Abstract: The regulations contained in 30 CFR 250, subpart D pertain to oil and gas drilling operations. BSEE uses the information collected under subpart D to ensure safe drilling operations and to protect the human, marine, and coastal environment. Among other things, BSEE specifically uses the information to ensure: The drilling unit is fit for the

intended purpose; the lessee or operator will not encounter geologic conditions that present a hazard to operations; equipment is maintained in a state of readiness and meets safety standards; each drilling crew is properly trained and able to promptly perform well-control activities at any time during well operations; compliance with safety standards; and the current regulations will provide for safe and proper field or reservoir development, resource evaluation, conservation, protection of correlative rights, safety, and environmental protection. We also review well records to ascertain whether drilling operations have encountered hydrocarbons or H₂S and to ensure that H₂S detection equipment, personnel protective equipment, and training of the crew are adequate for safe operations in zones known to contain H₂S and zones where the presence of H₂S is unknown.

The current Subpart D regulations specify the use of forms BSEE-0125 (End of Operations Report), and BSEE-0133/0133S (Well Activity Report). The information on BSEE-0125 is used to ensure that industry has accurate and up-to-date data and information on wells and leasehold activities under their jurisdiction and to ensure compliance with approved plans and any conditions placed upon a suspension or temporary probation. It is also used to evaluate the remedial action in the event of well equipment failure or well control loss. Form BSEE-0125 is updated and resubmitted in the event the well status changes. In addition, except for proprietary data, BSEE is required by the OCS Lands Act to make available to the public certain information submitted on BSEE-0125. The BSEE uses the information on BSEE-0133/0133S to monitor the conditions of a well and status of drilling operations. We review the information to be aware of the well conditions and current drilling activity (*i.e.*, well depth, drilling fluid weight, casing types and setting depths, completed well logs, and recent safety equipment tests and drills). The engineer uses this information to determine how accurately the lessee anticipated well conditions and if the lessee or operator is following the other approved forms that were submitted. With the information collected on BSEE-0133 available, the reviewers can analyze the proposed revisions (*e.g.*, revised grade of casing or deeper casing setting depth) and make a quick and informed decision on the request.

Total Estimated Number of Annual Respondents: Varies per requirement, not all of the potential respondents will submit information in any given year and some may submit multiple times.

Total Estimated Number of Annual Responses: 63,347.

Estimated Completion Time per Response: Varies from 15 minutes to 23 hours, depending on activity.
