This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive patent commercialization license territory may be worldwide and the field of use may be limited to: “Administration to humans of a GP120-binding protein or proteins, containing the 6 CDRs of the N6 antibody, all as described in the Licensed Patent Rights. This field of use does not include bi-specific/multi-specific constructs utilizing the Licensed Patent Rights.”

The N6 antibody has evolved a unique mode of binding that depends less on a variable area of the HIV envelope known as the V5 region and focuses more on conserved regions, which change relatively little among HIV strains. This allows N6 to tolerate changes in the HIV envelope, including the attachment of sugars in the V5 region, a major mechanism by which HIV develops resistance to other VRC01-class antibodies. N6 was shown in pre-clinical studies to neutralize approximately 98 percent of HIV isolates tested. The studies also demonstrate that N6 neutralizes approximately 80 percent of HIV isolates which were resistant to other antibodies of the same class, and does so very potently. Its breadth and potency makes N6 a highly desirable candidate for development in therapeutic or prophylactic strategies.

An abstract of the subject invention was published in the Federal Register on March 13, 2017.

The National Institutes of Health (NIH) hereby announces the availability of Licensed Patent Rights, as defined in 35 U.S.C. 209 and 37 CFR part 404, for the subject invention, which is a method of inhibiting or neutralizing HIV infection.

A series of studies were conducted to evaluate the N6 antibody. Prior to the development of N6, VRC01, a broadly neutralizing antibody, was identified. Because of particular challenges related to the structure and function of the viral envelope, N6 was uniquely designed to bind and neutralize HIV.

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.
