

estimates are based on every eligible respondent submitting the required information for every available grant. However, not all States apply for and receive a grant each year under each of these programs. In addition, under Section 405 grants, some requirements permit States to submit a single application covering multiple years allowing States to simply recertify in subsequent years. Considering the agency's steps to streamline the current submission process, including increased use of prepopulated information fields in GMSS and greater reliance on electronic submission in general, these estimates represent the highest possible burden hours and costs possible for States submitting the required information.

BTS entered into a memorandum of understanding (MOU)

with the Bureau of Safety and Environmental Enforcement (BSEE) to include an industry-wide repository of equipment failure data, analyze and aggregate information collected under this program, and publish reports that will provide BSEE, the industry, and all OCS stakeholders with essential information about failure types and modes of critical safety barriers for offshore operations related to well control. The data collection effort that is the subject of this notice, addressed the collection of failure data as referenced in recently issued BSEE regulations on (81 FR 25888), April 29, 2016 and (81 FR 61834), September 7, 2016. BTS received permission to collect the data under an emergency OMB control number on September 29, 2016. Through this notice, BTS is requesting permission to reinstate this previously approved OMB control number. This information collection is necessary to aid BSEE, the oil and gas industry, and other stakeholders in identifying barrier failure trends and causes of critical safety barrier failure events.

DATES: Comments must be received by December 27, 2017.

ADDRESSES: BTS seeks public comments on its proposed continuation of information collection. Comments should address whether the information will have practical utility; the accuracy of the estimated burden hours of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.
