

Safety Surveys with the exception of the inclusion of addressed based sampling (ABS) methods to explore the method as a possible alternative for new survey questions. ABS is sampling from address frames that are usually based, in part, on residential addresses in the U.S. Postal Service Computerized Delivery Sequence File. ABS is a cost effective method of sampling that provides much

coverage of U.S. households for in-person, mail, telephone, and multimode surveys (including Web-based surveys.) The Food Safety Survey will continue to include cell phones in addition to landlines for the telephone interviews. A nationally representative sample of 4,000 adults will be selected at random to complete the survey. The survey will also include an oversample of Hispanics

and Blacks to ensure a minimum of 400 each. Additionally, methods will be employed to test for the presence of response bias. Participation in the survey will be voluntary. Cognitive interviews and a pre-test will be conducted prior to fielding the survey.

FDA estimates the burden of this collection of information as follows:

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

FDA’s burden estimate is based on the Agency’s prior experience with the Food Safety Survey. FDA estimates that the burden hours for this information collection will remain the same since the last OMB approval.
