(b) Definitions
(1) For the purposes of this AD, shop visit is defined as the removal of the tie-shaft nut from the engine.
(2) For the purposes of this AD, access is defined as the removal of the fan rotor assembly from the engine.
(3) For the purposes of this AD, parts eligible for installation are those fan disks that pass the inspections and are marked with “T43374” adjacent to the P/N or S/N.

(i) Alternative Methods of Compliance (AMOCs)
(1) The Manager, Los Angeles Aircraft Certification Office, FAA, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request.
(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(j) Related Information
(2) For service information identified in this AD, contact Honeywell International Inc., 111 S. 34th Street, Phoenix, AZ 85034–2802; phone: 800–601–3099; Internet: https://myaerospace.honeywell.com/wps/portal/ut/.
(3) For service information on returning the fan disk for inspection identified in SB TFE731–72–5256 of this AD, contact Honeywell International Inc., 111 S. 34th Street, Phoenix, AZ 85034–2802; phone: 800–601–3099; Internet: https://myaerospace.honeywell.com/wps/portal/ut/.
(4) You may view this service information at the FAA, Engine & Propeller Directorate, 1200 District Avenue, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Issued in Burlington, Massachusetts on February 8, 2017.

Carlos A. Pestana,
Acting Manager, Engine & Propeller Directorate, Aircraft Certification Service.

Request for Comment on Possible Changes to Industry Guide 3 (Statistical Disclosure by Bank Holding Companies)

AGENCY: Securities and Exchange Commission.

ACTION: Request for comment.

SUMMARY: The Commission is publishing this request for comment to seek public input as to the disclosures called for by Industry Guide 3, Statistical Disclosure by Bank Holding Companies. The financial services industry has changed dramatically since Guide 3 was first published. Consequently, our disclosure guidance may not in all cases reflect recent industry developments or changes in accounting standards related to financial and other reporting requirements.

DATES: Comments should be received on or before May 8, 2017.

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission’s Internet comment form (http://www.sec.gov/rules/other.shtml);

• Send an email to rule-comments@sec.gov. Please include File Number S7–02–17 on the subject line; or

• Use the Federal eRulemaking Portal (http://www.regulations.gov). Follow the instructions for submitting comments.

Paper Comments

• Send paper comments to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number S7–02–17. This file number should be included on the subject line if email is used. To help us process and review your comments more efficiently, please use only one method of submission. The Commission will post all comments on the Commission’s Web site (http://www.sec.gov/rules/other.shtml). Comments also are available for Web site viewing and printing in the Commission’s Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

FOR FURTHER INFORMATION CONTACT: Lindsay McCord, Associate Chief Accountant in the Office of Chief Accountant, Division of Corporation Finance, at (202) 551–3400, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

IV. Closing
the financial services industry since publication of Guide 3, we are considering modernization of the nature, timing, scope and applicability of Guide 3. We also encourage commenters to consider registrants other than BHC registrants with material amounts of activities in the areas addressed in Guide 3 when responding to this request for comment.

The goal of the Commission’s disclosure system is to ensure that investors receive the information they need to make informed investment and voting decisions. Many of the Commission’s disclosure requirements are found in Regulation S–K, which is the central repository of non-financial statement disclosure requirements, and Regulation S–X, which prescribes the form and content of and requirements for financial statements. These requirements generally apply to all registrants, regardless of industry. In some instances, the Commission has determined that registrants in specific industries, such as bank holding companies, should provide additional disclosures. For example, Subpart 1200 of Regulation S–K7 contains additional disclosure requirements for oil and gas producing companies. The Commission also recently proposed to consolidate the property disclosure requirements for mining registrants in a new Subpart 1300 of Regulation S–K.8 Similarly, the Commission has adopted disclosure requirements and published guidance specific to bank holding companies, such as Article 9 of Regulation S–X (Article 9), which sets forth the Commission’s rules for the form and content of consolidated bank holding company financial statements and bank financial statements included in filings with the Commission.

Industry Guide 3 was first published in 1976 as “a convenient reference to the statistical disclosures sought by the staff of the Division of Corporation Finance in registration statements and other disclosure documents filed by bank holding companies.”11 The Guide 3 release noted that “as the operations of bank holding companies have diversified, it has become increasingly difficult for investors to identify the sources of income of such companies.”12 The Division believed that disclosure of the same statistical information on a regular, periodic basis would assist in assessing their future earning potential and enable investors to compare bank holding companies.13 In drafting Guide 3, the staff was “mindful of the investor’s need to assess uncertainties, the need for disclosure with respect to changes in risk characteristics, and specifically the need for substantial and specific disclosure of changes in risk characteristics of loan portfolios.”14 Consequently, Guide 3 called for “more meaningful disclosure about loan portfolios and related items in filings by bank holding companies”15 than had been generally available prior to implementation of Guide 3. Guide 3 also requests information with respect to a BHC registrant’s foreign operations on the basis that it believes is representative of its foreign activities and the risks associated with such business. The staff’s view was that such “information [would] assist investors to evaluate the potential impact of future economic events upon a registrant’s business and earnings and to assess the ability of a bank holding company to move into or out of situations with favorable or unfavorable risk/return characteristics.”16 In adopting Guide 3, the staff consulted extensively with representatives of the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC) (collectively, U.S. banking agencies), which regulate banking organizations.17 Unless the context dictates otherwise, in this request for comment, when we use the term “banking organizations,” we are referring to national banks, state member banks, Federal savings associations, and top-tier bank holding companies domiciled in the United States not subject to the FRB’s Small Bank Holding Company Policy Statement (12 CFR part 225, appendix C), as well as top-tier savings and loan holding companies domiciled in the United States, except certain savings and loan holding companies that are substantially engaged in underwriting or commercial activities.18 Guide 3 has been amended over time to provide more uniformity and consistency between the Guide and Article 9 and to elicit additional information about various risk elements involved in deposit and lending activities,19 although the last substantive revision of Guide 3 took place in 1986.20

**Purpose of This Request for Comment**

Since the last substantive revisions to Guide 3, the Commission has issued disclosure requirements and guidelines21 and the Financial Accounting Standards Board (FASB)22

---

3. Guide 3 is divided into seven sections, each covering a distinct area of statistical disclosure: (I) Distribution of Assets, Liabilities and Stockholders’ Equity; (II) Interest Rates and Interest Differential; (III) Investment Portfolio; (IV) Summary of Loan Loss Experience; (V) Deposits; (VI) Return on Equity and Assets; and (VII) Short-Term Borrowings.

20. Guide 3's last substantive revision, which added disclosures regarding loans and extensions of credit to borrowers in countries experiencing liquidity problems, occurred in 1986. See Amendments to Industry Guide Disclosures by Bank Holding Companies, Release No. 33–6077 (Nov. 25, 1986) [51 FR 43594].

22. The Commission has broad authority and responsibility under the federal securities laws to prescribe the methods to be followed in the preparation of accounts and the form and content of financial statements to be filed under those laws.
Financial institutions continue to dominate derivatives activity in the U.S. commercial banking system. During the third quarter of 2016, four large commercial banks represented 89.7 percent of the total banking industry notional amounts and 84.4 percent of industry net credit exposure. In this request for comment, we describe each disclosure section in Guide 3 in turn, as well as related disclosures required by Commission rules, U.S. GAAP and the U.S. banking agencies, and we ask for public input about how and to what extent the Guide 3 disclosure regime could be improved. We seek input on new or revised disclosure or the elimination of what may be duplicative or overlapping disclosures in Guide 3. We also seek input on whether any of the Guide 3 disclosures, which are not Commission rules or requirements, should be codified as Commission rules. Because we are considering modernization of the scope and applicability of Guide 3, we also encourage commenters to consider registrants other than bank holding companies when recommending improvements to the disclosure regime.

Sources of Disclosures

In addition to Article 9 and Guide 3, various Commission rules and accounting standards applicable to registrants in all industries govern the disclosures that bank holding companies provide in Commission filings. For example:

- Article 4 of Regulation S-X requires financial statements for domestic registrants to comply with U.S. GAAP, which in turn contains disclosure requirements that apply specifically to the financial services industry.

- Item 303 of Regulation S–K Management’s discussion and analysis of financial condition and results of operations (MD&A), requires a discussion and analysis of the underlying causes of material changes in financial statement line items, as well as the material trends and uncertainties that may have a material impact on a registrant’s results of operations, liquidity or capital resources.

- Item 305 of Regulation S–K Quantitative and qualitative disclosures about market risk, requires disclosures about market risks, including interest rate risk. Interest rate risk is a significant risk for registrants whose balance sheets are concentrated in interest-earning assets and interest-bearing liabilities.

- Item 2.02 of Form 8–K requires registrants that make any public announcement or release material non-public information about their results of operations or financial condition for a completed quarter or annual period to furnish the information as an exhibit to Form 8–K. Among other things, this requirement applies to earnings releases and investor presentations.

A wide range of information is publicly available beyond what is called for by the Commission’s disclosure requirements and guidance. For example:

- The U.S. banking agencies require their regulated banking organizations to file publicly available Consolidated Reports of Condition and Income (Call...
companies and certain consolidated subsidiary depositary institutions thereof are subject to a liquidity coverage ratio (LCR) requirement. The LCR requirement is designed to promote the short-term resilience of the liquidity risk profile of covered organizations, thereby improving the financial services industry’s ability to absorb shocks arising from financial and economic stress, and to further improve the measurement and management of liquidity risk. It requires covered organizations to maintain adequate levels of “high-quality liquid assets.”

Basel III also introduced, and the U.S. banking agencies have proposed, a net stable funding ratio (NSFR) requirement, a liquidity measure that would require large, internationally active banking organizations to maintain sufficient levels of “stable funding” to reduce liquidity risk in the banking system.

Under Basel III, certain banking organizations are subject to public disclosure requirements intended to allow market participants to assess an organization’s capital adequacy (Pillar 3).

The U.S. banking agencies adopted the LCR rule effective January 1, 2015 for large and internationally active banking organizations, generally, bank holding companies, certain savings and loan companies, and deposit institutions with $250 billion or more in total assets or $10 billion or more in on balance sheet foreign exposure and their consolidated subsidiaries that are depository institutions with $10 billion or more in total consolidated assets. In addition, a modified minimum LCR requirement applies to bank holding companies and savings and loan holding companies without significant insurance or commercial activity.

The FRB published the NSFR rule effective January 1, 2018 and is tailored based on organization size, and only those covered organizations that would be subject to the full scope of these tests. DFAST testing and disclosure requirements are significantly reduced for banking organizations with $10 billion to $50 billion in total consolidated assets. See https://www.federalreserve.gov/newsevents/press/bcreg/20150602a1.pdf.

The FRB uses CCAR to assess whether a banking organization has sufficient capital to continue operations in times of economic and financial stress and to ensure that the organization maintains a robust, forward-looking capital planning process that accounts for the unique characteristics of its business.

The FRB publishes the CCAR results, and the FRB generally publishes the DFAST results. These results are published both in summary form and on an organization-by-organization basis.

Public Comments on Guide 3

Over the years, the Commission has continuously evaluated its disclosure system and engaged periodically in rulemakings designed to enhance its disclosure and registration requirements. This request for comment is part of the staff’s broad-based review of the Commission’s disclosure regime. As part of this effort, the staff requested public input generally on how the Commission’s disclosure system could be improved for the benefit of both companies and investors, and a concept release on the business and financial disclosure requirements in Regulation S-K.

Comment letters related to the Regulation S-K Concept release are available at https://www.sec.gov/comments/st-76-16/st7616.htm.
30 of the comment letters submitted in response to these requests addressed Guide 3 specifically or Commission industry guides generally.\textsuperscript{48} Several commenters indicated that the industry guides are helpful and relevant,\textsuperscript{49} and several commenters recommended that the industry guides be updated.\textsuperscript{50} Several commenters recommended that the industry guides be revised to eliminate overlap with U.S. GAAP requirements.\textsuperscript{51} One commenter recommended that the Commission conduct a comprehensive review of the regulatory disclosures applicable to the financial services industry.\textsuperscript{52} Some commenters suggested that to reduce complexity and redundancy, the staff should consider how U.S. GAAP disclosure requirements interplay with Commission disclosure requirements.\textsuperscript{53} Some commenters recommended that the industry guides be codified into Regulation S–K or Regulation S–X,\textsuperscript{54} while other commenters recommended that the guides not be codified.\textsuperscript{55} Three commenters made specific recommendations on the disclosures called for by Guide 3.\textsuperscript{56}

In this request for comment, we are seeking public input as to whether and in which respects the specific quantitative and qualitative disclosures called for by Guide 3 should be modified. Such disclosures include statistical disclosures that enable investors to compare results of operations among BHC registrants and evaluate exposures to risk. Portions of Guide 3 may call for the same or similar information as called for by U.S. GAAP or other regulatory reporting requirements that are not subject to the Commission’s review. We are considering whether our current disclosure regime for BHC registrants continues to elicit the most relevant and important information for investors. To this end, we are seeking to understand better the types of information investors find important and how our current disclosure regime comports with investor expectations as well as industry practice and trends. In addition, we seek to understand to what degree other disclosure regimes, such as those instituted by U.S. banking agencies, may be used by investors.

We also are considering how Guide 3’s disclosures can be most effectively presented from the perspective of both investor protection and promoting efficiency, competition and capital formation.\textsuperscript{57} We also are interested in learning about any challenges that BHC registrants have faced in preparing and providing the categories of information currently covered by Guide 3.

