

the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through www.regulations.gov or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Steven Rosenthal, Environmental Engineer, at (312) 886-6052 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Steven Rosenthal, Environmental Engineer, Air Planning and Maintenance Section, at 312-886-6052, rosenthal.steven@epa.gov or at Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604.

SUPPLEMENTARY INFORMATION: Section 307(b)(1) of the Clean Air Act indicates which Federal Courts of Appeal have venue for petitions for review of final actions by EPA. This action pertains to facilities in Minnesota and is not based on a determination of nationwide scope or effect. Thus, under section 307(b)(1), any petitions for review of EPA's action denying the U.S. Steel petition for reconsideration must be filed in the Court of Appeals for the Eighth Circuit on or before February 2, 2018.

Dated: February 28, 2017.

Robert Kaplan,

Acting Regional Administrator, Region 5.

Editorial note: This document was received for publication by the Office of the Federal Register on November 28, 2017.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R02-OAR-2017-0013; FRL 9971-28-Region 2]

Approval and Revision of Air Quality Implementation Plans; State of New York; Regional Haze State and Federal Implementation Plans

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a source-specific revision to the New York state implementation plan (SIP) that establishes Best Available Retrofit

Technology (BART) emission limits for the Danskammer Generating Station ("Danskammer") Unit 4, owned and operated by Danskammer Energy LLC. The SIP revision establishes BART emission limits for sulfur dioxide, oxides of nitrogen, and particulate matter that are identical to the emission limits established by the EPA's federal implementation plan (FIP) for Danskammer Unit 4, which was published on August 28, 2012. The EPA finds that the SIP revision fulfills the requirements of the Clean Air Act and the EPA's Regional Haze Rule for BART at Danskammer Unit 4. In conjunction with this approval, we are withdrawing those portions of the FIP that address BART for Danskammer Unit 4.

DATES: This rule is effective on January 3, 2018.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-R02-OAR-2017-0013. All documents in the docket are listed on the www.regulations.gov Web site. Although listed in the index, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available through www.regulations.gov, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Edward J. Linky, Environmental Protection Agency, Air Programs Branch, 290 Broadway, New York, New York 10007-1866 at 212-637-3764 or by email at Linky.Edward@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, "we," "us," and "our" refer to the EPA.

Table of Contents

- I. What action is the EPA taking today?
- II. What significant comments were received in response to the EPA's proposed action?
- III. What are the EPA's conclusions?
- IV. Incorporation by Reference
- V. Statutory and Executive Order Reviews

I. What action is the EPA taking today?

The EPA is approving a source-specific SIP revision for Danskammer Unit 4 (the "Danskammer SIP Revision") that was submitted by the New York State Department of Environmental Conservation (NYSDEC) on August 10, 2015, and supplemented on August 5, 2016. Specifically, the EPA

is approving BART emission limits for sulfur dioxide (SO₂), oxides of nitrogen (NO_x), and particulate matter (PM) for Danskammer Unit 4 that are equivalent to the emission limits established by the EPA's FIP that was promulgated on August 28, 2012 (77 FR 51915, 51917).

In its submittal, NYSDEC included the following BART emission limits for Danskammer Unit 4: 0.12 pounds of NO_x per million British thermal units (lb NO_x/MMBtu) calculated on a 24-hour average during the ozone season and on a rolling 30-day average during the rest of the year; 0.09 lb SO₂/MMBtu calculated on a 24-hour average; and 0.06 lb PM/MMBtu calculated on a 1-hour average. NYSDEC also included a condition that restricts Danskammer Unit 4 to combusting only natural gas. As a result of the EPA's approval, the EPA is withdrawing those portions of the FIP that address BART for Danskammer Unit 4. The reader is referred to EPA's Proposed Rule, 82 FR 21749 (May 10, 2017), for a detailed discussion of this SIP revision.

II. What significant comments were received in response to the EPA's proposed action?

EarthJustice (EJ) submitted the following comments on behalf of the National Parks Conservation Association (NPCA) and Sierra Club.

Comment 1: EJ supports the inclusion in the New York SIP of limits that restrict combustion at Danskammer Unit 4 to natural gas. EJ agrees with the EPA's conclusion that such a restriction will have the effect of reducing visibility-impairing emissions compared to the prior Title V permit and the EPA FIP that allowed combustion of coal, oil, or natural gas in Unit 4. According to the 2012 BART determination study for Danskammer Unit 4 that formed the basis for NYSDEC's and the EPA's BART determinations, 100% firing of natural gas is associated with the highest percent reduction of SO₂ of the controls examined at the time, and the third highest percent reduction of NO_x. Elimination of coal combustion is consistent with BART and will certainly provide visibility benefits at Class I areas.

