operators require their construction contractors to maintain and use formal QMS? Are contractor personnel that construct new or replacement pipelines and related facilities already required to read and understand the specifications and to participate in skills training prior to performing the work?

1. INGAA reported that most of its members apply quality management principles, including requiring contractors conform to specified requirements, though the approach varies from operator to operator. INGAA acknowledged, however, that “[t]here is room to establish a more structured approach to QMS for operators and construction contractors” to assure more consistency. A number of pipeline operators supported INGAA’s comments.

2. AGA reported that transmission operators have the means to assure contractor work quality and that most LDC operators impose operator

qualification (OQ) and other specific requirements on their construction contractors.

3. The Texas Pipeline Association and the Texas Oil & Gas Association encouraged PHMSA not to adopt requirements for operators to train construction personnel. The associations expressed concerns over potential liability and their preference for a performance-based standard.

4. Ameren Illinois, Atmos, and MidAmerican reported that they apply operator qualification (OQ) requirements on their contractors.

5. Northern Natural Gas, Paiute, and Southwest Gas reported that they do not require contractors to have formal QMS but do require conformance to various standards.

6. Oleksa and Associates reported its experience that operators require construction contractors to meet the same standards as their employees.

7. GPTC, Nicor, and an anonymous commenter suggested that compliance with construction regulations contribute to QMS through requirements for specifications and inspections.

8. NAPS, the Texas Pipeline Association, and the Texas Oil & Gas Association suggested that operator qualification (OQ) requirements be applied to construction, since this would apply formal QMS to the full range of construction and operation.

M.4. Are there any standards that exist that PHMSA could adopt or from which PHMSA could adapt concepts for QMS?

1. INGAA and a number of pipeline operators suggested that several standards could be used as general references, including ISO 9001:2008 (Quality Management Systems), ISO 29001:2010 (Oil and Gas) and API Spec Q1 (Oil and Gas). INGAA opined that compliance with these standards should not be required, and added that additional standards, white papers, and guidance are under development.

2. The AGA, GPTC, Nicor, and Ameren Illinois opposed new requirements in this area. AGA opined that part 192 is already “saturated” with this type of requirement. A number of additional pipeline operators supported AGA’s comments.

3. The NTSB recommended improvement to PHMSA’s drug and alcohol requirements, citing their recommendations P–11–12 & 13.

4. A private citizen suggested that, by extrapolating from the practices of a pipeline operator with a good safety record. The commenter stated that useful references include the Baldrige Performance Excellence Program and

Quality Management Standard ISO 9000.

M.5. What has been the impact on cost and safety in other industries in which requirements for a QMS have been mandated?

1. INGAA reported that quality management systems have been demonstrated to reduce risk and opined that the keys to a successful QMS are simplicity, empowerment, accountability and ease of implementation. A number of pipeline operators supported INGAA’s comments.

M.6. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- The potential costs of modifying the existing regulatory requirements.
- The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.
- The potential impacts on small businesses of modifying the existing regulatory requirements.
- The potential environmental impacts of modifying the existing regulatory requirements.

No comments were received in response to this question.

Response to All Topic M Comments

PHMSA appreciates the information provided by the commenters. PHMSA does not propose additional rulemaking for this topic at this time. PHMSA will review the comments received on the ANPRM and will consider them in future rulemaking.

N. Exemption of Facilities Installed Prior to the Regulations

The ANPRM requested comments regarding proposed changes to part 192 regulations that would eliminate provisions that exempt pipelines from pressure test requirements to establish MAOP. Federal pipeline safety regulations were first established with the initial publication of part 192 on August 19, 1970 (35 FR 13248). Gas transmission pipelines had existed for many years prior to this, some dating to as early as 1920. Many of these older pipelines had operated safely for years at pressures higher than would have been allowed under the new regulations. It was concluded that a required reduction in the operating pressure of these pipelines would not have resulted in a material increase in safety. Therefore, a provision was included in the regulations (§ 192.619(c)) that allowed pipelines to

operate at the highest actual operating pressure to which they were subjected during the 5 years prior to July 1, 1970. The safe operation of these pipelines at these pressures was deemed to be evidence that operation could safely continue.

Many gas transmission pipelines continue to operate in the United States under an MAOP established in accordance with § 192.619(c). Some of these pipelines operate at stress levels higher than 72 percent specified minimum yield strength (SMYS), the highest level generally allowed for more modern gas transmission pipelines. Some pipelines operate at greater than 80 percent SMYS, the alternate MAOP allowed for some pipelines by regulations adopted October 17, 2008 (72 FR 62148). Under these regulations, operators who seek to operate their pipelines at up to 80 percent SMYS (in Class 1 locations) voluntarily accept significant additional requirements applicable to design, construction, and operation of their pipeline that are intended to assure quality and safety at these higher operating stresses. Pipelines that operate under an MAOP established in accordance with § 192.619(c) are subject to none of these additional requirements.

Part 192 also includes several provisions other than establishment of MAOP for which an accommodation was made in the initial part 192. These provisions allowed pipeline operators to use steel pipe that had been manufactured before 1970 and did not meet all requirements applicable to pipe manufactured after part 192 became effective (192.55); valves, fittings and components that did not contain all the markings required (192.63); and pipe which had not been transported under the standard included in the new part 192 (192.65, subject to additional testing requirements).

The ANPRM then listed questions for consideration and comment. The following are general comments received related to this topic as well as comments related to the specific questions:

General Comments for Topic N

1. INGAA and a number of pipeline operators opined that age alone is not an appropriate criterion for determining a pipeline's fitness for service. Old pipe that is well maintained operates safely and unfit pipe should be replaced regardless of age. INGAA suggested that fitness for service of pipe in HCAs should be evaluated using available records, if adequate, or through new testing. INGAA attached a white paper to its comments that described its

Fitness for Service protocol. INGAA also cautioned that any requirement to reconfirm MAOP should be subject to a rigorous cost-benefit analysis, as hydrostatic testing is very expensive and could require outages of up to several weeks.

2. A private citizen suggested phasing out sub-standard or systems that pre-date regulatory requirements where public safety is concerned, implying that this has been done in other areas (citing elimination of radium dial watches and leaking underground storage tanks as examples).

3. A private citizen suggested that legacy facilities should be subject to a timetable to come into full compliance with current regulations, arguing that this would improve safety and knowledge of older facilities.

Response to General Comments for Topic N

PHMSA appreciates the information provided by the commenters. NTSB recommended that regulatory exemptions be repealed. In addition, section 23 of the Act addressed gas transmission pipelines without records sufficient to validate MAOP. In response to these concerns, this NPRM proposes requirements for verification of maximum allowable operating pressure (MAOP) in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Verification of MAOP includes establishing and documenting MAOP if the pipeline MAOP was established in accordance with § 192.619(c), the grandfather clause. In addition, this NPRM proposes requirements for verification of pipeline material in accordance with new § 192.607 for existing onshore, steel, gas transmission pipelines that are located in an HCA or class 3 or class 4 locations.

Comments Submitted for Questions in Topic N

N.1. Should PHMSA repeal provisions in part 192 that allow use of materials manufactured prior to 1970 and that do not otherwise meet all requirements in part 192?

1. INGAA, supported by several pipeline operators, suggested age, alone, should not be a criterion for determining fitness for service, noting some pre-regulation materials (e.g., seamless pipe) are as good as today's.

2. AGA, GPTC, and numerous pipeline operators noted it is illogical to storehouse pre-1970 materials for installation now. AGA indicated that it thus did not understand the purpose of the ANPRM question.

3. Iowa Utilities Board, NAPS, Texas Pipeline Association, Texas Oil & Gas Association, Accufacts, Alaska Department of Natural Resources, Atmos, Commissioners of Wyoming County Pennsylvania, Professional Engineers in California Government, and an anonymous commenter encouraged repeal of this allowance. Some of these commenters would allow a specified time period for operators to come into compliance.

4. Thomas Lael and MidAmerican recommended operators be allowed to continue use of materials that have already been placed into service, arguing that they have been demonstrated safe through integrity management.

5. Ameren Illinois and Northern Natural Gas opposed repeal of this provision.

Response to Question N.1 Comments

PHMSA appreciates the information provided by the commenters. As stated above, this NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). In addition, this NPRM proposes requirements for verification of pipeline material in accordance with new § 192.607 for existing onshore, steel, gas transmission pipelines that are located in an HCA or class 3 or class 4 locations.

N.2. Should PHMSA repeal the MAOP exemption for pre-1970 pipelines? Should pre-1970 pipelines that operate above 72% SMYS be allowed to continue to be operated at these levels without increased safety evaluations such as periodic pressure tests, in-line inspections, coating examination, CP surveys, and expanded requirements on interference currents and depth of cover maintenance?

1. INGAA and a number of pipeline operators opposed repeal of this exemption. INGAA suggested its Fitness for Service protocol be used to assure continued safety of old pipe.

2. AGA, GPTC, Texas Pipeline Association, Texas Oil & Gas Association and numerous pipeline operators commented that the wording of this question creates a false impression. There is no exemption for MAOP. Rather, the regulations establish requirements for determining MAOP and the only "exemption" is to a post-construction hydrostatic test, since the pipeline was in service at the time the regulations became effective.

3. AGA, supported by several of its pipeline operator members, contended the appropriate method for verifying

MAOP of older pipelines is for PHMSA to follow Section 23 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011. AGA opposed eliminating § 192.619(c) for determining MAOP of older pipelines, arguing that it would cripple the nation's gas pipeline capacity. A number of additional pipeline operators joined AGA in opposing any new requirement to pressure test all older pipelines, arguing costs would be excessive and there would be significant potential to interrupt gas services. AGA included a white paper with its comments outlining its suggested approach to MAOP verification.

4. Accufacts, Texas Pipeline Association, and Texas Oil & Gas Association opposed requiring all pre-1970 pipelines to reduce MAOP, if necessary, to a pressure that would impose stresses no greater than 72 percent SMYS. Accufacts noted this pipe is still safe at its current operating pressure if it is managed properly, but suggested a possible focus on interactive threats that might make seam welds unstable.

5. Ameren Illinois opposed modifying MAOP requirements for pre-1970 pipelines.

6. NAPS, the NTSB, and Professional Engineers in California Government supported repeal of exemptions applying to MAOP of pre-1970 pipelines. NAPS added PHMSA should not allow any pipeline to operate at pressures above that which would impose stresses greater than 72 percent SMYS.

7. MidAmerican suggested use of a performance-based approach, which might include a fitness for service determination for pipe in Class 2, 3, or 4 areas or HCA.

8. Commissioners of Wyoming County Pennsylvania would support repeal of MAOP exemptions because pipeline infrastructure is aging and they see additional safety measures needed.

Response to Question N.2 Comments

PHMSA appreciates the information provided by the commenters. As stated above, this NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Verification of MAOP includes establishing and documenting MAOP if the pipeline segment: (1) Has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a

construction-, installation-, or fabrication-related defect, or a cracking-related defect, including, but not limited to, seam cracking, girth weld cracking, selective seam weld corrosion, hard spot, or stress corrosion cracking and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, "smart pigs"); (2) Pressure test records necessary to establish maximum allowable operating pressure per subpart J for the pipeline segment, including, but not limited to, records required by § 192.517(a), are not reliable, traceable, verifiable, and complete and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; or (ii) a class 3 or class 4 location; or (3) the pipeline segment maximum allowable operating pressure was established in accordance with § 192.619(c) of this subpart before *[effective date of rule]* and is located in one of the following areas:

(i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, "smart pigs").

N.3. Should PHMSA take any other actions with respect to exempt pipelines? Should pipelines that have not been pressure tested in accordance with subpart J be required to be pressure tested in accordance with present regulations?

1. AGA and a number of pipeline operators opposed any requirement to pressure test all pipelines that have not been tested in accordance with subpart J, arguing Congress considered and rejected this approach in developing the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011. The commenters argue such a requirement would cripple the pipeline industry and support the alternative requirements included in the Act.

2. MidAmerican suggests a focus on pipe in Class 3 or 4 areas or HCAs. The company suggests no new requirements are needed if records are complete for pipe in these areas or it has been tested to 1.25 times MAOP. Otherwise, MidAmerican would subject such pipelines to a fitness for service determination.

3. The NTSB would require all pre-1970 pipelines to be pressure tested,

including a spike test, citing their recommendation P-11-14.

4. Texas Pipeline Association and Texas Oil & Gas Association opposed a requirement to test all pipelines not previously subject to subpart J tests, arguing testing per the construction codes in effect when the pipelines were constructed and safe operating experience since then is adequate assurance of suitability.

5. Ameren Illinois reported the State of Illinois imposed pressure testing requirements before federal pipeline safety regulations were adopted in 1970.

6. Iowa Utilities Board and Iowa Association of Municipal Utilities recommended any new pressure test requirement be limited to pipeline segments in HCA and which operate at pressures where a rupture could occur (generally greater than 30 percent SMYS). These commenters argued the serious impacts of service interruptions pressure testing would be necessary for testing have not been appreciated and the cost for such testing of other pipelines would be unjustified absent any specific demonstration of risk.

7. Commissioners of Wyoming County Pennsylvania and Professional Engineers in California Government (PECG) would require pressure testing for pipelines not previously tested to subpart J requirements, since this would assure public safety. PECG would also require testing if adequate records of prior tests do not exist, noting California has experienced two failures to date of pipeline not adequately tested. PECG would also require all testing, modification, and replacement be observed by a certified inspector loyal to public safety interests.

8. An anonymous commenter would require subpart J testing but would allow schedule flexibility.

Response to Question N.3 Comments

PHMSA appreciates the information provided by the commenters. This NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3). Verification of MAOP includes establishing and documenting MAOP using one or more of the methods in 192.624(c)(1) through (c)(6). In addition, this NPRM proposes requirements for verification of pipeline material in new § 192.607 for existing onshore, steel, gas transmission pipelines that are located in an HCA or class 3 or class 4 locations.

N.4. If a pipeline has pipe with a vintage history of systemic integrity issues in areas such as longitudinal

weld seams or steel quality, and has not been pressure tested at or above 1.1 times MAOP or class location test criteria (§§ 192.505, 192.619 and 192.620), should this pipeline be required to be pressure tested in accordance with present regulations?

1. AGA and several pipeline operators opposed requiring hydrostatic tests for systemic issues, arguing it could potentially affect all pipelines. AGA noted Congress had considered and rejected this approach in developing the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011. AGA supports the requirements in Section 23 of the Act. AGA further argued hold times in subpart J are excessive since defects that fail will likely do so in the first 30 minutes and urged PHMSA not to require any special testing for pipelines operating at less than 30 percent SMYS since they are likely to fail by leakage rather than rupture.

2. GPTC and Nicor opposed a blanket requirement for hydrostatic testing. They would test only in event of a demonstrated safety issue and only if a risk evaluation indicates testing is appropriate. For distribution operators, these commenters would treat any safety issues in distribution integrity management programs.

