

No known individuals were identified. No associated funerary objects are present.

In 1940, human remains representing, at minimum, one individual were removed from the Medwin Knoll site, Sussex County, NJ, by W.B. Wilson, an amateur archeologist, who donated them to the New Jersey State Museum. The human remains include a fragmentary skull and infracranial remains. No known individual was identified. No associated funerary objects are present.

In 1980, human remains representing, at minimum, seven individuals were removed from a site in Gloucester City, Camden County, NJ, by a salvage crew during the construction of a building. The human remains were transferred to the New Jersey State Museum in 1980. The human remains include the fragmentary remains of at least seven individuals. No known individuals were identified. No associated funerary objects are present.

In the 1980s, human remains representing, at minimum, one individual were removed from site 28-Mi-72, in Monroe Township, Middlesex County, NJ, by a school group who discovered them eroding out of a bank. The human remains include skull fragments, limb fragments, and six teeth. No known individual was identified. The 27 associated funerary objects are 4 pieces of fire cracked rock, 22 flakes, and 1 piece of glass.

In 1995, State Archaeologist Dr. Lorraine Williams identified all of the human remains listed in this notice as dating from the Woodland Period to the Contact Period, a time during which Delaware-speaking groups occupied this area of New Jersey. Consultation with the Western Delaware Nation, the Stockbridge Munsee, and the Delaware Tribe of Indians occurred in 1995, and all representatives agreed that the locations from which these human remains were removed was traditionally occupied by the Delaware until progressive removals westward began in the early 1700s. It was noted during consultation that the presence of the Shawnee in the northern portion of the Delaware River Valley in the late 17th and early 18th centuries has been historically documented. Based on the analysis of the human remains, site information, and consultation, the New Jersey State Museum has determined a cultural affiliation between the human remains and associated funerary objects and the Delaware (Lenape) people.

#### Determinations Made by the New Jersey State Museum

Officials of the New Jersey State Museum have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of 161 individuals of Native American ancestry.

- Pursuant to 25 U.S.C. 3001(3)(A), the 137 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.

- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the Native American human remains and associated funerary objects and the Delaware Nation, Oklahoma; Delaware Tribe of Indians; and the Stockbridge Munsee Community, Wisconsin.

#### Additional Requestors and Disposition

Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to Dr. Gregory D. Lattanzi, Bureau of Archaeology & Ethnology, New Jersey State Museum, 205 West State Street, Trenton, NJ 08625, telephone (609) 984-9327, email [gregory.lattanzi@sos.nj.gov](mailto:gregory.lattanzi@sos.nj.gov), by October 23, 2017. After that date, if no additional requestors have come forward, transfer of control of the human remains and associated funerary objects to the Delaware Nation, Oklahoma; Delaware Tribe of Indians; and the Stockbridge Munsee Community, Wisconsin, may proceed.

The New Jersey State Museum is responsible for notifying the Delaware Nation, Oklahoma; Delaware Tribe of Indians; and the Stockbridge Munsee Community, Wisconsin, that this notice has been published.

Dated: July 28, 2017.

#### Notice of Intent To Repatriate Cultural Items: U.S. Army Corps of Engineers, Omaha District, Omaha, NE

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The U.S. Army Corps of Engineers, Omaha District (Omaha District), in consultation with the appropriate Indian tribes or Native Hawaiian organizations, has determined that the cultural items listed in this notice meet the definition of unassociated funerary objects. Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request to the Omaha District. If no additional claimants come forward, transfer of control of the cultural items to the lineal descendants, Indian tribes, or Native Hawaiian organizations stated in this notice may proceed.

**DATES:** Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request with information in support of the claim to the Omaha District at the address in this notice by October 23, 2017.

**ADDRESSES:** Ms. Sandra Barnum, U.S. Army Engineer District, Omaha, ATTN: CENWO-PM-AB, 1616 Capital Avenue, Omaha, NE 68102, telephone, (402) 995-2674, email [sandra.v.barnum@usace.army.mil](mailto:sandra.v.barnum@usace.army.mil).