Response: The EPA acknowledges EJ's support of the natural gas requirement in the Danskammer SIP Revision.

Comment 2: The 2012 BART determination for Danskammer Unit 4 formed the basis for NYSDEC's and EPA's prior BART determinations. Since the unit had already been converted to co-fire or exclusively fire natural gas in 1987, the determination included the option of 100% firing of natural gas as a feasible BART technology. Thus, the

use of natural gas is not fuel switching for this unit. The prior BART analysis lists an achievable emission rate of 0.08 lbs/MMBtu for NO_x, and a control efficiency of 99.95% under the 100% natural gas combustion scenario. Since natural gas combustion technology is already installed and operating, the cost of the technology to achieve these emission levels is \$0.

Response: The commenter's intended point is that because restricting Danskammer Unit 4 to combusting natural gas is not a form of fuel switching, the state must adopt BART emission limits that reflect the low emission rates associated with natural gas combustion. The EPA disagrees that restricting Danskammer Unit 4 to combusting natural gas is not a form of fuel switching. The Danskammer Unit 4 boiler was designed to combust coal, fuel oil, and natural gas, and until recent years, coal was the unit's primary fuel source. By prohibiting Danskammer Unit 4 from combusting coal or fuel oil going forward, the Danskammer SIP Revision effects a fuel switch from multi-fuel capability to the exclusive use of natural gas. In the BART Guidelines, the EPA stated that "it is not our intent to direct States to switch fuel forms, e.g., from coal to gas." 70 FR 39104, 39164 (July 6, 2005). As such, NYSDEC's decision to require fuel switching at Danskammer Unit 4 as a condition in its SIP revision was entirely discretionary. The EPA acknowledges that, by combusting only natural gas, Danskammer Unit 4 can achieve the lower emission limits cited by the commenter without additional cost, but the EPA cannot disapprove the SIP for not including lower limits when the BART Guidelines do not require states to consider fuel switching as a BART option in the first instance. See 70 FR at 39164.

Comment 3: As noted by the EPA, the emission limits for SO₂ and NO_x adopted by NYSDEC for Danskammer Unit 4 are identical to those contained in EPA's 2012 FIP. However, the rulemaking record for the 2012 FIP clearly demonstrates that these emission limits were designed for a plant that maintained the option to use coal as a fuel. The EPA's Regional Haze Rule requires that the "determination of BART must be based on an analysis of the best system of continuous emission control technology available and associated emission reductions achievable." 40 CFR 51.308(e)(1)(ii)(A). According to the EPA's own BART Guidelines, "[t]o complete the BART process, you must establish enforceable emission limits that reflect the BART requirements." 70 FR 39172. The coal-

based emission limits in the EPA's current proposal no longer reflect BART, as the plant is now restricted to burning natural gas. Thus they are not emission reductions "associated" with natural gas combustion under the BART Guidelines. The EPA must instead establish lower limits under BART reflecting the natural gas-only fuel restriction it proposes to incorporate into the SIP.

Response: The EPA disagrees that the natural gas requirement in the Danskammer SIP Revision is BART. As explained in the response to comment 2, the BART Guidelines do not require states to consider fuel switching as a BART control option. In its 2012 SIP submittal, NYSDEC included at its discretion a potential control option of 100% combustion of natural gas for Danskammer Unit 4 before rejecting it in favor of other control options. In the Danskammer SIP Revision, however, NYSDEC did not indicate that it was now determining 100% natural gas combustion to be BART. Rather, NYSDEC adopted the BART emission limits that the EPA established in its 2012 FIP, which were based on flue-gas desulfurization (FGD) for SO₂, various options for reducing NO_x, and Unit 4's existing electrostatic precipitator (ESP) for PM. The EPA included a detailed technical justification for its BART determinations in the record for that rulemaking, see 77 FR 24793, 24812–15 (April 25, 2012) (proposal); 77 FR 51918–23 (final), and the commenter has not made any effort to rebut that analysis with new information. Nothing in the Clean Air Act (CAA), the Regional Haze Rule, or the BART Guidelines requires the EPA to disapprove the Danskammer SIP Revision and establish lower emission limits reflecting 100% combustion of natural gas simply because NYSDEC included that condition in addition to its BART emission limits in its SIP revision. In any event, the EPA notes that requiring the lower emission limits favored by the commenter would not achieve an environmental benefit because the natural gas requirement in the Danskammer SIP Revision already has the practical effect of reducing Danskammer Unit 4's emissions to levels that are consistent with those lower emission limits.