3. Atmos would not require pressure testing for systemic issues, arguing these are addressed adequately by subpart O.

4. Accufacts would require testing, focusing first on pipe in HCAs, at pressures greater than 1.1 times MAOP. Accufacts understands some operators are arguing for a 1.1 x MAOP test pressure and considers that to be insufficient.

5. MidAmerican would allow a risk-based alternative approach for problem pipe.

6. Texas Pipeline Association and Texas Oil & Gas Association would require assessments appropriate to a specific threat rather than a blanket requirement for pressure testing.

7. An anonymous commenter supported pressure testing for pipe subject to systemic issues.

Response to Question N.4 Comments

PHMSA appreciates the information provided by the commenters. This NPRM proposes requirements for verification of MAOP in new § 192.624 for onshore, steel, gas transmission pipelines that are located in an HCA or MCA and meet any of the conditions in § 192.624(a)(1) through (a)(3).

N.5. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests

commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

O. Modifying the Regulation of Gas Gathering Lines

The ANPRM requested comments regarding modifying the regulations relative to gas gathering lines. In March 2006, PHMSA issued new safety requirements for “regulated onshore gathering lines.”³⁸ Those requirements established a new method for determining if a pipeline is an onshore gathering line, divided regulated onshore gas gathering lines into two risk-based categories (Type A and Type B), and subjected such lines to certain safety standards.

The 2006 rule defined onshore gas gathering lines based on the provisions in American Petroleum Institute Recommended Practice 80, “Guidelines for the Definition of Onshore Gas Gathering Lines,” (API RP 80), a consensus industry standard incorporated by reference. Additional regulatory requirements for determining the beginning and endpoints of gathering, modifying the application of API RP 80, were also imposed to improve clarity and consistency in their application.

In practice, however, the use of API RP 80, even as modified by the additional regulations, is difficult for operators to apply consistently to complex gathering system configurations. Enforcement of the current requirements has been hampered by the conflicting and ambiguous language of API RP 80, a complex standard that can produce multiple classifications for the same pipeline system, which can lead to the potential misapplication of the incidental gathering line designation under that standard. In addition, recent developments in the field of gas exploration and production, such as shale gas, indicate that the existing framework for regulating gas gathering lines may need to be expanded. Gathering lines are being constructed to transport “shale” gas that range from 4

to 36 inches in diameter with MAOPs up to 1480 psig, far exceeding the historical operating parameters (pressure and diameter). The risks considered during the development of the 2006 rule did not foresee gathering lines of these diameters and pressures.

Currently, according to 2011 annual reports submitted by pipeline operators, PHMSA only regulates about 8845 miles of Type A gathering lines, 5178 miles of Type B gathering lines, and about 6258 miles of offshore gathering lines, for a total of approximately 20,281 miles of regulated gas gathering pipelines. Gas gathering lines are currently not regulated if they are in Class 1 locations. Current estimates also indicate that there are approximately 132,500 miles of Type A gas gathering lines located in Class 1 areas (of which approximately 61,000 miles are estimated to be 8-inch diameter or greater), and approximately 106,000 miles of Type B gas gathering lines located in Class 1 areas. Also, there are approximately 2,300 miles of Type B gas gathering lines located in Class 2 areas, some of which may not be regulated in accordance with § 192.8(b)(2).

The ANPRM then listed questions for consideration and comment. The following are general comments received related to this topic as well as comments related to the specific questions:

General Comments for Topic O

1. Gas Processors Association (GPA) recommended PHMSA complete the study required by Section 21 of the Pipeline Safety, Regulatory Certainty, and Job Creation Act of 2011 before proposing any substantive regulations regarding gathering lines. The Association sees this as an essential prerequisite and indicated it would establish a working group to work with PHMSA on the study. Following the study, GPA would then have PHMSA begin any rulemaking process with another ANPRM, focused on the issues to be addressed in changing regulation of gathering lines. Independent Petroleum Association of America, American Petroleum Institute, Oklahoma Independent Petroleum Association, and Chevron agreed any change to gathering line regulations before the required report to Congress would be inconsistent with the Act.

2. Independent Petroleum Association of America, American Petroleum Institute, Oklahoma Independent Petroleum Association, and Chevron argued no change in the gathering line regulatory regime is justified. IPAA and API argued gathering lines can be regulated based only on actual, vs.

³⁸ 71 FR 13289 (March 15, 2006).

speculative, risk, and that any change without such demonstrated risk would be arbitrary, capricious, and contrary to law.

3. Atmos would require new gathering lines operating above 20 percent SMYS to meet requirements in § 192.9(c), and those below 20 percent SMYS § 192.9(d). These paragraphs are, respectively, requirements applicable to Type A and Type B gathering lines. The “type” of a gathering line is established in accordance with requirements in § 192.8, and is based on the pipe material and MAOP of the line. Atmos argued, however, that class location changes over time and determining applicable requirements for new gathering lines based on stress levels would provide for public safety without the problems or confusion that could result from subsequent class location changes.

4. Texas Pipeline Association and Texas Oil & Gas Association suggested PHMSA treat gathering lines under a separate docket and collect data under the current regulatory regime before making any changes. The associations suggested a delay in rulemaking of 3 to 5 years to accumulate data from recently-promulgated changes in reporting requirements. The associations argued changes made without gathering and reviewing that data could be found unnecessary and would divert resources from higher risk needs. Atmos agreed any rulemaking concerning gathering lines should be conducted under a separate docket due to the complexity of the issues involved.

5. Dominion East Ohio Gas argued it is too soon for wholesale changes to the new federal regulations applicable to gas gathering lines. The company suggested one proposed change would be to consider “Incidental Gathering” as defined in API RP 80.

6. NAPS and Commissioners of Wyoming County Pennsylvania suggested PHMSA assert regulatory authority beginning at the wellhead or first metering point. They argued the regulatory gap that results from excluding production facilities from regulation produces risks, especially in areas where high-pressure wells are being drilled in urban areas. NAPS further stated that PHMSA should consider short sections of pipeline downstream of processing, compression, and similar equipment to be a continuation of gathering. The functional name of a segment of pipeline is not important, *i.e.*, production, gathering, transmission. All pipelines should be treated the same in terms of safety from the well head to the city gate.

7. Commissioners of Wyoming County Pennsylvania recommended PHMSA regulate gathering lines in Class 1 areas. The Commissioners noted many new gathering lines, some operating at high pressures, are being constructed in Class 1 areas of the Marcellus Shale Region, and regulation of these lines is necessary to ensure public safety. The Commissioners noted Pennsylvania law gives the state’s public utilities commission authority to regulate pipelines but requires that they be no more stringent than federal regulations.

8. The League of Women Voters of Pennsylvania would regulate gathering lines in the same manner as transmission and would further require that gas in pipelines of both types be odorized.

9. Pipeline Safety Trust would have PHMSA assure gathering lines are displayed on the National Pipeline Mapping System.

Response to General Comments for Topic O

PHMSA appreciates the information provided by the commenters. The commenters are correct that the Act required several actions related to gas gathering lines including a requirement that a study be conducted prior to issuing new rules. We would note, however, that PHMSA is only proceeding with the issuance of an NPRM proposing expanded requirements and needed clarity with regard to issues that had been identified prior to enactment of the Act. The study has been completed and submitted to Congress and placed on the docket. PHMSA invites public comment on the study, which will inform the final rule. In addition, recent developments in the field of gas exploration and production, such as shale gas, indicate that the existing framework for regulating gas gathering lines may need to be expanded. Gathering lines are being constructed to transport “shale” gas that range from 4 to 36 inches in diameter with MAOPs up to 1,480 psig, far exceeding the historical operating parameters of such lines.

Currently, according to 2011 annual reports submitted by pipeline operators, PHMSA only regulates about 8845 miles of Type A gathering lines, 5,178 miles of Type B gathering lines, and about 6,258 miles of offshore gathering lines, for a total of approximately 20,281 miles of regulated gas gathering pipelines. Gas gathering lines are currently not regulated if they are in Class 1 locations. Current estimates also indicate that there are approximately 132,500 miles of Type A gas gathering lines located in Class 1 areas, and approximately

106,000 miles of Type B gas gathering lines located in Class 1 areas. Also, there are approximately 2,300 miles of Type B gas gathering lines located in Class 2 areas, some of which may not be regulated in accordance with § 192.8(b)(2).

Moreover, enforcement of the current requirements has been hampered by the conflicting and ambiguous language of API RP 80, a complex standard that can produce multiple classifications for the same pipeline system because numerous factors are involved, including the locations of treatment facilities, processing plants, and compressors, the relative spacing of production fields, and the commingling of gas. This can lead to the potential misapplication of the incidental gathering line designation under that standard.

In this NPRM, PHMSA proposes to extend existing requirements for Type B gathering lines to Type A gathering lines in Class 1 locations, if the nominal diameter is 8” or greater.

Comments submitted for questions in Topic O.

O.1. Should PHMSA amend 49 CFR part 191 to require the submission of annual, incident, and safety-related conditions reports by the operators of all gathering lines?

1. AGA, GPTC, Texas Pipeline Association, Texas Oil & Gas Association, and several pipeline operators opposed requiring annual reports for unregulated gas gathering pipelines, arguing such a requirement would be unduly burdensome with no safety benefit. These commenters agreed incident reports for unregulated gathering lines could be useful as a means to determine the effectiveness of safety practices on these pipelines.

2. Gas Producers Association opposed expanding reporting requirements to Class 1 gathering pipelines. The Association noted gathering lines in other class locations are currently subject to reporting requirements and suggested there were other means for PHMSA to collect data on Class 1 lines without requiring burdensome reporting. In the specific case of safety-related condition reports, the Association argued requiring reporting is clearly premature, because the purpose of these reports is to highlight problems in which PHMSA may elect to become involved and PHMSA presently does not regulate these pipelines.

3. Texas Pipeline Association and Texas Oil & Gas Association would support requiring incidents to be reported for all gathering pipelines as a first step in collecting data to determine whether other changes are needed.

4. Atmos would support limited reporting for Class 1 gathering lines, to include incidents and total mileage.

5. NAPSRS, Alaska Department of Natural Resources, Pipeline Safety Trust, and Commissioners of Wyoming County Pennsylvania would require operators of Class 1 gathering pipelines to submit reports, because these pipelines can affect public safety and should be held accountable.

Response to Question O.1 Comments

PHMSA appreciates the information provided by the commenters. The comments provide varied support for requiring submission of annual, incident, and safety-related conditions reports by the operators of all gathering lines. PHMSA believes these reports would provide valuable information, combined with the results of the congressionally required study, to support evaluation of the effectiveness of safety practices on these pipelines and determination of any needed additional requirements beyond those proposed in this NPRM. Accordingly, PHMSA proposes to delete the exemption for reporting requirements for operators of unregulated onshore gas gathering lines.

O.2. Should PHMSA amend 49 CFR part 192 to include a new definition for the term "gathering line"?

1. AGA and several pipeline operators opposed a change to the definition of gathering lines, noting API RP-80, with restrictions as specified in current regulations, is a good working definition.

2. Independent Petroleum Association of America, American Petroleum Institute, Oklahoma Independent Petroleum Association, Atmos, and Chevron argued that API RP 80, as currently specified, is the appropriate means for defining gathering lines. They argued it is based on a pipeline's function rather than its location and changes could infringe on production facilities, regulation of which is precluded by statute.

3. Gas Processors Association opposed changing the definition of gathering line or extending regulation to lines in Class 1 areas. The Association noted excluding Class 1 lines from regulation is risk-based and expressed its interest in continuing the risk-based approach to regulation represented by the 2006 rule.

4. NAPSRS, GPTC, Accufacts, Thomas Lael, and Nicor supported simplifying the definition of gathering lines. These commenters noted that API RP-80 is confusing. One commenter referred to its application as a "nightmare." The

definition in Texas regulations was suggested as one possible model.

5. Oklahoma Independent Petroleum Association strongly opposed changes to the definitions of gathering line or production facilities.

6. Texas Pipeline Association and Texas Oil & Gas Association would not change the definition of gathering lines at this time, arguing data gathering, a necessary first step, is not yet complete.

7. The State of Washington Citizens Advisory Committee and a private citizen urged changes to the definitions of gathering, transmission, and distribution pipelines, arguing that the current definitions are confusing and employ circular logic.

8. Pipeline Safety Trust would revise the definition of gathering in a manner that does not allow operators to choose whether their pipeline is gathering or not on the basis of where they decide to install equipment. PST noted there is significant overlap among pipeline types in size, operating pressure, and attendant risks.

9. Alaska Department of Natural Resources and Commissioners of Wyoming County Pennsylvania urged a revision to the definition of gathering lines, in light of shale gas development which, the commenters contended, produces risks approximately equivalent to those from transmission pipelines.

Response to Question O.2 Comments

PHMSA appreciates the information provided by the commenters. Industry commenters opposed a change to the definition of gathering lines, whereas NAPSRS and other commenters supported revision of the definition of gathering lines and classified API RP-80 as confusing. As discussed above, PHMSA believes revision of the definition of gathering lines is needed and also proposes a new definition for onshore production facility/operation. In addition, see response to question O.3 comments.

O.3. Are there any difficulties in applying the definitions contained in RP 80? If so, please explain.

1. Independent Petroleum Association of America, American Petroleum Institute, Oklahoma Independent Petroleum Association, and Chevron were emphatic in declaring there are no difficulties in applying API RP-80. IPAA and API noted that significant difficulties among gathering lines made RP-80 difficult to develop.

2. AGA and a number of pipeline operators reported RP-80 is clear and there are no difficulties with its application.

3. Gas Processors Association would retain the RP-80 definition, at least until the study required by the Act is completed. GPA acknowledged that application of RP-80 has been difficult, but stated that it has been difficult to craft a simpler definition.

4. Texas Pipeline Association and Texas Oil & Gas Association reported application of RP-80 has been challenging. The associations opined this has resulted from complexities in gathering pipeline systems and confusion caused by PHMSA guidance and interpretations.

5. Accufacts, NAPSRS, GPTC, and Nicor commented RP-80 is too complex, not understandable to the public, and subject to misuse by operators.

Response to Question O.3 Comments

PHMSA appreciates the information provided by the commenters. Industry commenters stated there are no difficulties in applying the definitions contained in API RP 80, whereas Accufacts, NAPSRS and other commenters contend that API RP 80 is too complex, not understandable, and subject to misuse. PHMSA enforcement of the current requirements has been hampered by the conflicting and ambiguous language of API RP 80, which is complex and can produce multiple classifications for the same pipeline system. In the 2006 rulemaking which incorporated by reference the API RP 80, PHMSA expressed reservations concerning the ability to effectively and consistently apply the document as written, echoing NAPSRS's comments at the time. Additionally, in 2006, PHMSA imposed limiting regulatory language in part 192 in an attempt to curtail the potential for misapplication of the language contained in RP-80. These limitations and their intended application were discussed in great detail in the Supplemental Notice of Proposed Rulemaking [Docket No. RSPA-1998-4868; Notice 5]. Because of the ambiguous language and terminology in the RP-80, e.g. separators are defined for both production and gathering almost verbatim, experience has shown that facilities are being classified as production much further downstream than was ever intended. The application of "incidental gathering" as used in API RP-80 has not been applied as intended in some cases. Several recent interpretations letters have been issued by PHMSA on this topic including an expressed intent to clarify the issue in future rulemaking. Therefore, PHMSA believes revision of the definition of gathering lines is needed and proposes

deleting the use of API RP 80 as the basis for determining regulated gathering lines and would establish the new definition for onshore *production facility/operation* and a revised definition for *gathering line* as the basis for determining the beginning and endpoints of each gathering line.