**SUPPLEMENTARY INFORMATION:** Notice is hereby given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3005, of the intent to repatriate cultural items under the control of the Omaha District, Omaha, NE., that meet the definition of unassociated funerary objects under 25 U.S.C. 3001.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American cultural items. The National Park Service is not responsible for the determinations in this notice.

### History and Description of the Cultural Items

Between 1965 and 1968, two cultural items were removed from the Fort Manuel site (39CO5), Corson County, SD, and are presently located at the South Dakota State Archaeological Research Center (SARC), under the managerial control of the Omaha District. Between 1965 and 1966, G. Hubert Smith recovered human remains (Individual 2) and associated funerary objects. In 1968, J.J. Hoffman and R.B. Johnson, SIRBS, recovered the human remains of two other individuals (Individuals 1 and 3) and associated funerary objects consisting of wood fragments. The human remains were stored at the University of Nebraska-Lincoln until 1986, when they were moved to SARC. In 1987, the University of Tennessee-Knoxville received the human remains and conducted an inventory before returning them to SARC in 1988. The human remains were housed at SARC until May 20, 1994, when they were repatriated to the Cheyenne River Sioux with the wood fragments. The remaining two unassociated funerary objects are two bear proximal phalanges that records show were originally collected with Individual 2.

The Fort Manuel site (39CO5) is a multi-component site on a narrow terrace above the confluence of the Missouri River and Hunkpapa Creek, and was most likely occupied during the Middle Missouri Tradition (900–1500), Extended (1500–1675), Post-contact Coalescent (1675–1780), and Historic period (post-1800). Fort Manuel was established at the location as a trading post by the Missouri Fur Company in 1812 and abandoned in 1813. A journal kept by a Company clerk at Fort Manuel states that two Company men, one Native American man, and two Native American women died during the winter of 1812–1813, indicating a Historic period occupation. None of the individuals recovered from the site can be tied to the journal with any certainty. Individual 1 was found with wood fragments, possibly either coffin or wood slab fragments, which indicates either a Lakota affiliation (post-1868) or an Arikara affiliation (1500–1780). Individual 2 was placed on a scaffold then later buried, indicating an Arikara affiliation. Individual 3 was found on the surface of the site indicating a Historic period occupation and affiliated with the Lakota or Arikara. Mortuary practices of the Individual 2 as well as historic documentation indicate the human

remains are most likely affiliated with the Arikara.

In August of 1979, 24 cultural items were removed from the Bergner site (39BR36), Brule County, SD, and are presently located at the South Dakota State Archaeological Research Center (SARC), under the managerial control of the Omaha District. The Bergner site is a burial site on a flat terrace above Lake Francis Case, south of Chamberlain, SD, and was discovered in August of 1979 by Mr. Lawrence Bergner. The human remains were eroding out of the bank and Mr. Bergner reported it to local authorities, who collected the human remains and 24 funerary objects. The human remains were then released to Timothy R. Nowak, Corp of Engineers field archeologist, who assessed the site but did no further excavations. At least 4 sets of human remains were recovered. The funerary objects were turned over to SARC in 1981. The human remains remained with the Corps of Engineers until some time prior to 1990, when they were reburied at site 39ST15 on the Missouri River. The excavation records show the funerary items as having been removed from the burial of a specific individual from site 39BR36. The 24 unassociated funerary objects are 16 burned clay fragments; 4 ceramic rim sherds (Iona Indented and La Roche, Wheeler); 2 bison horn cores; 1 skunk humerus; and 1 lot of wood fragments.

The Bergner site (39BR36) is a burial site that was most likely occupied between 1550 and 1675, dating to the Extended Variant of the Coalescent tradition. The archeological community associates the pottery types with the Extended Variant of the Coalescent tradition. Populations associated with the Coalescent tradition within this area and time frame are believed to be ancestral to the Arikara, therefore the unassociated funerary objects are most likely affiliated with the Arikara.