Further, we are considering whether disclosures called for by Guide 3 should be applicable to certain other registrants in the financial services industry.

Request for Comment

1. Does Guide 3 provide important information for investors about BHC registrants? What is the value to investors of the disclosures currently called for by Guide 3?

2. Do the disclosures called for by Guide 3 assist investors with comparing financial condition and results of operations across BHC registrants? Do the disclosures help investors evaluate exposures to risk across BHC registrants?

3. How should the Commission consider the importance of comparability for BHC registrants relative to other industries that do not have defined analytical data or specified disclosures?

4. Which Guide 3 disclosures, if any, should be codified as Commission rules, and why?

5. Excluding Commission filings, on what disclosures (e.g., U.S. banking agency regulatory disclosures) do investors most frequently rely in making investment decisions? How do investors use those disclosures in making investment decisions? How do investors use such disclosures to compare results of operations and evaluate exposures to risks?

6. Should the information from disclosures outside of Commission filings be incorporated into the Commission’s disclosure requirements? Why or why not? If incorporated, how should the information be presented to facilitate investors’ access to such information?

7. Should the disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

II. Applicable Disclosures

In this section, we describe the disclosures currently called for by Guide 3 and other regulatory regimes. Our discussion of U.S. accounting standards and bank regulatory requirements is neither comprehensive nor interpretive, and it emphasizes only current\textsuperscript{58} disclosure requirements, some of which may be modified or eliminated as a result of this request for comment.
of which will or may change in the future. To focus the discussion, this request for comment describes the disclosures applicable to domestic registrants that are not smaller reporting companies or emerging growth companies and that do not provide scaled Guide 3 disclosures. We discuss the applicability of these disclosures to foreign registrants, smaller reporting companies, emerging growth companies and smaller bank holding companies in Section III. We also consider whether disclosures beyond or in lieu of those currently applicable would be important for investors.

A. Distribution of Assets, Liabilities and Stockholders’ Equity; Interest Rate and Interest Differential (Average Balance, Interest and Yield/Rate Analysis and Rate/Volume Analysis)

1. Background

Net interest income represented more than 64% of total net operating revenue for all FDIC-insured institutions for the first three quarters of 2016. Given the significance of net interest income to the results of operations, it is important for investors to understand the reasons for its fluctuations. A BHC registrant’s future earnings depend significantly on present and future economic conditions. Changes in interest rates can have a significant impact on a BHC registrant’s performance, and that impact may not be evident from analyzing historical results alone.

As called for by Guide 3, average balance sheets provide investors with an indication of the balance sheet items that have been most affected by changes in interest rates and an indication of a registrant’s ability to move into or out of situations with favorable or unfavorable risk/return characteristics. For example, an average balance sheet may provide an indication of whether a registrant is asset-sensitive or liability-sensitive. Liability-sensitive BHC registrants that rely heavily on short-term and other rate-sensitive funding sources may experience significant increases in funding costs in a rising interest rate environment. Such BHC registrants may be unable to offset higher funding costs with higher yielding assets, which could result in an adverse impact on net interest margins.

2. Current Guide 3 Disclosures

Section LA of Guide 3 calls for balance sheets that show the average daily balances of significant categories of assets and liabilities, including all major categories of interest-earning assets and interest-bearing liabilities. Section I.B of Guide 3 calls for disclosure of the:

- average yield for each major category of interest-earning asset and interest-bearing liability;
- average yield for each major category of interest-earning asset;
- interest earned or paid on the average amount of each major category of interest-earning asset and interest-bearing liability;
- average rate paid for each major category of interest-bearing liability;
- average yield on all interest-earning assets;
- average effective rate paid on all interest-bearing liabilities; and
- net yield on interest-earning assets.

Section I.C of Guide 3 calls for a rate and volume analysis of interest income and interest expense for the last two fiscal years. This analysis should be segregated by each major category of interest-earning asset and interest-bearing liability into amounts attributable to:

- changes in volume (changes in volume multiplied by the old rate);
- changes in rates (changes in rates multiplied by the old volume); and
- changes in rate/volume (changes in rates multiplied by changes in volume).

3. Other Sources of Information

i. Information Available in SEC Filings as Required by Commission Rules and Accounting Standards

Article 9 prescribes the form and content of consolidated financial statements for bank holding companies and requires presentation of interest income and interest expense separately by type and subtotals of total interest income, interest expense and net interest income on the income statement or in the footnotes to the financial statements. In addition, all registrants must discuss their financial condition, changes in financial condition and results of operations in MD&A, including a narrative discussion of the extent to which any material increases are attributable to increases in price or increases in volume. MD&A requires registrants to describe significant components of revenues or expenses that, in the registrant’s judgment, should be described in order to understand the results of operations. In response to this requirement, some bank holding companies provide an analysis of fluctuations in their interest income and interest expense in MD&A. Another source of income for bank holding companies that may be discussed in MD&A is non-interest income. Because Guide 3 currently does not call for specific disclosures regarding this type of income, we discuss non-interest income as "current" and highlight separately throughout this request for comment standards that have been issued but are not yet effective.

63 For example, in 2016 the FASB issued two new accounting standards that modify the accounting for and disclosure of financial assets and liabilities. See the discussion of these new standards in Sections 2.B.2, 2.C and 2.D of this request for comment.

64 Exchange Act Rule 12b–2 [17 CFR 240.12b–2] defined a non-reporting company as an issuer that is not an investment company, an asset-backed issuer or a majority-owned subsidiary of a parent that is not a smaller reporting company and that has a public float of less than $75 million. If an issuer has zero public float, it is considered a smaller reporting company if its annual revenues are less than $50 million.

65 Section 2(a)(19) of the Securities Act defines an emerging growth company as an issuer that had total annual gross revenues of less than $1 billion during its most recently completed fiscal year. It retains that status for five years after its initial public offering unless its revenues are $1 billion or more, it issues more than $1 billion of non-convertible debt during the previous three-year period, or it qualifies as a large accelerated filer as defined in Exchange Act Rule 12b–2.

66 For bank holding companies with less than $200 million in total assets or less than $10 million of equity, Guide 3 calls for only two years of data, as opposed to three or five years of data, depending on the item, for all other registrants.

67 Unless otherwise indicated, industry-wide percentages used in this request for comment were calculated using information from FDIC Quarterly, which includes data for all FDIC-insured institutions and is available at https://www.fdic.gov/bank/analytical/quarterly/2016_voldrive/4/fdic_voldrive_4q16_quarterly.pdf.

68 Net yield is net interest earnings divided by total interest-earning assets, with net interest earnings equaling the difference between total interest earned and total interest paid.

69 17 CFR 210.9–04. The types of interest income or interest expense include loans, investment securities, trading accounts, deposits, short-term borrowings and long-term debt.
income in Section H. Potential New Disclosures.

Other rule provisions require registrants to provide quantitative and qualitative disclosures about market risk sensitive instruments, both trading and other than trading instruments, that affect their financial condition.\(^71\) Interest rate risk generally is a significant market risk exposure for BHC registrants. These disclosures, made in response to Item 305 of Regulation S–K, are intended to provide issuers with forward-looking information about a registrant’s potential interest rate risk exposure, while the disclosures called for by Item I of Guide 3 focus on the historical effect. Item 305 requires a description of the quantitative impact of market risk and provides flexibility by allowing one or more of the following three disclosure alternatives to be used:

- A tabular presentation of fair value information and contract terms relevant to determining future cash flows, categorized by expected maturity dates.
- A sensitivity analysis expressing potential loss in future earnings, fair values or cash flows from selected hypothetical changes in market rates and prices.
- Value at risk (VaR) disclosures expressing potential loss in future earnings, fair values or cash flows from market movements over a selected period of time with a selected likelihood of occurrence.

Item 305 of Regulation S–K addresses risks arising from changes in interest rates, foreign currency exchange rates, commodity prices, equity prices and other market changes that affect market risk sensitive instruments and was designed to strike a balance between comparability and flexibility of market risk disclosures by prescribing these alternatives without stipulating standardized methods or procedures specifying how to comply with each alternative.\(^72\) Registrants may choose which methods, model characteristics, assumptions and parameters they use in complying with the item, and registrants may use more than one disclosure alternative for each market risk exposure category.\(^73\) Consequently, investors may be unable to compare one registrant to another. The staff has observed that large bank holding companies generally elect to use a combination of disclosure alternatives to present different market risk sensitive instruments. An example of how a bank holding company may use multiple disclosure alternatives for its Item 305 disclosures is to use VaR to quantify market risks for its entire trading portfolio while using a sensitivity analysis to quantify interest rate risk for the other than trading portfolio.

Registrants must describe the disclosure alternative or alternatives they select to assist investors with evaluating the potential effect of variations in a model’s characteristics and assumptions. One consequence of the disclosure alternative approach used in Item 305 is that registrants may provide disclosure using alternatives that differ from the methods they actually use to manage, evaluate and monitor market risk. Commenters have suggested that management’s views about market risk and risk management activities, rather than one of the three prescribed methods, represent the most relevant information for investors.\(^74\) However, when Item 305 was adopted, the Commission believed that a presentation of market risk using a management approach outside of the framework articulated in Item 305 could make it difficult for investors to assess market risk across registrants.\(^75\)

During the last five years, other regulatory agencies and the private sector have given increased attention to market risk disclosures. For example, in 2012 the Financial Stability Board’s Enhanced Disclosure Task Force (EDTF), a private sector group composed of members representing users and preparers of financial reports, recommended that banking organizations provide information that facilitates users’ understanding of the linkages between line items in the balance sheet and income statement with positions included in the market risk disclosures. The EDTF report included 32 recommendations for improving bank risk disclosures in the areas of report usability, risk governance and risk management, capital adequacy, liquidity and funding, market risk, credit risk and other risks.\(^76\)

In addition, the BCBS has focused on whether banking organizations have sufficient capital to cover possible losses due to interest rate changes.\(^77\) According to the BCBS, adverse movements in interest rates can pose a significant threat to a bank’s current capital base and/or future earnings. However, U.S. GAAP does not require a presentation or disclosure of net interest earnings or average balance sheets. Nearly five years ago, the FASB proposed the following standardized quantitative interest rate risk disclosures:

- The carrying amount of classes of financial assets and liabilities segregated according to time intervals based on the contractual repricing of the financial instruments;
- the weighted-average contractual yield by class of financial instrument and time interval as well as the duration for each class of financial instrument;
- an interest rate sensitivity table showing the effects on net income and shareholders’ equity of specified hypothetical, instantaneous shifts of interest rate curves as of the measurement date;
- a discussion of the significant changes and reasons for those changes related to the timing and amounts of financial assets and liabilities in the tabular disclosures from the last reporting period to the current reporting period along with any action taken to manage the exposure related to the changes; and
- additional qualitative or narrative disclosure, as necessary, for understanding of exposure to interest rate risk.\(^78\)

During the FASB Exposure Draft’s development, the FASB received feedback from users that it was imperative that liquidity and interest rate disclosures be comparable and that standardized quantitative disclosures provide more decision-useful information than non-standardized disclosures. Although initiated, in part, as a response to these comments, the

---

\(^71\) Items 305(a) and 305(b) of Regulation S–K [17 CFR 229.305(a) and 305(b)]. For purposes of Items 305(a) and 305(b), market risk sensitive instruments include derivative financial instruments, other financial instruments and derivative commodity instruments. Each of these terms is defined in General Instruction 3 to Items 305(a) and 305(b).

\(^72\) See Disclosure of Market Risk Sensitive Instruments Release.

\(^73\) Market risk exposure categories include interest rate risk, foreign currency exchange rate risk, commodity price risk and other relevant market risks.

\(^74\) See, e.g., CAQ Letter and KPMG Letter.

\(^75\) The Commission noted that, in adopting Item 305, it sought to strike a balance between the views of commenters seeking a “management approach” and those supporting a more consistent reporting framework for the sake of comparability. See Disclosure of Market Risk Sensitive Instruments Release.

\(^77\) The proposed disclosures would have applied only to entities or reportable segments for which the primary business activity is to (i) earn, as a primary source of income, the difference between interest income generated by earning assets and interest paid on borrowed funds or (ii) provide insurance. See Proposed Accounting Standards Update—Financial Instruments (Topic 825): Disclosure About Liquidity Risk and Interest Rate Risk (Jun. 27, 2012) (FASB Interest Rate Risk Exposure Draft), available at www.fasb.org.

majority of respondents to the FASB Exposure Draft. 84% of whom were preparers, did not support the proposed disclosures. Most respondents stated that standardizing information about interest rate risk would not be achieved by the proposals. Some commenters questioned whether standardization was an appropriate objective and whether it could ever be achieved. The liquidity risk and interest rate risk project was last updated in November 2012 and is not on the FASB’s active standard-setting agenda.

ii. Information Available Outside of SEC Filings

Banking organizations must report segregated information about interest income and interest expense and quarterly averages of certain balance sheet items in their Call Reports. While banking organizations are not required to report all balance sheet line items or subtotals of interest-earning assets and interest-bearing liabilities, the Call Report categories for reporting interest income, interest expense and quarterly averages are more disaggregated than what is called for by Guide 3.

Request for Comment

8. Do the distribution of (i) assets, liabilities and stockholders’ equity; (ii) interest rates and (iii) interest differential disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in providing these disclosures or that investors or analysts face in utilizing these disclosures?

