

dusky, silky, and night sharks. Many of the proposed terms and conditions are structured to maximize the survival of these shark species and to increase the Agency's understanding of these data poor stocks. The proposed terms and conditions include:

- During the proposed research project, 33 percent of sets occurring in both portions of the EFC PLL Closed Area and in open areas would be observed by NMFS-trained NOVA Southeastern University students or NMFS-approved observers.

- NMFS would review 100 percent of electronic monitoring data for sets occurring in both portions of the EFC PLL Closed Area and in open areas.

- After three dusky sharks are discarded dead by a vessel participating in the EFP, that vessel would be required to reduce the soak time of the gear to no longer than 10 hours when conducting fishing operations under the EFP. If, after reducing the soak time to no longer than 10 hours, an additional three dusky sharks are discarded dead, then that vessel would no longer be authorized to fish in the EFC PLL Closed Area under this EFP, if issued, for the remainder of the 12-month project period, unless otherwise permitted by NMFS.

- All live sharks caught but not being retained must be safely sampled (*e.g.*, fin clip) and photographed without removing the shark from the water. All fin clips and photographs would be sent to the Southeast Fisheries Science Center (SEFSC) for identification purposes.

- All sharks that are dead at haul back, including prohibited species, and all sharks being retained for sale must be biologically sampled (*e.g.*, vertebra and reproductive organs removed) to facilitate species identification and collection of life history information. All biological samples would be sent to the SEFSC.

- Sets inside and outside of the closed areas would be equipped with hook timers, in accordance with protocols established by NMFS, to determine when animals were captured and when mortality occurs.

Availability of a Draft Environmental Assessment

NMFS is also announcing the availability of a draft EA that analyzes the potential impacts to the human environment of granting this EFP application for experimental PLL fishing within northern portions of the EFC PLL Closed Area and one area outside the Closed Area, as the request is described above. Among other analyzed impacts, the draft EA projects the annual catches

of all HMS species, as well as some non-HMS species interactions, from the EFC PLL Closed Area and open areas that could be expected to occur if this EFP is approved. Additionally, the draft EA describes NMFS' rationale for the preferred alternative and other alternatives under consideration for this research. The draft EA may be found on the HMS Management Division's Web site at <http://www.nmfs.noaa.gov/sfa/hms/compliance/efp/index.html>. Comments on the draft EA may be submitted via the methods outlined in the ADDRESSES section of this notice.