In approximately 1975, 31 cultural items were collected from the Oacoma Village site (39LM26), Lyman County, SD, and are presently located at the South Dakota State Archaeological Research Center (SARC), under the managerial control of the Omaha District. The Oacoma Village site is a large village on a low terrace above the Missouri River and was excavated around 1975 by an unknown individual. At least two sets of human remains were recovered. In 1978, the human remains were discovered during an inventory at SARC in 1978. It is unclear how the remains came to be at SARC. In the same year, the University of Tennessee-Knoxville received the human remains and conducted an inventory before

returning them to South Dakota in 1986. The human remains were then reburied at site 39ST15 on the Missouri River. SARC records show the funerary items as having been removed from the burial of a specific individual from site 39LM26. The 31 unassociated funerary objects are 13 ceramic rim sherds; 10 ceramic body sherds; 1 bison mandible; 1 modified bison rib tool; 1 biface knife; 1 biface core; 1 plate chalcedony knife; 1 utilized chert flake; 1 thinning flake; and 1 spokeshave.

The Oacoma Village site (39LM26) is a large village that was most likely occupied during several components between 1500 and 1862, all variants of the Coalescent tradition. The entire Oacoma Village site encompasses a large area that was previously three sites, Oacoma Village I (39LM24), Oacoma Village II (39LM26), and Oacoma Village III (39LM27). The three sites were later combined and considered Oacoma Village (39LM26) when excavated by Marvin F. Kivett, Smithsonian Institute River Basin Survey, between 1951 and 1952, and prior to the discovery of the burials in 1975. The village was comprised of 40–50 houses. The Oacoma Village site that was excavated by Kivett included ceramic pottery types that are associated with a Post Contact Coalescent tradition (1675–1780) occupation. The rim sherds found with the burials in 1975 represent pottery types found in three different periods, Extended Coalescent tradition, Post Contact Coalescent tradition, and the Disorganized Coalescent tradition. These three periods are known for primary inhumations, which researchers believe was done for the two sets of human remains. Populations associated with the Coalescent tradition within this area and time frame are believed to be ancestral to the Arikara, therefore the unassociated funerary objects are likely affiliated with the Arikara.

The Arikara are represented today by the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota. Consultation with the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota, indicates that these kinds of funerary objects are placed with individuals at the time of death.

### Determinations Made by the U.S. Army Corps of Engineers, Omaha District

Officials of the U.S. Army Corps of Engineers, Omaha District, have determined that:

- Pursuant to 25 U.S.C. 3001(3)(B), the 57 cultural items described above are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony and

are believed, by a preponderance of the evidence, to have been removed from a specific burial site of a Native American individual.

- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the unassociated funerary objects and the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota.

#### Additional Requestors and Disposition

Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request with information in support of the claim to Ms. Sandra Barnum, U.S. Army Engineer District, Omaha, ATTN: CENWO-PM-AB, 1616 Capital Avenue, Omaha, NE 68102, telephone, (402) 995-2674, email [sandra.v.barnum@usace.army.mil](mailto:sandra.v.barnum@usace.army.mil), by October 23, 2017. After that date, if no additional claimants have come forward, transfer of control of the unassociated funerary objects to the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota, may proceed.

The U.S. Army Corps of Engineers, Omaha District, is responsible for notifying the Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota, that this notice has been published.

Dated: August 2, 2017.

