** BILLING CODE 4165–15–P **

**Closed-Circuit Escape Respirators; Final Guidance for Industry; Availability**

** AGENCY: Centers for Disease Control and Prevention, HHS. **

** ACTION: Notice of availability. **

** SUMMARY: On December 28, 2016, the National Institute for Occupational Safety and Health (NIOSH), within the Centers for Disease Control and Prevention, Department of Health and Human Services, published a notice in the Federal Register announcing the availability of an interim guidance document addressing the availability of closed-circuit escape respirators (CCERs) for purchase, and the readiness of respirator manufacturers to comply with the regulatory provisions**
addressing these respirators. After consideration of public comments, NIOSH has revised the guidance and now announces that NIOSH does not intend to revoke any certificate of approval for any escape respirator approved for use in mining in accordance with NIOSH regulations, that are manufactured, labeled, or sold prior to June 1, 2019, provided that there is no cause for revocation under existing NIOSH regulation.

DATES: The final guidance announced in this Federal Register notice is effective on April 14, 2017.

FOR FURTHER INFORMATION CONTACT: Maryann D’Alessandro, NIOSH National Personal Protective Technology Laboratory, 626 Cochran’s Mill Road, Pittsburgh, PA 15236; 1–888–654–2294 (this is a toll-free phone number); PPEconcerns@cdc.gov.

SUPPLEMENTARY INFORMATION: The final guidance announced in this notice addresses the availability of closed-circuit escape respirators (CCERs) for purchase and the readiness of respirator manufacturers to comply with the provisions in Part 84, Subpart O, of Title 42 of the Code of Federal Regulations (CFR). Pursuant to a Federal Register notice published on February 10, 2016, beginning on January 4, 2017, manufacturers were no longer authorized to manufacture, label, and sell 1-hour escape respirators, known in the mining community as self-contained self-rescuers (SCSRs), approved in accordance with the certification testing standards in Part 84, Subpart H.1 Beginning on May 14, 2016, manufacturers were no longer authorized to manufacture, label, and sell 10-minute escape respirators for use in mining approved pursuant to Subpart H.2

In an interim guidance document published on December 28, 2016,3 NIOSH announced its intention not to revoke any certificate of approval for 1-hour escape respirators approved in accordance with 42 CFR part 84, Subpart H, that are manufactured, labeled, or sold prior to January 4, 2018, provided that there is no cause for revocation under 42 CFR 84.34 or 84.43(c). Upon consideration of public comments submitted to the docket for this action, NIOSH has reconsidered the scope of the guidance as well as the compliance deadline.4 The final guidance is summarized below. The full final guidance, entitled “Closed-Circuit Escape Respirators Approved for Use in Mining, 42 CFR part 84, Subpart O Compliance; Guidance for Industry; Final” is available on the NIOSH National Personal Protective Technology Web site at www.cdc.gov/niosh/npptl.

Standards for the approval of CCERs were updated in a final rule published March 8, 2012, in which HHS codified the new Subpart O and removed only those technical requirements in 42 CFR part 84, Subpart H that were uniquely applicable to CCERs.5 All other applicable requirements of 42 CFR part 84 were unchanged. The purpose of these updated requirements is to enable NIOSH and the Mine Safety and Health Administration (MSHA), which co-approves respirators used in underground coal mining, respirator manufacturers, and ultimately, respirator users, to more effectively ensure the performance, reliability, and safety of CCERs used in all workplace applications.6 The March 2012 final rule established a sunset provision for the Subpart H standards on April 9, 2015, three years after the final rule’s effective date; the three-year period was intended to provide sufficient time for manufacturers to obtain certificates of approval for CCER designs developed under the Subpart O standards. Since April 10, 2012, no new applications for approval of Subpart H SCSRs have been accepted.

However, manufacturers did not develop small capacity CCERs approved for use in mining or large capacity CCERs approved for use in non-mining and mining in time to meet the April 2015 transition deadline and, as a result, NIOSH ultimately extended the deadline to one year after the date that the first approval was granted to those CCER models.7 Under this deadline extension formula, manufacturers were authorized to continue the manufacturing, labeling, and sale of 10-minute Subpart H escape respirators approved for use in mining until May 13, 2016 and 1-hour Subpart H escape respirators for use in mining until January 4, 2017.

The deadline extensions have contributed to the availability of new escape respirator designs which conform to the Subpart O requirements, and have addressed the needs of certain broad segments of the market for such devices;8 however, MSHA has recently expressed concern that a market gap is imminent in the underground coal mining industry.9 Further communications with stakeholders, including the underground coal mine industry and respirator manufacturers, some of whom submitted comments to the docket for this action, have indicated that the supply of Subpart O CCERs approved for use in mining are insufficient to meet the current needs of the mining industry.

In order to allow mine operators access to all of the tools necessary to protect miners, to give respirator manufacturers time to develop a solution to the mine industry’s desire for person-wearable Subpart O CCERs, and to ensure a smooth transition from the Subpart H to Subpart O approval standards, NIOSH does not intend to revoke any certificate of approval for escape respirators approved for use in mining in accordance with 42 CFR part 84, Subpart H, that are manufactured, labeled, and sold prior to June 1, 2019, provided that there is no cause for revocation under 42 CFR 84.34 or 84.43(c), including misuse of approval numbers.

The final guidance, available on the NIOSH National Personal Protective Technology Web site, does not create any new deadlines or waive any existing deadlines. The final guidance is not an interpretation of 42 CFR 84.301(a), it is a policy statement regarding NIOSH’s intent to not revoke, except for cause, any certificate of approval for escape respirators approved for use in mining in accordance with 42 CFR part 84.10

DEPARTMENT OF HOMELAND SECURITY

U.S. Immigration and Customs Enforcement

AGENCY: U.S. Immigration and Customs Enforcement.

ACTION: 30-Day Notice of Information collection for review; Standards to Prevent, Detect, and Respond to Sexual Abuse and Assault in Confinement Facilities; OMB Control No. 1653–0051.

The Department of Homeland Security, U.S. Immigration and Customs Enforcement (USICE) is submitting the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection is published in the Federal Register to obtain comments from the public and affected agencies. This information collection was previously published in the Federal Register on February 8, 2017, Vol. 82 No. 9752 allowing for a 60 day comment period. No comments were received on this information collection. The purpose of this notice is to allow an additional 30 days for public comments.

Written comments and suggestions regarding items contained in this notice and especially with regard to the estimated public burden and associated response time should be directed to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the OMB Desk Officer for U.S. Immigration and Customs Enforcement, Department of Homeland Security, and sent via electronic mail to oira_submission@omb.eop.gov or faxed to (202) 395–5806.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information should address one or more of the following four points:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.