9. Do Commission rules or U.S. GAAP require the same or similar information on the distribution of (i) assets, liabilities and stockholders’ equity; (ii) interest rates and (iii) interest differential disclosures as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

10. What improvements could we make to the disclosures called for by Section I of Guide 3? For example, should we require disclosure about how BHC registrants present the effects of hedging of interest rate risk? Should we consider enhancing quantitative interest-rate risk disclosures? If so, what guidance, if any, should we provide to BHC registrants about the presentation?

11. Are there additional interest income and interest expense disclosures that would be important for investors that we should consider? In suggesting additional disclosures, please indicate whether BHC registrants would face any challenges in preparing and providing them. Please describe specifically the evidentiary basis for your knowledge of the challenges faced by BHC registrants in providing such disclosures. In your response, please assess the benefits of such disclosures to investors against the regulatory burdens to BHC registrants.

12. Recognizing the differences between more prescriptive and standardized disclosure requirements, which allow for more comparability, and more principles-based disclosure requirements, which allow registrants to provide disclosures more closely aligned with how their business is managed, would more prescriptive and standardized disclosures about market risks for BHC registrants beyond those called for by Item 305 of Regulation S–K be important for investors? If so, how should we revise our current disclosures? For example, should we limit the disclosure alternatives or assumptions these BHC registrants can use by market risk and/or trading versus other than trading portfolios in Item 305?

13. Alternatively, should we eliminate the prescribed market risk disclosure alternatives in Item 305 for BHC registrants and instead require them to provide market risk disclosures based on the methods they actually use to manage risk? Does the benefit of providing disclosure about the way management assesses market risk outweigh any lack of comparability of these disclosures across BHC registrants for an investor?

14. Should we require any of the interest rate risk disclosures proposed in the FASB’s 2012 Exposure Draft in our filings? If so, which ones, and why?

15. Should we revise our market risk disclosures for BHC registrants to better align the disclosures to the financial statements, capital adequacy or other metrics? If so, what revisions should we consider and why?

16. Should we consider requiring that the distribution of (i) assets, liabilities and stockholders’ equity; (ii) interest rates and (iii) interest differential disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

17. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

18. Should the categories used for disaggregation of these Guide 3 disclosures be closely aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

19. Should we require disclosure of the interest income and expense information provided in Call Reports or other regulatory filings? If so, what information and why?

20. Should the distribution of (i) assets, liabilities and stockholders’ equity; (ii) interest rates and (iii) interest differential disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

B. Investment Portfolio

1. Background

The investment portfolio typically is an important component of BHC registrants’ total assets. Due to a recent trend of deposits outpacing lending, investment portfolios have expanded in recent years and now represent a much greater percentage of the total assets of FDIC-insured institutions. In addition, compliance with the LCR requirements may require some large, internationally active banking organizations to alter the mix of assets in their investment portfolios or revise their investment strategies so as to maintain sufficient amounts of investments that meet the definition of “high-quality liquid assets.” At September 30, 2016,
investment securities constituted nearly 21% of the total assets of all FDIC-insured institutions.\textsuperscript{84} Banking organizations typically use their investment portfolios to provide balance sheet liquidity, to generate income and to engage in risk management and market-making. U.S. GAAP currently classifies investment securities into three categories: Trading securities, held-to-maturity (HTM) securities and available-for-sale (AFS) securities.\textsuperscript{85} Trading securities include securities acquired for the purpose of selling them within hours or days and securities for which this category has been elected. HTM securities are limited to securities that a registrant has the positive intent and ability to hold to maturity. Securities not classified as trading or HTM are classified as AFS securities. Both trading and AFS securities are measured at fair value on the balance sheet, whereas HTM securities are measured at amortized cost.

In 2016, the FASB issued two new accounting standards for financial instruments.\textsuperscript{86} ASU 2016–01 will change the accounting guidance for equity investments, but does not affect the recognition and initial measurement of investments in debt securities.\textsuperscript{87} This guidance is effective for registrants in fiscal years beginning after December 15, 2017. ASU 2016–13 will change U.S. GAAP disclosure requirements for investment securities.\textsuperscript{88} Guide 3 investment portfolio disclosures provide investors with insight into the types of investments a BHC registrant holds, the earnings potential of those investments and their risk characteristics. For example, the weighted average yield for a category of securities allows investors to calculate estimated future earnings potential for that category of securities. Disclosures about significant amounts of investments in one or a small number of issuers also alert investors to concentration risks.

2. Current Guide 3 Disclosures

Section II.A of Guide 3 calls for disclosure of the book value of investments by specified category as of the end of each reported period. Section II.B calls for a maturity analysis for each category of investments as of the end of the latest reported period, as well as the weighted average yield for each range of maturities.\textsuperscript{90} When the aggregate book value of securities from a single issuer exceeds 10% of stockholders’ equity as of the end of the latest reported period, Section II.C calls for disclosure of the name of the issuer and the aggregate book value and aggregate market value of those securities.

3. Other Sources of Information

i. Information Available in SEC Filings as Required by Commission Rules and Accounting Standards

Article 9 requires disclosure of investment securities either on the balance sheet or in the footnotes to the financial statements. Article 9 also currently requires footnote disclosure of the carrying value and market value of securities by specified category, while Guide 3 calls for disclosure of book value.\textsuperscript{91} Accounting standards have similar disclosure requirements, although the disclosures required by U.S. GAAP are more extensive than those required by Guide 3.\textsuperscript{92} For example, U.S. GAAP currently requires the following disclosures for AFS securities by major security type:\textsuperscript{93}

- Amortized cost basis;
- Aggregate fair value;
- Total other-than-temporary impairment (OTTI) recognized in accumulated other comprehensive income (AOCI);
- Total gains for securities with net gains in AOCI;
- Total losses for securities with net losses in AOCI; and
- Information about the contractual maturities as of the date of the most recent balance sheet presented.\textsuperscript{94}

U.S. GAAP requires similar disclosures for HTM securities, except that gross unrecognized holding gains and losses also must be disclosed.\textsuperscript{95} U.S. GAAP also requires a maturity analysis of both AFS and HTM securities, but it does not require disclosure of weighted average yields.\textsuperscript{96} ASU 2016–13, when effective for registrants in fiscal years after December 15, 2019, will not significantly change the disclosure requirements described above, except that it will require disclosure of the

\textsuperscript{84} See FDIC Quarterly.

\textsuperscript{85} See ASC 320–10–10.

\textsuperscript{87} ASC 320–10–50–2 defines nine security types that entities specified by Guide 3 categories.

\textsuperscript{88} ASC 320–10–50.

\textsuperscript{89} ASC 320–10–50–1B notes that major security types should be based on the nature and risks of the security and that an entity should consider all of the following when considering whether disclosure for a particular security type is necessary: (a) Shared activity or business sector, (b) vintage, (c) geographic concentration, (d) credit quality, and (e) economic characteristics. ASC 942–320–50–2 defines nine security types that entities within its scope must present in their investment disclosures and the list is more granular than the Guide 3 categories.

\textsuperscript{90} ASC 320–10–50–2. These disclosures will no longer be required for equity securities upon the effectiveness of ASU 2016–01 as equity securities that have readily determinable fair values (except those accounted for under the equity method of accounting or those that result in consolidation of the investor) will be measured at fair value with changes in fair value recognized in net income.

\textsuperscript{91} 17 CFR 210.9–03. The investment categories specified by Article 9 are the same as those specified by Guide 3. In July 2016, the Commission proposed to amend certain of its disclosure requirements, including Article 9, that may have become redundant, duplicative, overlapping, outdated, or superseded, in light of other Commission disclosure requirements, U.S. GAAP, IFRS, or changes in the information environment. Specifically, the investment securities disclosure in Article 9 was proposed for elimination. See Disclosure Update and Simplification, Release No. 33–10110 (July 13, 2016) [81 FR 51607] (Disclosure Update and Simplification Release).

\textsuperscript{92} See ASC 320–10–50.

\textsuperscript{93} ASC 320–10–50–18 notes that major security types should be based on the nature and risks of the security and that an entity should consider all of the following when considering whether disclosure for a particular security type is necessary: (a) Shared activity or business sector, (b) vintage, (c) geographic concentration, (d) credit quality, and (e) economic characteristics. ASC 942–320–50–2 defines nine security types that entities within its scope must present in their investment disclosures and the list is more granular than the Guide 3 categories.

\textsuperscript{94} ASC 320–10–50–2.
allowance for credit losses rather than OTTI.

U.S. GAAP also requires disclosures related to asset quality and impairment of investment securities.\textsuperscript{97} For example, registrants must disclose the aggregate fair value of investments with unrealized losses and the amount of those losses, segregated by those that have been in a continuous unrealized loss position for 12 months or longer and those that have not, as well as qualitative and quantitative information about impairments. When registrants conclude that it is not necessary to record OTTI for these investment securities, U.S. GAAP requires that they describe the factors considered in reaching that conclusion.\textsuperscript{98} When OTTI is recorded in earnings, registrants must disclose the methodology and significant inputs they used to measure the credit loss and include a roll-forward\textsuperscript{99} of the amount of credit losses recognized in earnings. When ASU 2016–13 becomes effective, the credit quality and impairment disclosures described above will continue to apply to AFS securities, but not HTM securities. Instead, the credit quality and allowance for credit losses disclosures discussed below in Sections C.3 and D.3 will apply to HTM securities.\textsuperscript{100}

U.S. GAAP also requires disclosures about fair value measurements for securities measured at or written-down to fair value.\textsuperscript{101} These disclosures include the valuation techniques and inputs used to develop the fair value measurements, the observability of the inputs used, quantitative information about significant unobservable inputs and the effect of those fair value measurements using significant unobservable inputs on earnings or other comprehensive income for the period.

The Division staff has observed that some BHC registrants discuss the composition of and fluctuations in their investment portfolio in MD&A.\textsuperscript{102} These BHC registrants also discuss critical accounting estimates\textsuperscript{103} related to their investment portfolios in MD&A, which may include fair value measurements and the determination of OTTI.\textsuperscript{104} Some BHC registrants, especially the largest ones, often publish and furnish in a current report on Form 8–K supplements to their earnings releases that provide detailed information about the investment portfolio not required by U.S. GAAP, including information about the duration of the portfolio, management’s investment strategy or how new regulations may affect the portfolio. Some BHC registrants also provide detailed information about credit ratings or the valuation of specific investments that may be at risk of impairment or were impaired during the period.

i. Information Available Outside of SEC Filings

Banking organizations are required to report the amortized cost and fair value of both HTM and AFS securities by security type in Call Reports.\textsuperscript{105} Banking organizations also report maturity and repricing data for debt securities and the amounts of income and loss recognized during the period.\textsuperscript{106} Banking organizations must also report regulatory capital components and ratios, including the categorization of investment securities by risk weights in Call Reports.\textsuperscript{107}

In addition, Pillar 3 disclosures require information about how banking organizations measure credit and market risks in their investment portfolios, along with the associated risk weights of investment portfolio assets.\textsuperscript{108} For example, they must quantify the credit risk exposure of their investment portfolio.

Request for Comment

21. Do the investment portfolio disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in providing these disclosures or that investors or analysts face in utilizing these disclosures?

22. Do Commission rules or U.S. GAAP require the same or similar investment portfolio information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

23. What improvements to the existing investment portfolio disclosures should we consider that would assist investors in making investment and voting decisions? For example, should investment securities that are measured at fair value with changes in fair value recorded in earnings, such as trading securities, fall within the scope of our investment portfolio disclosures? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

24. To promote comparability and consistency of investment portfolio disclosures, should we specify the investment categories that BHC registrants must present when providing their investment portfolio disclosures?\textsuperscript{109} Why or why not? If so, which investment categories should we specify?

25. While investors do not have experience with the disclosures that will be required by ASU 2016–13, is there information about HTM securities and impairment that would be important for investors under an expected credit loss model? If so, please indicate which information and indicate whether BHC registrants would face any challenges in preparing and providing the information.

26. In addition, is there information about AFS securities that would be important for investors when

\textsuperscript{97} Id.

\textsuperscript{98} OTTI is considered to have occurred if (a) an entity intends to sell an impaired security, (b) it is more likely than not that an entity will be required to sell an impaired security before the recovery of its amortized cost basis, or (c) a credit loss is determined to have occurred based on an analysis of the present value of expected cash flows. ASC 320–10–35.

\textsuperscript{99} A “roll-forward” is a reconciliation of beginning of period and end of period line item balances.

\textsuperscript{100} See ASU 2016–13. The new standard still requires a roll-forward of credit losses for HTM securities and a discussion of how the allowance for credit losses was determined. The new standard also includes prescriptive disclosure requirements for loans that do not apply to HTM securities. For example, a registrant is not required to present credit quality indicators for HTM securities by year of origination.

\textsuperscript{101} ASC 820–10–50.

\textsuperscript{102} Item 303 of Reg. S–K requires registrants to discuss their financial condition and material changes in financial condition. It also requires a description of internal and external sources of liquidity, and any material unused sources of liquid assets.

\textsuperscript{103} In the Interpretive Guidance on MD&A, the Commission reminded registrants that they should address the material implications of uncertainties associated with the methods, assumptions and estimates underlying their critical accounting measurements.

