We use FWS Form 3–2406 (Registration of Certain Dead Marine Mammal Hard Parts) to record the collection of bones, teeth, or ivory of dead marine mammals by non-Native and Natives not eligible to harvest

- Date and location found.
- Age, sex, and size of the animal.
- Tag numbers.
- Name, address, phone number, and birthdate of the collector.

III. Comments

On February 24, 2017, we published in the **Federal Register** (82 FR 11598) a notice of our intent to request that OMB approve this information collection. In that notice, we solicited comments for 60 days, ending on April 25, 2017. We received one comment in response to that notice:

Email comment dated April 24, 2017 from Marine Mammal Commission.

The Marine Mammal Commission supports the continuation of the information collection programs related to the taking of marine mammals for subsistence and handicraft purposes by Alaska Natives. Collection of this information is authorized under section 109(i) of the Marine Mammal Protection Act. This information is important for tracking Native use of marine mammals and to provide the documentation that marine mammal parts were legally taken.

The Commission also supports the continued use of FWS Form 3–2406 for registering marine mammal hard parts found on beaches and near shore areas. Under applicable regulations, these parts can be retained only if they are registered with the FWS (or NMFS). As such, retention of the registration form is necessary.

FWS Response: None required.

SUPPLEMENTARY INFORMATION:**I. Abstract**

The USGS Land Remote Sensing (LRS) Program is currently planning for the next generation of Landsat satellites. These satellites will continue the multi-decadal continuous collection of moderate-resolution, multispectral, remotely-sensed imagery through the Landsat program. Landsat satellite imagery has been available at no cost to the public since 2008, which has resulted in the distribution of millions of scenes each subsequent year, as well as tens of thousands of Landsat users registering with USGS to access the data. In order to continue to provide high quality imagery that meets the needs of users, LRS is collecting current and future user requirements for sensor and satellite attributes. These attributes include spatial resolution, spectral bands, frequency of acquisition, and many others. LRS will use the information from this collection to understand if they are currently meeting the needs of their user community and to help determine the features of future Landsat satellites. Questions will be asked to determine user characteristics, current uses of imagery, preferred attributes of Landsat imagery, and benefits of Landsat imagery. All current Landsat imagery users who are registered with USGS will be invited to take part in the survey.

To protect the confidentiality and privacy of survey respondents, the data from the survey will not be associated with any respondent's email address at any time and will only be analyzed and reported in aggregate. All files containing PII will be password-protected, housed on secure USGS servers, and only accessible to the research team. The data from the survey will be aggregated and statistically analyzed and the results will be published in publically available USGS reports.
