such as brakes, lights, horn, seatbelts, tires, steering, back-up alarm, windshield, cab safety glass, rear and side view mirrors, and other safety and health related items.

Any defects found are required to be either corrected immediately, or reported to and recorded by the mine operator prior to the timely correction. A record is not required if the defect is corrected immediately, i.e., a defect that the operator can fix without a mechanic such as a light bulb that needs turned tighter. The precise format in which the record is kept is left to the discretion of the mine operator. Reports of uncorrected defects are required to be recorded by the mine operator and kept at the mine office from the date the defects are recorded, until the defects are corrected.

A competent person designated by the operator must examine each working place at least once each shift for conditions which may adversely affect safety or health. A record of such examinations must be kept by the operator for a period of one year and must be made available for review by the Secretary or an authorized representative.