\textsuperscript{104} See Staff Accounting Bulletin Topic 5:M—Other Than Temporary Impairment of Certain Investments in Equity Securities. The OTTI guidance for equity securities will no longer apply when ASU 2016–01 is adopted.

\textsuperscript{105} Call Report Schedule RC–B, Securities, identifies more security types than Guide 3.

\textsuperscript{106} Banking organizations may omit the maturity and repricing data for certain branches or subsidiaries located in foreign countries in Call Report Schedule RC–B. A banking organization may exclude its foreign branches or subsidiaries if the assets of the excluded locations combined do not exceed 50% of its total assets in foreign countries and 10% of its total consolidated assets.

\textsuperscript{107} Banking organization’s assets and off-balance sheet exposures are risk-weighted based on the assigned categories of risk. Call Report Schedule RC–K, Regulatory Capital.

\textsuperscript{108} See Regulatory Capital Rules Release, Section XI, Market Discipline and Disclosure Requirements.

\textsuperscript{109} While most accounting standards include guidance about disaggregation, the requirements are principles-based instead of prescriptive.
impairment is reflected through an allowance for credit losses instead of OTTI? If so, please indicate which information and whether BHC registrants would face any challenges in preparing and providing the information. For example, upon adoption of ASU 2016–13, should we require disaggregation of the AFS securities allowance for credit losses roll-forward by security type?

27. Should we consider requiring that the investment portfolio disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

28. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

29. Should the categories used for disaggregation of these Guide 3 disclosures be closely aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

30. Should we require disclosure of the investment information provided in Call Reports or other regulatory filings? If so, what information and why?

31. Should the investment portfolio disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

C. Loan Portfolio

1. Background

Loans often constitute a banking organization’s most significant assets and generate a significant portion of revenues. At September 30, 2016, total loans and leases constituted 55% of total assets of all FDIC-insured institutions. Loan portfolio compositions differ considerably because lending activities are influenced by many factors, including the type of banking organization, management’s objectives and philosophies about diversification and credit risk management, the availability of funds, credit demand, interest-rate margins and regulations. A banking organization’s loan portfolio may consist of consumer loans, such as residential real estate, credit card and auto loans, as well as commercial loans, such as commercial real estate loans, lease financings and wholesale loans. Different types of loans have different risk characteristics. For example, commercial loans tend to have shorter maturities than residential real estate loans and are more likely to have balloon payments at maturity. Further, the composition of a particular banking organization’s loan portfolio may vary substantially over time due to factors such as changes in regulations or management philosophies. For example, if management expects interest rates to rise, it may seek to increase the banking organization’s offerings of variable-rate mortgages.

To address risks related to the loan portfolio and the allowance for loan losses, the Commission issued Accounting Series Release No. 166 in 1975, which was the precursor to Guide 3’s loan portfolio and loan loss experience disclosures. Among other things, ASR No. 166 provided for the disclosure of information necessary to enable investors to understand the nature and the status of loan portfolios, including a breakdown sufficient to provide investors with insight into investment policies, lending practices and portfolio concentrations. The release also called for consideration of expanded disclosures when loans considered doubtful as to collectability have materially increased, or there have been large increases in delinquent loans, or in loans extended or renegotiated under adverse conditions.

In 2010, the FASB issued updated disclosure guidance that greatly expanded the loan credit quality disclosures required by U.S. GAAP. Loan portfolio disclosures provide investors with information about the types of lending in which a registrant engages, and one objective of the FASB’s amendments was to increase the transparency of the nature of credit risk inherent in the loan portfolio. Further, disclosures of trends in early stage delinquencies can be an early-warning indicator of deteriorating credit quality.

2. Current Guide 3 Disclosures

Section III.A of Guide 3 calls for disclosure of the amount of loans in each specified category as of the end of each period.

Section III.B calls for a maturity analysis for each category of loans as of the end of the latest reported period and a separate presentation of all loans due after one year with fixed interest rates versus those with floating or adjustable interest rates.

Section III.C.1 calls for disclosure of the aggregate amount of domestic and foreign loans in each of the following categories:

- Loans accounted for on a nonaccrual basis;
- Loans accruing but contractually past due 90 days or more as to principal or interest payments; and
- Loans classified as troubled debt restructurings (TDRs)

116 Id.

117 The specified categories are, for domestic loans: (1) Commercial, financial and agricultural, (2) real estate—construction, (3) real estate—mortgage, (4) installment loans to individuals, and (5) lease financing, and for foreign loans: (6) Governments and official institutions, (7) banks and other financial institutions, (8) commercial and industrial, and (9) other. The loan categories specified in Guide 3 originally conformed to those required in Call Reports but were changed when Guide 3 was amended in 1980 to conform to the loan categories set forth in Article 9. 1980 Guide 3 Amendments Release.

120 The term “nonaccrual” is not defined in U.S. GAAP or Commission rules. Call Report instructions, however, generally require an asset to be reported as nonaccrual if: (1) It is maintained on a cash basis because of deterioration in the financial condition of the borrower, (2) payment in full of principal or interest is not expected, or (3) principal or interest has been in default for a period of 90 days or more unless the asset is both well secured and in the process of collection. Certain loans, such as consumer loans and purchased credit-impaired loans, are not placed on nonaccrual status as discussed in the nonaccrual definitions section of Call Report Schedule RC–N–2. Guide 3 also calls for and U.S. GAAP also requires disclosure of the nonaccrual policy.

121 Under U.S. GAAP, a restructuring of a debt is a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider.
otherwise disclosed as being on nonaccrual status or past due 90 days or more. 

Section III.C.2 calls for descriptions of the nature and extent of any potential problem loans at the end of the most recent reported period and the policy for placing loans on nonaccrual status. The instructions to Section III.C.2 call for disclosure of the amount outstanding in each foreign country, as well as the aggregate amount of outstandings to borrowers in any foreign country. Guide 3 states that each country should be identified and that the amounts outstanding should be quantified.

Section III.C.3 calls for disclosure of the aggregate amount of cross-border outstanding loans to borrowers in each foreign country where they exceed 1% of total assets. These disclosures should be provided by category of foreign borrower specified in Section III.A. Where current conditions in a foreign country give rise to liquidity problems that are expected to have a material impact on the timely repayment of principal or interest on the country’s private or public sector debt, Guide 3 calls for:

- A description of the nature and impact of the developments;
- An analysis of the changes in aggregate outstandings to borrowers in each country for the most recent reported period;
- Quantitative information about interest income and interest collected during the most recent period; and
- Quantitative information about any outstandings that may be subject to a restructuring.

Section III.C.4 calls for disclosure as of the end of the most recent reported period of any concentration of loans exceeding 10% of total loans not otherwise disclosed as a category of loans pursuant to Section III.A.

Section III.D calls for disclosure as of the end of the most recent reported period of the nature and amount of any other interest-bearing assets that would be disclosed under Section III.C.1 or III.C.2 if those assets were loans.

3. Other Sources of Information

i. Information Available in SEC Filings as Required by Commission Rules and Accounting Standards

Article 9 requires separate disclosure of total loans and unearned income on the balance sheet or in the footnotes for the same loan categories specified in Guide 3. Similar to Guide 3, Article 9 allows bank holding companies latitude in determining loan categories. Article 9 also requires disclosures about loans made to certain related parties and the aggregate amount of those loans that are disclosed as nonaccrual, past due, restructured or potential problem loans.

U.S. GAAP and Guide 3 have some similar loan presentation and disclosure standards. U.S. GAAP requires major categories of loans to be presented separately either on the balance sheet or in the financial statement footnotes.

Although U.S. GAAP does not specify loan categories, it does require that qualitative and quantitative credit quality information be provided for each class of financing receivable, except loans measured at fair value, under the fair value option, and loans held for sale measured at lower of cost or fair value. These disclosures include:

- A description of each credit quality indicator;
- The recorded investment in financing receivables by credit quality indicator; and
- The date or range of dates in which information was updated for each credit quality indicator.

Currently and after implementation of ASU 2016–13, U.S. GAAP requires disclosure, by class of financing receivable, of the same information as specified in Sections III.C.1(a) and (b) of Guide 3 and an aging analysis of past due financing receivables. ASU 2016–13 will increase the credit quality-related disclosures for loans. For example, it will require registrants to present credit quality indicator disclosures by year of origination and require additional disclosures about loans on nonaccrual status. The disclosures about loans on nonaccrual status will include the amortized cost basis at both the beginning and end of the reporting period and the amortized cost basis for those nonaccrual loans without a related allowance for credit losses. In addition, disclosures will be required by class of financing receivable due to collateral-dependent loans and the collateral that secures them.

In addition, both Guide 3 and U.S. GAAP, now and after the adoption of ASU 2016–13, call for disclosure of the following accounting policies:

- Placing financing receivables on nonaccrual status;
- Recording payments received on nonaccrual financing receivables;
- Resuming accrual of interest; and
- The recorded investment in financing receivables.

U.S. GAAP uses the term “financing receivable,” and a loan is considered a type of financing receivable. A class of financing receivable is defined as a group of financing receivables determined on the basis of all of the following: (a) Initial measurement attribute (for example, amortized cost), (b) risk characteristics of the financing receivable, and (c) an entity’s method for monitoring and assessing credit risk.

A credit quality indicator is defined as a statistic about the credit quality of financing receivables.

ASC 310–10–50.

The disclosures required for collateral-dependent financial assets include descriptions of (1) the type of collateral, (2) the extent to which collateral secures the asset, and (3) significant changes in the extent to which collateral secures the asset, whether because of general deterioration or some other reason.
determining past due or delinquency status for each class of financing receivable.\textsuperscript{136} Currently, U.S. GAAP also requires the following disclosures, by class of financing receivable, for impaired loans: \textsuperscript{137}

- The accounting policy for recognizing interest income, including how cash receipts are recorded;
- the accounting policy for determining which loans are individually assessed for impairment and the factors considered in determining that a loan is impaired;
- as of each balance sheet date, the recorded investment segregated by the amount for which there is a related allowance versus the amount for which there is no related allowance, and the total unpaid principal balance of impaired loans; and
- for each period, the average recording investment in impaired loans, the amount of interest income recognized while the loans were impaired and, if practicable, the amount of interest income recognized using a cash-basis method of accounting.\textsuperscript{138} ASU 2016–13 will eliminate the impaired loan concept and the above related disclosures.\textsuperscript{139}

U.S. GAAP also requires qualitative and quantitative information, by class of financing receivable, about TDRs for each period for which an income statement is presented. For example, for TDRs occurring during the period, registrants must disclose how the financing receivables were modified and the financial effects of the modifications. In addition, for TDRs that were completed within the previous 12 months and subsequently have payment defaults during the reporting periods, registrants must disclose the types and amounts of financing receivables that defaulted.\textsuperscript{140} Registrants also must disclose the amount of commitments, if any, to lend additional funds related to any, to lend additional funds related to

call for disclosures specific to TDR activity during the period, but calls for disclosure of the total balance of TDRs as of the end of the period. U.S. GAAP also requires specific disclosures about loans acquired with deteriorated credit quality\textsuperscript{142} for each balance sheet presented.\textsuperscript{143}

The Division staff has observed that bank holding companies often discuss their loan portfolios and focus on changes in portfolio composition, delinquencies and nonperforming or restructured loans in the results of operations section of MD&A. The Division staff also has observed that BHC registrants with material amounts of nonaccrual loans sometimes provide a reconciliation of the beginning and ending balances of those loans, although they are not required by Commission rules to do so. As described previously, ASU 2016–13 will require disclosure of the beginning and ending nonaccrual loan balances, but will not require disclosure of activity during the period. Information about activity during the period may help investors understand remediation efforts related to the portfolio and changes in credit quality. Therefore, we are considering whether we should require disclosure of activity during the period in addition to beginning and ending balances.

BHC registrants also may discuss higher-risk loans and declines in collateral value when they are reasonably expected to have a material impact on results of operations, liquidity or capital resources.\textsuperscript{144} For example, disclosures about mortgage banking activities, including carrying amount, originations, purchases and sales for both first lien and junior lien loans.\textsuperscript{149}

provisions and allowance for loans losses. \textsuperscript{146} For example, the allowance to loan ratios may be adjusted or more disaggregated than for BHC registrants. See disclosure guidance providing the Division’s views regarding disclosure related to registrants’

For example, the allowance to loan ratios may exclude credit cards and loans acquired with deteriorated credit quality. Registrants also may adjust credit quality statistics for significant sales, litigation settlements or regulatory changes.

