

current issues; and review and provide advice on the impact of policies, programs, and activities in the disciplines and fields encompassed by the Directorate or Office. In addition to Directorate and Office advisory committees, NSF has several committees that provide advice and recommendations on specific topics including: Astronomy and astrophysics; environmental research and education; equal opportunities in science and engineering; cyberinfrastructure; international science and engineering; and business and operations.

A primary consideration when formulating committee membership is recognized knowledge, expertise, or demonstrated ability.<sup>1</sup> Other factors that may be considered are balance among diverse institutions, regions, and groups underrepresented in science, technology, engineering, and mathematics. Committee members serve for varying term lengths, depending on the nature of the individual committee. Although we welcome the recommendations we receive, we regret that NSF will not be able to acknowledge or respond positively to

each person who contacts NSF or has been recommended. NSF intends to publish a similar notice to this on an annual basis. NSF will keep recommendations active for 12 months from the date of receipt.

The chart below is a listing of the committees seeking recommendations for membership. Recommendations should be sent to the contact person identified below. The chart contains web addresses where additional information about individual committees is available.

#### SUPPLEMENTARY INFORMATION:

### I. Discussion

The NRC has issued renewed Facility Operating License No. R–56, held by the licensee, which authorizes continued operation of the UFTR, located in Gainesville, Alachua County, Florida. The UFTR is an Argonaut-type graphite-moderated and reflected light water cooled research reactor licensed to operate at a steady-state power level of 100 kilowatts thermal power. The renewed Facility Operating License No. R–56 will expire 20 years from its date of issuance.

The renewed facility operating license complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission’s rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission’s regulations in chapter I, of title 10 of the *Code of Federal Regulations*, and sets forth those findings in the renewed facility operating license. The agency afforded an opportunity for hearing in the Notice of Opportunity for Hearing published in

the **Federal Register** on May 27, 2008 (73 FR 30424). The NRC did not receive a request for a hearing or for a petition for leave to intervene following the notice.

The NRC prepared a safety evaluation report (SER) for the renewal of Facility Operating License No. R–56 and concluded, based on that evaluation, that the licensee can continue to operate the facility without endangering the health and safety of the public. The NRC also prepared an environmental assessment and finding of no significant impact for the renewal of the facility operating license, noticed in the **Federal Register** on September 8, 2010 (75 FR 54657), and concluded that renewal of the facility operating license will not have a significant impact on the quality of the human environment.