Comment 4: The EPA claims in its proposal that NYSDEC's proposal is sufficient because it is "more stringent than the EPA's FIP." 82 FR 21750. However, the BART determination cannot simply be more stringent than the EPA's FIP; it must stand alone as a BART determination, which includes requiring an emission limit consistent

with the "best system of continuous emission control technology available," in this case, at a minimum, the exclusive use of natural gas. 40 CFR 51.308(e)(1)(ii)(A). In the original BART determination, as the EPA noted in its 2012 proposal, "[a]lthough gas co-firing (and 100% gas firing) appears to be feasible and cost effective, it was ruled out as a control option due to high price volatility of natural gas and potential reliability concerns on the state's electric system." 77 FR 24812. These concerns are no longer valid, if indeed they were in the first place. Thus, based on the original BART determination for the unit, limits associated with the 100% firing of natural gas should be those originally associated with that control, i.e., no higher than 0.08 lbs/MMBtu for NO_x and 99.95 percent SO₂ control efficiency consistent with the unit's existing limits. The existing NO_x limit is on a 24-hour average during the ozone season and a 30-day average during the remainder of the year. This is unjustified and inappropriate for a visibility-specific limit given 100% gas firing and higher impacts from nitrates during the wintertime. Also, the exclusive use of natural gas would reduce PM emissions as well, and so a PM emission limit should be set that reflects 100% natural gas firing, rather than the proposed limit of 0.06 lbs/MMBtu on a 1-hour basis, which was determined based on tests performed when burning coal.

Response: The EPA disagrees with this comment for the same reasons described in the EPA's previous responses. The EPA acknowledges that the Agency stated at proposal that the Danskammer SIP revision was approvable "because it is more stringent than the EPA's FIP." 82 FR 21750. More accurately, the SIP revision is approvable because it meets minimum CAA requirements by adopting the emission limits in the EPA's FIP, and then goes beyond those minimum CAA requirements by including the "more stringent" natural gas requirement. See CAA section 116 ("[N]othing in [the CAA] shall preclude or deny the right of any State . . . to adopt or enforce . . . any requirement respecting control or abatement of air pollution . . .").

Comment 5: As noted, NYSDEC has claimed to submit these changes for Danskammer Unit 4 as an "updated" BART determination. The EPA has proposed to approve it as such, simultaneously withdrawing the BART determination in its FIP. However, NYSDEC has not submitted a BART determination, only changes to Unit 4's Title V permit. Neither the state nor the EPA has offered an actual BART

determination, which must include consideration of: The costs of compliance, the energy and non-air quality environmental impacts of compliance, any pollution control equipment in use at the source, the remaining useful life of the source, and the degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology. 40 CFR 51.308(e)(1)(ii)(A). In this case, any updated BART determination should also include consideration of controls that can be used in addition to 100% firing of natural gas. Because the proposed rulemaking does not include a BART determination, the EPA cannot use it as a replacement for its challenged FIP. To fix this critical shortcoming, the EPA has several options. First, the EPA could include a BART determination with the final rule based on the information submitted with the 2012 New York haze SIP, setting limits based on 100% natural gas combustion and any further controls that it determines to be BART. Second, NYSDEC could immediately supplement its 2012 haze plan as to Danskammer Unit 4, and include a BART determination, again based on the prior BART analysis for 100% natural gas combustion and any additional BART controls. If NYSDEC pursues the second option and it cannot be achieved in a timely manner, EPA must issue a limited approval of the Title V permit restriction as to natural gas combustion and maintain the current FIP, disapproving the current submission as to any purported BART determination and requiring NYSDEC to formally resubmit an actual BART determination that includes at least 100% natural gas combustion at Unit 4.

Response: In the 2012 FIP, the EPA “encourage[d] New York at any time to submit a SIP revision to incorporate provisions that match the terms of our FIP, or relevant portion thereof,” explaining that if we approved the SIP revision, it would replace the FIP provisions. 77 FR 51917. NYSDEC responded by submitting the Danskammer SIP Revision, which incorporated provisions that match the terms of our FIP, as well as an additional requirement restricting Danskammer Unit 4 to combusting natural gas. Because NYSDEC was not required to update its BART determinations beyond incorporating the BART emission limits from the 2012 FIP, the EPA has no basis to disapprove the SIP revision and supplant it with another FIP.