O.4. Should PHMSA consider establishing a new, risk-based regime of safety requirements for large-diameter, high-pressure gas gathering lines in rural locations? If so, what requirements should be imposed?

1. Commissioners of Wyoming County Pennsylvania and 24 private citizens encouraged PHMSA to regulate gathering lines in Class 1 locations. The commenters noted many such pipelines will exist in shale gas areas, many of them large-diameter and operating at high pressures, and contended these pipelines currently are being ignored by federal and state regulators. They noted the pipeline that ruptured causing the San Bruno accident was operated at a pressure considerably lower than some gathering lines in shale gas areas.

2. AGA, GPTC, and a number of pipeline operators argued no new requirements are needed and the effectiveness of the 2006 changes to regulation needs to be reviewed first, in accordance with the Act.

3. Gas Processors Association, Texas Pipeline Association, and Texas Oil & Gas Association contended PHMSA must gather additional data on Class 1 gathering lines before deciding whether to regulate them, arguing that only a detailed study can determine whether new regulations are appropriate.

4. Oklahoma Independent Petroleum Association cautioned any regulatory change needs to be supported by science and a comprehensive cost-benefit analysis.

5. Independent Petroleum Association of America, American Petroleum Institute, Oklahoma Independent Petroleum Association, and Chevron argued any change in the regulatory regime for gathering lines is unjustified. The commenters contended such lines only operate at high pressures when new, that pressure decreases as wells deplete, and that the record shows these lines are safe.

6. A private citizen who operates an outdoor gear supply business in a shale gas region argued reduced use of recreational areas, caused by concerns over nearby pipelines, will adversely impact his and similar businesses.

7. Alaska Department of Natural Resources would establish risk-based safety requirements for gathering pipelines.

8. NAPSRS would establish new, prescriptive requirements for large-diameter, high-pressure gathering lines.

9. Pipeline Safety Trust argued the composition of gas carried in many gathering lines leads to increased risk of corrosion and additional corrosion and testing requirements should thus be considered.

10. A private citizen, arguing for regulation of Class 1 gathering lines, noted experience has shown Class 1 locations change to Class 2 or 3 locations while the pipeline remains unchanged and, the commenter contended, unsafe.

11. Pipeline Safety Trust, Accufacts, and NAPSRS would regulate gathering lines the same as transmission pipelines. PST would include integrity management requirements for lines operating at greater than 20 percent SMYS. NAPSRS would impose IM if greater than 30 percent SMYS.

12. ITT Exelis Geospatial Systems contended that safety criteria applicable to a pipeline should be based on the specifications of the line.

Response to Question O.4 Comments

PHMSA appreciates the information provided by the commenters. The comments provide varied opinions for establishing new, risk-based safety requirements for gas gathering lines in rural locations. Several comments recommended PHMSA gather additional data on gathering lines before deciding to issue revised regulations. PHMSA believes rulemaking should proceed now to address the identified issues with regulation of gathering lines. Therefore, PHMSA proposes to extend existing requirements for Type B gathering lines to Type A gathering lines in Class 1 locations, if the nominal diameter is 8" or greater. Integrity management requirements would not be applied to gathering lines at this time.

O.5. Should PHMSA consider short sections of pipeline downstream of processing, compression, and similar equipment to be a continuation of gathering? If so, what are the appropriate risk factors that should be considered in defining the scope of that limitation (e.g., doesn't leave the operator's property, not longer than 1000 feet, crosses no public rights of way)?

1. The AGA, the GPTC, and a number of pipeline operators suggested that the piping mentioned in O.5 be considered as gathering. The commenters contended that this is clearly "incidental gathering" in API RP-80, particularly if below 20 percent SMYS, and that some agencies are presently

treating this pipeline inappropriately as transmission pipeline.

2. Oleksa and Associates contended that the types of pipeline described in the question are "incidental gathering." Oleksa argued that the length of these pipeline sections should not be the determining factor in their definition but, rather, risk elements and public safety impact should be afforded more importance.

3. The Gas Processors Association, the Texas Pipeline Association, and the Texas Oil & Gas Association would continue to treat these types of pipelines as gathering. They argued that this reflects the practical realities in the field regarding the ability to locate gathering-related equipment. GPA urged PHMSA to retain the concept of incidental gathering in any future change to the regulations, arguing this would continue a consistent regulatory approach to gathering pipelines.

4. The Independent Petroleum Association of America, the American Petroleum Institute, the Oklahoma Independent Petroleum Association, and Chevron contended that the safety record in the Barnett Shale area demonstrates further regulation of downstream pipelines and compression is not needed.

5. Commissioners of Wyoming County Pennsylvania would treat gathering lines as transmission lines, arguing that this would preclude the need to answer any of these questions.

6. The Delaware Solid Waste Authority (DSWA) argued for the continued treatment of the listed pipeline sections as part of gathering for landfill gas operations. DSWA noted that landfills may use intermediate compression to improve collection efficiency and may have pipe at pressure leading to flares etc.

7. Waste Management contended that piping that is an active part of a landfill gas collection and control system should be exempt from regulation as this piping is generally on landfill property and poses no risk to the public.

8. The National Solid Waste Management Association and Waste Management supported PHMSA's interpretation that pipelines operating at vacuum, such as landfill systems up to the compressor/blower should be unregulated.

Response to Question O.5 Comments

PHMSA appreciates the information provided by the commenters. See PHMSA's response to Question O.3, above.

O.6. Should PHMSA consider adopting specific requirements for pipelines associated with landfill gas

systems? If so, what regulations should be adopted and why? Should PHMSA consider adding regulations to address the risks associated with landfill gas that contains higher concentrations of hydrogen sulfide and/or carbon dioxide?

1. The AGA, the GPTC, and a number of pipeline operators contended that RP-80 makes clear that these pipelines are production piping and therefore regulation is prohibited. In addition, they argued that risk doesn't justify regulating these lines; the situation is similar to production and is already managed well. They also noted that landfill systems are generally constructed with non-corrosive materials. The commenters agreed that piping from landfills to transmission or distribution pipelines is gathering and should be regulated.

2. Oleksa and Associates contended that landfill pipelines are distribution pipelines, if they carry gas to end use customers.

3. The APGA argued that new requirements are appropriate, as landfill gas is different from natural gas. The APGA contended that application of current regulations often produces absurd results. APGA would add new requirements applicable to systems with high concentrations of hydrogen sulfide and allow systems with low concentrations to use current requirements.

4. The Delaware Solid Waste Authority argued that no new requirements are needed, because these systems operate at low pressures and existing requirements are sufficient.

5. NAPSR encouraged that PHMSA establish jurisdiction over and requirements for landfill gas systems, arguing that many operate as distribution pipelines. NAPSR also recommended that PHMSA develop requirements for odorizing landfill gas, since normal methods cannot be used.

6. The National Solid Waste Management Association and Waste Management argued that landfill gas lines under the control of a landfill operator or gas developer should remain unregulated because they pose minimal risk. They also contended that lines delivering landfill gas to distant users should also remain unregulated because they are mostly buried, are generally constructed of plastic pipe, and pose low risk due to low pressure, their dedicated nature, and lack of interconnects.

7. The National Solid Waste Management Association (NSWMA) noted that these pipelines are already regulated by the EPA and the states and argued that additional regulation would

confer limited additional benefits. NSWMA argued that no requirements are needed to address internal corrosion, because these pipeline systems are generally constructed of plastic pipe and corrosive gas constituents are limited to prevent destruction of gas processing equipment. NSWMA suggested that PHMSA work with the EPA to obtain data on the landfill experience needed to support any future decision to regulate in this area.

8. Oleksa and Associates and the Delaware Solid Waste Authority would have PHMSA modify the regulations to clarify that pipe downstream of intermediate compression is unregulated, even if at pressure. They argued that the EPA has regulated such pipelines successfully and there is no safety case for applying part 192. DSWA further notes that most landfill pipeline is constructed of plastic pipe and not subject to internal corrosion.

9. Oleksa and Associates, the GPTC, Nicor, Waste Management, and the Delaware Solid Waste Authority would exempt landfill gas systems from requirements for odorization and odor sampling. They argued that there is a strong odor inherent to landfill gas, the sampling of which is not practical.

Response to Question O.6 Comments

PHMSA appreciates the information provided by the commenters. PHMSA is not proposing rulemaking to address landfill gas systems at this time, but would note that a pipeline that transports landfill gas away from the landfill facility to another destination is transporting gas. PHMSA will consider comments on this aspect of Topic O in the future.

O.7. Internal corrosion is an elevated threat to gathering systems due to the composition of the gas transported. Should PHMSA enhance its requirements for internal corrosion control for gathering pipelines? Should this include required cleaning on a periodic basis?

1. AGA, GPTC, and a number of pipeline operators commented that new requirements are not needed. They argued existing part 192 requirements are adequate for internal corrosion protection and unregulated gathering lines are rural and pose little risk.

2. AGA and a number of pipeline operators opposed a requirement for periodic cleaning of gathering lines. They noted existing lines are not configured to accommodate cleaning pigs and retrofitting them would be a major cost with no safety benefit.

3. Gas Producers Association noted internal corrosion is only one of many

threats, existing regulations are adequate, and thus no new requirements are needed.

4. Texas Pipeline Association and Texas Oil & Gas Association opposed establishing internal corrosion requirements for gathering pipelines. The associations noted risk from IC is not prevalent for many gathering pipelines and suggested the need to collect data (e.g., incidents) to determine whether new requirements are needed.

5. Accufacts would require, as a minimum, use of cleaning pigs and analysis of removed materials.

6. NAPSR, Alaska Department of Natural Resources, and Commissioners of Wyoming County Pennsylvania would enhance internal corrosion requirements and require periodic cleaning.

Response to Question O.7 Comments

PHMSA appreciates the information provided by the commenters. The majority of comments do not support enhancement of requirements for internal corrosion control for gathering pipelines. PHMSA is not proposing rulemaking specifically to address the need for additional internal corrosion requirements for gathering lines at this time. However, the proposed requirements in subpart I applicable to transmission lines; except the requirements in §§ 192.461(f), 192.465(f), 192.473(c) and 192.478, would be applicable to regulated Type A onshore gathering lines.

O.8. Should PHMSA apply its Gas Integrity Management Requirements to onshore gas gathering lines? If so, to what extent should those regulations be applied and why?

1. The AGA and several pipeline operators suggested that PHMSA consider applying some IM requirements to Type A gathering lines, since these lines represent conditions and risks similar to transmission pipelines. They consider IM inappropriate for Type B gathering lines, since these lines pose low risk and operate at hoop stresses similar to distribution pipelines.

2. The Gas Producers Association, the Texas Pipeline Association, the Texas Oil & Gas Association, and Atmos argued that it would be inappropriate to apply integrity management requirements to gathering pipelines. They noted that IM is a risk-based approach and that there is no evidence that gathering pipelines pose a risk that justifies application of IM.

3. The GPTC and Nicor opined that extending some aspects of gas transmission IM to non-rural, metallic

Type A gathering lines could provide enhanced protection to the public, since the operation and risk of these pipelines is similar to transmission pipelines. They cautioned, however, that the costs to impose IM on gathering pipelines would be significant. They considered IM inappropriate for Type B gathering lines since these lines are, by definition, of lower pressure and lower risk.

4. The Commissioners of Wyoming County Pennsylvania would apply IM to all onshore gathering pipelines. They would also apply requirements applicable to Class 2 transmission pipelines to Class 1 gathering pipelines, arguing that Class 1 areas will grow and class location will change.

5. Accufacts and the Alaska Department of Natural Resources would apply IM to gathering lines. Accufacts suggested an initial focus on large-diameter, high-pressure lines, since these lines are subject to failure by rupture.

Response to Question O.8 Comments

PHMSA appreciates the information provided by the commenters. PHMSA does not propose rulemaking to apply integrity management requirements to gathering lines at this time.

O.9. If commenters suggest modification to the existing regulatory requirements, PHMSA requests that commenters be as specific as possible. In addition, PHMSA requests commenters to provide information and supporting data related to:

- *The potential costs of modifying the existing regulatory requirements.*
- *The potential quantifiable safety and societal benefits of modifying the existing regulatory requirements.*
- *The potential impacts on small businesses of modifying the existing regulatory requirements.*
- *The potential environmental impacts of modifying the existing regulatory requirements.*

No comments were received in response to this question.

IV. Other Proposals

Inspection of Pipelines Following Extreme Weather Events.

Pipeline regulation prescribes requirements for the surveillance and periodic patrolling of the pipeline to observe surface conditions on and adjacent to the transmission line right-of-way for indications of leaks, construction activity, and other factors affecting safety and operation, including unusual operating and maintenance conditions. The probable cause of the 2011 hazardous liquid pipeline accident resulting in a crude oil spill into the Yellowstone River near Laurel,

Montana, is scouring at a river crossing due to flooding. This is a recent example of extreme weather that resulted in a pipeline incident. PHMSA has determined that additional regulations are needed to require, and establish standards for, the inspection of the pipeline and right-of-way for “other factors affecting safety and operation” following an extreme weather event such as a hurricane or flood, landslide, an earthquake, a natural disaster, or other similar event. The proposed rule would add a new paragraph (c) to section 192.613 to require such inspections, specify the timeframe in which such inspections should commence, and specify the appropriate remedial actions that must be taken to ensure safe pipeline operations. The new paragraph (c) would apply to onshore pipelines and their rights-of-way.

Notification for 7-Year Reassessment Interval Extension.

Section 5 of the Act identifies a technical correction amending Section 60109(c)(3)(B) of Title 49 of the United States Code to allow the Secretary of Transportation to extend the 7-year reassessment interval for an additional 6 months if the operator submits written notice to the Secretary justifying the need for the extension. PHMSA proposes to codify this statutory requirement.

Reporting Exceedances of Maximum Allowable Operating Pressure.

Section 23 of the Act requires operators to report each exceedance of the maximum allowable operating pressure (MAOP) that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices. PHMSA proposes to codify this statutory requirement.

Consideration of Seismicity.

Section 29 of the Act states that in identifying and evaluating all potential threats to each pipeline segment, an operator of a pipeline facility must consider the seismicity of the area. PHMSA proposes to codify this statutory requirement to explicitly reference seismicity for data gathering and integration, threat identification, and implementation of preventive and mitigative measures.

Safety Features for In-line Inspection (ILI), Scraper, and Sphere Facilities.

PHMSA is proposing to add explicit requirements for safety features on launchers and receivers associated with ILI, scraper and sphere facilities.

Consensus Standards for Pipeline Assessments.