Call Report Schedule RC–P, Family Residential Mortgage Banking Activities, must be completed by (1) all banks with $1 billion or more in total assets, and (2) banks with less than $1 billion in total assets with greater than $10 million in mortgage banking activities (determined based on

\textsuperscript{136} ASC 310–30–50.
\textsuperscript{137} See ASC 310–10–35–13 for the scope of loans evaluated individually for impairment. A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. TDRs are also considered impaired loans in accordance with ASC 310–40–35–10 but are not required to be included in the impaired loan disclosures in years after the restructuring as long as the criteria in ASC 310–40–50–2 are met.
\textsuperscript{138} ASC 310–30–50. For the cash-basis method of accounting, income is recognized only when the interest payment is received.
\textsuperscript{139} We discuss the ASU 2016–13 changes to the allowance and related disclosures in Section II.D below.
\textsuperscript{140} ASC 310–40–50.
\textsuperscript{141} ASC 310–40–50.
\textsuperscript{142} ASC 310–30–30. These are loans that were acquired with evidence of deteriorated credit quality since their origination and for which it was probable, at acquisition, that the acquirer would be unable to collect all contractually required payments. Because these loans are identified as having credit risk at the time of acquisition, the accounting treatment is different than for newly originated loans. Any cash flows in excess of those expected at acquisition are recognized as interest income on a level-yield basis over the life of the loan.
\textsuperscript{143} ASC 310–30–50 requires the following disclosures: Outstanding balance and related carrying amount of the loans at the beginning and end of the period; the amount of accretable yield at the beginning and end of the period, reconciled for additions, accretion, disposals of loans and reclassifications to/from nonaccrual and nonaccrue; and the carrying amount of loans acquired with deteriorated credit quality for which income is not being recognized because the timing and amount of cash flows expected to be collected cannot be reasonably estimated.
\textsuperscript{144} ASU 2016–13 revises these disclosures to require a reconciliation of the difference between the purchase price and the fair value of the assets and removes the requirements described above.
\textsuperscript{145} The Division has provided guidance in the form of a sample comment letter regarding

Continued
Banking organizations also must report regulatory capital components and ratios, including the categorization of loans by risk weights.\(^{150}\) Pillar 3 disclosures include a description of how banking organizations subject to the disclosure requirements \(^{151}\) measure credit risk in their loan portfolios, how they mitigate those risks and the associated regulatory risk weights of the assets. For example, these organizations must provide quantitative credit risk disclosures \(^{152}\) based on geography, industry and/or counterparty type. If a banking organization uses its own internal credit risk estimates, such as the probability of default, exposure at default and loss given default, those measures must be disclosed.\(^{153}\)

**Request for Comment**

32. Do the loan portfolio disclosures called for by Guide 3 provide investors with information upon which they base investing decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in providing these disclosures? or that investors or analysts face in utilizing these disclosures?

33. Do Commission rules or U.S. GAAP require the same or similar loan information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

34. What improvements to the existing loan disclosures should we consider that would be important for investors? For example, should loans held-for-sale or loans carried at fair value under the fair value option fall within the scope of our loan portfolio disclosures? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

35. How do investors use the TDR disclosures called for by Guide 3 for investment decisions? Is the basis for a modification (i.e., credit risk management purposes versus commercial or other reasons) important in assessing the risk elements in a BHC registrant’s loan portfolio?

36. Should we require disclosures of all loan modifications by type of modification and/or credit quality of borrower? Would BHC registrants face any challenges in preparing and providing these disclosures?

37. To promote comparability and consistency, should we prescribe the level of disaggregation that BHC registrants should employ for their loan portfolio disclosures?\(^{154}\) If so, what threshold should be used and why?

38. Should the categories used for disaggregation of these Guide 3 disclosures be closely aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

39. While investors do not have experience with the disclosures that will be required by ASU 2016–13, is there information about loans that would be important for investors under an expected credit loss model? If so, please indicate which information and whether BHC registrants would face any challenges in preparing and providing the information? For example, upon effectiveness of ASU 2016–13, should we require disclosure of the current period activity for nonaccrual loans since the new standard will require disclosure of the beginning and ending nonaccrual balances only?

40. Should we consider requiring that the loan portfolio disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

41. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

42. Should we require disclosure of the loan information provided in Call Reports or other regulatory filings? If so, what information and why?

43. Should the loan portfolio disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

**D. Summary of Loan Loss Experience**

1. **Background**

BHC registrants generally accept and manage significant amounts of credit risk, and most of their credit losses traditionally have come from loans and declines in the value of collateral underlying loans. The allowance for loss losses is a critical accounting estimate and is a primary focus of management, investors and the U.S. banking agencies. This discussion focuses on the allowance for loan loss methodology currently required by U.S. GAAP and highlights the significant changes that will occur once the new standard, ASU 2016–13, becomes effective.\(^{155}\)

A BHC registrant’s methodology for estimating loan losses is influenced by many factors, including the its size, organizational structure, business environment and strategy, loan portfolio characteristics, loan administration procedures and management information systems.\(^{156}\) Most methodologies for estimating loan losses include a risk classification process that involves categorizing loans into risk categories or ratings.\(^{157}\) U.S. GAAP also requires management to consider all available information reflecting past events and current conditions when developing its estimate of loan losses.\(^{158}\)

Because estimating loan losses involves

\(^{153}\) The effectively current guidance for recognizing credit losses includes ASC 310–10–35–4, which states that an impairment is recognized when it is probable that a loss has been incurred. The new standard replaces the current incurred loss methodology with a methodology that reflects expected credit losses, ASU 2016–13 is not effective for registrants until fiscal years beginning after December 15, 2018, unless early adoption is elected. Early adoption is permitted for annual periods beginning after December 15, 2018, and interim periods therein.

\(^{155}\) The categorization normally is based on relevant information about the ability of borrowers to service their debt, such as current financial information, historical payment experience, credit documentation, public information and current trends.

\(^{156}\) ASC 310–10–35. Examples of available information include existing industry, geographical, economic and political factors that are relevant to the collectibility of a loan.
a high degree of management judgment, the Commission issued a financial reporting release and the staff issued an accounting bulletin that provides its views on the development, documentation and application of a systematic methodology for determining an allowance for loan losses. ASU 2016–13, once effective, will replace the current incurred loss methodology with a methodology that reflects expected credit losses and will require consideration of a broader range of reasonable and supportable information to inform credit loss estimates. The new methodology will require registrants to use forward-looking information, in addition to past events and current conditions, when developing their estimates. In addition, it will not specify a method for measuring expected credit losses and will allow registrants to apply methods that reasonably reflect their expectations of the credit loss estimate. As a result of the broader range of items to consider and the required use of forward-looking information, the FASB expanded the disclosure requirements related to financial instruments and impairments. Loan loss disclosures, like those required by U.S. GAAP, provide investors with information about how a registrant analyzes and assesses credit risk when determining the allowance for loan losses and the reasons for any changes in how it determines the allowance. ASU 2016–13, once effective, will add new policy disclosures regarding the changes in the factors that influenced management’s current estimate of expected credit losses and reasons for significant changes in the amount of write-offs. In addition, ASU 2016–13 will require disclosures related to the forecasted information management used in developing its allowance for credit losses. U.S. GAAP currently requires disclosure of the allowance for loan losses and the related investment in financing receivables to which the allowance pertains, disaggregated on the basis of a registrant’s impairment methodology. Both before and after adoption of ASU 2016–13, U.S. GAAP requires a roll-forward of the activity in the allowance for loan losses for each period by portfolio segment. Both before and after adoption of ASU 2016–13, U.S. GAAP requires qualitative information, by portfolio segment, about the impact of TDRs on the allowance for loan losses. For TDRs occurring during each period for which an income statement is presented, U.S. GAAP requires disclosure of how the modifications were factored into the determination of the allowance for loan losses. Similarly, for TDRs that were completed within the previous 12 months and subsequently have payment defaults during the reporting periods, U.S. GAAP requires disclosure of how the defaults were factored into the determination of the allowance for loan losses. U.S. GAAP currently also requires specific disclosures about the impact that loans acquired with deteriorated credit quality have on the allowance for loan losses in periods subsequent to acquisition. For example, U.S. GAAP currently requires disclosure of the amount of any additions or reductions to the allowance for loan losses resulting from changes in estimated cash flows expected to be collected over the life of those loans, as well as the amount of the allowance pertaining to those loans at the beginning and end of the period. Since ASU 2016–13 requires the allowance methodology for all loans to reflect the current estimate of expected credit losses, it eliminates this disaggregation requirement. The staff has observed that some bank holding companies present their Guide 3 roll-forward using their U.S. GAAP portfolio segments instead of the loan categories specified in Guide 3 or Article 9 because Guide 3 provides latitude in determining loan categories. Currently under U.S. GAAP, an allowance for loan losses is not recorded upon the acquisition of loans acquired with deteriorated credit quality. These loans are initially recorded at fair value, which factors in an estimate of expected credit losses. An allowance may subsequently be required to the extent that there is an adverse change in the estimated cash flows expected to be collected over the life of the loan.

To disaggregate the required information on the basis of the impairment methodology, U.S. GAAP provides that a registrant shall disclose the following amounts: (a) Amounts collectively evaluated for impairment, (b) amounts individually evaluated for impairment, and (c) amounts related to loans acquired with deteriorated credit quality. See ASC 310–10–50–11C.

Since ASU 2016–13 requires the allowance methodology for all loans to reflect the current estimate of expected credit losses, it eliminates this disaggregation requirement. The staff has observed that some bank holding companies present their Guide 3 roll-forward using their U.S. GAAP portfolio segments instead of the loan categories specified in Guide 3 or Article 9 because Guide 3 provides latitude in determining loan categories. Currently under U.S. GAAP, an allowance for loan losses is not recorded upon the acquisition of loans acquired with deteriorated credit quality. These loans are initially recorded at fair value, which factors in an estimate of expected credit losses. An allowance may subsequently be required to the extent that there is an adverse change in the estimated cash flows expected to be collected over the life of the loan.

U.S. GAAP currently also requires specific disclosures about the impact that loans acquired with deteriorated credit quality have on the allowance for loan losses in periods subsequent to acquisition. For example, U.S. GAAP currently requires disclosure of the amount of any additions or reductions to the allowance for loan losses resulting from changes in estimated cash flows expected to be collected over the life of those loans, as well as the amount of the allowance pertaining to those loans at the beginning and end of the period. Since ASU 2016–13 requires the allowance methodology for all loans to reflect the current estimate of expected credit losses, it eliminates this disaggregation requirement. The staff has observed that some bank holding companies present their Guide 3 roll-forward using their U.S. GAAP portfolio segments instead of the loan categories specified in Guide 3 or Article 9 because Guide 3 provides latitude in determining loan categories. Currently under U.S. GAAP, an allowance for loan losses is not recorded upon the acquisition of loans acquired with deteriorated credit quality. These loans are initially recorded at fair value, which factors in an estimate of expected credit losses. An allowance may subsequently be required to the extent that there is an adverse change in the estimated cash flows expected to be collected over the life of the loan.
the required disclosures because, under the new methodology, these loans will be recorded with an allowance for credit losses at the acquisition date. Therefore, there no longer will be separate disclosures related to changes in expected cash flows for these loans, but the roll-forward of the allowance by portfolio segment will include a separate line for the allowance recorded at acquisition. The staff has observed that bank holding companies consider their methodology for determining the allowance for loan losses, when it could have a material impact on the financial condition or operation performance, to be a critical accounting estimate and provide a discussion of the material implications of uncertainties associated with their allowance methodology and assumptions in MD&A. These bank holding companies also discuss material fluctuations in their provision and allowance for loan losses in MD&A. The Division has provided its views on the appropriate disclosure in MD&A related to the allowance for loan losses methodology, which includes the following information:

- The historical loss data used as the starting point for estimating current losses;
- how economic factors affecting loan quality are incorporated into the allowance estimate;
- the level of specificity used to group loans for purposes of estimating losses;
- the application of loss factors to risk-rated loans; and
- any other estimation methods and assumptions used.

ii. Information Available Outside of SEC Filings

Banking organizations must report the amount of loans charged off against the allowance for loan losses during the period, as well as the amount of recoveries of loans previously charged off by specified loan category in Call Reports. Banking organizations also must provide a reconciliation of the allowance for loan losses on an aggregate basis. This requirement is similar to the disclosures called for in Section IV.A of Guide 3, except that write-downs arising from transfers of loans to held for sale and any other adjustments must also be reported in the Call Reports. Banking organizations must disclose in their Call Reports the amount of allowance for loan losses established due to decreases in cash flows expected to be collected on loans acquired with deteriorated credit quality. Banking organizations with $1 billion or more in total assets also must report disaggregated data on the allowance for loan losses and the related recorded investment in loans. This requirement is similar to the U.S. GAAP requirement.

Pillar 3 disclosures provide qualitative and quantitative information about the allowance for loan losses that are more detailed than the disclosures called for by Guide 3 and U.S. GAAP. For example, qualitative disclosures include a description of the approaches used to determine the allowance for loan losses, the statistical methods used and an explanation of the internal rating system and its relationship with external ratings by loan type. Quantitative disclosures include actual losses for the preceding period for each loan category, including how the amounts differ from past experience or the banking organization’s estimates of losses compared to actual losses over a longer period.

Request for Comment

44. Do the summary of loan loss experience disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in preparing and providing these disclosures or that investors or analysts face in utilizing these disclosures?

45. Do Commission rules or U.S. GAAP require the same or similar loan loss experience information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

46. What improvements to the existing summary of loan loss experience disclosures should we consider that would be important for investors? For example, should BHC registrants disclose the qualitative portion of their allowance or details about their allowance methodology, such as adjustments made due to existing economic conditions? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

47. To promote comparability and consistency, should we prescribe the level of disaggregation that BHC registrants should employ for their summary of loan loss disclosures? If so, what threshold should be used and why?

48. Should the categories used for disaggregation of these Guide 3 disclosures be closely aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

49. While investors do not have experience with the disclosures that will be required by ASU 2016–13, is there information about loan impairment that would be important for investors under an expected credit loss model? If so, please indicate which information and whether BHC registrants would face any challenges in preparing and providing the information? For example, upon effectiveness of ASU 2016–13, should we require separate disclosure of the amount of provision that relates to loans originated during the period in the allowance for credit losses roll-forward? Why or why not?