Comment 6: The CAA requires that Danskammer procure, install, and operate BART as expeditiously as practicable. “As expeditiously as

practicable” is defined as five years after the date of approval of a plan revision or promulgation of a FIP. The FIP here was promulgated on August 28, 2012. Therefore, the EPA must act promptly to respond to the issues identified in this letter and determine BART for gas-only combustion to enable Danskammer to meet this deadline.

Response: The 2012 FIP required Danskammer Unit 4 to comply with the BART emission limits by July 1, 2014. As a result of damage to the facility sustained during flooding in 2012, Danskammer Unit 4 was non-operational until the fall of 2014, when it began operating as a natural gas peaking unit. Danskammer Unit 4 has been complying with the BART emission limits in the FIP since it restarted in 2014. The Danskammer SIP Revision adopts the FIP’s BART emission limits, and they will become federally enforceable on the effective date of this final action. Therefore, NYSDEC has satisfied CAA section 169A(g)(4)’s requirement that BART must be installed as expeditiously as practicable, but in no event later than five years after the date of approval of a plan revision (*i.e.*, the Danskammer SIP Revision).

III. What are the EPA’s conclusions?

The EPA has evaluated the Danskammer SIP Revision and is determining that it meets the requirements of the CAA and the Regional Haze Rule. Therefore, the EPA is approving the BART emission limits and related administrative requirements (*i.e.*, monitoring, recordkeeping and reporting requirements) for Danskammer Unit 4, which are identical to those contained in the EPA’s 2012 FIP: 0.12 lb NO_x/MMBtu, calculated on a 24-hour average during the ozone season and on a rolling 30-day average during the rest of the year; 0.09 lb SO₂/MMBtu, calculated on a 24-hour average; and 0.06 lb PM/MMBtu, calculated on a 1-hour average. NYSDEC also included in its SIP revision a condition that restricts Danskammer Unit 4 to combusting only natural gas, which the EPA is approving into the SIP. Consequently, the EPA is withdrawing those portions of the 2012 FIP that address BART for Danskammer Unit 4.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with the requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of a single-source SIP revision, dated August 10,

2015, and supplemented on August 5, 2016, from NYSDEC for Danskammer Unit 4 (Facility DEC ID 3334600011), including Title V permit conditions (permit ID 3-3346-00011/00017) with Best Available Retrofit Technology (BART) emission limits for NO_x, SO₂, and PM. NYSDEC renewed Danskammer’s Title V permit on February 24, 2015. The summary of emission limits and other enforceable requirements for this SIP revision are included in section I of this rulemaking. The EPA has made, and will continue to make, these materials generally available through www.regulations.gov and/or at the EPA Region 2 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by the EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of the EPA’s approval, and will be incorporated by the Director of the Federal Register in the next update to the SIP compilation.¹

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <http://www2.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is exempt from review by the Office of Management and Budget (OMB) because it will result in the approval of a SIP submitted by the New York State Department of Environmental Conservation for Danskammer Generation Station Unit No. 4. Approval of SIPs falls within a category of Actions that is exempted from review by OMB. It was therefore not submitted to OMB for review.

B. Executive Order 13771: Reducing Regulations and Controlling Regulatory Costs

This action is not an Executive Order 13771 regulatory action because this action falls within the category of Actions that OMB has exempted from review. This action specifically is an Approval of a State Implementation Plan (SIP).

¹ 62 FR 27968 (May 22, 1997).

C. Paperwork Reduction Act

This action does not impose an information collection burden under the provisions of the Paperwork Reduction Act (PRA).² Because this final rule has identical recordkeeping and reporting requirements to the EPA's 2012 FIP, the PRA does not apply.

D. Regulatory Flexibility Act

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This rule does not impose any requirements or create impacts on small entities as no small entities are subject to the requirements of this rule.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate of \$100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. Because this final rule has identical BART emission limits and related administrative requirements (*i.e.*, monitoring, recordkeeping and reporting requirements) to the EPA's 2012 FIP, this final rule is not subject to the requirements of sections 202 or 205 of UMRA. This final rule is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments.

F. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175. It will not have substantial direct effects on tribal governments.

Thus, Executive Order 13175 does not apply to this rule.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997). The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards. Therefore, the EPA is not considering the use of any voluntary consensus standards.

K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action does not have disproportionately high and adverse human health or environmental effects on minority populations, low-income populations and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994). As explained previously, this action provides identical BART emission limits and related administrative requirements (*i.e.*, monitoring, recordkeeping and reporting requirements) to the EPA's 2012 FIP.

L. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to

each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

M. Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 2, 2018. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. *See* CAA section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: November 20, 2017.