PHMSA is proposing to incorporate by reference consensus standards for assessing the physical condition of in-

service pipelines using in-line inspection, internal corrosion direct assessment, and stress corrosion cracking direct assessment.

V. Section-by-Section Analysis

§ 191.1 Scope.

Section 191.1 prescribes requirements for the reporting of incidents, safety-related conditions, and annual pipeline summary data by operators of gas pipeline facilities. Currently, onshore gas gathering pipelines are exempt from reporting, as specified in paragraph (b)(4) of this section. In March 2012, the Government Accountability Office (GAO) issued a report (GAO-12-388) that contained a recommendation for DOT to collect data on federally unregulated hazardous liquid and gas gathering pipelines. PHMSA has determined that the statute requires the collection of additional information about gathering lines and that these reports and the congressionally required study support evaluation of the effectiveness of safety practices on these pipelines. Furthermore, PHMSA has inquired into whether any additional requirements are needed beyond those proposed in this NPRM. Accordingly, the proposed rule would repeal the exemption for reporting requirements for operators of unregulated onshore gas gathering lines by deleting § 191.1(b)(4), adding a new § 191.1(c), and making other conforming editorial amendments. In addition, Section 23 of the Act requires PHMSA to promulgate rules that require operators to report each exceedance of the maximum allowable operating pressure (MAOP) that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices. The proposed rule would amend 191.1 to include MAOP exceedances within the scope of part 191.

§ 191.23 Reporting safety-related conditions.

Section 23 of the Act requires operators to report each exceedance of the maximum allowable operating pressure (MAOP) that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices. On December 21, 2012, PHMSA published advisory bulletin ADB-2012-11, which advised operators of their responsibility under Section 23 of the Act to report such exceedances. PHMSA proposes to revise § 191.23 to codify this requirement.

§ 191.25 Filing safety-related condition reports.

Section 23 of the Act requires operators to report each exceedance of the maximum allowable operating pressure (MAOP) that exceeds the

margin (build-up) allowed for operation of pressure-limiting or control devices. As described above, PHMSA proposes to revise § 191.23 to codify this requirement. Section 191.25 would also be revised to provide consistent procedure, format, and structure for filing of such reports by all operators.

§ 192.3 Definitions.

Section 192.3 provides definitions for various terms used throughout part 192. In support of other regulations proposed in this NPRM, PHMSA is proposing to amend the definitions of “*Electrical survey*,” “*(Onshore) gathering line*,” and “*Transmission line*,” and add new definitions for “*Close interval survey*,” “*Distribution center*,” “*Dry gas or dry natural gas*,” “*Gas processing plant*,” “*Gas treatment facility*,” “*Hard spot*,” “*In-line inspection (ILI)*,” “*In-line inspection tool or instrumented internal inspection device*,” “*Legacy construction technique*,” “*Legacy pipe*,” “*Moderate consequence area*,” “*Modern pipe*,” “*Occupied site*,” “*Onshore production facility or onshore production operation*,” “*Significant Seam Cracking*,” “*Significant Stress Corrosion Cracking*,” and “*Wrinkle bend*.” These changes will define these terms as used in the proposed changes to part 192. Many of the terms (such as in-line inspection, dry gas, hard spot, etc.) clarify technical definitions of terms used in part 192 or proposed in this rulemaking.

The revised definition for “*(Onshore) gathering line*,” and the new definitions for “*Gas processing plant*,” “*Gas treatment facility*,” and “*Onshore production facility or onshore production operation*,” are necessary because of ambiguous language and terminology in the current definition of regulated gas gathering lines, which invoke by reference API RP-80. The application of “*incidental gathering*” as used in API RP-80 has not been applied as intended in some cases. Several recent interpretation letters have been issued by PHMSA on this topic including an expressed intent to clarify the issue in future rulemaking. Therefore, PHMSA believes revision of the definition of gathering lines is needed and proposes repealing the use of API RP 80 as the basis for determining regulated gathering lines and would establish the new definition for “*onshore production facility/operation, gas treatment facility, and gas processing plant*,” and a revised definition for “*(onshore) gathering line*” as the basis for determining the beginning and endpoints of each gathering line.

The revised definition for “*Electrical survey*” aligns with the amended

definition recommended in a petition dated March 26, 2012, from the Gas Piping Technology Committee (GPTC).

With regard to the new terms “*moderate consequence area*” or MCA, and “*occupied site*,” the definitions are based on the same methodology as “*high consequence area*” and “*identified site*” as defined in § 192.903. Moderate consequence areas will be used to define the subset of non-HCA locations where integrity assessments are required (§ 192.710), where material documentation verification is required (§ 192.607), and where MAOP verification is required (§§ 192.619(e) and 192.624). The criteria for determining MCA locations would use the same process and same definitions that are currently used to identify HCAs, except that the threshold for buildings intended for human occupancy and the threshold for persons that occupy other defined sites located within the potential impact radius would both be lowered from 20 to 5. This approach is proposed as a means to minimize the effort needed on the part of operators to identify the MCAs, since transmission operators must have already performed the analysis in order to have identified the HCAs or to verify that they have no HCAs. In response to NTSB recommendation P-14-01, which was issued as a result of the Sissonville, West Virginia incident, the MCA definition would also include locations where interstate highways, freeways, and expressways, and other principal 4-lane arterial roadways are located within the potential impact radius.

With regard to the new terms “*legacy construction technique*” and “*legacy pipe*,” the definitions are used in proposed § 192.624 to identify pipe to which the proposed material verification and MAOP verification requirements would apply. The definitions are based on historical technical issues associated with past pipeline failures.

§ 192.5 Class locations.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that an important aspect of compliance with this requirement is to assure that pipeline class location records are complete and accurate. The proposed rule would add a new paragraph § 192.5(d) to require each operator of transmission pipelines to make and retain for the life of the pipeline records documenting class locations and

demonstrating how an operator determined class locations in accordance with this section.

§ 192.7 What documents are incorporated by reference partly or wholly in this part?

Section 192.7 lists documents that are incorporated by reference in part 192. PHMSA proposes conforming amendments to § 192.7 in the rule text to reflect other changes proposed in this NPRM.

§ 192.8 How are onshore gathering lines and regulated onshore gathering lines determined?

Section 192.8 defines the upstream and downstream endpoints of gas gathering pipelines. Recent developments in the field of gas exploration and production, such as shale gas, indicate that the existing framework for regulating gas gathering lines may no longer be appropriate. Gathering lines are being constructed to transport “shale” gas that range from 4 to 36 inches in diameter with MAOPs of up to 1480 psig, far exceeding the historical operating parameters of such lines.

Currently, according to the 2011 annual reports submitted by pipeline operators, PHMSA only regulates about 8,845 miles of Type A gathering lines, 5,178 miles of Type B gathering lines, and about 6,258 miles of offshore gathering lines, for a total of approximately 20,281 miles of regulated gas gathering pipelines. Gas gathering lines are currently not regulated if they are in Class 1 locations. Current estimates also indicate that there are approximately 132,500 miles of Type A gas gathering lines located in Class 1 areas (of which approximately 61,000 miles are estimated to be 8-inch diameter or greater), and approximately 106,000 miles of Type B gas gathering lines located in Class 1 areas. Also, there are approximately 2,300 miles of Type B gas gathering lines located in Class 2 areas, some of which may not be regulated in accordance with § 192.8(b)(2).

Moreover, enforcement of the current requirements has been hampered by the conflicting and ambiguous language of API RP 80, a complex standard that can produce multiple classifications for the same pipeline system. PHMSA has also identified a regulatory gap that permits the potential misapplication of the incidental gathering line designation under that standard. Consequently, to address these issues and gaps, the proposed rule would repeal the use of API RP 80 as the basis for determining regulated gathering lines and would establish a new definition for onshore production facility/operation and a

revised definition for gathering line as the basis for determining the beginning and endpoints of each gathering line. The definition of onshore production facility/operation includes initial preparation of gas for transportation at the production facility, including separation, lifting, stabilizing, and dehydration. Pipelines commonly referred to as “farm taps” serving residential/commercial customers or industrial customers are not classified as gathering, but would continue to be classified as transmission or distribution as defined in § 192.3.

§ 192.9 What requirements apply to gathering lines?

Section 192.9 identifies those portions of part 192 that apply to regulated gas gathering lines. For the same reasons discussed under § 192.8, above, the proposed rule would expand and clarify the requirements that apply to gathering lines. PHMSA proposes to extend existing regulatory requirements for Type B gathering lines to Type A gathering lines in Class 1 locations, if the nominal diameter of the line is 8” or greater.

In addition, on August 20, 2014, the GAO released a report (GAO Report 14–667) to address the increased risk posed by new gathering pipeline construction in shale development areas. GAO recommended that a rulemaking be pursued for gathering pipeline safety that addresses the risks of larger-diameter, higher-pressure gathering pipelines, including subjecting such pipelines to emergency response planning requirements that currently do not apply. Currently, Type A gathering lines are subject to the emergency planning requirements in § 192.615 and only include gathering lines in Class 2, 3, and 4 locations that have a Maximum Allowable Operating Pressure (MAOP) with a hoop stress of 20% or more for metallic pipe and MAOP of more than 125 psig for non-metallic pipe. Further, gathering lines that are located in Class 1 areas (e.g., rural areas) are not considered Type A gathering lines even if they meet the pressure criteria specified in the preceding sentence. PHMSA is proposing to create subdivisions of Type A gathering lines (Type A, Area 1 and Type A, Area 2). The new designation “Type A, Area 1 gathering lines” would apply to currently regulated Type A gathering lines. The new designation “Type A, Area 2 gathering lines” would apply to gathering lines with a diameter of 8-inch or greater that meet all of the qualifying parameters for currently regulated Type A gathering, but are located in Class 1 locations. PHMSA proposes to address the GAO recommendation by requiring

the newly proposed Type A, Area 2 regulated onshore gathering lines, which include lines in Class 1 locations with a nominal diameter of 8-inch or greater, to develop procedures, training, notifications, and carry out emergency plans as described in § 192.615, in addition to a limited set of other specific requirements, including corrosion protection and damage prevention.

§ 192.13 General.

Section 192.13 prescribes general requirements for gas pipelines. PHMSA has determined that safety and environmental protection would be improved by generally requiring operators to evaluate and mitigate risks during all phases of the useful life of a pipeline as an integral part of managing pipeline design, construction, operation, maintenance and integrity, including management of change. This proposed rule would add a new paragraph (d) to establish a general clause requiring onshore gas transmission pipeline operators to evaluate and mitigate risks to the public and environment as part of managing pipeline design, construction, operation, maintenance, and integrity, including management of change. The new paragraph would also invoke the requirements for management of change as outlined in ASME/ANSI B31.8S, section 11, and explicitly articulate the requirements for a management of change process that are applicable to onshore gas transmission pipelines.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that an important aspect of compliance with this requirement is to assure that records that demonstrate compliance with part 192 are complete and accurate. The proposed rule would add a new paragraph (e) that clearly articulates the requirements for records preparation and retention and requires that records be reliable, traceable, verifiable, and complete. Further, the proposed Appendix A would provide specific requirements for records retention for transmission pipelines.

In addition, conforming amendments to paragraphs (a) and (b) list the effective date of the proposed requirements for newly regulated onshore gathering lines.

§ 192.67 Records: Materials.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational

characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that compliance requires that pipeline material records are complete and accurate. The proposed rule would add a new § 192.67 to require each operator of transmission pipelines to make and retain for the life of the pipeline the original steel pipe manufacturing records that document tests, inspections, and attributes required by the manufacturing specification in effect at the time the pipe was manufactured.

§ 192.127 Records: Pipe design.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that compliance requires that pipe design records are complete and accurate. The proposed rule would add a new § 192.127 to require each operator of transmission pipelines to make and retain for the life of the pipeline records documenting pipe design to withstand anticipated external pressures and determination of design pressure for steel pipe.

§ 192.150 Passage of internal inspection devices.

The current pipeline safety regulations in 49 CFR 192.150 require that pipelines be designed and constructed to accommodate in-line inspection devices. Part 192 is silent on technical standards or guidelines for implementing requirements to assure pipelines are designed and constructed for ILI assessments. At the time these rules were promulgated, there was no consensus industry standard that addressed design and construction requirements for ILI. NACE Standard Practice, NACE SP0102–2010, “In-line Inspection of Pipelines,” has since been published and provides guidance in this area in Section 7. The incorporation of this standard into § 192.150 will promote a higher level of safety by establishing consistent standards for the design and construction of line pipe to accommodate ILI devices.

§ 192.205 Records: Pipeline components.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that compliance requires that pipeline component records are complete and

accurate. The proposed rule would add a new § 192.205 to require each operator of transmission pipelines to make and retain records documenting manufacturing and testing information for valves and other pipeline components.

§ 192.227 Qualification of welders.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that compliance requires that pipeline welding records are complete and accurate. The proposed rule would add a new paragraph § 192.227(c) to require each operator of transmission pipelines to make and retain for the life of the pipeline records demonstrating each individual welder qualification in accordance with this section.

§ 192.285 Plastic pipe: Qualifying persons to make joints.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of certain pipelines and to confirm the established MAOP of the pipelines. PHMSA has determined that compliance requires that pipeline qualification records are complete and accurate. The proposed rule would add a new paragraph § 192.285(e) to require each operator of transmission pipelines to make and retain for the life of the pipeline records demonstrating plastic pipe joining qualifications in accordance with this section.

§ 192.319 Installation of pipe in a ditch.

Section 192.319 prescribes requirements for installing pipe in a ditch, including requirements to protect pipe coating from damage during the process. However, during handling, lowering, and backfilling, sometimes pipe coating is damaged, which can compromise its ability to protect against external corrosion. An example of the consequences of such damage occurred in 2011 on the Bison Pipeline, operated by TransCanada Northern Border Pipeline, Inc. In this case, the probable cause of the incident was attributed to latent coating and mechanical damage caused during construction, which subsequently caused the pipeline to fail. To help prevent recurrence of such incidents, PHMSA has determined that additional requirements are needed to verify that pipeline coating systems for protection against external corrosion are not damaged during the installation and

backfill process. Accordingly, this proposed rule would add a new paragraph (d) to require that onshore gas transmission operators perform an above-ground indirect assessment to identify locations of suspected damage promptly after backfill is completed and remediate any moderate or severe coating damage. Mechanical damage is also detectable by these indirect assessment methods, since the forces that are able to mechanically damage steel pipe usually result in detectable coating defects. Paragraph (d) does not apply to gas gathering lines or distribution mains. In addition, paragraph (d) would require each operator of transmission pipelines to make and retain for the life of the pipeline records documenting the coating assessment findings and repairs.

§ 192.452 How does this subpart apply to converted pipelines and regulated onshore gathering lines?

Section 192.452 prescribes corrosion control requirements for regulated onshore gathering lines. PHMSA proposes conforming amendments to the rule text in paragraph (b) to reflect other changes proposed in this NPRM for gas gathering lines.

§ 192.461 External corrosion control: Protective coating.