50. Should we require any of the suggested disclosures from the 2009 Sample MD&A Letter? Why or why not? If so, which disclosures should we require and what challenges, if any, would BHC registrants face in preparing and providing them? For example, should we require the disclosure suggestions related to changes in practices such as the historical loss data used as the starting point for estimating current losses?

51. Should we consider requiring that the summary of loan loss experience disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures

174 In the Interpretive Guidance on MD&A, the Commission reminded registrants that they should address the material implications of uncertainties associated with the methods, assumptions and estimates underlying their critical accounting measurements.

175 Sample MD&A Letter. The Division is considering the impact that ASU 2016–13 will have on these disclosures and will take into consideration comments received in response to this request for comment as part of its analysis.

176 The loan categories specified by Call Report Schedule RI–B, Charge-offs and Recoveries on Loans and Leases and Changes in Allowance for Loan and Lease Losses, are consistent with those specified by Schedule RC–C.

177 Loans held for sale are measured at lower of cost or fair value. Therefore, when a loan measured at amortized cost is transferred to the held for sale category, it may result in a write-down.

178 Memoranda Item 4 in Schedule RI–B.

179 The loan categories specified by Call Report Schedule RI–C, Disaggregated Data on the Allowance for Loan and Lease Losses, represent general categories that best correspond to the characteristics of the related loans and leases, rather than the standardized loan categories defined in Schedule RC–C.

180 Pillar 3 instructions do not prescribe the period used for this assessment, but define the period as “a period sufficient to allow for meaningful assessment of the performance of the internal ratings processes.”
should be tagged so that they can be extracted in a structured data format.

52. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

53. Should we require disclosure of any loan loss experience disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

E. Deposits

1. Background

Deposits are generally the most significant liability on an FDIC-insured institution’s balance sheet, and interest paid on deposits generally represents a large portion of expenses. As of September 30, 2016, deposits represented 76% of the total liabilities and capital of all FDIC-insured institutions.181 During times of economic stress, insured retail deposits have proven to be the most reliable funding source and, therefore, play an integral role in mitigating liquidity risk during crisis scenarios.182 FDIC-insured institutions can also generate funds by acquiring brokered deposits,183 which typically are obtained through arrangements with securities brokerage firms. The use of brokered deposits allows FDIC-insured institutions to raise large amounts of funds quickly with a predetermined maturity structure.

Brokered deposits, however, are highly rate-sensitive and when they mature institutions need to match prevailing market rates to roll-over or renew them. FDIC rules limit access to brokered deposits for insured institutions that are not “well capitalized” for purposes of the applicable regulatory capital requirements.184

Deposit disclosures, together with the level of other undisclosed funding sources,185 may provide transparency with respect to a registrant’s sources of funding and liquidity risk profile. Disclosures about significant amounts of deposits from a small number of depositors also could indicate concentration risk. For example, disclosures about a BHC registrant’s reliance on brokered deposits as a source of funding may inform investors that the BHC registrant’s cost of funding could increase quickly when the brokered deposits mature.

2. Current Guide 3 Disclosures

Section V.A of Guide 3 calls for presentation of the average amounts of and the average rates paid for specified deposit categories that exceed 10% of average total deposits.186 Most BHC registrants provide this disclosure by disaggregating the deposit categories in the average balance sheet required by Section I of Guide 3. Section V.A also calls for disclosure of the aggregate amount of deposits by foreign depositors in U.S. offices, if material. Sections V.D and V.E of Guide 3 focus on the disclosures of time certificates of deposits and other time deposits in amounts of $100,000 or more.187 Section V.D calls for a maturity analysis of time deposits,188 and Section V.E calls for disclosure of time deposits in excess of $100,000 issued by foreign offices.189

184 12 CFR 337.6.

185 ASC 942–470–50–3 requires disclosures related to debt agreements and Section VII of Guide 3 calls for disclosures about short-term borrowings as described below in Section II.G.

186 The specified deposit categories are: (1) Noninterest-bearing demand deposits, (2) interest-bearing demand deposits, (3) savings deposits, (4) time deposits, (5) deposits of banks located in foreign countries including foreign branches of other U.S. banks, (6) deposits of foreign governments and official institutions, (7) other foreign demand deposits, and (8) other foreign time and savings deposits. Categories (1) to (4) are deposits in U.S. banks offices and categories (5) to (8) are deposits in foreign bank offices. Other categories may be used for U.S. bank offices if they more appropriately describe the nature of the deposits.

187 The $100,000 thresholds were established in 1976 when the FDIC insurance limit was $40,000.

188 The ranges of maturities are by time remaining until maturity: (1) 3 months or less, (2) over 3 through 6 months, (3) over 6 through 12 months, and (4) over 12 months.

189 If the aggregate of certificates of deposit and time deposits over $100,000 issued by foreign offices represents a majority of total foreign deposit liabilities, this disclosure need not be provided if a statement to that effect is provided.

3. Other Sources of Information

i. Information Available in SEC Filings

As part of the standard-setting process for ASU 2016–01, in 2013 the FASB proposed a definition of “core deposit liabilities” and related disclosures.194 The proposal would have required registrants with core deposit liabilities to disclose the following by significant type of core deposit account:

• The core deposit liability balance;
• The implied weighted-average maturity period; and
• The estimated all-in-cost-to-service rate.195

The FASB did not include these disclosures in the final standard due to

181 See FDIC Quarterly.

182 See page 15 of OCC, Comptroller’s Handbook—Liquidity (June 2012). Retail deposits include demand, savings and time deposits. In addition, retail deposits are assigned a low outflow rate of 3–10% for purposes of the LCR calculations whereas the rates for other types of liabilities (e.g., unsecured wholesale funding provided by a financial sector entity) may be as high as 100%.

183 As defined by the FDIC, brokered deposits are deposits accepted through a “deposit broker” or “any person engaged in the business of placing deposits, or facilitating the placement of deposits, of third parties with insured depository institutions for the purpose of selling interests in those deposits to third parties.” See Frequently Asked Questions Regarding Identifying, Accepting, and Reporting Brokered Deposits on the FDIC’s Web site for additional information, available at https://www.fdic.gov/news/news/financial/2015/fil15051b.pdf.
input from financial statement preparers indicating that the cost of providing the information would be significant and that they could result in the disclosure of proprietary information. In addition, respondents expressed concern that the disclosures would not be comparable because the definition of core deposit liabilities would be based on management’s determination. Because the respondents to the FASB proposal consisted mostly of preparers and included only one user, we are seeking feedback about whether there are additional disclosures about deposits, such as those considered by the FASB, that would be important for investors.

The staff has observed that BHC registrants generally discuss in MD&A material changes to or key metrics for deposits when deposits are a material source of liquidity. For example, many BHC registrants discuss loan-to-deposit ratios and some present this information by reportable segment. They also generally include a discussion of deposits as a source of funding, including a description of deposit inflows and outflows during the period, in the liquidity section of MD&A. Some include total deposits or time deposits in the maturity of contractual obligations table.

ii. Information Available Outside of SEC Filings

Banking organizations must separately report deposits held at U.S. bank offices and deposits held at foreign bank offices in their Call Reports. Maturity data for brokered deposits, time deposits less than $100,000, time deposits of $250,000 and time deposits of $250,000 or more must also be provided. Banking organizations must also provide quarterly average balances of interest-bearing deposit transaction accounts and non-transaction accounts in Call Reports. Call Reports contain more information about deposits and categorize deposits by more and sometimes different factors than Guide 3. For example, banking organizations must provide information about whether deposits are insured or uninsured and the intended uses of the deposit products in Call Reports.

Request for Comment

55. Do the deposit disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in preparing these disclosures or that investors or analyst face in utilizing these disclosures?

56. Do Commission rules or U.S. GAAP require the same or similar deposits information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

57. What improvements to the existing deposits disclosures should we consider that would be important for investors? For example, should BHC registrants disclose the amount and maturity of brokered deposits? Should we require disclosures about core deposits and, if so, what disclosures? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

58. How do investors use the time deposit disclosures? Should we retain the $100,000 threshold for these disclosures or should we change it to another threshold, such as the FDIC insurance limit? Why or why not?

59. Should we require disclosure of an estimate of the quantitative and qualitative benefits of using government guaranteed deposits?

60. Should we consider requiring that the deposit disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

61. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

62. Should the categories used for disaggregation of these Guide 3 disclosures be closely aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

63. Should we require disclosure of any deposit information provided in Call Reports or other regulatory filings? If so, what information and why?

64. Should the deposit disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

F. Return on Equity and Assets

1. Background

Financial ratios allow investors to compare registrants in the same industry. Section VI of Guide 3 calls for disclosure of four specific ratios. Two are profitability ratios, one is an indicator of how much capital a BHC registrant returns to investors, and the other is an indicator of solvency. While useful to investors for comparing BHC registrants and making investment decisions, the ratios called for by Guide 3 are not specific to the financial services industry. Moreover, Guide 3 does not call for other industry-specific ratios, other than the ratio of net charge-offs to average loans outstanding in Section IV.A. Examples of industry-specific ratios that investors may use to evaluate BHC registrants and make investment decisions include the efficiency ratio, allowance for loan losses to total loans, and total nonaccrual loans to total loans. Although not specifically referenced in Guide 3, BHC registrants generally disclose these ratios. We are considering whether specific ratio disclosures for BHC registrants would be important for investors or whether these BHC registrants already disclose the ratios that are important for investors in response to Regulation S–K requirements.

2. Current Guide 3 Disclosure Requirements

Section VI of Guide 3 calls for the following ratios for each reported period:

- Return on assets (ROA);
- Return on equity (ROE);
- Dividend payout ratio; and
- Equity to assets ratio.

The efficiency ratio measures the proportion of net operating revenues that are absorbed by overhead expenses, so that a lower value indicates greater efficiency. FDIC Quarterly.

Instruction 1 to Section VI calls for a dual presentation of the return on equity and equity to...
Instruction 2 of Section VI indicates that BHC registrants should provide any other ratios they deem necessary to explain their operations.

3. Other Sources of Information

No other Commission rules, U.S. accounting standards or bank regulatory requirements specifically require disclosure of the four ratios included in Guide 3. These ratios, however, can be calculated using financial information disclosed in Commission filings. ROA, ROE and equity to assets can be derived from amounts reported on the income statement and the average balance sheet called for by Section I.A of Guide 3.205 BHC registrants also generally disclose their ROA and ROE ratios in their earnings releases. The dividend payout ratio can be calculated based on the disclosures required by Article 3 of Regulation S-X.206 Also, although Commission rules do not specifically require these ratios, the Interpretive Guidance on MD&A highlights the potential need for disclosure of industry-specific or key performance measures when they are used to manage the business and would be material to investors.

Bank holding companies also disclose non-GAAP measures in Commission filings. For example, they commonly present non-GAAP versions of ROE, return on average equity, and book value per common share using tangible equity207 instead of shareholders’ equity. Another common non-GAAP measure used by bank holding companies is taxable equivalent interest income and the related net interest margin.208 In addition, banking organizations are subject to a minimum “leverage ratio” requirement as part of their regulatory capital requirements.

assets ratios if mandatorily redeemable preferred stock is outstanding. The dual presentation provides the ratios calculated both with and without preferred stock.

205 In the case of average amounts, current and prior year amounts presented on the balance sheet can be used to calculate the average.

207 Tangible equity is not defined in Commission rules or U.S. GAAP. Generally, tangible common equity is U.S. GAAP shareholders’ equity minus any intangible asset (such as deferred costs or goodwill), net of deferred tax liabilities.

208 Net interest income is adjusted to reflect tax-exempt income on an equivalent before-tax basis with a corresponding increase in income tax expense. See Staff Accounting Bulletin Topic 11.G—Tax Equivalent Adjustment in Financial Statements of Bank Holding Companies (SAB Topic 11.G) for additional discussions related to tax equivalent adjustments.

The leverage ratio and its inputs are reported on the Call Report.209 Request for Comment 65. Do the return on equity and assets disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in providing these disclosures or that investors or analysts face in utilizing these disclosures?

66. Do Commission rules or U.S. GAAP require the same or similar ratios as called for by Guide 3? If so, how are the ratios similar or dissimilar?

67. What improvements to the existing return on equity and assets disclosures should we consider that would be important for investors? For example, should we require other industry-specific ratios, such as nonaccrual loans to total loans, and if so, which ones? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

68. What non-GAAP financial measures do BHC registrants disclose? Which of these measures help make investment decisions and why? Should we require disclosure of any of these measures to enhance the comparability of information for investors?

69. Are there any bank regulatory capital metrics, such as risk-weighted assets or liquidity ratios, that BHC registrants are not already required to disclose under accounting standards or Commission rules? What potential issues could we be required to disclose and what issues would be important for investors? If so, which ones and how do investors use them?

70. Banking organizations often are afforded a transition period to comply with new bank regulatory capital metric requirements. For recently issued accounting standards that have not yet been adopted, registrants generally discuss the potential effects of adoption in registration statements and reports filed with the Commission.210 However, there is no related disclosure guidance for bank capital metrics that have been issued but not yet implemented. Would

209 Tier 1 leverage ratio is calculated by dividing Tier 1 capital, as defined by the U.S. banking agencies, by average total consolidated assets. Call Report Schedule RC–R: Regulatory Capital.

disclosure of the calculation of a new metric provide important information for investors even before the organization is required to comply with the requirement? What challenges, if any, would BHC registrants face in preparing and providing it?

