photographs, and stored in fish totes with a chilled seawater flow through system. When the vessel arrives at the transplant site the scallops would then be placed into a box that would be attached to a large steel camera stand with an image coverage of approximately 3 square meters. The camera stand would then be deployed overboard, lowered to the ocean floor, and the scallops released. The cameras are equipped with batteries that would allow for 48 hours of continuous coverage. After 48 hours, the camera stands would be collected, refilled with scallops, and redeployed. Researchers will deploy two camera stands in this manner as many times as needed to release 1,000 scallops. If researchers are unable to release all 1,000 scallops according to the project protocols, any remaining scallops will be released adjacent to the camera sites. Researchers conclude that tag returns over time from the fishery could potentially provide information for the project.

One bushel from each tow would be measured for size frequency and 15 individual scallops would be sampled for meat weights to determine shell height/meat weight ratios prior to transplanting. Any finfish caught in the dredge that show signs of abnormalities would be retained and brought back to shore for analysis. Researchers would like to continue gathering information on the prevalence of the disease Ichthyophonus seen locally in yellowtail flounder. Anticipated catch for the project is listed in the Table 1 below.

Exemptions are needed to deploy dredge gear in closed access areas and retain yellowtail flounder for scientific purposes. Participating vessels need crew size waivers to accommodate science personnel and possession waivers would enable them to conduct data collection activities. We would waive the observer program notification requirements because the research activity is not representative of standard fishing activity.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