Section 192.461 prescribes requirements for protective coating systems. However, certain types of coating systems that have been used extensively in the pipeline industry can impede the process of cathodic protection if the coating disbonds from the pipe. The NTSB determined that this was a significant contributing factor in the major crude oil spill that occurred near Marshall, Michigan, in 2010. PHMSA has determined that additional requirements are needed to specify that coating should not impede cathodic protection and to ensure operators verify that pipeline coating systems for protection against external corrosion have not become compromised or damaged during the installation and backfill process. Accordingly, this proposed rule would amend paragraph (a)(4) to require that coating have sufficient strength to resist damage during installation and backfill, and add a new paragraph (f) to require that onshore gas transmission operators perform an above-ground indirect assessment to identify locations of suspected damage promptly after backfill is completed or anytime there is an indication that the coating might be compromised. It would also require prompt remediation of any moderate or severe coating damage.

§ 192.465 External corrosion control: Monitoring.

Section 192.465 currently prescribes that operators monitor cathodic protection and take prompt remedial action to correct deficiencies indicated by the monitoring. The provisions in § 192.465 do not specify the remedial actions required to correct deficiencies and do not define “prompt.” To address this potential issue, the proposed rule would amend paragraph (d) to require that remedial action must be completed promptly, but no later than the next monitoring interval specified in § 192.465 or within one year, whichever is less. In addition, a new paragraph (f) is added to require onshore gas transmission operators to perform close-interval surveys if annual test station readings indicate cathodic protection is below the level of protection required in subpart I. Unless it is impractical to do so, close interval surveys must be completed with the protective current interrupted. Impracticality must be based on a technical reason, for example, a pipeline protected by direct buried sacrificial anodes (anodes directly connected to the pipeline), and not on cost impact. The proposed rule would also require each operator to take remedial action to correct any deficiencies indicated by the monitoring.

§ 192.473 External corrosion control: Interference currents.

Interference currents can negate the effectiveness of cathodic protection systems. Section 192.473 prescribes general requirements to minimize the detrimental effects of interference currents. However, specific requirements to monitor and mitigate detrimental interference currents have not been prescribed in subpart I. In 2003, PHMSA issued advisory bulletin ADB-03-06 (68 FR 64189). The bulletin advised each operator of a natural gas transmission or hazardous liquid pipeline to determine whether new steel pipelines are susceptible to detrimental effects from stray electrical currents. Based on this evaluation, an operator should carefully monitor and take action to mitigate detrimental effects. The operator should give special attention to a new pipeline's physical location, particularly where that location may subject the new pipeline to stray currents from other underground facilities, including other pipelines or induced currents from electrical transmission lines, whether aboveground or underground. Operators were strongly encouraged to review their corrosion control programs and to have qualified corrosion personnel present during construction to identify, mitigate, and monitor any detrimental stray currents that might damage new

pipelines. Since the advisory bulletin, PHMSA continues to identify cases where significant pipeline defects are attributed to corrosion caused by interference currents. Examples include CenterPoint Energy's CP line (2007), Keystone Pipeline (2012) and Overland Pass Pipeline (2012). Therefore, PHMSA has determined that additional requirements are needed to explicitly require that operators conduct interference surveys and to timely remediate adverse conditions. The proposed rule would add new paragraph (c) to require that onshore gas transmission operator programs include interference surveys to detect the presence of interference currents and to require taking remedial actions promptly after completion of the survey to adequately protect the pipeline segment from detrimental interference currents, but no later than 6 months in any case.

§ 192.478 Internal corrosion control: Monitoring.

Section 192.477 prescribes requirements to monitor internal corrosion if corrosive gas is being transported. However, the existing rules do not prescribe that operators continually or periodically monitor the gas stream for the introduction of corrosive constituents through system changes, changing gas supply, upset conditions, or other changes. This could result in pipelines that are not monitored for internal corrosion, because an initial assessment did not identify the presence of corrosive gas. In September 2000, following the Carlsbad explosion, PHMSA issued Advisory Bulletin 00-02, dated 9/1/2000 (65 FR 53803). The bulletin advised owners and operators of natural gas transmission pipelines to review their internal corrosion monitoring programs and consider factors that influence the formation of internal corrosion, including gas quality and operating parameters. Pipeline operators continue to report incidents attributed to internal corrosion. Between 2002 and November 2012, 206 incidents have been reported that were attributed to internal corrosion. PHMSA has determined that additional requirements are needed to assure that operators effectively monitor gas stream quality to identify if and when corrosive gas is being transported and to mitigate deleterious gas stream constituents (e.g., contaminants or liquids). The proposed rule would add the new section 192.478 to require monitoring for deleterious gas stream constituents for onshore gas transmission operators, and require that gas monitoring data be evaluated quarterly. In addition, the proposed rule

would add a requirement for onshore gas transmission operators to review the internal corrosion monitoring and mitigation program semi-annually and adjust the program as necessary to mitigate the presence of deleterious gas stream constituents. This is in addition to existing requirements to check coupons or other means to monitor for the actual presence of internal corrosion in the case of transporting a known corrosive gas stream.

§ 192.485 Remedial measures: Transmission lines.

Section 192.485 prescribes requirements for remedial measures to address general corrosion and localized corrosion pitting in transmission lines. For such conditions it specifies that the strength of pipe based on actual remaining wall thickness may be determined by the procedure in ASME/ANSI B31G or the procedure in AGA Pipeline Research Committee Project PR 3-805 (RSTRENG). PHMSA has determined that additional requirements are needed to assure such calculations have a sound basis. The proposed rule would revise section 192.485(c) to specify that pipe and material properties used in remaining strength calculations must be documented in reliable, traceable, verifiable, and complete records. If such records are not available, pipe and material properties used in the remaining strength calculations must be based on properties determined and documented in accordance with § 192.607.

§ 192.493 In-line inspection of pipelines.

The current pipeline safety regulations in 49 CFR 192.921 and 192.937 require that operators assess the material condition of pipelines in certain circumstances (e.g., IM assessments for pipelines that could affect high consequence areas) and allow use of in-line inspection tools for these assessments. Operators of gas transmission pipelines are required to follow the requirements of ASME/ANSI B31.8S, "Managing System Integrity of Gas Pipelines," in conducting their IM activities. ASME B31.8S provides limited guidance for conducting ILI assessments. Part 192 is silent on technical standards or guidelines for performing ILI assessments or implementing these requirements. At the time these rules were promulgated, there was no consensus industry standard that addressed ILI. Three related standards have since been published:

- API STD 1163-2005, "In-Line Inspection Systems Qualification Standard." This Standard serves as an umbrella document to be used with and

complement the NACE and ASNT standards below, which are incorporated by reference in API STD 1163.

- NACE Standard Practice, NACE SP0102-2010, "In-line Inspection of Pipelines."
- ANSI/ASNT ILI-PQ-2010, "In-line Inspection Personnel Qualification and Certification."

The API standard is more comprehensive and rigorous than requirements currently incorporated into 49 CFR part 192. The incorporation of this standard into pipeline safety regulations will promote a higher level of safety by establishing consistent standards to qualify the equipment, people, processes and software utilized by the in-line inspection industry. The API standard addresses in detail each of the following aspects of ILI inspections, most of which are not currently addressed in the regulations:

- Systems qualification process
- Personnel qualification
- In-line inspection system selection
- Qualification of performance specifications
- System operational validation
- System Results qualification
- Reporting requirements
- Quality management system

The incorporation of this standard into pipeline safety regulations will promote a higher level of safety by establishing consistent standards for conducting ILI assessments of line pipe. The NACE standard covers in detail each of the following aspects of ILI assessments, most of which are not currently addressed in part 192 or in ASME B31.8S:

- Tool selection
- Evaluation of pipeline compatibility with ILI
- Logistical guidelines, which includes survey acceptance criteria and reporting
- Scheduling
- New construction (planning for future ILI in new lines)
- Data analysis
- Data management
- The NACE standard provides a standardized questionnaire and specifies that the completed questionnaire should be provided to the ILI vendor. The questionnaire lists relevant parameters and characteristics of the pipeline section to be inspected.

PHMSA believes that the consistency, accuracy and quality of pipeline in-line inspections would be improved by incorporating the consensus NACE standard into the regulations.

The NACE standard applies to "free swimming" inspection tools that are carried down the pipeline by the

transported fluid. It does not apply to tethered or remotely controlled ILI tools, which can also be used in special circumstances (e.g., examination of laterals). While their use is less prevalent than free swimming tools, some pipeline IM assessments have been conducted using these tools. PHMSA considers that many of the provisions in the NACE standard can be applied to tethered or remotely controlled ILI tools. Therefore, PHMSA is proposing to allow the use of these tools, provided they generally comply with the applicable sections of the NACE standard.

The ANSI/ASNT standard provides for qualification and certification requirements that are not addressed by 49 CFR part 192. The incorporation of this standard into pipeline safety regulations will promote a higher level of safety by establishing consistent standards to qualify the equipment, people, processes and software utilized by the in-line inspection industry. The ANSI/ASNT standard addresses in detail each of the following aspects, which are not currently addressed in the regulations:

- Requirements for written procedures
- Personnel qualification levels
- Education, training and experience requirements
- Training programs
- Examinations (testing of personnel)
- Personnel certification and recertification
- Personnel technical performance evaluations

The proposed rule adds a new § 192.493 to require compliance with the requirements and recommendations of the three consensus standards discussed above when conducting in-line inspection of pipelines.

§ 192.503 General requirements.

Section 192.503 prescribes the general test requirements for the operation of a new segment of pipeline, or returning to service a segment of pipeline that has been relocated or replaced. The proposed rule would add additional requirements to § 192.503(a)(1) to reflect other requirements for determination of MAOP. These include § 192.620 for alternative MAOP determination requirements and new § 192.624 for verification of MAOP for onshore, steel, gas transmission pipeline segments that: (1) Has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a construction-, installation-, or fabrication-related defect, or a cracking-related defect, including, but not limited

to, seam cracking, girth weld cracking, selective seam weld corrosion, hard spot, or stress corrosion cracking and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (i.e., “smart pigs”); (2) Pressure test records necessary to establish maximum allowable operating pressure per subpart J for the pipeline segment, including, but not limited to, records required by § 192.517(a), are not reliable, traceable, verifiable, and complete and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; or (ii) a class 3 or class 4 location; or (3) the pipeline segment maximum allowable operating pressure was established in accordance with § 192.619(c) of this subpart before *effective date of rule* and is located in one of the following areas: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (i.e., “smart pigs”).

§ 192.506 Transmission lines: Spike hydrostatic pressure test for existing steel pipe with integrity threats.

The NTSB recommended repealing § 192.619(c) and requiring that all gas transmission pipelines constructed before 1970 be subjected to a hydrostatic pressure test that incorporates a spike test (recommendation P-11-14). Currently, part 192 does not contain any requirement for operators to conduct spike hydrostatic pressure tests. In response to the NTSB recommendation, this NPRM proposes requirements for verification of MAOP in new § 192.624, which requires that MAOP be established and documented for pipelines located in either an HCA or MCA meeting the conditions in § 192.624(a)(1) through (3) using one or more of the methods in § 192.624(c)(1) through (6). The pressure test method requires performance of a spike pressure test in accordance with new § 192.506 if the pipeline includes legacy pipe or was constructed using legacy construction techniques or if the pipeline has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a construction-, installation-, or fabrication-related defect, or a crack or

crack-like defect, including, but not limited to, seam cracking, girth weld cracking, selective seam weld corrosion, hard spot, or stress corrosion cracking.

§ 192.517 Records.

Section 192.517 prescribes the record requirements for each test performed under §§ 192.505 and 192.507. The proposed rule would revise § 192.517 to add the record requirements for § 192.506.

§ 192.605 Procedural manual for operations, maintenance, and emergencies.

Section 192.605 prescribes requirements for the operator's procedural manual for operations, maintenance, and emergencies. Part 192 contains numerous requirements intended to protect pipelines from overpressure events. These include mandatory pressure relieving or pressure limiting devices, inspections and tests of such devices, establishment of maximum allowable operating pressure, and administrative requirements to not operate the pipeline at pressures that exceed the MAOP, among others. Implicit in the requirements of § 192.605 is the intent for operators to establish operational and maintenance controls and procedures to effectively implement these requirements and preclude operation at pressures that exceed MAOP. PHMSA expects that operator's procedures should already address this aspect of operations and maintenance, as it is a long-standing, critical aspect of safe pipeline operations. However, § 192.605 does not explicitly prescribe this aspect of the procedural controls. In addition, as a result of the San Bruno incident, Congress mandated in Section 23 of the Act that any exceedance of MAOP on a gas transmission pipeline be reported to PHMSA. As part of such reporting, the operator should inform PHMSA of the cause(s) of each exceedance. On December 21, 2012, PHMSA published advisory bulletin ADB-2012-11, which advised transmission operators of their responsibility under Section 23 of the Act to report exceedances of MAOP that exceeds the margin (build-up) allowed for operation of pressure-limiting or control devices (i.e., report any pressure exceedances over the pressure limiting or control device set point as defined in applicable sections of §§ 192.201(a)(2) or 192.739). Between December 21, 2012 and June 30, 2013, PHMSA received 14 such notifications. Therefore, PHMSA has determined that an additional requirement is needed to explicitly require procedures to maintain and operate pressure relieving devices and to control operating pressure to prevent

exceedance of MAOP. The proposed rule clarifies the existing requirements regarding such procedural controls.

§ 192.607 Verification of pipeline material: Onshore steel transmission pipelines.

Section 23 of the Act requires the Secretary of Transportation to require verification of records used to establish MAOP to ensure they accurately reflect the physical and operational characteristics of the pipelines and to confirm the established MAOP of the pipelines. PHMSA issued Advisory Bulletin 11–01 on January 10, 2011 (76 FR 1504) and Advisory Bulletin 12–06 on May 7, 2012 (77 FR 26822) to inform operators of this requirement. Operators have submitted information in their 2012 Annual Reports indicating that a portion of transmission pipeline segments do not have adequate records to establish MAOP or to accurately reflect the physical and operational characteristics of the pipeline. Therefore, PHMSA has determined that additional rules are needed to implement this requirement of the Act. Specifically, PHMSA has determined that additional rules are needed to require that operators conduct tests and other actions needed to understand the physical and operational characteristics for those segments where adequate records are not available, and to establish standards for performing these actions.

This issue was addressed in detail at the Integrity Verification Process workshop on August 7, 2013. Major issues that were discussed include the scope of information needed and the methodology for verifying material properties. The most difficult information to obtain, from a technical perspective, is the strength of the steel. Conventional techniques would include cutting out a piece of pipe and destructively testing it to determine yield and ultimate tensile strength. PHMSA proposes to address this in the rule by allowing new non-destructive techniques if they can be validated to produce accurate results for the grade and type of pipe being evaluated. Such techniques have already been successfully validated for some grades of pipe.