71. Should we consider requiring that the return on equity and assets disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

72. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

73. Should the return on equity and assets disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

G. Short-Term Borrowings

1. Background

BHC registrants often use short-term borrowings to supplement their deposits and diversify their funding sources. Short-term funds may include federal funds transactions,211 repurchase agreements,212 commercial paper,213 traditional loans from other banks, and any other short-term borrowings reflected on the BHC registrant’s balance sheet.214 Federal funds transactions can be an important tool for managing liquidity, while repurchase agreements can provide a cost-effective source of funds and may allow a BHC registrant to leverage its securities portfolio for liquidity and funding needs. Short-term borrowings and the reliance on them for financing are especially important to the liquidity of many of the largest BHC registrants.

211 The federal fund rate is the interest rate that banks charge one another for borrowing funds overnight. Federal funds are excess funds that banks deposit with the FRB for lending to other banks.

212 ASC 860–10 defines a repurchase agreement as an arrangement under which a dealer (repo party) transfers a security to a transferee (repo counterparty or reverse party) in exchange for cash and concurrently agrees to reacquire the security at a future date for an amount equal to the cash exchanged plus a stipulated interest factor.

213 Commercial paper consists of short-term promissory notes issued primarily by corporations. Maturities range up to 270 days but average about 30 days.

214 17 CFR 210.9–03.13(3).
and, industry-wide, may have a global impact on the financial markets and systemic stability. Illiquidity in the markets as a whole can affect short-term borrowings, sometimes severely and rapidly, which can present increased risks for registrants that rely heavily on short-term borrowings as a funding source. Because of these potential risks, banking regulators across the globe have focused on liquidity and funding sources and have adopted new liquidity measures, such as the LCR and NSFR requirements. These new liquidity measures are designed to create incentives for certain large banking organizations to fund their activities with more stable sources of funding, which may cause banking organizations to replace some of their short-term borrowings, like federal funds purchased, with long-term debt. For example, the NSFR generally is calibrated assuming that long-term liabilities are more stable than short-term liabilities.215

A BHC registrant’s use of short-term borrowings can fluctuate significantly during a reporting period. As a result, the presentation of period-end amounts alone may not accurately reflect a BHC registrant’s funding needs or use of short-term borrowings during the period.

The Guide 3 short-term borrowings disclosures provide investors with information beyond the period-end borrowings balance. These disclosures focus on the activity in short-term borrowings and related interest expense throughout the period and may help investors better understand the role of this form of financing and its related risks to BHC registrants.

2. Current Guide 3 Disclosures

Section VII of Guide 3 calls for the following short-term borrowings disclosures by category:

- The period-end amount outstanding;
- the average amount outstanding during the period; and
- the maximum month-end amount outstanding.216

Section VII also calls for disclosure, by category of borrowing, of the weighted average interest rates at period-end and during the period, and the general terms of the borrowing. The disclosures in Section VII need not be provided for categories of short-term borrowings for which the average balance outstanding during the period was less than 30% of stockholders’ equity at the end of the period.

3. Other Sources of Information

i. Information Available in SEC Filings as Required by Commission Rules and Accounting Standards

Article 9 requires separate disclosure of the period-end balances of federal funds purchased and securities sold under agreements to repurchase, commercial paper and other short-term borrowings on the face of the financial statements or in the footnotes.217 U.S. GAAP requires disclosure of period-end balances of significant categories of borrowings.218 U.S. GAAP also requires disclosures about repurchase agreements and securities lending transactions. For example, BHC registrants must reconcile the amount of the gross liability for repurchase agreements and securities lending transactions accounted for as secured borrowings to the net liability amount presented on the balance sheet.219

The staff has observed that BHC registrants typically discuss their sources of funding and outstanding borrowings in their liquidity section of MD&A. In 2010, the Commission issued interpretive guidance on liquidity and capital resources disclosures that highlighted important trends and uncertainties related to liquidity for registrants to consider in their MD&A disclosures.220 The guidance noted as examples of trends and uncertainties the reliance on commercial paper or other short-term financing arrangements for liquidity and intra-period variations in borrowings in circumstances where borrowings during the period are materially different than the period-end amounts. The guidance also specifically indicated that bank holding companies should consider additional MD&A disclosures, including their policies and practices for meeting applicable bank regulatory guidance on funding and liquidity risk management, or any policies and practices that differ from applicable bank regulatory guidance.

Regulation S–K also requires a discussion of off-balance sheet arrangements when the arrangements have or are reasonably likely to have a current or future effect on the registrant’s financial condition, results of operations, liquidity, capital expenditures or capital resources that is material to investors.221 When these disclosures were adopted in 2003, the definition of “off-balance sheet arrangement” focused on the means through which registrants typically structure off-balance sheet transactions or otherwise incur risks of loss that are not fully transparent to investors. For example, a registrant sometimes provides financial support as part of its involvement in activities of an unconsolidated entity.222 Commenters on the Regulation S–K Concept Release expressed differing views about whether the Commission should retain, expand or eliminate this disclosure item. One commenter recommended expanding it to include detailed information about the underlying assets of asset-backed securities.223 Commenters often cited redundancy with disclosures required by U.S. GAAP as the reason for eliminating the disclosure requirement.224 We are considering whether there are disclosures about off-balance sheet arrangements specific to BHC registrants that investors find important. Further, we are considering whether disclosures about off-balance sheet arrangements should be considered for other registrants in the financial services industry.

Short-term borrowing levels and deposit levels also factor into the LCR calculation, because it is based on projected cash outflows during a 30-day stress period.225 Banking organizations subject to the LCR requirement typically disclose whether or not they comply with the rule in their Commission filings. We are considering whether to require additional quantitative and qualitative disclosures about funding and liquidity risks.

216 Section VII refers to Rule 9–04, 11 for categories of short-term borrowings. The correct reference, however, is Rule 9–03.13. Registrants often provide the average short-term borrowings disclosures as part of their average balance sheet disclosures.

224 See, e.g., Chamber Letter; SIFMA Letter; KPMG LLP; Davis Polk Letter; and Financial Services Roundtable Letter.

225 See LCR Adopting Release.
ii. Information Available Outside of SEC Filings

Banking organizations must report the year-end balance, quarterly average balances and interest expense on federal funds purchased and securities sold under agreements to repurchase, and other borrowings in their Call Reports.226 Global systemically important bank holding companies (GSIBs) are subject to a risk-based capital surcharge in excess of their minimum capital requirements.227 One of the methods for calculating the risk-based surcharge focuses on a GSIB’s reliance on short-term wholesale funding because reliance on this type of funding may cause vulnerability to runs and fire sales. Pillar 3 disclosures discuss risks related to borrowings and liquidity and include borrowings as an input to certain disclosure requirements, including the LCR and GSIB risk-based capital surcharge.

Request for Comment

74. Do the short-term borrowings disclosures called for by Guide 3 provide investors with information upon which they base investment and voting decisions? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? Are there any particular issues that BHC registrants face in providing these disclosures or that investors or analysts face in utilizing these disclosures?

75. Do Commission rules or U.S. GAAP require the same or similar short-term borrowing information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

76. What improvements to the existing short-term borrowings disclosures should we consider? For example, should BHC registrants discuss the degree of reliance on wholesale or short-term funding sources? Should they describe the nature, timing, and extent of volatile short-term funding? In suggesting improvements, please indicate whether BHC registrants would face any challenges in preparing and providing the disclosures.

77. Are there disclosures about off-balance sheet arrangements in the financial services industry that investors find important? If so, which disclosures? Would such information otherwise be provided under Commission rules (e.g., Regulation S–K) or U.S. GAAP? If not, in what manner should these disclosures be provided? Are there quantitative and qualitative disclosures that would add transparency about ongoing liquidity risk exposure for BHC registrants? For example, should BHC registrants describe the liquidity risks arising from their assets, derivatives and off-balance-sheet activities? If so, what disclosures would be important for investors and in what manner should they be provided? For example, should we require these BHC registrants to disclose their compliance with and the calculation of their bank regulatory LCR?

78. What non-GAAP financial measures do BHC registrants provide concerning short-term funding? Should we require BHC registrants to disclose any of these measures to enhance the comparability of information for investors?

80. Do the short-term borrowings disclosures properly balance the benefits to investors and the costs to BHC registrants? If no, why?

81. Should we consider requiring disclosure of a liquidity mismatch index (MMI)228 or other measure of maturity mismatch for BHC registrants? If so, what measure would be useful for investors in making investment decisions?

82. Should we consider requiring that the short-term borrowings disclosures called for by Guide 3 be presented in a structured data format, such as XBRL, to facilitate investor comparison of data across BHC registrants and usability of the disclosures? Why or why not? If so, what elements of these disclosures should be tagged so that they can be extracted in a structured data format?

83. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

84. Should the categories used for disaggregation of these Guide 3 disclosures be aligned with those called for in Call Reports and other U.S. banking agency regulatory filings? If so, which ones and why?

85. Should the short-term borrowings disclosures called for by Guide 3 be extended to other registrants, such as those engaged in the financial services industry? If so, which registrants and which disclosures?

H. Potential New Disclosures

As originally published, Guide 3 focused on eliciting what the Division of Corporation Finance believed at the time to be the most significant statistical disclosures relating to the operations of bank holding companies. Over the intervening four decades, and particularly following the passage of the Gramm-Leach-Bliley Act,229 which repealed certain provisions of the Glass-Steagal Act,230 the scope of activities permitted to bank holding companies has expanded significantly. For example, today, some bank holding companies and financial holding companies may engage in operations involving physical commodities, insurance, investment management, asset management and broker-dealer activities that were limited or impermissible at the time of Guide 3’s initial publication.

We are considering whether and to what extent refinement of Guide 3 to account for the shifting landscape of the financial industry would yield important information for investors in their evaluation of BHC registrants. Part of this shifting landscape is supervisory or regulatory in nature. For example, in recent years CCAR, DFAST and resolution planning were implemented for certain large banking organizations.231 Consequently, we are seeking input about the effects of regulation on BHC registrants, including with regard to their operations, capital structures, dividend policies and treatment in bankruptcy.

We also are mindful of how our disclosure regime interacts with the various disclosure requirements of the U.S. banking agencies. In some cases, our disclosure regime and the regimes of the U.S. banking agencies require different types of information or present information in inconsistent ways;
other cases, the various regimes may overlap with or duplicate one another. Guide 3 was originally intended to conform to the information required in reports to the U.S. banking agencies to the “fullest extent possible, consistent with the public interest and the protection of investors,” although gaps between the two regimes have formed over the decades. We are interested in understanding the interrelationships between the securities and banking disclosure regimes, how they differ and whether and how the existing banking disclosures can be leveraged to improve our own disclosure regime. We are cognizant of the fact that securities and banking disclosures serve different purposes in light of the different missions of their respective regulatory regimes. Where our disclosure regime serves our core missions of investor protection, fair, orderly, and efficient markets, and capital formation, the U.S. banking agency regulatory regime is premised largely on ensuring safety and soundness of banking organizations.

Guide 3 disclosures currently focus on interest-earning and interest-bearing activities and do not address other revenues that a BHC registrant may earn. Non-interest income represented more than 35% of total net operating revenue for FDIC-insured institutions for the first three quarters of 2016. Examples of non-interest income include trading revenue, fee income from deposits and servicing income. Given the significance of non-interest income, it is important for investors to understand the reasons for its fluctuations. Non-interest income, generally, is a material component of net operating revenue for large FDIC-insured institutions. Trading revenues accounted for more than 24% of net operating revenues for FDIC-insured institutions, with more than $250 billion in assets for the first three quarters of 2016, but accounted for approximately 1% of net operating revenues for FDIC-insured institutions with less than $1 billion in total assets. Banking organizations must report disaggregated information about their noninterest income activity in Call Reports. We are considering whether to expand Guide 3 to include disclosures on non-interest income activities.

We also are considering whether or not more prescriptive disclosures not related specifically to the financial statements would be important for investors. An example is risk management disclosure. In May 2012, the Financial Stability Board established the EDTF with the goal of improving risk disclosures in the financial services industry. In October 2012, the EDTF published a report containing a number of recommendations for enhancing risk disclosures. Since 2012, the EDTF has published additional recommendations for enhancing disclosures and status reports on the implementation of the 2012 recommendation. Several of the EDTF’s recommended disclosures are already addressed by Commission rules, accounting standards or U.S. banking agency disclosure requirements. Some of the EDTF’s recommendations are intended to help investors better compare banking organizations but would require more standardized or detailed disclosures than currently required by either Commission rules or U.S. GAAP. Comparability was a fundamental principle identified by the EDTF for risk disclosures, with a focus on global comparability. We are considering whether industry-specific rules or guidance for these non-financial statement disclosures are needed to elicit more comparability.

Finally, we are considering whether our disclosure regime should better utilize technological advances that have occurred over the years that allow information to be provided in a more accessible manner. For example, interactive data allows users to search disclosure documents and extract specific information and compare it to information from other companies, performance in past years and industry averages. Commission rules require registrants to provide their financial statements, including notes and financial statement schedules, in interactive data format using eXtensible Business Language Reporting (XBRL) by filing them with the Commission and posting them on their corporate Web sites. Commission rules do not require Guide 3 disclosures to be submitted in XBRL format.