E. Scott Pruitt,
Administrator.

Part 52, chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart HH—New York

■ 2. Section 52.1670(d) is amended by adding an entry entitled “Danskammer Energy LLC, Danskammer Generating Station” to the end of the table to read as follows:

§ 52.1670 Identification of plan.

* * * * *

(d) * * *

² 44 U.S.C. 3501 *et seq.*

EPA-APPROVED NEW YORK SOURCE-SPECIFIC PROVISIONS

Name of source	Identifier No.	State effective date	EPA approval date	Comments
Danskammer Energy LLC, Danskammer Generating Station.	NYSDEC Facility No. 333 46000011.	2/25/15	11/4/17	Best Available Retrofit Technology (BART) emission limits for NO _x , SO ₂ , and PM pursuant to 6 NYCRR part 249 for Unit 4 and the requirement to combust only natural gas.

 BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2017–0196; FRL–9970–92–Region 9]

Approval of California Air Plan Revisions, Sacramento Metropolitan Air Quality Management District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a revision to the Sacramento Metropolitan Air Quality Management District (SMAQMD) portion of the California State Implementation Plan (SIP). This revision concerns emissions of volatile organic compounds (VOCs) from landfill gas flaring at the Kiefer Landfill in Sacramento, California. We are approving portions of two SMAQMD operating permits that limit VOC emissions from this facility under the Clean Air Act (CAA or the Act).

DATES: This rule will be effective on January 3, 2018.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–OAR–2017–0196. All documents in the docket are listed

on the <https://www.regulations.gov> Web site. Although listed in the docket, some information is not publicly available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available through <https://www.regulations.gov>, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Stanley Tong, EPA Region IX, (415) 947–4122, tong.stanley@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, “we,” “us” and “our” refer to the EPA.

Table of Contents

- I. Proposed Action
- II. Public Comments and EPA Responses
- III. EPA Action
- IV. Incorporation by Reference
- V. Statutory and Executive Order Reviews

I. Proposed Action

On January 15, 2016 (81 FR 2136) the EPA proposed to partially approve and partially disapprove SMAQMD’s SIP revision to address Reasonably Available Control Technology (RACT) requirements for the 1997 8-hour ozone National Ambient Air Quality Standards (NAAQS) based in part on our conclusion that the submittal did not satisfy the CAA section 182 requirements for major source VOC RACT from landfill gas flaring operations at the Kiefer Landfill. On August 12, 2016 we finalized our partial approval and partial disapproval and stated that sanctions would be imposed under CAA section 179 and 40 CFR 52.31 unless the EPA approved SIP revisions correcting this deficiency within 18 months of the effective date of our final rulemaking action.

On July 28, 2016 the SMAQMD adopted portions of two operating permits (Operating Permit 24360—issued March 24, 2016 and reissued

April 14, 2016; and Operating Permit 24361—issued March 24, 2016 and reissued April 14, 2016) to address the VOC RACT deficiency. On January 24, 2017 the California Air Resources Board (CARB) submitted these operating permits to the EPA for SIP approval and the EPA proposed to approve them into the California SIP on July 19, 2017 (82 FR 33032). Specifically, we proposed to approve permit conditions 2, 8, 13, 14, 16, 17, 22, 23, 24, 25, 26, 27, 37, 39 and 40 (or portions thereof) and Attachment A from SMAQMD Operating Permit Nos. 24360 and 24361. We proposed to approve these portions of the operating permits into the SIP because we determined that they complied with the relevant CAA requirements. Our proposed action contains more information on these operating permits and our evaluation.

II. Public Comments and EPA Responses

The EPA’s proposed action provided a 30-day public comment period. During this period, we received no comments.

III. EPA Action

No comments were submitted. Therefore, as authorized in section 110(k)(3) of the Act, the EPA is fully approving the submitted portions of the operating permits into the California SIP. Specifically, we are approving permit conditions 2, 8, 13, 14, 16, 17, 22, 23, 24, 25, 26, 27, 37, 39 and 40 (or portions thereof) and Attachment A from SMAQMD Operating Permit Nos. 24360 and 24361, which together establish enforceable VOC limitations that satisfy RACT for the landfill gas flares at the Kiefer Landfill. Please see the docket for a copy of the complete submitted documents.

Final approval satisfies California’s obligation, under CAA section 182 for the 1997 8-hour ozone NAAQS, to implement RACT for the landfill gas flares at the Kiefer Landfill. Our August 12, 2016 partial disapproval of SMAQMD’s RACT SIP demonstration for the 1997 NAAQS also stated that amendments to SMAQMD’s pharmaceuticals manufacturing rule