Another issue is the extremely high cost of excavating the pipeline in order to verify the material, and determining how much pipeline needs to be exposed and tested in order to have assurance of pipeline properties. PHMSA proposes to address this issue by specifying that operators take advantage of opportunities when the pipeline is exposed for other reasons, such as maintenance and repair, by requiring

that material properties be verified whenever the pipe is exposed. Over time, pipeline operators will develop a substantial set of verified material data, which will provide assurance that material properties are reliably known for the entire population of inadequately documented segments. PHMSA proposes to require that operators continue this opportunistic material verification process until the operator has completed enough verifications to obtain high confidence that only a small percentage of inadequately documented pipe lengths have properties that are inconsistent with operators' past assumptions. The rule would specify the number of excavations required to achieve this level of confidence.

Lastly, PHMSA proposes criteria that would require material verification for higher risk locations. Therefore, the proposed rule would add requirements for verification of pipeline material in new § 192.607 for existing onshore, steel, gas transmission pipelines that are located in an HCA or a class 3 or class 4 location. PHMSA believes this approach appropriately addresses pipeline segment risk without extending the requirement to all pipelines where risk and potential consequences are not as significant, such as pipeline in remote rural areas.

Requirements are also included to ensure that the results of this process are documented in records that are reliable, traceable, verifiable, and complete that must be retained for the life of the pipeline.

§ 192.613 Continuing surveillance.

Section 192.613 prescribes general requirements for continuing surveillance of the pipeline to determine and take action due to changes in the pipeline from, among other things, unusual operating and maintenance conditions. The 2011 hazardous liquid pipeline accident resulting in a crude oil spill into the Yellowstone River near Laurel, Montana was probably caused by scouring at a river crossing due to flooding. Based on recent examples of extreme weather events that did result, or could have resulted, in pipeline incidents, PHMSA has determined that additional requirements are needed to assure that operator procedures adequately address inspection of the pipeline and right-of-way for "other factors affecting safety and operation" following an extreme weather event such as a hurricane or flood, landslide, an earthquake, a natural disaster, or other similar event. The proposed rule would add a new paragraph (c) to require such inspections, specify the timeframe in which such inspections should

commence, and specify the appropriate remedial actions must be taken to ensure safe pipeline operations. The new paragraph (c) would apply to both onshore transmission pipelines and their rights-of-way.

§ 192.619 Maximum allowable operating pressure: Steel or plastic pipelines.

The NTSB issued its report on the San Bruno incident that included a recommendation (P–11–15) that PHMSA amend its regulations so that manufacturing and construction-related defects can only be considered "stable" if a gas pipeline has been subjected to a post-construction hydrostatic pressure test of at least 1.25 times the MAOP. This NPRM proposes to revise the test pressure factors in § 192.619(a)(2)(ii) to correspond to at least 1.25 MAOP for newly installed pipelines.

In addition, Section 23 of the Act requires verification of records to confirm the established MAOP of the pipelines. Operators have submitted information in their 2012 Annual Reports indicating that a portion of gas transmission pipeline segments do not have adequate records to establish MAOP. For pipelines without an adequately documented basis for MAOP, the proposed rule adds a new paragraph (e) to § 192.619 to require that certain onshore steel transmission pipelines that meet the criteria specified in § 192.624(a), and that do not have adequate records to establish MAOP, must establish and document MAOP in accordance with new § 192.624 using one or more of the methods in § 192.624(c)(1) through (6), as discussed in more detail below.

The proposed rule would also add a new paragraph (f) to explicitly require that records documenting tests, design, and other information necessary to establish MAOP be retained for the life of the pipeline.

Lastly, the rule would incorporate conforming changes to § 192.619(a) to reflect changes to gas gathering regulations proposed in §§ 192.8 and 192.9.

§ 192.624 Maximum allowable operating pressure verification: Onshore steel transmission pipelines.

Section 23 of the Act requires verification of records used to establish MAOP for pipe in class 3 and class 4 locations and high-consequence areas in Class 1 and 2 locations to ensure they accurately reflect the physical and operational characteristics of the pipelines and to confirm the established MAOP of the pipelines. Operators have submitted information in their 2012 Annual Reports indicating that some gas transmission pipeline segments do not

have adequate records or testing to establish MAOP. For pipelines so identified, the Act requires that PHMSA promulgate regulations to require operators to test the segments to confirm the material strength of the pipe in HCAs that operate at stress levels greater than or equal to 30% SMYS. Such tests must be performed by pressure testing or other methods determined by the Secretary to be of equal or greater effectiveness.

As a result of its investigation of the San Bruno accident, NTSB issued two related recommendations. NTSB recommended that PHMSA repeal § 192.619(c) and require that all gas transmission pipelines constructed before 1970 be subjected to a hydrostatic pressure test that incorporates a spike test (P-11-14). NTSB also recommended that PHMSA amend the Federal pipeline safety regulations so that manufacturing- and construction-related defects can only be considered stable if a gas pipeline has been subjected to a post-construction hydrostatic pressure test of at least 1.25 times the maximum allowable operating pressure (P-11-15).

The proposed rule would add a new § 192.624 to address these mandates and recommendations. The rule would require that operators re-establish and document MAOP for certain onshore steel transmission pipelines located in an HCA or MCA that meet one or more of the criteria specified in § 192.624(a). Those criteria include: (1) Has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a construction-, installation-, or fabrication-related defect, or a cracking-related defect, including, but not limited to, seam cracking, girth weld cracking, selective seam weld corrosion, hard spot, or stress corrosion cracking and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, “smart pigs”); (2) Pressure test records necessary to establish maximum allowable operating pressure per subpart J for the pipeline segment, including, but not limited to, records required by § 192.517(a), are not reliable, traceable, verifiable, and complete and the pipeline segment is located in one of the following locations: (i) A high consequence area as defined in § 192.903; or (ii) a class 3 or

class 4 location; or (3) the pipeline segment maximum allowable operating pressure was established in accordance with § 192.619(c) of this subpart before *[effective date of rule]* and is located in one of the following areas: (i) A high consequence area as defined in § 192.903; (ii) a class 3 or class 4 location; or (iii) a moderate consequence area as defined in § 192.3 if the pipe segment can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, “smart pigs”).

The methods specified in § 192.624 include the pressure test method. If the pipeline includes legacy pipe or was constructed using legacy construction techniques or the pipeline has experienced a reportable in-service incident, as defined in § 191.3, since its most recent successful subpart J pressure test, due to an original manufacturing-related defect, a construction-, installation-, or fabrication-related defect, or a crack or crack-like defect, a spike pressure test in accordance with new § 192.506 would be required. For modern pipe without the aforementioned risk factors, a pressure test in accordance with § 192.505 would be allowed.

Other methods to reestablish MAOP for pipe currently operating under § 192.619(c) would also be allowed. PHMSA has determined that the following methods would provide equal or greater effectiveness as a pressure test:

(i) De-rating the pipe segment such that the new MAOP is less than historical actual sustained operating pressure by using a safety factor of 0.80 times the sustained operating pressure (equivalent to a pressure test using gas or water as the test medium with a test pressure of 1.25 times MAOP). For segments that operate at stress levels of less than 30% SMYS a safety factor of 0.90 times sustained operating pressure is allowed (equivalent to a pressure test of 1.11 times MAOP), supplemented with additional integrity assessments, and preventive and mitigative measures specified in the proposed rule.

(ii) Replacement of the pipe, which would require a new pressure test that conforms with subpart J before being placed in service,

(iii) An in-line inspection and Engineering Critical Assessment process using technical criteria to establish a safety margin equivalent to that provided by a pressure test, or

(iv) Use of other technology that the operator demonstrates provides an equivalent or greater level of safety, provided PHMSA is notified in advance.

The proposed rule establishes requirements for pipelines operating at

stress levels of less than 30% of SMYS based on technical information provided in Interstate Natural Gas Association of America/American Gas Association Final Report No. 13-180, “Leak vs. Rupture Thresholds for Material and Construction Anomalies,” December 2013. The report references a 2010 study by Kiefner & Associates, Inc. “Numerical Modeling and Validation for Determination of the Leak/Rupture Boundary for Low-Stress Pipelines” performed under contract to the Gas Technology Institute (GTI). The Kiefner/GTI report evaluated theoretical fracture models and supporting test data in order to define a possible leak-rupture threshold stress level. The report pointed out that “no evidence was found that a propagating ductile rupture could arise from an incident attributable to any one of these causes in a pipeline that is being operated at a hoop stress level of 30% of SMYS or less.” In addition, the INGAA/AGA report included a review of Kiefner & Associates, Inc. failure investigation reports, which concluded that all manufacturing related defects failing under the action of hoop stress alone failed as leaks if the hoop stress level was 30% SMYS or less except for one case out of 94 which failed at 27% of SMYS. The INGAA/AGA report states that a hydrostatic test to 1.25 times the MAOP is unnecessary to reasonably assure stability of pipe manufacturing construction related features in pipe meeting the following conditions: (1) Ductile fracture initiation is assured by showing that the pipe has an operating temperature above the brittle fracture initiation temperature; (2) interaction with in-service degradation mechanics such as selective seam weld corrosion or previous mechanical damage is absent; (3) hoop stress is 30% or less; (4) mill pressure testing was conducted at 60% SMYS or more, established by documented conformance to applicable pipe product specifications (*e.g.*, API 5L) or company specifications; and (5) pipe is 6 NPS or smaller. For pipes that are 8 NPS or larger but still meeting the conditions mentioned above, hydrostatic pressure testing to 1.25 times the MAOP is still prudent, since theoretical analysis as well as full scale laboratory tests show that failure as a rupture is possible for stress thresholds below 30% of SMYS. However, NPS 8 pipe may be prioritized lower than larger pipe because there were no reported incidents of service rupture in pipe that size where all other criteria were met. PHMSA plans to limit stress levels, pressures, and pipe diameters that can meet the potential impact

radius and require alternative integrity and preventative and mitigative measures for pipelines that use these criteria to establish MAOP.

The above approach implements the regulatory mandate in the Act for segments in HCAs. In addition, the scope includes additional pipe segments in the newly defined moderate consequence areas. This approach is intended to address the NTSB recommendations and to provide increased safety in areas where a pipeline rupture would have a significant impact on the public or the environment. PHMSA does not propose to repeal 49 CFR 192.619(c) for segments located outside of HCAs or MCAs where the routine presence of persons is not expected.

The Engineering Critical Assessment process requires the conservative analysis of: Any in-service cracks, crack-like defects remaining in the pipe, or the largest possible crack that could remain in the pipe, including crack dimensions (length and depth) to determine the predicted failure pressure (PFP) of each defect; failure mode (ductile, brittle, or both) for the microstructure, location, type of defect, and operating conditions (which includes pressure cycling); and failure stress and crack growth analysis to determine the remaining life of the pipeline. An Engineering Critical Assessment must use techniques and procedures developed and confirmed through research findings provided by PHMSA, and other reputable technical sources for longitudinal seam and crack growth such as PHMSA's Comprehensive Study to Understand Longitudinal ERW Seam Research & Development study task reports: Battelle Final Reports ("Battelle's Experience with ERW and Flash Weld Seam Failures: Causes and Implications"—Task 1.4), Report No. 13-002 ("Models for Predicting Failure Stress Levels for Defects Affecting ERW and Flash-Welded Seams"—Subtask 2.4), Report No. 13-021 ("Predicting Times to Failure for ERW Seam Defects that Grow by Pressure-Cycle-Induced Fatigue"—Subtask 2.5), and "Final Summary Report and Recommendations for the Comprehensive Study to Understand Longitudinal ERW Seam Failures—Phase 1"—Task 4.5), which can be found on the internet at: <https://primis.phmsa.dot.gov/matrix/PrjHome.rdm?prj=390>.

Section 23 requires pipeline operators to conduct a records verification for pipelines located in certain areas to ensure that the records accurately reflect the physical and operational characteristics of the pipelines and confirm the established MAOP.

Congress further directed DOT to require the owner or operator to reconfirm a maximum allowable operating pressure for pipelines with insufficient records. This rule proposes methods for satisfying this direction from Congress. In analyzing the impact of the proposed methods, PHMSA determined that they would result in large cost savings (\$2.67 billion over 15 years discounted at 7%, \$3.67 billion discounted at 3%) relative to current regulatory requirements for pipelines with insufficient records in 49 CFR 192.107(b). The results of that action indicated that problems similar to those that contributed to the San Bruno incidents are more widespread than previously believed. As a result, the proposed rule would establish consistent standards by which operators would correct these issues in a way that is more cost effective than the current regulations would require (which could require more extensive destructive testing, pressure testing, and/or pipe replacement). PHMSA did not identify any significant adverse safety impacts from allowing operators to use the proposed methods instead of those in the current regulations. See section 4.1.2.3 in the regulatory impact analysis for the analysis of the cost savings.

PHMSA estimated the cost savings to operators associated with the Section 23(c) mileage. Existing regulatory requirements [§ 192.107(b)] related to bad or missing records would be more costly for operators to achieve compliance. Under existing regulations, in order for pipelines with insufficient records to maintain operating pressure, operators must excavate the pipeline at every 10 lengths of pipe (commonly referred to as joints) in accordance with section II-D of appendix B of part 192 (as specified in § 192.107(b)), do a cutout, determine material properties by destructive tensile test, and repair the pipe. The process is similar to doing a repair via pipe replacement. PHMSA developed a blended average for performing such a cutout material verification (\$75,000) by reviewing typical costs to repair a small segment of pipe by pipe replacement. The blended average accounted for various pipe diameters and regional cost variance. PHMSA assumed each joint is 40 feet long; ten joints is 400 ft. The number of cutouts required by existing rules is therefore the miles subject to this requirement multiplied by 5,280/400.

The proposed rule would allow operators to perform a sampling program that opportunistically takes advantage of repairs and replacement projects to verify material properties at

the same time. Over time, operators will collect enough information gain significant confidence in the material properties of pipe subject to this requirement. The proposed rule nominally targets conducting an average of one material documentation process per mile. In addition, operators would be allowed to perform nondestructive examinations, in lieu of cutouts and destructive testing, when the technology provides a demonstrable level of confidence in the result. PHMSA estimated that the incremental unit cost of adding material documentation activities to a repair or replacement activity would be approximately \$17,000 per instance.

The proposed methods for addressing pipelines with insufficient records are exclusively applicable to HCA and all Class 3 and 4 locations. Therefore, if the proposed rule were in effect, operators would be able to use the new methods for addressing pipeline with insufficient records in HCA and all Class 3 and 4 locations, but they would be required to comply with existing (more expensive) requirements for addressing the same issue for pipelines located outside HCA and all Class 3 and 4 locations. Locations outside HCAs and all Class 3 and 4 are by definition lower risk, meaning if incidents occur, the consequences are expected to be smaller than HCA and all Class 3 and 4 locations. PHMSA is considering including provisions in the final rule that would enable operators to use the proposed methods for addressing pipelines with insufficient records in locations outside HCAs and all Class 3 and 4. To maintain flexibility, the proposed methods may be an option to existing requirements—as opposed to a replacement of those requirements. PHMSA requests comments on the impacts of allowing operators to use the new methods for addressing insufficient records beyond HCAs and all Class 3 and 4 locations. What safety risks, if any, should PHMSA consider? What are the potential cost savings?

§ 192.710 Pipeline assessments.