Request for Comment

86. Are there activities in which BHC registrants engage that are not covered by Guide 3 about which we should require disclosure? For example, should we require disclosure, in addition to that already required by accounting standards, about commodities, asset management or broker-dealer activities? If so, what information is important for investors and what challenges, if any, would BHC registrants face in preparing and providing it? What thresholds should trigger any disclosure requirements we consider?

87. Are there additional disclosures, either potential new disclosures or disclosures required by other regimes, not already discussed in this request for comment that we should consider for BHC registrants that would be important for investors? If so, what disclosures and how are they similar or dissimilar to the disclosures called for by Guide 3? What challenges, if any, would BHC registrants face in preparing and providing them?

88. Are there other Commission rules or disclosure guidance we should consider as part of this project that are not already discussed in this request for comment?

89. Should we require disclosures about non-interest income and/or non-interest expense for BHC registrants? If so, what disclosures should we require and how should these disclosures be presented? For example, should we require statistical disclosures about trading revenue?

90. Do the current distinctions between Guide 3 disclosures and the Call Reports and other bank regulatory filings enhance investor understanding or contribute to investor confusion? Please indicate which distinctions enhance investor understanding versus contribute to investor confusion and why.

91. The Dodd-Frank Act requires bank holding companies with total consolidated assets of $50 billion or more and nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the FRB to periodically submit resolution plans to the FRB and the FDIC. The plans describe the companies’ strategies

233 See FDIC Quarterly.
234 Id.
235 Schedule R-1E, RC-P, and RC-T
238 See, e.g., Items 305 and 503(c) of Regulation S–K and ASC 815 for disclosures about derivatives and Pillar 3 for disclosures about risk-weighted assets.
239 For example, the EDTF recommends a quantitative analysis of the components of the liquidity reserve held to meet liquidity needs, ideally by providing averages as well as period-end balances. The description would be complemented by an explanation of possible limitations on the use of the liquidity reserve maintained in any material subsidiary or currency.
240 Regulation S–K Item 601(b)(101) and Regulation S–T Item 405. 17 CFR 229.601(b)(101) and 17 CFR 232.405.
241 Dodd-Frank Act § 165(d).
for rapid and orderly resolution in the event of material financial distress or failure. The plans contain a confidential section and a section that the FRB and FDIC make available to the public. Should we require the disclosure in Commission filings of information related to the resolution plans? If so, what types of information should be included and to what extent should BHC registrants describe their plans? What challenges, if any, would BHC registrants face in preparing and providing this information?

92. In recent years, BHC registrants have become subject to many new bank regulatory and capital requirements, including pursuant to the Dodd-Frank Act. Should we specifically require BHC registrants to discuss the effects, when material, of such regulations on their business, financial condition and results of operations? For example, should we require disclosure of the effects of these regulations on their dividend policy or disclosure of an estimate of the costs of such regulations? Why or why not?

93. Should we require disclosure that summarizes the inputs and results of the various stress testing scenarios that bank holding companies perform? For example, should we require disclosures related to DFAST and its results. Why or why not?

94. Should we require any of the disclosures recommended in the EDTF report that are not addressed specifically by Commission rules or U.S. GAAP? If so, which ones? For example, should a reconciliation of risk-weighted assets at the beginning and ending of the period be disclosed?

95. For disclosure areas already addressed by Commission rules or U.S. GAAP, should we consider any EDTF recommendations that could potentially elicit additional or better information? If so, which ones?

96. Should we expand the scope of our XBRL requirements to apply to the Guide 3 statistical tabular disclosures to facilitate investor comparison of data across BHC registrants? Why or why not?

97. If we require the Guide 3 tabular disclosures to be submitted in XBRL, are the current requirements for the format and elements of the tables suitable for tagging? If not, how should they be revised?

98. Should we require disclosure of any of the information provided in Call Reports or other regulatory filings? If so, what information and why? Should the information be presented in a Commission filing? Should we require hyperlinks directly to the Call Reports or other regulatory filings that are available on third-party government Web sites? Should it be incorporated by reference?

III. Applicability of Disclosure Requirements

A. Applicability to Registrants Other Than Bank Holding Companies

Some Commission disclosure requirements and guidance, including Guide 3, apply only to bank holding companies. The staff, however, has indicated that such disclosures should also be provided by other registrants with material lending and deposit activities. We are considering whether to expand the applicability of those disclosures and others discussed in this request for comment to other registrants. For example, marketplace lenders generally have material amounts of lending activities and may be exposed to some of the same risks as bank holding companies. Insurance companies and real estate investment trusts are examples of registrants that also may have material activities in the disclosure areas discussed in this request for comment. Typically, registrants in these industries have material investment portfolios and in some cases have material amounts of lending activities. Therefore, we are considering whether the disclosures discussed in this request for comment should employ an activity-based scope rather than a narrow industry-based scope. For example, using an activity-based approach, the disclosures called for by Section II and certain aspects of Section I of Guide 3 could be required to the extent that investments are material to a registrant’s operations, whether or not the registrant is a bank holding company.

Request for Comment

99. Should the disclosures called for by Guide 3 apply to registrants other than BHC registrants in the financial services industry? Why or why not? If so, which categories of non-BHC registrants should we consider?

100. Should Guide 3 employ an activity-based approach? If so, how should the disclosures be triggered?

101. Some Guide 3 disclosures, such as short-term borrowings, employ bright-line percentages or dollar amount thresholds to trigger disclosures. While the use of thresholds provides BHC registrants with certainty and promotes consistency, it does not allow BHC registrants to apply judgment to all facts and circumstances. Would employing a principles-based approach instead of using specific quantitative thresholds improve the effectiveness of the disclosures? Why or why not? What practical issues might arise if registrants apply judgment?

B. Applicability to Foreign Registrants

Foreign registrants that qualify as foreign private issuers may present their financial statements in accordance with any of the following:

• U.S. GAAP;
• another comprehensive body of accounting with reconciliation to U.S. GAAP; or
• IFRS as issued by the IASB without reconciliation to U.S. GAAP.

Foreign registrants that do not qualify as foreign private issuers may present their financial statements in accordance with U.S. GAAP and must use the same registration and reporting forms as domestic registrants. The staff has observed that most foreign registrants that are banking organizations meet the foreign private issuer definition and file their annual reports on Form 40–F or Form 20–F. As a result, most of the Commission disclosure requirements described in Section II of this request for comment apply to them.

242 “Foreign private issuers” are foreign issuers (other than foreign governments) except issuers meeting the following conditions: (1) More than 50% of their outstanding voting securities are directly or indirectly owned by record of residents of the United States, and (2) any of the following: (a) The majority of their executive officers, board of directors are U.S. citizens or residents, (b) more than 50% of their assets are located in the United States, or (c) their businesses are administered principally in the United States, and (d) no more than 50% of their management is located outside the United States.

243 General Instruction 1 to Guide 3 states that the guide applies to bank holding company Securities Act registration statements for which financial statements are required and to bank holding company registration statements on Form 10, proxy and information statements relating to mergers, consolidations, acquisitions and similar matters and reports filed on Form 10–K. Rule 9–01 of Regulation S–X indicates that Article 9 applies to consolidated financial statements filed for bank holding companies and to any financial statements of banks that are included in filings with the Commission.

244 See SAB 11:K.

Continued
6 to Guide 3 indicates that the disclosures apply to these registrants to the extent the information is available or can be compiled without unwarranted or undue burden or expense. The staff has observed that foreign registrants that are banking organizations typically provide the Guide 3 disclosures.

Because the categories and classifications specified by Guide 3 are influenced heavily by U.S. banking regulation and U.S. GAAP, some categories and classifications may not be relevant for understanding their operations. In addition, the Commission accepted IFRS without reconciliation to U.S. GAAP, for foreign private issuers, only in the last ten years, and Guide 3 was last substantively updated more than 30 years ago. Therefore, Guide 3 does not address the fact that some of its disclosures are not recognized concepts under IFRS. As a result, the staff has observed diversity in the manner in which foreign registrants that are banking organizations and file IFRS financial statements provide this information. For example, because nonaccrual is not a recognized concept under IFRS, the staff has observed disclosure of total impaired loans or disclosure of all past due loans in lieu of providing the nonaccrual loan disclosures called for by Item III.C.1 of Guide 3. Similarly, because the concept of TDRs is not recognized under IFRS, the staff has observed disclosure of loan modifications, regardless of whether they were undertaken for credit risk management purposes or for commercial or other reasons.

Further, Guide 3 generally available to foreign registrants that are banking organizations without unwarranted or undue burden or expense. We also are considering whether IFRS accounting and disclosure requirements elicit disclosures that are duplicative of or substantially similar to those called for by Guide 3, or whether the disclosure called for by Guide 3 should be different for foreign registrants that are banking organizations. Since there are significant differences between U.S. GAAP and IFRS, we are considering whether investors in foreign registrants that are banking organizations and that prepare their financial statements in accordance with IFRS lose any important information if we eliminated all duplicative or overlapping Guide 3 disclosures in favor of those in U.S. GAAP.

Request for Comment

102. Should foreign registrants that are banking organizations provide the disclosures discussed in this request for comment? Why or why not?

103. Is the information called for by Guide 3 generally available to foreign registrants that are banking organizations without unwarranted or undue burden or expense such that an accommodation should no longer be provided to these registrants? Why or why not?

104. Does IFRS require the same or similar information as called for by Guide 3? If so, how is the information similar or dissimilar? Please provide a detailed comparison.

105. What concepts or disclosures called for by Guide 3 are not recognized or contradict with IFRS? Please provide a detailed list.

106. Would investors in foreign registrants that are banking organizations and that prepare their financial statements in accordance with IFRS lose any important information if we were to eliminate all Guide 3 disclosures that are duplicative of or overlap with current U.S. GAAP? If so, which information would be lost?

107. While investors do not have experience with the disclosures that will be required by IFRS 9, is there information about financial instruments under an expected credit loss model that would be useful for investors in making investment and voting decisions? If so, please indicate which and whether registrants would face any challenges in preparing and providing the information?

C. Size Thresholds and Reporting Periods

Guide 3 applies to all bank holding company registrants, regardless of size. However, Guide 3 calls for those registrants with less than $200 million in total assets or less than $10 million of equity to provide scaled disclosures in terms of the number of periods presented.251 Commission rules also make certain scaled disclosures available to registrants that meet the definition of smaller reporting company and emerging growth company. Because the number of registrants eligible for scaled disclosures under those definitions is larger than the number that are eligible for Guide 3 scaled disclosures, we are considering whether the disclosures called for by Guide 3 should be scaled further.

Guide 3 currently calls for five years of loan portfolio and summary of loan loss experience data and three years of data for all other information.252 In addition, Guide 3 reporting periods include interim periods only when necessary.253 Regulation S–X generally requires two years of balance sheets and three years of income statements, except that smaller reporting companies may present only two years of income statements and emerging growth companies may present only two years of financial statements for initial public offerings.254

251 General Instruction 3 to Guide 3 provides that registrants below the prescribed thresholds may provide disclosures for each of the past two fiscal years instead of each of the past three or five years.

252 Guide 3 originally called for five years of disclosures for all items. However, the reporting periods were generally reduced in 1980. 1980 Guide 3 Amendments Release.

253 Instruction 3(d) of Guide 3.

254 17 CFR 210.3–01 and 3–02.

255 17 CFR 210.8–02.
offerings of common equity securities. In some instances, U.S. GAAP and/or Regulation S–X require similar disclosures to those specified in Guide 3, but for different periods. For example, Guide 3, Article 9 and U.S. GAAP all contain categorized investment portfolio disclosures, but Article 9 and U.S. GAAP require disclosures for the balance sheet periods presented, generally two years, while Section II.A of Guide 3 calls for three years.

Guide 3’s five-year presentation of loan portfolio and allowance for loan losses data provides a basis for statistical trend analysis and identifies unusual or non-recurring events which may have affected the loan portfolio and its related provision for loan losses. Similarly, the selected financial data requirement in Item 301 of Regulation S–K that generally requires five years of information was designed to highlight historical trends in significant data relating to financial condition and results of operations over a five-year period. We are considering whether the Guide 3 reporting periods, which generally are greater than most Commission disclosure requirements except for interim periods, facilitates trend analysis that investors rely upon or if the periods should be modified to be consistent with the requirements of Regulation S–X for both annual and interim reporting.

Request for Comment

108. Should the reporting periods called for by Guide 3 be modified, and if so, how? For example, should the Guide 3 reporting periods be reduced to match the Regulation S–X requirements and the scaled disclosure requirements for smaller reporting companies and emerging growth companies?

109. Should the Guide 3 reporting periods explicitly include interim periods so investors receive the information more frequently than once a year?

110. Should we eliminate the reporting period size threshold in Guide 3? Why or why not?

111. What is the minimum number of periods an investor needs to analyze and comprehend changes in trends? Do investors need five years of information to analyze and comprehend fully changes in trends in asset quality and loan losses?

112. If the reporting periods are reduced, should BHC registrants without reporting histories or publicly available financial information provide additional years of disclosures?

IV. Closing

This request for comment is not intended to limit the scope of comments, views, issues or approaches to be considered. In addition to investors and registrants, the Commission welcomes comment from other market participants and particularly welcomes statistical, empirical and other data from commenters that may support their views and/or support or refute the views or issues raised.

By the Commission.

Dated: March 1, 2017.

Brent J. Fields,
Secretary.
