

copy/paper docket in Washington, DC, as well as informational dockets in three locations in the State of New Mexico (Carlsbad, Albuquerque, and Santa Fe). The docket consists of all relevant, significant information received to date from outside parties and all significant information considered by the EPA in reaching a recertification decision regarding whether the WIPP facility continues to comply with the disposal regulations.

#### **IX. What is the EPA's role in future WIPP activities?**

The EPA's regulatory role at the WIPP does not end with this recertification decision. The Agency's future WIPP activities include additional recertifications every five years (the next being scheduled to be submitted by the DOE in March 2019), review of the DOE reports on conditions and activities at the WIPP, assessment of waste characterization and quality assurance programs at waste generator sites, announced and unannounced inspections of the WIPP and other facilities and, if necessary, modification, revocation or suspension of the certification.

As a result of the February 2014 incidents at the WIPP, the DOE will be making changes to the repository design. The DOE has indicated that it no longer plans to use panel 9 for waste operations due to the worker safety hazards in that location, so an alternative panel will be needed. This decision may also have implications for panel closures in the panels accessed through the panel 9 drifts (*i.e.*, panels 3–6). In addition, the DOE is planning a new ventilation shaft that will allow for increased airflow through the underground operations area. The EPA will be keeping abreast of the DOE's requested changes and will make that information available as it is received.

As described in Section VI of this notice, the EPA's review of the 2014 Compliance Recertification Application identified where the DOE's technical basis for the modeling has limitations with assumptions used or with the basis for some parameter values. The EPA concerns with these limitations were generally addressed by the results of the SEN studies. While this approach of using a series of sensitivity studies to examine identified limitations was sufficient in the context of this compliance recertification application, it was to some extent driven by the known upcoming physical changes in the repository. The EPA would prefer to be able to evaluate a complete revised performance assessment in future compliance recertification application

reviews. The EPA recommends that the performance assessment technical basis be evaluated for improvement in these areas: (1) Calculations of actinide solubility, (2) modeling the chemical conditions in the repository, and (3) modeling direct brine releases.

Although not required by the Administrative Procedure Act (APA), the WIPP LWA or the WIPP Compliance Criteria, the EPA intends to continue docketing all inspection or audit reports and annual reports and other significant documents on conditions and activities at the WIPP, as well as formal communications between the two agencies.

The EPA plans to conduct future recertification processes using an administrative process generally similar to that described in today's action.

Dated: July 10, 2017.

#### **ENVIRONMENTAL PROTECTION AGENCY**

[9965–03–OEI]

#### **Cross-Media Electronic Reporting: Authorized Program Revision Approval, Territory of U.S. Virgin Islands**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** This notice announces EPA's approval of the Territory of U.S. Virgin Islands' request to revise its EPA Administered Permit Programs: The National Pollutant Discharge Elimination System EPA-authorized program to allow electronic reporting.

**DATES:** EPA's approval is effective July 19, 2017.

**FOR FURTHER INFORMATION CONTACT:**

Karen Seeh, U.S. Environmental Protection Agency, Office of Environmental Information, Mail Stop 2823T, 1200 Pennsylvania Avenue NW., Washington, DC 20460, (202) 566–1175, [seeh.karen@epa.gov](mailto:seeh.karen@epa.gov).

**SUPPLEMENTARY INFORMATION:** On October 13, 2005, the final Cross-Media Electronic Reporting Rule (CROMERR) was published in the **Federal Register** (70 FR 59848) and codified as part 3 of title 40 of the CFR. CROMERR establishes electronic reporting as an acceptable regulatory alternative to paper reporting and establishes requirements to assure that electronic

documents are as legally dependable as their paper counterparts. Subpart D of CROMERR requires that state, tribal or local government agencies that receive, or wish to begin receiving, electronic reports under their EPA-authorized programs must apply to EPA for a revision or modification of those programs and obtain EPA approval. Subpart D provides standards for such approvals based on consideration of the electronic document receiving systems that the state, tribe, or local government will use to implement the electronic reporting. Additionally, § 3.1000(b) through (e) of 40 CFR part 3, subpart D provides special procedures for program revisions and modifications to allow electronic reporting, to be used at the option of the state, tribe or local government in place of procedures available under existing program-specific authorization regulations. An application submitted under the subpart D procedures must show that the state, tribe or local government has sufficient legal authority to implement the electronic reporting components of the programs covered by the application and will use electronic document receiving systems that meet the applicable subpart D requirements.

On July 7, 2017, the U.S. Virgin Islands Department of Planning & Natural Resources (VI DPNR) submitted an application titled “NPDES e-Reporting Tool” for revision to its EPA-approved program under title 40 CFR to allow new electronic reporting. EPA reviewed VI DPNR's request to revise its EPA-authorized Part 123—EPA Administered Permit Programs: The National Pollutant Discharge Elimination System program and, based on this review, EPA determined that the application met the standards for approval of authorized program revision/modification set out in 40 CFR part 3, subpart D. In accordance with 40 CFR 3.1000(d), this notice of EPA's decision to approve U.S. Virgin Islands' request to revise its Part 123—EPA Administered Permit Programs: The National Pollutant Discharge Elimination System program to allow electronic reporting under 40 CFR parts 122 and 125 is being published in the **Federal Register**.

VI DPNR was notified of EPA's determination to approve its application with respect to the authorized program listed above.