Currently, part 192 does not contain any requirement for operators to conduct integrity assessments of onshore transmission pipelines that are not HCA segments as defined in § 192.903 and therefore not subject to subpart O; *i.e.*, pipelines that are not located in a high consequence area (HCA). Currently, only approximately 7% of onshore gas transmission pipelines are located in HCAs. However, coincident with integrity assessments of HCA segments, industry has, as a practical matter, assessed substantial amounts of pipeline in non-HCA

segments. For example, INGAA noted (see Topic A comments, above) that approximately 90 percent of Class 3 and 4 mileage not in HCAs are presently assessed through over-testing during IM assessments. This is due, in large part, because ILI or pressure testing, by their nature, assess large continuous segments that may contain some HCA segments but that could also contain significant amounts of non-HCA segments. In addition, based on the integrity management principle of continuous improvement, INGAA members have committed (via its IMCI action plan discussed under Topic A, above) to first extend some degree of integrity management to approximately 90 percent of people who live, work or otherwise congregate near pipelines (that is, within the pipelines' Potential Impact Radius, or PIR) by 2012. By 2020, INGAA operators have committed to perform full integrity management on pipelines covering 90 percent of the PIR population. At a minimum, all ASME/ANSI B31.8S requirements will be applied, including mitigating corrosion anomalies and applying integrity management principles. Continuing to areas of less population density, INGAA members plan to apply integrity management principles to pipelines covering 100 percent of the PIR population by 2030.

Given this level of commitment, PHMSA has determined that it is appropriate to codify requirements that additional gas transmission pipelines have an integrity assessment on a periodic basis to monitor for, detect, and remediate deleterious pipeline defects and injurious anomalies. However, INGAA does not represent all pipeline operators subject to part 192. In addition, in order to achieve the desired outcome of performing assessments in areas where people live, work, or congregate, while minimizing the cost of identifying such locations, PHMSA proposes to base the requirements for identifying those locations on processes already being implemented by pipeline operators.

The proposed rule would add a new § 192.710 to require that pipeline segments in moderate consequence areas that can accommodate inspection by means of instrumented inline inspection tools (*i.e.*, "smart pigs") be assessed within 15 years and every 20 years thereafter. PHMSA proposes to define a new term "moderate consequence area" or MCA. The definition is based on the same methodology as "high consequence areas" as specified in § 192.903, but with less stringent criteria. Moderate consequence areas will be used to

define the subset of locations where integrity assessments are required. This approach is proposed as a means to minimize the effort needed on the part of operators to identify the MCAs, since transmission operators must have already performed the analysis in order to have identified the HCAs, or verify that they have no HCAs. In addition, the MCA definition would include locations where interstate highways, freeways, and expressways, and other principal 4-lane arterial roadways are located within the PIR.

Because significant non-HCA pipeline mileage has been previously assessed in conjunction with an assessment of HCA segments in the same pipeline, PHMSA also proposes to allow the use of those prior assessments for non-HCA segments to comply with the new § 192.710, provided that the assessment was conducted in conjunction with an integrity assessment required by subpart O.

The proposed rule would also require that the assessment required by new § 192.710 be conducted using the same methods as proposed for HCAs (see § 192.921, below).

§ 192.711 Transmission lines: General requirements for repair procedures.

Section 192.711 prescribes general requirements for repair procedures. For non-HCA segments, the existing rule requires that permanent repairs be made as soon as feasible. However, no specific repair criteria are provided and no specific timeframe or pressure reduction requirements are provided. PHMSA has determined that more specific repair criteria are needed for pipelines not covered under the integrity management rule. The proposed rule would amend paragraph (b)(1) of section 192.711 to require that specific conditions (*i.e.*, repair criteria) defined in proposed § 192.713 (see below) be remediated, and to require a reduction of operating pressure for conditions that present an immediate hazard.

§ 192.713 Transmission lines: Permanent field repair of imperfections and damages.

Section 192.713 prescribes requirements for the permanent repair of pipeline imperfection or damage that impairs the serviceability of pipe in a steel transmission line operating at or above 40 percent of SMYS. PHMSA has determined that more explicit requirements are needed to better identify criteria for the severity of imperfection or damage that must be repaired, and to identify the timeframe within which repairs must be made. Further, PHMSA has determined that such repair criteria should apply to any

transmission pipeline not covered under subpart O, Integrity Management regulations. PHMSA believes that establishing these non-HCA segment repair conditions are important because, even though they are not within the defined high consequence locations, they could be located in populated areas and are not without consequence. For example, as reported by operators in the 2011 annual reports, while there are approximately 20,000 miles of gas transmission pipe in HCA segments, there are approximately 65,000 miles of pipe in Class 2, 3, and 4 populated areas. PHMSA believes it is prudent and appropriate to include criteria to assure the timely repair of injurious pipeline defects in non-HCA segments. These changes will ensure the prompt remediation of anomalous conditions, while allowing operators to allocate their resources to high consequence areas on a higher priority basis. The proposed rule would amend § 192.713 to establish immediate, two-year, and monitored conditions which the operator must remediate or monitor to assure pipeline safety. PHMSA proposes to use the same criteria as proposed for HCAs (see 192.933, below), except that conditions for which a one-year response is required in HCAs would require a two-year response in non-HCA segments. In addition, PHMSA proposes to prescribe more explicit requirements for *in situ* evaluation of cracks and crack-like defects using in-the-ditch tools whenever required, such as when an ILI, SCCDA, pressure test failure, or other assessment identifies anomalies that suggest the presence of such defects.

§ 192.750 Launcher and receiver safety.

PHMSA has determined that more explicit requirements are needed for safety when performing maintenance activities that utilize launchers and receivers to insert and remove maintenance tools and devices. Such facilities are subjected to pipeline system pressures. Current regulations for hazardous liquid pipelines (part 195) have, since 1981, contained such safety requirements for scraper and sphere facilities (re: § 195.426). However, current regulations for gas pipelines (part 192) do not similarly require controls or instrumentation to protect against inadvertent breach of system integrity due to incorrect operation of launchers and receivers for in-line inspection tools, scraper, and sphere facilities. Accordingly, the proposed rule would add a new section § 192.750 to require a suitable means to relieve pressure in the barrel and either a means to indicate the pressure in the

barrel or a means to prevent opening if pressure has not been relieved.

§ 192.911 What are the elements of an integrity management program?

Paragraph (k) of § 192.911 requires that integrity management programs include a management of change process as outlined in ASME/ANSI B31.8S, section 11. PHMSA has determined that specific attributes and features of the management of change process as currently specified in ASME/ANSI B31.8S, section 11, should be codified directly within the text of § 192.911(k). The proposed rule would amend paragraph (k) to specify that the features of the operator's management of change process must include the reason for change, authority for approving changes, analysis of implications, acquisition of required work permits, documentation, communication of change to affected parties, time limitations, and qualification of staff. These general attributes of change management are already required by virtue of being invoked by reference to ASME/ANSI B31.8S. However, PHMSA believes it will improve the visibility and emphasis on these important program elements to require them directly in the rule text.

§ 192.917 How does an operator identify potential threats to pipeline integrity and use the threat identification in its integrity program?

Section 192.917 requires that integrity management programs for covered pipeline segments identify potential threats to pipeline integrity and use the threat identification in its integrity program. Included within this performance-based process are requirements to identify threats to which the pipeline is susceptible, collect data for analysis, and perform a risk assessment. Special requirements are included to address plastic pipe and particular threats such as third party damage and manufacturing and construction defects. Following the San Bruno accident, the NTSB recommended that Pacific Gas and Electric (PG&E) assess every aspect of its integrity management program, paying particular attention to the areas identified in the investigation, and implement a revised program that includes, at a minimum,

(1) a revised risk model to reflect the Pacific Gas and Electric Company's actual recent experience data on leaks, failures, and incidents;

(2) consideration of all defect and leak data for the life of each pipeline, including its construction, in risk analysis for similar or related segments to ensure that all applicable threats are adequately addressed;

(3) a revised risk analysis methodology to ensure that assessment methods are selected for each pipeline segment that address all applicable integrity threats, with particular emphasis on design/material and construction threats; and

(4) an improved self-assessment that adequately measures whether the program is effectively assessing and evaluating the integrity of each covered pipeline segment (NTSB recommendation P-11-29).

In addition, the NTSB recommended that PG&E conduct threat assessments using the revised risk analysis methodology incorporated in its integrity management program, as recommended in Safety Recommendation P-11-29, and report the results of those assessments to the California Public Utilities Commission and the Pipeline and Hazardous Materials Safety Administration (NTSB recommendation P-11-30). PHMSA has also analyzed the issues the NTSB identified in the investigation related to information analysis and risk assessment. PHMSA held a workshop on July 21, 2011 to address perceived shortcomings in the implementation of integrity management risk assessment processes and the information and data analysis (including records) upon which such risk assessments are based. PHMSA sought input from stakeholders on these issues and has determined that additional clarification and specificity is needed for existing performance-based rules. These clarifications define and emphasize the specific functions that are required for risk assessment and effective risk management.

These aspects of integrity management have been an integral part of PHMSA's expectations for integrity management since the inception of the program. As specified in § 192.907(a), PHMSA expected operators to start with a framework, which would evolve into a more detailed and comprehensive program, and that the operator must continually improve its integrity management program, as it learned more about the process and about the material condition of its pipelines through integrity assessments.

PHMSA elaborated on this philosophy in the notice of final rulemaking for subpart O (68 FR 69778):

The intent of allowing a framework was to acknowledge that an operator cannot develop a complete, fully mature integrity management plan in a year. Nevertheless, it is important that an operator have thought through how the various elements of its plan relate to each other early in the development of its plan. The framework serves this purpose. . . . It need not be fully developed

or at the level of detail expected of final integrity management plans. The framework is an initial document that evolves into a more detailed and comprehensive program.

The clarifications and additional specificity proposed in this NPRM (with respect to processes for implementing the threat identification, risk assessment, and preventive and mitigative measures program elements), reflect PHMSA's expectation regarding the degree of progress operators should be making, or should have made, during the first 10 years of the integrity management program.

The current integrity management rule invokes ASME/ANSI B31.8S by reference to require that operators implement specific attributes and features of the threat identification, data analysis, and risk assessment process. PHMSA has determined that those specific attributes and features of the threat identification, data analysis, and risk assessment processes as currently specified in ASME/ANSI B31.8S, section 11, should be codified within the text of § 192.917. While continuing to incorporate the industry standard by reference, the proposed rule would amend § 192.917 to insert certain critical features of the industry standard (ASME/ANSI B31.8S) directly into the body of the Federal regulation. Specifically, PHMSA proposes to specify several pipeline attributes that must be included in pipeline risk assessments and to explicitly require that operators integrate analyzed information, and ensure that data be verified and validated to the maximum extent practical. PHMSA also acknowledges that objective, documented data is not always available or obtainable. To the degree that subjective data from subject matter experts must be used, PHMSA proposes to require that an operator's program include specific features to compensate for subject matter expert bias.

In addition, PHMSA proposes to clarify the performance-based risk assessment aspects of the IM rule to specify that operators perform risk assessments that are adequate to evaluate the effects of interacting threats; determine additional preventive and mitigative measures needed, analyze how a potential failure could affect high consequence areas, including the consequences of the entire worst-case incident scenario from initial failure to incident termination; identify the contribution to risk of each risk factor, or each unique combination of risk factors that interact or simultaneously contribute to risk at a common location, account for, and compensate for, uncertainties in the

model and the data used in the risk assessment; and evaluate risk reduction associated with candidate risk reduction activities such as preventive and mitigative measures. In addition, in response to specific NTSB recommendation P-11-18, PHMSA proposes performance-based language to require that operators validate their risk models in light of incident, leak, and failure history and other historical information. Such features are currently requirements by virtue of being invoked by reference in ASME/ANSI B31.8S. However, PHMSA believes that these important aspects of integrity management will receive greater emphasis and awareness if incorporated directly into the rule text. The proposed rule would also amend the requirements for plastic pipe to provide specific examples of integrity threats for plastic pipe that must be addressed.

Lastly, PHMSA proposes to revise the criteria in § 192.917(e)(3) and (4) for addressing the threat of manufacturing and construction defects and concluding that latent defects are stable as recommended in NTSB recommendation P-11-15.

§ 192.921 How is the baseline assessment to be conducted?

Section 192.921 requires that pipelines subject to integrity management rules have an integrity assessment. Current rules allow the use of in-line inspection, pressure testing in accordance with subpart J, direct assessment for the threats of external corrosion, internal corrosion, and stress corrosion cracking, and other technology that the operator demonstrates provides an equivalent level of understanding of the condition of the pipeline. Following the San Bruno accident, PHMSA has determined that baseline assessment methods should be clarified to emphasize in-line inspection and pressure testing over direct assessment. At San Bruno, PG&E relied heavily on direct assessment under circumstances for which direct assessment was not effective. Further, ongoing research and industry response to the ANPRM is beginning to indicate that stress corrosion cracking direct assessment is not as effective, and does not provide an equivalent understanding of pipe conditions with respect to SCC defects, as ILI or hydrostatic pressure testing at test pressures that exceed those test pressures required by subpart J (*i.e.*, “spike” hydrostatic pressure test). Therefore, the proposed rule would require that direct assessment only be allowed when the pipeline cannot be assessed using in-line inspection tools. The proposed rule would also add three

additional assessment methods: (1) A “spike” hydrostatic pressure test, which is particularly well suited to address SCC and other cracking or crack-like defects, (2) guided wave ultrasonic testing (GWUT) which is particularly appropriate in cases where short segments, such as road or railroad crossing, are difficult to assess, and (3) excavation with direct *in situ* examination.

The current rule merely indicates that in-line inspection (ILI) is an accepted assessment method. The regulations are currently silent on a number of issues that significantly impact the quality and effectiveness of ILI assessment results. Such considerations are described in ASME/ANSI B31.8S, but limited guidance is provided. As discussed above, the proposed rule strengthens guidance in this area by adding a new § 192.493 to require compliance with the requirements and recommendations of API STD 1163-2005, NACE SP0102-2010, and ANSI/ASNT ILI-PQ-2010 when conducting in-line inspection of pipelines. Section 192.921(a)(1) would be revised to require compliance with § 192.493 instead of ASME B31.8S for baseline ILI assessments for covered segments. In addition, a person qualified by knowledge, training, and experience would be required to analyze the data obtained from an internal inspection tool to determine if a condition could adversely affect the safe operation of the pipeline, and must explicitly consider uncertainties in reported results (including, but not limited to, tool tolerance, detection threshold, probability of detection, probability of identification, sizing accuracy, conservative anomaly interaction criteria, location accuracy, anomaly findings, and unity chart plots or equivalent for determining uncertainties and verifying actual tool performance) in identifying and characterizing anomalies.

GWUT has been in use by pipeline operators for several years. Previously, operators were required by § 192.921(a)(4) to submit a notification to PHMSA as an “other technology” assessment method, in order to use GWUT. In 2007, PHMSA developed guidelines for how it would evaluate notifications for use of GWUT. These guidelines have been effectively used for seven years, and PHMSA has gained confidence that GWUT can be effectively used to assess the integrity of short segments of pipe. PHMSA proposes to incorporate these guidelines into a new Appendix F, which would be invoked in § 192.921. Therefore, notification for use of GWUT would no longer be required.

