SUPPLEMENTARY INFORMATION:

Title: FERC-717, Open Access Same-Time information System and Standards for Business Practices and Communication Protocols.

OMB Control No.: 1902-0173.

Type of Request: Three-year approval of the FERC-717 information collection requirements with no changes to the current reporting requirements.

Abstract: The Commission directs all public utilities that own, control or operate facilities for transmitting energy in interstate commerce to provide certain types of information regarding their transmission operations on an Open Access Same-time Information System (OASIS). The Commission does not believe that open-access nondiscriminatory transmission services can be completely realized until it removes real-world obstacles that prevent transmission customers from competing effectively with the Transmission Provider. One of the obstacles is unequal access to

transmission information. The Commission believes that transmission customers must have simultaneous access to the same information available to the Transmission Provider if truly nondiscriminatory transmission services are to be a reality.

The Commission also established Standards of Conduct requiring that personnel engaged in transmission system operations function independently from personnel engaged in marketing functions. The Standards of Conduct were designed to prevent employees of a public utility (or any of its affiliates) engaged in marketing functions from preferential access to OASIS-related information or from engaging in unduly discriminatory business practices. Companies were required to separate their transmission operations/reliability functions from their marketing/merchant functions and prevent system operators from providing merchant employees and employees of affiliates with transmission-related information not available to all customers at the same time through public posting on the OASIS.

Type of Respondents: Transmission Owners and Transmission Operators.

*Estimate of Annual Burden:*¹ The Commission estimates an adjustment in the annual public reporting burden for the FERC-717. The adjustment is due to Transmission Providers being allowed to file responses jointly or individually. The Transmission Provider may delegate this responsibility to a Responsible Party such as another Transmission Provider, an Independent System Operator, a Regional Transmission Group, or a Regional Reliability Council. The number comprise two separate entities: Transmission Owners and Transmission Operators. The responses submitted are our best estimate of the Transmission Operators and remaining individual Transmission Owners. The rationale is that some Transmission Owners have elected to turn over operational control of their collective transmission systems to Transmission Operators, including RTOs/ISOs (as authorized in 18 CFR 37.5). These Transmission Operators offer OASIS access to the collective systems facilitating a single OASIS transmission request serving multiple transmission systems. As a result of

¹ Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, refer to 5 Code of Federal Regulations 1320.3.