#### Notice of Inventory Completion: U.S. Department of the Interior, Bureau of Reclamation, Mid-Pacific Region, Sacramento, CA

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The U.S. Department of the Interior, Bureau of Reclamation (Reclamation), Mid-Pacific Regional Office, has completed an inventory of human remains and associated funerary objects, in consultation with the appropriate Indian Tribes or Native Hawaiian organizations, and has determined that there is a cultural affiliation between the human remains and associated funerary objects and

present-day Indian Tribes or Native Hawaiian organizations. Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request to Reclamation, Mid-Pacific Regional Office. If no additional requestors come forward, transfer of control of the human remains and associated funerary objects to the lineal descendants, Indian Tribes, or Native Hawaiian organizations stated in this notice may proceed.

**DATES:** Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to the U.S. Department of the Interior, Bureau of Reclamation, Mid-Pacific Regional Office, at the address in this notice by October 23, 2017.

**ADDRESSES:** Melanie Ryan, NAGPRA Specialist/Physical Anthropologist, Bureau of Reclamation, Mid-Pacific Regional Office, MP-153, 2800 Cottage Way, Sacramento, CA 95825, telephone (916) 978-5526, email [emryan@usbr.gov](mailto:emryan@usbr.gov).

**SUPPLEMENTARY INFORMATION:** Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains and associated funerary objects under the control of Reclamation, Mid-Pacific Regional Office, Sacramento, CA. The human remains and associated funerary objects were removed from Calaveras and Tuolumne Counties, CA.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations in this notice.

#### Consultation

A detailed assessment of the human remains was made by Reclamation, Mid-Pacific Regional Office, professional staff in consultation with representatives of the Bishop Paiute Tribe (previously listed as the Paiute-Shoshone Indians of the Bishop Community of the Bishop Colony, California) and the Tuolumne Band of

Me-Wuk Indians of the Tuolumne Rancheria of California. The following Indian Tribes were invited to consult but did not participate in consultation: The Buena Vista Rancheria of Me-Wuk Indians; California Valley Miwok Tribe; Chicken Ranch Rancheria of Me-Wuk Indians; Ione Band of Miwok Indians; Jackson Rancheria of Me-Wuk Indians; Shingle Springs Band of Miwok Indians; and Wilton Rancheria (hereafter referred to as "The Invited and Consulted Tribes")

#### History and Description of the Remains

In August of 1975, human remains representing, at minimum, one individual, were inadvertently removed from the Texas Charley Gulch site (CA-CAL-0338, original site number 4-CAL-S-286) in Calaveras County, CA. The site was first excavated in 1975 by San Francisco State University under the direction of Dr. Michael Moratto. Three burials were encountered in two of the units, but the human remains were left in situ. In 2013, SFSU notified Reclamation of the existence of an isolated left mandibular second premolar in the CA-CAL-0338 collection. Physical custody was transferred to Reclamation, Mid-Pacific, on March 31, 2013. Subsequent reanalysis of the site CA-CAL-0338 faunal assemblage by Reclamation, Mid-Pacific, professional staff resulted in the identification of an additional 97 pieces of human bone. The fragmentary nature of the remains precluded determination of age or sex. No known individual was identified. The five associated funerary objects include four Olivella shell beads and one Haliotis disc. A sixth grave item, a bone awl fragment was not among the items transferred by San Francisco State University to Reclamation, Mid-Pacific, in 2013.

Age estimates of CA-CAL-0338 are based on temporally-diagnostic artifacts and radiocarbon dates. Uncalibrated <sup>14</sup>C dates of 320 ±80 BP (Unit I-100-N, I-9040) and 405 ±80 BP (Unit G-100-S, I-9039) suggest a Late Horizon occupation for all three burials. However, the carbon samples were not directly associated with the remains; rather they were extracted from undifferentiated midden deposits in the general vicinity of the burials. The single Type M1a Olivella bead found in association with Burial 3 suggests that this individual was interred sometime between the beginning of the Middle Period (circa 200 B.C.) and the end of Phase 1 of the Late Period (circa A.D. 1500). The Type G2b Olivella beads, while not definitively associated with Burials 2 and 5, are temporally diagnostic for the timespan between the Early/Middle