ASME B31.8S, Section 6.1, describes both excavation and direct *in situ* examination as specialized integrity assessment methods, applicable to particular circumstances:

It is important to note that some of the integrity assessment methods discussed in para. 6 only provide indications of defects. Examination using visual inspection and a variety of nondestructive examination (NDE) techniques are required, followed by evaluation of these inspection results in order to characterize the defect. The operator may choose to go directly to examination and evaluation for the entire length of the pipeline segment being assessed, in lieu of conducting inspections. For example, the operator may wish to conduct visual examination of aboveground piping for the external corrosion threat. Since the pipe is accessible for this technique and external corrosion can be readily evaluated, performing in-line inspection is not necessary.

PHMSA proposes to clarify its requirements to explicitly add excavation and direct *in situ* examination as acceptable assessment methods.

PHMSA also proposes that mandatory integrity assessments proposed for non-HCA segments (see § 192.710, above) could also use these assessment methods.

§ 192.923 How is direct assessment used and for what threats?

As discussed in the changes to §§ 192.927 and 192.929 below, the proposed rule would incorporate by reference NACE SP0206-2006, “Internal Corrosion Direct Assessment Methodology for Pipelines Carrying Normally Dry Natural Gas,” for addressing ICDA and NACE SP0204-2008, “Stress Corrosion Cracking Direct Assessment,” for addressing SCCDA. Sections 192.923(b)(2) and (b)(3) would be revised to require compliance with these standards.

§ 192.927 What are the requirements for using Internal Corrosion Direct Assessment (ICDA)?

Internal corrosion (IC) is a degradation mechanism in which steel pipe loses wall thickness due to corrosion initiating on the inside surface of the pipe. IC is one of several threats that can impact pipeline integrity. IM regulations in 49 CFR part 192 require that pipeline operators assess covered pipe segments periodically to detect degradation from threats that their analyses have indicated could affect the segment. Not all covered segments are subject to an IC threat, but some are. IC direct assessment (ICDA) is an assessment technique that can be used to address this threat for gas pipelines. ICDA involves evaluation and analysis to determine locations at which a

corrosive environment is likely to exist inside a pipeline followed by excavation and direct examination of the pipe wall to determine whether IC is occurring.

Section 192.927 specifies requirements for gas transmission pipeline operators who use ICDA for IM assessments. The requirements in § 192.927 were promulgated before the NACE standard was published. They require that operators follow ASME/ANSI B31.8S provisions related to ICDA. PHMSA has reviewed the NACE standard and finds that it is more comprehensive and rigorous than either § 192.927 or ASME B31.8S in many respects. Some of the most important features in the NACE standard are:

- The NACE standard requires more direct examinations in most cases.
- The NACE standard encompasses the entire pipeline segment and requires that all inputs and outputs be evaluated.
- The NACE standard indirect inspection model is different than the Gas Technology Institute (GTI) model currently referenced in § 192.927, but is considered to be equivalent or superior. Its range of applicability with respect to operating pressure is greater than the GTI model, thus allowing use of ICDA in pipelines with lower operating pressures and higher flow velocities.
- The NACE standard provides additional guidance on how to effectively determine areas to excavate for detailed examinations for internal corrosion.

The existing requirements in § 192.927 have one particular aspect that has proven problematic. The definition of regions and requirements for selection of direct examination locations in the regulations are tied to the covered segment. Covered segment boundaries are determined by population density and other consequence factors without regard to the orientation of the pipe and the presence of locations at which corrosive agents may be introduced or may collect and where internal corrosion would most likely be detected (e.g., low spots). Section 192.927 requires that locations selected for excavation and detailed examination be within covered segments, meaning that the locations at which IC would most likely be detected may not be examined. Thus, the existing requirements do not always facilitate the discovery of internal corrosion that could affect covered segments. PHMSA is proposing to address this problem by incorporating NACE SP0206–2006 and by establishing additional requirements for addressing covered segments within the technical process defined by NACE SP0206–2006.

This proposed rule would require that operators perform two direct examinations within each covered segment the first time ICDA is performed. These examinations are in addition to those required to comply with the NACE standard practice. The additional examinations are consistent with the current requirement in § 192.927(c)(5)(ii) that operators apply more restrictive criteria when conducting ICDA for the first time and are intended to provide a verification, within the HCA, that the results of applying the NACE process for the ICDA are acceptable. Applying the NACE process requires a more precise knowledge of the pipeline's orientation (particularly slope) than operators may have in many cases. Conducting examinations within the HCA during the first application of ICDA will verify that application of the ICDA process provides adequate information about the covered segment. Operators who identify IC on these additional examinations, even though excavations at locations determined using the NACE process did not identify any, will know that improvements to their knowledge of pipeline orientation or other adjustments to their application of the NACE process to the covered segment will be needed for future uses of ICDA. § 192.927(b) and (c) are revised to address these issues.

§ 192.929 What are the requirements for using Direct Assessment for Stress Corrosion Cracking (SCCDA)?

Stress corrosion cracking (SCC) is a degradation mechanism in which steel pipe develops tight cracks through the combined action of corrosion and tensile stress (residual or applied). These cracks can grow or coalesce to affect the integrity of the pipeline. SCC is one of several threats that can impact pipeline integrity. IM regulations in 49 CFR part 192 require that pipeline operators assess covered pipe segments periodically to detect degradation from threats that their analyses have indicated could affect the segment, though not all covered segments are subject to an SCC threat. SCC direct assessment (SCCDA) is an assessment technique that can be used to address this threat.

Section 192.929 specifies requirements for gas transmission pipeline operators who use SCCDA for IM assessments. The requirements in § 192.929 were promulgated before NACE Standard Practice SP0204–2008 was published. They require that operators follow Appendix A3 of ASME/ANSI B31.8S. This appendix provides some guidance for conducting SCCDA, but is limited to SCC that

occurs in high-pH environments. Experience has shown that pipelines also can experience SCC degradation in areas where the surrounding soil has a pH near neutral (referred to as near-neutral SCC). NACE Standard Practice SP0204–2008 addresses near-neutral SCC in addition to high-pH SCC. In addition, the NACE Standard provides technical guidelines and process requirements which are both more comprehensive and rigorous for conducting SCCDA than do § 192.929 or ASME/ANSI B31.8S.

The NACE standard provides additional guidance on:

- The factors that are important in the formation of SCC on a pipeline and what data should be collected;
- Additional factors, such as existing corrosion, which could cause SCC to form;
- Comprehensive data collection guidelines, including the relative importance of each type of data;
- Requirements to conduct close interval surveys of cathodic protection or other above-ground surveys to supplement the data collected during pre-assessment;
- Ranking factors to consider for selecting excavation locations for both near neutral and high pH SCC;
- Requirements on conducting direct examinations, including procedures for collecting environmental data, preparing the pipe surface for examination, and conducting Magnetic Particle Inspection (MPI) examinations of the pipe; and
- Post assessment analysis of results to determine SCCDA effectiveness and assure continual improvement.

NACE SP0204–2008 provides comprehensive guidelines on conducting SCCDA which are commensurate with the state of the art. It is more comprehensive in scope than Appendix A3 of ASME/ANSI B31.8S. PHMSA has concluded the quality and consistency of SCCDA conducted under IM requirements would be improved by requiring the use of NACE SP0204–2008. Revisions to § 192.929 are proposed to address these issues.

§ 192.933 What actions must be taken to address integrity issues?

Section 192.933 specifies those injurious anomalies and defects which must be remediated, and the timeframe within which remediation must occur. PHMSA has determined that the existing rule has gaps, some injurious anomalies and defects are not identified in the rule as requiring remediation in a timely manner commensurate with their seriousness. The proposed rule would designate the following types of anomalies/defects as immediate

conditions: Metal loss greater than 80% of nominal wall thickness; indication of metal-loss affecting certain longitudinal seams; significant stress corrosion cracking; and selective seam weld corrosion. The proposed rule would also designate the following types of anomalies/defects as one-year conditions: Calculation of the remaining strength of the pipe shows a predicted failure pressure ratio at the location of the anomaly less than or equal to 1.25 for Class 1 locations, 1.39 for Class 2 locations, 1.67 for Class 3 locations, and 2.00 for Class 4 locations (comparable to the alternative design factor specified in § 192.620(a)); area of general corrosion with a predicted metal loss greater than 50% of nominal wall; predicted metal loss greater than 50% of nominal wall that is located at a crossing of another pipeline, or is in an area with widespread circumferential corrosion, or is in an area that could affect a girth weld; gouge or groove greater than 12.5% of nominal wall; and any indication of crack or crack-like defect other than an immediate condition.

The methods specified in the IM rule to calculate predicted failure pressure are explicitly not valid if metal exceeds 80% of wall thickness. Corrosion affecting a longitudinal seam, especially associated with seam types that are known to be susceptible to latent manufacturing defects such as the failed pipe at San Bruno, and selective seam weld corrosion, are known time sensitive integrity threats. Stress corrosion cracking is listed in ASME/ANSI B31.8S as an immediate repair condition, which is not reflected in the current IM regulations. PHMSA proposes to add requirements to address these gaps.

With respect to SCC, PHMSA has incorporated repair criteria to address NTSB recommendation P-12-3 that resulted from the investigation of the Marshall, Michigan crude oil accident. From its investigation, the NTSB recommended that PHMSA revise § 195.452 to clearly state (1) when an engineering assessment of crack defects, including environmentally assisted cracks, must be performed; (2) the acceptable methods for performing these engineering assessments, including the assessment of cracks coinciding with corrosion with a safety factor that considers the uncertainties associated with sizing of crack defects; (3) criteria for determining when a probable crack defect in a pipeline segment must be excavated and time limits for completing those excavations; (4) pressure restriction limits for crack defects that are not excavated by the required date; and (5) acceptable

methods for determining crack growth for any cracks allowed to remain in the pipe, including growth caused by fatigue, corrosion fatigue, or stress corrosion cracking as applicable (NTSB recommendation P-12-3). Although the recommendation was focused on part 195, the issue applies to gas pipelines regulated under part 192. PHMSA proposes to allow the use of engineering assessment to evaluate if SCC is significant (and thus categorized as an "immediate" condition), or not significant (and thus categorized as a "one-year" condition), but that an engineering assessment not be allowed to justify not remediating any known indications of SCC. Further, PHMSA proposes to adopt the definition of significant SCC from NACE SP0204-2008.

The current rule includes no explicit metal loss repair criteria for one-year conditions, other than one immediate condition. The rule does direct operators to use Figure 4 in ASME B31.8S to determine non-immediate metal loss repair criteria. PHMSA proposes to repeal the reference to Figure 4, and explicitly include selected metal loss repair conditions in the one-year criteria. These new criteria are consistent with similar criteria currently invoked in the hazardous liquid integrity management rule at 40 CFR 195.452(h). In addition, PHMSA proposes to incorporate safety factors commensurate with the class location in which the pipeline is located, to include predicted failure pressure less than or equal to 1.25 times MAOP for Class 1 locations, 1.39 times MAOP for Class 2 locations, 1.67 times MAOP for Class 3 locations, and 2.00 times MAOP for Class 4 locations in HCAs. Lastly, in response to the lessons learned from the Marshall, Michigan rupture, PHMSA proposes to include any crack or crack-like defect that does not meet the proposed immediate criteria, as a one year condition.

In addition, as a result of its investigation of the Marshall, Michigan crude oil spill, the NTSB recommended that PHMSA revise § 195.452(h)(2), the "discovery of condition," to require, in cases where a determination about pipeline threats has not been obtained within 180 days following the date of inspection, that pipeline operators notify the Pipeline and Hazardous Materials Safety Administration and provide an expected date when adequate information will become available (NTSB recommendation P-12-4). Although the recommendation was focused on part 195, the issue applies to gas pipelines regulated under part 192. Accordingly, PHMSA proposes to

amend paragraph (b) of § 192.933 to require that operators notify PHMSA whenever the operator cannot obtain sufficient information to determine if a condition presents a potential threat to the integrity of the pipeline, within 180 days of completing the assessment.

Lastly, PHMSA proposes to require that pipe and material properties used in remaining strength calculations must be documented in reliable, traceable, verifiable, and complete records. If such records are not available, pipe and material properties used in the remaining strength calculations would be required to be based on properties determined and documented in accordance with § 192.607.

§ 192.935 What additional preventive and mitigative measures must an operator take?

Section 192.935 requires an operator to take additional measures beyond those already required by part 192 to prevent a pipeline failure and to mitigate the consequences of a pipeline failure in a high consequence area (HCA). An operator must conduct a risk analysis to identify the additional measures to protect the high consequence area and improve public safety. As discussed above, PHMSA proposes to amend § 192.917 to clarify the guidance for risk analyses operators use to evaluate and select additional preventive and mitigative measures. In addition, PHMSA has determined that some additional prescriptive preventive and mitigative measures are needed to assure that public safety is enhanced in HCAs and affords greater protections for HCAs. This proposed rule would expand the listing of example preventive and mitigative measures operators must consider, require that seismicity be analyzed to mitigate the threat of outside force damage, and would add specific enhanced measures for managing external corrosion and internal corrosion inside HCAs.

With respect to additional preventive and mitigative measures operators must consider, PHMSA proposes to specify that preventive and mitigative measures include (i) correction of the root causes of past incidents in order to prevent recurrence, (ii) adequate operations and maintenance processes, (iii) adequate resources for successful execution of safety related activities, (iv) additional right-of-way patrols, (v) hydrostatic tests in areas where material has quality issues or lost records, (vi) tests to determine material mechanical and chemical properties for unknown properties that are needed to assure integrity or substantiate MAOP evaluations including material property tests from removed pipe that is

representative of the in-service pipeline, (vii) re-coating of damaged, poorly performing, or disbonded coatings, and (viii) additional depth-of-cover survey at roads, streams and rivers, among others. These example preventive and mitigative measures do not alter the fundamental requirement to identify and implement preventive and mitigative measures, but do provide additional guidance and clarify PHMSA's expectations with this important aspect of integrity management.

Section 29 of the Act requires operators to consider seismicity when evaluating threats. Accordingly, PHMSA proposes to include seismicity of the area in evaluating preventive and mitigative measures with respect to the threat of outside force damage.

With respect to internal corrosion and external corrosion, PHMSA proposes to add new paragraphs (f) and (g) to § 192.935 to specify that an operator must enhance its corrosion control program in HCAs to provide additional protections from the threat of corrosion. More specifically, operators would be required to conduct periodic close-interval surveys, coating surveys, interference surveys, and gas-quality monitoring inside HCAs. The requirements would include specific minimum performance standards for these activities.

Lastly, to conform to the revised definition of "electrical survey," the use of that term in § 192.935 would be replaced with "indirect assessment" to accommodate other techniques in addition to close-interval surveys.

§ 192.937 What is a continual process of evaluation and assessment to maintain a pipeline's integrity?
