[Docket No. FR-5816-F-02]

RIN 2501-AD77

Requirements for Notification, Evaluation and Reduction of Lead-Based Paint Hazards in Federally Owned Residential Property and Housing Receiving Federal Assistance; Response to Elevated Blood Lead Levels

AGENCY: Office of the Secretary, HUD.

ACTION: Final rule.

SUMMARY: This final rule amends HUD's lead-based paint regulations to reduce blood lead levels in children under age six (6) who reside in federally-owned or -assisted pre-1978 housing, formally adopting a revised definition of "elevated blood lead level" (EBLL) in children under the age of six (6), in accordance with Centers for Disease Control and Prevention (CDC) guidance. It also establishes more comprehensive testing and evaluation procedures for the housing where such children reside. This final rule also addresses certain additional elements of the CDC guidance pertaining to assisted housing and makes technical corrections and clarifications. This final rule, which follows HUD's September 1, 2016, proposed rule, takes into consideration public comments submitted in response to the proposed rule.

DATES: *Effective Date:* February 13, 2017.

Compliance Date: July 13, 2017.

I. Background

A. HUD's Long-Term and Ongoing Efforts To Reduce Lead Poisoning in Children

Childhood lead poisoning has long been documented as causing reduced intelligence, low attention span, and reading and learning disabilities; it has additionally been linked to juvenile delinquency, behavioral problems, and many other adverse health effects.¹ Despite public health efforts successfully reducing toxic lead exposure in children nationwide, blood lead monitoring continues to reveal children with elevated blood lead levels due to exposure in their specific housing environments. The Centers for Disease Control and Prevention (CDC) has consistently affirmed its position that lead-based paint and lead-contaminated dust are the most hazardous sources of lead for U.S. children.² Over the past decade, HUD has dramatically reduced housing-based lead exposure among children through lead paint abatement and interim controls.³ Nevertheless, a considerable number of children under age six (6) currently reside in HUD-assisted housing units that contain lead-based paint.
